REPORT

OF THE

COMMITTEE OF VISITORS.

MOULSFORD PAUPER LUNATIC ASYLUM.

REPORT

OF THE

COMMITTEE OF VISITORS.

To

The Berkshire County Council, The Council of the Borough of Reading, and The Council of the Borough of Newbury.

THE COMMITTEE OF VISITORS OF THE MOULSFORD LUNATIC ASYLUM REPORT WITH MUCH PLEASURE :----

That the condition of the Asylum is thoroughly satisfactory in every respect, and that the fabric has been kept in a proper state of repair.

The Commissioners in Lunacy visited the Asylum in October, and recorded in the Visitors' Book their high appreciation of the condition and efficiency of the Asylum. A Copy of their Report is appended. The conduct of the Staff has been very good, and great credit is due to all for the manner in which the work was performed under the great strain caused by the epidemic of influenza, which raged with virulent effect during the months of March and April. Besides being indirectly responsible for many deaths, it left the general health of the inmates in a very low condition.

There were three cases of Typhoid Fever, one of which proved fatal. The greatest attention is devoted to the Sanitary arrangements so as to render them as perfect as possible, and every endeavour to find the source of these recurring cases is made, but hitherto without success.

The Infectious Hospital was begun in September, by Mr. Simonds, of Reading. The contract price being £2495, exclusive of the requisite furnishing.

During the autumn the re-arrangement of the heating apparatus was completed by Messrs. Haden, and a separate main was extended to the Female Hospital Ward with great benefit to the comfort of the old and feeble patients placed therein.

The only change amongst the Officers is the appointment of Miss Browne as Housekeeper, in succession to Miss Chance, who resigned to fill a more important post.

The Committee of Visitors refer with much regret to the death of Mr. Goodlake, who had been one of the Visitors ever since the erection of the Asylum, and who took the greatest interest in everything connected with it. They also have to deplore the death of Dr. Ryott, who had been a constant Visitor for some years.

The cost of Repairs has been £1,007 11s. 11d., and of the Additions and Improvements £111 16s. 0d. for the year ending 31st March, 1894; of this latter sum £102 14s. 0d. has been spent in the re-arrangement and improvement of the Heating Apparatus in the original building. The Contractor has been paid £1,380 on account of the Infectious Hospital.

Lodging-money has been earned for the same period from the Boroughs of Reading and Newbury to the amount of £345 12s. 6d. This, with the amount of profit on out-county, private and criminal patients, viz. :--£253 4s. 9d., has been applied in aid of the Repairs Fund.

The principal Repairs, Renewals, and Improvements carried out during the year have been :--

New boarded Floor to Visiting Room in the Female Division.

Six new Retorts set at Gas Works.

Garden Walls repaired and pointed.

New Steam Cooking Pan in Kitchen.

New Cast Iron Soil Pipes to No. 1 Ward; new Apparatus to W.C.'s in Male Wards 1 and 7; Wooden Floors re-placed with Tiles.

- Painting, Whitewashing, Colouring, Varnishing, &c., in Male Wards 5, 7, and Infectious Dormitory; Female Wards 2, 3, 4, and Infectious Dormitory; also Male Messroom, Gardener's and Gasman's Cottages, Corridor of Officers' Quarters, and those leading to Female Wards 4 and 6.
- Painting of external woodwork on south front of female side and greenhouse.
- Water pipes in Wards Male 3 and Female 3 covered with felt and cased in.
- Chimney stacks of some of the cottages re-built and repaired.

The patients on the books of the Asylum on the 31st March, 1894, were :---

				м.	F.	TOTAL.

The weekly charge for maintenance of pauper patients has been 8s. 2d. throughout the year.

The Committee cannot close their Report without expressing their great satisfaction at the able manner in which all the affairs of the Asylum have been managed by Dr. Murdoch.

ALBERT R. TULL,

CHAIRMAN.

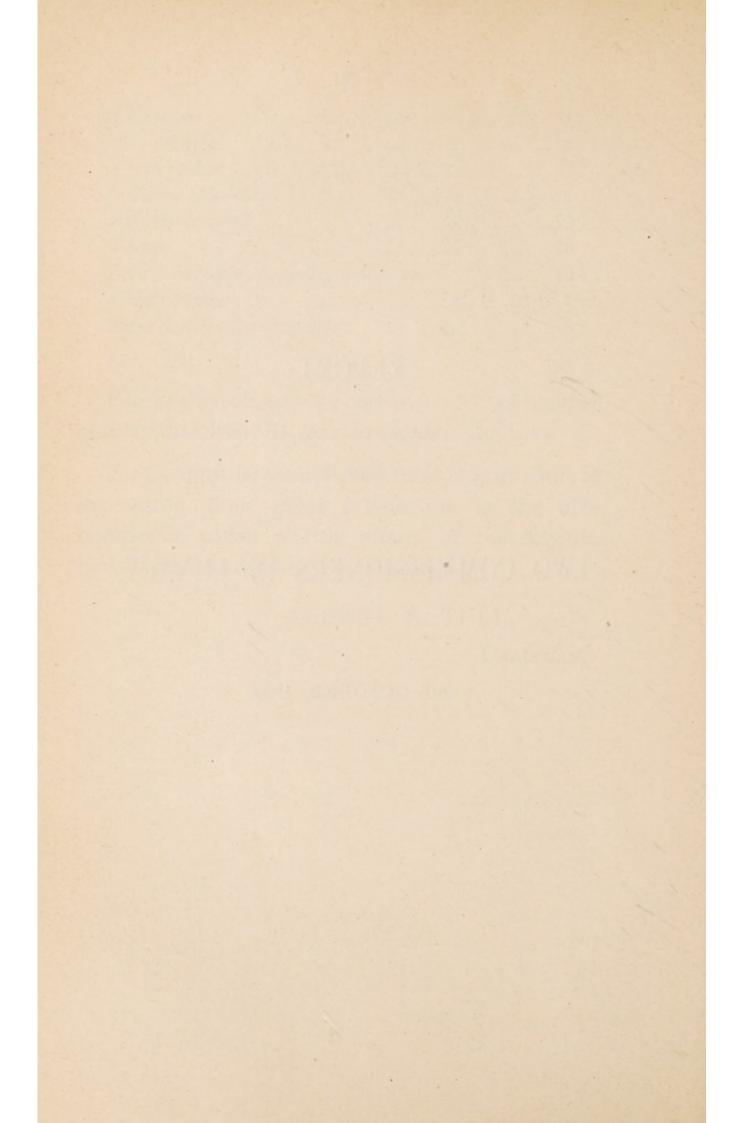

REPORT

OF

TWO COMMISSIONERS IN LUNACY,

.

28th OCTOBER, 1893.

REPORT

OF

COMMISSIONERS IN LUNACY.

(Entered in Visitors' Book.)

BERKSHIRE LUNATIC ASYLUM,

Moulsford, Oct. 28th, 1893.

This Asylum continues to be maintained in excellent order.

We have visited all the Wards and every department, and have found all the former clean and comfortable. Some have been painted recently, and in the older portion of the Asylum the warming apparatus has been extended, and to the Female Hospital a new and separate hot water main has been laid. The means of maintaining an adequate temperature appear to be now sufficient. Further progress has been made in improving the arrangements of the W.C.'s by removing soil pipes to the exterior of the building and providing better pans and flushing apparatus, at the same time replacing the wooden floors by tiles.

We are glad to observe that the erection of a Detached Isolation Hospital has been begun in conformity with plans approved by the Secretary of State after examination in onr office. The site is not that first suggested, but over to the N.E. of the Male Side, and those to leeward of the Asylum having regard to the prevailing winds. This building will set free for ordinary accommodation the Wards hitherto reserved for the treatment of infectious disorder, and for some of which they were used this year.

The patients on the books to-day are 536 in number, 234 being males and 302 females. No patient is absent on leave or trial, and all have been seen by us. The vacant beds, including those in the reserved Wards, are 57 on the male side, and 49 on the female side.

Since the visit of the Commissioners on November 23rd, 1892, 97 patients have been admitted, 60 discharged, of whom 41 had recovered, and 49 have died. In all but one of these deaths post-mortem examination was made. Except that five were due to lung disease resulting from Influenza, there was nothing in the causes of the above deaths that calls for special notice. In no case did the Coroner hold an Inquest. The death-rate in 1892 was 7 per cent. of the average number of patients resident, in the interval since the last visit it has been about 10 per cent. An outbreak of Influenza occurred in March and April, and 146 patients and 42 of the Staff were attacked by it. There have also been 2 cases of Typhoid, and 7 cases of Scarlet Fever among the patients, the latter also attacking five of the Staff, but no death resulted from either of these complaints.

There are at present 74 patients under Medical treatment, 22 being confined to bed. Many are old and feeble cases. The epileptics now here number 77, the actively Suicidal 22, and the General Paralytics 7.

There is only one case of the use of Mechanical Restraint recorded since the last visit, that of a woman, twice, for 16 hours; and two women on 23 occasions, and for a total of 230 hours, have been secluded.

The patients during our inspection have been quiet and orderly. They are clean and tidy in person and dress, and as regards the latter, in the female division, we are pleased to learn that some variety in the materials for the women's gowns is about to be introduced.

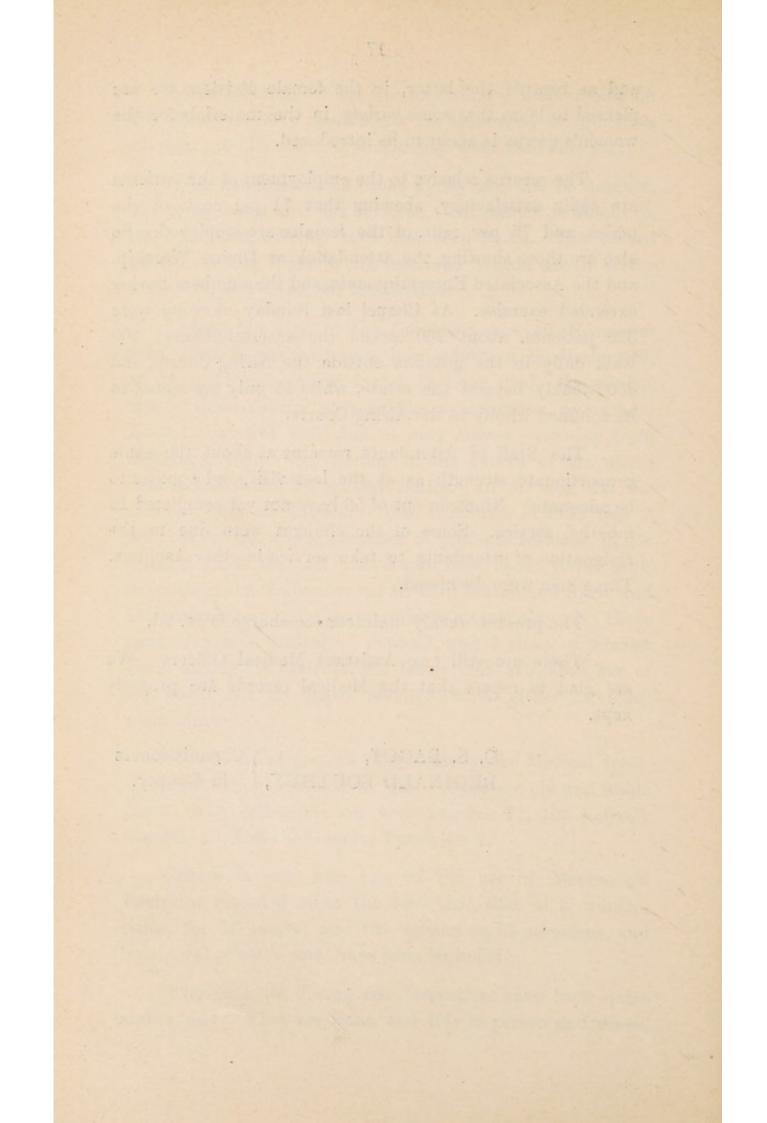

The returns relative to the employment of the patients are again satisfactory, shewing that 71 per cent. of the males and 76 per cent. of the females are employed. So also are those shewing the attendance at Divine Worship, and the Associated Entertainments, and the numbers having extended exercise. At Chapel last Sunday morning were 328 patients, about 260 attend the entertainments; 300 walk daily in the grounds outside the Airing Courts, and 230 weekly beyond the estate, while 46 only are stated to be confined wholly to the Airing Courts.

The Staff of Attendants remains at about the same proportionate strength as at the last visit, and appears to be adequate. Nineteen out of 56 have not yet completed 12 months' service. Some of the changes were due to the resignation of attendants to take service in other Asylums. Three men were dismissed.

The present weekly maintenance charge is 8s. 2d.

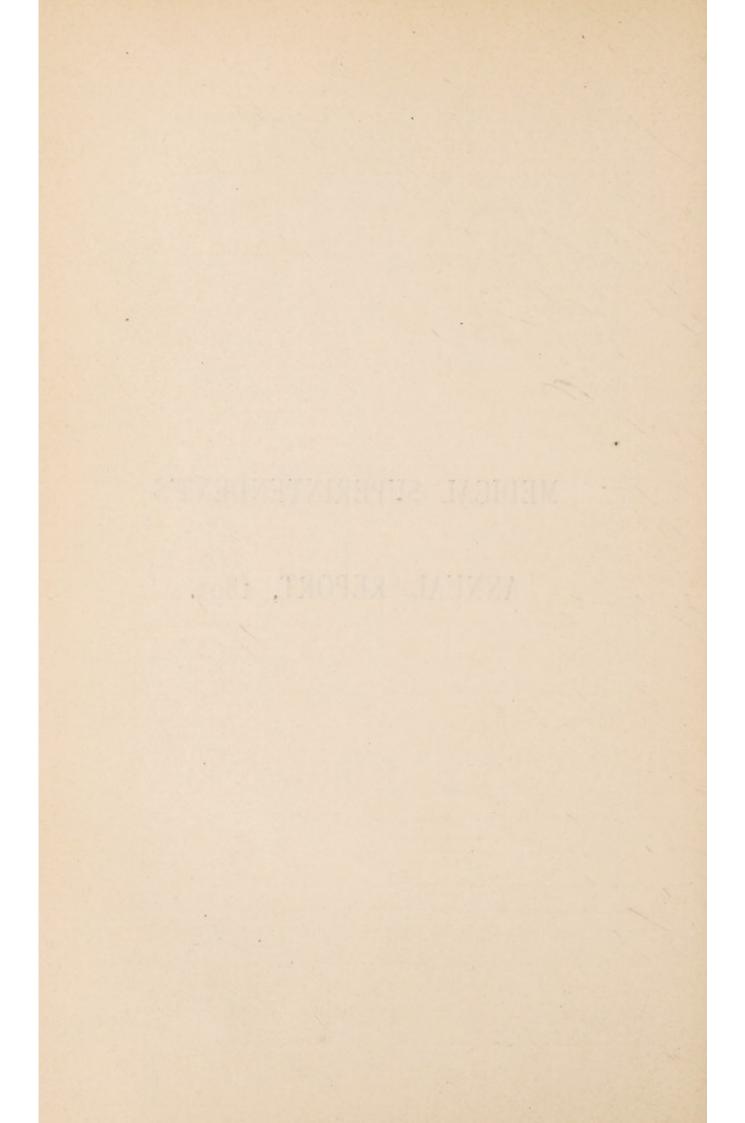

There are still two Assistant Medical Officers We are glad to report that the Medical records are properly kept.

C. S. BAGOT, REGINALD SOUTHEY, Commissioners in Lunacy.

MEDICAL SUPERINTENDENT'S

ANNUAL REPORT, 1893.

TWENTY-THIRD ANNUAL REPORT

OF THE

MEDICAL SUPERINTENDENT.

To the Committee of Visitors of the Berks, Reading, and Newbury Lunatic Asylum.

MR. CHAIRMAN AND GENTLEMEN,

I beg to present to you my Report upon the general management of your Asylum and its Medical History for the year ending December 31st, 1893, to which is appended the usual Statistical Tables.

The changes amongst the patients have been as shewn in the following table :—

	Males.	Females	Total.
Patients in the Asylum on January 1st	234	311	545
Admissions	44	62	106
Total Cases under treatment	278	373	651
Discharges-Recovered	14	24	38
Relieved	3	. 8	11
Not Improved	3	5	8
Deaths	18	31	49
Remaining in Asylum on Dec. 31st	240	305	545

It will be seen from the above that we ended the year with exactly the same number as we began, viz. :--545. This result of the year's working compares favourably with that of the previous year, when a net increase of 23 had to be recorded. There were 2 private and 1 criminal female patients admitted, and the same number were discharged. The criminal became chargeable to the rates on the expiry of her sentence. The number of private patients in the Asylum remains the same, viz. :--7.

Admissions

Not an Increase of Insanity.

Unfayourable Nature.

Excluding all patients admitted during the year who had at one period or another been inmates of this Asylum and also those transferred from class to class we are left with a total number of 89 new cases, which number is a marked decrease to that of last year, and is only on an average with that of the past 8 years. So far therefore as your County is concerned insanity cannot be said to be on the increase. The call for further accommodation is made chiefly on account of the accumulation in the Asylum of cases in whom there is not the slightest hope of recovery and whose longevity is materially lengthened as a result of careful housing, feeding, and nursing. As an example of the unfavourable pature of the admissions we have had no less than 20 brought from Workhouses where each had been resident for some prolonged period. In not one of those 20 can there be said to be the slightest chance of recovery, consisting as they chiefly do of idiots and aged broken-down people. Those had been retained in the Workhouses so long as the limited nursing capacity of these institutions would permit, and were brought here only to permanently swell the population.

Curability.

No less than 27 of the admissions were over 60 years of age, and of these 16 were over 70. Out of a total of 106 cases 31 were on admission prognosed as being curable, 15 as only doubtfully curable, and no less than 60 were recorded as hopelessly incurable. During the year the anticipation of recovery amongst those noted as curables has been realised to the extent of 18. Of those remaining in the Asylum 8 are deemed to be possibly curable and 17 doubtfully curable, leaving the large number of 520 to be carried to the account of the permanent population, only to be reduced by removal to the care of friends or by death.

The health and bodily condition of the admissions were also very unfavourable, as shewn by Supplementary Table 6. 32 were returned as in bad health, 52 as in indifferent health, and in only 16 could the health be said to be good. As already mentioned many were advanced in years, and only fit for care in the Hospital Wards. They are usually very frail yet are in a continued state of restless activity, sleepless and noisy at night, very destructive and offtimes of filthy habits. Those patients, of whom we are yearly getting an increasing number, cause the nurses the greatest anxiety lest an injury to life or limb, either accidentally or intentionally by other patients, should befal them.

Of the causes of insanity in the admissions Hereditary Influence ranks highest with a total of 34, next in order comes Predisposition from previous attacks, which is responsible for 20. There was a total of 8 due to Intemperance in Drink, 10 to Congenital Defect, 7 to Epilepsy, and 3 to Syphilis causing General Paralysis.

The discharges numbered 57, of these 38 were recovered and 19 were removed. Excluding those cases which were transferred from other Asylums (3), and those transferred from class to class (2), the recovery rate on the admissions is 37.6, a fraction less than that of last year. Nine of those removed were so far relieved as to be able to be taken care of by their relatives. Every encouragement is given in suitable cases to induce the friends to take over the care of patients so as to reduce our numbers, but I am sorry to say it is not taken advantage of so fully as it might be, probably on account of the general poverty of the agricultural class from whom we largely draw our patients.

The deaths numbered 49-18 males and 31 females, giving a death rate of 9 per cent. on the average resident number. This is higher than last year but is still below the Health and Condition of the Admissions

> Causes of Insanity.

Discharges.

Deaths.

Influenza.

average death rate of County and Borough Asylums. The increase is mainly attributable to the epidemic of Influenza which raged with most fatal effect upon the aged and feeble in the months of March and April. During these months the day temperature was high and the nights very cold, producing an atmospheric condition which had a most disastrous effect upon the course of the disease. With few exceptions every one affected had pulmonary complications, in fact the tendency of the epidemic seemed to be to exert its greatest effect upon the respiratory tract. In some of the fatal cases death ensued within 48 hours of the case being reported. Within a period of 9 days there were 78 cases, and during the two months that it was in our midst 136 of the patients and 42 of the staff were laid down. What were the exertions devolving upon the nursing staff and the pressure upon the Hospital accommodation can readily be imagined, yet the necessary work was willingly and well performed, and I have nothing but praise to bestow upon those who had to stand the brunt of the battle. In several instances many weeks elapsed before those members of the staff who had been affected could resume their ordinary duties.

Cerebral diseases account for the large number of 21 deaths, of which 9 were due to General Paralysis and 4 from Epilepsy. Pulmonary diseases and Senile Decay each account for 10. A boy died of an epiletic attack whilst at home on trial and is therefore reckoned amongst the number. One of the deaths may be specially mentioned as being that of a female adult aged 21, who died of that most fatal brain disease designated General Paralysis. Until very recently this disease was considered to be essentially one of middle adult lif-, but lately attention has been drawn to the fact of its having occurred in a few adolescents from 16 to 20 years of age, and now it is my privilege to record another which was verified by post-mortem examination.

General Paralysis in an Adolescent. There has been no escape neither has there been any suicide or Coroner's Inquest. Several Suicidal attempts have been made but fortunately were frustrated by the vigilance of the nurses. The only criminal patient admitted this year was tried at Quarter Sessions for having attempted suicide by cutting her throat. She was found insane and sent here, where for the first two months she was a constant source of anxiety. She was ever on the alert to effect her purpose by any possible means, even going so far as to make violent attacks upon the nurses to obtain their scissors or hairpins, happily without success, and now although not considered quite fit for discharge she has recovered her reason and makes herself an agreeable and useful member of

the Ward in which she is placed.

There have been very few accidents, the most important being in the cases of two old patients who each sustained fractures of the neck of the thigh bone by falling, and a man received fractures of two ribs through being struck with a broom by an impulsive epileptic. All made good recoveries.

There have been several important operations performed by the Medical Officers, all with satisfactory results, the chief being :---

For cataract in a female.

For strangulated femoral hernia in a female aged 78. Amputation of the breast for cancer.

Amputation at the thigh in a male necessitated by gangrene as a sequel of typhoid fever.

Extirpation of suppurating cervical glands in a female.

I regret to say that the general health has not been quite satisfactory, and on several occasions it has been my duty so to report to you. As a legacy of last year we had a continuance of Scarlet Fever on both sides of the house, which only ended after 7 patients and 5 members of the staff had been affected. Isolation, so far as we could command, Genéral Health. Scarlatina.

Inquests, Suicides, and Escapes.

Accidents.

Operations.

was immediately resorted to as each case arose. On the top of this we had a visit of the most serious epidemic of Influenza it has been our fortune to suffer from, followed in the summer by an epidemic of Opthalmia and of Diarrhœa consequent upon the excessive dryness and heat of the past summer. The cases of Diarrhœa were slight but numerous, causing constant surveillance of our sanitary arrangements. One case assumed the dysenteric form and proved fatal. In the autumn we had 3 patients suffering from Typhoid Fever. All made good recoveries except one, in whom gangrene of the foot and leg supervened, necessitating amputation.

Typhoid Fever.

Infectious Hospital.

Surrounded as we are by numerous small villages which are seldom if ever free from one or other of the Zymotic diseases it is no wonder that we are frequently having them imported into our midst by patients, friends, or others. In the spring you decided to erect a detached Infectious Hospital, thinking it no longer wise to expose the main building with its increasing population to the risks and worries of such repeated outbreaks; further, by so doing, sleeping accommodation for over 60 patients besides increased day space, which on the female side is badly wanted, will be liberated for ordinary use. Plans were devised for the accommodation of 6 of each sex with the necessary offices, and were duly sanctioned by the Commissioners in Lunacy. After competition the tender of Mr. Simonds, of Reading, was accepted to erect the Hospital at a cost of £2,495. Work began in the early part of September, and favoured by the open autumn it has progressed so rapidly that at the present time the building is being roofed in.

Treatment.

The treatment continues on the same lines as hitherto. Every means, moral and physical, that can assist us in curing the patient or in making happier the life of the incurable is called into requisition. Excercise on the farm and garden, entertainments and out-door games have their turn with due care and discretion.

Much has been done to improve the sanitary condition of the Asylum and to keep the fabric in good order and repair. Besides the usual painting, &c., new w.c. pans and flushing cisterns have been introduced into male ward No. 7. The pans are the wash down hoppers and the cisterns are of the 'Tower' pattern with a 3-gallon flush. Both are a great improvement on the old cisterns and wash-out pans. All the w.c.'s of male 1 have been renewed, the floors tiled, and the soil pipes carried outside. The drainage of the farm buildings has been re-arranged, and where possible carried in open gutters. A separate main has been added to the heating apparatus for the female Hospital which can be heated separately from the other wards and to a higher temperature. At the present time the heating apparatus of the original building, all of which has been recently re-laid, works very satisfactorily, but necessitates an increase in the consumption of fuel which, considering the great benefit and comfort derived therefrom, is well expended. Situated as we are, far from the coal fields, we suffered severely by the recent prolonged strike. It was only by the most exacting and oft times disagreeable surveillance that we were able, in spite of our usual stored supply for emergency, to keep ourselves going from day to day. It will probably be a question should such a repetition occur whether it would not be wise to provide further storage accommodation.

Two members of the Board of Commissioners in Lunacy made their annual visit of inspection on October 28th, and left a gratifying report which is appended as to the state of your Asylum.

In future the Maintenance Account, by order of the Asylum Rates. Local Government Board, has to be saddled with the rates of the Asylum instead of being added to the Repairs Account as hitherto.

With few exceptions, which have been reported to you, I can again report favourably of the staff. The past year Visit of Commissioners in Lunacy.

New Work.

Staff.

has been a trying one for the responsible heads in the wards, and to them I freely tender my deep obligation and thanks for the excellent work that has been done. The only change amongst the officers is the appointment of Miss Chance to the post of housekeeper in succession to Miss Morgan, who left to assume a more responsible post in the new London County Asylum at Claybury. To my colleagues, Drs. Dunn and Johnston, I thankfully acknowledge much ready and willing assistance, and to Mr. Nicholls, the Clerk and Steward, much praise is due for the conscientious manner in which he discharges the duties of his office.

Deaths of Two Visitors. I cannot conclude this Report without referring to the great loss your Committee has sustained by the deaths of Mr. Goodlake and Dr. Ryott. Both were men of ripe and wide experience, which was constantly devoted to the best interests of your Asylum.

To you, Gentlemen, it is my duty to gratefully acknowledge much consideration and support in the performance of the many duties appertaining to my office.

I have the honor to be, Mr. Chairman and Gentlemen, Your obedient Servant,

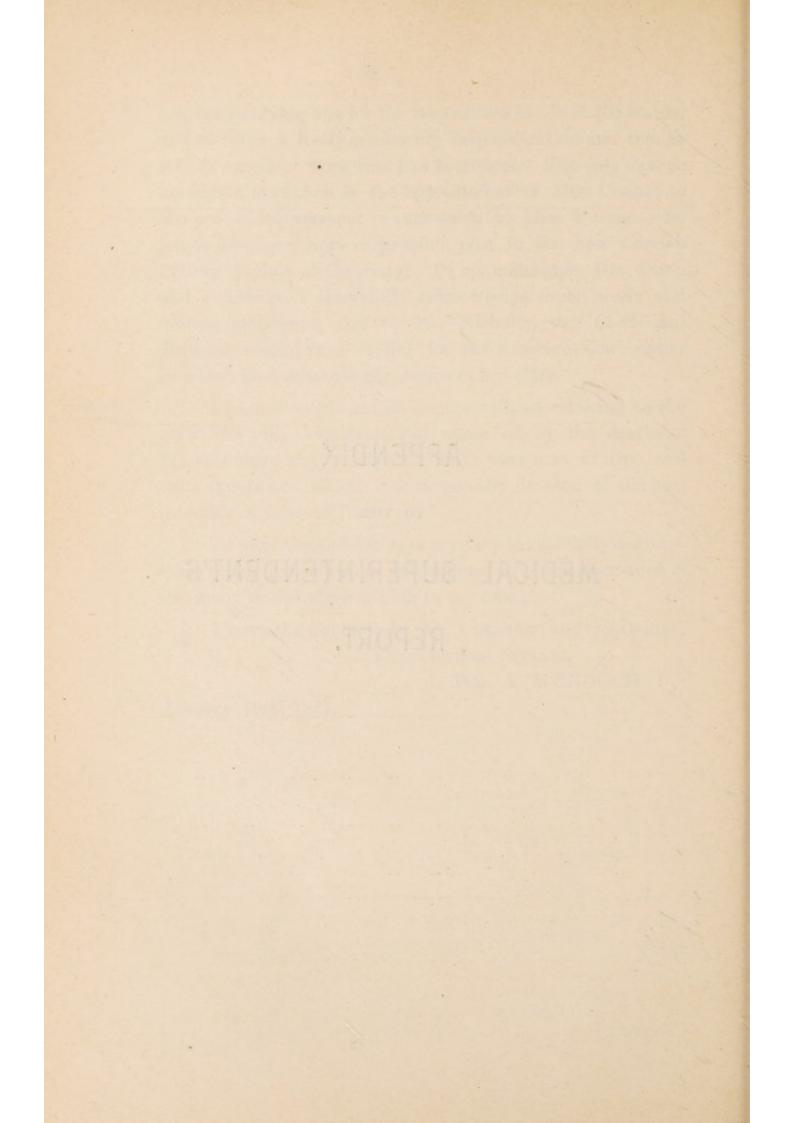

J. WM. A. MURDOCH.

January 19th, 1894.

Relapsed persons discharged recovered	17	49	66
Net † recovered persons being 27.2 per cent. of persons admitted	260	342	602

* Persons, *i.e.*, separate persons in contradistinction to "cases," which may include the same individual more than once.

Re-admission applies only to re-admission into this Asylum.

 \dagger i.e., Recovered persons same at the present time so far as the Asylum statistics show.

TABLE III.

Showing the Admissions, Discharges, and Deaths, with the mean Annual Mortality and proportion of Recoveries per cent. of the Admissions for each Year since the opening of the Asulum on the 30th September. 1870.

CHAPLAIN'S REPORT.

CHAPLAIN'S REPORT.

To the Committee of Visitors, Berks Asylum.

GENTLEMEN,

I have pleasure in submitting to you my Annual Report for the year now closing.

The Chapel Services have been performed twice each Sunday—with a sermon at each service—also on Christmas Day, Good Friday, Ascension Day, and every Wednesday throughout the year. The services have been generally appreciated, and the behaviour of Patients and Staff in Chapel has been devout and attentive. The average attendance of Patients at Divine Service on Sundays has been 330, and the average number of Communicants at the celebration of Holy Communion each month has been 27.

I would again express my thanks, and I feel sure the thanks of the Patients also, to Dr. Murdoch for his kind interest in our Services, and to those of the Officers and Staff who form the Choir, and who so very ably render the musical portions of the services.

As the Chaplain's Journal explains in detail, I have regularly visited all departments of the Asylum throughout the year. As I ventured to point out in my last Report, a very great deal can be done by this *personal* contact with the Patients. I have always endeavoured by practical and friendly conversation to render such spiritual direction, consolation and sympathy as the case required, and I believe many are made happier and more hopeful by this means. I have attended members of the Household and Staff, who have required my ministrations, and I have administered the Sacrament of Holy Communion to Patients and Staff who in illness have required and requested it.

Bibles and Prayer Books are fairly distributed in the Wards.

The Library is still greatly appreciated, and books are regularly issued. We have some 750 volumes, but could do well with some new ones.

Since my last Report—Dec. 16th, 1892—there have been 48 deaths among the Patients. Of these 32 have been buried in the parish churchyard at Cholsey.

I have assisted regularly in musical and other entertainments for the Patients.

With expressions of grateful thanks for all the kindness which you have extended to me in the past.

I am, Gentlemen,

Your faithful and obedient Servant, AUGUSTUS E. FARRAR,

CHAPLAIN.
