NEWCASTLE-UPON-TYNE
CITY LUNATIC ASYLUM.

REPORT, 1905.

17TH JANUARY, 1906.

The Committee of Visitors of the Newcastle-upon-Tyne Lunatic Asylum have, in pursuance of the provisions of the "Lunacy Act, 1890," to make the Forty-first Annual Report (and the Seventeenth Annual Report under the Local Government Act, 1888) to the Council of the condition and management of the Institution.

On the 31st day of December, 1904, the number of patients on the books was 806 (viz., 439 males and 367 females). The admissions during 1905 were 228 (viz., 109 males and 119 females).

The admissions were chargeable in the following manner :—

	MALES.	FEMALES.	TOTAL.
As Private Patients	4	7	11
To the Newcastle Union	84	98	182
To the Commissioners of Prisons ...	1	2	3
To the Tynemouth Union (Walker Parish)	20	12	32
As "Out-County" Patients	—	—	—
	<hr/>	<hr/>	<hr/>
	109	119	228

The discharges were 130 (viz., 58 males and 72 females), and the deaths were 112 (viz., 62 males and 50 females).

The average number daily resident was 800 (viz., 428 males and 372 females).

The number discharged recovered was 58 (24 males and 34 females).

The number remaining on the books on the 31st December, 1905, was 792 (viz., 428 males and 364 females). Of this number 21 are chargeable as private patients, as against 18 last year; 6 to "Out-Counties," against 45 last year; 2 are chargeable to the Commissioners of Prisons, against 1 last year; 26 to Tynemouth Union (Walker Parish); and 737 chargeable to the Union of Newcastle-upon-Tyne, as against 742 last year, being a decrease of 5 for the year 1905.

The Commissioners in Lunacy visited the Asylum on the 11th July, 1905.

The Committee have much pleasure in again expressing their entire satisfaction with the manner in which Dr. Callicott and the members of his Staff have discharged their onerous and responsible duties in connection with the Asylum.

(Signed) WM. H. STEPHENSON,

CHAIRMAN.

REPORT OF THE COMMISSIONERS IN LUNACY.

NEWCASTLE CITY ASYLUM,

11TH JULY, 1905.

We have to-day visited this Asylum, and have seen all the patients, with the exception of six patients who were out for the day, and three who were absent on trial.

There are on the books the names of 802 patients, 420 being males and 382 females.

Of these 21 are private patients and 22 chargeable to Out-County Unions.

There are at the present time vacancies for 27 males and 14 females. We found the patients neatly dressed, and in a satisfactory state as regards personal tidiness, and free from complaint apart from the subject of detention. They were also quiet and orderly in their behaviour.

Twenty-eight men and 16 women were in bed, but otherwise the health of the Asylum was satisfactory. The dinner which was served to the patients to-day consisted of Irish stew and brown bread, the beverage

being lemonade. The meal appeared to be popular with the patients, but we thought that the meat might have been more carefully distributed. From the statistics returned to our office we learn that 54 per cent. of the patients attended the Church of England services on Sunday; 66 per cent. were present at the associated entertainments; 11 per cent. were altogether confined for exercise to the airing grounds, and that as many as 78 per cent. of the men and 66 per cent. of the women were usefully employed.

Among the improvements which have been effected since our colleagues' visit, a new boundary wall on the south front, 491 yards long, has been built; and we can report that the plans for the reconstruction of the kitchen on the female side referred to by them have received the approval of the Secretary of State, and will immediately be submitted for tender.

We found the Institution in good order, and can report in generally favourable terms of the state of wards, dormitories, and bedding, but the door handles and division posts in the w.c. spurs should be removed or protected; and a larger supply of books should be distributed in the day-rooms, more especially in those devoted to the accommodation of the less favourable cases.

We would also call attention to the fact that an electric tell-tale clock is much needed on the female side to test the night watching.

Since our colleagues' visit, on the 7th April of last

year, 299 patients have been admitted, 137 have been discharged, 59 on recovery, and 148 have died. There has been no employment of mechanical restraint, and two patients only—one of each sex—have been secluded on two occasions for $8\frac{1}{2}$ hours in all.

At the end of last year the Staff of Attendants was maintained at adequate strength, there being about one attendant to every 10 patients.

Of the total Staff, 28 per cent. of the men and 38 per cent. of the women had served under one year, and 25 per cent. of the former and 13 per cent. of the latter had served more than five years.

Since the last visit four male attendants have left the Asylum for misconduct, one having been dismissed for leaving a patient of whom he was in charge.

The cause of the 148 deaths were most of them natural and ordinary, 21 per cent. being due to general paralysis, and the same proportion to phthisis. One patient died from the results of a fractured rib, sustained before admission; another from erysipelas of the head, following upon an accidental wound; and a third from suicide by hanging, in circumstances which were reported to our Board. *Post-mortem* examinations followed deaths in the creditable proportion of 80 per cent., and bed-sores existed in 5·3 per cent. of them. Two patients also were so suffering at our visit to the wards.

Inquests were held in four instances, viz., in the three cases above referred to, and in that of a woman who died suddenly of heart disease. The serious casualties

consisted of seven fractures or dislocations of bones, all except two being the result of accidental falls. In the two exceptions, the fracture of a rib and that of clavicle, were sustained in struggles with attendants, as to which the Committee made inquiry at the time, and satisfied themselves that no undue force had been used.

The zymotic disease in the Asylum has been represented by four cases of colitis; one of suspected enteric fever, now under treatment, the origin of which has not been ascertained; and one of small-pox, which occurred at the end of the year. The source from which the infection was derived was undiscovered. All the patients and servants were re-vaccinated, and no extension of the disease occurred.

The Case Books continue to be very well kept.

HARDING F. GIFFARD, } COMMISSIONERS
F. NEEDHAM, } IN LUNACY.

MEDICAL SUPERINTENDENT'S REPORT.

CITY ASYLUM, GOSFORTH,

NEWCASTLE-ON-TYNE,

21ST MARCH, 1906.

MR. CHAIRMAN AND GENTLEMEN,

I have the honour to submit the Forty-first Annual Report, with the Statistical Tables, for the year 1905.

On the 1st of January, 1905, there were 806 patients (viz., 439 males and 367 females) on the books of the Asylum; and on the 31st of December there were 792 patients (viz., 428 males and 364 females) residing in the Asylum.

The average daily number resident in 1905 was 800 (viz., 428 males and 372 females); and the total number under treatment was 1,034 (viz., 548 males and 486 females).

The admissions were 109 males and 119 females—total 228.

The discharges were 130; of this number 58 were *recovered* and 20 *relieved*.

The percentage of recoveries as calculated on the admissions, excluding cases transferred from other asylums, &c., was 29·90 (viz., 26·66 males and 32·69 females). The “relieved” comprised cases which were

transferred to other asylums in an improved condition, and such other cases as were sufficiently restored, and considered fit to be sent to the care of their relatives.

The deaths were 112 (viz., 62 males and 50 females), and represent a percentage of 14·00 (viz., 14·48 males and 13·44 females) of the average daily number resident, and a percentage of 10·83 (viz., 11·31 males and 10·28 females) of the total number under treatment.

The General Statistics of the Asylum are as follows:— Since it was opened in June, 1865, there have been 4,749 admissions (viz., 2,552 males and 2,197 females), of whom 589 (viz., 255 males and 334 females) were re-admissions, having been certified as insane at least once previously, and sent to this Asylum. Of the 4,749 admissions, 1,387 (viz., 611 males and 776 females), or a percentage of 29·2 (viz., 23·9 males and 35·3 females) have been discharged recovered; 995 (viz., 548 males and 447 females) have been discharged relieved or not improved; and 1,575 (viz., 965 males and 610 females) have died, leaving, as has been stated, 792 patients on the books of the Asylum on the 31st December, 1905, as compared with 806 on a similar date of the previous year 1904. Of these 792 patients, 4 men and 1 woman, are chargeable to the City of York; there are 21 private patients—2 are chargeable to the Commissioners of Prisons; and there is one Out-County case. The actual number of patients chargeable to the Newcastle Union was 737 as against 742 in the previous year, being a decrease of 5 patients for the year 1905.

The admissions during the past year of male patients have decreased, but there has been an increase of female patients; the discharges have increased, and there has also been an increase of the deaths in both sexes.

By reference to Table XI., it will be observed that there were 24 cases (19 men and 5 women) of general paralysis admitted; 11 males and 18 females were epileptics, and there were 36 congenital imbeciles, and 32 cases of secondary and senile or organic dementia.

Table X. shows the ascertained or ascribed causes of the insanity in the admissions, discharges, and deaths.

In the admissions, *domestic troubles, adverse circumstances, and mental anxiety*, have contributed as causes in 49 instances, *intemperance in drink* in 53 instances, and hereditary predisposition in 44 cases. Previous attacks had occurred in 28 instances, and 36 cases suffered from congenital mental defect.

Table V. shows an increased number of deaths in both sexes, and the percentage is therefore still higher than in former years. There have been 17 deaths from pulmonary consumption, and 15 men and 9 women have died from general paralysis, and there have been 4 fatal cases (1 man and 3 women) of colitis.

In two of the deaths the Coroner held an inquest—H. A., a female patient, who was admitted on November 21st, 1904, accidentally fell while getting out of bed on the morning of December 28th, 1904, and broke her left arm. She was 77 years of age, and confined to bed suffering from cardiac degeneration, from which she

died on the 8th of January, and the inquest was held on the 9th. The second case was that of a male patient named A. M., admitted on the 11th January, who hanged himself in a closet, in No. 1 Ward, on the 16th of May, about eight a.m., by taking the rope from a pair of steps and fastening it to a water pipe near the ceiling. This patient was admitted in a depressed condition with suicidal propensities, but for six weeks previous to his suicide, he was bright and cheerful, and had been daily employed in house work in his ward.

The cause of death was verified by *post-mortem* examination in 83 per cent. of the 112 cases.

It is with great grief that I have to record the death of Miss Elizabeth Ogilvie Aitken, Head Nurse and House-keeper, which occurred on May the 10th, from rheumatic fever. Although Miss Aitken had only been in office since the 1st of June, 1904, she had proved herself most valuable in all her work. She was devoted to the patients, and universally respected by the Staff, and her untimely and sad death was regretted by all.

The post of Head Nurse and Housekeeper was filled by the appointment of Miss Jeannie Philipps MacLeod, from the North Riding Asylum. She has had a varied and extensive experience in several asylums, and, in addition, she possesses the advantage of being a trained hospital nurse. She entered on her duties on August 30th.

I am glad to report that the general conduct of the attendants and nurses has been satisfactory throughout the year.

I have again much pleasure in thanking my fellow-officers for their loyal help in management of the Asylum, and I beg to express my gratitude to the Committee for their continued kindness and courtesy to myself at all times.

I am, Gentlemen,

Your obedient Servant,

JAMES THOMAS CALLCOTT.

APPENDIX I.

TABLE I.,

Showing the Admissions, Re-Admissions, Discharges, and Deaths during the Year 1905.

	M.	F.	Total.
In the Asylum, 1st January, 1905	439	367	806
Admitted for the first time during the Year	100	107	207
Re-admitted during the Year.....	9	12	21
Total under treatment	548	486	1,034
