Horfolk Lunatic Asylum.

MEDICAL SUPERINTENDENT'S ANNUAL REPORT

FOR THE YEAR 1875.

TO THE COMMITTEE OF VISITORS.

I beg to submit to you my fourteenth Annual Report of this Asylum, together with the usual statistical tables.

On December 31st, 1874, the total number of inmates was 477, of which number 183 were men and 294 women.

During the year 57 men and 64 women were admitted as new cases, and 7 men and 15 women were re-admitted—making a total of 143 admitted during the 12 months; 64 of these being men and 79 women. The number of patients treated during the year was 620, of whom 247 were men and 373 women. In the same period 16 men and 34 women were discharged cured; 1 man and 5 women relieved; and 1 woman was transferred to another asylum; we lost 31 men and 33 women by death, making the number of those who died or were discharged, 121-48 of these being men and 73 women; thus leaving on our books, on December 31st, 1875, 199 men and 300 women—total 499; of whom 2 men and 1 woman were out on probation. The average daily number of inmates was 188 for the males, and 300 for the females, showing an increase of 9 men and 20 women as compared with 1874. The numbers in the Asylum on December 31st, 1874, compared with those of the corresponding date of 1875, show an increase of 16 on the men's and 6 on the women's side. The number of male patients admitted during the year was higher than that of any previous period.

This unique great excess of admissions on the male side is not to be explained by the capitation grant allowed by Government; for all the cases were such as could not be properly treated outside an Asylum, although a large proportion of them required merely that moral treatment, supervision, and general care and attention, which can nowhere be so well carried out as in Institutions specially adapted for the Insane.

Our admissions were less by 11 than in 1874, although in analysing the figures there were 13 more men, but 24 fewer women. Twenty of the number referred to were upwards of 70 years of age, and belonged to a class whose bodily and mental infirmities required a special management and skill that cannot possibly be obtained in the Workhouses, as at present constituted, where they are mixed with the other paupers, and subjected to a mode of life, and a discipline or regimen for which they are utterly unsuited.

The cases re-admitted were 21, or 14 per cent. of the total number admitted during the year; a proportion below the average of former years. In 16 of these the interval between discharge and re-admission varied from $1\frac{1}{2}$ to 16 years; in the majority it exceeded 3 years, and in 5 it did not exceed 7 months; in one of these 5 cases, pregnancy was the immediate (exciting) cause; in 2 the recurrent type made a relapse possible at any time; and, in one, bad home influences amply explained it; in the 5th case, the remarkably short interval of three weeks is accounted for by the fact that she had been admitted several times before, that the woman was naturally of a very anxious temperament, a widow, and entirely selfdependent; her pre-disposition was, consequently, exceptionally strong, and her circumstances precisely such as might, at any moment, develop insanity; her convalescence was (like that of all the rest) thoroughly tested by the ordinary means; but, nevertheless, she most unfortunately relapsed the day following her discharge, and was returned to us in three weeks. In spite of every care, precaution and test, a certain proportion of cases *will*, in given unforeseen circumstances, relapse without any premonitory indications whatever.

Taking the last 10 years together, the increase in our numbers has been at the rate of 3 men and 2.5 women per annum; and taking the last 5 years, separately, at the rate of 4 men and 8 women per annum.

Our wards are constructed to accommodate 192 men, and whenever, as at present, we exceed that number, the surplus patients occupy the detached ward built for infectious cases, and which, when not required for its original purpose, relieves us of a pressure that would be attended with great inconvenience.

The dormitory for the male epileptic and suicidal is not capacious enough for patients belonging to these classes, and as it is essential that all of these should be under the charge of the special night attendant, plans for the enlargement of this dormitory, as well as for certain other alterations and improvements, have been submitted to and approved by the Commissioners in Lunacy, and, when carried out, will afford sleeping room for 12 additional patients under the same roof.

The recoveries were 25.0 per cent. for males and 43.0 per cent. for females. This strikingly favourable result on the female as compared with the male side is in accordance with the experience of all Asylum Medical Officers, and is due to the fact that insanity in men is so much more frequently associated with and dependent upon chronic and incurable brain disease than it is in women, whose mental aberration so commonly have their origin in special functional disorders and diseases that are amenable to ordinary medical treatment. Our mortality for the year was higher than that of the preceding eleven years, being 13.11 per cent. of the daily number of inmates, and showing a per centage of 16.5 on the men's side and 11.0 on the women's.

The causes of death require no special notice, being such as are always more or less in operation in Lunatic Asylums, where the enfeebled, diseased, or disordered state of the nervous system renders the inmates especially susceptible of morbific causes; and the depressed state of their vital powers makes them a ready prey to any disease that may assail them. Post mortem examinations were made in 33 cases, only, as against 40 in the previous year. On September 6th an inquest was held upon the body of W. B., the immediate cause of whose death was a fracture of the skull from a fall in the day-room; he was the subject of general paralysis, and of course weak and unsteady on his legs, consequently a slight push from a fellow-patient, caused him to fall like a statue, and with a like result, viz., a fracture; post mortem examination revealed extensive softening of the cerebral substance, so that, probably, he would have died in a few weeks if he had not fallen. A verdict of "accidental death" was returned.

On March 14th, one of the female patients, the subject of dementia and paralysis, was delivered of a male child.

Very few attempts to escape occurred during the year, and these were not marked by any noteworthy circumstances.

I have also to record a remarkable immunity from accidents of all kinds.

Once more I regret to have to call your attention to the large proportion of incurable patients admitted during the past year; I refer to a class of persons who do not require the skilled advice and systematic treatment of an asylum, but merely food, clothing, and general hygienic conditions, which asylums no doubt afford in perfection, and thus life is prolonged to a class of patients who would do equally well in a less expensive establishment.

Amongst the entire number of patients there are only 57 of whose recovery there is a faint hope, and of these, many may ultimately prove to be hopelessly insane.

For the first three months of 1875 both wings furnished heavy sick lists, erysipelas figuring most conspicuously, and causing us great anxiety; some of the cases were of a phlegmonous type, and in two or three of these extensive cellulitis, with large abscesses and symptoms of a pyæmic character occurred. All who were attacked were either demented or in feeble health. A similar type of disease co-existed in different parts of the county, so that it was not endemic but epidemic; not due entirely to local insanitary conditions, but to some more widely-spread, general telluric, or atmospheric influences; still, like all other epidemics, it pointed out the weakness in our system, the unsound links in our chain of arrangements, and tried them severely. The epidemic visited one particular ward in the oldest part of the building, where the ventilation and other sanitary matters are very defective. This may be called our weakest link, but we must remember that, in 1814, when this part of the Asylum was built, sanitary science was in embryo, or at most, in its infancy, and it is extremely difficult so to modify a building of this sort as to bring it up to the sanitary requirements of the present day. However, notwithstanding this imperfect state, we promptly and energetically improved our ventilation, cleansed and limewashed the ceilings and walls, and avoided, as far as possible, the washing of the floors, which, by making the atmosphere damp, has been found to favour the propagation of erysipelas.

I am happy to say that the last seven months of the year were characterised by a remarkable freedom from sickness and disease of every kind, so that we had almost a clean bill of health.

As regards the employment given to our patients I have little to report that is new or noteworthy; the digging up and removal, however, of an enormous quantity of earth for sewage tanks, was a source of active and useful exercise, for a long period, to many of the worst class. Recreations and amusements have, as in former years, received a due share of attention, and the introduction of theatricals has supplied the patients with a novel and fruitful source of hilarity and enjoyment.

It gives me pleasure to state that the changes in our Staff have been both few and unimportant, and that they have not, in any instance, been the consequence of grave misconduct. I continue, as heretofore, to receive the cordial support of my coadjutor—Mr. Seymour—and of all the other officers of the Asylum, without whose harmonious co-operation, I need hardly say, that my unaided efforts would be unavailing to promote the successful working of our living machinery.

WILLIAM C. HILLS, M.D.,

MEDICAL SUPERINTENDENT.

The Commissioners in Lunacy inspected the Asylum in July last and made the following Report:—

> NORFOLK COUNTY ASYLUM, JULY 12TH, 1875.

This Asylum has been the subject of our inspection to-day. In the course of our visit we have gone through the several wards, seen every patient in residence, and looked over the offices, shops and grounds. On the books are now 491 persons, consisting of 192 males and 299 females. Out on probation are 1 man and 5 women. By occupation of the new ward the overcrowding of the female sex in this Asylum, to which our colleagues referred in July, 1874, has ceased.

The general health is now good, but since the last visit there have have been as many as 16 patients attacked by erysipelas in the male division, and about 10 women on the other side of the Asylum. Dr. Hills attributes the epidemic to atmospheric causes, and it is noteworthy that the malady has been prevalent in Norwich and elsewhere in this neighbourhood. There is now a single case in the wards which is likely to end fatally, as the man is a bad subject. The following are the recorded changes since members of our board were here :—

		Males.	FEMALES,	TOTAL.
Admitted	 	54	95	149
Discharged	 	16	50	66
Died	 	30	33	63

Of those who were discharged 4 only had it seems not recovered. Of those who died 13 sank from senile decay, and 2 from erysipelas, complicated with other causes; 4 deaths were attributed to epilepsy, but none of these took place through sufficient and lying upon the face. To-day 4 men and 6 women were in bed, most of them in the comfortable infirmaries. With reference to this point, we may here state that the female infirmary has been transferred from No. 6 to No. 2. It now provides 14 beds. To the comfortable aspect of the wards much attention is given, and a large proportion of the patients are usefully occupied, the result is, as in other Asylums where these matters are studied, much contentment and little turbulence; very few complaints even on the score of detention were made to us.

The dress of the patients was tidy and clean, and the materials are varied and quite unobjectionable.

In each ward is a medicine cupboard duly locked, and a proper scullery will soon be added by conversion to that purpose of a single room; the water-closet accommodation, originally insufficient and defective, is to be improved immediately, in fact this has been done to a great extent on the male side. We think that the proper ventilation of these closets call for much consideration.

The new ward for females is tenanted, and has been well furnished; its decoration is in progress.

The Gardens surrounding this Asylum, for it would be wrong to describe them as airing courts only, reflects much cheerfulness on the interior of the building, and are beyond praise, in regard to their laying out, and the brightness of the flower beds. We were glad to see that the ground given up to the more excited patients for exercise is not overlooked, and presents also a very gay appearance.

The dormitories, beds, and bedding, were of course examined by us, and their condition was creditable to the staff in both divisions.

The arrangements reported on the last visit as to the night supervision of epileptics are still in operation, and Dr. Hills' further experience confirms his opinion in favour of the nightly association of epileptics under the eye of an attendant employed to sit among them.

If, however, the present number of epileptics on the male side is maintained, we think that it will become necessary to enlarge the dormitory now used, inasmuch as 8 or 10 cases of that class are now left to the ordinary supervision of the night watch, which we consider unsafe. The suicidally disposed of the worst character are placed with the majority of the epileptics. There is another matter which will also require early attention, the inadequacy of the present day room space for the inmates of wards 3 and 4, in all 61 men. Whether this difficulty could be best met by widening the corridor, and taking in the present space given to the male attendants for a mess room, is a matter for consideration.

We were in at the dinner hour in the hall, the dinner consisted of beef with cabbages, and rice, and a half-pint mug of beer to each patient, mustard with the beef would not be amiss, but the meat was excellent, and the beer good and genuine; the vegetables were also good, and the quantity of every thing abundant. We understood that the same dinner was given to those unfit to be present at the general dinner, except that most of the idiot and demented have milk and water in lieu of beer.

In the shops we saw the men there usually engaged. Tailors are very difficult to find among the patients, but 6 men work in the shoemaker's shop, and there are 9 others who are employed in upholstering, and as smiths, carpenters, or plumbers, and 1 as a bricklayer. Altogether 91 men are made useful in the Asylum, its offices, shops, and grounds, and as many as 199 women also do something in the shape of work, including 31 in the laundry. The additions to the laundry are finished, and are very satisfactory; the foul linen department will be ready for use within a few days.

The dormitory accommodation for the laundry workers is comfortable. A duplicate boiler has been added to the laundry apparatus.

We did not omit to look at the chapel; no work has yet been done in the way of giving it, as far as possible, some ecclesiastical character, but we trust that the Visitors will give this subject their consideration. Its decoration in an appropriate manner, by texts or otherwise, after consultation with some professional church architect, is very desirable. The attendance there of men on Sundays is 158, of women 225.

We did not leave the Asylum without a glance at the cricket ground. These and other ways, by musical performances, &c., a large majority of the patients are induced to take out-door exercise. During the winter, dances in-doors, and other recreations, fitted for that season, continue to be given. No one was to-day secluded or under restraint; but since last visit 4 women, each only once, have been secluded; there is no record of restraint during that period of women, but 1 male patient has been restrained, more or less for 4 weeks, for surgical reasons, and by means of gloves.

Since our colleagues were here, Mr. Francis Seymour has been appointed Assistant Medical Officer, vice Dr. Shaw resigned, he was temporarily absent, but on looking at the case books kept by him we see that certainly in that branch of his work he zealously performs his duty.

(Signed)

CHARLES PALMER PHILLIPS, Commissioners ROBERT NAIRNE, in Lunacy.
