Resolved that the following

## REPORT\*

of the SUPERINTENDENT be printed and circulated.

TO THE COMMITTEE OF VISITORS

GENTLEMEN,

The summary of Patients for the year 1862 shews a Total of 675 who were chargeable to the Counties of Oxford and Berks, or to the City and Boroughs in Union.

The admissions during the year were 73 Males, and 77 Females; a total number of 150 persons, which has been exceeded in two former years only since the opening of the Asylum in 1846.

---

\* RULE 25—[of the General Rules of the Asylum.] The Superintendent shall submit to the Committee of Visitors, at their first meeting after the Oxfordshire Epiphany Quarter Sessions annually, a Report in writing, of the general condition of the Asylum, and the number and character of the Patients; distinguishing the numbers who have been received and discharged as cured; the number of re-admissions; the number employed, and in what manner; the deaths which have occurred in the preceding year, and also the total number of discharges, cures, and deaths since the opening of the Institution, and specifying the sexes in each statement; with such other facts as the Superintendent may think desirable, or which the Visitors may have suggested.

Of the re-admissions of Patients, 6 had been absent from the Asylum less than a year; 11 for longer periods; 12 had been discharged at some time from other Asylums; and 8 were removed to this, from other County Asylums; numbers which are severally less than they were in 1861.

Sixty Patients have been discharged during the year recovered, being an increase on the number similarly discharged last year.

The deaths have been 65; being at the rate of  $9\frac{3}{4}$  per cent on the whole number chargeable; being less in number and proportion than in 1861.

Amongst the deaths and accidents, in 1862, I may refer to the following: H. H. C. an Epileptic Idiot, who had been long failing, died from natural causes. In his attacks of Epilepsy he broke his thigh, and subsequently complicated the injury. A. T. a violently maniacal Patient, who, while taking his airing, attempted to get over a Railing, fell, and fractured three ribs. The cases of both

these Patients, as sent to the Commissioners in Lunacy, will be appended to this Report. These Patients were both, after their accidents visited by their friends, who were made fully acquainted with the circumstances. L. C., while walking restlessly in her ward, was pushed violently by another Patient, she fell on the floor, and sustained a fracture of the thigh at the hip. She was nearly 70 years of age, although her restlessness has interfered with her treatment, she will probably be able to walk about.

On the first day of the year 1862, there were 495 Patients in the Asylum; which number increased during the year, to 510; the average number of the whole year was 490. On the last day of the year the numbers were 213 Males and 270 Females; (Total 483.) of these 24 Male and 7 Female Patients were under contract at the BUCKINGHAMSHIRE ASYLUM at STONE; and 6 Males and 24 Females, at BEHTNAL HOUSE, LONDON.

The increase in the total number chargeable was 19, being 10 Female and 9 Male Patients.

I visited both the ASYLUM at STONE and the Licensed House at BETHNAL GREEN, and saw all the Patients in them who were chargeable to the LITTLEMORE ASYLUM, and I was satisfied with the condition in which I found the Patients, with their health, and with the comforts afforded them.

To find suitable accommodation for the continually increasing number of Lunatic Patients, has been one of the prevailing anxieties of the year; and has not been confined to the limits of our Counties. The unanticipated number of Lunatics brought to the County Asylums has been a great difficulty to contend with. The Act of Parliament passed in 1845 contemplated the building of separate Asylums to which Chronic Lunatics might be removed, but I am not aware of any such County Chronic Asylums having been provided. The Plan and economy of such separate Buildings has not been satisfactorily demonstrated. Possibly it will be found that the design of the additional ASYLUM to be built for the County

of SURREY has advantages, and may be worth the study of the Visitors of the LITTLEMORE ASYLUM.

The Act passed in the last Session of Parliament gives a greater latitude to the provisions of the Act of 1845. It has yet to be proved to what extent that expansion of principle can be made available for the relief of the LITTLEMORE ASYLUM, a very limited power is given to the Visitors of making arrangements with the Guardians of any Poor Law Union for the reception and care of Chronic Lunatics. The concurrent powers given to the Commissioners in Lunacy is rather more than co-extensive. The possible arrangement would need to be carried out under a variety of authority ; and it does not appear to me that the power conferred can be more satisfactorily exercised than the power which the Visitors previously had, and from time to time used. The Visitors had the power to discharge a harmless Patient to the care of his friends, or absolutely to discharge if they saw fit. The exercise of the power now given, is subject to the Guardians satisfying the

Poor Law Board and the Commissioners in Lunacy, that the Union House can fitly receive Lunatics.

The Visitors have never shewn a disposition to retain Patients in the Asylum who could be satisfactorily taken care of by their friends ; or under other responsible persons in their own neighbourhoods, provided that the charge which they have undertaken as Visitors is duly regarded.

Before transferring any Patients to a Workhouse, the questions to be determined will be as to the fitness of the House for the reception and care of Lunatic Patients whose condition has been confirmed by the length of time they may have been insane ; of the selection of such Patients to be made by the Superintendent ; of the ability of the Medical Officer of the Union to certify, after fourteen days detention, that the Patient is a proper person to be kept in the Workhouse, and that the House affords proper accommodation ; and as to the satisfaction of the Visiting Commissioners. Now the Superintendent of an Asylum has no knowledge

or responsibility as regards the fitness of a Workhouse to receive Lunatics until it is approved by the constituted authorities for the care of Chronic Lunatics. He can have no knowledge as to the disposition of the Guardians of any particular Union to have their Lunatics transferred from the County Asylum to the Workhouse of another Union. He knows the habits and conduct of the Patient under his care ; and, under the rule of Asylum management, he does not know what effect the proposed change may have on many tranquil Patients. He sees however, from time to time, that Patients who have been apparently fit to return home, have been unable to bear the prospect of their discharge ; and he would feel that the sending of tranquil Patients to a Workhouse Asylum and having them returned to the County Asylum would be very unsatisfactory, and not economical.

That many Chronic Lunatics are Patients in the LITTLEMORE ASYLUM, may be explained as a fact, and is unquestionable. Patients are received here from 23 Poor Law Unions. And

2153 Patients have been so received; of these 543 were still under charge of the Visitors at the close of the year 1862.

In the first 14 years from the opening of the Asylum (including 1846 and 1849) the number of Patients admitted was 1710. Of these on the 1st of January 1862, 368 were Chronic Lunatics still under charge, five of whom were discharged, and 24 died (being at the rate of  $6\frac{1}{2}$  per cent in the year). Out of 293 Patients received in 1860 and 1861, 116 had, (at the end of the year 1862,) been discharged; 76 had died, (being  $8\frac{1}{2}$  per cent per annum;) and 101 remained in the House.

The year 1862 is complete as regards the number of Patients admitted into the Asylum; but the result of recovery or mortality among them would be unsatisfactory, as there were as many admitted in the latter months of the year as at its beginning. More time is requisite for the course of the disease to be developed. The 145 Patients who were admitted in 1860, were reduced in number to 51 still under charge in January 1862, being mostly Chronic Lunatics.

In that year 3 were discharged and 9 died ; reducing the number to 39 in 3 years. Of the 9 who died, 7 were Epileptic or Paralytic. In 1861, the number of Patients admitted was 148 ; of whom 21 were discharged, and 21 died, leaving 106 ; and of these in 1862, 30 were discharged, and 14 died ; leaving 62.

Disease having done its work, but the Chronic Lunatic surviving, the Patient remains under the care of the Visitors.

1st.—This class is composed of the IDIOT, whose mental development was arrested in the early periods of Life ; but who is likely to be in fairly good bodily health.

2nd.—The LUNATIC who has survived in body when the mind has been subverted ; or is reduced to a slow but steady course of deterioration ; while the *vis vitæ* remains an astonishing problem.

And 3rdly.—The EPILEPTIC and PARALYTIC or others in whom the bodily disease is still a prominent feature. Chronicity,—the lapse of time, discloses slowness of mind, and want of the

power of control ; but an inactive state of bodily disease is usually persistent with it, and Epilepsy and Paralysis are very commonly present in the latter stages of Chronic Insanity. The nurse often reflects that the disease would have been more merciful, if less sparing to those whom it has attacked.

The duty of Life acknowledges the need of persistent charity. When therefore, it is proposed to adapt WORKHOUSES for the reception of such cases, it is also remembered that those Institutions decline to accept the character of Charities. The Asylum is in a great degree an ultimate substitute. Many Patients, received into the Asylum to be nursed, and to die, might have been as well treated and cared for in any sufficiently provided Infirmary. The WORKHOUSES, on the other hand are not provided for the care of such cases, with the concurrent wholesomeness of the House for other Inmates. The question of the economy of each Workhouse providing itself with a suitable Infirmary, is the question proposed to other Authorities. An Infirmary however so sufficient, ought to be

fitted for the constant use of a larger number of persons than could be sent from the County Asylum ; and would be a great Charity in every District. The number of Patients who could be sent from the Asylum to each Union Workhouse, within its ambit, must be very small. Chronicity does not involve freedom from relapse, violence, maniacal language, noisiness at night, or any other quality for which Patients are sent to the Asylum.

Also the removal of Chronic Lunatics to a Workhouse, involves expense : whilst the relief afforded to the Asylum would be doubtful, both as regards economy and accommodation. The removal of tranquil Patients from the Associated Dormitories would diminish the crowding of Beds which now exists ; because the tranquillity of the Patients makes it convenient that they should be so occupied ; but the crowding which is now objectionable, would be most vicious by the substitution of noisy, violent, or unmanageable patients, for the obedient and tranquil persons who had been removed ; and a largely increased number of Night Attendants would become necessary.

It is not for me to prejudge what may be hereafter contemplated. The perfecting of any arrangement will be a great difficulty. For the present the liability to have a continued pressure for accommodation in the Asylum is the urgent consideration.

The occupation of the Patients in the LITTLEMORE ASYLUM has been, as heretofore, mostly domestic or in the Garden. And, with reference to the latter, I may remind the Visitors that the number of acres under Garden cultivation was greater in 1862 than in former years: whilst the occupation of Patients was more directly profitable.

The usual Annual Account of the CLERK of the ASYLUM accompanies this Report.

I have the honor to be,  
Gentlemen,  
Yours' most respectfully and obediently  
WILLIAM LEY

Superintendent.

## APPENDIX.

H. H. C. July 3rd 1862.—Has been long failing and needed to be carried from the Paralytic Infirmary to his bed in the Epileptic Dormitory and back, night and morning for many months, being so weak that he cannot stand. As the Paralytic Infirmary is under the care of Women Nurses, he has been carried to and fro by a helping Male Patient. On the first instant, while sitting in an arm chair at table he had a fit, and again another on the night of the 2nd and 3rd. He seldom passes 24 hours without having one or more fits. On the first instant the Boy was attended to by the Nurse (Mrs. Edginton) while in the fit, who describes that he was sitting at the ward table, and perceiving him in a fit attended to and held him during the fit, she did not notice anything particular while she was holding him. When W.M. the helping Patient placed him in his bed last night, he called the attention of the attendants who were assisting the Epileptic patients in undressing, to H. H. C's. condition, saying "He was very bad," The attendants noticed a slight discoloration or bruise on the inside of the thigh, which did not call for further attention. This morning the left thigh was very much discoloured, swelled and shortened, the shirt was stained with fresh blood. The Head Attendant was called, who forthwith reported to the Medical

Officers that he believed the lad to have a broken thigh. On examination it appeared that the left Femur was fractured, that there was much extravasation of blood, producing dark discoloration, the bone had protruded through the skin, but was not at that time visible.

The peculiar fracture suggests that the blow was to the knee, when the thigh bone was drawn up on the occurrence of the fit on the first instant. And from the position in which the Boy was sitting at the table, at the time of the fit, it appears probable, that the knee being drawn up would come with violence against the table : There is no direct evidence that the blow did occur in the manner described, beyond peculiarity of fracture and position of the Boy at the time of the fit : The lad did not appear on the morning of the third to be more or less sensible than usual, he appeared to feel little, and to fear nothing. He showed no apprehension at the approach of persons about him : He would at one time have shown resentment to any one who offended him, and habitually enforced attention to himself by kicking and biting. He has been characterized as mischievous. He has latterly had very little power except to hold with his teeth. He did not now make any effort to show consciousness of injury, or desire to resent. He might not have totally recovered from the unconsciousness produced

by the fit. Excepting that he was reported to have had a fit on the 1st instant, and the morning of this day the 3rd, there is no evidence of how the injury to the thigh could have occurred. In the day time he has been in the Paralytic Infirmary, under the care of Female nurses, he has been carried to his bed at night, by the patient, and commonly undressed by him. In the night he might have had fits of which the Night Attendants, being on a variety of duties, were not cognisant, they had attended to him in a fit this morning, had attended to his position on the pillow, had put his bed covering in order, and had gone off duty without observing anything amiss. The day attendants had found him very dirty, as had been his usual condition in the morning ; and disfigured as described. The Patients near him in the Dormitory were Epileptics and Idiots, quite unable to give evidence, and are supposed to be harmless.

The absence of all evidence of the mode of the injury being incurred induces me to consider, that the long failing of strength, indicates a weakened condition of frame, violent convulsions of Epilepsy, to which he is liable, being capable of producing and often causing fractures in strong men : such evidence as is afforded induces me to believe, that the bone might have been, and probably was, broken by the action of the Epileptic

fit, while in the chair on the first instant. And certainly that the laceration of the limb was by the broken bone, of which necessarily, the one portion was convulsed, while the leg was incapable of partaking of that action, in the fit which occurred in the night of the 2nd and 3rd.

He died on the 22nd. exhausted by the combined effects, of prolonged General Paralysis and Epilepsy ; of the Febrile condition following the accident ; and of deep and extensive sloughing of the buttocks produced by three weeks confinement in bed.

A. T. From the date of admission April 12th 1862 has been Maniacal and Paralytic, on the 20th of July while rambling in the airing court he scrambled over a railing about 6ft. high, when on the top of the rail he appeared to fall, was up immediately and had nearly re-crossed the railing when he was assisted by the attendants. This was 11 a.m. he declared himself unhurt, thumped his chest to show that he was not injured, rambled more wildly than before, took his meals as usual, ravenously, and was reported as bruised by the fall.

21st. The extent of bruise over the right shoulder and thorax more manifest, and on careful examination it appeared that he had broken the 3rd and 5th ribs on the right side, he denied feeling anything amiss and

thumped the spot at which crepitation was felt and heard, to prove that he had no pain or uneasiness of feeling. The chest was bandaged, but he refused care and was restlessly active as usual.

On the fourth day after the injury, he was so much weakened that he helplessly resigned himself to being kept in bed, and from that time it became apparent that he could not recover the effects of his previous illness and recent injury. He became rapidly and entirely unconscious and died at 11 p.m. August 4th 1862. On examination post mortem it appeared that he had had severe Pleurisy and accompanying Inflammation of the Lungs at a somewhat distant period; and it is probable that it was consequent on that state of disease that he was brought to the Asylum; and that the attack had been about 12 months previously. As the result of the blow or bruise which he received fourteen days before his death, it appeared that the Sternum was partially broken, and the 3rd and 5th Ribs on the right side and the 4th on the left side were broken. That pus had formed at the points of Fracture, denuding the ends of the bones: There was no attempt at reparation, there was little recently produced Inflammation of the Lung. The other appearances recorded were such as are often found in the Patients who have died after a lengthened period of general Paralysis.

*Summary, for the year 1862, of Patients chargeable to the  
Counties of Oxford and Berks or to the City and  
Boroughs in Union.*
