THE  
ANNUAL REPORT OF THE COMMITTEE OF  
VISITORS OF THE COUNTY ASYLUM FOR LUNATICS,  
STAFFORD,  
PRESENTED TO THE  
COURT OF QUARTER SESSIONS, JANUARY 4th, 1870.

---

THE 51st Annual Report of the Visiting Committee of the County Lunatic Asylum, Stafford, now submitted to this Court, shews that the present numbers in the building are 519, of whom 261 are males and 258 females.

During the last 12 months 267 have been admitted, 127 have been discharged, 88 have died, and 25 have been removed to Burntwood Asylum.

Of the 127 discharged 11 have been re-admitted, most of whom have relapsed from a return to their previous habits of intemperance, or from insufficiency of diet in their own homes.

The average of recoveries on the admissions has been at the rate of 43 per cent., and the average of deaths on the numbers under treatment at 11 per cent. Most of the deaths have occurred in Lunatics very recently admitted, and several of them within a few days of being brought to the Asylum.

At the present time out of 519 Lunatics only 30 present any prospect of recovery, the remaining 489 being perfectly incurable, and likely to become permanent residents during the remainder of their lives. Many of

these, although incurable, are perfectly harmless and quiet, and with adequate care, attention, and food might do equally well elsewhere.

Since the last Report was read, several persons have been sent to the Asylum who have not shewn any symptoms of insanity after admission, the paroxysms having apparently left them previous to removal. After a short probation in the Asylum these persons have been discharged and have continued well up to the present time.

The charge for the maintenance of Pauper Lunatics belonging to the County of Stafford has been at the average rate of 8s. 10½d. per week, and the healthy appearance of those Lunatics who have been some time resident shews that the diet scale is perfectly adequate for their support.

It is only in consequence of the large amount of productive labour that this low scale is maintained, whilst the employment of the Lunatics assists most materially in promoting recovery.

A few minor alterations in the building have been required for the improvement in the accommodation; but no changes of any extent have been found necessary, although, from the very considerable dilapidations caused by Lunatics, constant renovation, by painting, &c., is always going on.

Notice has been received from the Agent of Lord Stafford to give up the Meadow Land, now in the occupation of the Asylum, with the view of facilitating the sale thereof, should Lord Stafford decide upon that course.

Neither accidents or casualties of any kind have occurred since last report, and your Committee are pleased to say that the Asylum has been quite free from epidemics or fevers of any kind.

Throughout the year your Committee have given their best attention to the interests of the Asylum, and at their periodical visits have always found the management of the Asylum conducted in a satisfactory way, and the officers and various officials attentive to their duties.

Signed,

Shrewsbury,

Chairman.

## REPORT OF THE COMMISSIONERS IN LUNACY.

—♦—  
Stafford County Asylum,  
Friday, 3rd September, 1869.

YESTERDAY and to-day we have gone over every part of this Asylum, and, excepting one female at present absent on trial, have seen all the patients, who are in number 512.

Since the visit made on the 1st July in last year there have been 281 admissions—144 males and 137 females ; 172 discharges—81 males and 91 females ; 61 of the former and 76 of the latter being entered as recovered, and 12 of each sex have been removed to Burntwood, and there have been 99 deaths—60 males and 39 females. This is a large mortality, but it is accounted for by the feeble condition in which very many are admitted. Twenty-three of the number first named died within a month and twelve more within six weeks after they were brought to the Asylum.

There was one inquest in a case of inflammation of the lungs, produced by accidental fracture of the ribs ; but all the other deaths were from causes ordinary in Asylums. From General Paralysis and Epilepsy there were 36, from Apoplexy and other disorders of the Brain 28, from Disease of the Lungs and Heart 16 ; from Senile Decay 13, and from other common causes 5. There were hardly any in bed as we passed through the Wards, indeed none on the Male Division, and only one among the women ; but there were in the Infirmary day rooms, and especially

on the male side, an unusual number of very infirm and unfavorable cases, with a large proportion of Epileptics. Having this in view, and the very proper arrangement by which all cases of sickness taking a serious form are brought into the Infirmaries, we desire again very urgently to report a suggestion formerly made for appointment of an additional Night Attendant in each Division. Where not only the infirm and Epileptic but the Suicidal are so numerous as here, a thorough efficiency in the night nursing is absolutely essential.

The proportion of sexes is 258 males and 254 females, and there was during our visit a good deal of noise in the basement wards, where the worst patients of both sexes are congregated. These wards have been made externally almost cheerful by judicious paintings, and are kept faultlessly clean and orderly; but they are sadly wanting in those comforts of furniture and other enlivening influences, which are in our opinion as necessary to this class of patients as to any other, if the object be to cure bad habits rather than to afford facilities for their indulgence. We repeat, therefore, the suggestion which has frequently been made for improvement in this respect, and would further suggest the desirability of trying the effect on some of those noisy inmates of removing them to better wards, replacing them by patients of a better class who are often found willing and pleased to help the attendants in the wards occupied by troublesome cases.

Subject to the remarks thus made, we thought the condition of the patients generally, as well in personal appearance as in freedom from excitement, quite satisfactory. We saw 183 of the men well clothed and of most orderly conduct and demeanour, at a good dinner well served in the Hall; and nearly all the women were in

their airing courts at our arrival, where they were joined soon after by a party of between 30 and 40 of the most quiet class, who had been walking in the country. Such extended walks can only, we fear, be afforded to this comparatively limited class, until provision is made for all by means of a walk round the estate; and considering the numbers here to whose proper treatment facilities are always available for open-air exercise would be of the greatest importance, we strongly recommend the formation of such a walk, with seats and sunshades. Excellent as is the planting of the airing courts of this Asylum, their space is limited; and though nothing can be pleasanter in such weather as the present than the shade they afford, they do not yield what a majority of the patients require both in winter and in summer, and which the walks recommended would supply. These Courts, we should add, are carefully kept.

The interior of the Asylum, too, was throughout in the best order. The bedding of the worst patients was good and clean, and the Wards occupied by them were free from any offensive odour. Much papering and painting has been done since the last visit, and more is in progress: nor would it be easy to excel in any suitable ornaments and comfort by which the most perfect Asylum accommodation should be characterised, such Wards and Galleries as (for example) No. 2 on the female side. Reverting again, too, to the rooms where the less favourable cases are, we had pleasure in observing that since the last visit, cork carpets have been put down in several day rooms where Epileptics sit, so many of this unhappy class shewed marks of injury from falls that this kindly and judicious provision is really an important one, and we shall be glad to see it extended to all their dormitories and day

rooms. With patients of this kind on the increase, the many stone and plaster floors remaining in the Asylum require absolutely some such protection, until the wise and necessary steps can be taken of replacing them by boarded floors : exclusive of the main Corridors of the upper story, which are also used as sleeping rooms, there are still 12 associated and 67 single bedrooms calling for this change, which we would earnestly commend to the favourable consideration of the Committee.

Another recommendation we think called for, namely, that where, as in some wards on the female side, there is only one water-closet (and there is no such ward with less than thirty inmates) additional closets should be supplied. Addition has already in this respect been made, since the last visit, to No. 7 on the male side, but of this as of similar additions previously made in the Male Infirmary, we regret we cannot speak favourably. Both are associated closets, one having seven seats and the other four, all exposed and some facing each other ; an arrangement needlessly indecent, and even more gravely objectionable for its degrading tendencies.

From the impression made upon us by this visit, we are led further to suggest that in the onerous duties of a various kind now solely discharged with so much zeal by the Matron, she should be relieved by the appointment of a head female attendant. That lists of the names of the patients be kept in the several wards by the attendants in charge, and that former suggestions, for hand-rails to the staircases, and for associated amusements more frequently than once a month, should be adopted.

As to such amusements, as well as to the regular employment of the patients, there is for the present nothing to add to what has been said in former entries. Of the

men, excluding the 47 who scrub and clean the wards, 114 have useful occupation—78 on the land, and 36 in the shops and domestic offices. Of the women, making similar deduction for ward cleaning, 138 are employed usefully—110 at needlework, and 28 in the laundry and domestic offices. About 300 of both sexes take part in the associated amusements; and the musical practice is continued, once a week during the men's supper in the Dining Hall. It is very satisfactory to have to add that the attendance at the school classes does not diminish in either Division, between 40 and 50 of each sex receiving this advantage. The congregations at the religious services number 319 on Sundays, and 268 on week days.

Doctor Bower employs no restraint, and has thought himself able for some years to dispense with the necessity of resorting to seclusion,—in this and other respects, continuing with much ability to devote all his time and care to the welfare of the patients.

John Foster, } Commissioners  
John D. Cleaton, } in Lunacy.

## ANNUAL REPORT OF THE SUPERINTENDENT.

The admissions into the Asylum during the year 1869 have been very numerous, and with the exception of the year 1865 were larger than in any former period since the Asylum was opened in 1819. Admissions.

If the members admitted into Burntwood Auxiliary Asylum direct, be added to those received here, a considerable increase amongst the Pauper class of Lunatics belonging to Staffordshire will be found to have occurred.

Out of the 267 admissions within the 12 months since last report, thirty-eight had been previously in the Asylum ;—the remaining 229 may therefore be recorded as fresh cases of Insanity. Re-admissions.

In 71 of these persons the cause of the derangement of mind was stated to be Hereditary Tendency ; a cause which will certainly not diminish in the future ;—the histories of the inmates of the Asylum shew that very many of those now resident, are the sons and daughters of parents who have themselves been Lunatics, and who have been in this establishment at some previous time. Hereditary Pre-disposition.

The carefully recorded cases of those Lunatics who have been resident at any time within the last 50 years shew, that in many instances children and even grandchildren descended from such afflicted persons have since been brought here ; the 71 Hereditary Lunatics shewn by Table 9 indicate an

increase in the disorder from the above-mentioned cause, at a greater ratio than formerly.

Other causes  
of Insanity.

The same Table shews that the causes of Insanity in the other admissions do not materially differ from those in former reports ; Intemperance—Bodily Disease—and Poverty have contributed their full proportion of cases ; 42 having arisen from Intemperance—15 from Poverty and Starvation, and 102 from Diseased Brain or some other form of bodily disease.

Acute Mania.

Table 2 shews that the proportion of cases of Acute Mania has greatly increased, 93 individuals afflicted with the disorder in this form having been received within one year.

The excitement and violence displayed by persons thus affected render it necessary to retain a large staff of Attendants, as incessant watchfulness and attention are required in treating such forms of Insanity.

Although this type of the disorder is so formidable on admission, still it presents more prospect of recovery than many cases which appear of less importance, if the cause is accidental and if the attack does not arise from alteration in structure of the Brain.

Melancholia  
and Dementia.

61 cases of Melancholia came under treatment, and 37 in a state of Dementia, in which latter form the Lunatics are completely destitute of all mental intelligence, either for the duration of the disorder only, or in most instances permanently.

Suicidal  
Lunatics.

Out of the 267 admissions 113 were stated to have shewn a propensity to commit suicide, and several of them had marks left by previous attempts on life.

88 Lunatics have died since the last Report was made ; out of which number 50 succumbed within 12 months of their admission, and 19 within one month of the same. Deaths.

The diseased and collapsed state in which the majority of these persons were removed to the Asylum precluded any chance of recovery ; in some of the cases the exhausted condition of the Lunatics was so great that some blame attached to officials sending them in a state of bodily disease too advanced to bear removal without great risk.

127 convalescents were discharged during the year, and of these 116 have remained well, up to the present time. Recoveries.

In many instances restoration of the intellect is found to be simultaneous with improvement in the bodily health ; but such a condition only occurs where the insanity arises from functional derangement ;—where any morbid alterations of structure exist no such favourable results can be anticipated ; and it is even found in some cases that amendment in the bodily health is followed by actual loss of mental power and a state of Atrophy of the Brain ; in which condition many of the inmates now in this Asylum remain.

16 persons were recorded as being in good health when received in the Asylum ;—the remainder being either paralysed—suffering from some other form of bodily disease, or in a state of exhaustion. State of Health on Admission.

Of the 519 Lunatics in the house December 31st, 1869,—30 alone present any prospect of recovery : the remaining 489 may be considered as totally incurable and as permanent inmates for life. Prospect of Recovery.

Accumulation of harmless and imbecile Cases.

The accumulation of Imbeciles and Idiots will after a time preclude the admission of fresh cases and render fresh accommodation necessary.

Recoveries.

The numerous recoveries, 116 in number, which have taken place, are almost entirely amongst the cases recently brought to the Asylum; and if the establishment is to continue as a place for the cure of insanity, it will ere long be requisite to draft off many of the chronic and incurable class who now occupy beds which might be devoted to cases admitting of recovery.

Removal of harmless cases to Workhouses.

Many of such cases might be attended to in wards attached to Workhouses adequately fitted up for the reception of such harmless persons. Good diet, cleanliness, kindness, together with care and attention are alone requisite for them. The bodily health of many such persons is good and little or no medical treatment is required. For such persons a smaller staff of Attendants would suffice.

Difficulties have been found in effecting removals to Workhouses, but unless some such system as is now advocated be carried out, more Lunatic Asylums will have to be added to the large number already in existence throughout the country before long.

No local nor Epidemic disease.

No Diseases of an Epidemic character or from local causes have attacked the inmates, and for many years the Asylum has been perfectly free from any kind of fever.

Neither accidents or suicides have occurred, and the deaths which have taken place have arisen from diseases present in the Lunatics when admitted.

Employment

Nothing is found to contribute to the restoration of the mental condition in so powerful a degree as

employment, and by the occupation of the Lunatics, wherever practicable, not only is the restoration of their intellect advanced, but the cost of the maintenance to the different Unions is greatly diminished.

Out-door employment in the grounds and on the farm are found to contribute chiefly to recovery ; and whenever the capacity of the Lunatic, and as far as the limited extent of the property allows, advantage is taken of this to render his employment not only beneficial to himself, but advantageous to the Unions throughout the County ; by effecting a diminution in the cost of his maintenance.

Many residents, from physical causes or from mental incapacity, are incapable of being employed in out-door work. For the former class, trades of various kinds or in-door occupations are made use of ;—for the latter, amusements of various kinds—music, dancing, pictorial exhibitions, or theatrical representation are found of great benefit.

Trades and  
Amusements

These entertainments, if not of too frequent occurrence, are found well calculated to assist in promoting recovery, and are particularly beneficial in cases where a suicidal tendency or a disposition to melancholy exist.

Attendances at Chapel and School have been carried out with great regularity.

Attendance  
at Chapel  
and School.

The frequent visits and ministrations of our Chaplain have been most acceptable to the patients generally, and of essential benefit to the sick and afflicted.

The behaviour of all the Officers and Attendants throughout the year past, both in the male and female department, has been most exemplary, and

Conduct of  
Officials.

has contributed most materially to increase the comfort of those under their charge and to promote the list of recoveries.

The unvarying kindness and assistance at all times afforded to me by the Committee has greatly lightened the onerous duties of the management, and for the encouragement always granted to me I am sincerely grateful.

I am, my Lords and Gentlemen,  
Your very obedient Servant,  
Mark Noble Bower,  
Medical Superintendent.

The first part of the report is devoted to a general description of the project and the objectives of the study. It is followed by a detailed account of the methods used in the investigation, including the design of the experiments and the procedures for data collection and analysis. The results of the study are then presented in a series of tables and figures, which are discussed in detail in the following sections. The final part of the report is a conclusion and a list of references.
