Asylum Clerk. MR. G. JENKINS.

Matron. MISS GIDDINGS.

THE

THIRTY-FIRST ANNUAL REPORT

OF THE

COMMITTEE OF VISITORS

·OF THE

COUNTY AND CITY OF WORCESTER PAUPER LUNATIC ASYLUM,

Presented to the Justices of the County at the Epiphany Quarter Sessions, 1884, and to the Town Council of the City of Worcester, within twenty days of the 20th of December, 1883, pursuant to the 62nd Section of "The Lunatic Asylums Act, 1853."

1. Your Committee are thoroughly satisfied with the admirable manner in which Dr. COOKE discharges his arduous duties in every department of the Asylum.

The conduct of the Officers and Servants has been satisfactory throughout the year.

2. The prominent feature in this Report must of necessity be the progress of the new Buildings. The subject was dealt with in detail, as the matter was then in contemplation, by the Special Report presented to the Quarter Sessions and Town Council at Michaelmas, 1882, which will be found in the last Annual Report, page 18.

Your Committee have now to state that Quabb's Lane was stopped up by order of the Court of Quarter Sessions, the various purchases of land enumerated on page 22 of the Special Report were all duly completed, and, after obtaining the approval of the Quarter Sessions, Town Council, and Secretary of State to the Plans prepared by Mr. Rowe, your Committee advertised for Tenders for the main works in connection with the new Buildings.

Tenders were received as under :--

WALTERS AND SON	£27,495	0	0	
EVERALL	23,495	0	0	
Wood and Sons	21,770	0	0	
GROOME AND CO	21,200	0	0	
GUEST	21,100	0	0	
TREASURE AND SON	20,860	0	0	
GARLICK	20,579	0	0	
LOVATT	20,500	0	0	
Jones and Son	20,000	0	0	
HORSMAN	19,495	15	0	
HORTON	18,900	0	0	

After making careful enquiries your Committee accepted the Tender of, and entered into a Contract with, Messrs. PHILIP HORSMAN & Co., of Wolverhampton, for the erection of the main Buildings, at the sum of £19,495 15s. It will be seen that the Tenders ranged from £18,900 to £27,495.

3. Your Committee having, on investigation, satisfied themselves that the manufacture of a sufficient quantity of good bricks on the site of the proposed Buildings was practicable, and would effect a very considerable saving, had, prior to the acceptance of Messrs. HORSMAN's Tender, proceeded under proper supervision to turn and temper sufficient clay for the purpose, in which the Patients were as far as possible employed. These operations allowed of the double effect of preparing for the bricks and levelling the site.

4. Your Committee also entered into a Contract with Messrs. HADEN & SON, of Trowbridge, for the various works required in the Engineering Department.

5. The whole of the works are in progress, but your Committee do not feel it to be necessary to enter in detail upon the exact state of advancement; suffice it to say here that they have every reason to believe that the whole of the extension will be ultimately carried out at a cost within the sum granted by the Court and Council, viz., £35,200, and they hope that the Buildings will be ready for the reception of Patients before the close of the year 1885.

6. Your Committee beg to remind the Court and Council that no money has, as yet, been provided for furnishing the new Buildings, but they instructed Dr. COOKE to be preparing some of the carpenters' work by the Artizan Attendants employed at the Asylum, with the assistance of some of the Patients.

7. The exchange of lands with Earl BEAUCHAMP (referred to at page 19 of the Special Report), in order to rectify the irregular boundary line on the north of the Asylum property has been nearly completed, and his Lordship has purchased a small piece of surplus land at £80, which sum has been duly paid over to the County and City Treasurers, in accordance with section 40 of the Lunatic Asylums Act, 1853.

8. Your Committee are about to carry out very soon the improvements in the Farm Buildings referred to in the concluding paragraph of last year's Report, and for which funds were then granted, and are in hand.

9. In the last Report your Committee stated that they had reason to believe that a number of Patients chargeable to the Unions were in circumstances enabling their relatives to pay a higher rate than the pauper weekly charge, which covers only the bare weekly board, and does not contribute to the expense of lodging. It is obviously right that Patients should, if their means permit, make some payment in respect of the building, which, with its appliances and arrangements, tends so much towards the cure and comfort of the afflicted. The moral duty of meeting this obligation towards the County and City Rate is not less than the legal obligation of repaying to the various Unions the cost of maintenance, and the Committee think that this duty should be kept prominently before the relatives of Lunatics. They caused enquiries to be made in the various Unions, and the result is a considerable annual increase of profit derived from some of the Patients referred to, who have been transferred, with the consent of their friends, from the pauper to the private class.

10. Your Committee are considering whether it will not be advisable in future to apply the whole of the profit made from Out-County and Private Patients towards the cost of new Buildings, instead of devoting it to general repairs, in order to lessen the amount to be borrowed from time to time on mortgage. Their views on the point are not matured, but they have meanwhile ordered that none of this profit shall be so applied until Midsummer next, but shall remain in hand. If it is so dealt with, your Committee will have to make orders from time to time (probably for convenience quarterly) upon the County and City Treasurers for payment out of the Rates of the expenses of repairs, pursuant to section 38 of the Lunatic Asylums Act, 1853. The cost of repairs for the ensuing year may be approximately set down at £1,000.

11. The Agricultural Sub-Committee performs useful duties in connection with the Farm, the profits arising from which will for the past year come out well. Some of the wet lands are being underdrained.

12. The rate of charge will be raised from 7s. 3d. to 7s. 7d. per head per week from the 1st January, 1884. The Ratepayers again will be gratified to learn that the average weekly cost per head for the year 1882 was only 7s. $1\frac{3}{4}$ d., being absolutely the lowest of all the public Asylums of the country. The average weekly cost of the County Asylums was for that year 9s. $3\frac{1}{5}$ d. It should be added that in all probability the weekly charge per head might have remained at 7s. 3d. for the year 1884, but for the large additional expense involved in maintaining fiftyfive Patients at the Rubery Hill Asylum, at a cost of 6s. 9d. per head per week beyond the ordinary rate of maintenance.

13. Your Committee, under Dr. COOKE's advice, ordered a general vaccination to take place of all the Officers, Attendants, Servants, and Patients. The following table shews the number vaccinated :--

Total successful Vaccinations (first and second times)	795
Ditto unsuccessful	60
Not Vaccinated for various reasons	12

14. The large increase of the numbers in the Asylum of recent years, and the additions now in progress, have pressed upon the attention of your Committee the question of enlarging the Chapel, and Mr. RowE has, under their instructions, prepared plans for such enlargement in several different ways, which are now under consideration. The present Chapel holds, upon the usual scale of allotted space, 300 persons only, although some 340 Patients, exclusive of the staff, usually attend the services. This over-crowding causes much inconvenience and discomfort, and many more Patients might attend if there were room. Your Committee consider that accommodation is imperatively needed for 200 additional Patients. This question will be more fully referred to in a future Report.

15. Your Committee have adopted a uniform dress for both the male and female attendants, which they regard as having many advantages.

16. Two of the Commissioners in Lunacy visited the Asylum on the 3rd and 4th December. Their report will be found below (Schedule 1), also the Chaplain's Annual Report (Schedule 2), Statement of Repair Account (Schedule 3), and Statement of Mortgage Debt (Schedule 4). 17. The General Committee have held 13 meetings during the year and the House Committee 8 meetings. The following is the attendance table at both classes of meetings:—

adam Des Oberech advices and		NERAL ETINGS.	HOUSE COM MEET	
EARL BEAUCHAMP		11		4
THE EARL OF COVENTRY		1		0
ROBERT BERKELEY, ESQ		11		6
E. V. WHEELER, ESQ		4		0

F. D. LEA SMITH, Esq		12		0
REV. C. J. SALE		12		5
ROBERT BOURNE, ESQ.		10		0
JOHN BRINTON, ESQ., M.P		7		1
REV. H. W. COVENTRY		12		6
THE MAYOR OF WORCESTER		2		0
HENRY WILLIS, ESQ		5		0
FRANCIS WOODWARD, ESQ		8		3
R. E. BARNETT, Esq		10		4

18. The two (County) Visitors retiring will be Mr. E. V. WHEELER, who attended 4 meetings, and Colonel BOURNE, who attended 10 meetings.

19. Your Committee exceedingly regret to state that Mr. E. V. WHEELER'S non-attendance and consequent retirement have been caused by ill-health, and they think they would fail in their duty if they did not take occasion to refer in the highest possible terms to the great benefit the Asylum has derived from his punctual attendance, steady co-operation, and valuable advice for upwards of 20 years.

20. Deputations from numerous Boards of Guardians have visited the Asylum during the past year, and have, without exception, left favourable reports regarding the condition and management of the Patients belonging to their Unions. 21. The following Table shews the number of Patients in the Asylum at the last visit of the House Committee in each of the last six years :—

	MALES.]	FEMALE	s.	TOTAL.
1878	 314		422		736 .
1879	 336		434		770
1880	 348		417		765
1881	 362		429		791
1882	 341		436		777
1883	 349		422		771

The totals for 1882 are exclusive of 25 males and 5 females, and the totals for 1883 are exclusive of 25 males and 30 females belonging to the county and city, boarded out at Rubery Hill under contract. The Committee, however, believe that a careful consideration of statistics will shew that much of the apparent increase in lunacy is due to an increase of the longevity of the Patients, rather than to a spread of mental disease.

The totals for 1881, 1882, and 1883 include Private Patients, as under :--

	MALES.	F	EMALE	s.	TOTAL.
1881	 18		24		42
1882	 20		30		50
1883	 25		34		59

Signed on behalf of the Committee,

BEAUCHAMP,

CHAIRMAN.

MADRESFIELD COURT, DECEMBER 22ND, 1883.

[COPY]

REPORT OF COMMISSIONERS IN LUNACY.

WORCESTER COUNTY AND CITY ASYLUM,

DECEMBER 4TH, 1883.

There are in the Asylum 349 male and 421 female patients, making a total of 770, of whom 60 belong to the private class. There are besides 25 males and 30 females, who are boarded out in the Rubery Hill Asylum, so that the entire number of patients is 825. Here the wards are overcrowded; but they will be relieved by the new annexe now being erected, and which is calculated for 210 patients, with room for extension. This building will not be ready for more than a year, and at its completion there will probably be more than 100 patients to be at once placed in it.

We find the foundations of the new building laid, and the walls carried up to the damp course.

Since our Colleagues' visit of November 11, 1882, 88 male and 89 female patients have been admitted; 34 males and 62 females discharged; 22 of the former and 29 of the latter having recovered; and 44 males and 40 females died. The rate of mortality has been about 10 per cent of the average daily number resident. General paralysis was the most fatal of the causes of death. Twenty patients died from it. We notice that a male general paralytic was choked while eating his lunch, and that a female patient committed suicide. In these two cases there were Coroners' inquests. The causes of the remaining deaths were of the character common in Asylums. In all but three cases post mortem examination was made.

There have been several casualties occasioning fractures of limbs and bones. One was the subject of complaint to us by the patient. On enquiry we found, as was in fact admitted by the patient, that he had made an attack upon an attendant who was engaged in shaving another patient, and that in a struggle which ensued the attacking patient fell and had a rib broken. In another case of broken ribs, the patient is stated to have attacked the night attendant, who, with the assistance of another attendant, got the man on his back on the floor, but in the struggle he had three ribs broken. It is, we fear, but too probable that in these cases the attendants pressed with their knees on the patients' chests. In January last a male patient was attacked by typhoid fever, but recovered. It was supposed he had caught the infection from a sewer which had been opened for the purpose of removing an obstruction. There is at present a woman suffering from the same disease, but how contracted is not known. She has been a patient in the Asylum for some months. No other cases than these of epidemic or contagious disorders have occurred since the last visit.

During yesterday and to-day we have visited all parts of the Asylum. We found the wards in good order, but the temperature in some, chiefly in the female division, was low. Some experiments are being made in the male division to determine a satisfactory method of warming the wards, and particularly the single rooms.

Several wards have been painted this year, and all look comfortable, but the occupants of some are too numerous.

We are glad that the new building will comprise properlyarranged dormitories for epileptic and suicidal patients, for those now appropriated to these classes are structurally unsuitable, and complete supervision at night is impossible in them.

The mechanical means for testing the watchfulness of the night attendants have not yet been provided, but we understand that the purchase of some of Dent's Tell Tale Clocks has been sanctioned. We would most strongly recommend an electric apparatus, now used in many Asylums, in lieu of these.

The demeanour of the patients was quiet and good during our inspection. Their dress is very satisfactory; and due attention appears to be paid to personal cleanliness and neatness.

The returns supplied to us indicate that about 70 per cent. of the men and 74 per cent. of the women engage, to a greater or less extent, in some useful employment, as many as 102 men being employed on the land. These proportions are satisfactory. We could wish to see the numbers who do not go beyond the Airing Court, viz., 100 males and 131 females, considerably reduced, and efforts should be directed to this.

A larger Chapel would no doubt create a larger congregation; and we learn that its enlargement is now under consideration. On Sunday morning 349 patients attended Divine Service.

About 385 patients are usually brought together at the associated entertainments; on special occasions more. The patients at present under medical treatment are 23 males and 42 females. We find no record of the use of restraint since the last visit; but seclusion has been resorted to in the cases of 18 males on 61 occasions, and for an aggregate of 567 hours, and of 9 females on 42 occasions, and for a duration, in all, of 874 hours.

We learn with satisfaction that the Committee have just decided upon supplying uniforms to the attendants in both divisions, their wages remaining the same. The present staff, excluding head attendant, artizans, and domestic servants, comprises 22 males and a woman for the male division, and 25 nurses for the female division, for day duty; and there are 3 night attendants on each side.

The proportion of day attendants to patients is 1 to 15 on the male side, and 1 to 17 on the female. These proportions are lower than are usually found in County Asylums; and we think the staff is in some wards scarcely adequate.

In No. 2 Female Ward, for example, there are 56 patients, of whom 33 are considered more or less suicidal, and others epileptic in the charge of only 3 nurses, or 1 nurse to 19 patients.

The woman who committed suicide was an inmate of this ward. It seems to us that here certainly there should be another attendant.

The changes among the attendants have not been unduly numerous since the last visit.

The precautions against fire have, we are informed, been made more complete. We have suggested the addition to the code of instructions to attendants of some simple directions as to the course to be followed in removing the patients to a place of safety, and apportioning to each attendant his or her special duty.

The exits from No. 7 Female Dormitory and from the dormitories in the centre are not wholly satisfactory. The former, however, has windows which open just over a flat roof of part of the Laundry.

Plans for the enlargement of the Laundry and other portions of the offices have been sanctioned, and will be proceeded with as soon as possible.

New sewage tanks (which will not, we trust, be too large) are to be made, and a larger area of land will be brought under irrigation.

The various works in hand or contemplated will all tend to the greater efficiency and usefulness to the Asylum, already in a very satisfactory condition. It would be well, however, if they included a Detached Hospital for the treatment of such cases as that of the patient now suffering typhoid fever.

C. S. BAGOT, REGINALD SOUTHEY, Commissioners in Lunacy.

CHAPLAIN'S REPORT.

To the Committee of Visitors of the Worcester County and City Lunatic Asylum.

MY LORDS AND GENTLEMEN,

The return of the Advent season calls for my Annual Report, which is the Twelfth I shall have submitted for your approval since my entrance on the Chaplaincy of your Asylum.

For several years past no material change has taken place in the formal requirements of my office, though I find increasing calls on my time, due partly to the growing population, partly to the greater utility we have striven to make of our Library, the management of which falls to me, and partly to our aiming at greater efficiency in the Musical element in our Church services. It is no little satisfaction that in neither case is it labour in vain.

The Library, numbering nearly 900 volumes, has compensated for the extra labour bestowed on it. The new books, to which 17 others, the previous year's periodicals, were added in April last, have been well read. Altogether, I have issued 571 volumes, 441 of which were to the patients; and whilst these have afforded entertainment to the more regular and steady readers, they have also formed a fair index to the mental condition of some others. I am glad to acknowledge the care taken by the attendants to prevent as far as possible any damage to the books.

The expectation of improvement in our Sacred Music, which I ventured to express last year, has been realised under the unstinted care devoted to the choir by Mr. DOUTY, Assistant Medical Officer, and I feel thankful to him for thus lightening my responsibility; and to the Organist and Choir, for their cheerful response to the stimulus he imparts to us all at our weekly practice.

My Bible Class, at ten a.m. each Sunday, maintains an average of 59, 24 males and 35 females, being two in excess of last year. I think most of those that attend enjoy it, and both read and answer questions with sufficient intelligence to warrant a belief in the great utility of such a mode of instruction.

I have administered Holy Communion in the Chapel on seven Sundays, including Easter and Trinity Sundays, since my last Report, to an average number of 19 males and 16 females. The largest Communion I have known happened last Sunday, being 20 males and 22 females. I have ample reason to believe the regular Communicants value the privilege, and feel the deprivation if for any cause they are occasionally debarred. On Sunday last we made an offertory of a collection of about 16s. from amongst the attendants and a few others, by means of a Missionary Box of the S. P. G. sent round during the previous week.

During the past year no addition has been required to our stock of Bibles, &c., and the only purchase strictly in connection with my office is that of two surplices at Whitsuntide for use in the Chapel, the old ones being re-made for use in the House.

Our two Sunday Services with Sermons in the Chapel have been conducted throughout the year as heretofore, and likewise the Morning Services of Christmas Day and Good Friday. Also, as for many years previously, we have marked the Festivals and Harvest Thanksgiving with full Choral Services. Generally, but especially on these occasions, we cannot but be conscious of the crowded state of the Chapel. I need, however, say the less about this, as your recent repeated deliberations on its enlargement show you are fully alive to the want of accommodation.

The Wednesday Chapel Services of Morning Prayer and Litany, and the 8 o'clock prayers other mornings, consisting of one Lesson, a Hymn or two, and selections from Common Prayer read in the Assembly Room, have had the usual attendance, about 100, that is, those that can be spared from household or other employments. I have had to trouble Mr. DOUTY rather more than usual, and occasionally the Deputy-Superintendent with this last part of my duty, owing to greater absence from various causes; but the Medical Staff are all ready not only to give me help of this kind, but also by their friendly countenance to lend greater effect to my work generally.

By Reading and Prayer, I have ministered to the sick in both Hospitals, either privately or in small gatherings, as occasion offered, on most days throughout the year; and I am happy to think that in this way and by conversation, I have been the means of imparting spiritual encouragement, hope and cheerfulness to the minds of not a few. In their degree the same may be said of my visits three times a week to the other wards, and occasionally to the Workshops, Laundry, &c. I need scarcely say that most of the patients who have known me now for so many years always receive me with a friendly confidence and welcome, and I gratefully recognise the assistance given me by the attendants whenever necessity arises.

I am, my Lords and Gentlemen,

Faithfully your obedient Servant,

Powick, Dec. 7th, 1883.

ALFRED BOND, CHAPLAIN.

STATEMENT OF MORTGAGE DEBT.

THE THIRTY-FIRST ANNUAL REPORT

OF THE

MEDICAL SUPERINTENDENT

To the Committee of Visitors of the Worcester County and City Lunatic Asylum.

My Lords and Gentlemen,

I have the honour to lay before you my Report on the condition and management of your Asylum for the year 1883, and to present with it the various statistical and medical tables, to which is appended a financial statement of the general accounts, which has, as usual, been prepared by the Asylum Clerk, together with a table of the dietary, and some information as to the manner in which the patients have been employed.

The changes that have occurred among the patients during the year are as follows :---

Total number of patients remaining in the	Males.	Females.	Total.	
Asylum 1st January, 1883	339	433	772	
Admitted	80	86	166	
Discharged	33	60	93	
Died	42	34	76	
Remaining in the Asylum on 31st December	344	425	769	

The average number resident during the year was 340 males and 431 females. Of the total 769 remaining, the extreme limit in which recovery can be looked for is in the case of 29 males and 47 females.

ADMISSIONS .- The number of admissions has been just one more than the average number for the past ten years. The cases have, on the whole, continued unfavourable in their character for allowing of recovery, no less than 19 suffering from the fatal disease of General Paralysis, and 20 from Epilepsy; 8 were cases of Idiocy, some of which were also combined with Epilepsy; and 21 not included in the foregoing were over 60 years of age; 34 were for other reasons deemed incurable, leaving but 62 of the year's admissions, 33 males and 29 females, in whom, at the time of admission, there was a fair chance of recovery taking place, out of which number 10 males and 6 females have already been discharged cured, and 1 male and 3 females as relieved. Fifteen males and 9 females, who were admitted during the year, have died, and 3 males and 2 females have been discharged as unimproved, leaving at the end of the year, out of the total of 166 patients admitted, 51 males and 66 females still under treatment.

No criminal lunatic was admitted.

Three males and one female were transferred from other Asylums, their settlement having been determined on some Union in your County.

At the time of admission no less than 37 males and 45 females were stated to be suicidally disposed, and 68 males and 59 females were believed to be dangerous to others. In 49 cases there was reported to be either a collateral or hereditary history of insanity, whilst in 14 there was a distinct family history of consumption, and in 10 of intemperance.

By a reference to Table XVI. it will be seen that only the very small proportion of 42 cases were in good bodily health and condition, whilst of the remaining number, 62 were in an indifferent, and 62 in a highly critical state. It is very interesting to note how much of the diseased conditions was due to morbid states of the blood, heart, and circulatory system generally. DISCHARGES.—Of the discharges, 21 males and 26 females were discharged recovered, 2 males and 12 females relieved, and 10 males and 22 females unimproved. Included in these were 9 males and 3 females sent to fill the vacancies caused by death amongst the patients boarded out at the Rubery Hill Asylum, and also 25 female patients who were sent to that Asylum under an additional contract made during the year, the weekly rate of charge being the same as under the first contract—namely, 14s. per head. The seriously overcrowded state of your Asylum necessitated this step being adopted.

The percentage of recovery on the total number of patients admitted, excluding those transferred from other Asylums, was 27.2 for the males and 30.5 for the females, or an average for the two of 29.0. The rate of recovery would have been higher, but for the fact that some private patients were removed by their friends, in your Superintendent's opinion, somewhat prematurely, and so their discharges were ranked amongst the relieved instead of amongst the recovered, to which latter class they would have rightly belonged had they remained a month or two longer under treatment.

DEATHS.—The percentage of deaths on the average number resident was 12.3 for the males and 7.8 for the females, total 9.9; as compared with 11.7 males and 7.6 females, total 9.5, in all the County and Borough Asylums in England for the year 1882. Post-mortem Examinations were made in 73 out of the 76 cases of death. In Table XVII. will be found the causes of death, of which the following is a brief summary :—

and Statistic geometry dometry an april 161 101	Males.	Females.	Total.
Disease of the Brain	28	20	48
" " Heart and Lungs	9	9	18
Other Causes	5	5	10
Total	42	34	76

No less than 15 males and 1 female, included under disease of the brain, died from General Paralysis. PRIVATE PATIENTS.—Of the total number of patients remaining in the Asylum at the end of the year, 23 males and 35 females belonged to the private class, as against 21 males and 28 females remaining at the end of the year 1882. During the 12 months 8 males and 8 females have been admitted, 3 males have been discharged recovered, 1 male and 2 females relieved, and 2 males and one female not improved. Four males and 1 female have died. Six males and 3 females have been transferred from the pauper to the private class, and 2 males from the private to the pauper. As in last year's report, at page 61 will be found the rate of charge made in the case of every private patient remaining in the Asylum, together with the conditions on which these patients are admitted.

BIRTHS.—There has been one birth, the mother making a good recovery.

ACCIDENTS.—No fatal accident has occurred, but there has been a somewhat unusual number of injuries involving either fracture or dislocation of limbs.

The following is a summary, with the cause in each case :--

Two fractures of thigh occurring in old women—(1) by tripping over a piece of floor cloth; (2) by being pushed down accidentally by another patient.

One fracture of small bone of leg by slipping off a clod of earth on the farm.

Three fractures of collar bone—(1) by falling in an epileptic fit; (2) by fainting and falling down a flight of steps; (3) in the case of a paralysed patient tripping and falling.

Four fractures of upper arm—(1) by being pushed off a form by another patient; (2) by falling in a struggle with attendants who were preventing the patient attacking another patient; (3) by falling in the dormitory during the night; (4) by the patient falling off his bed.

One fracture of forearm—by tripping in the scullery over a bucket.

Four fractures of ribs—(1) by falling against the bedstead in an epileptic fit; (2) a very restless and feeble old man by falling; and (3) two cases in struggles with the attendants. One dislocation of shoulder—by a fall.

The details of these injuries, as well as of all others of minor import, were at the time fully reported to your Committee, and were made the subject of close investigation ; in no case was it shown that neglect or blame could be attached to any of the attendants ; and in one case only, your Committee thought, an attendant had been somewhat wanting in tact in dealing with his patient. The struggles above-mentioned were in all cases the result of unprovoked assaults by the patients, the outcome in most instances of some insane delusion, such as the suspicion of impending injury from those about them.

Several patients were admitted with recently inflicted injuries, the chief of which were as follows :—(1) with broken ribs, caused by the patient throwing herself down a flight of stairs; (2) with broken ribs, fractured collar bone, and recently amputated arm, the result of a railway accident; (3) with self-inflicted throat wound. In almost all the above cases satisfactory results were obtained, and this was especially so in the instance of the patient admitted subsequent to the railway accident, who reached the Asylum in an almost moribund condition, but who left it in a little over four months, quite recovered.

INQUESTS.—Two coroner's inquests have been held. One was in the case of a male patient, the subject of General Paralysis, who was choked whilst eating his morning meal, owing to the paralysed state of the muscles of the throat, allowing of the passage of food into the windpipe. Your Superintendent and Assistant Medical Officers were with the patient within two minutes of his being seized with symptoms of suffocation, and everything possible was done, including the operation of tracheotomy, to relieve him, but without avail. The verdict of the jury was " Death from accidental suffocation." The second inquest was in the case of a female patient who committed suicide by cutting her throat in the lavatory of her ward with an iron scraper used for removing old whitewash from the walls. The ward in which the patient was located was undergoing thorough repair and whitewashing, and the patient must have eluded the vigilance of her attendants, obtained possession of the scraper, and secreted it behind a chest of drawers or up a disused chimney in the lavatory, until an opportunity presented itself for the accomplishment of her desire. She was found committing the act, and was still alive when the medical officer reached her, but shortly expired. The patient was known to be suicidally disposed, and the strictest medical orders had been given that she was never to be left out of the sight of an attendant. The verdict of the jury was " The deceased destroyed herself, being at the time of unsound mind." Your Committee considered the charge nurse was culpably negligent in not having implicitly carried out the medical orders, and severely reprimanded her, but at the same time thought extenuating circumstances could be urged in her behalf, notably the disordered state of the ward at the time.

ESCAPES.—Only five patients have effected their escape, and in each instance they were shortly recaptured. This speaks well for the vigilance of the attendants, considering the very large number of patients who are daily engaged in various occupations beyond the walls of the Asylum.

GENERAL HEALTH.—The general health of the Asylum has been in a satisfactory state, especially during the summer, as is evinced by the fact that there were only seven deaths during the four months of June, July, August, and September—this being a much smaller number than has ever occurred in the corresponding period of any year in the history of the Asylum, although the numbers resident were higher than on almost any previous occasion. There were two cases of typhoid fever—one terminating in recovery, the other in death. The first was clearly attributable to the breathing of gas from a sewer which had to be opened for the purpose of removing an obstruction ; the source of the second was never clearly defined. No other infectious or contagious disease has made its appearance. In April last owing to the prevalence of smallpox in certain districts of the county, your Superintendent considered it necessary to recommend, as a matter of precaution, that the whole of the resident staff and the patients should be vaccinated, and the order was made by your Committee accordingly.

The following table gives the number vaccinated, with the results :--

		Females.
Vaccinated 1st time	379	476
Successfully	330	391
Unsuccessfully		85
Of above Unsuccessful-		
Vaccinated again	40	84
Successfully	21	53
Unsuccessfully	19	31
Total Successful Vaccinations	351	444
" Unsuccessful	28	32
Too ill to be Vaccinated	5	1
Refused	0	0
Not Vaccinated for Other Reasons		2

These results are interesting and instructive, as adding another testimony to the importance of re-vaccination, especially when it is considered that 317 of the cases vaccinated were over 50 years of age. It will be observed that the majority of those who did not "take" the first time were again vaccinated, and of these a large portion successfully. To obtain an adequate supply of lymph was a matter of no small difficulty. At first your Superintendent considered the propriety of using calf lymph, but after careful deliberation this idea was abandoned, and the supply was ultimately derived directly from the arms of children who had been recently vaccinated, or from tubes which were supplied him by the public vaccinators of the surrounding districts. His thanks are due to these gentlemen for the assistance they accorded.

ACCUMULATION OF CHRONIC HARMLESS CASES IN THE ASYLUM AND THE INCREASING LONGEVITY OF THE PATIENTS GENERALLY. —For many years it has been well known that the increasing demand for accommodation in our Public Asylums has been, in a great measure, due to the accumulation of chronic harmless cases (the patients either being in this condition when sent to the Asylum, or having, subsequently to admission, lapsed into it after an attack of some acute form of mental disorder), who are neither fit nor proper persons to be detained therein, nor are likely to be benefited by the treatment accorded in these institutions. At the latter end of the year your Superintendent was requested by the Commissioners in Lunacy to forward to their office, for the information of the Local Government Board, the particulars of every case in your Asylum which, in his opinion, could be dealt with outside under one of the following conditions :--(1) In an ordinary workhouse ward; (2) In a workhouse infirmary with paid nurse; (3) In a special lunatic ward, provided in a workhouse. The following table contains the summary of his replies :---

Number of all the Chronic and Harmless Pauper Lunatics Resident in the Asylum on 24th December, 1883, who, in the opinion of the Medical Superintendent, might be adequately taken care of in the Workhouses of their respective Unions.

	SUITABLE FOR CARE IN						
Sex.	1. Special Lunatic Wards in Workhouses.	2. Workhouse Infirmaries, with paid Nurse.	3. Ordinary Workhouse Wards.				
Males	28	15	1				
FEMALES	30	9	0				
Total	58	24	1				

Now it is no secret that the majority of Boards of Guardians set their faces, and your Superintendent thinks, under the existing circumstances, with reason, against retaining in their workhouses these chronic harmless cases, either because they have no special provision for their reception, or because some anxiety, owing to feebleness, restlessness, or other feature, is entailed in dealing with them, or else because they are maintained in your Asylum at as little or even less cost than they can at present be in their Union Workhouses.

It will be observed that your Superintendent is of opinion that the majority of the cases to which he alludes, if removed to the workhouses, would require some special supervision beyond that provided in the ordinary wards. Obviously it would be a most expensive matter to provide due accommodation, involving systematic attention and skilled supervision, in every workhouse for the few cases that would be relegated to each, amounting in some instances to perhaps only two or three. Even if this were not so, it is doubtful whether it would be advisable to distribute these patients throughout so many separate institutions, and whether, in the long run, lacking the constant attention of medical and other skilled officers, they would be so well looked after and cared for. These cases, however, do not require special Asylum treatment, and are constantly tending to cause our Asylums to assume unwieldy proportions, and so to hamper and interfere with the treatment of those patients whose cases are capable of being benefited by treatment.

The population of Worcestershire is increasing at the rate of over 4,000 persons each year. Every additional thousand to the population means an increase of more than 2.1 lunatics in your Asylum ; thus, from this source alone, a yearly addition of nearly 9 patients to the Asylum population must be looked for. Since the opening of the Asylum the average yearly increase has amounted to twenty in number. This, as was shown in last year's report, may almost, if not entirely, be accounted for by increase in population, and by the increasing longevity of the patients. This being so, supposing all other things to remain the same, and taking into consideration the number at present boarded out, and those already located in your Asylum, beyond its proper limits of accommodation, amounting to at least twenty in number, unless something is done, the buildings now being erected for 210 additional patients, will, in about seven years time, be filled up.

It would be impossible for the Asylum accommodation to be increased indefinitely, if only for the reason that it would be impossible to extend indefinitely that attention to those minor details in the treatment and care of the patients and in the administration of the several departments, which is so important for effectively carrying out the aims of the Institution and its economic working.

May there not be some way of meeting this difficulty ? Such, for instance, as the establishment in two or three districts of the county, in connection with the most important workhouse in each district, of special wards presided over by a Committee of Guardians representing the various Unions in each district. The wards might be under the immediate superintendence of the master of the workhouse, assisted by one or more skilled attendants, and subject to the daily visits of a local medical practitioner, and to them the chronic and harmless cases in your Asylum might from time to time be relegated, as well as those idiots and imbeciles who are unfit to be dealt with in the ordinary workhouse wards.

If such a system could be adopted, it would be most important that every precaution should be taken to prevent any case being sent to these workhouse lunatic wards which, presumably, might in any way be benefited by being placed under treatment in the Asylum. This danger might be obviated by making it compulsory for every case in which the mental unsoundness had made its appearance, say during the previous two years, to be sent in the first instance to the County Asylum. Such a system as your Superintendent has attempted to sketch would be simply an elaboration and consolidation of the one already in vogue at some of our Union Workhouses, notably that of Dudley. The causes to which the increase of the number of patients in your Asylum may be attributed were, as stated above, so clearly defined in last year's report that it is unnecessary to allude to them further here, beyond mentioning that the following table tends to confirm the statement then made—that the tendency to the increasing longevity of the patients has been one of the causes actively at work.

Table Illustrating the Increasing Longevity of the Patients, by showing the proportion per cent to the total number under treatment of patients above certain ages remaining in the Asylum at the end of each ten years.

AGE.	1883.	1873.	1863.	1855.

UNDER 20 ,,	4.2	6.1	2.8	3.4

STAFF.—Your Superintendent continues to receive much assistance from the Deputy-Superintendent, Mr. ATKINSON, and from the Second Assistant Medical Officer, Mr. DOUTY, as well as from all the other Officers, amongst whom there has been no change during the year.

The attendants and servants have discharged their duties satisfactorily.

One of the female attendants, who had been in your service over 19 years, and had always shown herself a most valuable and faithful servant, became incapacitated by paralysis for further duty; she has been granted a maximum pension of £36 per annum.

The male attendants and female nurses have, under your directions, had a uniform dress issued to them ; this has been

much appreciated, and whilst proving a boon to them, tends greatly to the orderly appearance of the staff when on duty. The uniform issued to the male attendants consists annually of 2 pairs of trousers, 1 waistcoat, 1 patrol jacket and 2 caps, all of black serge, and to the nurses of 2 black stuff dresses, with suitable aprons, caps, &c.

The night attendants, who have hitherto been expected to perform a considerable amount of duty in the afternoon of each day, have been entirely relieved from day duty, it being found that it was impossible for them to discharge their duties at night, which extend from 8 p.m. to 6 a.m., without having the remainder of the day entirely to themselves for sleep and exercise.

COMMISSIONERS IN LUNACY .- Two members of the Board of Commissioners in Lunacy visited the Asylum on the 3rd and 4th of December. As some of the matters referred to by them are alluded to elsewhere in this report, it only remains to be stated, (1) that in view of the possible catastrophe of a fire occurring in the Asylum, additional precautions have been taken, and directions given, for the safety of the patients, as well as for the extinction of the fire; (2) that the new sewage tanks have been designed on the most approved principles of direct irrigation; (3) the advantages that would accrue from the erection of a small detached hospital for the reception of infectious cases, were fully referred to in last year's report; (4) during the year two "tell tale" clocks on somewhat different principles have been purchased, with the object of testing the vigilance of the night attendants when on duty. By means of these appliances an accurate record is made by the attendants to whom they are issued, of their position in the building every quarter of an hour during the night. It is obviously right that your Superintendent should have some check on the way in which the night attendants perform their duties, the discharge of which, in a vigilant and attentive manner, should not be left, as it were a matter resting solely on their own honour; and there is reason to believe that good

attendants themselves appreciate the fact of a record of their work being kept. As is to be expected, improvements have from time to time been made in these "tell tale" instruments, and there is now a system of checking by electricity, which is a decided improvement on the old plans. Only two of the night attendants are as yet supplied with these clocks; should your Committee ultimately decide upon supplying all the night attendants with "tell tales," it would be a matter for your consideration whether the newest instrument that has been invented may not in the long run be the cheapest, most effective, and least likely to get out of order or be tampered with.

BOARDS OF GUARDIANS.—Deputations from eleven Boards of Guardians have visited the Asylum; copies of their reports have in each instance been duly forwarded, invariably expressing the high opinion entertained by the Guardians of your Asylum, and of the condition of their patients.

REPAIRS.—A considerable amount of whitewashing, papering, and general repairs have been done to the interior, whilst the external portions of the building have been thoroughly overhauled. Almost all this work has been done by the artisan attendants on your staff, assisted by patients.

The reports from the Boiler Insurance Company continue to show how satisfactory is the condition of the Engineer's Department. A certain amount of strengthening of one of the boilers has been ordered, to allow of the pressure being increased up to 50lbs. to the square inch, with the view of making its working more effective and economical.

FARM AND GARDEN.—The profit on the farm and garden has been £599 10s. 0d.; this is less than one-half of that of the previous year; the difference being accounted for by the large amount of land left fallow owing to the wet weather during the winter, and to the increase in outlay for seeds and horses, and to arrears of rent in respect of land held under Lord Hampton, which had to be met. Draining operations are being carried out on some of the land rented from Earl Beauchamp, his Lordship supplying the pipes free of charge, and the work being done by the patients, assisted by some paid labour. It is hoped that the new piggeries, &c., which are so much needed, and the building of which was sanctioned some time ago, will be completed early in the spring.

A very severe form of distemper existed for a month or two in the autumn amongst the cart horses, but your Superintendent is glad to say, that owing to the attention given to them by the Farm Bailiff, all made a good recovery.

FINANCIAL MATTERS.—The average weekly cost has been 7s. $8\frac{3}{4}$ d., as against 7s. $1\frac{3}{4}$ d. for the previous year. The increase is mainly due to the large quantity of potatoes that had to be purchased during the first half of the year at a very high cost per ton, and to the fact that the balance on the farm has been smaller. The weekly charge to the Unions has remained at 7s. 3d. This, coupled with the fact that there has been a dead loss on the maintenance account, not included in the above average, in respect of the 55 patients boarded out at the cost of 14s. a week at the Rubery Hill Asylum, has necessitated a reduction of the deposit account from £2,500 to £1,500. You have deemed it necessary, therefore, in order to stay the very rapid increase of expenditure over income, to raise the rate of maintenance from 7s. 3d. to 7s. 7d. from the 1st January, 1884.

SPECIAL MATTERS.—The warming apparatus of the original building having been allowed to fall into disuse, owing to ineffective action, and it being found impossible, by means of the ordinary fireplaces, to raise the temperature of the single rooms and wards to a proper height in cold and especially in damp weather, your Committee have decided that something should be done to remedy the defect, and with this object experiments are being made, with a view of ascertaining the most suitable means that can be adopted.

The minor "necessaries" and articles of food are now contracted for yearly, instead of quarterly as heretofore, and it is found that the change works well. On the night of May 14th the office of the Asylum Clerk was entered through one of the windows, and the drawer containing the cash-box, and the cash-box itself, were forcibly opened, and £8 5s., the amount of coin then in the box, abstracted. The matter was at once placed in the hands of the police, but the thief has not been detected, and the money taken has been written off as a bad debt. A Milner safe has been since procured for the future custody of money, &c., entrusted to the keeping of the Clerk.

As the opening of the Annex approaches the existing rules and regulations, which bear date 1866, will have to be revised. They are already deficient of several important orders for the guidance of the staff.

During the coming year, owing to the prospective alterations and additions, the Asylum will at times necessarily be in a state of disorder, and the working of some of the departments thrown out of gear. Your Superintendent however feels that he can confidently rely on your officers and servants for the increased thought, care, and judgment that will have to be exercised by all, and that by a continuance of the advice and firm support which he has invariably received from your Chairman and Committee in the past, and which he trusts by his conduct of the affairs of the Asylum in the future he may merit, all obstacles and difficulties will be overcome.

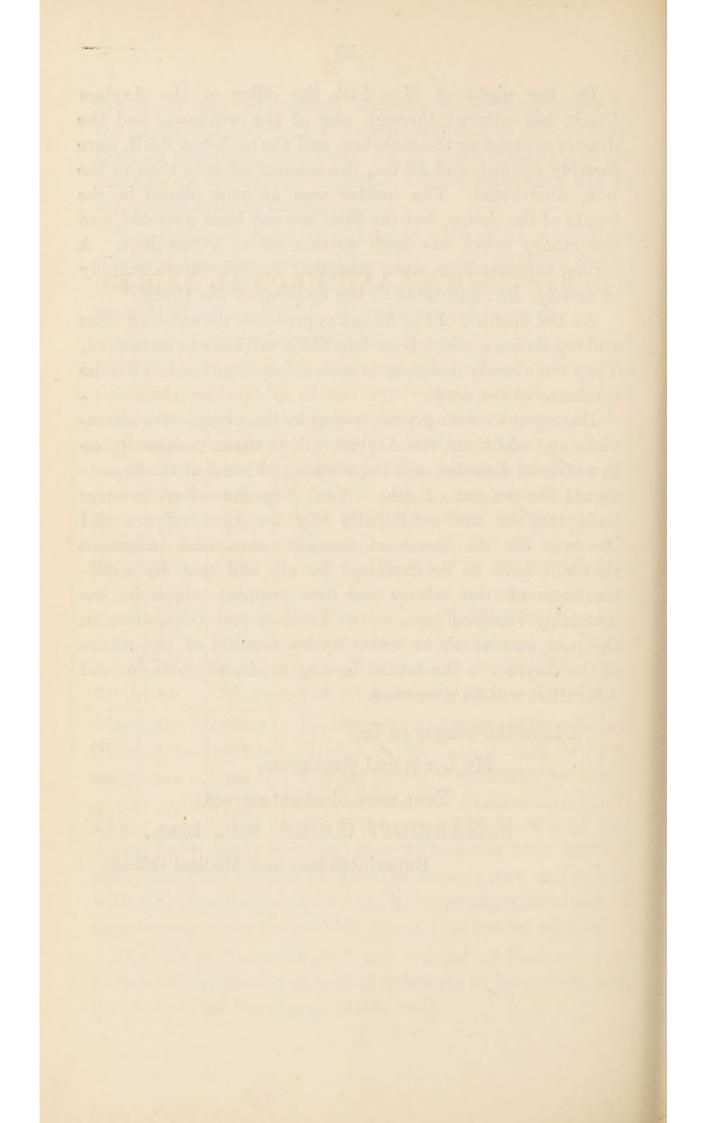

I have the honour to be,

My Lords and Gentlemen,

Your most obedient servant,

E. MARRIOTT COOKE, M.B., LOND.,

Superintendent and Medical Officer.

37	7s. 3d.		""	 0	1	1
				23	35	58

The following are the conditions under which Private Patients are admitted into the Asylum :--

I. They must either have a settlement on some Union in the County, or else immediately prior to admission have been resident in some part of the County or City of Worcester.

II. It is intended they shall be in such a pecuniary position that whilst their relatives are unable to place them in a Private Asylum, they can afford to pay more for their maintenance than the ordinary pauper charge.

III. The payments are required to be made monthly in advance.

IV. The Pauper weekly rate of Maintenance was 7s. 3d. The excess charge made beyond this for the Maintenance of Private Patients was carried to the favour of the Repairs Account.

V. The various blank forms for the order, Medical Certificates, &c., are to be obtained at the Asylum from the Medical Superintendent, who will give any information that may be necessary. SALARIES AND WAGES, 1883.

County and City of Morcester Lunatic Asylum.
