*North and East Ridings' Lunatic Asylum, Clifton, York,  
20th December, 1862.*

TO HER MAJESTY'S JUSTICES OF THE PEACE FOR THE  
RESPECTIVE RIDINGS IN GENERAL QUARTER SESSIONS  
ASSEMBLED.

## THE SIXTEENTH ANNUAL REPORT OF THE COMMITTEE OF VISITORS.

The Committee of Visitors again have the pleasure to Report that during the last year the Asylum has prospered. The health of the patients generally has been good, and the mortality very low, being only  $5\frac{3}{4}$  per cent. The recoveries are at the rate of 40\* per cent. on the number of fresh admissions during the current year.

The Commissioners in Lunacy devoted two days (23rd and 24th July last,) to the inspection of the patients. They recorded, "We found them all, in both divisions, singularly free from excitement, which, in a great measure, we attribute to the system of regular employment, carried out here on a scale so extensive as to include the idiotic and epileptic patients, and the class regarded generally as imbecile and helpless. The results of the system, as well in its profits to the Institution as to the patients, have been too frequently mentioned to require further reference at present; but we may state, that in the interval since the last visit there has

\* The discrepancy between 40 per cent. and  $38\frac{78}{119}$ , as stated in the Superintendent's Report to be the proportion of recoveries, is caused by the admission of patients after the 20th Dec., 1862.

been a larger than the ordinary amount both of in-door and out-door labour, and that by the sales of produce from the work of the inmates, besides what has been done for the Institution, upwards of £400 was realized last year."

The Statistical and Financial Accounts will be issued, together with Mr. Hill's Annual Report, at the Easter Sessions, 1863. The ordinary weekly charge per head remains at the very moderate rate of 7s. 7d., the average weekly charge of all the County Asylums being 9s. 1d. per head.

The difference of the weekly charge on 485 patients, the daily average number on the books in 1861, is the measure of the saving to the two Ridings.

The Committee remind the Courts that at the Epiphany Sessions the re-election of the Committee is required to be made.

J. V. B. JOHNSTONE,  
CHAIRMAN.

## REPORT OF COMMISSIONERS IN LUNACY.

*North and East Ridings' Asylum,  
23rd and 24th July, 1862.*

We have found this Asylum, at our visits yesterday and to-day to its several wards and departments, in excellent order.

Since the visit on the 2nd and 3rd of September last there have been 113 admissions, 106 discharges, and 34 deaths. Of those, the numbers in the male and female divisions respectively were, of admissions, 60 and 53; of discharges, 52 and 54; and of deaths, 24 and 10. The rate of mortality is low. The proportion of recoveries out of the number discharged were, of males, 17, and of females, 24; and of the rest, 27 were patients belonging to York, lately removed to Bootham.

There are now on the books 273 males and 225 females, in all, 498; whom, with the exception of 4 men and 2 women at present away on leave, we have seen at our visit.

We found them all, in both divisions, singularly free from excitement, which, in great measure, we attribute to the system of regular employment, carried out here on a scale so extensive as to include the idiotic and epileptic patients, and the class regarded generally as imbecile and helpless. The results of the system, as well in its profits to the Institution as to the patients, have been too frequently mentioned to require further reference at present; but we may state, that in the interval since the last visit there has been a larger than the ordinary amount both of in-door and out-door labour, and that by the sales of produce from the work of the inmates, besides what has been done for the Institution, upwards of £400 was realized last year.

On the evening before our visit there had been an entertainment in the grounds, at which 250 of both sexes were present, with dancing, music from two bands, and a good supply of refreshments. The general arrangements for amusement and leisure include daily walks for patients employed in-doors, Sunday afternoon walks of larger extent, and, according to the season, occasional out-door and in-door games, with special and elaborate Christmas shows. A suggestion was made at the last visit for setting apart, during the

summer, for the more hard working of the men and those employed indoors, a weekly half-holiday for out-door games; and if this could be carried out, we think it would be appreciated by the patients.

As we passed through the wards, there were seven in bed in the men's division, and in the women's, eleven. Several of these, however, were for attacks of excitement, and were, in fact, cases of seclusion. (There is here no separate seclusion room.) Of serious illness there were only three or four cases, and the health of both sexes is good. As under treatment, or taking medicine, 20 men and 19 women were entered last week; and with one exception, the deaths since the last visit have been from ordinary disease, exhaustion and gradual decay, old age, palsy, epilepsy, and apoplexy. From the two latter causes two patients were found dead in bed, but no inquests were held in those cases: the exception was that of a man who, in a supposed attempt to escape, was drowned in the Ouse.

The associated dormitories and single rooms, and the beds and bedding throughout, are in the best order; and here, as well as in the lavatories, bath rooms, water closets, and all parts of the building, we have found the ventilation good, and the air untainted. More seats generally, and more washing basins, as well as pieces of carpeting, wherever in that respect deficient, would add to the comfort of these sleeping rooms; and we again draw attention to this want. The excess of beds in some of the larger dormitories, also mentioned at the last visit, continues; and a provision for additional accommodation will have now to be considered. As it is very desirable that the private patients, (in number 21) who enjoy the advantages of the Institution, should not only be retained, but their number as far as possible increased, we trust, in any enlargement that may be undertaken, this will be kept in view. Mr. Hill has explained to us and shown us the plans for enlargement by means of additional cottages, on the same principle as that lately transmitted by him to our Board, in connexion with the Bedford Asylum; and we are of opinion, that such a mode of meeting the present want, with a limit of outlay to £30 per head for 37 patients, would be in every respect advantageous.

No head attendant has been appointed in either division as yet, and there is no night watch in this Asylum. The number of wet and dirty beds on the night before our visit, including patients of every class, was 51.

Restraint, by means of spencers and occasionally fastening patients in bed, continues to be employed here in cases of excitement and restlessness, and to check indecent and destructive habits: seclusion appears to be more rarely resorted to; but as to both, the entries made in the Medical Journal are very general,

and we think greater particularity desirable, both as to the occasions and the periods for which used. We think also that entries in the Case Books should be more frequently made, and with fuller details.

The personal appearance of the patients of both sexes was very satisfactory, and we are glad to learn that both change their body linen twice a week.

The Chapel will accommodate 320 patients, and on Sundays it is always quite full. On the Wednesdays, attendance is not so large. The School Classes among the women have been continued with increased success, in the numbers attending, and the interest taken in them; and it is now proposed immediately to resume the Men's School, a Master having lately been appointed.

We saw the patients at dinner on the first day of our visit, in parties of sixty in both divisions. It consisted of meat and potatoe pie, and beer, and was excellent in quality, well served, and abundant.

Continued evidence has been afforded to us by this visit of the ability with which the North and East Ridings' Asylum is managed in its several departments.

JOHN FORSTER, }  
JAMES WILKES, } *Commissioners in Lunacy.*

*North and East Ridings' Lunatic Asylum,  
April 2nd, 1863.*

## SIXTEENTH ANNUAL REPORT OF THE MEDICAL SUPERINTENDENT.

*To the Committee of Visitors :*

GENTLEMEN,—The past year (1862) has again demonstrated the advantages conferred on the Ridings by this Establishment ; as well as further proved the legitimacy and value of the principles upon which it is conducted.

One accident has to be deplored. In April last a male patient, who was digging with others in the north field, escaped ; and in an endeavour to swim the river, then much flooded, was borne away some 300 yards, when his strength failed him. An attendant who was there when he plunged in was unable to swim, and a party of gentlemen in a boat were alike helpless, through the rapidity of the current in the middle. Immediate search was made, but the body not found for several days, when an Inquest was held, and a Verdict in accordance with the facts was delivered by the Coroner's Jury.

The earnings from the industry and thrift of the patients of both sexes, under the teaching and superintendence to which nearly all are more or less subjected, have been large ; which, in a similar manner to former years, have had the satisfactory effect of diminishing the weekly cost per patient. For example, the boot and shoe trade has been so profitable as to reduce the cost for our own supply to under £30 for the daily average number of 491 patients in 1862. The other various branches of business and occupations have also been successfully managed.

The garden and farm are much improved. The embankment on the river side of the estate has been raised 3 feet 4 inches higher than it was in 1856, when it was overflowed and partially destroyed. This great work will constantly require watching and attention, as moles, rabbits, the humble bee, wasps, rats, and mice,

all commit damage. When floods rise, and the wind is high, the scour of the water is so trying that risk is incurred of a similar disaster happening as in 1856. There is, however, at present no appearance of weakness anywhere along its length of 1000 yards. The base is 30 feet wide, and the height 12 feet in the lower land. The footpath on the top, 3 feet wide, forms an agreeable elevated promenade. Some notion of the importance of this structure may be formed when it is known, that, during the last winter alone, pumping over the top of this earthwork into the flood on the other side had to be persisted in, on different occasions, for 41 days and nights, thus preserving the house and land drains from injury. The quantity pumped is estimated at 20,000 gallons an hour whilst rain is falling within the area of the embankment.

The system of a series of sewage tanks, first adopted in 1858, and increased in number and size last year on the north side, answers well, so far as the collection of manure is concerned; but notwithstanding Carbolic Acid is used as a deodorizer at the extreme south-point outfall, yet the smell is not quite dissipated. This still needs attention.

It will again be observed that the mortality last year was low, being 5.68 (less than  $5\frac{3}{4}$  per cent.), or very nearly 1 per cent. under the comparatively small average rate of  $6\frac{1}{2}$  per cent. during the previous fifteen years. To the salubrity of site, and the excellent ventilation of the whole Asylum, a great deal is due; and whatever reluctance may be felt in referring to other causes, yet perhaps some allusion may be made to the Medical treatment of Carbuncle, Gangrene, General Palsy, Erysipelas, and a peculiar type of Fever, not uncommon to the insane, and frequently attacking individuals at large.

1st. Carbuncle.—In no instance out of more than 80 cases of big Carbuncle since 1847, has the customary surgical operation of a crucial incision been performed; as early observations of numerous cases treated on that plan elsewhere, led to a conviction that the interference by knife reduced the powers of the sufferers, to cast off the deeply rooted slough.

The treatment followed is to apply to the Carbuncle turpentine dressing, under a linseed meal poultice, twice or three times a day, and support the patient with beef tea, mutton chops, eggs, Port wine, and London porter; also at first administering steel and quinine, with mineral acids, and just prior to the loosening of the slough giving turpentine, with opium, every six hours, in the place of the steel and quinine. Every case herein referred to perfectly recovered, in spite of drawbacks imposed through the derangement of mind in all the patients thus treated.

2nd. Gangrene.—Gangrene is sometimes so rapid in its course that many years ago I gave it the name of "The Rapid Rot." It

is not confined to those afflicted with General Palsy, nor to external parts alone. The immediate use of the water bed or cushion is indispensable, and, like the Carbuncular cases, needs a generous diet and stimulants. The medicinal treatment has consisted mainly of turpentine and opium: this combination is eminently tonic and antiseptic. There is a male patient now living here, whose almost every joint was affected with mortification. The putrefactive process went on so hurriedly that we hardly knew where to look for a sound spot. He completely lost both his heels; but against this destruction of parts, simultaneously going on over his body, extending from his shoulders, elbows, finger joints, to his back, hips, knees, ankles, heels, and toes, we were able to contend. This recovery is not improbably the most remarkable on record; for his skin is now as sound as ever it was, and has been so for more than  $2\frac{3}{4}$  years, with the exception of an occasional erysipelatous blush of the legs, always yielding to the Port wine treatment, to which I shall again refer when on the subject of Erysipelas.

3rd. General Palsy.—This disorder, so familiarly known among the insane, is very embarrassing. The skin of such sufferers is most susceptible of severe mischief from very trifling causes; a graze, the pinch of a shoe, even the ruck of a stocking, one leg lying across the other in bed, or a scratch, are enough at times to set up gangrenous inflammation, which, from the deficiency of tone in the brain and nerves, the consequent restlessness, and the diseased circulation, suddenly involve such patients in extreme danger, although, mercifully, not to much pain. To guard against such catastrophies the plan of sponging them all over with distilled vinegar, and when dry, dusting the skin with a fine starch powder, is found to be of advantage. All through the first stages of this insidious and terrible disease, often lasting for years, the patient is usually happy, active, over calculates his abilities and strength, imagines his wealth to be countless, offers to do acts of prowess and daring; if asked, “is quite well,” and if allusion is made to his detention, he cannot comprehend the reason for his absence from home. On the visits of relations and friends, they are puzzled likewise to discover sufficient signs, and are apt to suspect the patient’s opinion to be the correct one, nevertheless that, that unmistakeable defect of a faltering speech may be present. In most County Asylums this particular malady attacks males in much the largest proportion, but in this Asylum the female patients suffer almost to an equal extent.

4th. Erysipelas.—This dangerous affection has never spread from one to another here. It is for the most part treated by the giving an ounce of Port wine every third hour, which was first adopted by the late Dr. Robert Williams, the then Senior Physician

to St. Thomas's Hospital, who observed the fact of the Erysipelas subsiding on the fifth day. The local applications are generally warm, although in some constitutions cold may be employed with success.

5th. Fever.—There is so strong a resemblance between all the approaching signs in cases of nervous exhaustion amongst the insane, and those marking the illness of the sane, when their spirits and strength flag, followed by loss of appetite, head ache, wandering, and shivering, succeeded by hot skin and thirst, commonly recognized as some type of fever, that it may be worth touching upon. Such a condition of nervous and brain exhaustion, brought about by over taxed physical or mental exertion, grief, disappointment, or losses ; and a forfeiture of brain and nerve power, happening through the imbibition of morbid poisons, differ widely ; there being an absence of any specific poison in the one case, whilst in the other, it is present. This distinction is important, for without knowing it, very riskful mistakes may be committed, both in regard to the well-doing of the patient, and the apprehensions and anxieties of all in the house. The one form of this Fever is *innocuous*, and the other *contagious*, as testified by its single attack in the one instance, and the spreading tendencies of the *morbid poison* fever in the other. The *innocuous* patients who suffer from the disorder seldom fail to recover if steadily and skilfully treated on a supportal and sedative course of medicine and diet, necessarily very varied in selection, but all known by experience as possessing qualities and action conspiring towards one main end. In such lowering, exhaustive, and trying conditions, patients need incessant medical watching and the cleverest anticipatory nursing, embracing nicety of attention and foreseeing wants not to be particularized. These remarks apply with equal cogency to the *morbid poison* cases of sickness ; nevertheless, that Enteric and other obscure organic and internal complications, and the skin-exhalations, may call for special scrutiny and management.

The foregoing remarks upon a very few common and precarious maladies, to which all of us are more or less liable, will serve, to some extent, as an index to the hazards and toil of Asylum medical duties, and the anxious cares of other officers. The preservation of life under severe and baffling disease is an aim, hard to achieve, as everybody knows, even when not confounded with loss of reason : but immeasurably are impediments cast in the way amongst sick and bewildered patients like those treated within these walls.

For the sixteen years the Asylum has been open, the average death-rate,—without any special circumstances of exemption,—has been low, in comparison with the other Asylums of the Kingdom. It must, then, be obvious that an accumulation of aged and very dubious lives continue to exist.

## Under treatment in the Asylum during 1862—

	—	—	—

Amusements, games, out-door recreations, and rowing on the river in summer evenings, have added to the pleasures of the patients; and at Christmas the Groves formed of 22 illuminated pines, loaded with decorations and nick-knacks, and reflected by mirrors to 100 feet in length, were highly appreciated. All the other sources for improvement and mental culture continue in operation. My best acknowledgments are due to those united with me, and to the Committee of Visitors, for their promotion of everything calculated to benefit our charge.

I have the honour to remain,

Your very faithful and obedient Servant,

SAMUEL HILL.

RECEIPTS AND PAYMENTS by the Treasurers of the North and East Ridings of Yorkshire County Lunatic Asylum, from the 1st day of January to the 31st day of December, 1862. (Pursuant to the 16th and 17th Vict. cap. 97, Sec. 58.)

## NORTH AND EAST RIDINGS OF YORKSHIRE LUNATIC ASYLUM.

*Dietary Scale.*

DAYS.	BREAKFAST.	DINNER.	SUPPER.*
Monday .....	Gruel, thickened with oatmeal, 1½ pint, with 6 oz. of bread.	Pease soup, 1½ pint, with 6 oz. of bread.	6 oz. of bread, with butter and tea.
Tuesday .....	.....	Cooked meat, free from bone, 5 oz.; bread, 6 oz. for males and 4 oz. for females, with vegetables and ½ pint of beer.	.....
Friday .....	.....		.....
Sunday .....	.....		.....
Wednesday .....	.....	Meat pie, with vegetables, and ½ pint of beer.	.....
Saturday .....	.....	Irish stew, 1½ pint, with 4 oz. of bread.	.....
Thursday .....	.....		.....

Great additions are made to the above table; as for example, those patients who do not eat pease soup and irish stew, on Mondays and Thursdays, are allowed rice and suet pudding, and all epileptic, palsied, aged and weekly patients, are allowed extra diet, consisting, according to circumstances, of beef-tea, mutton broth, egg pudding, bread, rice, sago and arrow-root puddings, mutton chops, minced meat pie, porter, port and sherry wine.

The idiotic classes are allowed a pint of good meat broth, with bread and vegetables every morning at half-past ten o'clock, together with the fireman, bakers, house cleaners, &c.

\* On Thursday, two ounces of cheese are substituted for the male patients, in lieu of butter for supper.

Indulgences consist of tobacco, beer, tea, &c., and may be said to be enjoyed by nearly all the patients; since but few are, at any time, unemployed.

The pease soup and irish stew are made with legs of beef and necks of mutton, Scotch barley, vegetables, herbs, &c.
