REPORT.

The close of another year renders it necessary again to advert to the condition and prospects of this Asylum, in the form of a customary Report.

It must be looked upon as the progressive history of an Institution which has undergone no *material* change, but at the same time it is hoped that the system of management since its first opening, has been one of gradual improvement. Experience is progressively teaching, and although the mental and bodily exertions of those, to whose care the insane are intrusted, may be at once judiciously and unremittingly devoted to their security, happiness, and recovery, the means for effecting that grand object are gradually acquired.

During the past year the enlargement of the building, as agreed upon at the General Quarter

Sessions, has been completed. In the new Western wing many desirable improvements have been made, especially in the construction of the windows, and in the means employed for ventilating and warming the apartments. The two last objects have been obtained in such a way as to yield perfect satisfaction. Attached to the new building is an Infirmary for female patients, but so arranged as to prevent any fear of the spread of infection, should the Asylum ever be visited by disease of an infectious nature. Free ventilation in this part has also been secured, whilst the peculiarly cheerful and airy situation of the Infirmary, renders it one of the most desirable additions to the Institution.

In the month of July the new building was formally opened by a tea-party, at which nearly three hundred patients attended; the various apartments were examined by the guests with much interest and curiosity, many of whom expressed a strong desire to be in the list of its new occupants. The festival was enlivened by music and singing, and after partaking of cakes and fruit, the party dispersed in the most perfect good order, and with many expressions of gratification.

In proportion to the increase of inmates, new wants and requirements are constantly arising. A building originally planned and erected for the accommodation of between one and two hundred

patients, is not so easily adapted to the reception of nearly three times that number, as might at first be imagined. The apartment now used as a Chapel, and originally intended for a committee-room, is far too small for the numbers who might with advantage attend divine service. In the warm months of summer the atmosphere is close and oppressive, whilst its contracted dimensions render any sufficient means of ventilation impossible. In the original construction of the Asylum, the general weekly bathing of the patients was not at all contemplated. A large bath was provided for the females, contiguous to their wards, and a corresponding one on the male side, but both communicating with the centre passage of the Institution. From the distance at which many of the wards are situated from the baths, much inconvenience was experienced. In spite of every precaution, *it occasionally happened that mischievous patients made their escape, and, in some instances, were not found until after hours of anxious search*; the risk, however, and corresponding anxiety, augmented with the increase of inmates, and an alteration became imperative. By relinquishing some rooms, and erecting a new staircase, bathing is now accomplished without the necessity of removing patients, as formerly, into the main body of the building; yet the accommodation in this particular is still very inadequate; a bath in every Ward, supplied with hot and cold water, must always be regarded as essential to the purposes

of cleanliness, and highly advantageous in the treatment of Insanity. The airing and exercise grounds have undergone considerable addition and improvement. Banks have been raised, with walks, affording an agreeable prospect of the neighbouring country, and some of these are being planted with shrubs and evergreens.

Since the publication of the last Report, it has been found necessary to make some alteration in the regulations affecting the servants; their duties were so oppressively arduous to the mind, as well as body, that, in some instances, great suffering was induced. A cursory visitor can form no adequate idea of the nature of those duties, devolving on individuals having charge of the insane. All may wear the appearance of cleanliness and comfort; the patients may seem cheerful and healthy, and the treatment adopted may yield the most satisfactory results: but it is unseen that all this is too often purchased by wakeful nights and anxious days, that are insidiously undermining life and health. It is to be feared that if those who have sunk under mental exertions in behalf of the insane, were added to those who have been the victims of their violence, an appalling fact would be deduced, and one which appears hitherto to have been totally overlooked. That humanity which extends no further than profession, is but of little value; to speak or write, is much more easy than to act; it is to those who

are practically illustrating a spirit of Christian benevolence, by *personal exertion and self-sacrifice* in behalf of their fellow-creatures, to whom society is chiefly indebted.

In consequence of the former statement, a supernumerary attendant of each sex has been engaged, part of whose duty it is to supply the place of the others, whilst absent for necessary rest, or recreation. The stated increased periods of absence have had the anticipated desirable effect, and it is not more than a common act of justice to observe, that any reasonable indulgence, conducive to the welfare and happiness of the attendants, is only a portion of due recompense for their onerous, difficult, and laborious services. The character and conduct of some of them is beyond all praise ; and assuredly, if merit deserves reward in the ordinary circumstances of life, how much more to those who unknown to, and unseen by the world, are devoting youth, health, and even life itself, to the faithful discharge of duties, from which others shrink with fear or abhorrence.

The Asylum cannot boast entire exemption from those casualties to which all similar institutions are liable. When accidents have occurred, it has been considered judicious to caution the attendants not to allow any circumstance likely to produce excitement

or other injurious effects on the minds of the patients, to come to their knowledge. The history of this institution tends to shew, that an attempt at suicide, if spread by report, generally leads to others of the same nature; but beyond this necessary precaution, every investigation has been desired and courted.

The demands on the *Harrison's Fund Charity* have considerably increased during the last year. Had it not been for this charitable stock, many recovered patients would have left an Asylum of comparative comfort and happiness, to return to desolate hearths and starving families. It may not be improper once more to explain the object of this fund. In the year 1825, JOSEPH HARRISON, ESQ., of Kennington, Surrey, formerly of Wakefield, left a legacy of £1000 (minus the duty), to "*the Lunatic Hospital, at Wakefield.*" Out of the county purse, £300 was added, with which sum two fields were purchased, and conveyed to the Visiting Magistrates as trustees. For this land the Treasurer of the Asylum pays an annual rent of £36, which income is disposed of in donations to necessitous patients on their discharge, at the discretion of the Visiting Justices, not giving any one patient more than £5. The first relief afforded from this Charity was in June, 1823, since which period no less a number than *four hundred and fifty* persons have been relieved, on their dis-

charge from the institution. An additional sum of £98 8s. 7d. has been raised by the profits of the Asylum Bazaar, and added to the Harrison's Fund. Thus, not only has a pecuniary advantage been derived in this way, but the fancy articles with which it is furnished, have been an endless source of amusement; and industry and ingenuity have been stimulated, by the hope of ultimate reward.

There is another subject to which we would again advert, although attention has been called to it in one or two former Reports. We allude to the frequent negligence of Overseers, in not sending their insane poor at an earlier period of the disease. In many cases this amounts to a "*criminal neglect of duty towards the patient,*" as well as in regard to society, and cannot be too frequently brought to the notice of those who have the power of checking so great an evil. The history of a family may in some measure serve to illustrate this subject.

An influential tradesman, in one of the large towns of the West Riding, met with embarrassments and losses in business, which induced a severe attack of Typhus fever, and subsequent insanity; he was placed in a private Asylum, and speedily recovered. Previously, however, to his restoration, his wife, from excessive grief, became the subject of the same disease; his affairs in confusion, his large and helpless family without means of support, nothing re-

mained but her being immediately sent by the parish officers to the Asylum at Wakefield. For some time she continued under treatment, with every prospect of success, when her daughter, of the age of eighteen, was conveyed in a state of high maniacal excitement, brought on by "*excessive fretting,*" to be under the same roof with her unhappy mother. Disease in the daughter quickly yielded to the treatment adopted, and in a few months she returned home, perfectly cured; but this accumulation of affliction not only retarded the recovery of her mother, but was the occasion of a second attack in her father, who was also brought to the Asylum. In a few months he was cured, and returned home to his family, but leaving his wife still in the Asylum. Shortly after, the eldest son, a fine young man, of the age of twenty-one, who had been the prop of the family, borne down by a succession of domestic afflictions almost without parallel, wandered from home in a state of insanity, and after long search was found almost perished from cold and hunger, in a stone quarry. In this deplorable state he was brought to the Asylum, and continued for some months in a condition affording little hope of recovery; at length the means employed produced the desired effect, and it was not until near the time of his discharge, that his mother was made acquainted with his circumstances. She was herself shortly afterwards discharged cured, and years have now passed without any return of the malady; she speaks of the Asylum as her second home, and

though now a widow, she is surrounded by an affectionate and grateful family, who have been more fortunate than their unhappy parents, and who with her, afford an example even where strong hereditary tendency exists, and under circumstances the most unfavourable, of the benefit arising from speedy recourse to suitable treatment. It will not be improper to add, that in no instance was the beneficial relief of Harrison's fund charity, more advantageously employed or more gratefully received, than by this meritorious and afflicted family, for to use the expression of one of its members, "that money,—was the saving of us from ruin".

A table inserted at the 24th page of this Report, will shew the impolicy of neglect, even taking the subject on the low point of mere pecuniary consideration; it is a table comparing the results of treatment in twenty recent cases, and twenty cases of long standing before admission into the Asylum. It will at once be seen, that an early removal to this place, is an advantage not to be despised by those who have the care of parochial purses, without their incurring a just charge of dereliction of public duty. In twenty *recent* cases, (ten of each sex), admitted within three months from the commencement of their disease, *the whole number were cured*, at an average cost, for each male, £7 16s. 9d.; for each female, £9 14s. 6d. In twenty *neglected* cases, (ten of each sex), or those in whom the disease had

existed for twelve months and upwards, *twelve died; two were cured*, and dismissed in the enjoyment of good health; *the other six remain in the Asylum*. The average cost for the six males who died, (including the funeral expences) was £31 7s. 11d.; for the one cured, £5 14s.; for the three still remaining a charge to their respective parishes, £105 12s. 4d. each. For the six females who died, the average cost was £32 17s. 2d., including funeral expences; for the one cured, £14 6s.; for the three still remaining in the Asylum, the parish officers have already paid on an average for each, no less a sum than £103 18s. 4d.! Reference may be made to the table alluded to, for the date of admission, &c. in these forty cases. There can be only one conclusion drawn from this statement. Humanity here teaches the Overseers their duty, and, failing in that, the pecuniary consideration will perhaps prevail, the difference in the costs of the cases cited being so glaring as not to be misunderstood. An earnest appeal is once more made to the respective Overseers for the exercise of their judgment, and diligent attention to this most important part of their duty. If even the matter of money be not a consideration with them, let them view seriously the results of treatment in these forty cases, and avail themselves of the great advantages to be derived from an early application, for the admission of their Pauper Lunatics into the Asylum.

The state of the 378 Patients at present in the Asylum, is as follows :—
