## Officers of the Establishment.

1857.

---

### RESIDENT.

ROBERT JAMIESON, M.D.	. . .	<i>Resident Physician &amp; Superintendent.</i>
EDWARD SAVAGE,	. . . . .	<i>House Steward.</i>
MISS ELRICK,	. . . . .	<i>Matron.</i>

### NON-RESIDENT.

JOHN MACROBIN, M.D.	. . . . .	<i>Consulting Physician.</i>
REV. JOHN MASSIE,	. . . . .	<i>Chaplain.</i>
WILLIAM WALKER,	. . . . .	<i>Treasurer and Clerk.</i>

## MEDICAL REPORT.

---

**T**HE number of Lunatics under treatment or care in the Aberdeen Asylum during the twelve months, concluded 31st March, 1857, amounted to three hundred and eighty-two. The smallest number of patients resident at any time in that period was two hundred and seventy-nine; the highest, two hundred and ninety-six; and the average daily number, two hundred and ninety-one. Inclusive of officials and servants, the mean total of inmates has been three hundred and thirty.

From 1st April, 1856, to 1st April, 1857, twenty patients died in the House; sixty-nine were removed in various conditions, mostly cured; and their places were supplied by a hundred and three new cases.

Of the admissions more than eighty per cent. were from Aberdeen and the several parishes within the County and Presbytery. Sixty-seven cases were received into the Pauper portion of the Establishment; of whom about half belonged to the parishes of St. Nicholas and Old Machar; thirty-six boarders at various rates were admitted into the division set apart for such cases; and, in short, it is believed that the Hospital has proved itself

in the past year an adequate Lunatic Asylum for this quarter of the country, accommodating patients of all grades and of all varieties of the disorder. No application has been neglected, and in no case has a higher board been exacted, or, as is sometimes the case elsewhere, admission absolutely refused, or removal insisted on, upon account of the patient's habits or condition rendering treatment or cure hazardous or unprofitable.

The Asylum has steadily met the continually increasing demand for admission with equivalent extension of its walls; and the pace at which this has had to be done may be understood from the statement that the mean number of residents has doubled itself within the last sixteen years: a fact not showing that lunacy is twice as frequent as it was then, but to be taken as an illustration of the bearing of Poor Law legislation on the disposal of lunatic paupers; of the steadily increasing recognition of the usefulness of such an establishment in the district; and of the growing use made of it as an hospital for recovery and as a retreat for the incurable.

About a third of the cases recently admitted were of a kind to justify expectation of recovery under medical treatment, and about a similar proportion were of a character to warrant the most unfavourable prognosis.

The records of their history show, as in former years, a very distinct prevalence of physical causes, the hereditary tendencies of the individual's system being included in that catalogue; but, constitutional predisposition not being taken into the reckoning, and only exciting causes of the disorder considered, the question of the comparative influence of moral and physical agencies wears a

different aspect, for then it appears that in the forty instances in which causes were supposed traceable, there were but sixteen in which these did not bear the former character. Amongst the moral causes the depressing passions are constantly the most hurtful, and in the present Report the most prominent of these is grief; that is, to use the words of the Laureate, "the grief that saps the mind for those that here are seen no more." In the catalogue of assigned physical causes, intemperance still takes the lead. The cases attributed to this source during the last ten years are, for the satisfaction of the curious in this subject, here given as follows :

Year.	Admissions.	From Intemperance.	Per Cent. On Admissions.
1847 .....	67 .....	12 .....	17.91
1848 .....	93 .....	17 .....	18.28
1849 .....	82 .....	11 .....	13.41
1850 .....	81 .....	13 .....	16.05
1851 .....	68 .....	15 .....	22.06
1852 .....	84 .....	10 .....	11.90
1853 .....	95 .....	13 .....	13.69
1854 .....	107 .....	15 .....	14.02
1855 .....	65 .....	11 .....	16.92
1856 .....	103 .....	12 .....	11.65
<hr/> 10 years.	<hr/> 845	<hr/> 129	<hr/> 15.27

In this particular the various Scottish Asylums would seem to keep each other very much in countenance, the statistics of one serving to corroborate the exactness of those of the other; but there is great discrepancy among the English Hospitals, some of them, as Bethlem Hospital, and Kent and Devon Asylums, affording ratios as low as seven or six per cent.; and others of them, as for example the Stafford County Asylum (1857), giving one

fully as high as that of Glasgow or Aberdeen. The action of intemperance, while it is probably by some, in comparison with other causes, unduly overrated as to its prevalence and its influence, is, however, more widely detrimental in the production of mental disorder than is wholly to be apprehended from such statements as the foregoing; for the tendency to this and other forms of excess is apt to be reproduced in succeeding generations, and ultimately to develope the mental and physical degenerations of which several diseases, and insanity very usually, may be the exponent.

The number of deaths has been rather under the average, and the number of recoveries has also been somewhat under the ordinary ratio; the stability of the recoveries has however been very gratifying, the admissions of the year including but one instance of relapse in the dismissals of the year.

The period has passed by without any untoward accident whatever, without even an escape; a statement indeed very unusual in the history of this or of any other Lunatic Asylum of the same extent. The liberty afforded to the patients has not been less than usual, nor the temptation presented by apparent opportunity of less frequent occurrence; and, moreover, those engaged in gardening and agricultural operations have had to be employed on ground not enclosed within the continuous wall of the Hospital, and, from time to time, a body of them has had to accompany the gardener to a piece of ground rented at some miles distance.

The system of moral and medical treatment best devised for the successful restoration of the mental health

of the insane is pursued in this Hospital, under the supervision of a body of Managers and their Committees; the weekly visits of a Sub-Committee of Management; the inspection of a Sheriff specially jealous and critical on the subject of the right treatment and care of pauper lunatics, along with his medical and legal assessors; and the occasional inquisition of scientific strangers from a distance, and of officials from similar institutions: and, that it has never been a habit in these Annual Reports to laud the constitution of this Chartered Asylum and the system of treatment pursued in it, has not arisen from the unfavourable but from the very favourable tone of the criticism of qualified judges, and the concurrent voice of the medical and the general community. Recent circumstances, however, would seem to justify a departure in some degree from the ordinary course of confining the Annual Report to a simple and brief statement of medical results; for, since the commencement of the year, to which the appended Statistics refer, the Royal Commission appointed in the spring of 1855, and of whose visit notice was taken in the Medical Report of last year, have put forth, after long-timed consideration, a lengthy and effective statement of the condition of the insane in Scotland, in which, while not a little credit is given to this and the other generally called Chartered Lunatic Asylums of Scotland, there are some references to this particular Establishment, as probably there may be to others, which to us seem inaccurate in fact, and even liable to be thought ungenerous and unfair in spirit. The alleged defects are mostly dubious, or in the rank of such misapprehensions or exaggerations, as might be expected only from a Commission

which had not one single representative of the management or of the officials before their court of examination; and which has, we take leave to say, failed to furnish a strictly accurate representation, at least in so far as some of the matters of this Asylum are dealt with by them.

When the attention of Parliament was claimed to this document, it was asserted in the Commons by Colonel SYKES, himself formerly an English Lunacy Commissioner, and well acquainted with the subject, that a better Hospital, as he knew, than the Aberdeen Asylum was not to be found anywhere. This Asylum was one of the earliest to adopt the modern non-restraint treatment, and it has hitherto carried it out fully, honestly, and successfully, without the substitution of prolonged seclusion or other modes of harsh treatment. No modes of cure or palliation of the disease, of a rational and approved kind, which have been at any time introduced, have been overlooked. Recently, every year almost has improved the accommodations of the Asylum, enlarged its grounds, or added to the comforts and enjoyments of its in-dwellers. It has not followed in the wake of others, but kept going with the times. The patients have had a great amount of liberty within the Hospital grounds; with such extended freedom beyond them as has been thought consistent with the close neighbourhood of the town, and a due consideration of the condition of the patients themselves and the connections of many of them with the locality. They have been kept occupied in about the same degree as in the better Asylums, but they never have been kept immured for lengthened times within doors at work, nor has any attempt been made to get them to task

themselves rather for the advantage of the Institution than for their own profit. Although it cannot, in competition with some Hospitals, be represented that our patients club together for the production of a volume of essays, or engage in the editing of newspapers and in the acting of dramatic performances, they are encouraged to occasional association together in concerts; they have been furnished with various means of in-door diversion, such as billiards, bagatelle, cards, chess, draughts, and musical instruments; besides having such out-door amusements as walks, cricket, quoits, bowls, and from time to time, visits and excursions. They are also very amply provided with books, newspapers, and literary and illustrated periodicals; and have the daily attendance and instructions of an excellent and painstaking Chaplain.

In regard to the accommodation given to Lunatic Paupers; this has been kept in advance of most Asylums. For, with a liberality creditable to the Managers, about half of this class are furnished with separate bedrooms, while the rates that county parishes have been charged have been kept under those of other Hospitals. Again, in no Asylum with which we are acquainted are private patients, and particularly those in the least wealthy circumstances, more liberally considered and cared for, in respect of the rates charged and comforts afforded. For example, while in other places those at the lower rates are regularly lodged together at night in common dormitories, here they have had as regularly separate sleeping apartments at night; nor in the daytime has it been neglected, in association and accommodation, to pay respect to the previous social position and habits of patients.

Appended to this Report are a lithographed representation of the ground plan, and an isometrical drawing of the present state of the house and its grounds, prepared by Mr. RAMAGE, Architect; and from these, in addition to what is here said, the public will understand something of the extent and arrangement of the Institution, the classification of its inmates, and the number and size of its courts, grounds, and airing-yards, and appreciate more correctly what has been done for the right care of lunatics in this district; not as in England by the late spur of legislation and the assistance of rates, but many years ago—more than half a century since—begun by voluntary contribution and local benevolence, and since upheld, improved, and gradually extended very successfully by local management.

ROBERT JAMIESON.
