WILLIAM WALKER, *Treasurer and Clerk.*

MEDICAL REPORT.

THE following Report, with its Appendices, gives the history of the Aberdeen Asylum during the twelve months subsequent to 1st January, 1858. At that date there were, as appears from recently published authority, 2380 insane persons under confinement in the eight Public Asylums of the Northern division of the kingdom; 294, or just about an eighth part of the whole, being in the Aberdeen Asylum. Of these 294, 218 were Parochial cases, and 76 others were Private Patients at various rates of board. During the year, 102 new cases were admitted, of whom more than nine-tenths belonged to the County of Aberdeen, and about a third were received as Private Patients. There have been, it will be found, in all, nearly 400 cases under the treatment and care of the establishment during the period reported upon, and an average of about 295 daily resident.

The results at the end of the year have been, that 15 patients have died, and 91 have been removed; 39 as recovered from their malady, and 52 in various states; the unusually large number this year removed in an

uncured state being attributable to the bearing of the recent Act on the position of Pauper Lunatics residing in other than District Asylums, as well as to the strenuous endeavours of the Committee of Management to render the Hospital accommodation to the utmost available to the demands of Aberdeenshire Parishes.

In regard to Medical results, although the relative number of cures has not been equal to the high average of the past half-dozen years, it has yet been above the general average of the Scottish Asylums in reference to the period under review ; and, as respects the ordinary sanitary condition of its inmates, let it be sufficient to report, that it may be gathered from statements in the recently published Annual Report of the General Board of Lunacy Commissioners, that the rate of mortality in the Aberdeen Asylum has been less than in any Asylum within their jurisdiction, and very much, indeed, under the average of mortality in such like institutions even in Scotland ; for while, in the Private Houses, it has been nearly 8 per cent. on the mean number resident, and in the Public Asylums betwixt 8 and 9, at Aberdeen it has been little more than 3.

The year passed by without the occurrence of any accident worth noticing.

The only circumstance in its statistical features differing in any marked particular from corresponding statements in previous Annual Returns,—in addition to the exceptionally large number of inmates dismissed unrecovered as already referred to,—is, the larger number distinguishing females in the columns representing the relative proportion of sexes, for which no cause seems

attributable, other than the supposition that female lunatics had been hitherto,—that is, until the operation of the new law,—allowed, for the saving of expense, to accumulate in out-of-the-way country districts, as being comparatively less dangerous than male lunatics to be left at large, and more easy and less important to be provided for. This influx of incurables unfavourably affects the Medical statistics of the year, and will do so for some years to come.

Two statutory visits were made in 1858 by the Lunacy Commissioners to this establishment, at each of which all parts of the house were inspected, every patient seen, the history of certain cases investigated, and the legality and accuracy of warrants and registers examined, and various suggestions and critical remarks entered in the record of visit. Amongst the matters more particularly noticed with commendation were, the amount of personal liberty advantageously allowed, the domestic character of the hospital, the superior style of accommodation at very moderate rates now afforded to the private class of patients, the substitution of hair mattresses generally in place of chaff in the beds of the poorer class, the organization of an extended and improved system of night-watching, and the experimental addition of two detached cottages for occupation by some of the more orderly and aged class of female paupers.

Partly in deference to suggestions for further improvement, a slight addition has been made to the minimum diet of parochial cases, and it has been determined upon to proceed with a previously contemplated enlargement of the sitting-rooms in use by the inmates during

the day, to improve the condition of the airing-courts in several particulars, and to extend the present grounds of the Institution. Such an enlargement of space, besides being requisite for the adequate development of the Asylum to the necessities of the district, will allow many delayed improvements to be introduced, and afford an opportunity for the commencement of several important changes which have been brought under the consideration of the Managers, and which they have seen fit to determine on adopting.

ROBERT JAMIESON, M.D.,

MEDICAL SUPERINTENDENT.

13th June, 1859.
