## REPORT

#### BY

#### THE ORDINARY MANAGERS

#### OF THE

#### ROYAL EDINBURGH ASYLUM FOR THE INSANE.

#### Presented to the Annual General Meeting of the Corporation, held on Monday, 27th February 1871.

During the year ending 31st December 1870 the average daily number of Patients under treatment has been in the East House 69, in the West House 664, giving a total of 733. During the year ending 31st December 1869 the daily average in the East House was 69, in the West House 663, and in both Houses 732. There has thus been throughout the past year one additional Patient in the West House, the number in the East House remaining unchanged.

And the Surplus Revenue to ..... £1,831 1 10

The Surplus Revenue during the preceding year amounted to  $\pounds 2367$  18s. 10<sup>1</sup>/<sub>2</sub>d., so that the profits of the institution during the past year have declined by  $\pounds 536$ . It is proper, however, to explain, that this falling off is wholly attributable to the reduction in the rates of board,  $\pounds 213$  less having been received for Patients in the East House, and  $\pounds 542$  for those in the West House, mak-

ing a total of L.755 during the year. The falling off in the West House returns is mainly owing to the fact, that throughout the year 1869 there were accommodated therein sixty Pauper Patients from the country parishes generally paying L.27 and L.28 of board, who, in consequence of the termination of the contract with the District Lunacy Board at the close of that year, were removed to other Asylums, their places being taken by Patients from the metropolitan parishes at L.23.

While the receipts have declined, it is gratifying to observe that the Ordinary Expenditure has also declined, otherwise the falling off in the surplus would have been considerably greater.

The average cost per head of the maintenance of each Patient in the East House during the year was L.69 16s. 5d., and of each in the West House L.22 11s. 11d., against L.71 9s. 9d. and L.22 6s. 4d. respectively in the year 1869.

The	amount	of	Debt	at	the	close	of	the	year	1869		
was									L.1	8,046	5	5
At 31st	t Decemb	er l	1870 i	t wa	.s				1	9,247	17	2

#### Shewing an Increase of ..... L.1,201 11 9

The above increase in the amount of Debt has been wholly caused by the cost of the building operations now in progress at the Asylum. In the Report for the year 1869 reference is made to the erection of the north-west wing at the West House, which had then been commenced. The cost of the work was estimated at about L.4000, of which L.1900 had been paid at the close of the year 1869. The Managers have now the pleasure of reporting that this important undertaking was some months ago completed to their satisfaction, and has for some time been occupied by Patients. It promises to fulfil the purposes for which it was designed, and to supply a want which has for years been seriously felt in the female side of the house, viz., that of single apartments for the Patients requiring separate accommodation. As is usually the case, the cost of the work has considerably exceeded the estimate, having amounted to L.4486 16s. 3d., to further account of which L.2500 was expended during the past year, leaving a small balance of L.86 16s. 3d. over for the current year.

In consequence of the urgent representations made by the Commissioners in Lunacy in regard to the defective accommodation for the Patients, and especially the Servants, in the East House, the Managers, at their meeting on 23d June last, remitted it to the Building and Finance Committees to consider and report upon the best means of providing a remedy. The Joint Committee accordingly met, and agreed to recommend that a new wing be added to the East House, running west from the centre of the old building, and containing kitchen, dining-room, drawing-room, and twelve bed-rooms, all on a scale and in a style suited to the wants of the class of Patients by whom the house is occupied. The plans and specifications of such an addition had been prepared and approved of three years before, but the execucution of the work had been then delayed in consequence of the necessity for immediately proceeding with the additions to the West House. The Managers having approved of the report of the Joint Committee, estimates were taken for the work, and the lowest, amounting to L.1474 15s., was preferred. To account of this cost L.900 has been paid. The addition is now roofed in, and will be ready for occupation by Whitsunday.

In the Report for the year 1869 reference is made to an additional piece of ground, extending to four acres, which had been feued from one of the adjoining proprietors, in order to secure the privacy of the East House grounds. It has been found necessary during the past year to erect a sufficient boundary fence round this ground, involving a further expenditure of L.470.

The expenditure during the past year upon the various works above referred to amounts to a cumulo sum of L.3870. This, of course, forms a charge wholly against capital; and the Managers consider that they have reason to congratulate themselves upon the fact, that with so much extraordinary expenditure, the increase of debt amounts to no more than L.1201 11s. 9d., the balance being met out of surplus revenue, supplemented by the Sinking Fund.

With reference to the additions to the East and West Houses respectively, the Managers beg leave to make the following quotation from the Report made by Sir James Coxe on the occasion of his last statutory visit to the Asylum, which took place on 14th December 1870 :---

"The general condition of the East House is still as described in former Reports; but the extension so repeatedly recommended is now being actively carried out, and will, it is understood, be followed by important alterations and improvements in the existing building, and by extensive renovation of the furniture.

"The accommodation of the West House has been increased by the opening of the new wing on the female side. The object of this extension is to afford facilities of isolation and classification by single rooms, the number of which was formerly utterly insufficient for the proper care and treatment of the inmates. The accommodation thus provided is cheerful and appropriate; and when fully furnished, papered, and otherwise properly fitted up, may be expected to influence in a very material degree the condition of the Patients. Already its advantages are apparent in the greater tranquillity of the separate buildings, and in the manifest improvement which has taken place in several of the worst cases, by the increased means of classification and diversified association now at command."

The Managers regret to have to record that during the past year the Institution has been deprived by death of the services of Sir James Y. Simpson, Bart., one of the Deputy-Governors, and a member of the Medical Board; Professor Syme, also a member of the Medical Board; and Mr Cairns, who for many years had acted as an Ordinary Manager. The vacancies thus occasioned it is for the Corporation to fill up.

> ROBERT WALKER, Senior Manager.

## REPORT

#### OF THE

#### CHARITY COMMITTEE OF MANAGERS

FOR THE YEAR ENDING 31st DECEMBER 1870.

The amount of the Fund at 31st December 1870 was L.8694 9s. 7d., being an increase of the above sum of L.616 7s. 9d. over the amount at 31st December 1869.

The total number of Patients who have derived benefit from the Fund during the past year was 20, the average number on the roll each quarter being 19, and the average allowance to each Patient L.11 15s. Digitized by the Internet Archive in 2018 with funding from Wellcome Library

## PHYSICIAN'S ANNUAL REPORT

#### FOR THE YEAR 1870.

I have the honour to submit to you my Report for the past year.

The following Table exhibits the general results as regards the admission, removal, recovery, and deaths of Patients.

the memory of Patients charged	Males.	Females.	TOTAL.
Number of inmates at the close of 1869, Absent on Probation,	364 10	375 5	739 15
Admitted during the year 1870,	374 121	$\frac{380}{144}$	754 265
Total number under treatment,	495	524	1019
M. F. T. Discharged, 103 $126 = 229$ . Of whom were Recovered, 58 $60 = 118$ Relieved, 13 $20 = 33$ not Improved, 32 $46 = 78$ Absent on Probation at 31st 2 $1 = 3$ December 1870, 2 $1 = 3$ Deaths, 37 $30 = 67$ Total number at the close of 1870, .	142	157 367	299 720
Average number daily resident during the year 1870,	$\begin{array}{c} \text{Males.} \\ 346 \frac{16}{365} \\ 361 \frac{308}{365} \end{array}$	Females. $370\frac{10}{365}$ $370\frac{309}{365}$	Total. $716\frac{26}{365}$ $732\frac{252}{365}$
Decrease in 1870 of average number daily } resident,	$15\frac{292}{365}$	299 365	$16\frac{226}{365}$

TABLE I.-General Results of the Year.

The number of Patients in the Asylum at the close of 1869 was 739, exclusive of 15 absent on probation.

Two hundred and sixty-five Patients were admitted during the year 1870. The removals during the same period were 229, and of these 118 were discharged recovered, giving the per centage of 44.5 recoveries on the number of admissions; so that, although the number of admissions is slightly less than that of 1869, the number of recoveries in proportion to those admitted is greater.

The number of Patients admitted into the Asylum since it was opened now amounts to 7696, of whom 2978 have been discharged recovered, being in the ratio of 38.70 to the admissions, or 42.70 per cent., if those remaining under treatment are deducted.

The number of inmates at the end of 1870 was 720, exclusive of 3 absent on probation.

The average daily number resident during the past year was 716, being 16 less than the average of last year. This is, however, due in great measure to the removal of Patients chargeable to the landward parishes from this Asylum, and their transference to Hallcross, Musselburgh, and other Asylums.

It is a matter for congratulation to the Managers that the large addition to the Western Department, consisting of an entirely new wing, built as a completion of the original plan of the house, is now finished and occupied by Patients. The mode adopted of arranging the sleeping accommodation in single rooms in the addition has been attended with the most beneficial results, and has greatly facilitated the management of the Patients, as frequently Patients quiet, tractable, and easy of management when associated during the day, at nightfall experience such an accession of excitement as renders it imperative for the comfort of others that means should be taken for their separate accommodation. By this addition to the female side of the house, also, more room has been gained for the accommodation of male Patients of a higher class at the West House, those female Patients who were temporarily placed in dormitories more specially belonging to the male side of the house being now removed to their proper department.

The additions you projected to the Eastern Division are now

nearly completed, and will greatly add to the comfort and welfare of the Patients in that department.

Table II. shows the period of residence and condition of those Patients who were discharged.

Total,	13	20	33	33	45	78	58	60	118				

TABLE II.—Period of Residence of those Relieved, Not Improved, or Recovered, at their Removal.

This Table shows that the great majority of recoveries, 86 out of 118, occurred within the year, though a comparatively large number (12) took place in Patients who had been resident for the space of two years. In the case of one Patient, recovery took place after a mental aberration of seventeen years' duration.

The past year affords several examples of a constantly recurring source of annoyance and anxiety to Asylum Superintendents. I refer to the removal of Patients by their friends against the ad-

vice of the Medical Superintendent. A man becomes affected with mental alienation, and is very properly put under restraint in an Asylum. Gradually, as his general health recovers under careful treatment, supplemented by the removal of all sources of mental annoyance, the mental symptoms lose their prominence, and to an occasional visitor he presents no symptom of unsoundness of mind; but the medical man who has watched his convalescence knows well that the Patient's mind has not regained such a stability as to enable him to engage in business, or mix in the ordinary affairs of life, and that a course of establishment of mental soundness must take place before he can conscientiously discharge such a man recovered. He remonstrates against what he knows from his experience to be a deliberate injury to his Patient; but the Patient's friends, in their ignorant wilfulness, insist on removing him, and the consequence is, that he is in many cases, within a very short time, returned in worse plight than on the previous occasion. In some cases there is congenital weakness of mind, and the Patient, who, while under Asylum discipline, leads a quiet and happy life, if removed and exposed to the various annoyances of private social life, soon shows his singularity, and becomes impossible of management. Such a case has lately occurred with me. A gentleman labouring under hopeless Dementia, who, while in the Asylum, was quite tractable, and comparatively easy of control, on his removal from it, became very intractable in his behaviour, and troublesome in his habits : he finally mastered his attendant, and, when last heard of by me, was in a state anything but satisfactory to those taking an interest in his welfare.

Table III. shows the ages of those admitted, discharged recovered, and dead.

This Table shows the proportional frequency with which mental alienation and recovery from it occur at the decennial periods up to eighty, as far as the experience of a year can do so. The greatest number of admissions took place between thirty and forty, the period of life at which the bodily forces are in fullest vigour, and the mental powers most severely taxed. The forms of insanity during this period are chiefly of the Sthenic kind, and are, as the Table shows, in many instances recovered from. As life passes on, and the powers of the constitution become impaired, the forms of insanity which occur are not of so recoverable a nature: the mental insufficiency becomes more and more simply part of a general constitutional decay, and the senile dement sinks into a condition of merely vegetative existence.

TABLE III .- Ages of those Admitted, Discharged, and Dead.

In Table IV. are classified, after two different methods, the forms of mental affection under which those Patients laboured who were admitted during the year 1870.

In No. 1 the forms of insanity are given after the method commonly in use; in No. 2 the cases are classified under a nomenclature derived from the constitutional condition which was materially concerned in producing the mental symptoms.

Not only is this method of nomenclature of importance in defining of cases which, resembling each other in their general features, are nevertheless widely different in the gravity of their nature; but it is evident, I think, that the literature of insanity, as well as professional communication, must be materially assisted by a nomenclature which, instead of requiring a wearisome recapitulation of irrelevant facts, at once directs attention to a recognised group of symptoms, and leaves the attention free to dwell on certain features which may be peculiar to the case in hand.

TABLE IV. No. 1.-Forms of Insanity in those Admitted.

In No. 1, for example, several cases are entered under the old forms, as instances of a Monomania of Pride, Unseen Agency, and of Suspicion, while it is subject of constant remark, that though these may be prominent, they are rarely solitary symptoms, but are constantly associated with other evidence of mental derangement of various kinds, all depending on some constitutional deficiency, which refers them to one of the heads in No. 2.

TABLE IV. No. 2 .- Forms of Insanity in those Admitted.

Table V. shows the number of cases during the past year where suicidal impulses were displayed during the continuance of mental disorder.

The cases are grouped as to whether suicide was only meditated or actually attempted, an important distinction, as in not a few cases self-destruction is threatened by Patients as a means of gaining some indulgence desired by them, and is used as a means of coercing authority to their wishes; while in others, again, when the idea of suicide is seriously entertained, there is present in all cases a degree of general constitutional perturbation, which is characteristic of the inability for mental control, which renders possible the commission of the fatal act.

TABLE VI.-Probable Causes of Disease in those Admitted.

And here I would remark on the great difficulty which is often experienced in eliciting an intelligent account of the condition of Patients previous to their admission. Their friends will give you a circumstantial account of their daily life, but fail to recount the one thing which is necessary for the correct appreciation of their case.

Table VII. shows the forms of insanity in those who were discharged recovered, relieved, or not improved.

TABLE VII.—Forms of Insanity in those Patients who Recovered, or were Discharged Relieved or Not Improved.

Table VIII. shows the duration of disease previous to admission, and the probable condition of those admitted.

Of those who were admitted into the Asylum within one month of the time at which mental symptoms were reported as having first appeared, 30.5 per cent. have already recovered: of those who had been the subjects of mental disorder for periods varying from one month to a year, only 22 per cent. have already recovered. The deduction to be drawn from the consideration of this Table is, I think, plainly this, that after symptoms of mental impairment have displayed themselves, the Patient's chances of recovery are, as far as experience bears us out, in direct ratio to the promptness with which means are taken for his being placed under proper care and treatment.

TABLE VIII.—Duration of Disease previous to Admission, and probable Condition of those Admitted.

In Table IX. are shown the causes of death in those cases which terminated fatally.

It is noticeable that in the great majority of cases death resulted from diseases of a low type. Of the 67 Patients who died during last year, 10 were the subjects of General Paralysis, and death was the result of the inevitably fatal termination of that disease. In the case of 8 the appearances of general constitutional exhaustion were the only assignable cause of death. Thirteen were the victims of Tubercular Phthisis. So that, taking other items of this Table into account, more than one-half died of disease of a depressed type.

TABLE IX - Causes of Death.

Among the deaths in last year's list occurs that of one for more than ten years a Patient. When admitted from the prison of Edinburgh, he was loaded with chains, being considered one of the most dangerous Acute Maniacs ever under treatment; and when in one of his fits of excitement, presented more the appearance of some ferocious beast than of a human being. He died of Hæmorrhage, resulting from the progress of a cancerous ulcer of the stomach.

Table X. shows the period of residence of those deceased.

TABLE X .- Period of Residence of those Deceased.

The post mortem appearances of those cases in which an examination was obtained are given in a tabulated form in the Appendix.

I am happy to be able to report a considerable increase in the number of working Patients, particularly on the male side, of those who are engaged in outdoor occupation. I am of opinion that this mode of occupation is most desirable to the well-being of all who can in any degree bear the exposure which it entails: even those demented creatures whose bodily strength is poor, can still engage in the minor exertion of weeding, &c., and can render little aids to their more robust brethren.

As is customary, various means of amusement have been resorted to for the relaxation of the Patients, among which I may mention cricket, bowls, croquet, athletic games, garden parties, theatricals, curling, skating, &c. The Library Club has continued to hold its fortnightly Monday meetings, the alternate Monday evenings being appropriated to lectures delivered by the following gentlemen who have done us the favour to place their services at the disposal of the Institution :- Rev. John Pirie, John C. Steen, Esq., Rev. P. Barclay, Dr Bedford, Rev. J. S. Mill, Rev. W. Gillespie, Dr Nachot, Dr Wickham, John Sadler, Esq., R. M. Ballantyne, Esq., William Gillespie, Esq., and W. Lees, Esq., A.M.

In accordance with the suggestions made by the Commissioner in Lunacy on the occasion of his last visit, a course of papering, painting, and ornamentation of the male side has been commenced, and various additions to the furnishing of this part of the house are contemplated.

Since my last Report Dr R. H. B. Wickham, my Senior Assistant, has been appointed Medical Superintendent of the Newcastle Borough Asylum. He is the fifteenth of my assistants who have left to assume the Superintendentships of other Asylums.

In conclusion, I cannot but congratulate both myself and you on the work of the Asylum for the year past; nor can I close this Report without thanking you most cordially for the manner in which you have aided and encouraged me in my endeavours to support the reputation of the Asylum.

ANDREW LESLIE, House Superintendent.

## APPENDIX.

#### PATHOLOGICAL APPEARANCES OBSERVED IN THE BRAIN DURING THE YEAR 1870.

Of the 67 deaths that occurred during the year, autopsies were made in 16 cases. The lesions of the Encephalon are noted below, and are arranged so as to show their relations to the various forms of Insanity.

The following Tables give the forms of insanity and the causes of death in those who died :--

#### FORMS OF INSANITY.

Acute Mania,					2	Brought forward,	13
Epileptic do.,					3	Monomania of Suspicion, .	. 1
Chronic do.,					4	General Paralysis,	. 1
Dementia, .					4	Phthisical Insanity,	. 1

It will be noticed that death resulted, in most of these cases in which an examination of the body was held, from Tubercular Phthisis and diseases of a like asthenic type, causing death through an inability to recover from their effects, dependent on a previously exhausted constitutional state.

In the cases of Epileptic Mania, certain morbid changes were noticed in the brain. In one, a patient of Tubercular Cachexy, thickening and opacity of the Arachnoid, with adhesion of the membranes, and thickening of the Calvarium, were discovered. In another, a case where Epileptic Insanity had supervened on a severe accident, extensive softening of the brain substance, the separation of the convolutions over an area of two square inches in the left post-parietal region, together with erosion of the Optic Thalamus on the right side, were discovered.

It is curious, in reference to those cases whose mental condition was one of Dementia previous to death, that in all it is either mentioned, that in addition to the specific complaint under which the patient laboured at the time of death, general exhaustion was present to a great extent, or that the patient laboured under such organic disease as would interfere materially with the force of the circulation, and at the same time render him incapable of any, even the most ordinary exertion, mental or physical.

Of the two cases where undue excitement was the principal feature of their mental disorder, on post-mortem examination; in one extensive tubercular deposits were found in all the thoracic and abdominal organs, together with evidence of inflammatory changes of a low type in the brain and its appendages, thus showing that for some time past deterioration of the brain substance itself must have co-existed with an impaired condition of the bodily health.

In the other no impairment of the brain structure itself was found, but there was extensive disease of the lungs, both being emphysematous, and in the second stage of Pneumonia. In this case the general health was much impaired, the bodily condition being one of extreme emaciation. It is curious that the Pneumonia, an acute affection of the lungs, and an exacerbation of his mental excitement, were contemporaneous before death.

In one case of Chronic Mania there was also an organic disease of a cancerous nature in the stomach of long standing.

In two cases of Melancholia changes of a tubercular nature were found; in one affecting the membranes of the brain, in the other having their seat in the lungs.

In the one case of post-mortem examination of a patient who had been the victim of General Paralysis, extensive morbid alteration had taken place in the brain substance, it being rendered soft and friable. The floors of the lateral ventricles in this case presented the appearance of being covered with fine sand, so characteristic of this form of mental disease.
