REPORT
OF THE
ORDINARY MANAGERS
OF THE
ROYAL EDINBURGH ASYLUM FOR THE INSANE
FOR THE YEAR ENDING 31ST DECEMBER 1909.

*Presented to the Annual Meeting of the Corporation
held on Monday, 28th February 1910.*

IN last year's Report the Managers expressed the opinion that in Dr George M. Robertson, their new Physician-Superintendent, they had found a worthy successor to Dr Clouston. Dr Robertson has now been upwards of a year in office, and the Managers are extremely gratified in being able to state that he has quite fulfilled their expectations. They are in every way satisfied with his administration, and the continued confidence of the guardians of patients and of the medical profession which he enjoys, shows that the treatment given to patients under his charge maintains its high standard.

In administering the affairs of the great institution under their care, the Managers have to keep before them the claims of the two distinct departments into which it is divided, namely:—(1) Craig House, and (2) the West House, the latter being subdivided into the Intermediate and the Rate-paid

divisions. They are glad to be able to report that in each of these departments something has been done during the past year to add to the comfort of the patients. Dealing with them in detail, the Managers beg to report on

I. CRAIG HOUSE.

As is well known, this department of the institution is reserved for the class of patients for whom a liberal rate of board is paid, and of whom there has been a daily average during the year of 209, being a decrease of 4 on the average number for the preceding year.

The standard rate of board charged for the care and treatment of patients at Craig House is £3 a week, paid quarterly; but patients are also admitted at a minimum rate of £2 a week. For those desiring private sitting-rooms or suites of apartments, special attendance and extra privileges, correspondingly higher rates are charged.

Craig House with its dependent villas is entirely separated both in situation and administration from the other department. Standing as it does in its own grounds, extending to over 60 acres, with its handsome buildings, its commanding views, its golf course, tennis lawns, and bowling greens, it would appear that nothing could be added to its attractiveness. There are, however, always details requiring attention in order to keep this department as hitherto in the forefront of institutions of its kind.

During the year 1908 it was found necessary to add to the Hospital accommodation for ladies, and to erect a verandah for their open-air treatment. This year it has been thought desirable to add to the Hospital accommodation for gentlemen, and the Managers are glad to be able to report that by some internal alterations it has been found possible to do this with very beneficial results.

A part of the garden has been screened off, so as to afford a recreation ground for those patients whom it is advisable to segregate from the rest of the community; alterations are being made on the lower storey, so as to utilise part of it as a

store; considerable improvements are being effected on the kitchen arrangements and cooking apparatus, and the servants' accommodation has also been improved. These improvements all tend to the increased welfare of the patients. Notwithstanding the expenditure thus incurred, the financial position of this department at the end of the year's working has never shown signs of greater prosperity, and the Managers are steadily reducing the building debt secured on it.

II. WEST HOUSE.

This is the department appropriated to the Intermediate and Rate-paid patients, and as these are accommodated in the same block of buildings, although in different sections of it, it is more convenient to treat of them together. During the year several important alterations have been made dealing with the accommodation for the Staff, and the Managers hope to be able to carry out further improvements in this direction during the current year. These alterations will not only add considerably to the comfort of the attendants, nurses, and domestics, but will also conduce to more careful attention being paid to the patients.

Another matter in connection with the West House which has engaged the attention of the Managers has been the entire renovation and rearrangement of the Mortuary. It has long been felt that this department was in need of reorganisation, but the heavy expenses incurred during recent years in connection with sewage and drainage have hitherto prevented the Managers from undertaking it. As it now exists, the Mortuary consists of four rooms, including a room where a funeral service can be held.

In regard to this department Dr John Macpherson states in his Report, afterwards referred to, that "The interiors of these
"rooms have been tastefully decorated, and a dado of white tiles
"adds effectively to their appearance. The whole department is
"complete and impressive, and in many respects surpasses any
"similar department of the kind in the country. In effecting
"this important improvement, the Managers have, by showing

“their respect for the dead, indirectly advanced the interests of
“the great number of patients who from year to year pass under
“their care.”

During the year that is coming the Managers have in contemplation the execution of several important works in the West House Department:—(1) They have taken contracts for fitting up modern interior sanitary appliances in substitution for the arrangements hitherto in use; (2) they propose to thoroughly overhaul the Laundry Department; and (3) they hope to be able to effect some improvements on the kitchen arrangements.

In Dr Macpherson's Report the attention of the Managers is drawn to the heating arrangements of the West House, and this important matter will have their earliest possible attention.

The following table gives the numbers of patients in this department of the institution :—

	1908.	1909.	Increase.	Decrease.
Intermediates at £60 . . .	7	11	4	—
Do. at £45 . . .	157	150	—	7
Private Patients at lowest rate of board . . .	75	79	4	—
Rate-paid Patients . . .	284	287	3	—
	523	527	11	7
	—	523	7	—
Total increase . . .	—	4	4	—

As will be noticed, there is an increase of 4 in the number of £60 patients. It was only possible to admit patients at this rate of board a few years ago on the removal to Bangour of so many of the Rate-paid patients, and it is gratifying to find that the accommodation thus rendered vacant is being gradually utilised for the benefit of a higher class whose friends can afford only a moderate rate of board. The advantage enjoyed by those patients paying the £60 rate over the other Intermediate patients is that they have bedrooms to themselves.

With regard to the finances of the West House, it is

CRAIG HOUSE—CHIEF DRAWING ROOM

necessary for the Board to go into these in detail, as on them depends the rate to be charged for the coming year for the Rate-paid patients.

The amount of boards received for all the West House patients, including extra accounts, during the year was £20,639 15 9

Sundry other receipts, including £553, 3s. 9d.

received from Craig House for labour performed for that department by West

House patients 889 4 8

Total Ordinary Income . £21,529 0 5

Deduct—Payments for ordinary maintenance, including

interest of debt, etc. £20,266 18 2

Capital instalment towards

Sinking Fund 2,076 4 7

22,343 2 9

Showing a deficit for West House of £814 2 4

As, however, there has been a profit of £194, 9s. 3d. made on the Intermediate Department, the total deficit on the Rate-paid Department amounts to £1,008, 11s. 7d.

The following table shows the cost of maintenance of the two classes of West House patients for the years 1908 and 1909 :—

	Cost in 1908.	Cost in 1909.	Mean rate of boards received.	Surplus on each Patient in 1909.
Each Intermediate Patient	£48 5 8	£45 12 1	£45 15 10	£0 3 9
Each Rate-paid Patient and Patient at the lowest rate of board	39 4 6	37 8 5	34 13 3	Deficit. 2 15 2

These figures or calculations are based on the hypothetical assumption that the Managers have charged against the patients the full sum authorised by the Court of Session, and in the foregoing table, showing the cost per head of maintenance, each

patient is charged with £5, 2s. 6d. as his contribution towards liquidation of debt. As a matter of fact, the charge actually made for this year is considerably smaller, as will be seen from the following statement, which gives the figures, including the interest paid on debt, but excluding the instalment towards liquidation of capital :—

West House gross receipts as before	£21,529	0	5
<i>Deduct—</i>			
1. Expenditure (less capital instalment to Sinking Fund, £2,076 : 4 : 7)	£20,266	18	2
2. Arrears written off	18	19	7
		<hr/>	20,285 7 9
Leaving a surplus of	£1,243	12	8
Deducting from this the surplus from the Intermediate patients of	194	9	3
		<hr/>	
Leaves a surplus from the Rate-paid patients and patients at the lowest rate of board of	£1,049	3	5
		<hr/>	

This sum has alone been available for the liquidation of the West House debt, which has thus been reduced only by that amount, instead of by £2,076, 4s. 7d., as it would have been on the basis approved of by the Court of Session.

Although this year's reduction of debt is thus £1,037, 1s. 2d. short of the statutory amount, still the result is much more satisfactory than it was last year, when the West House debt was only reduced by £146, 12s. 5d., and the Managers therefore, for the reasons set forth in last year's Report, have resolved to continue the present rates of board in the meantime.

At 31st December 1908 the indebtedness of the West House Department amounted to	£18,555	19	11
It now stands at	17,506	16	4
		<hr/>	
Showing a reduction of debt as before-mentioned of	£1,049	3	5
		<hr/>	

CRAIG HOUSE—CENTRAL BILLIARD ROOM

In regard to the finances both at Craig House and the West House, the Managers cannot too strongly emphasise the fact that there is no proprietary interest of any kind in the institution, and that any surplus arising from the excess of boards received over expenditure is applied solely to the reduction of debt and to the amelioration of the condition of the patients.

The Asylum was officially inspected by Dr John Fraser, Commissioner in Lunacy, on 21st, 22nd, 23rd, and 24th June, and by Dr John Macpherson, Commissioner in Lunacy, on 22nd, 23rd, and 24th November. Dr Fraser writes :—

“ Various improvements and alterations in the accommodation
 “ of both Craig House and the West House have been carried
 “ out or are in progress. No. 1 Male Gallery in Craig House
 “ has been converted into a ward of a hospital character; it has
 “ been divided by a partition into east and west divisions, with
 “ four bedrooms adjoining the east and two the west section.
 “ A new door on the south side gives access to the gardens, and
 “ in connection with this ward it has been resolved to erect a
 “ verandah capable of holding six or eight beds, so as to permit
 “ of the open-air bed treatment. A storey has been added to
 “ the Ladies’ Hospital to accommodate senile cases, and a
 “ verandah has been erected having sufficient space for six beds.
 “ The bowling alley is being converted into mess and recreation
 “ rooms for the attendants. At the West House, No. 6 Female
 “ Gallery has been, by necessary and useful alterations, made
 “ into a hospital ward. It appears to be very complete in all
 “ its arrangements for the care and effective supervision of the
 “ sick and newly-admitted patients. The corresponding gallery
 “ on the male side has been similarly altered and improved, and
 “ is ready for occupation. The day-room in No. 1 Female
 “ Gallery is now utilised as a mess-room for nurses, and No. 3
 “ Gallery is in process of being made into a home for nurses.
 “ The eastern section of the male separate house is about to
 “ be used as quarters for attendants, and a section of the female
 “ separate house now accommodates the convalescent Inter-
 “ mediate patients. The Mortuary is to be reconstructed, and
 “ when completed will be a desirable improvement, as it has not
 “ been a satisfactory department in the past. The Research

“ Laboratory has been enlarged and thoroughly equipped, and it
 “ was evident during the visit that scientific investigations of an
 “ important character are being actually carried on by the
 “ resident Pathologist.

“ The Management of the Asylum is conducted with great
 “ energy and ability. All sections of the establishment, except
 “ those at present in process of alteration, were found in
 “ admirable order, and the provision for the comfort of the
 “ patients is highly satisfactory.”

The following extracts are taken from Dr Macpherson's
 Report :—

“ The impression formed as a result of the visit is that the
 “ institution is being very actively and successfully managed,
 “ and that every endeavour is being made, both by means of
 “ minor structural alterations and by means of administrative
 “ changes, to make it as efficient as possible for the welfare,
 “ comfort, and care of the patients.

“ Of the many important changes which have been made
 “ during the past year, the three following are selected for
 “ notice. At the West House the two wards on the ground
 “ floor in the south wings of the building have been converted
 “ into hospitals. The Male Hospital contains forty beds, and
 “ is under the charge of an assistant matron, assisted by five
 “ nurses and a male attendant. The Female Hospital contains
 “ forty-two beds, and is under the charge of an assistant matron,
 “ assisted by six nurses. These hospital wards are commodious
 “ and well lighted ; being on the ground floor they possess easy
 “ access to the open air, their situation is central, and their
 “ proximity to the entrance-door is an advantage in the case of
 “ newly-admitted patients. It is proposed to erect shelters or
 “ verandahs for the open-air treatment of patients.

“ At Craig House a verandah has been erected in front of
 “ the Ladies' Hospital. Not only does it afford the valuable
 “ opportunity of treating the patients in bed in the open air,
 “ but it also gives a much-needed relief to the hospital wards
 “ during the daytime.

Along with the Treasurer's Accounts there are submitted the Reports of the Charity Committee and Bevan Fund Committee, from which it will be seen that 67 cases have been assisted during the year.

The Managers feel assured that if the public realised the great benefit conferred by the grants from these funds upon persons belonging to the middle class and to the independent poor, they would contribute more liberally to the Charity Fund of the Institution than they at present do. By means of these grants the Managers are able to accommodate in better departments many patients of good position and education, who would otherwise have been placed in the Rate-paid Departments—an advantage which not only spares the feelings of the patients and their friends, but materially adds to the chance of recovery.

In name of the Managers,

JAMES ADAM.

Chairman.

REPORT

OF

THE CHARITY COMMITTEE OF MANAGERS

OF THE

ROYAL EDINBURGH ASYLUM FOR THE INSANE

FOR THE YEAR ENDING 31ST DECEMBER 1909.

THE Account of the Treasurers' Intromissions with the Charity Fund is herewith submitted.

The Fund amounted at 31st December 1908 to	£9755 9 11
The Ordinary Income during the	
year amounted to	£344 0 1
The Ordinary Expenditure during	
the year for the benefit of	
patients was	£364 12 10
Expense of Manage-	
ment	11 13 1
	<hr style="width: 100px; margin: 0 auto;"/> 376 5 11
Excess of Expenditure over Income	<hr style="width: 100px; margin: 0 auto;"/> 32 5 10
Amount of Fund at 31st December 1909	<hr style="width: 100px; margin: 0 auto;"/> £9723 4 1 <hr style="width: 100px; margin: 0 auto;"/>

The total number of patients relieved during the year from the Ordinary Income of the Charity Fund was 33, and the number of patients on the roll at the close of the year was 26.

CRAIG HOUSE AVENUE

Along with the Account of the Charity Fund, the Committee beg leave to submit the Account of the Treasurers' intromissions with the Bevan Trust Fund.

At 31st December 1908 the Fund amounted to £12,633 11 3

The Ordinary Income during the

year amounted to . . . £412 18 3

The Ordinary Expenditure during

the year for the benefit of

patients was . £448 12 1

Expense of Manage-

ment . . . 15 4 6

————— 463 16 7

Excess of Expenditure over Income. . . 50 18 4

Amount of Fund at 31st December 1909 . . £12,582 12 11

The number of patients relieved during the year was 34, and the number on the roll at the close of the year was 31.

The total number of patients relieved from both Funds was 67.

The Committee are very glad to be able to report that during the past year they have received subscriptions to the Charity Fund amounting to £25, 4s. 9d. for which they take this opportunity of returning their thanks to the subscribers, and they beg leave again to recommend this Fund to the favourable consideration of the benevolent.

It will be noticed that the claims upon the Fund during the year have been greater than the income was able to meet. The Committee would welcome the charitable support of the public. It is not, perhaps, very widely known that such kindly help is needed, and that it makes so great a difference to many self-respecting families, and to so many of the mentally affected.

R. H. FISHER, *Convener.*

PHYSICIAN-SUPERINTENDENT'S
 A N N U A L R E P O R T
 FOR THE YEAR 1909.

MY LORD PROVOST AND GENTLEMEN,

I have the honour to submit the Physician-Superintendent's Report for the year 1909.

Statistics
for 1909.

On the 1st of January the total number of patients under treatment was 752 (including in this number 11 who were on probation), and on the 31st December it still remained 752, as at the beginning of the year, and there were 14 patients then absent on probation.

The admissions were 209, of whom 97 were of men and 112 of women.

The total number of patients under treatment during the year was therefore 961.

The number discharged from the Institution was 147, of whom 53 were of men and 94 were of women.

The number of patients who died was 62, of whom 36 were men and 26 women.

The average number of patients resident during the year was 736, of whom 352 were men and 383 were women.

A condition
of stability
indicated.

The most marked feature of these statistics for the last year is the evidence afforded by them of a condition of stability. They deal with the changes of population in the two Mental Hospitals—Craig House and The West House—governed by the Managers of the Royal Edinburgh Asylum. The two Houses or Hospitals are quite separate from one another in all respects. They occupy extensive grounds of their own, and they both serve very useful but different purposes.

Craig House, with its surrounding villas, is situated on Craiglockart Hill, one of the finest sites near Edinburgh. It is ornate in design and is well furnished, and it is intended to supply accommodation and treatment of the best possible kind for people of means.

Craig House and The West House serve different purposes.

The West House is situated in the district of Morningside, and provides comfortable accommodation at low rates of board for patients of limited means. It also admits parochial patients belonging to Edinburgh, Leith, and the Orkney Islands.

ADMISSIONS.

The total number of admissions last year was 209, or 30 less than it was in the previous year. They have been falling in number for the last five years, and this decrease is entirely due to the opening and gradual development of Bangour Village for the reception of the Edinburgh patients, all of whom were formerly sent to The West House. It is believed that our Admission Rate in the future will show a tendency to rise, as the transitional period referred to has now been passed and the new conditions have adjusted themselves.

Admissions low, but will probably increase in future.

Although The West House no longer admits the bulk of the Edinburgh patients, it still receives a certain number, which it is found convenient for various reasons to send to it, and 114 patients belonging to that Parish are undergoing treatment there. All the patients, however, belonging to the Parish of Leith are sent to us, as well as the majority of those belonging to Parishes in Orkney. Comparing with past years the number of the admissions from the Parish of Leith, these being all the cases requiring Asylum treatment occurring in a population of known size, it would appear that last year was an average year as regards the occurrence of insanity. The admissions were very much less than they were during the years 1900 and 1901, when, owing to the South African War, the casual labourer, getting abundant employment, drank to excess, and swelled the admission rate of insanity. In spite, however, of bad times and the increased duty, in 19 per cent. of the male admissions, and in 10 per cent. of the female, alcohol was alleged to have been a factor in the causation of the insanity. The total percentage

An average year for the occurrence of insanity in Leith.

No female
G.P.s. admitted.

was 14·3, as compared with only 10·8 in the previous year. There were 14 cases of General Paralysis admitted, and none of these were females.

PRIVATE PATIENTS.

Admissions to
Craig House
above average.

Although among the poor the amount of insanity occurring during the year seems thus to have been average, the number of private patients admitted has never been exceeded, and forms a record. The number of admissions to Craig House alone is above the average of recent years, and many of these desired accommodation and attendance of a special character, which we were in a position to give them.

Comfortable
accommodation
and treatment
at £45 a year.

The number admitted to The West House at the £45 rate was again very high. The Managers are desirous that this provision, of a comfortable nature, for the care and treatment of patients, belonging to families of the professional and educated classes, should be widely known, as it was to supply the wants of these classes that the Institution was originally intended, and they are liberally provided for at the rate charged. In some cases, families, who have lived in comfort and even refinement when times were prosperous with them, cannot afford more than £32, 10s., the rate charged for the wards in which the parochial patients are also treated. Many of these are assisted out of Trust Funds in the hands of the Managers by the grant of a supplementary sum which enables the patient to get the benefits of the higher rate. This is an inestimable boon to many, and the extent of this Charity may be judged by the fact that out of 160 patients treated in the Intermediate (or £45) Wards, at least a quarter would not be entitled to these benefits but for the supplementary grant obtained from the Charity and Bevan Funds. The existence of this Charity is brought to the notice of generous donors, as its usefulness could be extended.

The Bevan Fund
a useful Charity.

DISCHARGES.

The Recovery Rate was 32 per cent. of the total number of admissions, which is slightly higher than it was last year, and than the average of the last ten years.

No less than 80 patients were discharged either Relieved or

CRAIG HOUSE—RECESS IN CORRIDOR

Unimproved. Many of the former were patients belonging to the Parish of Leith who had so far improved that they no longer needed special treatment in the wards of a Mental Hospital, and they were boarded out with suitable guardians in the country, who were selected for them by the Inspector of Poor.

Leith patients
boarded out.

DEATHS.

The total number of deaths was 62, being in the proportion of 8·4 per cent. of the average number resident, and 6·5 per cent. of the total number under treatment. The number of deaths in 1908 was actually and proportionately less than it had been for twenty years, and in 1909 there were two fewer than in the previous year, and the results were even more satisfactory.

Death Rate
very low.

GENERAL HEALTH GREATLY IMPROVED.

Convincing proof is supplied by the above evidence of the fact that the general health of the patients at The West House has improved very greatly. There is little doubt that the removal of the Edinburgh patients to Bangour Village, and the consequent relief to the insanitary state of overcrowding that had existed for some years, was by far the most important factor in effecting this improvement. There were other beneficial agencies as well, and amongst these I would give the foremost place to the greater employment of the open-air treatment.

Elbow-room
at last.

OPEN-AIR TREATMENT.

The success of this form of treatment in the prevention and cure of consumption has taught us all a lesson which has sunk more deeply into the minds of physicians in charge of Mental Hospitals than any other class. The reason for this is not difficult to find, for their patients—weakly folk to begin with—have suffered more from the effects of “air starvation” than most other people, and these physicians have thus had more immediate and direct proof of the advantages of hyper-aeration to the general health when they have begun to employ it. This deficiency of fresh air was due, in the first place, to the

Fresh air the
ideal tonic.

Patients too
much indoors,
especially
women.

A good
window yet
to be designed.

Craig House
set on a hill.

habit of keeping patients locked up in wards for the greater part of the day for the sake of easier supervision. Women were worse off than men in this respect, for the latter had a certain amount of outdoor employment; and while consumption was thus abnormally rife on both sides of an Asylum, it was always worse on the female side. The fact that the ratio of the incidence of consumption in the two sexes in Asylums is the reverse of what generally holds good outside of them is further proof of the evil of confining patients to wards. Then Asylums during the last generation have been imperfectly ventilated owing to the fact that the modern sash window introduced into them is only made to open to the extent of 5 inches, lest patients should escape through them. In the old days they had iron bars to prevent egress and they had abundant ventilation, sometimes there was too much as the windows were not always glazed. We removed the bars for the sake of sentiment and appearance, and we have only now learnt the price we have paid for restricting the supply of fresh air in our wards. The patients in all our Hospitals for the Insane are very much more in the open air than they were a few years ago, and as a consequence the general health of the whole Asylum population, including that of the nurses, has vastly improved. The health of the patients at Craig House has always been exceptionally good. From its airy situation, sheltered, however, from our severe south-westerly gales, its inhabitants suffer no lack of oxygen.

DIAGNOSIS OF CONSUMPTION.

A very low
mortality from
Consumption.

There were only three deaths directly due to consumption last year. None of these occurred on the female side, and in two out of the three, the patients were admitted suffering from the disease, and their lives were prolonged by the special treatment they received while here. In three other deaths, phthisis was present as a secondary cause. These results are very satisfactory. Great attention is paid to the diagnosis of this disease for two strong reasons. If it be diagnosed early we are in a position to treat it with the most hopeful results. In the Consumptive Sanatoria attached to the Stirling District Asylum, during a period of two years, I found that every patient admitted from

the other wards with newly developed phthisis improved, and the disease either became stationary or was recovered from. In the second place, if it be diagnosed late, the chances of recovery are not only greatly diminished, but the patient may be a source of danger to others by infection. All our patients are systematically weighed, and if there be a progressive loss of weight with other symptoms, they are carefully examined; there is also an annual medical overhaul of all the patients in the summer months when our staff of resident clinical assistants is large.

Treatment of
Early Phthisis
most hopeful.

Dr. Halliday Sutherland, late of the Victoria Hospital for Consumption and now Superintendent of the Westmorland Sanatorium, gave us valuable help in this respect last year. In addition to examining the condition of the lungs of almost all the patients, he applied Von Pirquet's test to all the patients at The West House who did not object to have it done. This is a simple operation, made by rubbing Koch's Tuberculin into a scratch on the skin, and by the reaction which follows it is possible to say whether there be any tubercle in the system or not. It proved of no practical value for the purpose of diagnosis by reason of its excessive delicacy as it elicited a reaction in more than 70 per cent. of our patients. This is about 20 per cent. above the average results given by adults outside. The lesson that the test has taught us is this, that half of us are already invaded by the tubercle bacillus, and that it is by maintaining the body at a high level of health and resistance that the enemy is prevented from making any progress.

A Specialist
gives us help.

Von Pirquet's
Reaction.

Two out of
every four
adults have
tubercle bacilli
in their systems.

There were 15 deaths from General Paralysis of the Insane last year, of which 13 were of men and 2 of women.

A CASE OF MONOMANIA OF PERSECUTION.

One death may be specially referred to as it was that of a gentleman who had resided with us for many years, beloved of every one. He was a man of great learning who wrote books on Political Economy while here, and to pay a visit to him was always an intellectual treat. One might have lived beside him for weeks enjoying his kindly humour and his sound

sense, without observing anything amiss, so long as his affairs were going on well. When trouble of any kind came he traced the source of all his sorrows and of everything that went wrong to the malignant activities of the Jesuits. The role of Satan was worthily filled by these Jesuits, and had Satan existed in his philosophy, he would have been one of the unemployed unless he had been content to serve under them. It was astonishing to hear this man, who would one day be discoursing most learnedly on the most abstruse fiscal problems, be the next passionately accusing the Jesuits of the most utterly improbable and ridiculous intrigues. When in this mood the well-meant actions of his best friends formed part of the deeply laid scheme of Jesuit strategy, and he turned even on them. When any one repudiated this alliance with the utmost vigour at his command, he said to him, with pity and contempt, that he was a mere tool in their hands without knowing the truth. At one time this form of insanity was known as Monomania, but it is now more accurately described as Systematised Delusional Insanity, because though seemingly localised, and perhaps really absent in impersonal matters, the mental flaw becomes incorporated in the fabric of the feelings and ideas, and runs through the whole personality. A case like this teaches us a lesson on the importance of toleration in our daily lives. How many are there holding strong views, with which we do not agree, towards whom we would feel more charitably inclined did we but know of a structural flaw that warped their intellects and of which they were the victims? May not some of our own views have a somewhat similar basis? It is a strange paradox, too, that it is within the walls of an Asylum that the greatest freedom is found. There the man who believes it can say he is "John the Baptist," or the woman that she is "Mary, Queen of Scots," and he or she is not jeered at or persecuted for stating these opinions, as they would certainly be if they made similar statements in any other place.

GENERAL HISTORY OF THE INSTITUTION.

The history of the labours of last year may be summed up in the word Organisation. In every department of the Institution

BEVAN HOUSE

efforts have been made towards greater efficiency, and the year has been a busy one for all. At Craig House, so much had been wisely done in the past, under capable officials, that it was only necessary to perfect details. At The West House, on the other hand, owing to the widespread consequences of the removal of the Edinburgh patients, it was necessary to reorganise the establishment, and it became possible, for the first time, to take advantage of abundant accommodation, to introduce improved methods of care. It is impossible to refer to the details of all that has been done, though one is tempted to do so, as it is on the details that time and thought are spent, and it is by attention to these that success is attained. I shall review the general lines upon which the work has proceeded.

A favourable opportunity for reorganising The West House.

THE STAFF.

The first attention was given to the requirements of the staff. When one considers that every measure for the care and treatment of the patients is effected through the agency of the staff of attendants and nurses who are in immediate contact with the patients, it will be seen how needful it is to have that staff the best of its kind and in a condition of perfect training and efficiency. The best devised schemes of the wisest physicians may be rendered valueless by the neglect or incompetence of the nurse who is entrusted with the duty of carrying them out, and much more depends on the personal qualities and skill of the nurse in the treatment of mental disease than in bodily diseases. I found it advisable to increase very largely the staff of Supervisory Officials. This was done with the object of subdividing and specialising the labours for which a few senior officials were previously held responsible and of making the work of supervision more thorough. The administration of an Asylum is a complicated machine, and while the senior officials might supervise the whole, it was impossible for them to attend satisfactorily to the details of each department, which have increased in amount and become more highly specialised with the evolution of the modern Mental Hospital. The nursing and domestic staff has therefore been strengthened by the

Nurses and attendants the backbone of Asylum administration.

Good Heads of Departments invaluable.

All Heads have graduated in their duties.

appointment of ten Heads of Departments, who are held fully responsible, under the Lady Superintendent and the Matrons, for the efficiency of their subdivisions. These are all women of good education and of experience, and almost all hold certificates of Training and of Proficiency from Hospitals and Asylums or from Schools of Domestic Economy. They have all graduated in their special studies. By the appointment of these officials work of a higher standard is attainable under their direction, and by their constant presence on the scene of their duties, the supervision of their juniors is more complete than formerly.

A contented staff does good work.

The requirements of the subordinate staff have also been dealt with. At The West House, the nurses, attendants, and domestics have been provided with Homes. New mess-room arrangements have been made for them, and their comforts have been increased in many other ways. Impressed as I am with the fact that the success or failure of every measure of treatment ultimately depends on the nurse, I am certain that these concessions to the legitimate wants of the staff will be amply repaid by the quality of the work obtained from it.

ASYLUM BEING HOSPITALISED.

To hospitalise an Asylum introduce Hospital nurses.

Under the supervision and direction of these new officials, trained as almost all of them have been in Hospitals, the work done by the staff has naturally assumed features of a more Hospital character. This is our aim now-a-days, and nothing has aided us more in attaining this object than the introduction into Asylums of Hospital-trained nurses. My own policy for many years has been openly to put under suspicion every practice that is in operation which is peculiar to Asylums. If I find I can do without it I abolish it, and if I find it cannot be done without, but that it can be replaced by another method of a Hospital character, then I introduce that. Subjected to this stern criticism it is surprising how many anachronisms and unmedical traditions have been exposed, and with a policy of Hospitalisation so definite and active, progress towards the goal we strive for is a comparatively simple matter.

All features peculiar to Asylums should be scrutinised.

THE DISUSE OF PADDED ROOMS.

As an instance of characteristic Asylum practices which have been discarded, the disuse of padded rooms and of the practice of locking up patients in single rooms by day may be mentioned. Strange as it may seem, the Padded Room, of which we are now beginning to feel ashamed, was apparently invented about sixty-six years ago by Conolly, the great Apostle of the Non-Restraint and the Humane Systems of treatment for the insane. It is quaintly described by him in his Sixth Report as "a room of which the floor is a bed and the four walls are padded." In his day its employment was without doubt a step in advance as it was a substitute for the less humane methods of mechanical restraint by strait jackets and straps which he had discarded, and was a sheer necessity. Owing to the ill-treatment which his patients had previously received at the hands of their attendants, many were revengeful and aggressive, and considerable risk was run when restraints were removed for the first time. For ten years the system of Non-Restraint was not officially recommended by the authorities because of this danger. At that time the Padded Room was no doubt needed and its use was to be commended, but now that the art of tactful management is practised, and patients from the first moment they enter the wards are treated with consideration and kindness, it has become practically unnecessary. Cases of Furious or Raging Mania, such as were described in those days, are never seen now, because they were goaded into being by the vile treatment they received, whereas skilful treatment has a tranquillising effect. We now employ a very much larger staff than was done in those days—probably two or three times as great—and we have a large night staff, while they had none. Our attendants and nurses are not only more numerous, but they are carefully trained and highly skilled, and they are of a more intelligent and respectable class. Conolly writes of the nursing staff of that day that they "were worse dressed and wilder looking than the generality of the patients." With a staff such as we now have and good supervision, we rely on constant personal care and attention by night and day to tranquilise the excited. We are glad to see these symbols of the past disappear,

"Seclusion" too good a name for this practice.

Risks run by Dr. Gardiner Hill and his disciples.

Our nurses and attendants highly trained and intelligent.

Prison-like methods have a bad effect on nursing ideals.

not so much on account of any direct harm they actually did to the patients when not abused, but because their influence on the morale of the nursing staff was not elevating.

SICK NURSING IMPROVED.

The insane man is usually a sick and an exhausted man.

He needs rest and nursing.

The introduction of so many Hospital nurses on the staff has necessarily improved the quality of the nursing given to the sick and infirm, and it is now extended to patients who a few years ago would have received no attention of this kind at all. A natural accompaniment of these changes has been the great development of bed-treatment or *alitement* for acute cases of insanity. The credit of this is mainly due to French physicians, who pointed out that the insane man is usually a sick and an exhausted man, and that he needs rest and a thorough medical examination. This method of treatment is a distinct advance on previous practice, and not the least of its advantages is that, immediately on entering the Institution, the patient himself is made to realise the fact that he is regarded as a person in ill-health, and that his detention is for the purpose of medical treatment.

FEMALE NURSES IN MALE WARDS.

No longer just to deprive male patients of the benefits of woman's skill.

A secondary feature, also in harmony with this system, which has been attended with the most gratifying results, is the extension of the care and supervision of male patients by female nurses and matrons. This has been particularly successful at Craig House. Exclusive of the nurses in the Gentlemen's Hospital, there are four ladies acting under the Lady Superintendent, and these direct the management of the gentlemen's wards and villas, and are responsible for everything. Their presence is a guarantee of gentle and refined methods; they have added greatly to the domestic comforts of the patients, and they have introduced by their companionship a homely feeling which did not exist before, and this has been much appreciated by many of the gentlemen. The exclusion of women from the male side of modern Mental Hospitals can no longer be justified.

SOUTH CRAIG

At The West House, Miss Thyne has been appointed Matron of the male side in place of Mr. Lindors, late Head Attendant. She received her Hospital training in the Royal Edinburgh Infirmary, her Mental training at the Stirling District Asylum, and for three years she has been Matron of the Midlothian District Asylum. With such a full and varied experience, I look forward to valuable assistance from her.

A Matron on
the Male Side.

ROYAL EDINBURGH ASYLUM LABORATORY.

It is one of the advantages of the Royal Edinburgh Asylum that it is situated near an important medical school, the atmosphere of which is a stimulus to scientific work, and in this congenial environment the treatment of the patients has never failed to be conducted in a medical spirit. This is a feature of the Institution to which the Managers have given the very greatest encouragement. A year ago they provided us with an excellent Laboratory, and last year they added to it Pathological Rooms and a Mortuary, the whole forming a very complete department. The work of this department, however, deals much more with the treatment of the living than with the examination of the dead. During the last few years the methods for the clinical investigation of disease have increased greatly both in number and in complexity. Some of these require not only a high degree of technical skill but time, and it is impossible for the physician who has his daily rounds to make, and whose services are in demand every hour of the day, to undertake them. These investigations of a chemical, microscopical, and bacteriological character are all done for us in our Laboratory by a special staff appointed for this purpose. We find their assistance of the very greatest value in the treatment of the patients, and this work and that of original research proceed together. An article by Dr. Muirhead, our Bacteriologist, on "The Occurrence of Micro-Organisms in the Blood and Cerebro-spinal Fluid in Mental Diseases," describing her researches on this subject, was awarded a special prize last year by the Medico-Psychological Association.

The proximity
of Edinburgh
University a

stimulus.

Laboratory
assistance
indispensable
in the modern
Hospital.

A Research
Prize.

THE DIAGNOSIS OF GENERAL PARALYSIS.

As an instance of these recent methods of research I cannot give a better example than those upon which we now rely for the diagnosis of General Paralysis of the Insane. This is a disease which has been known for about one hundred years, it is the most serious and important which we are called upon to treat, and it has received more attention at the hands of alienists than any other form of Mental Disease. In spite of these facts, till little more than three or four years ago there was no certainty in some cases that the diagnosis of this disease was a correct one. Early cases were not always diagnosed, cases were not rarely found to have been wrongly diagnosed, and the wisest and most experienced physicians were those who often gave the most guarded opinions, especially in cases with a history of alcoholic excess. This uncertainty has sometimes proved intolerable when important issues were at stake, and a piece of the brain has actually been removed during life for microscopical examination to settle this question. We are now able to diagnose this disease with absolute certainty in the earliest stage by means of chemical and microscopical tests applied to the blood and cerebro-spinal fluid. We are able to show, by means of these reactions, that the fluids in these cases are changed in chemical constitution from those of a healthy person or from persons suffering from other forms of insanity. Such information is sometimes invaluable, and possessing as we do a Laboratory and officials for this special work, we employ their services as a routine measure, for all these tests, in all cases of suspected General Paralysis.

"The disease of the XIXth century."

Diagnosis formerly doubtful.

Now absolutely certain.

Thanks to chemistry and the microscope.

THE MEDICAL STAFF.

Residential appointments for Senior Students.

The proximity of the Edinburgh Medical School is also of advantage for the facilities it offers in filling up the medical posts. In addition to the permanent and paid medical staff, there are residential appointments open to senior students and young graduates in medicine, and these posts are much sought after. These are mutually advantageous to the young men who fill them and to the Institution, for while they gain useful

SOUTH CRAIG VILLA—LIBRARY

practical experience, they do much valuable work under the supervision of the Assistant Medical Officers. At Craig House also, by associating with the gentlemen and by taking a leading part in their social life, they perform a service which is much appreciated. Our Debating Society, for example, through their influence, has this winter been a very flourishing institution, and the debate on the question of female suffrage, to which the much-wronged sex were invited, and in which they played their part most manfully, will long be remembered. There are nine graduates and four undergraduates on the staff of the Institution at the present time, a strength which renders it possible to do full justice to the medical needs of the patients and to carry on a fair amount of research.

The Closure

Dr. Ford Robertson, the Pathologist of the Scottish Asylums, has continued to receive during the year all those facilities for work which he has enjoyed in the past.

Dr. Ford
Robertson.

STRUCTURAL ALTERATIONS AND FINANCES.

In order to carry out the medical and administrative changes enumerated above, it was necessary to make a considerable number of structural alterations. Most of these were contracted for, but our own staff of artisans has been temporarily augmented, and they have been kept fully employed. The Managers spent a large sum in improving the Institution in this way, and no official has done his work more faithfully than the Clerk of Works, the arduous nature of whose duties last year is indicated by the fact that he had to forego his usual summer holiday. During the coming year several important works—verandahs, open-air shelters, and sanitary improvements—are to be undertaken, in order to maintain the Institution in a state of efficiency.

The Clerk of
Works has a
busy time.

It is gratifying to report that in spite of these exceptional outlays the finances continue to be in fully as satisfactory a state as in past years. I am much indebted to Mr. M'Intosh, the painstaking House Steward, for his assistance in helping to supervise these.

Finances very
satisfactory.

My thanks are due to the whole staff of the Institution, medical and otherwise, for the help I have received from them

Thanks.

in their several departments during rather a trying year. To Dr. Dods Brown, who acts as my Deputy during my absence, my thanks are especially due.

PERSONAL.

Dr. J. Rutherford.

During the course of the year we lost the services of Dr. James Rutherford, who was promoted to the post of Medical Officer in charge of Brislington House. His great abilities and long experience will make him a most capable head of that Institution. Dr. R. Dods Brown was promoted Senior Assistant Physician, and Dr. Rae Gibson and Dr. W. Scott Watson have been appointed on the staff.

Mr. T. Lindors.

We also lost the services, through retirement, of Mr. Thomas Lindors, who was for nearly forty-six years on the staff, and during almost all that time Head Attendant of the Male Side of The West House. He was a most courteous, amiable, and upright man, and he retires after his long and useful services with a maximum pension.

Sir A. Mitchell.

I cannot conclude this Report without referring to the death of Sir Arthur Mitchell, K.C.B., one of our Deputy Governors and a former Commissioner in Lunacy. He was one of a group of distinguished men who have, in the course of fifty years, been instrumental in raising the care of the Insane in Scotland from the condition it was in when Miss Dix visited this country and exposed its deficiencies, to the unsurpassed position it now occupies. This Institution is particularly indebted to him for having compiled with great care and accuracy a history of its origin and development, which has often been found very useful.

Mrs. Finlay.

I have also to record the death of Mrs. Finlay, for many years Charge Nurse of the Female Hospital of The West House, who, in the humbler position in which she was placed, rendered as great a service to the Insane as any one in her generation. She may not have excelled in technical skill, but she had a much rarer quality which cannot be obtained by Examination or Registration—a devotion to her duties of the most fervent kind. She had the dreadful misfortune when a young woman to lose, almost simultaneously, all her family by an epidemic and her husband by a sudden death. To seek distraction from this

overwhelming sorrow, she threw herself into the duties of nursing, and the patients placed under her charge eventually became a second family to her, and she a loving mother to them.

Dr. Clouston's portrait, by Mr. Fiddes Watt, which was presented to the Managers by his friends and admirers, has now been hung in the Great Hall at Craig House. The artist is to be congratulated on having produced a very striking likeness. Dr. Clouston's
portrait.

In conclusion, gentlemen, it remains for me to express my deep feelings of gratitude to the Managers for the confidence they have reposed in me during the past year. When I think of the difficulties that have obstructed the work of some of the ablest and most enthusiastic asylum physicians, and contrast these with the help and encouragement I have received from you, I cannot but feel grateful. My thanks are particularly due to the Chairman for his advice on many occasions.

GEORGE M. ROBERTSON.

* With reference to the distinction between "predisposing" and "exciting" causes, it must be understood that no single cause is enumerated as both predisposing and exciting in the case of any individual patient.

† The figures in the Total column represent the entire number of instances in which the several causes (either alone or in combination with others) were stated to have produced the mental disorder. The excess of the aggregate of such causes over the number of patients admitted is owing to combinations of causes.

REPORTS

OF THE

COMMISSIONERS IN LUNACY.

ROYAL EDINBURGH ASYLUM,
21st, 22nd, 23rd, and 24th June 1909.

THERE were on the 21st instant 747 patients on the registers of the Asylum. Of these, 13 are voluntary inmates, 442 are private patients, and 292 are paupers. Effect has been given in these figures to the transference of 2 males and 4 females from the private to the pauper list, and of 3 males and 1 female from the pauper to the private list. Twelve patients were absent on statutory probation, 2 were absent on pass, and 9 were resident at the villa at Cockenzie.

The movements in the Asylum population during the interval which has elapsed since the visit made on the 8th December 1908 have been as follows:—61 private and 40 pauper patients have been admitted, 24 private and 19 pauper patients have been discharged recovered, 16 private and 20 pauper patients have been discharged unrecovered, and 16 private and 23 pauper patients have died. The changes among the voluntary boarders have been the admission of 2 gentlemen and 7 ladies, the discharge of 2 gentlemen and 5 ladies, and the death of 1 gentleman and 2 ladies.

The result of these changes is an increase of 3 in the number of private patients, and a decrease of 20 in that of the paupers.

The deaths are registered as due to general paralysis in 12 cases, to cerebral lesions in 5 cases, to senile decay in 5 cases, to cardiac disease in 4 cases, to pulmonary tuberculosis in 4 cases, to pneumonia in 3 cases, and to cancer, influenza, Bright's

disease, fracture of the base of the skull, exhaustion from acute delirious insanity, and suicide by cut throat, each in 1 case. In 17 instances, or in the low proportion of 43·5 per cent. of the deaths, were the causes verified by *post-mortem* examination.

The Register of Restraint and Seclusion contains 7 entries. They refer to the use of restraint in 1 case on four occasions for surgical reasons, and to the seclusion of a patient on account of maniacal and dangerous excitement. Six casualties have occurred, 3 involved a fracture of a bone, all accidentally sustained; 1 was an attempt at suicide by cut throat, not serious in character; 1 consisted of severe head injuries, the result of the patient's throwing himself from the top of a tram-car; and 1 was a fatal case of cut throat. The circumstances attending this death were fully reported to the Board and the Procurator Fiscal. Four escapes have occurred, 3 of which were permanent.

The number of attendants and nurses engaged since last visit is 33, the number dismissed is 5, and the number resigned is 32.

The distribution of the patients is as follows:—215 in Craig House and its adjoining villas, and 532 in the West House. Of the latter, 157 pay the intermediate rate of board, 82 the lower rate, and 293 are paupers. A gratifying feature in the statistics of the Asylum during recent years is the increase in the number of patients paying the intermediate and lowest rates of board—two classes of patients for whose accommodation the Asylum was mainly instituted. Since last visit 23 have been received at the intermediate and 13 at the lowest rate of board.

Various improvements and alterations in the accommodation of both Craig House and the West House have been carried out or are in progress. No. 1 Male Gallery in Craig House has been converted into a ward of a hospital character, it has been divided by a partition into east and west divisions, with four bed-rooms adjoining the east and two the west section. A new door on the south side gives access to the gardens, and in connection with this ward it has been resolved to erect a verandah capable of holding six or eight beds, so as to permit of the open-air bed treatment. A storey has been added to the Ladies' Hospital to accommodate senile cases, and a

verandah has been erected having sufficient space for six beds. The bowling alley is being converted into mess and recreation rooms for the attendants. At the West House, No. 6 Female Gallery has been, by necessary and useful alterations, made into a hospital ward. It appears to be very complete in all its arrangements for the care and effective supervision of the sick and newly admitted patients. The corresponding gallery on the male side has been similarly altered and improved, and is ready for occupation. The day-room in No. 1 Female Gallery is now utilised as a mess-room for nurses, and No. 3 Gallery is in process of being made into a home for nurses. The eastern section of the male separate house is about to be used as quarters for attendants, and a section of the female separate house now accommodates the convalescent intermediate patients. The Mortuary is to be reconstructed, and when completed will be a desirable improvement, as it has not been a satisfactory department in the past. The Research Laboratory has been enlarged and thoroughly equipped, and it was evident during the visit that scientific investigations of an important character are being actually carried on by the Resident Pathologist.

The various classes of patients were found well cared for and liberally provided for in every way. Their behaviour was for the most part quiet and orderly; only a few appealed for discharge, and no complaint of a reasonable character was made. The dinners seen during the visit were excellent and abundant, and in every case in which the opinion of an inmate was elicited it was confirmatory of this view. Thirty-three patients were confined to bed, 11 on account of mental symptoms, 13 from bodily illness, and 9 on account of the infirmities of old age. The treatment of these patients is characterised by marked ability and kindly consideration. Eight patients are on parole beyond the grounds, and 119 have the privilege of parole within the grounds. The number who attend Divine Service is 374, and the number who are present at associated entertainments is 257.

The number registered as daily engaged in useful work is 162 males and 235 females. Ninety-seven men, of whom 12 are from Craig House, are actively employed in keeping the garden, grounds, and golf links in order.

The management of the Asylum is conducted with great energy and ability. All sections of the establishment, except those at present in process of alteration, were found in admirable order, and the provision for the comfort of the patients is highly satisfactory.

The books and registers were examined and found to be accurately and regularly kept.

JOHN FRASER,
Commissioner in Lunacy.

ROYAL EDINBURGH ASYLUM,

22nd, 23rd, and 24th November 1909.

THERE are 746 patients on the registers of the Asylum, of whom 731 are certificated and 15 are voluntary inmates.

Of those under certificates, 441 are private, and 290 are pauper patients. Craig House contains 220 private patients paying the higher rates of board, and the West House contains 526 patients, of whom 236 are private patients paying the intermediate and lower rates of board, and 290 are paupers. The pauper patients are chargeable as follows: 130 to Leith, 113 to Edinburgh, 45 to Orkney, and 2 to other parishes. During a three days' visit to the Asylum all the resident patients were seen, numbering 726. The remaining patients, who were not seen, are accounted for as follows: 11 were absent on statutory probation, 7 were at the seaside house at Cockenzie, and 2 were out on pass.

Since the Asylum was last visited, on the 21st June of the present year, 81 patients—43 private and 38 pauper—have been admitted; 61 have been discharged, of whom 23 had recovered; and 23 have died. The assigned causes of death are inflammatory affections of the lungs (excluding phthisis), 7 cases; general paralysis, 6 cases; senile and gross degenerations of the brain, 4 cases; heart disease, 3 cases; and cancer, nephritis, and phthisis, 1 case each. *Post-mortem* examinations were made in 12 instances only. This is a smaller proportion than is considered advisable, but as 13 out of the 23 deaths were in the cases of private patients, allowance must be made for the difficulty of obtaining the consent of the relatives.

Of the voluntary patients, 8 have been admitted and 6 have left since the previous visit.

The Register of Accidents contains 3 entries referring to (1) the fracture of the bones of the hand in a male attendant, the result of an assault by a patient; (2) the fracture of 2 ribs in a male patient, caused by an assault committed by a fellow-patient; and (3) a fracture of the femur in a female patient, caused by accidentally falling.

The Register of Restraint and Seclusion contains 15 entries referring to the mechanical restraint of a male patient for surgical purposes. About 55 per cent. of the patients of all

classes were usefully working at the time of the visit, and about 44 per cent. were unemployed because of mental or bodily disease or infirmity. Among those employed, it is important to note, were a considerable number of the ladies and gentlemen at Craig House. Fifty-five patients were confined to bed—30 for the treatment of mental symptoms, 19 for bodily illness, and 6 because of senility or infirmity.

The impression formed as a result of the visit is that the Institution is being very actively and successfully managed, and that every endeavour is being made, both by means of minor structural alterations and by means of administrative changes, to make it as efficient as possible for the welfare, comfort, and care of the patients.

Of the many important changes which have been made during the past year, the three following are selected for notice. At the West House the two wards on the ground floor in the south wings of the building have been converted into hospitals. The Male Hospital contains 40 beds, and is under the charge of an assistant matron, assisted by 5 nurses and a male attendant. The Female Hospital contains 42 beds, and is under the charge of an assistant matron, assisted by 6 nurses. These hospital wards are commodious and well lighted; being on the ground floor they possess easy access to the open air, their situation is central, and their proximity to the entrance-door is an advantage in the case of newly admitted patients. It is proposed to erect shelters or verandahs for the open-air treatment of patients.

At Craig House a verandah has been erected in front of the Ladies' Hospital. Not only does it afford the valuable opportunity of treating the patients in bed in the open air, but it also gives a much-needed relief to the hospital wards during the day time.

The Mortuary at the West House has been entirely remodelled and reconstructed. It consists in its renewed form of a *post-mortem* room, a room for the reception of the dead, a room where the friends can view the bodies of their deceased relatives, and a room for holding services in connection with funerals. The interiors of these rooms have been tastefully decorated, and a dado of white tiles adds effectively to their appearance. The whole department is complete and impressive,

and in many respects surpasses any similar department of the kind in the country. In effecting this important improvement, the Managers have, by showing their respect for the dead, indirectly advanced the interests of the great number of patients who from year to year pass under their care.

As a whole, the patients in the various divisions of the Asylum were orderly and contented, and had their wants adequately attended to. A good many appealed for release, and, as far as possible, these were given every opportunity of making such statements as they desired. On other matters complaints were remarkably few. One man in the West House complained that his bed-room was cold. At the time of the visit the temperature was unusually low, and the methods for artificially heating the dormitories and single rooms were inadequate. The question is one to which it is desirable to direct the attention of the Managers.

The staff of nurses and attendants at present numbers about 160 individuals. Of that number, 25 persons left the service since last visit, and 32 have been engaged.

The books and registers were examined and found correct.

JOHN MACPHERSON,

Commissioner in Lunacy.

EDINBURGH, 28th February 1910.—I have examined the foregoing Account of Charge and Discharge of the Intromissions of the Treasurer of the Royal Edinburgh Asylum for the Insane, for the year from 31st December 1908 to 31st December 1909, together with the Appendices relative thereto, and in connection with the Books of the House Steward and Matrons, and I now beg to report that I have found them to be correctly stated and sufficiently and satisfactorily vouched and instructed.

I have not, however, checked the apportionment of the items of Receipt and Expenditure between New Craig House and West House.

(Signed) JOHN M. HOWDEN, C.A.
