TRUSTEES' REPORT.

*To His Excellency the Governor and the Honorable Council of
the Commonwealth of Massachusetts.*

The Trustees of the Worcester Lunatic Hospital respectfully submit their Thirty-Sixth Annual Report.

This hospital was established nearly forty years ago in the suburbs of the quiet town of Worcester. It is now in the middle of a thriving and prosperous city. Its essential features remain the same as when it was built, with only the addition of such improvements as its construction permitted. It is yet far from being such a building as the wants of this community require. At no distant day it may be thought advisable to relinquish the valuable tract of land in which it stands, in exchange for a more quiet and less expensive location at a little distance ; and, by such exchange, the Trustees believe that a new hospital, suited to the times and to the character of the Commonwealth, might be built without cost to the State. As it is, the Trustees have confidence that the condition of its inmates, during the past year, has been as satisfactory as at any previous time.

By the Treasurer's report, the finances, which had been somewhat embarrassed by the high cost of supplies, are now in a good condition ; and when all dues are received, and all debts paid, a balance will remain in favor of the hospital.

The average cost per week of each patient, in 1867, was \$4.60, and for the present year \$3.80. The latter sum now

nearly approaches the amount paid by the State and towns for their patients. The deficiency is made up by the payment of private patients, some of whom, at a sacrifice to their sense of pride and independence, prefer not to be a public burden.

In the treatment of those under our care, we can hardly venture to say that any very decided improvement has been made over former years, as our facilities have not increased with the progress of experience. We have far from reached perfection in the treatment of the insane. There are more truths yet to be revealed to us, and we trust that nothing that thought or expenditure can give will be neglected to make this hospital what it should be.

Freedom from personal restraint, instituted by the humane and courageous Pinel, marked an epoch in the annals of insanity. Another great step in advance will be to give useful and cheerful occupation to the insane, to relieve the tedious monotony of a hospital life,—to make a cheerful and happy home for such as are visited with this malady, from which no gift of mind or person can exempt us. Judge, counsellor, legislator and private citizen are all alike subject to it. It is the duty of every member of the community to use his power and influence to lessen the sufferings of those afflicted with insanity.

The restraints formerly used here, partly from ignorance, but more from motives of economy,—the cell, the camisole, chains and other instruments of days gone by,—have been exchanged for the gentle but firm presence of faithful and conscientious attendants, at all hours, to protect the patient from injury to himself or to others. If such attendance could be had in private families, and the love and affection of friends not exhausted, there are many patients in our hospitals who might remain at home. Yet the surroundings of a hospital, which seem so painful to visitors, are a source of benefit to some patients, from the sympathy and interest they excite.

It must not be supposed that the hardness of each individual case is in proportion to the complaints made by patients of the injustice of confining them to a hospital. This man who represents his case to the visitor most eloquently as being separated from his family, for whose support he is able to work, in another hour is dangerous to approach. This one who claims the need

of her children for her fostering care, if placed at large would put a firebrand to her dwelling.

Every attention possible is given to the complaints by patients of ill usage from their friends or attendants, and experimental visits to their homes, when the friends desire, are allowed, if safe and proper. Some are permitted to work at their trades in the city, while under the supervision of the hospital, and all are allowed the largest amount of liberty consistent with safety.

The health of our Superintendent, after a life of twenty years of labor in the hospital, having failed, he was induced to take a vacation in the summer, which he passed in visiting the hospitals of other lands. He has returned, apparently restored to health, and filled with experience which he will detail to you in the report that accompanies this.

In his absence, the duties of his office were most faithfully performed by Dr. Draper, to whom we feel gratefully indebted.

Very respectfully submitted by the Trustees.

R. W. HOOPER.
CHAS. MATTOON.
HENRY CHAPIN.
WM. WORKMAN.
S. E. SEWALL.

TREASURER'S REPORT.

To the Trustees of the Worcester Lunatic Hospital.

GENTLEMEN:—I herewith submit my annual report of the financial condition of the Worcester Lunatic Hospital.

RECEIPTS.

Cash on hand September 30, 1867,	\$1,779 64
received of the Commonwealth for support of patients,	19,417 59
received of cities and towns for support of patients,	27,203 83
received of individuals for support of patients,	35,765 47
received from sale of farm products,	3,087 83

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Lunatic Hospital.

GENTLEMEN:—In obedience to the laws of the Commonwealth, I have the honor to submit to you the Thirty-Sixth Annual Report of the Worcester Lunatic Hospital.

For the general results of the year, and the condition of the patients in detail, you are respectfully referred to the following tabular statements, and such brief explanatory remarks as may accompany them:—

TABLE NO. 1,
Showing the general results during the year.

	Males.	Females.	Totals.
Patients in the Hospital, October 1, 1867, .	177	178	355
Admitted during the year,	158	138	296
Whole number under treatment,	335	316	651
Discharged recovered,	62	48	110
improved,	44	48	92
not improved,	20	14	34
Died,	21	12	33
Whole number discharged,	147	122	269
Remaining, September 30, 1868,	188	194	382

From this table, it appears that two hundred and ninety-six patients were admitted during the last year, of whom one hundred and fifty-eight were males, and one hundred and thirty-eight were females.

At the close of the previous year, there were three hundred and fifty-five patients inmates of the hospital, of whom one

hundred and seventy-seven were males, and one hundred and seventy-eight were females, so that there were six hundred and fifty-one persons under treatment in the course of the year, of whom three hundred and thirty-five were males, and three hundred and sixteen were females; the daily average was three hundred and seventy. No disturbing causes have operated to influence in any very great degree the usual results of the year.

The number of patients discharged was two hundred and thirty-six, of whom one hundred and ten were recovered, ninety-two improved, and thirty-four not improved. Thirty-three were removed by death, of whom twenty-one were males, and twelve were females.

The recoveries were thus in the ratio of a fraction more than thirty-nine per cent. to the number of admissions,—a gratifying result if compared with the percentage of recoveries in other old and long established hospitals.

At the close of the year there were eight patients in the hospital who had recovered their usual degree of mental health, and were awaiting the convenience of their friends for their removal. If this number be added to the number of those discharged and tabulated, the ratio of recoveries to the number discharged will be increased from forty-seven to fifty per cent. And if eight cases of recurrent mania and ten cases of unknown duration be included in the tabular statement, the ten per cent. of recovery of recent cases will be increased from fifty-four to sixty per cent.

Again, if fifty-six patients who were transferred directly to other institutions be deducted from the whole number discharged, the ratio of recoveries to the number discharged will be sixty-one per cent., or sixty-five per cent. if the eight who had recovered and were remaining be added to the number of those discharged.

The rate of mortality is somewhat less than during the previous year, and may be considered as quite moderate, if we regard the condition of many of the patients when admitted.

The percentage of deaths of the average number of residents was nine, and only five per cent., if calculated on the whole number under treatment.

TABLE No. 2,

Showing the Admissions and state of the Hospital from October 1, 1867, to September 30, 1868.

	Males.	Females.	Totals.
Patients in the Hospital, October 1, 1867, . . .	177	178	355
admitted in the course of the year, . . .	158	138	296
remaining in the Hospital, Sept. 30, 1868, . .	188	194	382
Of the admissions there were cases of one year or less duration,	103	82	185
Of the admissions there were cases of more than one year's duration,	49	48	97
Of the admissions there were cases the duration of whose insanity could not be ascertained, . . .	6	8	14
Patients committed by Courts,	109	88	197
committed by Overseers of the Poor, . . .	12	10	22
on bonds,	37	36	73
committed by Governor's warrant,	—	—	—
committed by the Board of State Charities, . .	1	3	4
committed by Commissioners of Lunacy, . . .	—	—	—
Foreigners and those having no settlement in the State, committed in course of the year, . . .	58	60	118
Foreigners and those having no settlement in the State, discharged in course of the year, . . .	61	63	124
Foreigners and those having no settlement in the State, remaining in the Hospital, Sept. 30, 1868, . .	47	48	95
Patients in Hospital previously,	45	45	90
in other Hospitals in this State previously, . .	8	8	16
in Hospitals of other States previously, . . .	1	6	7

State Paupers remaining in the Hospital at the close of each year as nearly as can be ascertained.

1842, . . . 34	1851, . . . 201	1860, . . . 130
1843, . . . 38	1852, . . . 241	1861, . . . 156
1844, . . . 38	1853, . . . 216	1862, . . . 189
1845, . . . 57	1854, . . . 151	1863, . . . 175
1846, . . . 52	1855, . . . 115	1864, . . . 116
1847, . . . 121	1856, . . . 155	1865, . . . 91
1848, . . . 150	1857, . . . 119	1866, . . . 129
1849, . . . 167	1858, . . . 121	1867, . . . 101
1850, . . . 181	1859, . . . 124	1868, . . . 95

The preceding table shows that one hundred and eighty-five patients were admitted to the hospital in the course of the year whose insanity had existed one year or less previous to the date of their admission. Other tables in this connection show that about seventy-five per cent. of all patients admitted to the hospital who had been insane not more than one year previous

to admission have recovered their mental health and usefulness and have been restored to society.

It may also readily be shown that a large proportion of those who are placed under treatment on the first appearance of disease recover their customary health within a period of six months.

The table also shows that one hundred and ninety-seven patients were committed by order of the probate courts of the several counties, thus making the commitment of patients an open, fair, legal proceeding. In all cases where the patient has been admitted by the officers of the hospital the admission has been given on the authority of a certificate of insanity from two physicians. And in those cases where the patient has voluntarily sought the benefits of the institution an examination has at once been made and certificates procured from physicians not connected with the hospital.

Of the one hundred and ninety-seven committed by the courts in the course of the year, one hundred and eighteen were supported by the charity of the Commonwealth. Of this class one hundred and twenty-four were discharged, leaving ninety-five in the hospital at the close of the year.

The number of patients admitted into the hospital since it was opened amounts to eight thousand one hundred and ninety-eight, of whom four thousand and ninety-five have been males and four thousand one hundred and three females.

Of this number, three thousand eight hundred and twenty-five have been discharged recovered, and one thousand four hundred and forty-six have been discharged improved; the recoveries being in the ratio of forty-eight and nine-tenths per cent. to the whole number, after deducting the number of those who remain under treatment. And the ratio of those discharged improved, to the whole number, is a fraction less than twenty per cent., after deducting those who remain in the hospital.

Fifty-seven patients have been removed to other institutions in the course of the year by order of the Board of State Charities, and five have been removed to their homes out of the Commonwealth. A large majority of these patients were supposed to be incurable, and had been residents in the hospital varying periods of time from a few weeks to several years.

I have done all in my power to carry out the plan of boarding a few quiet chronic patients in private houses, whose condition seemed to warrant it, both in deference to the opinions encouraged by your board, and under the convictions on this subject which I urged in my reports of 1856 and 1857 ; but I must confess that I find very great difficulty in getting proper persons to interest themselves sufficiently in the subject to assist me in my efforts, and have thus far been able to procure suitable homes for a few cases only of those whose service would be of real value.

In reference to those cases for whom asylums are sought out of the Commonwealth and similar cases so disposed of in former years, I beg leave to make a single remark.

It is much to be regretted that there cannot be a fair understanding and an equitable arrangement between the authorities of different countries and also between the authorities of different sections of our own country, for the purpose of facilitating and rendering such transfers humane and desirable, not only between this country and England, Scotland, Ireland and Germany, but between different States of our own country.

Under the existing state of things lunatics who may be wisely and properly transferred to their homes in a foreign country, are generally landed at Liverpool, where it not unfrequently happens that all trace of them is lost. Sometimes, however, they are picked up as wanderers in the streets, and are sent to English asylums or poor-houses.

And in the case of those who are sent into other States, where they are supposed to have settlements, the result frequently is, that on arriving in the place of their settlement, either their identity or their insanity is repudiated by the authorities, and the unfortunate lunatic, unable to provide for himself, is let loose on the public streets, to take his chance of what Providence may do for him. They sometimes succeed in begging their way back to the hospital. When they have done so they have been received by order of the Board of State Charities, and taken care of until they could again be transferred.

Of the unrecovered patients discharged, many were removed by the Board of State Charities, and proper provision was made for them in other institutions ; some, however, were removed for whom no special provision was made for their care ; and some, as frequently happens, were very injudiciously removed,

and have consequently been readmitted in a much more hopeless condition than when they were taken away.

TABLE No. 3,

Showing the Number Admitted, Restored, Improved, Died, &c., in each Month in the Year.

The foregoing table shows the assigned causes of insanity of the patients admitted during the year, and also of all the pa-

tients admitted in previous years since the hospital was opened. The classification is given as indicating very clearly the relation of cause and effect in the progress of mental disease. It does illustrate to some extent the predisposing influences as to whether they are moral or physical in their nature. In this respect the table is valuable, having been carefully kept nearly thirty-six years, and embracing more than eight thousand cases.

I have endeavored to re-arrange and classify anew the whole number of cases, and show in a more acceptable manner the conditions and circumstances influencing the health of the patients previous to invasion of mental disease.

Having personally known a majority of all the patients admitted to the hospital, and having carefully studied the histories of all others, I may be able to present a new classification in my next annual report.

No epidemic prevailed to any extent during the year, and the health of the patients was, in general, good.

The cold, wet spring, the very severe weather of summer, and the sudden changes of the temperature during almost the entire year, exerted an unfavorable influence on the sanitary

condition of such patients as were enfeebled by age and exhausting bodily and mental disorders. The deaths of thirty-three patients,—twenty-one men and twelve women,—have been somewhat less than during the preceding year; both absolutely, and when calculated in reference to the average population. By referring to the proper table it will be seen that the mortality for the year reached nine per cent. of the average number of residents, and five per cent. of the whole number of residents during the year; while the average mortality, since the opening of the institution, has been a fraction more than eight per cent. on the average number of patients, and a fraction less than five per cent. on the whole number of residents.

On comparing the mortality for the sexes separately, it will be found, as has been before noticed, that any seeming increase in the death-rate is nearly confined to male patients. When the rate of mortality in the hospital is considered, it must not be forgotten how large a proportion of the more feeble inmates are advanced in life,—more than one-third of those who died having passed their sixtieth year,—nor should it be forgotten that nearly all are broken in health of body and mind long before their admission to the hospital.

As to the causes of death, there must be noticed the large proportion from paralysis, epilepsy, apoplexy and other cerebral disorders, of which, altogether, there were fifteen cases; and also the proportion of thoracic diseases, of which there were as many as six cases: making, altogether, twenty-one deaths out of the thirty-three tabulated. The remaining twelve embrace a variety of cases, the character of which is shown in the table No. 13.

Several cases were brought to the hospital in nearly a dying condition, and ought not to have been sent to a hospital at all. Their transit here most likely hastened their death, and entailed upon the institution an unnecessary expense in nursing and attendance, besides adding to our bills of mortality. They seem to have been committed simply because they were not cleanly in their habits, and required nursing and attendance. These patients should be taken care of elsewhere, for the few days or weeks they may live, and not be sent to an institution which should be kept as far as possible for curative purposes.

It will be seen by reference to table No. 15, that while the average number of patients was less than during the preceding year, the average weekly expense was reduced from four dollars and thirty cents to three dollars and eighty cents,—a fact which seems to promise for the future something of our old-time financial prosperity. The weekly expense steadily advanced during the war until it reached the sum of four dollars and sixty cents in 1866. While the cost of support has been materially lessened, the property of the Commonwealth has not been suffered to deteriorate, nor has there been any reduction in the quality or quantity of the supplies.

In fact, the whole treatment of the patients, in a medical, moral and hygienic point of view, has received a full share of attention, so that the institution might be, as it has been, as far as possible, curative, and afford relief in those cases where recovery seemed impossible.

Insanity is so essentially a disease of debility, that, as a necessary starting point to its successful treatment, a good and generous dietary is indispensable. No less desirable are faithful and skilful nurses and attendants. In addition to this, large outlays must be made, annually, to provide other comforts, without which little can be accomplished.

Add to all this the expense necessary for the annual repairs of an establishment subject to the hard usage of a hospital for the insane, and it will not be expected that the weekly expense per patient can be reduced very much lower.

All the usual sources of intellectual occupation are kept up, as formerly,—the library, periodicals, and daily and weekly papers. The lectures, concerts, social re-unions have been the means of giving much comfort and relief to our patients who would otherwise have suffered from the dull monotony of a hospital routine. The usual recreations of games, rides, walks, and everything that can be made available for the healthy and innocent occupation of mind, have been freely encouraged and employed. I ought not to omit the daily religious services in the chapel, and the frequent, well-timed visits of the Chaplain, Rev. George Allen, as among the best and highest prized privileges of the patients.

The usual tables showing the extent to which the patients have been industriously occupied by the amount of work exe-

cuted in the house, in the shops and in the gardens and on the farm are necessarily omitted. But when I remind you that last year nearly thirty thousand days' work were accomplished, and nearly the same amount in each of several previous years, you will be ready to believe that a respectable degree of industry has marked the year just closed.

The great disproportion between the employed and the aggregate number of patients is always noticed and often commented upon. Those persons who regard this disproportion unfavorably are apt to overlook the greatly impaired physical condition of a large majority of insane persons. Regarding as I do occupation as one of the most important curative agents in the treatment of insanity, and urging its adoption upon all, both in and out of my own hospital, it ought of course to be my desire to bring this curative agent into full force.

When we look for a moment at the population of the house, it is evident that we cannot draw to a much greater extent upon the fluctuating portion of it for carrying on the process of either trade or farm labor. This class of our patients, to us, improve, or recover and go away. During a large part of the time they are with us, they not only are unfit for labor, but require extraordinary care and attention to preserve their health and lives. Then, the smaller class who sicken and die are not to be regarded in reference to any plan of occupation. If we turn our attention to the more fixed population, we shall find indolence is one of the most marked characteristics of dementia, and that incapacity for useful employment is quite frequently the measure of imbecility.

The general paralytics and epileptics, who comprise classes of large and increasing numbers, are, aside from all considerations of their physical condition, too uncertain and too dangerous for any sort of occupation. It is worthy of remark, that though the employments of the male patients are distributed among a great number of trades, we can claim at any one period but very few competent workmen, in any one of them most useful to the institution. Few indeed are there able to perform daily labor.

For example, we have had committed to our care during the past year four masons, one of whom was discharged at the end of one week, one is upwards of seventy years of age, one is

demented, and constantly excited, and the fourth is demented, but works daily. Of painters there were three admissions, one of whom is a young man, paralytic, one is seventy-four years of age and helpless, and the third was discharged within two months of the time of his admission. Of tailors there was but one admission, a paralytic. Of blacksmiths there were two admissions, one of whom was a man seventy-three years of age, and one young man who was discharged at the end of six weeks. Of shoemakers there were eight admissions, four of whom were discharged within about three months of the time of their admission, one is homicidal and dangerous, two are paralytic, and one is epileptic. Of machinists there were five admissions, two of whom were discharged within two months of the time of their admission, one is homicidal, one paralytic, and one epileptic. Of carpenters there were five admissions, one of whom works daily, two are thoroughly demented, and two are each seventy-nine years of age, and work a little every day.

Very nearly the same conditions will be found to exist, if we follow through the occupations of all those committed to the hospital in the course of any one year.

Notwithstanding all these discouragements, I am more than ever convinced of the value of systematic occupation as a powerful curative agent in the treatment of the insane—not manual labor merely, but occupation, manual and mental, which shall employ to the fullest extent consistent with improving health, every mind and every body under the care and control of the institution.

TABLE No. 16,

Showing the Statistics of the Hospital from January 18, 1833, to September 30, 1868.

In former reports, I have faintly sketched what seemed to me desirable in order to fulfil the important indication in the arrangements for the care and control of persons afflicted with mental disease.

The attention which you have given to the matter has led me to investigate and study the subject faithfully, and to inquire what modifications and improvements, if any, can be made in our present system.

The minds of medical men in all countries are now directed to the same subject, and are contemplating similar measures to those so feebly set forth in the annual reports of your hospital.

In England, asylums which were regarded twelve years ago as models, are now being enlarged and improved by wide departures from the original plans. New asylums are being built upon improved plans. And while this change is going on in existing hospitals, new plans are submitted and approved, embodying entirely new principles of arrangement. On the Continent, the same questions occupy the minds of thinking men.

If we consider that human nature is the same everywhere; that man is, all the world over, subject to the same impulses, and governed by the same motives; and that when insane, insanity assumes the same forms, and is successfully treated on the same general principles in all countries, we certainly ought to take as great an interest in the consideration of this subject as is taken by the humane of other countries.

Our system finds its weakness mainly in the meagre advantage we have at our command to classify, employ and occupy the minds and the bodies of our patients. It overlooks, to a great extent, the important fact that inactivity is incompatible with bodily vigor, and that exercise of all the faculties, bodily and mental, is the best method of preserving health, as well as of regaining it when lost. This law is laid deep in our organization, and cannot be violated with impunity. Any system of treatment not based upon it, or in any way ignoring it, must of necessity prove worse than useless.

If we look carefully at our own management, we shall find that our patients are and must be left too much to their own choice, whether to work or to be idle. No encouragement is held out, no inducement is offered to persuade them to labor.

They know almost at once that occupation is not the rule of the institution, and they act precisely as sane men and women would do under similar circumstances. Men are not apt to labor without some adequate motive. The insane will not labor for the benefit of their health, because they do not believe themselves diseased.

What we need most of all is a systematic arrangement and control which puts every one to some occupation. It is not to be expected that the work of any large proportion of the insane will be remunerative. The object will be gained when the faculties, mental and physical, are employed. This woman whose vagaries have controlled all her actions for many years, may not be persuaded to engage in the useful labors of her early life. She will, however, carefully undertake any useless fancy work, and thus employed, be relieved from the thralldom of delusion. This man who refuses to assist the mechanic in any light labor, will enslave himself for years in the pursuit of perpetual motion. This young clerk who cannot confine himself to the duty of an accurate copyist, is employed many weary hours in the equally laborious task of balancing imaginary accounts. To turn this waste of labor into healthy and useful channels, is a work next in importance to that of arousing the dormant energies of the demented and fatuous. How can we accomplish these desirable purposes? We may lay the subject before the whole corps of assistants. If, happily, they are persuaded, and are willing to devote themselves to the duty, where are the means by which they can accomplish the results? We may argue the advantages of occupation with the patients, but can we make it clear to such minds that labor is essential to recovery, and as such is a sufficient inducement to command their attention?

If a strong, active, convalescent mechanic is induced to labor, can we regularly pay him for his work? If we remunerate one, can we all? If a delicate lady is directed to occupy herself in music and drawing, in addition to the ordinary occupation of needle-work, can we assure her of a speedy return to society and friends? If we advise a gentleman to keep up his habits of reading, writing and conversation, can we afford accommodation for his library? Can any number of such visit the public library? When all these obstacles are over-

come, we shall find that we have no convenient rooms, no sufficient accommodations by which any number of our patients can gratify their own healthy tastes and feelings.

With the common laboring men and women, the difficulties are more readily met and overcome, though no hospital or asylum in this country has yet provided the means necessary for this class.

It is to be supposed that if all laborers were promised fair wages for their work, and regularly paid, a much larger proportion would be induced to engage in profitable employment. When the plan had proved successful, the wages of the patients might be kept, by the treasurer of the institution, on deposit for their benefit and use.

In Great Britain, an extra allowance of some luxury, such as beer or tobacco, has a powerful effect, not only in producing quiet and good conduct, but in promoting habits of industry; and under the influence of such motives, many who would otherwise be idle and listless, perhaps noisy and destructive, engage regularly in useful labor.

In regard to females, sewing and knitting, embroidery and fancy work furnish a ready resource. So also do the various departments of domestic labor. But they should have also the stimulant of remuneration. Labor, at present, is almost entirely compulsory, inasmuch as it is not, and cannot be, to any great extent, remunerative to the laborer. If we pay for it, there is the nice question of how much. Many of the insane, all of the demented, must be *re-taught* to labor, and at considerable expense; and it must not be excessive, but graduated according to the strength and condition of every patient.

It requires a large judgment and a nice discrimination to provide occupation for that growing class of active, intelligent minds which, for various reasons, find an asylum in our hospitals for the insane. How can we, for such patients, fill up all the hours of the day with recreation, amusement and exercise? How can we gratify their intelligent wants? How can we answer their just demands?

The establishment of hospitals for the insane was at the first an effort of philanthropy to redeem from jails and poor-houses, from cages and out-houses, the forlorn, the friendless and hopeless; and now, having fulfilled their first mission so well, we

seem to have forgotten that there is yet the higher office to prevent and turn aside this great current of human suffering from another and more hopeful class.

I know of no way by which this can be accomplished but by the adoption and execution of some such plan as we have considered on other occasions. What has been attempted elsewhere can be accomplished here. We need a different class of houses, and more land. We need arrangements which will dispense, for the most part, with the necessity of locks, bolts and bars; with camisoles and belts; and, if possible, with drugs, medicines and sleeping draughts. We need all the arrangements for the highest comfort, the most perfect cleanliness, ventilation and warmth. We need everything calculated to promote the best hygienic condition of the insane. And above all, we need such arrangements and such means as will serve to give occupation to every mind and every body placed under the care of the asylum.

During the last summer it was my good fortune to visit many institutions for the insane in foreign countries. Among other places visited was the town of Gheel, in Belgium, where the cottage system, so called, has perhaps reached its highest state of development.

The early history of this community, so far as it relates to the insane, is very obscure, and much of it is lost in tradition. It is supposed to be quite certain, however, that a church was built and dedicated to St. Martin as early as the seventh century where the town of Gheel now stands. To the little colony of Christians gathered about the church so recently built, the Irish princess Dymphna, accompanied by a priest named Gerbernus, fled from the rage of a cruel and wicked father. By their acts of charity and Christian benevolence, as well as by their quiet and pious conduct, they seemed to have gained the love and esteem of the few inhabitants of Gheel. But being pursued in their flight by the unnatural father, and discovered in their retreat, Dymphna was slain by her incestuous parent, while the good priest who had protected her, fell at the hands of his followers. It is related that some insane persons who witnessed this unnatural deed were so shocked by its horror as to recover at once their lost senses. Dymphna and

Gerbernus were buried side by side, and soon a little chapel rose near their graves.

In the meantime Dymphna was canonized, and hither to the chapel of St. Dymphna came the insane from all the country round about to bow at her shrine, and pray for the intercession of the blessed Saint that they might be healed of their infirmities. As the fame and influence of the Saint increased, a new and massive church was erected at great expense of toil and money. So great was the faith in the miraculous power of the Saint, that quarrels took place between rival towns for the possession of her bones, and the Gheelans, almost by divine assistance, were enabled to retain and remove them to the prepared shrine in their new church.

It is quite easy to understand how a thousand years ago the rude inhabitants of the little hamlet of Gheel were wrought upon by a belief in this supernatural agency. We, ourselves, in the days of spiritual manifestations and clairvoyant insight know how readily any absurd doctrine may obtain credence for peculiar medical efficacy. As a matter of fact in our every day experience we also know how frequently a removal from home and a change of scene is followed by an improvement in the condition of the insane mind.

The practice of bringing the insane to the shrine of the Saint increased as the knowledge of her miraculous power became more widely known; so that early in the history of Gheel the inhabitants became accustomed to the presence of lunatics among them, and also the care of providing for their welfare. Living in the midst of a most barren and desolate tract of country, the Gheelans were of necessity industrious, and as we have already seen, they were filled with religious fervor. These two important traits rendered them peculiarly well fitted for the duty of providing for and taking care of the insane; the duty being enforced by all the dictates of worldly interest as well as Christian charity. The insane were regarded with feelings of religious awe, and it was deemed the highest Christian duty to make every effort and suffer every sacrifice for their care. These feelings were handed down from generation to generation, and enjoined by father upon son, till at last, instead of a hamlet with a rude chapel and a few demented wanderers, Gheel comes to be an important community, accept-

ing a labor and devoting itself religiously to a duty which has no parallel in history ; choosing cheerfully and hopefully a state of things which no other community could be persuaded to tolerate for a day. It is this religious feeling in regard to the lunatics, which has been and still is, more than anything else, their safety in the colony, and makes Gheel better adapted than any other place for this peculiar plan of treatment called the cottage plan. The religious fervor in behalf of the insane seemed to be the distinguishing trait of the Gheelan mind and habit. Insanity was supposed to be due to supernatural causes. The doctrines of the Church were such as to encourage this idea, consequently spiritual aid was regarded as the most efficient means of relief. Who then so likely to intercede for divine favor as the blessed Saint Dymphna ?

The patient for whom the direct intercession of the Saint was desired, was placed in appropriate apartments adjoining the church under the care of persons retained for this purpose. These apartments consisted of two large and two smaller rooms or cells furnished with heavy oaken benches and iron rings to which furious patients might be fastened while awaiting their turn. Hither a priest would come daily to say mass and read prayers. If the patient was sufficiently tranquil an offering was performed daily for nine days in succession. The patient, preceded by priests and surrounded by assistants, chanting the praise of Saint Dymphna, marched in procession three times round the church. Each time as the procession passed through the chancel a halt was made at the tomb of the Saint, which is placed upon columns about four feet high, forming a sort of portico of gothic architecture. The procession kneeled and the lunatic dragged himself, or was dragged under this portico containing the remains of the Saint. They then exorcised him and conducted him back to the adjoining apartments. If the patient was too furious to be easily managed, a person from the country has been known to perform his part. While making the three circuits the friends and relatives remained in the interior of the church praying to the Saint for help. When nine days of such labor had passed the patient was generally freed from his restraint and restored to his family.

It is certain, says the very able and accomplished superintendent, M. Bulkens, in one of his reports to the Belgian Lunacy

Commissioners, that cures were effected in this way. Fortunately, however, for the insane, a belief in the miraculous power and direct intervention of the Saint has nearly passed away, and few, if any are now found willing to put their insane relatives through this ordeal.

Such in brief is the story generally told and believed in regard to the origin and growth of Gheel. It begins in fable and ends with the condition and prospects of the colony at the present day. Commencing with some accidental circumstance happening to a few religious fanatics eleven centuries ago, it reaches forward to an important community of eleven thousand people, among whom are living in comparative comfort and freedom, and in the enjoyment of unusual social privileges, about eleven hundred lunatics. No doubt there have been great cruelties practised at Gheel, and probably bad results were produced by so strange a mixture of medicine and religious fanaticism. But this was in no way peculiar to the habits or customs of Gheel.

It can be shown that severer customs prevailed in other parts of Europe, and that the system pursued at Gheel tended in a great degree to remove the restraint and ameliorate the condition of the insane. For as early as 1676 a municipal order was promulgated forbidding the keepers of lunatics to allow them to go abroad unrestrained, making the keepers responsible for damages done by lunatics, and imposing a fine for violation of the order; thus showing that the keepers were, in their humane tendencies, in advance of the public opinion of their day. Still, so much freedom continued to be enjoyed by the patients, that in 1747 another municipal interference was considered necessary to check the growing evil of permitting the insane the enjoyment of free air and exercise. But it is remarkable in this case that public opinion had taken a wide step in advance, and the magistrates in their municipal order enforced by fine, recognized the superiority of a careful personal supervision to the promiscuous employment of chains and fetters. Again, so soon as 1754 another enactment was passed, in which the magistrates complain that the lunatics are so free that one can no longer distinguish between the patients and citizens, and when the keeper is admonished, he always replies, "My insane boarder is not dangerous. He does no harm to any

one. He is quiet and well-behaved." All the facts go to show that the management and treatment of the insane was at that time in Gheel far in advance of the spirit of the age, while doubtless they suffered much, which, to us to-day, would seem but little short of downright cruelty.

In 1821, Esquirol visited this colony, and wrote nearly as follows: "The greater part of these unfortunates are fed like the peasantry of the country. In the town the dietary is better, and generally it is the same as that of the persons with whom they live. The lunatics, male and female, wander freely in the streets or in the country, without any one appearing to be watching them, even when they have trammels on their feet. If they try to escape, straps are used. If they are furious, they are chained by the hands and feet when they do not go out of doors, at least when they are lodged on a sequestered farm. In spite of these means of restraint, it happens often that they wander or escape, but the police of the surrounding districts stop them at eight or nine miles distance, and bring them back."

Following Esquirol, Guislain and Moreau addressed themselves to the French, Parigot and Bulkens to the Belgians, and Rollin and Droste to the Germans, giving to continental inquirers all the facts concerning Gheel and its system. In 1828, Sir Andrew Haliday, in his general view of lunatic asylums, gives his opinion of the system in the following remarks: "If the governors of St. Luke's were to form such an establishment upon some of the heaths or commons that are at no great distance from the metropolis, they would more effectually, I imagine, fulfil the intentions of the supporters and contributors to this institution, than by transferring their supposed incurables, after a twelvemonth's trial, to the white and red houses at Bethnal Green, as very uniformly has hitherto been their practice for a number of years, and that such an establishment might be formed at a very small expense must be apparent to all who will give themselves the trouble to think on the subject.

"The renting of a considerable portion of any such heath or common would not be any great charge to the funds of the establishment, nor could the building of the cottages cost much, and such an arrangement might be made the means of keeping many poor but well-ordered families from the work-house, and

of rendering them useful and industrious members of society. The average expense at St. Luke's was, some years ago, forty-six pounds eighteen shillings and threepence. He might be maintained at one-third of the expense at an establishment similar to that at Gheel, and have almost a certain prospect of being cured while the disease is yet curable."

Since that day, Doctors Cumming, Webster, Browne and Coxe have all published favorable notices of the cottage system. More recently, Doctors Stevens and Sibbald have recorded their observations respecting the working of the system.

According to all the published accounts of Gheel, and particularly that of Dr. Sibbald, it seems that up to about this period of time no efficient system of general superintendence had been established, without which it would be strange if gross abuses and crimes injurious to the patients were not frequently practised. And without doubt, during the long ages the colony had existed, scenes of great cruelty had been suffered. Slight responsibility attached to the keepers, except so far as the dictates of their religion, and motives of worldly interest guided and directed them in the care of the insane. These could hardly have been sufficient to repress abuse or encourage kindness, much less to reclaim, organize and bring under general superintendence this strange moral waste.

Guislain made Gheel the subject of a most searching examination, and in consequence of the numerous abuses found to exist, condemned the whole system. Another inquiry followed, which also resulted in exposure and condemnation of flagrant abuses, but at the same time in recommendation of the system, and suggested an organized medical superintendence, under the control of the state. Consequently, in 1850 or 1851, M. Parigot was appointed resident medical superintendent, and from that time, a most remarkable change took place in the condition of the insane. The law which inaugurated this state of things creates a superintending body called the general commission, consisting of the governor of the province for its president, the provincial attorney, the commissary, the burgomaster, the dean, the medical inspector, and four members taken from the citizens of Gheel. These hold office for two years, and go out by rotation. This commission appoints annually a

committee of five inhabitants, whose office it is to control the general administration and finances. The medical administration is lodged with the resident medical superintendent, who is appointed by the minister of justice. He writes the reports, grants certificates of cure, and superintends all the affairs of the colony, residing at the infirmary or asylum proper. Under him are four medical assistants, each residing in and visiting all the patients of his own district at least once in a week, and oftener when necessary, or when requested. They report quarterly to the resident medical superintendent, which, accompanied by his comments thereupon, are sent to the superior commissioner. Patients may also be placed under the care of private practitioners, who agree to submit to the same regulations as are laid down for the assistant-physicians. Then comes a corps of civilian inspectors, one for each district, who go from house to house, noting the condition, wants and prospects of every patient, and making regular reports to the superintendent.

A list is kept of those whose characters and dwellings are considered by the authorities as sufficient to qualify them as nurses, and includes the names of those at present under their care.

The insane of different sexes are not allowed to board with the same nurse, unless with the special sanction of the superior commission. Each lunatic is placed specially under the charge of the cottager with whom he boards, who is responsible for any injury done by the patient, and, except in case of emergency or extreme violence, he must not use any measure of restraint, such as the employment of straps, the belt, or the camisole, nor must he place the patient in seclusion without first having received authority for so doing from the assistant physician of the district in which he is located, and the physician must report directly to the superintendent.

Every nurse who violates these rules, who abuses a patient, or who neglects to obey the orders of the superior commission, or the committee, or the physicians, shall be deprived of his license to receive and take care of lunatics. I was informed that several householders had been so deprived of their licenses on account of their violation of regulations, or for neglect or abuse of patients. On the other hand, prizes and rewards are

awarded to such nurses as distinguish themselves by their humanity and devotion to the welfare of their patients. A chaplain is connected with the establishment, for the comfort and benefit of the lunatics.

Quiet patients also attend the public services in the various churches of the commune, unattended by their nurses. Those known to be excitable are accompanied by attendants. The local committee is authorized to fix the dietary, and also the hours of meals. The committee also appoint, when necessary, head attendants, to assist the assistant-physicians. Quiet and orderly patients are permitted to visit, unattended, public houses, places of amusement and refreshment, but the sale of drugs and spirituous liquors to all lunatics, is strictly forbidden. All the details as to clothing, bedding, furniture, &c., are under the direction of the local committee, with the concurrence of the superintendent. Unsuitable patients are excluded by law, and all classes of insane persons may be placed in the commune, except those who require continual restraint or coercion, those who are suicidal, homicidal or incendiaries, and those whose escapes shall have been frequent, or whose malady is of such a character as to offend the public peace or decency.

We are now at Gheel. We know its geography, we have heard its traditions, we have glanced at its history. Let us look at it as it is, and consider briefly its working. The general appearance of the town is quite as good, perhaps better, than other towns of equal size in its neighborhood, and produces, on the whole, a favorable impression on the mind of the visitor. The streets are quiet, but cheerful; the houses tolerably comfortable, though rude in finish, and very plainly furnished; the gardens are neat and well cultivated; the people are well clothed, and they seemed to be well fed. They are industrious, and occupied chiefly in cultivating the soil; the manufactures being confined entirely to the needs of the district, except perhaps small quantities of lace, in the making of which a few women are employed. Some agricultural and dairy products are supplied to the Antwerp market.

On the whole, the remembrance of the town is more pleasing than that of many Irish towns of the same size, and the general feeling in regard to its comforts is much the same as that in

regard to an English or Scotch village, consisting chiefly of peasantry. The hamlets and houses outside the town had the same general character with those in the town, except that they were of ruder construction, less commodious and less tidy. There are in the community about eleven hundred lunatics; a casual observer, a stranger, would pass a day in the village without detecting any marked signs of mental disease in the persons wandering about the streets. There is certainly less peculiar conduct which might be attributed to mental aberration than is witnessed in any second-rate Italian town.

In passing about the town, both alone and with Dr. Bulkens, I visited any and every house I desired, and I ought to state here my belief in the entire honesty and sincerity of the enlightened superintendent, Dr. Bulkens.

Judging from what I saw, the insane in the commune of Gheel are kindly and well cared for. That abuses do exist the Doctor frankly admits. The abuses, if any, are not the result of the system pursued so much as the want of a sufficient number of intelligent medical assistants to carry out the plan adopted.

The patients were in the enjoyment of a good degree of bodily health, were plainly but decently clad, and I believe they were provided with a sufficient quantity of wholesome, nutritious food. I was informed that the laws regulating the management of the insane, allow seventeen ounces of bread and five ounces of meat to each man, and fourteen ounces of bread and four ounces of meat to each woman per day; vegetables were being freely used also. They were generally cleanly in their persons, though not particularly neat or tidy in their habits. The free air and the unrestrained exercise of the powers of locomotion of so large a number of the insane add greatly to the health, quiet and general comfort of the whole. The sleeping accommodations of many of the patients were such as would not be satisfactory in a well-ordered lunatic asylum; the rooms being small, often smaller than our single rooms, never so well lighted, sometimes in lofts or attics, and occasionally, for patients of filthy habits or those who are noisy, in out-houses, as is sometimes practised at almshouses in towns of our own country. The beds of cleanly patients were neat and of the same quality as those of the family.

There is generally no accommodation for bathing, and little for general toilet purposes.

At some of the houses where are placed patients belonging to wealthy families, the apartments were cheerful, agreeable and commodious, and were furnished with some degree of taste and elegance ; some of them contained pianos and other musical instruments, and many of them books and pictures.

Patients from the families of the laboring classes were in considerable numbers engaged at some useful labor ; but those from families of the wealthy were not employed, except as influenced by their pleasure or the character of their delusions.

More than one-half, perhaps five-eighths, of the whole number of patients follow some occupation, though with but little attempt at any regularity or organization.

Some of both sexes were assisting the families with which they boarded in the various household duties, as cooks, nurses and companions for children. Some were laboring as shoemakers, tailors, blacksmiths and wheelwrights. Many of both sexes were employed in the fields, at the usual farm labors. They all or nearly all enjoy the fruits of their own labor. Those who are able to make any contract to perform a piece of work, or to hire themselves out for a day or week, receive their wages and make such use of them as they please.

One man was shown me who had purchased four cows from his earnings, and rented them to the villagers. Others were pointed out who owned goats or donkeys. One whom I saw had taken a contract to paint or color a house, and was about commencing his work.

I was informed that many who were able to work performed labor only at irregular intervals, working a few days and earning a little money, and then idling about until they had expended their earnings.

A large majority of the patients are paupers, but the amount of their earnings is never withheld and credited to the department from which they come, or to their families in payment for their support. Government wisely regulates this, the object being to induce habits of labor, thereby hoping to promote recovery.

There is exercised by the patients great apparent freedom of action and choice of pleasure. They seem to move when and

where they please, with no one to watch their steps. They may work or play, but if they work they receive direct gain in shape of wages for their labor. They may go in and out as any other members of the family do. They may be and are to a certain extent interested in all the details of social life. Though not in their own homes they have a home, live in a family and are members of society, useless it may be, but still they are identified as a part of the community.

There seems to be a general feeling of contentment among the insane which is not found in any asylum. In very few cases indeed did there seem to be any disposition to escape.

But little actual restraint is suffered by the patients; more perhaps, however, than in the best regulated asylums in England or America. But at Gheel restraint is only an interference with certain dangerous muscular efforts. If a patient strikes he wears a leather belt to which his arms are loosely strapped. If he tears his clothes or undresses himself he wears the camisole. If he attempts frequently to escape he wears anklets fastened together by a chain. Sometimes both anklets and wristlets are worn; generally, however, the patient still enjoys free air, and moves about as well as he can where he likes.

The most unpleasant forms of restraint which I saw were those cases of excited epileptics, who, during excitement, wore the camisole, and were also fastened to the bed, and must, from the nature of the case, be left alone a large part of the time. The condition of such, as soon as reported, is improved by admission to the asylum proper.

I am not able to state accurately the amount of restraint, but believe it to be a much larger percentage and of severer character than has been suffered in your own hospital at any time during the last twelve years. I believe also that restraint is going out of use at Gheel, and that if Dr. Bulkens were well supported by able medical assistants, mechanical restraint would soon lose itself in ordinary seclusion in comfortable rooms and private gardens. That you may not consider me a careless or superficial observer, I will briefly show how other alienists have seen the Commune of Gheel. In 1851 Dr. Earle writes: "The accommodations are of various grades; at some houses which I visited the apartments were very agreeable and commodious,

but in none were they furnished in a style nearly so elegant as that of many of the private institutions for the insane in Belgium, France, England and America. But at Gheel much the greater proportion of the patients are supported at the expense of the public, and about fifty cents a week is paid for the board and care of each of these. No very great extent of luxury, either in furniture or food, can be supplied at the rate of seven cents a day. Consequently many of these are placed in garrets, lofts, outhouses and other out of the way nooks and corners, where their accommodations can hardly be accurately described by that expressive word, comfortable. They appear however, to be decently clothed and sufficiently well-fed, and of all that I saw in the numerous houses which I visited in Gheel and the surrounding country, I have no recollection of hearing a word of complaint in these respects. On the contrary, one woman at a large farm-house a mile or two out of town, was sorely troubled because there was too much food, too much clothing, in short too much of everything in the world." Again he says, "Within the town I saw but one patient in the streets upon whom there was any restraining apparatus. His waist was encircled with an iron belt to which his hands were secured by wristlets. In the suburbs and around the farm-houses however there were several who were fettered with iron, the chain between the ancles being about eight inches in length. In some cases the rings around the ancles had abraded the skin and occasioned bad ulcers."

In 1860 Dr. Sibbald writes: "One of the agreeable features of the place is the general contentment manifested by the insane. In very few cases, indeed, did they complain of the injustice of their detention, though questioned on the subject. The comparative liberty of free air was evidently valued by them as a great privilege, more especially among those who had been previously residents in asylums. In one case, that of a young man who had been confined in Guislain's Asylum at Ghent, I was particularly struck with this. He was one of those subjected to mechanical restraint. He had a leather belt around his waist to which his arms were loosely strapped to prevent him from tearing his clothes. I asked him whether he did not find this restraint very irksome, to which he replied in the affirmative. I then asked him why he was thus strapped and

received a very simple, straightforward answer, giving the true reason. In my next inquiry I asked whether he had worn those things at Ghent? and he answered no. Then said I, would you not rather live there? they were kind to you were they not? Yes, replied he, but I prefer to walk about as I like." Again he says, "The greater number were restrained by anklets fastened together by a chain, which as well as the anklets is bound in leather to prevent the unpleasant appearance and jingling of the chain, and to avoid the anklets hurting the wearer, others wore a belt to which their arms were strapped, as in the case of the young man whom I have described above, some wore both belt and anklets."

Again he says, "As far as I could judge from the histories of the cases which I saw, I formed the opinion that two classes of cases, more than any other, derive benefit from this system. One class comprises the milder forms of acute mania, many of which may be successfully treated, though, at first sight, it might appear that their excitement would require that they should be more closely confined as a protection to themselves and others. The other class consists of partially demented cases who have, either through old age or from other causes, fallen into a second childhood. When such a patient is of the male sex he receives much more suitable care and attention from a kindly cottar's wife than is possible even from a conscientious and experienced male attendant; and when there are children in the family, the evident happiness which results from their playful intimacy with their broken-minded friend, either male or female, lights up as nothing else can do, the clouded remnant of their mental life." And again he says, "From what I saw I have every reason to believe in the thoroughly trustworthy nature of the reports of Dr. Bulkens. The patients appeared generally to be in good health, and as far as short residence can determine, they are well cared for. One thing which in such a place must speak strongly as to the character of the administration, is the fact that the worthy medical inspector appears to be a favorite with his patients."

In 1867 Dr. Howe writes: "This establishment flourishes mainly, I think, in virtue of three great advantages for the treatment of insane persons, which were not and are not found in an equal degree at any public hospital in the world.

"First, employment at domestic and agricultural work in company with sane persons, and mostly in the open air. This promotes bodily and mental health, or at least retards the progress of disease.

"Second, social and family relationship with sane persons. This keeps alive and active the unperturbed sentiments and affections, and helps to restore the mental and moral balance.

"Third, the greatest possible amount of personal freedom. This not only promotes bodily health, but, by preserving self-respect, promotes mental health." He says "the history of Gheel, from the twelfth to the nineteenth century, may be regarded as a severe test of human virtue and goodness. Tens of thousands of helpless lunatics were thrown upon the hands of simple peasantry, whose control over them was only partially modified by priests and magistrates. Whoever studies carefully the condition of lunatics during these centuries, will conclude that, upon the whole, these unfortunates had more of human enjoyment, and less of suffering, than in other countries where people not only thought, with John, that they were possessed of devils, but with Jeremiah, that they should be put in prison and in the stocks. Upon the whole, human virtue stood the test bravely at Gheel." Again he writes, "Here at Gheel one cannot but rejoice at seeing how large a proportion of the lunatics have entire freedom, and indulge the hope that, by some happy reform, thousands who are now needlessly imprisoned in other lunatic asylums, may have theirs also, and that to the sad loss of reason may not needlessly be added the loss of liberty also."

I visited also the French colony, Fitz James, about fifty miles north of Paris, in the department of Oise. The little town of Clermont is situated in the midst of a fertile and beautiful agricultural region, and, from the eminence on the slope of which it stands, commands an extensive prospect. The original asylum, established by the father of the present managers, which has grown from a very small beginning in a private house to a large and prosperous institution, is situated on the border of this village. In 1849 the original proprietor died, when his sons, the present proprietors, assumed the management, and reorganized the institution. The degree of prosperity was such that, as early as 1856, it was thought advisable to procure more land than was at that time occupied, and try

the effect of a greater amount of out-of-door labor for those whose habits and proclivities would allow of their being employed. Accordingly, an estate of about five hundred acres of land was purchased in the immediate neighborhood in order to carry out the plan. Upon the estate was a mansion-house and such other buildings as would constitute a gentleman's country residence. Other plain buildings of rather rude construction were erected, and soon forty able-bodied, quiet male patients, supported at the expense of the departments, were transferred from the original asylum proper to the colony, and put to work. These were all chronic cases, and had, for various periods of time, performed the out-of-door labor on the ninety acres of land cultivated in connection with the asylum proper at Clermont.

The results were so satisfactory, that Dr. Labitte soon erected other and more extensive buildings for the accommodation of a larger and increasing number of patients of both sexes.

Alterations and additions continued to be demanded until the institution may now be considered quite complete of its kind. It has four distinct departments, with convenient out-buildings, stables, and such other fixtures as a large and well cultivated farm requires. During the seven or eight years since which this system has been inaugurated, the profits of the institution have been so large that the improvements necessary have been made and paid for from the annual income. This colony is simply an appendage to the asylum at Clermont, from which patients may be transferred, when thought desirable by the proprietor, and sent back to the asylum again if necessary.

The four sections to which I referred are: first, one devoted to male patients, who pay liberally for their support, and whose friends prefer placing them here rather than at Clermont. The accommodations are such as may be found in an old country house. Twenty-three male patients, with their attendants, have rooms in this old mansion house, in which are also apartments for the medical officers and their servants. Second, a corresponding establishment at a little distance for female pay patients. These two sections are comfortable, though not furnished with any degree of taste or elegance. That of the males in the mansion-house could hardly be said to have been neat or tidy. Third, one for female paupers, situated at a little distance from the female pay patients, and at a greater distance and in the rear of the section for male pay patients. This sec-

tion is devoted chiefly to laundry operations, and the washing for both asylums is performed here. Fourth, one for the laborers on the farm, where they live in small, rude dwellings, called cottages. These cottages are not models for comfort or convenience, nor are they patterns of good taste and cleanliness. There are other buildings occupied by patients, but of the same general character as those of the third and fourth sections.

The mansion-house is of two stories, and so divided as to accommodate twenty-three patients and the medical officer and manager, with his family and the necessary servants and attendants. It has also, beside parlors and sitting-room, a billiard room. It is quite pleasantly situated in a wide lawn, is surrounded by trees, and has a creek flowing in front.

The section allotted to the female pay patients is also an old country house, of two stories, divided in the usual manner, and has the usual conveniences of a country house. It is well situated in a fine lawn, and gives one, on the whole, a pleasing remembrance. Of the comforts and conveniences of the departments for pauper patients, little can be said. They are destitute of all proper means of lighting, warming and ventilation. They have no conveniences for bathing, and but little attempt is made to preserve habits of common decency. The laundry is quite spacious, well arranged and convenient, and a large amount of useful labor is here performed.

The farm buildings are convenient, and arranged with care and skill, and speak of the thrift and enterprise of the place much more plainly than do the buildings for other purposes. The stables were well filled with a fine stock of oxen and horses, and a large herd of cows were feeding on the lawn. An extensive piggery was filled with choice breeds, and more than one thousand rabbits were kept in boxes, where they were bred for the table and market. There were also butchers' stalls, sheds for carriages and farming implements, and a mill, with steam power; and also, on the creek, in front of the male department, a small, showy building, which contains hydraulic apparatus for lifting water to such parts of the establishment as it may be desired. Besides these, there were store-houses and cellars and cider and wine vaults.

The hospital, or asylum proper, of which I have spoken, is known as the Clermont Asylum, and the colony of Fitz James

is only an appendage to this, in which are lodged in detached buildings, not cottages or houses, the quiet and industrious patients. Nor are these accommodations based upon the model of any family arrangements. They more nearly correspond to military barracks in second-rate villages.

Dr. Gustave Labitte is the medical director and superintendent of the affairs of both establishments, and a brother, Alexander Labitte, has charge of the general administration and direct oversight at the colony where he resides. A medical assistant is employed at each institution. At the asylum proper each division or class has its appropriate airing court, beyond which the patients seldom go. Here, as at the colony, the accommodations for the pay patients are fair, while that of the paupers are bare, uncomfortable and coarse in the extreme. Rooms used as day-rooms contained no furniture but the plainest of wooden benches and heavy tables, not clean, on which their meals were served. Their food was plain, but appeared to be sufficient in quantity and fair in quality. No great order or regularity was observed in dispensing the food, and on the whole the meal was unsatisfactory. Refractory patients could not be well supplied. Feeble patients were not properly attended, and deluded ones were suffered to absent themselves without an effort on the part of the attendants to satisfy their wants.

In this asylum, consisting mainly of three separate ranges of buildings, each with its appropriate grounds and enclosures, there appeared to be an unusual amount of severe restraint of various kinds, which, added to the number of those who were suffering from bruises of varying degrees of severity, leaves on the mind of the visitor painful recollections.

There seemed to be everywhere an utter want of authority, and almost complete absence of any executive power in the internal management of the establishment.

At the colony, which is used as a sort of penal establishment for the strong and healthy and docile who quietly submit to the direction of taskmasters, the condition is better only as the patients are of a class who can labor with profit and consequently enjoy freedom from restraint and the cheerful and healthy influences of out-of-door labor.

The medical end which should be kept in view seems to have

been lost sight of. The patients are not surrounded with any of the customs or habits of social life. I observed no marked attempt to introduce among them reciprocal relations, or to inspire them with sentiments of personal consideration. And I looked in vain for those conditions of social and domestic life of which the family is and must remain the model.

That the patients perform a large amount of useful labor no one can for a moment doubt. The general thrift and pecuniary prosperity of the place sufficiently prove this. Since its establishment, about six hundred acres of land, in a department where land is expensive, have been purchased out of the net proceeds of the establishment, besides the cost of the buildings, fixtures, stock, farming implements and improvements. Here may be seen the best mowing and reaping machines; the most approved ploughs, harrows, drills, cultivators; the most successful methods of raising and fattening improved breeds of cattle, sheep and swine. Here, too, are the finest horses, the best cows, and sleekest oxen to be found in the country, with prize sheep and swine. The buildings, courts, stables and out-houses, all prove how profitable to the proprietors has been the experiment.

The departments which send their poor insane to this colony, are not essentially different in their habits of feeling in regard to the insane from other localities, and consequently appreciate the pecuniary advantages of such a system. Although patients may not recover, the cost of maintenance may be lessened, and habits of obedience acquired may continue when returned to the local authorities. Such, in brief, are my impressions of Clermont. I know they differ widely from those of some other observers who have the same general hopes in regard to the insane, and the same or similar opinions in relation to their management with myself.

Of the French asylums for the insane, you will permit me to make a passing remark of one or two. In Paris, the asylum of St. Anne is perhaps the best. It has, architecturally, every advantage over others. Here are found all the accommodations for classification, all the arrangements for care and custody, and all the fixtures for treatment which skill and ingenuity can devise and money procure.

The buildings are neat, plain and substantial, and consist mainly of a separate block for reception and observation of

patients on admission, with rooms for medical offices and for a few convalescents. Opposite to this is a square with a block or pavilion occupying each corner and the middle of each side, with domestic offices and rooms for assistants in a centre block.

These blocks are all connected by a covered walk, which divides the blocks and their appropriate courts from each other. The ranges of apartments on the right of the entrance are occupied by males, and those on the left by females. Day-rooms, dining-rooms, bath-rooms, and rooms for refractory patients are on the first floor, and the sleeping accommodations in associated dormitories are on the second floor. The domestic arrangements, kitchens and laundry are perfect, containing the most expensive machinery of the latest pattern and improvement. There are large cellars, store-rooms and wine-vaults, filled with everything the market could supply. The sewing-rooms, linen and clothing stores are large, abundantly supplied, and were models of neatness and good order. The dietary was good, and seemed to be abundant. The medical stores appeared to be on a scale of the most lavish expenditure; supplies of all kinds were plentiful almost to wastefulness.

The apartments of the patients were very plainly but cleanly furnished. The bedding was good, and the sleeping-rooms light and airy. The rooms for excited patients open into separate airing courts. These rooms are of solid masonry, quite dark, often damp, and must at times be cold. Some of them, however, are very expensively padded, and did not appear to have ever been used. Many of the unpadded rooms were occupied, and in every case, I believe, the patient was also in the camisole. Here may be seen the most elaborate arrangements for the application of water as a remedial agent, and for the general purposes of bathing. In a large room devoted entirely to this use are contrivances quite extraordinary—jets of water of all sizes, from the finest stream to the most powerful douche, heavy enough to fell a strong man; baths of every conceivable form—plunge baths, sitting baths, foot baths, head baths and shower baths; baths in every direction—perpendicular, horizontal and upright. Then there was a sort of platform from which an attendant could control not only all other fixtures in the room, but also a powerful douche from flexible hose. Besides these, there was a coil of

iron pipe enclosing a space four feet in diameter and more than six feet high, so arranged that a man could step inside. The pipe was punctured with small holes on the inside, so that when a patient was placed upright in the centre and the stop was turned the water came rushing with great power from a thousand jets and struck upon every inch of his body in continued streams with immense force. In an adjoining room there was apparatus for vapor baths, and in another a score of ordinary bathing tubs with covers so fixed as to enclose the patient's body in the tub, leaving his head above the lid or cover.

The patients were employed in the laundry, kitchens and sewing-rooms, and in and about the airing courts much as at other hospitals for the insane the world over. There seemed to be no general system of occupation, and no provision for any considerable amount of recreation or amusement, and little or no room for outside exercises.

The hospital at Charenton, a short distance from Paris, is now being completed according to the original plan, only one-half of which has ever been constructed. The building is situated on the brow of a hill and overlooks a beautiful country. It is neat, plain, but rather showy in its exterior, consisting of a centre building and chapel at a little distance in the rear. From these two buildings proceed parallel wings or ranges of apartments. The centre and chapel are united by a range of apartments from front to rear, so that the centre group of apartments enclose four sides of a square; in the centre of this is a statue of Esquirol. Each of the two parallel wings has four small projecting wings, so as to form three sides of four courts in front of each parallel wing, the fourth side being enclosed by a simple erection or covered walk. The four divisions, consisting of the front wing and two of those in the rear wing, are assigned to men. And the two remaining divisions to the women.

In the male division there seemed to be an unusual amount of excitement and in a portion of it considerable violence, and many patients were in camisoles, muffs and wristbands with belts. Quite a large number were also in seclusion. No more than one division of the males were quiet, and in any degree as comfortable as in ordinary American asylums. The female patients appeared to be much more calm, and in every way

better managed. They were more tidily dressed, their apartments were more cleanly and better furnished, and many of them were employed in sewing, knitting and other light work. They also assisted to a small extent in the domestic offices. There seemed to be little or no occupation for the men, and but little recreation for either sex.

The dining and sleeping accommodations are much like those of St. Anne, comfortable but no more. The food was good and sufficient, and a liberal allowance of light wine is given to the patients. Here too, much reliance is placed upon baths; they are used in all their forms, simple and medicated. Cold water is employed in the neuroses, as headache, sleeplessness, hypochondria, hysteria and general atony. Long continued tepid baths are employed as a remedy for the excitement of acute mania, and one may see scores of patients locked into bathing tubs two, four, six, and even eight hours at a time.

In the French asylums there is much to leave on the mind unpleasant impressions, and one's recollection is often painful. The manner and bearing of both physician and nurses seem not to be sincere and honest. There is a want of confidence and a restless suspicion on the part of both which must lead to great discomfort and frequent excitement. In the management of the insane, there did not seem to be a sufficient attempt to awaken their sense of honor and confidence in their own strength to recover their habits of self-control. There was entire absence of any teaching by example the value of moral power and religious confidence. There was no endeavor to excite motives of hope or fear. No influence tending to fix their attention on any particular subjects, or to lead them to engage in any variety of occupation, amusement or intercourse. The same general remarks may be applied to the asylums in Switzerland and Germany if we except the asylum near Neuchatel, in Switzerland, which though small, is quite perfect in all its appointments. It is beautifully situated in a highly cultivated region on the shores of the lake, commanding views of the distant mountains, &c. The buildings enclose a square, are two stories high, and contain on the lower floor dining-rooms, sitting-rooms and libraries, and also a range of unoccupied rooms for excited patients. On the second floor are the dormitories and single bed-rooms. Here the conduct of the physician and nurses was different. I found Dr. Borell and

his family enjoying coffee, newspapers, books and music, with quite a group of his patients about him, all familiar, cheerful and happy. There was no appearance of suspicion; no fear or dread of returning to the wards and apartments devoted to patients. The whole household seemed to be one family, moved by the same impulse, having the same motives, enjoying the same pleasures and entertaining the same hopes. There was here no seclusion and no restraint. The Doctor was just completing a house for a few patients who could enjoy still larger liberties. This hospital was built and endowed for the poor of the district who pay only a nominal price. It may also receive the wealthy at higher rates, but must always accommodate the poor of its own neighborhood.

The asylums at Geneva and Berne are both well situated, pleasantly arranged, and the patients seemed to enjoy a fair degree of comfort. There appeared to be no striking evidence of tact or skill in the management of either. There was a lack of tidiness and order, and want of discipline and control in the care of the patients, and in the administration of the general affairs of the asylums.

The asylum at Frankfort, which is located near the city in the midst of a beautiful and growing suburb, is a pleasant building of modern plan and construction. The main wings are built on three sides of a square, and the patients' rooms are generally arranged on the back side of the wing and the corridor is open to the front. The day accommodations are mostly on the lower floor, and the sleeping-rooms are above. The patients are kindly but carelessly provided for. They are untidy and unclean, and the house in all its parts is slovenly and dirty.

In striking contrast with this is the asylum at Heppenheim, recently constructed upon an improved plan, and as yet occupied only in part. The building, consisting of centre, lateral and projecting wings, is plain, substantial and showy. Situated in the midst of a beautiful and healthy agricultural region, everything is charmingly neat and scrupulously clean. The patients are tidy, cheerful and social. There was perfect discipline in the control of the house, and great order observed in all the arrangements and details of management. There was more than usual attention given to the subjects of recreation, amusement and labor. The patients were well and cleanly

clad, the tables were bountifully spread. The beds were clean and comfortable, the house was roomy, airy and light. The furniture of the establishment was mostly made by the patients, who perform a large amount of useful labor.

In the continental asylums the apartments assigned to patients have not that finished aspect of comfort which is found almost universally in American institutions. Yet compared with the prevailing customs and habits of the people they are probably as comfortably furnished as our own, and answer the wants of the people of those countries as well as our own hospitals answer the wants of our own people. In the more recent ones, the domestic offices, laundry, kitchen and store-rooms are well appointed and quite perfect. Their facilities for distributing supplies are however inferior. In the treatment of patients, mechanical appliances for the purpose of bodily restraint are more extensively used than in any asylums known to me on this side of the Atlantic. And I dare not write how extensively I have seen such means of restraint in actual use. I have doubtless seen much that was not usual and customary. But sometimes it was difficult to see all I desired, and frequently some departments were very reluctantly shown. This is especially true of Parisian asylums.

In England the public institutions for the insane are of two kinds—hospitals for the middling and upper classes, and county asylums for the paupers. In some of these, patients from well-to-do families may be found who refund to the parish from which they come the expense of support. In Scotland, generally, and in a few only of English asylums, both classes are admitted into the same institution, but commonly separate buildings are provided for the two classes. There are also hospitals founded like Bethlehem and St. Luke's, where curable cases are admitted of persons in good social position, who have become reduced; and there are likewise many private asylums accommodating from three or four to seventy-five or one hundred patients. These may be and formerly were extensively owned and managed by non-professional persons who employed a physician to visit them. Some of them are now managed by the first alienists in the country, and a remarkably good feeling and understanding exists generally between them and the public hospitals and asylums. All these institutions, whether public or private, are under the inspection and control

of the commissioners of lunacy. The private establishments differ but little from private houses ; none of them having been constructed for the purpose. They nearly all have fine surroundings, large and beautiful grounds laid out in walks, lawns, croquet and bowling plats, tennis courts, and facilities for every amusement and recreation. In the house there are libraries, billiard and smoking rooms and reading rooms on the lower floor, and sleeping and dining rooms above. In these houses many of the rich keep their own servants, horses and carriages.

There is, I believe, in no case any provision for manual labor, except in such private asylums as are occupied by ladies, where the light occupations sought by ladies in their homes are readily available.

In the public asylums of England, what is termed the non-restraint system prevails, and is, I believe, generally honestly and faithfully carried out.

Cases of fury and violence, though by no means so common as with us, nevertheless do occur, and are often controlled by the administration of drugs, such as opium, nitrate of potash, digitalis and antimony. Seclusion in padded rooms is much resorted to, and in some asylums packing in wet sheets is supposed to exert a powerful controlling influence. Shower-baths are often ordered, both for their remedial effect and as a correction for misconduct.

Some alienists admitted frankly that the non-restraint system might be carried too far, and that in some cases it seemed to be for the best interests of the patient that some restraint be applied, but, on the whole, it was thought best to risk the little suffering that might result for want of restraint, rather than that multitudes should be unnecessarily deprived of their liberty.

As it is in America, so it is in England. The very poor have better opportunities for curative treatment than the middling, well-to-do class ; for, when attacked, they are taken to the asylum, and are placed under such restrictions as will at least detain them during the acute and curable stage of disease. The wealthy can remain at home, can travel with servants, or can seek admission in a private asylum, where weeks must elapse before a vacant room can be obtained.

Ten years ago the county asylum of England was on the corridor plan, with single rooms upon one side of the corridor only,

and large associated dormitories for about two-thirds of the patients, and day-rooms for self-seclusion of a few upon each floor of the establishment; the dining rooms being generally in some projecting portion of each corridor; bath rooms, water closets, padded rooms, clothes rooms, and all other appointments on each ward, with airing courts, and outside entrances corresponding to each ward. Then the chapel, recreation room, kitchens, laundry and general stores, in connection with the centre building, where the medical officers had their apartments. Then there were farm buildings and the bailiff's cottage at some distance. Of this plan the Derby and Essex County asylums were ten years ago the best examples. They have retained all they then had, and have both been enlarged and improved by slight departures from the original plans.

But hospital architecture has made large strides in England, so that if we were to-day to make comparisons, where all are so good, our preferences would be strongly in favor of the asylums in Sussex, at Haywards Heath and at Worcester. These two seem to be in advance of all other county asylums which I saw, and it would be difficult to say which is best or which is best managed. They each consist of twelve wards, and accommodate seven hundred patients. The construction is similar to other asylums in many respects, but the appointments are more complete. Corridors, with single rooms for a small portion of the patients, opening on one side, with large day-rooms in each story, and corresponding airing courts, and, as is usual in all the recently built institutions, a corridor of communication passing along the whole length of the wings, by which any ward may be entered without passing through any other ward. On the front of the first lateral wings are large showy one-story projections for dining-rooms, which communicate with all the wards by means of the corridor of communication. These rooms will each seat about three hundred and fifty persons, so that all able-bodied patients of the same sex sit at the same table. The laundry wing leads directly from the female side of the house, and the approaches of the stables and gardens are from the male side. The recreation rooms are near the centre, and the chapel is outside.

The hospital at Northampton and the asylum at Glasgow can be compared with our own institutions, inasmuch as they each

have both paupers and pay patients under the same roof, and in many respects are much like American asylums. In these the apartments for paupers are not as well furnished and as well kept, the patients are not as well fed and cared for as in your own asylum, while the apartments for the pay patients are better supplied, their surroundings are more tasty and comfortable, and, on the whole, they are better cared for than the corresponding class can be in your own hospital. The average price of board for paupers in English asylums is not materially less than is paid here, and the usual price for patients belonging to a class of well-to-do tradesmen, is from thirty to fifty pounds sterling.

In asylums in England and Scotland of a still more recent date, the day-rooms and all accommodations are on the first floor, and all the sleeping accommodations in large dormitories, with a few single rooms, are on the second floor, except the infirmary wards, which are usually, though not always, on the first floor.

Alterations now going on in some of the older asylums will convert them into blocks or pavilions, connected with each other by covered walks, each block or pavilion having day accommodations on the first floor, and sleeping rooms above assigned to particular classes of patients, and these classes generally taking their meals in one large dining hall.

Many asylums of all classes have detached buildings or cottages, for the accommodation of a few patients who cannot well be classed in the asylum proper, and great advantage is found to result from this plan.

In Ireland, the asylums were found to be quite as good as in England or Scotland, though of poorer construction, and laboring under other great disadvantages. The institutions were generally on the corridor plan, with rooms on one side only, and central dining-rooms. The kitchens, laundry and store-houses were all well constructed, and the patients seemed to be kindly and well cared for.

In most of the particulars of moral treatment, the English asylums are fully equal to those of the United States. In the most important of all, if reference be had to curative treatment, or the quietude, order and hygienic condition of the patients,—that of occupation for the inmates,—they are supe-

rior. Their superiority lies not in the more ardent wish or the greater efforts for the welfare of their patients, for in these respects none excel American superintendents, but in the education of the people, and the nature of their political governments, and also the social restraints under which they live. Obedience to authority becomes by education a habit and principle of life. The English peasant and mechanic have an ingrained belief that they are not only born to labor, but to obey authority, and they readily and without question do as they are bid. Very different are they, and all the continental peasantry, from the American, who looks upon labor as somewhat menial, or, at any rate, regards it as his capital, upon which he has a right to fix his price.

As to correctional means, in the strict sense of the term, there are none in any good institution, and if strong measures are necessary, they must ever bear at the same time more or less of a medical or therapeutical character, and correspond precisely to the mental peculiarity of the patient, whereby their particular healing aim is not lost. Therefore alienists direct the most reasonable mode, not excepting the most extended douche, the deprivation of nourishment, and the like, seeking out for each individual case the most suitable measure, which often requires the deepest meditation.

Their argument is that the insane are diseased, and that their malady is not only curable, but, like all other maladies, curable in proportion to the promptness with which the treatment follows the attack, and that there should be no obstacle in the way of receiving treatment. That some restraint is considered necessary by them for the violent and demonstrative, is manifested by their tenacity for the shower bath, the packing sheet, and nauseating doses of antimony. That a large amount of personal freedom is best for the many, is shown in their so pertinaciously following the system inaugurated by Dr. Connolly at a time when one could hardly think of institutions for the insane without chains, scourges and bands of iron. But, thanks to the humane spirit of the age, which has at last forced its way like a loving genius into the cells of human beings who had sunk to a condition lower than the brutes, and removed from most of them those unhappy conditions which a harder and colder age had made a necessity.

For any success which has attended the labors in this hospital during the year past, great credit is due to Joseph Draper, M. D., Assistant-Physician, and D. W. Bemis, Esq., Steward and Treasurer, who have performed all their duties, and executed all plans faithfully and scrupulously.

Alfred E. Walker, M. D., who acted as Assistant-Physician during a part of the year, leaves to engage in other duties, with the kind wishes of all who came in contact with him.

The Supervisors, Marshall S. Greene, Miss Evans, and Miss Butter , have done much to promote the welfare of the patients by the kindness and faithfulness in which they performed all their duties. The attendants generally are to be commended for their thorough devotion to the best interests of those committed to their care.

Our thanks are due to Miss Dix for the kind interest she has manifested in the welfare of the institution.

I desire to express my sense of obligation to the many friends who have contributed to the welfare of our patients by their frequent concerts in sacred music.

We are also under obligations to many friends for especial favors, among whom may be mentioned Dr. R. W. Hooper, William Knowlton, Esq., Professor Bushee, Professor Harrington, Mr. Brainard, and others.

To the publishers and proprietors of newspapers and periodicals in the city and throughout the Commonwealth, who have sent to us their daily, weekly and monthly issues, we are greatly indebted.

To you, gentlemen, for the personal kindness, the cordial support, and the sympathy enjoyed at all times from each individual member of your board, permit me to renew the expression of my grateful sense of obligation.

With renewed vigor we commence the labors of the new year, trusting that we may be able to devote ourselves wholly and entirely to the development of the highest and best possibilities of our calling.

MERRICK BEMIS.

APPENDIX.

FORMS CONCERNING ADMISSION TO THE HOSPITAL.

P E T I T I O N .

[The applicant must answer in writing the printed interrogations accompanying this blank.]

To the Honorable the Judge of the Probate Court, in and for the County of :

that _____ of _____ on oath complains
of _____, in said county
_____, is an insane person, and a proper subject for the treatment
and custody of the Worcester Lunatic Hospital.

Wherefore, h _____ prays that said
may be committed to the said Worcester Lunatic Hospital according to law.

_____, ss.

A. D. 186 .

Then the above named _____
the above complaint, by h _____ subscribed, is true.

made oath that

Before me,

_____, *Justice of the Peace.*

I, the subscriber, one of the selectmen of _____
where said _____ resides, hereby acknowledge
that notice has been given to me of the intention to present the foregoing
complaint and application.

A. D. 186 .

To the Honorable the Judge of the Probate Court, in and for the County of :

The subscriber, having made application to your Honor for the commitment
of _____ to the Worcester Lunatic Hospital, as a lunatic,
now presents the following statement, in answer to interrogatories:—

What is the age of the lunatic? Ans.

Birthplace? Ans.

Civil condition of lunatic? Ans.

Occupation? Ans.

Supposed cause of disease? Ans.

Duration? Ans.

Character—whether mild, violent or dangerous? Ans.

Homicidal or suicidal? Ans.

Paralytic or epileptic? Ans.

Previous existence of insanity in the lunatic? Ans.

Previous or present insanity in any of the family? Ans.

Habits in regard to temperance? Ans.

Whether he has been in any lunatic hospital; if so, what one, when, and how long? Ans.

(If a woman) Has she ever borne any children? Ans.

(If a woman.) How long since the birth of her last child? Ans.

Name and post-office address of some of the nearest relatives or friends? Ans.

What facts show whether h has or has not a settlement, and where, if anywhere, in this State? Ans.

[For the law relating to settlement, see Gen. Stat., chap. 69.]

, *Applicant.*

PHYSICIANS' CERTIFICATE.

The subscribers, respectable physicians of _____ in the county of _____, having made due inquiry and personal examination of _____ named in the foregoing application, within one week prior to the date hereof, certify that the said _____ is insane, and a proper subject for the treatment and custody of the Worcester Lunatic Hospital.

A. D. 186 .

, ss.

A. D. 186 .

Then the above named _____ made oath that the above certificate is true.

, *Justice of the Peace.*

Commonwealth of Massachusetts.

, ss. At _____, in said county, on the day of _____, A. D. 186 .

On the application of _____ for the commitment of _____ in said county, to the Worcester Lunatic Hospital, _____; notice in writing having been given by said applicant to one of the selectmen of _____ where said _____ resides, of h intention to make said application, and said _____ having been duly notified of the time and place appointed for hearing, it appears, upon a full hearing, that said _____ is an insane person, and a proper subject for the treatment and custody of the Worcester Lunatic Hospital.

Wherefore it is ordered that said _____ be committed to the said Worcester Lunatic Hospital.

, *Judge of Probate Court.*

FORM OF OVERSEERS' BOND.

Worcester Lunatic Hospital.

Whereas, _____ of _____, in the county of _____, has been admitted a boarder in the Worcester Lunatic Hospital, _____, a majority of the Overseers of the Poor of the town of _____, in the county of _____, in behalf of the inhabitants of said town, do hereby promise _____ Treasurer of said Hospital, to pay him, or his successor in said office, the rate of board which may, from time to time, be determined by the Trustees of said hospital, for said patient, so long as h shall continue a boarder in said hospital, with such extra charges as may be occasioned by h requiring more than ordinary care and attention, to provide for h suitable clothing, and to pay for all such necessary articles of clothing as shall be procured for h by the Steward of the hospital, and to remove h from said hospital whenever the room occupied by h shall be required for a class of patients having preference by law, or in the opinion of the Superintendent, to be received into said hospital: Also to pay not exceeding fifty dollars for all damages h may do to the furniture and other property of said hospital, and for reasonable charges in case of elopement, and funeral charges in case of death. Payment to be made quarterly, and at the time of removal, with interest on each bill from and after the time it becomes due.

Witness our hands this

day of

Attest.
