SUSSEX COUNTY LUNATIC ASYLUM HAYWARDS HEATH.

TWENTY-SIXTH ANNUAL REPORT OF THE COMMITTEE OF VISITORS.

To Her Majesty's Justices of the Peace for the County of Sussex, assembled in Quarter Sessions held at Lewes, in and for the Eastern Division of the said County of Sussex, on Monday, the 5th day of January, 1885, and at Petworth, in and for the Western Division of the said County of Sussex, on Thursday, the 8th day of January, 1885.

THE COMMITTEE OF VISITORS of the Sussex County Lunatic Asylum, appointed at the Epiphany Sessions, 1884, report—

That the County Asylum at Haywards Heath is in a highly satisfactory condition as regards the order, efficiency, and good management which prevail in every branch of the institution.

The Committee refer the Court for details to the annexed Report of the Medical Superintendent, and to the Statistical Tables appended thereto. The Number of Patients in the Asylum at the date of this Report is :--

Males	•	•	•	360
Females	•	•	•	481
		Total		841

The Admissions	during	the	past	year	were		225
The Discharges							136
The Deaths							82

On comparing these numbers with those of the corresponding period of last year, it appears-

1st. That there are at this time 9 more Patients in the Asylum.

2nd. That the Admissions have been 6 less.

3rd. That the Discharges have been 22 less.

4th. That there have been 5 more Deaths.

In these facts, therefore, viz., a diminution in the admissions and a slight increase in the deaths, an explanation is found of the nearly stationary condition of the numbers in the Asylum, which can only be of a temporary character.

The number of vacant beds in the Asylum at the date of this Report is 47 in the main building, 20 in the Sanatorium.

There are besides 22 beds now occupied by Private or Out-County Patients which are available for County Patients after due notice.

Your Committee are happy to report that these figures warrant, for the present, the postponement of the grave question of the provision of a second Asylum for the County of Sussex. It must, however, be borne in mind that a sudden increase of patients, causing an undue pressure upon the vacant beds in the Asylum, may at any time occur, and make this question an urgent one for the consideration of the Courts of Quarter Sessions.

Your Committee have used every exertion, with the constant assistance of Dr. Williams, to put off, as long as possible, the necessity of providing a second Asylum, which has already arisen in many other counties, and which has proved so heavy a burden to the ratepayers.

The chief incident in the Asylum, during the past year, has been the carrying out of certain important alterations and improvements in the main drainage system of the Asylum, which had been sanctioned by the Courts of Quarter Sessions.

The building of seven new blocks required for the closets was successfully completed by the contractor, Mr. Simeon Norman, at a cost of £2,895, on the 13th of September.

But the alterations in the drainage, the extent of which could not be ascertained till the drains were taken up, have been attended with much difficulty and expense.

It has been found no easy matter to apply the modern ideas of sanitation to a course of drainage originally defective in construction, and wholly insufficient for the present requirements of the Asylum.

These difficulties have, however, been successfully overcome by the ready resource and the unremitting attention of Dr. Williams. The engineering and necessary alterations in the drainage have involved a further expenditure of $\pounds 1,234$.

The total cost, however, has been defrayed out of funds which have accrued from the maintenance charges of Private and Out-County Patients, which are available under 25 and 26 Vic., c. III., sect. vi., for alterations and improvements in the Asylum.

The Farm has yielded this year a favourable result.

The only change of importance in the staff has been the appointment of the Rev. F. F. J. Greenfield as chaplain, in the place of the Rev. T. E. Crallan, to whom the Court, on his resignation, caused by serious illness, awarded a pension of $\pounds 166 \ 13s. 4d.$, in consideration of his valuable services for the space of 17 years.

The officers of the staff have, during the past year, given great satisfaction to the Committee.

> JAMES H. SCLATER, Chairman.

HAYWARDS HEATH, 20th December, 1884.

S. A. MORTLOCK, Clerk of the Asylum.

THE

MEDICAL SUPERINTENDENT'S

TWENTY-SIXTH ANNUAL REPORT.

THE Medical Superintendent has the honour to submit Twenty-sixth Annual Report. the Twenty-sixth Annual Report to the Committee of Visitors. On the 31st December, 1883, the Numbers in the Numbers on the 31st Dec., 1883. Asylum were-Male, 356; Female, 478; Total, 834. The Admissions during the year have been-Male, Admissions. 115; Female, 114; Total, 229. The Discharges during the year have been-Male, 64; Discharges. Female, 81; Total, 145. The Deaths during the same period have been-Male, Deaths. 52; Female, 34; Total, 86. The Mean Population resident during the year has Mean Annual Population. been-Male, 361; Female, 483; Mean Average, 844. The Numbers in the Asylum this day (31st December, Numbers this day, ^{31st Dec.}, 1884) are—Male, 355; Female, 477; Total, 832. The several Numerical Results are summed up in the Numerical Results of the year. first Table in the Appendix to this Report.

The Numerical Results of the year 1884 yield the following percentages :---

(a) The Discharges (including the cases relieved) Annual percentage for 1884. are 58.9 per cent. on the Admissions of the year. Excluding those cases relieved, the percentage of Recoveries on the Admissions stands at—Male, 38.1; Female, 45.7; Average, 41.9. On the average number resident it is—Male, 11.6; Female, 10.1; Average, 10.7.

(b) The Mortality on the total number under Mortality. treatment is—Male, 11.0; Female, 5.7; Average, 8.0.

The Admissions are 11 less than last year, which Admissions. was an exceptionally heavy year, but only five were Private Patients, as it was not found possible to admit more of that class owing to the crowded state of the Asylum. Of the character of the Admissions there is but little to be said, except that they were of the usual unfavourable class, and that of the curable cases there was a very marked preponderance of Acute Melancholia, with refusal of food, over Acute Mania.

The Discharges are much less numerous than last Discharges. year, though the absolute Recoveries are only four less.

They may be classed as follows :--

Recovered			 	91
Transferred to V or more or 1			nless 	10
Handed over to as chronic,			tives 	32
Transferred to c	other A	Asylums	 	12
To	otal		 	145

Deaths.

It is with great regret that I have to report that J. H. committed suicide by hanging himself in the W.C. with a towel on June 25th.

Suicide.

Inquest.

This is the first suicide that has occurred since 1876, although hundreds of suicidal cases, many requiring the most careful watching, have been admitted since then. It was one of those cases against which it seems difficult, if not impossible, to guard, as the patient, who was very feeble and infirm, was not supposed to be actively suicidal, and the means he adopted would not have sufficed to effect his purpose had not his vital powers been at a very low ebb. A Coroner's Inquest was held on June 27th, and the following verdict returned:—" That J. H., whilst insane, did kill and murder himself by hanging. That the attention of the Lunacy Commissioners be drawn by the Coroner to the circumstances of the case."

This is the only death calling for special notice, as it will be seen by reference to Table V. that all the others are from ordinary causes. The percentage is a fraction higher than last year, but is still a trifle below the average. Permission was obtained to perform *post-mortem* examinations on 48 of the deaths, which is a considerable improvement on former years, though it is still most difficult to persuade the relatives how greatly it is for the benefit of the patients that these examinations should be made. The Numbers in the Asylum are two less than at the Population. end of last year, and classing them in the usual way, are chargeable as follows :—

		м.	F.	т.
To Contributing Unions i Sussex	in 	322	417	739
To Non-Contributin	ng	544	41/	739
Boroughs in Sussex .		23	45	68
Private Patients		9	14	23
Out-County Patients .		I	I	2
		355	477	832

Comparing these numbers with the corresponding ones of last year, the result is as follows :---

The Patients from Contributing Unions have increased by seven; from Non-Contributing Boroughs have diminished by seven; from Private sources have diminished by three; and from Out-Counties have diminished by six.

The Number of Beds remains as before, viz. :-For Available Males, 380; for Females, 500; in the Sanatorium, 20; therefore, the available vacant space is now-for Males, 25; for Females, 23, which might be partially increased by discharging the Out-County cases, and such of the Private Patients (very few) as could afford to pay the increased rate in a Private Asylum.

The nine males returned as Private Patients include Criminal four Criminals, as owing to the "Criminal Lunatics' Act, 1884," they are in future to be classed as Private Patients, and their maintenance is to be defrayed by the Prison Commissioners. in Sussex.

Pauper Lunacy As regards the Classification of all the Pauper Lunatics of the County, the Table at page II gives the usual interesting information, and reveals the fact that there is an increase of 37 in the total number of Lunatics chargeable to Unions in Sussex, which is the heaviest increase of any year for the last 15 years. The parish of Brighton is accountable for the large proportion of 24 out of this number. There are 8 more Lunatics in Asylums, 16 more in Workhouses, and 13 more boarded out, thus accounting for the increase of 37.

New Sanitary Arrangements.

The plans for the new Sanitary arrangements detailed in the last report have been carried out during the year, and the new W. C. blocks are now in use, and, so far, have answered their purpose admirably, there being a complete absence of smell, and perfect ventilation. It will be remembered that the plans included an examination and renovation of the Drainage. This has proved to be a much more serious undertaking than was anticipated, as may be imagined when it is stated that it has involved an expenditure three times more than the original estimate. It has been necessary to take up all the old main drains-many of which passed under the main building, and were found to run into numerous catch-pits, situated under the Wards, Kitchens, Laundry, &c .- and to replace them with new ones, placed, as far as possible, outside the building, and to do away with the catch-pits altogether.

Now, all waste waters, and sewage, run direct from their source straight on to the Sewage Farm, without a single catch-pit or intercepting tank. All the pipes are in straight lengths, without any bends, and at each angle there is an inspection hole, every such hole being ventilated. The Medical Superintendent confidently believes that the Sanitary arrangements can now compare favourably with those of any similar establishment, and that the work has been undertaken and carried to so successful a termination is a great source of congratulation, and marks an era in the history of the Asylum. The necessity for strange workmen being employed in all parts of the Asylum, and working in the midst of the patients, both female and male, was necessarily a source of the greatest risk, and involved serious additional trouble and responsibility on the staff. It is a matter for much thankfulness that no *contretemps* of any sort occurred.

The changes in the Staff have been unusually Changes in the numerous, and have included the loss of three of the chief officials, viz.: the Chaplain, the Senior Assistant Medical Officer, and the Housekeeper.

The circumstances attending the Housekeeper's Housekeeper. retirement were detailed in the last Annual Report. She finally left the Asylum on February 1st. Mrs. Elizabeth Woodhouse, the Assistant Female Officer, was promoted to her post, and Miss Mary Heading, the Charge Nurse in Female Ward 8, was appointed Assistant Female Officer. So far, these changes have worked satisfactorily, and the new officers have been diligent in the performance of their duties.

The Chaplain, the Rev. T. E. Crallan, began to show Chaplain. signs of failing health early in the year, and acting under the medical advice of your Medical Superintendent, fortified by that of Dr. Lander Brunton, F.R.S., who was called in consultation, he applied to the Committee for three months' leave of absence, in the hope that relief from work and worry might restore his health. This hope, unfortunately, was not realised, and on his return he was compelled to resign, and he finally ceased to be officially connected with the Asylum on November 30th, retiring with a pension of £166 13s. 4d., being two-thirds of his salary and allowances. He had acted as Chaplain for exactly 17 years, and was 59 years of age. His retirement is a very great loss to the Asylum, and he will be much missed, but his old colleagues are unanimous in hoping that complete rest will restore his health to him, and that he will live long to enjoy his retirement. He has been succeeded by the Rev. F. F. J. Greenfield, who commenced his duties on December 1st, and has already proved himself an agreeable colleague and a fit person for the position.

Although the Senior Assistant Medical Officer, Dr. Assistant Medical Officer. T. B. Worthington, has not yet left the Asylum, he leaves as early in the New Year as arrangements can be made for the performance of his duties, having been appointed Medical Superintendent of the Hants County Lunatic Asylum. He has been connected with this Asylum for nearly eight years, and during that long period has worked with perfect accord with the Medical Superintendent, and has always rendered him ready and valuable aid in the administration of the establishment. Although, therefore, the Medical Superintendent cannot but fail to miss him greatly, he cannot but rejoice, for his sake, at the very honourable promotion that has come to him, and he wishes him a happy and prosperous career in his new sphere of action.

The changes amongst the Nurses and Attendants have not been so numerous as last year, but are decidedly greater than they used to be. It is difficult to assign any cause for this, as their position, emoluments, indulgences, &c., have been improved rather than otherwise. It is possible the accumulation of troublesome cases, rendering the work correspondingly more arduous, may have something to do with it, though it is more probably due to the love of change now pervading all classes, and to the ease with which attendants can now find employment, owing to the great increase in the number of Asylums. An attempt is being made to counterbalance this, by never engaging, if possible, a nurse from another Asylum, but by having two or three probationers, taken from the ordinary domestic servant class, always in training, ready to promote to a permanent post as occasion may arise. Altogether, seven Nurses and six Attendants, out of a total of 63, have left during the year, but they were all of the under class. The causes for their leaving were as follow :-- One died, three resigned owing to ill-health, three were requested to resign as being unsuitable, three resigned to marry, one to "attend a sick mother," and two because "they wanted

a change."

Two of the Commissioners in Lunacy visited the Visit of Commissioners in Asylum on May 30th and 31st. They went all over Lunacy. the establishment, and spoke individually to every patient in the Asylum. Their report is published, as usual, and will be found at page 26. The most impor-Fire-Escapes. tant recommendation in it had reference to the building of an outside iron staircase at the end of the Males' three-storey building, to be used in case of fire. This question was under consideration at the time, and only awaited the completion of more urgent work to be taken in hand. An external iron staircase has since been erected, and is available for use if required in any sudden emergency; and the stone staircase leading to the second storey floor has been raised to the third storey, thus completing the requirements of the Commissioners. Every section of the building has now two stone or iron staircases, one at each end, so that should one of them unfortunately become blocked or destroyed by a fire, the other could be used for the escape of the patients.

A Fire-Escape has also been added, during the year, to our other means of dealing with fire, and buckets filled with water are left in every Scullery and Bath Room, the Laundry, Stores, Kitchen, &c., &c., every night.

Maintenance Rate. The Maintenance Rate of last year, 9s. $3\frac{7}{8}$ d., was stated at the time to be the lowest since the Asylum was opened. This year it has been still lower, namely, 9s. $2\frac{3}{8}$ d.

Conclusion.

In acknowledging the services of the Staff of Officers during the past year, the Medical Superintendent has, as hitherto, no words but those of praise to give, and where all have worked so well for the common good it would be invidious to particularise.

S. W. D. WILLIAMS, M.D.,

Medical Superintendent.

HAYWARDS HEATH,

December 31st, 1884.

THE CHAPLAIN'S TWENTY-SIXTH

ANNUAL REPORT.

THE Chaplain, in submitting this, his first Report to Twenty-sixth the Committee of Visitors, takes the opportunity of sincerely thanking them for his appointment. He commenced his duties on December 1st, and has been ever since constantly occupied in their performance. So far as his ministerial duties are concerned, the short time that he has been here has not been distinguished by any incidents of an unusual character.

The well-arranged plan of daily operations which Chapel and has been carried on in the time past has not been Services. departed from. The Sunday Services and Daily Prayers have been regularly performed and well attended. Quiet decorum of behaviour and devotional attention have always characterised them. On Sundays the Service in the Chapel, with a Sermon, has been held at 3 p.m.; and at 4.15 p.m. a short Service has also been held in the Female Infirmary. Daily Prayers are said in both Dining Halls at 8.15 a.m.

There is a Choir Practice held in the Chapel on Thursdays, at 5 p.m.

Holy Communion has been administered in accordance with the custom of previous years, from time to time. Schools.

The Schools, held twice a week in the Dining Halls, for both Males and Females, have been regularly continued; and it seems to the Chaplain that the endeavour to impart instruction, and agreeable mental exercise, has been duly appreciated, and has been followed with beneficial results.

Library.

The Library for the Attendants and the books in the several Wards seem to be appreciated as a great boon.

Visits.

The Chaplain has visited the Wards, Workshops, and Infirmaries at the usual fixed hours. The Patients have always accorded him a cheerful welcome, and have expressed much delight at his frequent appearances amongst them.

Fifty-nine Burials have taken place during the past year, but there have been 86 deaths.

Conclusion.

Burials and Deaths.

The Chaplain feels much indebted to all the Staff for their kind assistance and support; and before closing his Report, he wishes to assure the Committee of Visitors of his earnest desire, in accordance with the established rules of the Institution, to promote, by every means in his power, its welfare and success.

> (Signed) F. F. J. GREENFIELD, Chaplain.

December 31st, 1884.

METEOROLOGICAL REPORT.

ALTHOUGH the Rainfall of the year just past was not so much below the average for this place as it has occasionally been, still, it was so far deficient as to cause very considerable inconvenience to the inhabitants of the locality. True, the deep well which supplies the Asylum has not failed, but most of the shallow wells in the neighbourhood have been dry. Mr. Lenton, who kindly kept the Meteorological Records for me during my absence, on account of ill-health, tells me that there was much distress, owing to the severe heat in the summer and the deficiency of water; and the same complaint has been heard from all parts of the country. Wells that have not been dry for 60 years and more have failed this autumn, and now the Rainfall for the past three months has been unusually small. So we begin the new year with a short supply. Should a deficiency of Rainfall occur for several years in succession, it is quite possible that the deep wells may be affected, with most disastrous results; and a state of things may possibly arise which few of us have contemplated, though it is not at all unlikely to occur.

The Total Rainfall here for the year 1884 was 23.82 inches, being nearly 6.0 inches below the average for the previous 16 years. The number of wet days was 163, being nearly 20 days less than the average. The result has been the great scarcity of water mentioned above. Unless there is an abundant Rainfall in the first three months of the coming year there will be still more distress and disease in the country. We have no idea in this country what a water famine is. It is on record, however, that in the beginning of the last century there was a deficient Rainfall in England for a period of about 30 years, but as the land was not extensively drained, and there were no large cities, the drought was little felt. Such a period of deficiency of Rainfall now would mean stoppage of manufactures, ruin to trade, pestilence, and a frightful death-rate.

We know no reason why there was a short supply of rain then, and no reason why it should not occur again at any time.

The driest month in the year was March, in which the Rainfall amounted to only 0.41 inches; the wettest month was December, in which the Rainfall was 3.85 inches.

The greatest Rainfall in twenty-four hours was 1.60 inches, occurring on September 3rd.

The greatest heat in the Sun was recorded on July 3rd, viz: 162.8; and the greatest cold on the grass on November 24th, when the temperature went down to 19.6.

The usual Table is appended.

THOMAS E. CRALLAN.

REPORT OF THE

VISITING COMMISSIONERS IN LUNACY.

SUSSEX COUNTY ASYLUM,

HAYWARDS HEATH,

May 31st, 1884.

WE are glad to be able to state, at the commencement of our Report, that this Asylum continues to deserve high praise for the condition in which it is maintained, and the management reflects much credit upon Dr. Williams, whose efforts are well seconded by the Assistant Medical Officers, and the rest of the staff. During the course of our inspection yesterday and this day we have seen all the patients in residence, including the 7 idiot boys who are boarded out in adjacent cottages. There are 4 patients of each sex who were absent on trial, but we have given to all the rest, 365 men and 484 women, opportunity of addressing us and making known their grievances. No complaint worthy of notice was brought before us, if we except the one so frequently made-alleged undue detention; and to all patients speaking to us on this score, we said that they must urge their grievance before the Committee of Visitors, who alone have the power of discharge. The changes which have occurred since the last visit may be summarized thus :--

A 1 1	M.	F.	Total.
Admitted	114	133	247
Discharged Recovered	55	49	84
,, Relieved or Not Improved	22	46	68
Died	43	28	71
Present Number on Books	369	489	858

There are now on the books of the Asylum 14 more men and 10 more women than were here at the last visit, nearly a year ago. The Private Patients under care here are 21, and there are also 8 Out-County Patients. The total number of beds available in the Asylum is 880, so that there is no immediate fear of over-crowding here, but some of the Private Patients, if discharged, would be returned here, as Dr. Williams thinks, upon the Pauper List. Sixty-two of the patients discharged as "relieved" or "not improved" were sent to Workhouses or to the care of friends, and 50 of these have been able to remain out of the Asylum. The causes of the 71 deaths which have taken place call for no remark: none of them were due to other than diseases ordinary in Asylums, and no fatal casualty has occurred. No inquest has been held by the Coroner, and post-mortem examinations verified the assigned cause in 36 instances. This number is low, being barely over one-half the cases of death, but we are told by Dr. Williams that his wish is to make such examinations in every instance, and that he does not do so is due solely to permission being refused by the relatives of the deceased patients. The building of seven new blocks for water-closets, which is now in progress, of necessity made some confusion in various places. We hear the contract time for the completion of these buildings expires at the end of next month, but we have great doubt whether the work can

be finished by that date. Despite the progress of these works the wards were bright, cheerful, and in good order, the dormitories clean, and the bedding in a state reflecting the greatest credit upon the attendants. The dress of the patients was neat and good, and we may add that the behaviour of the majority was most orderly. No patient was aggressive, and we only observed one black eye amongst the whole of the patients. Although we are enabled to state the satisfactory demeanour of the patients at the time of our visit, we do not consider that the staff of attendants in any of the wards is too strong, and we think that an addition is required in both Male and Female refractory wards. Including laundry and kitchen servants having charge of patients, the attendants are 33 men and 39 women. We regret to find changes amongst the attendants, particularly on the Female side, are numerous: 15* women have not been here a year yet, and out of the whole number of women but 10 have had any long experience in Asylum service. We are unable to learn the reason of these constant changes, but some cause must exist which we hope will be found, and a remedy applied. No patient was seen by us either in restraint or seclusion during our inspection. The former mode of treatment has been employed on 3 of each sex on 17 and 12 occasions respectively, and for a total of 50 and 15 hours (the means used being the "wet sheet pack.") The employment of seclusion has been confined to the Male side exclusively, and was found necessary in the case of 3 men once each, and for 32 hours in all. Nine men and 10 women were seen by us in bed, and there were registered

* This is a mistake : it should have been 11. The other 4 were kitchen servants. MEDICAL SUPERINTENDENT. last week under medical treatment the names of 38 men and 56 women. The amusements of the patients are frequent and of varied character. On the day before yesterday a large party went to a picnic, and many patients told us how much they had enjoyed the outing. We must also express our pleasure at the large supply of means of recreation furnished to the wards. There is a good library in every ward, well supplied with books of a secular character, and though the stock of Bibles and Prayer Books was ample, we noted with satisfaction that the rest of the works included no large proportion of sermons and dull theological treatises. The returns of employment furnished us show that on an average 285 men and 371 women work usefully in various ways, or, excluding ward cleaners only, nearly 200 men and 300 women are engaged in some way in the Asylum service. The Chapel services are attended by over 300 patients on an average. The building, however, can only accommodate 250 persons, so that every patient is not able to be present at both services on Sunday. The reading and writing classes continue to be well attended by the patients of both sexes. We have made enquiries as to the means adopted here for the extinction of fire, and find that the Fire Brigade arrangements remain as heretofore reported, and are considered sufficient to secure the safety of the building should an outbreak of fire be discovered at an early stage. We were also satisfied with the means of egress provided for the patients in most of the dormitories, but we suggested to Dr. Williams how the alternative staircase (for escape in case of fire), which can be used by persons of either sex, might be rendered safe and inaccessible to unauthorized persons or at improper times. One

dormitory on either side has at present but one exit. The dormitory on the Female side, third storey, 25 beds, could easily be rendered safe by the addition of a door and passage in one corner of the room, such means of exit being already provided in the storey below. The Artizans' Dormitory on the third storey contains 81 beds, and is reached by one staircase only. It is true that in the dormitory below two attendants are on duty throughout the night, as that room is occupied by the male epileptics, and one attendant is constantly on duty by night in the room below the Epileptic Dormitory. Still we think a second exit should be provided for these 81 working patients, and hope the Committee will give effect to our suggestion. We ought to add that these dormitories are above the workshops, in which places fires are more likely to be caused than in the wards of an Asylum. Except the buildings in progress and already noticed, the only important improvement which has taken place has been the re-laying and the rearranging of the whole of the drainage, and we may remark that nowhere was any smell of sewer gas, or other noxious odour, to be discovered in wards, closets, or dormitories. The rest of the alterations and improvements consist simply of the external painting, decorating, &c., always required in some parts of the Asylum. The cost of maintenance for the patients here is as follows :- For County Patients, 95.6d.; Out-County, 14s.; and Private, 16s. per week.

> W. E. FRERE, REGINALD SOUTHEY, in Lunacy.

APPENDIX,

CONTAINING THE REVISED TABLES OF THE MEDICO-PSYCHOLOGICAL ASSOCIATION, &c.

The Medical Superintendent desires to acknowledge the services rendered to him by the Clerk of the Asylum (Mr. S. A. Mortlock) in the compilation of these Tables.
