# Praxis Catholica 39-317

# OR, THE COUNTRYMAN'S Universal Remedy :

WHEREIN

Is plainly and briefly laid down the Nature, Matter, Manner, Place and Cure of moft *DISEASES*, Incident to the Body of Man;

Not hitherto discovered.

Whereby any one of an ordinary Capacity may apprehend the true Caufe of his Diftempers, wherein his Cure confifts, and the Means to effect it; together with Rules how to order Children in that most violent Difease of Vomiting and Loosenefs, & c.useful likewise for Seamen and Travellers.

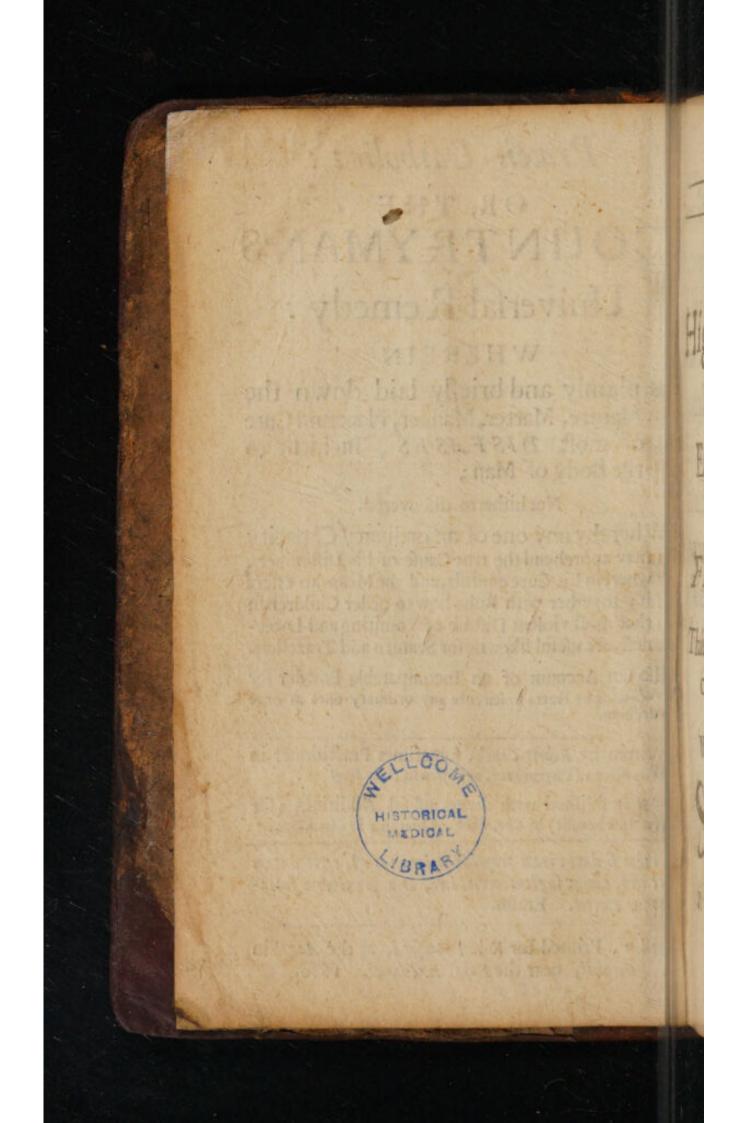

Alfo an Account of an Incomparable Powder for Wounds or Hurts which cure any ordinary ones at once dreffing.

Written by Robert Couch, fometimes Practitioner in Phylick and Chyrurgery, at Boston in New-England.

Now published with divers useful Additions (for publick benefit) by Chr. Pack, Operator in Chymistry.

Etenim si dare vitam proprius Dei munus est, certe datam tueri, jamq; fugientem retineri, Deo proximum fateamur oportet. Erasm.

London, Printed for Robert Harford, at the Angel in Cornhil, near the Royal Exchange. 1680.

TO HIS Highly Honoured AND MUCH 1900 Efteemed: FRIEND, COLONEL FRANCIS WILLIS,

This Little TRACT humbly offers and submits it self.

Worthy Sir : Now , ni?

# TO THE READER.

Reader,

朝

the

I Once having the Fortune to fee this Little Book of Mr. Couch's in the hand of a Gentleman living in Carolina (who did me the favour to lend it me to perufe) I was fo pleafed with his Sentiments of Difeafes, and manner of defcribing them, that I heartily wifhed it were here made Publick; but the Gentleman's fuddain departure out of England recalled the Book out of my hands before I A 4 could

could half transcribe it. Notwithstanding at length I attained my defire through the Affiftance of the Worthy Colonell Francis Willis (a Candid Loven and Promoter of true Medicine) who procured me this in Book in Manuscript from Vir= ginia ( where Mr. Couch died )) from whom also I had long before received the Knowledge of those most Excellent Remedies used by Mr. Couch for curing the Distempers treated of in this Book. But seeing that all Medicines now adays (of which there are too many) published as Arcanums, and bearing the: names of Universal Remedies, come so far short of their speciousi

ich

hel

he

cious pretences, they being indeed only Engines employed for gain, that I could not reafonably expect that those Worthy Medicaments should be beheld with any other Aspect, if the curing of Diseases should be here restrained to them only. Wherefore I have here added other Medicines for the cure of each Disease, & such as are good and effectual, in which I have candidly dealt with all perfons, and left every one to his liberty what to use. Moreover becaufe many Perfons (into whofe hands this Book may come ) who live remote in the Country, upon suddain occasion cannot have time enough to fend

ta

to me for the Powder and Pill, I have also directed the use of fuch as they may be ferved withal nearer home, by which I hope I may justly avoid the: cenfure of publishing this Book folely for my own advantage, Truly I abhor fuch private ends: which are not to be attained without hypocrifie, and the prejudices and ruines of Lives and Families : but so fast are most people tied to the Heathenss precepts of healing, and to the modes and fashions of times and perfons, that they know not truth when they meet her, but obstinately perfist in errour (for its age fake) and fo voluntarily come short of the benefits of God

tich the ook

ige, and and and and

in pr

Gods healing mercies, falling short of true knowledge, becaufe they think themfelves to be already sufficiently informed, according to the faying of Seneca, Multi ad virtutem perveni= re potuissent nisi se putassent perve= nisse : So that it may be as truly affirmed in relation as well to the body as the foul, that many perish through unbelief : neither will it be otherwise till the time cometh when the groans of the Creation to be delivered from this vanity shall cease, and the Elias of Arts shall appear to reftore all things.

This little Treatile may be uleful for every confiderate Reader, enabling him in divers Mala-

Maladies to get help at a cheaper and more certain rate than the usual. Neither will it be unwelcome to the Tyro's in the Helmontian Philosophy, and Medicine whom it may accommodate in many cases; others no out doubt at first fight will not freely receive it, because (to them) the Doctrine may be altogether novel, but if they will rightly 1.001 weigh the discourses of Diseases and compare them with the common precepts and notions of healing (out of defire to find out the truth ) they shall certainly apprehend them to be more agreeable to the frame and fimplicity of nature than the other. But as for fuch Subfcribers

P- scribers to Heathenism, as have taken a Lease of their Opinions for life, I do not question but to the them it will be difguftful, they will contend about the shell till they lose the Kernel; but be it as ne-1 it will, I design nothing but well 10 in it, what I have faid being only out of love to truth, not reflecting upon any man's person or interest. To conclude, I shall ftill make it my business to loofe the bonds of Animals, Vegitables and Minerals; endeavouring with Chimical Keys to unlock the choycest Cabinets of Nature, and whatever I from time to time (by the Divine Bounty) shall be able to take from thence, shall readily be com-

# To all Ingenious Students and Practitioners in Physick and Chyrurgery.

Courteous Brethren:

the

the

CR1:

en

ier,

W E read of Renowned Dr. Harvey our Countryman, who tells us he opened an Imposthume in a Gentleman's left side, where he beheld the Dyastole and Systole of the heart, and he touched it, and found it insensible, though it gives life unto every part.

'Tis an Argument he is of eminent and publick conducement; useful to derive good to others; who is least senfible of private Injuries offered himself. As for Injuries I have had a double share, and I have not only forgiven them, but forgotten them; I should gladly do them good that did me hurt.

There is a faying in Germany, poor Luther made many a Rich man; I could

could be contented to be poor, so I might be instrumental to enrich Artists in the Knowledge of Healing, whereby it might tend to the peoples greater good, and God's greater Glory.

The Laws of Charity oblige a manual that hath gone in a dangerous way to preadmonifb him that intends the fame. M So that I standle him

Satis Elequentiæ : Sapientiæ parum : abunde fabularum audivimus. bound to advise you that you confult not so much with that

learned Theory of the Schools; which is good for nothing but to dispute and contend.

Learned Dr. Charlton in the endi of his Epistle to his Translation of Helmont upon the Magnetick Cure of Wounds; I remember hath a saying to this effect: There are many things (saith he) that have been disputed in the Schools and Colledges, that have been received for truths among them; and they have seemed to have Reason for their Foundation, and Learning for their

### in Phyfick and Chyrurgery.

their Defence or Walls: but when they have come to be experienced, they have, fallen to the ground, and nothing of truth bath appeared in them &c. They can inform you nothing of truth, neither in the knowledge of a Disease; 1365 nor a good method in curing; nor a laudable Medicine to effect a Cure. Earth

Practice is the best part of Phylick, Observation the surest, and the Theory. of the Ancients, the uncertainest and emptiest. This we are taught by the example of many Eminent Phylicians both Chymical and Gal-\* Paracelfus, Hellenical; \* who could mont, Crollius. with their Arcanum's,

cure those Diseases that were termed opprobria Medicorum : And we see

a

\* Riverius, Foreftus, Johnstonus, and many more Modern Phyficians.

aut -

2.00

17

1

likewise those \* Renowned Phylicians that were trained up in the Do-Etrine of the Schooles; yet when they were to encounter any stubborn Disease, they would not trust to their Weapons, (ha-

ving

ving often been foiled with them) butt ran to their Arcanum's, as their Obfervations witness.

Not that I think all their Secretss were Chymical Preparations; for he have abundance of reason to believe that there are singular specifical virtues in Sensitive and Vegitive Simples, and off a far greater power than some of our large Compositions.

I am not so credulous, as to believe all to be true that the Chymists boast of, neither am I so diffident, as to think all the Schools have treated of to be false. \* Read them as our Mo-

dern Divines read the Schoolmen.

\* Comede datylos & projice foras duritiem.

Let not any one think

(qui forfan Latinè, aut Græcè intelligere poteft) that becaufe he is a good Scholar, he can prefently be a good Phyfician : if he doth, be fure he will be mistaken; Non quærit æger for he will find the Art of healing to confist in

## To all Ingenious Students

Practitioner; for if there be any thing of worth in him, and he acts like and Artift, let him expect to be undervalued by the ignorant, and let him not admire why it is so; for we find that it hath been the unhappiness of all Ages, and that Falshood hath been preferred before Truth, and persons of no worth or value, sime Truth, and persons of no worth or value, sime

Scientia non habet inimicum præter ignorantem.

have had the precedency and of perfons of true worthing the and esteem : as for the vulgar, whom Nature

buddl'd up in hast; that Act meerly by the prerogative of depraved Nature, speak against every thing but what is naught; whatsoever is of Worth and Art, be sure they will dislike; and exclaim against all Persons, but such as comply with their ignorance, whose Malice and Fury is like the Waves of the Sea, driven by the fury of enraged Boreas.

I have read of Cato that he was forty four times brought (by the vulgar fort of people) to the fudgment Seat, and

## in Phyfick and Chyrurgery,

the every time came off acquitted ; what a great happine [s it is, when a man what hat many malicious Enemies, to find man mpartial and upright fudges.

Every Country hath its Diana, as well as Ephefus: And he that will not acrifice with the people, shall be crucified y them; but he that doth keep a pure day and undefiled Conficience towards God, and acts like an honest and ingenious the Artist towards his Neighbour may exthe ract a Cordial from the World's poyion, and live above the reach of Envy. The most splendent Creature is sometime ime clouded, and the most vertuous and Lady suffers an Eclipse in her innocenter y by some malevolent Neighbour when his Strumpet goes unsuspected.

M It is not every Artiff's fortune to warrive at Corinth; but I could will very ingenious Artift could practice what he knows, and that he knew more, o practife better: so I desire to be unlerstood, when I say that Practife is he best part of Physick; that there music

#### To all Ingenious Students

must be first a knowledge of the Diseasi and likewise of the Remedy, and so the proportion the Remedy to the Disease

\* Care at fucceffibus opto, Quifquis ab eventu facta notanda putat.

and not to try practices on mens bodies; \* that the Poet curfed; but first you must know, bet fore you practise, am

Jo your practice will confirm your know ledge: So I conclude with this advice first, let God go before you, to counside and direct you unto the direct means let him go with you to crown it with good Success, and let him follow you, to take all the glory unto whom all glory a due.

Cæpta faveat Deus, ac vota nostri secundet.

So wisheth,

Robert Couch.

## TOMY Candid and Cordial COUNTRYMEN.

#### Friends and Countreymen :

S Ince Death and Difeafes (which are Diametrically opposite unto life) are entailed unto us through the Transgreffion of our first Parents, the Creator and fole Authour of life, forefeeing the weaknefs of our Natures, to withstand the strength of such mortal Enemies, created Medicine from the beginning but of the Earth, to correct the fury and tyranny of Difeases (whereof Death is the Daughter) whereby each should be at his good pleasure; and so governs it at his will, that he permits

permits and fuffers this man to dia and that to be fick by fecondary Cau fes, which happen as well directly irregularly,

And whereas the Nature of D feafes are various; fo he hath endland ed the Earth with various and fundmining Medicinal Vertues; and he haume likewife called and ordained fome administer and apply such fuitable in and fit means, as the nature of D) feases do require. But the great did whe ficulties by reason of the invisibility Rem of the Difease, and the great obscrime rity in the knowledge of Medicin have frustrated many in their expended Station. All Arts and Sciences (exalls cept Phylick) have grown to form pitch; but that hath rather gome backward, till within fome lat years, famous Helmont (to whom the Art it felf stands much obliged in and fome Renowned Phyficians a our Native Countrey, have begun the - caft off that black vail of deceit with which

#### Countrymen.

The which it was cloathed by the Theo-The rems of the Heathens.

Indeed the gate of healing hath remained thut from the Cradle of the World; and the Schooles of the Greeks, inftead of opening it thut it clofer, and made it more myfterious that than ever was intended by the firft one Creator.

The natures, caufes and places of Difeafes were not rightly underftood by them, whereby they failed in their Remedies ; they had fo much regard unto the effects, that they neglected the caufes, which pernicious and deftructive courfe is practifed ftill, by fuch who are wholly led by their Rules.

Wherefore the whole intent of this finall Tract is to undeceive you, that you be not deceived of your lives by fuch erroneous prefervers, and that you give not your money for what's not bread, nor buy a Snake inftead of an Eele. I know it is not Artift-

Artift-like to build fo great a Porch to fo finall a Fabrick : but if it tend to the Owners more conveniency, it: is to be difpenfed withall. Indulge me therefore Reader, to give thee: fome cautions; (it may be for thy Good) First, touching the Difease and Secondly, touching the Phyfician ... Inafmuch as we were poyfoned from the Tree of Knowledge; fo no other Tree could we fetch an Antidote from ; but the Tree of Life, which was for healing of the Nations : So Difeafes are only cured by fit and fuitable means; for thou mayft be kill'd by a bad means as well as reftored by a good. Wherefore be an earnest Suiter to Heaven, that thousand mayft have the right means from Earth, and a benediction with it, which will make it operate the better.

And as it must be a true and proper means that must cure thy Difease. To have a special care the Remedy come

#### Countrymen.

come not too late. How many have been robbed of their lives upon that fcore? Opportunity is the foul and perfection of Phyfick, you may lofe that opportunity to day, that the price of Polt eft occasio

the World cannot calva.

by the fore top left it be bald behind.

There are two great Obstacles which commonly make many difadvantages; the first is, from the personation of Friends; the second, from the flattery of Diseases.

First, when any one is taken fick, one Friend adviseth him to such a thing, another perswades another, and a third another; telling him if it does him no good it will do him no hurt: But there is no such Medinum will stand; for if it do not exalperate the Disease; yet it doth retard the Cure; and so by trying uncertain means, you loose the advanb tage

secondly, The Deceit and Flattery of the Difeafe; when Difeafes affault

\* Quamvis non nunquam morbi in corum principils abique periculo tibi videntur: vires & humores tamen fenfim dejicientur & corrumpentur ut poitca nulla falutis spes super fit, at morbus qui primo curabilis fuerat, malignitate neglecta incurabilis reddatur.

you very ftrongly in the \* beginning, they may have fuch Intervals and Refpites, that you apprehend youn felves better to day than you was yefterday, and that while the Difeafe doth im fenfibly undermine your lives, and then affaults with greaten fury than he did au firft.

Others are very mild and gentle in the beginning, yet they may be very malign: parvæ febres quandoque valde malignæ; whereby you do not fo much mistrust them, much less understand their danger.

And fometimes those that labour under sharp Diseases, the Symptoms have

#### Countrymen.

have been fo remifs and dark, that it hath been a very difficult thing for an able Phyfician to prefage either life or death, and when he hath paffed his Judgment, within few hours there hath been fuch a change, that he hath been fool'd in his Prognoflick.

In others again, Difeafes have layen fo hid and obfcure, that they have died before they were perceiwed to be fick, of which we have had many fad Examples, of fome that have died fuddenly, who have carried those Difeafes undifcovered about them, that wanted nothing but the word, immediately to run them to the heart.

Now I have fhewed you the Deceit and Flattery of Difeafes, which have couzened thousands of their lives; of whom you will do well to learn to beware, and act prudently, to prevent by mistrust, what you would not have come fuddenly and unexpected. b 2 And

And as I have told you the deceiption of Difeases, fo I shall tell you the deceit of Physicians; I mean such who have built more upon the sandy

\* As if it were for their sake God created Medicine, and Christians should be beholden to them for it. Foundation of the Pagans and Heathenss and Heathenss and Heathenss and then upon a fure and the rocky Foundation who have fudieed and more to get money.

than to cure their Difeases.

It hath pitied me many a time, the side that Old Saying too often verifier

Sæpe plus mali à Medico quam à Morbo. ed; viz. That man in times there is more danger from the Physics fician, than from the

Difeafe, fuch a Phyfician as practifeth by Old Authors. And that you may the better know them, and und derftand fome of their juggles, I shall recite fome of their Practifes.

First, when such a Deceiver is called ed unto a Patient, if his Difease should be grown to a great height which

#### Countrymen.

which hath made him dangeroufly will : ( which was the end God ordained Phyfick and Phyficians for, no relieve fuch diffreffed Natures) he a stands at a distance, fearing to come mnear (like a low fpirited fellow) left mhe receive fuch a kick from the Difease in his rotten reputation, as he may not eafily recover: but he renexploives rather to hazard the loss of a poor Patient, then venture the lofs of whis finall credit; wherefore he is refolved to look on, and fee which will inget the Victory: in the mean while the excuses his juggle, telling, the Diohr fease is not yet come to an height; and by fuch a time he hopes to find a Criss, and then he may fafely take fomething, in the interim adviseth an Ale-brew, or Herb-Caudle, many more fuch juggles they have to fend people to their Graves : Just as if your houfe were on fire, And one comes and counfels you to let it alone till it burn to the top of the Houle b 3

Houfe, and then is the furel quenching it, you take his counfell Now 'tis poffible that the Heaven may pour down fuch a fhower of rain as may extinguifh it; but whether they do or not, doth now this man well advife you, think you or as if an Enemy hath entered a Garrifon, it is not fafe to refift him. till he come to the heart of the Town: But good Souldiers will tell you otherwife, that what their Enemy gets they fhall get it by Inches, or.

the Moon's Motion, whereby there is, it may be, fome finall change a little while through her Motions; but they are not caufed by the Moon, but by Nature harmoning with

#### Countrymen.

with her Motion: But what of this? what is it to the taking away thy Disease? indeed it may help a little a bad Medicine, but a good Mediin cine will make a Laudable Crifis, ne let the Moon be where she will; in Itaying thus for the Moon, many have loft the Sun.

Now this Deceiver finding Nathe ture to have cast the Disease, runs in and congratulates her Victory with a dram of his Bottle; and instead of helping her up, many times keeps her the longer down : But if the Difease hath cast Nature, then he gives his Relation this Cordial : That all the men in the World could do no more, and that he did confult with forty Learned Authors, &c. all a But if this will not operate then he 古 gives them this \* O-1518 A Medicine to piate in a dram of caufe Rest or Sleep. 22 Aqua Calestis, viz. Line.

In vain had the Creatour created Medicines out of the Earth from the beginning, unlefs the natural terms and bounds of things might be prolonged by healing and Medicines: And likewife the Tree of Life had been in vain in Paradife ; if he that hath bounded the life of man had not together by the fame endeavour appointed all means requifite for the bounds of life : then , if I ufe no means, or not the right means, my bound

#### Countrymen..

bound is fet, which I fhall not pals over, according to that faying; woe is me that my Pilgrimage is prolonged; thy Youth fhall be renewed like the Eagle, &c.

There's a fecond fort of fuch Juglers, and they are altogether ignorant of any Knowledge, either from Ancients or Moderns; only know thow to let blood, give a Purge or OF Clyster; when any fuch is called to a Patient, he never stands to enquire into the Difease, but presently determines this to be done, and that to be taken upon pain of life, and if it is fucceed well, then he is a very skilful man; but if ill, then there was no other courfe to fave his life; and plead the former excufes. Thefe I do as much pity for their ignorance, as blame for their too rash confidence ; 'tis probable if they knew better they would act wifer.

There's another fort, much akin with the former, but carry things more

more modefily, and bring this fetch to excuse their ignorance; they tell the fick, they faw the fame Difeafe ap cured ( in some remarkable place: m and by fome eminent perfons, 'tis M like they tell them) and they have the means wherewithal it was eff fected, and feveral times fince have the tried it, &c. I shall fay by thefer in and the former, as Diogenes did when he faw fome Rodians gorgeoufly appres parel'd: Tush, faid he, that's not the thing but pride, and feeing fomee M poor Spartans stand by in their m thread bare Caps; faid, that's but another fort of pride. There are many other fuch Jugglers that thousand fands have been decoy'd by, which are palliated with heavenly excufes to blind your eyes; I shall speak but of one more, which is the greateft and most dangerous of all; and that is, in procrastinating and retarding Cures. They will undertake any thing, though they know nothing (a'

#### Countrymen.

(as to a Cure) yet in keeping them in hand to long by their delutions, in promifing this time, and that time, and tell them of Spring and Fall fo long, till the Patient is fallen : if any fuch Hocus be asked either by the Patient or fome other Friend, what he thinks of his Difease, or Ulcer; he tells them, there is no danger, and that by fuch a time he may be well, and when that fails, then puts it to another time, &c. Now if any ingenious Patient begins to fmell this Juggler, and apply himfelf to fome able and honeft Arat tift, to mend what he marr'd ; but whether it may be accomplished by Art, or not; This Quack-falver hath this fetch to excuse his deceitful ignorance, if the Patient be recovered, then faith this Impostor, why I knew and told him to, that there was no danger at all, and that he would be well, &c. but if it cannot be reftored by Art, then faith this deceiver, if

if he had continu'd with me, I could have cured him (I fhould not queftion it) long before this time and there was no danger in it, when he went: from me, &c. This is the Devil's Hocuft Pocuft, that he teaches fuch Artifts to perfwade people, the neareft way to Heaven, is by way of Hell; that: groß Impiety and grand Hypocrifie, that fuch Juglers are guilty of, they commonly lay on the fhoulders of the Innocent.

I am forry to fpeak it, that I have the feen too many fuch deluding fouls in this Country; I fhall forbear to fpeak any more left fome fhould think I fpeak in prejudice : I proteft the contrary, but wifh them really fuch, as they would have the World underftand them to be : I expect fuch as I have touched the guilty confcience of, to fnarle againft me; who will endeavour to corrupt your Judgment, and perfwade you into an ill opinion of this fmall Piece (for whofe

#### Countrymen.

whofe good it was defigned by the Author) raifing, it may be, curious and malitious Queftions amongst you, as the Rabbies and Doctors did amongst the Jews, viz. Can there any good thing come out of Nazareth? and that he eats and drinks with the Publicans; &c. But I tell fuch,'tis better be a Publican amongft the Pharifees, than a fudas amongst the Apoftles.

[1]

OR, THE

# COUNTRY-MAN'S Universal REMEDY.

T was the cuftom amongst the ancient Greeks, that if a fure Cure was found for any Difease, the party was bound to write it on a Table, and hang it up in the Temple of Diana t Epbesus; that every one labouring with hat Difease, might afterwards repair thiher, and receive their Remedy.

Soon after did they digeft the Art of Healing into a fatal Method, as a Directoy to the true knowledge of Curing; B whereby whereby a further enquiry into Medicinessa came to be neglected, and fo this falfee Doctrine of the Greeks spread it felf atmongft the Arabians, Romans, and them amongst the Christians, and is still in use amongst us to this day, to blind us from the knowledge of true and perfect Reme: dies for curing our Difeafes; whereby we fee many yearly fwept away from use through fome accultomed Difeafes, and well as new ones, and efpecially that an mongst Children, of a Griping, Vomitt ing and Scouring, which gives me gream caufe to miftruft, that either the true caufe of this is not understood as well as the reft, or a fit Remedy not yet found out

Nor is it Children alone, that this Fever, the Prince of Difeafes, doth app pear unto in those bloody manners, bun to fome of full Growth and Strength. If doth affault us in various Shapes and Haa bits. This Difeafe is a grand Enemy to man; for there is hardly a Diftemper bun is accompanied with a Fever, either going before, or following after it.

Wherefore I shall a little anatomize is unto you, and shew you its Rife, the place where it commonly abides, and what it feeds on, and so describe it as you may

## [3]

nay know it at a diftance, and not only his, but most of our Serpentine Enemies. I shall observe that method in treating of nem, as I do in curing of them; which is, p have respect unto that first which doth oft prefs; amonst which, I think that eracute Disease of Children is most urent, fo my method leads me to begin with child, whom I shall trace unto his old age, here I shall leave him to that great Phycian, whole Servant I am not worthy to

First it will be necessary that I give a reparative (to your understanding, in afolding the right use of two or three rincipal parts, whole proper ules have pt yet been discovered) before you enter pon the main Body seviz. commensators at

by every put.

no whole 6

is perioded in the Liver, and The Spleen. Liver: and Gaul.

From thefe three comes Life and Death, ealth and Difeafes, as they are disposed, ther well or ill. These are the Pillars at do support the Fabrick of the Microfm.

The two first do principally respect the B 2 prefervation

## [4]

prefervation of Health; the last is of : more Balfamical Nature, which doth an well prevent Diseases, as restore health when it is wanting.

Understand by a Ferment

A Specifical Virtue or Power which ever ry part is endued withal, that what foever

quando præva-Let ea est natura nt mutet sibique simile faciat id guod ad ipjam est victum.

istransferred through them Omnis facultas is transmuted into their fermental quality, as th Aliment in digesting in th Stomach is fow'r; then, when the Chyle paffeth through the Guts, Duodenum an Ileon, it is faltish, and bein

more elaborated in the Meferaick an Milky Veins, becometh more falt, which is a preparation for Sanguification, which is perfected in the Liver, and fo affimilated by every part.

The whole Body is feafoned and tinct red with the Ferments of those three prin

bre anomala.

cipal parts, viz. fharp from Whitmore de Fe- the Spleen, Salt from th Liver, and bitter from til To begin with Gaul.

the first.

## [5]

#### The Spleen.

This part hath been hardly cenfured by many to be the receptacle of the Faces of the Blood, the mother of black Choler, or Melancholy, the Sink and Fountain of many stubborn and rebellious Diseases, ind to be a Bowel of no great use; only o elaborate this more feculent Blood, ind give a fmall nourishment to some of he natural parts: likewife the efficient taufe of Madnefs and Dotage, &c. Some have not fluck to fay, that if ever nature nade any thing to hurt her felf, it was this, nd if she had found out some other way or difcharging of this Excrement, as fhe ath done the reft, fhe had eafed her felf of abundance of trouble, Gc. but I raher think the contrary, there is not any part within us, nature hath been fo liberl unto, as to this, nor hath bestowed

iuch special favour on : it is inriched with ten times, at east, as many Arteries as aby other part.

Vide Dr. Highmore de affectione Hypochon. fol. 132.

There is life peculiarly lue unto it more than fensitive; for it is B 3 extant

## [6]

Helmont. de Author. duum virut. extant long before quicken ing. It hath a double Fem ment; there is a Vital from the Arteries, and the digector flive faculty of the Stomaccure

which is made by an acid juice fent from it; and for that great concernment which is committed unto its charge, it is termes and the Prefident of the Stomach. I canned think that any excrementitious matter cannot refide, where it hath fo worthy a place for its Emundory, as the Stomach; the Arteries fetch from the Stomach of their pureft Chyle, and fanguifie it for their pleasant fure; and it may be by their too liberal and m traction, may debilitate their Fermer. that fo they may require an affiftance from the the main Body, whereby the Stomach man be neglected, with a due quantity of this juice; whence lack of appetite and crudi ties do arife, and fo this Ferment may be exorbitant in the Spleen; from whence comes bloody and black fpitting into the ftomach (which fome have judged black Choler) which is nothing but an expuri ging and renewing of nourifhable blood from the Spleen it felf; the Humour, Me lancholy and black Choler was never ye found in nature, nor indeed is there any fucl

## [7]

fuch thing extant: wherefore whatfoever is diffemper may arife from the Spleen, it is from a vitiated or debilitated Ferment : mot from a peccant matter, which doth offend only in quality, not in quantity.

Again, if the diftemper of the Spleen the be the caufe of Madnels, then in its right morder, there is a found and judicious unmederstanding due to the same place: acrecording to that Maxim of the Ancients, *Ejusdem partis atque potestatis sit functio satima, cujus est vitiata ac vicissim, i.e. There* the is a sound function of the same part and power, whereof there is a vicious one, and the on the contrary.

I could fpeak much in defence of the Dignity of this noble part, but at prefent thall conclude with this : the great Offices that proceed from it, and that rich and moble Retinue that attends it, fpeaks it no lefs than the pallace where the fenfitive foul keeps her Refidence.

#### Of the Liver.

I fliall but only hint at this becaufe I fhall fpeak more largely of it when I come to treat about Dropfies, and other Difeafes that are falfely fathered on it what a B 4 common

## [8]

common complaint is there about a hot: Liver, and a cold Stomach: when as II shall demonstrate, that the Liver is never: hotter than is necessary, nor the Stomach never colder : though it may feem to by imperfect or weak digestion.

And although Sanguification is not begun in it, yet it is the perfecter and rectifier of it : whereby the Blood is allimilated and conveyed into every part through the Veins. In a word, the Liver is the Administrator to all the natural parts in man.

#### Of the Gaul.

In the first Difease that I shall speak unto, I shall be enforced to anatomize thiss Bowel, only by the way take notice, that this Gall is the great Balsom of Nature, as well for preventing and destroying of Difeases, as the curing our Wounds.

Understand, that whatfoever is done by nature (in any thing of this kind) is performed by this great Balfom: nor hath this as well as the rest been free from the Calumniations of the ignorant, in making it guilty of causing feveral sharp Discafes, & c. But more of this in the next.

Of

Of Fevers.

[9]

I Shall speak a word in general, then come to particulars, all Fevers are of the same effence and name: and differ not so much in the matter as place.

#### Place.

The Place it acts in, is the Stomach mostly.

The Caufe is from the error and effranging of the Faculties; or from things undigefted and untranfmuted; or elfe from Excrements not being rightly fubdued, or feparated, and orderly evacuated.

Division : there are two forts, continual and intermitting.

From the first there are several Species, viz. some very malign; others accompanied with less Malignity: others with none at all.

Intermitting ones, are of three forts (Legitimate) Quotidian, Tertian and Quartan. Not

## [10]

Not to trouble you to treat of any contagious and peftilential Fevers : none hath yet been amongst us, God still keep them from us, and remedy them where they are...

I fhall therefore begin with malignant: Fevers, which are very rife in this Country, efpecially amongst Children.

A malignant Fever differs from a Synochus, or Burning, or any other Fever in this, that it draws its putrefaction immediately from its own matter: for indeed putrefaction is joyned with it.

A burning Fever, and other Fevers do not derive their putrefaction immediately from their matter, but gradually and cafually either from the peccancy of the matter, or debility of the Ferment where it refides, those are of a less malignity, and bound in a less quantity of the matter offending.

Fphemera, or an one days Fever is more from a difposition or inclination to a Difease; for that morbifick matter in the stomach is soon cast up by Vomit, or digested, I rather call it a Distemper than a Difease.

But more particularly.

A Ma-

## [11]

## A Malignant Fever in Children.

A S I have shewed that a Malignant Fever is from the present putrefaction of its own matter; so this

violent Difeafe in Children is of that nature, which is clearly demonstrated from the Symptoms in the first af-

570

0

24

Parvæ Febres quandoque valde malignæ, Hipp. Diagnost.

fault; that within forty eight hours putrefaction hath been nigh perfected, as is perceived by a coldness in the extreme parts, and cold sweats, &c.

#### Caufe,

It is from fome thing received which may contain fome vicious quality, or abounding in quantity; or from an ill difpofition of the digeftive Ferment; for it often happens, that when the feafon is most hot, then the digeftion is weakeft, and then crude Fruits, and things hard to digeft take advantage of the ftomach :

But above all, I look at Milk and Sugar

## [12]

to be the greatest cause; for Milk is the general Food of Children, and there is fuch a propensity in its own nature to curdle, that if it be not quickly digested, it obeyeth the acid Ferment of the place, which soon is coagulated, and a Curd made like new tough Cheese, which doth strongly result digestion, especially in a weak and tender stomach, and if it be not speedily vomited up, it soon begets a putrefactive Ferment, and then soon after those terrible Symptoms are produced, as Vomiting, Scouring, Griping,  $\mathcal{C}c$ .

Natura morboyum est medicus medicus naturæ minister. Now Nature, which is the Phylician to Difeafes, unites her force, and takes with her a quantity of this Gaul-balfom to rectifie this at the state of th

tis

in d

Malignity, and eradicate the Morbifick Matter; and whatfoever this Balfom doth incorporate with, it hinders its putrefaction (as Salt doth in Flefh or Fifh) and feafons it with its tafte, and colours it with its tincture, as a little Wormwood doth any thing it is commixt with, and a little Saffron doth Milk, & c. and what part of it is feparated for its putrefactive Body, nature endeavours to caft forth, and by reafon it ftill retains its acquired fharpnefs from

## [13]

from the putrefactive Ferment falling down upon the *Pylorus*, or lower mouth of the ftomach, ftirreth up thofe violent motions; and what part of it paffeth through the Inteftines, it abftergeth and fcoureth away that mucous or phlegmatick matter which nature hath lined the Guts withal; for atwofold end : firft, to hinder Obftructions, that the Chyle may have a more speedy and sippery passage: Secondly, to defend them from any sharp or corrosive quality that may be in the Chyle, which is transferred through them.

Which flimy matter is commonly feen to fcour from them in this Difeafe, and this being gone, this excrementitious matter doth eafily corrode by its fharpnefs, which is the caufe of those Tortures and Gripings.

And in regard that this peccant matter which is cast forth, is tinctured by this Balfom, it hath deceived many, who have taken it to be the Gaul it felf.

'Tis' true, there are Excrements in Children, from eating Milk, not perfectly digested, which are of this Tincture, but of no bitterish Taste, it is brownish in the stomach, yellow in the llion, and green in

#### [14]

in the blind Gut, yet they may not be fick.

And no marvel, that there is little or none of this Ballom found in its Receptacle or Bladder in dead Children; for if this be fpent, Death immediately follows, according to that Proverb :

When the Gaul is broken, the drowned Carcafe rifeth to the top of the Water, when it can no longer withstand putrefaction.

Those Sacrilegious Jews knew that this Gaul was a great Cordial for the preferving and continuing life; wherefore they gave our Saviour Vinegar and Gaul: Vinegar to excite the faculties of the stomach, for the Gauls quicker passage into the vital spirits to prolong his life, that they might the longer torment him under his pains before death.

But to ftay no longer here, it follows in the next place to treat about the great Heat and Cold which happens by Intervals, as well in most other Fevers as in this; and likewife of that inordinate Thirst.

Of Heat.

[13]

Though Heat and Fever are counted Synonyma's of one and the fame name, individual companions,  $C^{*}c$ . yet I Tay, this Heat is not of the Quiddity or Effence of the Difeafe, neither is it the caufe of any Difeafe, but is caufed by the Rirring up of that vital aiery fpirit, the directorefs of life; which fpirit

t is that makes the affault : now this fpirit being provoked by the Difeafe, allarms all the Faculties, Virtues and Powers both Vital and

Archæus Paracels. To evog-Mov. Hippoc.

Natural, which it doth unite unto it felf, and fo furioufly affault his mortal Enemy, as many Coals of Fire raked together, and plown up, make a great heat, fo doth this neat proceed from this inflamed Spirit.

#### EXAMPLE.

A Thorn or Splinter being got into the Finger or Hand, prefently a heat, pain and

#### [16]

山山

inth he is

10

gio den

Of th

anor

STREE

thin

and pulfation is felt, which this fpirit or Archaus ftirreth up, for the expelling of that extraneous Body: now this heat is not a product of the Thorn, but cafually from this fpirit, and occasionally only from the Thorn: therefore heat is a latter accident, and subsequent upon the effence of a Fever.

## Cold.

Cold is the Difeafes Colours, or Banner, under which it fights, but it is not either the Difeafe, nor Caufe, but a

Calorem & frigus non effe morbus ut neque borum caufas. Hipp. product and effect of the Difeafe, putrefaction brings in coldnefs, the Ferment of Putrefaction is fharp and cold: as we have an ocular Demonstration in Gan-

grenes and Mortifications, whilft it is but in *fieri* a Gangrene, what a hard task it is to revive it by the hottest and most penetrating Medicines we can get; nay, and

#### [17]

and fain to fcarrifie deeply too; left it should hinder their operation; or if it fouls a bone, no lefs than a Medicine that is hot in the highest degree can effect it, and when a Sphacelus, or Mortification is confirmed, without natures

Second comes in fpeedily to her refcue, and difmember it, it would foon run her to the heart; and did not pu-

A Chyrurgion, Chyrurg. natura minifter.

- trefaction work by a cold, a Body would be hotter after it was dead, than it was before; but we fee the contrary, when putrefaction grows ftronger, the Body grows colder : I could evidence by many demonstrations more, that the Heat is not of the effence, neither the caufe, nor ocs cafion of a Fever, and likewife, that Cold is meerly the effect of the Difease : but I think this fufficient.

#### Thirft.

This great Thirst in Fevers doth not proceed from Heat and drinefs, as in a true and natural Thirst; for this will not be allayed by drinking, as that will; but this Thirst is deceitful, and is produced by fome excrementitious matter, which adheres

#### [18]

adheres to that fensitive faculty, and de-

Nec sitis est extincta prius quam vita bibendo. ludes the Organ, as if a great drynefs had fuddenly come unto it, as I have obferved in a very malignant Fever, which the Army in Co

the

filo

ad

fin

10

Flanders was infected with, being always cold, and very thirsty; as likewise in the cold Fit of an Ague, *Soc.* and so this is evident, that heat in Fevers is not the cause of that inordinate Thirst; besides

Contraria contrariis curantur. I have extinguished this Thirst by those things which have been virtually hot; which, if heat had been

the caufe, would rather have exafpe-.

Thus you have the matter, manner, and! Concomitants of this Difeafe.

The Schools have observed fome Heads,, from whence they have derived many Species of Fevers, (which I shall not insift on,, because they depend upon one and the fame way and means of Cure) without mention of an Hectick, or intermitting Fever, which differ only in the place they refide, which I shall speak to in their proper places.

It is my chief delign to do good unto my Countrymen,

## [ 29]

Countrymen, who (I know) would rather have fomething to ease them, and be rid of their Difeafes, than to hear curious and learned Discourses, or quaint Distinctions; and in pleasing them, I care not whom I difpleafe.

As I have put the knowledge of the caufe into your Heads, fo I shall put a remedy into your Hands.

Cure. .....

The Ficht VI

You may clearly fee what first is to be done, and wherein the Cure doth confift, which is, in removing the caufe or matter offending; the neglect whereof hath fuffered fuch an infinite Slaughter, which gives me reason to think, that either the caufe is not known, or a fit Remedy not yet found; for unless there be a proportion between the Remedy and the Difeafe, tt will do but little good.

Difeases which come fuddenly, if they are rightly understood, they Ture foon gone, though they Extrema non

nay be extreme fharp whilft permanent. they continue.

I know it is the practice here to look more unto the Effect than the Caufe, in correcting C 2

### [20]

correcting the Symptoms than the matter:

Si ea tollantur quæ conveniunt æger melius fe habet & facile fert: Sublata caufa tolletur effectus. whereof they are produced; which is a very pernicious courfe, and contrary unto reafon, and all principles in Healing.

And that you may the better underftand your error I shall recite your practice.

When first any one is taken with thiss or the like Distemper, either Child, on those of full Growth, first you run ance fetch Mint Water, and a little Syrup to ftay the Vomiting.

Secondly, then Cinnamon Water and Syrup of Quinces, or Myrtle Berries to Itay the fcouring.

Then, it may be, you give a Carmina tive, or Clyfter to expel Wind, and corn and rect the Griping.

That done, you give fome cooling Ju lep to allay its Heat, and to quench in Thirft.

And when it is cold, you give a litt Mithridate, or Theriack of Andronica, ( London Treacle, and lay a Plaister of it 11 his Stomach.

And then lay a Spell against the Fevre to the Wrists, Ge.

#### [21]

And fo you keep doing, till you can 1.16 do no more; just as a man who hath lost himfelf in a Wood, he keeps going, but whither he knows not.

You fee all those things do but respect the effect, here is nothing hath any regard at all unto the Caufe.

And fhould things answer the intention for which they were given the party, either Child or Man would prefently die.

To hinder the evacuating of this morbifick matter, is directly a-

gainst the intention of nature; for the evacuation of get ad locum this matter is to be looked conferentem eo at as the Crifis of Nature, and whofoever shall reco-

Quo natura ver-Hippoc,

ver, all this matter is to be brought out, and whoever goes about to ftop it in the beginning, works against nature. What a vain thing therefore is it to think to take away the Gripings, before the matter be gone that caufes it; and to corroborate the stomach, or to refresh its Spirits, fo long as the Enemy beareth fway.

To give the Child Mithridate, or lay a plaister of it to the stomach, which is worfe, becomes another Difeafe; or any thing elfe that is naufeous, whilft Nature & the

3

#### [22]

the Disease are struggling : and to give cooling things to correct the heat, is to weaken nature and strengthen the Di-武田 feafe.

12

STE

ET I

130

at a the

Sickt

Obj. But you will tell me many have re-由日 covered by the use of those means.

Anfw. And many more had been, had they never been used ( with fubmiffion to) providence) but (quoad homines) after the manner of men, I admire that any m hould recover that ever was affected with this Difease, for they are ever giving, and the all to hurt it; feeing the best Friends become the worft Enemies, which makes 13 fus good that old Saying,

When God cuts off man's thread of life, His dearest Friends do bring the knife.

But many things are wrought by accident, as we have known many have been in recovered from a Fever by drinking cold 10m water.

Obj. From whence fome have afferted. that this Heat is of the Effence of the Difeafe.

Anfw. But this Cure is not wrought by the Water, as it is cold and moift, for Sack or ftrong Beer would have performed

#### [23]

it, and a great deal better; but it is from the great quantity of it, which doth fo replete the ftomach, that fome of the peccant matter which doth adhere unto the Fibres thereof, the Water hath loofened, and fo its brought away with it.

I fuppofe whofoever hath been cured by Water, it hath been when the Difeafe hath been on him fome confiderable time, and not in the beginning. I have prefcribed Water feveral times in the end of a Fever, to this intent, and I ever found it very fuccefsful; but I fuppofe the parties that have taken it upon their own fenfual inclination, it was hap-bazard with them, for to take Water in the beginning of a Fever, either kills them, or ftrikes them into an Ague, or fome other long Sicknefs.

To drink it in a contagious, peltilential Fever, or any Fever that tends much to putrefaction, haftens death.

I do not speak this as not approving of the use of Water; but I declare the contrary, for I have found as strange events by drinking Water, as ever I saw by any Physick I have known a man cured very soon of an Atrophia, or Consumption, only by the drinking of pure Rock Wa- $C_A$  ter:

四日 西方 河位

#### [24]

tar: and in many other cafes have I used it: but great confideration is to be had in the giving of it.

But to return, by applying a naufeous or fætid Medicine to the Stomach, whilft the morbifick matter refides there; nature thinking fhe is alfaulted by another Diftemper, unites all her ftrength and force, and defperately attempts both her Enemies with this refolution, to extirpate them, or fink her felf, whereby the may, by exafpetating of her new Enemy, caft forth the old, and then this amongft the ignorant is cryed up for a laudable Medicine, when as fuch things are done by chance, for where one hath recovered by this means, twenty have died.

Thus you fee what a blind courfe hath been taken for the curing this, or any other Difeafe. The meer pity that I bear to poor Infants, hath extorted this from me, to whom I have often been fent for, to fee them die, when their fpirits have been fo far fpent, that I have not dared to give them any thing to take off the Difeafe, to the great grief of my fpirit, for without the Difeafe be taken away, to fmall purpofe do we ufe Cordial Means to refresh their Spirits.

DIRECTIONS.

## DIRECTIONS.

[25]

I shall now direct you to a better way,

1. When you are affured this Difeafe is on them (which is known first by a fcouring away of a flimy matter, then a difcolouring of the Excrements, as yellow, green, cc. and a griping in the Belly, being very hot and cold by Intervals: prefs not any manner of Meat

npon them, as you tender their lives; this very thing hath deftroyed thoufands. For to give Meat

C.,

把

đ

1

尼

đ.

10

Impura corpora quo plus nutrieris eo majus læferis.

whilft the Difeafe is on them, when the ftomach is not fit to receive it. nor hath ftrength to digeft it, without it be fpeedily vomited up again, it becomes a Recruit, or fupply to the Difeafe.

2. Neither administer, nor apply any thing external, or internal, that is any way naufeous or ungrateful to the stomach, for nature hates and abhors fuch things; for though it be laid upon the stomach, yet

yet the tafte of it is in the ftomach, as though it were contained there, especially in young and tender Skins; for to have a thing that is naufeous to the ftomach, and ungrateful to the fmell, constantly to lie on, would be troublefome to one that is in health, much more to him that is fick. Give not the Child any Milk, and if it fuck, wean it; for Milk is the first matter and foundation this Difease is raifed on, and it bears still an affinity with it, and is prefently converted into its poilonous nature, and likewife let it forbear Water and Beer, either cold or warm : keep the fick party ( either Child or otherwife ) in a breathing fweat, which is done by drinking warm Poffet-drink, the Milk being turn'd with White Wine, or Sack, or Beer fharpened with Vinegar; let the party drink of it as warm as he can take it : this is far better than any Cordial or Julip whatfoever in a putrid Difeafe, between whiles the Child may drink a good draught of Sack, raw, and without Sugar is beft; and if it tends to coldness, either in Face, Nofe, Hands or Feet, you may fafely give it a liberal draught of Brandy, with a little white Sugar, though the Child be not two months old, and likewife make a Toaft of

#### [27]

of old ftale Bread, or a piece of Rofe-Cake, and foak it in warm Brandy, wherein a little white Sugar hath been diffolved, and put it to the Child's Stomach, and let it lie on for twenty four hours, and if the coldnefs is not removed, you may reiterate it. I have a fpecifick Water for that end, which doth much revive and cherrifh nature.

ert.

What though it exafperateth and maketh more hot? That is well recompenfed; for it mightily ftrengthens and refresheth nature.

Observe, that a hot and feverish temper, is the most laudable and best temper the Child can be in, whilst the Disease remains.

When the morbifick matter is gone, you may give a little falt of Pearls; Corral, Amber, or Wormwood, which are very good in a Cordial Electuary, to kill that putrefactive Ferment in the place where the Difeafe lay, that may lie behind lurking; which is the caufe of moft Relapfes, and long and tedious Sickneffes and Confumptions.

'Tis not enough to remove the effect, or matter produced, nor the caufe producing, but the principal producer must be rectified

#### [28]

rectified before health be perfectly reftored.

Thus 1 have directed you in the best courfe you can take; and be fure you will do nothing that will hurt, but rather to strengthen and refresh nature.

Obj. But you will ask me, what shall we do to remove the cause?

Anfw. That is the principal Verb indeed, Iknow a more proper and fafe Medicine to effect it, than I can direct you unto, in all the Difpenfitory. 'Tistrue, there are a great many good Medicines, though good for little, without it be the Laudanum of Paracelfus, and fome few Chymical Preparations: the reft are hardly worth a man's knowledge.

That Physician that hath not found out better and more specifical means than what are there, is like to make but a fad practice.

But I shall speak it to your comfort, God hath given me the knowledge of such a Medicine as will effect it; and not only this, but it doth also eradicate and extirpate the cause of most Diseases incident unto our frail Bodies, as you will hereaster perceive.

It is a Powder without either fmell or tafte,

#### [29]

11

tafte, and the higheft dofe or quantity is but five or fix Grains to the moft robuftive or ftrong Body, and fo downward to half a Grain, which a Child of two days old may fafely take, its operations are various, according to the nature and place where the peccant matter refides. How you fhall take it, and what is to be done and obferved in the taking of it, I fhall give directions in the latter end of this Book.

And as it is an effectual, fo it is a fafe Medicine; for I have given it unto three or fourfcore feveral Children in and about the Town of *Bofton*, and indeed I know not of any one that died, that ever took it, except one: the fpirits of which were quite fpent before I gave it, that it was not able to retain it in its ftomach, but immediately brought it up again.

5

R.

ä

1

There is an eminent perfon in this Country, whofe knowledge is great in the moft curious and beft Arcannus, or fecret Medicines that are ufed, he could tell you, it is as fafe as good, who was an eye-witnefs unto a wonderful operation it had in a moft contagious and malign Difeafe, which was the Small Pox, which ftruck in among the Pallengers in Captain Lord's Ship, coming from England two years funce,

#### [30]

おりの

這個語語語語目習目的目前, 一個可能

fince, that not one died that took it, two only died, and neither of them took it, as the Chyrurgion, Mr. Whiting can teftifie; I gave him fome of this Powder, and bade him give to every one that was infected with that Difeafe, which he did accordingly; though he gave it to fome that was blind, to others after they appeared twenty four hours, and very ready to be fuffocated, and very foon made them all perfectly well, which was well known unto all the Paffengers in the Ship, as well as unto themselves that took it, which are diffipated through this Country; and I queftion not but this Paper will find out fome of them, who can well witnefs this truth.

By this you may judge of its efficacy in any other Difease of a malignant nature.

I fhall tell you what I have observed from it in some other Maladies.

I have cured all forts of Fevers with this Arcanum univerfale, in all Ages and Sexes; for continual burning Fevers, whether putrid or not, are frequently taken off by it with one Dofe, in the beginning, or at the most by two, fo that the Patient may be well before the time of the expected Crifus. The fame Benefit I have often observed when given in the state of the

#### [31]

the Difeafe, that it hath been prefently taken off, although then nature is obliged to take a longer time to renew the ftrength, than fhe would have needed, if the had been affifted with this Medicine in the beginning. How common a thing it is to make a Month or fix weeks work in curing a Fever, although peradventure nature it felf hath overcome the Difeafe in twelve or fourteen days, but the difeasie matter formed, and fome fymptoms of effects must entertain the Phylician a great while longer. For if the Fever were putrid, then the Stomach and Lungs remain loaden with much pituitous matter, to carry off which, the common practice is to follow the Patient close with Expectoraters, fuch are their Pectoral Electuaries, Decoctions, Syrups, Lobochs, &c. the which are fo far from answering that end, as really to add to the matter they are defigned to expel, for they not being A. gents impowered to alter or rectifie any Ferment, as foon as they come into the Stomach, either nauseate it with their Load, and fo are caft up, or if they ftay, fubmit to the depraved digeftion of the Stomach, and there make an increase of the difeasie matter, whence an extraordinary

K.

#### [32]

nary fpitting continues till nature it felf, by degrees retrieves the natural Ferment, and frees her felf from the difease matter, and the pretended remedy together. Butt if this feem too long a doing, (that noo piece of Art may be wanting) there is ano-1 ther way at hand, and that is to exhibitt purging Medicines to carry it downwards, the which is more pernicious than the former, for the Purge drawing a greatt quantity of fordid matter from the Thorax to the Guts, and nature not having yett recovered her right Regiment may admitt ha fome of this matter (by the Meferaick on Milky Veins) again into the Blood, whence may fucceed again a Fever de novo, called a Relapse, or ( if the lately tired in fpirit take not the prefent Affault ) then in the occasional cause of a Dropfie, Hectick Confumption or fome other Cronick Difeafes: All which iseafily prevented by tak king a Dole or two of this Arcanum, which evacuates the prefent matter by vomit, and rectifies the vitiated Ferment of the Stomach, and other parts, whence the power of making fuch matter is quited taken away. This I have had very large experience of. But a few days before the writing of this, I was fent for to a lufty young

50-

young man, who had laboured under a synochus, about a week having, for during that time been treated by an Apothecary, first with cooling Juleps, which were continued all the while, then ftrongly fweat by a Sudorifick, and the next day blooded, but the Difease notwithstanding increafing (as being nowly changed from a non putrida to a putrid, when I came ) made the Apothecary, it feems, weary or doubtful of his work; for he defired the Man's Wife to fend for a Phylician, or a Second, ( who was a Friend of his, 'tis like for the Bills fake ) but the Woman having formerly had fome experience of my Medicines, fent to me about five or fix. that Afternoon, I prefently ordered him four Grains of this Powder, which wrought once only by Vomit, and discharged the ftomach of that Difeasie matter, which before felt to him like a great weight, the pain in his Head prefently abated, and that night he refted pretty well ( for he had no fleep worth mention fince he was ill ) the next morning I fent him four Grains more of the Powder, which gave him three Vomits and two Stools: about fix in the Afternoon I went to vifit him, and found him about his Chamber, faying, he thought D

#### [34]

thought he was as well as ever, his Stomach being returned, and he very hungry. Thus you fee a Fever cured in eighteen hours, or lefs, which in all probability would have been at the leaft three or four weeks (if recovered at all ) before nature by fuch enfeebled helpers, or rather, hinderers (as are the common Medicines) could have freed her felf from the Difeafe. I could inftance many the like cafes were it needful. This Medicine hath ( befides its other gifts) fuch a general tendency for the curing of all Fevers, that upon the first knowledge of it in practice, I called it my Species Febrifuga, by which name I published it in my Catalogue of Medicines, Printed in the year 1676, although I had then feen this little Book of the Authors. I shall here subjoyn a short Discourse of intermitting Fevers or Agues, in which Mr. Couch is filent, except in the name, yet I cannot doubt but he must be well acquainted with the power of this Medicine in curing them.

Of Agues.

GReat Diversity hath been, and yet is among Authors concerning this Disease, some holding one thing, and some another concerning its Seat and Causes: but I without reciting their differences or contending with any man's opinion (either of which is no way prostable) shall briefly endeavour to give you my own sentiment. It needs no Definition, being fufficiently known here; neither Division; feeing all the forts thereof proceed from one cause, and may be cured by the fame Medic ines.

ider

fat.

105

#### Seat.

The Place or Seat of Agues is the Pancreas, or Sweet-bread; for all the parts of Man's Body being confidered, which only by intervals may transmit the caufe of intermitting Fevers to the Heart, none is found to which not only the Focus or fource of those Fevers, but also the cau-D 2 fes

#### [36]

fes of all their Symptoms may be afcribed, besides the Pancreas or Sweet-bread.

#### Caufe.

The Caufe is an Obstruction of one or more of the Lateral Ducts or Branches of the Pancreas, by reafon of Phlegmatick Matter carried thither in too large a quantity, and there detained, the which being feparated from the Blood ( together with the Pancreatick Juice ) by the Glandules of the Pancreas, and fent to the main Duct or Pipe thereof caufeth an Obstruction there, and detaineth the juice of the Pancreas (contrary to nature) which ought continually to flow into the thin Gut, called the Duodenum. This Juice being thus stagnated, quickly grows acrimonious, or sharp, and acquires a putrefactive Ferment, whence at length it makes way through the obstructing Phlegm, and is effufed into the Duodenum, where meeting with the Bile or Gall, it ftirs up a vicious and preternatural Ferment, from whence comes the Ague Fit with all its Symptoms, as in the beginning, horrour, chilnefs, cold, shaking, Ore. then prefently reachings, yawnings and vomiting of bitter or OUL

#### [ 37]

four relifh, and afterwards burning heat, the caufes of *Heat*, *Cold*, *Thirft*, &c. you have in the foregoing Chapter of Fevers : but if any defire further fatisfaction, concerning the reafons of the differences of Agues, and the conftant or various accefs of their Fits with the particular caufes of Symptoms, they may read it at large in *Regnerus de Graaf*, in his Book intituled, *de fuceo Pancreatico*, publifhed by me in the year 1676, to which I refer the Reader, not having room here to be any larger.

の方法里記油

ù:

#### Cure.

The Cure confifts in opening the Obstructions, changing the difeasie Ferment, and expelling fuch matter as the Difeafe hath rendred incapable of being redintegrated and taken into the communion of life. All which intentions are truly and radically performed by this Powder; for an Ague being removed by the due use of this Medicine, returns not again, neither leaves any danger of its degeneration into another Difease, both of which too frequently happen after the use of some Medicines which take off the Fit only by a kind of foporiferous quieting the prefent D 3 fury

#### [38]

fury of the Archaus. If it be taken before the Ague hath exceeded three Fits, one only Dofe is ufually fufficient to carry it away; if fix or feven Fits, two Dofes or three at the moft; yea, I have cured divers at twice or thrice giving it that have had it fix or eight weeks; but if it be a year old or more, the continuance of its ufe but a reafonable time (with the help of the Balfamick Pill) will not fail to cure it. I have alfo known it to cure Agues when it hath had no other fenfible operation than Breaking of Wind.

A perfon living in *Greenwich* who had a Tertian Ague, and fometimes a Quotidian all the laft Winter, was cured this and Spring by three Dofes of the Powder which never had any fenfible operation, and two Dofes of the Balfamick Pill, for that in eight or ten days he was abroad about his Affairs, and never had any Fit: ince, although he was before for low brought, that he could not fit up any longer than while his Bed was made, notwith ftanding the conftant advice of an eminent Phyfician of that Town, which he had ufed.

It is to be taken in a Spoonful of Drink, or Posset drink about an hour before the Fit:

#### [39]

03

2

Fit comes, for two or three Fits together, according as the Ague is in continuance. 064 If the Patient be weak, or of a tender ha-bit of Body, let him take a Dole of the 100 Balfamick Pill the fame night after the 01 Powder hath been given, when he goes to 27 Bed, with a draught of warm Ale, or a 28 Glass of good generous Wine, which Pill will mightily corroborate and refresh his Spirits, and alfo tends much to the Cure, 131 if the Ague have been of a long continuance, or be a Quartan, or fourth Ague, then after the Patient hath taken the Powder three times, if the Fit still remain, 212 then let him take a full dofe of the Balfa-mick Pill, two or three hours before the 5 coming of the next Fit, and goe to Bed, and dispose himself to fweat before the Fit. comes, the which if he do, its ten to one 01 but the Fit comes no more; but if there 62 fhould be a failure of 'fweating timely e-11 nough, then let him take the powder be-180 foreone Fit, and the Pill before the next, 12 till it be gone; but not one Ague in twenty will need to be thus treated. 6 Syraps: or any Sugared or Honeyed Means

or Dring. And when shey begin to re:

### A general Direction in Fevers.

[40.]

TO drink liberally of fuch Liquor as and is most convenient, is good: I like and not Beer of any Liquor in a Fever, before the peccant matter (wherein the Difease doth fublist) be evacuated, because it hath a nutriment from the Grain it is made withal, which doth add unto the matter of the Difease, whereby Thirst is exasperated, as is commonly seen.

Irather advise to drink Wine and Water, two parts Water, and one Wine, Tharpened a little with the Spirit of Vitright ol, or Sulphur, if it be per campanam, which is drawn from a Bell Still, it is the: better, which is a fingular Medicine to allay and correct the inordinate Thirft and Heat in Fevers. Medera, Fial, French, or Sherry Wines, you may ufe, Malaga or an ny Sweet Wine is not fo good, neither Syrups, or any Sugared or Honeyed Meat, or Drink. And when they begin to recover, the plainest Broths and Gruels are: the best; till then a little is too much, and

#### [41]

and if you did use Salt and Vinegar in-Itead of Spices and Sugar, the fick would like it the better; and it would be better for them; a few Prunes and Currants, if the fick like them, may be used.

But fome may fay, How shall we do that live far up the Country, where we have no Wines, nor can get neither of those Spirits? the belt that I can advife you to, is Milk boiled, and turned with fome Vinegar or Verjuice, the Curd being taken 2月1 away, whereof he may drink freely, but he is to take it alway hot, and the hotter the better.

This courfe is to be taken after the caufe is removed by my powder, or fomething elfe (but I know not what) otherwife this, or any other, is like to do but little good.

12

10

1254

8.00

and I

at

18.

ち

218

Bleeding, Purging, Clyfters, Cordials, Juleps, Ge. are but Trifles in curing a Fever, they do at best but correct the Symptoms or Effects; I will do more good with one dofe of my Powder, and one of my Pills, than they with all those in a Month.

If the Fever be continual, and come by a Surfeit, or otherwife, fo that the Patient feel

feel a Load or Weight at his Stomach, or hath a propenfity to vomit, the first thing; to be done is to give a Vomit, whereby the Stomach and first passages may be freed !.... of the groffest of the Diseasie Matter wherein the Fever fits, or hath taken up its; Inn, to which purpole you may give half an ounce of the Infusion of Crocus Metallorum, or fix Drams, or a whole Ounce: unit ( according to the age and ftrength of the: and Patient) in a fmall Draught of warm Poffet-drink; but if you know any better An-. M timonial Preparation, then give it. That: being done, R Tartar. Vitriolat. fix: Grains, Volatile Salt of Amber and Hartskorn, each feven or eight Grains, mix them, and give the mixture twice a day in a little: thin Broth, or Water Gruel. This is abfterfive and Diuretick, and will cleanfe the Stomach and Inteftines of the remaining, Sordes, and expel them by Urine. For the Feverish Thirst give the dulcified Spirit of Nitre, or of Salt, in Posset drink, and all the Liquids they take, from five or fix to ten or twelve drops at a time. Keep the Patient in a. fmall breathing Sweat, either with the Poffet-drink, before-mentioned by Mr. Couch, or with Treacle-water and Powder, or rather the Tincture of Virgi-

14934

aid

[42]

#### [43]

mia Snake-root, or which is most excellent ( if you can get it ) the Aqua Prophylattian caof Sylvins de le Boe, of which Take three Ounces, Water of Carduns and Borrage, each one Ounce, Syrrup of Citron Peels an onnce and an half, mix them, and take it often by a Jpoonful or two at a time. But instead of this, if the Fever be malignant, give Bea zoardicum minera'e to eight or ten Grains every third or fourth hour in a spoonful or two of good Canary.

But becaufe the Aqua Prophylactica men-Alk . tioned is rarely to be had at any fhop, I will here defcribe the making thereof for the fakes of those who are willing to make it. R Roots of Angelica, Zedoary, of each an and ounce, Batterbur two ounces, the leaves of Rue four ounces, of Balm, Scabious and 20-Marygold Flowers, each two ounces, unripe Walnuts, cut two pounds, fresh Citrons cut one pound. Let them be all beaten together, and pour upon them fix quarts of the best distilled Wine-Vinegar, let them Stand in digestion all night, and then distil them by a very easie fire (without burning) till they be dry, and keep the distilled liquor for use. It is very profitable in all Fevers, efpecially in those which are malignant and the Plague.

81

I

381

In the declining of the Fever, if fleep be wanting,

#### [44]

wanting, this following mixture will much avail, both to caufe reft, and refrefil the Spirits, R of Treacle water an ouncer the thin Syrup of Corn Poppies, an ounce, on an ounce and a half, Laudanum Londinenf. on rather that of Paracelfus two grains, mixe them, and let the Patient drink it at the house of Sleep. But give nothing wherein there is Opium or Poppies in the beginning of a Fever, becaufe they tie up the Archaus of the Stomach and first raffages, thereby hindering him from feparating and expellling the occasional caufe of the Difeafe.

For Agues, or intermitting Fevers, when ther they be Quotidians, Tertians or Quartans, proceed as followeth :

R Of Salt of Amber twenty grains, Tartarum Vitriolatum six grains, Diagridium seven, eight, nine or ten grains, according tee the strength of the Patient; mix them into a Powder, and give it in a little Posset-drink, or thin Broth, four or five hours before the time of the Fit.

Repeat it two or three times, if need be; but if the Ague be not then gone, give the following mixture about an hour, or an hour and an half before the Fit comes; the Patient being in Bed, and difpofing; himfelf to fweat.

Rof

#### [45]

Re of Carduus Water two ounces, Treacle Water two drams, Salt of Wormwood half a dram, Spirit of Salt Armoniac ten grains, Syrup of Corn Poppies half on ounce, mix. This, if the Patient fweat well with it, requently removes the Ague.

This following alfo hath cured many without any other Medicine.

Re of the Salt of Wormwood and Carduus seach fifteen grains, Tartar Vitriolat. fix trains, Sugar of Pearls half a dram; powder and mixthem, and give it half an hour, r an hour before the Fits access.

The Juice of Featherfew being drank about half an ounce ) in a glafs of Wormwood Wine, is profitable against he Quartan or fourth Ague.

These Remedies I have used with good fucces, but never found any thing so certain and effectual in Fevers, as my Species Febrifuga, and Pillula Balfamica.

# [46]

## A Dropfie.

There are three forts of Drophes, viz. When Anafarca, Afcites and Timpanites the and two first are most from Water. Thesault last, Timpany is more from Wind.

Anafarca, is when the extreme parts with fwell; but when the Belly, then it is Afri- walk tes.

The Caufe, I do not believe, ( as hath Om generally been received ) that it proceeds from a Diftemper of the Liver, and that to be the principal part affected; but I have have more reafon to think it to proceed in from an obstruction or impediment in one of the Kidneys: for commonly they that are in troubled with Gravel and Stone in the Kidneys are Hydropical; and feldom any that have been affected with either Analy farca or Afcites, but they have observed at the Dolor in their Reins to precede it; and for that Water which should be transferred through the Kidneys, to be evacuated by the Bladder is forced out at the Abdomen And it hath lately appeared by diffection thank

## [47]

that those who have died of those Distempers, the tailt hath been through the Kidney, which is most agreeable to reafon.

And undoubtedly that operation in an Afcites, in making a hole to let out the Water, doth but only refpect the effect not taken away, (and yet not inconfiftent to that Maxim, Take away the caufe, and the effect ceafeth: which is to be underflood of that which is to come, and not of what is paft, as Helmont well observes) and fo that operation might happily perfect a Cure in taking the effect for the Caufe.

1 have cured a man of an Anafarca, (whofe Thigh hath been near as big as his middle) with one Dofe of this Powder he was prefently made perfectly well; that in the operation of this Medicine, his Legs & Thighs fell, and never fwelled after, you would have admired (had you feen) what abundance of Water came from him, both by Urine, and Vomiting; and at night I gave him a Pill (which I ufually do after this Powder) to refresh his Spirits, and feetle his Body in a right temper.

This was all the Phylick he took from me, though he had fpent many pounds before in fruitlefs endeavours. And I know not

#### [48]

not any thing to the contrary, but it may had do as well in an Afcites, or Timpanites, if it hath not continued too long.

This

First it is necessary to begin the Cure with with gentle purging; for ftrong Purges, it (especially in weak and tender Bodies) don it far more harm than good, by refolying it and expelling the Blood, and good juicess in with the peccant matter, thereby dejecting the ftrength, and depauperating the vital spirit.

Re of the Roots of Orris an ounce and a balf, Parfley Roots half an ounce, Leaves of the Agrimony a handful, clean Senna an ounce; the beft Rhubarb half an ounce, Agarick threes of drams, Cinnamon two drams, Cloves one of a dram, cut the Roots, with the Rhubarb ana Agarick into thin flices, bruife the Spices, ana Agarick into thin flices, bruife the Spices, ana put them all into a little Bag, infufe them twenty four hours in two quarts of the beft Whitee with or Rhenifn Wine, then let the Patient drink ewery morning five or fix ounces, or as much as will give four or five Stools. It is plcafant to take; but if you pleafe, you may alfo add Sugar to it.

For fuch as had rather take Pills, those following are good.

R Rofin of Scammony and Jallap, of each half

[49]

10.7 掘

Care

18**3**, do

wing

RIEL

eich-

2th

me

TTE

Titt

half a dram, Tartar Vitriolat, Mercurins dulcis of each two scruples, Oil of Juniper Berries twenty drops, of the purest Venice Turpentine a Sufficient quantity to make the powder into a Mass for Pills: the which make into thirty fmall Pills, and give three, four or five of them, according to the Patients Age and Strength every morning. After purging,

The Salt of Broom or Amber, of Bean-stalks, or of Pidgeons dung are profitable, either of them being taken twice a day in warm Broth, or which is better, the Spirit or Volatile Salt of humane Urine. In a Tympany the dulcified Spirit of Nitre is excellent, being taken in Broth or Sack three or four times a day, from fix to twelve drops at a time-

A Gentleman, a Friend of mine, living in Greenwich, cured a man of the Dropfie with the Pill alone. This man had an Ague first, which either went off it felf, or were moved by fome common Remedy; about feven weeks after which, he began to fwell, and also was forely afflicted with Gripings and Flux for a great while, which had brought him fo low, that he had not been out of his Bed for three weeks. The first Dofe of the Pill that was given him took E

## [ 50 ]

took away the Gripes, and in a great meafure ftayed the Flux; but then he fwelled fo much in his Breaft, that he could not lie down in his Bed, but his Breath would be gone, the fecond Dofe freed him from that, and made him able to rife and drefs himfelf, and by a fhort continuance of it was cured.

# Epilepsie, or Falling Sickness.

VINDAUV She Unicitied 5

I Had a Maid fince I came to this Town, that was turned over from one to another, no one cared to have her, by reafon fhe was violently troubled with the Falling Sicknefs: at length I bought her, to whom I gave only one dofe of this Powder, which freed her from her Fits, though fhe had them before almost continually, day and night, that whofoever had her, kept one to watch her, for fhe would be ready to deftroy her felf; I kept her about a quarter of a year, and fhe never had a Fit that I know of. I perfwaded her to take another

# [51]

ther Dofe two or three days after, but fhe would not; fhe told me fhe needed not; for fhe was confident fhe was perfectly cured. Since I hear fhe is married fome where in the Country, and whether fhe had them fince, I know not

the set and rest for

By the operation of this Medicine I judged by what came from her, that the primary caufe was not in the Brain, but in the Stomach, or fome place near adjacent thereunto; and that the Brain fuffered only by confent.

Purging in this Difeafe (when it is fimple) feldom or never doth any good, as alfo Blood-letting, but both are very injurious, as many have found to their great prejudice. But when it proceeds from the Stomach (as may be known by the Patient, perceiving in himfelf a pain, forenefs, and diffention about the mouth, or pit of the Stomach and Heart-ftrings, efpecially when they are fafting ) before the Fit they have a difpolition to vomit, with pain and palpitation of the Heart, and the Fit ends with vomiting, in fuch, I fay, a Vomit may be available, either with the infusion of Crocus Mettallorum, or the Salt of Vitriol; but they are warily 10.18204 E 2 to

# [ 52 ]

to be administred, and not without the direction of a Phylician. All four and tharp things are hurtful in this Difease, as Oranges, Lemons, Vinegar, Gc. In the time of the Fit you may use the following Liniment to anoint and chafe the Temples, Nostrils, Wrists and Coronal Suture, or Seam of the Skull upon the top of the Head.

R Unguentum Nervinum two ounces, melt it gently in a Gally pot, then put to it Oyl of Amber and Rosemary of each two drams, 新加 Spirit of Sal Armoniack one dram, stir them 1 3/0 well together, and use it warm.

Take of Oil of Tartar per deligninm ani ounce, Salt of Harts-born and Amber each as Tet fcruple, mix them, and let the Patient take from ten to twenty drops in Broth, or Blackcherry Wine four times a day.

The dung of a Peacock, or Liver of al Raven being gently dried, and powdered, and given twice a day to two Scruples, or: a dram at a time are very good, but it: were better, if their Volatile Salts were: extracted.

But the Flowers of Sal Armoniack excel all the reft, being given three times a day, from ten to fifteen or fixteen grains at au time in Broth or Sherry Wine.

TA

THere was a poor Fisherman that lay down by the New Meeting Houfe in this Town, that had undergone most terrible Gripings and Torture in his Guts, with a great Flux and Vomiting for feveral days, till at length his Spirit was almost Ipent, his Belly was fo inflated, that he could hardly breath. About ten or eleven of the Clock at night I was fent for; I knew there was not any Medicine I had would do him good, or preferve his life, but this Powder; I being not very well, and much disposed to Sleep, told them, I would come and fee him again as foon as it was day, and then I would give him fomething. When I returned home, I confidered he could not live till that time, and if not quite dead, yet could not be in a capacity to take any thing, I prefently went to him again, and gave him five grains of this Powder: within half an hour after he took it, he broke wind up-E ward

# [54]

ward and downward, to the admiration of all those that were there. A little after he had a stool, in which came away abundance of obdurate and hard excrements that a long time adhered unto his Guts, ( and was the cause of his sickness ) and presently he went to sleep (which he had not before for several nights ) and shept very soundly till the morning. The next day when I came up to see him, I found him up, and at Breakfast, and was preparing for his going to Sea : he told me he was as well as ever he was in his life.

A Surfeit is a *preludium* to a Fever, which doth not always proceed from the quantity of Meats or Drinks, but it may be from a vicious quality of Meats, as crude Fruits, Pulfe, & c or from an antipathy or loathing of Meats, that the ftomach abhorrs; and they are fuch things as commonly the eating of them hath made them fick before; and fometimes it comes by lying with their Stomachs bare when they fleep, efpecially in the Summer : I have known many that have been furfeited, and could not tell how they got it. I never knew this Powder fail to make them well in fix or eight hours.

In the Month of May this prefent year

金品

but two hours, and then was called up to lay a woman (fhe being a Midwife by practice) the which fhe went over the water to do, and came home again to Bed about eight in the morning, and hath remained very well ever fince.

For the Griping of the Guts I do not think this Balfamick Pill hath its equal in nature. How many grown People as well as Children expire yearly in this City of London, by this tormenting Difease, for want of a good Remedy. I do ferionfly profess, I do not think that any perfon need perifh by that Enemy, had they but this Medicine in time; for it commonly takes it away at one Dofe, but with a fecond 1 never failed in my life; for it will certainly give ease in the most violent Gripings in two hours time, given in a large Dofe; and if the pain return, it may be repeated after eight hours; but where there is ftrong Vomitings alfo, it is beft to give it diffolved in warm Ale, or Sack, and fo give it by a spoonful or two at a time, and very often, that fo the ftomach may not caft it up before it comes to operate, for it will ftay the Vomiting and Loofnels as well as ease the Pain, the which ought to be done with all expedition (unless the Difeale

# [ 58]

Difeafe proceed from a Surfeit, then firft give a Dofe of the Powder) let ignorant: people think what they will, who often out of a foolith timerofity fuffer them for long, till the ftrength is fo exhaufted, that: it cannot be again reftored; and fo they as miferably as foolifhly fhake hands with their lives.

62

di.

臣

# FLUXES.

There are three forts of Fluxes, viz. Lienteria, Diarrhœa and Dyfenteria: and Authors have very confusedly treated of their Causes, and their Places; and because they would be fure to hit right, they have named almost every place. But the cause of the first, Lienteria, is from a defect of the Spleen, which doth not fend a sufficiency of that acid juice into the Stomach, which maketh the digestive Faculty, whereupon it is, that the meat comes away with little alteration.

The fecond, Diarrhan, is from a defect

# [59]

fect of the Mefaraick Veins, that do not attract the Chyle, whereby it is evacuated as Excrements.

12.

TES

0

The last, Dysenteria, is from Excrements that adhere to the Intellines, and by their Acrimony corrode, crc.

You fee that they proceed from feveral Caufes, and yet to be cured by one Remedy. Every one may judge it to be an Arcanum Catholicum, or an universal Remedy, which I know this Powder I tell you of hath perfectly effected, as I have well experienced. And in this last I commondy give my Balfamical Pills the next night, to confolidate the Excoriations which the morbifick matter hath caufed.

In all Fluxes of the Belly, whether bloody, or not, you may do as followeth. First give half a dram, or two scruples, or a dramof the Powder of Toafted Rhubarb, mixed with a little Conferve of Red Rofes, and made into a Bolus. Then R of the Conferve of Red Rofes & Mint of each an ounce, Orange Pill candied fix drams, Red Coral in fine Powder a dram, Diascordium two drams, Syrup of Myrtles Sufficient to make a fast Electuary, let the Patient take it often

### [ 60 ]

often about a dram at once. Or this: R off M Mint Water, and Cinnamon Water, each and Ounce, Plantane Water two ounces, Syrup off 20 Comfrey an ounce and an half, Laudanum twon grains, mix them, and let the fick take it by at mi Spoonfulevery half bour.

稲田

tur.

fer

10

In the Flux with the Griping of Guts, as also in others, this following is very good. R of the best Cinnamon Water three 1 onnce, of Diascordium three drams, let them : Fill be well mixed, and give it by two spoonfuls at atime pretty often. Either this or the former will both ftay the Vomiting, and bridle the Flux.

The following Clyster is also good to alleviate the sharpness of the matter, and ease the excoriated Guts. R of new Milk half a pint or better, in which quench a piece of red hot steel once or twice, to which add half an ounce of Venice Turpentine disfolved in the yolk of an Egg, Honey of Rofes an ounce, common Balfam of Sulphur tenor twelve drops mix and make a Clyster.

The Pill alone will cure any Flux or Loofness whatfoever presently, yea the Bloody Flux in two, three, or four days, according to its magnitude, but in that cafe it is good to continue the use of it a day or two after the Flux is stayed, left the Acrimonious

# [61]

Acrimonious Ferment ( not being quite dethat ftroyed) should reassume its force, and cause the Difease to return. Therefore in fuch Countries where this Malady is in a manner Epidemical (as Ireland, and perhaps fome other places) did they but know the worth of this Pill, they would undoubtedly prize it at a high rate, and refcue many a miferable perfon from the devouring jaws of death.

Calculus Renum; or, Stone or Graz vel in the Reins or Kidneys.

THe Stone or Gravel in the Reins or Kidneys, as it is the sharpest of Difeafes, so it hath been the longest in curing, though the prefent Fit or Pain is foon remedied. I never knew any Man or Woman that was past forty five, or forty fix years of age that was ever perfectly cured, but once or twice a year after, they have been troubled with it more or lefs; though I knew a Gentlewoman that was free from any

# [ 62 ]

any Fit nightwo years, and then allaulted! her again as violently as at first.

#### Cause.

Those Paroxysms or Fits that come by Intervals, which are fo dolorous, do not proceed from the Gravel or Stone generated, but from the Kidney generating, which may be affected either primarily, from a debility or vitiousness of its own Ferment, or cafually, from an excels in quantity, or being too fharp or falt in quality : and in regard it is fo fenfible a part, must needs ftir up an inflammation, which maketh those cruel Tortures. And should all the Gravel and Stone come away, the pain would not be the lefs, until the Kidney it felf be reduced to its right temper. For we fee how vain and ufeless all those things have proved, that have been given to absterge, and force away the Gravel and Stone, nay, they have much more exafperated the pain, and made it more:

And befides that, the Gravel and Stone are not the caufe of those Tortures, Ifind by this Powder, which hath perfectly freed them from all their pain in two or three hours, and no Gravel or Stone hath come

# [63]

come from them, neither that day, nor the next.

Again, how many have I feen in perfect health, that have voided a great quantity of Gravel at a time, without the least pain, it would be in one as well as in another.

By any Weaknefs, Confumption, Inflammation, or any Diftemper of the Kidney, Gravel may be caufed, fo that Gravel is the product, not the producer or primitive caufe of this pain.

In this Difeafe the Belly is to be kept loofe, which may be well performed by this following. R of the Pulp of Caffia, newly drawn four ounces, Tartar Vitriolated, two drams, powder it, and mix; to the mixture, add ten or twelve drops of oil of Juniper. Take of it once in three or four days at night going to Bed, at each time fix drams, or an ounce, which will give two or three Stools the next day.

Then give the following Powder. Take of Tartar Vitriolated a dram and a half, Crabs-eyes, Salt of Bean-stalks, of Broom, of Restbarra, and Pidgeons dung each two scruples, mix and make a Powder. The Dose is a scruple or more twice a day in Parsley or Saxifrage

### [64]

Saxifrage Water. When the pain is very great, and the Urine stopped, the following potion may be given to the comufort of the sick. Take of fine Venice Turpentine washed a scruple, dissolve it in the yolk of a new laid Eeg, by beating them well together, then put them to a quarter of a pint, on half a pint of new Milk, and let the patients the drink it off at once:

Wild Carrot Seed being boiled in Ales for and the Ale drank two or three times at the day, is good both to hinder the increase of the the Stone ( by refifting the putrefactivee the ftonyfying odour or Ferment, ) and alfo toom diminish it being grown, but its use must m be continued a Month together at the The German Academ. Curios. in leaft. their first Volumn published in the Year 1670 observat. 107. highly commend the Decoction of Paul's Bettony for expelling the Stone, being drank in a large quantil ty, and continued for fome time; and example of which is there fet down at large, of a certain Woman who was freed from a Stone in the left Kidney, by the ufe of the faid Decoction, after it had been her miferable Companion for fixteen years.

The Pill being taken in a full Dofe, and diffolved in a Glafs of well warmed White

ON

### [65]

or Rhenish Wine (or where that cannot be had, Ale) and fo drank, gives prefent ease in the most grievous pains, occafioned by Stone or Gravel in the Kidneys, when all other Remedies fail; and I remember once a Gentlewoman that I gave it to, either at the first or second Dose voided three Stones of an untoward Figure, with much pain, and remained free in from that tormenting dolor (with which the was wont to be often exercifed ) for the fpace of three years. But for the Stone die in the Bladder, I do not know that either the Powder or Pill will do any thing, as at to the Cure, only give fome prefent eafe.

> Flatus Hypochond. or Windy Me= lancholy ...

Nd likewife there is the Windy Melancholy, that many, both Men and Women in this Country are troubled with, (efpecially those that live near the Sea) I will not fay, that if the party hath been troubled

### [66]

troubled with it above a year, it is not tee be cured; but I never knew it cured: Though this Powder of mine is the beffin thing that ever I used for it, it gives them speedy ease, and much corrects the sharpness of the Malady. And one that hat not been above a year troubled with its it cures them at once taking. And beso cause this Distemper bears an affinity with fome other flatuous and windy Distemperson I shall treat of their causes together; as an Coliack and Illiack Passion with a windy Pleurise and Tympany.

These are called windy Distempers (though very improperly) neither Air of Wind are the cause of any of them.

171

tra

TI

#### Caufe.

Negatively, not Air or Wind that is breathed into us, nor from any windined that is in Meat or Drink, that is the cauf of those Distempers; but positively from some malign or putrefactive or dung quality that is contained in them, or from vitious quality or debility of the digestiv Ferment, or from Excrements detained beyond their due order.

There is in every Vegetive an aiery fpi

1011013

# [67]

rit [or Gas ] which doth defend and preferve it from putrefaction, and endeavours its fubliftence in its primitive effence and figure, which fuffering a Fermentation is evaporated and exhaled.

23

ured; ; bet

han had

die.

Ni

戰略

#### EXAMPLE.

As in New Wine, after it comes into the Cellars, it paffeth another Fermentation.

Likewife a Raifin of the Sun, when the aiery fpirit which was in the Grape is feparated from its concrete Body, the Grape kow contracts it felf, and taketh a new Ferment of Raifin.

Alfo we fee in an Apple, when it is roafted at the Fire, this aiery Gas is exhaled, which was co-fermented with the Apma ple.

In like manner all things that begin to putrefie, this aier y Spirit parts from them, and then they take another Ferment. As in poyfons, when their venemous tharp quality feifeth on the Mufcles, this aiery Blas flies from them, whence the Body tumifies and fwells fo: as we fee in Bodies that die through putrefaction, a little before they die, how they are opprelled with F 2

## [ 68 ]

with this Wind, which doth puff up their Bodies after they are dead.

The windy Blaft is made chiefly in those three places, the Stomach, Ilion and Colon.

From the Stomach proceeds this windy Melancholy (as they call it) and most of: Dia those Flatulent Distempers, for whenfoever any thing is not well digested in the Stomach, this Blaft is prefently made, assimil we fee in this Diftemper; whatfoever they and eat or drink, how they belch for it, and are worfe commonly after they have eaten, than they were before; which doth clear -- which ly demonstrate, that the principal defect iss in the Stomach, and therefore not from the meat they eat, but from the vicioufness or defective Ferment; for let another eat and drink of the fame, it doth not difturb them at all. And to talk of windy Meats, is but a meer Chymera : there are no Mears or Drinks windy to good and healthful ftomachs; too great repletion doth likewife ftir up, and caufe this windynefs in the ftomach.

By the favour of belchings you may understand the temper of the Stomach.

Sour Belchings betokeneth a weak fto-

Unfavory fheweth a weaker.

31.17

Burntift

# [69]

Burntish, bitter and sharp ones, proceed from a vicious ftomach.

There are fome Specifical, which give their own favour, as Garlick, Onions, Radifhes, Oc.

1 could fay much more to vindicate the Spleen from having a hand in those flatu. lent Diftempers, as alfo that air or wind that we received from without, is not the aufe whereof they are made. But left I should

1

infe

oles,

副

fol

10

11

122

13/07

If you would bebetter fatisfied, read Doctor Highmore, de affectione Hypochond. fol. 105.

make my Book outswell an Enchyridion, I do pass it in tilence : and defiring to be ingenious and faithful to all, and not willing to write the least thing that I were not de convinced of the truth of, nor give you the leaft occasion to fay that I extol this incomparable Medicine beyond its merit; wherefore I must confess what's truth; I never knew them really cured in my life, if they were habitual, and of a

long continuance ; nor in-Quodinturans deed is there any Difeafe, if eo difficilis. once it be familiar to nature,

that is of easie curation. I could with, for the fakes of those that are troubled with these Maladies, that I had fuch a fure F Remedy 3

# [70]

Remedy to cure them after long continuance, as this powder is to prevent them when they are in the beginning, and the fureft to bring the greatest help at last.

I would not willingly be miftaken by any one, nor have him to abufe his judg-. ment, as to think he may be as foon well of an old and chronical Diftemper, as: of one that hath newly taken possellion of the the body. To proceed,

This Difease hath great affinity with the star Scurvy, and therefore the same Mediciness and are proper for both.

R of Crabs-eyes prepared two drams, Tartar Vitriolated a Scruple, Flowers of Sal Armoniack a dram, Confection of Alkermess without Musk three drams, Conferve of Garden Scurvy Grafs three ounces, mix them into an Electuary, of which let the patient take every morning and evening a dram and a half, or two drams upon an empty ftomach, that is, let him fast an hour after it in the morning, and take it three hours after Supper.

Strong Purges are injurious in this Difeafe; but after the use of the aforesaid Electuary, you may purge with the following Powder: R Cream of Tartar fifteen Grains, Salt of Wormwood and Scurvy Grass each Unable to display this page

## [72]

Illiaca Passio : or, the Wind in the Small Gut.

T hath been an old received opinion and that this Difeafe comes from the twift: ing of that long and finall Gut: but I have reafon to believe the contrary.

This great Torture is not from the wind contained there, but from an excrementitious matter that doth adhere unto the Illion; it is as it were glued unto it by its flimy matter, which it is lined withall and in time is coagulated into a very obdut in rate and hard fubftance.

I remember when I was in Dunkirk there was a Soldier which was miferably troubled with this Difeafe for fome days after general Evacuation, Vomiting, Cly fter, then carminative and fumous Clyfterss and abundance of other means, he found not the leaft eafe: there was given him three or four ounces of Quick-filver, and that came foon through him, yet no eafe at laft I gave him four of the biggeff Musket Bullets I could get; about fix on eight

## [73]

eight hours after I came to him, and he was difcharged of pain, and was fallen afleep, which he had not before for feveral nights; after he awaked he had a Stool, wherein was two of the Bullets, and about eight or nine great round pieces of excrement, greater than the Bullets, and they did feem to be as hard.

18

hich,

trik

TER

n the

-9721 10107

aitby

A.B.

Befides, it could not be wind, for it is always repleted with wind, to hinder fuch accidents, by making the more clearer and more flippery way for the Chyle, and when there is a redundancy of it, it is eafily forced forth behind, without any Griping or Torture.

So you fee it is not from Wind, or knotting of the Gut, but from fome excrement that doth adhere unto the fame.

# COLLICK.

The Collick is commonly from Excrements contained beyond their courfe, which vitiates the Ferment of the place, whence

## [74]

whence cometh those windy Blafts, which are not wind, but far more fubtle and rare than the most rarified air, being of an incoagulate nature; whereupon those retained excrements adhere fo firmly to the Gut, that it contracts it, which is the cause of that violent dolour. I had a man that was shot (at the Siege of Iper 10

Hypogastrium.

in Flanders ) in the lower and Belly; which penetrated and

the Colon: all his Excrements came out at in his wound for about fix days, fo that the: Intestinum Restum, or Arfe-gut became: in ufelefs: this wound lay twenty four hours: it exposed to the wind before he was dreffed. I made a Suture to the external Orifice, and cured him by vulnerary Clyfters, cc.

Befides, how many wounds have I feen that have penetrated the Breaft and Belly, and yet never troubled with those windy Pains or Tortures; and yet we fee there is hardly a Distemper amongst us, but we accuse wind, troubled with wind,  $\mathcal{O}_{\mathcal{C}}$ . In but the small benefit those discussors of wind have brought, is able to convince any, that wind is not the cause.

But indeed this aiery Blaft, which is made by a bad digestion of things, that feems

feems to be wind, (which is perceived to move between the Muscles of the fides, and caufeth those Ructations and Belchings ) hath never been thought on by the Schools, and but of very late years treated of.

To confirm Mr. Couch's opinion concerning the Illiaca Paffio, I shall here add another experiment, which is this; About a year ago a certain man was forely the tormented with the excruciating pains of this Difease, commonly called the twifting of the Guts, his Phylician treated him with ( I fuppose) all the usual Remedies, and some other Devices, one of which was I remember to blow wind into the Intestinum Rectum, or Arse-gut with a pair of Bellows, but nothing taking effect to give the miferable man any eafe, the last Remedy was instituted, which was three pound weight of Quickfilver, which the Patient poured down his Throat on Friday about ten or eleven in the Forenoon, and prefently (as advised) rode a little way for the better agitating of his Body, but yet to no purpole; for on the Sunday Morning following I was at his House by accident, with another perfon, who

## [76]

who was a Phyfician, and then none of the: Quickfilver had made any paffage; he had the very afpect of death, and complained! of an intollerable cold and weight in his at Belly, went not to bed in three nights, and if he fell into the least fleep, nothing; but dotage and distraction appeared, His; mm Phyfician was at a ne plus ultra, thinking; him a dead man, as all that faw him. Up-- point on enquiry we understood that he was not: Min forbid the taking of any thing, nor yet directed to any thing befides Canary, where-- men fore we advised that he should abstain from the use of all acids & others that might have: 100 any power to coagulate any of the Quickfilver in his Body, and to drink fweet Oill plentifully, the which he prefently put ini read execution, and the next day being Munday, the Quickfilver began to come away and like Small Shot, and the use of the Oil being still continued, by Tuesday night he had parted with it all, or most; for what: they had collected wanted but four ounces of the three pounds, after which fomebody well advifed him to fwallow Golden Bullets, which he did divers times, and fo to a wonder recovered, and is well to this day. Now had this Torture been occalioned only by wind, fuch a quantity of Quickfilver

# [77]

Quickfelver could not poffibly have been thereby detained in the Body one quarter of an hour: or again, that it should be the twifting of the Gut, as is commonly believed, is impoffible; for it cannot be, that the Gut should be fo closely twifted up He by any accident that may happen either within or without the Body, that three b pound weight of this active ponderous Mineral flould not in three days time find a paffage; befides ( which I had almost forgot to tell you ) his Excrements came away with the Quickfilver in finall hard Bits, like dried Sheeps Dung, which plainly proves that the occasional caufe of this Difease is the Excrements grown to a in preternatural hardgefs. I will here fet down (for the fake of the poor) a cheap Month . and easie remedy against this cruel Enemy.

R of the Seeds of Annife, Fennel, Carraway and Coriander, each half an ounce, let them be all bruised, put them into a quart of Ale, or somewhat more, boil them gently in a Veffel close covered for about three quarters of an hour, then take it from the fire, and A strain it, and let the Patient drink half a pint at a time warm. And by God's bleffing he shall foon have eafe.

illes.

TH

This is also good in the Wind Chollick. But

# [78]

But the Balfamick Pill is the most immedia ate Remedy for the Wind Chollick that ever yet knew; but it is not to be given in the Illiaca Paffio; therefore I will hereen at for the fake of the ignorant, fhew how will they may diftinguish those Diseafes from one another. The pain called the Twifthan ing of the Guts lies about the Navell and higher, and is felt only before, non and extended to the Right and Left Sides that of the Chollick is about the Navel Die and lower, going crofs the Belly to both man Sides, even to the Back, the pain generation rally prefling to the bottom of the Belly with a ftoppage of the Urine, which ne ver is in the former; there are fome Symptoms which are common to both, as the Burning, Chilnefs, Reaching, Vomiting, c. but what I have faid before is fufficient for any to know them afunder.

A Gentlewoman living in Greenwich was lately feifed with a pain in all her Bones, and a violent Loofnefs, for which we fhe took a Dofe of the Balfamick Pill, and in two hours time was at perfect eafe, and the Loofnefs ftopped. The next morna ing fhe took a Dofe of the Powder, and at night a Dofe of the Pill, but fleeping very foundly, with the Cloaths off of her the

gott

# [79]

got cold, which turned to an Ague; after the had had two Fits, fhe took a Dofe of the Powder an hour before the accefs of the third, and fo was cured of her Ague, the next day fhe fell into a Fit of the Cholick and Stone, for which fhe took a Dofe of the Pill, which gave her eafe, and by another Dofe the night following was quite freed. Thus you fee divers Difeafes ( and those not trivial ones neither ) to be cured by the fame Medicine. This was performed by a Gentleman in that Town that buys those Medicines of me.

This Difeafe having its Inn in the thick Guts (particularly the Colon, from whence it hath its denomination) may be eafed by Clyfters, for which purpose the following is good.

R of the Seeds of Coriander, Annife, Fennel, Carraway, each a quarter of an ounce, let them be all well bruifed in a Mortar, then boil them in a pint of Poffet-drink gently for a quarter of an hour in a Veffel close covered, then strain it, and add thereto two ounces of Oil of Cammomile (and if you will, a little Canary, and let it be administred conveniently hot. If you put to it fix or feven drops of the Oil of Harts-horn it will be then stronger and better,

### [ 80 ]

The Fume or Smoak of Tobacco is an prefent remedy for eafe, being blown up into the Guts by a Pipe put into the Fundament. The forementioned Drink with Seeds is alfo good in this Difeafe. And forafmuch as the Chollick is many timess wont to be accompanied with a grievous Symptomatical Vomiting, it is neceffary; that it fhould fpeedily be ftopped, not only; in regard of its own moleftation, but alfor becaufe it hinders the retention of any Medicine in the Stomach, to which end ufer the following mixture.

R of Simple Mint Water three ounces, A! qua Mirabilis an ounce, Tincture of Cinnamon two drams, Laudanum Opiatum three grains, Syrup of Myrtles and Mint of each half an ounce, mix, and let it be taken often by a spoonful at a time.

After the violence of pain is over, purge the Body gently with this following.

R of fine Manna an ounce and a balf, Cream of Tartar balf a dram in powder, mix them, and lot them be diffolved in a draught of warm Ale, or rather Posset-drink, and give it in the morning fasting.

Timpanites ;

御

This Timpany arifeth from a ftercorous or dungy Ferment in the Sacculus, or blind Gut, from Meats that are not perfectly freed from their ftomachical fharpnefs; and there being obftructed, ferments & putrefies; from whence this foctid aiery blaft proceeds, (indeed the worft of all forts) which is breathed forth to the Peritoneum, and fo inflates the whole Abdomen.

That it is produced of fuch a ftinking Air, proceeding from fome putrefied matter, 1 am very certain; but whether it takes its Rife from the blind Gut ('as a worthy Author affirms) or from the Mefenterium, as I rather think, is controverted: and that this dungy matter might be fucked up by the Mefariack Veins with the Chyle: but what I am not fure of, I fhall not fpeak unto.

I never had one under my confideration of this Diftemper, fince I had the know-G ledge

[82]

ledge of this powder; and therefore H cannot fpeak any thing by experience in this Difeafe : but undoubtedly fince itt doth unobftruct the Kidneys, and abfterges what is vitious in them, it muft needs bes good for this. And I perfwade my felf, whofoever fhall try it in the beginning off this Difeafe, I queftion not but ( with God's bleffing ) they will find a happy fuc-

This fort of Dropfie is eafily diftinguifhed from others; for in this the Belly only fwells, and is hard, not yielding to a the preffure of the Fingers, but being ftruck upon, founds, after the manner of The Cure confifts in changing a Drum. the putrefactive Ferment of the Chyle, whether it be in the Gut, or the Veins of .... the Mefentery it matters not; the which being done, the inflated Abdomen foon falls of its own accord, for that is but the effect of the Difeafe, the which necessarily ceafeth, when its propagator and nourifher is taken away. Purging is always pernicious in this Difease (I-mean with direct Laxatives ) and therefore not to be used : This following is very profitable.

R of the Seeds of fweet Fennel, Annife; Carraway

# [83]

Carraway and Coriander each an ounce, Juniper Berries an ounce and a half, let them be all bruised well, and put into a Glass with half a dram of Salt of Tartar in powder, upon which pour a quart of the best Sherry Wine, stop it close, and let it stand two or three days, then begin to drink of it three times a day, yiz. in the morning, half an hour after dinner, and at night, at each time a fmall Glafs, it will be much better if you add to it a dram bf the Volatile Salt of Amber in powder, which will diffolve. When that is drank put you may put to the Ingredients a pint wo of Wine more, with half a dram of Salt of Amber, and it will be good. The Dily Volatile Salt of Sylvins is excellent in is this Difease, as also in the Scurvy, Flatus Hypochondriacus and others. But the Powind Her and Balfamick Pill are more certain and quick in the Cure than any other that I know of.

In the next place I shall speak of Gouts.

Artbritick

加加

# [84]

# Arthritick, or Gouty Disease.

Hey take their names from the places they frequent, viz. Hands, Feet: Knee, or Hip, or Recurrent, and then it is called Artbriticus, Chyragra, Poby the vulgar, the Running dagra, Gona-Gout : the Gout differet gra, Siatica. from other Difeases, for itt Idæa or Character confifteth in the vita fpirit, and is transferred through the Seed, (which makes it Hereditary where it maketh a fermental fharpnefs which when it is exorbitant, is fent forth into the extreme Parts, and there meetin that Callous or + feed Glue, which is conjoyue. + Synovia. between the Ligaments an

the Bones it doth affect it with its fermental Tharpnefs, and is the caufe of that great dolor or pain, and inflammation.

It is not from humours, excrements, c blood, but a morbifick Idæa feminally in planted in the vital spirit, and that is th reason it is so hard to cure; for there

ne

# [85]

not any Arcanum extant will reach it.

Yet I believe there hath been a † Remedy found for it, and hope there will be again, when it will be more divulged.

Horizontal Gold of Paracelfus.

To take off a Toe or Foot doth not cure the Gout; for this pain that is exafperated, is but the fruit or product of it, for it is virtually contained in the Seed implanted by the vital fpirit.

I dare not promife this Arcanum, or fecret of mine to effect this Cure: yet in extremity of pain I may boldly tell you, there is not any thing will give you eafe fooner; and for any thing I know, it may cure it, for it will ftrongly repel from the place.

The Sciatica and Knee-Gout I never yet failed to cure, with a water I make to embrocate, or wash the part withal, though I have had some that one Leg was a great deal shorter than the other, so that they went with Crutches, having an Atrophia, or Confumption in that Leg and Thigh.

There is another Difeafe, much like, which is the *Rhumatifmus*, or Running Gout, but this possefieth the musculous part as well as the Joynts, and exulcera- $G_3$  teth

### [86]

teth or breaketh out, wherefore fome where thought it to be that Difeafe they call the King's Evil : I

+ Scrophila.

have feen feveral that have a laboured with it in thiss

Country ; and without they have a Curce at for it in the beginning, it brings them into a Confumption, yet I have cured one that had it twelve or fourteen years.

#### Place.

The Place that this Difeafe doth commonly poffers, are the Legs, Thighs and Hip-bones; fometimes the lower Region of the Belly, and then it is very danger ous; for it is of a very fharp and malign nature, and fouls a Bone prefently, if not prevented.

#### Canfe.

From fome excrementitious matter that the Mefaraick Veins have attracted, of a fætid favour, not fit to be transferred with the Blood, therefore the Liver difchargeth it into the emulgent Veins, to be carried to the Reins, and fo to be evacuated through the Bladder; but the Archens,

# [ 87 ]

or vital spirit of the Reins, raifed up with indignation against such a fordid matter, palling through them, forceth it to the Legs and Thighs, (as in an Anafarca) and feating it felf, by its vitious quality corrupteth the place.

#### Cure.

If this Powder be given before it hath too much defiled the place, either by fouling the Bone, or becoming exulcerate, it bringeth it away by the Root, if not at once taking, in twice or thrice be fure; but if it hath had too firm a footing, then it requires the affiftance of fome other things.

This Difeafe being fo intimately joyned to the very Archeus it felf, hath its Inn in the most private Recesses, or innermost Chambers of Life, into which admittance is denyed to all common Remedies, and allowed to none but the most powerful Arcanums, which none but the Adeptifts have known. Therefore fince I know not what internal Remedy to direct you (that may be had in all places) that hath power to obliterate the Character of this Enemy G 4

### [88]

Enemy out of the fpirit of life, I shall be content to fet down an outward application, the which (respecting the effect only) doth frequently give ease to the pained part.

R Common Oil of Rofes two ounces, Oil off Guaicum and Bricks of each one ounce, mix: en them, and put them into a clean Pipkin, and fet them over the fire, into which cut in thin flicess has four ounces of Castile Soap, stir it well, till it all disolve in the Oils, then have in readiness half an ounce of Opium dissolved in spiritt of Sal Armoniack, which add to the other, which taking it presently from the fire, and keep it: stirring till it be cold.

Which use as an Ointment; but if you would have it for a Plaister, you may add for for much Virgins Wax when it is hot, as will give it a fufficient confistency.

The bathing or fomenting the pained part with hot Urine wherein Caftile Soap is diffolved doth often give eafe; that Urine is beft that is kept till it putrefieth and ftinketh.

But the Arcanum and Pill doth certainly refolve and expel the occafional matter, although I do not know them to be able to cure this Difeafe radically, but fome II have

have cured therewith, having it in the beginning.

In the Month of December 1676, a Gentleman defired my ailiftance, who was forely afflicted with the Gout, great pain and tumor in both Knees, infomuch that he could not ftir from his Bed to the fire fide without Crutches for fome weeks before, during which time he had been under the difpensation of a Physician, but in no part thereof ever found any comfort, except in his promifes : but he being difmilled, I first gave him a dole of the Arcanum, or Powder, and at night after a dole of the Balfamick Pill, after which he could go crofs the Room without his Crutches: I continued the use of the Pill five or fix times, and repeated the Arcanum once, and he was freed both from the pain and tumour, notwithftanding the extremity of the Weather, being a fevere Froft and Snow. But about ten days after he having urgent bulinefs abroad, the Weather then breaking, being wet, yet cold, got a Relapse, the Difease then returning with great pain and tumour in one foot, by the repetition of the Arcanum once, and the Pill three or four times was perfectly reftored, and hath fo remained to this

# [90]

this day, without any other Remedy, except two Dofes of the Arcanum, which he took the Spring following to prevent a return.

# Pluritis : or, Plurisie.

This Difease is accompanied with a Fever, it derives its name from the: place where it is seated, which is the inner: skin of the Ribs, which we call Pleura.

The matter hath been generally received to be blood; but it is very doubtful unto me.

There are two reafons from whence: fome have concluded it is blood.

First, By derivation, in opening a Vein on the fame fide, which hath immediately brought ease; I have done it feveral times.

Secondly, that intention not being timely performed, then an *Empyema*, or Imposthume ariseth, through the blood there suppurated.

Butt

# [91]

But on the contrary :

1. If it be from the pecculancy of the Blood that hath made an Eruption in the Veins, and extend the Pleura, whether this Blood doth re-enter the Veins, and is evacuated by Phlebotomy? which is contrary to that principle, What once nature. hath cast forth, never more is received into favour.

2. If not out of the Veins, how comes an Empyema, or Imposthume, which is never caufed in the Veins?

16 3. How comes this Sanies, or bloody matter, which is often feen in a Plurifie, though not yet come to an Empyema?

4. If it be blood, how comes it to be cured by a Diaphoretick, or Medicine caufing Sweat, which hath been often done?

NEE ----To treat accurately upon this Difeafe, would make a bigger Tract than I intend this.

In a word :

0.5

Ven

301

I have cured this Difeafe both ways.

There is an aiery Blas contained in the Blood, which doth ftir up and actuate it, and makes it more fluid, and fo likewife there is incorporated with the Blood a Serum, or watery matter, to contemper its Ebullition and Inflammation. But

[92]

But when there is a redundancy, or too much of it, or elfe when it may be too fharp or falt, then this aiery fpirit conveys it to the Pleura, to be evacuated by transpiration thorow it, whereby those Veins are fo repleted with this Water, that it extorts and dilates the Pleura, which caufeth the pain in the place; and unlefs it be repelled by bleeding, or diffipated by a fweat; it maketh an eruption of the Veins, and the Blood iffuing forth with it, foon suppurates, which makes an Imposthume, or Empyema; and although an eruption by those means may be prevented, yet there may be fome of that aqueous matter transpired through! the Pleura, which may be tinctured with a fanguine: complexion, and caufe that colour which is feen in expectoration; fo that 1 conceive, the effence of this Malady is not: blood, with fubmillion to founder Judgments.

Now you may ask me, which off those two ways I think the furest : for Hippocrates faith, a Plurific not perfectly cured before the fourth day, the party becometh confumptive.

Asfw. I judge the morbifick matter to be evacuated by transpiration through the

「「「「「「「」」

時 百百四

### REASONS.

i. For fo there is nothing exhaufted but the matter offending.

2. Those that are cured by Phlebotomy, or Blood-letting, are more liable to that Diftemper again.

3. The Blood is not fo depurated from this offenfive matter, as by a powerful Sweat.

4. The party affected may be in that condition, that letting Blood may prove prejudicial; as women with child, young women obstructed, &c.

I am not averfe to Blood-letting; but I had rather make use of my Balfamical Pill, which effects it fingularly, and not hurtful in any condition.

Now I am fpeaking of letting out blood, I fhall give my judgment in that great queftion, (which hath been, and is to this day controverted amongft our great Doctors) whether it be proper in Fevers.

Hollerius, Forrestus, Sennertus, Galen, Avicen, with the rest of the Schoolmen, press it of a necessity to be done in the beginning.

Paracelfusz

#### Paracelsus, Helmont, with the rest of the Quickfilver Wits, condemn it, as not convenient at any time.

[94]

Betwixt Scylla and Charybdis there is a fafe Channel, but he must be an experienced Mariner that can fail through.

As Practice is the beft part of Phylick, fo obfervation is the fureft.

1

In

From my observation I shall speak something to those two extremes.

If I could think the School definition of a Fever true, that it is heat befides nature, being kindled in the heart firft, and throughout the whole Body, I fhould think nothing could more clearly indicate Phlebotomy; but I hold the contrary, and no neceflity for it in the beginning, but rather prejudicial.

I have been an observer in this Intention about twenty two years, and have had many hundreds under my confideration at once, and almost fome of all Diseases; and those in Fevers, fome have been let Blood, and others not; and for the most part, those that were not let blood, were well before those that were.

# [95]

In any contagious peftilential malignant Fever, to let blood is

very deftructive, as experience well teacheth.

DOL 1

In a continual Fever, as Synochus, or burning, Coit prolongs their ficknefs,

Detracto fanguine licet impuro, impurior multo, fuccedit, Fernel.

and commonly ftrikes them into an intermitting Ague, or fome other Difeafe.

In a Fever intermitting, or determinated into Paroxyfms, or Fits, it strongly confirms them.

In a word, to let blood in any Fever in the beginning, I have found to do much hurt feveral times, good hardly at any time: fo that I am inforced to fhew my diflike of letting blood in the beginning of this Difeafe. Neither do I confent with great *Helmont*, the Calciner of Phyfick, and laudable *Paracelfus*, that Blood-letting doth exhault the fpirit of life, becaufe the life is feated in the blood; nor that it may be convenient at any time; but I have reafon to believe the contrary.

'Tis true, Letting-blood doth never ture a Difease properly, but it doth mightily refresh and cherish a weak nature that hath almost spent her felf, through freeing her from her mortal Enemy,

# [96]

As we see often after a tedious sickness,

Quo natura verget ad locum conferentem eo ducere oportet. nature her felf ftirs it up) as a *Crifis*, and then to take: a little blood from her, doth much revive and ftrengthen her.

I have cured a man that had a Quartam In Ague above a year and four months, only, and by once letting blood, who never had an day Fit after.

The drawing blood was but the occafion, nature was the efficient caufe; for im fhe was much more elevated and ftrengthened by it, whereby fhe expunged the morbifick Reliques with a greater facility.

I have cured a man that had laboured with an *Atrophia* or Confumption for a long time (wholly become a meer Skelleton) only by letting blood three times, about fix ounces at a time, in the fpace of ten days, without the use of any other means, he became perfectly well to the admiration of all his Neighbours.

I have feveral times fince experienced it in an Hectick Fever; and although this nor any thing elfe that I know of will cure it, yet they have been more refreshed by it, than by all the things took; and whofoever practifeth it, will find it fo.

Icould

# [97]

1911

日頃

12/2

ter, and I could inftance in feveral more, but let this fuffice to evidence the truth (though a Paradox) that Phlebotomy is very difguftful to nature in the beginning of a Difeafe, but very grateful in the latter end.

The Pleurifie is cured by Diaphoreticks and Diureticks, being mixed with fuch things as have power to concentrate acidity, as this following mixture.

Rof the Syrup of Marsh-mallows an onnce, Syrup of Corn-Poppies an ounce and an half, Crabs-eyes prepared and Mineral Bezoar of each a dram, mix them, and make a Lin-Eus, of which let the Patient lick very often till he come to sweat.

Or if he had rather have it in a liquid form, add to this Mixture Triacle and Carduus-Water of each two ounces, fhake them well in a Glafs, and take it by fpoonfuls till fweat proceed. For an outward application this following is excellent.

Re of the compound ointment of Marshmallows an ounce, oil of sweet Almonds and Roses of each a quarter of an ounce, oil of white Lillies, Poppies, and Henbane strained each a dram and a half, Chymical Oil of Cammomile, Cummin-Seeds and Bricks of each a scruple, Camphire half a dram, mix them, and make a H

### [98]

Liniment. With which anoint the pained fide as hot as it may be fuffered.

It would grieve any pitiful heart to fee how many perfons lives in this Difeafe, as well as fome others, expire with their Blood, fome being blooded five or fix times over, and yet receiving no eafe while they live, as I have divers times known. About three or four years fince: I was fent for to a Gentlewoman, lying under this Difease, she had been let blood three times, but yet had no eafe, and was plyed with Lohochs and Linctus's, and fuch like broken Reeds; and while I was: in her Chamber the Apothecary came in with a Commission to draw more blood, if he found her not eafed. She was Patientt to one of the oldest Doctors in London, upon which, and the confideration of her weaknefs, I wholly declined to meddle with her, not without much reluctancy and regret of mind fince, for my timerofity: becaufe I then thought I might have faved life by the Balfamick Pill; and on the other hand, was confident, that the would be certainly loft by that usage the had, which accordingly came to pais the next day, at the fifth or fixth bloody Bout, dying under the Lancet. But I never

## [99]

never failed to cure any Pleurifie with the Pill, by repeating it, if need be, in ten or twelve hours; I have fometimes wholly removed the pain in two hours time, although they have been twice let blood before without eafe, although I do not deny put blood letting may fometimes cure it without injury in fuch as are lufty and trong, or those that have a *PlethorA* of Blood. But for a common easie Remedy, here is none exceeds the infusion of Horselung in Ale, for it is rich in Volatile Salt, whereby it hath power to flay any acidity in the blood, as also to transpire any other eccant matter.

# Ictoritia: or Yellow Jaundice.

rellow, and a bittemels perceived in t

of this mayor which was morbin

H

He Schools have told us, That this Difeafe proceedeth from an obstruction the Gaul-Bladder, whereby Choler is fufed through the whole Body. Helmont judgeth it to be a poyfonous rment besides nature, which so badly af-H 2 fecteth

### [-109]

fecteth the Pylorus, or lower Mouth of the Stomach, that the digeftive and diffributive faculty is alienated, and the Seat of this poifon to be either in the Duodenum or I! leon. And he proves it to be poifonous from the inftance of one that was bit by: Serpent, who prefently turned yellow. But my Judgment doth not fute with either; Helmont is very near it, only think it not to be of fo poyfonous a national ture as he takes it to be.

This Diftemper is often the fequel of fome antecedent fickness, and therefore not any primary Difease, but rather the effect or relique of some foregoing one.

If you look back into that Difeafe of Children, there I tell you how the peccan matter comes to be tinctured with Choler fome of this matter which was morbific in fome precedent Difeafe, did adhere u to the Duodenum or Pylorus, which ti ctures the Chyle, and fo the body becom yellow, and a bitternefs perceived in the mouth, I fay, it is from the morbifi matter of fome precedent Difeafe, th this Balfome of the Gaul hath colour and feafoned with its bitternefs, to p vent its putrefaction, and adhering to the Pylorus or Duodenum, ftains and imbitt

feateria

# [ 101 ]

the Chyle, which is transferred through the whole Body, whereby the fuperficial parts are difcoloured.

this cr.l.

bya

and

with the second

tom

初期

As to the biting of the Serpent, this yellownefs is not effential from the poyfon of the Serpent, but from this Balfom that is fent thither to antidote it, and fo the Body becomes yellow : as I have inftanced in a little Wormwood and Saffron.

# CURE. la stratt chi

I have often cured it with a little Turmerick roafted in an Apple with a little Saffron.

Likewise the middle Rind of a Barbary Tree, steeped in a little White-Wine, and a little Saffron, Flowers of Marygold, Rhubarb. &c. The yellowness of those means shew their ordinati-

on to be for the scour- Vide Helmont: ing of this Relique; for

Signatures bewray the internal Crasis, or temperature of a thing; but the Crasis it felf doth not discover the thing.

Things of this nature have happily cured feveral; but if those should chance to fail, my Powder doth it presently.

H 3 Calculus

# [103]

# Calculus Vesicæ: or the Stone in the Bladder.

The Stone in the Bladder ( that Monfter in nature ) which well may be reckoned with those Difeases, that are the shame of Physicians. The cause and manner of its generation hath not rightly been understood by the Ancients: and our Modern Physicians having made no latter fearch into it, there is yet no Remedy found out for the Cure, but the poor miferable creature is left to the tyranny off this Monster, or delivered up unto the torturous way of cutting, which is fuch a Remedy as was never instituted by God or nature.

All men are liable to this Difease, though fome more than others; but effecially Children.

You may observe, that in most Mens water there is this storyfying matter, though it may not be discerned when it is hot and new; but after it hath stood some while exposed to the cold, it is separated from

## [103]

from the Urine, and remains in the bottom of the Pot, or cleaves unto its fides.

#### CAUSE.

11

da

REG.

it.

15

Elg

IL B.

107

「「

Men of ripe years are not fo inclinable unto it as Children, becaufe they have a better digeftiou, and have not fo much of that crude matter out of which it is made.

Old men are not incident unto it, though their Digeftion be weak, becaufe they want quantity of the matter; but when the Ferment of the Bladder is weak in them, they are hable to the Strangury, which I shall speak a word unto presently.

But Children are most inclinable unto it, because they have weak Digestions, which breedeth abundance of Crudities, the Mother of this Disease.

It is more from the weaknefs of the Ferment of the Bladder where it is produced, than from the matter producing; neither is this matter coagulated and hardened as Clay is by the heat of the Sun; but condenfed as Ice is, by the frigidity of the Air, And what inordinate heat is per-H 4 ceived

# [104]

ceived, it is only accidental; as by that example before of a Thorn in the hand.

I could produce feveral inftances to illuftrate this truth; but I fhall omit them at prefent.

The intention curative will flew it, according to that Maxim; the trueft Indication is from the benefit or hurt of things formerly ufed: and that hot and warm things do mitigate and correct the pain, and cold things do exafperate it.

#### PROGNOST.

If it hath been of a long growth, and confirmed, I am forry to tell you, I known not what will diffolve it. Such a Remedy hath been, if we will credit *Paracelfus*, which I believe to be true; and I hope God will difcover it to fome of us, for the comfort of those miserable creatures which are affected with it, and keep them from that torturing courfe of cutting, which very often proves a Remedy worfe than the Difease.

But when it is in doing, and of no long continuance, it may eafily be prevented and reduced.

CURE.

# [105]

#### CURE.

Now the Cure confifts principally in those three things, viz. Evacuation, Alteration and Corroboration.

20

10.

13

11

겚

ope

捕

t B

曲 鸿 加

1. In evacuating the matter contained.

2. In altering the Ferment of the Bladder, if it be vicious, or

3. In corroborating of it, if it be weak, which is commonly the caufe.

And you can hardly evacuate the matter, before you corroborate the parts,; which is done by this courfe.

#### Victús Ratio.

Let most of his Liquor that he drinks be Sack; let most of his Meat be roasted well, whereof let him eat but little at a time, though he eat the oftener; let his Bread be Bisket, or the Crust of Bread well baked; let him eat Salt with his Meat; Salt Beef boiled is good for him, if he loves it, and doth well digest with him.

Let him avoid Milk, Cheefe, let little Butter ferve him, and fruits : an Apple he

### [106]

he may eat if he defires it, Raifins of the Sun he may freely eat.

You must foment or bath the Region of his Bladder often with Decoctions of fome comfortable herb boiled in Sack, and fome good Ointment to embrocate it afterward, and fo bound up warm.

After ten or twelve days that you have: kept the Child in this order, you may give: him a Dofe of my Powder, which will bring forth the watter contained.

I shall direct any one further that shall defire it.

But above all things, let him avoid all old womens Medicines to void or break the Stone; for I verily believe that hath made many a Stone where there would be none; for if the Bladder be any way defective, whereby he doth not make water freely, they conclude prefently the Stone; and then take fuch a thing, fays one, and fuch a thing, fays another; and fo keep giving till it come to a Stone indeed; for all those things they give to force the Stone away, or break it, are inimical to the Bladder, and the more debilitates the Ferment, which is the efficient cause in generating the Stone.

I dare affirm it possible to generate a Stone

100

Stone in any Body, though never fo free from it, only by those things they commonly give to cure it.

I have been fomewhat larger in this than I intended.

I fball only name two or three Difeafes more, and conclude; for I intend it only for a fmall *Encbyridion*. thing to carry in a man's hand for a Memorandum.

So potent an Enemy is this Difeafe of the Stone to mankind, that it is very feldom vanquished or cured, except sometimes by the affrightful way of cutting, under which many also die, and fome others which recover, lofe the use and office of the Bladder for ever; fome there are again who generate the Stone afresh, after cutting, as Helmont notes, a young man who was twice cut, but the Stone growing again, the third time he died under the Knife. For indeed the cutting takes not away the power of making, although it may free a man from the matter made: Many Remedies have been invented to diffolve the Stone; but experience bath found them but feeble helpers. First, those which have promised help by being injected

# [ 108 ]

injected into the Bladder by a Syringe, as juice of Citrons, Spirit of Salt and others, becaufe they have been obferved to dif-Tolve a Stone in a Glass, taken from a humane Body; but alas their promifes are wain, for a fmall quantity being caft into the Bladder immediately ftirs upon an intollerable Strangury, as being wholly foreign to the ferment of the part: Again, the powers of all common Remediestaken at the mouth are altered, tranfmuted, and perifh before they get to the Bladder, for they must first pass three digeftions, fo that little more than their excrements can arrive at the Bladder; for acid or tharp things, from whence fo much hath been hoped, as foon as they are paft the Stomach, lofe their acidity, and are converted into a faline nature, whereby the sharpness is either wholly transmuted, on at least fo fealed up, that it is devoid of an acid act before it gets to the Bladder. 'Tis true there are fome things (as Turpentine 10 Alparagus, Raddifbes, &c.) which have their odours fo fast tied to the middle life of their Concretes, that they are not wholly overcome by the Ferment of the Stomach, but retain them even to the exc pelling of the Urine, but those are too feebled

# [109].

100

eeble refolvers; and befides perfevere not long in that eftate, but quickly fubmit to any dungy Ferment of putrefaction. Therefore a true Refolver of the Stone ought to have the following powers and properties, viz.

1. It must have a fufficient power to diffolve the Stone, being put with it into a Glass in a heat not exceeding the heat of our Bodies; and that not after the manner of Corrofives, which make a forcible diffolution with an ebullition and noife, but by the action are much weakened in their own force : but a true folvent acteth without noife or ebullition, diffolving the Stone infensibly, as warm water diffolveth Ice, neither is its own power infringed, or depauperated by the action.

2. The Solvent of the Stone ought to be fo homogenious and fingular, that it fubmit not to any digeftions or fermental powers through which it paffeth in its way to the Bladder, that coming thither in its own integrity and might, it may work upon the Stone as oft as it paffeth by it.

3. It ought to be fo amicable and agreeable to the Bladder, that being caft into it with a Syringe, it may not be painful thereto after the manner of fharp injections. Such

# [ 110 ]

Such a Remedy I have a near profpect of, but no more of that in this place : but I have a Medicine that will give eafe in the most racking pains of the Stone, within the space of an hour.

Atrophia or Marasmuss: or, a Consumption without a Cough.

A Confumption without a Cough proceeds from the lofs of the Ferment of fome principal part, whereby it decayeth and withereth, and fome other part doth too much abound and increase. I shall speak a word of this in the Rickets of Children.

and al test and

TE CREAT TO LEADER D

OWO.

### [ 111 ]

Febris Hectica : or, a Confumption with a Cough.

A Confumption with a Cough of ehe Lungs, is from the decaying and putrefying of them, either in part, or in the whole, nature fending a more than ordinary proportion of nourifhment to that part, which by that putrefactive Ferment is converted into Excrement, and is expectorated, or coughed up.

This Difeafe hath been feldom cured, if it hath been long on the party, whereby his Body ismuch emaciated and confumed,

Paracelfus had a Remedy for it: but I think it was buried with

him: others have cured it likewife, after a great lofs of their Substance.

Riveriuscent.4d of observ. by the fumy Troch Auripigm.

Whillt it is in *fieri*, or in *pigm*. the beginning, I am very confident this Arcanum, or Powder of mine will cure it.

5 L116 1

This.

### [ 112 ]

This Difease is usually the confequent of a Surfeit or Fever, or else it is Hereditary, being transmitted by the Parents to their posterity, which admits of no cure: that I know of by Medicine: the forment of may be cured, if good Medicines be administred in time, that is before the Stomach and Lungs be too much vitiated, and the Lungs exulcerated. But it is in vain at tempted by the usual Methods of Sugareco Milk, nourifhing Broths, Jellies, Lou hochs, Electuaries, pectoral Syrups, and Apozems, c. for they all add to the hear of Excrements, Milk and Broth of Fleff being fubject to putrefie fpeedily by the very heat of the Stomach, not meeting with the digeftive Ferment thereof ( which is almost lost ) submit to a vitious Ferr mentation, and fo form a vile and degene rate Chyle, which is in no wile fit for the nourishment of the Body, whence all the parts languish and waste; the which alf enrageth the Archeus, from whence that burning in all the folid parts proceeds the which is evidently proved by being in creafed, always an hour or two after eat ing. Then as for Electuaries, Lohochs Powders, Ge. Some of them are defign edto relieve the Lungs, by fliding down thi

## [113]

[113] the Wind-Pipe infentibly, and fo going immediately to the part affected, but o-thers are appointed to go about, till by the Laws of Circulation they may at length come with their affiftance to the Lungs, but both to no purpofe: as for the firft nature derideth the offer, in as much as fhe plainly fleweth an abhorrency but of the leaft crum or drop that through a-ny inadvertency patieth the Larynx, and gets into the Wind-pipe, and will not be at reft till by coughing it be driven back a-gain: therefore who fees not that if those licking Medicines fhould go that way their appointers would have them, that inftead of curing or eating a Cough, how migh-tily they would increase it. As for the latter, they are forced to fub-mit to the fate of the Food, only they

mit to the fate of the Food, only they prove more troublefome to the Body, because more crude. But the cure of this Difease ought to be instituted after another manner, viz. by cleanfing away of filth, and altering the putrefactive Ferment of the Lungs, the first makes room for an equal distribution of the nourishable juices: and the fecond reftrains the exorbitant Governour of the Lungs from converting their proper nutriment into purulent

#### [114]

rulent excrements. But when I fpeak of cleanfing away of Filth, I do not mean either by direct purges, or by those things called Expectoraters: for the first are ini deed poyfons, and refolve the good juices themfelves, and expel them with the Exa crements, and the latter promote cor. ruption faster than they cause spitting; But true cleanfers refolve all filth in the Stop mach, Guts and Veins, and in their paffagee carry them to the common Emunctories on nature, as those of the first pallage to be expelled by itool, and they of the Veina To which purpofe you may by Urine. take Tartarum Vitriolatum every morning for three or four days together, from ten to twenty grains in a little warm Broth increating the dofe every morning, or in stead thereof for those who affect not sharp things, you may give half a dram or two scruples of the Cream of Tartar diffolved in hot Broth : after which give Salt of Harts-horn and Amber, of each eight, nine, or ten grains twice a day ii Broth, or Sherry Wine, continue it for fome time, thefe will cleanfe away Filth and Excrements, as Soap cleanfeth Clothin and likewife relift putrefaction; but for the farther pacifying the Archeus of the Lungs Unable to display this page

## [116]

wife have the Learned Doctors Glyffan and Bates, and Mr. Culpepper. They differ butt little, and conclude, that it is mostly from an obstruction either in the Liver or Spleen.

I rather think it to be from a debilitation, or viciousness of their Ferment, and fo there is no affimilation, whereby the part becomes atrophied, or decayed, and fome other part increased : for the Confumption of one part is the growing, our greatning of another part : as I have often observed.

An Atrophia, or Confumption, and thiss are Coufin- Germans, there is little diff ference between them. Children do as bound more with a crude phlegmatich matter, which makes the Head bigger and the Joynts knotty, &c.

#### PROGNOST.

If they have continued long, they ar not to be cured, but if taken in the begin ning, my Arcanum, or Powder doth cur it prefently, and two or three of my Ba famical Pills to be taken after, to rectiff the Ferment; for the Arcanum opens th Obstructions, and sweeps off all the percant matter.

# [ 117]

If the Childs Head begin to grow big, let it blood in both ears. I have known it very effectual, and fometimes it hath made a perfect Cure, without the help of any other thing.

Take of the Bark of Ah and Tamarisk each three drams, to which add a scruple of Salt of Tartar, put them into a Glass Bottle, with a quart of good Beer, let it stand twenty four hours, and afterwards let the Child drink it for common drink

it for common drink, it jud to had so had sold When it is out, you may put to their Bark another quart of Beer, and it will be o good. If you will make it pleafanter, you may add to it two or three ounces of Syrup of Harts-tongue. Continue the ufe for fome confiderable time, Ens. Veneris is alfo excellent, being given twice doy do o three or four grains, or more, it was mot Broth.

Apoplexy,

### [118]

# Apoplexy, Paralifis, Catalepsie, E= pilepsie, Vertigo, &c.

There are feveral Difeafes that have been thought to have their Rife immediately from the Brain, as Apoplexy, Epilepfie, or Falling Sicknefs, Catalepfie, or the fleepy Difeafe, Palfie, Giddinefs of the Head, &c. but it is not my judgment: that the Brain is primarily affected in any of them.

Apoplexy.

An Apoplexy proceeds from a vapour of fome poifonous matter that hath for fome time lain either in the Pylorus, or about the Diaphragma, or Midriff, or Hypochondria, fermenting and corrupting.

Vertigo.

# [119]

#### Vertigo.

Fs

pour n for

1 H.

It is not of fo poifonous and malignant a nature as the Apoplexy is; it is fomewhat narcotical, or ftupefactive, as Tobacco is to them thac cannot well take it. It is the Forerunner of an Apoplexy.

# PALSIE.

A S Giddinefs is the Forerunner to an Apoplexy; fo a Palfie is the Subfequent, or Follower.

#### CAUSE.

It is caufed by the horrour or great fear (in the vital and animal fpirit of the Brain) by those terrible affaults that are given them by that dreadful Enemy the Apoplexy. As we may see sometimes many persons do tremble and shake for fear. I know some Palsies have been occasion-I 4 ed

### [120]

ed by hurts and colds in fome great Joynts, as Shoulder and Hips, and in progrefs of time that whole fide hath become paralytick. How vain hath been the received opinion of the Schools, about Palfies, that they fhould proceed from Obftructions in the Head, or Conjugation,  $\mathcal{O}c$ .

A Lethargy doth proceed from a more mild poifon than the Apoplexy; as from Opium. Epilepfie, or Falling Sicknefs, I have fpoken of before.

They all affect the Brain by confent of the parts where the peccant matter lies.

#### CURE.

DALLANCE ED ALL

All these (besides the Palsie) are cured, by my Arcanum universale, if ever they be cured at all; which is to be hastened, for if not remedied in the beginning, hardly find any cure.

The Palfie is an accident, or product, or the effect, and this may remain, though the caufe be removed, it is rather *Intemperies* than *Morbus*; an affrighted Diftemper in the Spirits, than a Difeafe; and the Cure may be performed by my Balfamical Pills, which do refocillate, comfort, and cherifh

### [I2I]

cherish the spirit, as also by Salt of Pearls, or Corral, or my Aurum vite, either of them taken alone, with a little fharp Wine drank after doth excellently.

From a weakness and decaying, of the fpirits, this may be occafio-

ned, as well as by terrour in them: therefore this is one of the Difeafes of old age. And to go about to cure it in old perfons, if it hath conti-

23

Tes.

My pirit halt be diminished , and my days Thall be Thortened.

tof nued any time, is to fwim against the ftream, and write in the Sand.

In the Apoplexy, the Ointment for the Head and Neck defcribed in the Cure of the Falling Sicknefs is good; as alfo the following mixture, the mouth being first opened by art.

Re Aqua Langii, Water of Sage and Lavender of each an ounce, Tincture of Caftor half adram, Spirit of Sal Armoniack a foruple, Oil of Amber nine or ten drops, Syrup of Stechas an ounce, mix them, and give a Spocnful very often.

The Palsie, Vertigo, Catalepsie, &c. are all of the effence of an Apoplexy, and differ only in degree, therefore they are to be

#### [123]

be cured with the like Medicines. In the Pallie, Lethargy, and Swimming, or Giddinefs of the Head, those following Pills are effectual.

Rx of Pill. Aloephangina a scruple, Rosin of Jallap fix grains, Salt of Amber as much, Oil of Marjoram two drops, mix them, and make four Pills to be taken in the morning earby, and repeated once in three or four duys.

In the Palfie fweat betwixt purgings with spirit of Sal Armoniack given in Sack. You may also use the Ointment above mentioned to the Back-bone and paralytical parts.

heat, as also an indifferent Pulle, the which with fome other confiderations made me to believe he might ftill recover, the which I told his Mafter and Miftrefs, when they demanded what I thought of his condition, who then defired I would. take him into my care, which I did. The first thing I gave him was a Dole of the Powder, which wrought very well up-. wards and downwards, towards the end! of which he began to fpeak fome oddl words, and came to be fomewhat fenfible; the next day I repeated the Powder which wrought again as before, upon which he came to perfect fensation, and allo to increafe in speech, and one fide returned again to the exercise of all Functions, but the other remained paralytical and infenfible from Head to Foot, not being able fo much as to ftir one Finger on that hand but by the ufe of the Balfamick Pill, and repeating the Powder once or twice more (by the bleffing of the Almighty.) I reftored him, and in a months time was again at work, using those useless Fingers, without which he could have done nothing, being a Glover by Trade.

In the time that I had this perfon in cure, the Wife of another of the Artsmatters

#### [124]

masters in Bridewel, having lain in Childbed about a Fortnight, was also one Evening fuddenly deprived of her fpeech, and taken somewhat Paralytical on one fide, fhe fent to me about eleven or twelve of the clock that night; as foon as I came, I gave her four grains of the Powder, which wroaght both upward and downwards, but most upward, the which being once or twice repeated, and the Balfamick Pill for fome time taken at nights, fhe was alfo happily recovered. I could give divers other notable inftances of Cures of this nature performed by these Medicines, ( having had many fallen under my care ) but thefe I think may fuffice.

這

Rt

However, I will in this place add another ftrange Cure (which comes fresh in my mind) done with the Pill alone, by a Physician, who buys Medicines of me, and lives near *Highworth* in *Willshire*. At a certain time he being abroad about fix miles from his dwelling, was much folicited by a Friend to go a little out of the way to look upon a poor man that had lain bedrid for three months, being grievously pained all over his Body, and not able to turn himfelf, but as he was helped; he had used Purgations, Philebotomy, Fomentations,

# [125]

mentations, Unctions, Ge. but all to no purpofe. The Phyfician having fome of the Balfamick Pill about him, diffolyed a full Dofe in a Glafs of Ale, and gave him, and fo left him, within two or three days the poor man came that fix miles on foot to give him thanks, and told him, that within two hours after he had taken the Pill, he was perfectly free from pain, and fo remained, with the due ufe of all the parts, only weak; the Phyfician gave him another Dofe home with him, which he took, and became very well, and had been fo many months when the Phyfician told me of it.

# Spafmus: or, Convulsion.

A Convultion is caufed by fome malignant matter contained in the Guts, as is oftentimes feen after the taking of fome Hellebore or Stibium, or any Medicine that hath a poyfonous quality.

The

# [126]

The Sting or biting of any venomouss or poifonous creature produceth Convulfion.

#### CAUSE.

That vital *Blas* or Spirit in the Mufcle: being affaulted by fome poyfonous quality,, contracteth it, the better to defend it from that poyfon.

#### SPASMUS.

The Cramp is from a fharp aiery Blas; that doth meet with a Nerve or Sinew.

The Worms in Children bringeth Convultions in them many times.

That it is cauled through fulnefs or emptinefs, and the primary place affected to be the Brain, I do not confent unto, though it hath been received for a truth.

#### CURE.

If it be caufed by fome poyfonous matter that hath been received, or through the biting or ftinging of fome Snake,  $\mathcal{C}c$ . my Aurum vite is admirable: but if it cometh by excrementitious matter contained

# [127]

tained in the Body, as the matter of Worms, &c. the Arcanum or Powder eradicates it, or takes it away by the root. They are generated from corrupted Chyle, and they differ according to the place where they are made.

If in the Stomach little finall Worms. In the Ilion long and flender like earthworms.

In the Colon, little flort thick worms, much like the Bots in Horfes. This Powder doth not only take away Difeafes when they are on, but likewife prevent them, if it be given in health; for this violent Difeafe in Children, I verily think there is not a better remedy under the Heaven, if it be timely given; for it carries off all that may be the occasion of the Difeafe or Worms, one Grain is sufficient, and that's but fix pence.

C.

s or ected

th.

Da.

E.

The last are the worst, and sometimes the longest in curing.

If these continue long, they encompass themselves into a *Ciftis* or Bladder, which they run out and into, as a Coney into her Burrough, whereby they defend themfelves from the injury of any thing that is fent into the place to kill them.

For the two former the Powder cures them

# [128]

them perfectly, not only in killing, or bringing away the worms there made, but: in taking away the caufe.

The laft, if they have made this fhelter, it is very hard to kill and deftroy a them.

I have known a young Gentlewoman that was troubled with them from feven years till fhe was nineteen, and never could get remedy: they conftantly came from her day and night, without any exfrom her day and night, without any excrement, to her great grief and forrow, though the pain was not intolerable. Now becaufe I do defire to be found ingenious to my Countrymen, I fhall freely tell in what my two or three *Arcanums*, or fecret Medicines will not avail them, and direct them unto that which will do it.

Many Phylicians were befooled in this: Difeafe of this Gentlewoman, fhe took is the advice of all within that Country where fhe lived : many were the Clyfters: that fhe took of falt, fharp, and bitter that things, with the like ointment, and plaifters to her Belly, & c. but all to little purpofe; as well as abundance of Mercurial with Preparations which fhe took.

She was cured by this following.

The fame Worm dried (which is the beft:

#### [129]

beft thing to deftroy them that is ) and powdered and given in a Clyfter with Milk anda little Honey.

But first let the Belly be well anointed and chafed with this Ointment.

Take fome of the fame Powder of the Worms, the Gaul of an Ox, a little Vinegar and Bay Salt, three or four Cloves of Garlick, the juice of

Worwood, and the Powder You may have of Coloquintida; if you have not the art to bring them into an Ointment with Ho-

Without it were a Vein in the Head, the party himfelf may very well tell where the eruption is; for he can as perfectly perceive it to flow, as if he faw it. But in the Head he cannot, for he only finds a diftilling and tickling in his Throat, with fome pain in his Head. If this diftilling be from the *Dura*, or *Pia Mater*, it is very dangerous, if from fome branch about the Throat, not fo dangerous, without it be the Jugular, which pours out fo violently, without any intermiffion, that in few hours life will expire.

If it be in those Panicles, Dura, or Pia Mater, which cover the Brain, the pain of his Head. K<sub>3</sub> And

# [134]

And especially that fide where the hurt was, will increase, and likewise his Fever.

The Cure doth folely confift in opening the Skull, and that place where he feels his pain most, to stop and cleanse away the congealed Blood.

ofi

Ra

山山

AL ANT THE

とこのいい

If it be in the Throat, in applying ftrong Defenfitives round the Throat, and next repellers to the Head and Shoulders, opening a Vein in the Foot, and ftrong Ligatures or Boundages to his Thighs, a little above his Knees, with vulnary and fpecifical means.

If it fhould be in the containing parts of the breaft, as in the Mufcles, *Ge.* letting blood, with difcuffive means to the place, giving him fome proper thing to ftir up a gentle fweat, cures him.

But if there fhould be a Laceration, or renting of the *Pleura*, with an Eruption of a Vein in the fides, (which is a thing hardly ever heard of) whereby the Blood doth fall into the concavity of the Breaft, the Cure is thus:

Make incilion upon, or as near the place as you can, where the Eruption is, then to tie the mouth of the Vellel is the practife of fome, but I would rather reftrain the

#### [135]

the Blood by fome fit means, whereof my Powder for Wounds is admirable, ufed as in the Directions; and fo it is for *Hæmorrbagia*. or bleeding at the Nofe, a Tent of Tow or Lint, and armed with the Powder, ftays it prefently; or any where elfe, if it doth but touch the mouth of the Veffel, immediately ftops the blood. Remove it not prefently, but let it unite and heal the Veffel firft, which it will not be long in effecting.

But if there fhould be any Blood fallen down upon the *Diaphragma*, or Midriff, which fhould not be prefently evacuated, but there lies coagulating, (which is perceived by fome weight in the place, and likewife a Fever to allault him, with conftant increase;) In that case, if the Orifice where you cut to stop the Vein, may be so high, whereby you cannot make it depending enough for the evacuating this blood, there mult be another Orifice made more lower for that purpose. But this operation doth belong to an experienced Chyrurgion.

Those internal Wounds are very dangerous, and a great deal of circumspection is to be had about them; and are not to be cured but by a skilful Chyrurgion, K 4 that

13

# [136]

that is well acquainted with those operations, which are the highest practise in the Art.

Wherefore have a care you are not deceived with any old Wifes Stories of Tom Thumb, and Jack of Newberry, &c. to tell you of a Vein broken in the Lungs, or Heart, or Liver, &c. ('tis just as they tell you about Diseases) 'tis a great abfurdity to speak it; and should an Artist speak it, he would be laughed at by those that understood the nature of such things : for, the two Roots of Veins in the Liver, either of them hurt, death prefently ensues.

If it should be asked, what Veins should be broken in the Lungs and Heart, whether the Vena Arteriofa, or the Arteria Venofa? There is not any Vein in the Lungs: only some small Twigs of the Arterialis, or Artery, which are dispersed through them, by which they are nourissed: and for what use are the Ribs, but to defend them from such injuries? and it is impossible they should be hurt by such accidents.

And in cafe what they fay were granted to be true, there is no other way under Heaven to fave his life, but immediately to perform that operation of a · Paracentyfis, which

which is, to make an orifice in the fame fide, whereof there is no more danger in performing, (by him that hath done it, and knows what belongs to it) then in opening a Vein in the Arm, though probably there may be fome professors of Art. that what they never faw, neither understand, they fpeak against, and tell of danger in letting in Air, and letting out spirits, and a great many more nonfenfical Stories.

Pray be advised, that you take but little notice of it: for although they may be old practitioners, yet look on them but as young Artifts.

Fluxes of Blood, without fudden help will foon flux out life; and to expect a Cure from those that know not a Remedy, nor the place where to apply it, feems very ftrange to me.

And befides, without it be well cured in the beginning, it will break out again upon certain times, which at laft will kill him; whereof I have known many fuch examples. Wherefore get the best advice you can from Chyrurgions. Without it be from the Head, ( as I have before told you ) the party can very well tell you himfelf where the hurt is; for he will not only perceive the Blood to flow, but he will

#### [138]

Del.

IT III

will find fome pain there: if it be from the Head, he will perceive a great dulnefs and heavinefs, and pain in his Head, with a tickling, as it flows down into his Throat, fometimes ready to choak him, which ftirreth up a Cough, whereby this Blood is caft forth from the Amygdales, or Glandules, which are of each fide the Windpipe, and those fpungy places about the Throat; and so fome have thought them to be from the Lungs, when alas 'tis from the Head.

I did prefage this in a Gentleman of this Town, Mr. Bifhop, only by his Brothers Relation ( which he can well tell ) of his pain, which was in the fore part of his Head: I advifed him, by all means, immediately to be let blood, and to be re-

Which that night happened unto him, and he died in the morning.

peated, if occasion ferved; for I told him, if he did bleed at the mouth, before he was let blood, he would prefently die, for he would be beyond all means, in re-

gard he was ancient, Gc. the place difficult to apply the Trepan, or Trefine, without which, I look on it as impossible (quoad artes) for any to recover, unlefs the blood be discharged, which falleth between

# [139]

between the Skull and the Panicles, which cannot be done by any other way.

For what happens in the lower Belly, it is to be cured as wounds, by vulnary Drinks and Clyfters.

I have been a little longer on this than I intended; but those internal wounds are of high concernment, and I fear not right. In ly understood by all pretenders to Art.

likewile hint at, hi

# Coryza, Catarrhus, Tuffis, Afthma.

Coughs and Catarrhs, Rheums in the Head, Eyes, Nofe, & c. proceed from the Evening cold, tharp wind beating upon Ethmoides os the † fpungy Bone of the cribriforme. Head.

Afthma, or fhortnefs of Breath, cometh through a vicious matter contained in the Wind-pipe, or Lungs. I have not time to inlarge upon them.

The three first are commonly cured in one night, by one of my Balfamical Pills, The last by the Arcanum. I have strong reason

#### [ 140 ]

reafon from experience to believe, there is not another fuch Medicine found for itt in any place that ever I was in : this is æ Difeafe that old age is liable unto; and for old perfons that have had it long, 'tiss folly for them to think to receive a perfect Cure from it, or from any thing elfe, but I know not any thing will eafe them more than this.

There is another Difease that follows old age, which I shall likewise hint at, and so end, viz.

# Stranguria : or, the Strangury.

The Strangury is from the defect and weaknefs of nature in the fecond Digestion.

#### CURE.

Let him forbear all fharp meats and drinks, and obferve the fame courfe I have directed for the Stone, in which he will find great comfort.

# [141]

For any Venereal Diftemper, or French Difeafe, there is not a better Medicine that ever was prepared for it, than this Arcanum; for it cures any, of what nature foever (that is curable) without Salivation or Fluxing.

There are fome Diftempers belonging to the Female Sex, that are not here neceffary to express, for which this Arcanum is fingular.

likewile ut barrenneist in all the

e ever i read. I never m

Hystericus: or, Fits of the Mother.

IN Hysterical Fits, or Fits of the Mother, there hath been a great mistake, as to the true cause, as well as of the rest. With one dose of my Arcanum universale, aud one of my Balsamical Pills: I have cured some in twenty four hours.

The Seeds of White Nettles bruifed, and drank in White Wine are a very good remedy against these Fits. So is also the

#### [ 142 ]

the Tincture of Caftor, Spirit of Sal Ar moniack, and Elixir Proprietatis, being given in Rhenish Wine. But I have a Mer dicine which I call Elixir Hystericum with which I never yet failed to cure the those Fits.

I have also that Remedy mentioned by h Mr-Couch for the speedy delivering Woo men with Child.

And likewife in barrennefs, in all the Authors that ever I read, I never me but with one that ever came near the Bufh; and it is very unlike that any of those fhould ftart the Hare.

I am confident there are many that are many married who are childlefs, that fhould here they be divorced, the Husband would be and get Children by another Woman, and the his Wife conceive by another man.

Now if one fhould demand the reaformed why could they not procreate when the were together. I doubt it would puzzl an old Phyfician to refolve it.

It may be he might tell them of Ant pathies in their Natures : as the Stomac doth abhor fome kind of Meats, &c. bu I fuppofe those Meats had first injured the Stomach. It may be if the Mother low for

nco

# [ 143 ]

not Cheefe, she may cry pah unto it; to may loath it as much as the Mother. her little Daughter, and thereby the Child

But I never knew a Pica in the Mother to beget a Crapila in the Daughter, though the may labour cum furore matricis.

But no more of this.

ion,

THE

This Difcourse deserves more to be whifpered in a private Room, than to be treated of here.

And no marvel that there are fo many incurable Difeafes, in regard their true and causes were never hitherto found out

Thus you may perceive what a Lethargy and blind ignorance hath benighted Medicine, & obscured the Inquiry into the right Remedies for Difeases, by a fad Theory, and miferable method of the Heathens, (which is ftill in force amongft Chriftians) as if Medicine was made only for them, and the true knowledge God fhould difcover unto them, and Christians were to receive it from them. And well may healing fail us, who make no further inquiry after it, than the tradition of fuch Teachers.

I have fome other Arcanums, or Secrets, for fome Diftempers of the Female Sex, efpecially for Women in Travel, which commonly

# [144]

commonly delivers them in a very (hort time; (I have known feveral within half an hour) after the taking of it; and without the tenth part of that pain which they would have without it.

There are fome weak or aged perfons: that digeft very badly, whereby they are: fm troubled with crudities, lack of appetite, pains in the Head, crc. my Arcanum universale may be a little too quick for them; wherefore I make up a Pill, which I call men my Stomach Pill. There is a Difpenfato-. of ry called by that name, which most Apo -- Only thecaries fell; but alas, one Pill of mine: Itm is worth twenty of them for goodnefs, and whofoever shall try them shall fay fo .. man I give but one at a time, and that is attak night going to Bed, though you have fup-- Om ped freely before; in the morning it gives two or three Stools, without the least griping or pain at all, it doth not only digeft: those Crudities, and take away the pain of the Head, but it doth likewife ftrengthen both the Head and the Stomach. ama Shlin confident whofoever shall once try them will never take any other Pills.

As I have recommended two principal at Medicines for the curing of your Difeases, the which

# [145]

which proceed from within, fo I shall comall 1 mend another unto you, for the healing the Wounds and Hurts from without.

ant

028

I have feen Cuts, or Hurts, or Bruifes, that have been very inconfiderable in the beginning, which afterwards for want of fome proper Remedies became matter of great moment and danger.

Therefore to prevent the like, I will S Mile accommodate you with fuch a Remedy as the world doth not yield a better. It is of far more worth than all the Balfoms Mo. Oyls, Oyntments and Plaifters that ever was we yet made for that intent.

There hath been a great talk about the weapon-Salve, and Sympathetical Powder; they are not worthy to be her Chamber-maids.

Any wound, if it can but reach the bot-0173 tom of it, it cures at the first dreffing, and within half an hour after you have appli'd it, it takes away the pain and fwelling, and draws out any Thorn or Splinter got into it, let it lie on, till it be miready to come off of it felf.

I verily believe it will cure an amputation, (that is, a Leg or Arm cut off) at one dreffing, you need not fear, though the Bone appear, there shall not be any ī. exfo-

# [ 146 ]

exfoliation nor difcolouration, which I have well experienced feveral times.

I want words to praife it to its merit;, only this I shall tell you, that whosoever shall use it, will bless God for it, and admire it with me.

As for an Ulcer it is not proper, becaufe: a Wound and an Ulcer are of different: Natures, and this is fpecifical to a wound, or Laceration, or Rending, or tearing the flefh and skin.

But whofoever shall defire it for an Ulcer, I shall but change an Ingredient on two and make it as effectual in any curable Ulcer, as in a Wound, but then you must not expect to have so speedy a cure as in a wound.

I have recommended three or four Arcanums, or fecret Medicines unto you; proteft unto you, I would rather lose the knowledge of all things in the dispensato. ry than the worst of those.

And as they are the best Medicines, for they are the cheapest.

My Arcanum universale or Powder, the dofe or quantity taken at a time, is from half a grain to fix, which is the highest I will fell it for fix pence a grain.

My balfamical Pill, twelve pence: which

# [ 147 ]

is as well worth it, as any fix Pills in the difpenfatory are worth fix pence.

My Aurum vite two pence a grain. As for my specifical Powder for Wounds, Bruifes and Hurts, you shall have enough for your money : you shall have an ounce for five shillings, which may be enough to cure a dozen ordinary hurts or wounds; How it is to be used I shall direct you.

I have omitted to fpeak of feveral difeafes this Arcanum or Powder is a Remedy for, I am very confident, there is not any difease that any Country doth infect men withal, but it is a fingular Remedy for. Laft year I had a Patient that went to Virginia, And he took a Dole of the Powder here, and carried a Dofe of it with him; but he proved very healthy himfelf, and gave it to one that was Sick of that Country Difease, and it prefently cured him.

If any Master of a Vessel, that carries hot a Chirurgeon with him, please to take ome of this Powder in cafe of Sicknefs, and fome of my Ballom for Cuts or Wounds; I engage, if once he carries it with him he will not go without it at any lime, if he can get it. And what he doth not make use of, I will take again, and return him

L 2

#### [ 148 ]

him his mony as he paid me for it. Be-Caufe there are many ready to fpeak evil of what they know not, and fome whofe judgment may be defiled through prejudice, may fay, that this is more to benefit my felf than you, and that you may not be deceived. I declare, that whofoever fhall ufe any of thefe things according too direction, and if he do not find me faithfull in my relation, and himfelf bettered by it, the lofs fhall not be his, but mine, I will return him his mony again.

Accept it with fuch an affection as it iss proffered, or the good it brings may me-. rit, and the God of health make it fuc. cesful, for from him comes healing.

Unto whom give all the Glory.

I thought to have severed the Directious how to take the Powder, from the Book, but I am advised to annex it; which I have done.

### Directions.

You may take the Powder in any thing, or without any thing: I commonly give it in the pap of an Apple, or Conferve, or a little bit of Bread, to the bignefs of a Pill, it matters not what it is, being without either tafte or fmell, fo that the most nauseous Stomach may freely take it. It will not diffelve in any Liquor, therefore you may leave some of it behind, if you give it in any Liquor : I have L 4

#### [152]

given it in a little beer in a fpoon, to Children that would not take any thing elfe, then be fure to give it all. Its operations are various, according to the nature of the matter offending, and the place where it refides; that way which nature thinks most convenient for her, for the difcharging that matter which si is willing to be rid of.

Sometimes by Stool, by Urine, by Vomit, and fometimes by Sweat, I have known it work effectually, and yet by neither of those ways, but by breaking wind upward and downwards, as I have shewed in the cure of the Fisherman, for it draws wind out of any part of the body effectually. If the matter be in the Stomach, which commonly it is in Fevers, &c. then it often works by Vomit and Stool : If the matter be more in the Guts, it works by Stool alone. In Dropfies, and fuch Difeafes as water doth abound, it works by Vomit and Urine. What of fuch aqueous matter is contained in the parts containing, it drives forth by Sweat plentifully.

The time; in Winter, and when the weather is cold, I give it in the morning, with a benefit of a fire in the room, but in Summer I give it at night : but let them not

eat any folid meat that day, but if the party be very fick, never ftand upon any time, whether day or night give it him; the fooner the better : but it is beft when the Stomach is empty from meat.

It commonly works about half an hour after, take nothing before it works of it felf, and then if you pleafe to drink a little warm poffet drink, or beer, you may. And if it fhould work by Vomit more then you would have it, take a little thin Gruel or Broth, fo feafoned with Salt that it tafteth well of it; and that makes it work downward, but I have given it to Children and others that never took any thing in the working of it; for what matter it hath wrought upon, it will bring away, whether you take any thing or not.

If you are difpofed to fleep, you may freely do it, without the leaft prejudice unto you, for nothing can hinder the working of it, nor the bringing it away.

I never knew it fail to work in my life (where it hath been retained in the Stomach) But in cafe it fhould not, you need not fear; it will do you no more hurt, then if you had taken fo much Nutmeg, or Cinnamon, and if you pleafe you may take

As for my specifical Powder for wounds, or hurts, of that nature, take the white of an Egg and beat it well, then take fo much of it as may well wet a pledget, and fo much lint fcraped from an old rag, or fo much tow as will cover the hurt, then mix 150 fo much Powder with the white of the Egg, as you think will make it to the confiftence of honey, ftir them well together, and the lint, or fine flax, or tow in it, and lay it to the place, bind it on very gently, only fo hard as will keep it from falling off. And although it doth prefently cure it, yet you had not best take it off in fourty eight hours, I never knew it fail. And in cafe it fould not be perfectly well, you may take a little more, but it is not one Hurt or Cut in a thousand that you will use it twice, without it be a deep thrust, or shot in the Thigh, where it may not reach the bottom, but for any ordinary hurt though it be never fo broad, or torn, it cures it at the first dreffing, and takes away all pain and fwelling in half an hour, and immediately ftops the bleeding; Remember, the fooner you apply it the better.

But if you are at Sea, where the white of

#### [155]

of an Egg is not to be had; then take the powder and caft it upon the hurt or wound, and take a fine linnen cloth or ragg, dip it in falt water, and then wring out the water well, and lay the cloth feveral times double upon the place hurt, and bind it on gently (as before) and it will prove as effectual as the other way.

If any fhall defire it for an Ulcer, I fhall fo make it, that it fhall cure any cureable Ulcer, in a very fhort time.

This is to be kept in some dry place, or carried about one; for against moist and rainy weather, it will be a little moist, wherefore keep it near the fire, and if it should be moist at any time, dry it at the fire, and it will be as good as at the first.

It will not decay, you may keep all the Powder twenty years, and be as good as at first. The Stomachical Pills you may keep feven years.

I am fully perfwaded, and I have reason to think, that there is not any Disease (either in the West or East-Indies, nor any where in the World, but this Powder will take off. I should not question to cure the Plague, with my Arcanum Universale, and my Aurum Vita.

If any Practitioner shall defire any of those

9ire

those Arcanums, I shall accommodate him with them upon reasonable terms, I will engage, that any Chyrurgion that hath once found the worth of them, he would rather have one Dragme, than a Chest of ten pounds worth of the laudablest Cathartical Medicines he can chuse.

My Pillula Balfamica, or Balfamick Pill, is to settle the Body, and to reftore it into a good temper, (for a House that hath been fired; though the fire be out, yet there may be a great heat and fmoke) which I give the next Night after my Powder. If you take the Powder in the Morning, take the Pill at Night, if there be occasion; that is, if he find his Body much disordered, or out of temper, or feels any pain, then it is good to take one of those Pills, otherwise not. If you please you may drink after it : In the Summer give after it a Glass of White Wine, Cider, or Ale; in the Winter a draught of warm Posset-Drink, or warm Ale, or a Glafs of Sack.

My Aurum Vita, is when the Malignity of the Difeafe hath tainted the Spirits; and that is known by this, though the Caufe be gone, and the Effect removed, yet the Party doth not become well, but continues

111

cure; if you defire to have the water yet ftronger, in ftead of fair water infuse the Powder in Lime-water. This water is not only a Cure for Old Sores, but for Ringworms, Tetters, Manginess, Itch, Scabs, and fuch like Cutaneous Diftempers, they being washed therewith, and limenclothes wet therein laid upon the place. The way of using the Powder or Balfom for Wounds and Blood-stopping is sufficiently taught by Mr. Couch; that I call by the name of Species Vulneraria.

The Dofe of the Aurum Vite for one of full years is ten or twelve grains, and fometimes more, it may be taken in a little Sack, Ale, of Poffet drink, or made into a Bolm, with a little Conferve of Rofes, or any Cordial Syrup; it may as well be taken at Night going to Bed, as in the Morning, provided the Patient hath eat but a light Supper, and that two or three hours before.

This is a powerful Remedy in any Malignant Fever, Small Pox, or Meafels, Surfeit, Scurvy, French-Pox, &c. It mightily purifies the Blood, and refresheth the Spirits.

All those Medicines mentioned in this Book may be had at my House (except the M Water
