L. S.

Cum forte aversi causa *Mysae* aliquot hujus urbis inviserem, inter spolia marina aliquanullos Turbines Exoticos adveni, quorum alios Terrestres, alios aquae dulcis sive Fluviales esse probe cognovi: sc. ex analogia nostrorum Angliarum novum olim a me editum. Cum autem nemo quid sciam (non qui vel data opera de his rebus scripserant, quod tamen ysis vertendum est) hos a marinis distingueret, operae pretium esse duxi, ut qui in nostris manibus haberentur (qui sunt non pauci) aliorum in hac urbe Musaeis reperti sunt, ipsi breviter enarrarem, literisq. et Chalcographia fideliter mandarem.

Virorum autem a quibus plerisque mutui accipi, ut par est, mentionem fecimus: ut non mea tantum ea de re, sed et publice gratia in merito agerentur. At praeter ceteris laude dignus est D. G. Courtein, tam ob summam industriam, quam haec maximis impensis colligit, nitide reponit, diligenter servat: quam ob singularem suam humanitatem, quam mihi aliisq. rerum natura inquisitoribus facili aditum praestat, nobisq. in penu suo locupletissimo, libenter copiam facit haec aliisq. ut genus delineandi describendiq.

Septuaginta autem et amplius Cochlearum Terrestrialium genera (ut de Fluvialibus nunc taceam) jam edidi: adeo haud verum est, quod nuper alicui temeri visum est, Terram ad Testacea generanda aquis minus aptam esse: imo rix dubio quin Terrestres Cochleae inam Marinas specierum numero aequant: si non superent. At haec, opinor, in causa sunt, cur nonnulli aliter senserint, nimirum, Terrestres Cochleas, si Marinas referantur, magnitudine exiguas esse: Deinde harum testa fere leves et tenuis sunt, sc. propter expeditum motum,

et ne suis bestiolis nimis oneri sint: adeoque brevi pereant et dissipantur: cum Marinarum propter plerarumq. crassitiam, vel extincto animali in aram durent. Porro Marinarum Testae continuis fluctibus in litus rejici solent: cumq. fere valide et crassa sint, in unum locum assidue accumulantur: at haec causa Terrestribus Cochleis deficit, unde non nisi sparsim inveniuntur, densisq. vepribus et sylvis maxime occultantur. His accedit, ex omni parte Orbis Marinas Cochleas ex industria, fuisse, et ex ore colligunt maris cujusq. accola et nauta, at Terrestres non nisi raro et casu ex ulla transmarina regione nobis afferuntur, et propter difficultatem appulsus, et quod sylvae et campi inter feroces populos, imo mansuetos, Terra coram continentis, non sine summo vite periculo adeantur, nedum periculantur. Quod autem Terrestres Cochleae Marinis et colorum varietate et pulchritudine non cedant (idq. etiam contra quorundam sensum) ex descriptionibus nostris ut opinor abunde constabit. Praeterea duo sunt, Lector, quae te scire volui. Unum, ex his testis aliquot posse esse marinas: ejusq. adeo rei, ubi aliqua suspicio est, notam fere adpono. Alterum, in aliquibus colorem naturalem fere perisse credibile esse, sc. ubi ex toto albidae sunt: at mihi ex vivis rebus vivae perfectae descriptiones concinnasse fas non fuit: hanc felicitatem aliis relinquo. Haec autem pauca et exigua literarum commode et incremento, maxime Historiae Naturalis, cui vehementer studio, litari.

A close-up photograph of the fore-edge of a book. The image shows the binding material, which appears to be a dark, possibly leather or cloth, running horizontally across the middle. Above the binding, the edges of several pages are visible, showing a light, off-white or cream color. The pages have a slightly textured appearance with some minor discoloration or foxing. The overall lighting is soft, highlighting the textures of the paper and the binding.
