OFTHE

SOCIETY

FOR THE RECOVERY OF

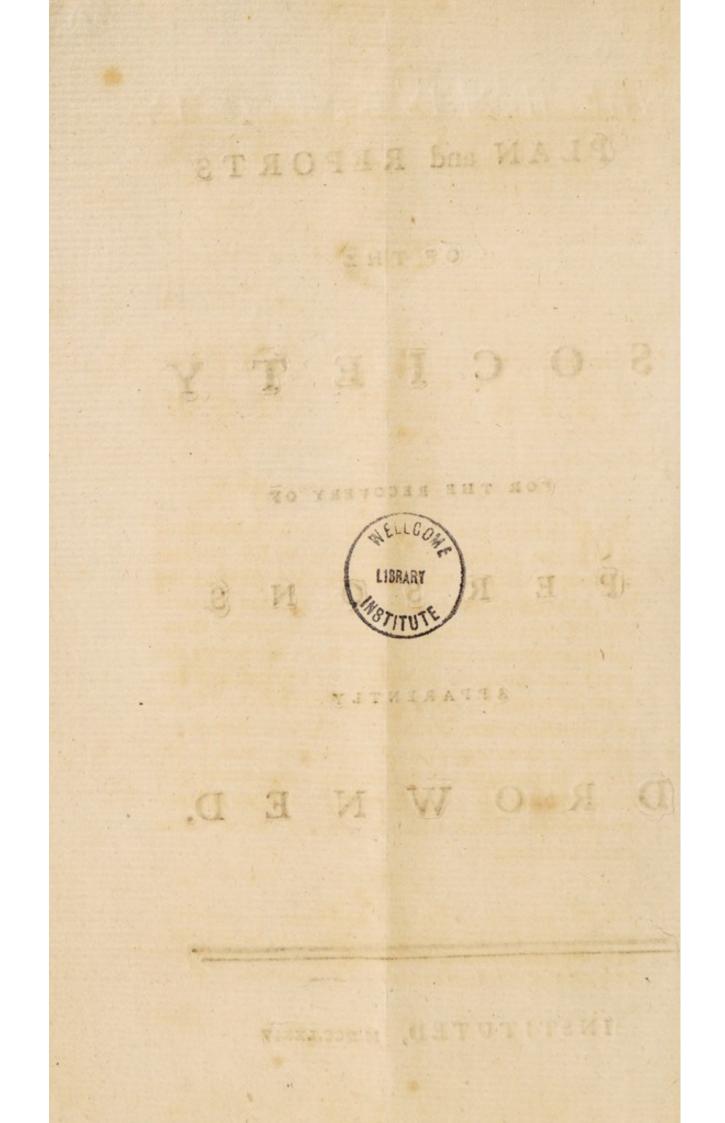

PERSONS

APPARENTLY

DROWNED.

INSTITUTED, M.DCC.LXXIV

3

THE

INTRODUCTION.

M ANY and indubitable are the inftances of the poffibility of reftoring to life perfons apparently ftruck with fudden death; whether the evil proceeded from a ftroke of apoplexy, convulfive fits, fuffocation by noxious vapours, ftrangulation by the cord, or *drowning*; although the party had remained fenfelefs, and without any the leaft figns of life, for a confiderable time *. Cafes of this nature have occafionally prefented themfelves in every country; and although they could not fail to furprife for a feafon, yet they were confidered and *negleEted* as very fingular and extraordinary phœnomena, from which no falutary confequences could be drawn.

* The memoirs of the fociety, inftituted at Amflerdam, mention feveral cafes, well attested, where the patients continued upwards of an bour, without any figns of life, after they were taken out of the water, who were yet reftored.

Thefe

These repeated instances at length attracted the attention of fome benevolent Gentlemen in Holland; where, from the great abundance of canals and inland feas, the inhabitants are particularly exposed to accidents by water. They perceived with deep regret, that numbers, and those principally among the most laborious and deferving part of the community, were annually drowned : and it was justly conjectured that fome at least might have been faved, had they not been entirely abandoned as dead, or very fuperficially treated. The hints that were difperfed through various publications, concerning the method of treating perfons in this critical ftate, were carefully collected. These were made public, and rewards were proposed to those who should put them into execution. These humane attempts far exceeded their most fanguine expectations. They became instrumental in the reftoration of feveral, who must otherwife have perished inevitably. This furprising fuccefs engaged the general notice, and was fo univerfally countenanced, that they were at length enabled to form themfelves into a respectable fociety, and extend their plan over the feven provinces. And it must afford real pleasure to every friend of the unfortunate to be informed, that about 150 perfons, of whom the lives of many were very important to their families, and to the community, have been redeemed from death in the space of a few years.

The authentic teffimonies produced of their remarkable fuccefs, inftigated other countries alfo to imitate their example. In the year 1768, the magistrates of health at *Milan* and *Venice* iffued orders for the treatment of *drowned* perfons. The city of *Hamburgh* appointed a fimilar ordinance

10

to be read in all their churches, extending their fuccour not only to the drowned, but to the ftrangled, to those fuffocated by noxious vapours, and to the frozen. The first part of the Dutch Memoirs was prefented to the Imperial academy at Petersburgh, and was translated into the Ruffian language, by command of the Empress. In the year 1769, the Empress of Germany published an edict, extending its directions and encouragement to every cafe of accidental death that afforded a poffibility of relief. In the year 1771, the magistrates of the city of Paris founded an inftitution also in favour of the drowned. And the repeated inftances of fuccess in each country have abundantly confirmed the truth of the facts related in the Amfterdam Memoirs.

In the year 1773, Dr. Cogan translated these Memoirs, in order to inform this part of the world of the practicability of recovering perfons apparently drowned:* And Mr. Hawes having also exerted his endeavours to excite the attention of the public to the same subject, these gentlemen united and proposed a Plan for the introduction of a similar institution into these kingdoms. This Plan was so well received, and met with so much encouragement from several gentlemen of influence, that they were soon enabled to form a Society to promote its laudable defigns. It is as follows:

I. The Society has undertaken to publifh, in as extensive a manner as possible, the proper methods of treating perfons in those unfortunate circumstances.

PLAN.

HE

T

* See the Memoirs of the Society inflituted at Amflerdam in favour of drowned perfons, published by Mr. G. Robinson, Pater-noster row. There are earnedly recommended o the peiusal of every one. They contain such a variety of cases, minurely related and well authenticated, as would render it unpar lonable in us not to attempt a similar Institution.

11. To

II. To diffribute a premium of two Guineas among the first perfons, not exceeding four in number, who will attempt to recover man, woman, or child, taken out of the water for dead, within the cities of London and Westminster, or the parts adjacent; provided they have not been longer than two bours under the water; and provided the Affistants perfevere in the use of the means recommended, and no others, unless under the direction of a regular practitioner, for the space of two hours: This reward to be given though they may not prove successful.

III. To diffribute in like manner four Guineas wherever the patient has been reftored to life.

IV. To give to any publican, or other perfon, who shall admit the body into his house without delay, and furnish the necessary accommodations, the sum of one Guinea; and also to secure them from the charge of burial, in unsuccessful cases.

V. A certain number of medical gentlemen, ftationed near to the places where difafters by water are most frequent, have engaged to give their affistance gratis; these gentlemen are to have a fumigator, and other necessaries, always in readiness *.

They flatter themfelves, that by thefe regulations many individuals, in and about this metropolis, will be fecure of the beft and most immediate affiftance in fuch critical cafes : And, where it fhould not prove fuccefsful, their relations will always have the fatisfaction of reflecting, that the last efforts have not been neglected.

* Should the Society meet with due encouragement, it is proposed to prefent an honorary Medal to any medical genth man or other, who may not chule to accept of a pecuniary reward, in all those cases where they have been inftrumental of fuccess. (7)

The METHODS of TREATMENT.

I. IN removing the body to a convenient place, great care muft be taken that it be not bruifed, nor fhaken violently, nor roughly handled, nor carried over any one's fhoulders with the head hanging downwards, nor rolled upon the ground, or over a barrel, nor lifted up by the heels, except with the greateft caution. For experience proves, that all thefe methods may be injurious, and often deftroy the fmall remains of life. The unfortunate object fhould be cautioufly conveyed by two or more perfons, or in a carriage upon ftraw, lying as on a bed with the head a little raifed, and kept in as natural and eafy a pofition as poffible.

II. The body being well dried with a cloth, fhould be placed in a moderate degree of heat, but not too near a large fire. The windows or door of the room fhould be left open, and no more perfons be admitted into it than those who are absol tely neceffary; as the life of the patient greatly depends upon their having the benefit of a pure air. The warmth most promising of fuccess is that of a bed or a blanket, properly warmed. Bottles of hot water should be laid at the bottoms of the feet, in the joints of the knees, and under the arm-pits; and a warming-pan, moderately heated, or hot bricks wrapped in cloths, should be rubbed over the body, and and particularly along the back. The natural and kindly warmth of a healthy perfon lying by the fide of the body, has been found in many cafes very efficacious. The fhirt or clothes of an attendant, or the fkin of a fheep frefh killed, may alfo be ufed with advantage. Should thefe accidents happen in the neighbourhood of a warm bath, brew-houfe, baker, glafs-houfe, faltern, foap-boiler, or any fabrick where warm lees, afhes, embers, grains, fand, water, &c. are eafily procured, it would be of the utmost fervice to place the body in any of thefe, moderated to a degree of heat, but very little exceeding that of a healthy perfon.

111. The fubject being placed in one or other of thefe advantageous circumstances as speedily as poffible, various ftimulating methods should next be employed. The most efficacious are,-to blow with force into the lungs, by applying the mouth to that of the patient, clofing his noftrils with one hand, and gently expelling the air again by preffing the cheft with the other, imitating the ftrong breathing of a healthy perfon.-The medium of a handkerchief or cloth may be used to render the operation lefs indelicate .- Whilft one affiftant is conftantly employed in this operation, another should throw the fmoke of tobacco up by the fundament into the bowels, by means of a pipe or fumigator, fuch as are used in administering tobacco clysters : a pair of bellows may be used until the others can be procured. A third attendant fhould, in the mean time, rub the belly, cheft, back and arms, with a coarfe cloth or flannel dipped in brandy, rum, gin, or with dry fait, fo as not to rub off the fkin : fpirits of hartfhorn, volatile falts, or any other ftimulating abstance, must also be applied to the nostrils, and rubbed upon the temples very frequently. The body

body fhould at intervals be shaken also, and varied in its position.

IV. If there be any figns of returning life, fuch as fighing, gasping, twitching, or any convulsive motions, beating of the heart, the return of the natural colour and warmth; opening a vein in the arm or neck may prove beneficial, but the quantity of blood taken away should not be large; nor should an artery ever be opened, as profuse bleeding has appeared prejudicial, and even deftructive to the fmall remains of life. The throat fhould be tickled with a feather, in order to excite a propenfity to vomit; and the noftrils also with a feather, fnuff, or any other flimulant, fo as to provoke fneezings. A tea-spoonful of warm water may be administered now and then, in order to learn whether the power of fwallowing be returned : and if it be, a tablefpoonful of warmed wine, or brandy and water, may be given with advantage: but not before; as the liquor might get into the lungs before the power of fwallowing returns. The other methods fhould be continued with vigour, until the patient be gradually reftored.

We have been as circumstantial as possible in the above directions, that if one conveniency should be wanting, the attendants may not be at a loss for others. Where the patient has lain but a short time fenseles, blowing into the lungs or bowels has been, in fome cases, found sufficient: yet a *speedy* recovery is not to be expected in general. On the contrary, the above methods are to be continued with spirit for *two bours*, or *upwards*, although there should not be the least symptoms of returning life. The vulgar notion that a perfon will recover in a B few minutes, or not at all; and the ignorant, foolifh ridiculing, of those who are willing to perfevere, as if they were attempting impossibilities, has most certainly caused the death of many who might otherwise have been faved.

Most of the above rules are happily of fuch a nature, that they may be begun *immediately*, and that by perfons who are not acquainted with the medical art; yet it is always adviseable to feek the affistance of fome regular practitioner as foon as possible; not only as bleeding is proper, and fometimes neceffary; but as it is to be prefumed that fuch a one will be more fkilful and expert, and better able to vary the methods of procedure as circumstances may require.

The Society think it proper to obferve, that thefe means of reftoration are applicable to various other cafes of apparent deaths; fuch as hanging, fuffocation by damps and noxious vapours, whether proceeding from coal-mines, the confined air of wells, cifterns, caves, or the Muft of fermenting liquors; to those feized with apoplectic and convultive fits, and also to the frozen. And they hope that fome perfons of influence in the parts where fuch accidents mostly happen, will form a fimilar inftitution for the recovery of the unhappy victims.

Wherever any good has been produced by the means recommended, the perfon who has fuperintended the cure is defired to write a circumftantial account of it to James Horsfall, Efq; Treasurer, Middle Temple, or Mr. J. B. Rich, No. 4, Fieldcourt, Gray's inn, Holborn, Secretary to the Society.

(11)

REPORTS of the SOCIETY

INSTITUTED IN FAVOUR OF

DROWNED PERSONS, &c.

I gives us unspeakable pleasure, that we are now able to unite our evidence with that of other nations, in confirmation of a fact equally interesting as it is curious and surprising, viz. that perfons may, either by immersion in water, or by other species of strangulation, have every faculty totally sufpended, so that they shall, to all appearance, be dead for a considerable length of time, and yet it may be in the power of art to recover them.

The Cafes we fhall lay before the public, demonftrative of this truth, have either been communicated by gentlemen whofe veracity is unqueftionable, and who could readily produce a fufficient number of vouchers, were any one to difcredit their evidence; or they have fallen under our own immediate infpection.

As to ourfelves, we can have no motive to induce us to be abfurdly credulous on the one hand, or on the other, attempt to impose falshoods on the public. The furprising facts recorded by our neigh-

bours,

bours, the Dutch and French, induced us to make the like experiments. Had we not fucceeded, we fhould have made our report to the world; and, refting fatisfied with the goodnefs of our intention, we fhould have left others to draw what confequences they pleafed. But we bave fucceeded; and we congratulate our countrymen upon having demonstrated a fact, which we hope will, in procefs of time, wipe tears from the eyes of thoufands: we congratulate ourfelves in being the inftruments of fo much happinefs. Thefe were our motives; thefe are our rewards; and we defire no other.

Since thefe are the fecret fprings of our conduct, we lie under no temptation to act difingenuoufly. We are folicitous, equally with others, to weigh the validity of our undertaking, and afcertain the proportion of ufefulnefs to our fellow-creatures likely to accrue from it; and therefore we hefitate not to declare, that we have paid our proffered rewards, in no lefs than 25 unfuccefsful attempts, while the inftances of recovery, in confequence of our infitution, are only *feven* in number. But fo valuable is life, not only to the individual, but to his various connections, that were the cafes of fuccefs never to bear a greater proportion, we fhould have no reafon to repent of our undertaking.

Yet were it confiftent with the proposed brevity of this publication, to give the unfuccessful cases also at large, several instances would sufficiently indicate, that the cause of their failure was owing to adventitious circumstances, which, without affecting our leading principle, rendered it morally impossible to recover the unfortunate objects.

Several of the number had lain in the water from an hour and half to two hours, before they were taken up: and although we have engaged, that we might

err

err on the fide of fafety, to give our premiums to thole who fhall attempt the recovery of perfons in this flate, yet we are not fo fanguine as to expect that one in fifty could be reftored under fuch difadvantages. Others, after being taken out, were neglected for a confiderable length of time, through the ignorance of the attendants.—In another inflance, the perfon fell into the water as he was fighting. In this cafe, the body must have been heated to a great degree, and the lungs furcharged with blood; and his reftoration would most probably have been impracticable, had the proper means been inftantly applied.

In fome other cafes, although we were not fo happy as to fucceed, yet we were for fome time flattered with fuch figns of returning life, as demonftrated that the vital fpark had not been totally extinguished, though it was not in our power to revive it.

A due confideration of these circumstances fo far from discouraging, animates our hopes, that, in the usual course of accidents, we shall proportionably equal other countries in the number of objects snatched from immediate death.

Candour will alfo make allowance for our prefent inexperience in attempts of this nature. No rules can be laid down that fhall be equally applicable in every cafe; and our own obfervations in a few inftances will better inftruct us in the modes of procedure, than the moft minute and circumftantial directions that can be poffibly given. It is but juft that we affure the public, however, that in all the accidents, where the Medical Gentlemen have been called in, they have difcovered fo much attention and zeal, as well as fkill and expertnefs in their methods of treatment, that we have every reafon to expect

expect confiderable fuccefs from the continuance of their generous affistance. It is with pleasure we find alfo, that publicans and others readily admit bodies into their houfes, without being fuch flaves to vulgar prejudices as we might naturally have apprehended; and that the lower class of people begin to be very affiduous in their endeavours to affift objects in that perilous state. The fourth cafe we have defcribed is a pleafing specimen and earnest of the good effects of our rewards, in faving the unfortunate from an immediate danger of drowning ; which is full as fatisfactory, refpecting the good produced, as recovering them after they were to appearance dead: and the Ninth Cafe evinces with what fuccefs ftimulating methods may be employed in other accidents befides those of drowning.

In giving the hiftory of Cafes, the order which naturally prefents itfelf is, first to relate the instances of fuccess which fall under our immediate cognizance, and afterwards these which have been communicated to us by our correspondents.

amining while also charice allow more

called in, they have discouncil fo many

[15]

CASE I.

July 12, THOMAS, the fon of John Joseph, a 1774. _____ child aged about 14 months, dwelling by the Iron Foundery near the Falcon Stairs, wandering from its mother and other women who were drinking tea together in a chandler's fhop, got into a back kitchen, and fell through a trap, the door of which was carelefsly left open, into an aqueduct communicating with the River Thames. The women heard it fall, and ran to the place, but could not perceive the child. Their fcreams brought a fhoemaker, who lived in an adjacent houfe, to the place, but he was fearful of jumping in, left he fhould fall upon the child. Thomas Vincent, a waterman, who was amongft the crowd brought together by the cries of the diffreffed mother, being informed of the event, ran round by feveral houfes, and climbing over the walls of the aqueduct, waded up to the place to the height of his cheft in the water, proceeding cautioufly, and feeling for the infant with his feet as he advanced; for he imagined the returning tide might have carried it to a diftance from the place : nor was he altogether deceived; as he felt the child about ten feet from the opening. He took it up, and gave it to the . women through the hole through which it had From feven to ten minutes must have fallen. elapfed from the falling-in of the child to the time it was taken out. The women upon the ftricteft exa-

examination affirmed, that the child was to all appearance dead; its eyes were fixed, it lay breathlefs, and void either of motion or pulfe. They shook, and beat it on its back for fome little time, and then laying it upon a counter in the fhop, rubbed its belly and cheft with dry falt; the friction was fcarcely continued three minutes before the child began to gafp, and give other figns of returning life, which encreafed till they were enabled to pour fome falt and water down its throat. This excited a vomiting, by which the child threw. up a confiderable quantity of water and mud from its. ftomach, and in a few minutes more it was reftored to the joyful arms of its mother. In the course of the evening it had two or three convultive fits, but thefe were of fhort duration, and returned no more. The perfon who had taken the child out of the water ran for Mr. Boyfe, one of the Medical Affiftants to this Society : he not being at home, his journeyman went to the house, but he found the child pretty well recovered. The waterman had the reward promifed by the fociety.

CASE II.

ven round by feveral house net

ON the 11th of August, 1774, in the afternoon, about the time of high water, as Dederic, the fon of Dederic Woolbert, a lad about thirteen years of age, was standing on a wharf near Wapping New Stairs, and casting a net, he accidentally fell into the river, in a depth of between 12 and 14 feet. Some perfors who faw him fall threw a rope into the water : the boy, as he afterwards informed us, perceived the rop, and catched at it, but missing his aim he suck, and became immediately fenseles. A wa-

A waterman, who also faw him fall, got a boat hook, and drew him up with fome difficulty. He had been under water about ten minutes; when taken out he was to appearance void of life; his face was fwoln and livid, there was neither pulfe nor refpiration, and his limbs were cold and ftiff; one leg was confiderably contracted. He was conveyed to a public house in the neighbourhood, and Mr. Hodgfon, surgeon and apothecary in Wapping, was immediately fent for, who ordered the wet clothes to be taken off as foon as poffible, his body to be rubbed dry with flannels, and then put between two blankets. Four men rubbed him well with falt; bottles of warm water were applied to his arm-pits, to the foles of his feet, &c. In about 25 minutes a little warmth was perceptible; fome wine and water warm was then given him; he fwallowed about half a fmall glassful, which excited a cough; a vein was opened, and more of the wine and water was given, which he drank without any difficulty. By the above method he was, in the fpace of an hour and a half, very well recovered.-The lad appeared before the Society. He faid he had been troubled with a difficulty of breathing two or three days after his recovery; and his eyes were ftill fo much inflamed, that what is termed the white of the eyes appeared of a uniform red; which was a fufficient evidence of the extreme danger from which he had been delivered. The prefence of a promifing youth, as it were rifen from the dead, and the gratitude he expressed to the instruments of his prefervation, diffused a pleasure over the whole company, which it is eafier for a benevolent heart to conceive, than for any words to exprefs.

His account corresponded with the general decla-C ration ration of perfons in his fituation, viz. that he remained entirely fenfelefs, from the time of his first finking, to the time of his recovering at the inn.

CASE III.

The following extraordinary Cafe, communicated to us by Mr. Thomas, Surgeon, at Greenwich, one of the Medical Affiftants, is a demonstration of the efficacy of fimilar methods of treatment applied to the unfortunate perfons who hang themfelves, and indicates the extensive utility of thefe institutions. We shall relate it in Mr. Thomas's own words.

"ON the 14th of June, 1774, Jane Donnelly, wife of one of the penfioners in the Royal Hofpital at Greenwich, being in a phrenzy, took the defperate refolution of hanging herfelf. She lived in a houfe with feveral inmates; and about five o'clock in the afternoon was heard to drive a nail. In a few minutes after, a little dog that was in the room began to howl in a very uncommon manner. At first the people paid no attention to the dog, but finding the poor animal become more outrageous, and feemingly in great diffrefs, one of them was induced to open the door, when the difcovered the woman hanging in the middle of the room. She immediately alarmed the neighbours, who came to her affistance, and cut her down. They believe that, from the time the dog began to howl, to the time: fhe was cut down, was full 25 or 30 minutes. She appeared to the people about her to be quite dead, as the did not breathe nor move; however they rubbed her temples with fpirits of hartfhorn, and poured water into her mouth. Full half an hour was fpent in finding the hufband, who came for me. I found

I found her entirely motionless, her face somewhat fwoln and and livid, her jaws fallen, and every other appearance of death; but having a general warmth, I was induced to attempt her recovery. After laying her in a proper fituation, I directed the women to rub her extremities with common falt; the husband was employed in rubbing her temples with hartfhorn, every now and then applying it to her nostrils; at the fame time I opened a vein in her arm, from which the blood only dropt flowly. When the friction had been continued about fifteen minutes, I perceived a small pulse; this assured me that the use of the fumigator, or bronchotomy would not be wanting, which it was my intention to have tried. The friction was continued with affiduity for half an hour, when I found her pulfe increase; the blood flowed freer; fhe began to breathe, and move her head; and foon after fcreamed most violently. She then swallowed a few drops of spirit of hartfhorn and water without much difficulty: her fenfes in fome degree returned; fhe called for water, and complained of her legs being hurt : her extremities being by this time very much inflamed, and fhe being thought out of danger, the friction was difcontinued. I then left directions with the people about her how fhe was to be managed; and on the next morning found her free of all complaints, except a pain in her head and forenefs of the throat. I have feen her frequently fince in perfect health.

F. THOMAS."

CASE IV.

ON Thursday afternoon, August 18, 1774, John Harrington, a boy 14 years old, fon to Mary C 2 Harring-

15

Harrington, near the Blue Posts at Poplar, went into the Thames, near the Horse-ferry at Limebouse, to bathe. The tide making down, and the river fuddenly deepening at that place, he foon got out of his depth, and was in the greateft danger of being drowned; he was a confiderable time in the water, ftruggling and driving down with the tide, until being quite spent, insensible, and finking, he was fortunately taken into a boat by Isaac and Cornelius Estridge. He was actually below the furface of the water, and they could just reach to catch hold of fome part of the body, and in all probability he would have been totally loft in two minutes more, as it was in the middle of the river. He was without fenfe, or any perceptible refpiration, when taken They brought him on fhore, and began up. to shake him pretty fmartly, with his head rather downwards, as they fuppofed he had taken in a confiderable quantity of water : however, by this agitation he came to his fenfes; he was taken into the Three Crowns at the Ferry, and put to bed between blankets. In this fituation I found him when I first came, (fays Mr. Patten, of Radcliffe-cross, the Medical Affiftant who fuperintended the cure). As he was then fenfible, and the pulfation at the wrift plainly to be diffinguished, I directed him to be well rubbed with a piece of hot flannel, and fome warm brandy and water to be given him. After which he lay two hours, and went home perfectly well.-Mr. Patten also observes, that the encouragement and rewards which the Society give to people affifting in fuch cafes, will be the means not only of recovering many thought to be dead, but will make people more diligent in giving their affiftance, before they are fo far gone as to render the recovery doubtful-an inftance of which was to be feen in the before

2.

fore recited cafe. A waterman in particular, upon the first cry of the boy's danger, jumped from off the gunwale of a ship into his boat, at the hazard of breaking his limbs, with the view of being first to get him out of the water; but it happened others were nearer, and took him up: Again the people at the house made no scruple of receiving him, and immediately putting him to bed.

CASE V.

A paragraph appearing in the public papers relative to the reftoration of Capt. Scott, who had fallen into the River Thames, near Limeboufe, feveral Gentlemen, Directors in the Society, took the trouble of going down to that place, in order to learn the particulars of the event from the perfons faid to be immediately concerned in his recovery, wiz. William Edges and his apprentice, who took the body out of the water; Thomas Edlefton, the publican, who admitted it into his houfe; and Mr. Paul Nedham, journeyman to Mr. Hales, furgeon and apothecary at Limeboufe, who fuperintended the cure. Thefe, conjointly and feparately, confirmed to us the following account.

ON September 5th, 1774, about five o'clock in the morning, as Capt. Scott, of the Favourite, just arrived from Legborn, was passing in a boat from his ship to land, the tide ran so strong that the lad belonging to the boat was not able to make way against it. The Captain took the scull from the boy, and by some accident or other, to which the boy happened to be inattentive, he fell into the water, yet in such a direction that his head soon emerged above the surface. It appears that he was carried

crs

carried in this manner nearly a mile by the ftrength of the current, when William Edges, the waterman, feeing his perilous fituation, rowed towards him, and by the affiftance of his boy heaved the body into his boat. This man fays, there were at first fome feeble figns of life, his eyes being convulfed, and his cheft feeling warm. He conveyed him as expeditionally as possible to the Plough Alebouse by Kidney Stairs. By this time every fign of life, as an he imagined, had vanished. The publican very humanely took the body under his roof, and furnished every necessary accommodation. A meffenger was immediately difpatched to Meffrs. Patten, of Radcliff-Cross, and Smith of Limebouse, Medical Affistants; but these gentlemen not being at home, Mr. Nedham attended. He informs us, that he found the body exrended upon a table, cold, ftiff, and motionlefs, and without the leaft figns of refpiration ; the jaws were fixed. He forgot to examine the pulse at his first entrance, but ordered him to be placed in a warm bed, and opened a vein ; whence there iffued fcarcely an ounce of blood : brifk frictions of falt, volatiles, &c. were used for some time. When he examined the wrift, he perceived a feeble pulfation, but how long this had taken place, or whether it had ever been fuspended, he was not able to fay, as he had forgotten to attend to this circumstance upon his first arrival. But as fo trivial a quantity of blood had iffued from the orifice, there is great reafon to conclude that the circulation was entirely suspended .- The means mentioned above were employed for near half an hour, without their making any apparent progrefs. At length, forcibly opening the patient's mouth, they applied to it the pipe of a pair of bellows, and blew into the lungs. This immediately excited a fudden catching of the breath.

breath, which gradually encreafed. In the fpace of two hours the Captain was fo far recovered, as to appear out of danger, though he was extremely heavy, ftupid and inattentive, during the whole day. He for fome days loft the power of fpeech; but was afterwards perfectly reftored.

It is observable that no water came from his lungs. The perfons who gave their affistance were fatisfactorily rewarded by the Society.

CASE VI.

ON Wednesday, September 20, 1774, betwixt three and four o'clock in the afternoon, James Becket, aged about 35 years, fell out of his boat into the Thames, near the Hermitage Bridge. His foot being accidentally entangled in a rope, which had fastened the boat to a veffel, he was fufpended by the leg. and his head was under the furface of the water. A lad in the fame boat attempted to extricate him, but in vain. At length the fhoe flipping off his foot, he plunged under the water. As he arofe, the boy feized his leg, but was not able to hold it. The fecond time of his emerging, the lad laid hold of fome part of his coat, and crying out for help, two other watermen came to his affiftance, and with great difficulty (he being a large, heavy man) they heaved him into the boat. He was immediately conveyed to the nearest public-house in Rotherhithe, where the landlady received him with great humanity and care.

These particulars were given us by the watermen who took the body p. The remainder we shall relate in the words of Mr. Corney himself, the furgeon geon who was the happy inftrument of the recovery, in a letter addreffed to us.

. Gentlemen,

• On Wednesday, about four o'clock in the afternoon, I was fent for to the New-York Arms, a public-houfe in this parish. On my arrival there, was introduced to a man that had been taken up out of the River, and was then in a boat adjoining to the yard. 1 immediately ordered him on fhore, and faw him brought with great care by three men. He was placed in a room, and appeared dead, being without motion; and from the most minute examination, I could not difcover either breath or pulfation. His clothes, by my direction, were cut off. and his head was raifed rather above his body; the room was cleared from spectators, except such as were useful, and a constant friction applied to his belly, which appeared hard and enlarged. By this ele means I difcovered a fpafm or two about his eyes. I then proceeded to venelection, and immediately the fpasms encreased, and were succeeded by diftortions of the body and limbs, and they terminated in ftrong and continued convultions, which lafted feveral minutes, and then his fenses returned. I then ordered him clean and warm cloths, gave him a small portion of brandy, and had him put to bed : I find this morning he is perfectly recovered, and feels no inconvenience from the difaster.

' The watermen who attended, and were tifeful to me, have applied for this letter, to recommend them to your notice for a reward : if you think they merit the full, or part of the reward, you'll pleafe to use your difference. As to my attendance and application, the Society being estab-Lifhed on fuch humane and honourable principle, it it gives me happiness to contribute my affistance without reward, except that of doing service to my fellow-creatures.

• I wifh fuccels may crown fo laudable an inftitution; and believe me

Mr. Becket appeared before the Society, affembled September , to return the Directors thanks for a reftoration to life, of which they were fo inftrumental. He confirmed the account given by the waterman concerning the accident, and faid that, as he was carelefsly ftepping backwards, in order to look at fome object, his foot miffed the edge of the boat, and he plunged into the water ; and that by his other foot being entangled in the rope, he was rendered incapable of faving himfelf by fwimming. He recollected a violent agitation of mind for a few moments; but he had no pain, and foon became fenfelefs. He felt a tightnefs and oppreffion upon his breaft, and a flight cough for fome days afterwards, but no other inconvenience.

This man is remarkably tall and ftout : he fignalized himfelf in the year , in quelling an infurrection of the coal-heavers, by feizing five of the ringleaders with his own hand.

The fight of fo hearty a perfon in the full vigour of life, a worthy hufband, and father of a family, and uleful member of fociety, fnatched from inftant death, infpired every one prefent with the higheft fatisfaction and triumph : and they agreed the pains and expences the Society had been at, would have D been been abundantly recompensed, had this been the only instance of restoration to life by their means.

CASE VII.

The following remarkable inftance of fuccels was communicated to Mr. Rich, Secretary to the Society, by Mr. Smith, of Limeboule, one of the Medical Affiftants.

October 31, 1774. · Sir. ' I have the pleafure to inform you, that I was yesterday instrumental in faving the life of a perfon who was in a most critical fituation, by falling into the River Thames. The cafe was as follows :

60 25

,Lh.O

· Nicholas Groome, whofe mother keeps a public house (the fign of the Red Lion and Still) in Drurylane, went yesterday with two of his acquaintances to fee a friend on board the Ashley, Capt. Crisp, an homeward-bound Weft-India-man, lying off Limebouse bole, a three-mast vessel. He infisted upon climbing up the foremalt malt, notwithftanding the earnest remonstrances of his friends. When he was up to the fore-top crofs bars, fuppofed to be at the height of fixty feet from the water, he fell, first upon the round-top, from thence on the gunwale of the fhip, and then into the river. It wanted about an hour and half to low water. The thip was on 4997 the outfide of a tier; fome lighters were also ahead of her. He funk under the corner of one of these lighters, and arofe between two others on the fide next to the adjacent fhip, with his face under the water, and his back upwards. A Dane belonging to the ship which lay on the infide of the Afbly, and a Black, cook of the fame fhip, perceiving the accident, immediately flid down the cables to the affiftance

affiftance of the unfortunate man. The Dane first laid hold of the skirt of his coat, and the Black soon after seized his hand. They held him in this manner until two watermen, William Blackett and Richard Accousting of St. Catharine's, passing that way, came to their affistance. They got him into a boat, and immediately conveyed him to land; there was neither sense nor motion in him. He was fix or eight minutes under the water.

* I was immediately fent for, and happened fortunately to be in the way. When I was arrived, they had already got the patient into a public-house at Limebouse, the fign of the Horns, kept by Mr. Yohn Horney, who received him with great humanity, and afforded him every affiftance in his power, after admittance had been refused into another house. I found him placed before the fire, void of fense, or perceptible respiration. There was no pulfe at the wrifts or temples, nor any beating of the heart. The attendants were already rubbing him with dry falt; I continued the friction; and in a few minutes he shewed some signs of life. I ordered his wet clothes to be immediately taken off, and the body to be placed in bed, and rubbed well with hot flannels. In about a quarter of an hour more he attempted to speak, and the pulse was plainly to be felt at the wrift. I bled him directly, taking away about eight ounces of blood. Soon after he was made to fwallow, though with fome difficulty, a little warm brandy and water.

' I then particularly examined his head, and found a large lacerated wound on the right fide, near three inches long, which I dreffed. Covering him warm, and giving proper directions to the affiftants, I left him. In two hours I returned, and found him much recovered.

D 2

· The

8

• The next morning he was fo well, as to be able to go home with his mother in a coach, who hearing of his misfortune had come down, and attended him the preceding night.

' I should observe that, in the night after the accident, he bled from the wound on the head through all the dreffings and cloths. I did not few up the wound, though large, the scalp being fo much lacerated that in all probability it would have inflamed,

'As foon as he became fenfible, he complained of violent pains in his back, legs and arms: one leg was bruiled in the fall, and was confiderably fwoln the next morning.

⁶ The perfons who took up the body, and affifted in the recovery, as alfo the publican who received him into his houfe, deferve great commendation for their behaviour; and I doubt not but they will meet with the encouragement they merit for their diligence.—With fincere respects, and with hearty wishes for the fuccess of fo respectable and deferving a Society, I have the honour to be, Sir,

Name Rich Arrowsmith RICHARD SMITH.

Although this account, given us by Mr. Smith, is perfectly fatisfactory as to the fact itfelf, and to the most material circumstances of which he was witness; yet curiofity prompted us to enquire into the particulars antecedent to his arrival; and we have from Mr. Joseph Curiss, a companion of Mr. Groome, who was with him on board the vessel, and of Mr. Horney, the landlord, that four or five minutes had elapsed after the fall, before the body became visible to them; that it was about eight minutes after the body appeared before it could be

A Wy known of following firmen stances taken

taken up, as the perfons who first endeavoured could not fucceed 'till the watermen came to their affistance; that it was *twenty* minutes at least from the time of the body's being taken out of the water to the arrival of Mr. *Smith*; that he fighed in about *three* minutes after the means were used by that gentleman, and became univerfally convulsed: that it was above an bour before the patient opened his eyes, and *two bours* before he could speak intelligibly; and that he threw no water up from his lungs or ftomach.

Notwithstanding this providential escape from immediate death, the patient was afterwards in great danger from the wounds and bruises he had received in his fall; particularly that in his head, which at first gave fome cause to apprehend a fracture or fiffure of the skull, but fortunately these fears were groundless; and by the great care and skill of his surgeon, Mr. Anderson, of Queen-street, Sau who in conjunction with Messer Hunter and Hawes, and Dr. Cogan, gave him constant attendance, he is now perfectly is recovered, and has not many public Sau C A S E VIII.

Having observed in the London Chronicle an account of the recovery of a child that was drowned at Henley upon Thames, we wrote to Mr. Clowes, Surgeon in that place, who was mentioned as having performed the cure, for the particulars of it; and he was so obliging as to transmit the following to us, by the hands of Mr. Rich, Secretary to the Society.

CASE

Sir, Henley upon Thames, July 15, 1774. In compliance with your request, I have fent as true a state of the case you enquire about as I am able, and think myself happy in having merited the attention of so humane a Society.

• ON the 27th of April an accident happened here, attended with a very fingular circumstance: fome children were playing near a drain cut through this town for the conveniency of conveying the water from a neighbouring fpring, occasioned by the late heavy rains, into the Thames, when one of thefe children unfortunately fell in, and was driven by the rapidity of the current near 300 yards under ground. From the place where this little girl fell, the water takes an angular courfe under the great Oxford Road, and is banked in with pofts and other implements to confine the violence of the ftream. From the angular course it runs in a right line into the Thames, through another narrow covered drain, almost choaked up with fand and filth. This child, fomething better than two years of age, was at last taken up at the end of this drain, notwithstanding every impediment in the paffage.

My houfe being fituated next the Thames where the child was taken up, I was called immediately to its affiftance, and found her to all appearance dead; cold as clay; the extremities and body of a high livid colour, with its jaw fallen, and a neighbour fufpending her by the legs. Being firmly of opinion that little or no water enters into the thorax or ftomach in these cases, I immediately altered its position (after taking off the wet clothes with the greatest expedition) by the affistance of two or three bystanders; ftanders; the child was supported in an horizontal pofture, with its head a little elevated. Then I began the recovery, by compreffing with my hands the abdomen, fo as to force the vifcera towards the diaphragm, that the lungs might receive fome preffure, and expel the ftagnated air in their veffels; as it is generally allowed, that people who die by iubmerfion, die in infpiration. By continuing this preffure a fhort time, and making a ftrong friction with warm cloths upon the abdomen, thorax and extremities (by the help of a proper affiftant who was at hand) the child foon fhewed fome figns of life by little gaspings. I also evidently felt a pulfation from the heart. As foon as the was capable of fwallowing, I got down acetum scilliticum 3 /s. in order to ftimulate nature by puking, which had the defired effect, and the foon recovered. The coldness of the limbs prevented my using the lancet, and I believe it was a full hour before the pulfe at the wrift could be perceived.

> 1 am, Sir, your obedient humble Servant, T. CLOWES.

CASE IX.

B

We fhall take the liberty of inferting, in this collection, the following inftance of the furpriling effects of electricity, communicated to the Rev. Mr. Sowdon, and Mr. Hawes, apothecary, in the Strand, by Mr. Squires, of Wardour freet, Sobo. For although we are obliged at prefent to confine our rewards to cales of drowned perfons, yet one part of our defign is to manifest the possibility of recovery in every instance of fudden death, where the vital powers powers are fuspended, without any effential injury being induced upon the frame. It will also manifest the admirable effects of the electrical shock; which we would earnestly recommend in all cafes of this nature where it can be obtained.

aged 3 7 Catharine Sophia Greenbill, claughter of William Greenbill, three years of age, on the 16th of July, 1774, fell out of a one pair of flairs window upon the paved ftones: fhe was taken up to all appearance dead. An apothecary being fent for, he declared that nothing could be done for the child : Mr. Squires, who lives oppolite to where the accident happened, finding the cafe hopelefs, with the confent of the parents very humanely tried the effects of electricity. At least twenty minutes, had elapfed before he could apply the flock, which he gave to various parts of the body without any apparent fuccefs; but at length, upon transmitting a few fhocks through the thorax, he perceived a fmall pulfation : foon after the child began to figh, and to breathe, though with great difficulty. In about ten minutes she vomited : a kind of stupor, occafioned by the depression of the cranium, remained for fome days, but proper means being ufed, the child was reitored to perfect health and fpirits in about a week.'

> Mr. Squires gave this aftonishing cafe of recovery to the above gentlemen, from no other motive than a defire of promoting the good of mankind; and hopes for the future that no perfon will be given up for dead, till various means have been used for their recovery.

wards to cales of droubled perious, yet one fart of our defige is to manifelt the polibility of recovery in every infrarce of fodden death, where the vital

The Cafe following was communicated to Mr. Rich, Secretary to the Society, by Mr. Rofe, Surgeon and Apothecary, at Putney.

Putney, August 15, 1774.

· Sir.

· You'll be pleafed to prefent my most respectful compliments to the Gentlemen of the Society, and acquaint them I have, agreeable to their request, transmitted the method used in the recovery of John Beefley, a lad of 12 years of age, fon to a shoemaker in Fulbam.

· Paffing over the bridge in my carriage on the -4th inft. about fix o'clock in the evening, I was stopped, and requested to give my assistance to a boy just carried into the Swan Aleboule by the water fide, faid to be drowned. On my entrance, I found him lying on his face, and people rubbing him with falt. I immediately caufed him to he fet up, his head and fhoulders supported, and took away 8 oz. of blood from the arm, rubbed his face, neck, &c. well with brandy, and continued the friction of falt : after fome time perfifting in this method, he shewed figns of life. I then directed him to be put to bed betwixt the blankets, and attempted to get down fome brandy into the ftomach, but this was impracticable. I then left him for the prefent, defiring the attendants to continue the friction of falt on the body and extremities, and the bathing of the face, &c. with the brandy, and to keep his head and shoulders a little raifed. At nine o'clock the fame evening I called again, and found nature had just then made an effort, by vomiting up fome flime and

and water. His pulfe now was getting up, and a general warmth was diffused all over him. I ordered fome gruel with wine as foon as he was capable of taking it, and then to leave him to reft, which he did the remaining part of the night. He arose the next morning free from complaints, eat a good breakfast, walked home, and has continued perfectly well ever fince.

I am, Sir, Your most humble Servant, JOHN ROSE.

• N. B. When I firft faw him there was a total loss of mulcular motion, no perceptible pulle nor refpiration; the extremities cold, face and eyes livid, and the jaws fixed, with a frothing at the mouth; in fhort, he was to all appearance dead, excepting a guttural noife, which indicated fome degree of air circulating through the lungs. How long he might be ftruggling in the water ere he was taken out I know not; they told me he had been fifteen minutes out of it when I firft faw him."

CASE XI.

D

The fubftance of the following cafe being inferted in the public papers, we were defirous of having its authenticity confirmed by Mr. *Randell* himfelf, who was fo obliging as to return us the following fatisfactory answer to our enquiries, addreffed to the Secretary.

1.

• SIR, Bath, Gam street, Sept. 12, 1774. • On Saturday the 27th of August, in the afternoon, I was called to a lad about nine years old, fon

fon of Mr. Syms, pig-butcher, in Queen-ftreet. The meffenger told me the boy was drowned, but that fome figns of life were perceptible. I haftened to him with all expedition, and as I entered the door, ordered a large fire to be made in the kitchen; which was immediately done. On viewing the patient, I found he had had a vein opened by a butcher, who had preffed out of it about two ounces of blood : part of his wet clothes still remained on him, and fome few bubbles of froth now and then appeared upon his lips. Whilft we were taking off the remainder of his clothes, fome heated blankets were brought up, into which he was inftantly put, and often rolled in them. Thefe were repeatedly applied for a quarter of an hour. His face, body and extremites, were quite cold, and of a livid complexion; and the heart had not the leaft degree of motion in it. I then got a warming-pan-full of common falt, and having heated it over the fire, put it into a flannel petticoat, which I found at hand, and laid it over the region of the flomach, heart, and great part of the abdomen. In about five minutes after this last application (though the former ones were constantly renewed with unremitted frictions of warm flannels) he began to figh. This fymptom, no doubt, was very pleafing to me, as well as to the standers by; on which we repeated our labours, if possible, with redoubled assiduity. In about an hour more he began to breathe with great difficulty, and the motion of the heart to return, though feebly : Frequent applications of heated falt during this period had been used. Soon after this, he drew up his legs and arms, and began to ftruggle under the clothes; and now a cold fweat appeared on his face, which in ten minutes more became

became warm, and then gradually extended itfelf over the whole body. His breathing was lefs and lefs difficult for the next eight hours, at the expiration of which his fpeech returned; and foon after he fell afleep. The next morning I found him perfectly recovered, and able to walk about as well as if nothing had happened. I afked him if he remembered any thing of the accident, and what were his fenfations at the time of drowning? To which his replies in general were, that he did not know that he had been in the water, or that any means had been used for his recovery. From the strictest enquiry I can make, and from the means used to find him in the river, I fhould fuppofe he could not have lain there lefs than twenty minutes. I fhould have mentioned that the boy's parents live at a confiderable diftance from the place where he was taken up, and that those who carried him home held him up by the heels, with his head obliquely downward ; by which polition, they faid, much water had been evacuated by his nofe and mouth. From what I have observed in the above patient, I should imagine great attention and firict application are abfolutely neceffary in like cafes.

^e I heard of a man who was taken out of the fame river not a month fince, and who had not been therein more than five minutes: he was ftript and bled almost immediately, afterwards rubbed with falt, and put into blankers, and yet did not recover; which circumstance (if the report be true) was probably owing to a want of perfeverance and labour in the affistants, as I do not find any medical gentleman had been called to him.

I shall at all times be glad to hear from any of the gentlemen who have undertaken this laudable and humane scheme; and beg leave to assure them,

[37] that any future informations they may have to com-municate shall be readily attended to by, Sir,

Your most obedient, humble Servant, THO. RANDELL. Que,

.

1.2.4

[38], 11.4 4 P. S. Salar -1000 03 HV21 VARI 4961 2

To the PUBLIC.

WE undertook to introduce into these kingdoms an Inftitution for the Recovery of Perfons apparently dead by Drowning, &c. upon the juftifiable prefumption, that, fhould the methods recommended in fuch alarming cafes prove in any tolerable degree effectual, the known and experienced humanity of our countrymen would encourage a defign fo peculiarly benevolent in its views. We naturally concluded, that numbers in this great and opulent city would freely join us, and affift, by their liberal contributions, our attempts to leffen, in a very effential article, the evils of human life. Induced by these confiderations, we have taken no fmall pains, and fome of us have been at no inconfiderable expence, to place our inftitution upon an unexceptionable and advantageous footing, and to give the methods recommended by others as fo remarkably efficacious, a fair and impartial trial. If they had not anfwered our defires, we should have borne alone that ridicule which the bulk of mankind are fo ready to lavish upon unfuccessful projectors : Surely then we have a right to call upon every one whofe circumftances will permit, to fhate with us the bonour of of doing good; the inexpreffible fatisfaction of reftoring life to perifhing individuals, and happiness to diffracted families!

The above examples of recovery, few as they are, as inconteftibly prove the practicability of reftoring those who are to all appearance dead, as if they had been more numerous. And they afcertain alfo a very affecting and humiliating truth : They demonstrate that hundreds might have been reftored, and have remained to this moment a bleffing to their connections and to the world, had not Britain been fo fhamefully inattentive to thefe cries of the diffreffed; had not a baneful, may we not fay murderous spirit of incredulity, rendered us deaf to the repeated affertions and demonstrative facts communicated to us by our neighbours on the continent; who, we are forry to fay, have in this inftance taken large ftrides before us, in ferving the great caufe of humanity.

The fecond part of the Dutch Memoirs, publifhed fince the first was translated, contains no lefs than *fifty-eight* additional instances of restoration to life; so that they have redeemed, in the space of about fix years, upwards of *two bundred* souls from death. In France, they have been instrumental in faving forty-five perfons out of fixty-nine in about 16 months; and it is a natural inference, that England has permitted numbers nearly equal to perish, for want of a fimilar interposition.

It is acknowledged, that accidents by water may not be fo frequent in and about this city as in feveral parts of Holland, yet they are fufficiently numerous to awaken the concern of every compassionate breast. The bills of mortality inform us, that upwards of an hundred perfons are drowned within their limits in the course of a year. Some of them, indeed. indeed, being carried off by the tide, are not found for feveral days, and their recovery becomes totally impoffible. But the greater number are in more favourable circumftances; and fuppofe but one in ten reftored, what man would think the defigns of this Society unimportant, were himfelf, his relation or his friend that one?

It is to be hoped that the happy experience we now have, as well as that of the chief countries in Europe, will at length fix the attention of our countrymen upon this important object; and then they will foon learn how much good may be effected by their patronizing our undertaking. It would be difficult to form an eftimate of the number of lives annually loft by drowning in this island : but when we recolleft that we are furrounded by water; that we are the first maritime state; that accidents of this nature are perpetually happening upon navigable rivers, in fea-ports, and on voyages; and that there is not a town or village in the kingdom where the inhabitants are not exposed to danger by bathing, fliding, &c. we need not hefitate to pronounce the amount to be feveral hundreds. But as the methods fo fuccefsfully practifed in the cafe of drowned perfons, are also applicable in fudden deaths occasioned by various other caufes; whether fuffocation by the cord, by noxious vapours, (as in coal and lead mines) fuspension of the vital powers by lightning, fyncopies, &c. &c. what an ample and untrodden field is open for the exercise of our generous compaffion ! What folid benefits might we not infure to the flate, what lafting happiness to thousands, were the rich individuals, or the Magistracy of this great and wealthy city, to let fo laudable a defign fhare

fhare fome portion of their bounty *! Our premiums might be extended to a greater diftance from the metropolis; they might also comprehend other cafes of fudden deaths; we should be enabled to diffuse over the whole kingdom, even to its most retired parts, the knowledge of these fuccesful methods, and excite a general spirit of trying falutary experiments in every cafe of fudden death : and there is every reason to believe that, when the public becomes familiarized to the affurance, that perfons are recoverable in circumstances which were once deemed beyond the reach of help, they will exert themfelves on these occasions with fuch vigour and perfeverance as may be productive of the most happy confequences. Other parts of the nation may be animated by our example, and form fimilar inflitutions to avert the evils to which the inhabitants are rendered liable by their fituation or employment. Of what benefit might they not prove in fea-ports, large towns, by the fide of a river, and particularly in countries abounding with mines! The very idea of fuch extensive utility must warm the heart of every man that has a heart to be warmed : And we confess it hurts us to have such a noble prospect

* We cannot forbear expressing our warmest acknowledgments to FREDERICK BULL, Esq; the late worthy Lord Mayor, for the early countenance he has given to our design. It is not unusual for Societies which have gained a full establishment, or are so far advanced as to confer a degree of honour upon their Presidents, to meet with respectable patrons. But for the chief Magistrate of the first city in Europe, to stoop and take an *infant* institution by the hand, and lead it through its first dangers and difficult es, merely because it was a *humane* one, respects the highest lustre upon the benevolence of his disposition, and affords an example worthy the imitation of every gentleman of fortune and influence.

opened

opened to our view, and feel ourfelves confined and fettered by the narrownefs of our finances.

It is by no means our defire to erect this Inflitution upon the ruins of any other. It is with pleafure, and with a juftifiable pride, that we behold fuch a variety of Plans formed, and fupported by that fpirit of benevolence which diffinguishes this nation, in order to alleviate the various diffreffes of mankind. Our only wish is, that this may be added to the number; that we may be uniform and confistent in our acts of humanity; that the ftreams of public beneficence may not be confined in partial channels, but be divided and fubdivided until they reach every proper object of diffress.

And yet the juffice we owe to our undertaking requires us to hint, that were we to draw a comparison between our Inftitution and those many others which do honour to their patrons, it would yield to none of them, either with respect to the quantity of good produced at a comparatively small expence; the importance and extent of its views; or the peculiar benevolence of its defigns.

After the extraordinary expences are defrayed, which were necessary to make our plan fufficiently known, the current expences will be nearly proportionate to the number of accidents which prefent themfelves. As we are not burdened with any standing charges, as the spot nearest to the place where the accident has happened becomes a temporary infirmary; where, if the humanity of the inhabitant should not, a moderate gratuity furnishes all the necessary accommodations; every guinea employed will be towards the actual redemption of a life. Surely if a charitable difpofition contributes fuch large fums with chearfulnefs towards the building, furniture, and maintenance of HOSPITALS, where a princely fortune is frequently frequently funk previous to the expected good, and where the hopes of relief are equally uncertain to each individual, it will not refufe a moiety immediately employed in fuccouring a fellow creature in the depth of diffrefs.

We must also urge that the objects this inftitution attempts to relieve, are the most pitiable of any that can be imagined. The defign of it is, to reftore fuch as have in an inftant been numbered amongst the dead, by fome dreadful difaster, or by fome fudden impulse of phrensy.

With respect to the latter class, although it is mifery in one shape or other that drives any one to commit the horrid crime of *suicide*, yet every ferious and confiderate mind must earnestly with to fnatch them from fuch a deflruction; that their fouls may not rush into the presence of their Creator, stained with the guilt of murder; and that their relations may also be refcued from the shame as well as loss to which fuch rafhnefs exposes them. In fome cafes, perhaps, they may repeat their attempts, and elude all endeavours to fave them; yet as their horrid defigns are mostly the effect of a temporary phrenfy, there is greater reafon to expect, that when returned to their fenfes, they will rejoice in their efcape, and cordially thank their deliverers. And if indulgent benevolence has erected hospitals for the removal of evils mankind bring upon themfelves by vicious gratifications, it must feel an additional pleafure in recalling a miferable creature from the very brink of eternity, into which he was precipitating himfelf by his own guilt; which guilt has this alleviation-it was occasioned by wretchedness.

A fecond clafs are the *industrious* poor. These from working upon water, mines, &c. are necessarily exposed exposed to the difasters mentioned above; and have they not a kind of demand upon us, to interpose, and avert if possible, the fatal confequences to which they are rendered liable, by ferving the community with their labours, and gaining an honess livelihood? Nay, is it not our *interest*, as well as duty. to replace them, if possible, in their sphere of usefulness, that they may again work for their wives and families; whereby these may be snatched from immediate misery and want, and the community be relieved from an expensive burden?

But fuch establishments as ours intend a general benefit. Business or pleasure, or some unforeseen cause, exposes every man, either in his own perfon or in his connections, to accidents by water. In other cafes our station in life may be fo different, and fo remote from the party we affift, that it may become impoffible for us ever to partake of any other benefit from our donations, than the pleafure of doing good; but every man living is exposed to the accidents we are attempting to avert, either in his own perfon or connexions, without any exemption from age, fex, or fortune : and he may owe his own prefervation, or the prefervation of some one still dearer to him, to that institution he patronized from a motive of public utility. So that it ought to be confidered as a kind of infurance of life rather than an affair of charity; as an affociation against those calamities which are common to us all. And when it shall become extenfive, numbers will doubtlefs have caufe to rejoice, that while they have been inftrumental in faving others, their own, or the lives of their dearest relations, perhaps of their children, whose heedless and adventurous spirits are exposing them to rking upon water, mines, Ste. are

tusilagica

to perpetual dangers, have by these means been protracted for years. How many a parent is hourly subject to the danger of seeing a sprightly, thoughtless son, brought home to him a breathless corpse! What would they not give at that instant for the most distant hopes of recovery!

But the Inftitutions formed upon the Plan, and for purpofes like ours, fpeak with peculiar energy to the finest feelings of the human heart. Death is univerfally dreaded as an evil, and those establishments which have for their object the healing of difeafes, and reftoration to vigorous active life, have juftly been ranked amongst the most benevolent and useful; but sudden death, by some fatal difaster, aggravates the ftroke. It is refented as a dreadful robbery which accident has committed; and we lament the victim as cruelly and unguardedly ftript in a moment, of the bleffings he had the profpect of enjoying for a feries of years. If there be, to every good man, a fecret pleafure in performing acts of common beneficence, in being of cold utility to his fellow-creatures, how must his heart glow with fatisfaction, where he has been inftrumental in reftoring to the joyful arms of relatives and friends, a parent, a child, a brother or an intimate, at the inftant they are deploring his lofs with inexpreffible anguish ! We have too favourable an opinion of the human heart, to fufpect that any one who calls himfelf a Chriftian, or a Man, would refuse to part with a much larger fum, than that for which we folicit, in order to extricate a fellow-creature, were he to behold him ftruggling with the agonies of death ; or were he enabled by it to prefent a father to the fatherlefs, a hufband to the widow, and a living child to the bosom of its distracted parents ! And furely,

Brien, Surgeon and Apothecary, Shad-, near Shadwell-Dock. ck, Apothecary, opposite Cecil-street,
