This city has been the See of an Archbishop ever since the year 1132, and though it be not an university, here is an academy of wits, who spend their time in composing orations, poems, and other ingenious studies: for as the Italians are perfectly ignorant in the art of drinking and smoking away the best part of their day, the principal amusement of the quality, in some countries to the northward of them; it is necessary they should introduce some amusements, in the room of those elegant entertainments. When a foreigner arrives at Genoa, I perceive his baggage is strictly searched, and he is severely treated if the custom-house officers find any foreign coin. A dagger, or a sharp pointed knife also is seized

VOL. II.

as an unlawful weapon, and incurs a forfeiture; but fire-arms are only taken away, and secured till the traveller leaves the town, and they require a fee for taking care of them. It is the same in other towns of Italy; so that a person pays more than the price of his pistols before he has passed through many of them.

VERIYARD relates, that the day he arrived at Genoa, as he passed through one of the great streets, he observed a woman mounted on a stage, hung round with spheres, globes, schemes, and mathematical instruments: she was tall of stature, of a swarthy complexion, and a fierce masculine countenance, and was haranguing the croud, magnifying her skill in judicial astrology, and telling of fortunes, with a thousand ridiculous gestures and odd grimaces; after which she invited the people to attend at her chamber, where they might have an account of their whole lives, past and to come, at a reasonable rate: and as a proof of her art, she whispered several of the mob, through a kind of speaking-trumpet twelve feet long, applying the small end of it to the ear of the person she spoke to, so that none of the standers-by could hear what she said. Among others, she pitched upon our traveller to make an experiment upon; and having applied the machine to his ear, she told him, he was troubled with an itch of rambling, that he had gone through many dangers to gratify his curiosity, and been five years out of his own country; which a little surprized him, every tittle of it being literally true: and as he was but just come into the town, and had conversed with none of the inhabitants, he seemed to suspect she had received her intelligence from the devil. But as to his being a traveller, she might easily collect this from his garb, and the time he had been abroad, was probably a meer guess; people are so willing upon one lucky guess to ascribe every thing to some supernatural power, and to make allowances where the pretended conjurer happens to be mistaken, that 'tis no difficult matter, for the professors of this science, to establish a reputation wherever they come. I proceed now to describe the situation of the rest of the towns of any consequence upon the Genoese coast; viz.

2. Cogereito, a little port-town, fifteen miles south-west of Genoa, which would scarce have been worth mentioning, but that it is said to be the place where the famous COLUMBUS, who discovered America, was born; though some make him a native of the city of Genoa.

3. Savona, at the bottom of a bay, about thirty miles south-west of Genoa, one of the largest towns in the Genoese territories, to which the King of Sardinia sometimes sets up a claim. It is the See of a Bishop, suffragan of Milan, and remarkable for the birth of three Popes, viz. GREGORY VII, JULIUS II, and SIXTUS IV.

4. Noli, situate on the same coast, ten miles south-west of Savona, the See of a Bishop, suffragan to the Archbishop of Genoa; an independent state, till the fifteenth century, when it was incorporated with the republick of Genoa.

5. Final, about five miles south-west of Noli, and forty from Genoa, the capital of a marquise, bounded by two mountains on the east and west, by the duchy of Montferat on the north, and by the sea of Genoa towards the south; governed by it's own Lords, 'till about the year 1600, when ANDREAS SFORZA, the last Marquis, sold it to the Spaniards, who yielded it to the Imperialists

12 X

when

CHAP.  
VII.  
Genoa.

when they evacuated the rest of the Spanish territories in Italy, in the year 1707, and was by the Imperialists sold to the republick of Genoa, who are now in possession of it. The town is defended by a castle and two forts, and may be reckoned a tolerable harbour on a coast where none are good.

Albenga.

6. Albenga, situate on the same coast, about twenty miles to the southward of Final, at the mouth of a small river, formerly esteemed a considerable city, and a pretty good harbour, and is still the See of a Bishop suffragan to Genoa.

Oneglia.

7. Oneglia, the capital of a territory of the same name, about sixty miles south-west of Genoa, and forty to the westward of Nice, belonging to the King of Sardinia, and already described with the rest of that Prince's territories.

St Remo.

8. St Remo, fifteen miles to the westward of Oneglia, pleasantly situated, partly in a plain by the sea-side, and partly on the ascent of a hill, the country about it abounding in oranges, lemons, and other delicious fruits, which has occasioned it to be called the paradise of Italy. Mr ADDISON being driven into this harbour by contrary winds, observed that there were several plantations of palm-trees in the neighbouring fields, which are not found in any other part of Italy.

Vintimiglia.

9. Vintimiglia, a port-town, situate at the mouth of the river Rota, thirty miles and upwards to the westward of Oneglia, remarkable for little but its antient castle, and it's being a Bishop's See, suffragan to Milan.

Monaco.

10. Monaco, the capital of a little principality, belonging to the family of Grimaldi, about ten miles long and three broad. The town lies about ten miles to the westward of Vintimiglia, and eight to the eastward of Nice, and is supposed to be the *Herculis Monaci Portus* of the antients. It is fortified and defended by a castle, and has a harbour belonging to it. The Spaniards were in possession of it till the year 1641, when the Prince expelled them, and received a French garrison, under whose protection it has been almost ever since. The Prince is a Peer of France.

Rapallo.

The towns situate to the eastward of Genoa, are, 1. Rapallo, which lies on a little bay of the same name, sixteen miles south-east of Genoa, famous for the excellent oil produced in the country about it.

Lavagne.

2. Lavagne, situate at the mouth of a river of the same name, twenty-five miles south-east of Genoa.

Borgheto.

3. Borgheto, the capital of a marquisate, a little to the eastward of Lavagne, the See of a Bishop, suffragan to Genoa.

Sarzana.

4. Sarzana, situate about sixty miles south-east of Genoa, about three miles from the mouth of the river Magra, the eastern boundary of the state of Genoa, a large populous town, with a pretty good trade, and the See of a Bishop suffragan to Rome.

Porto Venere.

And, 5. Porto Venere, about seven miles to the southward of Sarzana, upon the gulph of Spezza, esteemed a good harbour, and defended by a fort.

The legislative authority in the republick of Genoa is lodged in the Great Council or Senate. The administration of the government is committed to the Doge, or Duke, with the following councils, 1. The council called the Signiory. 2. The council called the College. 3. An assembly stiled the Council. And, 4. An assembly composed of the Signiory and College united in one.

The Great Council, or Senate, consists of the

Signiory and College, and four hundred noblemen and principal citizens, annually elected out of the freemen, who must be twenty five years of age, and who have been registred citizens four years at least, and have not been of this council before; three hundred of whom, with the members of the Signiory and College, make a Quorum. Four parts in five of this Senate must agree to the enacting new laws, and levying of taxes; and they have also some of the principal offices in their disposal.

The Signiory consists of the Duke and twelve other members, who have been free twelve years, and hold their places two years, but are not capable of being elected again under five years after their quitting them. By these, audience is given to Ambassadors, dispatches to and from foreign courts sent and received, letters-patent granted, and orders issued for the payment of the publick money: And where the matter is of difficulty, and they cannot agree, they call the College to their assistance, and sometimes the Council also, and the matter is determined by plurality of voices.

The College is composed of eight members stiled Procurators, together with all such as have enjoyed the office of Dukes, the latter being Procurators for life, but the former chosen once in two years. These manage the revenue, farm out the lands of the state, buy and sell for the republick, and in case any dispute arise, call the Signiory to their assistance.

The assembly called the Council, consists of the Signiory, the College, and one hundred members more, chosen out of the Great Council or Senate. These are the last resort in civil causes, and receive all appeals from inferior judicatories, and assist the Signiory and College in difficult points, as hath been observed already.

The Signiory and College united, have a power of granting pardons in ordinary cases, but in parricide, high-treason, and other enormous crimes, they are obliged to call the Council to their assistance. The Signiory and College also treat of war and peace, and forming alliances; and in all their councils, matters are determined by ballot. Besides the five councils above-mentioned, there is another assembly of five persons, whose office it is to see the laws put in execution.

The Doge is obliged to reside in the palace the two years he is in office, with two of the Signiory, and their families. He must be an inhabitant of the city, fifty years of age, no bastard, and one that hath an estate to support his dignity. He proposes all matters to be debated in the Senate and Council, which are of a publick concern; and after he has served two years retires to his own house, where he remains in private for eight days till his administration is examined, and either approved or condemned. In the first case he is made Procurator during life; but in the other, proceeded against as a criminal.

When the Doge is elected, they place a crown of gold upon his head, and a scepter in his hand, on account of the island and kingdom of Corsica, of which they are Sovereigns; but this is but a shadow of royalty, the authority being lodged in the Senate: He hath however his guards, and his habit is not inferior to that of other crowned heads, his temporary Majesty being clothed in robes of crimson velvet, and complimented with the title of His Serenity. The Senators are stiled Their Excellencies, and the Nobility illustrious; as indeed every man is in Italy, who makes any

Genoa.

any thing of a figure. The nobility derive their titles from such lands or signories as they possess in Milan or Naples, or have purchased them of the King of Spain or the Emperor, who now possesses the Spanish territories in Italy. And though the ancient and modern nobility enjoy the same privileges, yet those families which are of an hundred or two years standing, mightily despise those who are lately made, as is usual in other countries. This republick has suffered very much by permitting her subjects to purchase honours and estates of foreign Princes; for this has in a manner rendered the most considerable families amongst them subjects to another jurisdiction. While the Spaniard was possessed of Milan and Naples, they were obliged to be governed by Spanish councils, as they are now by the Imperialists; which has sometimes drawn upon them the resentment of the French, who have bombarded their capital city and other towns upon the coast, and given a great shock to their trade. As to their naval strength, it is dwindled to nothing: Their fleet, which formerly obtained so many glorious victories over the Venetians, Turks, Spaniards, &c. and settled so many colonies in Asia, is now reduced to six galleys; and when they would have made an addition to them of four more, the French King ordered them to desist at their peril. Their forces at land in time of peace may be about four or five thousand men, and in case of a war they might raise twenty thousand, and find taxes sufficient to maintain them, for many of their subjects are still very rich. The ordinary revenue indeed is not computed to amount to two hundred thousand pounds per annum, but upon an extraordinary occasion the great men must submit to be taxed in proportion to their wealth; though as they compose the legislature, no doubt they will avoid charging their own estates 'till there is an absolute necessity for it. As for what they possess in the Emperor's territories in Naples and Milan, they are usually taxed higher than the natives, and these duties add nothing to the publick revenue of their own state; and whatever extortions are practised upon them abroad, they have no remedy for them. It has always been the maxim of the Spaniards, as I suppose it is now of the Imperialists, not to suffer the Genoeſe to sell their estates in Naples, &c. to any but their own countrymen, that the great men of Genoa may always be dependent on those powers. There is a bank at Genoa, whose fund is part of the publick duties, which are appropriated to pay off the debts of the republick; from whence it is natural to think the projectors of our Sinking Fund took the hint.

The crown of Spain remains still vastly indebted to this republick for the money borrowed by PHILIP II, towards fitting out the Invincible Armada against England, and other sums taken up since; for which that kingdom pays them part of the interest sometimes, and probably they never expect the principal, especially since the Spaniards have so little to do in Italy at this day. One piece of oeconomy the Genoeſe are justly commended for, considering the barrenness of their country; and that is, the keeping always two or three years provision of corn, wine, and oil, before-hand in their store-houses, for the use of the publick. In plentiful years, when these things are cheap, they buy up enough to serve the city three or four years; and if there happens to be a bad year, they live upon the old store. The necessaries of life by this means are never at an extravagant price,

the state contenting itself with a very moderate profit. All retailers of corn and wine, bakers, vintners, &c. are obliged to take them of the publick, and have a certain gain allowed them, which they may not exceed upon the severest penalties. The wine-cellars are fixed in several quarters of the town as conveniently as may be, and every cellar has its intendant or officer, who is answerable to the state for his conduct. The Genoeſe boast that these wines are never adulterated, and that here only pure natural wine is drunk; for should the officers or their servants be concerned in the mixing them, they would infallibly be sent to the galleys. The chief manufactures in Genoa, are silks, taffeta's, velvets, brocades, and other rich stuffs, which they export to other countries, together with wine, oil, citrons, lemons, anchovies, dried sweet-meats, Parmesan cheese, and several kinds of drugs used in physick and painting; but their trade seems to be very much upon the decline.

From history we learn, that this country, the ancient Liguria, with the rest of Italy, fell under the dominion of the Romans; and that MAGO, the brother of HANNIBAL, having taken and destroyed their capital city of Genoa, the Romans sent LUCRETIVS to rebuild it, during the consulate of C. N. SERVILIUS SCIPIO, and C. SERVILIUS NEPOS. Upon the fall of the Roman empire it became subject to the Lombards; after which, they erected governments of their own, but were so tumultuous and unsteady in their choice, that no state has ever suffered greater or more frequent revolutions. Sometimes the people chose them a head on whom they conferred the sovereignty; soon after, the nobility deposed him, and assumed the government themselves. To-day they put themselves under the protection of some neighbouring Prince; and not many days after renounced his authority. They were successively subject to the Archbishop of Milan, the French, the Marquis of Montferat, the Duke of Milan, and again to the French: and in the intervals of these foreign governments they chose Counts, Consuls, and Captains, of their own. At length ANDREW DORIA, about the year 1518, settled their republick in the form we find it at present; of which event a late writer gives the following relation:

The Genoeſe putting themselves sometimes under the protection of the Spaniards, and sometimes under that of the French, according as they could procure the most advantageous terms from the one or the other, as hath been hinted already; the abovementioned ANDREAS DORIA, a native of this republick, who was one of the greatest Admirals and Generals of his time, and had served alternately in the French and Spanish armies, had the address to play one of these powers against the other so successfully, that he entirely disengaged his country from a dependance on either of them, and then erected a free state according to the aboveſaid model, notwithstanding the Genoeſe offered to make him their hereditary Prince, without putting any limitations upon him; and so jealous was he of their losing their liberty again, that he procured an act of state, that neither he nor any of his descendants, nor any other family that should grow rich and powerful in the commonwealth, should be admitted to any office or share in the government, lest they should usurp the sovereign power. But all his caution was very near being eluded even in his life-time; for about the year 1547, a popular citizen named FIESCO, had obtained

Genoa.

obtained such an influence over the people by his benevolence to the poor and necessitous, and a pretended zeal for the publick good, that he carried all before him: He prevailed with the citizens to imprison the principal Senators, under pretence of male-administration; and created an ill opinion in the people also of their once-admired Prince DORIA, the only person he apprehended able to frustrate his designs; and afterwards found but little difficulty in making himself master of the capital city. But going the same day as it were in triumph to take possession of the fleet of the republick, which lay at anchor in the harbour, and walking over a plank from one vessel to another, he dropped into the sea loaded with his armour, and sunk downright; whereupon his party being in confusion, the aged Prince DORIA took advantage of it, set upon the rebels, and dispersed them; and by these means became a second time the founder of their commonwealth. FIESCO's body being afterwards found, the Senate decreed that it should be carried several leagues to sea, and with ignominious ceremonies thrown into it; that his estate should be confiscated, his palace demolished, and no house ever be built in the place where it stood, that the ruins might remain a monument of his treachery, as they do to this day: While, on the contrary, the fine marble statues of Prince DORIA, and of his nephew who was killed in opposing the usurper, stand on each side of the stairs as we ascend the senate-house, in memory of their virtue. The nobility of Genoa, the same author observes, converse freely with foreigners as well as with their fellow-citizens; while the Venetian nobility are reserved, wearing a distinguishing habit, and it seems dangerous entering into too free a conversation with them. But to return to the Genoise: After this second deliverance by Prince ANDREW DORIA, they caused a register to be made of all their free citizens; and found five hundred twenty-four antient families of noble extraction, and four hundred eighty-seven other families of considerable citizens; and these two classes only were denominated free citizens; in whom and their descendants, taking up their freedoms and registering themselves, not being infamous, or having exercised any mechanical trade within three years before their election, the government is lodged. The rest of the inhabitants, either of the city or in the territories belonging to the republick, are stiled unfree, and have no share of the government. Out of the former only the members of the Senate and of all the other Councils are elected. But it is provided, That if any free citizen shall, through infamy, or his exercising any mechanical employment, be disabled to exercise any office or place in the administration; yet his legitimate male issue, being men of reputation, and not exercising any mean trade, shall be restored to the privileges of their ancestors. It is also provided, That the buying and selling as merchants, or the going to sea and negotiating such kind of business, without keeping open shop, shall not disqualify a freeman. And the Signiory, the College and Council in conjunction, have a power of electing annually in January out of the citizens that are not free, any number not exceeding ten, to be registered and added to the number of free citizens. The inhabitants who are not free are eligible also to many beneficial offices.

## CHAP. VIII.

*Contains a description of the duchy of Milan.*

THE duchy of Milan is bounded by Switzerland and the country of the Grisons on the north; by the territories of Venice and the duchies of Mantua and Parma towards the east; by the Apennine mountains, which separate it from the territories of Genoa on the south; and by Montferat and the King of Sardinia's other dominions on the west, being about eighty miles in length from north to south, and sixty in breadth from east to west, and three hundred miles in circumference. It is extremely well watered with rivers and lakes: the chief rivers are the Po, the Tefin, the Adda, and the Sessia; the lakes are those of Maggiore, Lugano, and Como. The air and climate are very desirable, and the whole country almost one fruitful plain, adorned with a great variety of fine towns, palaces, and convents. This country, says Dr BURNET, is equal to the loveliest spots in England or France, hath all the sweetness of Holland and Flanders, but with a warmer sun and better air. The neighbourhood of the mountains causes a freshness of air here, that makes it the most desirable place to live in that can be found.

Situation  
and extent  
of the du-  
chy of  
Milan.

Rivers and  
lakes.

The air.

Soil.

This duchy is divided into thirteen parts, viz. 1. The Milanese Proper. 2. The Pavese. 3. The Lodofan. 4. The Cremonese. 5. The Comasco. 6. The county of Anghiera. 7. The vallies of Sessia. 8. The Novarese. 9. The Vigevanois. 10. The Lomelline. 11. The Alexandrin. 12. The Tortonese. And, 13. The territory of Bobbio.

Subdivi-  
on.

Milanese Proper is bounded by Comasco on the north, by the Lodofan on the east, by the Pavese on the south, and by the Novarese on the west; the chief towns whereof are, 1. Milan, the capital of the duchy. 2. Marignano. 3. Agnadel. And, 4. Cassano.

Milanese  
Proper.

1. Milan, stiled *The Great*, and that very justly, if we consider it's demensions, the multitude of it's inhabitants, the magnificence of it's temples and palaces, or it's manufactures and commerce. It is situated in the latitude of forty-five degrees twenty-five minutes; nine degrees thirty minutes to the eastward of London, about two hundred and fifty miles north-west of Rome, and eighty-five to the eastward of Turin. It stands upon the little river Olana, and has the advantage of two navigable canals, by which it hath a communication with the rivers Adda and Tefin. The city is of a round form, and encompassed by a wall, in which there are ten gates, being about ten miles in circumference, too large to admit of a regular fortification; but the citadel, which is a large hexagon and commands the place, is looked upon as one of the strongest fortresses in Italy. The streets of the town are broad and clean, the squares spacious, the houses lofty, but the contrivance of them, or their beauty, not so much admired as those in some other Italian cities. It contains two hundred and thirty churches, of which eighty are parochial, and eleven collegiate. There are also forty convents of men, and fifty of women, with some other fraternities, and the suburbs are very large. The vastness of the town,

The city  
of Milan.

the

CHAP.  
VIII.  
Milan.

the nobleness of the buildings, and above all, the surprising riches of the churches and convents, says Dr BURNET, are signs of great wealth. It is supposed to contain three hundred thousand souls, amongst whom are great numbers of nobility and gentry, as well as merchants. Their principal manufactures are those of silk-brocade, and other rich stuffs: their steel and iron-ware, and fine crystal-works, are also much admired, especially the last; and their artificers of every kind are such exquisite artists, that they have engrossed the trade of this part of Italy. The nobility here affect to make a grand appearance, as is evident from their clothes, their coaches, and numerous retinues of servants; and the women go abroad and enjoy more freedom here than in many other towns in Italy.

The publick buildings most taken notice of, are, 1. The cathedral, a vast Gothick structure, about five hundred feet in length, and two hundred in breadth: the pavements, the walls, inside and out, with the roof, according to Dr BURNET, are all marble. The roof is supported by an hundred and sixty white marble pillars, standing in four rows, each of them three fathoms round, and valued at ten thousand crowns a pillar: though this church is so full of statues, says the same reverend writer, that one would be inclined to think every saint hath it's statue here; it is said there are several thousands still wanting to finish the design. Those of St BARTHOLOMEW fleeced, alive, and ADAM and EVE, are admirable pieces. Here are two noble brazen pulpits in the church, each of them running round a large pillar like a gallery, and supported by huge figures of the same metal. The choir is wainscoted and carved in so extraordinary a manner, says my author, that I never saw passion so well expressed in wood. It contains sixty stalls, and they have almost all the histories of the gospel represented in them. Just under the cupola lies St CARLO's body, (CHARLES BORROMEO once Archbishop of this See) in a great crystal case of an immense price. The plate and other presents made to this saint are of a prodigious value; some services for the altar are all of gold, very massive, and set with jewels; others are so finely wrought, that the fashion is thought equal to the value of the metal; and indeed the riches of the churches of Milan, says my author, strike one with amazement.

The church of St AMBROSE is in great esteem on account of the corps of that saint, which is interred here; and his denying the Emperor THEODOSIUS entrance into the same church, for having barbarously massacred seven thousand of the inhabitants of Theffalonica. Here is also shewn a brazen serpent upon a high marble pillar, said to be the same that MOSES erected in the desert, though the scripture assures us, it was beaten to powder some thousand years ago.

The other buildings best worth viewing are the palace of the Archbishop, the Viceroy's, and that of the Marquis of Homodeo's; the seminary also is a fine building, erected by CHARLES BORROMEO; and the college of the Jesuits, the town-house, and the great hospital deserve our attention. The last is a magnificent structure, wherein are entertained four thousand infirm people, having a revenue of seventy thousand crowns per annum, and upwards. The closet of Signior MANFIEDO SETTALA, being a vast collection of natural and artificial rarities, is also said to be well worth the

VOL. II.

viewing. As for the Ambrosian library, so much admired by some, Mr ADDISON observes, that they have laid out more money in pictures than in books, according to the Italian genius. About two miles from Milan, as the same writer relates, stands a building that would have been a masterpiece in it's kind, had the architect designed it for an artificial echo. Here he discharged a pistol, and the sound was returned six and fifty times, though the air was very thick and foggy. The first repetitions follow very thick, but are heard more distinctly in proportion as they decay. There are two parallel walls which beat the sound back on each other, till the undulation is quite worn out. Other travellers relate, that they have heard the echo repeated in this place an hundred times. At Milan, as in several other cities of Italy, the natives are inclined to imitate the French in their mien and garb; but there is a kind of awkwardness in the Italians, which easily discovers the airs they give themselves not to be natural.

The civil government of Milan is lodged in the senate, consisting of prelates, doctors of law, and gentlemen of the country, who are however subject to the controul of the Emperor's Vicar-General, who is at present the celebrated Prince EUGENE of Savoy, to whom the Viceroys of Naples and Sicily, and the Governors of all the rest of the Italian territories subject to the Emperor are accountable. The Vicar-General also appoints the president of the senate, magistrates, commissaries, officers of the treasury, &c. The governor of the town and citadel of Milan are independent of each other. The several cities, districts, and chatellanies of Milan are governed in civil matters by their respective magistrates. In each city there are twelve Seniors or Aldermen, who are chosen out of the common council, consisting generally of sixty members, and the governors of the several places are appointed by the Vicar-General, and accountable to him, as are all the generals and military officers. The city of Milan is an Archbishop's See, and according to tradition, their first prelate was St BARNABAS, colleague to St PAUL. Here, as in other towns, is an academy, or club of Wits, who stile themselves *Nasceffi*, that is, hidden, or secret. At their publick meetings they entertain each other with rhetorical, moral, or philosophical discourses, and sometimes with politicks; for travellers relate, that there is no place where the common people inquire into state-affairs, and entertain one another with political remarks more than in this country. They always had an aversion to the French, but the barbarous and insolent treatment they met with from them in the last war, has confirmed them in their aversion to that nation; this induced them so readily to submit to the Austrian dominion after the victory of Turin in the year 1706.

The second subdivision of the Milanese, is the Pavese, which lies to the southward of Milanese Proper; the soil whereof affords such plenty of corn, wine, and the most delicious fruits, that it is called the garden of the Milanese: The chief towns whereof are Pavia, Certosa, and Voghera.

The city of Pavia is situated in a plain on the banks of the river Tesin, four miles north of the Po, and twenty to the southward of Milan, and was the capital of the kingdom of the Lombards, till that monarchy was destroyed by the Emperor CHARLEMAGNE, who took DIDIER their last King prisoner in this city. The streets

Milan.

are straight and large; but the buildings generally inferior to the other towns of Italy. There are some buildings indeed very well worth viewing, particularly two colleges of their university, which consists of seven in all; the one was founded by Pope PIUS V. and the other by Cardinal BORROMEO. The church of St PETER, with the monastery adjoining to it, are noble structures; in the last of which the corps of St AUSTIN is said to be interred in a tomb of white marble, and is visited to this day with abundance of devotion. The church of the Dominicans also is well worth a traveller's curiosity, as well for the beauty of its architecture, as for its rich moveables and admirable paintings. In the square before the cathedral is a brazen statue on horse-back of MARCUS ANTONINUS, which the people call CHARLES V. and some learned men have taken for CONSTANTINE the Great. The cathedral itself is a heavy old Gothick building, and has little to recommend it. The church and convent of the Carthusians are beautiful structures; the choir of the church particularly is exceeding fine, all the walls are lined with marble, and adorned with pillars of the same stone of different colours, and the figures about the high altar are incomparable. As to the convent, some travellers affirm, that there is nothing equal to it, if we regard either the grandeur or conveniences, the court being surrounded with a portico a mile in circumference, sustained by an infinite number of pillars, under which are the cells of the Monks. But notwithstanding there are some churches and religious houses that deserve our attention here, the place is at this day very much impoverished and run to ruin, nor are its fortifications of any great consequence. It is still however the See of a Bishop, one of the richest in Italy, and depends immediately on the Pope.

The Lodetan.

The third subdivision of Milan is the Lodetan, which abounds in rich pasture and large herds of cattle, and is famous for its cheese. The chief towns whereof are Lodi, and Lodi Vecchio.

The city of Lodi.

The city of Lodi stands on a hill near the banks of the river Adda, twenty miles south-east of Milan, being a large well-built town, and a Bishop's See; but travellers do not give us a particular description of it.

The Cremonese.

The Cremonese is a small province to the eastward of the Lodetan, from which it is separated by the river Adda, and abounds in corn, wine, flax, and fruits. The chief towns whereof are, 1. Cremona. 2. Casal Maggiore. And, 3. Soncino.

The city of Cremona.

The city of Cremona stands in a plain on the north side of the Po, a canal cut from this river to the Oglio running through the city, and is about forty-five miles south-east of Milan. It is a large well-built town, five miles in circumference, the streets wide and straight, and the squares spacious; but neither populous nor rich. It is defended by a castle and other fortifications, and being in possession of the French in the year 1702, Prince EUGENE of Savoy, the Imperial General, entered the place by a subterraneous passage, and surprized Marshal VILLEROY, who commanded the French garrison, in his bed; but the Prince was forced to retire with his prisoner, some Irish regiments in garrison making a brave defence, and the detachment which should have supported the Germans, missing their way, and not coming up in time. This town however, with the rest of Milan, was evacuated by the French in the year 1707, and the Imperialists

have been in possession of it ever since. The cathedral, the Bishop's palace and the town-house, are said to be handsome structures; and there are several fine hospitals well endowed. It is the See of a Bishop, suffragan to Milan, and hath an university very little frequented at present.

CHAP.  
VIII.  
Milan.

Comasco, the fifth subdivision of the Milanese, lies north of Milanese Proper; the chief towns whereof are, 1. Como. 2. Lecco. 3. Bellamo. And, 4. Fort de Fuentes.

The Colomafco.

Como is situated at the south end of the lake to which it communicates its name, about twenty-five miles to the northward of Milan; 'tis a populous town, and a place of some strength, and the See of a Bishop, suffragan to Milan. Here PLINY the younger was born. The neighbouring lake is about thirty miles in length and three in breadth; the river Adda runs through it.

The city of Como.

The sixth subdivision of the Milanese is Anghiera, situate on each side of the south part of the lake Maggiore; the chief towns whereof are, 1. Anghiera. 2. Arona. 3. Orta. 4. Palanza. 5. Canobio. 6. Ugonia. And, 7. Domo d'Ocella.

Anghiera.

The town of Anghiera stands on the east side of the lake Maggiore, about thirty miles north-west of Milan; but I meet with no particular description of this, or of any of the rest of the towns in this district.

The town of Anghiera.

The eighth subdivision of the Milanese are the vallies of Sessia, which lie to the westward of Anghiera: but these having been yielded to his Sardinian Majesty by the Emperor, have been mentioned already.

The vallies of Sessia.

The little province of the Novarese is bounded by the district of Anghiera on the north; by the Milanese Proper on the east; and by the King of Sardinia's territories on the south and west: the chief town whereof is,

The Novarese.

Novara, about thirty miles to the eastward of Milan, a fortified town, and the See of a Bishop, suffragan to Milan.

The city of Novara.

The Vigevano, or Vigevanasco, situate on the river Tesin, having been granted to his Sardinian Majesty by the Emperor, has been already described.

Vigevano.

The Lomelline, or Laumelline, to the southward of Vigevano, having been granted also to the King of Sardinia by his Imperial Majesty, hath been already described.

The Lomelline.

The Alexandrin also, which lies to the southward of the Po, having been yielded to his Sardinian Majesty, hath been treated of already.

The Alexandrin.

The Tortonese lies to the eastward of the Alexandrin, the chief town whereof is Tortona, about twelve miles east of Alexandrin, and is the See of a Bishop, suffragan to Milan.

The Tortonese. Town of Tortona.

The district of Bobbio lies between the Pavese on the north; and the Apennine hills, which separate it from the territories of Genoa, on the south; the chief town whereof is Bobbio, situate in a pleasant plain, about thirty miles south-east of Tortona, being a Bishop's See, suffragan to Genoa.

Town and territory of Bobbio.

The duchy of Milan, the north part of the ancient Liguria, was inhabited by the Insabres when it fell under the dominion of the Romans. Upon the decline of the Roman Empire it was possessed by the Goths, who were expelled by the Longobardi, or Lombards, a people of Germany, about the year 572. Milan constituted the best part of the kingdom of Lombardy, which continued about two hundred years, when DIDIER the last

King

CHAP.  
VIII.  
Milan.

King being taken prisoner, and the monarchy destroyed by CHARLEMAGNE, the Emperors of Germany afterwards appointed the governors of the Milanese, who at length assumed the sovereignty of this country stiling themselves Lords of Milan. JOHN GALEAS was first honoured with the title of Duke, about the year 1395, and being succeeded by his two sons, who died without any legitimate issue, several Princes laid claim to the Duchy, particularly the Emperor FREDERICK IV, ALPHONSUS King of Naples, LEWIS Duke of Savoy, CHARLES Duke of Orleans, and the Republick of Venice: whereupon the Milanese for some time took the government into their own hands; but about the year 1468, submitted themselves to FRANCIS SFORZA, one of the greatest Generals of his time, who had married the base daughter of their last Duke, LEWIS XII, King of France, son to the Duke of Orleans, and great-grandson of Duke JOHN GALEAS, reviving his pretensions to the Milanese, marched an army thither, and reduced it to his obedience in less than a month; obliging the Duke, surnamed LEWIS the Black, to fly for refuge into Germany. His subjects growing weary of the French insolence, soon after recalled him; but being betrayed by a mercenary Swiss soldier in his service, he was taken prisoner by the enemy, and died in captivity. MAXIMILIAN, the son of Duke LEWIS, assisted by the Swiss, defeated the French in his turn, and drove them out of the country. But FRANCIS I, reinforcing his troops, obtained a signal victory over the Milanese and Swiss, obliging MAXIMILIAN to quit the government, and accept a pension of thirty thousand ducats *per annum*. FRANCIS SFORZA, the son of MAXIMILIAN, being assisted by the Emperor and the Pope, was restored to his duchy about the year 1521; and at the treaty of Cambray, *anno* 1529, the French King relinquished his claim to the Milanese. Upon the death of FRANCIS SFORZA II, *anno* 1536, the Emperor CHARLES V, granted the investiture of the duchy to his own son PHILIP II, King of Spain; whose successors enjoyed it till the year 1706, when the French and Spaniards evacuated the Milanese, and the rest of the Spanish dominions in Italy; which, by the following treaty of peace in the year 1714, were yielded to the Emperor, who still remains sovereign of them.

The constant revenues of the duchy of Milan are computed at three hundred thousand pounds *per annum*, and the compliment of forces for this duchy are about thirty thousand men; though there are scarce half so many in actual service, the officers putting great part of the pay in their pockets, which is assigned for that service; at least this was the case while they were under the dominion of Spain; possibly the present Vicar-General, Prince EUGENE, may have put things upon a better foot.

## MANTUA.

### CHAP. IX.

*Contains a description of the duchy of Mantua.*

Situation  
and extent.

THE duchy of Mantua is bounded by the Brescian and Veronese, part of the territories of Venice, on the north; by another part of the Venetian dominions and the Ferrarese on the east;

by the duchies of Modena and Mirandola on the south; and by the Cremonese in the duchy of Milan towards the west; being divided into, 1. The duchy of Mantua proper. 2. The duchy of Guastalla. 3. The county of Novellara. 4. The duchy of Sabionetta. 5. The principality of Bozolo. 6. The principality of Castiglione de la Stivere. And, 7. The principality of Solferino. But not finding their exact boundaries, I shall content myself with a general description of the whole duchy; which is about fifty miles in length, but of a very unequal breadth, in some places upwards of thirty miles, and in others not seven miles over. The chief towns are, 1. Man-

CHAP.  
IX.  
Mantua.  
Subdivi-  
sion.

Chief  
towns.

Mantua  
city.

Trade.

The city of Mantua stands in the middle of a lake, or as some call it, a morass, formed by the river Mincio, about fourscore miles to the eastward of Milan, and as many south-west of Venice, the situation rendering it very unhealthy in the hot season. It is joined to the continent by a cause-way three hundred paces long on the side of Cremona, and by two others five or six hundred paces long towards the north, with forts and draw-bridges for their defence. It is between four and five miles in circumference, and supposed to contain fifty thousand inhabitants. The walls and fortifications are but indifferent, the lake being it's best defence; the streets are large, and the squares spacious. There are about eighteen parish-churches in it, and forty convents: the cathedral, the Jesuits church, that of St BARNABAS, the town-house, the theatre, and the ducal palace, are the principal publick buildings; but I do not find any of them much admired by travellers: indeed one writer acquaints us, that several of the streets have piazza's with marble pillars, and that the palaces of the nobility and persons of quality are very numerous; but I presume they have nothing extraordinary in their structure, others having passed over them in silence. The town however is a place of good trade, their silk manufacture particularly has a great reputation all over Europe; it is from this city those glorious Italian silks, called Mantua's take their name, which our countrymen find more difficulty in imitating than any other. The late Duke had several palaces, or pleasure-houses, as they are called, in the neighbouring country, of which the principal were Marmerola and La Favorita. TASSO the poet was born in Mantua, and the celebrated VIRGIL at the village of Andes, within two or three miles of it. It is in the cathedral of this city the Catholics pretend to have preserved two or three drops of our Saviour's blood. This bishoprick is immediately subject to the Holy See, and acknowledges no other superior.

Luzara, fifteen miles south of Mantua, is not remarkable for any thing but a great battle fought near it, between the Imperialists on one side, and the French and Spaniards on the other, in the year 1702, when both sides claimed the victory.

The town of Guastalla is the capital of a duchy of the same name, and lies about twenty miles south of Mantua.

Sabionetta also is the capital of a duchy, and lies about twenty miles south-west of Mantua; but does not require a particular description, any more than the other towns above-mentioned.

The

CHAP.  
IX.  
Mantua.  
History of  
Mantua.

The duchy of Mantua generally followed the fortune of the rest of Lombardy, till about the eleventh century, when the leading men of the country erected a government of their own, and became independent of any foreign power. Some time after they lost their liberty again, and were subject to several tyrants, as they are stiled, till LEWIS DE GONZAGA, from whom the late Duke derived his pedigree, deposed the last tyrant in the year 1328, and obtained the sovereignty of the Mantuan, as Vicar of the Empire. His successors enjoyed the titles of lords of Mantua, till the year 1435, when the Emperor honoured them with the title of Marquis; and CHARLES V. afterwards conferred that of Duke on FREDERICK II. The duchy continued in this branch till the year 1627, when VINCENT II, dying without issue, his cousin CHARLES GONZAGA, Duke of Nevers in France, by the assistance of LEWIS XIII, obtained the sovereignty of this duchy. His grandson, FERDINAND CHARLES IV, the last Duke, adhering to the French King in the late war, was proscribed by the Emperor, who seiz'd the duchy as a forfeited fee; and the Duke dying in the year 1708 without issue, his Imperial Majesty still keeps possession of it. The country of Mantua abounds in corn, fruits, flax, silk, and excellent pasture, but has little good wine. The annual revenue of the late Duke, is computed to amount to three hundred thousand crowns and upwards, besides what he drew from the Monteferrat. The other branches of the family of GONZAGA are the Princes of Guastalla, Bozolo, Castiglione, and the Earl of Novellara; but these seem at present contented with the Emperor's government, and have not yet thought fit to lay claim to the duchy of Mantua.

## M O D E N A.

### CHAP. X.

*Contains a description of the duchies of Modena, Mirandola, Reggio, and other small states dependent on Modena.*

Subdivi-  
sion.

Chief  
towns.

Modena  
city.

UNDER the name of the Modenese, I comprehend the duchy of Modena, the duchy of Mirandola, the duchy of Reggio, the marquissate of Scandiano, the principality of Correggio, and the principality of Carpi; bounded by the Mantuan towards the north; by the Bolognese on the east, by the Apennine hills, which separate it from Tuscany, towards the south; and by the Parmesan on the west: extending about sixty miles in length from north to south, and fifty in breadth from east to west: the chief towns whereof are, 1. Modena. 2. Bostia. 3. Final de Modena. 4. Frignano. 5. Casagnano. 6. Mirandola. 7. Concordia. 8. Reggio. 9. Rubiera. 10. Berfello. 11. Scandiano. 12. Correggio. 13. Carpi. 14. Sassuolo. 15. St Martin de Este.

The city of Modena stands upon a canal, in a pleasant fruitful plain, about forty miles to the southward of Mantua, and twenty north-west of Bologna, built out of the ruins of the ancient Mutina, which stood near this place. It is surrounded by a wall, and some antique fortifications of no great strength; the buildings are not fine, considering they are in Italy, the streets generally narrow and dark, with little low Piazza's before the houses, which are no great ornament to the place:

the cathedral and the Duke's palace are the only things mentioned by travellers as worth the viewing. The soil about Modena, says Mr ADDISON, is very rich, and well cultivated, and the Prince's palace magnificent. The subject might live in great plenty here, if the taxes and impositions were not so exorbitant; but the Court is too splendid for the small territories which lie about it. One cannot but be amazed to see such a profusion of wealth laid out in coaches, trappings, tables, cabinets, and such precious toys, in which, few Princes in Europe can equal these petty sovereigns; though at the same time they neglect to make bridges over their rivers for the convenience of travellers, who are forced to pay unreasonable exactions at every ferry, upon the least rising of the waters. It happens very unfortunately, adds the same author, that these little Italian Princes will still be endeavouring, at their subjects cost, to equal the pomp and grandeur of the greatest monarchs, as well as to outvie those of their own rank. The town of Modena, is neither large nor populous, nor has it any great trade, though it stands in a country abounding in corn, wine, rich pastures, cattle, and all manner of delicious fruits. But notwithstanding the people are not generally rich, with Mr ADDISON's leave, they cannot be very miserable, in the midst of so much plenty; especially in so warm a climate, where the poor have little or no occasion, either for clothes or firing, the want of which occasions the greatest hardships the poor endure in these northern countries. But our travellers of the Whig strain, out of an unaccountable prejudice to Monarchy and the Popish religion, unanimously cry out of the miseries and oppressions the subjects of the Italian Princes undergo; and yet none of them pretend to tell us, wherein that misery consists, unless it be, that there are not so many overgrown tradesmen as there are in other countries; which I am apt to think is not to the disadvantage of the inferior rank of people, who suffer less by monopolies where trade is more equally divided. Modena is the See of a Bishop, suffragan of Bologna, and the residence of the Duke.

Frignano is the capital of a little country of the same name, situate at the foot of a mountain on the river Panaro, twenty miles south of Modena.

Mirandola, the capital of a duchy of the same name, is pleasantly situated in a fruitful country, twenty miles to the northward of Modena, formerly under the dominion of its own Prince, of the family of PIC, but purchased of the Emperor by the Duke of Modena, with Concordia, about the year 1711. The revenues of the duchy of Mirandola, were computed to amount to two thousand pounds per annum.

Reggio is the capital of a duchy, and stands about fifteen miles north-east of Modena; a populous trading town, better built than Modena, and subject to the same Prince. The natives admire their churches and publick buildings, which would make a good appearance in any other part of the world, but it seems are not comparable to many others in Italy. Reggio is the See of a Bishop, suffragan to Bologna.

Correggio is the capital of a principality of the same name, and stands about ten miles north-east of Reggio, but is not considerable enough to require a particular description.

Carpi also is the capital of a principality, situate in a fine plain, on a canal filled by the river Secchia,

CHAP.  
X.  
Modena.

Miran-  
dola.

Reggio.

Correggio.

Carpi.

CHAP. X. Secchia, ten miles north-west of Modena, defended by a citadel and other works, and esteemed a place of some strength, taken by the Germans in the year 1702, after they had obtained a victory over the French near this place; subject at present to the Duke of Modena.

History of Modena. Modena became a Roman colony soon after the establishment of that State, but was destroyed by MARCUS ANTONINUS. The Lombards rebuilt the city and made it a part of their kingdom. It was afterwards a free State, under the protection of the Empire, till it became annexed to the marquisate of Ferrara. It has been since possessed alternately by the Pope and by the family of D'ESTE, being at this day subject to the latter. The present Duke is REGINAULD, Duke of Modena,

The present Duke's family. Reggio, and Mirandola; Prince of Carpi and Corregio; Lord of Frignano, Carfagnano, Corregio, &c. born in 1655, and made Cardinal Deacon in 1686: after his brother's death however he threw off the purple, and about the year 1696 married CHARLOTTA, the daughter of JOHN FREDERICK Duke of Hanover, by whom he had BENEDICTA-ERNESTINA-MARY, born anno 1697, and married to Prince ANTHONY of Parma in the year 1715. 2. FRANCIS-MARY, hereditary Prince of Modena, born in 1698, who married the second daughter of the late Duke of Orleans, by whom he hath had two sons. 3. AMELIA-JOSEPHA, born anno 1699. And, 4. JOHN-FREDERICK-ERNEST, born anno 1700. The Duke is absolute in his dominions, and appoints the Governors of the several towns and fortresses, and podesta's or judges in criminal and civil affairs, determining all appeals however himself. His revenues are computed to amount to an hundred thousand pounds per annum; but his forces not being sufficient to defend his country against the neighbouring powers, he relies chiefly upon his alliance with the Emperor, whose party he espoused in the late war: and though his country was ravaged by the French, and great part of it taken from him on that account, it was afterwards recovered by the Emperor, and restored him with advantage. And in the year 1726, his Imperial Majesty granted the Duke of Modena a principality in Hungary, in consideration of his Highness's resigning his pretensions to Commachio, which the Emperor a little before yielded to the Pope.

His revenues.

Commachio surrendered to the Pope.

MARY Queen of England of this family.

MARY-ELEANOR-BEATRIX, Sister of the Duke of Modena, was married to JAMES Duke of York (afterwards King of England) anno 1673, to which match some are apt to ascribe that Prince's misfortunes: but however this be, it appears from hence that the Chevalier de St GEORGE is nephew to the Duke of Modena, and first cousin to the duchess of Parma his daughter, to whom the Chevalier lately made that visit which the British court so much resented, as to command the Duke of Parma's Minister out of the kingdom.

## P A R M A.

Situation and extent.

THE duchy of Parma, (in which I include the Plaisantin, or duchy of Piacenza, the States of Bassetto and Landi, being all subject to the same Prince) is bounded by the Cremonese and Lodofan on the north; by the duchy of Reggio towards the east; by the territories of Genoa and Modena on the south; and by the Pavese and Bobbion

on the west: extending sixty miles in length, and thirty in breadth. The chief towns are, 1. Parma. 2. Castel Guelpho. 3. Fornovo. 4. Corneglio. 5. Piacenza. 6. Nibiano. 7. Borgo St Domino. 8. Florenzola. 9. Corte Maggiore. 10. Buffeto. 11. Borgo de Val de Taro. 12. Bardi. And, 13. Compagno.

CHAP. X. Parma. Chief towns.

The city of Parma, the capital, is pleasantly situated on a river of the same name, which divides it in two parts, having a communication with each other by three bridges; the form of it is almost round, and the walls about three miles in circumference: it is defended by a citadel and other fortifications, and esteemed a place of some strength: the streets are wide and strait, and the buildings regular, but low, having no piazza's before them, as at Modena. It stands about sixty miles north-east of Genoa, and thirty north-west of Modena. The publick buildings best worth the viewing are, the Cathedral, a magnificent pile, surrounded on the out-side by several ranges of pillars, and the cupola exquisitely painted by the celebrated CORREGIO. The church of St JOHN is a beautiful piece of architecture, and adorned with the paintings of the same CORREGIO and PARMEGIANA. In the church of the Capuchins is the tomb of that famous General ALEXANDER FARNESE. The Duke's palace, that part of it which is lately built, is an elegant structure, but most admired for the theatre and fine gallery. The theatre, Mr ADDISON observed, was the most spacious in Europe, and so admirably contrived, that from the depth of the stage the lowest found may be heard distinctly to the furthest part of the audience; and let the voice be raised never so high, there is nothing like an echo to cause the least confusion. There are no boxes in it, only benches rising gradually as in an amphitheatre, and the pit between the benches and the stage is sometimes filled with water three foot deep, into which are brought little gilded boats, that with the lights and glasses that surround it from a very agreeable scene. The gallery is hung with a numerous collection of pictures, done by the most celebrated hands, and on the side of it is a large room adorned with inlaid tables, cabinets, works of amber and crystal, and other pieces admired for their value and contrivance; adjoining to this is another large room furnished with antient inscriptions, idols, busts, medals, and other antiquities. Amongst the medals the scarcest is that of PESCENIUS NIGER, (coined at Antioch, where that Emperor trifled away his time, till he lost his life and empire) on the reverse a *Dea Salus*. There are also two of OTHO, two of MESSALINA and POPPEA, two of PERTINAX, and another of GORDIANUS AFRICANUS. The gardens of the palace also are admired for the grotto's, fountains, cascades, fine walks, statues, and other embellishments. The University here was founded in the year 1509, in which there is a large college appropriated to the nobility, where all manner of exercises are taught as well as the sciences. The academy of wits here stile themselves *Innominati*, or *Anonymous*, and spend their time as the members of other Italian academies usually do. Parma is the See of a Bishop, suffragan of Bologna, and a place of good trade, especially in cheese, which they send to every country in Europe.

Piacenza, or Plaifance, is situated about thirty miles north-west of Parma, in a fruitful plain, watered with rivulets, about half a mile from the

CHAP.  
X.  
Parma.

Po, being rather larger than Parma, and defended by a wall, a citadel, and other fortifications. The Duke of Parma has a palace here. The streets and squares are spacious, and the buildings regular, but they seem to be excelled by so many other places of Italy, that travellers have not thought them worth a particular description. A fountain erected by AUGUSTUS CÆSAR, and an equestrian statue of ALEXANDER I, Duke of Parma and Piacenza, however are mentioned by every traveller as worth the viewing. Piacenza is a Bishop's See, suffragan of Bologna, and has an University but of no great fame. The trade of this place consists chiefly in their cheese, as at Parma: these cities being surrounded with the richest pasture-grounds in Italy.

Buffeto.

Buffeto is the capital of a country, of the same name, about sixteen miles to the north-east of Piacenza, taken notice of for little but it's desirable situation.

Borgo di  
Val di  
Taro.

Borgo di Val di Taro is a small city, on the river Taro, capital of the State of Landi, purchased by the Duke of Parma in 1682, of the family of LANDI.

Borgo St  
Domino.

Borgo St Domino, the antient *Julia Fidentia*, about sixteen miles south-east of Piacenza, situate in the State of Buffeto, is the See of a Bishop, suffragan of Bologna, but does not require a particular description.

Air, soil,  
animals,  
and pro-  
duce.

The duchies of Parma and Piacenza are allowed to be blessed with a fine air and fruitful soil. They abound also in cattle of all kinds, and the wool of their sheep is not inferior to any in Italy. Their excellent cheese has been taken notice of already, and they have plenty of the best oil, wine, rice, corn, and fruits; truffles, a delicious root without stems or plants, also are found here, and they have some mines of copper and silver. The Tuscans inhabited this country antiently; and the Romans sent a colony hither above an hundred years before the birth of our Saviour. Upon the declension of the Roman Empire it fell under the power of the barbarous nations that invaded Italy, and afterwards became a free State. It was successively subject to the western Emperors, the Pope, the Venetians, Milanese, and French. Pope JULIUS II, reduced it again under the power of the See of Rome. Pope PAUL III created his natural son, PETER LEWIS FARNESE, Duke of Parma and Piacenza, about the year 1545; but the Emperor disputed his title, till his son OCTAVIO FARNESE married MARGARET of Austria, the Emperor's natural daughter, which confirmed this duchy in the Farnesian family, though the Emperor still looks upon it as a fief of the Empire, and revertible to him on failure of male issue. The Pope on the contrary claims it as a fee of the holy See, and actually receives ten thousand crowns per annum of this Prince.

The fami-  
ly of Far-  
nese.

And here it is necessary to be a little more particular in treating of the family of FARNESE than of any Italian Prince, in order to the clearing up a considerable piece of modern history. It seems ODOUARDO, or EDWARD FARNESE, Duke of Parma, in the year 1690, married DOROTHY-SOPHIA of Newburgh, sister to the Elector Palatine, and the Empress-mother, and to the Queen Dowager of Spain, and afterwards died in the year 1693; having had issue by his Princess a son named ALEXANDER, who died soon after his

birth, and a daughter named ELIZABETH born in the year 1692, and married to PHILIP V, the present King of Spain, anno 1714. Prince FRANCIS FARNESE succeeded his brother ODOUARDO or EDWARD in the duchy of Parma, and in 1695, married his widow, the Princess DOROTHY-SOPHIA, mother to the present Queen of Spain, at which every body was amazed on account of the proximity of blood, Prince EDWARD his eldest brother having had children by her; but the Pope granted a dispensation, which removed all scruples.

In the year 1718, the Emperor, the Kings of Great Britain and France, and the States-General, entered into an alliance, which from the number of the parties, obtained the name of the quadruple alliance, wherein it was stipulated, that for preventing a war in Italy, in case the Grand Duke of Tuscany, or the Duke of Parma and Placentia, or their successors, should die without heirs male, the states and duchies possessed by the Grand Duke of Tuscany and Duke of Parma being fiefs of the Empire, should go to the first-born son of the said Queen of Spain, and his male issue lawfully begotten; and in default of such issue, to the second, and other younger sons of the said Queen in like manner: provided that none of the aforesaid duchies or dominions should ever be possessed by a Prince who at the same time held the kingdom of Spain; nor any King of Spain be guardian to the Prince who should succeed to the said duchies and dominions. And for the securing the said succession to the son of the Queen of Spain, it was farther agreed, that garrisons of Swiss troops should immediately be put into the towns of Parma and Placentia, Leghorn and Porto Ferraro, in the isle of Elba, to be paid by the contracting powers: (but this last part of the agreement was never put in execution.)

The Duke of Tuscany died in the year 1723, and was succeeded by his son JOHN GASTON DE MEDICIS the present Duke, who was born May 24, 1671, and married to ANNE-MARIA-FRANCES, daughter of JULIUS-FRANCIS, Duke of SAX-LAWENBURG, and Widow of PHILIP-WILLIAM, Count Palatine of the Rhine, by whom he has no children, nor is ever like to have any; and being the last heir male of the family of MEDICIS, is to be succeeded in that duchy by DON CARLOS, eldest son of the present Queen of Spain, according to the aforesaid treaty: but more of this in the description of Tuscany.

By another treaty, anno 1725, between the Emperor and King of Spain, the said duchies of Parma and Tuscany are confirmed to the eldest son of the said Queen of Spain, and his male descendants, on failure of heirs male of the said two houses of Parma and Tuscany; but the Duke of Parma dying on the 25th of February 1726-7, and being succeeded by his brother ANTHONY FARNESE, who the same year married AMELIA-JOSEPHA, the third daughter of the Duke of Modena, if there be any male issue of this marriage, the settlement upon the eldest son of the Queen of Spain cannot take effect as to Parma.

The annual revenue of this duchy is computed at an hundred thousand pounds; but this Prince also owes his security more to the jealousies his neighbours entertain of each other, than to the forces he can raise.

*Contains a description of the duchy of Tuscany, or Florence, and the republic of Lucca.*

Situation  
and ex-  
tent.

**T**HE duchy of Tuscany, or Florence, is bounded by the territories of the Pope on the north, east, and south-east; by the Tuscan sea on the south-west; and by the territories of Genoa and Modena on the north-west: extending an hundred miles in length, and about as many in breadth, being pretty near square. As great part of this country is taken up by the Apennine mountains, and that the barrenest part of them, it cannot be said in general to be either fruitful or pleasant; the air also is so exceeding sharp on these hills, that they are generally destitute of towns and inhabitants; but then there are some vallies, and those large ones, that are the very reverse, and when viewed from the neighbouring hills appear a perfect paradise; where the air is not only more agreeable, but ripens the fruits of the earth sooner, and brings them to a much greater perfection than on the north side of the Apennine. There is a plain particularly, which runs quite cross the country from east to west, namely, from Arezzo to Pisa; extending fourscore miles in length, and watered by the river Arno; which abounds in corn, wine, oil, oranges, citrons, figs, and all manner of delicious fruits; and as for mulberry trees, the food of their silk-worms, and chesnuts, no country is better stocked with them. There are also several little hills between the vallies and the barren Apennines, where they enjoy a happy medium, being neither subject to the cold blasts of the one, or the scorching heats of the other, and that are well covered with trees and herbage, which make them very delightful retirements in the summer. The chief rivers are the Arno, and Ombro, which rising in the Apennine mountains, run to the south-west, and fall into the Tuscan sea, the one near Pisa, and the other over against the island of Elba. This country is usually divided into three parts, viz. the Pisan, the Florentin, or Florenza, and the Siennese.

Air and  
soil.

Produce.

Rivers.

Division.

The Pisan.

Pisa city.

The Pisan is bounded by the Florentin and the republic of Lucca on the north and east; by the Siennese on the south-east; and the Tuscan sea on the south-west. The chief towns whereof are, 1. Pisa. 2. Leghorn. And, 3. Volterra.

The city of Pisa stands in a fruitful plain on the river Arno, but in an unhealthful air; thirty-six miles to the westward of Florence; fifty north-west of Sienna, and about six from the Tuscan sea. It is the largest town in Tuscany next to Florence; and defended by a good wall, a citadel, and other fortifications; being divided almost into two equal parts by the river Arno, which is of a good breadth here: there are three handsome bridges, by which they have an easy communication, one of them being built with marble. The sides of the river, lined with a sloping wall, form a mighty commodious quay, where ships of burthen formerly unladed their merchandize; but the mouth of the river being now choaked up, it is only navigable for smaller vessels. The streets are broad and strait, paved with large stones; the houses well built, the squares spacious, and the

publick buildings magnificent; of which the domo or cathedral, dedicated to St MARY, is esteemed the chief, very advantageously situated in the middle of a large piazza, and built out of a great heap of wrought marble, such as pillars, pedestals, capitals, cornishes, and architraves, part of the spoils which the Pisans took in their eastern expeditions, when the republic was in a flourishing condition. The roof is supported by seventy-six tall marble pillars of different colours, and finely gilt. The choir is painted by the greatest masters, and the floor inlaid with marble. The brazen doors are exquisitely wrought, containing the annunciation, incarnation, nativity, life, and passion, of our Saviour, and consequently could never have belonged to SOLOMON'S temple, according to the tradition of the place. In the same area with the domo, stands the baptistery, a round fabrick supported by stately pillars; and near it the burying-place, called the *Campo Santo*, the earth which covers it, having been brought from the Holy Land; and this is surrounded with a cloyster, adorned with admirable paintings. Adjoining to it is the leaning tower, in form of a cylinder, built with marble, and beautified with pillars on the outside an hundred and eighty-eight feet in height, which, some travellers relate, was built on purpose leaning, to shew the skill of the architect; others, that it only deceives the sight, and is really upright: but Mr MISSON assures us, the foundation is sunk, which occasions it's bending forward, as he discovered by a line and plummet let down from the top.

The palace of the Knights of St STEPHEN, an order instituted by COSMUS DE MEDICIS, in memory of a victory obtained over the Turks that day, with the church adjoining to it, adorned with the trophies taken from the infidels, are worth the viewing. And here is a famous aqueduct mentioned by travellers, consisting of five thousand arches, that conveys the best water in Italy to this city, which is drank by the Great Duke and Court of Florence.

Pisa is an archbishoprick and university, and was once the metropolis of a flourishing republick, maintaining powerful fleets upon the Mediterranean, and disputing the sovereignty of those seas with the Genoese and Venetians. They made a conquest also of the islands of Sardinia and the Balears, reduced the city of Carthage, and were of great service to the Christian Princes in their wars against the Infidels in the Holy Land: but being subdued by the Florentines, and the seat of the government removed, their river became unnavigable for large vessels; their trade lost, and carried to Leghorn; the town is almost deserted; the buildings decayed; nor does it seem to be in the power of the Great Duke to restore it to it's former happy state, though this has been attempted by sometimes making it the residence of the Court, and granted extraordinary privileges to the citizens.

Leghorn, *Livorno*, is situated in a low ground on the Tuscan sea, sixteen miles to the southward of Pisa, being one of the best harbours in Italy, and surrounded with a wall and other fortifications for it's defence. The town is not large, but the buildings are regular, and painted on the outside; the streets broad and straight, and the great square one of the largest and most beautiful in Tuscany. Leghorn was an inconsiderable village, till Duke FERDINAND I. enlarged and beautified it; and granted such privileges to the place,

Leghorn.

CHAP.  
XI.  
Tuscany.

as invited foreign merchants from all countries hither. Mr ADDISON observes however, that they are at a constant expence in cleansing the harbour, and keeping it from being choaked up; which is done by the help of engines, that are always at work, and employ many of the Great Duke's slaves, and with the soil and sand taken out of the harbour, they fill and dry up the marshy ground about the place, whereby it is become more healthful than formerly. It is not to be conceived what great profits the Duke reaps from this single town, notwithstanding it has the reputation of being a free port; and may very well be reckoned so, if compared with some others. 'Tis true, foreigners pay little or no duties directly, but out of every thing they purchase, there goes a large gabel, or tax, to the government. The very ice-merchant here pays above a thousand pounds per annum to the government, for his privilege of selling it; and the tobacco-merchant ten thousand. The ground also is sold at a prodigious high rate by the Great Duke, on which new houses are erected every day. All merchandize which is sent up into the country, of which there are great quantities, are clogged with impositions, as soon as they leave Leghorn. And all the wines, oils, and silks, which come from the fruitful vallies above-mentioned, must make their way through a variety of duties, before they reach the port; and though this must enhance the price of them to the foreign merchant, yet the labouring oar lies altogether on the natives. Here is none of the trouble of entring their goods, either upon importation, or exportation, which is the plague and vexation of other ports, and sometimes a great hinderance to the voyage. The canal, which runs from the sea to the Arno, affords a mighty convenient carriage, for all goods imported, or exported: and because the Great Duke reaps such advantages from this free port, several Princes and States of Italy, have been upon the same project; particularly the Pope, who was about to enlarge the harbour of Civita Vecchia, and grant it the same privileges, but was diverted from this project, by the management of the Great Duke. The Genoese are attempting the same thing, but their road is too dangerous, to invite foreign merchants from Leghorn thither; and they will not make any of their other ports free, for fear of drawing the trade from their capital. After what has been observed already of Leghorn, the reader will naturally conclude it to be a place of good trade, and very populous in proportion to the extent, as it really is; particularly the Jews, who never fail to frequent such towns, are computed to amount to no less than ten thousand; and, as the English factors complain, have in a manner engrossed the trade of our country. Besides the trade we have directly with Leghorn the ships of England, France, and Holland, touch here frequently in their voyage to, or from Turkey, bartering the goods of one country for another; and in this port, there are frequently small barks laden with wine from Languedoc, Sardinia, and Corsica, which sell their liquor on board by retale, making taverns of their vessels, because they are not allowed to land it, without paying custom.

The marble statue of FERDINAND I, on the quay, with four brazen figures at his feet, representing so many Turkish slaves, who endeavoured to run away with a galley, and were executed in this place, are reckoned an extraordinary piece of workmanship. The galley-slaves here are used with

much more humanity than in other places, of which there are two forts; the one called *Forzatti*, who are either Turks or Moors, who are taken at sea, or natives condemned to the galleys for their crimes: the other are called *Bona Voglia*, a rascally sort of people, who make themselves slaves for money, and have their liberty, when the time bargained for is expired. The Turks and Moors are allowed to go abroad with a single iron on their leg, and some without any, because they are easily known, and it is difficult for them to escape; but those who are condemned for any criminal matter, go coupled together with a long chain, and have always a guard following them; and for the greater security, they sometimes chain a Turk and a Christian together. Great part of these slaves, when the galleys are laid up, follow their respective trades and business, and those who have none, sell wine and other provisions; insomuch, that there have been found Turkish slaves here worth a thousand crowns a man, who would not have their liberty if it was offered them; for, it seems, they have little mosques allowed them, to worship God in their own way, and if they have any money to present their Captain, he will excuse their going to sea, and provide others in their room.

Volterra is an antient city, built upon a hill near the river Cecinna, situate in a fruitful country, in which are several fine stone-quarries, and springs of mineral waters. It is the See of a Bishop, suffragan to Rome, but travellers have not thought it worth a particular description. About sixteen miles to the westward of this city, are the *Aque Volaterrane*, now called, *Il Bagno al Merbo*, which are small lakes of a prodigious depth, from which, 'tis said, the water perpetually bubbles up like a copper of boiling liquor, and sends forth such sulphureous steams, that they kill the birds which fly over them, and are so excessive hot, that they boil a piece of flesh sooner than water heated by culinary fires.

The Florentin, or duchy of Florence, properly so called, is bounded by the Bolognois and Romagna towards the north; the duchy of Urbino and Ancona towards the east; by the Siennese on the south; and by the Pisan and the republick of Luca towards the west. The chief towns whereof are, 1. Florence. 2. Fiesoli. 3. Pratolino. 4. San Martino. 5. Scarperia. 6. Fiorenzola. 7. Pietra Mala. 8. Pistoia. 9. Prato. 10. Poggio Imperiale. 11. Empoli. 12. St Miniato al Toderca. 13. Barbarino. 14. Colle. 15. Pongibond. 16. Monte Pulciano. 17. Marciano. 18. Cortona. 19. Arezzo. 20. Burgo San Sepulchro. 21. Val Ombrosa. And, 22. Ancisa.

The city of Florence lies in a fruitful valley on the river Arno, in forty-three degrees forty minutes north latitude, thirty-six miles to the eastward of Pisa, and about as many to the northward of Sienna, and an hundred and twenty north of Rome; in a most desirable situation, encompassed with beautiful hills on three sides, full of villages, country-seats, gardens, groves, and woods of olives rising gradually, till they join the highest mountains of the Apennine. And towards the west, lies that rich valley watered by the river Arno, which extends as far as Pisa, abounding in corn, wine, and oil, and all manner of delicious fruits. The town is of a round form, about six miles in circumference, encompassed with walls and other fortifications, and defended by three citadels. The river Arno divides it in two parts, which

CHAP.  
XI.  
Tuscany.

which have a communication by four bridges, of which two, the old and the new, are admired for their structure. The streets are strait and well paved, in imitation of the old Roman high-ways, with great flat stones, larger than our common pavement-stones, but much thicker, which are so hollowed in their joinings, that the horses find fastening for their feet. There are a great many statues and fountains in the streets, and we meet with agreeable objects, which way soever we turn our eyes. Their private buildings are tall and fair, their palaces numerous and exquisitely contrived, their churches but little inferior to those of Rome, and there are no less than seventeen spacious squares; inasmuch that this city has obtained the title of *Florence the Fair*, which all travellers agree it well deserves. In two things only they think it defective; the first, that they have no glass in their windows, but their finest palaces are often disgraced with tattered paper; and in the second place, the streets and courts in their palaces, are too narrow for the loftiness of their buildings: which are objections made to many other towns of Italy; and the only answer we meet with is, that neither glass nor wide streets are convenient in so warm a climate: as it is, one side of the streets always casts a shade upon the other; and by their paper windows, they avoid the scorching heat of the sun, whose rays would be contracted and heightened by the crown glass used here, as by a burning-glass.

As Tuscan pillars and rustick work, owe their original to this country, says Mr ADDISON, the architect always takes care to give them a place in the great edifices that are raised in Tuscany; though the Dorick, the Ionick, and Corinthian orders are not excluded. The Duke's new palace, called the palace of Pitti, according to the same gentleman, is a noble pile, built after this manner, which makes it look extremely solid and majestic. [This architecture *a la maniera rustica*, as the Italians call it, is where great rough stones are set jutting out beyond the plain superficies; which has been imitated by several English noblemen, particularly by the present Duke of Newcastle, in the pillars before his house in Great Lincoln-Fields.] This palace is in the form of a Roman H, with double rooms on all sides. From the street there is an easy ascent to it, on which front is a range of two and twenty large windows in each story, with fine stone pillars on the sides of them; but the smallness of the court in the middle of the palace, is by some travellers esteemed an unpardonable fault: for though the height of the building to the cornice of the third order is an hundred and twenty-two feet, the court is but an hundred and sixty feet long, and an hundred and forty broad; inasmuch that there is no part of it where we can stand to view the building, without lifting up one's head in a very troublesome manner. From the back court we ascend to a large plot of ground, encompassed with a semicircle of stone-seats six rows deep, in form of an amphitheatre, on which people sit to see the sports that are still exhibited to them. The gardens are beautified with a multitude of pleasant walks, fountains, grotto's, and statues of an inestimable value. The furniture of the Grand Duke's apartments is rich beyond expression, and the paintings exquisite. In one room we see described the history of SELEUCUS, giving his beloved wife STRATONICE to his only son SELEUCUS, who languished

CHAP.

Tuscany.

for her. In another, a collection of pictures, all originals, done by the best hands, as TITIAN's, RAPHAEL's, MICHAEL ANGELO's, &c. one of the best of which is RAPHAEL's, drawn by his own hand. But it would be endless to enumerate all the beauties of these apartments; I shall only observe further, that upon setting open the doors, you see through sixteen large rooms at once, all upon a floor. Let us pass on from hence through the long close gallery, which runs from the new palace to the old, over the river and over the tops of the houses, with many turnings and windings for the space of half a mile: being arrived at the old palace, the first thing shewn to travellers is that famous gallery, so replenished with statues and pictures by the best hands, that it is the admiration of all that see it; on the left is one continued window, and on the other a set of pictures of the Medicean family. Under the window, and also under the pictures on each side, are a range of marble statues of the Roman Emperors and other antient heroes: above the window is another range of pictures of the most famous men for learning; and on the right side over the pictures already mentioned, are those of the most celebrated Generals and military men. The number of the statues are near an hundred: among the busts of the Emperors and Empreſſes that are most scarce, and some of them almost singular in their kind, Mr ADDISON observes, are those of CALIGULA, OTHO, NERVA, ÆLIUS VERUS, PERTINAX, GETA, DIDIUS JULIANUS, ALBINUS, and AGRIPPA, extremely well wrought, and, what is very uncommon, in alabaster. He places AGRIPPA among the Emperors, because he is generally ranged so in sets of medals; as he does some of the other sex of an inferior rank among the Empreſſes, because they are usually found in their company, viz. DOMITIA, AGRIPPINA wife of GERMANICUS, ANTONIA MATIDIA, PLOTINA, MALLIA, and SCANTILLA. Among the busts of such Emperors as are common, the following ought to be taken notice of for the excellence of the sculpture, viz. those of AUGUSTUS, VESPASIAN, ADRIAN, MARCUS AURELIUS, LUCIUS VERUS, SEPTIMIUS SEVERUS, CARACALLA, and GETA. In the same gallery there is a beautiful bust of ALEXANDER the Great, casting up his face to heaven with a noble air of grief or discontent, whereby my author conceives the sculptor intended to express the conqueror's concern for want of new worlds. There is also in porphyry the head of a Faun, and of the god PAN; and among the entire figures, a vestal virgin with the fire burning before her, and her hair full grown and gathered under her veil; which my author thinks may determine that notable controversy among antiquaries, whether the vestals after the first tonsure suffered their hair to grow again. There is in the same gallery the Gladiator, the NARCISSUS, the CUPID and PSYCHE, and FLORA; and one of MORPHEUS, lying with his head upon a pillow of touch-stone; which god is usually represented by antient statuary under the figure of a boy asleep, with a bundle of poppies in his hand. The same gentleman observes, that he scarce ever saw any figure of sleep, which was not of black marble, having probably some relation to night, the proper season for rest. But to return to the gallery: Those that shew it, desire you to take particular notice of a brazen one, cloathed in an antique dress,

The Great  
Duke's  
gallery.

CHAP.

Tuscany.

supposed to be SCIPIO's; of LEDA receiving JUPITER's embraces, expressing pleasure mixed with shame; the antique BACCHUS, with a copy of it by MICHAEL ANGELO; the JULIA, daughter of AUGUSTUS; the VENUS, the DIANA, the APOLLO, and the Peasant striking a boar. Among the pictures of celebrated Generals are those of HANNIBAL, the terror of Rome, of SCIPIO, who took Carthage, of PYRRHUS, of ALEXANDER FARNESE, who never lost a battle, &c. And among the men of learning, PETRARCH, ARIOSTO, MACHIAVEL, GUICCIARDIN, PAULO JOVIO, BOCCACIO, MICHAEL ANGELO, RAPHAEL URBIN, GALILEO, &c.

After the traveller has surveyed the gallery, he is led into seven or eight chambers of curiosities which stand on the side of it. In the first is a cabinet of antiquities, consisting chiefly of idols, talismans, sepulchral lamps, hieroglyphicks, medals, stones, and minerals. The second has nothing but paintings. The third, called the chamber of the mathematicks, has a globe and sphere each of them seven feet in diameter. The fourth is hung with an excellent collection of pictures; and in it is an ebony cabinet, containing many curiosities in amber, ivory, and precious stones; a great rough emerald, rooted in it's rock; and the ground-plot of Leghorn, described on a table of lapis lazuli. In the fifth chamber are pictures of several Generals and other men of figure in the last age, particularly OLIVER CROMWELL and General MONK. The sixth contains the pictures of the most famous painters, drawn by themselves. But the most valuable things are in an octagonal room, twenty foot in diameter, covered with an arched dome, lined with mother of pearl, the floor inlaid with marble of various colours, and the sides hung with pictures, done by the greatest masters. Here is kept the great diamond, weighing an hundred and thirty-nine carats and an half, of a very fine form, but the water a little upon the citron colour. Here also is the head of JULIUS CÆSAR, of one entire turquoise stone of the old rock, as big as a hen's egg; a cabinet full of vessels of agate, lapis lazuli, cornelian, and crystal of the rock; a large table of inlaid work, composed of oriental jasper, chalcedony, rubies, topazes, and other precious stones admirably wrought; six Grecian statues of extraordinary beauty; the two wrestlers; the Roman slave, whetting his knife, and listening to CATILINE's conspiracy; a FAUNUS; a sleeping CUPID; and lastly, the celebrated VENUS OF MEDICIS, which, as Mr ADDISON observes, seems much less than the life, being perfectly naked, and in company with others of a larger make; but is however five feet high, as big as the ordinary size of a woman, as is evident from the measure he took of her wrist: for from the size of any one part, says my author, it is easy to guess at all the rest, in a figure of such nice proportions. The softness of the flesh, the delicacy of the shape, the air and posture, and correctness of design in this statue, is inexpressible: thus far Mr ADDISON. Another traveller inform us, that this is the most charming body, and the finest piece of workmanship in the world: the head is turned a little towards the left shoulder, and she holds her right hand before her breast at some distance, the other hand she holds before what all the sex conceal; and bowing down a little, advances her right knee, as if she would hide herself better if she could:

that decent bashfulness, which is so becoming an ornament in the fair, as imprinted on her face, accompanied with that sweetness, beauty, delicacy, and bloom of youth, which are beyond description. This figure of VENUS, says Mr ADDISON, puts me in mind of a speech she makes in one of the Greek Epigrams, which he thus renders into English:

ANCHISES, PARIS, and ADONIS too,  
Have seen me naked and expos'd to view:  
All these I frankly own without denying?  
But where has this PRAXITELES been prying?

I proceed now to the description of the sacred buildings; of which the domo or cathedral, called Santa Maria Florida, is one of the most magnificent in Europe, being covered on the outside, as well as paved with marble of various colours. The architecture is *à la rustica*, and admirable in it's kind: the pillars which support the church are so slender, and stand at such a distance, that one has a view of the whole church at once, which is four hundred and eighty feet long, and three hundred and eighty feet high to the top of the cross, covered with a cupola, the design of BRUNELLESCHI, being the first of the kind, and the pattern of St PETER's in Rome, and all other cupola's of a later date. The painting of it, which represents the resurrection, is much admired by some; but critics find fault with it, because the rising bodies are cloathed, and of different ages. The statues of God the father, of a dead Christ, and an Angel supporting him, on the same altar, done by BANDINELLO, are admirable pieces, as are the ADAM and EVE behind the altar. The choir is round, and perpendicularly under the cupola, being of the same dimensions. The steeple, or square tower where the bells hang, is a little distance from the church: it is an hundred and eighty foot high, and overlaid with square pieces of white, red, and black marble, and adorned with statues. The baptistery stands before the dome, and is of an octagonal figure, covered with marble, as the church is; the three brazen gates, containing pieces of sacred history in bas-relief, one of which is so exquisitely wrought, that MICHAEL ANGELO used to say it would serve for one of the gates of paradise. The body of the baptistery was antiently an heathen temple dedicated to MARS.

The collegiate church of St LAURENCE, the design of BRUNELLESCHI, is an admirable structure, adorned with excellent statues, paintings, and other rich ornaments; but our countryman, Dr BURNET, it seems, was much scandalized, that some of the statues appeared with nudities, which he had never observed in any other church. The chapel of St LAURENCE adjoining to it, the mausoleum of the Medicean family, is universally allowed to be the finest edifice of the kind in the world. It is of an octagonal figure, [Misson says a hexagon] vaulted on the top in form of a cupola, the walls incrustated and covered with porphyry, jasper, agate, touch-stone, lapis lazuli, oriental alabaster, and other rich workmanship, which sets it beyond all parallel. Round the chapel are the tombs of the Great Dukes, composed of porphyry, oriental granite, and the most precious kinds of marble; on each tomb is a great pillar of jasper, enriched with various sorts of jewels, and on each pillar a ducal crown, which

CHAP.  
XI.  
Tuscany.

The cathedral of Florence.

The fine chapel of St Laurence.

CHAP.  
XI.  
Tuscany.

is still a great deal richer. In the middle of each face of the octagon rises a double pilaster of jasper, with a double chapter of brads gilt, the base being of the same metal. On the pedestal of each pilaster, are several emblematical figures, composed of precious stones, joined together with all the art imaginable: over the tombs are the statues of the Great Dukes at full length, all of brads gilt, and placed in niches round the chapel. In a word, says a late traveller, on which side soever we cast our eyes we were amazed; if we looked down, we saw the pavement of the choicest marble; if we viewed the walls, our eyes were even dazzled with the piercing lustre of the precious stones; if we looked up, we were ravished with the beauty of the roof, vaulted with lapis lazuli, the brightest blue, and intermixed with stars and veins of gold, which represented the face of heaven very naturally. This work has been already above an hundred years begun, wherein a great many millions sterling have been expended, and still it remains unfinished. The great altar, whose riches and workmanship is equal to such a chapel, is not yet set up, as I can learn, but kept still in the Great Duke's jewel-office. The crystal pillars of this altar, according to one that saw it, are a full ell long, and finely wrought, having chapters of pure gold; the pictures composed of inlaid precious stones, which form the antependium of the altar: the neat contexture of others of different colours and lustre, with the variety of rich cameo's, which are set here and there, render the beauty of it inexpressible. And among the statues designed to adorn this chapel, says Dr BURNET, there is one of the virgin, made by MICHAEL ANGELO, which represents her grief at the passion of her blessed son, that hath the most life in it of all the statues I ever saw. But the famous library, which belongs to the convent of St LAURENCE, we are to believe, took up more of our author's time, than all the other curiosities in Florence; for here is a collection of many manuscripts, most of them Greek, which were gathered together by Pope CLEMENT VII, and given to his country: there are but few printed books mixed with them, and those so rare, that they are almost as valuable as the manuscripts; and here also he saw some of VIRGIL's poems in old capitals. Mr ADDISON viewed the same, and observes that they want the *Ille ego qui quondam*, &c. and the two and twenty lines in the second Æneid, beginning at *Jamque adeo super unum eram*, which he always thought left out with a great deal of judgment by TULLIA and VARIUS, as it contradicts a part of the sixth Æneid, and represents the hero in a passion not becoming his character.

The churches of the Annunciata, St MARK's, the Holy-Cross, and St MARIA Novella, are all buildings of exquisite beauty and immense riches; but the curiosities of Florence, have already had their share in a work of this nature, and forbids my enlarging further upon them: I shall only observe in general, that the town is supposed to contain eight thousand houses, which at seven to a house, makes the number of inhabitants to amount to fifty-six thousand; an hundred and fifty collegiate and parochial churches, ninety monasteries and nunneries, two and twenty hospitals, of which that for orphans maintains nine hundred persons; eighteen halls belonging to merchants and tradesmen, and an hundred and sixty publick statues, besides what are found in palaces.

The principal trade of this city, besides wine, oil, fruits, and other produce of the country, consists in wrought silks, gold and silver stuffs, and some say they have a woollen manufacture: (but this last must be inconsiderable.) The nobility and gentry do not think it beneath them to apply themselves to trade; and the Great Duke himself is said to be one of the most considerable merchants in Europe: Nay, the gentry sell their own wines by retale out of doors, though not in their houses, and even hang out a broken flask for a sign at their court-gates. Their customers come no further than the cellar-window however, where they take and return the flasks to the butler, without disturbing the house; at the same time they look upon it as a great disparagement, to educate their children in the profession of physick: so various are the notions of honour in different countries, physick being esteemed with us one of the most creditable professions, and on the contrary, a retale trade of liquors the most ignominious.

The women, we are told by most travellers, are in no part of Italy, more confined than they are at Florence; and yet LASSEL assures us, the quality invite one another to play at cards on winters evenings at their houses, whither the married ladies come richly dressed, and are attended by an equal number of cavaliers; that they find the rooms all open, and well lighted with candles, where the ladies and gentlemen sit down at the same tables promiscuously, having wine and other liquors prepared for them, and usually in a great room below; at the entrance of the palace is a long table, where gamesters resort, who play deep, the rest coming purely for diversion. In the time of the carnival, masquerading and all manner of liberties are taken, so that methinks the restraint of the married women in Italy, is not so terrible as it is usually represented (as to virgins indeed, they are sent to nunneries for education, at eight or ten years of age, and seldom come out till they are married). There are also frequently balls at court, opera's and plays, where the ladies are not excluded; but what many of our travellers are offended at, is, that the women are not seen commonly in the streets, or ever ride in coaches with the gentlemen; and 'tis true, a woman would not be looked upon much better than a prostitute, that should suffer herself to be placed among fellows in a coach, tho' with us it is esteemed no reflection upon their modesty. Another diversion at Florence, as I have hinted already, is the combat of wild beasts, which the court exhibits to the people, as those of lions, leopards, tygers, wild boars, bears, and wolves, which are let out of their dens into a spacious court surrounded by high walls, above which the spectators sit on benches gradually rising as in a theatre; and when the sport is over, they drive the fierce animals back into their dens by a terrible wooden machine, made in the form of a great green dragon, which a person within rolls upon wheels, holding two lighted torches through the eyes to terrify the creatures, who seldom dare stand the shock of this monstrous engine. Another of their sports is horse-racing, without riders in the long street, which from hence is called the *Curso*. They throw a broad piece of leather over each horse, in which they fasten sharp-pointed irons like the rowels of a spur, that strike against the horse's sides as he moves; and four or five of them starting at the same time, they run with all the speed they can make

make to the end of the course. But besides these races, on the 24th of June annually, the ancient Roman races are imitated in the piazza di Santa Maria novella, with magnificent open chariots drawn by a pair of horses each, at which the Great Duke assists. There being two fine marble obelisks erected in the square, they drive four times round them with all the speed imaginable, and sometimes overturn each other; and he that performs the course soonest, gains the victory. The reward is usually a fine piece of brocade. In this square also during the carnival is performed another diversion, called the *Calcio*, which our travellers resemble to foot-ball, only it is performed by persons of quality: the two parties each of them chuse their Prince, who keeps his court like a real sovereign, and is always one of the first rank, who is able to make a figure. The two parties magnificently dressed, but with marks of distinction, with each of them their Prince at their head, are ranged in order of battle between the barriers, when the ball being thrown into the middle, they use their utmost endeavours to receive it at the first rebound, and after a great deal of struggling, they that kick it beyond the barrier of the opposite party, gain the prize.

In the square called *Loggia de Pisani*, on the 23d of June annually (where is erected the statue of JUDITH in brass, and the rape of the Sabines is represented) the Grand Duke comes in his robes of state, attended by all his court, to receive the homage of his officers and vassals under his jurisdiction, each of them passing before his throne on horseback with their heads uncovered, and bowing their bodies, make some present, as a tribute or mark of their submission.

city.

2. The city of Fiesoli, to which Florence owes it's original, is situated on a hill, three miles to the northward of it, and was one of the twelve great cities of the Etrurians, and the residence of their augurs; but is remarkable for little at present but the cathedral, being still the See of a Bishop, suffragan to Florence.

Pratolino.

3. Pratolino, two miles north of Fiesoli, considerable for a palace of the Great Duke's situated here. It is a majestick square structure, encompassed with mountains, and the gardens suitable to the magnificence of the palace. The fountains, cascades, and grotto's, all admirable in their kind; and what are most taken notice of by travellers, are certain statues playing upon musical instruments, others working at a forge, water-organs, birds chirping, frogs croaking, statues walking, and all put in motion by water. As for the concealed spouts, or fountains as they are called, with which they take the liberty of half drowning the common people who come to see the gardens, they scarce deserve the mentioning: we find some of our quality imitating them in this piece of ill-nature.

Fiorenzola.

4. Fiorenzola, is a large town, situate in a valley, about thirty miles to the northward of Florence, considerable on account of it's trade.

Pietra  
Mala.

5. Pietra Mala, twenty-five miles north of Florence; is a village much talked of by travellers, on account of a light which is seen in the fields near it, like a globe of pure fire, almost every evening.

Pistoia.

6. Pistoia, stands twenty miles north-west of Florence, and as many south-east of Luca, and is a Bishop's See, suffragan to Florence, a very poor town at present, though situate in the richest part of Tuscany. It was antiently a flourishing

commonwealth, and submitted to the Great Duke upon the taking of Pisa.

CHAP.  
XI.

Tuscany.  
Poggio  
Imperiale.

7. Poggio Imperiale, is considerable for another of the Great Duke's palaces, about a mile from Florence, adorned with a collection of some of the finest pictures in Italy. The gardens also are very artificially disposed, and furnished with exotick as well as domestick plants. Among the statues, that of ADONIS, done by MICHAEL ANGELO, is most admired.

8. Empoli, eighteen miles south-west of Empoli. Florence, the See of a Bishop.

9. St Miniato al Toderico also is a Bishop's See, but considerable for little else.

St Miniato  
al Toderico.  
Colle.

10. Colle, situate on a mountain, twenty-five miles south of Florence, is only mentioned as a Bishop's See.

11. Pongibond, or Poggio Bonzi, two and twenty miles south of Florence, is a town of some trade.

Pongibond.

12. Monte Pulciano is the See of a Bishop, suffragan to Rome, and lies twenty seven miles south-east of Sienna.

Monte  
Pulciano.

13. Cortona, fifty miles south-east of Florence, is pleasantly situated on a mountain, planted with vines and fruit-trees, said to be more antient than Rome, and is at present the See of a Bishop, suffragan to Florence.

Cortona.

14. Arezzo, is situated on a hill, about forty miles to the eastward of Florence, a well-built town, and the See of a Bishop, suffragan to Florence, but thinly inhabited at present.

Arezzo.

15. Borgo San Sepulchro, lies near the Tiber, forty-five miles to the eastward of Florence, and is the See of a Bishop, but no otherwise considerable.

Borgo San  
Sepulchro.

The Siennese, or duchy of Sienna, is bounded by Florence Proper towards the north; by the territories of the Pope on the south and east; and by the Tuscan sea on the south-west, being about sixty miles in length, and as many in breadth. The chief towns are, 1. Sienna. 2. Massa. 3. Castiglione. 4. Buriano. 5. Grossetto. 6. Monte Alcino. 7. Pienza. 8. Sanquiriti. 9. Savona. 10. Radicofani. And, 11. Chiufi.

The Siennese.

The city of Sienna stands in a healthful air, thirty-six miles to the southward of Florence, pleasantly situated on an eminence in an exceeding fruitful country, being about four miles in circumference, and of a triangular figure, encompassed with a ruinous wall, and commanded by a citadel, intended more to awe the natives than for it's defence: in it are still remaining several square towers, the most of them are fallen to decay, which were built heretofore, as 'tis said, to commemorate the great actions of particular citizens when it was a republick. The streets are neatly paved with bricks, the great square in the middle of the city is surrounded with a piazza, where they run races annually on the 2d of July. Fourteen horses are brought from as many parishes by riders richly dressed in different colours, with the arms of the parish each of them belong to on their respective habits: the horses splendidly accoutred, and their very hoofs gilt. When they are all ready, they start at the sound of several instruments, and having run four times about the square, the horse that comes first in gains the prize, which consists of a rich brocade, to which every parish contributes: they run also with machines in the form of triumphal chariots drawn each by a pair of horses, and driven by persons of quality with incredible swiftness, as at Florence,

Sienna city.

CHAP.  
XI.  
Tuscany.

Florence, where the honour of the victory is passionately contended for with no small hazard to the drivers, who are sometimes overturned by their competitors, and come off with broken limbs. The town is thinly peopled, vineyards and gardens lie here and there interspersed within the walls. The public buildings are magnificent, and the private houses have many of them an air of grandeur, but every thing seems to be upon the decline.

The domo, or cathedral, however, is still one of the proudest structures in Italy of the Gothick architecture: the walls are covered within and without with marble of different colours; the roof is azure intermixed with stars of gold; the heads of an hundred and seventy Popes in alabaster adorn the walls; the frontispiece is finely carved and set thick with excellent statues; the floor is inlaid with marble of various colours, forming lights and shades, and composing all together a kind of Mosaick work, representing the history of ABRAHAM sacrificing his son, the passage of the Israelites through the Red-Sea, MOSES striking the rock, and many other parts of sacred history. This beautiful pavement is covered with a boarded floor, part of which is removed to satisfy the curiosity of strangers when they come to view it. The principal statues are those of Pope ALEXANDER III, PIUS II, and ALEXANDER VII, who were natives of this city. The painting of the library belonging to this church, representing the great actions of PIUS II, is much admired by the most judicious travellers, which remains as fresh and lively as at first, though done near three hundred years ago. The other curiosities usually shewn to foreigners, are, the great hospital, the house of PIUS II, the pillar with a brazen wolf upon it, supposed, erroneously, to be the arms of the city; probably first set up by the Romans, who erected such pillars in many of their colonies, perhaps in memory of the wolf, which, according to tradition, suckled ROMULUS and REMUS, the founders of their city; which is not however more incredible than some later traditions concerning St CATHERINE, the Saint of the town: they still shew several places here made famous by her devotions; as the room where she received the five wounds, now converted into a chapel; the apartment where she lived in the church of the Dominicans; here they have preserved her head and one of her fingers, but her body, it seems, is removed to the church of the Dominicans at Rome. They relate, that she was not only visited by our Saviour in person at Sienna, but formally married to him; and that the blessed Virgin, St PETER, St JOHN and St DOMINICK, were at the wedding: but the great use her friends make of her, is, a revelation which they pretend she received, that the Virgin was conceived in sin as well as other mortals; which was introduced in opposition to a contrary revelation of St BRIDGET's, confirming the immaculate conception. Thus do these bigotted people make sport for those who are atheistically inclined, and by their counterfeit visions and revelations, render those that are real, suspected. Sienna is an Archbishop's See and University, where young gentlemen are instructed in all manly exercises, as well as the sciences. Here also is an academy of Wits, as in other Italian cities. The purity of their language is much commended, being equal in that respect to Florence, and their pronunciation as good as at Rome; which, with

VOL. II.

the other advantages of the place above-mentioned, in point of air and situation, make it frequently the residence of foreigners who intend to learn Italian. The magistracy of this city consists of a Governour and Senate composed of twelve of the principal inhabitants; the sovereignty being lodged in the Great Duke, under whose dominion they have been ever since the year 1555; before which time they were a flourishing republick, and often disputed with the Florentines for Empire.

2. Massa, situated on the side of a hill near the coast of Tuscany, about thirty-five miles to the westward of Sienna, to whom it's Bishop is suffragan.

3. Grossetto, a small town, about forty miles south-west of Sienna, near a bay of the Tuscan Sea, defended by a castle, whose Bishop also is suffragan to Sienna.

4. Monte Alcino, famous for it's wine, lies twenty miles south-west of Sienna, and is the See of a Bishop.

5. Pienza, twenty-five miles south-east of Sienna, which has the honour of being a bishoprick.

6. Savona, a Bishop's See, fifty miles south of Sienna.

7. Chiusi, a Bishop's See, thirty-six miles south of Sienna; but travellers have not thought any of them deserve a particular description.

8. Radicofani, a little town, defended by a castle upon a hill, formerly looked upon as impregnable, lies upon the Pope's frontiers, about forty miles from Sienna in the road to Rome.

9. Castiglione, a small town, situate on the frontiers of the Pope's territories, on a lake to which it communicates it's name, forty-five miles south-east of Sienna.

This country which now goes under the name of Tuscany, was antiently called by the several names of Ombria, Tyrrhenia, and Etruria, and divided into twelve small principalities, each of them governed by their respective sovereigns, till it fell under the dominion of the Romans with the rest of Italy, and afterwards followed the fortune of that Empire, being over-run and pillaged by the Goths and other northern people: Florence, the capital city, particularly was destroyed by those barbarians, and rebuilt by CHARLES the Great about two hundred and fifty years after. It remained under the power of the Emperors of the west for some time; but during the struggles for dominion between them and the Pope of Rome, the principal cities of Italy, such as Florence, Pisa, and Sienna, withdrew themselves from the subjection of both, and erected such governments in their respective territories as they saw fit, seldom remaining long under any one form, but altering their several constitutions as the people or the nobility prevailed, till some of the most popular noblemen in Florence assumed the government of that city, and reduced it to the form of a monarchy. These were frequently deposed by other aspiring citizens, but at length the house of Medicis had the good fortune to fix the government in their family, and now remain Sovereigns of the greatest part of Tuscany, having reduced the republicks of Pisa and Sienna under their dominion. It was JOHN DE MEDICIS, who by flattery the populace, and pretending to defend them against the oppressions of the nobility, about the year 1410, first procured the sovereign power to be put into his hands; but his descendants did not become absolute as they are at present till many years

years after; this was obtained by slow degrees, and by the most refined policy. Pope PIUS V. first conferred the title of Great Duke on COSMO DE MEDICIS, in the year 1570, crowned him with his own hands at Rome; and the Pontiffs have ever since looked upon these Princes as their vassals; while the Emperor on the other hand claims Tuscany as a fief of the Empire, with a power of disposing of it whenever male issue shall be wanting of the Medicean family; which was the occasion of the treaties above-mentioned in the description of Parma, for the preventing a war in Italy. The Pope seemed highly to resent this proceeding of the powers of Europe, in taking upon them to dispose of the territories of Tuscany, exclaiming against it at the courts of Vienna, Madrid, &c. But they still seem determined that DON CARLOS, son of the Queen of Spain, shall succeed if he dies without issue. The present Grand Duke is JOHN GASTON DE MEDICIS, the son of COSMO III. and MARGARETA LOUISA, daughter of GASTON JOHN BAPTIST Duke of Orleans. He succeeded his father in the year 1723, having been married to ANNE MARY FRANCES of Sax-Lawenburg, widow to PHILIP WILLIAM Count Palatine of the Rhine, by whom he has had no issue, and probably despairs of having any now: however, as there are some branches of the family of MEDICIS left in Naples, particularly the Princes of OTTAJONO and SARNE, whom the Great Duke has acknowledged to be of the same blood, neither the Florentines or the Pope will contentedly acquiesce in the determination of the Empire and Spain for the succession of DON CARLOS; nor will France and England, who were parties to the quadruple alliance, probably insist on this disposition, since the misunderstanding which hath happened between the allies of Hanover and Vienna, unless this matter be farther confirmed at the congress of Soissons.

Govern-  
ment.

The Great Duke, as hath been intimated already, is arbitrary in his dominions, nor hath he so much as a privy council, in whose name proclamations and other acts of state are issued, as is practised in the courts of other monarchs, but all things of this nature are executed as the sole effect of his will and pleasure. The Florentines indeed retain the shadow of their antient government, having a senate composed of forty of the nobility and great officers, who serve to record the decrees of the Prince. There are also a great variety of courts of Justice, a council called the *Rota*, who determine appeals from them, with many other councils which superintend the treasure, forces, publick buildings, &c. Governors and other officers are appointed by the Great Duke throughout his territories, and preferred and displaced as he sees fit. His annual revenues are computed to amount to five hundred thousand pounds, arising from the tenths of the yearly value of every house, the tenth of all lands and houses that are sold, the ground-rents of the houses in Leghorn and other places, where he sells the land to the builders; eight *per cent.* on the portions of all women who are married; two *per cent.* on law-suits; five shillings for every heifer that is sold; an excise upon bread, tobacco, eggs, and almost all manner of provisions; besides which, these Princes have a prodigious treasure in bank, with part of which they traffick as merchants: and were they only to lay up the surplus of their expences, which do not amount to half their in-

Revenues  
and forces.

come, it is not to be conceived what immense sums they must have heaped together since this family have had the government in their hands, there being no Court in Europe which lives so frugally as this, keeping the servants at board-wages, and being at a set rate with their cooks, bakers, &c. They are only extravagant in their buildings, furniture, gardens, collections of antiquities, and other curiosities of art and nature, which are the amusements of the Italian nobility in general.

As to their forces, this Prince has only some galleys at sea, and two or three troops of guards; but 'tis said he has some thousands of Militia enrolled, who are suffered to live at their respective dwellings, and follow their trades; I do not find they have been brought into actual service of late years. The Italian Princes chuse to employ Swiss and other mercenaries in their service, rather than national troops; and of these few Princes are able to maintain more, whose dominions are of so small an extent as the Duke of Tuscany's. But the genius of these petty Sovereigns does not seem to lie this way at present; in which they differ pretty much from their ancestors, who carried their arms into every part of the habitable world: as they do from the Germans, who still impoverish themselves and their subjects by keeping three times as many forces on foot as they can maintain. I shall only add, that besides the territories of the Duke of Tuscany already mentioned, he is possessed of part of the island of Elba, the marquisate of Scanzano, the Citta del Sole in Romania, and some other small places, which will be described in treating of the countries where they are situated. I proceed now to the description of the rest of Tuscany which belongs to other Princes and States, namely, 1. The territories possessed by the republick of Luca. 2. The State delli Presidii, possessed by the Spaniards. 3. The Principality of Piombino. 4. The domain of the house of Cibo. And lastly, the marquisate De Fos di Novo.

The territories of the republick of Luca are bounded by Modena on the north; Pistoia on the east, the Pisan on the south; and by the Tuscan Sea and the republick of Genoa towards the west; being about five and twenty miles in length from east to west, and twenty in breadth from north to south; the chief towns whereof are, 1. Luca. 2. Via Reggio. 3. Coreglia. And, 4. Castiglione.

The city of Luca is situated in the middle of a fruitful plain, about fifteen miles over, near the river Secchia, ten miles to the northward of Pisa, and twelve miles to the eastward of the Tuscan Sea, being of an oblong form, three miles in circumference, and encompassed with a wall, defended by eleven bastions, and other fortifications. The walls are very wide, and faced with brick, and so well planted with trees, that they cover the whole town, except the steeple of the cathedral, which only can be seen as we approach the place. The streets are moderately wide and straight, the squares large, the private houses equal to those of other Italian cities; and among their publick buildings is the cathedral dedicated to St MARTIN, a large handsome fabric, most remarkable for a crucifix of our Blessed Saviour, according to tradition, begun by NICODEMUS, and finished by a divine hand. This crucifix is of cedar, and as others are usually naked, this is richly cloathed, with a crown upon it's

its head, adorned with precious stones. In the church of St FREIDAN is a tomb, which they called St RICHARD's, a quondam King of England, but our histories do not furnish us with an account of any King of England of that name who died in Italy. The palace of the republick might make a noble figure in another country, but there are so many finer in Italy, that it is not thought worth a particular description. This republick is of about three hundred years standing. The legislative authority is lodged in the senate composed of about two hundred and twenty noblemen, as they are called, or thereabouts, but these are generally noblemen without titles, or any honours to distinguish them from gentlemen, and most of these apply themselves to trade and merchandize: which inclines me to think that we have many citizens of London who much better deserve the character of noblemen than those who go under that denomination in some Italian republicks. This senate is divided in two equal parts, who sit alternately every six months. The executive power is lodged in the Gonfalonier, or standard-bearer, the chief officer of the state and a council consisting of nine members, called the Signoria, who with the Gonfalonier are changed every two months, and incapable of serving in the same posts for six years afterwards, to prevent their having any ambitious views. The Signoria while they are in office live in the palace, where their expences are borne by the state, but this is all the reward they receive from the state for their trouble. The Gonfalonier is no more in effect than President of the Council, unless it be that he wears a robe of crimson velvet, and has the title of His Excellence, and a guard of sixty Switzers. All elections of officers are made by balloting in the senate, of which the Signoria compose a part. They have a Podesta, or Judge of criminal matters, and four other judges for civil causes, from whence the parties may appeal to the Gonfalonier and Signoria, who are the last resort.

The revenues of this republick are computed at about thirty thousand pounds per annum, and 'tis said, they can raise ten or twelve thousand men upon occasion; but their greatest security from their more potent neighbours is in the Emperor's protection, especially now he is master of the best part of Italy. They keep guard constantly at their gates as in time of war, and admit no travellers but at one particular port, taking their arms from them before they enter the city, not so much as suffering any man to wear a sword in their streets. This city is the See of a Bishop, subject immediately to the Pope, who officiates in the vestments of an Archbishop, and the canons in the choir are habited like Cardinals. Here are as many ecclesiasticks in proportion, as in any other town of Italy, unless Jesuits; and 'tis said, they will not admit any of this order amongst them.

The diligence of the people of this place has given it the name of *Luca the industrious*: their manufactures consist chiefly in silk, and gold and silver stuffs. The olives and oil produced in their territories are very much esteemed: they have also plenty of wine, but not corn sufficient for their subsistence; the common people eat chestnuts frequently instead of bread, as they do in many other parts of Italy. Of the rest of the towns of this republick I meet with no particular description, unless it be, that Viareggio is a little port

which preserves their communication with the Tuscan sea, and lies about ten or twelve miles to the westward of the city of Luca.

The state delli Presidii, subject to the Spaniard, is extended about thirty miles along the coast of Tuscany, having the Siennese on the east, and is about fifteen miles broad. The chief towns whereof are, 1. Orbitello. 2. Porto Hercole. 3. Porto Sancti Stephani. 4. Talamone Vecchio. And, 5. Talamene.

Orbitello is situated on the Tuscan shore, at the foot of mount Argentario, thirty miles north-west of Civita Vecchia, and about as many to the eastward of the island of Elba, and fifty to the southward of Sienna; a well-fortified town, and belonged to the republick of Sienna, till that state was brought under the dominion of the Florentines; for about the same time the Spaniards made themselves masters of Orbitello, Porto Hercole, and the other towns in this district, putting garrisons into all of them, which occasioned the adjoining country to be called *Il Stato delli Presidii*, or the country of garrisons.

Porto Hercole is a large town and harbour on the Tuscan sea, six miles to the southward of Orbitello, defended by a strong castle. The other places do not require a particular description.

The principality of Piombino lies along the coast of the Tuscan Sea, between the Siennese and the Pisan, being about twenty miles long, and ten broad: the chief town whereof is Piombino, about thirty-five miles south-east of Leghorn, a strong fortress and harbour, subject to the Spaniard.

The Domain of the house of Cibo lies between the territories of Genoa on the west; and Val de Main on the east, being ten miles in length, and about as much in breadth; formerly governed by it's own Prince, but now subject to Tuscany. The chief towns are, 1. Massa. And, 2. Carara.

Massa is situated on the little river Lavenza, about four miles from the Tuscan Sea, and twenty north-west of Luca; a little well-built town, formerly the residence of the Prince.

Carara is situated five miles north-west of Massa, near which is dug that fine white marble, esteemed the best in Europe; but I meet with no farther description of the town.

The marquise De Fos di Novo is a small territory north-west of Massa, belonging to the family of MALESPINA, the only considerable town being of the same name, and situate about eight miles to the northward of Carara.

broad on the west part of it, and of a very irregular figure, which makes it necessary to refer my reader to the map of Italy in this volume, for the form of it. As the territories of Venice in Italy are a part of the antient Lombardy, I have already observed, there cannot be a happier climate or a better air, if we except the coasts. The only sea which belongs to it is the Adriatick, now generally known by the name of the Gulph of Venice, that city lying at the bottom of it. The tide flows regularly twice in four and twenty hours, and ebbs as often, rising about four feet at high water, and is governed by the moon as with us: Nor are they at all apprehensive of the sea's abandoning their shores, if we may credit Mr ADDISON, who enquired particularly after this matter at Venice; tho' Dr BURNET and some other travellers insinuate, that Venice is in danger of being joined to the continent in another age. Of all the seas about Italy, there are none that abound in fish like this gulph. The chief rivers are the Po, the Piava, the Adige, the Sila, the Livenza, the Tagliamento and the Brenta, all which fall into the Adriatick. This country is also well watered with lakes, of which the principal are the lake de Garda, being about thirty-five miles long, and twelve broad; and the Ilseo, fifteen miles in length, and three in breadth.

The country is generally level, and as fruitful as any in Italy, abounding in excellent arable and pasture, vineyards, and plantations of mulberries. The road between Verona and Padua is extremely pleasant, being planted thick with white mulberry-trees in squares, which do not only furnish food for great quantities of silk-worms with their leaves, and feed their swine and poultry with their fruit, but serve as so many stays for the vines, which hang all along like garlands from tree to tree; and within the several squares are fields of corn, which in these hot countries ripens much better in the shade of the mulberry-trees, than if it were exposed to the sun: On the other hand, it is too cold for their oranges and citrons in the winter, when they are forced to cover them; whereas to the southward of the Apennine they have no occasion to use such precautions. There is also plenty of cattle of all kinds in the Venetian territories, which travellers observe are either grey or white, but that their hogs are usually black, and their flesh much better than in France or England; which is supposed to proceed from their food, living much upon truffles, (a delicious root) the husks of the pressed grapes, chefnuts, mulberries, &c. The sheep of the Paduan afford a good sort of wool, little inferior to that of England; and there is no where a greater plenty of fish and fowl, and all manner of game, than in the territories of Venice; and yet travellers complain much of their ill diet, which I presume proceeds from the manner of ordering and dressing it: but this is different in almost every country, and seldom approved by strangers. No wonder also if at inns upon the road, they do not study the palate of their guests any more than in other countries; but in all great towns people may have their food dressed after their own way: therefore when travellers complain so much of bad diet, where there is plenty of every thing that a man can desire to eat or drink, they are not to be much regarded. Husbandmen and poor people eat a coarse sort of bread in Italy, as they do in most countries of Europe; but people of condition may have fine flour, and cooks to order it as they

see fit, if the manner of making bread and baking it here be not suitable to their palates, as Dr BURNET seems to complain very sensibly; tho' 'tis possible he might have seen as bad in his own country.

CHAP.  
XII.  
Venice.

### CHAP. XIII.

*Contains a description of the provinces and chief towns subject to the Venetians in Italy.*

THE territories of the Venetians in Italy are usually divided into thirteen provinces, viz. 1. The Dogado, or duchy of Venice Proper. 2. The Padouano. 3. The Polesino de Rovigo. 4. The Veronese. 5. The Brescian. 6. The Bergamasco. 7. The Cremasco. 8. The Vicentin. 9. The Trevisana. 10. The Feltrino. 11. The Bellunese. 12. The Cadorino. And, 13. Part of Friuli.

The Venetian provinces in Italy.

The Dogado, or duchy of Venice, properly so called, contains almost all the Venetian sea-coast in Italy, with the islands, lakes, and marshes, of Venice, extending in length from the mouth of the Adige in the south, to the province of Friuli in the north, about fourscore miles in length, but is not in any place above eight or ten miles in breadth, being bounded by the Adriatick on the east, and the Padouan and Trevisin on the west: the chief places whereof are, 1. The city of Venice. 2. Murano. 3. Torcello. 4. Caorle. 5. Grado. 6. Malamocco. 7. Chioggia. 8. Brondolo. 9. Loredo. 10. Fusine. 11. Marghera. And, 12. Mestre.

The duchy of Venice Proper.

The chief towns and islands.

Venice, the capital city of this State, is situated in 45 degrees 40 minutes north latitude, in the Lagunes, as they are called, five miles from the continent. These Lagunes are supposed to have been originally marshy grounds, which the sea encroached upon, leaving here and there some little islands, or spots of ground uncovered, on which the fishermen of Padua built their huts, and first inhabited them; and that in the fifth century, when the Goths and Vandals over-run Italy, several considerable families of Padua, Aquileia, and other neighbouring cities, observing the advantageous situation of these islands, that they could neither be approached by sea or land by an enemy, retired hither with their effects, and laid the foundation of this great city. But my design being to describe the situation, and not to enter upon the history of Venice in this place, I shall only observe further, that the water of these Lagunes is so very shallow, that it will not admit of vessels but in certain channels, which are marked out with stakes, and which the government are at great charges in keeping clear by mills and other engines. On the side towards the Adriatick there is a long bank of earth, called the Lido, extending forty or fifty miles in length, which breaks the fury of the sea, and makes these waters calmer in blowing weather than they would otherwise be: nor are there more than two or three passages by which the city can be approached that way; and these so difficult, that if the buoys and other sea-marks were removed, their own pilots would find a difficulty in entering them. But were it otherwise, the islands which command those streights might easily be put into such a posture of defence, as to bid defiance to the greatest naval powers. And in fact it appears, that no enemy has ever been able to bring a fleet of men of war before the city since it was founded, and those who have endeavoured

The Lagunes.

CHAP.  
XIII.  
Venice.

endeavoured it, have perished in the attempt. They have this farther advantage against a land-army, that their waters are never frozen hard enough in winter to bear a considerable weight; so that if any place in Europe may be stiled impregnable, it is this: and if we should suppose an enemy strong enough, to block them up by sea and land, it would be difficult to starve them, there being shoals of fish continually passing through their very streets. Nor is Venice more admired for its strength than beauty: To see one of the finest towns in the universe rising out of the waters, its magnificent palaces and lofty towers appearing in full view, on which side soever you approach it; no trees, or even walls, to interrupt the sight, but the houses on the outside of the town, washed with the flood at least four feet deep, affords a most delightful and amazing prospect. As for the city's standing upon seventy-two islands, which is the received opinion, whether there were at first that number of small islands, confederated together for their common defence, which might give occasion to this surmise, or whatever other foundation it might have, it is evident, that at present there are not less than two hundred islands in Venice, if every part of the town is esteemed such, which is divided from the rest by canals. The town is of an irregular figure, rather long than broad, and divided in two parts by the grand canal, which runs the whole length of it, in the form of an S. The circumference is by some said to be five, and by others about eight miles, and both of them possibly in the right; for it may be eight miles, if we take in all the windings of the buildings, though I am satisfied it is but five, if we leave them out. The number of the people is no less controverted, than the dimensions of the place; some making them 130,000, and others 300,000; the first seem to come nearest the truth.

Canals and  
bridges.

The canals are so numerous, that one may go to almost any part of the city by water, as well as by land; and there are no less than four hundred and fifty bridges, all of them built of stone, by which the several parts of the town have an easy communication. The principal bridge, called the Rialto, lies over the middle of the grand canal, and is composed of one arch, which makes one third of a circle, there being ninety feet from one extremity of the arch to the other, and consequently the arch is near twenty-four feet in height. It is very solidly built of large square stones, being a coarse sort of white marble, and has rails on each side: there are two rows of shops in the middle, which divide it into three streets, the broadest in the middle, and the other two between the rails and the back-sides of the shops. The rest of the bridges have no rails, and being built with a white stone, hard and slippery, makes the passage of them very unsafe; at least, says Mr ADDISON, it would be so to a people less sober than the Italians. There are not keys on each side of every canal where people may walk, but frequently the canal takes up all the space from one side of the street to the other. The streets which have no canals in them are very narrow and crooked, which makes it extremely difficult for a stranger to find his way to any part of the town by land. The piazza of St MARK is esteemed the glory of Venice, as well for its extent, as for the magnificence of the buildings about it. The fine church of St MARK fronts one part of it, and that of St GEMINIAN the other; and the procuraties, where the lawyers

Streets.

The pi-  
azza of St  
MARK.

reside, being uniform stately fabricks, adorned with large marble portico's and bas-reliefs, run on each side of it. The length of this square is two hundred and fourscore paces, and the breadth an hundred and ten. And on the right hand, going up towards St MARK's, is another square, extending as far as the sea, two hundred and fifty paces long, and eighty broad; the palace of the Doge lies on one side of it, and the procuraties are continued on the other. This is called the Broglio, where the nobility and senators meet and walk every day, before they assemble in their respective councils. They sometimes chuse one side of the square, and sometimes the other, according as the weather serves; but which part soever they take up, none of an inferior rank are permitted to come on the same side. These piazza's also serve as an Exchange, where the merchants of the several nations here transact their affairs. The houses which make the best appearance are upon the grand canal, as the palaces of Morosini, Loredano, Grimani, Cornaro, Vandramino, &c. These are noble lofty structures, the fronts of marble, or other hewn stone, and adorned with pillars of the several orders of architecture. But notwithstanding they have so beautiful an outside, the nice Dr BURNET did not at all approve their contrivance; he says, they have nothing convenient, the architecture is almost all the same, one stair-case, a hall that runs along the body of the house, and chambers on both hands; but there are no apartments, no closets, or back stairs; so that in houses of an excessive costliness, they have yet no sort of convenience. The flooring, according to Mr ADDISON, is a kind of red plaister, made of brick ground to powder, and afterwards worked into mortar; it is rubbed with oil, and makes a smooth shining and beautiful surface. The furniture is not commonly very rich, if we except the pictures, which are here in greater plenty than in any other place of Europe, done by the best masters, such as TITIAN, PAUL VERONESE, and TINTORET, the last of whom is of greater esteem at Venice, than in other parts of Italy. The rooms are generally hung with gilt leather, which they cover with tapestry on extraordinary occasions, or with other hangings of greater value. Their bedsteads are of iron, to prevent the vermin lodging in them, and the bottoms of boards, on which they lay so many mattresses, that it is a large step up to them. The streets are paved with brick or free stone, and kept very neat, there being no horses or carriages, or so much as a chair that passes thro' them; they have almost every where the convenience of the water, and go by gondola's or boats from one place to another. In the middle of the vessel the passengers sit covered, as in a coach, with glasses on every side: the gondolier rows standing, with his face the same way he goes. All the gondola's are painted black, and the cabin in the middle covered with black cloth or stuff, by an order of the State; except those of foreigners, and particularly the gondola's of Ambassadors, which are very large, and finely painted, carved, and gilded; in these they make their publick entries, and they are esteemed equal to so many coaches and six. The common gondola's may be hired by the hour, or from place to place, and a good one may be had for five or six shillings a day. It is computed there are not less than ten or twelve thousand of them plying upon the canals of Venice, besides

which, all the nobility and people of condition have two or three a-piece of their own, every one of them large enough to hold five or six persons at least. This city is said to contain seventy parishes, thirty monasteries, and about as many nunneries; two hundred palaces fit for the entertainment of Princes, a great many statues of brads and marble, and several publick fountains; but their water is generally bad, they are furnished with what they drink, from the continent, or from their cisterns of rain-water.

Bad water.

Publick  
buildings.

St MARK's  
church.

The publick buildings most admired are, first, the church of St MARK, which is properly the Doge's chapel: it is built after the Greek fashion, almost square, and covered by several domes or cupola's, of which the largest is in the middle, the whole supported by thirty-six marble pillars, three foot diameter each. The outside and inside also are of excellent marble, and the frontispiece adorned with pillars of porphyry and jasper. There are four brazen horses over the gate of exquisite workmanship, said to have belonged antiently to the chariot of the sun, and an ornament to a triumphal arch, which the Senate of Rome erected for NERO, after his victory over the Parthians. This church is not lofty, and something too dark; but the vast quantity of mosaick work, with which both the roof and pavement are adorned, render it one of the greatest curiosities in Italy. This mosaick work consists of pictures formed with little inlaid pieces of wood, stone, ivory, enamel, or any other matter, in which they will imitate nature to a miracle. They shew here a red stone, on which the Emperor FREDERICK BARBAROSSA laid his head, when Pope ALEXANDER III, trod on his neck, with this inscription, viz. *Super Aspidem Et Basiliscum ambulabis*. A late writer observes, that the mosaick work on the walls has lasted more than six hundred years, without the least diminution of it's beauty: and in the pavement several large pieces remain entire, which are composed of little pieces of jasper, porphyry, serpentine, and marble of several colours.

Mosaick  
work de-  
scribed.

The trea-  
sury.

From this church strangers are led into the treasury belonging to it, which is never opened but in the presence of one of the procurators of St MARK, who are the guardians of it. They are first shewn abundance of precious relicks; such as pieces of the cross, the hair and milk of the virgin, &c. And in another room abundance of real treasure, great part of which was brought from Constantinople, when the Venetians were masters of that city: as the crowns of Candia and Cyprus, set thick with precious stones; armour of beaten gold, enriched with jewels of a prodigious value; vessels of agate, crystal, and entire emeralds; four carbuncles, the least weighing six ounces, and a sapphire of ten ounces; a picture of St JEROME in fine mosaick; a mitre with a great carbuncle on the top of it, which belonged to CONSTANTINE, and innumerable other valuable curiosities; insomuch that Dr BURNET says, he never saw so great a treasure amassed together in any other place.

The  
Doge's  
palace.

After this, foreigners are shewn the duke's palace, which has a very magnificent front, beautified with a multitude of marble pillars of the several orders; and if the other three sides were answerable to it, 'tis said, there would not be a finer fabrick in Europe; but these have a mean appearance. In the chamber of the college there is admirably painted on the roof, JUPITER darting thunderbolts, by PAUL VERONESE. In an-

other room, a description of all the cities the Venetians possess on Terra firma, and eleven fine statues of Emperors. In the great council chamber, which is an hundred and fifty foot long, and seventy-three broad, PAUL VERONESE and TINTORET have exercised their utmost skill. The principal pieces are, the battles of the Venetians; the siege of Constantinople; their wars with the State of Genoa; the history of Pope ALEXANDER III, treading on the neck of the Emperor FREDERICK BARBAROSSA, and a representation of Paradise, esteemed the best picture in Venice.

CHAP.  
XIII.  
Venice.

The patriarchal church is dedicated to St PETER DI CASTELLO; but travellers have not thought fit to give us a particular description of it any further than to acquaint us, that it is large, and the front deserves to be taken notice of for it's beautiful simplicity; that the great altar was erected by the Senate, in pursuance of a vow they made, during a war with the Turks, anno 1649, and is dedicated to the blessed LORENZO, whose body lies near it, in a noble marble tomb, supported by angels and apostles. What seems particular to the city of Venice, is, their dedicating their churches to saints who lived before the Christian dispensation; as to St JOB, St MOSES, SAMUEL, JEREMY, and DANIEL. The churches most admired for their architecture, are, those of St GEORGE and Della Salute, which far exceed St MARK's, as well as the cathedral, in this respect.

The ca-  
thedral  
and other  
churches.

The arsenal of Venice is another curiosity, which travellers seem to think can never be sufficiently admired: they relate, that there are arms for an hundred thousand foot, and twenty-five thousand horse, with other necessary accoutrements for them, two thousand four hundred pieces of cannon, &c. which I find far exceeds the truth. Mr ADDISON gives another account of it: he says, the arsenal is an island of three miles in circumference, which contains all the stores and provisions of war, which are not actually employed; and here are the docks for their galleys and men of war, most of them full, as well as work-houses for all land and naval preparations: that the magazine of arms makes a great show, and was indeed very extraordinary about an hundred years ago; but at present a great part of it's furniture is grown useless. There seem to be almost as many suits of armour as there are guns; the swords are old-fashioned and unwieldy in a very great number; and the fire arms fitted with locks of little convenience, in comparison of those that are now in use. The Venetians pretend they can set out, in case of great necessity, thirty men of war, a hundred galleys, and ten galleasses; but he could not conceive how they could man a fleet of half that number.

The arse-  
nal.

The Venetian nobility and gentry are admired, as well for their persons, as genteel behaviour. When I came from France to Venice, says a certain traveller, I came from boys to men: here I saw walking upon the piazza of St MARK every day, five hundred gentlemen at least; proper handsome men, with gravity and wisdom in their looks, any of them fit to act the part of an Ambassador. They wear a little light cap, turned up with a kind of black fringe, and a long black gown of Paduan cloth, as their laws require (tho' I am very well assured they procure English cloth if they can clandestinely) and under their gowns, which fly open in summer, they have handsome black

Persons  
and habits  
of the men

CHAP.  
XIII.  
Venice.Of the  
women.

black silk suits; their shoes and stockings are extremely neat; they wear long perukes, and usually carry their caps in their hands; they line their gowns with furs in the winter, and girt them close about them.

The women are well-shaped and beautiful, witty, and of an agreeable conversation, and endeavour to improve their complexions with washes and paint. Those of quality are so immoderately fond of being tall, that some of them wear shoes with the heels above a foot high; inasmuch that they are forced to have two people to support them when they walk, and appear much taller than their husbands, whenever they do appear, but that is mighty seldom, most commonly at church, where they are so veiled that very little of their faces are seen. In the gondola's they are shut up close, and have always two old women to attend them. Those of an inferior rank also are covered with a veil or scarf, when they go abroad, and open no more of it than to see their way: nor do these go out often, the men buying in all provisions, and doing whatever is to be done without doors. As for virgins, they are sent to nunneries in their infancy, and never come out till they are married, or take the veil. They seldom see the man they are to have till the hour they are married; and their friends concern themselves about nothing more than the wealth and quality of the person they are to marry.

Concubinage al-  
lowed  
here.

The use of concubines is so much countenanced here, that the wife generally lives in a good correspondence with them. The ladies are so indulgent to their sons, that as soon as they observe in any of them an inclination for the fair sex, they bargain with some of their poor neighbours for one of their daughters to be his bed-fellow: whereby they prevent his marrying to disadvantage, or contracting a nauseous distemper by cohabiting with common women. The friends and relations of the girl who is to be the young gentleman's mistress, come frequently to wish her joy upon the occasion, as if she was really married to him. They contract for a month, a year, or more, as they can agree; and you shall hear a mother swear by God, and upon her salvation, that she cannot afford to take less for her daughter than she asks. This commerce is taken to be so little criminal here, that they scarce ever mention it in confession; and if they do, the priest tells them he will not be troubled with such trifles. A late writer adds, that those who cannot afford to keep a mistress for their particular use, join with two or three friends, and have one in common amongst them. That there are whole streets of wenches who receive all comers; and as the habits of other people are black and dismal, these dress in the gayest colours, with their breasts open, and their faces painted enough to mire a horse, in the phrase of a certain poet, standing by dozens, at the doors and windows, to invite their customers.

As to the wives of Venice, if we are to credit Dr BURNET, they are bred up in so much ignorance, and converse so little, that they know nothing but the dull superstition of holy-days, in which they stay in the churches as long as they can, and so prolong the little liberty they have of going abroad on those days, as children do their hours of play. They are not employed in domestick affairs, and generally understand no sort of work, but are the insipidest creatures imaginable: which does not seem to agree with what

other travellers relate of the wit and sprightly conversation of the Venetian women; unless we are to understand it wholly of common women, whom the Doctor perhaps would insinuate, have ingrossed all good sense. But he surely does not speak this from his own experience, any more than what follows, namely, That the married women do not wait the usual forms of courtship, but descend at once to downright lewdness with their gallants; the first step with them, without any preamble or preparative, is consummation.

As to the entertainments and diversions of the men, Mr ADDISON observes, that though they live in a very moist air, drinking is not at all in fashion with them; nor have they any such amusements as bowling, hunting, walking, riding, or other exercises to employ them without doors. At the carnival, a time devoted to pleasure, the great diversion of the place, as at all other times of rejoicing, is masquerading: the Venetians, who are naturally grave, however give in to the follies and extravagancies of such seasons, disguised in a false personage. They are indeed under a necessity of finding out diversions that may agree with the nature of the place, and make amends for the loss of several pleasures which may be met with on the continent. These disguises give occasion to abundance of love-adventures; for according to my author, there is something more intriguing in the amours of Venice than in those of other countries. Opera's are another principal entertainment at this season; but the poetry of them is generally as bad as the musick is exquisitely good: the subject is generally some celebrated action of the ancient Greeks or Romans, which often looks ridiculous enough, as when you hear one of the rough old Romans squeaking through the mouth of an eunuch. But the Italian poets, besides the celebrated smoothness of their language, have a particular advantage above the writers of other nations, in the difference of their poetical and prose language; for they have not only some phrases and sentences peculiar to poets, as in other countries, but a multitude of words never used in common discourse: they have such a different turn and polishing for poetical use, that they drop several of their letters, and appear in another form when they come to be ranged in verse. For this reason the Italian opera seldom sinks into a poorness of language; but amidst all the meanness and familiarity of the thoughts, has something beautiful and sonorous in the expression. Without this natural advantage of the tongue, their present poetry would appear wretchedly low and vulgar, notwithstanding the many strained allegories that are so much in use among the writers of this nation. The comedies my author saw at Venice, he tells us, were very indifferent, and more lewd than those of other countries. Their poets have no notion of genteel comedy, and fall into the most filthy double meanings imaginable, when they would make the audience merry: four standing characters enter into every piece that comes upon the stage; the Doctor, Harlequin, Pantaloon, and Coviello. The Doctor's character comprehends the whole extent of a pedant, that with a deep voice and a magisterial air breaks in upon conversation, and bears down all before him; every thing he says is backed with quotations out of GALEN, HIPPOCRATES, PLATO, VIRGIL, or any author that rises uppermost, and all answers from his companions are looked upon as impertinencies and interruptions. Harlequin's part is made up of blunders, he mistakes one name for

CHAP.  
XIII.  
Venice.Diversi-  
ons.

CHAP.  
XIII.  
Venice.

for another, forgets his errand, stumbles over Queens, runs his head against every post in his way, all which is attended with something so comical in the voice and gesture, that a man who is sensible of the folly of the part, can hardly forbear being pleased with it. Pantaloon is generally an old cully, and Coviello a sharper: all four of them appear in masks; which custom the Italians and French probably derived from the Romans; but as my author well observes, a mask can never suit with the variety of passions that are incident to every single person in the whole course of a play, where the turns and motions of the face are often as agreeable as any part of the action: the grimace may be proper on some occasions, but is too steady to agree with all. The mob indeed are generally pleased at the first entry of a disguise, but the jest grows cold even with them, when it comes on the stage in the second scene. Among other shows exhibited to the Venetians, one is peculiar to them; where a set of artificers, by the help of several poles, which they lay cross each other's shoulders, build themselves up into a kind of pyramid, so that you see a pile of men in the air of four or five stories rising one above another: the weight is so equally distributed, that every man is able to bear his part of it, the stories growing less and less as they advance higher and higher; a little boy represents the point of the pyramid, who after a short space leaps off with a great deal of dexterity into the arms of one that catches him at bottom, and in the same manner the whole building falls to pieces.

Another diversion during the carnival, is gaming in places, called the *Ridotti*, which are apartments in the noblemen's houses, where none but noblemen keep the bank; they dismiss the gamblers when they please, and always come off winners. There are usually ten or twelve chambers on a floor with gaming-tables in them, and very great crowds of people; a profound silence however is observed, and none are admitted without masks; here you meet ladies of pleasure, and married women of quality, who under the protection of a mask enjoy all the diversions of the carnival, but are usually attended by the husband, or his spies. Besides these gaming-rooms, there are others for conversation, where wine, lemonade, and sweatmeats are sold: here the gentlemen are at liberty to rally and address the ladies, but must take care to keep within the bounds of decency, or they may meet with a severe resentment from the injured husbands, who too often employ bravoos or assassins to procure them satisfaction, as 'tis called, for affronts of this kind; but these practices are not so common as formerly, the State having in a manner extirpated this race of villains. The crowd of masqueraders is often so great in the piazza of St MARK, that there is no passing; a man may take upon himself what character he pleases, so he be qualified to act the part he assumes. The Harlequins frequently meet, and are exceedingly witty upon one another; the Doctors dispute; and thus every man endeavours to support the character he has taken upon him. Those who only desire to be spectators, take the habit of Noblemen. The common people divert themselves chiefly with the rope-dancers, jugglers, fortune-tellers, &c. who have their several stages in the square; there are also bull-baitings, races of gondola's, and a multitude of other diversions, too tedious to enumerate.

Inconven-  
iencies of  
Venice.

Among the inconveniencies of Venice, the want of good cellars for their wine is one, which occa-

sions it's turning sour; the badness of their water is a second; and the stench of some of their canals in the heat of summer a third; from whence it is easy to conclude the air is none of the best. Firing also is scarce; and they have hardly earth enough to bury their dead; consequently they have few fine gardens, courts, or squares, which are so great an ornament to other cities.

The island of Murano is situated about two miles north-east of Venice, and is one of the largest and pleasantest islands in the Lagoon; the chief town is of the same name. Here was the famous manufacture of Venice glass, which brought in a considerable profit to the republic, before other nations learnt the art; but they are now equalled, if not excelled, by the English, French, and Dutch, who used to take it off their hands.

Malamocco is an island two miles from Venice, considerable for it's harbour, and for lying upon one of the narrow channels, which leads from the Adriatick sea to Venice; it has a town of the same name, formerly the See of a Bishop, but having been removed by earthquakes and inundations, the See was removed to Chioggia.

Chioggia, or Chioggia, is situated in a little island on the coast of the Dogado, about fourteen miles south of Venice, remarkable for little but it's being a Bishop's See, suffragan to Venice, and for a battle fought near it between the Genoese and Venetians.

Torcello is a small city, on an island of the same name, six or seven miles north of Venice, considerable for little else but the being a Bishop's See.

Caorle, olim *Caprule*, is a little city, in an island of the same name, the See of a Bishop, suffragan to Venice, in a very bad air, as most of these islands are upon this coast.

The city of Grado stands upon an island of the same name, about forty-five miles north-east of Venice, and ten miles south of Aquileia, called *New Aquileia*, on the destruction of that city by the goths, and was for a considerable time the seat of the Patriarch of Aquileia, but the Bishop of this See is now suffragan to Venice.

Fusine is a little town on the continent, five miles to the westward of Venice, where people take water to go to that city.

The second province I proposed to describe was the Paduan, antiently inhabited by the *Venetii*, being bounded by the Trevisan on the north; by the Dogado or duchy of Venice towards the east; by the Polesin on the south; and by the Vicentin towards the west; being about thirty-five miles in length and thirty in breadth. This country, on account of it's fertility, and delightful situation, has obtained the name of the garden of Italy, and the terrestrial paradise. It's chief towns are, 1. Padua. 2. Abano. 3. Arquà. 4. Montefelice. 5. Este. 6. Anguilura. 7. Campo St Pietro. And, 8. Citadella.

The city of Padua, olim *Patavium*, stands in a pleasant plain, watered by the rivers Brent and Bachelio, about two and twenty miles to the westward of Venice; the form almost circular, held to be a town of great antiquity, and according to tradition, built above four hundred years before the city of Rome: it has been one of the most flourishing cities of Italy, but at present half the ground within the walls is not built upon, and great part of the houses that are left are uninhabited; though the walls, 'tis true, take up the same ground they did in the time of the Romans,

Romans,

CHAP.  
XIII.  
Venice.

Romans, when, as their historians relate, this city was able to raise an hundred thousand men; at this day all the souls in the place scarce amount to thirty thousand. The air is good, and there is plenty of every thing; and the falling palaces are sufficient indications of it's antient grandeur. What does Dr BURNET, and other travellers mean, therefore, in crying up the mild and happy government of the Venetians, when under all the natural advantages imaginable, the people subject to them are reduced to the extremest poverty, and the finest cities in their territories are fallen to decay, during a long uninterrupted peace; when no general calamity, either war, plague, or famine, has afflicted them for many years? These writers do to a man lament the miseries of these unhappy people, and yet are perpetually commending the wisdom and lenity of the administration they live under, which to me seems a manifest contradiction; nor can I assign any other reason for it, but that having laid it down as an incontestable maxim, that a republican form of government is much the happiest, and most beneficial to mankind; and the Venetian being a republick, if they should acknowledge the tyranny and oppression of that State, it would bear hard upon their favourite maxim, and induce people to have better thoughts of monarchy: for they themselves can't but acknowledge that at Turin, at Milan, and even at Rome itself, where the government is monarchical, there is a much greater appearance of wealth and prosperity. But to be a little more particular in the description of Padua; the streets are narrow, and the buildings being lofty, the lower rooms are consequently dark: a double piazza runs along most of the streets, and there are abundance of magnificent palaces, inhabited by a numerous, but half-ruined nobility; occasioned, 'tis said, in a great measure by pursuing their revenge against each other from generation to generation. For as there are continual quarrels and factions amongst them, and sometimes persons killed in these unnatural disputes, the government punishes those who were concerned in them with the confiscation of part of their estates, raising thereby considerable sums; while they impoverish their unhappy subjects, without endeavouring to suppress these feuds entirely, as well on account of the profit which arises from them to the State, as because they are less apprehensive of a revolt, while the nobility of the conquered provinces remain at variance. But how wise soever this conduct may seem in the Venetians, it is surely very barbarous; nor am I perfectly convinced of the wisdom of it, since these destructions have occasioned many of the trading and most wealthy inhabitants to leave the place. For the like reasons, 'tis said, the Venetians encourage the scholars of the University to insult and abuse the townsmen here, and even to murder them in the streets in the night-time. These young gentlemen, to shew they are superior to all laws and magistrates, arm themselves every evening, attacking those they meet with in the streets, wounding some, and killing others; and sometimes when two parties of them have met, they have fired at each other from piazza to piazza, till many of them have lost their lives: and the University has in a manner lost it's reputation by these disorders; for of ten colleges that it consisted of, there is not now above one left, the other nine being appropriated to other uses; which has had this one good effect however, that the streets are not so dangerous in

VOL. II.

an evening as they were formerly: the *Qui va li*, or, Who goes there? in which words they used to challenge the townsmen, is very little dreaded at present.

The manufacture of cloth here brought in a great revenue to the State formerly, and is not inconsiderable at this time; but the English finding means to furnish the quality of Venice with better cloth clandestinely, few of the nobility wear any thing else, notwithstanding the magistrate of the pomps is obliged by his office to see that no body wears the cloth of a foreign country. The fields about Padua afford the best corn in Italy, and the neighbouring hills the best oil and wine, with a vast variety of delicious fruits; the air and water, as hath been observed, is equally good; and yet all this affluence cannot render the people happy: they are still miserable, through the tyranny of the government, which is here administered by a Podesta and Capitaneo, the former having the civil, and the other the military power committed to him. The Bishop has the ecclesiastical government, who is suffragan to the Patriarch of Aquileia.

The publick buildings best worth seeing at Padua are, 1. The town-hall, where their courts of justice are held, the dimensions whereof are said to be equal to those of Westminster-Hall, but with this advantage, that the roof is finely painted with astronomical figures: in it are several magnificent tombs, and among them one erected to the memory of the celebrated LIVY the historian, who was a native of this place; but whether he was buried in this city is very uncertain; all the evidence they have for it, is an old leaden coffin, which was dug up in the year 1413, without any inscription on it, the people were pleased to think it the remains of LIVY, and in honour to him built the above-mentioned tomb. There is another monument in this hall taken notice of by travellers, as equally worth observation, and that is the tomb of the Marchioness of Obizzi, esteemed a second LUCRETIA. It seems a gentleman of Padua being passionately in love with her, found means to get into her chamber when she was a-bed, and the Marquis her husband absent; and having, as 'tis presumed, first tried what courtship would do before he proceeded to acts of violence, at length enraged at her refusal to comply, stabbed the young lady to the heart. When she was first surprized by the murderer, her only son, of about five years old, was in bed with her, but the child was afterwards found in an adjoining chamber, whither 'tis supposed he carried him before he perpetrated this piece of villany. The lady being found dead, the gentleman was apprehended, it being known that he had an inclination for her, and one of the buttons of his sleeve found in the bed, the Marchioness's young son also confirmed his having been in the room with his mother: upon which strong presumptions, he was put to the torture both ordinary and extraordinary; still he persisted to deny the fact; and after fifteen years imprisonment his friends procured his liberty; but it was not many months after that the young Marquis (the child who was in the room when the murderer surprized his mother) shot him through the head with a pistol, and then went into the Emperor's service, where he continued so lately as the year 1712.

The church of St ANTHONY of Padua, (or rather of Lisbon, for he was a Franciscan Monk of that city) is a very large structure, adorned

13 D

with

CHAP.  
XIII.  
Venice.

CHAP.  
XIII.  
Venice.

with several fine pieces of painting and sculpture, and many beautiful monuments. The painting in Fresco in the chapel of St FÆLIX is inimitable, done by the famous GIOTTO, who excelled in that kind of work. But what is most remarkable in this church, is the the chapel of St ANTHONY, the protector of Padua, whom by way of eminence they stile *Il Santo*. His body lies under the altar, which is exceeding rich, and the whole chapel is lined with bas-reliefs of white marble, representing the principal miracles of St ANTHONY; and nine and thirty large silver lamps burn night and day round the altar. There are abundance of inscriptions and pictures hung up by his votaries in the church, his aid being more implored in Lombardy than that of any other Saint in their distresses, and if they happen to escape the evil they dreaded, they hang up some inscription or picture to commemorate the deliverance, esteeming it to be miraculous. Thus the beauty of some Popish churches is spoiled, the walls being hung with wretched daubings and impertinent inscriptions, or with legs and arms of wax, &c. resembling the part affected and offered to the Saint. Among the stories we find in bas-relief in the chapel of St ANTHONY, the most remarkable is his preaching to an assembly of fishes, which he had drawn together towards the sea-shore to hear him, which is a very edifying discourse, but a little too long to be inserted in this place; I shall only observe, that at the conclusion of it the grateful fishes, as if they had been endowed with reason, bowed their heads with the most profound humility and devotion, seeming to approve the sermon; which miracle occasioned the conversion of many obstinate hereticks, that nothing could prevail on before; whereupon the Saint gave his benediction to the fishes, and dismissed them. This puts me in mind of the sermon that was preached by one of our sectaries to a flock of sheep, for which he apprehended he had a sufficient warrant from that command of our Saviour's, requiring his disciples to preach to every creature.

The church of St JUSTINA, designed by the celebrated PALLADIO, is, according to Mr ADDISON, the handsomest, the most luminous, and disincumbred building on the inside, that is to be met with, and esteemed by artists one of the finest pieces of architecture in Italy. The long Nef consists of a row of five cupola's, the cross one has on each side a single cupola, deeper and broader than the others. The martyrdom of St JUSTINA, which hangs over the altar, was done by the famous PAUL VERONESE, and is an exquisite piece of workmanship; and there are besides, twenty-four other fine marble altars; but they will not suffer any monuments to be erected here, which might spoil the beauty of the whole. The basso-relievo in the choir is admirable, representing the prophecies of the Old Testament relating to our Saviour, with their accomplishment in the New. The monastery to which this church belongs is one of the finest in Italy, where they pretend to have an image of the virgin, which flew from Constantinople when it was taken by the Turks. The university, to which physicians chiefly resort, is very much upon the decline, as has been observed already. Here are two societies of Virtuosi, as in other Italian cities, who employ themselves in the improvement of their language, and other ingenious studies. There are the ruins of an amphitheatre here, which appears

to have been larger than that of Verona. And it would be esteemed an unpardonable fault by some, if I should conclude the description of Padua, without taking notice of the tradition, that this city was founded by ANTENOR and a colony of his Trojans.

Abano, is a village about five miles south-west of Padua, famous for it's hot and medicinal waters, which are so hot that the natives scald their hogs in them. They are full of white salt, which coagulates upon the surface, and are used for bathing as well as drinking.

Este is an ancient town, at the foot of the Este mountains, about twelve miles south of Padua, from whence the family of D'ESTE, now Dukes, of Modena, take their name. The rest of the towns in the Paduan do not require a particular description.

The Polesin de Rovigo is bounded by the Paduan on the north, the Dogado of Venice on the east, the duchy of Ferrara on the south, and the Veronese on the west; and is about fifty miles in length from east to west, and twenty in breadth from north to south: a country fruitful in corn and pasture, and watered by the rivers Po, Adige, and Adigesto; the chief towns whereof are Rovigo and Adria.

Rovigo is a well-built little town, situated on the Adigesto; twenty miles to the southward of Padua, the residence of the Bishop of Adria; but not considerable, as I can learn, on any other account.

Adria, or Hadria, twelve miles to the eastward of Rovigo, and as much to the westward of the gulph of Venice, once a famous city, and a colony of the Tuscans, and gave name, as 'tis said, to the Adriatick Sea, being a commodious harbour when PLINY wrote, but now a miserable village, almost under water, and inhabited only by fishermen.

The Veronese is bounded by the Trentin to the north; by the Paduan and Vicentin towards the east; by the Mantuan on the south; and by the Brescian on the west; being about forty miles in length from north to south, and thirty in breadth from east to west. It is well watered by the Adige and the lake de Garda, which supply them with excellent fish; and the country abounds in corn, wine, oil, silk, wool, and cattle; and they have some quarries of marble, with an agreeable variety of hills and vallies, plains and enclosures. The air is healthful, but the neighbourhood of the mountains renders it very sharp in the winter. The chief towns are, 1. Verona. 2. Peschiera. And, 3. Garda.

Verona, the capital city, is pleasantly situated, partly on a hill and partly in a plain, on the river Adige, which divides it in two parts, being fifty miles to the westward of Padua, and twenty-five to the northward of Mantua. It is fortified after the modern way, and defended by three forts, two upon the hill, and one by the river-side; and is about six miles in circumference, besides the suburbs, which are very large. Both parts of the town have a communication by four stone bridges over the Adige, one of which is much admired for it's beauty. There are several noble palaces, publick buildings, and antiquities, which well deserve a traveller's attention here; but the generality of the houses are low, the streets some of them unpaved, and not very cleanly; neither is the town rich or populous, having but an indifferent trade. The cathedral has little

The amphitheatre.

to recommend it, unless the tomb of Pope Lucius III, whose epitaph is no more than this, *Osse Lucii III. Roma pulsus invidia*. For it seems he was driven from Rome, and died here in the year 1185. There are however several magnificent churches in the place, travellers acquainted, but have not taken the pains to describe them; particularly that famous piece of antiquity, the amphitheatre, seems to have ingrossed their whole attention, all the seats whereof are still entire, but the high wall and corridors that went round it, are almost ruined, and the area is quite filled up to the lower seat, which was formerly deep enough to let the spectators see in safety the combats of the wild beasts and gladiators. There are in all four and forty benches, in the highest round of which, Misson says, he counted five hundred and thirty of his paces, and in the lowest two hundred and fifty; and it is generally agreed, that they would hold about four and twenty thousand spectators. The longest diameter of the area, or arena, as 'tis called, is two hundred and thirty-three French feet, and the breadth or shortest diameter, an hundred and thirty-six feet eight inches. Every step or seat is near a foot and half high, and about twenty-six inches broad, of the same measure; tho' Dr BURNET, after his careless and cursory way of examining and recording things, makes every seat an English foot and half in breadth, and just as much in height, of which he pretends to have been an eye-witness, as he was no doubt of many facts in his posthumous history, which are equally true. Dr BROWN observes, that when this fabrick was entire, the outside was no less splendid than the inside, being all of marble an hundred and twenty feet high, and consisted of three rows of pillars and arches, one above another, which opened into spacious walks and portico's within, quite round the building; and above these three rows of arches there was a handsome wall, with windows over each arch, and pilasters over every pillar beneath: that each row consisted of seventy-two arches, and as many pillars of a great height, the upper-row supposed to be adorned with statues.

These magnificent structures were raised by the Romans for the diversion of the people, who were here entertained with combats, either between men and men, men and beasts, or beasts and beasts. Those between beasts and beasts are still continued by the gentlemen of Verona in this amphitheatre; but these sports were pursued with much more zeal by the antient Romans, who procured savage creatures from all parts of the known world to fight in these places. The engagements between men and beasts were usually performed by slaves, prisoners, or condemned criminals, though persons of condition would sometimes enter the lists. The combats between men and men were of various kinds, sometimes they fought on horseback, sometimes in chariots, and sometimes in boats, when either the area was filled with water, or a building was provided for that purpose, called *Naumachia*. The naval engagement exhibited by the Emperor CLAUDIUS on the lake Fucinus is famous in history, where both fleets saluted the Emperor with an *Ave Caesar, Morituri te salutant*: but the most usual fights in the amphitheatres, were between the gladiators on foot; and these of various kinds, as, 1. The Retiarii, who fought with a trident in one hand and a net in the other, endeavouring to ensnare their enemies: if they failed in the

attempt, they retreated suddenly, till they could recover themselves and renew the engagement. These gladiators fighting without any other armour than a short coat of mail, and barefaced, the people were much delighted in observing the convulsions in their limbs, and the alteration of their colour and features in their dying agonies. These Retiarii, who acknowledged NEPTUNE for their patron, usually engaged the Secutores, who were followers of VENUS, and guarded themselves with a shield, which they carried high to defend their heads against the enemies nets, and were armed also with a spear and a long sword. Five Retiarii having thrown down their arms, and yielded to as many Secutores, the Emperor CALIGULA commanded the Secutores to kill them, which they did to the last man, who out of despair taking up his trident, killed all the five Secutores. A third sort of gladiators were the Thraces, who were armed with a little Thracian shield, and a strong broad sword, bending back like a Turkish cymetar. Another sort were the Myrmillones, who fought after the manner of the Gauls, covering themselves with an oval shield, and armed with a helmet with a fish for their crest, and pointed swords, with which they pushed the enemy with great activity. These frequently engaged the Thraces, and sometimes the Retiarii, who coming up to them with their nets, would sing, *Non te peto, piscem peto, quid me fugis, Galle?* Another sort of gladiators were the Samnites, armed with shields flat and broad, a breast-plate, a helmet with a feather on the crest, and a boot on their left leg, with offensive arms, as described by LIVY. The Dimacheri fought with two swords, and the Laquearii with sword and halter. The Meridiani were desperate fellows, who coming in about noon, when the spectators were dismissed, fought without any order, art, or armour. Nor were the fair sex exempted from these rough encounters: they made choice of the handsomest young women they could find, who were taught to fight by the gladiators; and when one of these girls fought in the arena, with her golden shield and plume of feathers in her crest, the Emperor himself would sometimes cry out, *Well played, fair lady*. The Emperor DOMITIAN made the gladiators fight in the night-time, and would command even his dwarfs to engage each other. Thus far from Dr BROWN. And I am so far from begging the reader's pardon for this digression on amphitheatres, if it be one, that I am of opinion he will be infinitely pleased with the relation, as I was when I met with it; and intend in this volume to give the plan of an amphitheatre, and describe every particular part of it.

There is still at Verona also the remains of a triumphal arch, which was erected in honour of MARIUS, on his victory over the Cimbri, in the territories of Verona; and the ruins of a magnificent temple dedicated to JUPITER, with abundance of other valuable antiquities. But nothing seems to be more admired than the cabinet of the Count DE MOSCARDO, consisting of a gallery and six other rooms, all filled with antiquities, and the greatest curiosities in art and nature; as Pagan idols, instruments and utensils for their sacrifices, sepulchral urns, busts, lamps, inscriptions, the barks of several trees which the antients used to write on before paper came up, two trees of black coral, pearls, amethysts, sapphires, and a great variety of other precious stones;

Venice.

CHAP.  
XIII.  
Venice.

stones; fossils, plants, fruits, minerals, and monstrous productions, with numberless medals, and ancient coins: here is also a vast collection of the finest paintings by the best hands.

Verona underwent the fate of the rest of the cities of Italy on the decline of the Roman Empire, having been taken by the Goths and Lombards. It afterwards fell under the dominion of the emperors of the west, and since that was subject to the family of the SCALIGERS, several tombs of these Princes being still to be seen here. The Venetians made themselves masters of it about the year 1403, but it was taken from them by the Imperialists in 1509. The Venetians recovered it again in 1516, and have ever since kept the possession it, governing it by a Podesta and Capitano, assisted by three Councils, and other subordinate magistrates; and in ecclesiastical affairs it is subject to the Bishop, who is suffragan to the Patriarch of Aquileia. Besides PLINY the historian, already mentioned, the Poet CATULLUS, and PLINY the Naturalist, were born here; as were CORNELIUS NEPOS, and VITRUVIUS the famous architect.

Peschiera. 2. Peschiera, *olim Piscaria*, and *Ardelica*, a little fortified town, situate on a little island formed by the river Menzo, which flows out of the lake de Garda, and is about fourteen miles north of Verona, taken from the Duke of Mantua by the Venetians about the year 1441.

Garda. 3. Garda, a small city, lying on the east-side of the lake de Garda, fifteen miles to the eastward of Verona. The neighbouring lake is as rough as the sea itself when a storm happens upon it, which is very frequently occasioned by the gusts which come from the adjoining mountains.

Brescia Province. The next province I am to describe is the Brescian, bounded by the country of the Grisons towards the north; by the Veronese on the east; by the Cremonese on the south; and by the Bergamasco on the west: extending about sixty miles in length from north to south, and thirty in breadth from east to west. The country has plenty of corn, wine, and oil, but is most remarkable for its iron mines and works, its plantations of flax, and linnen manufacture. It extends to the sides of the Alps, and consists of hills and vallies, not being so level as the rest of Lombardy. The chief towns are, 1. Brescia. 2. Desenzano. 3. Salo. 4. Guagnano. 5. Idro. 6. Sabio. 7. Tavernola. 8. Gardone. 9. Isco. 10. Palazuolo. 11. Chiari. 12. Pontevico. 13. Menerbio. And, 14. Calcinato.

Brescia city. The city of Brescia, or Brixia, is situated in a plain at the foot of a mountain, on the rivers Mela and Garzo, whose branches run through most of the streets, being about thirty miles to the westward of Verona, and thirty-five north-west of Mantua. It is a populous trading town, defended by a wall and other fortifications, three miles in circumference; and has also a citadel built upon a rock, which commands it. The streets are neat, the buildings good, and amongst them several beautiful palaces and churches. Their trade consists in linnen, cheese, and iron-work, particularly swords and fire-arms, which employ abundance of armourers, held to be the best artists in Italy. It is the See of a Bishop, suffragan to Milan, who has the title of Duke, Marquis, and Viscount. The women have more liberty here than in the neighbouring cities, appearing frequently in the streets and shops. The people of this town and province are better used by the

C. H. A. P. XIII. Venice. Venetians than the rest of their subjects; for having been once a part of the Milanese, and a frontier province, they might think of returning to their old masters if they were hardly dealt with. The Governor here is both Podesta and Captain-General, but in other Venetian cities the civil and military power is usually lodged in different hands.

2. The Isco, situate on a lake to which it communicates its name, a considerable town of great antiquity: The neighbouring lake is about fifteen miles in length and three in breadth, the river Oglio running through it. The rest of the towns of this province do not merit a particular description.

The Bergamasco is bounded by the territories of the Grisons on the north; by the Brescian on the east; and by Cremasco and the Milanese on the south and west; being about forty-five miles in length from north to south, and thirty in breadth from east to west. It is for the most part a mountainous rocky country, but lying on the south-side of the Alps moderately warm, and being watered with a multitude of little rivulets which fall from thence, the country is fruitful in many places. The chief towns are, 1. Bergamo. 2. Caleppio. And, 3. Cluson.

Bergamo is a large city, strongly situated on a hill, and defended by a castle, lying thirty miles to the westward of Brescia, and as many to the northward of Milan, and is the See of a Bishop suffragan to Milan. The town is populous and a place of good trade, the merchants of Germany, Switzerland, and Italy, resorting thither to their annual fair with the product of their several countries. The natives are the most clownish in the Venetian dominions, and their dialect the worst; but frequently make clever fellows when they meet with good education. This town has often changed its masters: It was a republic till the year 1300, about which time some of their leading men assumed the government, and it became monarchical. In 1419 it was taken by PHILIP Duke of Milan, and in 1447 they put themselves under the protection of the Venetians, who have been in possession of this town and province ever since, except that the French had it in their hands seven years in the reign of LEWIS XII. Here, as in all other mountainous countries upon and near the Alps, the natives are troubled with great wens or swellings on their throats, occasioned, as 'tis said, by their drinking snow-water.

The Cremasco is bounded by the Brescian on the north; by the Cremonese on the east; and by other parts of the Milanese on the south and west: extending about fifteen miles in length from north to south, and seven in breadth from east to west. It is a well-watered fruitful country: The only town of any note is Crema, from whence this little territory takes its name, situate on the river Serio, in a pleasant fruitful plain, about twenty miles south-west of Brescia, and twenty north-west of Cremona. It is a place of some strength, well-built, and populous, and the See of a Bishop suffragan to Bologna. Their principal manufacture is that of fine linnen. It formerly belonged to the duchy of Milan.

The Vincentin is bounded by the country of Trent on the north; by the Trevisin and Paduan towards the east and south; and by the Cremonese on the south-west; being about forty miles in length from north to south, and thirty in breadth from east to west. As this province is contiguous to the Paduan, it is equally fruitful and

and pleaſant; the ſoil and face of the country much the ſame, and therefore needs no further deſcription here. The chief towns are Vicenza, and Marafſica.

The city of Vicenza, or Vincenza, is pleaſantly ſituated at the confluence of ſeveral ſmall rivers, of which the chief are the Bacchiglione and the Rerone, about twenty miles north-weſt of Padua; a populous trading city, about four miles in circumference, and conſiſting of fifteen pariſhes; the buildings beautiful, the ſquares and piazzas ſpacious; there is particularly a modern theatre built in imitation of the Roman theatres, by the famous PALLADIO, and a triumphal arch by the ſame artiſt; a magnificent town-hall, the ruins of an antient theatre, and ſome other antiquities which demonſtrate it's antient grandeur. This town coming voluntarily under the protection of the Venetians about three hundred years ago, and not by conqueſt, enjoys greater privileges than many other cities; having three councils conſiſting of the natives, who have ſome ſhare in the adminiſtration; tho' here alſo is a Podoſta and Captain-General, as in the reſt of the Venetian governments. The chief manufacture of the place is ſilk. The gardens of Count VALARANO, according to Dr BURNET, are as well worth ſeeing as any thing in the town, wherein he ſeems to be mightily pleaſed with a noble alley of oranges and citrons, ſome as big as a man's body, but affords us no further deſcription of them. It is a Biſhop's ſee, ſuffragan of Aquileia.

I come now to the marquiſate of Treviſana or Trevigiano, bounded by the Feltrin and Belluneſe on the north; by Friuli and the duchy of Venice on the eaſt; by the Paduan on the ſouth; and the Vicentin on the weſt. The chief towns are, 1. Treviſo. 2. Caſtel Franco. 3. Coalto. 4. Conegliano. 5. Cenada. And, 6. Saravalle.

Treviſo, or Trevigno, is ſituated on a riſing ground, in a large plain near the river Sile, fifteen miles north-weſt of Venice; a well-built populous place; and formerly the reſidence of the Marquiſſes of Lombardy, from whence it obtained the name of the Marquiſate.

The Feltrin is ſometimes reckoned part of the marquiſate, and lies to the northward of Treviſana Proper. The chief towns whereof are, 1. Feltri. 2. Romegno. And, 3. Vedana.

Feltri, or Feltro, is ſituated on the river Aſo, twenty-five miles north-weſt of Treviſo; and is the See of a Biſhop, ſuffragan of Aquileia. The Venetians have been in the poſſeſſion of it above three hundred years.

The Belluneſe is alſo frequently deemed part of the marquiſate, being a little diſtrict to the northward of the Feltrin, and conquered about the ſame time by the Venetians: The chief town whereof is Belluno, or Bellano, a ſmall city, fifteen miles north-eaſt of Feltri, and the See of a Biſhop, ſuffragan of Aquileia. Theſe three laſt diſtricts of the Treviſin, Feltrin, and Belluneſe, have a ſufficient quantity of corn and wine for their uſe; but what they are moſt remarkable for is their timber, fire-wood, and iron mines, which are of great advantage to the republick of Venice.

The Cadore is a ſmall province, bounded by the biſhoprick of Brixen on the north; by Friuli on the eaſt; the Belluneſe on the ſouth; and by the Trentin on the weſt. The chief town is Pieve de Cadore, about twenty miles north of Belluna.

The province of Friuli is bounded by the Alps, which ſeparate it from Carinthia on the north; by Carniola, another province of Germany, on the eaſt; by the gulph of Venice on the ſouth; and the marquiſate of Treviſana, and another part of the Alps, upon the weſt; being about fifty miles in length, and as many in breadth; ſome part whereof is ſubject to the Emperor, on which account it is frequently made a part of Germany, and the reſt to the Venetians, as will appear in the deſcription of the ſeveral towns; which are, 1. Aquileia. 2. Palma Nova. 3. Udene. 4. Ciudad de Friuli. 5. Goritia. 6. Gradisca. 7. Idria. And, 8. Pontafel.

Aquileia is ſituated on a ſmall river near the Adriatick ſea, about fifty miles north-eaſt of Venice, antiently a city of great ſtrength and fame, made the metropolis of Italy by the weſtern Emperors, and ſtill gives a title to the Patriarch of Aquileia, to whom moſt of the neighbouring Biſhops are ſubject; but the town is dwindled to a poor village, inhabited by fiſhermen, and there remain ſcarce any footſteps of it's antient grandeur. It is at preſent under the dominion of the houſe of Auſtria.

Palma Nova is a large fortified town, twelve miles north-weſt of Aquileia, built by the Venetians as a frontier againſt Germany in the year 1594, and has a communication with the Adriatick ſea by a canal cut from thence, and is ſtill under the dominion of Venice.

Udene, or Udina, is a large populous town, above four miles in circumference, twelve miles north-weſt of Palma Nova, and ſubject to the Venetians.

Goritz, or Goritia, the capital of a county of the ſame name, ſituate about ten miles north-eaſt of Palma Nova, ſubject to the Emperor; but this town has already been deſcribed in Germany. The natives uſe a barbarous dialect, neither Italian or German, and are ſcarce underſtood by either.

Ciudad de Friuli, lies about ten miles north of Palma Nova, and is ſubject to the Venetians.

Idria is ſituated in the mountains, about twenty miles north-eaſt of Goritia; remarkable for it's mines of quick-ſilver. It is ſubject to the Emperor.

Pontafel ſtands about twenty miles north-weſt of Ciudad de Friuli, a frontier town between the Empire and the Venetian territories, but now ſubject to the latter.

#### CHAP. XIV.

*Treats of the Venetian dominions in Iſtria, Morlachia, and Dalmatia.*

I STRIA is frequently deſcribed among their Italian provinces, but as it lies on the eaſtern ſide of the Adriatick Sea, it ſeems more properly to belong to Germany. It is a peninſula, bounded by Carniola on the north, and encompassed by the Adriatick Sea on the eaſt, ſouth, and weſt; being about ſixty miles in length, and fifty in breadth; a woody mountainous country, and chiefly valuable to the Venetians on account of the ſtone and timber which they bring from hence. The chief towns are, 1. Capo d'Iſtria. 2. Pirano. 3. Cita Novo. 4. Parenzo. 5. Oſero. 6. Pola. And, 7. St Veit en Flaum.

Capo d'Iſtria is ſituated on a ſmall iſland in the gulph of Trieſte, having a communication with

- CHAP. XIV. Venice.** with the continent by a bridge, and stands about ten miles south-east of Trieste: It is the See of a Bishop, suffragan of Aquileia, and the seat of the Venetian Governor, antiently called *Agida* and *Justinopolis*, having been built by the Emperor JUSTIN.
- Cita Novo.** Cita Novo, antiently *Amonia*, stands at the mouth of the river Quitto, twenty miles south-east of Capo d'Istria; in a very bad air, and thinly inhabited, tho' it hath an harbour, and is a Bishop's See, suffragan to the Patriarch of Aquileia.
- Parenzo.** Parenzo is situated on the Adriatick, six miles to the southward of Cita Novo, and hath a good harbour: It is the See of a Bishop, also suffragan to Aquileia; but lying in a very bad air, does not abound with people any more than the former.
- Pola.** Pola, *olim Pata*, forty-five miles southward of Capo d'Istria, a strong town, situate on a mountain near the sea, under which there is a good harbour.
- St Veit.** The town of St Veit, situate at the mouth of the river Flaum, belonging to the Emperor, has already been described in Germany.
- Trieste.** The Port of Trieste, thirty miles east of Aquileia, belonging to the Emperor, has also been already described in this volume.
- Morlachia.** Morlachia is bounded by Croatia and Bosnia towards the north; by Dalmatia on the east; by the gulph of Venice towards the south; and by Istria towards the west; being about eighty miles in length, and five and twenty in breadth; a part of the antient *Liburnia*. The Turks laid claim to it as a dependant on Hungary, whereupon they put themselves under the Emperor's protection, as it remains at present, only some towns on the coast are subject to the Venetians, the chief whereof are Zeny and Novigrad.
- Segna.** Zeny, or Segna, is situated on the sea-coast, about forty miles south-east of St Veit, a pretty town, with a castle and harbour; being a Bishop's See, subject to the Archbishop of Spalatto.
- Novigrad.** Novigrad stands near a bay of the sea, above sixty miles south-east of Segna, of which I meet with no further description.
- Dalmatia.** Dalmatia, the eastern part of the antient *Illyricum*, stretches along the coast of the Adriatick Sea, near two hundred miles in length, and is generally about thirty miles in breadth; bounded by Bosnia and Servia towards the north; by Albania on the east; by the gulph of Venice on the south-west; and by Morlachia on the north-west; the sea-coast, except the territories of Ragusa, belonging to the Venetians, and the inland part of it to the Turks. The Venetian Dalmatia is divided into the continent and islands; the chief towns on the continent are, 1. Zara. 2. Nona. 3. Scardone. 4. Sebenico. 5. St Nicholas. 6. Salona. 7. Trau. 8. Spalatto. 9. Clissa. 10. Ciclut. 11. Rifano. 12. Castel Novo. 13. Cataro. And, 14. Budua.
- Zara city and district.** Zara, *olim Jadera*, is situated on the coast of the Adriatick sea near two hundred miles south-east of Venice, and an hundred and thirty south-east of Trieste, formerly the capital of Liburnia, a province of Illyricum. It was purchased together with Novigrad by the Venetians of LADISLAUS King of Hungary, about the year 1409, and is now the capital of the Venetian Dalmatia, and of a district to which it communicates its name; and is an Archbishop's See. The sea surrounds the place, which is joined to the continent by a bridge, and defended by a castle.
- Nona, olim Aenona,** situate about eighteen miles north-west of Zara, upon a promontory almost encompassed with the sea. It is a fortified town, and the See of a Bishop, suffragan to Zara.
- Scardone** stands at the mouth of the river Kirka, thirty-five miles south-east of Zara; and is defended by a castle, and other fortifications, frequently taken and retaken in the wars between the Venetians and the Turks. It is the See of a Bishop, suffragan of Spalatto.
- Sebenico** is a fortress, situate on the same coast, about forty miles south-east of Zara; the castle stands on a steep rock, near the mouth of the Kirka. The Bishop is suffragan to Zara.
- Trau.** Trau, the antient *Tragurium*, a little town and harbour, about thirty miles south-east of Sebenico, encompassed with the sea, and joined to the continent by a bridge, a Bishop's See, suffragan to Spalatto.
- Spalatto.** Spalatto stands on the same coast, about sixty miles south-east of Zara, and ten to the eastward of Trau: It is a place of strength, a large and populous town; and hath one of the best harbours upon the coast, and is an Archbishop's See; hither the Emperor DIOCLESIAN retired when he was driven from his throne.
- Castel Novo** is situated on a bay of the sea, a little to the eastward of the territories of Ragusa, defended by a strong castle, among inaccessible rocks.
- Cataro.** Cataro, situate on the same bay, about thirty miles to the eastward of Ragusa, defended by a strong castle, and is a Bishop's See.
- Budua.** Budua, a little town, the See of a Bishop, twenty miles to the southward of Cataro, almost surrounded by the Turkish territories. The chief towns in Dalmatia belonging to the Turks, are Trebigna, Narenza, and Antivari.
- Narenza, or Narenta, olim Naro, and Narona,** stands on the river Naro, about sixty miles to the eastward of Spalatto, and forty to the northward of Ragusa; antiently a large and flourishing city, but has little to recommend it at present.
- Trebigna** is situated forty miles south-east of Narenza, which is all the description I meet with of it.
- Antivari** stands on the confines of Albania, between Budua and Dulcigno, and was an Archiepiscopal See, till taken by the Turks.
- Ragusa republick.** As for that part of Dalmatia which belongs to the republick of Ragusa, tributary to the Turk, this has been described already in Turkey (in Vol. I.); the chief towns whereof are Ragusa, Stagno, and Sabioncello.
- Venetian islands.** The Venetian islands on the coast of Morlachia and Dalmatia, are, 1. Cherfo. 2. Ofera. 3. Veglia. 4. Pago. 5. Arbe. 6. Grossa. 7. La Coronata. 8. La Lissa. 9. Lezina. And, 10. Corzola.
- Cherfo.** Cherfo, *olim Crexa*, lies on the coast of Istria and Morlachia, ten miles to the southward of St Veit, an hundred and twenty miles in circumference; the capital city is of the same name, and the See of a Bishop, suffragan to Zara.
- Ofera.** Ofera is joined to Cherfo by a bridge, the chief town being of the same name, a Bishop's See, and Suffragan to Zara.
- Veglia.** Veglia, or Curitta, lies between Cherfo and the coast of Morlachia, being about sixty miles in circumference; its capital also is of the same name, and a Bishop's See suffragan of Zara.
- Pago.** Pago, or Gliffa, is about fifty miles in circumference, and lies within two miles of the coast of Morlachia; its chief town is of the same name, and has a tolerable good harbour.
- Arbe**

CHAP.  
XIV.  
Venice.

Arbe lies between Pago and Veglia, it's chief town of the same name, and a Bishop's See suffragan of Zara.

Arbe.  
Grossa, or  
Longa.

Grossa, or Longa, about thirty-five miles south-east of Osiera, and ten from the coast of Dalmatia, is about thirty miles in length, and six in breadth. It's chief town is of the same name, defended by a castle.

Lezina.

Lezina lies near the south coast of Dalmatia, being about fifty miles in length, and ten in breadth; it's capital is of the same name, and lies towards the north-west end of the island, and is a Bishop's See, suffragan of Spalatto.

Corzola.

Corzola lies about six miles to the westward of the territories of Ragusa, and is the best peopled of the Dalmatian islands; it's chief town is of the same name, being a Bishop's See, suffragan of Ragusa.

The lesser Venetian islands on this coast do not require a particular description, but are laid down in the maps bound up with this work.

The Venetian islands which lie without the Adriatick sea upon the coast of Epirus and Morea, are, 1. Corfu. 2. St Moura. 3. Cephalonia. And, 4. Zante.

Corfu.

Corfu, *olim Corcyra*, lies near the coast of Epirus, being about fifty miles in length, and twelve in breadth; it is a populous island, containing two cities, and near a hundred villages; and produces oil, honey, wax, oranges, lemons, and a great variety of other fruits. The chief towns are Corfu and Cassiope.

Corfu  
city.

Corfu lies about the middle of the east side of the island, in a peninsula, strongly fortified, and hath a good harbour: It is the See of a Latin Archbishop, though the Greeks have also their churches here.

Cassiope.

Cassiope is situated on the same side of the island, fifteen miles north-west of Corfu; a little trading town, with a good harbour, about six miles from the coast of Epirus.

St Moura  
island and  
city.

The island of St Moura, *olim Leucadia*, is almost of a circular figure, and lies about forty-five miles south-east of Corfu, being separated from the coast of Achaia by a channel not more than half a league broad: It is about twenty miles over either way; the chief town of the same name, which stands on the north-east part of the island, being strongly fortified, and the See of an Archbishop.

Cephalonia.

Cephalonia lies seven or eight miles to the southward of St Moura; about twenty miles to the westward of the gulph of Lepanto; being fifty miles in length, and five and twenty in breadth, being a mountainous uneven soil; but produces however wine, oil, silk, wool, honey, and wax; with which the natives carry on a tolerable trade. It has a town of the same name, situate near a bay on the west side of the island, being a Bishop's See, suffragan to Corfu. And there are three other towns mentioned by geographers, viz. St Nicholas, Catano, and Asio; but I meet with no particular description of them.

St Nicholas,  
&c.  
Zante  
island and  
city.

The island of Zante, *olim Zacynthus* and *Illyra*, lies about twelve miles to the southward of Cephalonia, and as much to the westward of the Morea, being twenty-four miles in length, and twelve in breadth, most considerable for the little grapes called currants, or corinths, from their being first cultivated about the city of Corinth, where there are now scarce any; France and England, and the rest of the countries of Europe, being supplied with this kind of fruit from hence,

and consequently this island hath a very great trade. The natives of Cephalonia and Zante are generally Greeks, but the Venetians have also introduced the Roman Catholick religion. The chief town is Zante, situate on the east side of the island, fortified and defended by a castle, being of the last importance to the Venetians. It is the See of a Bishop, suffragan to Corfu, and the residence of the Governor, who is always a noble Venetian of the first rank. There are some other small islands belonging to the Venetians in these seas, but of no great consequence.

CHAP.  
XIV.  
Venice.

The Morea was taken from them by the Turks in one campaign, anno 1715, to compensate which loss they made themselves masters of the towns of Previsa and Vosnia in Epirus; but these are far from being an equivalent for that fine country: They bid fair indeed for taking Dulcigno in Albania, anno 1718, but the peace which was concluded while they lay before it, put an end to that enterprize.

Vosnia.

## CHAP. XV.

### *Treats of the Venetian government.*

THE Venetians boast that their government has lasted upwards of thirteen hundred years; but then it must be remembered that their State has undergone various changes and revolutions during that time. The islands on which Venice stands, and those in the neighbourhood of it, were antiently subject to Padua, and received a Governor from thence, but were then only inhabited by fishermen, mariners, and other poor people. About the year 420, the Goths and other barbarous nations over-running Italy, and destroying the cities of Parma, Aquileia, and many more upon the continent, the inhabitants fled with their effects to these islands, and laid the foundation of the city of Venice. They were at first under the government of the consuls or magistrates of Padua, to whom the soil belonged; but when they began to increase in wealth and numbers, and Refugees from all parts of Italy flocked in to them, a deputy or representative from every island was elected, in whom the legislative power was lodged. Whether this was brought about by force, or the consent of the Paduans, at this distance of time does not appear: But this form did not endure long, some of the most powerful and popular men of the republic procured the sovereign power to be conferred on him, with the title of Duke, or Doge; making the representatives of the people only his council, whose advice he took or refused as he saw fit. No Princes were more absolute than these Doges for a considerable time, till at length the leading men of the republic encroached upon the prerogatives of their Doges, as the antient Doges had on the liberties of the people, and the sovereign power became vested in the most substantial citizens; the Doge retained no more than the shadow of his antient authority. About the year 1325, the great council, which was then composed of the chief citizens, passed an act for reducing their number, and vesting the sovereign authority in certain families and their male issue, who at the age of five and twenty, and proof of their legitimacy, without any previous election, were to be introduced into this assembly; and this body of men have long since assumed the title of *Noble Venetians*, who, according to Mr Addison, look upon

Venice.

upon themselves to be equal at least to the Electors of the Empire, and but one degree below Kings; for which reason they seldom travel into foreign countries, where they must undergo the mortification of being treated like private gentlemen. It is observed, that they discharge themselves with a great deal of dexterity in such embassies and treaties as they are concerned in, for their whole lives are employed in intrigues of state, and they naturally give themselves airs of Kings and Princes, of which the Ministers of other nations are only the representatives. About three or four score years ago, it was computed there were about five and twenty hundred of these noble Venetians who had voices in the Great Council; but there are not at present more than fifteen hundred, notwithstanding the addition of many new families: for during the war with the Turks in Candia, when their treasury began to be exhausted, and on other exigencies of the State, they have permitted merchants and overgrown citizens, and even some foreigners, to purchase this honour, and consequently a seat in the Great Council of the republick for them and their heirs. And tho' there be but one order of nobles at Venice, yet they look upon themselves to be more or less honourable, according to the antiquity of their families. They are generally divided into four classes by our voyage-writers: 1. Those twelve families which were really noble before the constitution of their commonwealth. 2. Such as were registered when the members of the Great Council were limited to certain families. 3. Such as have purchased their nobility of the State. And, 4. Those who have been created noble Venetians on account of their merit. But to be a little more particular in describing the constitution of their present government; it consists, 1. Of the Doge, or Duke. 2. The Great Council. 3. The Council of Ten, or Seignory. 4. The Senate, or Council of Pregadi. 5. The Council of the Savi, or Sages. And, 6. The Council called the College.

The Doge, if he be not in reality a monarch, yet he represents one in his habit and state. He is clothed in a purple robe, and his head covered with a cap resembling a mitre, which he never takes off but when the Host is elevated. All subjects appear bare-headed and standing before him, and he rises up to none. His name is on the coin, publick letters and instruments of State; and all laws and decrees are published in his name; and the letters of foreign Princes are directed to him, tho' he delivers them unopened to the Council. Ambassadors address themselves to him, but he delivers no other answer than what is agreed on in council. He cannot go out of the city without the leave of the State; and whenever he sets his foot on the continent his authority ceases, and he is considered only as a noble Venetian. When he is elected, all his relations leave their posts, though they continue members of the Great Council: he is as subject to the laws as the meanest person; and the State-inquisition is levelled chiefly against his power. He has a double voice in the Great Council, and the appointment of the servants and officers of the palace, and the nominating of the Dean and Canons of St MARK, and is called His Serenity. He continues in his office for life, unless he commits some offence against the State, or happens to be superannuated, or otherwise rendered incapable of discharging his trust. He presides in the Great

Council, and other courts, and sees that the magistrates perform their duty, and summons them before the college on their neglect. He is elected in the Great Council by balloting, after a manner too tedious to relate here; only I shall observe, that such precautions are used, that 'tis impossible the Electors should be biased or over-awed in their choice by any great man: and in the same manner their Admirals, Governors of towns and provinces, and all other officers of state are appointed.

The Great Council is composed of the Doge and all the noble Venetians who are in town; but more than half of them being absent on their governments, or at their country-seats on the continent, this assembly seldom consists of more than five or six hundred: nor is the Great Duke's presence absolutely necessary, it being frequently held without him. In this Council the legislative authority is lodged, as well as the choice of the Doge, and of most of the great officers of state, as hath been observed already, for which purpose they meet on Sundays and some other holy-days.

The Seignory consists of the Duke, six other members chosen by the Great Council, and the three chief judges of their principal courts of judicature, making ten in all, from whence they are usually called the Council of Ten. In these the executive power seems to be lodged, and this Council elect three of their own number every three months, who may be called Inquisitors of State. These receive all accusations and informations against persons suspected to have any designs against the government; imprison, and even proceed capitally against them, without allowing them to make any defence, either in person or by their advocates, if they all agree; if not, the matter is laid before the Council of Ten.

The Senate, or Pregadi, consists of an hundred and twenty of the members of the Great Council, chosen annually by that Council, assisted by a like number of other counsellors, magistrates, and officers, who have not a power of voting, but only of proposing matters in this Council. All laws are last debated in this Council, and brought by them to the Great Council for their sanction, who have no power of altering any act propounded to them, but only of assenting to it or rejecting it. The making peace and war, the sending and receiving Ambassadors, and all other matters of state, (except such as require secrecy, and are referred to the Council of Ten on that account) are, after they have been prepared and debated by the college, brought hither for their approbation. In the Senate also is the choice of many of the inferior officers of state, and commanders by sea and land.

The Council called the Savi, or Sages, consists of sixteen persons: six called the Savi Grande, who have both the sea and land under their care; five others, who consult and debate only of land-affairs; and five more, who take only the transactions at sea under their deliberation.

The College is esteemed the most useful Council of State, consisting of the Seignory and Savi in conjunction, twenty-six in number. They meet severally every morning at a certain hour in their respective council-rooms, where having spent some time in debating the several businesses appropriated to each, the Savi go to the room where the Seignory sits, and joining with them form that Council called the College. From whence it appears that matters of State (except what

what requires an extraordinary secrecy) are debated, 1. By the Savi and Seignory in their several rooms distinctly. 2. By these two jointly, who constitute the college. 3. By the Senate, who when they have considered and altered the matters proposed as they see fit, bring all to the Great Council, who have a power of affirming or rejecting, but none of debating or altering the laws proposed.

From hence it appears, says my author, that Venice is one of the best constituted republicks that ever was established. But methinks their State-inquisition, which they stile the basis of their government, has a terrible aspect, notwithstanding it may have frustrated some conspiracies and attempts against the state: for surely nothing can reconcile people to such an arbitrary bloody tribunal, who have ever known what liberty and property means; a tribunal that must make every subject and every senator tremble. How can the greatest amongst them enjoy his fortune with any tolerable tranquillity, while he is liable every day to be thrown into a dungeon, to be tortured, condemned, and executed upon the crazy suggestions and insinuations of his enemies, without being suffered to know either his accusers or his accusation, or to offer any thing in vindication of his innocence? And in fact, we find several persons have suffered by this accursed court, who have afterwards appeared innocent. It would amaze one therefore to see some men, who cannot bear to live under even a limited monarchy, ever crying up this part of the Venetian constitution. In some instances indeed, the subjects of Venice enjoy an unbounded liberty; they may be as leud and wicked as they please, so their crimes do not affect the State; and in this the republicks in Holland perfectly agree with them. There they have their musick-houses, whether the votaries of VENUS resort by publick authority; and here are whole streets assigned to the same purposes, though the carnival is the time when they indulge this humour most; then a croud of cavaliers resort hither from the neighbouring countries, where they meet an equal number of the other sex, that come to make their fortunes upon these occasions. Another instance of Dutch and Venetian liberty, is, that they suffer all manner of sects and persuasions in religion, provided there is no tendency in them to disturb the State. Neither the clergy of Holland or Venice are suffered to hold synods or ecclesiastical courts, or to frame laws for the government of the church, without the approbation of the State; and every man has an unlimited freedom to believe and practise as he sees fit; neither the laws of religion or mortality are enforced by the government; every one may do what is right in his own eyes, so he lets the administration alone. These are some of the glorious liberties that the subject enjoys under most republicks; but in other respects they are as great slaves to their Sovereigns as the people are in France or Turkey. Should a man complain of the oppressions of the nobility, or presume to censure the conduct of the ministry; nay, if any thing of this kind should be suggested against him by his enemies, though never so falsely, he shall be first racked and tortured into a confession, and afterwards executed as a malefactor, his estate confiscated, and his family reduced to beggary. And if these are the charms of a republican form of government, who would not make it part of his litany to be delivered from it? But to proceed:

VOL. II.

CHAP.  
XV.  
Venice.

The nobility themselves, though they have the legislative authority in their hands, stand so much in awe of this State-Inquisition which they have established, that they dare not enter into any familiar conversation with foreigners, or even with their own order, for fear of being charged with designs against the State: nay, 'tis held criminal to talk of publick affairs, when they are not assembled in the Broglio, or in their Councils. And now I am speaking of the nobility, I shall take an opportunity of mentioning some other rules they are subject to: they are not permitted to carry any arms about them, or to wear silver or gold lace, or fringe on their clothes, except the Procurators of St MARK, and some few others, or to keep above a certain number of servants; even the Doge himself is under the government of his six Counsellors, who may visit his closet, and all his retirements at any hour of the night or day, and he is not at liberty to go abroad without them.

The most honourable among the nobility are the Procurators of St MARK, who are appointed by the Great Council, and have the guardianship and administration of the revenues, treasure, gifts, and legacies belonging to the church of St MARK, with very handsome annual pensions for life. They are five and twenty in number; and formerly consisted only of those who had been concerned in foreign embassies, or had otherwise highly merited of the State; but some have been allowed to purchase this honour of late years, when the State wanted money. It is out of these that the Doge, and his Council of ten, are generally chosen.

Besides the nobility, there are three orders of Knighthood; 1. That of the Golden Star, which is conferred only on those of the first quality, who have merited of the government; they wear a star bordered with gold-lace. 2. The Knights of St MARK, which honour is usually conferred on the officers in the sea or land service, who have behaved well, to which is annexed a pension of a thousand ducats per annum. They wear a medal with the figure of St MARK on one side, and some other device of the Senate's appointing upon the reverse. 3. The Doge's Knights, as they are called, on account of their being created by him, which is bestowed on foreign officers in their service.

There are still several orders of nobility, as Counts, Marquisses, &c. on the Terra Firma in the Venetian territories, who are not at all esteemed for their titles at Venice; and these are the heirs and descendants of such noblemen as were created by foreign Princes before these provinces were conquered by the republick, who have lost their privileges, and now enjoy no more than the titles of their ancestors. These the Venetians endeavour to humble and distress by all the ways imaginable, that they may render them incapable of carrying on any designs against their government. They create other noblemen with the like titles, of whose fidelity they are assured, in order to balance their power; and are perpetually fomenting and encouraging their private quarrels, that they may be diverted from any practices against the State. Another piece of their accursed policy, is to discountenance all that are eminent and remarkable for their virtues of any kind whatever: a brave man is sure to be brow-beaten; and if a person is a little more hospitable or charitable than his neighbours, he is in danger of the State-Inquisition, lest these virtues, or the appearance of them,

CHAP.  
XV.  
Venice.

them, should render him popular, and the government be endanger'd thereby. But among the liberties of Venice, there is one I had pass'd over when I was upon that subject, which ought not to be forgot. This, says my author, is perhaps the only city in Europe, where young painters may best study the beauties of nature; for there are two academies, where there are always naked people of both sexes to be drawn, who are often upon the stage together, in what posture they please to put them; and any man for the value of six-pence or a shilling may come in and take a view of them: nor is it to be conceiv'd with what assurance these young creatures will suffer themselves to be gaz'd on by all the world.

Ecclesiastical government and religion.

I shall conclude this head with some account of their ecclesiastical government and clergy. The Patriarchs of Aquileia and Venice share the government of this church between them; if that may be called a government, which can only be exercis'd at the pleasure of another, namely, the temporal power. The republick of Venice is as supreme and arbitrary in all causes, and over all persons ecclesiastical and civil in their territories, as the States of Holland are in theirs. The Pope is look'd upon as little more than a temporal Prince at Venice, and the Patriarch a cypher: the Patriarch of Aquileia, whose province is upon the Terra Firma, seems something more independent of the State, and is better supported in his spiritual authority by the Pope. He is also the eldest Patriarch, and has the largest extent of jurisdiction: for his province comprehends Friuli, Istria, and several other hereditary provinces of the Empire, with the Venetian territories in Lombardy, except Bergamo, Crema, and Brescia, whose Bishops are suffragans to Milan. The Patriarch of Aquileia is nominated by the republick, who oblige him to chuse a noble Venetian for his coadjutor, lest the nomination should return to the Emperor; who, on the other hand, detains the temporal revenues of the Patriarch in his dominions, and will not suffer him to reside at Aquileia, and therefore his seat is at present at Udina.

The Patriarch of Venice is always a noble Venetian, nominated by the State, and confirm'd by the Pope, and has a limited jurisdiction over the Archbishop of Candia, the Archbishop of Corfu, and the Bishops of Chioggia, Torcello, and Canale. The church of St MARK at Venice is a peculiar; the Premicerio, or Dean, has no superior, and is always a noble Venetian; to which church there belongs twenty-six Canons, and a seminary of young lads, besides an adjoining abbey. There is also at Venice a court of Inquisition, consisting of the Nuntio, the Patriarch, the Father Inquisitor, and two Senators, without whose assent they can transact nothing, or put any sentence in execution, being as much subject to the Senate as any other tribunal. The parishes elect their own curates, or parish-priests, in which they are generally influenced by the nobility, whom they dread above all things, and consequently love them very little; not so much, 'tis said, on account of the oppressions they suffer, as that lofty supercilious behaviour, which the quality of Venice are distinguish'd for, and which indeed the State requires of them: for should they give themselves any familiar popular airs, and seem to court the vulgar, the State-Inquisition would look upon them as dangerous persons. But to return to the clergy: the Venetians, says my author, suffer

themselves to be govern'd neither by Priests nor Monks: men of this profession may wear masks during the carnival, keep their concubines, sing on the stages, and take what other liberties they please, so as they do not meddle with the government. And notwithstanding the worshipping of images and relics is encouraged here, as well as in other Popish countries, among the vulgar, the wits of Venice trouble themselves very little about these matters. But the Italians of all degrees are infinitely fond of musick in their churches; and perhaps there are the best entertainments of this kind in Italy, that are to be met with in the world. Vocal musick is usually perform'd by eunuchs: a good voice is a provision for a son; upon which account the poor people frequently castrate a boy or two of the family, who are notwithstanding admitted afterwards into priests orders. 'Tis true, this religion, as well as that of the Jews, requires a perfect man to administer in holy things; and it is necessary for the eunuch to produce these testimonials of his manhood, before they will permit him to officiate as a Priest in any church, (for a eunuch is known by his complexion;) but then if he have them dried in his pocket, it is deem'd sufficient to satisfy the intent of the Canon in this particular; and thus a happy expedient is found out in favour of vocal musick. Instrumental musick also is very much encouraged; insomuch, that if a strange violin comes and performs to the satisfaction of the audience in any of their great churches, they will immediately collect him a handsome gratuity.

Church-musick.

The nuns of Venice have not a much better reputation than the clergy, particularly those of St ZACHARY and St LAURENCE, where only noble Venetians are admitted, and where they do not so much as pretend to retire for devotion; but the nobility send their daughters thither to save their estates, it being the easiest provision they can make for them. These, according to Dr BURNET, are not veil'd, neither do they cover their necks or breasts, and receive variety of company; though he acknowledges, that those he saw used the same precautions they do in other nunneries, and had grates in their parlours, beyond which their male friends were not admitted to come. They talk'd much, he observ'd, loud and very ungracefully, and allow'd themselves a liberty in rallying, that other places could not bear. The Patriarch intended to have restrain'd the liberties of these houses, and begun with the nuns of St LAURENCE; but they told him plainly, they were noble Venetians, who had chosen that way of life as most convenient for them, but would not be subject to his regulations; and upon his attempting to shut up their house, they were about to set fire to it; whereupon the Senate interposed, and required the Patriarch to desist. Mr ADDISON relates also, that the Venetian nuns are famous for their liberties; that they have opera's within their own walls, and often go out of their bounds to meet their admirers, (if they are not misrepresented) and their lovers converse with them daily at the grate of their parlour.

Nuns.

## CHAP. XVI.

*Treats of their revenues, forces, views, and interests; with some account of their trade and manufactures.*Revenues  
and forces.

THE publick revenues of this State are computed to amount to above twelve hundred thousand pounds sterling per annum, and as the government is arbitrary, may be advanc'd in time of war, according to the exigency of their affairs. Their forces by sea and land may amount to four and twenty thousand; and in case of necessity, as has been intimated already, it is pretended they can man and equip out thirty men of war, an hundred gallies, and ten galeasses; but this calculation seems to be of the largest. A noble Venetian is always Generalissimo at sea, who has the command of the islands, ports, and maritime places subject to them, as well as of the fleet; and there is constantly a Provveditor-General of the sea, who commands the fleet when there is no Generalissimo; he is chang'd every two years, and during his office is always attended by two noble Venetians, without whose concurrence he can undertake no enterprize. There is also a General of the Gulph, that commands the galeasses and gallies, clears that sea of pyrates, and takes care that the customs be duly paid. For the land-service they usually make choice of a foreign General, who is attended by some few Senators, whose advice he is obliged to take upon all occasions. The inferior Generals and Officers are also foreigners; the noble Venetians, who look upon themselves as Princes and Legislators, don't care to be commanded by those they look upon as their inferiors. The common soldiers are usually Slavonians, Morlachians, and Albanians on the frontiers of Turkey; and in Italy they chuse to hire Germans, Swiss, or any other foreign troops, rather than put arms into the hands of their own subjects, on whose fidelity they cannot depend. Their fortifications are usually in a ruinous condition, both on the side of Italy and Turkey; and the garrisons weak and ill paid, or the Turk could never have made himself master of the Morea in one campaign: though 'tis true, the disaffection of their subjects in the conquer'd countries, whom they treat with intolerable insolence, might contribute also to that revolution.

Their interest.

The interest of this republick is certainly to live at peace with all their neighbours, if possible; especially with the Emperor and the Turk, who are either of them too powerful for this State to grapple with. 'Tis true, the Emperor, the Pope, and the rest of the Italian Princes would infallibly join the Venetians if they were attack'd, so as to prevent the Infidels getting footing in Italy; but we see the Emperor suffer'd the Turks to wrest the Morea from them in the last war, anno 1715; and if he assists them in a future war, possibly it will be on such terms as are not very agreeable to them: he will either insist on their surrendering some of the provinces dismember'd from the Milanese, or their sharing the dominion of the Adriatick Sea with him, which they have hitherto been so jealous of. And no doubt but the Venetians, and the rest of the Italian Powers heartily wish that the Emperor, as well as the Infidels, were further remov'd from their frontiers. They seem to be in a very uneasy and

precarious situation at present: were it not the interest of France to prevent the Imperialists being entire masters of Italy, those little States would soon be swallow'd up; but if ever the Emperor should attempt this, his most Christian Majesty would infallibly make a powerful diversion in their favour; they will certainly therefore cultivate a good understanding with the Court of France. As to the Spaniards, since they have been driven out of their Italian territories, they are neither capable of assisting or annoying them, and were much less dangerous neighbours when they were in possession of Naples and the Milanese than the Imperialists are. But, as Mr Addison observ'd on another occasion, among all these difficulties this republick will maintain itself, if policy can prevail upon force: Were they as rich as formerly, they would find no great difficulty in supporting themselves, at a time when every thing is carried in all the Courts of Europe by the force of money; but their trade is miserably declin'd, and their treasure exhausted by their wars with the Turks.

CHAP.  
XVI.  
Venice.

As the trade of Venice formerly consisted in transporting the merchandize of Asia from Alexandria, and other ports of Turkey to the kingdoms of Europe, so it does still, in a much lower degree, since the navigation about the Cape of Good Hope has been found out. Their manufactures and produce of their dominions also furnish them with merchandize to traffick with other countries; as their raw and wrought silks of various kinds, brocades, gold and silver stuffs, damasks, velvets, wine, oil, fruits, particularly currants or corinths, almost peculiar to the island of Zant, alum, sulphur, Venetian-steel, iron, copper, woolen-cloth, glass, marble, soap, rice, essences, turpentine, cream-tartar, snuff, and many other small articles. Great part of the goods they brought from Turkey used to be taken off by the Germans; but if the Emperor succeeds in his project of establishing a trade in the gulph of Venice, this branch of business will be entirely lost to the Venetians.

I must not conclude the description of Venice without taking notice of the ceremony of the Doge's espousing the sea annually, every Ascension-day, when he is attended by three or four hundred of the nobility, and embarks on board the Bucentaur, a noble galeasse finely carved and gilded, followed by a vast number of gallies, barges, and gondola's, magnificently adorn'd, with trumpets and musick playing. The Captain of the Bucentaur always takes an oath on this occasion, that he will bring her back safe and sound, in spite of waves and tempests; and indeed he takes care to run as little hazard as possible, for he does not go above a mile or two out to sea in the calmest season of the year; and if the wind blow never so little, the ceremony is deferr'd. When they are come to a proper place, the Doge receives a gold-ring from the master of the ceremonies, which he throws into the sea, over the stern, saying at the same time, *We espouse thee, O Sea, as a mark of our true and perpetual dominion over thee.* It was about the year 1174, that Pope ALEXANDER III, conferred the dominion of the Adriatick sea on the republick, instituting this annual ceremony of espousing it by a ring; and this in gratitude for their assistance against his great enemy the Emperor FREDERICK BARBAROSSA, who had driven his Holiness from Rome; but was afterwards compell'd to submit to this haughty Pope, and

CHAP. XVI. and suffer him to tread on his neck in the city of Venice, of which they still retain the memory in some exquisite paintings.

Pope's

inions.

### The POPE'S DOMINIONS.

#### CHAP. XVII.

*Treats of the situation and extent of the Pope's dominions, particularly of the Campania of Rome, and the principal cities and towns comprehended in that province.*

Their si-  
tuation  
and ex-  
tent.

THE Pope's dominions are bounded by the territories of Venice towards the north; by the Adriatick sea, or gulph of Venice, on the north-east; by the kingdom of Naples on the south-east; by the Tuscan sea on the south-west; and by the duchy of Tuscany on the north-west; encompassing the duchy of Tuscany on three sides, and is of a very irregular figure: extending in length from north to south about two hundred and forty miles, and in it's greatest breadth from east to west an hundred and forty; though in some places, as between the duchy of Tuscany and the gulph of Venice, it is scarce twenty miles broad. To give the reader a just idea of the form of it, I must refer him to the map of Italy bound up with this volume. The Pope's dominions are usually divided into seven provinces. 1. The Campania of Rome. 2. The patrimony of St PETER, comprehending the duchy of Castro, the territory of Orvieto, and the county of Ronciglione. 3. The province of Sabina. 4. Ombria, or the duchy of Spoleto, in which are included the territories of Perugia, and the Contado di Citta de Castello. 5. The marquise of Ancona. 6. The duchy of Urbino. And, 7. Romania, or Roman-diola, comprehending Romania Proper, the Bolognese, and the duchy of Ferrara.

Provinces.

The Cam-  
pania of  
Rome.

The Campania of Rome, containing the greatest part of the antient Latium, inhabited by the Latini, Equi, Hernici, Rutuli, and Volsci, is bounded by the patrimony of St PETER and Sabina towards the north; by the provinces of Abruzzo, and Terra de Lavarò, in the kingdom of Naples on the south-east; and by the Tuscan sea on the south-west: being about seventy miles in length from the north-west to the south-east; and forty-five in breadth from the north-east to the south-west. The chief towns whereof are, 1. Rome. 2. Tivoli. 3. Paliistrina. 4. Zagarola. 5. Colonna. 6. Fregcati. 7. Marino. 8. Castell Gandolpho. 9. Albano. 10. Velitri. 11. Cisternæ. 12. Sermoneta. 13. Paleano. 14. Anagni. 15. Ferentini. 16. Alatri. 17. Veroli. 18. Frasillone. 19. Maenza. 20. Piperno. 21. Fossa Nova. 22. Terracina. 23. Netuno. 24. Anzio. 25. Ardash. 26. Paterno. And, 27. Ostia.

Chief  
towns.

Rome, it's  
name and  
antiquity.

Rome, the metropolis of the Pope's dominions, and antiently of the Roman Empire, derived it's name, according to some, from ROMA, a Trojan Lady, and according to others, from ROMULUS the founder; there are those also that affirm it was called Roma before the days of ROMULUS; and maintain that he only enlarged the town, and was called by it's name, as Princes and Great Men are at this day called by the names of their seats in some countries. Others again reject the story of ROMULUS and REMUS entirely as a fable:

and indeed I meet with nothing satisfactory on this head, any more than I do as to the time of it's foundation; some affirming it was founded about the year of the world 3301, 753 years before the coming of Christ; and others again in the year of the world 3198.

CHAP.  
XVII.  
Pope's  
Dom-  
inions.

Situation.

Rome is situated on the river Tiber, about sixteen miles north-east of the Tuscan Sea, in forty-one degrees forty-five minutes north latitude, thirteen degrees odd minutes to the eastward of London. It stood antiently on seven mounts or eminencies of easy ascent, and was of a square figure, but now comprehends twelve little hills, viz. Monte Capitolino, Palatino, Aventino, Celio, Esquilino, Viminale, Quirinale, or Monte Cavallo, Janiculo, Pincino, Vaticano, Citorio, and Giordano. It is of an irregular figure, and the walls, which take in the same ground with those which AURELIAN built, are about twelve miles in circumference, all the turnings and windings included; otherwise the compass is not, or ever was, more than six or seven miles; though some have made it fifty miles about. How far the suburbs antiently extended, is very uncertain; if the town, with all it's suburbs and adjacent villages, contained half the number of souls which some authors of very great reputation have asserted, and all these were looked upon as part of the city (as the villages within the weekly bills are sometimes reckoned part of London) the circumference must have been very large: and there is room to believe that the villages towards the sea were deemed part of Rome, because 'tis said, that some of the Roman Emperors had a design of extending the walls as far as the Tuscan Sea; which is twelve or fifteen miles distant from the present city. Another way of accounting for that vast number of Roman citizens, which we find upon record in some writers, is by taking into the account all those who had the privileges of Roman citizens in the Empire; and then the highest account we meet with will not appear incredible, for the citizens of a multitude of great cities had this privilege. But to return to modern Rome; there is not above a third part of the ground within the walls built upon, but taken up with, gardens and vineyards, and other void spaces; and consequently is but thinly inhabited. The natives are usually computed at 120,000. That part of the town which stands on the west side of the river, and is called Trastevere, is not above a sixth part of the whole; the course of the river through it is from north to south; it rises so high, and runs with such an impetuous torrent, at the time of the melting of the snows, or on violent rains, that the lower part of the town frequently suffers very much by inundations. There are five bridges over the river, twenty gates in the walls, and three hundred towers still remaining; the castle of St ANGELO was designed rather as a bridge for the inhabitants, than for their defence. Rome is too large to be of any great strength, and would hardly be able to sustain a regular siege. Though the Italians excel in architecture, they apply themselves very little to fortifications and engineering, unless the King of Sardinia, who lying next two such potent neighbours as France and the Empire, is under a necessity of fortifying his towns after a better manner. It is computed that modern Rome stands fourteen or fifteen feet higher than the old city, being built upon the ruins of the former. The ingenious Mr ADDISON observes farther, that the violent rains, which have happened in so long a tract

CHAP.  
XVII.  
Pope's  
Domini-  
nions.

tract of time, must have washed down great part of the hills into the vallies, and very much altered the face of it, and that the town is much more upon a level therefore than it was formerly; what confirms this conjecture is, that the Tarpeian rock, which was once a terrible precipice, from whence malefactors were thrown, is not now above twenty feet high; but then as those parts of the town are higher which are built in the vallies, consequently those which stand upon the hills are proportionably lower. The town is generally well built, the streets strait, and adorned with a vast number of palaces, monasteries, and churches; of the last of which there are not less than three hundred. The triumphal arches, pillars, obelisks, statues, and fountains, all exquisite in their kind, are no small addition to it's beauty. On each hand, says Dr BURNET, as I entered Rome by the gate Del Populo, I observed a long vista of streets; but there is not a town in these parts of the world, where the churches, convents, and palaces are so noble, and the other buildings so mean. Before I give a particular account of these, I shall enquire into the character of the modern inhabitants; and, according to the last mentioned author, there is an universal civility reigns among all sorts of people at Rome, which he conceives flows in a great measure from the nature of their government, where every man being capable of all preferments, the meanest ecclesiastick may be a Cardinal, and even Pope; which makes every one behave himself towards all other persons with an exactness of respect, no man knowing what another may arrive at: but this makes professions of esteem and kindness go so promiscuously to all sorts of persons, that one ought not to build too much upon them.

The politeness, affability, and officious civility, says a more modern traveller, which I experienced among the Romans in two journies I made to Italy, seemed to me charms sufficient to induce any, who have a taste for what is valuable, to come thither from all parts of the world, to view the treasures of curiosities contained in this city. I have here seen noblemen of the first rank, both secular and ecclesiastick, who upon hearing a traveller at their gate desirous of seeing what was in their palaces, would themselves take a pleasure in shewing them; and if they were busy, order their domesticks to do it for them, and even leave their cabinets to give them the liberty to see what was worth seeing in them. But I found not at first all the Italians so civil, complaisant, and polite, but more reserved: they generally study a stranger's humour and temper before they admit him into their company and familiarity. As for the persons of any consideration, they are ambitious of passing for virtuoso's, admirers of pictures, statues, musick, architecture, medals, and other pieces of antiquity; and no people have more command of their temper, or are more careful in avoiding to give offence, or bear more before they take it, especially from a stranger, than the Italians in general. I shall conclude their character with a passage in MISSON, where he says, the people of this country are not at all possessed with a spirit of hatred or persecution against strangers, of what religion soever: and I must do them the justice to acknowledge, that in our travels through Italy, and even at Rome and Loretto, we were never in the least molested by those adorers of relics and images.

Rome, according to Mr RAY, is well supplied  
VOL. II.

with provisions, though not so cheap as at Florence or Naples, which may be occasioned by the multitude of foreigners resorting to this city, who seldom study frugality much in their travels. Their beef is not inferior to that in England, except the flesh of the buffalo, which is only eaten by the poor Jews and common people, and they hunt or bait it all before they kill it. Their veal is the best in Europe, and their kid and pork are excellent, but the mutton is tough and dry. Tame fowls are plentiful and good, as turkeys, hens, capons, tame pigeons, &c. Geese indeed are scarce, but wild fowl is very cheap, and that of the best sort, as partridges, woodcocks, snipes, duck, mallard, teal, quails, plover, larks, and all manner of small birds; besides which, they eat several sorts that we never touch here, as kites, buzzards, sparrowhawks, jays, magpies, and almost every fowl that flies. They are also pretty well supplied with sea and river fish, but dearer than flesh. The fresh-water fish are, pike, carp, tench, trout, eels, barbel, chevin, and dace. Their sea-fish *mullus antiquorum*, now called *triglia*, and with us surmullet, mugil or mullets, sole, plaice, and others of the flat kind, hake sturgeon, dolphin, and the *lupus marinus*, not known in England. Wild boar and other venison is to be had every day in the market, but their deer are not comparable to the wild hog. Oranges and lemons are cheap, but apples and pears are dear, being sold by weight; however, they are exceeding good. The bread is good and cheap, and very light, tho' made without yeast; what they use in the room of it, I can't learn. And they have greater variety of wines here than in any town in Italy, as the Greco, Lachryma Christi, Languedoc, wine of Syracuse and Augusta in Sicily, Orvietano, Jansano, Monte Pulciano, Monte Fiascone, Castelli Romano, and Albano, the last of which is most usually drank. Their wines are generally sweet, and so strong bodied that they will bear half water. Their rough wines are none of them so harsh as the French Claret, or Florence, which may also be had here, and are generally better liked by foreigners than the sweet wines, which are not fit to sit by. The Romans, who only take a single glass now and then, or mix them with water, prefer their own wines to the French; and we find their antient poets very lavish in the praises of them. Their olives are small but very sweet and good, as is the oil consequently that is drawn from them, and eaten generally instead of butter all over Italy. They have plenty of peaches, apricots, walnuts, small nuts, almonds, chestnuts, and other fruits which grow in our climate in great perfection. The water of the Tyber is thick and muddy, and not fit to drink till it has stood a considerable time; but they are abundantly supplied with good water by their aqueducts, some of which bring the water from fountains thirty or forty miles distant from Rome, as will be observed more particularly hereafter.

Rome affords so vast a variety of agreeable objects, that one knows not where to begin, much less where to end, when we have entered upon the description of them. The most valuable curiosities however may be reduced under the following heads, viz. 1. Theatres and amphitheatres. 2. Pagan temples. 3. Triumphal arches. 4. Columns. 5. Baths. 6. Aqueducts and fountains. 7. Catacombs. 8. Obelisks. 9. Sepulchres. 10. Cirques or Circus's. 11. Bridges. 12. Churches.

13 G

13. Pa-

inions.

Theatres  
and am-  
phithe-  
atres.

13. Palaces, with the statues and paintings which adorn them. 14. Piazza's and squares. 15. Colleges. And, 16. Hospitals.

Of all the theatres and amphitheatres that were in old Rome, there are only the ruins of three now remaining, viz. some small footsteps of the amphitheatre of STATILIUS TAURUS, near the church of St CROCE. Some part of the walls of the theatre of MARCELLUS, on which the palace of the Savelli stands. And part of the amphitheatre of TITUS, now called the Coliseo, of which there are very large ruins. It appears to have been of a round form without, and of an oval figure within; and, as 'tis said, was capable of holding eighty-five thousand persons. This structure was famous antiently, as well for the beauty of it's architecture, as the martyrdom of many thousand Christians, who, like other condemned persons, were frequently obliged to fight with wild beasts here. The Romans do not seem to have had certain punishments fixed for every crime, but the Emperors, their Viceroys and Judges, ordered them to be put to Death often in what manner they saw fit; and upon their coming off victorious in their combats with men or beasts, frequently granted the prisoner his pardon. This probably was St PAUL's case, who lived to tell us he had fought with beasts at Ephesus.

Pagan  
temples.

The chief pagan temples remaining, are, 1. The Pantheon, or temple of the gods, usually called the Rotunda, from it's circular figure, and now dedicated to the Virgin MARY and All Saints: it is an hundred and forty-four feet in height, and as many in breadth; the roof vaulted in form of a cupola, and receives all it's light from a hole in the top of it, nine feet diameter. It's portico consisted of sixteen tall pillars of speckled marble, called oriental granite, each pillar being but one stone, of which there are only now thirteen remaining: they are all of the Corinthian order, and about fifteen English feet in circumference, some a few inches more and some less. The door is forty feet high, and about twenty-five broad, the side-posts and cross-pieces composed of five pieces of granite, and not of one, as some have related. Upon the architrave of the portico are these words, inscribed in large capitals, viz. *M. Agrippa L. F. Cos. Tertium fecit.* This temple was covered with copper, till Pope URBAN VIII removed it; with which he made those four admirable wreathed pillars, which support the canopy of the high altar in St PETER's church; and with the *clavi trabales*, or nails which fastened the copper plates of the portico, and weighed two thousand eight hundred pounds, he cast a great cannon, which still remains in the castle of St ANGELO, with this inscription, *Ex clavis trabalibus porticus Agrippæ*, and the form of one if the nails is engraven on it. The body of this temple remains entire, having only been deprived of it's statues and some other ornaments, amongst which was the famous MINERVA of PHIDIAS. Antiently this temple was ascended by seven steps, which surrounded the whole building, and now there is a descent of eleven steps to go into it, which shows how far old Rome is buried in rubbish. In the church is the tomb of that exquisite painter and architect RAPHAEL URBIN, with the following inscription, viz.

*Hic situs est Raphael, timuit quo sospite Vinci,  
Rerum magna parent, & moriente mori.*

2. The temple of FORTUNE, was given by PIUS IV to the Armenians, where they still celebrate divine worship. It is at present called St MARIA ÆGYPTIACA, and is an entire piece of antiquity, surrounded with pillars of the Ionick order, mixed with the Corinthian and Dorick, which serve for a model to the modern architects.

3. The temple of the SUN, or of VESTA, which stands not far from the former, on the banks of the Tyber near the broken bridge, and is now a Christian church, called La Madonna del Sole; being a small round structure, with a gallery of strait pillars round it, receiving the light in the same manner as the Pantheon, by a round hole in the top.

4. The temple of DIANA AVENTINE, now called St SABINA, a large building, supported by twelve pillars on each side, which divide the nave from the isles.

5. The temple of HERCULES AVENTINE, now dedicated to St ALEXIS and BONIFACE, and stands on the top of Mount Aventine.

6. The temple of JANUS, in the market for beasts, being a building exactly square, with four fronts, resembling a triumphal arch more than a temple: on each front are twelve niches for as many statues, representing the months of the year, which JANUS was held to govern.

7. The temple of CONCORD, or rather the remains of it, there being only the portico left, sustained by eight great marble pillars of one stone each, and standing on the ascent from the Forum Romanum to the Capitol.

8. The temple of SATURN, now a Christian church, dedicated to St ADRIAN; the frontispiece only whereof is part of the antient temple. Here the Romans kept the Tabulæ Elephantinæ which contained the names of the thirty-five tribes of the city: it stands at the foot of the Capitol near the arch of SEVERUS.

9. The temple of ANTONINE and FAUSTINA, which stands in the Forum Romanum, whereof are left good part of the walls, and the pillars of the portico, said to consist of a kind of marble, which will cleave like wood, the grain lying one way.

10. The temple of ROMULUS and REMUS, since dedicated to St COSMO and DAMIANO, but very little of the antient temple left.

11. The temple of ISIS and SERAPIS, or of the SUN and MOON, now New St MARY's: the small ruins of the antient temple which remain are behind the cloyster, the present church not standing exactly on the same ground.

12. The temple of PEACE, in the Campo Vaccino, begun by CLAUDIUS, and finished by VESPASIAN, in which were laid up the rich spoils found in SOLOMON's temple, on the taking of Jerusalem, till this city was plundered in it's turn by ALARIC, King of the Goths. This exceeded all the other temples in Rome in it's dimensions, as may still be discerned by the vast ruins of the foundation. There is very little standing of it at present, besides part of three arches, the rest having been burnt down in the reign of COMMODUS by a fire, which, 'tis said, broke out with an earthquake; tho' there is a tradition which says it fell of itself, at the birth of our Saviour. The great marble pillar which stands before the church of St MARY MAGGIORE, and is the largest in Rome of one entire stone, was taken from hence, being one of the

CHAP.  
XVII.  
Pope's  
Dom-  
inions.

CHAP. XVIII. eight which supported the nave or body of this temple.

Pope's  
Domi-  
nions.

13. The temple of JUPITER STATOR, in the Campo Vaccino, of which there now remains no more than three marble pillars, was built under the Consuls, as 'tis pretended, in compliance with a vow made by ROMULUS, who finding his troops give way in an engagement with the Sabines, promised to build a temple to the honour of JUPITER, if they stood their ground: and this temple was accordingly afterwards erected, and dedicated to JUPITER STATOR, *à stando*, from the Romans standing their ground.

14. The temple of JUPITER TONANS, or the thunderer, erected near the Capitol by AUGUSTUS, 'tis said, on his being preserved from a flash of lightning which fell on his litter and killed his servant, of which there remains no more at present than three pillars of the Dorick order, half buried in the ruins.

15. The temple of FAUNUS, now a Christian church, called St STEPHANO ROTUNDO, from it's circular figure, situate on mount Celius: it is a large edifice, sustained by two concentric circles of pillars, the outermost, which are forty-four in number, are the least, and the innermost are exactly half that number, and stand at the same distance from each other as those of the outer circle.

16. The temple of HERCULES CALLAICUS, now Galuzo, of a diagonal figure, the roof consisting of a cupola, little less than the Pantheon, having two doors directly opposite to each other.

17. The temple of BACCHUS, now the church of St CONSTANTIA, without the walls, of a round figure, sustained by twelve large pillars without, and a concentric circle of twelve pillars of a less circumference within, containing an antient monument of porphyry, called the tomb of BACCHUS, which resembles a large chest finely engraved, with branches of trees, boys treading of grapes, birds, and other animals; several parts of the roof also is beautified with bunches of grapes, and other things belonging to a vintage in Mosaick work; but the freshness of the colours, and the rudeness of the figures, have made some judicious travellers suspect that it is not of Roman workmanship.

18. Another temple of ROMULUS and REMUS, now dedicated to St THEODORE, of a circular figure, into which there is a descent of several steps, as into the Pantheon.

Trium-  
phal  
arches.

The triumphal arches still remaining, are five; 1. That of SEPTIMIUS SEVERUS. 2. That of CONSTANTINE the Great. 3. That in the Via Sacra, erected to the honour of VESPASIAN, and his son TITUS. 4. That of GALIENUS. And, 5. Another to the honour of SEPTIMIUS SEVERUS, and his son.

1. The triumphal arch of SEPTIMIUS SEVERUS stands at the foot of the Capitol, being of marble, and still entire, tho' something sunk under the present surface of the ground. On each side are represented in bas-relief the victories of this Emperor; and on the inside the vault is finely wrought with flowers, of which no two are of the same shape. It was erected to the honour of SEVERUS, in memory of his Parthian conquests; but being under a great concern at the civil discords he met with on his return to Rome, he feigned himself ill of the gout, and deputed his son to triumph in his stead. The inscription on the arch is as follows in large Roman cha-

acters, viz. IMP. CAES. LVCIO SEPTIMIO. M. FIL. SEVERO. PIO. PERTINACI AVG. PATRI PATRIAE. PARTHICO. ARABICO. ET PARTHICO ADIABENICO. PONTIFICI MAXIMO TRIBUNIC. POTES. XI. COS. III. PROCOS. ET IMP. CAES. M. AURELIO. I. FIL. ANTONINO AVG. PIO. FELICI TRIBUNIC. POTES. VI. COS. PROCOS. P. P. OPTIMIS FORTVNATISSIMISQVE. PRINCIPIBUS. OB. REMP. RESTITVTAM. IMPERIVMQVE POPVLI ROMANI PROPAGATAM. INSIGNIBVS. VIRTVTIBVS EORVM DOMI FORISQVE. S. P. Q. R.

CHAP. XVIII.  
Pope's  
Domi-  
nions.

2. CONSTANTINE's arch, which is not only the noblest in Rome, but in the whole world, according to Mr ADDISON. It stands near the amphitheatre of NERO, and was erected by the Senate, as 'tis said, in one day's time, while the armies of CONSTANTINE and MAXENTIVS were engaged at Ponte Molle, with an intention to inscribe it to him that should come off victorious; and CONSTANTINE defeating his competitor, it was accordingly dedicated to him; being beautified with several excellent statues and bas-reliefs, relating to the most remarkable actions of his life. The statues have many of them lost their heads; which, 'tis said, the Duke of Tuscany, LAURENCE DE MEDICIS, stole and carried to Florence. The bas-reliefs on this arch are not equally fine, which makes it supposed that some of them were taken from more antient monuments to adorn this. Mr ADDISON says, he searched narrowly for some representation of the apparition which is said to have preceded the victory; but there are not the least traces of it to be met with; the reason whereof, he conceives, is, that the greatest part of the ornaments were taken from TRAJAN's arch, and set up to the new conqueror, in very great haste, by the Senate and people of Rome, who were then most of them heathens. There is however, he observes, something in the inscription which is as old as the arch itself, which seems to hint at the Emperor's vision, viz. IMPERATORI CAESARI FLAVIO CONSTANTINO MAXIMO AVGVSTO QVO INSTINCTV DIVINITATIS MENTIS MAGNITVDINE CVM EXERCITV SVO TAM DE TYRANNO QVAM DE OMNI EIVS FAC-TIONE uno tempore IVSTIS REMPVBLICAM VLTVS EST ARMIS ARCUM TRIVMPHIS INSIGNEM DICAVIT S. P. Q. R. LIBERATORI VRBIS.

FVNDATORI QUIETIS.

3. The triumphal arch in the Via Sacra, erected in honour of VESPASIAN and his son TITUS, on their conquest of Jerusalem and Judea, is composed also of marble, on which is represented VESPASIAN riding in triumph with the spoils of SOLOMON's temple; namely, the table of shew-bread, the seven golden candlesticks, the tables of the commandments, the trumpets of the great Jubilee, and several vessels used by the Jews in their sacrifices. But Mr ADDISON says, he was much disappointed in not finding the figure of the temple of Jerusalem on it; tho' some are of opinion, that the composite pillars of this arch were made in imitation of the pillars of SOLOMON's temple, and observe that these are the most antient of any that are found of that order. The inscription on it is as follows, SENATVS POPVLVSQVE

RO.

CHAP. XVII. ROMANVS DIVO TITO, DIVO VESPA-  
SIANI F. VESPASIANO, AVGVSTO.

Pope's  
Domi-  
nions.

4. the arch of GALIENUS, usually called the arch of St VITO, is of Tiburtine stone, and was erected in honour of the Emperor GALIENUS and SALONINA, as appears by the following inscription, viz GALIENO CLEMENTISSIMO PRINCIPI CIVIS INVICTA VIRTVS SOLA PIETATE SVPERATA EST ET SALONINAE SANCTISSIMAE. AVG. M. AVRELIVS VICTOR DEDICATISSIMVS NVMINI MAIESTATIQUE EORVM.

5. Another arch erected to SEPTIMIUS SEVERUS by the goldsmiths and graziers of the city, the inscription whereof differs but little from that on the other arch of SEPTIMIUS.

Baths.

The *Thermae*, or baths of antient Rome, were esteemed some of the most magnificent buildings in the city, of which there are still considerable ruins remaining, particularly of ANTONINE's bath, which lies at the foot of mount Aventine, and appears more like a great town than a single fabrick. The walls are still vastly thick and high; and it contained sixteen hundred seats of polished marble, for as many persons to sit and bathe in separately; some of these bathing-places were floor'd with silver, and the pipes which brought in the water were of the same metal; the walls being adorned with statues, pictures, and precious stones.

2. The baths of DIOCLESIAN, which had seats for three thousand people, who might bathe without seeing one another, the ruins whereof are seen at St MARIA DE ANGELIS, and the Carthusian church is composed of part of this bath, particularly eight noble marble pillars of this church, with their cornices of composite work, exquisitely wrought, which serve as a model of that order to the present architects.

3. The baths of CONSTANTINE, built before his conversion, which stood at the foot of Monte Cavallo, a third part whereof are still remaining. There are also some small ruins of those of NERO, near the church of St EUSTACHIUS; of those of PAULUS EMILIUS near St DOMINICK's; and of AGRIPPA's near the Pantheon.

Columns.

Of columns, there are four remaining, besides those which belong to temples. 1. The column of TRAJAN. 2. The column of ANTONINUS. 3. The Columna Milliaria. And, 4. The Columna Rostrata.

1. The Columna Trajana, an hundred and twenty foot high, besides the pedestal, which is twelve: It is composed of twenty-four entire pieces of white marble, hollow within, and set one upon another, with little windows to let in the light, and is ascended up an hundred and twenty-three steps. It is adorned with bas-reliefs, ascending in a spiral line from the base to the chapter, representing the wars and memorable actions of this prince; and served also as a mausoleum for his ashes, which were placed in a golden urn on the top of it, for TRAJAN never lived to see this pillar, dying of the flux as he returned from his Parthian expedition. The statue of St PETER of brass gilt, was afterwards placed on the top of this pillar in the room of the urn by Pope SIXTUS V. The pedestal, which was buried in the ground, was laid open again by Pope PAUL III, on which is the following inscription, IMP. CAESARI DIVI NERVAE F. NERVAE TRAIANO AVGVSTO GERMANICO DACICO PONT. MAXIMO TRIB.

POT. XVII. IMP. VI. COS. VI. P. P. AD DECLARANDVM QVANTAE ALTITVDINIS MONS ET LOCVS TANTIS OPERIBVS SIT EGESTVS.

CHAP. XVII. Pope's Domi-nions.

2. The column of ANTONINUS PIUS in the piazza Colonna, which is an hundred and forty-five feet in height, English measure, ascended by two hundred and six steps; and composed of twenty-eight entire pieces of marble, having fifty six small windows in it. The statue of the Emperor was placed on the top, where that of St PAUL's brass gilt now stands: Among other historical pieces in bas-relief, is the figure of JUPITER FLUVIUS sending down rain the on the fainting army of MARCUS AURELIUS ANTONINUS, and thunderbolts on his enemies; which, as Mr ADDISON observes, is the greatest confirmation imaginable of the story of the Christian legion. The army of ANTONINUS, it seems, being surrounded by the enemy, and ready to perish for want of water, the Christian legion by their prayers obtained a plentiful shower of rain, which wonderfully refreshed their troops, while the other army was destroyed by a dreadful tempest of thunder and lightning; which extraordinary event the Pagan Romans ascribed to JUPITER, and the Christians to our Saviour. The inscriptions are all modern, and three of them relate to the repairing the column, and dedicating it to St PAUL by SIXTUS V.

3. The Columna Rostrata, which antiently stood in the Forum Romanum, and was erected to the memory of CAIUS DULLIUS on the victory he obtained over the Carthaginians at sea, above two hundred and fifty years before the birth of our Saviour, is now placed in the wall at the foot of the stairs ascending to the rooms of the Capitol, and is not more than twelve foot high; the antient inscription not being legible, is supplied by antiquaries.

4. The Columna Milliaria, from whence 'tis said the antient Romans reckoned their miles and distances from the city to all parts of Italy, is removed from the Forum Romanum in the center of the city to the Capitol. It is marked with the numeral letter I. as the second stone at the first mile's end was with II. and so on; so that *ad secundum lapidem* signified one mile's distance from this pillar; *ad tertium* two, and so on upon all the great roads in Italy. This column is of white marble, eight foot and a half high, and on the chapter there is a brass globe, about two foot in diameter; but Mr MISSON is of opinion, that this is not the pillar from whence they reckoned their miles, because some antient writers say, it was brass gilt, and the names of the great roads and the distances of towns were engraved upon it, which they are not on this; besides, as the number I. is engraved upon it, he conceives it as rather one of those which stood upon some road a mile distant from the city: but I don't think it worth the while to take up the reader's time longer in this controversy, in which Mr MISSON contradicts the notions of most of those travellers who have gone before him.

As to the column erected before the church of St MARY MAGGIORE, that has been taken notice of already; but it seems there is a new column discovered not many years ago, the body whereof between the basis and the chapter is sixty-seven Roman palms, and the pedestal, which is one entire piece, eighteen Roman palms in height, (a Roman palm is about eight inches and a half

A new pillar discovered of Antoninus Pius.

half English.) Upon one of the faces is the following inscription: DIVO ANTONINO AVGVSTO PIO. ANTONINVS AVGVSTVS ET VERVS AVGVSTI FILII. And on the opposite side several bas-reliefs, among which there is a winged genius of ANTONINVS and FAUSTINA deified.

Aqueducts  
and foun-  
tains.

There is nothing, says Dr BURNET, that delights a stranger more in Rome, than to see the great fountains of water that are in every corner of it. That old aqueduct which PAUL V restored, comes from a collection of sources five and thirty miles distant from Rome, which runs all the way thro' a vaulted channel, equal to a river, and breaks out in five several fountains, of which some give water above a foot square. That of SIXTUS V, the *aqua felice*, is brought twenty miles to Rome, and dischargeth a prodigious quantity of water. The glorious fountain in the Piazza Navona hath an air of greatness that surprizeth one. The fountain in the piazza de Spagna, those before St PETER's and the Palazzo Farnese, with many others, furnish Rome so plentifully, that almost every private house hath a fountain which runs continually. Among the antient aqueducts there are only four that have any thing remaining of them now, viz. the Aqua Marcia, conducted thirty-seven miles; the Aqua Claudia, brought thirty-five; the Aqua Appia, and the Aqua Virginis, both brought eight miles; the last of which being repaired by Pope NICHOLAS V, is still in use, and known by the name of Fonte de Trivio. There are inscriptions on the Porta Maggiore, shewing who built and repaired the aqueduct called Aqua Claudia, in the following words, viz.

TIT. CLAVDIVS DRVSI. F. CAESAR. AVGVSTVS GERMANICVS. PONT. MAX. TRIBVNICIA POTESTATE. XII. COS. V. IMPERATOR XVII. PATER PATRIAE. AQVAM CLAVDIAM EX FONTIBVS QVI VOCABANTVR CAERVLEVS ET CVRTIVS, A MILLIARIO XXXV. ITEM ANENEM NOVAM A MILLIARIO LXII. SVA IMPENSA IN VRBEM PERDV-CENDAS CVRAVIT.

Among the antiquities of Rome, those which go under the name of Catacombs are not the least surprizing. These are narrow subterraneous vaults, with a variety of windings and turnings in the nature like a labyrinth, by which the suburbs of antient Rome were in a manner undermined. They are generally about five feet and a half high, and wide enough for two men to go a-breast, but in some places the dimensions are larger. On each side of these passages are two or three rows of Loculi, or graves, cut out of the rock, or sand (as the nature of the ground is) like troughs, each of them capable of receiving a body, and had a square stone or tile set up before the mouth of them, with an inscription shewing that some martyr or confessor, or other person, was interred there. In some of them are found bones, but most of them are empty, the bodies, or what remained of them, having been removed to several churches, and kept as reliques of martyrs; for it was generally believed in the last age, That these caverns were dug by Christians, who in the times of persecution performed divine service in them: That these burying-places were peculiar to Christians, and never used by Heathens; and that a great number of saints and martyrs were interred here. But Dr BURNET says, nothing seem'd more evident to him, than that these were the common burying-places of the antient Heathens; for one enters into them without the walls of the town, according to the laws of the twelve tables; though 'tis true, in some places they run under it, which they could not avoid before they had the use of the compass, when they were engaged far under ground: Nor is it to be conceived how the Christians in the primitive times could be able to carry on such a work without the notice of their governors, when such mountains of rubbish must have been brought out, and such a multitude of hands employed in it. My author also observes, that it is absurd to think they could hold their assemblies amidst the annoyance of so much corruption, for he found the streams so strong, that though he was as little subject to vapours as most men, yet he had all the day long after he was in them, which was not an hour, a confusion, and as it were, a boiling in his head that disordered him extremely; and if there is now so much stagnating air there, this must have been sensible in a more eminent and insufferable manner, while there were vast numbers of bodies rotten in those niches. Be-

combs.

CHAP.  
XVII.  
Pope's  
Domi-  
nions.

sides, according to his calculation, the number of Christians in those days at Rome could not amount to above fifty thousand; of whom, excluding the women, old men, and children, there were not more than twelve thousand fit for labour, and it is not credible that so vast a work could have been accomplished by them. My author acknowledges indeed, that it does not appear when these caverns were dug, but observes, that when the laws of the twelve tables were made, sepulture was in use, and Rome being grown to a vast bigness, he takes it for granted that they had repositories for their dead; and none of the Roman authors mentioning any such work, he thinks it not unreasonable to imagine, that these vaults had been wrought and cut out from the first beginnings of the city, and therefore later authors had no occasion to take notice of them. And though it is certain, that burning came to be in use among the Romans again, yet they returned back to their first custom of burying bodies long before CONSTANTINE's time; so that it was not the Christian religion that produced this change. Our modern writers seem to agree, that the change was made in the times of the ANTONINES; yet there being no law made concerning it, and no mention in an age so full of writers, of any orders that were given for burying-places, it is probable that the custom of burning wore out by degrees: And since we are sure that they once buried, it is more natural to think, says this writer, that the slaves and the meaner sort of people were still buried, that being a less expensive and more simple way of disposing of their bodies than burning, which was both pompous and chargeable; and if there were already burying-places prepared, it is much easier to imagine how the custom of burying grew universal, without any law made concerning it. But to return to the catacombs: Though the inferior people among the Pagan Romans, and their slaves might be buried here, it is evident from the many genuine inscriptions that have been found in the catacombs, which bear the dates of the consuls, that these were also the common burying-places of the Christians of the fourth and fifth century, but this reverend Divine does not remember any of an antient date.

The Roman Catholics, as has been observed already, do not only firmly believe that the catacombs were the works of the primitive Christians, but adore the bones and ashes that are found there. They assure us also, that several of the antient Roman Bishops held their synods and resided here, administered the sacraments, preached, &c. that LIBERIUS baptized above four thousand persons in these regions of darkness on an Easter-Sunday, and that there are several large grotto's in these burial-places adorned with painting and Mosaic work, which might very well serve for chapels, but that they are generally in the remotest and most intricate parts of the labyrinth, and the rubbish in many places fallen in, that travellers seldom or never visit them. While the Protestants universally maintain, that these are only the burying-places of the Roman slaves, which the Christians might afterwards apply to the same uses; but that it is impossible they could ever assemble and perform divine service in these nauseous subterranean vaults. Notwithstanding both sides seem to be very positive in their respective opinions, I believe all impartial men must say, the matter still wants to be cleared up. If

these catacombs are as old as the city, according as Dr BURNET, and some other Protestant writers affirm, or indeed if they were known publick burying-places for any number of years while Rome continued Pagan, it is very unaccountable that they should never be particularly described by any Roman writer. As for a passage or two which these gentlemen have cited in relation to the burying of their slaves, they may relate to any other common burying-place as well as these, and do not seem at all conclusive. On the other hand, how the Christians should be able to undermine almost all the suburbs of Rome, dispose of the earth that came out of these cells, constantly perform their worship in them, and bury their dead, without being discovered by one false brother, appears to me very incredible. How it came to pass afterwards that the memory of these catacombs was perfectly lost, and they should lie undiscovered for many hundred years, is equally surprising. Surely the slaughter of the Romans must be very great, when the barbarous nations destroyed this city, that there should be none left alive that could tell what antient Rome was; one would think that there had been a general massacre, and Italy entirely new peopled by the northern nations, or such a night of ignorance could never have over-spread the face of the country, as we find there did on the declension of the Roman Empire; which inclines me to believe, that however the modern inhabitants may have assumed the names of the antient Romans, they are really most of them of Gothic extraction; and when no other probable account could be given of the forming of these catacombs, it is no wonder to find them ascribed by a politic court to the primitive Christians, whereby they are furnished with an inexhaustible fund of relics.

Of the antient tombs, or Mausolea in Rome, there are still the traces of four, viz.

1. Moles Adriani, now the castle of St Angelo, which was the mausoleum of the Emperor ADRIAN, and beautified antiently with statues and marble pillars, which were taken from it to adorn some of the modern churches and palaces, after it had been defaced by the Goths; but it still retains the antient inscription, viz. L. HÆLIO. CAES. DIVI HADRIANI AVGVST. COS II. F.

Pope BONIFACE converted it into a fortress, and it has been improved by succeeding Popes; ALEXANDER VI built a long close gallery from the palace of the Vatican to this castle, through which he might retire on any tumult or insurrection in the city. It is said to have taken the name of Angelo, from an angel that appeared at the top of it sheathing a bloody sword, while St GREGORY was conducting a procession through the streets, and praying against a raging pestilence, which had taken off a multitude of the inhabitants, but ceased from the time of this procession. In this castle is the magazine of arms, ammunition and stores of war, as well as the Pope's treasury; and here also prisoners of state are confined.

2. The Mausoleum of AUGUSTUS, which was built of white marble, of a round figure, encompassed by three circular walls; the circumference of the outermost being the largest, and joined to that in the middle by a circular plain, and that to the innermost by another; so that the fabrick consisted of three stories, or walks, lessening

nions.

Mausolea.  
Moles A-  
driani, the  
castle of St  
Angelo.

sening gradually as they advanced in height, and planted with ever-greens, whose lasting verdure was supposed to represent eternal life: it was adorned also with many fine statues, pillars, and obelisks, and stood near the church of St ROCH, whereof little more remains at present than the ruins; from which however the design of the ancient structure may still be discerned.

3. The tomb of CAIUS CESTIUS, which stands in the wall near St PAUL's gate; is a square pyramid, ending in a sharp point, being an hundred and twenty foot high, and ninety-four foot broad at the base; the body of it is of brick, but covered over with square pieces of white marble; being repaired by ALEXANDER VII, in the year 1673, and almost restored to it's original beauty. The entrance into this Mausoleum is by a low narrow passage to the middle of the building, where there is a little arched room, nineteen foot long, thirteen broad, and fourteen foot high, plaistered over with a sort of white polished mortar, on which are still several pieces of painting, representing women, flowers, vessels, and other ornaments. The inscription on a pedestal near the pyramid, on which the statue of CESTIUS is supposed to have stood, is as follows, viz. CAIVS. CESTIVS. L. PVB. F. EPVLO. TR. PL. VII. VIR. EPVLONVM. OPVS ABSOLVTVM EX TESTAMENTO. DIEBVS CXXX. ARBITRATV. PONTI. P. F. CLAMELAE. HEREDIS. ET PROTHI L. But tho' this be inscribed to CESTIUS, the general opinion is, that it was the common sepulchre of the Epulones, who were seven in number, and to whom belonged the management of all sacrifices, feasts, and banquets that were celebrated in honour of the gods.

4. The tomb of METELLA, the wife of CRASSUS, stands in the Via Appia near St SEBASTIAN, being vulgarly called the *Capo de bove*, from the heads of oxen carved on the walls. It is a round building, formed like an old tower, the walls whereof are twenty-four foot thick. At the funeral exequies of this lady were two great sacrifices performed, consisting of an hundred oxen each.

Obelisks.

Of fifty obelisks which were in antient Rome, there are not more than ten or eleven yet dug out of the rubbish. They were all of them brought from Egypt, and were of granite, being a red and white marble, so hard and durable, that it will even resist the fire for a considerable time: They are of a quadrangular figure, broad at the base, and narrow towards the top, representing the rays of the sun, adored by the Egyptians under the name of OSIRIS, and deemed by them the residence of Beings, Genius's, and the Soul of the Universe. They do not terminate in a point, but are a kind of obtuse pyramid.

1. The fairest obelisk now in Rome, stands in the piazza before St PETER's church, formerly dedicated to AUGUSTUS and TIBERIUS, and was brought hither from the Circus of NERO. It is one entire piece of granite, seventy-two foot high, twelve foot square at the base, and eight at the top; and weighed nine hundred and fifty-six thousand one hundred forty-eight pounds; and is now about four thousand years old. It lay many years buried in the ruins of the abovesaid Circus; and after it was found, it's immense weight deterred several architects from attempting to erect it, till DOMINICO FONTANA, by the encouragement of SIXTUS V, set it on a pedestal thirty-eight foot in height, to the astonishment

of all that saw it. The Pope dedicated it to the Holy Cross, as appears by the modern inscriptions. There are no hieroglyphicks on it; but the antient Roman inscription on the obelisk is in the following words, viz. DIVO. CAESARI DIVI. IVLII. F. AVGVSTO. TIBERIO CAESARI. DIVI AVGVSTI F. AVGVSTO SACRVM.

2. The obelisk of St JOHN DE LATERAN has three rows of hieroglyphicks on each face of it, and is the largest in Rome; being an hundred and eight feet in height, without the pedestal or cross, nine feet and a half at the base one way, and eight the other. It was antiently consecrated to the sun in the city of Thebes, about twelve hundred years before our Saviour; sent to Rome by the son of the Emperor CONSTANTINE, and set up in the Circus Maximus, where it was found not many years since, covered with rubbish, and broken in three pieces; cemented together and erected again before the church of St JOHN DE LATERAN by the abovementioned FONTANA.

3. The obelisk in the piazza del Popolo, which was brought from Heliopolis in Egypt by AUGUSTUS, and dedicated to the sun in the Circus Maximus, where it lay a long time broken in pieces, and was set together, and erected again in the place where it now stands by the abovesaid FONTANA, at the expence of SIXTUS V, having the following antient inscription, IMP. CAESAR DIVI F. AVGVSTVS PONTIFEX MAXIMVS IMP. XII. COS. XI. TRIB POT. XIV AEGYPTO IN POTESTATEM POPVLI ROMANI REDACT. SOLI DONVM DEDIT.

4. The obelisk near the church of St MARIA MAGGIORE was set up in the mausoleum of AUGUSTUS by the Emperor CLAUDIUS. It is less than any of the three former, and is without hieroglyphicks.

5. That in the Piazza Navona was taken from the Circus of CARACALLA, and set up here, with four marble statues, and a fountain breaking out under it's base, by INNOCENT X.

6. That which stands by the Jesuits church, and those in the gardens of MEDICIS and MATTHO's are of a smaller size, and seem to be only the tops of obelisks broken off; but the hieroglyphicks upon them sufficiently demonstrate their antiquity. Some are of opinion, that the hieroglyphicks on these obelisks relate the memorable actions of the Egyptian Kings; others imagine they contain the secrets of their divinity, astrology, metaphysics, magick, and other sciences that were cultivated by the Egyptians; but I could never meet with any writers who pretended to decypher them, which might have been done if they made use of an alphabet, and each character had been a letter. I am inclined to believe therefore, that every character was a word, or syllable at least, as we find the case to be in the Chinese writing, which is possibly of an equal antiquity.

The Circi, or Cirques, where spacious structures, of an oval or semicircular figure, with large areas, where the Romans run races in chariots, or on horseback, round a Meta, which stood in the middle. There are only some small remains of that of ANTONINUS CARACALLA without the walls, and of the Circus Maximus the form may just be discerned. Of the Circus Agonalis, now the piazza of Navona, the Circus of NERO in the Campo Vaticano, and the Circus Flaminius,

CHAP.  
XVII.  
Pope's  
Dom-  
inions.

no traces are left. The Circus Maximus, 'tis said, would contain an hundred and sixty thousand spectators, who might sit conveniently in the three open galleries; one of which was for the senators, a second for the gentlemen, and a third for the common people. Those two obelisks which are before the Porto del Popolo and St JOHN de Lateran, formerly stood here, as has been intimated already.

Bridges.

There were antiently eight bridges over the Tiber, of which five are still left, viz. 1. Ponte di St Angelo, formerly called the *Pons Ælius*, near the castle, on which are the statues of St PETER and St PAUL, and twelve angels holding the instruments of our Saviour's passion. 2. Ponte St Bartolomeo, antiently *Pons Cestius* or *Esquilinus*. 3. Ponte Sisto, heretofore *Aurelius Janiculumis*. 4. Ponte di Santa Maria, *olim Palatinus* and *Senatorijs*. And, 5. Ponte de Quattro Capi, the antient *Pons Tarpeius*, or *Fabricius*, on which there is still the following inscription, viz. L. FABRICIVS. G. F. M. CVR. VICAR. FACIENDVM CVRAVIT. Q. LEPI M. F. M. COLLIVS M. F. COS. PROBAVERVNT DD. NN. IMP. CAES. FLA. VALENTINIANVS PIVS FAELIX MAX. VICTOR ET TRIVMPHATOR. SEMPER AVGVSTVS. PONT. MAX. GERM. MAX. ALEM. MAX. FRANC. MAX. GOTH. MAX. TRIB. POT. VII. VICTOR AC TRIVMPH. SEMPER AVG. PONT. MAX. TRIB. POT. III. IMP. II. COS. PRIMVM. P. PP. PONTEM FAELICIS. NOMINIS GRATIANI. IN VSVM SENATVS AC POPVLI ROM. CONSTITVI DEDICARIQVE IVSSERVNT.

Churches.  
St Peter's.

I come next to the description of the churches in Rome, of which St PETER's, situate on the west side of the river in Trastivere, is the most admired both for it's dimensions and architecture; and as I am speaking to Englishmen I cannot give them a juster idea of this noble fabrick, than by telling them that St PAUL's in London is built after the same model. The length on the outside, including the portico, is seven hundred and twenty-two English feet: the length within, not taking in the portico, or the thickness of the walls, is five hundred and ninety-four feet. The breadth of it from the north-side of the cross to the south-side, or from the north to the south door on the outside, is four hundred and ninety feet: the breadth from the north to the south door within is four hundred and thirty-eight feet; the breadth of the body of the church is eighty-six feet eight inches. The height of the body of the church is an hundred and forty-four feet. The outward circumference of the dome or cupola is six hundred and twenty feet; the diameter of the dome within, an hundred and forty-three feet. The breadth of the front of the church four hundred feet; the height from the pavement to the top of the cross which is over the ball, four hundred thirty two feet: the diameter of the ball, eight feet four inches. The height of the statues which are on the cornice of the front, eighteen feet. The body of the church, as well as the cupola, is sustained by large square

CHAP.  
XVII.  
Pope's  
Dom-  
inions.

pillars, like those in St PAUL's, and have the advantage of being incrustated or overlaid with marble, as well as the walls, which is however so tarnished by the smoke of the lamps and candles, that the plain stone of St PAUL's looks full as well. The great altar is directly under the cupola, being a kind of pavilion supported by four wreathed brazen pillars, adorned with foliages and strewed with bees, which were the arms of Pope URBAN VIII, over every column of the altar is an angel, brass gilt, seventeen feet high, with the figures of children playing and walking on the cornice, the height of the whole being ninety feet; and about the altar are an hundred silver lamps perpetually burning. The inside of the cupola is adorned with Mosaick work representing paradise, the eternal Father, and many other figures; and in the corners below are the four Evangelists of the same work, admirably well done: on the inside of the four square pillars that support the cupola are erected gigantic statues of St VERONICA, St HELENA, St LONGINUS, and St ANDREW; and under the pedestal of each statue is an altar with a beautiful picture of each saint. These statues and pictures are placed here in regard to certain relics which are kept in the vestries belonging to these altars or chapels, as they are called; as, 1. The handkerchief which, according to tradition, St VERONICA lent our Saviour as he was carrying his cross to mount Calvary, and still retains the print of his face. (One of these handkerchiefs the reader will remember we met with at Turin; which is the right, I shall not take upon me to determine.) 2. A piece of the real cross of Christ. 3. The top of the lance wherewith LONGINUS pierced our Saviour's side, sent as a present by BAJAZET, Emperor of the Turks, to Pope INNOCENT VIII. And, 4. The head of St ANDREW. Under the high altar there is a pair of stairs which leads to the chapel, where 'tis said, part of St PETER's body is kept, and to the other holy places in the vaults of this church. An old wooden chair, supposed to be St PETER's, enclosed in brass, and supported by four Doctors of the Latin church, whose Colossian statues are of brass gilt, is not one of the least ornaments of St PETER's; the chair, with all it's furniture, having cost seven thousand five hundred and fifty Roman crowns. The riches and beauty of the chapels and altars round the walls of this church can never be expressed; the gilding, carving, emboss'd work, statues of brass and marble are all disposed by so wise and happy a contrivance, according to a late traveller, that the abundance does not cause the least confusion. Among other admirable pieces, the dead Christ of alabaster by MICHAEL ANGELO is said to be a stupendous work; the two wreathed pillars of alabaster brought from Jerusalem by HELEN, the mother of CONSTANTINE, and erected at a side-altar, are much admired; the altar-piece representing St MICHAEL in Mosaick work shews such a vivacity of colours and exact proportions of all the parts and lineaments of the body, that it passes for a wonder of it's kind; the martyrdom of St SEBASTIAN, the visitation of the blessed Virgin, the crucifixion of St PETER, the fall of SIMON MAGUS, and a thousand other historical pieces, are exquisite performances. There are also a great number of tombs of Popes, Cardinals, and other persons of distinction; particularly those of the Emperor OTHO II, CHARLOTTE Queen of

*The West end of St PETER'S at ROME*

CHAP.  
XVII.  
Pope's  
Domi-  
nions.

of Jerusalem, Cyprus, and Armenia, and of A-  
DRIAN IV, the only English Pope. The tomb  
of St PETER serves for an altar to say mass on;  
the tombs URBAN VIII, PAUL III, ALEXAN-  
DER III, the Countess MATHILDA, who gave  
her estate to the church, are works of a finish'd  
beauty and magnificence: Nor does the tomb of  
CHRISTINA Queen of Sweden, who voluntarily  
abandoned the glories of a crown for a religi-  
ous retirement, fall short of the rest. I shall  
conclude the description of the inside of St PE-  
TER's with the general account of it given us  
by DE LA MOTRAYE. It is adorned, says that  
gentleman, with above an hundred columns of  
the finest, and for the most part antique marble,  
with some of brass: twenty-nine altars exqui-  
sately designed; with several incomparable sta-  
tues, especially the brazen ones which support St  
PETER's chair: there are also two statues which  
adorn the glorious tomb of PAUL III, which are  
esteemed some of the most valuable remains of  
antient Rome; especially that of the young wo-  
man representing justice. Here are also an infi-  
nite number of excellent paintings, the master-  
pieces of the most celebrated pencils, with se-  
veral other curiosities of art and nature, which  
can never be too much admired or applauded for  
their magnificence. The sacristy of this church  
and that of the Pope's contain also a vast variety  
of sacred utensils in gold and silver, enriched with  
precious stones, as crosses, shrines, chalices, por-  
tifical tiara's, mitres, priestly habits and ornaments  
that are inestimable. But if we look upon the  
building only, exclusive of the rich materials  
and furniture, the church of St PAUL's in Lon-  
don, according to modern travellers, is very little  
inferior to that of St PETER's: Nay, there  
are some that say St PAUL's is to be preferred  
to it; not being encumbered with chapels on the  
sides, as that of St PETER's is, which tho'  
they contain abundance of rich furniture and ex-  
quisite paintings, hinder and obscure the prospect  
of the whole. That spacious court in the front  
of St PETER's indeed, surrounded by a piazza  
of two hundred and eighty-six fine marble columns,  
adorned with a prodigious number of statues, gives  
it some advantage of St PAUL's. Here also is  
that obelisk already mentioned, erected by SIX-  
TUS V, and two fine fountains playing in the  
middle of the area, which are no small addition  
to the beauty of it; from whence we ascend to  
a lofty portico before the church by four and  
twenty steps, and from this porch the church is  
entered by five doors, one of which, called the  
*Porta Sancta*, is opened only in the jubilee year.  
On the other hand, as the palace of the Vati-  
can is contiguous to St PETER's much of the  
beauty of the building is lost to those who view  
it on the outside. But to be a little more par-  
ticular in describing the magnificent porch: In  
the front it is eighty-five foot high, and sup-  
ported by pillars three fathoms in circumference,  
the vaulted roof gilded and beautified with Stucco  
work, and on the architrave is the following in-  
scription, viz. *In honorem principis Apostolorum,  
Paulus Quintus Burgbesius Romanus, Summus Pon-  
tifex Anno 1612.* Over the porch are the statues  
of our Saviour and the twelve Apostles; and in a  
balcony here the Popes are crowned in the view  
of all the people. The two principal doors of  
the church are above forty foot high and covered  
with brass, on which are represented our Saviour,

VOL. II. NUMB. LXXII.

the Virgin MARY, the crucifixion of St PE-  
TER, the decollation of St PAUL, the coro-  
nation of the Emperor SIGISMUND by EUGE-  
NIUS IV, and the re-union of the Greek and  
Roman Churches.

There is one thing related by VERYARD of  
this church, which I don't meet with in any other  
writer; and that is, that, contrary to all others,  
it opens to the east: which was occasioned, he  
apprehends, from it's situation; for had it been  
otherwise built, the back part would have looked  
towards the city. This is a fact which some  
who have resided at Rome could not satisfy me  
in; but I shall make a further enquiry into it  
before I leave Italy, that the reader may not re-  
main in the same suspense I do at present. This  
church stands in the same place where the Em-  
peror CONSTANTINE the Great erected one in  
the year 324, with the materials of the Circus  
built by CALIGULA and NERO; and dedicated  
it to the honour of St PETER, upon a tradition  
that this Apostle and many other saints suffered  
martyrdom here by the command of NERO.  
Here also 'tis said stood the little subterraneous  
chapel or oratory of CLITUS, the first Bishop of  
Rome, concealed from the Pagans till the reign of  
CONSTANTINE. The church built by CON-  
STANTINE, which was a most magnificent fabrick,  
falling to decay about the year 1450, Pope  
NICHOLAS V, formed a design of rebuilding it  
from the ground, which his death preventing, his  
successor Pope JULIUS II. had the honour of be-  
ginning it, the plan being laid by that famous ar-  
chitect BRAMANTE LAZARI, and continued  
by MICHAEL ANGELO under the pontificate  
of PAUL III, nor was it finished till the time of  
Pope PAUL V, so that it was an hundred years in  
completing.

2. The church of St JOHN DE LATERAN, St John de  
thought inferior to St PETER's in it's dimensions  
and architecture, is indeed the metropolitan church  
of Rome: It was built by CONSTANTINE af-  
ter his conversion to the Christian faith, and by  
him stiled the first or head of all the churches  
in the world, *Mater Orbis & Urbis*. The Em-  
perors aptiently received their crowns here: and  
here the Pope still takes possession of his digni-  
ty, and confers all ecclesiastical characters and  
orders. The fabrick of this church hath been  
much enlarged since the time of CONSTANTINE,  
and is very beautiful. It has five doors, one of  
which is called the *Porta Sancta*, which is only  
opened in the year of Jubilee (every twenty-fifth  
year). The body of the church is long and large,  
supported by two rows of pillars on each side;  
the roof is gilt, and the pavement curiously in-  
laid with the finest marble: The number of it's  
precious shrines, rich ornaments, and utensils, are  
very great; but nothing is more valued on ac-  
count of it's holiness, than a plain tin chalice,  
which, 'tis said, was used by St PETER, and a  
portable wooden altar, inclosed in the great one;  
whereupon, according to the Roman tradition, that  
Apostle and his immediate successors said mass.  
The tabernacle of the high altar is a beautiful  
piece; and amongst a great number of columns  
that are placed in the most exact order for the  
symmetry and construction of this church, there  
are twenty-four of Verd Antico, and four others  
of hollow brass of the Corinthian order, fifteen  
feet high, said to be brought from Jerusalem; but  
according to others, were taken from the temple

13 I

nions.

of JUPITER CAPITOLINUS. The little church adjoining to this, dedicated to St JOHN Baptist, is much admired also on account of it's fine columns, it's old brazen doors, and the font, where, according to tradition, CONSTANTINE was baptized. The piazza of St John de Lateran, with the noble obelisk and fountain in the middle of it, and the fine buildings which surround the cathedral, form all together a very delightful scene.

St Mary  
Maggiore.

3. The church of St MARY MAGGIORE, though it's dimensions are not large, is esteemed one of the most beautiful in Rome; the body of it is supported by fine marble pillars of the Ionick order, the roof gilt, and the walls adorned with Mosaick work; but the greatest curiosity is the chapel of PAUL V; the altar whereof is prodigiously rich and splendid, the back of it being one entire piece of Lapis Lazuli, sixteen feet in height, and twelve in breadth, with a space in the middle containing an antient picture of the blessed Virgin, covered almost with jewels of an immense value, said to have been drawn by St LUKE himself. The marble walls of the chapel are adorned with bas-reliefs, representing the principal actions of PAUL V, and CLEMENT VIII, whose statues are likewise here. Over against this chapel is that of SIXTUS V, the building and adorning whereof is said to have cost eight hundred thousand crowns; here also in bas-relief are represented the great actions of SIXTUS V, and in it is kept the manger, where, 'tis said, our Saviour was laid in the stable of Bethlehem.

St Paul.

4. The church of St PAUL, about a mile out of the city, built by CONSTANTINE, and enlarged and beautified by several Popes, is in the form of a cross, seven hundred and eighty feet in length, and two hundred and sixty in breadth, supported by an hundred stately marble pillars, taken from the baths of ANTONINUS, one half of them being of striate marble, with capitals of the Corinthian order finely wrought: the high altar is a noble piece of architecture, supported by pillars of jasper, and, according to tradition, contains the cross which spoke to St BRIDGET, with half the bodies of St PETER and St PAUL, the other half remaining in St PETER's. The roof is adorned with mosaick work of twelve hundred years standing; as is the pavement, which passes for one of the greatest curiosities in Rome. On the altar of St STEPHEN is a beautiful picture of the stoning of that martyr, done by that ingenious female LAVINIA FONTANA. The doors of this church are of brass, exquisitely wrought, containing several pieces of sacred history in bas-relief.

St Laurence.

5. The church of St LAURENCE without the walls, built also by CONSTANTINE: it is supported by thirty-two fair marble pillars, and the pavement beautified with mosaick work. The high altar is adorned with pillars of jasper; and under it are reposed, as it is said, the bodies of St STEPHEN the Proto-Martyr, St LAURENCE and St JUSTIN. From this church there is a passage into the catacomb of St CYRIACUS.

St Sebastian.

6. The church of St SEBASTIAN without the walls, on the *Via Appia*, was also founded by CONSTANTINE: but it is not remarkable for any thing, unless a beautiful altar, the tomb of St SEBASTIAN, and the print of our Saviour's foot, which, according to tradition, was left upon one of the stones that is shewn in this church, when he ascended into heaven. From hence is a passage into the catacomb of St CALIXTUS.

7. The church of St CROCE in Gierusalemme, built also by CONSTANTINE, at the request of his mother HELENA, as it is said, out of the ruins of the temple of VENUS and CUPID. The most remarkable things here are, 1. The high altar. 2. The pavement of Mosaick work. 3. The roof of the choir, whereon is represented the finding of the cross by St HELENA, which, it is said, was distinguished from those of the two thieves by sick peoples being cured by the touch of it. 4. A chapel under ground, where only the Pope says mass. And, 5. Some of the pieces of silver, for which JUDAS betrayed his master. These are the seven churches usually visited by pilgrims; besides which, there are others equal to several of them; as the churches of the Jesuits, that of St AGNES in the piazza Navona; the church dedicated to St MARY DELLA MINERVA, and the three noble churches in the piazza del Popolo, each of them dedicated to the Blessed Virgin.

nions.

St Croce.

I shall conclude the description of the Roman churches with a tradition concerning that called Ara Coeli, which stands in the place where the temple of JUPITER FERETRIUS once did. The Emperor AUGUSTUS, it is said, consulting the Cumean Sibyl on some future events, and amongst other questions, demanding if any one should hereafter be born greater than himself; she shewed him the Virgin MARY with our Saviour in her arms, in a circle about the sun, telling him that child should be greater; whereupon the Emperor from that day renouncing all his august titles, and owning himself a mortal man, while he was worshipped as a god by the people, erected a temple and altar in this place, calling it Ara Coeli. The most remarkable thing in this church is the tomb of St HELENA. It belongs to the Franciscan Fryars, whose General usually resides in the adjoining convent. There are above an hundred white marble steps ascending from the street to this church.

Ara Coeli.

Next to the churches their hospitals come naturally to be treated of; and these are no less than forty in number; some for the old and infirm, others for orphans, for fools and madmen, for pilgrims, for women unhappily married, for decayed gentlemen, for leud women who have left their ill courses, and a very large one for infants exposed in the streets by their wretched parents. The chief hospital is that of St Spirito, near the Vatican, erected by INNOCENT III, above five hundred years ago, for exposed infants, on his finding great numbers of them at the bottom of the Tiber: it has been much enlarged by succeeding Popes, and appears now like a little town. Besides children, they receive here above a thousand sick and infirm persons; and have apartments for poor gentlemen, where they are treated in a better manner than in common hospitals. It is under the government of a Cardinal, who hath his palace within the walls of it. The revenues amounting to near forty thousand pounds per annum, and they have apothecaries shops well furnished within the house, with physicians and surgeons who also reside here. As to the foundling children, their parents, or any other person for them, carry them to a back wall of the hospital, where a place is made to receive them, and ringing a bell, a servant comes and takes the child, asking no other question, but whether it be baptized. The boys are educated by monks, and the girls by nuns, in different apartments, and are provided for when they grow up.

Hospitals.

St Spirito.

Every

CHAP.  
XVII.  
Pope's  
Dom-  
inions.

Every nation in Europe, where the Roman Catholick religion is professed, have their hospitals for pilgrims in this city, but this of the Trinity receives all indifferently; insomuch, that it hath lodged and fed at one time fifteen thousand persons, besides their ordinary quota. The manner of receiving and treating of the pilgrims is thus: every evening those who are newly arrived present themselves before the officers of the house, and producing their certificates, are entered on the register, each person receiving a medal, or ticket of his admission: after this they are led into a large room, where a priest having read prayers, washes all their feet, and dresses such as are hurt with travelling: after which they are brought into the refectory, where having supped, they are shewn the common dormitory, and each man having his bed assigned him, the priest after some short exhortations and prayers leaves them to take their rest.

The Paz-  
zarella.

Pazzarella, or hospital for mad people, pretty much resembles Bedlam in its institution, unless it be that the charity is more extensive, and provides for persons of all countries who are disordered in their senses, as appears from a story related by a traveller of reputation. He says he was walking in this mad-house with another English gentleman, who had resided several years at Rome, who took that opportunity of acquainting him with an adventure of two English Quakers, who were merchants in Italy, and had learnt the language. These gentlemen, it seems, in the abundance of their zeal, looked upon it as a meritorious undertaking to endeavour the conversion of his Holiness the Pope, and accordingly applied themselves to his domesticks for an audience; nor were they at all backward in declaring their business in their usual cant and phrases. They were laughed at, at first, as people that were disposed to be merry; but continuing their solicitations from day to day with great earnestness, they were at length taken for madmen, and the Pope's officers, in meer charity, sent them to Bedlam, or the Pazzarella, as it is called. The Governor of the house taking their zeal and unusual transports for certain symptoms of a disordered brain, shut them up in a dungeon, and treated them with the utmost rigour: the physicians also purged them off their legs, repeating and strengthening their doses, as they observed their flights and extasies increase; but all proving ineffectual, they were at length neglected as insatuated persons, past all cure, and permitted to walk about the house among the harmless lunatics; till the above-mentioned gentleman coming to see the hospital with some friends, and meeting these Quakers, after a little discourse with them, understanding the bottom of the matter, procured them to be dismissed, and sent to England; where no doubt they acquainted their friends with the success of their adventure, which probably deterred their brethren from making any further attempts of this nature. But to return to the charitable institutions at Rome: besides many other publick hospitals, almost every company or body of artificers have their hospitals among themselves, and provide for such of the fraternity as are infirm, or otherwise distressed, till they can procure them admission into the greater hospitals. In the church of the twelve Apostles are chosen annually, twelve noblemen, and one Prelate, called their Prior, who make it their business to search every corner of the city, to find out poor

men in want who are ashamed to beg, and relieve their necessities. Even the lawyers of Rome, the colleges of advocates and attornies, 'tis said, assign one day in a week for accommodating poor men's suits, or bringing them to an issue at their own charge.

There are hospitals also founded for poor maids, who are educated and provided for till they come to women's estate, when they have their choice of a married life or a nunnery; to three hundred of whom the Pope annually distributes a purse of money, as their portion; and the Cardinals, and other charitable people do the same for others: and some Monks and Friars in the religious houses make it their business to teach grammar to the children of poor people gratis, to fit them for the university; which brings me to enquire after the education of lads in their seminaries and colleges.

The university and publick schools here, called Colleges; the Sapienza, were founded by Pope EUGENIUS IV, enlarged and beautified by URBAN VIII and ALEXANDER VII. The structure is magnificent, and the schools of all the faculties extremely commodious; and there are no less than forty Professors, who have good salaries; but they have very little business since the erecting the Jesuits college, who seem to have engrossed the education of youth here, and in most Roman Catholick countries. A modern traveller relates, that at his being at Rome, all the readers of this university together, except those of law and physick, had not forty auditors, besides some strangers who accidentally came in, and whose presence seemed very acceptable: the Professors being obliged to read lectures at their stated hours, though nobody attended them. Every nation almost has its particular seminary or college in Rome, who send their students however twice a day to the Roman college of Jesuits, which was founded for divinity, philosophy, and mathematicks, by GREGORY XIII: it is a large and noble building, with a magnificent new church, esteemed equal to any in Rome, except St PETER'S. The English college was formerly an hospital for pilgrims of this nation, and converted into a college by GREGORY XIII. Cardinal HOWARD much enlarged and beautified it, and built himself a palace adjoining to it. The superiors of this college are Jesuits, but the students of the secular clergy, and seldom exceed eighteen or twenty, though the foundation be for fifty or more. Every one who is admitted to study here, after six months probation, is obliged to take a vow to enter into orders after having completed his studies, to serve so many years as a missionary in England, and not to enter into any order of regulars.

The palaces in Rome are very numerous, the nobility of Italy chusing to reside most part of the year in towns: and as architecture is one of their favourite amusements, and they are furnished with greater variety of rich materials from the ruins of the old city, and their own quarries, than are to be met with elsewhere; it is no wonder if the beauty of their houses in general exceeds that of other cities; for we are not to imagine but there are palaces in Europe which equal, and even surpass any that we meet with in Rome, particularly some of the French King's; and as to those of private noblemen, that of the Duke of Devonshire at Chatsworth, and some others in England, do not fall short of the best in Italy.

Pope's  
Dom-  
inions.  
The Va-  
tican.

The palace of the Vatican, near St PETER's church at Rome, where the Pope usually resides in winter, is large and commodious, but far from a regular building. It is, according to a late writer, a heap of good pieces ill joined together, as Princes houses generally are; advantageously situated on an eminence, to which we ascend from St PETER's church by a good number of stairs, which lead into the great hall, or Sala Regia, where the Pope gives audience to Ambassadors; much admired, for the exquisite paintings with which it is adorned, as the Pope's condemnation of heresy, his return from Avignon after he had been driven from Rome, the subdued Emperor FREDERICK's kissing his toe, St LEO in his pontifical habit meeting ATTILA King of the Huns, the circumcision of St PETER and the conversion of St PAUL by MICHAEL ANGELO, the victory over the Turks at Lepanto, &c. The parts of this palace most admired, are the great stair-case, the apartment where the Conclave is held, the Pope's apartment on the east side, the Clementine hall, that in which they preach in Lent to the Papal family; but above all, the building which contains the Vatican library, which is so beautiful a fabric, that, according to a late traveller, it will admit of no addition: nor is the library itself inferior to the case, being the richest in the world, both in printed books and manuscripts; and indeed, it is not a single library, but a collection of some of the best in Europe, as the Elector Palatine's, the Duke of Urbino's, &c. with nineteen hundred scarce manuscripts, presented by CHRISTINA Queen of Sweden. Dr BURNET in his description of this library says, the case is great, but that which is lodged in it much greater; for here is a collection of books which fills a man's eye. There is first a great hall, and at the end of it there run two galleries, of so vast a length, that though the half of them is already furnished with books, yet one would hope there is room left for more new books than the world will ever produce. When it appeared I was come from England, says the same writer, King HENRY VIII's book of the Seven Sacraments was shewn me, with an inscription upon it with his own hand to LEO X; together with a collection of some letters which he wrote to ANNA BULLEN, of which some are English, and some are French; 'I that knew his hand well, saw clearly they were no forgeries.' A copy of one of these is given us by Mr ADDISON, and is as follows:

THE cause of my writing at this time, is to hear of your health and prosperity, of which I would be as glad as in manner of my own; praying God, that it be his pleasure to send us shortly together; for I promise I long for it, howbeit, I trust it shall not be long too: and seeing my darling is absent, I can no less do than send her some flesh, prognosticating that hereafter thou must have some of mine; which if he please, I would have now. As touching your sister's mother, I have consigned WALTER WELSH to write to my Lord MAUWRING my mind therein, whereby I trust he shall not have power to displease her; for surely, whatever is said, it cannot so stand with his honour, but that he must needs take his natural daughter in her extreme necessity. No more to you at this time, my own darling, but that with a whistle I wish we were together one evening by the hand of yours

HENRY.

These letters are shewn to every Englishman who visits the Vatican library. The manuscripts of greatest antiquity, if they are genuine, are a VIRGIL and TERENCE above fourteen hundred years old; the gospels, written by the hand of St CHRYSOSTOM; an antient Hebrew bible, written on pieces of parchment fastened together in length, and rolled up, from whence comes the word *volumen*, signifying a book. There are also several antient bibles in all the oriental languages; Chinese and Japonian books, antient Roman table-books, &c. The library, as well as the rest of the palace, is adorned with excellent paintings; among the rest there is a representation of all the general councils, antient libraries, and learned men, who have contributed to the advancement of arts and sciences. These paintings and inscriptions make ADAM, instructed by God, the first inventor of sciences and letters; the sons of SETH of astronomy; ABRAHAM the author of the Syriac and Chaldean; and MOSES of the antient Hebrew; and ESDRAS of the modern. In the same pieces JESUS CHRIST is represented as the sovereign teacher of the heavenly doctrine, and the Pope his Vicar, under the form of SIXTUS V, said to be the best resemblance of that Pope. And, lastly, the Emperor is represented as defender of the church and the catholic faith. In the same manner the General Councils are embellished with what was most remarkable in them. In the Council of Nice is represented the condemnation of ARIUS, for denying that CHRIST was of the same substance with the Father. In that of Ephesus is the condemnation of NESTORIUS, for having separated the two natures of CHRIST, and denying the Virgin MARY to be the mother of God. In that of Trent the condemnation of the Lutherans and other Protestants called hereticks; and so of the rest. There are three galleries over one another in the Vatican, filled with the paintings of the greatest masters, which must not be forgot: one of them is covered with pieces of sacred history, done by the celebrated RAPHAEL. The chapel of SIXTUS V, adjoining to the Sala Regia, is admired for its structure, as well as a representation of the Last Judgment by MICHAEL ANGELO, held to be inimitable: the paintings in the Capella Paulina over-against it are equally admired. In another part of the palace the victory of CONSTANTINE over MAXENTIUS, the resignation and renunciation made by CONSTANTINE to St SYLVESTER by putting the plan of Rome into his hands, the coronation of CHARLEMAGNE, and many other admirable pieces of painting are shewn, which would be too tedious to enumerate. From the palace strangers are led to the adjoining garden of Belvidere, so called from its delightful situation: it is divided into three parts, or rather is three entire gardens, the first travellers denominate the Privy-Garden, full of pleasant walks, fountains, and cascades; and here lies the famous pine-apple of gilt brass, which antiently stood on the Moles Adriani, and contained the ashes of that Emperor, being three fathom in circumference; and by it are two large peacocks of the same metal, taken from the tomb of SCIPIO AFRICANUS. The second garden is remarkable for a great variety of antique statues; among which is that of LAOCOON with his two children, and serpents twining about them, of one entire piece of marble; a dying CLEOPATRA, APOLLO, PYTHIAS, VENUS coming out of a bath, with the representations of Nile and Tiber in cumbent postures, and

XVII.  
Pope's  
Dom-  
inions.

Belvidere.

CHAP.  
XVII.  
Pope's  
Domi-  
nions.

and many others, all of marble, and so exquisitely wrought, that they are esteemed some of the best pieces of antiquity. The third enclosure is admired for it's fine walks, fountains, grotto's, and exotick trees. I shall leave the palace of the Vatican with observing, that most travellers relate it contains above twelve thousand rooms, which, considering the largeness of many of them, seems incredible; I believe most of our writers take this fact from others, as little acquainted with the matter as themselves; and indeed I am so far of Misson's mind, that it is not worth any man's while to number them, if he had leisure and opportunity of doing it: it is sufficient that we acknowledge it to be vastly large, and equal to the grandeur of it's master, who wears the triple crown, and claims the sovereignty of all the Princes and States upon earth.

The  
palace of  
Monte  
Cavallo or  
the Qui-  
rinal.

The second of the Pope's palaces is that of Monte Cavallo, or the Quirinal, situate on the Mons Quirinalis, where the Pope usually resides in the heat of summer; said to take it's name from two gigantick statues of ALEXANDER with their Bacephali, erected before the gate, the works of PHIDIAS and PRAXITILES, and presented by TYRIDATES King of Armenia to NERO, according to tradition. This place, tho' much less than the Vatican, containing but seventeen hundred rooms, is fit to receive the greatest monarch in the world. Here also are an infinite number of exquisite paintings, and it's furniture is answerable to the magnificence of the building: but what travellers most admire are it's gardens, where the walks are planted with myrtle, laurel, and orange-trees, and adorned with near two hundred fountains, which continually discharge large sources of water; and here is a grotto where organs are played by water, accompanied with the notes of birds, which make a very agreeable harmony. Among a great number of antique statues placed here, those of APOLLO and JUPITER the Thunderer are preferred to the rest.

The Ca-  
pitol.

The third of the Pope's palaces is the Capitol, a modern structure built upon the ruins of the ancient Capitol, admired for it's agreeable situation and the antiquities it contains, as the two lions of Egyptian marble, which throw up vast floods of water; the two Colossus's called CASTOR and POLLUX, and two horses of the finest marble, with the trophies of MARIUS and TRAJAN; the equestrian statue of MARCUS AURELIUS brass gilt, with the celebrated fountain of Aqua Felice, in the middle of the square; the statue of ADRIAN, in the habit of a Priest going to sacrifice; that of FAUSTINA ANTIQUA on the stair-case, and those of JUNO and AGRIPPINA; the lion devouring a horse; the busts of TRAJAN and ANTONINUS PIUS; the brazen tables whereon the ancient law is engraven in golden characters. Among the modern curiosities are the marble busts of URBAN VIII, LEO X, ALEXANDER FARNESE, and other Generals of the church; the brazen Colossus's of INNOCENT XI and SIXTUS V; the marble statue of Queen CHRISTINA, with a Latin inscription, purporting, that having triumphed over herself, preferring a religious retirement to the throne of her ancestors, and submitted herself to the apostolick See, she ascended the Capitol, where admiring the old Roman grandeur in it's majestick ruins, she conferred regal honours on the Senate and Consuls assembled there. The antiquities in the chamber of the Festus Consulares are also much admired; the heads of SOCRATES, DIOGENES,

and PLATO; the representation of the ancient magistrates in marble, the head of MITHRIDATES, the statues of SILENCE, CYBELE, and CERES, that of HERCULES in brass, and that of the Courier's taking a thorn out of his foot, ROMULUS and REMUS suckled by a wolf, HERCULES, BRUTUS, and other ancient heroes. Among the historical pieces in the great hall are, the rape of the Sabines, the fight between the HORATII and CURATII, HORATIUS COCLES defending the bridge against the army of TARQUIN, and the bold action of MUTIUS SCÆVOLA. From the Capitol strangers are led to the Tarpeian rock, from whence traitors used to be precipitated; of whom TITUS MANILIUS was the first, a person who had received six crowns for having distinguished himself as often in his country's service, and thirty-seven rich presents as marks of the republick's gratitude and affection: he had also received three and thirty wounds in the fore-part of his body, and obtained the surname of CAPITOLINUS from his defending the Capitol against the Gauls; yet for his aspiring to the sovereignty, and endeavouring to render himself master of the city, was condemned to be thrown from this rock: which would not have been looked upon as a very severe sentence, if it had been no higher than it is at this day, when travellers tell us it is but an ordinary leap; so much is the face of the ground altered.

The next palace I shall mention is the apostolick chancery, which, according to DE LA MOTTAÏE, may be ranked among the finest palaces of Rome, if we regard the regularity of it's architecture, the disposition of it's apartments, and the happy distribution of the paintings and statues which adorn it; of which the best judges prefer the two CHRISTs by RAPHAEL, the blessed Virgin by GUIDO RHENI, and the ADONIS by SPAGNOLETTO. This palace was built out of the ruins of VESPASIAN's amphitheatre, and the triumphal arch of GORDIANUS.

The  
palace of  
the chan-  
cery.

The palace of Farnese, belonging to the Duke of Parma, and built by Pope PAUL III, is a square fabrick, and one of the most magnificent in Rome, admired by travellers for the piazza and fountains before it, and for it's beautiful front, an hundred and eighty foot in breadth, and ninety in height; for the statue of HERCULES FARNESE in the court with his club and lion's skin, that of AUGUSTUS in the gallery; but chiefly for that of DIRCE fastened to the horns of a bull by her hair, with the figures of the persons who bound her, endeavouring to throw both the bull and her into the sea, all as large as the life, of one entire piece of marble, even to the rope, which is admirably imitated: but 'tis scarce credible, that the Venetians should offer the weight in gold for this piece, admitting it to be as exquisitely wrought as it's greatest admirers can feign. In the hall is a fine statue of ALEXANDER FARNESE Duke of Parma, the King of Spain's successful General in the Netherlands, trampling upon two prostrate statues, representing Heresy and Rebellion, while he is crowned by a Fame. All these figures are of white marble, and of one entire stone: round the hall also stand a great number of statues, representing gladiators with their swords in their hands upon their guard in various postures. The ceiling of the gallery, according to Dr BURNET, is one of the best pieces of painting extant; and among the great number of heads of the Greek philosophers and poets that are here, the two

that struck him most were those of SOCRATES and HOMER, but chiefly the former; which, as it is really antique, carries in it all the characters which PLATO and XENOPHON give of SOCRATES, as the flat nose, the broad face, the simplicity of look, and the mean appearance which that great philosopher made. In the library are several admirable pieces of painting, amongst which, the Last Judgment by MICHAEL ANGELO is one.

The  
palace of  
Giusti-  
niani.

The palace Giustiniani near the Pantheon, is held to contain the greatest number of antiquities and excellent paintings of any in Rome: one is struck, says MOTRAYE, at the very entrance of the court with the bas-reliefs and statues which adorn it, especially that of MARCIANA, representing the goddess of health, that of SCIPIO AFRICANUS, CERES, &c. and on ascending the steps to the house, one is agreeably detained by those of GALIENUS, ANTONINUS, TITUS VESPASIAN, and many more; and on the top of the steps with the busts of AGRIPPINA, JUPITER, MAXIMILIAN, BERENICE in her hair, with an excellent bas-relief of JUPITER sitting on mount Olympus, and drinking the milk of the goat Amalthea out of a horn, while a little Satyr dances and plays on an instrument before him.

The  
palace of  
Barberini.

The palace of Barberini alle Fontane, according to the same author, is incomparably magnificent, very large, and an invaluable treasury of antiquities, adorned with the finest paintings and richest furniture. The palaces of Altieri, Colonna, Chigi, Mazarini, Pamfili, Altemps, Gaitani, and many others, would afford infinite satisfaction to those who are judges in architecture, sculpture, and painting; but it would be endless to enumerate all the beauties and curiosities of this nature in Rome. No city whatever, according to this writer, can shew either within it's walls, or in it's neighbourhood, so many fine palaces, adorned with so many different pieces of antiquity, and such pleasant gardens, where nature and art have each of them contributed their joint endeavours to beautify and enrich them; and of which whatever we see noble of that kind in other parts of Europe are but imitations; at least, one can no where meet with so great a number of columns, statues, and other curiosities, of such different sorts of marble, as oriental, Egyptian, serpentine, gial antico, verd antico, jasper, &c. nor are there any where so many ingenious architects and carvers as in Rome and Italy, and who come so near to the perfection of the antients, and even surpass them in architecture. As for sculpture, neither the modern statuary or engravers have been yet able to arrive at the art of giving their works so much life and spirit as the antients.

But notwithstanding all these high flights in regard to the Roman architecture, MISON, in one of his letters, desires his friend to lay aside that partial opinion he had entertained of it: the Romans, says he, have no secret knowledge, or infused gifts, about this matter, beyond other men. And notwithstanding all the eulogies that have been given to the palace of Farnese, no Prince in Europe would at this day build him a palace exactly upon that model; and to affirm there is nothing in the world comparable to it, is only the effect of a prejudiced understanding. Without going out of England I shall always be in a condition to demonstrate, that Chatworth in Derbyshire is preferable to the palace of Farnese; and that the

skilful Mr TALMAN, the architect of Chatworth, who has made use of the knowledge of all the celebrated restorers of that art, had acquired a degree of capacity that exceeds perhaps that which MICHAEL ANGELO was master of in his time. It is not the materials of the palace of Farnese, which is built with brick, and plastered over, except the door-cases and corner pieces; nor it's three rows of windows without pillars, like an hospital; nor the disposition of the apartments, which are built now after a much more agreeable and convenient manner, than can be boasted of in this, or any other Roman palace; but it is the famous antique statues, pillars, and excellent paintings, that are to be admired in and about this house, which are foreign to, and no part of it. Nor is MISON the only traveller who is of this opinion. The contrivance of the Romans in their palaces, says Dr BURNET, is not to be admired; there are a great many things in them that offend the sight, the doors are generally mean, and the locks meaner; the floors of brick bear no proportion to the rest of the room, which creates a sensible dislike. There is indeed a great series of noble rooms one within another, of which their apartments are composed; but there is not at the end of the apartments where the bed-chamber is, such a disposition of rooms for back-stairs, dressing-rooms, closets, servants rooms, and other conveniences, as are necessary for accommodating an apartment; so that, notwithstanding all the riches of their palaces, it cannot be said they are well lodged in them. Nor are their gardens kept up as they ought: indeed no people lay out so much wealth at once as the Italians do in building and finishing their palaces and gardens, and afterwards bestow so little in preserving them. As to furniture, the publick apartments of their palaces are all covered with pictures, but those where they lodge are hung either with red velvet or damask, with a broad gold galloon at every breadth of the stuff, and a gold fringe at top and bottom; there is not much tapestry in Italy. But to return to their buildings; their palaces are usually built about a square court, like that of Somerset-house, having a piazza below, and galleries above; and sometimes a colonade and fountains before them, as well as in their courts and gardens. Give me leave to add a word or two out of the judicious Mr ADDISON, in relation to the materials their antique pillars are composed of: Several of these pillars, says that gentleman, are certainly rated at a much lower price now than they were of old; for not to mention what a huge column of granite, serpentine, or porphyry, must have cost in the quarry, or in it's carriage from Egypt to Rome, we may only consider the great difficulty of hewing it into any form, and of giving it the due turn, proportion, and polish. It is well known how these sorts of marble resist the impression of such instruments as are now in use. There is indeed a Milanois at Rome who works in them; but his advances are so very slow that he scarce lives by it. He showed me a piece of porphyry worked into an ordinary salver, which cost him four months continual application before he could bring it into that form. The antients had probably some secret to harden the edges of their tools, without recurring to those extravagant opinions of their having an art to mollify the stone, or that it was naturally softer at it's first cutting from the rock, or what is still more absurd, that it was an artificial composition, and not the natural product of mines and quarries.

CHAP.

CHAP.  
XVII.  
Pope's  
Dom-  
inions.

The most valuable pillars about Rome for the marble of which they are made, are the four columns of oriental jasper in St PAULINA's chapel at St MARIA MAGGIORE; two of oriental granite in St PUDENZIANA; one of transparent oriental jasper in the Vatican library; four of nero bianco in St CECILIA TRANSTEVERE; two of brocatella, and two of oriental agate in Don LIVIO's palace; two of giallo antico in St JOHN DE LATERAN's; and two of verdi antique in the Villa Pamphilia. These are all entire and solid pillars; and made of such kinds of marble as are no where to be found but among antiquities, whether it be that the veins of it are undiscovered, or that they are quite exhausted upon the antient buildings. Amongst these old pillars, there is great part of an alabaster column found in the ruins of LIVIA's portico, of the colour of fire, which is now placed over the high altar of St MARIA in Campitello, having been cut in two pieces, and fixed in the shape of a cross, in a hole in the wall made on purpose to receive it; so that the light passing through it from without, makes it appear to those who are in the church like a huge transparent cross of amber. As to the workmanship of the old Roman pillars, it is observed, that the antients have not kept to the nicety of proportion, and the rules of art, so much as the moderns; for which the workmen of Egypt and other nations are sometimes blamed, who sent most of the antient pillars ready shaped to Rome. Others are of opinion, that the antients knowing architecture was chiefly designed to please the eye, only took care to avoid such disproportions, as were gross enough to be observed by the sight, without minding whether or no they approached to a mathematical exactness. Others again imagine it to be an effect of art, and of what the Italians call the gusto grande, rather than of any negligence in the architect; for that the antients always considered the situation of a building, whether it was high or low, in an open square or in a narrow street, and more or less deviated from the rules of art, to comply with the several distances and elevations from which their works might be viewed.

Piazza's or  
squares.

There are also some noble piazza's in Rome called, by the French, Places, and by the English squares, let them be of what form they will, several of which have obelisks or pillars, and fountains in the middle of them. The chief whereof are, 1. The antient Forum Romanum, now the Campo Vaccino, where formerly stood the Rostra, made of the stems of ships. Here causes were heard, and orators harangued the people, and here the decrees of the Senate were published. The head of CICERO, who had often honoured this place with his eloquent orations, was set upon a pike here by the command of MARK ANTHONY, against whom it was supposed his Philippicks were written. Here also travellers are shewn the place, where, according to tradition, there was a gulph or lake, which had swallowed up several houses, and infected the whole city with a pestilential air; which the people having long in vain endeavoured to fill up, and consulting the oracle about it, were told nothing would avail, unless the most precious thing in Rome were thrown into it. After having cast in great quantities of silver, gold, and jewels, without success, MARCUS CURTIUS, a noble Roman, imagining nothing could be more precious than the life of a young man, threw himself well armed and mounted into the pit; whereup-

on the gulph closed, and the contagion immediately ceased. 2. The piazzadi Pasquino, so called from an old broken statue, standing against the wall at the corner of one of the streets which opens into this square, on which are fastened all lampoons and libels, from thence called Pasquinades; which are answered by others fixed to an old statue, in another part of Rome, called MARPHORIO. 3. The piazza Colonna. 4. The piazza Navona. 5. The piazza Farnese. 6. The piazza de Spagna. And, 7. The piazza del Popolo; where most of the principal streets meet, before the gate del Popolo, antiently the Flaminian gate, through which several great roads lie to other cities of Italy. And this naturally brings me to the antient Roman highways, the remains whereof are not the least instance of their grandeur. The chief of them were the Via Flaminia and the Via Appia; though there was scarce a single city that had not a way paved to it, on which travellers and carriages might go in the depth of winter, as well as in summer. The Via Flaminia, so called from the noble Roman who projected it, led to Ariminum, now Rimini, and was begun to be paved in the year of Rome 533. It was afterwards carried by the Emperor VESPASIAN over the Apennine, as far as the Adriatick sea; extending above two hundred miles, several other ways branching out from it. The Via Appia, so called from blind APPIUS the Senator, who directed the work, led from the Porta Capena or Appia, to Capua and Brundisium; extending three hundred and fifty miles and upwards, and was paved in the year of Rome 442, from whence also several other ways were branched out to the cities in the south-west parts of Italy. We travelled, says Mr RAY, a whole afternoon along the Tiber upon the Via Flaminia, which reaches quite cross Italy from Rome to Rimini: it is paved with broad flints and pebbles, having on each side a border of stone, and in that border, at every second or third pace, a stone standing above the level of the border. The Via Appia, according to Dr BURNET, is still in a good condition in many places between Rome and Naples. This highway is twelve foot broad, all made of huge stones, most of them blue, generally a foot and a half large on all sides. The strength of this causeway appears in it's long duration, for it hath lasted above eighteen hundred years, and is in most places for several miles together as entire as when it was first made: and the botches that have been made in mending such places as have been worn out by time, shews a very visible difference between the antient and modern way of paving. One thing seems strange, that the way is level with the earth on both sides; whereas so much weight as those stones carry should have sunk the ground under them by it's pressure: besides, that the earth, especially in low grounds, receives a constant increase, chiefly by the dust which the winds or rains carry down from the hills, both which reasons should make a more sensible difference between those ways and the soil on both sides, which makes me apt to believe, that antiently those ways were a little raised above the level of the ground, and that a course of so many ages hath brought them to an equality. They seem chiefly designed for those who go on foot; for as nothing is more pleasant than to walk along them, so nothing can be more inconvenient for horses, and all sorts of carriage; mules seem to be the only beasts of burthen that can hold out long in this road, which beat all horses after they have gone

gone it a little while. Thus far the reverend doctor. But why these ways should be more inconvenient for wheel-carriages than the paved streets in London, I cannot apprehend, though one would not chuse to ride either on the one or the other, but to avoid deep ways.

### CHAP. XVIII.

*Contains an abstract of the history of Ancient Rome.*

Italy peo-  
pled from  
Greece  
and Asia  
Minor.

AS sacred history informs us that paradise was seated between the Tigris and Euphrates, and that the posterity of Noah after the flood descended from the mountains of Armenia, and first planted themselves in Assyria and Mesopotamia (the present Turcomania and Diarbeck) upon the banks of those rivers; it is observable that prophane history and tradition so far agree with the penmen of holy writ, as to make Assyria the first scene of action, and the first monarchy upon earth, from whence the rest of the world was gradually peopled. Those detachments which travelled westward, soon came to the shores of the Mediterranean, and planted colonies in the Lesser Asia, Syria, Phœnicia, and Egypt; and as these increased, they extended themselves to Greece, Italy, France, Spain, and Africk, as far as the straits of Gibraltar upon the great Western or Atlantick Ocean. But to come to the point: As Italy lay next in their way from the Lesser Asia and Greece, we have all the reason in the world thus far to agree with the general tradition, that this country was planted by colonies from thence; especially when we find the southern part of Italy actually called *Magna Græcia*, and the whole country sometimes so denominated from thence: and as every fiction almost hath some foundation in history, the fable of *ÆNEAS* and his Trojans settling themselves on the shores of Latium, may possibly have some mixture of truth blended with it. That there was such a people as the Trojans in the Lesser Asia, and that they were driven from thence by a confederacy of the neighbouring powers, and afterwards planted themselves in Italy, is not in the least incredible, though most of the circumstances which *VIRGIL* and others have invented to cast a lustre on the Roman State, as springing from so glorious an original as they have feigned, were admitted to be false. But to proceed in the story: Pious *ÆNEAS* soon after his landing addressing himself to *LATINUS*, then King of Latium, obtained his only daughter *LAVINIA* in marriage, and upon the death of his father-in-law succeeded him in the kingdom, removing the seat of his government from Laurentum to Lavinium, a city he built in honour of his Queen, and dying not long after, left his petty dominions to his son *ASCANIUS*. This Prince built the city of *ALBA*, and made it the capital of his territories, which his posterity enjoyed successively for eleven generations, till it came into the hands of *PROCAS*, who leaving two sons, viz. *NUMITOR* and *AMULIUS*, the younger found means to depose the elder brother, and in order to secure the crown to his posterity, made *RHEA SILVIA*, the only daughter of *NUMITOR*, take upon her the habit of a Vestal, and vow virginity: But *MARS*, or some other happy mortal, surprizing the fair Nun asleep, as it is said, made her the mother of two brave boys, who afterwards went by the names of *ROMULUS* and *RE-*

*ÆNEAS*  
and his  
Trojans  
land in La-  
tium.

The birth  
of *ROMU-  
LUS* and  
*RE-*

*MUS*. The usurper no sooner heard of it, but he locked up the mother, and ordered the two infants to be exposed: whereupon the person who was entrusted with the matter left them under a tree upon the banks of the Tiber; and being found there by *FAUSTULUS* the King's shepherd, who was not in the secret, he carried them home to his wife *FAUSTINA*, and bred them up with his own children. *FAUSTINA* having in her youth been a common prostitute, called in Latin *Lupa*, this 'tis said gave rise to the story of their being nursed and suckled by a she-wolf: though some still will have them to be nourished by a real wolf; while others again reject the whole as a fable. But to proceed; *ROMULUS* and *RE-*  
*MUS* being two enterprising young fellows, and acquainted with their relation to old *NUMITOR* their grandfather, who had been deposed, formed a conspiracy against *AMULIUS*, who was surprized by them, and *NUMITOR* restored to his throne; after which they left him to reign in peace at Alba, and either built or fortified a town on the banks of the Tiber, which has ever since been known by the name of Rome, from *ROMULUS* its founder; though others say the town was so called long before, and that *ROMULUS* making it the seat of his residence, received his name from the town, and not the town from him. But however that matter be, the two brothers, according to tradition, falling out about the building or fortifying it, *RE-*  
*MUS* had the misfortune to be killed in the skirmish, and left his brother *ROMULUS* in the sole possession of the place; whose inhabitants being for the most part a loose idle generation, who had been assembled by the two brothers, and subsisted chiefly by hunting or rapine, invited all people of the same disposition to join them, as well to defend what they had thus violently gotten from the neighbouring powers, who were exasperated at their ravages, as to enlarge their territories, which were at present too small to subsist any number of men. Historians generally ascribe several politick institutions to *ROMULUS*, as that he commanded that no child should be killed unless it was deformed; a barbarous custom then very common in Italy and Greece. That he ordered all the slaves in Rome should have their liberties, and the privileges of citizens, from whom afterwards descended many of the best families. Nor were the most considerable of those who were made prisoners of war suffered to be sold for slaves, as was the practice of other Italian States, but enrolled also among the number of Roman citizens, while he supplied their places in the conquered provinces with the poorest of his Romans, whereby he secured the obedience of the places he made himself master of. The expedient he took to provide his people with wives also, by carrying off great numbers of the Sabine virgins who were assembled to see their rural sports, must not be forgot; which perhaps was done with an intent to provoke that people to enter into a war with them, wherein they hoped to be gainers, as well as on the account of their want of women. *ROMULUS* is supposed to have begun his reign about the year of the world 3300, and to have reigned thirty-seven years and some odd months, being succeeded by *NUMA POMPILIUS*, who was a man of peace, and spent his time in reforming their barbarous customs, and the establishment of their priesthood and religious rites: and after a long reign of three and forty years, was succeeded by

TULLUS HOSTILIUS, anno 3381, who regulated their military discipline, and entirely ruined the city of Alba, the mother of Rome; during which war was that memorable engagement between the three HORATII in behalf of Rome, and the three CURIATII on the side of Alba; where two of the HORATII being killed, the other feigning a flight separated the CURIATII, and kill'd them all one after another. HOSTILIUS, 'tis said, was kill'd by a thunderbolt after he had reigned one and thirty years, and was succeeded by ANCUS MARCIUS, anno 3412, as guardian to the children of HOSTILIUS, but procured himself to be declared King; after which he subdued some tribes of the Latins, and incorporated them with the citizens of Rome. He was successful also against the Veientes, and extending his conquests as far as the Tuscan sea, built the port of Ostia at the mouth of the Tiber; and having reigned three and twenty years, was succeeded by TARQUINIUS PRISCUS, anno 3437, who is said to be the first of the Romans that wore a crown: he subdued part of Tuscany, beautified Rome, increased the number of the Senate to an hundred, and the Roman Knights to three hundred; appointed the Fasces to be carried before the magistrates, and the ornaments and badges of the several offices, to distinguish them from the common people. In his reign the Gauls made themselves masters of that part of Italy which lies on each side of the Po, and thereupon obtained the name of Gallia, but at present is known by the name of Lombardy. He died in the thirty-eighth year of his reign, and was succeeded by SERVIUS TULLUS, *A. M.* 3475; who having had great success against the Tusci and Veientes, enlarged the city, extended the walls, numbered the citizens, took an account of their estates, and divided them into thirty tribes, levying a tax on them every five years, which he call'd *Lustrum* or *Census*. He also enacted that only the most wealthy citizens should bear arms, from whom he expected the best service, as they fought in defence of their private rights, which those who have little to lose are not very solicitous about; and this gave the Roman soldiery, 'tis said, a vast superiority over the rabble the armies of their enemies were composed of. This Prince was kill'd by TARQUIN, surnamed *the Proud*, in the forty-sixth year of his reign, who afterwards usurped the crown, anno 3521. TARQUIN having reigned about four and twenty years, and committed many acts of oppression and violence, the people were so enraged against the usurper, that they took an occasion, from his son SEXTUS's ravishing LUCRETIA, to drive him out of the city, and alter the form of government, electing BRUTUS and COLATINUS for their consuls, or chief magistrates; the latter being the injured husband of LUCRETIA; so that it is computed the Kingly government lasted about two hundred and sixty years, and the Consular began about the year of the world 3545.

TARQUIN the usurper had however many friends in the city, who entered into a conspiracy for his restoration, and amongst the rest the two sons of BRUTUS, which being timely discovered, they were brought before the Consuls in order to be tried. BRUTUS sternly demanded of his sons what they had to say in their defence, who remaining silent, he immediately ordered them to be beheaded, and only staying to see this execution done, he left the rest of the

VOL. II.

conspirators to the mercy of his colleague; an act which has been applauded by some, as proceeding from an uncommon virtue, and censured by others as the effect of a cruel and unnatural temper; and surely most men must reflect upon it with horror. Had this rigour been used in defence of a lawful Prince, or any settled government whatever, there might have been some colour for this severity; but when it was only in support of another usurpation, and to subvert the ancient form of government, where could be the virtue of imbruing his hands in the blood of his own children? He could only propose to establish a new kind of tyranny; and such it seems it proved to the common people not long afterwards, much heavier than that of any of their Kings. But to proceed in the history; TARQUIN found many friends among the neighbouring Princes, who levied forces in his behalf, and laid siege to the city of Rome, the chief of whom was PORSENNA, the King of Etruria or Tuscany, who had actually taken the place if they had not purchased their peace with a sum of money, and given hostages not to forge any arms or iron-work, but what was necessary for their husbandry. The Roman historians indeed endeavour to cover the weakness of their ancestors, and tell us that it was the courage and resolution of the Romans, that induced PORSENNA to raise the siege, of which they give us such instances as can scarce be credited. The celebrated COCLES, 'tis said, when the Romans were driven back in an unfortunate sally, and the enemy upon the point of entering their gates, defended a bridge against their army by the assistance of two persons only, till his own party broke down the bridge behind him, and then throwing himself into the river, in his armour, swam over to the other side. A second instance they give is that of MUTIUS, who intending to assassinate PORSENNA, and mistaking another person for him, when he was brought before the King to be examined, thrust his right hand into a pan of burning coals which stood ready for the sacrifice, and burnt it off, to atone for his mistake, telling him that there were hundreds in Rome that had vowed to kill him as well as himself. At which the King was so astonished, that he dismissed him without punishment. A third instance is that of CLELIA, who being delivered as a hostage to the Tuscans, with several other noble Virgins, and obtaining leave to bathe in the Tiber, they all mounted on horseback and swam over to their friends, though the Consul it seems sent them back to the enemies camp! But whether the Romans purchased their peace with treasure, and by submitting to such ignominious terms as PORSENNA was pleased to impose upon them, or their obstinate courage was the principal inducement for his raising the siege, certain it is he withdrew his forces, and retired into Tuscany; which he had no sooner done, but the Sabines and Latins entered into a confederacy against the Romans.

As the Consuls who presided in the Senate were annually elected, I shall not tire the reader with a dry account of every consulate, but only touch upon such remarkable occurrences as happened while this form of government continued. It appears that the Sabines and Latins in their wars with Rome were extremely weakened by their own divisions, particularly when APPIUS CLAUDIUS deserted to the Romans, and carried over with him five thousand families at once; soon after

13 L

which

which, the Latins received a remarkable defeat from VALERIUS PUBLICOLA. The Equi and Volsci, the bravest of the Latins, still carried on the war with various success several years, but were at length entirely subdued by LUCIUS QUINCTIUS, the celebrated dictator, who was taken from the plough but a little before he obtained that signal victory. Still the Veii, who inhabited the capital city of Tuscany, contended many years with the Romans for empire; but losing several battles in the open field, and shutting themselves up within their own walls, after a siege of ten years were forced to surrender to CAMILLUS the Roman General. While the Romans were thus extending their conquests on one side of Tuscany, the Gauls made an irruption on the other, laying siege to the city of Clusium, whereupon the inhabitants sent to the Romans to interpose in their behalf. The Romans accordingly dispatched the three FABII, persons of the highest rank, to the Gauls as their ambassadors, who were received with all imaginable civility, but the Gauls could not however be prevailed on to raise the siege. The ambassadors thereupon retiring into the town, and encouraging the besieged to make a sally, one of them was discovered afterwards personally engaged in the action; which being looked upon as a breach of the law of nations, was resented in such a manner by the Gauls, that rising from before Clusium, they immediately marched towards Rome, and in their way entirely defeated the Roman army, about eleven miles from the city; which put the inhabitants into such a consternation, that most of them left the city, the rest retiring into the Capitol. The Gauls thereupon plundered and set fire to the town, and having laid siege to the Capitol, were very near surprizing it in the night-time, but were discovered by the noise of some geese; and the brave MANLIUS, who making a sally from the fort while CAMILLUS attacked them in the rear with an army of twenty thousand men, the Gauls were entirely defeated, and most of the stragglers cut off by the country people before they could reach their own country. This is the account most of the Roman historians give of this matter: but there are others that say, when the Capitol was reduced to the greatest extremity by famine, the Romans purchased their peace with a great sum of money: And as to the story of CAMILLUS coming to their relief just as they were telling over the money, and driving away the Gauls from before the place, this is by many writers looked upon as a fiction. However, certain it is the Romans had a very narrow escape, and the city was so miserably demolished, that upon the return of the inhabitants it was proposed to remove to Veii, which was ready built and provided with all things to their hands; but they were diverted from this design by an omen, whereupon they applied themselves with such diligence to the rebuilding their city, that it was finished within the year. Soon after the Equi, the Volsci, and other states of Latium, entered into a new confederacy against Rome, but were defeated by CAMILLUS. After these the Samnites being apprehensive of the growing power of this city, entered into a war with the Romans, which they maintained with various success for fifty years, when they were entirely subdued by PAPIRIUS CURSOR. The city of Tarentum on the Adriatick sea, with their confederates, were

A. M.  
3666.

the next that made trial of their strength; who being supported by PYRRHUS King of Epirus, and other foreign powers, frequently defeated the Romans, and once in a general battle, when their horse were put into disorder by the elephants which PYRRHUS brought with him, which were the first that had been seen in Italy; but being better provided to meet these monstrous animals in another battle, and happening to wound some of them in the beginning of the engagement, they turned upon their own troops and trod them down; so that the Romans gained an easy victory, and by it the entire conquest of the southern part of Italy, and of all of it indeed which was not possessed by the Gauls: and this is computed to have happened about four hundred and forty-seven years after the building of their city; though some date this event the four hundred seventy-sixth year after the building of Rome, A. M. 3777.

Not long after the conclusion of this war upon the continent, the city of Messina in Sicily implored the assistance of the Romans against the Carthaginians, who had made themselves masters of a great part of that island; which they afforded them so effectually, that in the space of two years the Romans retook no less than fifty cities; and in conclusion, drove the Carthaginians quite out of Sicily; at the same time making themselves masters of Sardinia and Corsica; after which the Romans under the command of REGULUS and MANLIUS their consuls, transported their forces into Africk, making that the seat of the war. Whereupon the Carthaginians applied themselves to XANTIPPUS King of Lacedemon, for assistance, who sent them such a reinforcement, that they defeated the Romans in a general battle, killing thirty thousand of them, and making fifteen thousand prisoners, together with REGULUS the consul; but the Romans not discouraged, recruited their forces, and carried on the war in Africk with tolerable success; and apprehending that the most effectual way to bring the Carthaginians to submission was to make themselves masters at sea, that people supporting themselves chiefly by their foreign trade, and the supplies they received from their confederates by sea; the Romans built and manned out a mighty fleet, and notwithstanding they were yet but little versed in maritime affairs, entirely defeated the grand fleet of the Carthaginians, destroying above a hundred of their ships, and taking almost as many more; in which battle thirty-two thousand of the Carthaginians were killed, and thirteen thousand made prisoners, which obliged Carthage to accept a peace on such terms as the Romans were pleased to prescribe. The Carthaginians, however, had no sooner recovered from their consternation, but they assembled an army of an hundred and fifty thousand foot, and twenty thousand horse in Spain, under the command of the glorious HANNIBAL, who marched through France into Italy, passing the mountains of the Pyrenæes and Alps, which till that time were thought impassable for a body of troops; and having defeated the Romans in four general battles, the last of which was at Cannæ, wherein no less than forty thousand of them were killed, he marched almost to the gates of Rome; but being unprovided for a siege, and the Carthaginians being jealous of the ambitious designs of their General, neglected to send him any recruits or supplies, till the Romans reinforced their army, and straitened

his quarters by cutting off all provisions; so that his army was in danger of famishing. In the mean time the celebrated *Scipio* was sent into Africa with a body of troops to make a diversion, which obliged the Carthaginians to recal their General; and this put an end to the war Italy. The two Generals having assembled all their troops in Africa, came to a general engagement there: After a most obstinate dispute the victory fell to the Romans, and Carthage was obliged thereupon to accept of an ignominious peace.

The Romans now making a great figure in the world, the Athenians, and several other Grecian cities that had been brought under the subjection of *Philip* of Macedon, implored the assistance of the Romans for the recovery of their liberties; which they afforded the Greeks so effectually, that *Philip* was obliged to abandon all his conquests, and become tributary to Rome. In the mean while *Hannibal*, who could not bear to see the rising glory of the Romans, procured a reinforcement from *Antiochus* King of Syria; but that Prince's Generals having been defeated by land, his fleet also, though commanded by *Hannibal* himself, was ruined by the Romans: whereupon *Antiochus* was glad to purchase his peace of this victorious nation. *Philip* King of Macedon dying soon after, his son *Perseus* confederating with the neighbouring States, who dreaded the growing power of the Romans, assembled a very numerous army, and marched against their allies; but the consul *Emilius* came so seasonably to their relief, that he defeated the whole power of *Perseus*, and made him prisoner; and lest Carthage should recover itself, and contend with them again for empire, they laid siege to that city upon some slight pretence; and having made themselves masters of it, after three years brave defence, they levelled it with the ground. And such a train of good fortune we find attending this people, that *Attalus* King of Pergamus dying without issue, left his extensive dominions, which contained the best part of the lesser Asia, to the Romans. They afterwards enlarged their conquests in Africa, where being opposed chiefly by King *Jugurtha*, they defeated his forces, and brought him in triumph prisoner to Rome. The Teutones and Cimbri making incursions into Italy about the same time; they repulsed their forces, and obliged them to retire. But after all this train of glorious success, civil wars now began to distract their Empire, *Marius* being at the head of one faction, and *Sylla* of the other. But the rise of these divisions may be traced as high as the first constitution of their republick, when the nobility assuming the government, and forming an Aristocracy upon the expulsion of *Tarquin*, grievously oppressed the lower rank of people, who, wearied with their exactions and insolent treatment, unanimously left the city, and could not be prevailed on to return, till the nobility, who, composed the Senate, consented to constitute Tribunes of the people, who might protect the commons against the encroachments of the nobility. These Tribunes, far from being contented with a power of defending their clients, insisted on a liberty of directing and controlling the Senate in almost all their acts: They extorted a law, that the Plebeians might marry with the nobility; they obliged the Senate to consent that one of the consuls should be chosen from among the Plebeians; and that no law should pass without their

consent. At length they took upon them to make laws themselves, and to exercise a kind of sovereign authority. In their contentions with the Senate they seldom wanted some ambitious nobleman to espouse their interests, who served his ends by encouraging the disaffection of the people. This was the state of Rome when *Sylla* was constituted General against *Mithridates* King of Pontus, who had encroached upon the Roman territories in Asia and Greece, and reduced several of their towns and provinces under his obedience: for *Sylla* had not marched out of Italy before *Sulpicius* the Tribune, who was of a contrary faction, proposed a law to recal *Sylla*, and confer the command upon his antagonist *Marius*: of which *Sylla* having intelligence, marched back with his army, defeated *Marius* and *Sulpicius* in a pitched battle, banished all his enemies from Rome, and then turned his arms against *Mithridates* the common enemy, whom having defeated in two general engagements, he compelled to beg a truce. In the mean time new consuls being chosen, *Marius* and his friends were recalled from banishment; and exercised all manner of cruelties on those who were in *Sylla*'s interest. *Sylla* therefore, as soon as the truce with *Mithridates* was signed, marched back with part of his army to Rome; where *Marius* being dead before his arrival, he was opposed by his two sons and the consuls, who had raised an army against him; but these being defeated, he entered the city, and restored his friends to their commands; procuring himself the title of Perpetual Dictator; by which he was invested with the sovereign power, and subject to no controul from the senate or people. An authority that had never been committed to any General but for a limited time, and on some very great emergency of the State. However, having regulated the government according to his mind, he laid down his command, and retiring from business died in peace.

*Mithridates* having broken the truce, and fallen upon the Roman provinces in Asia, was repulsed by *Lucullus*, and both his fleet and army defeated; but *Lucullus* being recalled, was succeeded in that command by *Pompey*, who defeated another army raised by *Mithridates*, drove him out of his dominions, and compelled him to fly for refuge to his father-in-law *Tigranes* King of Armenia, whither *Pompey* following him, *Tigranes* was so terrified at his approach, that he immediately submitted himself and his kingdom to the disposal of the Romans; on which success the Senate became apprehensive, lest *Pompey* should entertain ambitious views; but finding him dismiss his army on his landing in Italy, and return to the city with his ordinary attendants, they received him with all imaginable expressions of joy, and decreed him a Triumph. It was during *Pompey*'s expedition into Armenia that *Catiline*'s conspiracy was discovered. The Roman State was at this time under the influence of three great men, namely *Pompey*, *Cæsar*, and *Crassus*. *Pompey* was most in the good graces of the Senate, and was pretty well beloved by the soldiery; *Cæsar* was the darling of the soldiers and the people, and *Crassus* had procured himself a considerable interest by his wealth. These three in the consulate of *Cæsar* entered into a kind of confederacy to promote their mutual interests,

interests, and indeed to govern the State as they saw fit; from whence they obtained the name of the Triumvirate. And first they procured themselves the government of the three best provinces of the Empire; POMPEY had Spain conferred upon him; CÆSAR, Gaul; and Asia was allotted to CRASSUS. CÆSAR and CRASSUS hereupon entered upon their commands; and CRASSUS had the misfortune not long after to be killed in an expedition against the Parthians. CÆSAR on the other hand met with incredible success against the Gauls: but POMPEY, to maintain his authority in the Senate, chose to reside at Rome, and commit the administration of his government in Spain to a deputy. CÆSAR, by his repeated victories in Gaul and Britain for nine years together, rendered himself exceeding popular, while the Senate on the other hand were so jealous of his ambitious designs, that when he petitioned for a second consulship, they commanded him to disband his army, and appear as a private person at the election; and notwithstanding CÆSAR's friends are apt to excuse his future conduct by surmising that it was not safe for him to come to Rome without a sufficient force to protect him against his great rival POMPEY, it is not to be doubted but he had long before this meditated the subversion of the State, and advancing himself to the supreme command; and if POMPEY had the same design when he returned in triumph from the Mithridatick war, and was in the height of his glory, he certainly committed a very great oversight in disbanding his army, at least in the opinion of CÆSAR, who finding himself at the head of the best body of veteran troops in the Empire, marched directly to Rome, in order to obtain that by force which he was never like to arrive at with the consent of the Senate, who being pretty well apprized of his intentions, a majority of them left the city and retired into Greece; whereupon CÆSAR entered Rome without opposition, and obliged those that were left behind to declare him Consul and perpetual Dictator. His next step was to fall upon POMPEY's forces in Spain, who either laying down their arms, or deserting over to him, he followed their General POMPEY into Greece, where he and the Senate had drawn together a very numerous army to oppose him. In the first engagement CÆSAR's troops happened to be defeated; but both parties afterwards assembling their whole force upon the plains of Pharsalia, CÆSAR obtained a compleat victory, and pursuing POMPEY to Egypt, found he had been killed by King PTOLEMY; after which CÆSAR having taken Alexandria, the capital city, he committed the government of Egypt to CLEOPATRA, the sister of PTOLEMY, who 'tis said had captivated the conqueror's heart; but not so fatally as afterwards she did MARK ANTHONY's, for the hero left her there, and still pursued his enemies in other parts of Africk, where he reduced SCIPIO and JUBA, the friends of the Senate; and afterwards POMPEY's two sons in Spain, in almost as short a time as he might have travelled through those countries: so that *all opposition falling before him*, in the modern phrase, he was received at Rome with general applause; at least, in appearance, and styled the Father of his country; for no other reason that I can learn, than the having subverted the constitution, and accomplished her destruction. Which the senate, who had before the sovereign authority, and were like to be the greatest suf-

ferers by the change, were so sensible of, that notwithstanding they gratified him with all the titles and honours he could ask, before he had reigned five months they publickly stabbed him in the Senate; of which number were BRUTUS and CASSIUS, two of his most intimate friends. Hereupon a civil war ensued, one party espousing the interest of BRUTUS and his associates, who had killed the usurper, and the other pretending to revenge his death. The last were headed by MARK ANTHONY the Consul, who had no other design but to follow CÆSAR's steps, and assume the supreme command; which the Senate were so apprehensive of, that they declared him any enemy to the State, and raised an army under the command of HIRTIUS and PANSA the new Consuls, and young OCTAVIUS (CÆSAR's heir) to oppose him; but ANTHONY being defeated, they plainly shewed they never intended that young OCTAVIUS should succeed his uncle: for they decreed BRUTUS and CASSIUS, the two heads of the conspiracy against CÆSAR, the two provinces of Syria and Macedonia, whither they had retired after CÆSAR's death, to avoid the rage of the populace. OCTAVIUS rightly judging from hence, that the Senate had no great regard to his interests, tho' they had made use of him to defeat MARK ANTHONY's ambitious designs, reconciled himself to ANTHONY, and with LEPIDUS, another General in the army, formed a second Triumvirate; and OCTAVIUS returning to Rome, by their united interest was chosen Consul, tho' under twenty years of age. All the members of the Senate whom they suspected to be in a different interest were banished; and they afterwards procured a law, that all who were concerned, in the death of CÆSAR should be proclaimed enemies to the common-wealth; and an army being assembled under the command of OCTAVIUS and ANTHONY, they marched into Macedonia, and defeated BRUTUS and CASSIUS at Philippi; who finding victory declare against them, killed themselves with their own hands. The Roman affairs continued to be managed by the Triumviri for ten years after this battle, when LEPIDUS attempting to render himself independent of his colleagues in Sicily, was defeated by OCTAVIUS, and compelled to relinquish his share in the government. Not long after there happened a misunderstanding between the other two; whereupon OCTAVIUS procured ANTHONY to be declared an enemy to the State, and having defeated him by sea and land, and reduced him to that despair, that he laid violent hands upon himself, OCTAVIUS assumed the supreme command, as his uncle JULIUS had done before him; but by his prudent and cunning behaviour so gained upon the affections of the Senate and people, that he had much fewer enemies. He even rejected the titles of King and Dictator, which he observed the people had a particular aversion to, tho' he rendered himself as arbitrary as his predecessor. His long reign of forty years, and his successes in Aquitania, Pannonia, Dalmatia, Illyricum, and Germany, very much contributed to the establishment of the Empire.

TIBERIUS, who succeeded AUGUSTUS, proved an indolent Prince, famous, or infamous rather, for his retirement to the island Caprea, on the Neapolitan coast, where he led a most voluptuous life, abandoning the affairs of the Empire to that degree, that he neglected to send Governors to Spain and Syria for several years, and

CHAP. XVIII. Pope's Dominions. Caligula, A.C. 37. and suffered the frontier provinces to be insulted and over-run by the barbarous nations. CALIGULA, his successor, was equally effeminate and cruel, and is taken notice of only for a mock expedition against Britain, when being arrived on the opposite shore, instead of embarking his troops, he ordered them to fill their helmets with cockle-shells, which he called the spoils of the Ocean: and returning to Rome, demanded a triumph for this glorious success; which being denied him, he became so monstrously cruel, that his own servants killed him, in the fourth year of his reign. Whereupon the Senate were about to return to their ancient form of government; but the army set up CLAUDIUS, the uncle of CALIGULA, for their Emperor, and compelled the Senate to confirm their election. The conquest of Britain was the most memorable occurrence of this reign. The cruelty of NERO's reign was insufferable, which continued however fourteen years; when to avoid the resentment of the people, he chose to die by his own hands; and was succeeded by GALBA, who is said to have restored their martial discipline; but was murdered by OTHO, after a reign of some few months. VITELLIUS being proclaimed Emperor by the German army, disputed the title with OTHO, who, despairing of success, killed himself before his affairs became desperate. VITELLIUS being detested of all mankind for his cruelties and voluptuous life, after a reign of eight months, was torn in pieces by his soldiers, and VESPASIAN proclaimed Emperor by the provincial armies in his room; who reformed the abuses of the State, added several provinces to the Roman Empire, and after a glorious reign was succeeded in the Empire by his son TITUS, styled, The Delight of Mankind, who after a short reign of three years was succeeded by his brother DOMITIAN, a Prince fortunate in his wars, but guilty of such acts of cruelty, that he was murdered by his nearest relations; and so detested by the Senate, that they pulled down his statues, and razed out all the pompous inscriptions his creatures had set up, who had flattered him with divine attributes. And this was the last of the blood of the Cæsars. Upon the death of DOMITIAN the Senate elected NERVA, an old General, who commanded the army in Gaul, who answered their expectations in the justice and prudence of his administration: but dying within two years, was succeeded by TRAJAN his adopted son, who is esteemed equal to any of the Roman Emperors. He mightily extended the limits of the Empire, reducing into the form of provinces the large countries of Dacia, Assyria, Armenia, Mesopotamia, and Arabia. He is still more admired for his conduct in times of peace, and his prudent administration of the civil government; for his justice, liberality, and other virtues that adorn a throne. This Prince, after a reign of about twenty years, was succeeded by his adopted son ADRIAN or HADRIAN, originally a Spaniard; he was more remarkable for his learning than martial exploits, though it is said he visited Britain, and the remotest part of the Empire in person, and built a wall between Newcastle and Carlisle, to keep the Scots within their bounds. After a reign of near twenty years he was succeeded by ANTONINUS PIUS, his adopted son, who was esteemed for his excellency of his morals, and the sweetness of his temper. He was of a peaceable disposition, and applied himself more to the reform-

VOL. II.

ing abuses in the state, and to see justice duly administered, than in extending the bounds of the Empire. He died in the twenty-third year of his reign, and was succeeded by his adopted son MARCUS AURELIUS, who associated with him in the Empire LUCIUS AELIUS VERUS; he is remarkable for his extraordinary learning and profession of the Stoick philosophy, from whence he obtained the name of *The Philosopher*; he was also successful in his wars. It was in one of his expeditions that the Christian Legion is said to have gained him a complete victory by their prayers, and a plentiful rain when his army was on the point of perishing by thirst. His associate LUCIUS dying not long after him, his son COMMODUS, who was as remarkable for his vices and extravagance as his father was for his virtues, succeeded to the Empire; and after a reign of twelve years, was murdered by one of his mistresses, who suspected he had the same design against her. PERTINAX, a General of sixty years of age, was on the death of COMMODUS elected Emperor by the soldiers; a man of mean extraction, who had raised himself by his merit, and endeavouring to reform some abuses in the discipline of the army, was murdered by the Prætorian guards in his palace, before he had reigned three months; after which the army plainly put up the empire to sale, and elected DIDIUS JULIAN, who happened to be the highest bidder: but he being unequal to so great a trust, and the Senate setting up SEVERUS against him, he retained the title of Emperor not above two months. SEVERUS revived and improved their military discipline, was successful against the Parthians, and defended the Britons against the incursions of the Picts and Scots. He died at York in the eighteenth year of his reign, and was succeeded by his two sons, CARACALLA and GETA: CARACALLA soon afterwards murdered his brother GETA, and became one of the greatest debauchees and tyrants that ever reigned. He was murdered by a Captain of his guards after a reign of six or seven years, and succeeded by OPILIUS MACRINUS; who abandoning himself to a voluptuous life, was murdered also by the soldiers in the second year of his reign. To whom succeeded HELIOGABALUS, a bastard son of the Emperor CARACALLA; one of the most cruel and voluptuous of the Roman Emperors; who after a whimsical and extravagant reign of two or three years, was murdered by his soldiers. To whom succeeded his adopted son ALEXANDER SEVERUS, who restored justice and discipline in the Empire, and was successful in his expeditions against the Persians; but was notwithstanding murdered by the soldiers in the fourteenth year of his reign.

MAXIMINUS CAIUS JULIUS succeeded SEVERUS, being elected by the army, who admired his prodigious strength; for he was a monster of a man, above eight foot high, and every way proportionable. He was at first but a common soldier, and a Goth by extraction, and being opposed by the Senate, he became exceeding barbarous and cruel: he marched into Italy to revenge himself of his enemies, but laying siege to Aquileia, which made an obstinate defence, he was murdered by the soldiers, together with his son, whom he had associated with him in the government in the second year of his reign, before he had seen Rome. PUPPIENUS and BALBINUS were thereupon elected by the Senate, Prin-

ces of great merit, but murdered within the year by the soldiers, because they had no share in the election. GORDIANUS, a General of a good family and sufficient merit, was elected by part of the African Legions, being at that time four-score years of age, and their choice was confirmed by the Senate; but another part of the army opposing him, and defeating his son, who was killed in the field of battle, he laid violent hands upon himself, and was succeeded by GORDIANUS junior, his grand-son. This young Prince was esteemed a good Governor, but making PHILIP the Arabian his partner in the Empire, was treacherously murdered by his procurement in the seventh year of his reign; and PHILIP and his son, whom he associated with him, were also both of them murdered before they had enjoyed the fruits of their treachery much above four years. DECIVS was next advanced to the Empire by the Legions, and had at first good Success against the Scythians, but was killed in an engagement with them in the second year of his reign. GALLUS, the General of his army, was next elected by the army, and confirmed by the Senate; he meanly consented to pay an annual tribute to the Goths or Scythians, whereupon he was murdered by those who advanced him, in the second year of his reign. EMILIANUS, another General, was elected in his stead; who defeated the Scythians, making a terrible slaughter of them; but VALERIAN setting up against him, he was killed by his soldiers, to prevent a civil war. VALERIAN being betrayed by MACRINUS his General, in an expedition against the Persians, was taken prisoner by King SAPOR, who used him as a footstool to mount his horse, and afterwards slew him alive. His son GALIENUS succeeded him, but was such an indolent voluptuous Prince, that he became the contempt of mankind, and gave occasion to no less than thirty tyrants, as they were called, to usurp the sovereign authority in several parts of the Empire, whom he at length however suppressed, but lost many of the frontier provinces to the Goths and Germans, against whom CLAUDIUS II conspiring, he was murdered with his brothers and children, and CLAUDIUS advanced to the Imperial purple, who cleared the Empire of the Barbarians, and made an excellent Prince; but died in the second year of his reign. AURELIANUS, who from a private man by his merit had obtained the highest posts in the army, was next elected by the soldiers, and approved by the Senate and People. He was successful in his wars against the Barbarians, conquered the famous ZENOBIA, Queen of the East, as she styled herself, and took her capital city Palmyra. He was murdered in the seventh year of his reign, in an expedition against the Persians, by the treachery of his Captains, being succeeded by TACITUS, who was elected by the Senate. He was admired for his moderation and justice, but cut off by the soldiers before he had reigned seven months. PROBUS, who raised himself by his merit from a gardener to the chief commands in the army, was elected on the death of TACITUS. He had great success against the Germans, Goths, Sarmatians, and Persians, but was murdered by his soldiers in an expedition to Persia, in the seventh year of his reign. CARUS, who succeeded him, carried on the war with success in Persia, and was found dead in his tent in the second year of his reign, supposed to have been killed by a storm of thunder

and lightning. His two sons CARINUS and NUMERIAN, whom he had associated with him in the Empire, enjoyed the sovereign power some time after; but one of them being killed, the other gave way to the fortunate DIOCLESIAN, the most successful of the later Emperors, especially in Egypt, Persia, and Armenia. He raised a very severe persecution against the Christians, which was the tenth and last; and for which they seem to bear hard upon his memory, making him a devil incarnate in the latter part of his reign, which continued about twenty years. CONSTANTIUS CHLORUS succeeded him, and was successful in his wars against the Germans, having GALERIUS for his colleague. He died in peace at York in the second or third year of his reign, and was succeeded by his son CONSTANTINE the Great. As to MAXIMIAN and SEVERUS, whom DIOCLESIAN associated with him in the Empire, I meet with nothing remarkable concerning them.

CONSTANTINE the Great, the son of CONSTANTIUS CHLORUS and HELENA, succeeded his father in the year 306, being with him at York when he died. But notwithstanding he was proclaimed Emperor by the army in Britain, the Pretorian guards at Rome set up MAXENTIUS the son of MAXIMIAN. CONSTANTINE, to avoid a civil war, proposed to associate MAXENTIUS with him in the government; which being refused, CONSTANTINE marched with his army towards Italy, and while he was preparing to pass the Alps, 'tis said he was favoured with the vision of a shining cross in the air, and an inscription under it, that *in that sign he should overcome*, whereupon he ordered the cross to be worked in his standards. CONSTANTINE having passed the Alps, defeated the troops of MAXENTIUS in several engagements; but the great and decisive battle was fought at Ponte Molle, within a mile of Rome; and while the victory was in suspense, the Senate caused that noble triumphal arch, of which there are still such large remains, to be erected, designing to dedicate it to the honour of the conqueror, let the victory fall on which side it would; and MAXENTIUS happening to be defeated and drowned in the Tiber, his rival entered the city in triumph on the twenty-fourth of September, 312, about six years after his election in Britain; and immediately published several edicts in favour of the Christians, having himself been initiated in the principles of that religion by his mother HELENA in his youth, though he was under a necessity of disguising his opinion for a considerable time. He erected several magnificent churches in Rome, and settled lands and revenues on the Bishops and clergy; and on his removing the seat of the Empire to Constantinople, 'tis said, conferred the city of Rome, and a considerable territory in Italy, on SYLVESTER, the Pope or Bishop of that See, and his successors. He died in peace, after having reigned thirty, and as some say, forty years, reckoning from the death of his father, and left his Empire among his three sons, viz. CONSTANTINE, CONSTANTIUS, and CONSTANS. To CONSTANTINE's share fell Gaul, Spain, and Britain; to CONSTANS Italy, Illyricum, and Africa; and to CONSTANTIUS Greece, Thrace, Egypt, and all the eastern provinces. CONSTANTINE not being content with his share, and attempting to dispossess his brother CONSTANS of his part, was defeated and killed at Aquileia, in the twenty-fifth year of his age, and the

CHAP. XVIII. Pope's Dominions. the third of his reign. **CONSTANS** was killed by **MAGNENTIUS**, who usurped his part of the Empire in the thirteenth year of his reign; whereupon **CONSTANTIUS** remained the sole Emperor, and died on his march against **MAGNENTIUS** the usurper in the forty-fifth year of his age, and twenty-fifth of his reign. **JULIAN**, the nephew of **CONSTANTINE** the Great succeeded him, and endeavouring to restore paganism, is generally stiled the Apostate. He was successful in his wars with the Persians, but mortally wounded in the last engagement with them in the second year of his reign: whereupon **JOVIAN** was elected by the army, and declared himself a Christian, but died in the eighth month of his reign, being succeeded by **VALENTINIAN** the son of a rope-maker, who raised himself in the army by his merit, and proved an excellent Prince. He assigned the eastern part of the Empire to his brother **VALENS**, and governed the west in person: he died in the twelfth year of his reign, and was succeeded by **VALENS** and **GRATIAN**. **VALENS** dying, **GRATIAN** associated **THEODOSIUS** with him in the Empire, who succeeded to it after his death. **THEODOSIUS** the Great was a native of Spain, he answered the expectation the world had conceived of him, and became a successful defender of the Empire against the barbarous nations in it's declining state. He died in the sixteenth year of his reign, leaving the Empire of the east to his son **ARCADIUS**, and that of the west to his son **HONORIUS**. Under this Prince the state of the western Empire became desperate again, the barbarous nations attacking it on all sides. **ALARICK**, King of the Goths, having ravaged the greatest part of Italy, set fire to Rome itself, and plundered the city, while the Emperor remained at Ravenna, unable to relieve it. **VALENTINIAN III** succeeded him; in whose time **ATTILA** the Hun invaded Italy, and was repulsed by the Roman General **ÆTIUS**; but the Emperor having put **ÆTIUS** to death, the barbarous nations carried all before them, while **MAXIMUS**, in order to mount the throne, procured the murder of **VALENTINIAN**, and compelled his widow **EUDOXIA** to marry him; at which she was so exasperated, that she invited **GENSERICK** the Vandal into Italy, to deliver herself and the miserable inhabitants from his oppressions: but **GENSERICK**, contrary to his oath and promise, bringing a prodigious army with him, plundered the city of Rome, and carried many thousands of the inhabitants slaves to Africk. **AVITUS**, the General in Gaul, next assumed the title of Emperor, which he was forced to resign within eight months. To whom succeeded **MAJORIANUS**, a warlike Prince, who had some success against the Goths and Vandals, but was deposed and murdered by his General **RICIMIR**, in the fourth year of his reign, though others say he had the good fortune to die a natural death. To whom **SEVERUS**, and then **ANTHEMIUS** succeeded, who were both deposed and murdered also by **RICIMIR**. **OLYBRIUS** was afterwards sent from Constantinople with Imperial power, but died within seven months. After whom **GLYCERIUS** was elected by the soldiers, but deposed by **JULIUS NEPOS** in the second year of his reign, and afterwards made Bishop of Salona. **NEPOS**, who succeeded him, was also soon after deposed by **ORESTES** the General, who left the Empire to his son **AUGUSTULUS**; but **ODOACER**, King of the Heruli, a people near the mouth of

the Danube, deposed him in the first year of his reign, and put a period to the Roman Empire in the west, about the year of our Lord 475.

**THEODORICK**, King of the Eastern or Ostrogoths, who inhabited Dacia and Mæsia (the present Servia, Bulgaria, Walachia, and Moldavia) having been serviceable to the eastern Emperor **ZENO** in suppressing a rebellion, had his statue erected in Constantinople, and being a Christian, was adopted the Emperor's son. This Prince the Emperor prevailed with to march his army into Italy against **ODOACER**, about the year 491, who having defeated him in several engagements, it was agreed at a treaty to share Italy between them; but there afterwards happening to be a misunderstanding between these two Princes, and a war following thereupon, **ODOACER** was defeated and killed; whereupon **THEODORICK** became sole Sovereign of Italy, and dying in the thirty-fourth year of his reign, left the kingdom to his grandson **ATHALRICK** an infant, under the guardianship of his mother **AMALASUNTHA**: who dying in the eighth year of his reign, he was succeeded by **THEODOBAT** or **THEODAT**, the nephew of **THEODORICK**, who married **AMALASUNTHA**, but afterwards took away her life on suspicion of adultery; and was himself murdered by his subjects, who set **WITIGES**, one of his Generals, on the throne in his stead. **JUSTINIAN**, Emperor of the East, taking advantage of the divisions among the Goths in Italy, ordered his General **BELISARIUS** thither with an army, who defeated **WITIGES**, and sent him prisoner to Constantinople, and reunited part of Italy to the Empire; while the Goths set up **THEOBALD** and **ARARICK** in other parts of that country, who did not both of them reign two years; and were succeeded by **TOTTILA** about the year 547, who in some measure restored the declining state of the Goths, making himself master of several towns and provinces in the absence of **BELISARIUS**; and amongst the rest, of Rome, which he plundered in a most barbarous manner, and had entirely destroyed it, but for a letter he received from **BELISARIUS**, who dissuaded him from it, and returning to Rome soon after, so well repaired the walls, that **TOTTILA** investing the city a second time, was repulsed with loss. He continued however to ravage other parts of Italy, till he was defeated and killed by **NARSES**, another of **JUSTINIAN**'s Generals. The Goths afterwards set up **TEJAS**, who gained several advantages of his enemies, and took the city of Rome again, exposing it to the plunder of his soldiers for forty days, but was defeated by **NARSES** before he had reigned a year; which put an end to the kingdom of the Eastern or Ostrogoths in Italy, after they had been in possession of great part of it near an hundred years.

**NARSES**, the Imperial General, after all his services, being recalled and slighted by the Emperor at his return, was so provoked, that he invited the Lombards, a German people, into Italy, who remained masters of the north-west part of that country for near two hundred years; the eastern Emperors however keeping possession of another part of it, of which the city of Ravenna, where the Emperor's Viceroy or Exarch resided, was the capital.

The first King of the Lombards in Italy was **ALBOIN**, who began his reign anno 568, and was succeeded by one and twenty Princes, of whom I meet with little remarkable, unless it be that some

some of them were esteemed orthodox Christians, and others Arians and Hereticks, and consequently sometimes friends, and at others enemies to the Pope. They were also in perpetual wars almost with the Gauls, and the Emperor's Exarch at Ravenna. ASTULPHUS, the last King of the Lombards but one, took the city of Ravenna, and put an end to the eastern Emperor's dominion in Italy about the year 755, and proceeded to lay siege to Rome; whereupon the Pope called in PEPIN King of France to his assistance, who compelled ASTULPHUS to surrender the exarchate of Ravenna, and the patrimony of the church, to the Pope: and ASTULPHUS being killed by a fall from his horse as he was hunting not long after, DIDIER was elected King of Lombardy in his room; who seizing on part of the patrimony of the Pope, CHARLEMAGNE, the son of PEPIN, marched into Italy to the Pope's assistance, and having taken him prisoner, confined him in a monastery at Liege, which put an end to the kingdom of the Lombards, after it had continued above two hundred years.

From the destruction of the kingdom of the Lombards we may date the Pope's sovereignty over the city of Rome and the territories thereto belonging, which now go under the name of *The Pope's Dominions*, or *The Ecclesiastical State*: tho' PUFFENDORF seems to go higher, or at least to date the first rise of his temporal power from the Emperor JUSTINIAN's making Italy a province of the Grecian Empire: for then he observes it was that the Papes took the opportunity of exempting themselves from the jurisdiction of these Emperors, whose authority was mightily diminished in Italy; partly by the ill conduct of their Viceroy at Ravenna, and partly by their own weakness and want of strength. One great inducement the Papes had to shake off the authority of the Grecian Emperors at this time, was, their declaring against the adoration of images; for LEO ISAUROS ordered them to be removed out of the churches, which was strenuously opposed by Pope GREGORY I; partly because the Roman See found this superstition very advantageous, and partly because the Pope took it amiss that the Emperor should undertake a reformation in matters of religion without his approbation; or perhaps he was glad of so fair an opportunity to shake off the jurisdiction of the Grecian Emperors. And in order to effect his design, he incited the Italians and Romans, who had hitherto been obedient to the Emperor, to refuse him his tribute; which his Viceroy endeavouring to levy, was killed in the tumult; after which indeed the Lombards seized Ravenna, and almost all the rest of Italy which belonged to the Emperor. But the Pope, as has been observed already, calling in PEPIN the French King to his assistance, defeated the Lombards, and procured the territories which belonged to the Emperor to be conferred upon him. Which PEPIN was the more ready to grant, in consideration of Pope ZACHARY's approving his proceeding in dethroning his lawful Sovereign CHILDERICK, and from Grand Marshal advancing himself to the dignity of King of France. A further reason of his interposing between the Pope and the Lombards is supposed to be the opportunity it gave him of making conquests in Italy, of which the French nation has always been ambitious. This donation of the Grecian Emperor's territories in Italy to the Pope by King PEPIN, was confirmed by his son CHARLEMAGNE, who established a new em-

pire in the west; of whose successors the reader will find an account in the state of Germany in this volume. But these Emperors reserved to themselves a power of confirming the election of future Papes, and granting the investiture of Sees to the Italian Bishops; and the Pope enjoyed these territories under the sovereign jurisdiction of the Emperor, who thereupon was styled *The Patron and Defender of the Church*; till the reign of the Emperor HENRY IV, when the Papes growing weary of their subjection to the Emperor, who sometimes refused to confirm their election, and at others turned them out of the chair, in order to exempt themselves from their jurisdiction, were perpetually embroiling their affairs in Germany and Italy, and inciting insurrections against them; the German Bishops also, who were weary of their dependance on their Sovereign, were very ready to assist the Pope in setting up an independent ecclesiastical authority, which the ill conduct of HENRY IV, and the discontents of the Princes and States of the Empire, gave them an opportunity of effecting. GREGORY VII, a proud resolute prelate, being in the chair, loudly exclaimed against the Emperor's mercenary temper, in setting bishopricks and other benefices to sale, and his putting persons into them before they had taken holy orders; and when the Emperor asserted his right of investing Bishops in their Sees, the Pope excommunicated him, and stirred up the Bishops and Princes of Germany against him, inasmuch that the Emperor was obliged to part with that branch of his prerogative. Nor did he only thus free himself and other ecclesiastics from the Emperor's jurisdiction, but even assumed an authority over him, summoned him before him to answer the complaints of his subjects, and declared he had forfeited his right to the Empire. And though his son, the Emperor Henry V, attempted the recovery of the Imperial prerogatives, and imprisoned Pope PASCHAL, whom he compelled to yield up the right of constituting Bishops, yet the clergy of Europe in general became so dissatisfied with it, that he was obliged to resign this power again into the Pope's hands. Succeeding Pope's pretended to a power over all temporal Princes, to judge of their actions whether they were good or bad, to admonish and correct them, and even command what they thought fit to be done. If Princes entered into a war, they looked upon themselves to be authorized to command a truce, and would require the contending parties to refer their differences to their decision, on pain of excommunication; and on their disobeying their decrees, would forbid the exercise of divine service, and the administration of the sacraments in their dominions. They gave out that they were empowered by their office, in order to obviate all publick scandal, to defend such as were oppressed, and to see justice done in the world. They received the complaints of all that applied themselves to them for a redress of such grievances as they suffered from their Princes, either by taxes laid upon them or otherwise, prohibiting the levying them upon pain of excommunication. Sometimes they declared the territories and possessions of those who stood excommunicated to be forfeited, releasing their subjects from their oaths of allegiance, under pretence that the government of Christians ought not to be entrusted to those who were rebels to the church. But I shall not enlarge here on the encroachments of the Bishops of this See, which will be seen in the following historical account of the Papes of Rome.

## CHAP. XIX.

*Contains an abstract of the history of the Popes of Rome, with a chronological table of their respective reigns.*

## CHAP. XIX.

*The name Pope common to all priests anciently.*

THE word Pope, or rather *Papa* [Father] was anciently given to all Bishops, and indeed to every priest or ecclesiastick, as it is in the Greek church to this day, and was not appropriated to the Bishops of Rome till the latter end of the eleventh century; when GREGORY VII, in a Council held in this city, ordered that the name Pope should be peculiar to the Bishop of Rome. Nor did the ancient church allow any such distinguishing primacy in the Pope as is now claimed; as appears by St. CYPRIAN's epistles, in which he calls the Pope brother, and treats him as his equal, and declares himself, by virtue of his episcopal authority, accountable to none but God for the government of his diocese. FERMILIAN, Bishop of Cappadocia, also writing to Pope STEPHEN, uses him with great freedom, and reproves him severely, without giving him the least mark of any superiority. The Council of Carthage, held by St. CYPRIAN, reflect upon his stile of *Episcopus Episcoporum*, as an encroachment on the rest of the church. And from the canons of the second General Council of Constantinople it appears, that the precedency given to the Pope was on account of his residing in the capital city of the Empire, and not on account of his being the successor of St. PETER. The fourth General Council of Chalcedon, held in the fifth century, assigning the Bishop or Patriarch of Constantinople the limits of his jurisdiction, decree also by the twenty-eighth canon, that he should have equal privileges with the Bishop of Rome, because that Constantinople was then New Rome, dignified with a Senate, and the residence of the Emperor; of which the Pope's Legates complained indeed, and refused to be present at the passing the canon: But notwithstanding their opposition, it was read a second time, and unanimously carried by the fathers, and afterwards confirmed by the Emperor. BALUZIUS has demonstrated for the Gallican churches, that for eight hundred years the French synods never allowed of any appeals from their determinations to the Pope; they always ordained their own metropolitans, and strenuously resisted the encroachments of the Popes. And as to the Britannick church, it is evident that for six hundred years they never acknowledged any dependence on Rome. When AUSTIN the Monk came into England, and had a conference with the British Bishops, wherein he required their subjection to the Bishop of Rome, and a conformity to the Roman rites in the observation of Easter, and other things; they answered, that they owed no obedience to the Pope of Rome, but were under the government of the Bishop of Caerleon upon Uske, who was their overseer under God. And as to the controversy about Easter, they were so far from paying any deference to the Roman custom, that they continued their ancient custom of observing Easter on a different Sunday from Rome for some ages after, for which reason they were treated as schismatics by that See.

This pretence of the Bishop of Rome's to an ecclesiastical sovereignty over the whole church, has been sufficiently exploded by the learned in the last age. They have shewn that he could

never derive it from St. PETER, because St. PETER never pretended to a superiority over the rest of the Apostles. That the church in her original establishment usually took the civil government for her model: as every city among the Greeks and Romans was under the immediate government of certain magistrates within its own body, commonly called the Senate or Common-Council, in which there was one chief or principal, whose power extended not only over the city, but all the adjacent territory, then called the suburbs, in which several lesser towns and villages were included. In the same manner the Apostles, in the first planting a church, wherever they found a civil magistracy settled in any place, there they endeavoured to settle an ecclesiastical magistracy, consisting of a Senate or Presbytery, a Common-Council of Presbyters, and one chief President among the rest, called the Apostle, Bishop, or Angel of the church, whose jurisdiction was not confined to a single congregation, but extended to the whole region or district belonging to the city, which was what we now call the diocese of the church.

The Roman Empire also was divided into provinces and larger dioceses. A province contained the cities of a whole region, which were subject to one chief magistrate, who resided in the metropolis or chief city of a province, and was usually a Prætor or Proconsul. A diocese was a larger district, comprehending several provinces, the Governor whereof was stiled Vicar of the Roman Empire, and from hence the church took her model when she constituted Metropolitans and Patriarchs: for as in every metropolis or chief city of each province there was a superior magistrate above the magistrates of every particular city, so in the same metropolis there was a Bishop whose power extended over the whole province, whence he was called the Metropolitan or Primate. And as the State had a Vicar in every capital city of each civil diocese, so the church in process of time came to have their Exarchs or Patriarchs in many, if not in all the capital cities of the Empire. This in the main was the state and division of the church in the latter end of the fourth century; but these things being only matters of conveniency and outward order, the church did not tie herself up to follow this model, but only so far as she judged it expedient and conducive to the ends of her own spiritual government and discipline, and therefore she did not imitate the State-model in all things; she never had one universal Bishop, in imitation of an universal Emperor, nor an eastern and western Pontificate in imitation of an eastern and western Empire, nor four grand spiritual Administrators answering to the four great ministers of State, the Præfecti Prætorio in the civil government. The church was at liberty to follow the model and divisions of the civil State or not, as she judged most expedient for herself; and when any alterations were made, they were generally done by the direction or consent of a Provincial or General Council. As to the Bishop of Rome in particular, whether he was only a Metropolitan according to some, or a Patriarch according to others, it is held by learned men, that his jurisdiction extended no farther than the ten provinces of the Roman diocese, which were subject to the Vicarius Urbis, viz. 1. Campania. 2. Tuscia and Umbria. 3. Picenum Suburbicarium. 4. Valeria. 5. Samnium. 6. Apulia and Calabria. 7. Lucania and Brutii. 8. Sicilia.

CHAP. 8. Sicilia. 9. Sardinia. And, 10. Corsica. DUPIN, a Roman Catholick writer, makes no scruple to confess, that Germany, Spain, France, Britain, Africa, Illyricum, and seven of the Italic provinces, were not subject to the jurisdiction of the Roman Patriarch in the first and primitive ages. How he afterwards enlarged his ecclesiastical jurisdiction, remains still to be enquired into.

PUFFENDORF has assigned several reasons as the occasion of the increase and establishment of the Pope's spiritual monarchy; and first the barbarity and ignorance which on the decay of the Roman Empire overspread the western part of the world; for bad wares, he observes, are ever best vended in the dark, or at least by a dim light. An ignorant person is sooner prevailed on to believe ridiculous stories, than a wise man versed in all sciences: but what gave them the best opportunity of advancing their pretensions, was the Emperor's removing from Rome; for the Bishops of Constantinople, who he supposes were equally ambitious, could never gain this point. A third thing which contributed to enlarge their power, was the respect the barbarous nations paid them, who conquered the Roman Empire, on account of their being converted to the Christian faith by the Romish church; this induced them no doubt to honour her, as the most considerable of the western churches. A further opportunity she had of claiming a superiority over the western parts of Europe in the fifth century, when the Bishops who lived on this side of the Alps, used to go to Rome to visit the sepulchres of St. PETER and St. PAUL, either out of devotion, or to testify their firm adherence to the Christian faith; which voluntary devotion was afterwards changed into a necessity, and such as neglected it severely rebuked: from hence it was easy for the Popes afterwards to pretend, that the Bishops ought to receive their confirmation from Rome. Besides, many Bishops and Churches, that were novices in comparison of the ancient Roman church, used to refer themselves to, and ask the advice of the church of Rome, concerning matters of consequence, and the true sense and interpretation of the canons; and when once they perceived at Rome, that their answers were taken as decisions, they began to send their decrees before they were demanded, under pretence that Rome being the first seat of the Christian Bishops, ought to take effectual care that the canons and ecclesiastical laws were duly put in execution. On the like pretence they made themselves judges of the differences between Bishops; and encroaching on the right of their Metropolitans, used to depose such Bishops as, in their opinion, had not a right ordination; and such as were charged with enormous crimes they suspended, and obliged to appear at Rome and plead their cause: and if any desired an exemption from the canons, they travelled to Rome, where they were kindly received, and encouraged in their demands; whereby the staple of dispensations and favours became established at Rome. If any one lost his cause before the ordinary Judge, he immediately appealed to Rome. According to the French historians, the Emperor HENRY having made the city of Arles the capital city over seven provinces, the Pope constituted the Archbishop of that city his Vicar in France, lest he should attempt to make himself Patriarch of that kingdom; and the Archbishop chose to have the inspection, though precariously, over seventeen provinces, into which

France was divided at that time, rather than to be head only of seven in his own right; and to add the greater authority to his commission, did all that lay in his power to establish the Pope's authority there. In the eighth century, when the clergy were become very debauched, WINIFRED, an English Friar, who afterwards went by the name of BONIFACE, took upon himself to reform the manners of the monks and clergy, and endeavoured to establish Christianity in Germany; and, to acquire the greater authority, entirely devoted himself to the Roman chair, and was honoured with a pall, and the title of Archbishop of Mayence: he was constituted also by Pope GREGORY III his Vicar, with authority to call Councils, and constitute Bishops in those places, which by his means had been converted to the Christian faith, with ample recommendations to those nations, and particularly to CHARLES MARTEL, the then Grand Master of France, desiring he would take him into his protection, which he very willingly did: and when afterwards his son CARLOMAN shewed an inclination to have the church-discipline regulated, BONIFACE took that office upon him, to the great advantage of the Roman See. At the request of this Prince also he called a Council in Germany; and in the reign of King PEPIN held several synods in France, where BONIFACE presided in quality of the Pope's Legate. In the first of these Councils the clergy signed a confession of faith, whereby they obliged themselves, not only to maintain the Catholick faith, but to remain in constant communion with the Romish church, and to be obedient to the successors of St. PETER. BONIFACE was the first who required the German Bishops to receive the episcopal pall from the Pope, and sent it to the Bishops of France unasked, in order to increase their obligation to the See of Rome; and these ornaments afterwards becoming customary, they were forced upon them as of absolute necessity, and the episcopal function forbidden to be exercised till they had received them. They assumed also an authority of licensing Bishops to remove from one See to another, and obliged them to receive their confirmation from Rome, for which a sum of money was exacted. They also made void the decisions of provincial synods, which reduced their authority to nothing. Pope GREGORY VII obliged the Bishops to take an oath of fealty to him; and decreed that none should dare to condemn any one who had appealed to the Pope. He sent Nuncios or Legates also to every court, who in the name of the Pope exercised that authority which formerly belonged to the respective Bishops, Metropolitans, and Provincial assemblies: and not contented with the liberality and charity of Princes and Great Men, who had been very bountiful to the church and clergy, contrived various artifices to empty the people's pockets, such as saying masses for the living and the dead, purgatory, indulgencies, dispensations, pilgrimages, jubilees, and other poperies; and his emissaries had always a watchful eye on such as were at the point of death, observing that men were then inclined to be most liberal. But nothing turned more to the Pope's advantage than the croisadoes, which were encouraged in the eleventh century; for in these expeditions, after people had received the sign of the cross, the Pope claimed the supreme command, and took the persons and estates of the adventurers under his protection, exempting them from the

How he enlarged his authority.

CHAP. XIX. Pope's dominions.

CHAP. XIX. Pope's dominions.

CHAP.  
XIX.  
Pope's do-  
minion.

the civil jurisdiction. The Pope's Legates also disposed of all the alms that were given for these expeditions, and levied the tenths on the clergy to support them, laying their commands on Kings and Princes to receive the cross themselves. This sacred militia were afterwards employed against such as they were pleased to declare hereticks or schismaticks, whose kingdoms and possessions they usually confiscated and bestowed on their most zealous sons.

The multiplying of monks and friars also very much advanced the strength and interest of the See of Rome; for these served not only to drain the purses of the laity, but to curb the Bishops and Clergy, for which reason the Pope supported them with all imaginable zeal in the tenth century, when they withdrew themselves from the jurisdiction of their Bishops, and submitted to the immediate authority of the Pope. These friars were a great grievance to the secular clergy, sharing with them in the legacies and burials of the rich, in the direction of their consciences, and the administration of the sacraments; from whence there arose perpetual feuds between the Bishops and their clergy, and the monks, but the latter being supported by the Pope, had generally the best of it. If a Bishop attempted any thing against the Pope's authority, the friars ran him down with clamour and noise, like so many hounds, and rendered him odious to the people, among whom they were in great veneration, on account of that outward appearance of sanctity they put on. And this was one of the principal reasons why the Bishops who opposed the Pope's encroachments, could never make a great party among the common people. Some of them, it is true, were very well satisfied with the advancement of the Pope's power, as participating of the grandeur of their supreme head, and thereby being exempted from the jurisdiction of the civil magistrate, which was more dreadful to them than a foreign jurisdiction, exercised by those of their own order, from whom they had reason to expect more favour.

But surely nothing contributed more towards establishing the Pope's empire, than that opinion so industriously propagated by the Jesuits of his infallibility; for if he alone was infallible, what need could there be for the future of a General Council? unerring wisdom needed no advice, and ought not to be subject to the control of misguided mortals. All Princes and States therefore, who really believed him possessed of this divine attribute, readily submitted to his dictates: but there were some, it seems, that would never come into this notion of the Pope's infallibility, unless it were in conjunction with a Council; and the schisms and double elections, which frequently happened, gave a great shock to their pretended claim of infallibility; for at these times all their faults and failings were ripped up, and they excommunicated and reviled each other without mercy. They were sometimes also obliged to submit their infallible understandings to the Princes who gave them their assistance: at others, their Holinesses were defeated, imprisoned, and deposed, and forced to return to a private life. The first schism happened about the year 1130, (according to PUFFENDORF, but the reader will find several Anti-Popes before this in the following table) when INNOCENT II and ANACLETUS were both chosen Popes. After the death of ADRIAN IV, two Popes were again elected, viz. ALEXANDER III, and VICTOR IV, to the first France, England,

and Sicily adhered, and to the latter the Emperor FREDERICK I, Germany, and the Roman clergy; and after the death of VICTOR his party chose three Popes successively, all whom ALEXANDER out-lived. But the greatest schism was after the death of BENEDICT X, when two Popes being elected, one resided at Rome, and the other at Avignon, which lasted through several successions near forty years; when they did not only excommunicate each other, but exercised the greatest cruelties on their adversaries: Both parties pretending to have the Saints on their side, producing sham miracles and revelations to induce the people to believe they were approved by heaven, till at length they became the jest and contempt of Christendom; and instead of being deemed infallible, it was held that a Council might depose them for male-administration. Succeeding Popes however so insinuated themselves into the good graces of the Princes of Europe, and gained such an ascendant over the common people, that they were become as absolute as ever a little before the Reformation; when that scandalous practice of selling indulgencies, and permitting people to be as wicked as they pleased, who had money to purchase the Pope's favour, provoked LUTHER and some others, about the year 1517, to call their authority in question again: the consequence of which was, the utter abolishing of the Pope's supremacy in several of the kingdoms of Europe, which would probably have been universal, if the reformers had been conducted by any one chief, and had not split into so many sects and parties.

What deterred a great many prelates and ecclesiastics from joining with them, was their seizing and sequestering the lands and revenues of the church, and applying them to secular and profane uses; though on the other hand, it is said, that a view of seizing the benefices of the church was one great inducement to some temporal powers to embrace the Reformation. But however that matter be, it is evident the Pope in a little time regained his authority in those kingdoms, which were not fallen off to the reformed; and of late has rather got than lost ground, for which several reasons are assigned, as the Pope's treating sovereign Princes with more civility than formerly; his reforming the Bishops and Clergy, who do not now lead such scandalous lives as when LUTHER exclaimed against them, and made this one of the principal grounds of separating from their communion. They are also become more learned, and have many excellent books and preachers amongst them, which they were destitute of at the Reformation. The Jesuits particularly apply themselves to learning, and the education of youth, and furnish their disciples with specious arguments at least for their adhering to Popery. There is not a court of the Romish communion in Europe, where this crafty generation have not a mighty influence, and we see them daily drawing off one Prince or other from our communion. But I proceed to give a catalogue of the Popes, in which I shall take notice of some of the most remarkable events that have happened since they possessed the Roman See.

The learned are not agreed exactly about the time of the choice and decease of the preceding Popes. It is held that some of the first reigned together, there being two Bishops, one of the converted Jews, and another of the Gentiles in some cities.	
251. St. Cornelius	2
Novatian, a Priest, was chosen at the same time by the practice of Novatus, the author of the Novatian heresy, and this is looked upon as the first schism in that church.	
253. St. Lucius	1
255. St. Stephen	2
257. St. Sixtus II.	1
258. St. Denys	12
270. St. Felix I.	4
275. St. Eutychianus	8
283. St. Gaius	12
296. St. Marcellinus	7
He apostatized in Dioclesian's persecution, but afterwards repented, and reprehended Dioclesian for his cruelties, for which he was put to death.	
304. St. Marcellus	4
309. St. Eusebius	2
311. St. Melebiades	2
314. St. Sylvester	22
He was compelled to leave Rome by Maxentius, but restored by Constantine the Great, and in his time the Council of Nice was held.	
336. St. Mark	Eight months.
336. St. Julius I.	15
352. Liberius	15
356. St. Felix II set up against him, which made another schism	1
365. St. Damasus I.	17
Ursinus a Deacon was set up in opposition to him, but banished by the Emperor Valentinian in the second year of his usurpation. This Pope held the second Council against the Arians.	
385. St. Siricius	13
He excommunicated the Manichees, and ordered priests who married a second time to be deprived.	
398. St. Anastasius	4

## Years. A. D.

402. St. Innocent I.	15
He defended St. Chrysostom against the Emperor Arcadius, and condemned the errors of Pelagius, Celestin, and Priscillian, and ordered every Saturday to be kept as a fast.	
417. St. Zozimus	1
This Pope also condemned the Pelagians.	
418. St. Boniface I.	4
He would not admit any one into Priests orders under thirty years of age. Eulalius the Archdeacon usurped the Papal chair in this reign, which occasioned the fourth schism; but the difference was decided in favour of Boniface by the Bishops of Italy, Gaul, and Africa.	
423. St. Celestine I.	8
He took the part of St. Augustin against Nestorius.	
432. St. Sixtus III.	7
He bequeathed all his goods to the poor.	
440. St. Leo I, surnamed the Great	20
He was sent for out of Gaul, and advanced to the papacy on account of his merit, as being the most able to defend the church in those distracted times against the Nestorians, Pelagians, and the barbarous nations. He so far insinuated himself into the favour of Attila the Hun, and Geserick King of the Vandals, that he preserved Rome from a total destruction.	
461. St. Hilary	5
He called a Council at Rome to restore ecclesiastical discipline, and confirmed the Councils of Nice, Ephesus and Chalcedon.	
467. St. Simplicius	15
He ordered church-benefices to be divided into four parts, the first for the incumbent, the second for other ecclesiasticks, the third for the repairs of the church, and the fourth for the poor.	
483. St. Felix III.	8
The dedication of churches, and the annual commemoration of such dedications, were first ordered in this pontificate.	
492. St. Gelasius	4
496. St. Anastasius II.	1
498. St. Symachus	15
He decreed that no Pope should be chosen until the See was vacant. Laurence the Archdeacon was set up against him, but Theodorick King of the Goths determined in favour of Symachus, who made Laurence, his rival, Bishop of Nocera. He excommunicated Anastasius the Emperor, who had opposed him, and incited the Bishops of the east to resist him.	
514. St. Hormisdas	9
523. St. John I.	2
Imprisoned by Theodorick the Goth for persecuting the Arians.	
526. St. Felix IV.	4
He succeeded by the interest of Theodorick King of the Goths: first ordered extreme unction, and excommunicated the Patriarch of Constantinople.	
530. St. Boniface II.	2
He ordered the people to be separated from the clergy during divine worship. Diocorus was set up against him, having obtained a great interest by his money, but he was excommunicated by Boniface, and died eighteen days afterwards: this occasioned the sixth schism in this church.	
532. John II, named Mercury	2
He condemned the Monks called Acemeta, who maintained the errors of Nestorius; but

Pope's do-  
minions.

## CHAP. A. D.

XIX.  
Pope's do-  
minions.

Years.  
were remarkable for devoting themselves to the service of God, singing psalms and anthems night and day, and scarce allowing themselves any sleep.

535. St. *Agapetus* I. Ten months.

The processions round churches on Sundays are ascribed to him.

536. St. *Silverus*

4

He was the son of Pope *Hormisdas*, and appointed by *Theodotus* the Goth, rather than elected by the clergy and people, who were many of them against him. The Empress *Theodora*, the wife of *Justinian*, procured his banishment, and set up *Vigilius* against him, who imprisoned *Silverus*, and starved him to death. This was the seventh schism.

540. *Vigilius*

15

This Pope resigned on the death of *Silverus*, and was re-elected, but died afterwards in banishment.

555. *Pelagius* I.

3

He was elected by the interest of the Emperor *Justinian*. He ordered hereticks to be punished by the temporal powers, and added the mass to the office for commemorating the dead.

559. St. *John* III, called *Catilius*

12

571. St. *Benedictus*, named *Bonofus*

4

577. *Pelagius* II.

12

In his time Italy was plundered by the Lombards, and the church distracted with schisms. He was at variance with *John* Bishop of Constantinople, on account of his assuming the title of Oecumenical.

590. St. *Gregory*, surnamed *the Great*

13

He was first a soldier, and by his merit raised himself to be Governor of Rome. He afterwards entered himself in a monastery, and became as eminent among the clergy, till at length he was elected Pope. He opposed the Bishop of Constantinople's taking upon him the title of Universal Bishop: and was the first who introduced the doctrines of purgatory, invocation of Saints, expiations by masses, processions, lustrations on the purification of the blessed Virgin, pilgrimages, &c. And prohibited the eating flesh, milk or eggs on fast-days. He ordered Priests also to put away their wives; but, it is said, upon finding great numbers of infants skulls in the Tiber, he revoked that decree. His compliance with *Phocas*, who murdered the Emperor his master, is highly censured.

604. *Sabinus*. Five months.

He first introduced the burning of lamps in churches.

606. *Boniface* III. Eight months.

He decreed, that those should be excommunicated who procured themselves to be advanced to the Papal chair by bribery and corruption. He decreed also, that Bishops should be elected by the clergy and people, and confirmed by the Pope and Civil Magistrate: and procured an order from the Emperor *Phocas*, that none but the Pope of Rome should be stiled Universal Bishop.

607. *Boniface* IV.

6

614. *Deus Dedit*.

617. *Boniface* V.

7

He decreed that the church should be a sanctuary for criminals.

626. *Honorius* I.

12

639. *Severinus*. Two months.

VOL. II.

## A. D.

Years.  
He condemned the exposition made by the Emperor *Heraclius* in favour of the Arians.

639. *John* IV.

Lent was first observed in England in his pontificate.

631. *Theodorus*

7

He instituted the ceremony of blessing the wax-candle on the Saturday before Easter, and condemned two patriarchs of Constantinople as Monothelites.

649. St. *Martin* I.

5

He condemned the Monothelites in a council at Rome, whereupon the Emperor *Constantius* brought him prisoner to Constantinople, and banished him to the Chersonesus, where he died.

655. *Eugenius* I.

Five months.

655. *Vitalianus*

13

He first ordered divine service to be performed in Latin, and introduced organs into churches.

669. *Adeodatus*

7

676. *Domnus*, or *Domnionus*

1

He reduced the church of Ravenna, the seat of the Emperor's Exarch or Vicar in Italy, under the subjection of the See of Rome.

671. St. *Agatho*

3

He ordered the decrees of the Roman See to be revered and obeyed as the decrees of St. *Peter*, and to be sealed with lead instead of wax.

683. St. *Leo* II.

Ten months.

He ordered baptism to be administered at all times in case of necessity.

684. St. *Benedict* II. Eight months.

In this pontificate the Emperor forgave the money paid him on confirming a Pope, and excused them from applying to him by his Vicar or Exarch at Ravenna.

685. *John* V.

1

686. *Conon*

1

Two usurpers in the interregnum, which made the eighth schism.

687. St. *Sergius* I.

13

His former name was *Bocco de Porco*, or Swine's Snout, which he changed on his advancement to the chair to *Sergius*, which introduced the custom of the Pope's changing their names on an election. He crowned *Lewis*, son to the Emperor *Lotharius* King of Italy.

701. *John* VI.

3

705. *John* VII.

2

He first introduced images into churches.

708. *Sisinius*. Twenty days.

708. *Constantine*

6

He was at variance with the Emperor because he prohibited the worship of images.

714. *Gregory* II.

16

*Leo Isaurus* Emperor of Constantinople, having convened a Synod which condemned the worship of images, praying to the Virgin and other Saints, and the adoration of reliques, ordered all images to be burnt both in the Greek and Latin churches, and all pictures to be defaced. Whereupon the Pope called a Synod, which approved the worship of images, censured the Emperor's decree, and excommunicated him. He also encouraged the Italians to deny him his taxes, in levying whereof the Emperor's Vicar or Exarch at Ravenna was killed.

731. *Gregory* III.

10

This Pontif also excommunicated the Emperor *Leo*, for prohibiting the worship of images,

13 O

but

Pope's do-  
minions.

but was attacked by *Luitprand* King of the Lombards, who besieged him in Rome, and had taken the city, if *Charles Martel* Grand Master of France, the Pope's ally, had not interposed and prevented it.

741. *St. Zachary* 10  
He encouraged the French in deposing their King *Childerick*, and advancing *Pepin* the son of *Charles Martel* to the throne.

754. *Stephen II.* Four days.

754. *Stephen III.* 5  
He was compelled to abandon Rome by *Astulphus* King of Lombardy, but his ally King *Pepin* defeated the Lombards, recovered the exarchate of *Ravenna*, and conferred those territories on the Pope.

757. *Paul I.* 11  
He began to rebuild the church of *St. Peter's* in Rome; his election was disputed by *Theophylact* for some time, which occasioned the ninth schism. The writing the lives of Saints way very much in vogue in this pontificate.

768. *Stephen IV.* 3  
*Constantine* a lay-man was set up against *Stephen*, but was soon degraded, and his eyes put out; afterwards *Philip* a priest opposed *Stephen*, but submitted to him. This was the tenth schism.

772. *Adrian I.* 23  
He was attacked by *Didier*, or *Desiderius*, the last King of Lombardy; but *Charlemain* marched to his assistance, and having defeated *Didier*, and taken him prisoner, put an end to the kingdom of the Lombards: whereupon he acknowledged his right of appointing the Pope. *Charlemain*, on the other hand, confirmed his title to the territories which his father *Pepin* had conferred upon him; and had so great a respect for this Pope, that he wrote his epitaph, which still remains in *St. Peter's* church.

795. *Leo III.* 20  
He was opposed by a faction, and forced to fly to *Charlemain* in Germany, who confirmed him in the chair; whereupon *Leo* crowned his benefactor Emperor of the west, and acknowledged him his sovereign.

816. *Stephen V.* 1

817. *Pascal I.* 7  
He prevailed with the Emperor to give up his right of appointing a Pope; and excommunicated *Leo V*, Emperor of the East, for opposing the worship of images. He crowned *Lotharius* Emperor of the West.

824. *Eugenius II.* 3  
He was opposed by *Zizinius*, which occasioned the eleventh schism. The worship of relics being very much in vogue in this pontificate, he distributed great numbers of bones in France, Germany and England, said to belong to Saints and Martyrs.

827. *Valentinus* Forty days.  
He was poisoned forty days after his election.

827. *Gregory IV.* 15  
He refused to accept of the chair, it is said, till he had the Emperor's consent.

844. *Sergius II.* 3

847. *Leo IV.* 8  
He defeated the Saracen fleet, and defended Rome against them. He prohibited laymen to enter the church in time of divine service, it is said.

852. Some place Pope *Joan* here by the name of *John VIII.* It is said she was of English ex-

Years. A. D.

traction; that she had her education at Athens, where having made a great progress in her studies, she went to Rome, and on *Leo's* death was advanced to the papal chair. But being with child, was delivered of a bastard as she was going to the church of *St. John de Lateran*. But I find the whole is looked upon as a fiction by many Protestants.

855. *Benedict III.* 2

*Anastasi*, an excommunicated Priest, opposed him, which occasioned the twelfth schism.

858. *Nicolas I.* surnamed *the Great.* 9

He was called *the Great* on account of his maintaining his authority against *Michael* Emperor of the east, and excommunicating *Photius*, whom the Emperor had made Patriarch of Constantinople, in the room of *Ignatius*, whom he had deposed.

867. *Adrian II.* 4

He was chosen without the consent of the Emperor, and ordered that neither the Emperor, nor any layman should be concerned in electing a Pope for the future.

872. *John VIII.* 10

He was made prisoner by the Marquis of *Tuscany*, but escaped into France, and returning to Italy, then infested by the Saracens, it is said, was forced to pay tribute to them. He was taken off by poison.

882. *Marin* or *Martin II.* 2

884. *Adrian III.* 1

885. *Stephen VI.* 6

He first appointed the sign of the cross.

890. *Formosus.* 6

He was opposed by *Sergius*, a Cardinal Deacon, which occasioned the thirteenth schism.

897. *Stephen VII.* 3

Opposed by *Boniface*, who is by some placed in the number of Popes; but was forced to quit the title in fifteen days.

901. *Theodorus II.* Twenty days.

901. *John IX.* 3

905. *Benedict IV.* Some few months.

906. *Leo V.* Forty days.

One of his domesticks usurped the See, and threw him into prison, where he died.

906. *Christopher* Seven months.

He governed tyrannically, and was imprisoned in a monastery.

907. *Sergius III.* 3

Having imprisoned his predecessor, he obtained the chair by force; after which he threw the corps of Pope *Formosus* into the Tiber, who had formerly been his competitor for the pope-dome. He cohabited with a Lady of quality, by whom he had a bastard, that afterwards came to be Pope by the name of *John X.*

910. *Anastasi* III. 2

912. *Landon* Some months.

913. *John X.* 15

He succeeded by the interest of his mother, who was concubine to *Sergius III*, but was deposed, and strangled in prison by the procurement of her daughter, to make room for *John XI*, her bastard son.

928. *Leo VI.* Six months.

929. *Stephen VIII.* 2

931. *John XI.* 4

936. *Leo VII.* 3

939. *Stephen IX.* 3

He was set up by the Emperor *Orto*, but opposed by the people, who assaulted him, and so dif-

minions.

disfigured his face that he could never appear in publick.

943. *Marin* or *Martin III.*

6

949. *Agapetus II.*

9

955. *John XII.*

9

He called the Emperor *Otbo* to assist him against the tyrant *Berengarius* and his son, and swore allegiance to him; but on some misunderstanding joined his enemies; whereupon *Otbo* procured him to be deposed, setting up *Leo* a Deacon, whom he maintained in the papal chair two years, which occasioned the fifteenth schism: But *John* was afterwards restored by the interest of the ladies, whose votary he had been. He was murdered by one with whose wife he had been too free.

962. *Leo VIII.* the usurper, is by some placed in the catalogue of Popes

2

964. *Benedict V.*

1

965. *John XIII.*

6

He was elected by the interest of the Emperor, but expelled by the Romans; and being afterwards restored, used his enemies barbarously. He first appointed the blessing of bells.

972. *Domnus* or *Donnion II.* Two months.

972. *Benedict VI.*

1

He was imprisoned and afterwards strangled by the procurement of *Boniface* the Cardinal Deacon, who usurped the papacy, and occasioned the sixteenth schism; but *Boniface* having plundered the church of *St. Peter's*, retired to Constantinople.

975. *Benedict VII.*

9

He attempted to reform the clergy, and was deposed.

984. *John XIV.*

1

He was imprisoned and starved to death by *Boniface* the Antipope, who returned to Rome and usurped the chair about four months; after which dying suddenly, he was dragged naked about the streets.

985. *John XV.*

10

He was at perpetual variance with his clergy; driven from Rome, and restored again by the Emperor; but at last was famished in the castle of *St. Angelo*, as it is said.

996. *Gregory V.*

2

He was the son of *Otbo* Duke of *Suabia*, and first created Elector in the Empire. *Crescentius*, a nobleman of Rome, set up *John* Bishop of *Piacenza* against him, who held the See sixteen months, which occasioned the eighteenth schism.

999. *Silvester II.*

4

1003. *John XVII.* Some fews months.1003. *John XVIII.*

5

He appointed the festival in commemoration of the dead.

1009. *Sergius IV.*

2

1012. *Benedict VIII.*

12

He defeated the Saracens who were then masters of part of Italy.

1024. *John XIX.*

9

1034. *Benedict IX.*

10

He procured the chair by force and bribery, and led a very scandalous life; he was several times deposed and restored again.

1044. *Gregory VI.*

2

He purchased the chair of *Benedict*, who resumed his pretensions notwithstanding. Two others also usurped the chair about this time, which occasioned the twentieth schism. *Gregory*

## A. D.

bought out the other competitors, but was afterwards carried prisoner into Germany by the Emperor *Henry III.* where he died.

1046. *Clement II.* Nine months.

He was set up by the Emperor, but poisoned by *Bennet IX.* in the tenth month of his pontificate.

1048. *Damasus II.* Twenty-three days.

He was also set up by the Emperor, and poisoned by *Bennet IX.*

1049. *St. Leo IX.*

5

1054. *Viktor II.*

2

1057. *Stephen X.* Eight months.

He subjected the church of *Milan* to that of *Rome*, which till this time had disputed its supremacy. He was advanced to the chair by the interest of the Emperor, as three or four of his immediate predecessors had been. The faction that opposed him fell upon him, and so disfigured his face, that he could not appear in publick for some time.

1058. *Nicholas II.*

2

He directed that the Pope should be elected by the Cardinals and the Emperor. The Bishop of *Velitri* was his competitor, but obliged to relinquish his pretensions.

1061. *Alexander II.*

11

He was chosen by the Cardinals, but opposed by *Honorius* who was set up by the Emperor, between whom several bloody battles were fought: But *Honorius* was at length obliged to submit. This Pope assisted *William the Conqueror* in his enterprize against *England*.

1073. *Gregory VII.*

12

He was elected by the Cardinals without the Emperor's consent, and decreed that the investiture of Bishops, &c. should not belong to the Emperor. He excommunicated the Emperor *Henry IV.* cited him to appear at *Rome*, and absolved his subjects from their allegiance, and set up *Rodolphus* of *Suabia* against him; but the Emperor having defeated *Rodolph*, who was killed in the field of battle, marched into Italy, besieged and took *Rome*, compelling *Gregory* to fly to *Salerno*; whereupon he advanced *Clement* to the papal chair, which occasioned the twentieth schism, that lasted above twenty years.

1086. *Viktor III.* Ten months.

He was poisoned by his Subdeacon at the sacrament.

1087. *Urban II.*

11

He excommunicated the Emperor, and was obliged to fly into *France* for protection.

1099. *Pascal II.*

18

He excommunicated *Clement* the Antipope, and contested with the Emperor and the King of *England* about the investiture of the bishopricks, &c. The Emperor *Henry V.* imprisoned him, and made him relinquish the investiture, and confirm this agreement by taking the sacrament; but he afterwards promoted an insurrection against the Emperor in *Germany*, and obliged him to give up the right of investiture again. *Clement* the Antipope dying, *Paschal* ordered his corps to be dug up and treated ignominiously: after which four other Antipopes set up against him, which occasioned the twenty-fourth schism.

1118. *Gelasius II.*

1

He was obliged to leave *Rome* by the Emperor *Henry V.* (who set up *Gregory* against him) and to fly into *France*; whereupon happened the twenty-

## CHAP. XIX.

Pope's do-  
minions.

XIX.  
Pope's do-  
minions.

Years.

- twenty-fifth schism, *Gregory* keeping possession of the See for three years.
1119. *Calixtus II.* 5  
He was of the blood royal of France, and succeeded on the death of *Gelasius*. He excommunicated the Emperor, and imprisoned *Gregory* the Antipope, and held the first General Council of Lateran, in order to accommodate matters with the Emperor.
1124. *Honorius II.* 4  
Being illegally chosen, he resigned, in order to be elected canonically, as he was.
1130. *Innocent II.* 13  
*Anaclete* was set up against him by the Italians, whereupon he was obliged to fly for refuge into France; but afterwards accommodated matters, and held the second General Council of Lateran.
1143. *Celestine II.* Five months.
1144. *Lucius II.* Eleven months.  
He persuaded the Emperor *Conrad* to undertake a croisado against the Saracens.
1145. *Eugenius III.* 8  
He was several times driven from Rome, but was at length successful against those who opposed him, and promoted a croisado.
1153. *Anastasiu IV.* 1
1154. *Adrian IV.* 4  
He was an Englishman, named *Nicholas Breakspere*, of Abbots Langley in Hertfordshire, his father a lay-brother of St. Albans. He travelled to Arles in France, and being admitted into the abbey of St. *Ruff*, became their Abbot. He afterwards travelled into Norway, and planted Christianity there; for which service he was made a Cardinal by Pope *Eugene III.* He excommunicated the Emperor *Frederick Barbarossa*, for not acknowledging the Empire to be a fee of the See of Rome, abolished the Roman Senate, and excommunicated the citizens. He was afterwards reconciled to the Emperor, and crowned him in St. *Peter's* church.
1159. *Alexander III.* 21  
He had continual wars with the Emperor *Barbarossa*, being supported by the Venetians and other powers. *Victor* was set up against him, and took him prisoner; but he made his escape into France, where he was forced to remain three years, which occasioned the twenty-seventh schism in the church. *Paschal* and *Calixtus* were set up against him after *Victor*; but he extricated himself out of all his difficulties, and compelled the Emperor to submit to him, who it is said was contented to let the Pope tread upon his neck, to procure the liberty of the Prince his son, who had been made prisoner by the enemy. The Pope on this occasion insolently made use of that passage of scripture, *Thou shalt tread on serpents and scorpions*. He held the third Lateran Council at Rome for the reformation of the clergy.
1181. *Lucius III.* 4  
He was driven from Rome upon his attempting to lay aside the Consuls and Patricii; but being assisted by the neighbouring powers, the Romans were obliged to submit to him. He also disputed the right of investiture with the Emperor.
1185. *Urban.* 1  
In this pontificate Jerusalem was taken by the Saracens.
1187. *Gregory VIII.* Two months.

A. D.

Years. CHAP.

XIX.  
Pope's do-  
minions.

- He promoted a croisado for the recovery of the Holy Land.
1188. *Clement III.* 5  
He promoted the croisado's, prohibited the celebrating Mass with common bread or in wooden vessels.
1191. *Celestine III.* 6  
He took part with *Richard I.* King of England, against his Barons, and invited him to undertake a croisado. Upon his crowning the Emperor, he struck the crown off again with his foot, intimating that he had power to depose him, says my author.
1199. *Innocent III.* 18  
He first appointed auricular confession; excommunicated the Emperor *Otho*, and set up *Frederick II* against him; *John* King of England made his dominions tributary to the Pope in this pontificate.
1216. *Honorius III.* 10  
He ordered kneeling at the elevation of the Host, and excommunicated the Emperor *Frederick II.*
1227. *Gregory IX.* 14  
He was in continual wars with the Emperor *Frederick II*, excommunicated him and attempted to depose him; but the Emperor proving successful, it is said, broke the Pope's heart.
1241. *Celestine IV.* Twenty-eight days.  
He was poisoned.
1243. *Innocent IV.* 11  
He excommunicated the Emperor *Frederick II*, and defeated his army; but the Emperor afterwards getting an advantage of him, the Pope fled to France for refuge, where he remained till the Emperor's death, and then returned to Rome. He was the first who appointed the Cardinals to wear red hats.
1254. *Alexander IV.* 6  
In this pontificate Italy was distracted by the two factions of Guelphs and Gibelines, the first being espoused by the Pope, and the other by the Emperor.
1261. *Urban IV.* 3
1265. *Clement IV.* 3
1271. *Gregory X.* 4
1276. *Innocent V.* Five months.
1276. *Adrian V.* Twenty-nine days.
1276. *John XXI.* Nine months.
1277. *Nicholas III.* 2
1281. *Martin IV.* 3
1285. *Honorius IV.* 2
1287. *Nicholas IV.* 4  
After his death there was an interregnum of two years and three months.
1294. *St. Celestine V.* Five months.  
He was chosen out of an hermitage, and after a reign of five months, chose to resign and return to his hermitage again.
1295. *Boniface VIII.* 8  
He excommunicated *Philip* the French King, and absolved his subjects from their allegiance, and gave his kingdom to those who could recover it; whereupon *Philip*, in a Synod and Parliament of that kingdom, condemned the Pope for simony, murder, usury, atheism, adultery, and a confederacy with the Saracens, and sent an army into Italy, which took the Pope prisoner, and it is said he died raving mad in their hands.
1303. *Benedict X.* Nine months.

*The See removed from Rome to Avignon.*

1305. *Clement V.* 8  
He was a Frenchman, elected after a long vacancy, and crowned at Lyons. He resided at Avignon, as his successors did after him for seventy years, which the Romans called the Babylonish Captivity.
1316. *John XXII.* 18  
In this pontificate *Lewis* of Bavaria and *Frederick* of Austria being competitors for the Empire, *John* excommunicated *Lewis*, whereupon *Lewis* set up a *Cordelier* against the Pope under the name of *Nicholas V.*, which occasioned the twenty-eighth schism, which lasted two years; but *Nicholas* being defeated and taken prisoner, died in prison.
1334. *Benedict XII.* 7  
He was the son of a French miller; he excommunicated *Lewis* of Bavaria the Emperor.
1342. *Clement VI.* 10  
He ordered the Jubilee to be held once in fifty years.
1352. *Innocent VI.* 12  
He was a Frenchman also, and perpetually at war with one Prince or other. He burnt *Joannes de Rupe* for his interpretation of the Revelations, in which he called the Pope Antichrist.
1364. *Urban V.* 5  
He was the first who wore the triple crown, condemned pluralities and non-residency, and prohibited the Cardinals making their palaces sanctuaries for villains.
1370. *Gregory XI.* 1  
He went from Avignon and took up his residence at Rome, after the See had been removed seventy years.

*The See resettled at Rome.*

1378. *Urban VI.* 11  
The Romans threatened to set fire to the Conclave, unless an Italian was elected; whereupon *Urban* was elected; but the Cardinals afterwards set up *Clement VII* against him, which occasioned the twenty-ninth schism, that lasted thirty years.
1378. *Clement VII.* lived till 1394, but is reckoned by some among the Antipopes.
1389. *Boniface IX.* 14  
He was the first who assumed the absolute government of Rome, and took upon him to appoint all the magistrates. Before he could accomplish the design, he had several warm skirmishes with the citizens, in one of which he was driven out of Rome, and was very near being killed. He excommunicated several sovereign Princes for conferring benefices on Clerks without his approbation, and pronounced a sentence of deposition against the Emperor *Wenceslaus*.
1404. *Innocent VII.* 2  
He was elected on condition that he would quit the chair again, if *Bennet* the Antipope, who resided at Avignon, would do the like: But refusing afterwards, and being reprehended by the Romans for it, he caused several of them to be beheaded, and their bodies thrown into the streets; whereupon the citizens called in *Ladislaus* King of Naples to their assistance,

who drove him from Rome, but he returned thither afterwards and died there.

1406. *Gregory XII.* 2  
He was chosen also upon condition he should resign the pontificate if *Bennet* the Antipope did; which they refusing, the Cardinals met at Pisa, and resolved that both of them had forfeited the See, and elected *Alexander*.
1409. *Alexander V.* Ten months.  
He deposed King *Ladislaus* for invading the dominions of the church.
1410. *John XXIII.* 5  
He was elected on condition also that he should resign again, if *Gregory XII* and *Bennet* would do the same; but he refusing, a council was called by the Emperor at Constance anno 1415, and this Pope taken and sent prisoner to Heidelberg, after which the council deposed him and the other competitors, and elected *Martin V.* who afterwards upon *John's* submission, made him Dean of the Cardinals, and gave him the bishoprick of Frefcati.
1417. *Martin V.* 13  
He was chosen, as has been said, by a committee of the council of Constance, and made an excellent Governour. He repaired the city of Rome, which was almost destroyed during this schism, and reformed the manners of the Clergy and Laity, preferring none but men of merit, and was much lamented when he died.
1431. *Eugene IV.* 15  
He called a council at Basil, but afterwards revoked his letters of summons, and held a council at Ferrara. The council of Basil however met, and summoned the Pope before them, and on his refusing to appear, deposed him, and set up the Duke of Savoy, *Felix V.*, which schism lasted above nine years. *Eugene* however maintained himself at Rome till his death.
1447. *Nicholas V.* 8  
*Felix V* resigning his pretensions, put an end to the schism in this pontificate.
1455. *Calixtus III.* 3
1458. *Pius II.* 5  
He is esteemed one of the most learned men that ever was advanced to this See.
1464. *Paul III.* 6
1471. *Sixtus IV.* 13  
He endeavoured to ruin the Venetians and the house of Medicis, and even hired assassins to murder two of the Princes of Medicis at church, one of whom was killed, and the other escaped. He proceeded so far as to excommunicate the Venetian republic, but they maintained their liberties against all his thunder; which proved such a disappointment to him, that it is said it contributed to his death.
1484. *Innocent VIII.* 7  
He permitted the Norwegians to celebrate Mass without wine, upon their alledging that it was not sometimes to be had in their country. He is said to be remarkable for his incontinence, and enriching his base sons.
1492. *Alexander VI.* 11  
He obtained the chair by bribery, and it is said broke through all the Laws of God and man to advance his base son *Cesar Borgia*, besides whom he had several others. He and his son *Cesar* poisoned several of the Cardinals, and designed to have poisoned others at an entertainment, for which purpose a bottle of poisoned wine was provided, but by mistake the

*A. D.* servant gave a glass of the poison to the Pope, which killed him. The French King *Charles VIII* was provoked to enter into a war with him, and took Rome, and brought the Pope to terms.

1503. *Pius III.* Twenty-six days.

He was poisoned, as it is supposed, by his successor, before he had reigned a month.

1503. *Julius II.*

He entered into a war with the French, in which he was unsuccessful; and excommunicated several sovereign Princes who had opposed his election.

1513. *Leo X.*

A war with the Turks being resolved on in this pontificate, the Pope issued his indulgences in order to raise money to maintain it, which gave occasion to *Luther* to enquire into this and other errors of the church of Rome, and ended in the throwing off the Pope's authority in several kingdoms of Europe. He gave King *Henry VIII* of England, the title of *Defender of the Faith*, for writing against *Luther*.

1522. *Adrian VI.*

He endeavoured to drive the French out of Italy, but his councils being betrayed, he could not effect it, and was poisoned in the second year of his reign.

1523. *Clement VII.*

He insulted the Emperor *Charles V.*, who thereupon sent an army into Italy, besieged Rome, and took the Pope prisoner, obliging him to pay forty thousand crowns of gold for his ransom. But matters were afterwards accommodated between him and the Emperor. In this pontificate, *Henry VIII.*, King of England, divorced his Queen, without applying to the Pope; whereupon his Holiness excommunicated the King, and his Majesty on the other hand threw off the Pope's supremacy, which laid the foundation of the reformation in England.

1544. *Paul III.*

He convened the council of Trent, established the inquisition, and approved the order of *Jesuits*, but condemned the Interim which *Charles V.* had contrived, in order to accommodate matters with the Protestant Princes and States of Germany. He cited King *Henry VIII.* to appear at Rome, to answer the charge of adultery, and absolved his subjects from their allegiance, which only confirmed them in their aversion to the See of Rome.

1550. *Julius III.*

1555. *Marcellus II.* Twenty-one days.

1555. *Paul IV.*

He treated the Ambassadors with great insolence, who came from King *Philip* and Queen *Mary*, to beg absolution in the name of the people of England, and to desire a reconciliation with the See of Rome; the reason of which is supposed to be the ill treatment he met with from the Spaniards when they took Rome by storm. He joined with the French and Swiss also against Spain, and making Italy the seat of war, reduced it to great misery. He opposed the resignation of the Emperor *Charles V.*, and would never acknowledge *Ferdinand* the Emperor, because he was not consulted in it. He was a zealous promoter of the Inquisition, and recommended it on his death-bed as the principal support of the Papacy.

Years. *A. D.*

1559. *Pius IV.*

He put a conclusion to the council of Trent, ordered the antiquities in Rome to be preserved, and encouraged magnificent buildings.

1566. *Pius V.*

This Pope, with his confederates the Spaniards and Venetians, defeated the Turks in a great naval engagement near Lepanto. He assisted *Charles IX.*, of France, against his Protestant subjects; conferred the title of Great Duke of Tuscany on the family of Medici; excommunicated *Elizabeth* Queen of England, absolved her subjects from their allegiance, and transferred her dominions to the King of Spain.

1572. *Gregory XIII.*

He encouraged fine buildings in Rome, and particularly caused a college to be built for the English, and reformed the Calendar, from hence called the *Gregorian Calendar*.

1585. *Sixtus V.*

He was the son of a cottager, and his first employment keeping of swine; but being taken into a monastery, he appeared an excellent genius, and had an education given him suitable to it, but would not have been advanced to the Papacy so soon, if he had not pretended to be more infirm and old than he really was: immediately after his election he appeared to be one of the most vigorous active men that had sat in that chair. He reformed the courts of justice, and entirely suppressed the banditti. He rebuilt the Vatican library, and adorned Rome with more magnificent structures than any of his predecessors, and recovered several obelisks, pillars, and other noble antiquities which had been long buried in rubbish, giving the city a perfect new face. He repaired the fortifications of the towns belonging to the church, and increased their garisons to twenty thousand men, and was dreaded both by the French and Spaniard. He encouraged the great attempt of the Spaniards against England with their Armada in 1588, designing, as it is said, at the same time to have surprized the kingdom of Naples. He laid new taxes on his subjects, and increased the revenues of the Roman See six hundred thousand crowns per annum, and at his death, it is said, left five millions of crowns behind him, of which he appropriated great part for the defence of the church, enjoining that it should not be touched on any other occasion: Among other acts of charity, he employed two hundred thousand crowns to prevent a scarcity in Rome, when the rest of Italy was grievously distressed by famine. He is supposed to have been poisoned by the Spaniards, who did not admire his conduct.

1590. *Urban VII.* Thirteen days.

1590. *Gregory XIV.* Ten months.

1591. *Innocent IX.* Two months.

1592. *Clement VIII.*

He united the duchy of Ferrara to the See of Rome; he corrected the Bible set out by *Sextus V.*, in two thousand places, and forbid confession by Letters.

1605. *Leo XI.* Twenty-five days.

1605. *Paul V.*

He excommunicated the Venetians, and laid their country under an interdict, for trying an ecclesiastick in the secular courts, and making statutes of Mortmain to prevent the Laity leaving

Pope's do-  
minions.

Years. leaving their lands to the church. The Venetians on the other hand expelled the Monks, Jesuits, and all religious orders, who refused to celebrate divine service. And the Pope found himself under a necessity at last to accommodate matters with the Venetians, and yield up every point he had insisted on. He condemned the oath of allegiance which the crown of England required of the subject, and declared no Catholic could take it with a safe conscience. In this pontificate arose the dispute between the Dominicans and Jesuits concerning the immaculate conception of the blessed Virgin. He equalled any of his predecessors in beautifying and adorning the city of Rome.

1621. Gregory XV.

2 He founded the congregation *de Propaganda Fide*.

1623. Urban VIII.

20 He was extremely devoted to the Angel St. Michael, whose image he erected in St. Peter's church, and his own in a posture of adoration before it, with this inscription, viz. *I worship thee morning and evening*. He solemnized a Jubilee in the year 1625, when the Spanish Ambassador, in a compliment, subjected all his master's dominions to him, as the Vicar of Christ, promising to defend the Holy See with all his power. He ordered the State of Venice to be treated with the same honours as crowned heads; condemned Galileo for affirming the sun stood still and the earth moved; and had an intention to have made one of his nephews King of Naples, but did not succeed in it. He put some persons to death for attempting his life by witchcraft, and forming an image of him in wax, which they wounded with pins and needles.

1644. Innocent X.

10 He is charged with cohabiting with his brother's wife Donna Olympia, and being governed by her. He protested against the treaty of Munster, because church-lands were yielded up, and transferred to temporal Princes, and others who had gotten possession of them at the Reformation; and because liberty of conscience was allowed to Protestants in many countries; and Monsieur Moulin suggests, that he promoted the murder of Charles I, King of England.

1655. Alexander VII.

12 The French King insulted him, and he made a very mean submission. He condemned the Jansenists, and determined the controversy concerning the immaculate conception of the Blessed Virgin in her favour.

1667. Clement IX.

2 In this pontificate the island of Candia was taken by the Turks, which, it is said, broke the old gentleman's heart.

1670. Clement X.

1676. Innocent XI.

13 He assigned Christina Queen of Sweden, who resided at Rome, a pension of twelve thousand crowns per annum. He had great disputes with the French King about disposing of benefices and church-lands, and his Holiness was so highly incensed against his most Christian Majesty on this account, that he entered into a confederacy with the Emperor, England, and Holland against him, who stipulated that they would not make peace with France, till the Pope had received satisfaction for the wrongs done to the

## A. D.

Years. Holy See by his most Christian Majesty; and from this alliance with the Protestant powers he obtained the name of the Protestant Pope.

1690. Alexander VIII.

1 He seemed to dread the French King's power as much as his predecessor, and therefore was no great enemy to the Confederates, tho' most of them were Protestants.

1691. Innocent XII.

9 He was of the noble family of Pignatelli in Naples, and having been Nuntio in the greatest courts of Europe, was extremely well qualified for a Governour when he was elected to the papacy. He declared against nepotism, and aggrandizing his relations, and acted accordingly. He built him a magnificent tomb in his lifetime, in which he was interred, only he ordered his Confessor to send his heart to the Great Duke of Tuscany.

Nov. 20, 1700. Clement XI.

20 It was three days before the Cardinals could persuade him to accept the chair; and then he declared he would not have done it, but to free himself from some scruples they had raised in his mind concerning the sin of refusing it.

He had indeed a very difficult part to act, the crown of Spain being in dispute during this pontificate. He was thought to be more inclined to the French than the Imperialists, but insulted however by both of them in their turns; his towns surprized, and soldiers quartered in his territories. The thunder of the Vatican had now lost its force; neither the Emperor or France would be terrified by his threats.

May 8, 1721. Innocent XIII.

2 He protested against the Emperor's granting the investiture of the duchies of Parma and Placentia to Don Carlos Prince of Spain, claiming them as fees of the church.

May 29, 1724. Benedict XIII.

Pope INNOCENT XIII dying on the seventh of March 1724, the Cardinals entered the conclave on the twentieth of the same month, where after having been shut up two months and nine days they resolved unanimously to chuse for Sovereign Pontiff his Eminence Cardinal VINCENTO MARIA ORSINI of the Dominican order, who thereupon took upon him the name of BENEDICT XIII. He was the first that had been chosen of a monastical order for near two hundred years. He is a Neapolitan by birth, and senior Cardinal of the sacred college, being in the seventy-fifth year of his age at the time of his election. He is said to have more humility and integrity than most of his predecessors, and is a person of extraordinary temperance. On his advancement he would not suffer his domesticks to wear any thing but coarse purple cloth without lace, and ordered all the rich hangings and furniture of the Vatican to be taken down, and plain to be put up in their room. He prohibited all ecclesiasticks wearing perukes; and as to his own person, is so mortified, that he wears nothing but woollen next him in the hottest weather. At the first consistory he held, several of the Cardinals and Prelates appeared with their bald pates without perukes, in conformity to the Pope's order, and the rest excused themselves on account of their health. An admirer of this Pope gives him the following character: He is, says this gentleman, the mildest, most friendly, and most engaging Pope.

engaging person in the world, obligingly gracious to every body, of the most easy access, and exceeding affable, especially to the poor. Though he is nicely frugal as to himself, he is beneficent to others to a degree of magnificence. When he was Archbishop of Benevento he bestowed all the revenues of that See, and his own patrimony, which were very great, upon the publick. The monuments of his abundant charity must shine as long as the city of Benevento stands. When that town was in a manner destroyed by a terrible earthquake in June 1688, and sixteen hundred persons buried in its ruins, and the remaining inhabitants were about to abandon the place, and settle elsewhere, the good Archbishop prevented them by his liberality. He assisted them to repair their private houses, and rebuilt the cathedral, parish churches, hospitals, and religious houses at his own charge; insomuch that the city makes a much better figure than it did before that calamity happened. But by the account the Pope himself gives of his miraculous escape, he appears to have a pretty deal of superstition and enthusiasm in his composition.

The pre-  
sent Pope's  
escape  
from an  
earth-  
quake.

He relates, That on Saturday the fifth of June, 1688, at the hour of Vespers, being then with a gentleman in one of the uppermost rooms of his palace, the same was thrown down, together with the apartment underneath, and part of the main roof; so that he fell with the above-mentioned gentleman down into a vault of the cellar, where they were covered with the stones and beams of the shattered apartments. His friend was crushed to pieces, but he was preserved by means of some rafters, which fell in such a manner that they formed a kind of roof, and gave him room enough to breathe in; and, to his unspeakable comfort, "there fell also with him a chest of drawers, in which he kept the pictures of the principal actions of his glorious protector St. PHILIP of Neri, which though it was locked, burst open, and the pictures placed themselves round him; one of them particularly fell upon his head, which was the picture of the Saint praying and looking towards the blessed Virgin, who with her sacred hand supported the main beam of the church of Vallicella, which was split out of its place." He lay under these ruins an hour and a half, but did not think it had been above a quarter of an hour, when he was dug out by some of the Monks of his order. They carried him out of the gate of the city, wounded as he was, in his head, his right hand, and right foot, but he felt no pain, and the same night he preached to the people with the host in his hand. The favours he received from the abovesaid Saint, to whose intercession he ascribes his deliverance, he says, were not confined to his person, but extended to his whole family; for though his palace was entirely ruined, he did not lose one of his domesticks, or any officer of his court, except one footman: so that he could say, to the glory of that Saint, that he was pleased in his favour to renew the miracle which happened, anno 587, at Antioch, in a terrible earthquake, wherein sixty thousand persons lost their lives, and their Bishop GREGORY was preserved with all his family, though his palace, as well as that of Benevento, was entirely demolished. "The Saint also had preserved all the records and writings belonging to his church; and upon going to visit his heart, which lies in the church of the Fathers of the

Oratory at Naples, he continued his goodness so far, that he was cured of all his wounds before he had well got out of the chapel." And concludes as follows: "In order to perpetuate the memory of so great a miracle, which God, by the intercession of St. PHILIP of Neri, wrought for me a miserable sinner, and to augment the devotion of believers towards so distinguished a benefactor, and so amiable a protector, I cause this relation to be registered, and confirm it with my own subscription and seal, that none may doubt the truth of the facts it contains."

Done at Naples at my convent of St. CATHERINE DE FORMELLE, this present Tuesday the 22d of June, 1688.

F. VINCENT MARIA Card. ORSINI,  
Archbishop of Benevento.

From this Specimen of the present Pope's bigotry and superstition, notwithstanding his intended reformations in the church, and his permitting the bible to be translated, few people will believe him in danger of being infected with the northern heresy; though there were some wise men amongst us so sanguine as to believe him a Protestant in his heart, about the time of his accession to the triple crown. The pope indeed had been used to a retired monastick life, and did not seem to relish either the business or splendor of a court; nay, he would gladly have retired to his bishoprick of Benevento again, and left the administration of the government to the Cardinals, if he had not been dissuaded from this project by his relations; and yet he may not be less zealous for his religion than his predecessors. But some men are of opinion, that a Roman Catholic cannot be endued with any Christian or moral virtues, but immediately they suppose he is turning Protestant; as if virtue were confined to the people of that denomination, when God knows we may have as little of that kind to boast of at this day, as any persuasion whatever. But to proceed: The Pope considering the shortness of human life, decreed, that a great jubilee should for the future be celebrated every five and twenty years, instead of fifty, which it was formerly limited to; when the people should be entitled to plenary indulgences, upon condition nevertheless that every person should be obliged to visit four churches every year fifteen times on foot, between the beginning of Lent and the twenty-seventh of May. In pursuance of which new regulation, the Emperor, attended by his whole court, visited the four principal churches of Vienna lately, whither they went on foot over boards laid along the streets for that purpose. Nor does the Pope wholly neglect secular affairs; for they tell us he is about making Civita Vecchia and Ancona free ports, in order to promote a foreign trade in the ecclesiastical State.

Having thus given a catalogue of the Popes, and an abstract of their history, I shall here add a list of the Antipopes, and the years of their respective usurpations, though I find authors are not entirely agreed which were real Popes, and which Antipopes.

It is observable, that no Pope, unless *St. PETER*, has reigned four and twenty years: and it seems there is a prophetic tradition, that no Pope's reign shall ever extend beyond those limits. Some there are, it is true, which have come pretty near it; as *St. SILVESTER*, who died anno 336, in the twenty-third year of his pontificate: *ADRIAN I*, who died anno 795, in the twenty-fourth year of his pontificate: *LEO III*, who died anno 816, in the twenty-first year of his pontificate: *ALEXANDER III*, who died anno 1181, in the twenty-second year of his reign: *Pope URBAN VIII*, who died anno 1623, in the twenty-first or twenty-second year of his reign: And lastly, *Pope CLEMENT XI*, who died anno 1721, in the twenty-first year of his reign.

This tradition, that no Pope shall govern the See of Rome above four and twenty years, is so firmly believed in that court, that we find *Cardinal TANARA*, Sub-dean of the sacred college, when he complimented *Pope CLEMENT XI*, on the anniversary of his creation, anno 1720, on his entering into the twenty-first year of his pontificate, using this expression, *Sanctissime Pater, non superabis annos Petri*, Most holy Father, you shall not out-live the years of *St. PETER*; intimating, that as *St. PETER*, according to their tradition, was Pope of Rome four and twenty years, and none of his successors had reigned so long, he ought to prepare himself for his departure: which was but a melancholy compliment to the Pontiff, just recovering from a fit of sickness, and was by some thought to have had an ill effect upon his health; for he soon after relapsed, and died within three months. It may be thought strange, that no Pope of Rome should in the space of seventeen hundred years reign twenty-four, when we find Princes in every kingdom, who have sat upon their thrones forty, fifty, and some sixty years: but the wonder will abate, when we consider that they generally elect one of the eldest Cardinals in the sacred college, who have lived the ordinary age of men before they are advanced to that dig-

VOL. II.

nity, whereas other Princes are frequently crowned in their infancy: and perhaps rather than spoil the prophecy, That no Pope shall exceed the years of *St. PETER*, they may be induced to practise Italian arts upon him, if he presume to advance beyond those limits.

## CHAP. XX.

Contains an account of the ceremonies observed at the death of the Pope, and the election of his successor.

WHEN the Pope dies, notice is immediately given to the sacred college, to the nobility and courts of justice; and the same or the succeeding day, the Cardinal Chamberlain dressed in purple, and attended by the clerks of the chamber, and some members of the Council, comes and views the corps, and calls out to the deceased by his Christian name, OTTOBONI or PIGNATELLI as his name is, *ſei morto?* art thou dead? and after a short pause answers again, *Ottoboni e morto*, OTTOBONI is dead. Then taking the seal called *L'anello del piſcatore*, the fisherman's ring, he breaks it, and the great bell of the capitol, which is never moved but on this occasion, is ordered to be rung, to give notice to the citizens of Rome of the Pope's death; and Expresses are sent to all Roman Catholick Princes and States, and particularly to the absent Cardinals, to summon them to the election of another Pope. The Cardinal Chamberlain has the administration of the civil government during a vacancy, and even coins money, according to *MOTRAYE*, with his own arms on one side, and two cross keys on the reverse, and is attended by the guards of the deceased Pope. The Cardinals of his creation are dressed in violet-coloured serge during the vacancy, and those of his predecessors creating wear green habits faced with red; and the maces carried before the Cardinals on all solemn occasions are reversed. The corps being washed and embalmed, the next day is carried to *St. PAUL's* chapel in the Vatican, and dressed in the pontifical habit, from whence they attend it to *St. PETER's*, and place it in the chapel of *SIXTUS V*. on a magnificent bed of state, surrounded by a vast number of wax lights, which burn night and day; the Priests all the while praying for the repose of the deceased's soul: which surely must be unnecessary, for he who in his lifetime could give ease to all the souls in purgatory, can never want it himself. As the feet of the dead Pope are set close to the iron balustrade which opens into the chapel, multitudes of people crowd hither to kiss them, especially the women, not doubting but their paying this piece of respect to God's Vicar on earth, will exalt them to heavenly mansions. On the ninth day the corps is put into a coffin, or rather coffins, the first of cedar, and the second of lead, with sixty of the late Pope's coronation medals, twenty of gold, twenty of silver, and as many of brass; after which the funeral being solemnized, the corps is conveyed to a little old church, dedicated to *St. PETER* by *CONSTANTINE* the Great, where it is deposited till removed to the monument usually erected for it in the life-time of the deceased, when there is usually as magnificent a cavalcade as at the funeral.

During the first five centuries, according to *MAIMBOUR*, the clergy and people jointly, and sometimes the clergy alone, with consent of the people, elected the Pope by plurality of voices.

CHAP.  
XX.  
Pope's do-  
minions.

After the death of Pope SIMPLICIUS, ODOACER King of the Heruli, who had conquered Italy, decreed that no Pope should be chosen without his consent. This law was afterwards repealed by THEODORICK King of the Goths, in the fourth council of Rome, under the pontificate of Pope SYMACHUS; but this Prince turning Arian in the latter end of his reign, resumed the privilege of appointing a Pope, and accordingly placed FÉLIX IV in the chair. His successors, the Gothic Princes, allowed the Clergy to elect, but would not suffer the Pontiff to enter upon the exercise of his office till confirmed by them. The Emperor JUSTINIAN, who defeated the Goths, and put an end to their dominion in Italy, insisted on his privilege of confirming the Pope, as did his successors after him, requiring a sum of money of the Pope when he was confirmed by them: which sum was remitted by the Emperor CONSTANTINE POGONATUS; but still the Pope was not elected without the Emperor's or other Sovereign's consent till the French Emperor LEWIS the Debonaire, anno 824, and his successors LOTHARIUS I, and LEWIS II, about the year 864, relinquished all pretensions to the electing or confirmation of the Pope. In the eleventh century the Marquis of Hetruria, or Tuscany, and the Count DE TUSCANELLA, with the nobility of Rome, chose and deposed Popes at their pleasure; and after them OTHO the Great, his son, and grandson, did the like. HENRY Duke of Bavaria, who succeeded them, left the clergy and people of Rome at liberty to choose their Pope again, about the year 1014; but his grandson HENRY III, and HENRY IV, reassumed the power of choosing and deposing Popes, which occasioned frequent wars between them and the Emperor, the Emperor setting up Antipopes, which occasioned schism in the church, as hath been already observed; but after the difference between ANACLETE and VICTOR IV was ended, the Cardinals and principal Clergy of Rome chose Pope CELESTINE II, by their own authority, anno 1143; and the rest of the Clergy having resigned their pretensions, HONORIUS III, anno 1216, or, according to others, GREGORY X, anno 1274, ordered that the election should be made in the Conclave; since which time the Cardinals have been in possession of that privilege, and elected the Pope without the interposition of any other powers, unless by way of address or recommendation.

The Con-  
clave.

The Conclave is the place where the Cardinals meet for the election of a Pope, and the assembly of Cardinals who meet there are also called the Conclave. They are at liberty to appoint what place they please to meet in: However for some years a large gallery in the palace of the Vatican has been made use of for this purpose: There are prepared in this gallery as many cells or apartments made of deal-boards, as there are Cardinals, with lodgings and conveniences for servants, who shut themselves in to wait on the Cardinals, and are on that account called Conclavists, of whom no Cardinal is allowed more than two or three at most; and it must be on account of sickness, or their being Princes, if they are allowed three. People of good fashion frequently desire the office of a Conclavist, having thereby an opportunity of seeing all that passes, and being entitled to a considerable present, if their Cardinal happens to be chosen Pope: But it is however a post of some trouble, the Conclavist being obliged

to take in the meat, wait at table, and humour an old peevish fellow, sometimes for several months before the election is over, and are as strictly confined as their masters. The several apartments or cells are numbered, and the Cardinals draw lots for them. They are erected during the nine days which are taken up in the ceremony of the late Pope's funeral, when any person is at liberty to view the cells. Those Cardinals who are of the late Pope's creation hang their apartments on the outside and inside with violet-coloured cloth, and the rest hang them with green serge or camblet; and over each cell is placed the Cardinal's arms it belongs to. They have no other light than what they receive from the windows of the gallery.

The day after the Pope's funeral, which is always the ninth day after his death, the Cardinals meet in the cathedral, where a high mass of the Holy Ghost being celebrated, and an oration or sermon made upon the occasion, they go in procession to the palace of the Vatican, and having sung the hymn *Veni Creator Spiritus*, and heard the usual prayers, in St. PAUL's chapel there, and sworn to observe certain articles for the better government of the church, they retire to their cells, when every body is ordered to quit the place, except the Conclavists, two masters of the ceremonies, a Secretary, a Confessor, a Physician, and Surgeon; and the Marshal locks up all the doors and passages into the Vatican, which are guarded by the militia of Rome, to prevent all intercourse with the people without doors; and a Master of the ceremonies inspects every dish that is brought in, to see that no letters are concealed in the meat, which is delivered in through a hole in the wall left for that purpose. The Cardinals, who arrive from time to time from distant countries, are admitted into the Conclave as they come, at any time before the election is made. They come out of their cells but once a day, to hear a mass of the Holy Ghost, and give their votes in the chapel. The election is performed either by scrutiny, access, or adoration: when it is by scrutiny, every Cardinal writes the name of the person he votes for on a piece of paper doubled down in five folds, on the first of which he writes, *Ego ego in summum Pontificem reverendissimum Dominum meum Cardinalem Del Giudice*, (as his name is) I elect for Pope the most reverend Lord Cardinal DEL GIUDICE: on the fourth the Cardinal writes his own name, and covers it with the fifth fold. Then they go to the chapel at the appointed hour, and having seated themselves in order with these billets in their hands, each Cardinal in his turn goes up to the altar, and after a short prayer upon his knees, puts the billet into a chalice that stands on the table. [Others say, the Master of the ceremonies goes round to all the Cardinals in the chapel, and receives their billets in a cup.] The Cardinals being returned to their places, the Cardinal-Bishop, who sits on the right side of the altar, puts out the billets on a plate, and gives them one by one to the Cardinal-Deacon, who sits on the other side of the altar, and reads them with an audible voice, the Cardinals in the mean time writing down how many voices every candidate hath; after which the Master of the ceremonies burns the billets in a little chimney prepared for the purpose: and this collection of votes is continued every day till two thirds of them agree on the same person, who is thereupon declared Pope. When the election is made by ac-

minions.

CHAP.  
XX.  
Pope's do-  
minions.

cess, the Cardinals rise from their places, and going towards the person they design to chuse, each of them says, *Ego accedo ad reverendissimum Dominum*, &c. The election by adoration is in much the same manner, only the Cardinals approach him with a profound reverence. There is still a fourth way of chusing when the differences run high, and that is by referring the matter to three or five of their number, a majority of whom determine the election. The Pope being chosen, is clothed in the pontifical habit, and being placed before the altar, he receives the adoration or respects of the Cardinals, who kiss his feet, hands, and mouth; after which all the doors and gates of the Conclave are thrown open, and the Pope being led to the lodge of benediction, and shewing himself to the people, the first Cardinal Deacon says with a loud voice, I declare to you tidings of great joy, the most reverend Cardinal——— is elected Pope, and has chosen the name of——— adding *Vivat Clemens* or *Innocentius*, according to the name he chuses. Then the Pope putting on the robes he appears in at the greatest solemnities, and a mitre on his head, goes to St. PETER's, where he is seated on the high altar, and publicly adored by the Cardinals, Patriarchs, Archbishops, Bishops, and Canons of that church; which being over, he is attended to his apartment in the Vatican. Some days after is performed the ceremony of his coronation, before St. PETER's church, where a throne is erected for that purpose, when his mitre is taken off, and the tiara (a raised cap) encircled with three crowns one above another, and embellished with jewels, is put on his head. This triple crown, says my author, declares his sacerdotal and imperial dignity, and represents him as the supreme Judge and Legislator of all Christians. LEWIS I of France first sent the Pope a crown of gold adorned with jewels, he wearing till then only a mitre. BONIFACE VIII added the second crown, about the year 1296, after having asserted his dominion over the temporal powers; and BENEDICT XII added the third about the year 1340. There is a splendid cavalcade some time after the coronation, when the Pope goes to take possession of the cathedral church of St. JOHN de Lateran, as he is Bishop of Rome. At this solemnity the Cardinals march in order before him, and he is attended by all the foreign Ambassadors, Nobility, and persons of distinction, ecclesiastical and secular, in and about Rome. When he comes to the church he knocks three times at the door, which is thereupon opened by the Arch-priest, who presents him with two keys, one of gold and the other of silver, and afterwards, with the rest of the Canons, kisses his slipper. Then the Pope advances to the high altar, where he sits enthroned, and the Cardinals and the rest of the clergy are admitted also to kiss his slipper. After some other ceremonies his Holiness blesses the people, and returns to his palace in the same state he came.

## CHAP. XXI.

*Treats of the Pope's ecclesiastical power and government.*

CHAP.  
XXI.  
Of the  
Pope's ec-  
clesiastical  
power and  
govern-  
ment.

THOSE who have treated of the Pope's power and the constitution of the Papal State, constantly distinguish and divide them into ecclesiastical and temporal. The ecclesiastical is extended throughout the world, wherever the Roman Ca-

tholick religion has gained admittance: the temporal is confined to the Pope's territories in Italy. The motives made use of to procure a submission to his ecclesiastical sovereignty, are the strongest that the wit of man could devise: Some Princes, as PUFFENDORFF observes, have gained themselves and their government a great authority by pretending to be the offspring of the gods, and that their institutions were the dictates and commands of heaven, and on these accounts have been adored and placed among the gods after their deaths: but the Pope has gone farther, and persuaded the people that he is the Lieutenant of Christ, who has all power in heaven and earth, and can dispense the merits of our Saviour to whom he pleases; and those who refuse to acknowledge this prerogative are incapable of eternal salvation. And as nothing can so strongly enforce our obedience, and induce us to submit to all sorts of hardship as the fear of God's displeasure and eternal damnation, it is evident, that if the people once believe the Pontiff possessed of this power of saving and damning whom he pleases, they will readily conform to his dictates in every other instance; consequently his subjects are as numerous, and indeed the very same with those who acknowledge his vicarious power. Whatever ties and obligations they are under to the civil powers where they live, they will cancel them all, when their duty to the Pope comes in competition with that to their temporal Sovereigns: nay, when this article was more generally believed than it is indeed at present, the people were frequently spirited up to depose their natural Sovereigns, and transfer their allegiance to the Pope, or to whomsoever he was pleased to assign their kingdoms; consequently the Princes of that communion have but a very precarious title to their crowns, where this article is firmly believed. It is the apprehension of this independent jurisdiction also, the setting up an empire within their empires, that has deterred the Sovereigns of Japan, China, and Turkey, from encouraging the disciples of the Romish communion, and been an inconceivable prejudice to Christianity in general in those parts of the world. It is not the doctrine of a crucified Saviour, as the Jesuits suggest, that prevents the gospel's gaining ground in China; but the notions they infuse into the people, that the Pope is rather to be obeyed than the civil Magistrate, which sets all the Magistrates of the East against them, and has occasioned their being massacred and cut in pieces more than once. The Japonense, who apprehend that all Christians teach the same doctrine, will not suffer a Christian to set his foot on their shores, unless the Dutch, who are content to trample upon the cross, and renounce their Saviour, that they may engross this branch of trade.

And though of late years many temporal Princes, and their lay-subjects of that communion, have disputed the Pope's supremacy, yet the Monks and regular Clergy, if not the secular, in every country still remain entirely devoted to the Roman See, and are ready to oppose and distress the civil powers by all the ways imaginable, whenever the Pope's authority is called in question; and these, though exceeding numerous, amounting as it is computed to two millions of souls, are more formidable than any other militia of the like number would be; inasmuch as there is scarce a Prince's court, or great family in Europe, but they have a considerable influence on, and are all subsisted at the charge of the people, of those very people

Pope's do-  
minions.

C H A P.  
XXI.  
Pope's do-  
minions.

people to whom they preach this slavish doctrine, without being any burthen to their great ecclesiastical Sovereign or General. And that which renders them the more independent on their respective Princes and States where they reside, is the state of celibacy, which is strictly required of them all; for having none of those domestick pledges of their fidelity, a wife or children, as other subjects have, they are always disencumbered and at liberty to obey the Pope's orders, whenever he requires their service. They serve also to drain the several countries where they live of their wealth and treasure, and convey them from the impoverished natives to Rome, the seat of this spiritual Empire: and according to a late calculation, the stated constant revenues of the Romish clergy thus dependent on the Pope amounts to more than twenty millions sterling per ann. and the casual profits arising from offerings, and the superstitious bounty of the people, amounts to full as much: add to these the moveable ornaments and utensils in their churches, the gold and silver crosses, chalices, pattens, lamps, candlesticks, and shrines enriched with diamonds and other precious stones, especially those of St. PETER's and Loretto, and the treasure of the church will appear inestimable. And what may not be effected by a court of such refined politicks, as that of Rome, thus powerfully supported? It is observed that their missionaries gain ground every day, and not a year passes but some Sovereign Prince is reconciled to their communion. Nor can this be thought strange by those who reflect on the immense sums the church is possessed of, and with what address it is applied to promote her interests. Were it not that many of the best families in Europe have great part of their revenues out of the sequestered church-lands and tithes, and that the Protestants are in continual dread of the Inquisition, the Pope would soon unite the Christians of every denomination to the See of Rome; few, very few would stand out on principle, could he find a way to remove their fears of persecution and the loss of their estates, the most zealous opposers of his supremacy might be taken off, according to the modern phrase, and be induced to wave their clamours against Popery. It seems to be now as under the Jewish dispensation, the people are most effectually wrought upon by temporal motives; as the milk and honey, the wine and oil of the land of Canaan, had a much greater influence on that people, than the distant prospect of eternal rewards; and a temporal captivity was more dreaded by them than everlasting misery. In these respects there may be a pretty near resemblance between the ancient Jews and the Christians of the present age. But to proceed: Suitable to the power and grandeur of the Sovereign Pontiff are the honours and titles that are given him, the respect that is paid him, according to a late traveller, is greater than was ever paid to mortal man: those that approach him kneel three times, viz. at the entrance of the hall of audience, in the middle, and before his throne, where they kiss his slipper, or rather a little embroidered cross on the toe of it. The greatest Roman Catholick Princes are not exempted from this submission, and when they speak to him, they stile him Most Holy Father. Some of the principal prerogatives he assumes as God's Vicar on earth, are, 1. The canonization of those who have deserved well of the Holy See, placing them in the number of Saints, and decreeing them

those honours which they call Doulia, being prayed to and honoured afterwards as so many subordinate deities. 2. The making of Cardinals, to whom he says at their creation, 'My most beloved sons, You have received the greatest and highest honour; You are called into the Council of the Apostles; You shall be our Counsellors, and with us judge the universe and sit round the throne as successors to the Apostles.' 3. Excommunication, that spiritual thunder which hath formerly made the greatest Princes in Europe tremble, who after this sentence have been driven from their thrones, and their dominions transferred to others. On their subjects this power is frequently exercised by inferior Bishops and Priests, who holding in their hands lighted tapers till they are extinguished, fling them down and trample them under their feet, using at the same time the most terrible execrations against the party excommunicated that can be imagined, whereupon he is cut off from all communion with the church, and excluded from all society with men, assigned to the flames in this world, and to everlasting fire in the next. And from hence I very naturally proceed to enquire in what instances the Roman Catholick religion differs from that of the Church of England, or at least the most material points.

#### C H A P. XXII.

*Contains and enquiry into the principal points wherein the church of Rome differs from the church of England.*

THE church of Rome has added so many articles to the primitive creeds, that she carries a very different face from the rest of the Christian world, of which the doctrine of the Pope's infallibility is the most monstrous, and indeed the mother of all the rest: for admitting this one article, we must of course submit our judgment to whatever he is pleased to dictate. It would be the highest arrogance and folly to dispute with unerring wisdom. But the Roman Catholicks themselves, I find, are not agreed in infallibility whom this infallibility is lodged: Some hold that the Pope alone is possessed of it; others are of opinion it is in the Pope and a general council; and a third place it in a general council without the Pope: and accordingly, we find that the Council of Constance, held about the year 1415, deposed all the contending Popes, and placed MARTIN V in the chair, declaring that a general council lawfully called only was infallible, and had the supreme authority in the church next under Christ. Notwithstanding this decision, the Pope alone is held infallible at this day by many of that communion, and especially the Jesuits. But as there is no colour in Scripture or Antiquity to induce us to believe that the successors of the Bishop of Rome are more infallible in their judgments than the successors of any other primitive Bishop, and that the Roman Catholicks themselves are not agreed in whom this unerring wisdom resides, we may fairly suspend our belief of this article for the present: and there seems to be such a connexion between his supremacy and infallibility, that if we deny one, we shall not easily admit the other, the greatest motive to acknowledge his supremacy being a belief of his infallibility. A man will make but little scruple to obey him as God's Vicar

Vicar on earth, who believes he is infallible and divinely inspired.

2. The second doctrine I shall mention is that of purgatory; supposed to be an unquenchable fire, where the souls of those who have been guilty of venial, or involuntary transgressions, burn till they are purified from their dross and guilt, not having had time or opportunity to perform the penances enjoined them on earth. Of which they produce just as much evidence as of the former.

3. The doctrine of indulgencies, which supposes that the Pope has power to remit the punishments due to sinners, and exempt them from the pains of hell and purgatory.

4. Limbo, or the confines of hell, in which they suppose the souls of infants who die without baptism are confined; and though they are not punished by fire, are however excluded from the beatific vision.

5. The doctrine of worshipping Saints and Angels, and begging their mediation and intercession with God, and the adoring their reliques and images.

6. The sacrifice of the Mass, which they hold to be a propitiatory sacrifice, both for the living and dead, which every Priest usually offers once a day, and twice on Christmas-day and other solemn occasions. If it be a Low Mass he is assisted by one or two laymen, called Respondents; and it is called a Low Mass from the being celebrated in a low voice, such as is used in common conversation. At High Mass he is assisted by Deacons and Subdeacons, and the service is sung or chanted aloud, from whence it is called High Mass. This service is performed in Latin, and after the Priest has used these words of consecration, *Hoc est enim Corpus meum*, For this is my body; the members of this church believe the body of Christ descends invisibly from heaven, and the bread is imperceptibly changed or transubstantiated into his flesh and blood in such a manner, that though the appearances and accidents continue to make the same impression upon all the senses after the pronouncing those words as before, yet there is none of their real substance remaining, but that the sole and natural body of Christ, with all its parts and blood, is as entire in the least particle of bread, as it was upon the cross before his death.

The words of consecration of the cup are the same as those used by our church; but this is never communicated to the Laity, because, say their Doctors, the body of Christ being entire in every particle, and there being no living body without blood, the cup is superfluous. But we might demand on this occasion, If the cup be superfluous, why do their Clergy drink of it? And why indeed was it instituted by our Saviour? These Masses, they give out, will shorten the pains of the souls in purgatory; for which reason their votaries usually give large legacies to the church at their deaths, to have Masses said for them; and some of them in their health settle lands in perpetuity, that the Priests may say Masses for themselves and families from generation to generation.

Tradition, is another doctrine of the church of Rome, which Protestants do not come into. This is an unwritten law, which some of the Roman Catholics prefer to the written law, or Scripture it self; for they alledge that these books have been corrupted by the several translators, either through design or ignorance; especially by

VOL. II. NUMB. LXXIV.

the authors of heretical or schismatical sects. To prove which, they shew the several different versions and copies amongst them, the abridgments and omissions in some, and the additions in others. They alledge farther, that several parts of the written law which was owned as such at least by the primitive Christians, is entirely lost; and observe that the version of the Septuagint, makes the world fifteen hundred years older than the Hebrew text: and tradition, they say, is a kind of errata and supplement, which supplies whatever is imperfect or defective in Holy Writ. They dissuade their disciples therefore from reading those books; and the better to prevent it, keep them locked up in the dead languages; and lest those who understand them should be guided by their private judgments in the interpretation of the Scriptures, the inquisition was established to prevent all disputes, and to compel them to believe as the church believes.

### CHAP. XXIII.

*Treats of the court of Rome, and the Pope's temporal government.*

THE Pope considered as a temporal Prince, is one of the most absolute Monarchs in Europe; he holds indeed a consistory of Cardinals frequently, who are his council in ecclesiastical affairs, but are not permitted to intermeddle in the civil government. They are seventy in number when complete, and their present title that of Eminence. Their election depends solely on the Pope's pleasure, and they look upon themselves equal to sovereign Princes of the second class at least. Six of them are Cardinal-Bishops, fifty Cardinal-Priests, and fourteen Cardinal-Deacons. The Pope has of late years been very cautious in electing persons of high birth, who are related to sovereign Princes, on account of the disturbances that have been occasioned sometimes by their too potent interests; and if such persons do obtain a Cardinal's cap, they seldom are advanced to the Papal chair, lest they should endeavour to fix it in their families. And the Popes having been Italians for several centuries, take care that there never want a great majority of the natives of Italy in that body to strengthen their interest against foreigners, who being advanced to the Papal See, would naturally be partial to their respective countries, and perhaps give up the prerogatives of the church in favour of their natural Sovereigns. Such Cardinals as have not a competent subsistence of their own, which seldom happens, are allowed, it is said, a stipend of seven thousand Roman crowns per annum, out of the Apostolick chamber.

The Pope's chief minister is the Cardinal-Patron, usually one of his nephews, or a nearer relation, to whom he gives an opportunity of amassing prodigious sums, if the Pontificate be of a long duration; and these nephews have been the founders of some of the greatest families in Italy. The second minister is the Pope's Vicar, who is always a Cardinal, and has the jurisdiction of the secular and regular Clergy, Lay communities, Hospitals and Jews, and has a Lieutenant of civil and another for criminal affairs, and a Bishop for his Vicegerent in matters belonging to his episcopal function. 3. The Chancellor, who is always a Cardinal also. 4. The Cardinal Chamberlain. 5. The Prefect of the signature of justice,

rice, who is a Cardinal. 6. The General who commands the troops and fortified places of the State. 7. The Penitentiary. 8. The Master of the sacred Palace. 9. The Sacristan, or Vestry-keeper. 10. The Pope's Secretary, who is always a Cardinal, and frequently one of his nephews. There are besides twenty-four Secretaries for briefs. 11. The Governor of Rome, who has cognizance of civil and criminal causes in the city, with a power to stay the proceedings of other courts. 12. The Treasurer General. 13. The Marshal of Rome, who has the cognizance of causes between the citizens and strangers; he is always a foreigner, and wears a robe like an ancient Roman Senator in the execution of his office. 14. Four Masters of the ceremonies. 15. The Major Domo, or Steward of the household. 16. The Chamberlains of honour. 17. The Master of the stables. 18. The General of the Pope's guards.

The principal courts in Rome, next to the consistory of Cardinals, are, 1. The congregation of the Holy office, consisting of twelve Cardinals, and several Prelates and Doctors, who are the supreme courts of inquisition. 2. The Apostolical chamber, which consists of the Cardinal-Chamberlain, the Treasurer-General, and other inferior officers, who manage the revenues of the ecclesiastical state. 3. The court of Rota, consisting of twelve Prelates, who take cognizance of all causes, ecclesiastical and civil, relating to Clergymen, which come before them by way of appeal, the canonization of Saints, ceremonies of the church, disputes about precedence, &c. This court takes its name, it is said, from the pavement of the chamber where they sit, on which there is the resemblance of a wheel. 4. The court of Datary, which consists of a Datary, Subdatary and Prefect, who have the disposal of all vacant benefices, except those called Consistorial, or under four hundred ducats per annum, which are conferred without the Pope's knowledge; but the grants of benefices of a greater value must be signed by the Pope himself. 5. The court of the Penitentiary, which takes cognizance of all bulls and dispensations in cases of conscience, which are generally sealed up and sent to some confessor.

The Campania of Rome is under the immediate government of the Pope, the other provinces of the Ecclesiastical State are governed by Legates or Vice-legates, besides which there is a Commander in chief of the forces in every province, and every city hath its Governor deputed by the Pope; but as to the Podesta's, or Judges, and other inferior Officers, they are elected by the inhabitants. The great oppression complained of in the Pope's territories, is his engrossing all the corn in the country, obliging the owners and occupiers of lands to sell his agents their corn at a very low rate, and retailing it out again at double the price; insomuch that some gentlemen chuse to let their lands lie uncultivated, rather than manure them, the charges of ploughing and sowing exceeding the profits they make. But it can hardly be supposed that this is generally the case; for if the People were discouraged in this manner from ploughing their grounds, the Sovereign must lose the duty arising by corn, which is one of the best branches of his revenue: neither does he hold up the price of grain so very high as some suggest when he retails it out; for travellers all agree that bread-

corn is very reasonable at Rome; and tho' there have been some oppressors among the Roman Pontiffs, there have been others who have distributed great quantities of grain to the poor gratis; so that to say with some, that the government is mild, and with others, that it is oppressive, is ridiculous. It is by all allowed to be despotical, and varies according to the disposition and temper of the Pontiff who happens to be upon the throne. Only thus much is observed in general, that there is more liberty allowed in Rome to those of a different communion than in any other Roman Catholick city whatever.

#### CHAP. XXIV.

*Contains a description of the rest of the towns, and remarkable places in the Campania of Rome, and the other towns and provinces of the Pope's dominions.*

THE city of Tivoli, the ancient *Tibur*, said to be built by the Greeks, is situated on the brow of a hill near the river Anio, or Teverone, about twenty miles to the eastward of Rome. The hill is covered with olive-trees for five or six miles together, and adorned with beautiful villa's or palaces; from hence there is a glorious prospect over the Campania as far as Rome itself. In the time of the ancient Romans it was esteemed one of the most healthful, as well as pleasant situations in Italy: on which account they had their villa's, or summer's retirements here. HORACE was so pleased with the situation, that he wishes it might be the retreat of his old age. The Teverone forms a cascade, or rather cataract, near this town, falling from a rock; in one of the cavities whereof is said to be the grotto of *LEUCOTHEA*, the Tiburtin Sibyl, from whence she uttered her oracles. Here are also the ruins of an ancient round building surrounded with marble pillars, supposed to be the temple of *HERCULES SAXANUS*. One of the greatest modern curiosities is the palace belonging to the family of *ESTE* or *Modena*, admired for its architecture, sculpture, paintings, gardens and water-works. The gardens lie on the side of a hill, divided into four parts. The walks, labyrinths, grotto's, fountains and statues, admirably disposed; and there is a wilderness where artificial birds are made to fly and sing, being put in motion by a stream of water. The *Girandola*, representing a storm of thunder, hail and rain, surprizes all that view it. There is not a place in Italy which affords so great a variety of curiosities of this kind. Mr. ADDISON admires the prospect from the hill of Tivoli above all things, which opens, he observes, on one side into the Campania, where the eye loses itself in a smooth spacious plain. On the other side is a more broken and interrupted scene, made up of an infinite variety of inequalities and shadowings, that naturally arise from an agreeable mixture of hills, groves and valleys; but the most enlivening part of all is the river Teverone, which is seen at about a quarter of a mile distance, throwing it self down a precipice, and falling by several cascades from one rock to another, till after a turbulent noisy course of several miles, it gains the bottom of the valley, where the sight would be quite lost if it did not sometimes discover it self through the breaks and openings of the woods that grow about it; from hence

Pope's do-  
minions.

hence it flows gently on till it falls into the Tiber. Tivoli is now reduced to a very little town, surrounded with an ordinary wall; but is still the See of a Bishop. Not far from it is the rivulet of Salforata, formerly *Albula*, from whose waters there arises a sulphureous stench, which may be smelt at a good distance. The little lake from whence this river issues, is one of the greatest natural curiosities about Rome: it lies in the very bottom of the Campania, and is the drain of these parts; the sides are covered with a kind of stony crust, and in it are several floating islands, twenty or thirty yards over, supposed to be formed originally by parcels of rarified sulphureous earth cast up by the water, which sticking to rushes and herbs have been augmented by degrees to this bigness. This lake is unfathomable, and yet not above a mile in compass at present; but Mr. Addison supposes the banks have grown over it in the same manner the islands have been formed in it, and that in time the whole surface will be crusted over, as the islands are enlarged, and the banks close in upon them; for all round the lake where the ground was dry, they discovered it to be hollow by the trampling of the horses feet. Near Tivoli also are the stone-quarries from whence they fetch that stone used in their buildings at Rome, called Tiburtine stone, of which great part of St. Peter's is built, not comparable to Portland stone, of which the churches in London are built.

**Palestrina.** Palestrina stands about nine miles to the eastward of Tivoli, and twenty-eight east of Rome; at the foot of the same mountain on which the ancient *Præneste* stood, famous for the Temple of Fortune, where the *Sortes Prænestinae* were kept; there are still great pillars of granite and other ruins of this ancient temple, but the most considerable remnant of it is a very beautiful Mosaic pavement, the finest, says Mr. Addison, that I have ever seen in marble; the parts are so well joined together, that the whole piece looks like a continued picture. In it are the figures of elephants, a rhinoceros, and several other animals, with little landscapes, which look very lively, and well painted, tho' they are made out of the natural colours and shadows of the marble.

**Frescati.** Frescati is a little town, situated on the brow of a hill, twelve miles to the eastward of Rome; the prospects from whence are not so delightful as formerly, when the Campania was set thick with towns, villa's, and plantations. The Tusculum of Cicero, called *Grotto Ferrata*, is about two miles from hence, though it is generally placed at Frescati. There are several houses of pleasure in it, of which the three principal are Monte Dracone, belonging to the Prince BORGHESE; Belvidere, belonging to the Prince PAMPHILIO; and the Villa Ludovisia, to the family of COLONNA. Mr. Addison is a great admirer of Frescati also. Here, says he, I had the satisfaction of seeing the first sketch of Versailles in the walks and water-works: but Misson, who is a native of France, despises them to the last degree, insinuating that there is no comparison between the one and the other. I am sorry, says Misson in one of his letters, that I cannot relate to you so many wonders of Tivoli and Frescati, as you seem to expect. They are indeed very pleasant places, and rather than give offence, I will venture to call them very fine. But if once this maxim be established, that when we consider things which are reputed beautiful, we ought to

proportion the esteem we have for them by comparing them one with another; I must sincerely acknowledge, that if we compare Frescati to Versailles, or to several other pleasant seats in France, which are not Royal houses, I dare positively affirm that the celebrated wonders not only of Frescati, but also of Tivoli, and all the most beautiful palaces about Rome, as to the gardens and water-works, deserve no higher title than that of Pretty Things. Monte Dracone is a pretty large house, situated on a rising ground, from whence we may see Rome and the whole extent of the plain; but the city is at too great a distance to be seen from hence with pleasure. The avenues to this house also are very difficult: nor are there at present fountains or gardens about it that merit a particular description. The situation of Belvidere is not unlike that of Monte Dracone: there is a pretty cascade in it, and a grotto, in which are the figures of APOLLO with the nine muses on Mount Parnassus, where the several statues play on instruments when the water-works are in order. The cascade at the Villa Ludovisia is the principal ornament of that garden also. The furniture of all the three houses was mean, and every thing about them appeared neglected when I was there in 1688. But whether things were put into a better condition when Misson visited them afterwards, or he was in a better humour than at first, he gives us a very different account of the Roman villa's within a very few pages. The Villa Borghese, says that gentleman, pag. 68. of the second volume, is in my opinion kept in better order than any that I have hitherto seen. 'Tis certainly a very pleasant place, and fit for a great Prince: the house is almost covered over on the outside with basso-reliefs, which are disposed in so natural an order, and with so much symmetry, that you would be tempted to think they had been purposely made to fill those places where they are now set. The principal statues, with which the apartments are replenished, are, the JUNO of porphyry, ROMULUS's she-wolf of fine red marble of Egypt; the busts of HANNIBAL, SENECA and PERTINAX, the hermaphrodite; the old SILENUS holding BACCHUS in his arms; but especially the Gladiator, of which there was a copy at the head of the canal in St. JAMES's Park, till the late King WILLIAM removed it. Here are also DAVID wounding GOLIATH with a stone; AENEAS with his father ANCHYSES on his back, and the transformation of DAPHNE. And my author is so exceeding indulgent to the Villa Borghese at this time, that he says, he cannot forbear repeating once more, *That it is a delicious place*: And if all the royal magnificence which adorns some other places (the French palaces he means) does not appear in this with so much splendor, yet it must be acknowledged, that it has beauties no less soft and charming, such tender and natural beauties as touch our hearts very sensibly, if they do not inspire us with some awe. Adding, that Rome being the source of antique statues and sculptures, some of which are reputed inimitable, all the world must yield the precedence in this point to a Roman Prince.

In the Villa Ludovisia there is also a prodigious multitude of ancient statues, among which the expiring Gladiator, known by the name of the dying MYRMILLO, is invaluable. The poor Prince to whom it belongs was once about mortgaging of it for fifteen thousand crowns. The

groupe,

CHAP.  
XXIV.  
Pope's do-  
minions.

groupe, call'd Concord, the statues of FULVIUS, ESCULAPIUS, ANTONINUS PIUS, the two APOLLO's, FAUNUS and VENUS, are admirable pieces. The gardens of the Villa Pamphilia, says the same Gentleman, would be the fairest that I have seen, if they were kept in order; for here is more design, more symmetry, and a more regular disposition of the parts than any where else. The house is adorn'd on the outside with fine antique basso-relievo's, like that of the Villa Borghese, and no less replenish'd within; but the best statues were much disorder'd by the following accident: A young Prince of this family having a Jesuit for the governor of his conscience, who exclaim'd loudly against the indecency of those naked marble figures which he kept in his palace, the poor young gentleman, to humour his confessor, caus'd all the statues with nudities to be plaister'd over; only little BACCHUS had the good fortune to escape this holy fury; but the Prince returning to a better mind, and preferring the conversation of a Princess to the society of the Jesuits, order'd these fine statues to be uncover'd again, when he found several parts of them had been broken by the workmen who were employ'd to cover them to make the clay stick the faster, to his irreparable damage. Fregati is a Bishop's See, who is suffragan of Rome, and usually possess'd by one of the six eldest Cardinals.

Castel  
Gandol-  
pho.

Castel Gandolpho stands about ten miles south-east of Rome, near a lake of the same name, and is most considerable for a Villa or palace of the Pope's, where he resides for some time in the Spring and Autumn.

Albano.

Albano, built out of the ruins of the ancient *Alba longa*, is situated twelve miles south-east of Rome, famous for its excellent wine, and the ruins of an ancient mausoleum, which according to the tradition of the place belong'd to ASCANIUS; but nothing is more remarkable at Albano than the prospect from the Capuchins garden, which for the extent and variety of pleasing incidents, Mr. ADDISON says, is one of the most delightful he ever saw. It takes in the whole Campania of Rome, and terminates in a full view of the Tuscan sea; you see at the same time part of the Alban lake, which lies close by it in an oval figure, about seven miles in circumference, and by reason of the high mountains which encompass it, looks like the area of some vast amphitheatre. This together with the several green hills and naked rocks within the neighbourhood, makes the most agreeable confusion imaginable. Not far from Albano lies Nemi, which takes its name from the *Nemus Diane*, the whole country about it being still overspread with woods and thickets. The lake of Nemi lies in a very deep bottom, so surrounded on all sides with mountains and groves, that the surface of it is never ruffled with the least breath of wind, which with the clearness of the waters, my author supposes, gain'd it the name of DIANA's Looking-Glass,

—*Speculumque Diane.* VIRG.

The places abovemention'd in the Campania were all of them formerly the cool retirements of the Romans, where, in my author's phrase, they used to hide themselves among the woods and mountains during the excessive heats of summer (as Baïæ was the general winter rendezvous) according to the Poet.

All shun the raging dog-star's sultry heat,  
And from the half unpeopled town retreat;  
Some hid in Nemi's gloomy forests lie,  
To Palestrina some for shelter fly:  
Others to catch a breeze of breathing air,  
To Tusculum or Algidu repair:  
Or in moist Tivoli's retirement find  
A cooling shade, and a refreshing wind.

CHAP.  
XXIV.  
Pope's do-  
minions.

On the contrary, as Mr. ADDISON observes, Rome is never fuller of nobility than in summer, for the country towns are so infested with unwholesome vapours, that it is dangerous residing there during the heats; though the air of Campania no doubt would be as healthful as formerly, if there were as many fires burning in it, and as many inhabitants to manure the soil. Albano is a Bishop's See, suffragan to Rome, and held by one of the six eldest Cardinals.

Velitri is situated on a fruitful hill, eighteen miles south-east of Rome, anciently a considerable city of the Volsci, and is at this day a handsome little town, well inhabited, surrounded with a wall, and the See of a Bishop, who is also Bishop of Ostia. The great AUGUSTUS was nurs'd, if not born near this place, and the Romans had such a veneration for his memory, that they made it unlawful for any man to set his foot within the doors of that house.

Cisternæ is a castle between Velitri and Sermonia, near which are the three taverns mention'd by St. PAUL, where the primitive Christians, according to tradition, used to receive the communion.

Sermonia is a little town which gives title to a Duke of the family of CAJETANO, and is situated on a hill near the Palus Pontina, about thirty miles south-east of Rome.

Anagni, anciently the capital of the Hernici, is situated upon a hill about two and thirty miles south-east of Rome. It is now a ruinous place and ill inhabited, but is however a Bishop's See.

Ferentini, Alatri and Veroli, are only considerable for being the Sees of as many Bishops.

Piperno is situated in a fruitful country about thirty five miles from Rome, in the road to Naples.

Terracina, *olim Anxur*, stands about fifty miles south-east of Rome, and fifteen north-west of Gaeta, on the same road, near the sea, about two miles to the westward of the kingdom of Naples. The place is small, and but thinly inhabited on account of the badness of the air, occasion'd by the Palus Pontina which lies about it; but is still a Bishop's See.

Nettuno, the *Antium Navale* of the ancients, is situated on the Tuscan sea, about thirty miles to the southward of Rome, and formerly a good harbour; but is now almost deserted also on account of the badness of the air.

Ostia, situate at the mouth of the Tiber, twelve or fifteen miles to the westward of Rome; formerly a good port, but the harbour being choak'd up, it is now an inconsiderable place, and only remarkable for its being a Bishop's See united to Velitri.

The second province of the Pope's dominions, I proposed to describe, was that which goes by the name of the Patrimony of St. PETER, comprehending the duchy of Castro, and the territory of Orvieto, bounded by Tuscany and Umbria towards the north and east; by Sabina, and the Campania on the south-east, and by the Tuscan

The Patri-  
mony of  
St. Peter.

*Myrmillo expiring.*

CHAP.  
XXIV.  
Pope's do-  
minions.  
Chief  
towns.

can sea towards the west. The chief towns where-  
of are, 1. Viterbo. 2. Montefiascone. 3. Bol-  
fena, or Volseno. 4. Vitorchiano. 5. Orta. 6.  
Citta Castellana. 7. Fiano. 8. Nepi. 9. Sutri.  
10. Corneto. 11. Civita Vecchia. 12. Braccia-  
no. 13. Bagni di Bracciano. 14. Ronciglione.  
15. Caprarola. 16. Castro. 17. Castel Farnese.  
18. Toscanella. 19. Montalto. 20. Orvieto.  
And, 21. Aquapendente.

Viterbo.

Viterbo, the capital of this province, anciently  
called Tetrapolis, as it consisted of three towns  
united in one, is situated at the foot of mount  
Cyminus, about forty miles to the northward of  
Rome. The town is moderately large, built for  
the most part of stone, and defended by a wall  
and some antique square towers of no great  
strength. It is beautified with several handsome  
fountains, among which some are medicinal. It  
is a Bishop's See, and hath been the residence of  
several Popes: the cathedral is a fine old church,  
but not equal to those already described. Near  
Viterbo stands the castle of Soriano on an emi-  
nence, esteemed one of the strongest fortresses in  
Italy.

Montefas-  
cone.

Montefiascone is situated on a little fruitful  
hill near the lake of Bolsena, about eight miles  
north-west of Viterbo, and taken notice of by  
most travellers for its excellent Muscatello-wine,  
which grows in the neighbourhood. They show  
the tomb of a Dutchman here who was so fond  
of this liquor, that he killed himself in a few hours  
with it, as appears by his epitaph.

Bolsena.

Bolsena, or Volseno, the ancient *Volturnum*, is  
situated on a lake of the same name, five miles  
north of Montefiascone. It was one of the twelve  
cities of Etruria, and, according to PLINY, re-  
duced to ashes by lightning. It is now a little  
inconsiderable place, most taken notice of for the  
neighbouring lake, which is of an oval figure,  
and near forty miles in circumference.

Citta Ca-  
stellana.

Civita, or Citta Castellana, is a little town  
situated fifteen mile, south-east of Viterbo; re-  
markable for little but its being a Bishop's See,  
suffragan to Rome.

Civita  
Vecchia.

Civita Vecchia is situated on the Tuscan sea,  
about thirty miles north-west of Rome, being the  
port of that city, and one of the best harbours  
on the coast; and the Pope, in order to draw  
the trade that way, has made it a free port. It  
is defended by a castle and other works, and is  
the station of the Pope's galleys. The great  
obstacle to the trade of this place was the want  
of good water, and the unhealthfulness of it  
on that account: but the government have been  
at the charge of conveying water thither by  
aqueducts of late; whether it will answer their  
expectations, time must discover; but the Duke  
of Florence seems to be apprehensive of its draw-  
ing the trade from Leghorn, and did what lay  
in his power to divert the Pope from making it  
a free port.

Bracciano.

Bracciano is the capital of a duchy to which  
it communicates its name, and belongs to the fa-  
mily of URSINI. It is situated on a hill near  
a lake of the same name, fifteen miles north-west  
of Rome. From this lake, which is of a circular  
figure, and about four miles over, issues the river  
Arone, which falls into the Tuscan sea.

Bagni di  
Bracciano.

Bagni di Bracciano is a little town situated on  
the same lake, famous for its baths, called by the  
ancients *Stiglianæ Therme*.

Roncigli-  
one.

Ronciglione is the capital of a territory of the  
same name, about twenty five-miles north of

Rome; a town of good trade, and one of the  
richest in this province: it belonged to the Duke  
of Parma till the year 1649, when Pope INNO-  
CENT X made himself master of it, and his suc-  
cessors have kept it ever since.

Caprarola is a little town situated on the brow  
of a hill, four miles to the northward of Ro-  
la. miglione, and belongs to the Duke of Parma, hav-  
ing one of the finest castles in Italy for its de-  
fence.

Castro is the capital of a duchy which be-  
longed to the Duke of Parma, till Pope INNO-  
CENT X deprived him of it in the year 1649,  
when he demolished the place, and removed the  
bishoprick to Aquapendente. It lies about forty  
miles north of Rome, on the confines of Tus-  
cany.

Castel Farnese is a little town two miles north-  
east of Castro.

Tuscanella, anciently called Tuscina and Tyr-  
rhenia, situate on the confines of Tuscany, and la-  
supposed to have communicated its name to that  
country.

Orvieto, the capital of a territory called the  
Orvietan, is a large strong city, situated on a  
high hill of a steep ascent, near the river Paglia,  
about five and forty miles to the northward of  
Rome, and fifteen north-east of Viterbo; the  
See of a Bishop suffragan of Rome, and has one  
of the finest cathedrals in Italy.

Aquapendente is a large well-built town, situ-  
ated on the top of a rock, from whence there  
falls a cascade of water, which is thought to be  
the occasion of its name. It was made a bishop-  
rick upon the destruction of Castro, but is still  
a poor place, considerable only for the earthen  
ware made there.

The province of Sabina is bounded by that of  
Umbria on the north-east; by the kingdom of  
Naples on the south-east; by the Campania of  
Rome on the south-west; and by the Patrimony  
on the north-west: being about twenty-five miles  
in length, and twenty in breadth, part of the  
ancient kingdom of the Sabins, and exceeding  
fruitful in wine and oil; the chief towns whereof  
are, 1. Magliano. 2. Vicovaro. And, 3. Correse.

Magliano, or Manliana, is situated on an emi-  
nence near the river Tiber, about twenty miles  
north-east of Rome; the capital of the province,  
and made the See of the Bishop of Sabina by A-  
LEXANDER VI, anno 1405, and is usually pos-  
sessed by one of the eldest Cardinals.

Vicavaro is situated on a mountain near the  
river Tiverone, not far from the confines of Na-  
ples, and gives the title of Duke to a branch of  
the family of URSINI.

Correse, *olim Quiris*, from whence the Romans  
were called *Quirites*, is at present a small place,  
situate on a rivulet, about twenty miles to the east-  
ward of Rome.

The province of Umbria, or duchy of Spoleto, The pro-  
vince of  
is bounded by the duchy of Urbino and the  
marquisate of Ancona on the north-east; by the  
kingdom of Naples on the south-east; and by the  
Patrimony of St. PETER and Sabina towards the  
west and north; being sixty miles and upwards  
in length from east to west, and forty in breadth  
from north to south, and had its name of Um-  
bria from the river UMBER. The country is di-  
versified with hills and plains, and produces wine,  
oil, fruits, and plenty of corn. The chief towns  
are, 1. Spoleto. 2. Trevi. 3. Foligno. 4. Ponte.  
5. Spello. 6. Assiso. 7. Bevagna. 8. Montefal-  
to.

CHAP.  
XXIV.  
Pope's do-  
minions.  
Spoleto  
city.

co. 9. Todi. 10. Aqua Sparta. 11. Amelia.  
12. Otricoli. 13. Narni. 14. Cefis. 15. Terni.  
16. Rieti. 17. Norcia. 18. Perugia. 19. Cas-  
tiglione. And, 20. Passignano.

Spoleto is situated on the declivity of a hill, near the brook Tefino, about five and forty miles north-east of Rome, almost surrounded by rocks and mountains, on one of which stands the castle, of very difficult access, much stronger by nature than art, and anciently repulsed the victorious HANNIBAL, after he had defeated the Romans near the lake of Thrasimene, which great event is still commemorated by several inscriptions in the place. It is but a poor city at this day, indifferently built and thinly peopled, and of a very uneven situation. The cathedral is a noble old fabric, the front adorn'd with Mosaiick work on a golden ground, and the pavement inlaid. The chapel of the Madona of St. LUKE is very fine, and has some excellent marble statues in it. There are also some fragments of antiquity in the place, as part of a triumphal arch, and some remains of an amphitheatre; and there is an aqueduct three hundred and fifty paces in length, which joins the mountain of St. FRANCIS to that of Spoleto, lying seven hundred feet above the valley over which it runs. This town was terribly shaken by an earthquake in the year 1703.

Foligno.

Foligno, or Foligno, is situated ten miles north-east of Spoleto, in one of the most fruitful plains of Italy, built upon the ruins of the *Forum Flaminii*, the little river Tupino running through it. It is a populous trading place, their principal manufactures are cloth, silk, gold and silver lace.

Narni.

Narni is situated on the side of a mountain near the river Nera, surrounded almost with hills, and makes a pretty appearance as we approach it from Terni. On the top of the hill on which it is built stands the castle, the residence of the Governor. It is very troublesome walking in the city, people being obliged to go perpetually up or down hill. The houses also are indifferently built, and their tattered paper windows make them look still worse. On the other hand, it stands in a fruitful soil, and their fruits are excellent in their kind: they have also some mineral waters. It is the See of a Bishop, and the great altar in the cathedral is esteem'd a fine piece of workmanship. Near Narni are the ruins of a magnificent bridge, said to be built by AUGUSTUS, of large square pieces of marble, without any cement. Of four arches it consisted of, there remains but one entire, the top of the largest is broken off, which is computed to have been an hundred and fifty feet high, and two hundred broad, much larger than the famous arch of the Rialto in Venice.

Cefis.

Cefis, or Cæsium, eight miles north-east of Narni, remarkable for the cold winds that issue from the mountains in the neighbourhood, especially in summer. They lie between Gemini and Terni, and are a chain of hills about eight miles long from east to west, all huge rocks, wonderfully placed by nature one above another. The surface of these rocks is full of holes and chinks, from whence those cold blasts issue during the heat of summer, and at no other time; and the natives have a way by pipes and canals to convey it into their cellars, to cool their wines and preserve their fruits.

Terni.

Terni, olim *Interamnina*, is situated seven miles north east of Narni, in a fine fruitful plain, en-

compassed by two branches of the river Nera, CHAP. XXIV. from whence it derives its ancient name, and is Pope's do- said to have been founded not long after Rome. minions. It has a brisk trade in oil of olives, with which the country abounds, making, it is said, three hundred charges of oil every day for six months in the year, every charge weighing six hundred pounds. Near this place is the famous cascade, or water-fall from mount Marmore, where the river running with a prodigious swift current, throws it self down a steep rock three hundred feet high, and falls into the cavity of another rock, against which the water dashes with such violence, that it rises again like a cloud of water-dust, in Misson's phrase double the height of the fall, and falls again in a perpetual rain over all the adjacent parts. This pulverized water forms with the sun an infinite number of rainbows, which increase and diminish cross each other, and dance about according to the various spouting and reboundings of the water, and as the watry smok happens to be thicker or thinner. At length they fall into an abyss hollowed by their own weight, from whence they break forth again impetuously through the jaws and crevices of the rock, from whence they run murmuring on a little way, and then mingle with the river Nera, which they enlarge above two thirds. Terni is a well built populous town, and a Bishop's See, who is suffragan to Rome.

A remark-  
able na-  
tural cas-  
cade, or  
cataact.

Rieti, or Reate, is situated on the river Velino, about twenty miles to the eastward of Terni, on the confines of the kingdom of Naples. It is a place of some trade, but has a very bad air, occasioned by the neighbouring lakes and marshes. It was miserably shattered by an earthquake in the year 1703. The Bishop of this place is suffragan to Rome.

Rieti.

Norcia, or Norcera, anciently called *Conflantia Colonia*, is situated at the foot of the Apennine, sixteen miles north-east of Spoleto, and is a Bishop's See, suffragan to Rome. It suffered pretty much by the same earthquake in the year 1703.

Norcia.

Perusa, or Perugia, capital of the territory which goes by the name of the Perusin, or Perugin, a country which abounds with excellent corn and wine, is situated on a hill near the Tiber, on the confines of Tuscany, about thirty miles to the northward of Orvieto. It is a large well-peopled city, and the See of a Bishop, suffragan to Rome, and a University, and is defended by a citadel and other fortifications. About six miles from hence is the lake of Thrasimene seven leagues in circumference, near which the Romans were defeated by HANNIBAL.

Perugia.

Castiglione del Lago, the capital of a territory called *Il Contado di Castello*, is a fortified town on the frontiers of Tuscany, fourteen miles to the westward of Perugia.

Castigli-  
one.

The marquise of Ancona is bounded by the duchy of Urbino on the north; by the gulph of Venice on the north-east; by the kingdom of Naples on the south-east; by the province of Umbria or Spoleto on the south-west; and by Tuscany on the north-west; being about seventy miles in length from east to west, and fifty in breadth from north to south: the chief towns whereof are, 1. Ancona. 2. Loreto. 3. Osimo. 4. Recanati. 5. Macerata. 6. Fermo. 7. Ripa Transone. 8. Mont Alto. 9. Offida. 10. Ascoli. 11. Tolentino. 12. St. Severino. 13. Camerino. 14. Fabriano. 15. Sassoferrato. 16. Jesi. It is one of the most fruitful provinces of

Ancona  
marqui-  
sate.

CHAP. XXIV. of the Pope's dominions, producing plenty of corn, wine, flax, hemp and fruits.

Ancona stands on a promontory in the Adriatick sea, on two little steep hills, about an hundred and twenty miles to the eastward of Rome; and sixty south-east of Urbino, having a good harbour, and a citadel which commands both that and the town. It makes a tolerable figure at a distance, but the streets are narrow and uneven, and neither the publick or private buildings equal to those of other great towns in Italy. Their trade also is at a very low ebb, but possibly may revive again now the Pope has made it a free port, as well as Civita Vecchia. Provisions, travellers complain, are dear and scarce here, though the town stands in a plentiful country; one reason whereof may be, that it is a common thorough-fare from the north of Italy to Loretto, a place as much frequented by pilgrims and travellers as any in Europe, either out of devotion or curiosity. The harbour was made by the Emperor TRAJAN, on which account there was a triumphal arch erected to his honour by the sea-side, which still remains almost entire, and looks white and fresh, being exposed to the winds and salt sea-vapours, which by continual fretting it, in Mr. ADDISON's opinion, preserves it from that mouldy colour which others of the same materials have contracted. There was some distinction made by the Romans, my author thinks, between these honorary arches erected to Emperors, and those that were raised on account of some victory, and were properly triumphal arches; but he does not hint wherein the difference consisted; only commends the wisdom of the Romans, who to encourage their Emperors in their inclinations of doing good to their country, gave the same honours to the great actions of peace which turned to the advantage of the publick, as to those of war; and this, he observes, is very remarkable in the medals that were stamped on the same occasions. The medal struck for TRAJAN in memory of his beneficence to Ancona, is still very common, on the reverse whereof is a port with a chain running cross it, and a boat with this inscription, *S. P. Q. R. optimo Principi S. C.*

The habits of the people of Ancona, according to MISSEN, are very particular. He observed on one of their festivals, he says, when they were better dressed than usual, that the principal citizens wore black cloaks lined with green, blue stockings, shoes whited with chalk, and tied with coloured ribbon; their waistcoats were unbuttoned, and the facing of the sleeves embroidered; their shirts full, and hung over their fingers ends. The ordinary citizens wives and daughters had head-dresses with long fringes hanging over their faces; the body of their gowns of red and yellow silk, laced before and behind, and on both sides, and overlaid with galloon like a livery; their petticoats short, and of forty different colours. The Ladies of quality were dressed after the French mode, but so awkwardly, that they made a more ridiculous figure than their inferiors in their native dress, how fantastical soever it might appear to foreigners. The exchange where the merchants meet is a handfom square portico, in which is an equestrian statue of TRAJAN, and four other figures at the four corners, representing religion, faith, hope, and charity: but an earthquake which happened not many years since, has done considerable damage to these statues, by breaking or overturning them. Ancona

is the See of a Bishop, suffragan to Rome. It is observable here that the tide does not rise above a foot, though it rises above four feet at Venice and the bottom of the gulph, and in that part of the gulph of Venice which lies next the Mediterranean there is no tide at all to be discerned.

The city of Loretto, *olim Lauretum*, taking its name from a grove of laurel there, is situated on an eminence three miles to the westward of the gulph of Venice, fifteen south of Ancona, and an hundred and forty-five to the eastward of Rome, in a pleasant fruitful soil; but there cannot be worse roads for the poor pilgrims to wade through, than there are near this celebrated place. The city is small, consisting only of one large street within the gate, and another without; and is defended by a wall and other fortifications, which may be sufficient to prevent a sudden surprize, but would not be able to hold out a long siege. Some have wondered, says Mr. ADDISON, that the Turk never attacks this place, where so vast a treasure is repositied, since it lies so near the sea-shore, and is so weakly defended: But besides that he has formerly attempted it without success, the Venetians keep too watchful an eye over him at present, to suffer him to enter the Adriatick. It would, as that gentleman observes farther, be an easy matter for a Christian Prince to possess himself of it, who has ships continually passing by; especially if he had a party in the town disguised like pilgrims: for it is computed there have been no less than an hundred thousand pilgrims in this place in the compass of a day's time; but it is probable that their veneration for the Holy House, and the horror of an action that would be resented by all Catholick Princes, will be as great a security to the place as the strongest fortification. And there is no doubt but the Pope would make use of these treasures in case of an unfortunate war with the Turk, or a powerful confederacy among the Protestants against the Holy See. The vast heaps of wealth amassed together here and in other religious places in Italy, may be looked upon as so many hidden reserves and magazines of the church, that she would open upon any pressing occasion for her last defence and preservation. But I proceed to give an account of the Holy House, which drew so great a treasure hither.

It is called here, *Sacratissimo Sacello. Gloriosa Cella. Domus Aurea. Domus Sapientie. Vas Insigne Devotionis. Sanctuarium Dei. Propitiatorium Altissimi. Civitas Refugii. Puteus Aquarum Viventium. Terror Demonum. Spes Desperantium. Gloria Jerusalem. Tabernaculum Fœderis. Solium Glorie Dei. Sacrarium Divinitatis. Sacrosancta Casa, &c.*

The history of the translation, or transportation, of this house from the Holy Land to Loretto, is hung up in the cathedral of Loretto in several languages; the substance whereof is as follows, viz. That this was the blessed Virgin's chamber near Jerusalem, in which she was born and saluted by the angel; that she conceived and brought up her son JESUS here till he was twelve years of age; that after the ascension of our Saviour, the Apostles consecrated it to the honour of the Blessed Virgin, and St. LUKE drew a picture of her, which is preserved here to this day: that the natives apostatizing from the faith of Christ, and becoming the disciples of MAHOMET, the Angels carried it into Dalmatia, and placed

Pope's do-  
minions.

placed it on a mountain there called Terfatto, near the Gulph of Venice; (but as to the time of this memorable event, they are not perfectly agreed, whether it was on the ninth, tenth, or the twelfth day of May 1291, or in the year 1294.) But the people of the country not expressing a due veneration for it here; three years and seven months after, the Angels transported it over the sea to a wood in the territory of Recanati (which is about three miles from Loretto) the territory belonging to a noble Lady named Loretto, from whence it obtained the name of *Our Lady of Loretto*. After it had remain'd here eight months, on account of the wickedness of the natives, it was remov'd a third time to the hill where it stands at present; but a controversy arising between two brothers to whom the ground belong'd, four months after it was remov'd a little farther into a highway; and here they built over it a magnificent church, the present cathedral, under the middle of the cupola whereof it now remains. They also erected four walls of white Parian marble, which surrounded the Holy Chamber at the distance of half a foot, the better to preserve it. Here, says my author, all the beauties of sculpture and architecture may be seen, the greatest artists in Italy having been employ'd in the work. It is of the Corinthian order, with excellent bas-reliefs, in which the history of the Virgin is represented; and there being two rows of niches one above another between the double columns, in the ten below are the statues of ten Prophets, and in those above the images of ten of the Sibyls, who prophesy'd of our Saviour's birth. There remains no more now of the Virgin's chamber than the four walls, composed of a reddish stone, which the legend says is no where to be found but near Nazareth. The roof has been remov'd to give light within, and a door made on each side; nor is there any of the foundation. The chamber is about forty foot long, twenty broad, and about twenty in height. My author says, he view'd the wall on the inside, which they were prevented from doing without by the marble enclosure; and whatever they may pretend, it appears to be built of brick. Misson also relates, that he has examin'd the matter, and that they have on purpose made choice of bricks of different shapes and unequal bigness, together with some flat greyish and reddish stones, which are common every where, and that the cement is common lime and sand, as in other ordinary houses, but ill join'd and fitted together; which seems to evince that the work was done in haste. But to go on with the tradition concerning this house, which the Roman Catholics believe as firmly as their creed: They say, that it was not known from whence it came till the blessed Virgin appeared to a devout man in his sleep, and declar'd the manner of its removal in the year 1296, who discovering it to the Governor and other considerable men of the province, they sent sixteen persons of good reputation to Nazareth, who measur'd the foundations from whence it was taken, and found them to be exactly of the same dimensions with the walls of the Holy House. They saw also an inscription on an adjoining wall, which signified that it had left that place; which demonstrated to them, that this was the chamber of the Virgin MARY: and it has been reverenc'd by Christians accordingly, and many miracles wrought there, says the legend. PAUL SILVA a hermit of great sanctity, who liv'd in the neighbourhood, also declar'd, that going there constant-

ly to mattins for ten years on the eighth of September annually, two hours before day, he saw a light descend from Heaven upon the Holy House, which was the blessed Virgin, who shew'd herself there on the day of her nativity. Another man of credit, named PAUL RENALDUCCI, attested, that his Grandfather saw the Angels convey it over the sea, and place it in the wood, where he had often visited it. One FRANCIS PRIOR also attested, that his Grandfather's Grandfather being an hundred and twenty years old, had much frequented it in the same place, and that in his time it was carried from thence to the mountain of the two brothers.

The Holy House is situated east and west. Towards the east is the little chimney of the chamber, and over it stands the Lady of Loretto, with a little Jesus on her right arm: the image of our Lady is said to be of cedar wood, the workmanship of St. LUKE, and brought hither with the house. It is about four foot high, and adorn'd with a particular kind of veil (of which they have several of various colours for change) all rich and glittering with precious stones; one of these, LASSELS relates, has six rows of diamonds down before, to the number of three thousand; and is wrought over with a kind of embroidery of little pearl, set thick every where, within the flowers, with great round pearl, to the number of twenty thousand pearls in all. Her triple crown, cover'd with precious stones, was the present of LEWIS XIII, King of France. The crown on the head of our Saviour, also is set with diamonds. Before the breast of the blessed Virgin hangs a royal toison or fleece of rich jewels; a collar of rubies, pearls and diamonds, and a rich cross hanging at it. And round the nich where the statue stands, is a close row of precious stones of several kinds and lustres of great bulk and value, forming a kind of rainbow of various colours. Before the image of our Lady hang twelve lamps of beaten gold, each as big as a man's head: all the rest of the chapel is loaden with the rich vows and presents of great Princes. The altar is of pure beaten silver, scarce any thing of less value is to be seen here. There is still remaining some ancient paintings, said to be done in the primitive times, particularly several pictures of the Virgin, with our Saviour in her arms. On each side of the Virgin's image are presses fill'd with her ancient ornaments, and on another in the south side they preserve some earthen dishes and household utensils, said to be used by the Virgin and her family, many of which are cover'd with gold plate. Over against the image of our Lady, at the end which looks westward, is the window at which, 'tis said, the Angel enter'd when he brought her the joyful tidings of being the mother of our Saviour; this window is about three foot high, and almost the same breadth; and according to tradition, the Virgin was telling over her beads when the Angel appear'd to her.

As for the old roof of the house, and the little steeple, with which it is painted in ancient pictures, they can give no account of them; the present vaulted roof they acknowledge to be a modern fabric, but the old bells they pretend to have, which are never used for fear of wearing them out: they add, that the altar made by the hands of the Apostles, and the stone on which St. PETER said his first mass, were transported hither with the house, which are now cover'd with silver. The pavement consists of square pieces of red and white marble; but this also is modern: for the old floor they

Pope's do-  
minions.

they say was left at Nazareth with the foundation of the house. The entrance of this chapel is by three doors at present, viz. one on each side, and one behind the altar, though originally there was but one. The place between the altar and our Lady's shrine is called the sanctuary: upon this altar mass is celebrated from four in the morning to one in the afternoon; and before it hangs a lamp of gold as big as two men can carry; there are also all round the chapel lamps, statues, busts, and other figures of gold and silver, and particularly eight and twenty large silver candlesticks gilt. The last rich offering is always laid before the shrine of our Lady for some time, and then removed into the treasury. All round the walls that inclose the house are a great number of candlesticks and branches; and these walls the pilgrims surround on their knees, some five, some seven, and others twelve times, as they are disposed, saying over their Pater-Nosters and Ave-Marias, and telling their beads, all endeavouring to get as near the wall as they can; and as some surround it one way, and others the contrary, this occasions frequent jostling, and must not a little disturb their devotions; but this is never done when there are great numbers of Pilgrims assembled. From the Sancta Casa foreigners are led to view the treasury, in comparison of which, says Misson, all the riches of the Holy House are but of small value. It is a gallery with a rich vaulted roof, forty paces long, and fifteen broad, on one side of which are large presses with folding-doors, which serve instead of wainscoat when shut. The silver works are not thought worthy to be admitted into these presses, but are laid in heaps in other repositories, while the presses are filled with pure gold, rich jewels, or vessels and ornaments more precious than gold; being the votive donations of Emperors, Kings, Popes, Princes, and other persons of distinction, for several hundred years past. Here are whole services for the altar of amber, agate, lapis lazuli, coral and crystal, Priests vestments adorned with pearl and precious stones. A spread eagle covered with diamonds, several crowns of gold enriched with pearls and diamonds, a heart set with diamonds, and a great emerald in the middle of it of an excessive bigness. Several single diamonds of an immense value; images of our Saviour and the Samaritan woman in gold; a golden dove with two crowns above it covered with diamonds, rubies, emeralds, and other precious stones; a cup of Lapis Lazuli, with a lid of rock crystal, on the top whereof is an Angel in relievo, having a lilly set with diamonds in his hand: the border of this lid is adorned with four large diamonds, and as many rubies: the foot is oriental jasper and gold artfully intermixed and embellished with precious stones; three Satyrs of gold sitting upon it glittering with rubies and diamonds, intermixed with pearls; and there are three golden Syrens for the basis, holding each of them a child, with this distich,

*Ut quæ prole tua mundum Regina beasti,  
Et Regnum & Regem prole beare velis.*

This glorious cup HENRY III of France offered to our Lady for a successor. And here are two crowns in form of Tiara's, which LEWIS XIII of France offered on the same account.

These are both of gold embellished with diamonds and pearls, which, it is said, cost eighty thousand crowns. Another present the same

King offered after the birth of LEWIS XIV, being an Angel of silver with a young infant of gold in his arms, which he presents to the Virgin. Among the golden statues are those of the Duke of Savoy, with a royal mantle on his knees, and that of STANISLAUS King of Poland: and there is an altar-cloth presented by the Lady of the Great Chancellor of Poland, the jewels whereof are computed to be worth an hundred and fifty thousand crowns, with a multitude of other valuable presents; among which I must not forget one that Misson says was sent by King JAMES II's Queen in 1688, viz. an Angel of gold, holding a heart bigger than an egg covered with diamonds of great value, which, he says, she offered to the Virgin just before she became pregnant of the Chevalier. On the other side of the gallery is a range of windows, between every one of which are the plans of several great towns in bas-relief in silver. But not to weary the reader with a tedious enumeration of more particulars, I shall conclude the description of this treasure in the words of Mr. ADDISON: The riches in the Holy House and treasury, says that gentleman, are surprizingly great, and as much surpassed my expectation as other sights have fallen short of it: silver can scarce find admission, and gold itself looks but poorly among such an incredible number of precious stones. There will be in a few ages more the jewels of the greatest value in Europe, if the devotion of its Princes continues in its present fervour. The last offering (when he was there) was made by the Queen Dowager of Poland, and cost her eighteen thousand crowns.

The church, in which the Holy House stands, is a magnificent fabrick, built in the form of a cross, with a cupola in the middle, adorned with stucco work and exquisite paintings by the greatest hands; particularly in the chapel of the Annunciation, is the history of her visitation and marriage; and in the chapel of St. JOHN Baptist an incomparable picture of our Saviour's baptism. In the great square before the church is a vast marble fountain, with the brazen statue of Pope SIXTUS V; and four other statues representing the cardinal virtues. All the doors of the church are of brass, and have several histories engraven upon them. The cellars belonging to the house are very spacious, and replenished with variety of wine, not only for the service of the Bishop's palace, but for all those numerous bodies of Pilgrims which resort hither, to whom they are always open. After the cellar strangers are shewn the Apothecaries shop, where all pilgrims are furnished with such medicines as they want; but the pots which contain them are the greatest curiosity here, having been painted by the admired RAPHAEL URBIN, and containing several pieces of sacred and prophane history. The palace where the Governor, the Bishop, and Penitentiaries of all nations reside, is large and commodious; and here are apartments always ready for the reception of Princes, Cardinals, and other persons of distinction, whose devotion brings them hither. In the square of this palace is an octangular fountain of brass thirty foot high, consisting of three stories one above another: into the uppermost four Eagles throw the water; four Dragons pour it into the second; and four Tritons mounted on the backs of dolphins convey it to the third. The inhabitants of Loretto, notwithstanding the vast concourse of pilgrims hither, are not rich, most of them being main-

Pope's do-  
minions.

CHAP.  
XXIV.  
Pope's do-  
minions.

tained by the charity of the house, and laying out but little money, unless it be in beads, crosses, and medals, the making whereof are the principal employment of the inhabitants. TURCELINUS, in his history of Loretto, relates, that in some years between Easter and Whitfuntide there have resorted hither five or six hundred thousand pilgrims; and in the space of two days in September, when they celebrate the feast of the Virgin's nativity, not less than two hundred thousand. These pilgrims set out in bodies from the several Catholick cities of Italy, and other parts of Europe, each body or society being distinguished by the arms of the city they come from, and by the colour of their clothes: they wear a kind of linen frock with a cowl, which quite covers their heads, leaving only three holes for their eyes and mouth; they have large chaplets of beads, girdles, pilgrims staves, and the arms of the society painted or embroidered before and behind, on the back and breast of every brother. The men usually ride on asses, probably in imitation of our Saviour, which animals, says my ludicrous author, on account of their frequent journeys to the Holy House, are supposed to have some smack of sanctity. They are very sure-footed, and travel better in that uneven country about Loretto than horses would. As to the female pilgrims, their habits are the richest they can procure, and they fasten to the body of their gowns a little pilgrim's staff of gold, silver or ivory, some of them set with pearls or precious stones; and these being about six inches long, says the same merry writer, give occasion for many pretty thoughts, serving for diversion for the company on the way. The Ladies usually ride in calashes and chaises, surrounded with a croud of gentlemen mounted on asses, and dressed in the manner above described, who show a thousand antick tricks, and sing merry songs for their diversion, which must make the women extremely fond of these expeditions in a country where they are never permitted to converse with the men but on such occasions; though there are few of them but have a governante, a brother, or some other relation near them, who serve as spies to see that they do not carry their gallantry too far. But to return to Loretto, besides the jewels, plate and ornaments already mentioned, it is supposed there are vast sums of ready cash laid up in the treasury of the Holy House, for no pilgrim scarce comes thither but gives something to the box; and to incite them to be liberal, they deliver out printed papers, wherein they suggest that the revenues of this church amount to but twenty seven thousand crowns per ann. and that in their charges in maintaining the clergy and officers which belong to the Holy House, and the pilgrims who resort hither, they annually expend above thirty eight thousand crowns, so that there is a deficiency of eleven thousand crowns every year; from which representation they endeavour to move the compassion of devout pilgrims; tho' it is supposed the lands and revenues appropriated to Loretto, are much beyond what they are pleased to discover. It is true, the numerous clergy who constantly attend here, must occasion a very great expence; there being above an hundred and twenty masses founded to be said every day in the church and chapel, besides casual ones celebrated for particular persons; for which purpose only they maintain near fourscore extraordinary Chaplains; and the Madona or Saint herself is continually served by twenty Canons, thirteen Ecclesi-

asticks, called Incumbents, twelve Clerks, and other inferior officers. SIXTUS V. first made Loretto a City and Bishoprick; and so great is the dignity of this place (say the Catholicks) so sublime is its majesty, that before all the holy places under heaven, the chapel of Loretto is to be preferred.

Osimo is a small city, about fifteen miles west of Loretto, remarkable only for being a Bishop's See, suffragan to Rome.

Recanati, the ancient *Helvia Recina*, united to the See of Loretto, is situated on the top of a hill, about three miles south-west of Loretto. In the territories of this city it was that the Holy House first rested on its transportation from Dalmatia.

Macerata is situated on a hill between Loretto and Tolentino, twenty miles south of Ancona. It is a Bishop's See, united to Tolentino, suffragan of Fermo, and has a little University.

Fermo is situated on a rising ground near the gulph of Venice, fifteen miles south of Loretto, a large place, and made an Archbishoprick by SIXTUS V. who had been Bishop of this city.

The cities of Ripa, Transone, Montalto, Ascoli, Tolentino, Camerino, and Jesi, are all Bishop's Sees; but do not deserve a particular description.

Fabriano, on the confines of the duchy of Urbino, is taken notice of for a manufactory of fine paper there.

The duchy of Urbino, including the Republic of St. Marino, is bounded by the province of Romania, and the gulph of Venice, towards the north and east; by the marquisate of Ancona towards the south; and by the duchy of Florence or Tuscany and Perugia towards the west: being about seventy miles in length from the south-east to the north-west, and of a very unequal breadth, in some places fifty, and in others scarce twenty, particularly that part of it which lies between Tuscany and the gulph of Venice is very narrow. The chief towns are, 1. Urbino. 2. St. Angelo. 3. Urbana. 4. Cagli. 5. Fombrone. 6. Fano. 7. San Leo. 8. Penna de Billi. 9. Gubbio. 10. Senigaglia. And, 11. Pesaro.

Urbino, the capital city, is situated on a hill near the river Foglia, about twenty miles south-west of the gulph of Venice, and an hundred north-east of Rome; a little well-peopled city, and hath some handfom buildings in it, particularly the Ducal Palace, Pope URBAN VIII. being an intimate friend of the last Duke's, and having, among other favours, given him an hundred thousand ducats, so entirely won the Duke's heart, that he bequeathed this city, and the whole duchy belonging to it, to the See of Rome about the year 1630, and it has ever since been part of the Ecclesiastical State. In this city the famous Painter RAPHAEL was born, from hence called RAPHAEL URBIN. It was made an Archbishoprick, by Pope PIUS IV. anno 1563.

Sinigaglia, or Senegallia, said to take its name from the Galli Senones, is a little pleasant town, situate in a plain near the gulph of Venice, about twenty miles north-east of Ancona, and has a harbour of no great consequence.

San Leo is a fortress situated on a mountain fifteen miles north of Urbino, capital of the county of Montefeltro, which has its name from its mountainous situation.

Cita

H. A. P.  
XXIV.  
Pope's do-  
minions.

Cita de  
Castello.  
Fano.

Cita de Castello is the capital of a county of the same name, situated about twenty miles south-west of Urbino, a little fortified town, and the See of a Bishop, suffragan to Rome.

Fano is situated on the gulph of Venice, about twenty miles to the eastward of Urbino, anciently called *Fanum Fortunæ*, or the Temple of Fortune, on account of a temple erected to the honour of that Goddess here, of which there is nothing remaining but the ruins at present. There is also here a magnificent triumphal arch, pretty much defaced, consisting of three arches of marble, the loftiest that are to be met with any where, each of them, as it is said, being thirty cubits high; the plan of it, with all its inscriptions, is neatly cut upon the wall of a neighbouring building. In this, as in almost every other town in this part of Italy, is a beautiful marble fountain, where the water runs continually through several little spouts, which, my author observes, looks very refreshing in this hot country, and gives a coolness to the air about them.

Pesaro.

Pesaro is pleasantly situated also upon the gulph of Venice, about ten miles north-east of Fano; and was the capital of a territory, governed by its own Princes till the year 1631, when it came under the dominion of the See of Rome. It is one of the largest and best-peopled towns in the Pope's dominions; and has a very good trade; the churches and houses are for the most part modern and well built. Pope CLEMENT XI. who was a native of this place, built a magnificent cathedral here, whose Bishop is suffragan to Urbino. The country about Pesaro is exceeding fruitful, and every thing extremely cheap, but the air is bad in summer-time.

Gubio.

Gubio is the capital of a little mountainous territory, situate near the foot of the Apennine, about thirty miles south-west of Urbino, and is the See of a Bishop, suffragan of that city.

Fombrone.

Fombrone, or Fossombrone, is situated about ten miles south-east of Urbino, and about as much to the westward of Fano, and is the See of a Bishop, Suffragan of Urbino.

St. Angelo, &c.

St. Angelo, Urbaneæ, Cagli and Penna de Belli, are Bishops Sees, but remarkable for little else; and indeed every town of Italy almost of the bigness of an English market-town is a Bishop's See.

The republick of  
St. Marino.

The territories of the Republick of St. Marino are situated on the north part of the duchy of Urbino, near the confines of Romania. They consist of one mountain, and some neighbouring hillocks which lie scattered about the bottom of it, being about three miles over, and about ten in circumference, containing one little city of the same name, four or five villages, eight corn-mills, and two powder-mills, in which little State there are about six or seven thousand souls. There is not a spring or fountain, according to Mr. Addison, in their dominions, which defect is supplied by vast cisterns or reservoirs of rain-water. Their wine that grows towards the bottom of the mountain is the best on the north side of the Apennines.

St. Marino  
city.

The town of St. Marino stands on the top of the mountain, which is exceeding high and steep, it is generally hid among the clouds, and lay under snow, says Mr. Addison, when I saw it, though it was clear and warm weather in all the country about it. The city is walled on one side, and defended by a dreadful precipice on the other, on which stand three towers or castles on a line. The streets are narrow, and the houses but indifferently built: There are five churches and four convents

in their limits, but not considerable enough to deserve a particular description. There is a suburb at the foot of the hill, where they have a good weekly market, and four annual fairs, in which great herds of live cattle are bought and sold. Their principal fair is on the feast of St. BARTHOLOMEW, when all the natives that are fit for military service are under arms, to the number of twelve or fifteen hundred. There are but two ascents from the suburbs to the city, by one of which, winding about, a coach may get up to the gate; the other is very steep; and there is a law that none shall enter the town by any other paths, lest new ones should be worn on the sides of the mountain, and foreigners find an access to it. The town stands about nine miles south of Rimini, twenty north of Urbino, and five or six west of the gulph of Venice. This little republick has continued twelve or thirteen hundred years; and was founded by St. MARINO, a hermit who retired hither, and practised such rigours and austerities upon himself, as gave the people of the neighbourhood a great opinion of his sanctity. It being given out at length that heaven had conferred on him a power of working miracles, the Princes of the country gave him the mountain he had chosen to erect his hermitage upon; and his reputation soon drew people enough thither to people it, who formed themselves into a republick, which has been ever since called by the name of their founder, whose statue stands on the high altar in their principal church, which is dedicated to him. He holds a mountain in his hands, crowned with three castles, which is the arms of the common-wealth. They attribute to his protection the long duration of their state, and esteem him the greatest Saint next to the blessed Virgin.

The sovereign power was originally lodged in the Arengo, or great council, wherein every house had its representative, but was afterwards devolved on the council of sixty, or rather forty, for it consists of no more at present, of which one half are of noble families, as they are called, and the other half plebeians, and all matters are decided in this assembly by ballotting. By these are all ministers and officers of the common-wealth appointed, and no sentence is executed which is not confirmed by two thirds of this council. The two principal officers of the common-wealth are stiled Capitaneo's, which our writers resemble to the Roman Consuls: these are elected every six months. The next officer is the Judge in civil and criminal matters, and because of the many alliances, friendships and intermarriages, as well as the personal feuds and animosities which must of necessity happen among so small a people, and might obstruct the course of justice, if one of their own number was possessed of this post, they always entrust a foreigner with the administration of justice, who is a Doctor of law, and has a reputation for his integrity; they change him every three years. The fourth man in this petty state is the Physician, who is also a foreigner, and maintained by a publick salary, and changed also every three years. A fifth officer, who makes no small figure in the republick, is the school-master, and the natives in general, it is said, have some smattering of learning. They are esteemed an honest well-meaning people, and according to some of our modern travellers, live much more happy and contented among their rocks and snows than any other Italians do in the most fruitful valleys. Nothing, says Mr. Addison, can be a greater instance of the natural love mankind have for

CHAP.  
XXIV.  
Pope's do-  
minions.

CHAP.  
XXIV.  
Pope's do-  
minions.

for liberty, and of their aversion to an arbitrary government, than to see such a savage mountain cover'd with people, when the Campania of Rome (under a Monarch) in the same country, is destitute of inhabitants. From which and many other instances it is evident, that Mr. Addison preferr'd a republican form of government to any other, and insinuates, that no such thing as liberty can be expected under a monarchy. But it is to be observ'd, that these very people lie in the midst of the Pope's dominions, are under his protection, and so much in his power, that he might at any time put an end to their boasted liberties if he saw fit. And after all, why people should be happier under forty tyrants or governors than one, is not easy to be conceived. Nor does it proceed so much from the excellency of their constitution, as from the poverty of their country, and their cold uncomfortable situation, that they have so long remain'd a state. The richest and the happiest countries ever suffer the most frequent revolutions. Is it not worth any Prince's while to make a conquest of a mountain eternally cover'd with snow, tho' 'tis very natural for people to have an esteem and fondness for their native place, how miserable soever. At the island of St. Helena, which is but twenty miles in circumference, and above five hundred from any continent, where the natives are of British extraction, and subject to a Governor appointed by the East-India company, who acts as despotically as any Prince upon earth, the natives seem no less contented than these are represented to be at St. MARINO, and will tell you that they have very little inclination to remove to any other part of the world. They represent that their small fortunes that maintain them in necessities here, would probably be spent before they could fix themselves to any advantage elsewhere; that they and their families must run great hazards and suffer many hardships in the attempt: But what is more than all, they have such a fondness for the spot of earth where they were born and bred, that they cannot think of leaving it, any more than the mountaineers of Marino can of descending into the rich vales about them; not on account of the mildness of the government, but for some such reasons as keep the natives of St. Helena at home. And indeed, it is no easy matter for poor people to leave their country with their families and fix in other places, whatever the nature of the government may be, they live under, or whatever oppressions or hardships they may suffer from their Governors. And that the rest of the people of Italy are not less contented than those of Marino, how miserable soever some travellers may represent them, or they may in reality be in our opinion, appears from MOTRAYE, Vol. I. p. 74. The picture several travellers have drawn, says that gentleman, of the meanness and poverty of the Italian peasants, render'd so by their rich masters, is apt to make any one look upon them who bear the burthen to be as miserable as those who impose it seem to be happy; but as the felicity of people consists chiefly in being contented with their condition, or more in believing themselves happy than in being really so, they complain less themselves than travellers do for them; they are born for the most part with their chains, (as we denominate them) which grow habitual and light by education. *They are taught to expect a true happiness in the next world from the very sacrifice of riches and wealth in this; from their observance of religion, contributions to the church, and submission*

*to their superiors. And being born in great plenty of all things necessary to life, in the midst of so many sorts of delicious wines, they are always more sober by choice, more quiet, and better content with what is sufficient, than those of other nations, who in the midst of riches, even to a superfluity, are tyranniz'd over by the love of money, slaves to their ambition, never pleased, but always uneasy with their masters.* It is surprizing, says the same author, how much these people give to the church in proportion to what they have, and this very willingly, notwithstanding what they are obliged to pay to the temporal power, of which they complain but little. The peasant pays religiously tythes to his curate, and has masses said for his health, for the fertility of his lands, and for the souls of his deceased relations; nor does he refuse a part of his corn, wine and fruit to the Mendicant Fryars, though without making any vow of poverty, he lives poorer than they that do it. And though these people should be deem'd to have fallen into one extreme, both in their religion and politics, yet whether the contrary extreme, where people deny any subjection to the ecclesiastical or civil Magistrate, but when they act suitably to their own whimsies, be not the more troublesome and dangerous of the two, will scarce be made a question by any considering man. But 'tis time to proceed in the description of the rest of the Pope's dominions.

The province of Romania, or Romandiola, in which I include the Bolognese and Ferrarese, is bounded by the territories of Venice towards the north; by the gulph of Venice on the east; by the province of Urbino and Tuscany on the south; and by Modena and Mantua towards the west; being about fourscore miles in length from east to west, and near as much in breadth from north to south.

Romania Proper, call'd anciently *Æmia Regio*, and *Flaminia*, is bounded by the Ferrarese on the north; by the gulph of Venice on the east; by Urbino and Tuscany on the south; and by the Bolognese on the west; and is about sixty miles in length from east to west, and forty in breadth from north to south. It is diversified with hills, woods, arable, meadow and pasture, and abounds in corn, wine, oil, figs and other fruits: but the salt-pits are its principal riches. Here are also several good rivers, as the Savio, Santerna, Pisatello and Rubicon; the last of which will be remember'd as long as JULIUS CÆSAR, who by passing it with his army, manifested his design of subduing the Roman republick. This province was part of the ancient *Gallia Cispanada*, and said to be call'd Romania from its firm adherence to the Roman Empire, and not from its being in the neighbourhood of Rome, for it lies on the opposite side of Italy, at above an hundred and forty miles distance from that city. The chief towns are, 1. Ravenna. 2. Cervia. 3. Rimini. 4. Sarcina. 5. Sefena. 6. Bertinora. 7. Forlimpopoli. 8. Forli. 9. Faenza. 10. Castel Bolognese. And, 11. Imbola.

Ravenna is situated in a flat country, three miles west of the Adriatick sea; an hundred north-west of Ancona; and fourscore south of Venice, being encompass'd with two small rivers. Its ancient situation is said to have been like that of Venice, upon certain islands, when it was one of the best harbours the Romans had on this side; but the waters are retired above three miles from it, and these plains which formerly

CHAP.

minions.

The province of Romania.

Romania proper.

Chief towns.

Ravenna.

merly were under water, are now some of the most fruitful grounds in Italy. It was the residence of the Emperor HONORIUS, and of many of the Gothick Kings, and afterwards the capital of the eastern Emperors dominions in Italy, where their Viceroys or Exarchs held their courts from the year 568, to the year 728. It was taken by the Lombards in 752, and by PEPIN King of France, anno 756, who gave this city, with most of the territories belonging to the eastern Emperors in Italy, to the Pope; but it never suffer'd more than when it was storm'd by the French about the year 1512, ever since which it has been in a declining condition. The buildings are generally mean, the magnificent churches and palaces which it anciently contain'd, are now run to ruin, its trade lost, and the place but thinly peopled. Good water was always so scarce here, that it was preferred to wine, according to MAR. l. 5.

*Sit cisterna mihi quam vinea malo Ravennæ,*

*Cum possim multo vendere pluris aquam.*

Lodg'd at Ravenna, water sells so dear,

A cistern to a vineyard I prefer. ADDISON.

*Callidus imposuit nuper mihi caupo Ravennæ*

*Cum peterem mixtum vendidit ille merum.* Ibid.

By a Ravenna vintner once betray'd,

So much for wine and water mix'd I paid;

But when I thought the purchas'd liquor mine,

The rascal fobb'd me off with only wine. Ibid.

The place which is shewn for the haven is level with the town at present, and is supposed to have been fill'd up by sand and dirt brought thither by the sea; for all the soil on that side of Ravenna, it is observ'd, has been made by the sea discharging it self upon it for ages past. The ruins of the Pharos, or light-house, stand about three miles from the sea, and two from the town, the foundations whereof were cover'd several yards deep. It was a square tower, about twelve yards in breadth, as appears by that part of it which still remains entire. Without the town, on that side where the ancient harbour is supposed to have been, is the Mausoleum which Queen AMALASUNTHA erected for her father THEODORICK, King of the Ostrogoths, who kept his court at Ravenna. This building is now converted into a little church which they call the Rotunda; the most remarkable thing in it is the roof, which consists of one large stone, hollow'd almost into the form of a cupola, with a round hole to let in the light. Mr. Misson says, he measured this stone, and that it was thirty-eight feet in diameter, and fifteen in thickness; but I suppose he means that the cavity or cupola was fifteen feet deep, for Mr. ADDISON says, the stone is but four feet thick, so uncertain are the accounts we receive sometimes from those who pretend they have been eye-witnesses. On the out-side of this little cupola was placed the porphyry tomb of THEODORICK above-mention'd, surrounded by the statues of the twelve apostles, but it was broken in pieces by a cannon-ball when Lewis XII besieg'd it. The same shot, 'tis supposed, made a flaw in the cupola; though, according to the tradition of the place, it was crack'd by thunder. The cathedral is an ancient fabrick, the nave whereof is supported by fifty-six pillars of Grecian marble, which form a double row on each side of it, and the roof of the choir is inlaid with fine Mosaic work. Another curiosity in

VOL. II.

this church is the great door, which is made of the planks of vines, some of them twelve feet in length, and five in breadth. The soil which has been made by the sea is so agreeable to vines, that they grow to an incredible size here. In the church of the Theatins, travellers are shewn a little window over the high altar, with the figure of a white pigeon in the middle of it, which was placed there as a memorial, that after the death of St. APOLLINARIUS, the first Bishop of Ravenna, the Priests being assembled to chuse a successor, the Holy Ghost in form of a dove (as they say) came in at this window, and sat upon the head of him who was to be elected; and that the same thing happen'd afterwards at eleven elections successively. In the churches of St. VITALIS, St. APOLLINARIUS, St. ROMOALDUS, and St. ANDREW, are some very fine pieces of marble and porphyry, supposed to be brought from Greece during the time of the exarchate. In the church of St. CELSUS is a noble tomb of GALLA PLACIDIA, sister to the Emperors ARCADIVS and HONORIUS; and in the great square a fine brazen statue of Pope ALEXANDER VII. Upon two columns in the same square were set the patron and arms of Venice formerly, when Ravenna was in the possession of that state; but the Pope has since placed the statues of St. VICTOR and APOLLINARIS, the patrons of Ravenna, on the same pillars. This city is the See of an Archbishop, but is neither considerable for its bulk or fortifications at present.

Rimini, the ancient *Ariminum*, stands in a plain Rimini, near the coast of the Adriatick Sea, at the mouth of the river Ariminus, about four and twenty miles south-east of Ravenna, and twenty north-west of Pesaro. Between Ravenna and Rimini runs the famous river Rubicon, which some take to be the modern *Pisatello*, and others another small stream near it; but however that be, the Rubicon was the boundary between Gaul and Italy, and it was made treason either for the Roman officers or soldiers to pass this river in their military habits. This it was that made JULIUS CÆSAR halt here for some time in his march towards Rome, but having weigh'd the consequence, he cried out at length, *EATVR QVO DEORVM OSTENTA, ET INIMICORVM INIQUITAS VOCAT: IACTA EST ALEA.*

*Jam gelidas Cæsar cursu superaverat Alpes*

*Ingenteque animo motus, bellumque futurum*

*Cæperat ut ventum est parvi Rubiconis ad undas.*

LUCAN.

This river, says Mr. ADDISON, who takes it to be the modern *Pisatello*, is not so very contemptible as it is generally represented, and was much encreased by the melting of the snows when Cæsar pass'd it, according to the same Poet:

*Fonte cadit modico parvisque impellitur undis*

*Puniceus Rubicon, cum fervida conduit æstas,*

*Perque imas serpet valles, & Gallica certus*

*Limes ab ausonis determinat arva colonis.*

*Tunc vires præbebat hyems atque auxerat undas,*

*Tertia jam gravida pluvialis Cymbria cornu,*

*Et madidis Euri resolute flatibus Alpes.* LUCAN.

While summer lasts the streams of Rubicon From their spent source in a small current run, Hid in the winding vales they gently glide, And Italy from neighbouring Gaul divide. But now with winter storms increas'd they rose, By wat'ry moons produc'd and Alpine snows,

13 U

That

That melting on the hoary mountains lay,  
And in warm eastern winds dissolv'd away.

ADDISON.

Rimini is in a declining condition at present, having neither trade nor harbour, for both which it was considerable anciently; but the sea is retired a mile from it, and, according to Mr. Addison, it has nothing modern to boast of. The antiquities are, 1. A marble bridge of five arches, built by AUGUSTUS, as appears by the inscription, viz. *Cesar. Divi F. Augustus Pontifex Maxim. Cos. 14. Imp. XX. Tribunitia potest. XXVII. p. p.* On the other side, *Ti. Cesar Divi Augusti F. Divi Juli N. August. Pontif. Maxim. Cos. 4. Imp. 8. Trib. potest. 17. Deder.* 2. A triumphal arch erected by AUGUSTUS, which makes a noble gate to the town; on which is the following inscription, viz. *Cos. sept. Designat. Octavum V. Celebr. rimis Italiae Viris Consilio Senatus pop. Ta. CS. US. Nileis.* Here are also the ruins of an amphitheatre, and they pretend to shew the Suggestum on which JULIUS CÆSAR stood when he harangued his officers after he had passed the Rubicon. Rimini is a Bishop's See suffragan to Ravenna.

Cervia. Cervia, the ancient *Phocle*, stands in a morass near the sea, about ten miles to the southward of Ravenna; considerable on account of the salt-pits about it; and for its being a Bishop's See, suffragan to Ravenna: but is not very well peopled, on account of the badness of the air.

Faenza. Faenza is situated on the river Amone, about twenty miles west of Ravenna, a little neat town, and a Bishop's See suffragan to Ravenna, most considerable on account of its manufacture of earthen ware.

Sarcina, Bertinoro, Forlimpopoli, Forli and Imola, are only remarkable as they are the Sees of so many Bishops.

The province of Bologna, or the Bolognese, is bounded by the Ferrarese on the north; by Romania proper on the east; by Tuscany on the south; and by the Modenese on the west; being about forty miles in length from east to west, and five and twenty in breadth from north to south; and is watered by the rivers Reno, Saveno and Quadraro: being a fruitful country, abounding in corn, wine, oil, flax and fruits. It was anciently part of Lombardy, and afterwards of the exarchate of Ravenna, and given to the Pope by King PEPIN and CHARLEMAIN. The chief towns whereof are, 1. Bologna. 2. Budri. 3. Bentivoglio. 4. Fort Urbin. And, 5. Castel-Franco.

Bologna, or Bolonia, in Latin *Bononia*, and anciently *Felsina*, is usually surnamed the *Fat*, from its standing in one of the most fruitful plains in Italy. It is situated upon several little rivulets and a navigable canal, by which it has a communication with Ferrara, and a branch of the Po; lying about seven or eight miles to the northward of the Apennines, which in the way from Florence sink gradually into little mounts or eminences till we arrive at the plain in which Bologna stands. This city is about sixty miles north-west of Florence, and something more than two hundred north-west of Rome, thirty south-west of Ferrara, and an hundred and thirty south-east of Milan. The country between Florence and Bologna is as barren as the country on the side of Lombardy is fruitful, being one continued chain of the Apennine mountains, over which the road would be

intolerable if the Italians did not take more care of their highways than any nation in Europe, in which they imitate their ancestors the old Romans; but this road is still so incommodious for wheel-carriages, that those who travel between Bologna and Florence chuse either litters or mules to ride on, rather than calashes in which they travel in the plain country. Bologna is of a round figure, about five or six miles in circumference, surrounded with a single wall of very little strength; for it is said, when they put themselves under the Pope's protection about the year 1278, they stipulated particularly against citadels and fortifications, lest they should be used as a conquered people; and the Popes have religiously observed this part of the treaty to this day. The town is remarkable for its magnificent monasteries and churches, and the riches and fine paintings in them. The streets are tolerably wide, and have piazza's on each side: the private houses are not lofty, or comparable to those of Venice or Genoa, but are handfom and convenient enough; they are either built of stone or brick plastered over in imitation of stone. They have several fine squares with noble fountains in them; and all manner of provisions are extremely plentiful; but what they are most remarkable for are their hams and sausages, in which most towns in Europe endeavour to imitate them. The wealth of Bologna, says Dr. BURNET, appears in every corner of the town; there are many noble palaces all over it, and the churches and convents are incredibly rich. The inhabitants are computed to amount to seventy thousand souls. The place is much colder in winter than those towns to the southward of the Apennines, which, Mr. ADDISON supposes, is the reason that their wines are not so good; so sweet I suppose he means, for they have excellent white wine, and they do not lie so cold as France and some other countries, where we meet with the best of wines; and, according to Misson, the heats are almost as troublesome here in the summer, as they are to the southward, accordingly they use ice with their wine, and all manner of cooling liquors; the men also have fans as well as the women all over the country, and little machines at table to drive off the flies. Here Misson takes an opportunity to acquaint us, that they drive away the flies from the Pope's face (when he is carried in publick on men's shoulders, seated in a chair of state) in hot weather with an engine, called *Muscaria Pavonina*, being a kind of open fan, made with the feathers of a peacock, and fastened to the end of a gilt staff about six foot long, and adorned with several toys; two officers on each side hold these implements near his face to drive away the flies; they serve also instead of a fan, producing with a little motion a gentle gale of wind. But however this may be looked upon as an extravagant piece of state in Europe, it is no more than every gentleman and tradesman in the East-Indies has whenever he goes abroad; the East-India company's factors have their men to run by them and beat off the flies as they travel, and others with umbrellas to screen them from the sun; as Misson observes the Pope also has, upbraiding him that St. PETER, whom he pretends to succeed, was never thus attended. But to return to Bologna, their trade consists chiefly in silks and velvets, in which manufactures, and those of flax and hemp, it is said, there are not less than

CHAP.  
XXIV.  
Pope's do-  
minions.

CHAP.  
XXIV.  
Pope's do-  
minions.

four hundred mills employed to put the machines in motion with which they are wrought. One of these kinds of mills, I am informed, is erected on a stream at Derby, which saves abundance of hands, and were they more general in England, our silks might be afforded much cheaper: the Italians, French and Dutch underwork us more by the machines they employ, than by their frugal living. Bologna is also most famous for its soap, snuff and perfumes; but there is one species of goods almost peculiar to this town, and that is Lap-dogs for Ladies, which it seems are very small, and sold at an excessive price here. One of these was presented to some of the Bishop of Rochester's family by the Chevalier's people, as it is said, and was an evidence of the Bishop's correspondence with that court. There is another thing almost peculiar to Bologna, and that is their boiling their wines, which I presume is in order to make them keep, for some of their wines grow sour as soon as small cyder: but I must not forget their olives, which are excellent in their kind, and bought up as much as their white wine. I proceed now to be a little more particular in the description of the public buildings in Bologna: To take a full prospect of the town, says my author, you must go a little out of it, to the convent of St. MICHAEL in Bosco, which stands upon a neighbouring hill, and is itself one of the most magnificent monasteries in Italy: there are few sovereign Princes whose Palaces are near so beautiful, nor are the monasteries of the Dominicans, and that of St. SAVIOUR inferior to this. In the church of the Dominicans is a glorious monument of St. DOMINICK their founder, of fine alabaster, beautified with bas-reliefs, containing the history of his life; and the picture of St. DOMINICK over the tomb, is an exquisite piece done by the famous GUIDO RHENI; but as for the inlaid work of the choir, so much admired by travellers, MISSON observes, that the modern performances of that kind are much better done, now they have found out the art of imprinting natural colours on wood. The church of St. PETRONIUS is the largest in the city, in which the most remarkable thing is CASSINI's meridian line, which is drawn on a copper-plate, set in the pavement two hundred and twenty two foot long; directly over the noon-point of this line is a little hole in the arched roof of the nave, at which a ray of the sun enters, and marks the solstices and equinoxes upon the line. At the Church of Corpus Domini they shew an embalmed body, which is black and dry like a mummy, and pretend that it is the body of a deceased Nun, called KATHERINE DE VIGRI, who died about the year 1463, which frequently works miracles; she sits in a chair clothed in a Nun's habit, a crown of gold on her head, rings on her fingers, a crucifix in her right hand, and a book of her own composing in her left; her hair and nails, as her votaries pretend, grow as when she was alive, and are often cut: Mr. MISSON says, she is a dismal spectacle, and cannot be looked upon without horror. At the church of St. SALVATOR, amongst abundance of exquisite paintings, the best are an assumption and a picture of our Saviour. At St. GIOVANNI del Monte is an admirable picture of St. CECILIA, a master-piece of the divine RAPHAEL, as he is called, and esteemed one of the greatest treasures of the city. The church of the Mendicants also abounds in fine paintings, the principal and most beauti-

ful pieces are the calling of St. MATTHEW, a dead Christ, and the re-establishment of JOB's fortunes. The Religious of this city have a profound veneration for an image of our Lady, which, according to tradition, was drawn by St. LUKE, and go in procession annually five miles out of town to the mount La Guardia to bring her hither; and they are making a kind of piazza, or covered way, from the city to the mount, that they may never be interrupted in their procession by the weather. When they have brought this image of our Lady into the city, they carry it about with all imaginable pomp: all the companies in the corporation, the fraternities, convents, parishes, Magistrates, Gonfalonier, and the Pope's Legate, all assist at the solemnity; and as the Madonna passes by, who is carried under a rich canopy, the spectators fall upon their knees, and express the utmost devotion. As to the palaces of Bologna, that of General CAPRARA is esteemed the finest in the city, where are shewn abundance of rich plunder which he took from the Turks. In the palace of the State, or the Pope's palace, in which are abundance of noble apartments richly furnished, the Cardinal Legate has one, and the Gonfalonier another; the counsellors of State also have their several apartments here. Over the gate is a brazen statue of Pope GREGORY XIII, which weighs eleven thousand pound, and is in great esteem for the workmanship; but the greatest curiosity in this palace is the cabinet of ULYSSES ALDROVANDUS, the prodigy of his time. It contains a multitude of natural and artificial curiosities, with two or three hundred great manuscripts of his own writing, fifteen of which are filled with the figures of beasts, birds, fishes and plants, all illustrated with their proper colours: and though one would imagine he had done nothing but write all his lifetime; his works sufficiently testify his great reading, profound science, and an immense progress both in ancient and in modern learning; which shews what may be done where a great genius and an indefatigable industry meet in the same person.

The University here is reckoned one of the best in Europe. It was founded by the Emperor THEODOSIUS in the year 425, and augmented by CHARLEMAIN and LOTHARIUS the French Emperors. The study of law is in the greatest reputation here. The learned Azo was a member of this University, whom they stile the light of Bologna, and oracle of the canon and civil law, in whose time the number of students amounted to ten thousand. The famous BARTOLUS commenced Doctor here, and taught publicly in this University. Here also ACCURSUS composed the Glossa, Pope GREGORY IX and BONIFACE VIII their Decretalia, and JOHN XXIII, the Clementinæ. The publick school is a magnificent structure, and has a noble portico before it, supported by a great number of marble pillars; the rooms and galleries within being adorned with admirable statues and paintings. Among the statues the most remarkable are those of ÆSCULAPIUS, APOLLO, and the famous physician and surgeon GABRIEL TAGLIACOTZO, or TALIAECOTIUS, who had an art, as it is said, of supplying people with artificial noses, lips, ears, and other members where their own happened to be mutilated or defaced, out of living human flesh; to which purpose he published his *Chirurgia Artiorum*, where he relates a story of a certain gentleman who lost his nose, and

CHAP.  
XXIV.  
Pope's do-  
minions.

CHAP.

minions.

and had it supplied by him with a piece of flesh cut from another man's back-side, and so artificially shaped and joined, that every body took it to be natural, till unluckily the fellow whom it was taken from happened to die, and then the gentleman's nose rotted off by sympathy, according to the ingenious BUTLER, author of *Hudibras*.

—Learned TALIACTIUS from  
The brawny part of porter bum  
Cut supplemental noses, which  
Would last as long as parent breech;  
But when the date of nock was out,  
Off dropt the sympathetick snout.

The two towers of Afinelli and Garisendi, so named from their respective founders, are looked upon as great curiosities by travellers who visit this place; the former is 376 feet in height, and the latter 130. The leaning position of that of Garisendi, which bends like the tower of Pisa, is thought by some to have been so erected to shew the dexterity of the architect; but is more likely to have been disordered by some earthquake, or the sinking of one side of the foundation. Bologna is the See of an Archbishop, and esteemed the second city in the Pope's dominions, equal, if not superior to Florence in its riches, trade, and dimensions. It threw it self under the protection of the Pope about the year 1278, and procured very advantageous terms, which have not been infringed to this day; to which the flourishing of this city beyond any other in the Pope's territories is ascribed. They are allowed to appoint an Auditor of the Rota (the great Court which receives appeals from inferior Courts at Rome) and to have an Ambassador there to take care of their privileges: Civil causes are determined by the Magistrates of the city, and criminal by Judges of the Pope's appointing; but then their estates are not liable to be confiscated to the government for any offences whatever. As to the rest, the Pope's Legate is his Viceroy here, as in other provinces of the ecclesiastical state. The curiosities that pleased Mr. ADDISON most when he visited Bologna, he says, were an authentick silver medal of the young BRUTUS, in the hands of an eminent antiquary there; wherein he imagined he could see the character of the person in the features of the face, it was so exquisitely cut. On the reverse is the cap of Liberty, with a dagger on each side of it, subscribed, *Id. Mar.* for the Ides of March, the memorable date of CÆSAR's murder. The next was the picture of St. CECILIA, already mentioned, in which he says there is something wonderfully divine. The third thing he admired was a stair-case, where the easiness of the ascent within a small compass, the disposition of the lights, and the convenient landing-places are admirably contrived. And there is scarce a traveller but mentions the shining stones found about three miles from the city in the hill Paderni, which go by the name of Bologna Stones; but these, I find, after they have been taken some time out of the earth, lose their shining quality. The rest of the towns of Bologna do not merit a particular description.

The Fer-  
rarese.

The third subdivision of Romania is the Ferrarese, bounded by the Venetian territories on the north; by the gulph of Venice on the east; by Romania Proper and the Bolognese on the

south; and by the duchies of Modena and Mantua towards the west; being near seventy miles in length from east to west, but of a very unequal breadth, towards the gulph of Venice fifty, and in others scarce fifteen miles over. The country produces corn, flax and hemp, except that part of it next the sea, which is a perfect bog, and very unhealthful. This was part of the exarchate of Ravenna, and about the tenth century conferred on the Marquis of ESTE by the Emperor ORTO, and by an heiress of that family was given to the See of Rome about the year 1077. The Lords of a second branch of the family of ESTE held it as Vicars to the Pope, till the time of Pope PAUL II, who transferred it to NICHOLAS BORSO, another branch of the house of ESTE, and made him Duke of Ferrara; whose posterity failing about the year 1597, the Pope re-united it to the ecclesiastical State, but gave Modena and Reggio to CÆSAR DE ESTE, who also claimed a right to the Ferrarese, but wanted power to support his pretensions. The chief towns are, 1. Ferrara. 2. Francolino. 3. Buendino. 4. Cento. And, 5. Comachio.

The city of Ferrara stands in a plain, on a branch of the Po, called *Po Morto*, about four miles distant from the main stream, with which it has a communication by a navigable canal, and is about fourscore miles south-west of Venice, and fifty north-west of Ravenna, being four or five miles in circumference. It has a citadel, and something like a fortification (in the phrase of my author) round it; but the town is so large, that it would require more soldiers to defend it than the Pope has in his dominions. The streets are as beautiful as can be seen, as to their length, breadth, and regularity, but it is very thinly peopled, and can neither boast of its wealth or trade: formerly it was eminent for both. When Dr. BURNET travelled through it, he tells us it was almost deserted; that there were whole sides of streets without inhabitants; that the poverty of the place appeared signally in their churches, which were mean and poorly adorned; for the superstition of Italy is so ravenous, says that reverend author, and makes such a progress in this age, that one may justly take the measures of the wealth of any place from their churches: and yet the same writer tells us in other parts of his travels, that "Italy is in general exceeding poor, tho' their churches are vastly rich;" so consistent is he with himself. As to the miserable poverty of Ferrara, he is indeed supported by the concurrent relations of every person who writes of the state of Italy, and therefore we have no reason to doubt the fact. I could not, says the same reverend writer, but ask all I saw, how it came to pass that so rich a soil was so strangely abandoned? Some said the air was become so unhealthy, that those who stay in it are very short-lived: but it is well known, that fourscore years ago it was well peopled, and the ill air is occasioned by the want of inhabitants; for there not being people to drain the ground, and to keep the ditches clean, this occasions a great deal of water to lie on the ground and rot, which infects the air in the same manner as is observed in that vast and rich, but uninhabited Champaign of Rome; so that the ill air is the Effect, rather than the Cause, of dispeopling the Pope's dominions. "The true cause, (according to this author) is the severity of the government, and the heavy taxes and frequent confiscations;" by which the nephews of

CHAP.  
XXIV.  
Pope's do-  
minions.

CHAP.  
XXIV.  
Pope's do-  
minions.

of several Popes, as they have devoured many of the families of Ferrara, so they have driven away many more. As I came down one of the branches of the Po from the Ferrara, says Mr. ADDISON, all the fields lay miserably incultivated till I came near Ravenna, where the soil is made extremely fruitful, and shews what the other might be, were there hands enough to manage it to the best advantage. From whence it appears, that there are some places in the Pope's territories in a flourishing condition, though others are thus wretchedly deserted. And though I do not doubt but *heavy taxes and a despotick government* contribute in a great measure to the impoverishing any place, yet there seems to remain some other hidden causes to be assigned, why these oppressions should have had a worse effect on the Ferrarese, than on any other province in the Pope's dominions. Trade once in an hundred years receives very great alterations in other countries as well as this; a city dwindles to a village, and a village improves into a city under the mildest administrations. The conveniency or inconveniency of land or water-carriage, the encouraging or discouraging a manufacture, and ten thousand accidents may advance and ruin trade, and consequently people or depopulate a place, besides the tyranny of the government: and yet I find our travellers in general agree, not to assign any other reason for the decay of any one Italian city, but the oppressions of the government. Should foreigners visit Sandwich, Rye, Winchelsea, and many of our inland as well as maritime corporations, and immediately conclude we were under a *Tyrannical Administration*, because these places are now in a miserable ruinous condition, which formerly made a figure in the world; should we not with reason look upon it as an ill-natured suggestion, and to be founded in ignorance as well as prejudice? And the same reflections no doubt the Italians frequently make on our unthinking voyage-writers. When Rome was empress of the world, and the Princes and great men of every nation had a dependance on her, no wonder that Italy was crowded with inhabitants, when Italy was almost the only country in Europe that had a manufacture of silk: And when the Venetians, Genoese, and other Italian states only furnished the rest of Europe with the rich productions of the East, with the merchandize of China, India and Turkey; it is no wonder if their country abounded more in wealth and inhabitants, that it was better drained and cultivated than it is at present. Nay, before the reformation, when all the Christian Princes of Europe, their clergy, and the rest of their subjects were on many occasions obliged to appeal to Rome, and to resort thither for a determination of their differences, and on many other occasions; it is very natural to suppose the ecclesiastical state was in a better condition than it is now, when the Protestants have all withdrawn their contributions and attendance; and those of the same communion are grown much cooler in their devotion than they were in those days of darkness. These are some of the reasons that occurred to me as the occasion of the decay of the Italian cities and states, besides the severity of their respective governments, when I was considering the miserable condition of the Ferrarese: this might have happened to them, let the administration of their respective governments have been never so mild. But to return to the description of this city:

VOL. II. NUMB. LXXV.

Their churches and palaces are not yet so despicable but they would make a figure out of Italy, though, it is true, they were miserably shattered by an earthquake which happened in the year 1570. The palace of the ancient Dukes, where the Pope's Legate keeps his court, is a stately old fabrick, to which belongs a good library, adorned with statues, painting, medals, and other antiquities, after the manner of Italy. The Domo, or Cathedral, says my author, is rather venerable than beautiful: in the piazza before it stands the statue of Pope ALEXANDER VII, and two others, which represent two Princes of the family D'ESTE, one on horseback, and the other in a sitting posture. In the church of St. BENEDICT is a monument erected to the memory of that celebrated Poet ARIOSTO, who like his brethren wanted necessaries in his life-time. The Carmelites church is famous for its exquisite paintings. The University of this place, which was founded about the year 1390, is dwindled to one college of Jesuits; but they have a philosophical academy here, as in other Italian cities, who stile themselves *Elevati*. Ferrara is a Bishop's See, suffragan to Rome.

Comachio is a little city in the middle of a morass, called the valley of Comachio, a town of some strength on account of its watery situation, and lies about thirty miles south-east of Ferrara, near the coast of the Adriatick Sea, in a very unhealthy air. This town the Imperialists took possession of in the last war, and held for many years, as well to facilitate the march of their troops to and from the kingdom of Naples, as to compel the Pope to grant the investiture of the Spanish dominions to King CHARLES III, the present Emperor, but they have yielded it up to his Holiness again. It is the See of a Bishop, suffragan to Ravenna, from whence it is about thirty miles distant. The rest of the towns of the Ferrarese are not very considerable. The description of such of the Pope's territories as lie in Naples, Tuscany, France, or any other foreign State, will be met with in the respective countries where they are situated. I proceed now to enquire into the State of the kingdom of Naples.

## The KINGDOM of NAPLES.

### CHAP. XXV.

*Treats of the situation and extent of the kingdom of Naples; the air, seas, ports, lakes, rivers and mountains; and enquires into the genius and temper of the natives; and the several provinces it is divided into.*

THE kingdom of Naples is the south-east part of Italy, which being very properly resembled to a leg, Naples makes all that part of the leg and foot which is below the calf, and is a peninsula, bounded by the Adriatick sea, or gulph of Venice on the north-east; by the Ionian sea on the south-east; by the Tuscan sea on the south-west; and by the lands of the church, or the Pope's dominions on the north-west; extending two hundred and forty miles in length from the north-west to the south-east; an hundred and sixty in breadth in the broadest place, and eighty about the isthmus, or the narrowest part of it. If we consider the southerly situation of this country, we must conclude it to be excessive hot;

and so indeed it is in many of their valleys, but as the Apennine mountains run the whole length of it, from whence there fall innumerable cooling streams, and it is well watered with lakes, and as the sea almost surrounds it, from whence they seldom want refreshing breezes, the air is exceeding healthful and pleasant, and more pure and serene than in any of our northern countries which lie near the Ocean. Their seas, as I have intimated already, are the Adriatick, the Ionian, and the Tuscan sea: on which their principal ports are those of Naples, Baya, Maremonte, Gaeta, Trani, Brindisi, and Tarento. The most considerable lakes are Agnano, Averno, Lucrino, Patria, Lefina, Varano, Focino, Andronico, Ansfanto, Vignola, Perito, and Baccino. Their chief rivers, the Volturno, Garigliano, Tronto, Piscara, Sangro, Tortore, Candeloro, Ufente, Vafento, Acifino, Sarno, and Riofredo; besides which, they reckon up an hundred and forty more: but it is true, as their course is short and steep, falling chiefly from the Apennine into one or other of the seas above-mentioned, which are not far distant from their source, scarce any of them are navigable, though they enrich the soil prodigiously in this warm climate, and produce an inconceivable abundance of the most delicious fruits and wines, scarce equalled in this respect by any country in the known world, being stiled the garden of Italy, as that is of Europe. The principal mountains are those of the Apennine, Vesuvius, Pausilippo, and Falerno.

As to the character of the Neapolitans, it differs but little from that of their neighbours, except it be that they are charged with being more lazy, more inclined to venereal pleasures, and more given to change their masters than any other State in Italy; and they have actually changed them very often: but this may be ascribed rather to the amiableness of their situation, and the fertility of the soil, which invites the neighbouring powers to contend for it, than to the fickleness or discontents of the people. It is an infallible sign that it is worth the conquest, because it has been so often conquered; and it is very reasonable also to believe, that where people live in so agreeable a soil and climate, they will naturally be dissolved in pleasures, and consequently seldom be in a condition to defend themselves against a foreign force, and on that account are apt to become a prey to every invader. Mr. Addison, and some other travellers also relate, that this people are of a litigious temper: it is incredible, says that gentleman, how great a multitude of retainers to the law there are at Naples. It is said that when INNOCENT XI had desired the Marquis of Carpio to furnish him with thirty thousand head of swine; the Marquis answered him, that for his swine he could not spare them, but if his Holiness had occasion for thirty thousand lawyers, he had them at his service. These gentlemen find continual employment for the fiery temper of the Neapolitans, and prevent their uniting into such common friendships and alliances as are observed in other places. There are very few persons of consideration who have not a cause depending: for when a Neapolitan Cavalier, says my author, has nothing else to do, he gravely shuts himself up in his closet and falls a tumbling over his papers to see if he can start a law-suit, and plague any of his neighbours. Which is very different from the character of the natives anciently, according to the Poet,

*Nulla fore rabies aut strisla jurgia legis,  
Morum jura viris solum & sine fastibus equum.*

SIL. L. 3.

CHAP.  
XXV.  
Kingdom  
of Naples.

Rendered into English thus by Mr. ADDISON,

By love of right and native justice led,  
In the strait paths of equity they tread;  
Nor know the bar, nor fear the judge's frown,  
Unpractis'd in the wranglings of the gown.  
But the inhabitants of Naples, as that gentleman truly observes, have been always remarkable for leading a life of laziness and pleasure; which he conceives arises partly out of the wonderful plenty of their country, that does not make labour so necessary to them; and partly out of the temper of the climate, that relaxes the fibres of their bodies, and disposes the people to such an idle and indolent humour,

*Et in otia natam*

*Partbenopen*—— OVID. Met. L. 15.

*Otiola Neapolis*—— HOR. Ep. 5.

PARTHENOPE, for idle hours design'd,

To luxury and ease unbends the mind.

Another passage out of SILIUS the same author renders into English thus,

Here wanton Naples crowns the happy shore,

Nor vainly rich, nor despicably poor;

The town in soft solemnities delights,

And gentle Poets to her arms invites.

The people free from cares, serene and gay,

Pass all their mild untroubled hours away.

PARTHENOPE the rising city nam'd,

A Siren for her songs and beauty fam'd,

That oft had drown'd among the neighb'ring seas,

The listning wretch, and made destruction please.

The kingdom of Naples is usually divided into four large portions, viz. 1. The Terra di Lavoro. 2. Abruzzo. 3. Apuglia. And, 4. Calabria. Grand division of Naples.

1. The Terra di Lavoro is subdivided into, 1. The Terra di Lavoro Proper. 2. The Principato Citerior. And, 3. The Principato Ulterior. Subdivision.

2. The Abruzzo is subdivided into, 1. The Abruzzo Citerior. 2. The Abruzzo Ulterior. And, 3. The county of Molisa.

3. Apuglia is subdivided into, 1. Apuglia Capitana. 2. The Terra de Barri. And, 3. The Terra di Otranto.

4. Calabria is subdivided into, 1. The Basilicate. 2. Calabria Citerior. And, 3. Calabria Ulterior. And these I shall endeavour to describe in their order.

## CHAP. XXVI.

*Treats of the first grand division, the Terra di Lavoro, with the subdivisions or provinces comprehended in it, and their respective chief towns; and particularly of the city of Naples, the capital of the kingdom.*

THE Terra di Lavoro, the first grand division, stretches itself along the coast of Tuscany from the Campania of Rome to Calabria, being about an hundred and forty miles in length, and five and thirty in breadth. CHAP. XXVI. The Terra di Lavoro.

Lavoro Proper is bounded by Abruzzo and the Campania of Rome on the north; by the county of Molisa and the Principato Ulterior towards the east; by the Principato Citerior towards the south; and by the Tuscan sea, or sea of Naples, towards the south-west; extending about seventy miles in length. The chief towns whereof are, Lavoro Proper. Chief towns.

Naples  
city.

The city of Naples, Neapolis, the ancient Parthenope, was so named, according to tradition, from PARTHENOPE, a sea nymph or siren, whose charms ULYSSES and company very narrowly escaped. The name of Neapolis was given it by AUGUSTUS, according to some; while others hold that the Greeks, who rebuilt and beautified it, called it Neapolis. But these are trifles not worth searching after; and therefore I proceed to the description of the city itself, leaving people of more leisure to contend about the name.

Naples is situated on the declivity of a hill, and on one of the finest bays that ever the sea formed. The bay is of a circular figure, about thirty miles in diameter, three parts of it sheltered with a noble circuit of woods and mountains, the island Capræa standing as a vast mole, which seems to have been planted there on purpose to break the violence of the waves that run into the bay, and stretches it self in a line almost parallel to Naples. This bay was called the Crater by ancient Philosophers, which Mr. ADDISON thinks might proceed from its resemblance to a round bowl half filled with liquor; and that VIRGIL, who composed great part of his *Æneids* here, took his first plan of the beautiful harbour described in the first book from hence, which description Mr. DRYDEN thus renders into English:

Within a long recess there lies a bay,  
An island shades it from the rolling sea,  
And forms a port secure for ships to ride,  
Broke by the jetting land on either side,  
In double streams the briny water glide.

Between two rows of rocks a sylvan scene  
Appears above, and groves for ever green.

And as Naples lies on the bosom of this charming bay in form of a crescent towards the south, there are on the north little fruitful hills, which rise insensibly into the Campania Felice. On the east is a large plain, which leads towards Mount Vesuvius, and on the west is a high hill, on which the castle of St. ELMO and the Carthusian monastery are situated, from whence the prospect is inexpressibly fine. It is scarce ever cold in winter, and in summer they have refreshing breezes both from the mountains and the sea, which is not subject to storms, and has so bold a shore, that vessels of burthen may lie close to the keys. Wine and oil, and all manner of provisions excellent in their kind, are exceeding plentiful. The air is pure, serene and healthful; the buildings beautiful beyond comparison, inhabited by people of distinction, remarkable for their parts and education, as well as their quality, in so much that we can scarce frame an idea of a more desirable abode. But every thing has a dark as well as a bright side; and as this city is remarkably happy in many respects beyond any other town, perhaps in the universe, it has its allays and inconveniences also to such a degree, that no considering man, who had any other place

to live in, would chuse to reside in it; the principal of which are the frequent earthquakes and eruptions of Mount Vesuvius, the apprehensions of which must spoil all the pleasures and beauties already enumerated. The litigious temper of the inhabitants is another great objection to the place; and if they are as wicked as some of our travellers would make them, particularly BURNET and MISSON (whose relations I do not entirely credit in this particular) few people will be inclined to leave their native country and transplant themselves to Naples. But to be a little more particular in the description of this city.

Naples is situated in forty-one degrees of north latitude, fifteen degrees to the eastward of London, and about an hundred and forty miles south-east of Rome, being seven or eight miles in circumference within the walls, and as much more including all the suburbs, and is supposed to contain about three hundred thousand inhabitants. It has three castles, which serve rather to bridle the inhabitants than for its defence, and indeed the town takes up too great an extent of ground to be defended by any thing less than an army. Accordingly we find the Spanish Viceroy quitted it without striking a stroke, and threw himself into Gaeta, that was, more tenable, when the Imperialists last invaded this kingdom. The streets are generally broad and straight, and paved with stones about a foot square. The buildings are of stone, lofty and uniform, with flat roofs, surrounded with battlements or balustrades, on which the inhabitants take the air in an evening. And as the houses in Naples are generally large and well built, without any mixture of mean ones, there are great numbers of them which well deserve the name of Palaces; scarce a great family in the kingdom but has one here. The fountains in the streets, and the many fine gardens about it, are no small addition to its beauty. The Viceroy's palace stands in a large open square, with a regular front, composed of three orders of architecture, and is near four hundred feet in length. The three castles, the academies, hospitals, arsenal and magazines, are noble edifices; but what is most extraordinary, is the number and magnificence of their churches and convents, which are not to be paralleled. Some reckon up and hundred and twenty convents, forty nunneries, and three hundred churches, every one of which are remarkable for their architecture, sculpture, painting or ornaments. The Domo, or cathedral, dedicated to St. JANUARIUS, is a magnificent old fabrick, and hath a little modern chapel, esteemed one of the finest in Europe, adorned with brazen statues, and the most exquisite paintings. In this chapel is the tomb of St. JANUARIUS, Bishop of Benevento, whose blood being kept in a glass and congealed, grows liquid, as the people are taught to believe, on the approach of the Saint's head. Mr. ADDISON relates, that he had twice an opportunity of seeing the operation of this pretended miracle, which was one of the most bungling tricks that ever he saw. The Jesuits church is esteemed the best that society has in Italy; all parts of it are beautified with the richest ornaments from the pavement to the roof. The same may be said of that of St. MARY's della Annunciata, which belongs to the famous hospital of that name, which entertains two thousand infirm people, and above eight hundred orphans, having a revenue of two hundred thousand crowns per annum,

Kingdom  
of Naples.

num, and upwards. The churches of St. PHILIP of Neri, Santa MARIA la Nova, St. SEVERIUS, St. PAUL's, St. DOMINICK's, and St. MARIA della Sanitate, are all surprizingly rich and beautiful. The frontispieces, the gates, the chapels, the tombs, the sculpture, painting, gilded roofs, Mosaick-work, and bas-reliefs are exquisite pieces of workmanship. The vessels of gold, silver, jasper and porphyry, are innumerable. The plate alone in the churches of Naples, upon a moderate estimate, says Dr. BURNET, amounts to eight millions of crowns; and the gildings and paintings in some of the churches above mention'd, according to the same writer, have cost millions. The great convent of the Carthusians on St. MARTIN's hill, near the castle of St. ELMO, is a most glorious fabrick, and immensely rich. The Monks relate, that in one priorate there was laid out five hundred thousand ducats in silver-plate, pictures and sculptures alone. Their church is not large, but nothing, says my author, can be added to the value of the matter, or the excellence of the workmanship. The nativity of Christ by GUIDO is an inestimable piece; and there are four pictures of the Lord's supper done by the greatest hands. The cloyster is an hundred paces square, built and paved with marble, the four galleries supported by sixty fine white marble pillars, each of them of one entire piece. Every Monk here has his chamber, closet, library, and a pretty garden to himself, and the Prior a palace fit to entertain a Prince. Among other rarities, they pretend to have a crucifix drawn from the life, as they call it, by MICHAEL ANGELO, who having hired a peasant to let him tie him to a cross, that he might the better describe the dying agonies, stabbed the fellow to the heart: but this story does not meet with universal credit. Here is also a St. LAURENCE by TITIAN, some designs by RUBENS and ALBERT DURER, which they set a great value upon. And there cannot be a greater variety of glorious prospects than are to be seen from hence, as has been intimated already; for here you have a view of the sea and several islands, among which is that of Capræa, whither TIBERIUS retired with his court. Here also we have a distinct view of the city of Naples, its castles, harbour, mole and pharos, and the gardens and fruitful hills which surround it. On the other side you have a prospect of the sea-coast, with its little bays and capes, set thick with pretty villages and houses of pleasure. A little further you discern the air darkned with the smoak of Mount Vesuvius, which must strike a damp to all their enjoyments, if they reflect on the many eruptions and earthquakes that have happened within a few years past, some of which it may be proper to give the reader an abstract of, after having described the situation of this mouth of hell, as it is called.

Mount Vefuvius described.

Mount Vefuvius, according to Mr. ADDISON, stands about six English miles to the eastward of Naples, (Misson says eight) tho' its height makes it appear much nearer to those who survey it from the town. The first part of the way lies upon a level, through several good villages along the sea-coast; afterwards we begin to ascend till we come within a mile and half of the top, when we are obliged to quit our horses, the hill grows so steep, and covered thick with the burnt earth as small as dust, which makes it very difficult ascending it, even on foot. In our way to

CHAP.  
XXVI.  
Kingdom  
of Naples.

Vesuvius, says Mr. ADDISON, we passed by what was one of those rivers of burning matter that run from it in a late eruption. It looks at a distance like a new-ploughed land, but as you come nearer it you see nothing but a long heap of heavy disjointed clods, lying one upon another. There are innumerable cavities and interstices among the several pieces, so that the surface is all broken and irregular. Sometimes a great fragment stands like a rock above the rest, sometimes the whole heap lies in a kind of channel, and in other places has nothing like banks to confine it, but rises four or five foot high above the surface, without spreading on either side. This, says my author, is demonstration to me, that these rivers were not, as they are usually represented, so many streams of running matter; for how could a liquid that lay hardening by degrees, settle in such a furrowed uncompact surface? Were the river a confusion of never so many different bodies, if they had been all actually dissolved, they would at least have formed one continued crust, as we see the scorium of metals always gathers into a solid piece, let it be compounded of never so many heterogeneous parts. I am apt to think therefore, that these huge unweildy lumps that now lie one upon another, as if thrown together by accident, remained in the melted matter rigid and unliquified, floating in it like cakes of ice in a river; and that as the fire and ferment gradually abated, they adjusted themselves together as well as their irregular figures would permit, and by this means fell into such an interrupted and disorderly heap as we now find it: what was the melted matter, lies at the bottom out of sight. After having quitted the side of this long heap, says Mr. ADDISON, which was once a stream of fire, we came to the foot of the mountain, and had a very troublesome march to gain the top of it. It is covered on all sides with a kind of burnt earth, very dry, and crumbled into powder, as if it had been artificially sifted. It is very hot under foot, and mixed with several burnt stones and cakes of cinders, which have been thrown out at different times. One sinks almost a foot into the earth, and generally loses half a step by sliding backwards. When we had climbed this mountain, we discovered the top of it to be a wide naked plain, smoaking with sulphur in several places, and probably undermined with fire, for we concluded it to be hollow by the sound it made under our feet. In the midst of this plain stands a high hill in the shape of a sugar-loaf, so very steep that there would be no mounting or descending it, were it not made up of such a loose crumbled earth as is already described. The air of this place must be very much impregnated with salt-petre, as appears by the specks of it on the sides of the mountain, where one can scarce find a stone that has not the top white with it. After we had with great labour gained the top of this hill, we saw in the midst of it the present mouth of Vefuvio, which goes shelving down on all sides above an hundred yards deep, and is about three or four hundred in the diameter, for it seems a perfect round. This vast hollow is generally filled with smoak, but by the advantage of a wind that blew from us we had a very clear and distinct sight of it. The sides of it appear all over stained with mixtures of white, green, red, and yellow, and have several locks standing out of them that look like pure brimstone. The bottom was entirely covered, and

CHAP.  
XXVI.  
Kingdom  
of Naples.

though we looked very narrowly, we could see nothing like a hole in it, the smoak breaking through several imperceptible cracks in many places. The very middle was firm ground, when we saw it, as we concluded from the stones we flung upon it; and I question not but one might then have crossed the bottom and have gone up on the other side of it with very little danger, unless from some accidental breath of wind. In the late eruptions this great hollow was like a vast cauldron, filled with glowing and melted matter, which as it boiled over in any part, ran down the sides of the mountain, and made five such rivers as are above mentioned. In proportion as the heat slackned, this burning matter must have subsided within the bowels of the mountain, and as it sunk very leisurely, had time to cake together and form the bottom, which covers the mouth of that dreadful vault that lies underneath it. The next eruption or earthquake will probably break in pieces this false bottom, and quite change the present face of things. This whole mountain, shaped like a sugar-loaf, has been made at several times, by the prodigious quantities of earth and cinders which have been flung up out of the mouth that lies in the midst of them; so that it increases in bulk at every eruption, the ashes still falling down the sides of it like the sand in an hour-glass. A gentleman of Naples relates, that in his memory it had gained twenty foot in thickness; and I question not but in length of time it will cover the whole plain, and make one mountain with that on which it now stands. In those parts of the sea which are not far from the foot of this mountain they find sometimes a very fragrant oil, which is sold very dear, and makes a rich perfume: The surface of the sea is for a little space covered with its bubbles during the time it rises, which they skim off into their boats, and afterward set a separating in pots and jars. They say its sources never run but in calm warm weather. Thus far Mr. ADDISON, who visited this mountain in the year 1702. Several ancient authors relate, that the roaring noise of this mountain at an eruption has been heard as far as Rome; that the thickness of the smoak has in a manner eclipsed the sun, and made it dark at noon-day; that streams of brimstone have run down from it into the sea, and that the sea it self hath swelled and boiled with heat. I proceed now to give an account of some of those earthquakes and eruptions that have happened at Mount Vesuvius and Naples.

Eruptions  
of Mount  
Vesuvius.

The  
earth-  
quake in  
1688.

Before the reign of AUGUSTUS historians have not recorded above five eruptions of this burning mount, though we can reckon up more than that number within forty years last past; particularly in the years 1688, 89, 94, 96, 1701, 1707, and 1727. The earthquake which happened the fifth and sixth of June 1688, overturned several of their churches and religious houses, particularly the fine church of the Jesuits, with a third part of the city, and destroyed several ships in the harbour, of which we meet with the following account from a person who was then on the spot, viz. A little after four in the afternoon we were put into such a confusion as cannot be expressed, we perceived the houses stoop and recover again, to part from one another, and in some places to fall; soon after a more violent earthquake succeeded, and a subterraneous noise surpassing that of thunder was heard, while our household goods at the same time clatter'd about our ears, the bells rung in the steeples, the reservoirs and cisterns threw out their waters, many houses fell, and others stood stooping just ready to fall; where-

VOL. II.

CHAP.  
XXVI.  
Kingdom  
of Naples.

upon were heard the most hideous shrieks from all parts of the town, some embraced and took an eternal farewell of their friends; others threw themselves headlong out of the windows, not knowing what they did; but before the third shock, people being a little recovered from their consternation, began to consider how to save themselves by flight. When the earthquake was over, those who had run out into the fields and gardens returned to see what was become of their houses and acquaintance they left behind; but the next morning their consternation was renewed by the thunder, lightning and storms which lasted for two or three days. The streets were filled with processions of penitents, women, children, old men, ecclesiastics, and other, clothed in sackcloth, and crowned with thorns, with ropes about their necks, and their feet chained, whipping themselves, and often sinking under the burthens of crosses, great stones, and other things, with which they had loaded themselves to atone the wrath of heaven; some of them were perfectly naked, covering only what decency required, their bodies discoloured with blood and dirt, weeping and lamenting themselves, and redoubling their blows and cries when they passed by any ruins occasioned by the earthquake. The Archbishop Cardinal PIGNATELLI in the mean time sat in a balcony of his palace, where he spent three whole days in distributing his blessings among the people, his arms relieving each other, which were wearied with making the sign of the cross. He authorized all the Priests in the city to confess and absolve all sins without distinction; so that every where people were seen upon their knees confessing in the streets, that they might take the advantage of so general an absolution. The Monks and Priests themselves having ashes upon their heads, and halters about their necks, preached to the people from the shops and stalls in every street of the town. As I was passing by the pyramid of St. JANUARIUS, says the writer of this relation, a Capuchin was preaching there with a croud about him, when on a sudden a woman, whose brains were still turning, cried out she saw the pyramid shake, whereupon another without examining the truth of it, cried out, *Misericordia!* Whereupon the *Misericordia* went round, and occasioned such confusion, that the whole assembly dispersed in a minute; while the poor Monk, with his cord about his neck, and his feet chained, swooned for fear, and was with difficulty brought to himself again. These subterraneous attacks, which thus disturb us here, we look upon to be the effects of the rage of Mount Vesuvius, when the fires are pent up and cannot find a vent at the mouth of it.

On the sixth of April 1694, there was a terrible irruption, the mountain was on fire the greatest part of the month, and threw out the burning matter with that force, that some of it reached Benevento, above thirty miles distant; but what was most extraordinary, was the prodigious quantity of melted minerals mixt with other matter, which it poured out at several places, and which run for the space of three miles slowly like melted tallow, which begins to cool, but at the same time carried every thing before it which lay in its way. One of these slow floods running over a great rock fell down a precipice with such violence, and occasioned so great a smoak, that every one began to think there had been a new opening. The Viceroy set great numbers of men to clear the way for these rivers of melted minerals to prevent their

of Naples.

overflowing their banks, which at length congealed and raised themselves into little hills, but the matter they were composed of was good for nothing, not so much as to make cannon-bullets of; some people attempted to make little cups, and other things of it, but it was as brittle as earthen ware.

Another relation I have before me of this irruption says, that the people were at first alarmed with roaring subterranean noises, attended with rolling flames intermixed with smoak, which broke forth from the mountain; that the breadth of those torrents of melted matter above mentioned, was about fifty fathom, and that the fire raised itself above two and twenty fathom; that the wind coming about to the east, the streets and houses in Naples were covered with cinders; that the stone and pieces of rock which lay in the way of these fiery rivers, were presently kindled and calcined, and afterwards floated upon the torrent.

In the year 1707, when they were in the midst of their rejoicings for the success of the Imperialists in reducing the kingdom of Naples, they were interrupted by a dreadful eruption of Mount Vesuvius, which began on the 29th of July to send out vast streams of flame and smoak, and throw out stones. On the third of August it raged with greater violence, throwing out such quantities of cinders and ashes that it was dark at noon-day, and they were forced to light up candles. When the Archbishop happily carrying St. JANUARIUS, the Saint of the place, in procession, attended by all the nobility and people, the eruption ceased in a few hours, which confirmed them in their devotion for their Patron. They immediately therefore solemnized a thanksgiving, and illuminated the streets for three nights successively, which sufficiently shews the dread the natives have of these eruptions, and with a great deal of reason, as they sometimes carry whole towns and villages before them, and will probably in time lay this fine city in ashes. In 1727, they had a violent shock of an earthquake; the sea swelled in an extraordinary manner, and flames of fire issued from Mount Vesuvius, which terrified the bravest of them, and brought them upon their knees before the head of St. JANUARIUS their Patron. Mr. MISON I find has other objections to the town of Naples, beside the danger of earthquakes and fiery eruptions. There are many things, says that gentleman, which are not suitable to its beauty, and cloud the pleasant countenance it would otherwise have; among which, the keeping up their women, and not suffering them to appear in the streets, or the company of men, he esteems none of the least: *They hide the fairest part of the creation from the world*, which he looks upon as an insupportable grievance. Then the habits and equipages of the people of Naples are generally black and dismal; they are prohibited wearing gold and silver, or silk upon silk; nor is a person of the greatest quality allowed more than two footmen: Their coaches also are drawn by slow-footed mules, with odd kind of harnesses; and the stiff Spanish dress is generally worn. The Viceroy seldom appears, and his court has a very dull air in the eyes of those that have seen other courts. But were there no other objections against Naples, than these last mentioned, most men would esteem it a very desirable place, I believe, however it may appear in the eyes of that reverend gentleman. wines of Naples, it has been already observed, are the best in Italy; and the clergy it seems are the greatest wine-merchants in this city. The wine-

cellar belonging to the Jesuits, if we may credit Dr. BURNET, is a vast vault, that contains above a thousand hogheads, and the best wine is sold by them; tho' they do not retail it out in so scandalous a manner as they do who live in the great square, and sell it in the same manner our publick houses do. It is true, the people of the town are no great drinkers; they do not set tipping for hours together, as they do with us, but only go in for a draught now and then, when they are thirsty, and then go about their business; however, the fathers grow very rich by this retail trade. The people here, from the highest to the lowest, drink no wine or other liquors, not so much as water, if it has not lain some time in snow, which they use instead of ice, and affirm that it cools any liquor much sooner; and a scarcity of snow, according to Mr. ADDISON, would raise a mutiny at Naples as soon as a dearth of corn or provisions in another country. To prevent which the government has sold the monopoly of it to certain persons, who have contracted to furnish the city with it at so much per pound. There is a high mountain about eighteen miles from Naples, in which several pits are dug; and here labourers are employed at proper seasons to roll in vast balls of snow, which they ram close together, and cover from the sun; and out of these reservoirs of snow they cut great lumps as they have occasion, and send them on asses to the sea-side where they are received into boats and carried to Naples, and distributed to the several shops which deal in it at a settled price.

Cool'd in  
snow.

Without the city towards the church and hospital of St. GENNARO are the catacombs, which are of much larger dimensions than those of Rome. They are, according to Dr. BURNET, vast long galleries cut out of the rock, three stories of them one above another. These galleries are generally about twenty foot broad, and fifteen foot high, noble spacious places; and as my author was informed on the spot, went into the rock eight or nine miles; but he had no mind to go so far under ground to satisfy his curiosity, though he walked a great way in them, and saw galleries going off on all hands without end. And whereas in the catacombs of Rome there are not above three or four rows of niches cut out of the rock one above another, into which the dead bodies were laid; in those of Naples there are generally six or seven rows of those niches, and they are both larger and higher: but this reverend writer could see no marks of a cover or facing to shut up the niches when the dead bodies were laid in them; from whence he concludes they were monstrous unwholesome places, where thousands of bodies lay rotting without any thing to shut in so loathsome a sight, and so odious a smell; for the niches shew plainly that the bodies were laid in them wrapped only in their burying-clothes, they being too low for coffins. But as to the niches being open, and not shut up when dead bodies were put in them, this reverend divine seems abundantly confuted by Mr. ADDISON. The catacombs, says this gentleman, must have been full of stench and loathsomeness, if the dead bodies that lay in them were left to rot in open niches; as an eminent author of our own country imagines. But upon examining them I find, they were each of them stopped up (without doubt as soon as the corps was laid in it) for at the mouth of the nich one always finds the rock cut into little channels to fasten the board or marble that

of Naples.

was to close it up: and I think I did not see one which had not still some mortar sticking in it. In some I found pieces of tiles that exactly tallied with the channel, and in others a little wall of bricks, that sometimes stopped up above a quarter of the nich, the rest having been broken down. St. PROCULUS's sepulchre seems to have a kind of Mosaic work on its covering; for I observed at one end of it several little pieces of marble ranged together after that manner. Mr. ADDISON thinks it is probable they were adorned more or less, according to the quality of the dead. One would indeed wonder, he says, to find such a multitude of niches unstopped; and he cannot imagine any body should take the pains to do it who was not in quest of some supposed treasure. From this, and a multitude of other instances, it is evident that Dr. BURNET did not see many things and places he pretends to have viewed personally; or that he did not make use of his senses in examining them: or, lastly, that he concealed or disguised things he was acquainted with when they would not serve an opinion he had advanced; for instance, he brings the stench and noisomeness of the catacombs where so many carcases lay open and putrifying, as an undeniable argument, that the primitive Christians never could assemble in those places for divine worship. Whereas Mr. ADDISON produces very good proof, that all those places were so close walled and shut up, that there could arise no greater inconvenience from them than there does from dead bodies buried in the vault of a church.

Statues  
and anti-  
quities.

Statues and other pieces of antiquity, Mr. ADDISON observes, are not so common at Naples as might be expected in so ancient a city of Italy, their Viceroy having sent almost every thing that is valuable of this kind into Spain: or, as Mr. MISSON observes, it has been demolished and plundered so often, that great part of its antiquities probably lie buried in its ruins. The front of St. PAUL Major however is supposed to be the old frontispiece of the temple of APOLLO. The portico was supported by eight channelled pillars of the Corinthian order, and on the base were some basso-relievo's, which represented heathen deities; but this portico was thrown down by the earthquake in 1688. There are also some remains of an amphitheatre; an ancient statue of the Nile leaning against a crocodile; and the neck of a large brazen horse, that stood formerly in one of the squares of the city. The two finest modern statues are those of APOLLO and MINERVA on each side of SANNAZARIUS's tomb, who at his own expence at the foot of Mount Pausilippus erected a temple to the memory of the Blessed Virgin, whom he thus invokes at the beginning of his *De partu Virginis*:

Thou bright celestial Goddess, if to thee  
An acceptable temple I erect,  
With fairest flow'rs, and richest garlands deck'd;  
On tow'ring rocks whence MERGILLINE spies  
The ruffled deep in storms and tempests rise:  
Guide thou the pious poet, nor refuse  
Thine own propitious aid to his unpractis'd muse.

University  
and soci-  
eties of  
Virtuosi.

The city of Naples is the seat of the Viceroy, and an Archbishop's See; it has also a university founded by FREDERICK II, which is not so much admired by our modern travellers as the Philosophical Academy of Virtuosi, at whose meetings our countryman Mr. RAY says he was present, and was not a little surprized to find such a company of learned men in a place where he was

taught to believe they would scarce allow a reasonable latitude of judgment. They were not only well acquainted, he observed, with the best and most refined authors of the preceding age, such as GALILÆUS A GALILÆO, DES CARTES, GASSENDUS, HARVEY, VERULAM, &c. but also with BOYLE, Dr. WILLIS, WHARTON, HÖECK, PERQUET, &c. Dr. BURNET, who will not allow the clergy of Naples any great share of learning, observes however, that there are societies of men in this city of freer thoughts than can be found in any other part of Italy. The Greek learning flourishes there, and the new philosophy is much studied; he instances in one assembly (that had a vast collection of well chosen books) and was composed of men that had a right taste of true learning and good sense; tho' indeed they were represented as a set of Atheists by the clergy: but he had the honour of meeting twice or thrice with a good number of them, and could not observe they deserved such a charge. Few clergymen however came into this attempt for reviving learning among them: on the contrary they dreaded nothing more. Some physicians in Naples also lay under the scandal of Atheism when he was there; and certain it is, says this reverend writer, that in Italy men of searching understandings, who have no other idea of the Christian religion but that which they see received among them, are very naturally tempted to disbelieve it quite; finding such cheats in many parts of their religion, they are thereby induced to question the whole.

Puzzoli, anciently called *Puteoli*, and more anciently *Dicæarebia*, and *Delos Minor*, on account of a temple here dedicated to APOLLO, is situated on the sea-coast, about nine miles to the westward of Naples, and was in the time of the Romans the most considerable harbour on that coast, and still between this town and Baia the sea forms a noble bay. The city is almost dwindled to nothing, but is still a Bishop's See, suffragan to Naples, and there are some noble ruins about it, which still afford us an idea of the Roman grandeur. The cathedral is built on the place where JUPITER's temple stood, and there are some other churches and houses which do not make a despicable figure.

Baia, the ancient *Baie*, stands also by the sea-shore, on the other side of the Bay, about three miles to the westward of Puzzoli, and is now but a small village, whose principal ornament is an inconsiderable castle.

There is a noble scene of antiquities, as Mr. ADDISON observes, about Naples, Puzzoli and Baia, visited by every traveller almost. The first they mention in the way from Naples to Puzzoli, is the grotto of PAUSILIPPUS. This is a little steep hill, which lies about four miles to the westward of Naples, by the sea-side, through which the Romans dug a highway large enough for carriages to pass. To form a just idea of this place, we must fancy, says the gentleman above-mentioned, a rock undermined from one end to the other, and a way running through it as long and as broad as the Mall in St. JAMES's park; that is, according to others, half a mile in length, and eighteen feet in breadth. The entrance at both ends is higher than the middle parts of it, and sinks by degrees to fling in more light upon the rest; and towards the middle are two large funnels bored through the roof of the grotto to let in light and fresh air: and still

it is scarce possible to discern the way thro' it, as well on account of the clouds of dust that are raised by the carriages, as the want of windows to this subterraneous passage; insomuch that when two companies meet, they cry out, *To the mountain, or, To the sea*, to give notice on which side they are of, that they may not fall foul of one another. SENECA complains of the dust and darkness of this passage as well as the moderns, and with more reason it is thought, it having been enlarged at each end since his time.

Virgil's  
tomb.

Over the entrance of the grotto, as we go from Naples, is an ancient little monument in form of a pyramid half destroyed, called the tomb of VIRGIL. It is certain, says Mr. ADDISON, this Poet was buried near Naples, but I think it is almost as certain that his tomb stood on the other side of the town which looks towards Mount Vesuvius. The common people of Naples believe that VIRGIL was a magician, and that he made this grotto by the assistance of some infernal powers. The hill of PAUSILIPPUS stands mighty pleasantly on the sea-side, and is beautified with fine houses, gardens and vineyards, where the quality of Naples spend their time part of the year.

The lakes  
of Agna-  
no, Lu-  
crine, and  
Avernus.

A little beyond the cave of PAUSILIPPUS, in the way to Puzzoli, lies the lake of Agnano, between two little hills, about a mile in circumference, the water whereof is clear, and has no ill taste at present, and produces fish in abundance. Neither this, the Lucrine lake, or Avernus, which lie a little distance from each other, have any thing remarkable in them now, though anciently, it is said, the poisonous steams would kill the birds that flew over Avernus. Near the lake of Agnano is the grotto del Cane, a little cave at the foot of a hill, about ten foot long, five broad, and five in height, famous for the suffocating or poisonous steams, which float within a foot of its surface. The sides of the grotto are marked with green as high as the malignity of the vapour reaches. The common experiments made here are these: a dog that has his nose held in the vapour, loses all signs of life in a very little time; but if he is carried into the open air, or thrown into the neighbouring lake, he immediately recovers, if he is not quite gone. A torch with the snuff goes out in a moment, if dipped into the vapour; nor will a pistol take fire in it. Dr. CONNOR made a discourse in one of the academies at Rome upon the subject of this grotto, which was printed in England, and he attributes the death of animals and the extinction of lights, to a great rarefaction of the air, caused by the heat and eruption of the steams. But how is it possible for these steams, says Mr. ADDISON, though in never so great quantity, to resist the pressure of the whole atmosphere? and as for the heat, that is but very inconsiderable. And though this vapour is generally supposed to be sulphureous, I can see no reason for such a supposition, says the same author; for if a man dips his hand in it, he finds no smell that it leaves upon it; and if you put a whole bundle of lighted brimstone matches to the smoak, they will all go out in an instant, as if immersed in water. The experiment has been made upon other animals, and even upon men, on whom the vapour has the same effect: but it is called the grotto *del Cane*, from the experiment being usually tried on dogs, to satisfy the curiosity of strangers: and the dogs in the neighbourhood have been so tormented with this custom, that they no sooner see a stranger, but

they get out of the way and hide themselves. CHAP. XXVI. Kingdom of Naples. The Viceroy Don PEDRO DE TOLEDO made the experiment on two slaves, who both died: and there is an account of one Tournon, a traveller, who stooping down in the grotto to take up a stone, was seized with the vapour, and immediately lost all signs of life; being carried into the lake, he recovered his spirits a little, but died a few minutes after: one may walk however safely in any part of the grotto, so that he keeps his head above a foot from the ground, for the vapour never rises higher. Those who suppose this to be a sulphureous vapour, have this to support their opinion, That all the adjacent country is nothing but brimstone.

The baths of St. Germain, which lie near this grotto, smell strong of brimstone, and before you have entered them three steps, you fall into a violent sweat. They are frequented for many distempers, but principally for the gout, rheumatism and venereal diseases. It would be endless, says Mr. ADDISON, to reckon up the different baths to be met with in a country that so much abounds in sulphur. There is scarce a disease that has not one adapted to it. The mountains of Secco and Solfatara are full of brimstone and allum; here smoak and flame issue through the cracked earth with noise and stench continually. On Solfatara, the surface of which is yellow and white, burnt and worn by its own fires, they prepare rock-allum, making their cauldrons boil without any other fire than what issues out of the crevices of the earth. The top of the hill is worn into a kind of oval basin, about twelve hundred foot long, and a thousand broad. The fumes which issue from it are often smelt at Naples, and so taint the waters in the neighbourhood, that the Capuchins, who have a cloyster here, are forced to raise their cisterns high upon pillars, to prevent their water's being spoiled. Mr. ADDISON, and all our travellers observe, that the country about Puzzoli and Baia has been miserably torn to pieces by subterraneous fires and earthquakes, and the whole face of it entirely changed from what it was formerly. The sea has drowned a multitude of palaces, the ruins whereof may be seen at the bottom of the water in a calm day. Mount Gaurus, from one of the fruitfulest parts of Italy, is now become the most barren. The fields which were in the time of the old Romans laid out in beautiful groves and gardens, are now naked plains, smoaking with sulphur, or encumbered with hills, thrown up by eruptions of fire. The works of art lie in no less disorder than those of nature. This, which was once the most beautiful spot in Italy, covered with temples and palaces, embellished by many of the Roman Emperors, and celebrated by the best of their Poets, has now nothing to shew, says Mr. ADDISON, but the ruins of its ancient splendor, and a great magnificence in confusion.

The baths  
of St. Ger-  
main.

Solfatara,  
and other  
burning  
hills.

The Mole of Puteoli, or Puzzoli, the same gentleman observes, having been built upon arches, is usually mistaken for CALIGULA's bridge, between Puzzoli and Baia; whereas that bridge, it is evident from ancient authors, was made of boats. Of all the scenes of noble objects that present themselves in the bay of Puzzoli, says Dr. BURNET, the remains of CALIGULA's bridge are the most amazing; for there are yet standing eight or ten pillars that supported the arches, and of some of the arches the half is yet entire, the furthest

The Mole  
of Puzzoli.

CHAP.  
XXVI.  
Kingdom  
of Naples.

furthest of them on the Puzzoli side standing seven fathom deep in water, and on the other side he supposes them to stand twenty fathom deep in water. *This was a noble monument of the profuse and extravagant expence of a brutal tyrant, who made one of the vastest bridges that ever was attempted, over three or four miles of sea, merely to sacrifice so great a treasure to his vanity.* But notwithstanding this grave censure of the doctor's, these arches were only made to support a mole for the defence and conveniency of the harbour, as Mr. ADDISON and some late travellers have demonstrated, for CALIGULA's bridge was a bridge of boats. But to proceed: Besides the antiquities already mentioned, we find the ruins of a theatre near Puzzoli, the area whereof was an hundred and seventy-two foot long, and eighty-two broad: and between the city and theatre are the ruins of a temple, said to be consecrated to DIANA. The sea sometimes throws up several rich ornaments of the ancient palaces, which stood hereabouts, consisting of jasper, agate, amethysts, cornelians, &c. This bay, it is said, was anciently called *Venerum*, from the lewdness practised in their baths, over which they built magnificent edifices, and near them temples dedicated to VENUS and other deities, whom they imagined pleased with such actions. But however that be, 'tis evident, as Mr. ADDISON observes, that Baia was the winter retreat of the Romans, that being the proper season to enjoy the *Baiani Soles*, and the *Mollis Lucrinus*; as on the contrary, Tivoli, Tusculum, Alba, Fregati, Anxur, &c. were their retirements during the heats of summer. (Dr. BURNET forgets himself therefore, when he makes the Romans reside at Baia in summer.) To confirm which, Mr. ADDISON gives us a passage in MART. L. 1. Ep. 116. which he thus translates;

While near the Lucrine lake consum'd to death  
I draw the sultry air and gasp for breath,  
Where steams of sulphur raise a stifling heat,  
And thro' the pores of the warm pumice sweat,  
You taste the cooler breeze, where nearer home  
The twentieth pillar marks the mile from Rome.  
And now the sun to the bright lion turns,  
And Baia with redoubled fury burns;  
Then briny seas and tasteful springs farewell,  
Where fountain Nymphs confus'd with Nereids  
In winter you may all the world despise, [dwell,  
But now 'tis Tivoli that bears the prize.

Near the lake of Lucrine is another road wrought through a rock, like that of PAUSILIPPUS, and in it some grotto's, which they call the apartment of the Cumæan Sibyl. They shew also the ruins of buildings about Baia, which they call the palaces of CÆSAR, POMPEY, CICERO, and other Romans of distinction; but the face of this country has been so altered by earthquakes, that there is very little to be depended on of this kind, particularly on the 19th of September 1538, at night there happened an earthquake, which produced the Monto Nuovo, or the new mountain, which is four hundred fathoms high, and three thousand paces in circumference; at which time, says my author, the neighbouring sea retired, the Lucrine lake was almost filled up, churches and houses were set on fire and swallowed up, great numbers of men and beasts perished, and there was a general consternation through all the country; but this mountain has never thrown out fire or smoke, or occasioned any disorder since that time. That little spot of ground called the Elysiac Fields, lies about a mile

The Elysiac Fields.

VOL. II.

from Baia, and has not much to render it admired at present. Two miles to the westward of Baia are the ruins of the ancient *Misenum*, on a promontory which runs into the sea, and still retains the name. Here, it is said, LUCULLUS had his country seat, and is supposed to have dug the many grotto's and caves in the rocks which are upon this coast. Near this place also is the *Piscina Mirabilis*, built upon arches supported by forty-eight square pillars, supposed to be the work of the same LUCULLUS: and not far off lies Bauli, the seat of AGRIPPINA, NERO's mother, with that of HORTENSIVS, and the ruins of his famous fish-ponds. But not to enumerate more particulars, I shall refer the reader to the map of Puzzoli and Baia, bound up with this volume, where he will find the situation of most of the remarkable places in the neighbourhood of that city, mentioned by the Classics.

Cuma, or rather the ruins of it, lie two miles to the northward of Baia, partly on a mountain, and partly on the sea-shore, and formerly gave name to the bay, now called the bay or gulph of Naples. From this place one of the Sibyls was denominated the Cumæan Sibyl.

Capua is situated in the Campania Felix, on the river Volturnus, about two miles from the ancient Capua, in a pleasant plain, sixteen miles to the northward of Naples, and above an hundred and twenty south of Rome. The town is in a declining condition at present, and remarkable for little but being the See of an Archbishop. Here the famous HANNIBAL wasted his time and his army, while the Romans recovered from their consternation after their defeat at Cannæ, and not long afterwards compelled him to quit Italy.

Carinola stands about ten miles north-west of Capua, a poor ruinous city, in an unhealthful air, considerable only for being a Bishop's See, and for the Mount Falernum in its neighbourhood, which produces that delicious wine so much admired by HORACE.

Gaieta is situated on a rock, near a bay of the sea to which it communicates its name, about fifty miles north-west of Naples, and eight south-east of Rome. The harbour is one of the best in the kingdom, and is defended by two castles. It was almost the only town that made any defence when the Imperialists invaded Naples in the year 1707, when it was taken by storm, and the garrison retiring into the castles, was obliged to surrender at discretion; whereby the Viceroy, the Duke of ESCALONA, and all the Grandees in the Spanish interest who had shut themselves up in Gaieta, were made prisoners.

Fondi is situated about ten miles to the northward of Gaieta, and gives name to a neighbouring lake and morass, which makes this a very unhealthful country. It is now a poor place, and only considerable for its being a Bishop's See.

Aquino stands on the river Garigliano, about fifteen miles north-east of Gaieta, on the confines of the Ecclesiastical State, and is a Bishop's See, but remarkable for little, unless the birth of the famous THOMAS AQUINAS, who first saw the Light here.

Sora is situated on the Garigliano, fifteen miles to the northward of Aquino, and is a pretty little town, and the See of an Archbishop.

Monte Cassino lies three miles to the eastward of Aquino, and is remarkable for the fine abbey of Benedictines, their founder St. BENNET being interred here about the year 543. The church

C H A P. XXVI. belonging to the convent is one of the most magnificent fabricks in Italy.

Kingdom of Naples. St. Mary's is a large town near the ruins of old Capua, remarkable on account of the antiquities which still remain there, particularly the ruins of two amphitheatres, several Pagan temples, columns, and one of the gates of the ancient city.

Venafro. Venafro, Tiano, Alifi, Cerrito, Cajazze, Calvi, Caferta, Averfa, Nola, Castella Mare de Strabia, Vica and Sorrento, are all Bishops Sees, but not considerable enough to deserve a particular description.

The Principato Citerior, or the hither principality, is bounded by the Terra di Lavoro and the Principato Ulterior towards the north; by the Basilicata on the east; by Calabria towards the south-east; and by the Tuscan sea towards the south-west: the chief towns whereof are, 1. Salerno. 2. Cava. 3. Minuri. 4. Amalfi. 5. Scala. 6. Lettere. 7. Nocera. 8. Sarno. 9. Campagna. 10. Evoli. 11. Cangiano. 12. Satriano. 13. Marfico. 14. Policaastro. 15. Castella Mare della Bruc. 16. Acerno; and, 17. Capaccio.

Salerno. Salerno, the capital, stands at the bottom of a bay of the Tuscan sea, from hence called the bay of Salerno, twenty seven miles south-east of Naples: the town has a good harbour, and is an Archbishop's See; they have also a university, where physick was chiefly studied; but I don't find it is a town of any great consequence at present.

Amalfi. Amalfi is situated on the same bay, about ten miles to the westward of Salerno: It is an Archbishop's See, and is a tolerable harbour. Here, it is said, FLAVIUS BLONDUS was born, who invented the seaman's compass; and, according to the tradition of the place, the corpse of St. ANDREW the Apostle lies buried here.

Policaastro. Policaastro lies at the bottom of a bay, to which it communicates its name, about fifty-five miles south-east of Salerno; being a Bishop's See, but a very inconsiderable town at present.

Scala, &c. Scala, Lettere, Nocera, Sarno, Campagna, Satriano, Marfico, Acerno and Capaccio, are all Bishops Sees, but too inconsiderable to deserve a particular description.

The Principato Ulterior, or further principality, is bounded by the Molise and Capitanata on the north-east; by the Basilicata on the east; by the hither principality towards the south; and by the Terra di Lavoro towards the west. The chief towns whereof are, 1. Benevento. 2. Montefoscato. 3. Ariano. 4. Trevico. 5. Cedogna. 6. Bifaccia. 7. Monte Verde. 8. St. Angelo de Lombardy. 9. Friventi. 10. Lusco. 11. Conza. 12. Avellino. 13. Volturara. 14. St. Agatha di Goti. 15. Monte Marano; and 16. Trimaldi.

Benevento. Benevento, anciently a colony of the Samnites, is situated at the conflux of the rivers Sabato and Colore, about an hundred and thirty miles south-east of Rome, and thirty-four north-east of Naples. It was given with the territory belonging to it to Pope Leo IX, by the Emperor HENRY III, in exchange for Bamberg in Germany. The earthquakes and eruptions of Mount Vesuvius have been more fatal to this city than to Naples. The same earthquake which shook Naples so terribly in the year 1688, made this a heap of rubbish; and the present Pope, who was then Archbishop of Benevento, for some time lay buried under the ruins of his palace, as has been already related at large. This city is an Archbishop's

See, and generally possessed by a Cardinal: The revenues being very large, and the city belonging to the Pope, his Holiness having in a manner rebuilt the city since the earthquake, and conferred many privileges upon the place; it is now in a very flourishing condition, and the cardinals find some difficulty in persuading the Pope not to make it the place of his residence.

Montefoscato. Montefoscato is a small city, five miles south-east of Benevento; the residence of the Governor of the province, and on that account esteemed the capital.

Conza. Conza is situated on the river Ofanto, about twenty-five miles to the southward of Benevento, the See of an Archbishop; but almost ruined by an earthquake in the year 1694. Ariano, Trevico, Cedogna, Bifaccia, Monte Verde, St. Angelo de Lombardy, Lusco, Avellino, Volturara, St. Agatha di Goti and Monte Marano, are all Bishops Sees, but not remarkable upon any other account.

The Abruzzo. The Abruzzo is bounded by the Pope's dominions on the north-west; by the gulph of Venice on the north-east; by Capitanata in Apulia on the south-east; and by the Terra di Lavoro on the south-west; being about an hundred miles in length from the north-west to the south-east, and about fifty miles in breadth, divided into three parts, viz. the Abruzzo Citerior, the Abruzzo Ulterior, and the county of Molise.

The Abruzzo Citerior, or the hither Abruzzo, is bounded by Abruzzo Ulterior towards the north-west; by the gulph of Venice on the north-east; by the county of Molise on the south-east; and by the Terra di Lavoro on the south-west; being about fifty miles in length, and forty in breadth. The chief towns are, 1. Civita di Chieti. 2. Lanciano Anxanum. 3. Sulmona; and 4. Ortona de Mare.

Civita di Chieti. Civita de Chieti, the capital of the province, stands about ten miles to the westward of the gulph of Venice, and is a large populous place, and the See of an Archbishop; it was anciently called *Theatea*, and gave name to the *Theatin Monks*, as it is said, for JOHN PETER CARAFFA their founder was Archbishop of this place, and afterwards advanced to the pontificate by the name of PAUL V.

Lanciano. Lanciano is situated on the gulph of Venice, about fourteen miles south-east of Civita di Chieti; a large populous place, and an Archbishop's See, considerable for its trade, especially at their Fairs, when it is frequented by merchants from both sides the gulph of Venice.

Sulmona. Sulmona stands about twenty miles south-west of Civita Chieti; and is considerable only as it is a Bishop's See, and the town where OVID was born.

Ortona. Ortona is situated on the sea coast, about twelve miles to the east-ward of Civita di Chieti: It has a tolerable harbour, and is the See of a Bishop.

The Abruzzo Ulterior, or the further Abruzzo, is bounded by the Pope's dominions on the north; by the gulph of Venice on the east; by Abruzzo Citerior towards the south-east; and by the Campania of Rome towards the west; being about sixty miles in length from east to west, and forty in breadth, the middle of it a mountainous country, but the rest abounds in corn, cattle, saffron and fruits. The chief towns whereof are, 1. Chief towns, di Penna. 2. Terano. 3. Atri; and, 4. Civita di Penna.

CHAP.  
XXVI.  
Kingdom  
of Naples.  
Aquila.

Aquila is situated at the foot of the Apennines on the river Pescara, about eighty miles north-east of Naples, and twenty-five to the west-ward of Civita di Chieti; being the capital of the province, and an Archbishop's See, but miserably destroyed by an earthquake in the year 1703, together with several other towns in the neighbourhood. In the Pope's dominions at the same time several towns were destroyed, and fifteen thousand people perished; Rome itself was also terribly shaken by the same earthquake, abundance of houses and buildings in that city shattered and damaged, particularly the churches of St. PAUL, St. CARLO, and St. GREGORY. This happened on the fourteenth of February in the night-time; and it was observed that the sun had not shone out in two months time before. The Pope on this occasion proclaimed a jubilee, with plenary indulgence to all who confessed their sins, and visited the three principal churches in Rome; all orders and societies thereupon went in procession, tearing their flesh with whips and cords; the Pope and Cardinals supplied the place of confessors themselves, and administered the sacrament of repentance. And what increased the general consternation, was a pack of villians who had dispersed themselves all over the city in order to plunder the houses of the affrighted inhabitants: they knocked at every door almost, crying out, that the Pope had just received a revelation that the town would be suddenly swallowed up by another earthquake; whereupon the people fled half-naked into the fields and gardens, leaving their houses to be plundered by these fellows. And it was a considerable time before they were undeceived, by the Pope's ordering his guards to patrol along the streets, and declare that he had no such revelation.

Terano.

Terano stands twenty miles north-east of Aquila; it is a Bishop's See, suffragan of Civita Chieti, but not remarkable on any other account.

Atri.

Atri, or Atria, the town where the Emperor HADRIAN was born, is situated four miles west of the gulph of Venice, and ten south-east of Terano, and is a Bishop's See, united to that of

La Penna.

La Penna, a small town five miles south-west of Atri, which belongs to the Duke of Parma.

The county  
of Mo-  
lisa.

The County of Molise, or Molisa, is bounded by the Abruzzo Citerior and the gulph of Venice on the north and east; by Apulia on the south; and by the Terra di Lavoro towards the west; and is about forty miles in length, and thirty in breadth; fruitful in corn and wine, and produces great quantities of silk: the chief towns whereof are, 1. Isernia. 2. Molisa. 3. Trivento. 4. Garda Alferez. 5. Larina; and, 6. Boiano.

Chief  
towns.

Isernia.

Isernia is situated on the confines of the Terra di Lavoro, thirty miles to the northward of Capua; and is a populous place, the See of a Bishop, and capital of the county.

Molisa.

Molisa is a little fortified town, in a ruinous condition, twelve miles to the eastward of Isernia. Trivento, Garda, Alferez and Boiano, are all Bishops Sees, but considerable for little else.

Trivento,  
&c.

Apulia or  
la Puglia.

La Puglia, or Apulia, is bounded by the Abruzzo towards the north; by the gulph of Venice on the east; by the Ionian sea on the south-east; and by Calabria and the Terra di Lavoro on the west; being near two hundred miles in length from the north-west to the south-east, sixty in breadth in some places and in others scarce twenty; and is divided into, 1. The Ca-

pitana. 2. The Terra di Barri; and, 3. The Terra di Otranto.

The Capitanata is bounded by the Molise and the gulph of Venice on the north and east; by the Terra di Barri on the south-east; and by the Terra di Lavoro towards the west; being about seventy miles in length, and fifty in breadth, abounding in corn and pasturage. The chief towns whereof are, 1. Manfredonia. 2. Mont St. Angelo. 3. Bieste. 4. Lefina. 5. Termine. 6. Dragonara. 7. San Severo. 8. Troja. 9. Bovino. 10. St. Marco; and, 11. Salpe.

Manfredonia, the ancient *Sipontum*, is situated on a Bay in the Adriatick sea, about fourscore miles to the eastward of Naples; and had its modern name from MANFRED Son of the Emperor FREDERICK II. who repaired and beautified it. It was taken and almost demolished by the Turks in the year 1620, but has pretty well recovered itself, and has a tolerable harbour, a castle, and some other fortifications for its defence, and is still an Archbishop's See.

Mont St. Angelo is situated on the top of Mont Gargano, about eight miles to the east-ward of Manfredonia, a populous place, and much frequented by pilgrims, on account of St. MICHAEL, who, according to tradition, appeared here in the fifth century, and to whom they have dedicated a fine church in this place.

Lefina stands on a lake of the same name, near the Adriatick sea, about twenty miles to the north-ward of Mont St. Angelo; and was a considerable town before it was destroyed by an earthquake in the year 1627.

Bieste, Termine, Dragonara, or Tragonara, San Bieste, &c. Severo, Troja, Bovino and Salpe, are all of them Bishops Sees, but not considerable on any other account.

The Terra di Barri is bounded by the Capitanata and the gulph of Venice on the north and east; and by the Terra di Otranto and the Basilicate on the south and west; extending about seventy miles in length, and thirty in breadth;

producing corn, wine, saffron, and fruits, but wants water in many places, and is troubled with that dangerous insect, among many others, called the Tarantula. The chief towns are, 1. Barri. 2. Giavonazza. 3. Molfetta. 4. Biseglia. 5. Trani. 6. Barletta. 7. Canosa. 8. Cannæ. 9. Andria. 10. Altamura. 11. Bittetto. 12. Conversano. 13. Polignano. 14. Monopoli.

Barri, the capital, is situated on the gulph of Venice, in a very pleasant country, an hundred and twenty miles to the eastward of Naples, and forty south of Manfredonia; a pretty well-built town, and an Archbishop's See; but most remarkable for the Relicks of St. NICOLAS Bishop of Mira, brought hither out of Lycia.

Trani is situated on the same coast, about twenty miles north-west of Barri, anciently called *Trojanum*, having been built by the Emperor TRAJAN; it had once a good harbour, but is most considerable at present for being the See of an Archbishop.

Cannæ, or rather the remains of Cannæ, where the Romans received that memorable defeat by the Carthaginians, losing forty thousand men on the field of battle, lies about twenty miles south-west of Trani. The rest of the towns above mentioned are only remarkable on account of their being the Sees of so many Bishops, and do not deserve a particular description.

The

Calabria.

The Terra di Otranto is a peninsula, encompassed on every side by the Adriatick or Ionian seas, except on the north-west, where it is bounded by the Terra di Barri, and the Basilicate; being about an hundred miles in length, and from twenty to thirty in breadth; the chief produce whereof is olives, figs, and other fruits. The chief towns are, 1. Otranto. 2. Leccie. 3. Brindisi. 4. Ostuni. 5. Oria. 6. Tarento. 7. Nardo. 8. Gallipoli. 9. Alessano; and, 10. Maria di Luca.

Otranto lies on the gulph of Venice, in the most eastern part of Italy, about two hundred miles south-east of Naples, and was anciently called *Hydruntum*; It was destroyed by the Turks in the year 1480, but has been rebuilt and fortified since, and is defended by a castle built upon a rock. It is the See of an Archbishop, whose revenues are very great; from hence the Italians usually take shipping for Greece, it lying over against that country.

Leccie is situated fifteen miles to the northward of Otranto, and is a populous trading town, the capital of the province, and the See of a Bishop, suffragan to Otranto.

Brindisi, the ancient *Brundisium*, is situated on the gulph of Venice, about thirty miles to the northward of Otranto; a large well-built populous town, and an Archbishop's See, and has one of the best harbours on the Adriatick. Here it was that *CÆSAR* embarked his troops when he followed *POMPEY* to the plains of *Pharsalia*; and here, it is said, *VIRGIL* died when he went to meet *AUGUSTUS* in his return from the east.

Taranto, or Tarentum, is situated on a bay of the Ionian sea, to which it communicates its name; being about sixty miles north-west of Otranto, and sixty to the southward of Barri; a town of great antiquity, supposed to have been built by the Lacedæmonians. It was the head of a powerful republick anciently, which contended with the Romans for empire; now but a small city, their harbour almost choaked up, and consequently their trade upon the decline: It is however an Archbishop's See, and the capital of a little principality. The spiders, called Tarantula's, being most commonly met with here, received their name from hence.

Gallipoli is situated on the Ionian sea, about twenty miles to the westward of Otranto; it stands on a steep rock, surrounded by the sea, and joined to the continent by a stone bridge; said to be one of the strongest and best towns in the kingdom of Naples, and is the See of a Bishop, suffragan to Otranto.

Ostuni, Oria, Nardo, Alessano, and St. Mary de Luca, are only considerable on account of their being Bishops Sees.

Calabria, so called from the Calabri, a Grecian people, is bounded by Apulia on the north-east; by the Ionian sea on the south-east; and by the Tuscan sea and the straits of Messina towards the west; being about an hundred and fifty miles in length from the north-east to the south-west, and about sixty in breadth, but in many places it is very narrow: It was anciently called *Magna Græcia* by the Greeks, who settled here. Then the Romans possessed it, and after them the eastern Emperors, till the Saracens made a conquest of it in the ninth century. These infidels were expelled by *ROBERT DE GUISEARD* in the eleventh century, who took upon him the title of Duke of Apulia and Calabria: one of whose pos-

terity bequeathed it to *ROGER II.*, King of Naples and Sicily, about the year 1106; since when it has been deemed part of the kingdom of Naples, and is divided into the Basilicate, Calabria Citerior and Calabria Ulterior.

The Basilicate is bounded by the Capitanata towards the north, by the Terra di Barri and

Otranto on the east; by the bay of Taranto and Calabria Citerior on the south; and by Lavello Citerior on the west; being about seventy miles in length from north to south, and forty-five in breadth from east to west; and produces corn, wine, oil, saffron, cotton, wax, and the most delicious fruits. The chief towns whereof are, 1. Cosenza, or Acerenza. 2. Venosa. 3. Laviello. 4. Melfi. 5. Rapolla. 6. Murai. 7. Tricarico. 8. Monte Pilosa. 9. Potenza; and, 10. Turfis, or Turfina.

Cosenza, the capital of the province, is situated about fourscore miles south-east of Naples, and forty to the westward of Barri, a small city, and not in a very flourishing condition; but is however an Archbishop's See. Venosa stands about ten miles north-west of Cosenza, and is a Bishop's See, supposed by some to be the place where *HORACE* was born. Turfis is situated about ten miles north-west of the bay of Taranto, and forty south-east of Cosenza. It gives title to a Genoese Prince of the Family of *DORIA*, and is a Bishop's See.

Laviello, Melfi, Rapolla, Atura, Tricarico, Monte Pilosa and Potenza, are also Bishop's Sees; but I don't find they are remarkable on any other account. Calabria Citerior, or the hither Calabria, is bounded by the Basilicate and the Ionian sea on the north and east; and by the same sea, Calabria Ulterior, and the Tuscan sea on the south and west; being about sixty miles in length, and as many in breadth. The chief towns whereof are, 1. Cosenza. 2. Corenza. 3. Strongoli. 4. Umbriatico. 5. Cariati Novo. 6. Rossano. 7. Cassano. 8. Bissignano. 9. Amantea, or Adamantia. 10. Cosenza, the capital of both the Calabria's, is situated about twenty miles to the eastward of the Tuscan sea; a large well-built town, but has suffered pretty much by earthquakes: It is the See of an Archbishop, and has a good castle, from whence there is a fine prospect of the neighbouring country. *ALARIC* King of the Visigoths died in this city.

Strongoli is a little city, situated on a mountain two or three miles from the Ionian sea, and thirty south-east of Cosenza, a Bishop's See, suffragan to St. Severina.

Corenza, Umbriatico, Cariati Novo, Rossano, Cassano, Bissignano and Amantea, are all Bishops Sees, but travellers do not think them worth a particular description.

Calabria Ulterior lies between the Tuscan and the Ionian seas, and is joined to the continent only on the north-east, where it borders on the hither Calabria; being about eighty miles in length, and fifty in breadth in some places, and in others scarce twenty. Besides the other produce of this country, they are remarkable for fine Horses. The chief towns are, 1. Rhegio. 2. St. Severina. 3. Cotrone. 4. Isola. 5. Belcastro. 6. Nicotera. 7. Taverno. 8. Nicastro. 9. Monte Leone. 10. Seminara. 11. Squillaci. 12. Melito. 13. Oppido. 14. Bova; and, 15. Givina.

Rhegio, or Rhegium, stands on the straits of Messina, almost opposite to that city, and is the common

CHAP. XXVI. common passage from Italy to Sicily, this freight being about fifteen miles over here. It is a pretty good town, and the See of an Archbishop.

St. Severino stands on the confines of Calabria Citerior, not far from the Ionian sea, a little well-built city, and the See of an Archbishop. The rest of the towns of this province are only remarkable as they are the Sees of so many Bishops, and have most of them suffered pretty much by earthquakes.

## CHAP. XXVII.

*Contains an abstract of the ancient and modern history of Naples, with an account of their nobility and present constitution; the produce of the soil, their trade, manufactures, revenues, forces and interests.*

CHAP. XXVII.

An abstract of the history of Naples.

THE countries of which the kingdom of Naples is composed, anciently called *Sammium*, *Campania*, *Apulia*, and *Magna Græcia*, were planted by colonies from Greece at least; these are the first inhabitants we have an account of in history, and, according to tradition, the city of Naples was built by *HERCULES*. When the Romans began to enlarge their limits, part of this kingdom they subdued by force of arms, but the city of Naples and the territories belonging to it early submitted to the Roman power without compulsion, and was numbered among their free confederated cities, and according to *LIVY*, always remained firm to the Roman interest; even in their great distress during the Carthaginian war, Naples is applauded for her fidelity, when *Capua* and many other cities in the neighbourhood revolted to *HANNIBAL*. On the declension of the Roman Empire in the fifth century, the Goths possessed themselves of this part of Italy, and though they were driven from thence by *BELISARIUS*, the Emperor *JUSTINIAN*'s General, who entered Naples by the aqueducts, and other subterraneous passages, about the year 537; the Goths under *TOTILUS* retook it again anno 543, but were dispossessed by the Lombards some few years after, who remained masters of it till *CHARLEMAIN* having taken *DIDIER* the last King of the Lombards prisoner in the eighth century, shared this country, which now goes under the name of the kingdom of Naples, with the Greeks, who were possessed of several free cities and states in it. In the ninth and tenth centuries the Saracens invaded this country, and made themselves masters of great part of it, from whence they were driven with some difficulty by the Normans and the Pope in the eleventh and twelfth centuries. In which *TANCRED* the Norman and his twelve sons having been very instrumental, had large territories assigned them: *ROBERT* the son of *TANCRED* was created Duke of *Apulia* and *Calabria* by the Emperor, and *ROGER* the son of *ROBERT* was advanced to the dignity of King of Naples and Sicily, or rather of the two Sicilies, for Naples was then called Sicily on this side the Pharo (or the strait of *Messina*) and the island of Sicily beyond the Pharo. *ROGER* was succeeded by his son *WILLIAM* anno 1135, to whom succeeded his son *WILLIAM II*, about the year 1166; who left both Naples and Sicily to *TANCRED* his base son, who was opposed by the Pope, possibly on account of his refusing to hold his dominions of his Holiness, who claimed a right to them, as be-

VOL. II.

ing principally concerned in expelling the Saracens: and *HENRY VI*, son to the Emperor *FREDERICK I*, Duke of *Swabia*, was set up against him; and to strengthen *HENRY*'s title, the Pope persuaded him to marry *CONSTANTIA*, whom he brought out of a nunnery, pretending that she was heiress to the kingdom. The Pope however upon some disgust to the Swabian family, afterwards introduced the Earl of *Anjou*, and the French, who were sovereigns of this kingdom till the year 1267, or according to others 1282, when the Sicilians apprehending themselves to be oppressed, formed a conspiracy against their masters; and on Easter-Eve that year, when the bells rung for prayers, they set upon the French throughout the island, and left scarce any of them alive; and this memorable massacre thereupon obtained the name of the Sicilian Vespers. At the same time *PETER* of *Aragon*, who supported the conspirators, having obtained a victory at sea over *CHARLES II*, of *Anjou*, and made him prisoner, compelled him to resign his pretensions to Sicily and *Sardinia*, which then constituted part of the kingdom of Naples. Whereupon the French remained masters only of that part of the kingdom which lay on the continent, and which we call Naples at this day. I shall not trouble the reader with the successions of all the French and Spanish Princes who were Sovereigns of Naples and Sicily, or their wars, which lasted two or three hundred years; only observe that the *Aragonians*, or *Spaniards*, entirely expelled the French from Naples and Sicily about the year 1504, and enjoyed those countries till the year 1700, when the Duke of *Anjou*, the present King of *Spain*, took possession of Naples and Sicily, with the rest of the Spanish dominions, by virtue of the will of *CHARLES II*, the late King of *Spain*, which was one occasion of the last war between the Imperialists and their confederates on the one side, and the French and Spaniards on the other. In the course of which war, the Imperialists having driven the French and Spaniards out of the *Milanese*, detached fifteen thousand men under the command of Count *THAUN* to Naples, who entered that kingdom without opposition; and on the sixth of July 1707, the capital city submitted to them without striking a stroke, the castles of Naples surrendering the sixteenth of the same month. And on the twenty-ninth of September following, Count *THAUN* took *Gaieta* by storm, with the Viceroy, and all the nobility in the French interest, which was the only place that made any defence; and the Imperialists have remained in the quiet possession of the kingdom of Naples ever since, paying the usual acknowledgment of a Spanish pension and seven thousand ducats annually to the Pope on St. *PETER*'s Eve, for the investiture; the Pope looking upon Naples as a fee of the ecclesiastical state, on account of the share he had in driving the Saracens from thence.

The dignified clergy and nobility of this kingdom are very numerous, some reckon up twenty-five Archbishops, an hundred and twenty-five Bishops, near three hundred Princes, Dukes, Marquesses and Earls, above a thousand baronies, and twelve or fifteen hundred castles; but as a Neapolitan barony, and an English manor were originally much the same, so these castles are no more than the country seats of the quality, with a single wall and ditch about them, at most like the Chateau's or gentlemen's seats in *Flanders*, sufficient

CHAP. XXVII. Kingdom of Naples.

of Naples.

sufficient to secure them and their families against a troop of Banditti or Turkish rovers, but by no means capable of resisting an army. The better to understand the present constitution of the kingdom of Naples, it may be proper to divide the people into four classes, 1. The Clergy. 2. The Nobility and Gentry. 3. Tradesmen and Mechanicks: And, 4. Peasants.

The Clergy are possessed of one third of the lands of the whole kingdom, (Dr. BURNET says half) and in tythes, offerings and legacies, they have a great deal more. The crown, the nobility and gentry possess almost all the rest of the lands. The tradesmen and peasants have scarce any they can call their own: they are no better than tenants at will in a literal sense. The peasants are subjects and vassals to their lords, as they were formerly in England, and most other countries in Europe. They manure the Lord's lands, plant and prune his vines and olives, and are allowed no more than a bare subsistence for their poor families. They come for justice also to the courts of their respective Lords in all cases that are not capital or highly criminal, and are in every respect subject to these petty Sovereigns. The King's tenants are used much the best, it seems, and those of the nobility better than the vassals of the clergy, if we may credit some of our Protestant travellers; and they give this reason for it, that the clergy having no children to succeed to their estates, rack their tenants and get all they can in their life-time, allowing them nothing towards bettering or improving their grounds, because their posterity can reap no advantage by it. As the crown-lands pay no taxes, so neither do those of the clergy, but with their own consent; and consequently the charges of the government are born chiefly by the nobility and gentry. Dr. BURNET assures us that the Jesuits and other orders of the clergy sold their wine themselves by retail, as well as wholesale, when he was at Naples, for which they paid no duty to the crown. Their corn, oil, silk and fruits, they sell in the like manner, and what is not consumed at home, is transported by foreign merchants, for there are few merchants among the Neapolitans. Their corn is sent to Spain by English or Dutch ships; their oil is a great deal of it taken off by us. The nobility as well as the clergy sell the produce of their estates directly to foreigners; but with this disadvantage, that they pay a duty to the crown out of their crops, whereas the clergy pay little or nothing. The nobility and gentry therefore are the people that, in Dr. BURNET's phrase, are oppressed by the government, if there be any, for they bear the whole burthen of it: their lands, or the produce of them, must answer all the exigencies of the State. As to the tradesmen and mechanicks, they manufacture little more of their silks at home than will serve their own people; and as they wear chiefly black or dark colours, and after the Spanish mode, seldom alter their fashions, their home consumption is but small, and consequently the government can raise but little from thence. And as to the peasants or farmers, who are tenants to the crown, the nobility or clergy, and are their subjects or vassals, whatever they have is the property of their respective Lords; and if these poor people are oppressed, they are oppressed by their masters, and not by the government. Nay, it is observed, that the tenants and vassals of the crown are much better used than those who belong either

The pro-  
duce of  
the coun-  
try and  
trade.

to the clergy or nobility; inasmuch, that if the crown is about to sell or alienate the farms to which they belong, they unanimously petition against it, apprehending much severer usage from the clergy and nobility than from the government. Dr. BURNET, and some other travellers, ascribe the misery and poverty of the Neapolitans sometimes to laziness and sloth, as well as to the tyranny of the government: but I presume the lords of the soil, the nobility and clergy, take care that their vassals shall not be idle: if some of the lands of the nobility lie uncultivated, as he observes they do, it must be either because they want hands, or because the duties are so high upon the produce, that it is not worth their while to manure them. As to the miserable inhabitants of their towns, which the Doctor saw walking in tattered cloaks in the market-places, this is not to be wondered at, if we consider they have scarce any manufactures amongst them, and that the proprietors of lands are the only merchants of the country, if they may be called such, who vend no more than the produce of their own farms to foreigners; almost the only manufactures, besides that of silk already mentioned, are their soap, knit waistcoats and stockings, snuffs and perfumes, which are not like to fill their towns with treasures: besides, as these people have been long under the Spanish government, and are many of them of Spanish extraction, the same pride that reigns in Spain, is no stranger here. The most ordinary mechanicks, who are not in a state of vassalage or slavery, will have their cloaks and swords, and had rather starve in freedom than serve any lord in the country.

The forces of this kingdom have been unaccountably magnified by some writers, or they have mistaken the ordinary militia of the kingdom for standing troops. As the nobility and gentry hold their lands here by feudal tenures, as they did formerly with us, and according to the value or extent of their lands were obliged to bring a certain number of horse and foot into the field, these might amount to an hundred thousand horse, and a hundred and fifty thousand foot, anciently, as some have calculated; but most of these military services are now turned into rents, and the Sovereign chuses to rely upon foreign troops rather than natives. And notwithstanding the Emperor may well be apprehensive of having his title to Naples disputed one day, I question whether he maintains more than fifteen or twenty thousand regular troops in that kingdom at present. As to their naval force, it consisted of no more than a man of war or two, and some few armed galleys, while they were under the dominion of the Spaniards; but since the Emperor has been Sovereign of this kingdom, they have applied themselves so diligently to the building of ships, that we see a list handed about of near thirty sail of frigates, or small men of war, which his Imperial Majesty has in these seas: And why they should not build merchant-ships as well as men of war, when there are so many fine ports in Sicily and Naples, and export the produce of their own country themselves, I can't conceive; unless it be that the nobility, who are the proprietors of the lands and staple commodities of the kingdom, have no inclination or encouragement to turn merchants, and the citizens have no stocks to carry on a foreign commerce; and if so, it is not the Emperor's declaring his

Forces and  
Revenues.

CHAP.  
XXVII.  
Kingdom  
of Naples.

harbours free ports that will bring any considerable trade to his Italian dominions. There must be some other regulations of their commerce, before we need be apprehensive of their taking from us any branch of the Levant-trade.

The publick revenues in the kingdom of Naples, are supposed to amount to near a million sterling; which arises, 1. From a tax or composition with the Barons and other feudatories, in lieu of their personal services. 2. From a duty on houses, which pay usually fifteen Carolines (or sixpences) for every hearth. Besides which, there are duties laid on wine, oil, tobacco and meat; and as the meat is taxed equally by the pound, this duty, Mr. Addison observes, lies heaviest on the coarsest sorts, beef paying a third part of the value, when veal does not pay a tenth of the price to the government. There is scarce any thing that is eaten or worn but has a duty laid upon it, unless fruits, fowls and game. It was a tax on fruits, which the common people live much upon, that occasioned the rebellion by MASSANIELLO, and his brethren the fishermen and other poor people, who were very near subverting the government, and striking out a new constitution; for no Prince ever reigned more absolutely, or had a greater body of men at his command, than MASSANIELLO had for twelve or fifteen days; but since that insurrection, the government have not thought fit to lay any duty upon fruits, unless they have done it very lately. The crown, it is said, frequently farms out the several branches of the revenue to some of the most powerful and wealthy natives, of whom considerable sums have been borrowed for the exigences of the state; whereby the odium of collecting them falls upon the Neapolitans themselves, and they secure the farmers in their interest, according to a maxim in vogue at the revolution here, *The more money you borrow, the more friends you make.* The people will not be very forward for a change of government when they are like to be losers by it. Those who are most oppressed by taxes and impositions, I find, are the Genoese and other foreigners who have purchased honours and estates in Naples, who are pretty numerous; for these the government have no apprehensions of. They are not afraid of their inciting an insurrection, as the native nobility and clergy might: And indeed the Sovereign seems to be in more danger from the clergy, than any set of men in the kingdom, as they are possessed of great part of the lands and treasure, and are supported by the Pope, whose dominions are contiguous. The Pope may well be supposed also to receive a larger revenue from this kingdom, and to have a greater interest here, considering the wealth and numbers of the Neapolitan clergy and religious orders, than the Imperialists themselves. If the Pope should at any time happen to be disgusted with the Emperor, and imagine he could find his account in restoring the Spaniard, as the clergy can command their vassals and very much influence the rest of the nation in his favour, a revolution might be easily effected: But then his Holiness must take care that he is well supported by the French and Spaniards, or the Emperor may make reprisals in the ecclesiastical State, and perhaps a conquest of it. The long possession the Emperor had of Comacchio, one of the Pope's cities, in the last war, shews what the Imperialists would do if they met with any treacherous underhand dealings from the Holy See; and therefore it is presumed,

his Holiness will keep as even a hand as possible amongst the Catholick Princes of Europe, and not shew too great partiality where it may be attended with fatal consequences. The greatest misfortune which attends both Naples and Sicily, is their having been for many ages under the dominion of foreigners, who instead of endeavouring to advance the trade, or improve the soil of these countries, are perpetually contriving ways and means how to drain and fleece the natives of the little treasure they have: from whence it comes to pass that two of the most fertile kingdoms in Europe, that abound in corn, wine, oil, silk and fruits; that have a great number of fine ports, and are the most advantageously situated in point of trade of any countries in the world; are really poor, and make a very contemptible figure. The Sovereign taxes and oppresses the nobility and gentry; these again rack and plunder their vassals and tenants; the clergy ravage all, heaping up vast sums, which never circulate in these kingdoms, and the publick interest is neglected by all orders and degrees of men: whereas had they a King of their own, who had no foreign views, he would immediately release the commons from the oppressions of the nobility, and put them into a way to improve the rich product of their soil, to manufacture their own silks, to encrease their shipping, and apply themselves to foreign commerce; and not let the Dutch and other nations run away with all their gains. Then would the estates of the nobility and gentry be doubled in their value, and the commons get a handsom livelihood, whether they applied themselves to trade or husbandry. But while the ministry are only busied in projecting new taxes and impositions, and framing every year new pretences for levying them, not only with a view of filling their own pockets, but to keep the people in a state of poverty and dependence, that they may not be in a condition to resent the injuries they suffer, how miserable must be the condition even of these kingdoms, where nature has been so exceeding lavish in her productions!

But among the inconveniences to be met with in Naples, we may add to those already enumerated the swarms of flies and insects with which they are plagued in summer, especially in Apulia; inasmuch that it is become a proverb, *If any one would have a foretaste of hell-torments, let him spend a summer in Apulia.* The most dangerous insect is the Tarantula, which some resemble to a scorpion, which carries a sting in the tail; and others to a spider. According to the best information I can get, it is that insect which resembles the spider that is the true Tarantula, and this neither bites nor stings, but drops its poison like water on the part it wounds. The other is a real scorpion, an insect not so long as a man's finger, nor so large; of a greenish yellow, which carries its tail with the sting in it coiled up upon its back, and moves so slowly that it is very easy to get away from it. The cure for the one and the other, according to some travellers, is musick; but in India, where scorpions are common, the cure is an oil drawn from the insect, or the bruising him upon the place. The effect of his sting is a most exquisite pain, which makes a man almost distracted, so that he runs about like a madman for twelve hours, when the pain begins to abate, and is usually removed within twelve hours more; but I never heard of the party's

CHAP.

Kingdom  
of Naples.

C H A P.  
XXVII.  
Kingdom  
of Naples.

party's dancing or being affected by musick in India, as those are who are wounded by the true Tarantula. One who happened to be stung by a scorpion in India, told me the pain he suffered was as great as if a hot iron had been applied to the part for twelve hours; but it is very seldom any person dies of the sting of a house-scorpion. There is, I am informed, a black wood-scorpion, whose sting is mortal. But let us hear what our voyage-writers say of the Tarantula which they resemble to a spider. Misson says, that the party wounded by it makes a thousand different gestures in a moment; he weeps, dances, vomits, trembles, laughs, grows pale, cries, swoons away, and after a few days torment expires, if he be not assisted in time: that he may find some relief from sweating antidotes, but musick is the great and only remedy. VERYARD acquaints us, that the Tarantula is a small animal or insect resembling a spider, found chiefly about the city of Taranto, so strangely venomous, that those who are bitten by it infallibly die, unless some speedy means be used to expel the poison; and though they seem to be cured, there usually lurks a remaining ferment in the blood, which shews it self by several odd symptoms during the hot months of every summer, as long as they live. It stupifies the senses of some, and makes them drowsy; others become apish and extravagant in their actions; others rave, and are as unruly as madmen. There is no remedy against the venom, he says, but musick; nor will all kinds of harmony do the feat, but when the patient hears a tune that suits with his humour, he immediately expresses the utmost satisfaction, and falls a dancing with all his might till his strength fails him, and the same dance is repeated three or four days together till the poison is expelled. I know, says VERYARD, that several eminent men have questioned the truth of this, as I did till I was put out of all doubt of it by several persons of unquestionable worth and credit, who had been eye-witnesses of what I here write.

I proceed next to the description of the Italian islands.

#### C H A P. XXVIII.

*Treats of the Italian islands, and particularly of the island of Sicily.*

C H A P.  
XXVIII.  
The Italian  
islands.

THE Italian islands which lie in the gulph of Venice, have been already described: I come now to those which lie south-west of Italy in the Tuscan sea; which are, 1. Sicily, with the Lipari islands, and those of Lavanza, Maritima and Favagnana belonging to it. 2. The islands of Capri, Ischia, Procida, Ponza, &c. on the coast of Naples. 3. The islands of Elba, Capraia, Gorgona, &c. on the coast of Tuscany. 4. The islands of Sardinia: And, 5. The island of Corsica.

Sicily.

I begin with Sicily, not only because it is the largest, and in many other respects the most considerable, but because it has the same Sovereign with Naples, the kingdom last described.

The name.

Sicily, anciently called *Trinacria*, from its triangular figure, and *Eibinea* by the Poets, from the famous Mount Etna, is said to have obtained the name of Sicily, from the Siculi, an Italian people who planted part of this island, which is situated between 37 and 38 degrees 40 minutes north latitude, and between the 12th and 16th degrees of longitude, reckoning from the meri-

Situation  
and extent

C H A P.  
XXVIII.  
Kingdom  
of Naples.

dian of London, being about 170 miles in length from east to west, and 100 in breadth from north to south in the broadest part. It lies in a very warm climate, but healthful air, being refreshed with cool breezes from the seas and mountains, having the Tuscan sea on the north, which is much the longest side of the triangle; the Faro, or streight of Messina, and the Ionian sea towards the east; and another part of the Mediterranean sea on the south-west, distant from the shores of Calabria, the south-west part of Italy, about seven miles. There is not a country in Europe whose hill and plains are more fruitful, which occasioned its being stiled the granary of Rome. There are also plenty of springs and rivers, but few of their rivers navigable, because they fall into one sea or other at a little distance from their source. The principal are, 1. That of Thermini, which falls into the bay of Salanto, in the north part of the island. 2. The Chantera, which rises about Mount Etna, and falls into the eastern sea near Taormina. 3. The Laretta, which has its source about the middle of the island, and discharges it self into the bay of Catanea on the east part of the island: And, 4. The river Salta, which rises in the north part of the island, runs almost cross it, and falls into the sea to the southwards of the island. The principal mountains are those of Mount Etna or Gibello, Madoni, and Afdonis. Their best harbours are Messina and Syracuse on the east part of the island, Melazzo on the north, Palermo on the north-west, and Trapano on the west.

Springs  
and Ri-  
vers.

Moun-  
tains.

Harbours.

Sicily is usually divided into three parts, or provinces, which take their names from so many fine valleys, viz. 1. The valley of Demona. 2. The valley of Mazara: And, 3. The valley of Noto.

The valley of Demona is bounded by the Tuscan sea on the north; by the streights of Messina and the Ionian sea towards the east; by the valley of Noto on the south; and by the valley of Mazara towards the west. The chief towns are, 1. Messina. 2. Diveto. 3. Melazzo. 4. Tindari. 5. Patti. 6. St. Marco. 7. Cefaledi. 8. Nicosia. 9. Catanea; and, 10. Taormina.

Chief  
towns.

Messina, is situated on the sea-coast at the north east part of the island, from whence the neighbouring streight, which divides Italy from Sicily, is denominated the streight of Faro or Messina. It has a large secure harbour, along one side of which the town stretches it self between the mountains and the sea, lying about 12 or 14 miles to the westward of Rhegio in Calabria, and about as many to the southward of Cape Faro, in 38 degrees 30 minutes north latitude, 15 degrees 40 minutes to the eastward of London. The town is of a great length, and makes a fine appearance towards the sea; the houses being lofty, and built of stone, but it does not answer a traveller's expectation however when he comes into it, for the streets are narrow, and ill-paved, and consequently dusty: The Italian proverb says, *They have dust, fleas, and robbers in abundance.* And I presume they give the same reason for building narrow streets here, as they do in some towns of Italy, namely, to shade them from the scorching sun. The city is not strong, as appears by the poor defence it made in the late war; but there is a castle and some forts which held out a considerable time after the town was taken. It is a populous trading place, and continues to furnish Italy with corn, as it did in the time of the Romans; great quantities

CHAP.  
XXVIII.  
Italian I-  
lands.

ties also are exported to Spain and other parts in foreign bottoms: They have also a good trade in silk, oil, and fruits; and indeed, they want nothing but shipping, and a Prince of their own to render them considerable. They have large privileges, and the civil government is committed to their own magistrates; subject however to the controul of the Emperor's Viceroy and officers, who are in possession of the castles, which command the town; and tho' they might be indulged before their last revolt to the Spaniards, the Imperialists probably will keep a strict hand over them for the future, since they have been obliged by their disaffection in a manner to make a new conquest of the island.

An earth-  
quake.

There happened an earthquake in this city in January 1693, which overturned 24 palaces, and shook the rest of the town; whereupon the people fled in the utmost consternation, some to the fields, and others to the churches to prayers, especially to the cathedral, where the Archbishop preached, and gave absolution, as the Priests did in all parts of the city. They apprehended their last hour was approaching; and surely nothing could be more terrible, for not only the earth shook and threatened to lay their city in ruins, but the thunder and lightning which happened at the same time was equally dreadful, the air being all in a flame: however, they escaped much better than the rest of the great towns on the same side of the island, as Syracuse, Augusta, Catanea, &c. which were in a manner totally destroyed.

Melazzo.

Melazzo is situated on the Tuscan sea, about twenty-five miles north-west of Messina, and has a good harbour. The Imperialists looked upon this town to be of such consequence, that they made it a place of arms in the last war, and defended it with great vigour against the Marquis de Lede the Spanish General, after he had taken the castles of Messina; tho' some are of opinion, that it cost both sides a great deal more than it was worth; however, here the Imperialists maintained their ground till such reinforcements joined them from Italy as made them masters of the field in the year 1719.

Patti.

Patti is a port-town on the same coast, about five and twenty miles to the westward of Melazzo, a pretty good harbour, and a Bishop's See, suffragan to Messina.

Cifalu.

Cifalu, or Cefaleddi, situate on a cape or promontory fifty miles to the westward of Patti, is said to have a secure harbour, defended by a castle, and a very good trade, and is the See of a Bishop, suffragan to Messina.

Nicosia.

Nicosia is a large town, situate on a mountain forty miles to the southward of Cifalu, but I meet with no further description of it.

Taormina

Taormina is a little fortified town, situated on the sea-coast, thirty miles to the southward of Messina, supposed to be the ancient *Tauromenium*.

Franca  
Villa.

To the eastward of this place lies Franca Villa, remarkable for an obstinate battle fought near it, on the twentieth of June 1719, where the Spaniards being strongly entrenched, maintained their posts against the Imperialists, and sung *Te Deum* for the victory: the Imperialists, on the other hand, laying siege to Messina after the battle in the face of the Spaniards, affirmed that victory was on their side. Certain it is, there were a great many men killed and wounded on both sides; and among the rest, Count MERCI, General of the Imperialists, was dangerously wounded with a

musket-ball; as was also Mr. BYNG, the English Admiral's son, who was a volunteer in this engagement: but both of them recovered.

Catanea stands on a bay to which it communicates its name, about thirty miles south-west of Taormina, near the foot of Mount Etna, by eruptions from whence and earthquakes it has suffered very much, especially in the years 1669 and 1693, but is still a town of some consequence. At the beginning of the earthquake, which happened in January 1693, the sea retired from the shore above two miles, whereupon the people run to the cathedral in the greatest consternation, to deprecate the wrath of heaven; but the church and city was however overturned in a moment, and not less than eighteen thousand people perished in the ruins, besides the maimed and wounded, who were dug out of the rubbish: but it is said, one of the Canons of that church, who carried about the reliques of St. AGATHA, the patroness of the city, happened to be saved by a partition-wall that was left standing, wherein the reliques of that Saint were kept; which was looked upon by the devout people of the place as a miracle. In September following there happened another earthquake at Catanea, and in the neighbouring country, which did not do much damage; but it was observed, that during the most violent shocks, the top of Mount Etna was considerably sunk, whereupon the Vicar-General, the Duke of Canastra, who was then at Catanea, sent people to view it, who perceived that the top was fallen in near six hundred foot, and that all the earth was tumbled down into the gaping chasm about it, which was near six miles in circumference. At the same time all the fountains about Taormina were dried up, and the earth gaped at the foot of a hill about a mile distant, and out of the overture broke forth five or six torrents of sulphureous water of different colours, which put the island in general in a great consternation.

Catanea is rendered famous by the two pious brothers, as they are called, AMPHINOMUS and ANAPIUS, natives of this place, who seeing a torrent of fire breaking out from Mount Etna, and finding their aged parents unable to shift for themselves, took them on their backs and fled; and when the sulphureous stream had in a manner overtaken them, on a sudden it divided itself into two branches, and left them room to escape: in memory whereof the citizens of Catanea erected a magnificent monument, and ordered an anniversary festival to be kept, that their names might be transmitted to posterity, as SENECA, PAUSANIAS, and other ancient authors relate.

From Catanea to the top of Mount Etna there are two ways, the shortest and steepest being about twenty miles, and the other thirty: the first ten miles of the way is full of towns and villages, vineyards and plantations, which are rendered fruitful by the burnt matter thrown out of the mount, that is dissolved by the rain. The next ten miles is exceeding pleasant, planted with vines and fruit-trees, intermixed with corn and pasture grounds, with little rivulets running down the mountain: the upper part is planted with fir-trees, pines and beech, which seem to reach the sky, and is almost unpassable; and in some places there are clefts and cracks in the earth, from whence there issues smoke, with several little hillocks which have been raised by

CHAP. XXVIII.  
Italian Islands.

Beyond this the mountain is surrounded with a circle of snow till you come to the grand Volcano on the top, which continually sends forth smoke and flames, and is sometimes four, sometimes six miles in circumference, more or less; according as the eruptions have been, hills are raised at one time, and at another sunk, so that the face of it seldom continues many years the same. Those that pretend to have seen this terrible cavern, relate, that the sides of it are encrusted with sulphur, that sometimes there issues a pure flame, and at others a mixture of smoke and ashes, and that the noise of this burning pit is inconceivably dreadful. As this hill is much larger than that of Mount Vesuvius, being three or four score miles in circumference at the bottom, so the eruptions seem to have been more frequent and much more dreadful.

The valley of Mazara.

Chief towns.

Palermo.

The second division of Sicily is the valley of Mazara, which has the Tuscan sea on the north; the valleys of Demona and Noto on the east; and the Mediterranean on the south and west; being about ninety miles in length, and seventy in breadth. The chief towns whereof are, 1. Palermo. 2. Montreal. 3. Mazara. 4. Gergenti. 5. Marfala. 6. Trapani: And, 7. Castella Mare.

Palermo is situated on the sea-coast, on the north-west part of the island, about an hundred and fifty miles to the westward of Messina, in a most fruitful country, and has the advantage of a good harbour, and a brisk trade; the town is also well built, and the usual seat of the Viceroy, and the See of an Archbishop. When the Spaniards under the Marquis de Lede invaded Sicily in July 1718, Count MAFFEI, Viceroy of the King of Sicily, did not think fit to make any defence here, but quitted the city and retired to Messina; whereupon the magistrates offered their keys to the Spanish General, and a few days after the castle surrendered; from whence it is evident, that Palermo is a place of no great strength. The Imperialists afterwards took possession of this city in the year 1720, upon the treaty of convention with the Spaniards for their evacuation of Sicily, and are still in possession of it.

An earthquake at Palermo, an. 1726.

On the second of September 1726, between ten and eleven at night, some shocks of an earthquake were felt here, which at first were not very violent, but soon after increasing, it continued with great violence for the space of twenty-four or twenty-five minutes; by which most of the churches in the city, and a fourth part of the houses were overturned and entirely ruined. In the ward of St. CLARA a whole street gaped on a sudden with a dreadful noise, from whence broke out flames mixed with calcined stones, and a torrent of burning sulphur, which in less than half an hour reduced the whole ward to ashes. The Governor used his utmost endeavours to spirit up the people, and to stop the inhabitants who hurried into the fields instead of helping to quench the fire; but seeing it was to no purpose, and that even the garison were astonished, he let them go. Those who lived along the coast betook themselves to the ships that lay in the port; and it is computed that six thousand persons were buried in the ruins, besides those who perished in the ward of St. CLARA. It was observed, that the same day the air was extreme sultry, and overcast with thick and dark clouds, and that between five and six in the afternoon a very hot south wind began to blow, followed by a great shower, which did not at all abate the

wind: the storm seemed something calmed in the dusk of the evening; but between nine and ten the wind grew fiercer, and the shower fell heavier, which was soon followed by this terrible earthquake. For several days after the earthquake, the people seemed to be wonderfully reformed, exceeding humble and penitent, going in procession every hour of the day with scourges in their hands disciplining themselves; the Ladies dressed in mourning, wore crowns of thorns, and lashed themselves till the blood followed; and it was generally apprehended, that this calamity was a mark of God's wrath and vengeance for the extravagance of the inhabitants, because no other part of the kingdom suffered ten miles distant from the city.

Mont-real, *Mons Regalis*, is a little well-built town, situated on a hill, about five miles south-east of Palermo.

Mazara, or Mazara, is situated on the sea-coast, in the south-west part of the island, about fifty miles south-west of Palermo; is a large handsome trading town, and has a good harbour, the See of a Bishop, suffragan to Palermo.

Gergentum, or Agrigentum, is situated on the same coast, fifty miles south-east of Mazara; a large handsome town, and See of a Bishop, suffragan of Palermo, and one of the ancientest in the island, said to be the capital city of the tyrant PHALARIS, who tortured PERILLUS in the brazen bull he had contrived to torment others.

Trapano is a port-town, with a good harbour, in the west part of the island, about thirty miles south-west of Palermo. It was anciently one of the most considerable places in the island, and long defended by the Carthaginians against the Romans; near it lies Mount Erya, now Monte Trapano, where, according to tradition, ANCHISES was buried.

The valley of Noto, the third division of Sicily, is bounded by the valley of Demona on the north; by the Ionian sea towards the east; by another part of the Mediterranean on the south; and by the valley of Mazara on the west: the chief towns whereof are, 1. Noto. 2. Syracusa. 3. Augusta.

Noto is situated on the top of a mountain, surrounded with high rocks, near the south-east part of the island, about seven miles from the sea, twenty-five to the southward of Syracusa, and twelve north-west of Cape Passaro; and is a large populous place, from whence this province or division takes its name.

Syracusa is situated at the east end of the island, on a neck of land in the Ionian sea, about forty miles to the southward of Catania; once the capital of a flourishing state, of a vast extent, rich and populous; but was demolished in the ninth century by the Saracens, and afterwards almost ruined by the same earthquake in 1693, which overturned Catania; and several other towns upon this coast. In the first Punic war it held out a siege of three years against the Romans, by the direction of that eminent mathematician ARCHIMEDES, who was killed at the storming the town, contrary to the intention of MARCELLUS the Roman General, who had generously given orders to save his life. Here in the time of the Greeks reigned AGATHOCLES, and after him several Kings or Tyrants, as they were called, by the name of DIONYSIUS. One of the principal curiosities shewn to travellers is a grotto, said to be cut out of a rock by one of their tyrants

CHAP. XXVIII.  
Italian Islands.

CHAP. XXVIII. of a man's ear, so artfully contrived, that he could hear the least whisper in a room he had over it. In this grotto therefore he used to confine those he thought disaffected to his government, and thereby discover their plots against him. The place is about forty foot in height, and twenty in length. The town is so well situated for trade, and has so excellent a harbour, that people have been induced to resort thither again, and build some part of it, and it is still a Bishop's See, but there is very little appearance of its ancient splendor. As to the produce of the island of Sicily, it is the same with that of Naples, only there is every thing here in a much greater abundance; particularly corn, wine, oil, fruits and silk, in which they have a good trade, tho' they lose great part of the profit of this rich product by suffering it to be exported in foreign bottoms, and not improving their commerce abroad.

Augusta. Augusta was a strong fortress, situate on a peninsula, five and twenty miles to the northward of Syracuse, inhabited by the Knights of St. JOHN of Jerusalem, after their expulsion from Rhodes by the Turks, till the Emperor CHARLES V. gave them the island of Malta, about the year 1530. It was a place of trade, and had a good harbour, but was miserably destroyed by the earthquake and eruptions from Mount Etna, at the same time with Catania and Syracuse, in the year 1693.

Lipari islands. The islands of Lipari, which belong to Sicily, called by the ancients *Æolie* and *Vulcania*, and by the Poets feigned to be the seats of *ÆOLUS* and *VULCAN*, lie about thirty or forty miles to the northward of it; and are, 1. Lipari. 2. Hiera. 3. Rotto. 4. Strombolo. 5. Panaria. 6. Didima. 7. Felicur: And, 8. Alicur. Lipari, which gives name to the rest, is the largest, being about twenty miles in circumference, and has a good town in the middle of it of the same name. The situation of this and the rest of the islands will be seen in the map bound up with this volume. They have nothing considerable in them that deserves a particular notice, unless it be that Strombolo and Hiera have fiery Vulcano's issuing out of them, whose flames are seen a great way at sea. The islands of Levanzo, Maritima and Favagnana, lie at the west end of Sicily, but have nothing in them that merits a particular description.

An abstract of the history of Sicily. The first inhabitants of Sicily are said to be the Cyclopes and Lestrigones, a gigantic and savage race of men. After these, the Iberi from Spain settled here under the conduct of their General SICANUS. Then the Siculi, from Sicily in Italy, came over hither, from whom, it is said, to have received its name. After these, colonies of Phœnicians from Tyre and Sidon planted themselves on the coast, but were driven from thence by the Greeks, who introduced their laws and language, and in a manner new-peopled it. The Carthaginians afterwards made themselves masters of part of the island, till the Mamertines, or people of Messina, called in the Romans to assist them against HIERO, King of Syracuse, and his allies the Carthaginians. This produced a long and bloody war between the Roman and Carthaginian States, which ended in an entire conquest of this island by the Romans, who reduced it into the form of a province, it having never been under the dominion of any one power before,

but was divided into several little kingdoms and states. Upon the declension of the Roman Empire, it followed the fortune of the kingdom of Naples, till the famous Sicilian Vespers in the year 1282, when it came into the hands of the Spaniards, who enjoyed almost an uninterrupted possession of the island till the peace of Utrecht, anno 1713, when it was agreed by all the parties to that treaty, that it should be conferred on the Duke of Savoy, with the title of King of Sicily; but the King of Spain, under pretence that the Emperor had not acknowledged his title to Spain and the West-Indies, as the confederates had engaged he should, first invaded Sardinia, and made himself master of it in the year 1717, and the next year invaded Sicily, landing 17000 men near Palermo, under the command of the Marquis de Lede, on the first of July; whereupon the Viceroy for the Duke of Savoy quitted Palermo, and retired to Messina. On the 17th of the same month, the Spanish fleet, with most of their infantry on board, sailed from Palermo, and appearing before the fort or tower of Faro on the 22d, the Piedmontese quitted it, and the Spaniards landed and took possession of the fort, and having joined their cavalry, advanced to Messina, while their fleet came into the Faro, or channel, and detached some men of war and galleys to block up the harbour. The same day the Piedmontese troops quitted the town, and retired into the citadel and fort of St. SALVADORE; whereupon the magistrates waited on the Marquis de Lede the 24th, and delivered him the keys of the town, of which he immediately took possession. Upon the first of August N. S. the British fleet under Sir GEORGE BYNG arrived at Naples, having been detached thither, as was given out, in order to see the peace of Utrecht preserved; and the 10th of the same month, or the 30th of July, O. S. the British Admiral came before Messina, whereupon the Spanish fleet made to the southward, and were pursued and defeated by Sir GEORGE; of which action he sent the following account to England by his son the honourable PATTEE BYNG, who came express with it, which I chuse to insert verbatim, because so great a stress seems to be laid upon the circumstances of the engagement at this time, some affirming that the British fleet were the aggressors, and others that the Spaniards began the fight.

From on board the *Barfleur* off of Syracuse, 6 August O. S. 1718.

‘ Early in the morning on the 30th of July, as we were standing in for Messina, we saw two scouts of the Spanish fleet in the Faro very near us; and at the same time a Felucca (a small vessel) coming off from the Calabrian shore, assured us they saw from the hills the Spanish fleet lying by: upon which the Admiral stood through the Faro (or streight) after the scouts, judging they would lead us to their fleet, which they did, for before noon we had a fair sight of all their ships as they were drawing into a line of battle, their fleet consisting of 26 men of war, great and small, 2 fire-ships, 4 bomb-vessels, 7 galleys, and several ships with stores and provisions. The Admiral ordered the *Kent*, *Superbe*, *Grafton*, and *Orford*, being the best sailers in the fleet, to make what sail they could to come up with the Spaniards, and that the ship which could get headmost and nearest to them, should carry the lights usually worn by the Admiral, that he might not lose sight of them in the night, and

CHAP. XXVIII. Italian Islands.

The sea-fight between the British and Spanish fleets.

he made what sail he could with the rest of the fleet to keep up with them. It being little wind, the Spanish galleys towed their heaviest sailers all night. The 31st in the morning as soon as it was day, they finding us pretty near up with their fleet, the galleys and smaller ships, with the fire-ships, bomb-vessels and store-ships, separated from the Admiral and bigger ships, and stood in for the shore; after whom the Admiral sent Captain WALTON in the Canterbury, with the Argyle and six ships more. As those ships were coming up with them, one of the Spaniards fired a broad-side at the Argyle: The Admiral seeing those ships engaged with the Spanish which were making towards the shore, sent orders to Captain WALTON to rendezvous after the action at Syracuse, where the Viceroy for the King of Sicily was with a garison. The like orders he dispatched to the flags, and to as many ships as were within his reach, that place being defended against the Spaniards, and being the most proper port on that coast for the fleet to gather together again. We held on our chase after the Spanish Admiral, with three of his Rear-Admirals, and the biggest ships, which staid by their flags, till we came near them. The Captains of the Kent, Superbe, Grafton, and Orford, having orders to make what sail they could to place themselves by the four headmost ships, were the first that came up with them. The Spaniards began by firing their stern-chace at them, but they having orders not to fire, unless the Spanish ships repeated their firing, made no return at first; but the Spaniards firing again, the Orford attacked the Santa Rosa, which some time after she took. The St. Charles struck next without much opposition, and the Kent took possession of her. The Grafton attacked the Prince of Asturia's, formerly called the Cumberland, in which was Rear-Admiral CHACON; but the Breda and Captain coming up, she left that ship for them to take, which they soon did, and stretched a-head after another 60 gun ship, which was on her starboard-

bow while she was engaging the Prince of Asturia's, and kept firing her stern-chace into the Grafton. About one o'clock the Kent and Superbe engaged the Spanish Admiral, which with two ships more fired on them, and made a running fight till about three, when the Kent bearing down upon her, and under her stern, gave her a broad-side, and went away to the leeward of her; when the Superbe put for it, and laid the Spanish Admiral on board, falling on her weather-quarter; but the Spanish Admiral shifting her helm and avoiding her, the Superbe ranged up under her lee-quarter, on which she struck to her. At the same time the Barfleur being within shot of the said Spanish Admiral astern, inclining on her weather-quarter, one of their Rear-Admirals and another 60 gun ship, which were to the windward of the Barfleur, bore down and gave her their broad-sides, and then clapped upon a wind, standing in for the land. The Admiral in the Barfleur stood after them till it was almost night; but it being little wind, and they galing from him out of reach, he left pursuing them, and stood away to the fleet again, which he joined two hours after night. The Essex took the Juno; the Montague and Rupert took the Volante. Vice-Admiral CORNWALL followed the Grafton to support her, but it being very little wind, and the night coming on, the Spaniards galed away from the Grafton. Rear-Admiral DELAVALL, with the Royal Oak, chased two ships that went away more leewardly than the rest, (one of them said to be Rear-Admiral CAMMOCK) but we not having seen them since, know not the success. The ship that suffered most with us was the Grafton, the Captain of which, though he had not the fortune to take any particular ship, yet was engaged with several, behaved himself very much like an officer and a seaman, and bid fair for stopping the way of those four ships that he pursued; who got away not through his fault, but failure of wind, and his own sails and rigging were much shattered.

## A list of the Spanish ships taken and destroyed off Cape Passaro.

Ships.	Guns.	Men.	Commanders.
1. St. Philip the Royal.	74	650	Vice-Admiral CASTAGNETA.
2. Prince of Asturias	70	550	Rear-Admiral CHACON.
3. Royal	60	400	Rear-Admiral Marquis DE MARI.
4. St. Charles	60	400	Prince CHALAY.
5. St. Isabella	60	400	Don AND. REZIO.
6. Santa Rosa	56	400	Don ANT. GONZALES.
7. St. Isidoro	46	300	Don MANUEL VILIVICENTIA.
8. Anna Volante	44	300	Don ANT. ESCUDERA.
9. Surprize	44	250	MICH. SADAY, Knight of Malta.
10. Juno	36	250	Don PEDRO MOYANA.
11. Eagle	24	240	Don LUCAS MASNATA.
12. Tyger	26	240	MONTIER CAVAIGNE.

## Burnt and destroyed.

1. Esperance	46	300	Don JUAN DELFINO and BLANDINA.
2. Hermione	44	300	Don RODERIGO DE TORRES.
3. Porcupine	44	250	A Frenchman.
4. Pearl.	50	300	Don GABRIEL ALDERETE.

Burnt also two fire-ships, two Bomb-vessels, and one fattee.

Another ship of thirty or forty guns was taken, and twelve escaped, besides a bomb-vessel and seven galleys, of which the Spanish fleet was composed.

The English fleet consisted of the Barfleur, in which was the Admiral, of 90 guns and 730 men; nine 70 gun ships; one 80 gun ship; seven 60 gun ships; two 50 gun ships; and one 40 gun ship; in all 21: besides 2 fire-ships, 4 bomb-vessels, an hospital-ship, and a store-ship.

After this engagement the English Admiral sailed to Syracuse, the place appointed for the rendezvous, where he was joined by the rest of the fleet, and from thence he went to Rhegio in Calabria, leaving Admiral CORNWALL with ten men of war at Syracuse, to convoy the ships taken.

CHAP.

Italian  
Islands.

ken. In the mean time the Germans embarked a thousand men at Rhegio, and threw them into the castle of Messina, which could not however prevent its being taken, that fortrefs surrendering to the Marquis de Lede the 29th of September, and the garison was transported to Rhegio. The Imperialists and Piedmontese still kept possession of Syracusa and Melazzo, waiting for reinforcements from Italy to enable them to act offensively. But before we proceed farther in the relation of the Sicilian war, it is but just to see what account the Spaniards give of this enterprize of the British fleet, and how that court resented it.

The Spanish account of the engagement at sea.

The Spanish relation says, That on the 9th of August N. S. in the morning, the English squadron was discovered near the tower of Faro, and lay by towards night off of Cape de la Martelle, over against the said tower. The Spanish squadron was then in the Streight or Faro of Messina; and as the intention of the English in coming so near was not known, the Admirals of the Spanish squadron resolved to go out of the Streight, and join together near cape Spartivento, (the most southerly cape of Calabria) carrying the transports laden with provisions with them, that they might the better penetrate into the designs of the English; and the rather, because the officer whom Sir GEORGE BYNG had sent to the Marquis de Lede, to propose a suspension of arms for two months, was not returned; to whom the Marquis answered, That he could not consent to it without orders from his court. And though it was believed that the alternative was taken of sending a courier to Madrid with the said proposal, yet the English squadron took the opportunity of the night to surprize the Spanish squadron, and to improve those advantages which were owing to dissimulation.

The English squadron on the tenth advanced farther into the Faro, and was saluted by all the Spanish ships and vessels that were there. And it is to be observed, that Admiral BYNG having convoyed some transport-vessels from Naples as far as Rixoles in Calabria, with the Archduke's (the Emperor's) troops, the officer he sent to the Marquis de Lede, declared, that it was not to commit any act of hostility, but only that those transports might be secured from insults under his protection. The Spanish squadron sent two light frigates to get intelligence of the English squadron, and though they saw that the English made all the sail they could (their intention being not known) to approach the Spanish squadron, whose Admiral knew not then whether the English came as friends or enemies, yet the Spaniards being two leagues from the English, resolved to retire towards Cape Passaro, but without making much sail, that it might not be thought they suspected any hostilities.

During this a calm happened, by which the ships of both squadrons fell in one among another, and the Spanish Admiral perceiving this accident, caused the ships of the line to be tow'd, in order to separate them from the English, and join them in one body, without permitting the galleys to begin any act of hostility, which they might have done to their advantage during the calm. The weather changed when the Marquis of Mari was near land, and by consequence separated from the rest, making the rear-guard with several frigates and other transport-vessels, which made up his division, and endeavoured, though in vain, to join the main body of the Spanish squadron, while

VOL. II.

the English held on their way (their dissimulation filling their sails) to gain the wind, and cut off the said division of the Marquis de Mari; and having at last succeeded in it, they attacked him with six ships, and obliged him to separate from the rest of the squadron, and to make towards the coast, where they stood it against seven ships of the line; till being no longer able to resist, the Marquis de Mari saved his men by running his ships a-ground, some of which were burnt by his own order, and others taken by the enemy. 17 ships of the line, the remainder of the English squadron, attacked the Royal St. Philip, the Prince of Asturia's, &c. (mentioned in the English account) which continued making towards Cape Passaro; and as they retired in a line, because of the inequality of their strength, the English attacked those that composed the rear guard with four or five ships and took them, and this happened successively to the others, which notwithstanding all the sail they made, could not avoid been beaten: inso much that every Spanish ship being attacked separately by five, six, or seven of theirs, after a bloody and obstinate fight they made themselves masters at last of the Royal St. Philip, the Prince of Asturia's, &c.

Immediately after the fight, a Captain of the English squadron came in the name of Admiral BYNG to make a compliment of excuse to the Marquis de Lede, giving him to understand, that the Spaniards had been the aggressors, and that this action ought not to be looked upon as a rupture, because the English did not take it as such. To which it was answered, That Spain on the contrary would reckon it a formal rupture, and would act against the English in a hostile manner, and do them all the damage imaginable, by giving orders to make reprisals, &c.

Upon the arrival of the news of the defeat of the Spanish fleet at London, Mr. CRAGGS, Secretary of State, sent the following letter to the Marquis de Monteleone, the Spanish Ambassador here, dated August 28.

*May it please your Excellency,*

HIS Majesty hath commanded me to acquaint you, that he hath received certain advice of the defeat of the Spanish fleet on the coast of Italy by his Admiral Sir GEORGE BYNG. Nothing could have moved his Majesty to this step, but the strict regard he bears to treaties, by which his Majesty was obliged to preserve the peace and neutrality of Italy. I am further commanded to assure your Excellency, *That this proceeding would have been entirely disagreeable to the sentiments of his Majesty, had not the King of Spain made it absolutely necessary, by his rejecting all offers of accommodation, and committing hostilities on the dominions of a Prince in peace with the whole world.* That his Majesty is firmly determined, by the blessing of God and the assistance of his allies, to establish the peace of Europe on such a footing, as to put it out of the power of any one Prince or Potentate to disturb it hereafter.

To which the Spanish Ambassador answered, That after such an unexpected hostility, he could not act in any affair till he had received further instructions, and acquainted the court of Spain with the purport of the letter he had received from Mr. Secretary CRAGGS, and the answer he had given to it. Whereupon Cardinal ALBERONI, the prime Minister of Spain, sent the Marquis of Monteleone the following letter.

sea-fight.

**SIR,**  
**JUST** as I was computing your Excellency might be informed of the unworthy action committed by Admiral BYNG against the King's Squadron, I received the copy of the letter your Excellency wrote upon that subject to Mr. Secretary CRAGGS, to let him know, that after such an unexpected hostility you were obliged to refrain from the functions of your pacifick ministry, and that to maintain the King's honour, and that of your character, you must avoid all manner of intercourse. Having delivered the said copy to his Majesty, he very much approved what your Excellency had written, and the justness of the expressions you made use of to expose the breach of faith of that ministry, in relation to the over-hasty proceedings of Admiral BYNG, when nothing was pretended to but a mediation to facilitate the project of peace, or at most to defend the territories actually in the possession of the Archduke in Italy, when my Lord STANHOPE was in Spain at a small distance from court, to propose projects of peace and a suspension of arms. And lastly, in the very instant when the King our master, to give new proofs of his royal circumspection, had ordered the effects of the English brought to Cadiz in the last Flota which arrived there from the Indies, not to be touched, but that every man of that nation should have what respectively belonged to him.

In truth, no impartial man can hear without surprize, that the fleet of his Britannick Majesty, commanded by Sir GEORGE BYNG, did, without any provocation, necessity, or pretence, and forgetting the title of Peaceful Mediator, which his master assumes to himself, together with the interests of Great Britain, attack the fleet of Spain, only to frustrate the expedition against Sicily; after having been at Naples to concert with Count THAUN so base an action; *received great sums of money by way of supposed arrears*; and finally, having come near Messina, and sent trusty officers to confer with the commanders of the King's army, and to assure them that he would commit no act of hostility.

The greatest part of Europe is impatient to hear how the British Ministry can justify themselves to the world after so rash a violence. If they recur to the feeble argument, to say that Admiral BYNG's instructions were to maintain the neutrality of Italy, who is ignorant at this time of day, that that neutrality hath long been at an end? And that the Princes who guaranty the treaties of Utrecht, are entirely free and discharged from their guarantee? Every body knows that the guaranty of the suspension of arms in Italy was revoked and annulled, not only by the scandalous breaches which the Austrians made in the ill-performed evacuation of Catalonia and Majorca, and by other subsequent outrages, but also by reason that the said guaranty, taken in its literal sense, was no longer binding than till the peace was made with France, and the Princes guarantees ought no otherwise to maintain it than by their mutual good offices. Upon these grounds every one may make his own reflections. What will the world say, to see that after the said neutrality had, for the reasons above alledged, lain dormant for four years, the ministry of London would fain revive and support it, not by the employment of a friendly mediation, but by open force, and the scandalous artifice of abusing our security and confidence?

This is so certain and indubitable, and Admiral BYNG found himself so perplexed with the remorse of his injurious conduct, that in the account he gives of this naval fight, knowing that he had no motive or reasonable pretence to fall foul on the Spaniards, he betakes himself to the shift of supposing, quite contrary to truth, that the King's ships first ranged themselves in line of battle, and fired upon the English. But that which is most surprizing is, that he lays it down for fact, that he sent orders to his ships not to fire upon the Spaniards. If he had no design to attack them, if he had a mind to treat them as friends, why did he pursue them from the Straights of the Faro to the height of Syracusa? Why did he send four of the best sailers in his fleet in all haste, with orders to come up with the Spaniards? And why, lastly, did he follow them with the rest, after having given them his own lights, unless it was not to lose sight of the Spanish fleet during the night? This step, which is so extraordinary, was not certainly taken with the view only of saluting the Spanish fleet in so nice and critical a juncture, after having conveyed to Rioxles in Calabria a considerable part of the Austrian infantry.

The remainder of this letter ascribes this enterprize to the ministry, and seems to excuse both his British Majesty and the nation in general from promoting it; but concludes however with recalling the Spanish Ambassador, the Marquis de Monteleone.

In a second letter of Cardinal ALBERONI to the Marquis of Monteleone, he says, men are universally surprized at the arrival of the first Minister of Great Britain (Earl STANHOPE) at the court of the Catholick King, there to make proposals of peace and of suspension of arms, at the same time that the naval force of the Potentate who should have been mediator, was performing the actions of an open rupture. It does not suffice to say, that a rupture might and must be predicted by the demand which the Lord STANHOPE made of a pass for the security of his person in his Majesty's dominions, and it is needless to repeat what passed between the Marquis de Lede and Sir GEORGE BYNG while he was in Sicily about a suspension of arms, because no body is ignorant that the Marquis de Lede was not authorized to treat, and that his instructions required nothing else of him than to recover that kingdom, without impowering him to enter into a negotiation of peace; and it is very customary to demand passes to secure one's self against accidents, and to shew the mutual respect that nations have for each other: but it is no where to be found in history, nor is it compatible with good faith, neither have the most barbarous people yet learnt the maxim of sending a Minister from one court to another with the character of Mediator, there to treat of peace, and executing at the same time the utmost rigours of war.

It is observable, that among other inducements to prevail with the King of Spain to come into the Quadruple Alliance, before Sir GEORGE BYNG engaged the Spanish fleet, the King of France had promised to obtain for the King of Spain the restitution of Gibraltar; but whether France had any encouragement from the British ministry to make this offer, is left to every man's judgment.

It is observable also, that though Sir GEORGE BYNG justifies his engaging the Spanish fleet, by affirming that they fired first at him, Secretary CRAGGS

lands.

CRAIGS in his letter to the Marquis of Monteleone, the Spanish Ambassador at London, makes no such apology for this hostility; but plainly tells that Minister, that the King of Spain had made it absolutely necessary, by his rejecting all offers of accommodation, and committing hostilities on the dominions of a Prince (Sicily) at peace with all the world. The declaration of war against Spain also, proclaimed the 17th of December 1718, at London, does not suppose the Spanish fleet to begin the engagement, but justifies the Admiral's falling upon them, for the same reasons mentioned in Mr. CRAIGS's letter.

I proceed now to enquire into the progress of this war in Sicily. We left the Spaniards in possession of Palermo, Messina, and indeed of the whole island almost, except Syracuse, Trepano and Melazzo, which held out for the Piedmontese and Imperialists till November 1718, when Sir GEORGE BYNG in a letter to the government from Naples relates, that he had conveyed over so many of the Imperial troops from Italy to Melazzo, that the troops there amounted to 16000 men, for which and other important services, we find the Emperor soon after sent that Admiral his picture set in diamonds of great value.

In May 1719, the British Admiral conveyed over another strong detachment of the Imperial forces from Naples to Melazzo, whereupon the Spaniards were obliged to raise the blockade of that place, and retire thirty miles into the country to Franca Villa, where they strongly entrenched themselves. The first action the Imperialists entered upon was the reducing of the Lipari islands, which they soon effected. On the 20th of June N. S. they attacked the Spanish intrenchments at Franca Villa, but the Spaniards defended themselves so well, that they could not drive them from their posts; in which engagement the Imperial General Count MERCI, and Mr. GEORGE BYNG, now Colonel BYNG, another son of the Admiral's, were dangerously wounded. The Germans did not think fit to renew the attack of the Spanish trenches at Franca Villa after this repulse, but marched forward and laid siege to Messina about the latter end of July, while Sir GEORGE BYNG with the British fleet blocked up the harbour. In the mean time three or four thousand Sicilian peasants armed themselves and fell upon part of the German troops that were quartered in the country, at a distance from their main army, and defeated them, which the Spaniards magnified as a great victory. The city of Messina was however obliged to surrender on the 9th of August. About the latter end of September, Sir GEORGE BYNG conveyed another body of Imperial troops from Genoa, consisting of six or seven thousand men, and being arrived at Messina the 9th of October N. S. advised General MERCI to raise a battery against the Spanish men of war in the Mole, whereby five of them were sunk and the rest disabled; and on the 18th of October the citadel of Messina surrendered, whereupon the Imperialists transported seven or eight thousand men to Trepano, at the west end of the island, in order to reduce Palermo. In January following, Sir GEORGE BYNG conveyed another detachment of the Imperialists to Trepano; but the King of Spain soon after acceding to the Quadruple Alliance, there afterwards happened no considerable action between the Imperialists and Spaniards in Sicily; and on the 6th of May N. S. 1720, the

Imperial General MERCI, Admiral BYNG, and the Marquis de Lede, signed a convention for a suspension of arms, and the evacuation of Sicily, by which the Spanish troops in this island were to be conveyed by the British Admiral to Spain. His Catholick Majesty by the Quadruple Alliance renounces all rights and claims whatsoever upon the Kingdoms and provinces possessed by his Imperial Majesty in Italy, and his right of reversion to Sicily, which was reserved to him by the treaty of Utrecht. And by the treaty of Vienna, entered into by his Imperial Majesty, his Catholick Majesty, and other Powers, the cession of Sicily is confirmed to the Emperor; Sardinia, with some places in Lombardy having been given to the King of Sicily in lieu of it, and his title changed to that of King of Sardinia. But I refer the reader to the former part of this volume for the particulars, where he will find an abstract of the treaty of Vienna.

The next island I shall describe is Capri, or Caprea, or Caprea, situate at the entrance of the gulph of Naples, three miles to the westward of the continent, and about twenty to the southward of the city of Naples. This island, says Mr. Addison, I was very desirous to see, having been the retirement of AUGUSTUS for some time, and the residence of TIBERIUS for several years. It is about four miles in length from east to west, and about one in breadth. The west end of it for about two miles is a continued rock, vastly high and inaccessible by sea, in which part however is the largest town in the island, called *Ano Caprea*, and is covered in several places with a very fruitful soil. The east end of the island rises up in precipices very near as high, but between the eastern and western mountains lies a slip of lower ground, which runs across the island, and is one of the pleasantest spots that can be seen. It is hid with vines, figs, oranges, almonds, olives, myrtles and fields of corn, which look extremely fresh and beautiful, and make up the most delightful little landscape imaginable, when they are surveyed from the tops of the neighbouring mountains. Here stands the town of Caprea, the Bishop's palace, and two or three convents. In the middle of this fruitful tract of land, rises a hill that was probably covered with buildings in TIBERIUS's time. There are still several ruins on the sides of it, and about the top are found two or three dark galleries, low built, and covered with mason's work, tho' at present they appear over-grown with grass. But the most considerable ruin is that which stands at the very extremity of the eastern promontory, where there are still some apartments left very high, and arched at the top. These rooms stand deep in the earth, and have nothing like windows or chimneys; from whence it is conjectured they were either bathing-places or reservoirs of water, and here are often found medals and pipes of lead as they dig among the rubbish. Not many years ago they discovered a paved road running under-ground from the top of a mountain to the sea-side. There is a very noble prospect from this place. On the one side lies a vast extent of seas that runs farther than the eye can reach, and opposite to it, is the green promontory of Surrentum (or Sorrento,) and on the other side the whole prospect of the bay of Naples, which must still have been more pleasant when that bay was encompassed with so long a range of buildings, that it appeared to those who looked

CHAP.  
XXVIII.  
Italian I-  
lands.

C.H.A.P.  
XXVIII.  
Italian I-  
lands.

at it at a distance but as one continued city. One still sees on the bendings of the mountains of Caprea the marks of several ancient scales of stairs, by which they used to ascend them. The whole island is so unequal, that there were but few diversions to be found in it without doors; but what recommended it most to TIBERIUS, was its wholesome air, which is warm in winter and cold in summer; and its inaccessible coasts, which are generally so very steep, that a handful of men might defend them against a powerful army. TIBERIUS, it is conjectured, had his different residences here, according to the seasons of the year, and his different sets of pleasure required. SÆTONIUS says, *Duodecim villas totidem nominibus ornavit*. The whole island was probably cut into several easy ascents, adorned with palaces, and planted with as great a variety of groves and gardens as the situation of the place would admit. The works under ground were however more extraordinary than those above it, for the rocks were all undermined with highways, grotto's, galleries, bagnio's, and subterraneous retirements, that suited with the brutal pleasures of the Emperor, which were after his death demolished by the Romans, in detestation of the unnatural and lascivious scenes which had been acted there; the beauties of the island were ordered to be defaced by an army of pioneers.

—*Quem rupes Caprearum terra latebit  
Inceſto poſſeſſa Seni?* CL. de 4to Conf. Hon.  
Who has not heard of Caprea's guilty shore,  
Polluted by the rank old Emperor?

This island is most remarkable at present for the multitude of quails that are taken there twice a year.

Ischia.

The island of Ischia is situated about three miles to the westward of the Cape or Promontory of Misenum, and 12 or 14 to the westward of the city of Naples; being about 20 miles in circumference, and was called by the ancient Poets *Inarime*, having laid TYPHOEUS under it, on account of the eruptions of fire which formerly happened here, tho' there have been none for 300 years past. The last was a very terrible one, and destroyed a whole city. There are scarce any signs of subterraneous fires at present, the earth being covered with herbage, except where it is rocky. There issues indeed a constant smoke through some crevices of the earth, which is occasioned, my author conceives, by the warm springs that feed the many baths, with which this island is replenished. On the north end of the island stands the town and castle on an exceeding high rock, divided from the body of the island by a channel, and inaccessible to an enemy on all sides; on which account FERDINAND II, King of Naples, retired hither when CHARLES VIII of France, overrun that kingdom.

Procita.

Procita is an island of much less dimensions than the last, but abundantly more fruitful, and is situated between Ischia and Cape Misenum; being three or four miles in circumference; the most considerable place upon it is the abbey of St. MICHAEL.

Ponza.

Ponza, *olim Pontia*, situated about 14 miles to the southward of the promontory of Circeo, or Circello, and 30 to the westward of Gaeta; deemed a part of the kingdom of Naples, but subject at present to the Duke of Parma. Hither the Romans anciently banished criminals of figure. It is an island of very little consequence, and yields but a poor revenue to the Sovereign. There

are some other small islands belonging to Naples and Sicily, which will be found in the map bound up with this volume; but they do not merit a particular description.

The principal islands upon the coast of Tuscany, are, 1. Giglio. 2. Elba. 3. Pianosa. 4. Formica. 5. Monte Christo. 6. Capraria. 7. Maloria; and, 8. Gorgona.

Giglio is situated about 12 miles from the Sienese in Tuscany, and is about 25 miles in circumference; subject to the Great Duke in temporals, and to the Abbot TREFONTANA in spirituals.

The island of Elba, or Athalia, is situated about 15 miles to the westward of the coast of Tuscany, stretching from east to west, much longer than broad, and about 40 miles in circumference. The chief places upon it are, 1. Porto Longone, a small town near the east end of the island, with a good harbour, and defended by a fort on a rock, now in the possession of the King of Spain. 2. Porto Feraio, situate on the north side of the island, which has also a good harbour, and is defended by a citadel, under the dominion of the Duke of Tuscany.

Pianosa lies 4 or 5 miles to the southward of Elba, and is subject to the Duke of Tuscany; but is a barren uncultivated island, from whence he reaps little profit.

Capraria, so called from the multitude of goats which were found here anciently, is situated between Corsica and Tuscany, a mountainous island, about 20 miles in circumference, and subject to the republick of Genoa, who have a fortress upon it. The number of the inhabitants is not computed to be more than 600.

Gorgona, or Urgo, lies in the same sea, to the northward of Capraria, about 25 miles to the westward of Leghorn, and 10 miles in circumference, subject to the great Duke of Tuscany.

Maloria is a little island between Gorgona and Leghorn, subject to the same Prince. The rest of the islands on this coast are inconsiderable, but their situations are described in the map of Italy.

When I was speaking of the strait or Faro of Messina, between Calabria, and Sicily, I should have remembered the famous Scylla and Charybdis there, so much dreaded by the mariners of old; but ships passing them now frequently with the greatest security, I hardly thought them worth the mentioning. Navigation was but in its infancy when the poets represented these places as fatal to sea-faring men. There seems to be nothing more than a strong current and eddy of the waters here, which is frequently observed in other places.

Sardinia is an island of an oblong form, stretching from north to south in the Tuscan sea, bounded by the strait, which divides it from Corsica towards the north; by the Tuscan sea which separates it from Italy, from which it is about 50 leagues distant, towards the east; and by the same sea on the south and west; lying about 40 leagues north-west of Sicily, between the 39th and 41st degrees of north latitude, and is 140 miles in length, and sixty in breadth. The air in summer is hot and sultry, and reckoned very unhealthy. The soil is fruitful where it is manured, producing corn, wine and oil in abundance; but is not cultivated as it ought to be, the natives seeming to have little inclination to husbandry, choosing rather to live upon what the earth produces spontaneously than to improve their grounds. They have great plenty of cattle, wild

beasts and game, and are so far from having any want of corn, though great part of their lands are uncultivated, that some years, it is said, they export 8 or 900000 bushels, of which the greatest part is carried to Spain. There is a variety of hills and plains, and the mountains on the north are exceeding high. Their chief rivers are, 1. The Sacer, which rises in the north-east part of the island, and falls into a bay on the south-west near Oristagni. 2. The Coquinas, which rises in the middle of the island, and discharges it self into the sea on the north near Castel Arragonefe. 3. The Sepus, which rises in the middle of the island, and falls into a bay towards the south-east. And, 4. The river Sepro, which runs from north to south, and falls into the bay of Cagliari on the south-east part of the island.

Division. It is usually divided into two parts; 1. The southern, called Cape Cagliari, from the capital city, which stands in this part of the island. And 2. The northern, called Cape Logadori, from a cape of that name in the north. The chief towns are, 1. Cagliari. 2. Oristagni. 3. Villa D'Iglesia. 4. Saffari. 5. Castel Arragonefe. 6. Algeri; and, 7. Bofa.

Cagliari city. Cagliari or Calaris, the capital, is situated on the declivity of a hill near a bay of the sea to which it communicates its name, on the south-east part of the island, and is a large handsome populous place, with a tolerable harbour, and pretty brisk trade, considering the country it stands in; and is a University, the See of an Archbishop, and the seat of the Viceroy: It does not seem to be a place of any great strength, making but a very mean defence when it was taken by the English in the year 1708, and afterwards by the Spaniards in the year 1717; nor did the castle hold out much longer, tho' some have given it the name of a strong citadel.

Oristagni. Oristagni, or Oristan, is situated on a bay of the same name, on the south-west part of the island, about 45 miles north-west of Cagliari: It is a handsome well-built town, the see of an Archbishop and the capital of a marquisate.

Villa D'Iglesia. Villa D'Iglesia stands on a bay of the sea at the south-west corner of the island, 30 miles to the westward of Cagliari, defended by a castle, and is the See of a Bishop, suffragan of Cagliari.

Saffari. Saffari, or Safferi, is situated in a plain on the north-west part of the island, about 10 miles from the sea, a pretty large town, defended by a castle, and the See of an Archbishop.

Castel Arragonefe. Castel Arragonefe is a little fortified town, in the north-west part of the island, with a pretty good harbour, about 25 miles north-east of Saffari, and is the See of a Bishop, suffragan of Saffari.

Algeri. Algeri, or Algeri, is a fortified town, situated on a bay of the sea, on the north-west part of the island, 16 miles south of Saffari, and is the See of a Bishop, suffragan of Saffari.

Bofa. Bofa stands at the mouth of a river of the same name, on the west part of the island, 20 miles south of Algeri, and is a Bishop's See, suffragan of Saffari.

Their history. There are very few towns more of any consequence upon the island. It is but thinly peopled, and the natives are an unpolish'd generation, who having long been a province to some distant kingdom, have been pretty much neglected, and neither their soil or traffick improved as they would have been if they had been blessed with a Prince of their own.

The first colonies planted here came from Greece, Phœnicia, and other eastern countries,

who erected little states and principalities in this island, as they had done in Italy and Sicily. The Carthaginian state was the first power that had the dominion of the whole island, who were dispossessed of it by the Romans. The Saracens made a conquest of it about the same time they ravaged Naples and Sicily. The republics of Genoa and Pisa attacked the Saracens, and recovered part of the island from them; but Pope BONIFACE VIII. was pleased to make a grant of it to JAMES II, King of Arragon, in the 13th century, who with great difficulty drove the Genoese and Pisans from thence, with the rest of the powers then in possession of the island, who had confederated together against him, and it was afterwards united to the crown of Spain, till the English fleet under Sir JOHN LEAKE reduced it to the obedience of King CHARLES III, the present Emperor, in the year 1708; and it was confirmed by the several parties to the treaty of Utrecht (except Spain) to the house of Austria, Spain seeming to acquiesce in this disposition: but King PHILIP under pretence that the Emperor had not evacuated Catalonia in the manner he had stipulated to do it, but had put the Catalans into possession of Barcelona, which ought to have been delivered up to him, equipped a fleet of men of war in the year 1717, putting 7 or 8000 land-forces on board, under the command of the Marquis de Lede to recover Sardinia to the crown of Spain. On the 22d of August the dispositions being made for a descent near Cagliari, the Marquis de Lede sent an officer to the Marquis de Rubi Viceroy of Sardinia for the Emperor to summon him to surrender Cagliari, and the rest of the island to the King of Spain; and the officer returning with a refusal, the Spanish troops landed without opposition. The Imperialists thereupon retired into the Suburbs of Cagliari without firing a shot, and from thence with-drew into the town; but it seems the whole garison did not amount to more than 400 regular foot, and 200 horse, besides militia, for at this time the Emperor was engaged in a war against the Turks, and had drawn most of the regular forces out of the island. On the 17th of September, the Spaniards having advanced their trenches within pistol-shot of the walls of Cagliari, the Marquis de Rubi left the town with 150 horse, and retired to Alguero or Algeri, leaving the command of the place to the Marquis de la Guardia, who was obliged to surrender the 3d of October following; and no supplies coming to the assistance of the Germans, the Viceroy quitted the island and retired to Genoa: whereupon the Spaniards became entire masters of Sardinia, which they held till the year 1720, when they were obliged to yield it to the Duke of Savoy by treaty; to whom it was assigned in lieu of Sicily, with the title of King of Sardinia, and this Prince remains in possession of it at this day.

The island of Corsica lies also in the Tuscan sea, a little to the northward of Sardinia, 90 miles to the southward of the coast of Genoa, and 80 to the westward of the coast of Tuscany, between the 41st and 43d degrees of north latitude; extending about 30 leagues in length from north to south, and about 13 leagues in breadth from east to west about the middle; but being near an oval figure, is much narrower at each end. It is surrounded almost with rocks and mountains, which makes it of difficult access, and the

Islands.

inland part is pretty mountainous, though there are some plains which produce plenty of corn, as the hills do wine, oil, and fruits; however, the soil is not so fruitful as that of Sardinia, nor the air so unhealthful: It is pretty well watered with springs and rivers, but as the last run but a little way before they fall into the sea, they cannot be very large. They have plenty of black cattle and sheep, and a little sprightly breed of horses. Here are some iron mines, and others of allum, with some salt-pits. The natives are said to be a clownish people, rough in their manners, like the element they chiefly converse with, and were so much given to piracy and pilfering formerly, that it is said, the name of Corsair, which signifies a rover or pirate, was derived from hence. It is usually divided into Corsica Citerior and Ulterior; the former is the northern part next Genoa, and the other the southern next Sardinia. The chief towns are, 1. Bastia. 2. Fiorenza. 3. Nebio, or Nebbio. 4. Calvi. 5. Sagona. 6. Corte. 7. Aleria. 8. Accia. 9. Mariana. 10. Ajazzo. 11. Bonifacio; and 12. Porto Vecchio.

Chief  
towns.

Bastia.

Calvi.

Corte.

Ajazzo.

Bonifacio.

Porto Vecchio.

Bastia, the capital, is situated on a bay of the sea, at the north-east part of the island, and has a pretty good harbour, defended by a castle, the See of a Bishop, suffragan of Genoa, and the seat of the Viceroy.

Calvi, situated on the bay of the same name, on the north-west part of the island, defended by a castle on a steep rock, 40 miles south-west of Bastia.

Corte is an inland town, about the middle of the island, 40 miles to the southward of Bastia, defended by a castle, situate on an inaccessible rock.

Ajazzo stands on a bay of the same name, on the south-west part of the island, a pretty large town, with a good harbour, defended by a fort, and is the See of a Bishop, suffragan to Pisa.

Bonifacio, stands on the south point of the island, on the streight which divides it from Sardinia: It has a good harbour, and a tolerable trade, being esteemed the best town in the island.

Porto Vecchio stands near the sea on the south-east part of the island, about 16 miles to the northward of Bonifacio, and is a large town, with a tolerable harbour.

This island was planted also by colonies from Greece, and other countries of the Levant; and having been subdued by the Carthaginians, was afterwards taken from them by the Romans: The Saracens possessed themselves of it when they invaded Sicily and Sardinia, and were driven from thence by the Pisans and Genoese; and this last state having driven out the other, remain sole masters of it, and send their Viceroy hither, who is the governor of it. The Doge of Genoa is crowned at his accession with a royal crown, as Sovereign of Corsica, which was anciently reputed a kingdom; but this does not however give this state the precedence of Venice.

Malta I-  
land.

Among the Italian islands I shall take in Malta, it being nearer Sicily than any other shore, and formerly under the same Sovereign that Naples and Sicily were.

The situa-  
tion and  
extent.

This island of Malta or Maltha, *olim Melita*, is situated 60 miles to the southward of Cape Passaro, the most southerly promontory of Sicily, 200 miles to the eastward of Tunis in Africa, and almost as much south-west of Cape Spartivento, the most southerly promontory of Italy, so that it lies almost in the midway between

Africa and Europe; but as it is rather nearer to the latter, it may properly enough be reckoned among the European islands, tho' it be sometimes by geographers placed in Africa. It lies in 35 degrees some odd minutes north latitude, and is of an oval figure, or pretty near it, being 20 miles in length from the north-west to the south-east, and 10 or 12 in breadth, about the middle of the island.

The air is generally clear and healthful, but excessive hot, when it is not refreshed with cool breezes from the sea. The island is all a white soft rock, covered with a foot of earth, or thereabouts; moderately fruitful, producing corn and grapes; they make no wine however, nor have they corn sufficient for the inhabitants; not but that it would bear corn enough, says a late traveller, but their cotton and other plants are more profitable, and they furnish themselves with corn and wine upon very easy terms from Sicily. The corn the island produces is barley and buck-wheat, they have also olives, figs, and other fruits, and great plenty of cummin-seed, anniseed, and cotton, of which they export large quantities, as they do also of indigo. They have lemons and oranges all the year round, and plenty of peas and beans, and other pulse and garden stuff; in so much that my author thinks it very well deserves the epithet of Fertile Malta, still given it by the poets. Their mutton and lamb is excellently good, and they have store of game, and fowls wild and tame: The superstitious are of opinion that no venomous creature will live here, since St. PAUL blessed the island with his presence. Roses, thyme and fennel grow wild in every part of it, and their honey is esteemed the best in Europe. There are several good springs in the island, but no rivers; what they seem to want most is wood, there being scarce any other trees than fruit-trees upon the place; but as they have very good stone for building, and the country is warm, they want it the less.

The natives are of very tawny complexions, especially the peasants, who are not half clothed. The better sort of people who live in towns, follow the French or Spanish modes; in keeping their women concealed, they imitate the Spaniards and Italians. The island is pretty well stocked with women of pleasure however from Greece, who resort hither to accommodate the unmarried Knights, and others who despise the chains of a conjugal life. The language of the common people is the Moreisco, a sort of barbarous Arabick, spoken on the coast of Africa, and the rest use a dialect of the Italian, which they speak pretty roughly.

The chief places are, the city of Malta, or La Valette, the Cite, the Bourg, and the Isle, with the castles of St. Elmo and St. Augé, Civita Vecchia, and Il Bochero.

The Cite, the Bourg, and the Isle, all of them Malta compose the town of Malta, but are, according to my author, so many distinct cities separated from each other by channels of the sea, which form so many peninsula's, consisting of rocks, which rise a great height out of the sea, and have secure harbours belonging to them capable of receiving whole fleets. On approaching of Malta, two of these ports appear distinguished by a high point of land, on which are built the new city and the castle of St. Elmo. That on the right hand is called Marsamouchet, where vessels put in for refreshments; the other is the great harbour,

Italian I-  
lands.

bour, defended by the castle of St. Elmo, the fort of Terra della Bocca, and the castle of St. Auge. The fortifications are regular, and very strong by art as well as nature. The streets are broad, and the houses well built with white hewn stone, with which their rocks furnish them upon the spot. They are flat-roofed, surrounded with rails or balusters, and make a very good appearance. The water they drink is brought by an aqueduct four miles to Malta, besides which they have cisterns and reservoirs of rain-water. The new town called Valetta, consists of 20 streets that lie parallel to each other, but they are uneven, having no other pavement than the rock on which they are built. It has but two gates, one on the land-side and the other towards the harbour. The out-works take in a good space of ground, for the security of the country people in case of an invasion. Among their public buildings, the church of St. JOHN is esteemed equal to most in Italy, adorned on the out-side with a noble piazza and fountains. It is large and lofty, and paved with marble of various colours, beautified with several rich chapels and altars, and the tombs of the Grand Masters: and here among their reliques, they shew the right hand of St. JOHN Baptist; but it is most admired for the Evangelical History, exquisitely painted by one of the Knights. The palace of the Grand Master is a magnificent building, besides which there are many other palaces that make no mean figure. The magazine, in which there are arms for 30000 men, the treasury, and hospital, are all noble buildings, and deserve a traveller's attention. In the hospital all infirm people are received, and served by the younger Knights in silver, and every Friday by the Grand Master and the Great Crosses, or chiefs of the respective nations, to which it seems they are obliged by their constitution. Malta is a Bishop's See, suffragan of Palermo. The old city of Melita, now called Città Notabile and Civita Vecchia, lies in the middle of the island, anciently a large populous place, and contains at present about 5 or 600 houses. Near it is the summer palace of the Grand Master, called Il Bochetto, fortified like a castle, but extremely well situated, having a prospect over a great part of the island. Its gardens and natural orange-groves, says my author, are delicious, beautifully intermingled with fruit-trees, and parterres of flowers. There are besides in the island 26 parishes, and between 30 and 40 villages equal to towns, containing about 50000 souls, of which one half are military men and unmarried. Five miles to the westward lies the island of Goza, being about 12 miles long and 6 broad, and containing about 500 houses. Near it is the isle of Comino, 5 miles in circumference, with some lesser islands that are subject to Malta. And I must not forget the Catakombs of Malta, which some call a subterranean town, hewn out of the solid rock; but by the description they seem to resemble those of Rome and Naples, and therefore were probably put to the same use at Malta.

Goza I-  
land.

Comino.

History of  
Malta.

The first inhabitants of this island were the Phenicians and Carthaginians, after which it fell under the dominion of the Romans, and generally followed the fate of Sicily, till CHARLES V gave it to the Knights of St. JOHN of Jerusalem, anno 1530. Of the original of these Knights or Hospitallers of St. JOHN of Jerusalem we meet with this account. Some time be-

fore the expedition of GODFREY of Bouillon to the Holy Land, some Neapolitan merchants who traded in the Levant obtained leave of the Caliph of Egypt to build a house there, for the entertainment of those of their nation who came in pilgrimage to Jerusalem, for which they agreed to pay an annual tribute. They afterwards built two churches near their house, and entertained the pilgrims who resorted thither with great charity, and taking several others into their society, who thought they should merit much by joining in so pious an undertaking, they founded a church in honour of St. JOHN Baptist, and an hospital for infirm people, from whence they obtained the name of Hospitallers. GODFREY of Bouillon having taken Jerusalem about the year 1099, we find them a little after distinguished by black habits, and a cross with eight points; and besides their former vows, they took another to defend pilgrims; and thus their order became military, into which several sons of figure entered themselves, changing their title of Hospitallers to that of Knights Hospitallers. After Jerusalem was taken, these Knights retired to Margat, and from thence to Acre in Palestine, which they bravely defended in the year 1290; after which they were entertained by JOHN King of Cyprus, who assigned them Limasson in his dominions, where they remained till 1310, when they took Rhodes under their Grand Master FOULQUES DE VILLARET, a Frenchman; and next year repulsed a great army of Saracens, being commanded by their Great Master AMADEUS Duke of Savoy, whose successors afterwards used the following Letters for their device, viz. *F. E. R. T. i. e. Fortitudo ejus Rhodum tenuit*, and those of the order were from thence called Knights of Rhodes. They afterwards defended the island against several attacks of the Turks, but it was taken at last by SOLYMAN in the year 1522, when they retired to Candia, and from thence to Sicily. The Emperor CHARLES the Fifth gave them this island of Malta in the year 1530, looking on it as a good frontier against the Turks, and they accepted of it with the consent of the other Princes, in whose territories their lands lay. In 1566, SOLYMAN attacked them vigorously in Malta, destroying the whole island except two or three castles, which he was forced to abandon after a siege of four months, having lost 15000 soldiers and 8000 seamen in the expedition. JOHN DE LA VALETTE PARISOT was at this time Grand Master, and gained abundance of honour in the defence he made. He afterwards built that part of the town which has the name of La Valette. The Knights formerly consisted of eight different people, viz. 1. Of those of Provence, whose Chief was the grand commendator of religion, 2. Of Auvergne, whose Chief was Marechal of the order, 3. Of France in general, whose Chief was Grand Hospitaller, 4. Of Italy, whose Chief was Admiral, 5. Of Arragon, whose Chief was Grand Conservator, 6. Of Germany, whose Chief was Grand Bailiff of the order, 7. Of Castile, whose Chief was Grand Chancellor, And, 8. Those of the English, whose Chief was Commander of the cavalry: but the English having withdrawn themselves, there are now only seven Chiefs.

Those who enter into this order, are obliged to prove their legitimacy as well as nobility by father and mother for four descents, except the natural sons of Kings and Princes. Amongst the Knights, only those styled the Grand Crosses can

stand candidates for Grand Master. The Grand Crosses are the Chiefs of the several nations, who are now seven in number, and have their respective colleges and halls in Malta, forming so many several societies, the head of each house being at this day called the Grand Prior of his nation, who is a member of the council of state, and distinguished by a large white cross embroidered on his breast. Those of this order never marry: They consist of three degrees or states, as they are called, viz. Knights, Chaplains, and Servants at Arms. There are also priests of obedience, who officiate in churches; friar-servants, who assist at the offices; and donnes, or demi-crosses: but these are not reckoned as constituent parts of the body. This division was made in 1130. The Chaplains or Conventual Priests are of noble extraction, and the ecclesiastical dignities in Malta are reserved for them, several of whom have been Cardinals. The servants at Arms are also of noble extraction, but it is not necessary they should be so for four generations. The government is mixed, partly monarchical, and partly aristocratical. The Grand Master, who is Sovereign, coins money, pardons criminals, and bestows the places of Grand Priors, Bailiffs, Commendators and Knights; and these are obliged to obey him in whatever is not contrary to the statutes of their order. In the great or sacred council however, where matters of the highest importance are debated, the Grand Master has but two voices. The ordinary Council is composed of the Grand Master and the Grand Crosses, but in a full Council two of the eldest Knights of each nation attend. Every nation, as has been intimated already, has its several Grand Prior, and every Grand Prior a certain number of Commanderies. The Knights are received into this order, either by undergoing the trials required by the statutes, or by dispensation. Dispensations are either obtained by the Pope's Brief, or from a general chapel of the order, and are granted in case of some defect in their nobility or pedigree on the mother's side. The Knights are received either as of age, under minority, or as pages to the Grand Master. According to the statutes they must be 16 years of age complete before they are received, enter into the novitiate at 17, and make profession at 18. And they must present themselves either to the grand chapter, or to the provincial assembly of the Grand Priory in which they are born. The proofs of their nobility by four descents on both sides are made by the arms of the families, and an exact enquiry into registers, signed by the Grand Prior and sent to Malta, where they undergo another examination by the Knights of that particular nation, who sometimes reject them; and if they pass, the standing of the Knight is reckoned from that day, when he pays 250 crowns of gold to the treasurer of the order. They make a particular enquiry whether any of the candidates predecessors have during those four generations, derogated from their nobility by merchandize, traffick, or being bankers, except those of Genoa and Sienna, in whom these things are esteemed no objection. They sometimes admit minors of a year old, but then 4000 Livres must be paid down by their guardians for this privilege, which are never returned. The Grand Master hath 16 pages, who serve him from 12 to 16 years of age, and then are succeeded by others. Those who are chaplains, conventual clerks, or servants at arms, cannot be admitted into the order of Knights; nor any who are ecclesiasticks, tho' they have all other requisites.

The churchmen, who make the second state, are received as deacons, or clerks conventuals, to serve in the church of Malta from 10 to 15 years of age. The deacons are obliged to prove that they have been legally baptized, and that their parents are a degree above the common people, and the charge of their admission is 100 crowns in gold, and the chaplains pay twice as much, besides the duties to their respective nations; and the servants at arms pay the like. The priests of the obedience are received without any formalities, and are so called because they obey the Grand Prior, who appoints them to officiate in the cures belonging to the order. They wear a white cross upon their cloaks, and enjoy the privileges of the religion: and of these some are gentlemen. The servants of the office are those who are employed in the hospital or other necessary occasions. There are also donnes, or demi-crosses, who marry, and wear a golden cross of three branches, those of the Knights having four, as have also those of the servants and chaplains; but they must not wear them without a particular licence from the Grand Master. All the Knights, of what rank or quality soever, are obliged, after making their vows, to wear on the left side of their cloaks a cross of white waxed cloth with eight points, which is their true badge, that of gold being only an ornament. When they go to war against the Turks, they wear over all a red coat, with a great white cross before and behind without points, which are the arms of the religious. The ordinary habit of the Grand Master is a kind of cassock of tabby or cloth, open before and tied about him with a girdle, at which hangs a great purse, signifying, says my author, charity to the poor, according to the first institution of the order; and over this he wears a velvet gown, or long cloak, when he goes to church on solemn festivals, and on the left side a white cross with eight points, or cross-patee. The rest of the Knights give him the title of Eminence, and his subjects call him his Highness. Some say the Knights at their admission vow to God, the Virgin MARY and St. JOHN Baptist, obedience, poverty and chastity. They are obliged to take care of the sick and strangers, and receive none into their order but such as are of sound robust bodies. The Priors chuse the Grand Master, who is only subject to the Pope in spirituals, but has a dependance on those secular Princes where their lands and revenues lie. If the suffrages at the election be equal, they chuse an umpire who determines the matter. The annual revenue of the Grand Master is 10000 ducats, besides some thousands of ducats out of the common treasury. Their galleys usually carry 500 men each, and 16 pieces of cannon. They are obliged to suppress pirates by their agreement with CHARLES V, and think themselves bound by their profession to be engaged in a perpetual war with the Turks, as the Algerines and Corsairs of Barbary are with the Christian States and Princes. When the Knights of Malta, says MOTRAYS, are professed, a carpet is spread upon the ground, on which is set a piece of bread, a glass of water, and a sword, and they are told, *This is what religion gives you, you must procure yourselves the rest with your sword.* And accordingly this order have been in a perpetual state of hostility with the Mahometans for several hundred years, and consequently are very good soldiers, tho' I can't call them good Christians; for surely that religion teaches peace and good-will to all mankind, of what sect or persuasion soever they be.

CHAP.  
XXVIII.  
Italian I-  
lands.

CHAP.  
XXVIII.  
Italian  
Islands.

The disciples of MAHOMET indeed are obliged by their great Prophet to make no peace with the rest of the world till they have beaten them into the same religion with themselves; and we find them for many years after their first institution refusing to enter into any other treaty with Christians than for a suspension of arms, and that each party should keep what they respectively possessed, but necessity has at length reduced them to better manners, and they have been obliged to yield up their finest towns, and very large territories, rather than run the hazard of being taken by storm, particularly Temeswaer and Belgrade, which were both surrendered by the Turks to the Imperialists in the last war; when according to the principles of their religion, they ought to have fought it out to a man, rather than have given up these places to the Christians. And as the Turks by principle ought to be always in a state of hostility with the Christians, so we find some Christian Princes and States besides the Maltese, engaged in a continual war with them, particularly the Pope and the most Christian King of Spain. I do not remember that ever either of these powers entered into any formal treaty with the Mahometans, but the rule seems to be on both sides, to do each other what mischief they can. Indeed it happens that the dominions of these perpetual enemies are not contiguous, or else they would find themselves under a necessity of treating sometimes as well as the Imperialists and the Turks. But I think the Christians have no manner of reason to cry out on the piracies and depredations of the Algerines, Sally-men, &c. when they themselves do the very same things; taking and plundering all Turkish vessels they meet with, and carrying the miserable people into captivity: nor are their hostilities confined to the sea, but they land on the shores of Barbary, and carry whole towns and villages into captivity, when they have an opportunity; which kind of visits the natives of Barbary frequently return, landing on the Christian shores, and plundering and destroying all within their reach. Malta indeed stands as a frontier garison against the Infidels, and is so strong by art as well as nature, that the Turkish rovers can do them but little hurt; whereas their galleys take prizes almost every day, and the commanders grow rich by the spoils of their enemies, whom for that reason they never desire to be at peace with. But what brings them in as much profit as any one article, is their prisoners, which either serve them as slaves, or are ransomed at very high rates. But surely these practices will never induce the Infidels to believe that peace and love, and a universal benevolence are the grand characteristicks of our religion: They will rather think that we are animated by the same spirit the disciples of MAHOMET are, whatever we may pretend, and consequently that they have reason to return us the usual title we give them, of Barbarians.

I shall now add some remarks on Italy which have been omitted or lightly touched upon before.

Poor entertainment at their inns.

Between Rome and Naples, tho' it be one of the richest countries in the world, all our travellers agree, that there is the worst accommodation and entertainment in this road that can be met with any where, and that a man must really undergo a great deal of hardship in the four days journey between those two cities, if he does not take his provisions with him. The flesh of buffalo's, crows and magpies, such, as we should throw to the dunghill, here often makes the best part of the ordinary; and tho'

they have a variety of wines in Italy, the best are scarce, especially at their inns; partridges, hares, and other game, and wild-fowl are not often met with, except quails, and these they have in great abundance, especially in the spring, when they arrive in vast flocks from Africa, and even cover the country; they are frequently so wearied in their flight cross the Mediterranean, that they drop into ships as they are under sail, and may be taken in heaps when they first come on shore, but so extremely lean, that they are very indifferent food till they are fatted. But to make some amends for the ill provisions travellers meet with on the road, they travel in great security; there have scarce been any banditti or troops of robbers in the Ecclesiastical State since the Pontificate of SIXTUS V, who was very severe upon them, and other Princes following his example, they have pretty well cleared Italy of robbers, as they have also of bravo's or assassins. Gentlemen are permitted to ride with pistols, and even fuzees in the country for their defence; but in several of their cities they will not allow a traveller to wear any arms, particularly at Genoa and Lucca, where they take away both swords and pistols when you enter the gates, and return them again when you leave the town on paying a certain sum, so that you will sometimes pay treble the price of your arms in travelling through Italy. The bayonet and stiletto are unlawful weapons, and prohibited almost in every city.

Quails  
plentiful.

Few robbers.

Arms.

My author further observes, that tho' the women are permitted to come to church and hear sermons in Lent, they are enclosed in a tall pew near the pulpit, where they can neither see or be seen; for the Italians cannot bear their women should be prophaned by common eyes, nor can they comprehend how a man can be devout while he is staring them in the face, as in our protestant churches. When they go to prayers and kneel near the men, they are so veiled, that no part of their faces can be seen, and so carefully watched by their relations or governantes, that they seldom have an opportunity of going astray; and indeed, it is said, they seldom fail of complying with the first motion. They look upon themselves to be unjustly restrained of their liberty, and make no scruple to break from their tyrannical keepers as often as they have opportunity, who allow themselves all manner of liberties, tho' they will permit the women to take none.

Their women concealed.

On the north side of the Apennine, they are not only forced to cover their orange and lemon-trees in the winter to preserve them from the cold, but also their pomegranate-trees, olives, myrtles, caper-trees, and many others; the plane-tree is very common in Italy, as are the cypress, fena, lentisk, cork-tree, carob and scarlet oak, and the highways are frequently bordered with white mulberry trees, with the leaves whereof they feed their silk-worms; and almost all manner of medicinal herbs and simples are to be had on the Apennine mountains and the Alps. Spunges are found on the sea side near Terracina: Pumice-stones grow on a little island over against the promontory of Misenum, when the sea is stormy it loosens them from the rocks, and carries them over in small pieces to the opposite shore of Pozzoli and Baia; they are not to be met with about Vesuvius, or any other burning mountain, as some have related, those stones being of a very different nature.

Spunges and pumice stones.

The Italian mountains, and especially the Apennine, are rich in metals, and other minerals, as crystal, agate, alabaster, and several kinds of marble; the white marble of Carara is esteemed the finest,

but the Grecian marble in the Archipelago has much brighter colours than the Italian.

In the summer they use all manner of stratagems to render the heats tolerable at Rome, men of quality have apartments at the bottom of their houses, where the sun never enters; these are furnished with fountains and water-spouts, and floored with marble, and the doors so contrived as to draw in a cool refreshing breeze when they want it. To preserve them from flies and gnats when they sleep, their beds are enclosed with curtains of gauze: when they sleep after dinner, as they usually do about two hours, they loll in easy chairs, whose backs are made to let down as low as they please. The Serain, or evening-dew in the Campania of Rome, is reckoned fatal to those that sleep in it for three months in summer, on which account, it is said, travellers chuse to lie 15 or 20 miles short of Rome, if they can't reach the city before night. My author says, he found an inscription over a door in Rome, importing that the air of this town is fatal to strangers, and troublesome to the natives: that if a man would preserve his health here, he must take physick the seventh day after his arrival, avoid nauseous smells, use moderate exercise, guard himself against colds and heats, abstain from fruit and women, and never quench his thirst with cold water.

They use very little tin or pewter in this country, but generally earthen-ware, resembling Delft or coarser, for all kinds of vessels. They begin their day at sun-set, and count one o'clock an hour after, and so on to 24, and do not divide the day into twice twelve hours as we do here; the hours consequently are perpetually varying, their day beginning sooner or later as the sun sets, whereas it is always six o'clock with us six hours before or after noon, and twelve at noon and midnight. If the sun sets at six o'clock in Italy, the next day at noon they reckon 18; and if it sets at seven, they reckon 17 the next day at noon and so on.

Though people are apt to imagine there is little winter in Italy, my author says, he found the winter very sharp there, and he thinks travellers in the wrong in chusing that season to travel through it, as they generally do, for in winter the ways are uneasy and dangerous, especially in the mountains, on account of the snow and ice; the days also are short, and a traveller comes late to his lodging, and is often forced to rise before day; besides, the country looks dismal, nature is in a manner half dead, and neither fruits or flowers to be seen. On the contrary, in summer we have none of these inconveniences, and though it is very hot, it is only the reposing one's self during the heat of the day, and the cold of the winter sufficiently counterbalances the heats of the summer.

In many parts of Italy, as in Tuscany, Parma and Modena, the traveller may have horses or calashes, called Cambiatura, the rates of which are fixed, and the conveniency of this way of travelling is, that he may stop where he pleases, and change his horses or calash at every Cambiatura, without being obliged to pay for their return; he may also take what time he pleases to satisfy his curiosity. There is room for two people in a calash, and my author prefers it to travelling on horseback, because one has the advantage of being screened from the sun and weather, and the traveller is permitted to carry a portmanteau fastened to it of two hundred weight.

When the traveller comes to Rome, he will be immediately surrounded by a multitude of lackeys,

who come to offer their service, but my author advises him to be cautious how he trusts them, for they are generally a pack of knaves; it is most advisable when a person wants them to take those who belong to the town, or to the country at least, because they give security to perform their duty, and are best acquainted with the people and customs of the place. People of quality usually carry some spare liveries with them to clothe them with. The ordinary allowance of these Staffieri, as they are called, is two and a half, or three Julio's a day, (a Julio is about six pence) when they are at board wages; and for ten or twelve pistoles a month, a gentleman may have a handsome coach and a pair of horses; except it be in Lent, or about Easter, when the concourse is very great at Rome, and then they will ask fourteen pistoles a month for a coach and pair of horses. A licence may easily be obtained here to eat flesh in Lent, and the inn-keepers on the road will furnish you with it if you desire it, privately, that they be not exposed to the censures of the church. The lean-days, as they call their fasts, however very well deserve that name, for it is scarce possible for a foreigner to dispense with those exceeding lean dinners.

A skilful antiquary is a very necessary dependant, which a man of quality must retain when he arrives at Rome, and will cost him three or four pistoles a month; and he is advised to take a particular view of every thing that is remarkable himself, without trusting to the report of others; and a gentleman will chuse to view the curiosities of Rome in the company of other strangers rather than alone, because he will hear their opinions of them: he ought to be provided with maps, measures, prospective-glasses, a mariner's compass and quadrant, and to be able to take the dimensions of things himself.

A Roman palm (or a span and a half) makes thirteen inches English measure, the Roman foot is shorter by six lines than that of England, and eight Roman feet make a Roman Cane. A Brasse of Florence is 22 inches and a half English.

A complete set of prints of all the antiquities and remarkable things that are to be found in Rome may be had there, but they will cost near 100 pistoles, according to Misson; and he advises gentlemen not to be too parsimonious in their travels, for if they are, he tells them, they must expect to meet with trouble and vexation instead of pleasure; whereas a liberal hand gains admission every where, and procures great advantages; and as it is but once in their lives, and in order to accomplish themselves, they will not find their account in being over-penurious, such a management only renders them contemptible wherever they come.

Gentlemen who travel in company from Rome to Naples usually hire both calashes and horses, that they may ride one way or the other by turns, as they see fit, and every passenger pays the person who lets them 15 piasters, on condition he shall spend five days in going thither, wait for him five days at Naples, and lend his horses to Vesuvius and Puzzoli, and return to Rome in five days more; so that the whole journey is performed in 15 days. They may very easily go from Rome to Naples in four days, only they are supposed to spend some time in viewing the country, or the curiosities in the way thither. (A piafter is about the value of 6 s. 8 d. or 7 s.) But as Naples well deserves more than five days to view it, my author advises the traveller to go by the Procacciaio, or ordinary

dinary stage, because he is at liberty then to return when he pleases.

He advises all gentlemen that travel to Italy also to contrive their affairs so, as to see the last days of the carnival at Venice, the Holy week at Rome, and the octave of the Sacrament at Bologna; and to avoid being at Rome during the heats. He says, a person will do well to consider what company he travels with also, or it may be better to have none; some, as he observes, are curious in examining every thing, and will expose themselves to a shower of rain, or hazard losing a dinner to make a discovery of any importance, while others travel post thro' a country as it were, and take care of nothing else but the providing a good bed, a dish of meat, or a glass of the best wine. A large company is by no means proper to travel with in Italy, where we meet with such wretched inns, that they can seldom find beds or provisions for a tolerable company.

Every town almost in Italy affords some things which are either peculiar to it, or done in greater perfection than in other places; as at Rome you meet with fine prints of palaces, churches, gardens, statues, fountains, ornaments of architecture, pictures of Popes, Princes, Cardinals, and other illustrious men, maps, plans of towns, &c. They are famous also for their perfumes, such as bergamot, limetta, imperial oil and millefiori, and all sorts of quintessences, balsams and pomatums. The fruit bergamot is like a lemon, and the perfume drawn from it is incomparably better than what we meet with in other places. The perfumers of Rome have either an art, or ingredients that their neighbours want, for perfuming skins, of which they make gloves, fans, purses, and other things. And this is the proper place to furnish one's self with fine medals; tho' if a man has not some judgment in them, he will be imposed upon.

Naples is remarkable for its silk stockings, waistcoats, breeches and caps, perfumed soap, snuff-boxes made of shells inlaid with silver, and Spanish snuff.

Venice is taken notice of for its points, works in glass, crystal and steel, snuff-boxes, silk stuffs, and fine scarlet.

At Milan we meet with works of rock crystal, swords, heads of canes, snuff-boxes, and steel toys.

Florence also is famous for its essences, balsams, pomatums, and other perfumes; but their bergamot is inferior to that of Rome. Here are also inlaid works, with the stones called Dendrites, and others called Ruins of Florence, which are found in Monte Limagio.

At Genoa we meet with silk stuffs, velvets, points, dry sweetmeats, soap and wash-balls.

At Bologna shining stones, or phosphorus's, several kinds of snuff and wash-balls, and their lapdogs were formerly in much esteem; one of them made a mighty stir in England not many years ago.

Brescia has been remarkable for its fire-arms.

The Nuns of Tortona for their works in straw, of which they make boxes, flowers, birds, caskets and toilets, or any little implement of the like nature.

The knives of Searperia, sixteen or seventeen miles from Florence, are much cried up, not so much for the goodness of the metal, as for their contrivance of putting several blades to one hilt, as they will ten or a dozen at a time, if 'tis desired.

At Loretto the devout traveller furnishes himself with beads, crucifixes, Agnus Dei's, and other holy utensils; and their beads are thought to have an extraordinary sanctity by being touch'd or rubb'd on the Madona or image of the Blessed Virgin there.

The Nuns of Gaieta pretend to have the best essence of oranges: but Misson does not approve of it; he says, it is too strong and sharp.

The masks of Modena are said to be well contrived, and the spurs of Reggio in as much esteem in Italy, as those of Rippon are here.

The milled gloves, the sweet snuff of Millefiori, and the Rosa Solis of Turin, are also in esteem with our travellers.

In the year 1726, the Viceroy of Sicily received orders from the Imperial court to publish a Bando, or proclamation, prohibiting the importation of several English manufactures, such as duroys, calmancoes, camblets, druggets, and other stuffs proper for a warm country, in order to encourage those of Germany, which are design'd to be brought into Sicily and Naples by the new company established at Trieste: whereupon the English Consul Mr. CHAMBERLAYNE on the 10th of June that year, by the advice of the English factory at Messina, presented the following memorial to the Viceroy of Sicily, viz.

*Most excellent Lord,*

WILLIAM CHAMBERLAYNE, his Britannick Majesty's Consul-General in this kingdom, and the English merchants settled and residing in the city of Messina, do humbly represent that they are informed, the Royal Patrimonial Council by your Excellency's direction, upon what motives your memorialists know not, are about to prohibit the importation into this city and kingdom of divers sorts of English woollen manufactures and stuffs. That before such a resolution pass, they offer to your Excellency's consideration, the prejudice which would manifestly arise from it to the publick commerce, to the income of the royal treasury, and to the general interest not only of his Imperial and Catholick Majesty's subjects, but likewise of foreigners concerned in traffick with this city. For this would be an abolition of the establishment of a Scala Franca, or staple granted by the most serene King CHARLES II, who engaged his Royal word to permit the importing hither of all manner of merchandize and manufactures from what part of the world soever. It would also be a direct violation of the treaty of commerce concluded between the most serene Kings of Spain and England in the year 1667, which was ratified by King CHARLES II, of blessed memory, the same year, and confirmed by his present Imperial and Catholick Majesty anno 1709, at Barcelona; by which treaty entire liberty was granted to the subjects of Great Britain to import and bring into all the territories, kingdoms and dominions of the King of Spain, all sorts of merchandize, cloths, manufactures, and things of the Kingdom of England, there to sell, barter, or otherwise convert and dispose of the same, as will more fully appear to your Excellency by the inclosed copies of the article of the Scala Franca, and the seventh article of the aforesaid treaty concluded and confirmed as above. Wherefore the memorialists have judged it proper by way of prevention to make application to your Excellency, a Prince zealous for justice, and a lover of the publick good, to induce you to suspend so important a resolution till some deputy of theirs be permitted to lay before you the solid and weighty reasons they have to urge against this novelty, which is not only prejudicial to the publick commerce, the promoting whereof your Excellency has so much at heart, but to the general interest of the natives and foreigners who are concerned in, and do contribute to and carry on the trade of this city and kingdom, and also to

the royal duties, which must inevitably diminish in proportion as commerce lessens. But in case your Excellency in your great wisdom shall determine otherwise, they beseech you at least to give sufficient allowance of time before such prohibition takes place; because the memorialists under the sanction of the publick faith, and relying on the royal promises, have some time ago sent commissions to their correspondents in England for large quantities of such several sorts of goods as they used to provide every year against the fair in August, which by this time are not only bought up, but actually embarked and on the way hither, to the end that within the time limited they may vend and dispose of them. Upon which concession from your Excellency as a just Prince, the memorialists do securely depend.

The answer to which memorial was, That the orders from the court of Vienna on this affair being uncontrollable, the publishing them could not be deferred.

*A list of the Imperial navy.*

The fruits of the earth destroyed in Italy in 1727.

Tempests and unseasonable weather proved almost as destructive to Italy in the year 1727, as any earthquake that has happened there in our memory; for they relate, that on the 7th of October this year, there arose such a dreadful hurricane at Naples, that the like was never known. The storm begun by furious jarring winds, attended with continual lightning and dreadful thunder-claps, which were soon followed with such heavy rains mixed with hail, that all the gardens in that city and neighbourhood were overflowed; the trees, vineyards, &c. which were upon the hills round the city were torn up by the roots and washed away by the torrent; their kitchen-gardens were covered with sand, and in the lower part of the city the flood forced open the strongest gates, threw down several walls and houses, and destroyed abundance of people: the great reservoirs which furnish the city with water, with their wells and fountains, were choked up. The borough of Pianura, which lies very low, was so suddenly overflowed, that of 500 inhabitants, six only escaped; the borough of Panecoli was entirely sunk, and there arose such a thick vapour and poisonous stench out of this gulph, that all that came near it swooned away, or died on the spot. No words can express the desolation which happened both in city and country, with the loss of their corn, wine, cattle, and other provi-

sions. This calamity was ascribed to a violent shock of an earthquake they felt the night before, which terrified them extremely; the sea swelled also in an extraordinary manner, and from Vesuvius issued a mighty flame: whereupon the head of St. JANUARIUS was exposed, the miraculous image of the crucifix uncovered, before which the Viceroy, Nobility and people prostrated themselves to avert the wrath of heaven.

At Venice the same month they had terrible storms of rain and hail, and in January following they relate, that the tempestuous winds and rains continued at Naples; that the air was sometimes so close they could hardly breathe, which with the frequent eruptions of Mount Vesuvius occasioned a general consternation, and bred distempers in the country: that they had for three days successively such furious storms of rain attended with dreadful thunder and lightning, that the flat country was all under water, and appeared like a general deluge, and that the damage occasioned by it was not to be expressed. From Florence the same month they write, that the Sacrament had been exposed for three days in the metropolitan church, and publick prayers put up throughout the duchy to obtain from the Almighty a cessation of rain. A plenary indulgence was published in form of a Jubilee in all the churches of that city, and the Grand Duke forbid the usual diversions of the Carnival; and in the Venetian territories several little towns were swept away by the overflowing of rivers.

At Notto in Sicily in the year 1727-8, there happened a terrible earthquake, which lasted from the 5th of January to the 9th, and threw down several churches, monasteries and private houses; the same was felt at Augusta, Syracuse, Catania, Messina and Palermo, and almost throughout the kingdom, but few or no people perished in it.

The Emperor and the other parties to the Quadruple Alliance looking upon the duchies of Tuscany, Parma and Placentia as Fiefs of the Empire, and agreeing that on failure of issue of those Princes the said duchies should be conferred on Don CARLOS, son to the present Queen of Spain; this proceeding was highly resented by the Dukes of Tuscany and Parma, as well as by the Pope, who pretends that these duchies are Fiefs of the Holy See.

The Duke of Tuscany in a memorial endeavours to shew that the state of Florence has been entirely independent on the Empire ever since it had a being; that it has always been governed by its own laws and magistrates; that the Great Dukes of Tuscany are absolute masters and sovereigns in that State; that all the rights of Majesty belong to them; and that they only differ from the Kings of France and Spain in the extent of their dominions, as not having such large territories under their jurisdiction.

To which the Imperialists reply, That it is notorious that the city and territory of Florence made a part of the kingdom of Italy, and that when the German Emperors became masters of that kingdom, Tuscany, and the city of Florence in particular, was as much subject to them as the rest of Italy; that it continued under the Dukes or Marquises of Tuscany, who were the Emperors feudatories from the time of RODOLPHUS I, tho' it was governed by its own magistrates, as the cities of the Empire are at this day, yet it always acknowledged the sovereignty of the Emperor, till the time of MAXIMILIAN I, who for a sum of money confirmed its privileges: That the Emperor CHARLES V, in the year 1530, commanded his troops to besiege the city of Florence, to reduce them to their duty

CHAP.

Islands.

duty to the Empire, which they then seemed to dispute; that the city having been obliged to surrender, the Emperor declared he had a right, after depriving it of all those privileges which it had received of his predecessors, to dispose both of the city and territory according to his pleasure, as of an estate of inheritance devolved to the Empire; but upon the intercession of the Pope, and by advice of the States of the Empire, he had been pleased to pardon it, and to confirm all its privileges, rights and liberties obtained of the Roman Kings or Emperors. But whether the duchies of Tuscany and Parma are Fiefs of the Empire or not, since the Diet of the Empire have declared them to be so; and the greatest powers of Europe, who were parties to the Quadruple Alliance, have determined they shall be deemed such, and are in a condition to constitute DON CARLOS Sovereign of these duchies if they see fit, the matter of right will be little attended to. The Princes of this age apprehend themselves vested with authority to set up and depose Kings at their pleasure, as is evident from their disposal of Sicily and Sardinia twice in a few years, without so much as enquiring into the laws and constitutions of the respective countries: These, it is held, ought to be dormant when the general good of the world comes in competition with that of any single State; or, when the chief Powers of Europe are pleased to think so. They themselves seem to rely more upon a confederacy, or guaranty of their neighbours for the establishment of their thrones, than either upon the constitution of their respective governments, or the affections of the people they are to govern. The civil power does not only truckle to the military in most of the kingdoms of Europe; but where national troops are not so ready as it is expected, to oppress and harass their fellow-subjects, foreigners are call'd in, who are supposed to have less remorse, to finish the ruin of the unhappy people. But to return to the eventual succession, as it was called, of the duchies of Tuscany and Parma, which the parties to the Quadruple Alliance had conferred on DON CARLOS Prince of Spain: The last Pope INNOCENT XIII, loudly protested against it, declaring those duchies Fiefs of the Holy See, and in the instrument to be sent to the Plenipotentiaries at Cambray on this head, he has these expressions: 'Can Christian Princes flatter themselves with the hopes of concluding a lasting peace, when the depriving the Holy See, and the Vicar of JESUS CHRIST, of their undeniable rights, is made the foundation of it? Can they promise themselves long to enjoy what they violently seize against all manner of justice, and invade the indisputable right of an uninterrupted succession, which has been acknowledged for several ages by all the nations of Europe.' The present Pope BENNET XIII also, upon the conclusion of the Vienna alliance between the Emperor and Spain, wherein the disposal of the duchies of Parma and Tuscany are confirmed, sent a circular letter to his Nuncio's in the several courts of Europe, wherein he tells them, he could not delay acquainting them with his sorrow for those unjust conditions in the treaty. That he abhorred and disowned them, and solemnly protested against the same, and would leave no stone unturned to provide a remedy against them; concluding as follows: 'Venerable Brethren, We will apply ourselves to pious pray-

ers, which are powerful weapons with God, that the Lord would please to call his eyes upon his inheritance; and not suffer us to receive damage from those to whose protection he hath recommended the defence and support of the interests of the Holy Church.'

The Duke of Parma looked upon himself also to have had great injustice done by the disposal of his dominions by foreign powers, without consulting him, and protested against it: but I don't find that any of the parties to the Quadruple Alliance took any notice of the opposition that was made either by the Pope, or the Dukes of Tuscany or Parma. The misunderstanding however which has happened since between the allies of Vienna and Hanover may effect that for them, which all their own care and foresight could not, unless a speedy peace should reunite these powers again, and the Quadruple Alliance be made the foundation of another treaty.

Having omitted to describe the manner of balloting for a Doge of Venice, I shall take the opportunity of doing it here.

The obsequies of the deceased Doge are no sooner over, but all the nobility above 30 years of age meet in the Grand Council, where they elect five collectors, who are to correct the *Ducal Promissione*, i. e. the statutes, to the observation of which the Doge is to swear immediately after his election. And these Noblemen have a power to add or abstract whatever they shall deem requisite for the good of the State.

The Grand Council being afterwards assembled in the hall of St. MARK's palace, the door is shut, and the number of the members present being counted, they throw into a basin, or urn, an equal number of balls all white, except thirty which are gilt, and when they are well mixed, every gentleman takes out one: after which, the 30 who happen upon the gilt balls meet in a little room, where there are prepared 30 other balls, of which nine are gilt; those of the 30 which draw the nine gilt balls chuse 40 members, who are reduced to 12 by lot, and these 12 elect 25, the first chusing three, and the rest two a-piece; these are by lot reduced to nine, and those nine chuse 45, by naming five a-piece, who are again reduced by lot to eleven, and these chuse 41 members; who elect the Doge, if they are approved by the Grand Council; and if they be not, the same method must be repeated. And by this tedious way of balloting they prevent all possible corruption or influence in the choice of a Doge. When the 41 electors are approved by the Grand Council, they are shut up in the palace of St. MARK, and not suffered to stir out till they have elected a Doge, and there must be 25 of the number concur in the choice. When the suffrage is declared, the Doge elect is carried on mens shoulders from the church round the square of St. MARK in a machine, in which he is attended by two or three noblemen, his friends, and sometimes by the boy who drew the ball that determined his election; and being crowned by the Procurator Treasurer, he usually makes a speech to the people, after which he gives a ball; the streets are illuminated, and masquerades and other entertainments are continued for three nights successively; bread and wine being in the mean time distributed to the multitude.

Padua 22 from Venice, 54 from Mantua.	

This alphabetical table will give the reader a general notion of the distances of the great towns in Italy from each other; and if he finds them differ two or three miles in twenty from other accounts, he must not complain for want of exactness, for scarce any two travellers come nearer: Some measure the distances in a direct line on the map, while others take in all the turnings and windings, &c.

Rome,

CHAP.  
XXVIII.  
Italian  
Islands.

Rome, according to baron POLLNITZ, is still one of the finest cities in the world, though it has lost much of its ancient beauty and grandeur. Nothing is equal to its church, its fountains, and some of its palaces. He proceeds to give a particular description of them; but having dwelt pretty much on these particulars in the former edition of MODERN HISTORY, I shall only take notice of such things as were omitted there.

Tho' every thing in St. PETER's church, says the baron, is worthy of the particular observation of a curious traveller, I think nothing deserves it more than the noble pictures of Mosaic work, wherewith the altars are decorated; than which there can be nothing more complete; for it surpasses any thing that ever was done by the ancients. It is but a few years that the artists have arrived to the perfection we now discover in works of this kind. One of these pictures, which is just finished, represents the story of St. PETRONELLA, St. PETER's sister, so excellently designed, and so nicely coloured and polished, that nothing in the art of man can out-do it. One would swear 'twas a picture behind a glass; yet it consists only of little glass-squares, exactly cemented together by a certain gum that is extremely astringent. It is a piece of work of the more value, because it is proof against the injuries of weather, and nothing can damage it. They design to remove out of this church all the pictures painted in oil, which grow mouldy by time and moisture, and to put pictures of Mosaic work in their place. If this project, which is in a good forwardness, and carried on apace, be ever finished, St. PETER's church will be possessed of a treasure the more precious, because there will be none like it.

The baron proceeds to give an account of those unfortunate Princes, who are there called King and Queen of England (meaning the Pretender and his Wife.) Perhaps (says he) you will not dislike to know what they are doing, and on what foot they stand here. That unfortunate Prince, which is a title I think no body can envy him, lives a very melancholy life; and I question whether the pension which the Pope allows him, twelve thousand crowns, is enough to make him easy under his afflictions. He lodges in the palace of the marquis Monti, and has a great number of domesticks, but few in his service that are persons of quality. My lord DUNBAR is the chief man at his court, since Mr. HAYES, to whom the Pretender gave the title of my lord Inverness, retired to Avignon: this gentleman is intrusted with the education of the young Princes, who are stiled here the Prince of Wales, and the Duke of York, and as lovely children they both are, as one shall see.

The Pretender is complimented with the stile of Majesty by the Pope, and by all that have access to him. He never goes to an audience of the holy Father in publick, but always by the back-stairs; and the Pope not only gives him an arm chair, but all the honours are paid to him, that are due to a King who keeps incognito. When the Cardinals visit him he gives them the tabouret or little stool; but the Imperial Cardinals never go to see him; nor did they think fit to do it, even at the time when the Emperor seemed to be more embroiled with the King of Great Britain than ever, whereas the French Cardinals go to him every day, and are always with him, notwithstanding the strict

alliance between the King their master, and the King of Great Britain. When the eldest Prince, who is here stiled the Prince of Wales, goes to wait on the Pope, he is treated as the presumptive heir of a crown; he has a chair set for him with a back to it, and takes place of the Cardinals. As to the younger son, the pretended Duke of York, his rank is not yet settled, nor has he yet made a visit to the Pope.

The Pretender is of a middling stature, but a mere skeleton; and, if I may venture to say it, has nothing in his looks of an impostor. He is prodigiously like the pictures I have seen of the late King JAMES II. only his aspect is something more melancholy; but he is so far from it in his natural temper, that he is a lover of pleasures, and would indulge himself in gallantry, if he was not so strictly watched by the priests; for if the scandalous chronicle does not belie him, Mrs. HAYES, alias lady Inverness, had for a while the honour of obliging him. If one may guess at the heart by external appearances, he is sincerely attached to the religion which he professes, yet without being such a bigot as some will have him to be; for he causes his children to be educated by protestants, and every sunday a church of England minister preaches in English in the protestant chapel of his palace: he is extremely reserved at first to those with whom he is not acquainted, but it wears off by degrees; and when once he knows people, he is very courteous and civil to them. I have the honour to be often at his table, and I am bound to acknowledge his favours to me.

His table, which is commonly laid for a dozen guests, is served with what is grand and delicate. People are seated at his table without any distinction of rank, and he sits himself between the two Princes, his sons: he talks a great deal at his meals, but the tone of his voice is not the most agreeable: his conversation runs generally upon common topics, and falls very naturally upon his misfortunes. All this Prince's time is regularly divided; he rises early, devotes the morning to his business, hears mass before noon, when he goes to dinner, and after sitting an hour and an half, or two hours at table, takes a nap; and then, unless it be a saint's day, when he goes to vespers, he walks out for the air in some garden or other without Rome, where he exercises himself on horseback, or else diverts himself at mall with his sons and his gentlemen. In the evening he returns to his palace, and receives visits from the Cardinals; at ten o'clock he goes to supper, and at midnight to bed. During the carnival, he was almost every day at the opera, where his box being very large, he used to sup with the gentlemen and ladies of his court.

The baron, giving an account of the carnival at Rome, says, it lasted but one week, according to an established custom; and during all that time, from two o'clock in the afternoon till sunset, all the streets were full of masquers, some on foot, and some in open chaises: the former say a thousand silly things, and the latter throw flower in one another's eyes by handfuls, but the best on it is, that either by their clothes, or their equipage, every body is known. Besides, the pageantry of the Romans is always the same even in masquerades; they dress up their domesticks like harlequins, and make them follow them with their faces bare. They thus take the air, gravely, in open chariots, made like

CHAP.  
XXVIII.  
Italian  
Islands.

like gondola's. Their horses are adorned with plumes of feathers, and loaded with little bells, like ours in the sled races. In the evening, the coaches range themselves in two rows in the street del Corso; which is, besides, pretty narrow; and there they see the race of barbs, which are five or six horses, that are suffered to run loose without a rider, from the gate del Popoli, to a place beyond the Venetian palace. The poor beasts gallop through the shouts and cries of the populace, and are often crippled by striking themselves against the coaches. The first of these horses that reaches the goal wins a prize for his master, which generally consists of a piece of cloth of gold; and at sunset every body retires. Mean time, a Roman will tell you, that the carnival of Rome is the finest in the world.

But the thing of which they brag most, and which they believe is no where to be paralleled for magnificence, is their balls, of which you shall now be judge. Several gentlemen having clubbed this winter for the hire of the palace Barberini, near the Mount of Piety, and caused it to be furnished by the Jew Brokers, when the day was fixed for the ball they invited all the ladies; and as to the gentlemen, they had the liberty of appearing there masked, provided they made themselves known at the door: all the rooms were small, and but poorly lighted: there were several pieces of dancing to the musick of five or six violins: the room designed for the principal nobility was encompassed with forms, and the place for the dancers was an oval space railed in. A gentleman of the company, that gave the ball, stood at the entrance of the oval: they gave him the title of master of the hall, and it was he that called out the dancers. All the ladies were masked at this ball, which was called a feast, but I know not why; for there were glasses, indeed, but there was nothing to eat or drink. The ladies were all gay, and some of them in court dresses. I have been twice at these pretended entertainments, but was so tired, and in such danger of being pressed to death, that I do not care to go again; for which reason, the Romans say I have not an elegant taste.

Neither am I very well reconciled to their plays, of which, indeed, here are none all the year, except during the carnival; but then we had two opera-theatres, and four or five for comedy. Of all these theatres there is but one that is good for any thing, and that is the ladies theatre, commonly called the theatre of Aliberti, because it was built by order of one count ALIBERTI. The room is excessive large, so that the voices are lost in it. It has seven rows of boxes, so low and little, that it makes the room look like a hen-roost; the pit will hold nine hundred persons with ease: the stage is spacious, very high, and finely decorated; but they do not shift the scenes with that dexterity as they do at our play-houses; yet when the whole is put together, the place is not to be despised: the habits of the three principal actors are magnificent, but those of the rest are horrible. Their voices are good, and so are their instruments, for the most part; but their dances are too bad to behold, and you cannot imagine any thing more hideous: the women are in the disguise of men, out of a ridiculous scruple, if I may venture to call it so, which they have here, that women should

not be seen at the theatres. This is the reason that the opera's at Rome are vastly inferior to the other opera's of Italy. There is not, perhaps, a more ridiculous sight than to see these creatures, who are but half men, play the parts of women; yet though they have neither air nor gracefulness, they are applauded here as much as the best actresses are elsewhere. Though I am passionately fond of the Italian musick, yet I own to you, that I am disgusted with their opera's, when I see those eunuchs play the part of a ROLAND, a HERCULES, or some such hero; and I have not patience to see no more than half a dozen actors, no machines, and no dances, except in the interludes. In my opinion such an opera rather deserves the name of a concert. Good voices here are very scarce, and there are actually but five or six men, and three women, that have the reputation of singing well. The case is the very same with the composers; they have just lost one of the ablest men of that class, viz. LEONARD VINCI, who, they say, was poisoned at Naples; but there are still remaining Mr. HASS, commonly called the Saxon, and signior PURPORA, of whom the former is a German, who married the famous signora FAUSTINA.

While I am giving you an account of the pleasures of Rome, I ought not to omit the inundations of the square Navona, which are performed on the four sundays in the month of August. Two thirds of the square being then laid under water, it forms a lake, in which the coaches make a ring. The adjacent windows are full of spectators, and the fronts of the houses are crowded by the populace, who make hideous shouts and outcries, when a coach happens to take in a little water, or when one overturns, which sometimes is the case. The oddest thing of all, to my mind, is, that while the people were intent upon seeing the coaches pass, and paying a thousand pranks, a jesuit, mounted upon a rail, at the other end of the square, bawled out in vain for an audience of penitents; and tho' very few, if any body heard him, yet he went on haranguing; and it was not his fault, that every body did not forsake all to hear him. About twenty paces from the preacher was a mountebank, who by the comical jests, and actions of his merry-andrew, drew a much greater audience to him than the jesuit had.

Are not these very enchanting pleasures? Yet a Roman, who never passed the Ponte Mole, as there are a great many who have not, will tell you, there is none like those of Rome. But I affirm, that the Romans do not know what diversion is; for in those parties of pleasure, where reigns the greatest freedom, there is always an air of constraint, which one does not see elsewhere: nor does a free deportment become them; insomuch, that when they assume such a carriage, they naturally forget politeness; which, besides, is not what they are much used to; for they know how to be respectful much more than to be polite. The way to be acquainted with them thoroughly, is to visit them at their country-seats, where they are more frank, less ceremonious, and more sociable, and where they live much better than they do at Rome; at least they feed better: and I will even venture to say, that they there spend high, but they get not the credit by such living which

CHAP.  
XXVIII.  
Italian  
Islands.

they ought, because they do not set it off to the best advantage; and if I am not too much prejudiced, it seems to me that they grudge the expence. The most sumptuous article of their repasts is deserts. They have excellent cooks and butlers, they pretend; but as for us, Ultramontains, we are not quite so well used to their method of cookery.

Every nation in Europe where the Roman catholick religion is professed, have their hospitals for pilgrims in this city, but that of the Trinity receives all indifferently; inasmuch, that it had lodged and fed at one time fifteen thousand persons, besides their ordinary quota.

The university and publick schools, here called the Sapienza, were founded by Pope EUGENIUS IV. enlarged and beautified by URBAN VIII. and ALEXANDER VII. The structure is magnificent, and the schools of all the faculties extremely commodious; and there are no less than forty professors, who have good salaries; but they have very little business since the erecting the Jesuits colleges, who seem to have engrossed the education of youth here, and in most Roman catholick countries.

The palaces in Rome are very numerous, the nobility of Italy chusing to reside most part of the year in towns: and architecture is one of their favourite amusements, and they are furnished with greater variety of rich materials from the ruins of the old city, and their own quarries, than are to be met with elsewhere.

The chief of the Pope's palaces are the Vatican, Monte Cavallo, and the Capitol. As to the palaces of the nobility, those of Farnese, Borghese, Colonna, Palavicini, and Barberini, are most admired; but we are not to imagine that the whole town consists of palaces: even at the grand entrance of the gate del Popoli, there are as mean buildings on the right and left, as are to be seen in any town whatever, while those in the front are surprizingly magnificent.

The Pope, considered as a temporal Prince, is one of the most absolute monarchs in Europe: he holds, indeed, a consistory of cardinals frequently, who are his council in ecclesiastical affairs, but are not permitted to intermeddle in the civil government. The Pope has of late years been very cautious in electing persons of high birth, who are related to sovereign princes, on account of the disturbances that have been occasioned sometimes by their too powerful interests; and if such persons do obtain a cardinal's cap, they seldom are advanced to the papal chair, lest they should endeavour to fix it in their families. And the Popes having been Italians for several centuries, take care that there never want a great majority of the natives of Italy in that body, to strengthen their interest against foreigners, who being advanced to the papal see, would naturally be partial to their respective countries, and, perhaps, give up the prerogatives of the church in favour of their natural Sovereigns. Such cardinals as have not a competent subsistence of their own, which seldom happens, are allowed, it is said, a stipend of seven thousand Roman crowns per annum, out of the apostolick chamber.

The Pope's chief minister is the cardinal patron, usually one of the nephews, or a nearer relation, to whom he gives an opportunity of amassing prodigious sums, if the pontificate be of a long duration; and these nephews have been the founders of some of the greatest families in

Italy. The second minister is the Pope's vicar, who is always a cardinal, and has the jurisdiction of the secular and regular clergy, lay communities, hospitals, and Jews; and has a lieutenant for civil, and another for criminal affairs, and a bishop for his vicegerent in matters belonging to his episcopal function.

Baron POLLNITZ, giving a character of Rome, and its modern inhabitants, says, I cannot conceive what motives, except devotion or curiosity, can bring any man to Rome, than which there is hardly a more melancholy city in the world: yet I know some foreigners, and particularly certain Englishmen, who are fond of Rome to a degree of enthusiasm.

The people here rise late and go to bed late: the first thing which they do, is to drink chocolate; then they hear mass in their domestick chapel, of which almost every house has one: they afterwards make some visits, return home at dinner-time, undress, and dine frugally with their families. After their meal they get between the sheets, and sleep for an hour or two, and after that loiter away as much in doing nothing at all; but then they dress, and go to the ring, which is without the gate del Popoli; from thence to the Ponte Mole: there's a walk which is very forcibly paved, between two walls and some pitiful houses; and there is no air, but dust enough to choke one. When the sun is upon its decline, the beau monde repair to the square, or place d'Espagne, where I think I have already told you how they amuse themselves: from the square they go and make their visits of ceremony: at two o'clock at night, which in the long summer days is about ten with us, they fall into assemblies. These may be divided into three classes: the great companies, for gaming; the private companies, where they also play; and the societies, in which they only converse.

They play at such games as we Ultramontains know no more of than magick, viz. such as tarot, pazzica, premiere and milchiades. As to the last of these, I take it to be like languages, which it is difficult to be master of, unless people begin to learn them when they are young. It would take up a man's whole life to learn to know the cards, whereof at one game they play with 99, which are painted too with very extraordinary figures, of popes, devils, &c. and it often happens that the devil takes up the pope. During the conclave they play at pharo; but the Pope has prohibited all games of hazard.

The private assemblies differ only from the publick ones, in that they have not so much company. There is generally the mistress of the house, and a dozen petits-colets, who really are the petit-maitres of this place, supposing them to be Italians; for you are not to imagine that these gentlemen will suffer a poor Ultramontain abbé to put in a word, because they think he has neither sense nor merit. As this is a country of priests, you shall see ten sparks of the band to one of the sword. It is true, that the abbé wears the same habit as the gentlemen of the gown, and as all others do, who are not able to lay out much money in clothes; so that when you see a petit-colet come out of any suspicious place, you must beware of mistakes; for they are not always priests, nor even clergymen.

A gentleman that lives beyond the mountains will here be apt to forget the good manners he has contracted in France, or elsewhere; the generality

nerality of the Romans know nothing more than ceremony, because they are ignorant of good manners; and there is scarce one of them in a thousand that has the air of a man of quality. To be judge of this, one must see them at table, and in what a very slovenly manner they behave at their meals, which is owing to their eating generally alone; for they then loll so much upon the table, that when they dine in company they are at a loss what to do. They are not only nasty in their manner of eating, but in their clothes; for I believe there is not above one out of thirty that puts on fresh linnen every day.

The Italians are in general accused of being jealous; but I really think it wrong, for there is no nation where the ladies have more freedom than here. It is possible, that some of the leaven of the ancient jealousy may still remain among the citizens; but as to the people of quality, I do not think them any more liable to that imputation than our people are; I wish I could say as much in their vindication as to their avarice; but the fact is too well known, and it is the original sin of almost all the Italians, particularly of the Romans, from the highest to the lowest; and it is undoubtedly this avaricious temper, which makes them so sober as they are; for when they are at other folks tables they are intemperate enough; yet I never saw the better sort drunk, and the common people but very seldom. They are accused also of being revengeful, which may be true enough; but really they are cried out against upon that score much more than they deserve; for I have known some that have received affronts, so good-natured as to forget them. It is true, that the populace are very apt to make use of the stileto; but this is owing to the too great indulgence of the magistrate. A man convicted of murder for the first time, is condemned to the galleys; though in some cases indeed, he is only banished from the city, and the ecclesiastical state, and then, after two or three years absence, he pays fifty crowns, and returns to Rome. They who have committed a murder and are not apprehended, generally compound the matter with the government, by paying a certain sum of money. If justice were no stricter in our part of the world, and if our churches were sanctuaries, as they are here, we should have more crimes perhaps committed among us than there are at Rome, where, when all is said and done, we don't hear of robberies; nor of murders committed for the sake of robberies; and though there are no lanthorns, nor watchmen, nor patrols here in the night, I should make no scruple to go from one end of the city to the other with my purse in my hand. What I should be most afraid of, would be the being assassinated by mistake; but even murders of this kind are much oftner committed among the dregs of the people, than among persons of condition; for since I have been here, I have not heard of such an accident to any person of note.

The Campania of Rome is under the immediate government of the Pope; the other provinces of the ecclesiastical state, are governed by legates, or vice-legates; besides which, there is a commander in chief of the forces in every province, and every city hath its governor deputed by the Pope; but as to the podestats or judges, and other interior officers, they are elected by the inhabitants. The great oppression complained of

in the Pope's territories, is his ingrossing all the corn in the country, obliging the owners and occupiers of lands to sell his agents their corn at a very low rate, and retailing it out again at double the price; insomuch that some gentlemen chuse to let their lands lie uncultivated, rather than manure them, the charges of ploughing and sowing exceeding the profits they make. But it can hardly be supposed, that this is generally the case; for if the people were discouraged in this manner from ploughing their grounds, the Sovereign must lose the duty arising by corn, which is one of the best branches of his revenue: neither does he hold up the price of grain so very high, as some suggest, when he retails it out; for travellers all agree, that bread corn is very reasonable at Rome; and tho' there have been some oppressors among the Roman Pontiffs, there have been others, who have distributed great quantities of grain to the poor gratis. So that to say with some, that the government is mild, and with others, it is oppressive, is ridiculous: it is by all allowed to be despotical, and varies according to the disposition and temper of the Pontiff who happens to be upon the throne. Only thus much is observed in general, that there is more liberty allowed at Rome to those of a different communion, than in any other Roman catholic city whatever. As to the Roman villa's:

Tivoli, the ancient Tibur, said to be built by the Greeks, is situated on the brow of a hill, near the river Anio or Teverone, about twenty miles to the eastward of Rome. The hill is covered with olive-trees for five or six miles together, and adorned with beautiful villa's, or palaces: from hence there is a glorious prospect over the Campania, as far as Rome itself. In the time of the ancient Romans, it was esteemed one of the most healthful, as well as pleasant situations in Italy; on which account they had their summer retirements here. HORACE was so well pleased with the situation, that he wished it might be the retreat of his old age. The Teverone forms a cascade, or rather cataraet, near this town, falling from a rock, in one of the cavities whereof is said to be the grotto of LEUCOTHEA, the Tiburtin sibyl, from whence she uttered her oracles. Here are also the ruins of an ancient round building, surrounded with marble pillars, supposed to be the temple of HERCULES SAXANUS. One of the greatest modern curiosities, is the palace belonging to the family of ESTE, or Modena, admired for its architecture, sculpture, paintings, gardens, and water-works.

Tivoli is now reduced to a very little town, surrounded with an ordinary wall; but is still the see of a bishop. Not far from it is the rivulet of Salforata, formerly Albula, from whose waters there arises a sulphureous stench, which may be smelt at a good distance. The little lake from whence this river issues, is one of the greatest natural curiosities about Rome: it lies in the very bottom of the Campania, and is the drain of these parts; the sides are covered with a kind of stony crust, and in it are several floating islands, twenty or thirty yards over, supposed to be formed originally by parcels of rarified sulphureous earth, cast up by the water, which, sticking to rushes and herbs, have been augmented by degrees to this bigness. This lake is unfathomable, and yet not above a mile in compass at present: but Mr. ANDERSON supposes the banks have grown over it in the same manner the islands have been formed in it; and that in time the whole surface will be crusted

Villa's  
Tivoli.

crusted over, as the islands are enlarged, and the banks close in upon them; for all round the lake, where the ground was dry, they discovered it to be hollow by the trampling of the horses' feet. Near Tivoli also are the stone quarries, from whence they fetch that stone used in their buildings at Rome, called Tiburtine-stone, of which great part of St. PETER'S is built, not comparable to Portland-stone, of which the churches in London are built.

As to the great outcry in our part of the world, against the luxury of the cardinals, says the Baron, I really think it unjust; for I cannot see wherein it consists. Their household is not over and above numerous. Their domesticks are generally a *maitre de chambre*, an officer, who, they say, is tantamount to the great chamberlain of our electors; a cup-bearer, a train-bearer, one or two gentlemen, two or three priests, as many valets de chambre, eight or ten lackeys, three coachmen, eight horses, and three coaches. Their furniture is red damask, very plain. They keep so frugal a table, that they commonly allow their cook but one or two testoons a day to defray the expence of it, exclusive of the wine, bread, and fruit; for they always eat alone. None but the cardinal ministers keep an open table at any time.

The Princes of Italy every where give them the upper-hand; and a cardinal takes so much state upon himself, that he refuses the precedence in his own house to a Sovereign Prince of Italy. Our Princes, on the other side of the mountains, are, perhaps, as staunch Catholics, and as much devoted to the holy see as the Italian Princes are; yet they don't pay this homage to the cardinals.

When one cardinal makes a visit to another, the latter receives the visitant at the coach-door, and conducts him into the chamber of audience, where they both place themselves in arm-chairs, under a canopy; and after having been a few minutes by themselves, the gentlemen of the cardinal that receives the visit bring them ice, chocolate and sweetmeats. When the stranger goes away, the other waits on him to the coach, lends him a hand to put him into it, and even shuts the coach-door. They give one another the title of eminency; but in all their interviews there is a great air of constraint.

The complete number of cardinals is seventy. They are the Pope's counsellors in ordinary, and have the right of electing him. They are distinguished into three orders, viz. six cardinal bishops, fifty priests, and fourteen deacons. Their number was fixed by Pope SIXTUS V. The first cardinal bishop is stiled dean of the sacred college. This dean, the first cardinal priest, and the first cardinal deacon, are stiled chiefs of the order; and, as such, they have the prerogative of giving audience to ambassadors, and to the magistrates of the ecclesiastical state, during the vacancy of the holy see. INNOCENT IV. while the council was held at Lyons, made a rule, that the cardinal's hat should be red, to denote, that they were always ready to shed their blood for the liberties of the church. BONIFACE VIII. ordered, that they should wear scarlet robes. PAUL III. required, that their bonnets should be of the same colour. And URBAN VIII. granted them the title of eminency, which before that was only given to the ecclesiastical Electors of the empire, and to the Grand Master of Malta. The council of Trent owned it to be the right of all nations to put in for the dignity of cardinal;

but those who push for it with the greatest success, are the kindred of the reigning Pope, the nuncios in Germany, France, and Spain, the auditors of the rota, the clerks of the chamber, and, in fine, many of the Pope's great officers.

The Pope claims a power of deposing cardinals, which they on the other hand deny he hath; and certain it is, that cardinal Coscia, who so richly deserved it, was not degraded, though a sentence was passed upon him, and ratified, whereby he was declared excommunicate, and out of a possibility of being absolved, but by the Pope, even in articulo mortis; he is also to be confined in a fortress, deprived of the power of speaking or voting, &c. But as omnia venalia Rome, even more now than in JACURTHA'S time, the cardinal DEL GIUDICI, who is a friend of his eminency COSCIA gave him to understand, that the Pope was resolved to treat him as a grand vizir in disgrace; that he must absolutely refund, and that all his sins should be blotted out. Consequently his eminency submitted to implore his Highness's clemency; on condition of paying well for it; and, in fine, his pardon has been taxed at thirty thousand ducats. He has clamoured against it not a little; but the holy father would not bate an ace of it, and the cardinal was forced to acquiesce: however, as he always watches for the death of the Pope, he desired to pay it at several terms; and, upon depositing ten thousand crowns down, he immediately received absolution, his guards were taken off, and he had liberty granted him to walk about in the castle of St. Angelo, and to converse there with his brother, the bishop of Targa. He pleads poverty, and shuffles off his payment from one time to another, in constant expectation that the gout will rise in the Pope's stomach, and take him out of the way. At length, in 1734, he paid down ten thousand crowns more. But a collector of taxes, from whom he formerly received a great present, to procure him an acquittance from the chamber, to which he owed seventy thousand crowns, died lately insolvent, and without making good the fraud; and as CÆSAR, they say, loses nothing, the chamber comes upon cardinal COSCIA, who is condemned to pay this deficiency too; and the Pope won't hear any talk of compounding it.

There are in Rome certain persons stiled Roman Princes, who for the most part are only beholden for this princely dignity, to the happiness of their families, in having one of them a Pope; for many of them are scarce so much as gentlemen. They are complimented with the stile of excellency; but this title extends only to the first-born of the family. They require a vast deal of homage from their domesticks; and all affect to have canopies and chambers of audience in their palaces. They expect that a gentleman should come to their houses without sending word beforehand, and wait in their antichamber till they are pleased to see him. You will think that they must be very necessitous gentlemen, who will submit to this rule, and that their excellencies antichambers are only frequented by their own domesticks. When they receive visits from one another in ceremony, they seat themselves under a canopy, like the cardinals; then they go abroad in state, and have two coaches to follow their body-coach, in which his excellency sits forward by himself, and his gentlemen ride backward; and at the boots of the coach a footman carries an umbrella

la before them, as is done before the cardinals, which is a signal of respect, that requires all coaches, except those of the cardinals or priests, to give them the way, and even to stop while they pass by.

The princesses formerly did not use to give the right-hand to the ladies of quality, at their own houses; but since the honours annexed to nepotism have been abolished, they have been obliged to humble themselves, and to treat the ladies as their equals; yet for all this, they correspond together very little. Heretofore too, the Pope's nieces did not give precedence to any body, not even to the princesses; and all ladies in general were obliged to be in a full dress when they paid them a visit; nor did the nieces go to any body's house, but enjoyed all the honours of sovereigns. But all this is over now; for the nieces of the present Pope not only give the right-hand to ladies of the lowest rank, but also return their visits.

The thing which puffs up this gentry to such a degree, is, that gentlemen of good families make no scruple to wait on them; the poverty among the nobility being very great, and there being but a very indifferent chance for gentlemen of the sword, because the greatest part of the Roman gentry are so much degenerated from their ancestors, that they have no taste for arms, while their fondness for Rome, and the notion they have, that there is not such a delightful place in the world, hinders them from going abroad, and puts them under a necessity of being slaves to people who are very often inferiors in birth.

Nor do the Roman princes distinguish themselves either by their air, or their manner of living. They have a great number of footmen indeed, some no less than two dozen; but they live very meanly; so that not one of them keeps an open table, or has any thing to treat with but ice, and at most a dish of chocolate. The evening is the time to converse with them; for as soon as the Angelus has sounded, all ceremonies at Rome are over; the abbots and priests go in the lay habit to the cardinals, and all compliments at meeting are set aside.

The princesses have the privilege of being lighted to the publick spectacles by eight flambeaux of white wax; but I have known some of them, who, for saving their wax, never burnt any till they came within four or five hundred paces of the theatre, when they stopped to give their lacqueys time to light their flambeaux in order that they might arrive at the opera in pomp; and when they went out they stopped at the very same place for their lacqueys to put out their flambeaux, from which place all the light the princesses had to go home by, was no more than a couple of little dark lanterns, which are here made use of commonly. This way of going with eight flambeaux, puts me in mind of a certain English dutchess, who having travelled in that manner at Rome, would fain have introduced the fashion at Paris too; but she was forbid to make that parade there, because the first two or three times that she went abroad with so much splendor, every body fell on their knees, and thought the holy sacrament was carrying to some sick person.

Most of the ladies, as well as princesses, have very magnificent coaches, but seldom make use of them. The marquiss SUDARINI, who has lately matched his son, has made his daughter-in-law a present of a coach, for which he gave seven thousand Roman crowns, and there are many

others that cost more money; but these coaches are terrible machines, and it is as much as a pair of horses can do to drag them along. Besides, these stately portable houses have an attendance on them which is by no means suitable; they are generally accompanied by half a score or a dozen shabby footmen, who, with the swords that they wear, look more like catchpoles than footmen; their liveries in general are scare-crows, and I do not think that there are any in the world more fantastical. The lacqueys are for the most part old, dirty, unshapeable fellows, because when once a poor wretch has a livery put upon his back, he never throws it off, and does not so much as attain the honour of being a valet de chambre: when he is past his service his master jubilees him, that is to say, puts him upon half-pay, and he serves no longer. The appearance, or neatness of a servant, are things that are not regarded here, and provided they have but the number, what matters it, say they, how they look?

This humour of keeping so many lacqueys, has infected even the citizens; they who are in such mean circumstances, that they cannot afford to maintain them the whole year round, covenant with them only for sundays and saints days. Thus a journeyman shoemaker, or a chimney-sweeper, who has but that very day put a scrub livery on his back, and that often borrowed of a tallyman, shall walk gravely before young master or pretty miss to and from church, with his greasy hair turned up behind his ears, and a long sword by his side. For it would be reckoned indecent here, to see a woman, or a miss, go abroad alone, and the most abandoned prostitutes are always attended with a matron.

They have but two sorts of punishments at Rome, viz. the strappa corda, and the gibbet. The first, tho' it is not mortal, seems to my mind more terrible than death itself: the malefactor being tied with his two hands together to a rope, by which he is hoisted fifteen or sixteen feet from the ground, and then let fall on a sudden, so that he generally becomes a cripple for life. When a man is to be hanged they talk of it a week before-hand, as if it was the finest holy-day in the world. The night before the execution, several prelates, princes, and others of quality, admitted into the confraternity of comforters, repair at midnight to the prison. When they come near the dungeon they make a great noise, and with a loud voice, ask the gaoler, Where is such a one? naming the criminal that is to be condemned. Here he is, says the man, loud enough to be heard by the criminal. Open the doors to us, say the comforters; he is in a bad state there, we will remove him to a place where he shall be better. The turnkey opens the dungeon, and lets in the comforters, who exhort the criminal to go along with them; and being guarded by a company of the Sbirri, they put him in the middle, and carry him thro' several galleries and turnings towards the door of a chapel, before which is hung a piece of black cloth. Just as the criminal is preparing to enter it, the fiscal, calling him by his name, says to him, You—there is your sentence; and at the same time throws him a paper, in which the sentence is written. The criminal reads it, or else one of the comforters does that office for him: that very moment the Sbirri withdraw, and the comforters remain alone with the criminal: then the cloth hung before

before the chapel door is lifted up, and the patient is led to the altar at the end of it, with a crucifix upon it, in the middle of six lighted wax candles; where the question is put to him, If he is willing to confess? If he says Yes, as very few Italians die willingly without confession, a confessor is allotted him, who gives him the best advice he can.

After the criminal has confessed, he receives the sacraments, and the comforters continue with him till the next day. At ten o'clock, which is the hour of execution, he is conveyed in a cart to the gallows, to which he rides backwards, attended by two priests, and two comforters: when they are come to the fatal place, they set him down out of the cart before a chapel to say his prayers, and then they make him walk backwards to the foot of the ladder, which he also mounts with his back to it; when the hangman, who is at the top of it, fastens the rope about his neck, and then leans with all his weight upon his shoulders to put him out of his pain. After he is expired, masses are said in all the churches, and even in the Pope's chapel, for the repose of his soul; and for this end a collection is made, to which the poorest people contribute something: at length, after he has hung four or five hours, he is buried like another man.

I shall conclude, says the baron, with a remark I have made upon the Romans in particular, and the Italians in general; I mean as to the reciprocal hatred of the inhabitants of the different states of Italy. I cannot imagine that they should be so blind as not to see the prejudice it does them; for, in short, it is not barely the hatred of one province to another, but it diffuses its poison to the towns that are subject to one and the same sovereign. These people do not consider, that they form one and the same nation; and that if they did but unite together, they would be both rich and powerful; but being jealous of one another, they only seek to ruin each other, and by that means deprive themselves of the most solid support of their liberty.

The former edition of the MODERN HISTORY of Italy, left Pope BENEDICT XIII. in the chair, exceeding weak and infirm: however, the pious Pontiff could not be persuaded by his physicians, to omit his accustomed devotions; and in the month of October 1729, as he was celebrating mass, and going to drink out of the chalice, his hands shook to that degree, that he spilt all the wine and water that was in it upon his vestment and the ground, at which the Pontiff was in a great consternation, and it was thought proper to burn the garment, to plain the foot of the altar, and burn the shavings.

His favourite cardinal COSCIA, having been accused about the same time of intolerable extortion and oppression, of which his Holiness would never believe him guilty; to secure his eminence against future enquiries, he signed an instrument of indemnity, importing, that this cardinal should never be made accountable for his administration, or for any money that passed through his hands, by any future proceedings against him; and that whatever he acquired, his Holiness made him a free gift of it.

But the cardinal soon after lost his patron and protector; the Pope was taken ill of a fever on the 14th of February 1729-30, and died on the 21st of the same month, being then fourscore

years of age, and some few days more; for he was born on the second of February 1650. He was the eldest son of Don FERDINAND ORSINI, or URSINI, Duke of Gravina, and was made cardinal by Pope CLEMENT X. on the 22d of February 1672. He was the oldest cardinal of the college when he was elected Pope, on the 29th of May 1724, and then took the name of BENEDICT XIII.

The Pope was no sooner dead, but cardinal ALBANI, chamberlain of the holy see, caused the effects of cardinal COSCIA to be seized, and the principal agents of his extortions to be imprisoned; particularly his steward, and the farmer of the revenues arising by fish, who were in great danger of being pulled in pieces by the mob, as well as the cardinal himself; but he had the good fortune to save himself by a timely retreat: however, the cardinals assembling soon after, for the election of a new Pope, cardinal COSCIA found means privately to get into the conclave, where he made loud complaints of the seizing his effects, but could get none of them restored.

After a conclave of four months, the choice fell upon cardinal LAURENCE CORSINI, who was declared duly elected on the 12th of July 1730, taking upon him the name of CLEMENT XII. He was born at Florence April 7, 1652, and consequently within two years of fourscore at the time of his election, being of the noble family of the CORSINI's in Tuscany.

I proceed now to give some account of the wars that happened in Italy, during the pontificate of CLEMENT XII. which may be in a great measure ascribed to the treaty concluded at Seville, between Great Britain and Spain, in the year 1729, to which France and the States General also became parties; for by this treaty, it was agreed, that the contracting parties should introduce six thousand Spaniards into the dutchy of Tuscany, to secure the succession of Don CARLOS, Prince of Spain, to that dutchy, after the death of the then reigning Duke: which the Emperor appeared extremely averse to, and ordered great bodies of his troops to march into Italy, in the year 1730, to oppose the Spaniards and their confederates, if they should attempt to put that article of the treaty in execution, which prevented the transporting the Spaniards to Italy that year: but the Emperor, finding that they would be assisted by the fleet and land forces of Great Britain the following year, if he did not come into the measures prescribed by the treaty of Seville, he consented, at length, very unwillingly, that if Great Britain, and her allies, would guarantee his hereditary dominions to himself, and his heirs female, he would submit to the introduction of six thousand Spaniards into Tuscany; and they were accordingly conveyed to Italy in the year 1731, by the united fleets of Great Britain and Spain; and took possession of the dutchy of Tuscany; which proved, as the Emperor expected, the ruin of his affairs on that side; for the Queen of Spain, whose ambition, probably, will never be satisfied, till she sees her son, Don CARLOS, sovereign of all the Spanish territories in Italy, having thus got footing there, entered into a confederacy with the King of France, to drive the Emperor out of all the Italian provinces which formerly belonged to the crown of Spain, and prevailed on the King of Sardinia

to come into this scheme, contrary to his most solemn treaties and engagements with the Emperor; Spain offering to augment his dominions with the duchy of Milan, or the greatest part of it. The grand motive which prevailed on France to come into this confederacy, was the weakening the Emperor, whom she ever looked upon as her most formidable rival in power. The confederates laid hold of the slightest pretence imaginable for putting their designs in execution; namely, the Emperor's making interest to get the Elector of Saxony advanced to the throne of Poland: and observing, that his Imperial Majesty, relying on the guarantee of the maritime powers, for the security of his Italian territories, had withdrawn most of his troops from Italy; in this favourable juncture, they united their forces that were in garrison in Tuscany, with those of the King of Sardinia, and invaded Milan the latter end of the year 1733, and being supported by another body of troops from France, under the command of marshal VILLARS, reduced almost all that duchy within the space of a few months; while another army, commanded by the Duke of Berwick, was ordered to pass the Rhine, and invade the frontiers of Germany, as has been related already.

The following year, the Spaniards having transported another army of twenty thousand men to Italy, Don CARLOS invaded the kingdom of Naples; and being arrived at Averla, three leagues from the city of Naples, on the ninth of April 1734, deputies came from thence, and made their submission to this Prince, delivering him the keys of the city. While the King remained in the neighbourhood of Naples, the count de Montemar, the Spanish general, was ordered to pursue the Imperialists; who, to the number of six or seven thousand men, commanded by general VISCONTI, retired to a camp of difficult access near the town of Bitonto, where they were attacked on the 25th of May by the Spanish army, which were three times their number, and totally defeated; for which victory, Don CARLOS caused Te Deum to be sung in the cathedral of Naples, and created count de Montemar duke of Bitonto, being the place where he gained that memorable victory, which rendered Don CARLOS master of that kingdom.

After this victory the Spaniards laid siege to Gaeta, which surrendered on the fifth of August, and then made preparations for the invasion of Sicily, and landed twenty thousand men there, under the command of the duke of Bitonto, in the beginning of September 1734, whereupon the whole island revolted to them, except the citadel of Messina, and the fortresses of Syracuse and Trepani. The Spaniards afterwards laying siege to the citadel of Messina, that fortress surrendered on the 22d of February 1734-5, on the taking whereof, the Infante Don CARLOS, now stiled King of Naples and Sicily, embarked for that island, where he landed on the ninth of March; and, on the second of June, the town of Syracuse surrendered, and immediately after the fortrefs of Trepani, which had been blocked up ever since the Spaniards landed in the island: and now the Spaniards, being entire masters of Sicily, Don CARLOS made a triumphant entry into the capital city of Palermo, on the thirtieth of June 1734, and

on the third of July following was crowned King.

The town of Capua having been closely blocked up ever since the arrival of the Spaniards in the kingdom of Naples, surrendered on the 21st of November 1734; and soon after the duke of Bitonto reduced Orbitello, and Porto Ercole, and the rest of the fortresses the Imperialists were possessed of on the coast of Tuscany: after which, he detached part of his army to the assistance of the confederates in Lombardy; whereupon the Emperor was obliged to abandon all the places he was possessed of in Italy, except the city of Mantua, as has been related already; and the following year 1735, a treaty of peace was concluded between the Emperor on one side, and the Spaniards and their confederates on the other; whereby the kingdoms of Naples and Sicily were confirmed to Don CARLOS; and on the other hand, Milan and Mantua (except some few places assigned to the King of Sardinia) were yielded to the Emperor, and Tuscany to the Duke of Lorraine (after the death of the then Duke) as has been related already in the history of Germany.

But to give a more particular account of the late war in the north of Italy; although the Emperor was surprised at the beginning of the war, and lost most of the towns in Milan within the space of a few months, for want of garisons to defend them: he afterwards reinforced his army in the Mantuan, and disputed the ground by inches with the French and their confederates, maintaining the remainder of his Italian territories with great obstinacy, till the confederates were joined by the victorious army from Naples; and then the Imperialists, finding it impossible to resist the united power of the confederates, retired out of Italy, as has been said, in the year 1735.

During this war, the most considerable actions were, first, that of Parma, of which we received the following account from Mantua, viz. On the 27th of June 1734, count MERCI passed the Parma with his army: the same day he received advice, that the marshal DE COIGNY had likewise ordered his army to march. The 29th, count MERCI advanced towards the village of Croceta: he found that the enemy had already begun to intrench themselves under the walls of Parma, and that they had possessed themselves of two castles. That general, at the head of five companies of grenadiers, supported by five or six battalions, attacked the enemy about eleven o'clock with so much vigour, that he took one of the castles, and six pieces of cannon, which he immediately turned upon the French; but he being unfortunately killed soon after with a cannon ball, and his troops not being timely supported, the enemy obliged them to abandon the castle: the fight continued, nevertheless, with a great deal of vigour till night, without any considerable advantage on either side. The Prince of Wirtemberg, who took upon him the command of the army, as soon as he heard that count MERCI was killed, behaved very gallantly: he received two wounds, and had several horses shot under him: there was only the right wing of our army engaged, that is to say, eighteen battalions, with a regiment of horse, and another of dragoons, the left wing not having fired a shot. We had about four thousand men killed and wounded upon the field of battle.

Among

Among those killed the 29th, besides count MERCI, were the Prince of Culmbach, counts NICHOLAS PALFI and HARRACH, general DE VINK, colonels FORMENTINI and SECKENDORF, counts DAUN, NESSELROTH, SCHEFFENBURG, the marquis D'ESTE, the young prince of Lowenstein, &c. Among the wounded were prince LEWIS of Wirtemberg, the Count DE CASTELBARCO, M. DE DISSBACH, M. DE WACHTENDONCK, M. DE RESTONI, &c. General DE LA TOUR was likewise wounded, and taken prisoner.

On the other hand, the French acknowledged they had three or four thousand men killed and wounded in this action, which they observed lasted longer, and was more bloody than any in the memory of man. It seems to have been a drawn battle, both sides claiming the victory, and very probably, had not count MERCI, the German general, been killed in the beginning of the action, the Germans had obtained a complete victory.

The next considerable action was on the 15th of September, when count KONIGSECK, the Imperial general, passed the river Secchia in the night, surprised marshal BROGLIO, the French general, in his quarters, took great part of his baggage, and made between two and three thousand prisoners, the general having but just time to make his escape in his shirt; and four days after, viz. on the 19th of September, another obstinate battle was fought under the walls of GUASTALLA, where neither party would acknowledge themselves beaten, but lost four or five thousand men each; and among the German officers was killed Prince LEWIS of Wirtemberg.

The celebrated marshal VILLARS commanded the French army in Italy, in the beginning of the year 1733; but his memory and judgment failing him, he became troublesome to the army, and he would have endangered all, if the King of Sardinia had not prevailed on the King of France to recall him. He fell sick at Turin in his way home, and died there on the 17th of June 1734, in the 84th year of his age. He was page to LEWIS XIV, but went very young into the army, and soon distinguishing himself, owed his advancement more to his merit than his fortune. The French looked upon him as the restorer of their reputation in Flanders the last war, and the greatest general in his time: he was to the last a man of uncommon gaiety and gallantry; for whether fighting or dancing, he appeared with the same vivacity and good humour, and seemed an enemy to none except the Jesuits. What did not consist well with such a temper was his love of money; he enriched himself too much

by the spoils of war, and the contributions he used to raise for safe-guards.

The war in the Netherlands being finished by the peace of Utrecht, the marshal DE VILLARS had again the command of the army in Germany. When he took his leave of the King, he said to him, I most humbly intreat your Majesty to consider, that I leave you in the midst of my enemies, whilst I am going to fight yours. During the campaign, his enemies told the King, in hopes his Majesty would censure him for it, that he laid out the sum of eighteen millions of livres in the purchase of an estate. The King asking him one day at dinner, if it was true, that he had made such a purchase; Yes, Sir, replied the marshal, who suspected, that those who told the King of it were then at the table, I have bought an estate which cost me eighteen millions of livres, and if the war continues, and your Majesty trusts me with the command of your army, I hope to purchase a more considerable one next year at the expence of your enemies.

Before I leave Italy, it may be proper to take notice of the abdication of VICTOR AMADEUS, King of Sardinia, and of his attempts to re-ascend that throne, of which baron POLINITZ has given us the following particulars, viz.

VICTOR AMADEUS, King of Sardinia and Duke of Savoy, after the death of the Queen his wife, who was daughter of PHILIP of France, duke of Orleans, by HENRIETTA of England, fell in love with the marchioness of St. Sebastian, lady of honour to the prince of Piedmont. The virtue of madame de St. Sebastian, and the King's devotion for her, induced him to marry this favourite. But not thinking it honourable for a King to place a subject on his throne, he took a resolution to resign his crown before he contracted so unequal a match. He imparted his design to madame de St. Sebastian, who did all she could to prevail with VICTOR to continue upon the throne; but finding he was resolved not to make her a Queen, she consented to his abdication, still thinking herself highly honoured, to become the wife of a Prince who had worn a crown. King VICTOR consulted with his chief favourites, about his abdication, who all advised him not to leave the throne. His son, King CHARLES, conjured him to keep possession of it. I protest to your Majesty, said this Prince, I never once indulged a wish to govern, and think myself exceeding happy to be your Majesty's first subject. But all his remonstrances were of no effect; and the 4th of September, 1730, was fixed for the day of abdication. Upon that day all the chief persons in the government, and the senate, met in the great hall of the palace. There the King appeared, without any marks of

\* The Prince had a kindness for mademoiselle DE CUMIANE, before she was married to the count de St. Sebastian, when she was maid of honour to madame royale. She was afterwards a lady of honour to the Dutchess of Savoy, and at last tirewoman to the Princess of Piedmont, late Queen of Sardinia. She was left a widow ann. 1723. While she was married to the count de St. Sebastian, she still preserved the King's friendship and esteem, and was always in great credit with him. When she became a widow, the old flames of love broke out again; the King gave her an apartment at court, where he could see her without been seen; and he took care of her family.

† It is said, that the real motive of this abdication was his perplexity on account of the succession of Parma and Tuscany, and the introduction of DON CARLOS in Italy. They say, he entered into engagements relating to this, first with the court of Vienna, and afterwards with Spain, and it not being possible for him to satisfy either of these courts, without exposing himself to the resentment of the other, he resolved to abdicate, at least for a time, because he knew of no other way to extricate himself from the dilemma.

‡ The abdication was performed the 3d of September, in the castle of Rivoli. The declared motives were, the fatigues of a reign of fifty years, the infirmities of old age, and the necessity of some interval of retirement between a throne and a tomb.

royalty, accompanied by the Prince of Piedmont, and declared to the assembly, that he was resolved to yield the throne to his son; and that, from that moment, he exempted them, as he did all his subjects, from the oath of allegiance they had taken to him. He exhorted them at the same time to acknowledge his son CHARLES, Prince of Piedmont, for their King; and desired them to be as loyal to their new Sovereign as they had been to him. Then the act of abdication was audibly read by the marquis DEL BORGIO, secretary of state, and CHARLES was recognized for King.

After the ceremony was over, King VICTOR, with the marchioness of St. Sebastian, whom he had married on condition \* that she should wear no other title, set out for Chamberry, which he had chose for the place of his retirement. But scarce a month was past, ere he began to repent of having given the reins out of his hands, though the King, his son, behaved as dutifully to him as if he had been still his subject. When King VICTOR resigned, he advised his son to cause the lands of the nobility and gentry to be surveyed, and to impose a tax on them in proportion to the number of acres. This scheme, tho' it had a view to the encrease of the King's revenues, tended to the ruin of the nobility; for which reason CHARLES, when he came to the crown, did not think proper to put it in execution. VICTOR being incensed at it, wrote about it to his son, rather in the stile of his lord and master than his father; and perceiving that CHARLES was still averse to his counsel, he entertained a thought of re-ascending the throne. † To this end, he secretly felt the pulse of the people, and found them all faithful subjects to CHARLES: yet all this did not discourage him; he relied upon the troops, which he knew had an esteem for him, and he thought they would also be his friends; for most of the officers having been preferred by him, he did not doubt but they were still attached to him; and he flattered himself with their concurrence to his designs. He wrote to the marshal RHEBINDER, in general terms indeed, but in a stile that was very soothing and tempting. This general, who was commander in chief of the forces, being sensible of what consequence it was to deprive King VICTOR of the least hopes of re-ascending the throne, returned him answer, that he owned he was obliged to him for his estate, honours, and every thing. "Your Majesty, said the marshal in his letter, has made me all that I am. I am under no obligation to King CHARLES, but my engagements to your Majesty are inexpressible; though of all the favours which you have heaped upon me, the honour of your esteem was always to me the dearest. Give me leave therefore, sir, to preserve that esteem, which I presume to say, I have acquired by the blood I have spilt for your service; whereas, sir, I should forfeit it, were I to be so unhappy as to be guilty of perjury to the King you have given me, and to whom you have enjoined my obedience. I shall be as true to him as I

"was to your Majesty, and will spend the last drop of my blood to maintain him on the throne. I am, however, always ready to give your Majesty the most sincere marks of my respect for your person, being fully persuaded, sir, that your Majesty will lay no commands on me, but such as are agreeable to that justice which ever accompanied all your actions, &c."

This answer was not sufficient to cool King VICTOR's ambition to resume the government. He wrote a second time to the marshal DE RHEBINDER, and to other general officers. He assumed an imperious stile, and signified that he knew how to punish those that refused to obey him. All these letters were carried to King CHARLES; who being concerned to see his father so uneasy, said to those who brought them, What would you have me do? He is my father; I depend upon your fidelity, and resign myself to Providence!

The King was still in hopes that he should be able to make VICTOR easy, and was willing to have an interview with him, and for that purpose he went with his Queen to Evian, and from thence to Chamberry, where CHARLES paid his father a visit; but found him very much out of temper. The Prince, however, bore all with the dutifulness of a son. But when he took leave of VICTOR, he paid a visit to madame de St. Sebastian, with whom he had a long conference. He desired this lady to pacify King VICTOR, and to dissuade him from concerning himself any farther with state affairs. He hath made me a King, said CHARLES, and a King I will be. You can do any thing with him; therefore make him easy. If he does not like this, let him chuse any other castle or place in my dominions that he likes better, of which he shall have the entire disposal. They say CHARLES dropt a hint in this conversation, that he was inclined to yield his father a province in sovereignty: however he promised great advantages to madame de St. Sebastian, not only for herself, but for the son she had by a former marriage, and for her brothers. This lady promised the King all that he desired, but kept her word very ill; for her ambition to be Queen prompted her to make King VICTOR every day more and more uneasy.

VICTOR after this observed no measures, and said publicly, that he would re-ascend the throne. To this end, he thought it necessary for him to be nearer Turin. He therefore wrote to the King, his son, that the air of Chamberry was bad for his health, and desired him to let him go and reside at the castle of Montcallier. CHARLES was returned to Turin when he received this letter; but before he had time to answer it, he understood that the King his father, and madame de St. Sebastian, were already come to Montcallier. He was not at all sorry for it; because, as he knew King VICTOR's designs, he could better observe his motions when so near him: and King VICTOR, on his part, was glad that he was at Montcallier, in hopes that the neighbourhood of

\* The King was not married to the countess of St. Sebastian till he came to Chamberry, where she met him; for he set out from Turin without her. When he married her, he gave her one hundred thousand crowns, with which she purchased the marquisate of Spigo for her children, and then exchanged her title of countess of St. Sebastian for that of marchioness of Spigo.

† VICTOR AMADEUS took it into his head to re-ascend the throne as soon as he heard of the conclusion of the treaty of Vienna, by which the Emperor consented to the Introduction of the Spaniards, he then let the marchioness del Spigo into the true motives of his abdication, and into the measures he intended to take for re-ascending the throne. This ambitious woman encouraged him; and being withal a very cunning intriguing person, she left no stone unturned, to bring a project to bear which would set her on the throne; and she engaged all her friends and relations in the affair, of whom some betrayed her.

CHAP.  
XXVIII.  
Italy and  
the Italian  
Islands.

Turin might give him a better opportunity of tampering with the garison, and the commanding officer of the place. He did all that was in his power to gain them, and gave such publick \* proofs of his intention to re-ascend the throne, that CHARLES's ministers, † fearing lest he should call in foreigners to his assistance, unanimously advised the King to confine him. The young Prince exclaimed several times against this proposition. What, said he, make my father a prisoner? No; I can never consent to that. And indeed it was a long time ere he could agree to it; but at length he was prevailed on by the strenuous solicitations of his council; though, when he signed the order for confining him, his hand shook to such a degree, that the secretary of state was obliged to guide it.

The count DE LA PEROUSE, lieutenant general of his forces, was charged with the execution of the warrant for arresting King VICTOR, and had a detachment given him of three thousand men, drawn out of the garisons of Turin, and other neighbouring places, to support him in the undertaking. They all marched out at the same hour from their quarters, without knowing whither they were to go; and at two o'clock next morning they all arrived at the place appointed, at Montcallier. The count DE LA PEROUSE, attended by the chevalier DE SOLARE, lieutenant governor, at the head of a detachment of grenadiers, with their bayonets screwed to their muskets, went up the great stair-case of the palace, which led to King VICTOR's apartment, while the marquis d'ORMEA, secretary of state, who carried the order signed by King CHARLES, secured the back-stairs with another detachment of grenadiers. M. DE LA PEROUSE finding the apartment shut, broke open the door, and after seizing a page in waiting, that was asleep in the first antichamber, he made his way farther, and forced open all the doors till he came to the chamber where the King was a-bed with madame de St. SEBASTIAN. This lady hearing a noise arose immediately, and having only time to slip on a night-gown, ran to the door, when seeing so many armed men, she cried out, Oh, sir, we are betrayed! They gave her no time to say more; but two officers carried her into the next chamber, where they caused her to be dressed, and afterwards conducted her to Ceve, a fortress of Piedmont.

Neither the outcry of madame de St. SEBASTIAN, nor all the noise that was made, had awaked King VICTOR, who always slept sound. The chevalier DE SOLARE seized the King's sword, which he saw lying on a table, and the count DE LA PEROUSE went to the bed-side, and opened the curtains. Upon that the King started out of his sleep, and asked, what was the matter? The count DE LA PEROUSE said to him, that he had orders from the King to arrest him. What King do you mean, said VICTOR? it is I that am your King and master, you ought to acknowledge no other. Your Majesty has been so, replied the count, but you are so no longer; and since it has pleased you to give us King CHARLES for our lord and master, and to command us to obey

him, I hope your self will set us an example of such obedience. The King was in a violent passion, threatened the officers, and refused to rise. The chevalier DE SOLARE, coming too near the bed, the King punched him with his elbow in the belly, and commanded him in wrath to withdraw. As he still continued obstinate in his refusal to rise, the officers lifted him up, and dressed him. The King was heard to say, in the mean time, that he only wished to sit two hours on the throne, that he might hang up the rascals that had misled his son; and he named the principal lords of the court.

As soon as he was dressed the officers surrounded him, and conducted him down the great stair-case to his coach, that waited for him in the yard. The King seeing the anti-chamber full of grenadiers, seemed surprised at it; and the soldiers, who as yet knew not on what errand they were sent, seemed no less surprised, when they saw their old King was to be carried off a prisoner. What? our King! said they softly to each other. What has he done? What is the matter? The count DE LA PEROUSE fearing a mutiny, called out, Silence, in the King's name, on pain of death. The old King found drawn up in the court-yard, a regiment of dragoons, which he had always valued above the rest of his troops. The sight of it affected him; and he would have spoke to it, but no time was allowed him, and he was obliged to go into the coach. The count DE LA PEROUSE, and the chevalier DE SOLARE, asked his leave to sit with him; but the King answered, he would not suffer it. So they mounted their horses, rode by the sides of the coach, which was surrounded by the soldiers, and conducted him to Rivoli. I had almost forgot to tell you, that when he went from Montcallier, he asked for three things; his wife, his papers, and his snuff-box, the last of which was all he obtained.

The day after he came to Rivoli, as they were clapping iron bars and double shutters to the windows of his apartment, the King asked the glazier, what he was going to do? I am going, said the man, to put on double shutters to your windows, that you may not catch cold this winter. How now, varlet! said the King, do you think I shall spend all the winter here? Ah by my faith, replied the glazier, you will pass this winter here, I believe, and many more.

This prince was attended with care, and treated with all the respect due to his person; and they say he began to be composed. The chevalier DE SOLARE, and two captains of the guards, were appointed to take care of him, with whom he sometimes played at billiards. They had orders to treat him with all manner of respect, but to give no answer to any of his complaints §

In the whole course of this affair, it is fortunate for King CHARLES, that not one of his subjects failed in his allegiance to him; he has not been obliged to stain his government by any bloody execution, nor has he caused above three persons to be apprehended, among whom were King VICTOR's two physicians that carried his letters, but they are lately set at liberty.

\* These proofs were his sending for the marquis DEL BORGO to Montcallier, demanding the instrument of abdication from him, giving him but twelve hours time to fetch it, and his appearing before the citadel of Turin, with a view of getting into it, and of animating the garison to assist him in his enterprise.

† These were all privy counsellors and great men; who, being assembled by order of the King, and consulted on the imminent danger of his being dethroned, were all of opinion for putting VICTOR AMADEUS and his consort under an arrest.

§ He died October 31. 1732.

C H A P.  
XXVIII.  
Italy and  
the Italian  
Islands.

They say, that madame de St. SEBASTIAN fell into a deep melancholy, and lived intirely upon broth of her own making. After her disgrace, her son, who was an ensign in the guards, was no longer seen at court. The young King missing him, ordered the marquis d'ORMEA, minister and secretary of state, to acquaint him, that he might come to court and continue in his employment, and that his Majesty assured him, he did not intend he should be a sufferer for any crime whatsoever, which madame de St. SEBASTIAN had committed, and that he would take care of his fortune.

The Piedmontese are charmed with their new King; and indeed he is a Prince, says the baron, that has the qualities of a good monarch. He is humane, compassionate, generous, and beneficent. He is a little under size in stature, but very well shaped; dances well, loves pleasures, and particularly hunting. Without flattery, one may say, he is endowed with a great many virtues; and that if he has faults, it is only owing to human nature, with which intire perfection is incompatible.

His first Queen was of the family of Hesse Rhinfels. She brought the King two princes\* and a princess; but dying in 1736, his Sardinian Majesty is lately married to the eldest princess of Bavaria.

The death of JOHN GASTON DE MEDICIS, Duke of Tuscany, happening in the month of June 1737, the Duke of Lorrain, in pursuance of the late treaty between the Emperor and France, and her allies, took possession of that dutchy, as has been intimated already; and on his return to Vienna, appointed the princess ANNA-MARIA-LOUISA, sister of the late Duke, to be regent of Tuscany in his absence. The Duke of Parma, ANTHONY FARNESE, father-in-law to the present Queen of Spain, died some years before him without issue, viz. in the month of January 1731.

What is most remarkable in the MODERN HISTORY of GENOA, is, the rebellion of their subjects in the island of Corsica, which could never have subsisted so many years, if it was not fomented by some foreign powers; but who they are is yet a secret; and we know as little of THEODORE, who styles himself their King; but he will probably be laid aside, or forced to abdicate by the French, who under pretence of making themselves umpires between the Genoese and their subjects, have introduced a body of troops into that island, and will probably give law to both.

The war  
in Corsica  
revived.

There was however a cessation of hostilities for some time, after the arrival of the French in the island of Corsica; but the natives apprehending they were too partial to their masters the Genoese, the war was revived, and the Corsicans renewed their allegiance to King THEODORE by a declaration of the following tenor, viz.

WE declare and make known to the whole world our will and positive intention, that by reason of the intolerable oppressions, which we have suffered for a long while under the tyranny of the Genoese, we did some years ago chuse Lord THEODORE, Baron of Neuhoft, King of the island of Corsica; that to him we now submit and do intend for ever hereafter to submit to his person,

whom God preserve, as also to his descendants. And moreover, that when we gave hostages, and appointed certain deputies with full powers, we never had it in our view or thoughts to retract the inviolable election of his said Majesty, but only to demonstrate to all crowned heads, and particularly the King of France, the oppressions which we have suffered from the Genoese, and the validity of the election of our King THEODORE, the most Christian King having not perhaps been duly informed of the misery of the people of Corsica. And to the end that the said monarch, if he ever formed a design to reduce the kingdom of Corsica under the Genoese tyranny, might know, that all the inhabitants had rather, with a salvo to their religion, deliver themselves into the hands of the Turks, than the Genoese; the massacre of seven hundred of the principal Corsicans, which happened three years after the zealous resentment of SAMPIERE the Corsican, and this too after having obtained the guarantee of France, being still fresh in their memory: For this reason we declare, that the hostages and deputies have made an ill use of their commissions, contrary to their former election and submission. And that by this solemne act, the nation does now and for ever confirm the election of the said Baron de Neuhoft for King of Corsica, and the island Caprara, with their dependencies. And that we do cheerfully and unanimously declare the said Baron to be our lawful King and Sovereign; and in consequence submit our persons, lives and fortunes to the disposal of our King THEODORE, whom God preserve. Done in the great square of the convent of Tavignia, where we are all assembled, Friday January 16, in the year of Grace 1739.

Ratified in the name of all the people by us, who are appointed Generals and Commanders,

HIACINTHO DE PAULI,  
DON LEWIS GIAFFERI.

The Corsicans, not long after the publishing this declaration, defeated several parties of the Genoese, and their French allies; whereupon a further reinforcement of French troops embarked for that island, under the command of Marshal Mallebois, who soon compelled the malecontents to submit or quit the island, which most of their chiefs did; King THEODORE being absent at that time soliciting the protection of foreign powers, or providing arms and ammunition for the service of his new subjects. He arrived the latter end of the last year at Naples with three Dutch ships, laden with arms and other provisions of war, which were seized there, as well as his person; but his Sicilian Majesty thought fit to give THEODORE his liberty, tho' he detained his effects and sold them to the Genoese.

In the mean time a war commencing between Great Britain and Spain, his Sicilian Majesty declared he would stand neuter, assuring the British merchants that they might continue their commerce with all freedom and security. He applied himself also to improve the manufactures and commerce of his dominions, suppressed sanctuaries in a great measure, and would not suffer criminals to be protected in religious houses or churches as they used to be, let their crimes be of never so high a nature.

And as Naples had declared for a neutrality between Great Britain and Spain, it appears the

Great Duke of Tuscany followed the example, as did almost all the Italian Princes, viz. The Pope, the Genoese, the Venetians and Modenese; though few of them seem to have observed that neutrality very strictly, but have in a clandestine manner supplied and assisted the respective parties they most favour.

The Neapolitan Court continuing to encourage every project that might tend to the improvement of trade, among others invited the Jews to come and settle in that kingdom, from whence they had been banished upwards of two hundred years, under the following restrictions:

They are permitted to reside there fifty years, and if they are not ordered to depart then, fifty years more: They are also permitted to purchase lands, provided they are not fiefs to which a jurisdiction is annexed, and to sell their lands and goods if they are ordered to depart: That they may establish schools, and their rabbies shall have jurisdiction over their people in all cases not capital: They shall have the free exercise of their religion, but not build temples: They shall not be confined to one quarter, or wear badges of distinction, but dwell in any town where they please: Those who have studied physick may take a Doctor's degree, and prescribe to their patients: They may entertain Christian servants, provided the men be 35, and the women 23 years old, and they be not permitted to remain in their masters houses all night without leave from the Bishop.

The ecclesiastics preached violently against admitting the Jews on these terms, but they were silenced by the government, and a great many Jews actually resorted to Naples and Sicily from Turkey and several parts of Christendom.

The King of the two Sicilies also concluded a treaty of peace and commerce with the Turks this year; for such has been the folly and superstition of the Spaniards and Sicilians hitherto, that they would have no commerce or friendly correspondence with Jews or Turks, either in their Spanish or Italian dominions, but have been in a perpetual state of war with both of them, making prize of all such Turkish ships and merchandize as fell in their way, and putting to death all who professed Judaism, and confiscating their effects, as they do to this day in Spain and Portugal.

By the articles of commerce with the Turks, it was agreed that the goods of the Neapolitans should pay a duty of three per cent. in Turkey, and the Turks should pay the same duty at Naples.

That their Ministers, Consuls and domesticks should enjoy the same privileges as those of any other friendly power.

The King of the two Sicilies concluded a like treaty with Tripoli by the recommendation of the Grand Signior; but the Algerines could not be prevailed on by the Porte to conclude articles of peace and commerce with the two Sicilies; so that their Turkey trade remains very precarious.

This year, on the 5th of March, a violent shock of an earthquake was felt at Salini near Palermo in Sicily. The Capuchins of that town hearing a great noise under their cloyster, ordered some bricklayers to search whether their house had not received damage by it. The workmen having examined it declared they did not apprehend any danger: however the Capuchins were so heartily frightened, that they thought fit to remain in their church the next night, and at five in the morning hearing the like noise they had done before, they

ran out into the fields, and there saw their convent and garden overturned with a terrible noise, and so buried, that nothing remained above ground but the tops of two cypress trees.

The Pope dying on the 29th of January this year, in the 88th year of his age, and the tenth of his reign, his obsequies were begun on the 4th of February. His corps was laid upon a magnificent bed of state in St. PETER's church, which was illuminated with a thousand pound weight of wax-candles and flambeaux. On the 6th a funeral oration was made, and the next day the Cardinals went into the conclave, where sixty-eight being assembled, they proceeded to elect another Pope, but did not effect it till the 17th of August, when Cardinal PROSPER LAMBERTINI, having 34 votes, was chosen, and took upon him the name of BENEDICT XIV.

He is of one of the noblest families in Bologna, and was Archbishop of that city, where he gained the love of all men by his charity and affability. As he is but sixty five years of age, and of a strong constitution, a long reign is expected, as well as a good one.

The Spaniards this year, on the third of November, assembled a fleet of two hundred sail of transports at Barcelona, on which they embarked fifteen thousand men in order to invade the Austrian dominions in Italy, in which they were not opposed by HADDOCK the British Admiral; tho' one principal design of sending him to the Mediterranean was supposed to be to prevent any such embarkation. It was said in his excuse, that since the French had joined the Spanish fleet in that sea, and taken them into their protection, his force was then much inferior to the united fleets, and he thought it more prudent to retire into Port-Mahon, and preserve the men of war under his command than hazard the loss of them in an unequal fight. But however that was, the combined fleets meeting with no other obstructions than a storm, in which they were no great sufferers, landed the forces that were on board at the Spanish port of Orbitello on the coast of Tuscany, from whence they were to march to Bologna, and be joined by the forces of the King of the two Sicilies. The Austrians in the Milanese and Mantuan thereupon made preparations to stop their progress, but no action happened this year in Italy between the contending parties.

In the beginning of the year following a second embarkation of Spanish troops arrived in Italy, and marched thro' the Ecclesiastical State, towards Lombardy. And the French demanded a passage for a body of fifteen thousand more thro' the King of Sardinia's territories, but that Prince did not think fit to comply with the motion: On the contrary he declared he should be an enemy to any power that should disturb the peace of Italy; and the Duke of Modena discovering an inclination to join the Spaniards, the forces of the King of Sardinia and the Queen of Hungary invested Mirandola, and threatened Modena with a bombardment. In the mean time the Duke of MONTENAPOLÉ, the Spanish General, advanced into the Bolognese with twenty thousand men, where he waited the arrival of the Sicilian auxiliaries. And Don PHILIP made preparations for invading the duchy of Savoy, on the side of Dauphine.

The Duke of Modena finding the King of Sardinia persisted in his demands of having Modena and Mirandola delivered up to him, abandoned his dominions, but ordered the governor of those cities

cities to defend them to the last extremity: how-  
ever both Mirandola and Modena surrendered in  
the month of July, and the garison of Modena,  
consisting of three thousand men, submitted to  
be made prisoners of war.

On the other hand, Don PHILIP invaded Savoy,  
and penetrated as far as the capital city of Cham-  
bery. He published his manifesto on the 26th of  
August, declaring that the King of Sardinia hav-  
ing opposed the claims of his Catholick Majesty  
to Lombardy, he had therefore caused his forces  
to invade the territories of the King of Sardinia,  
by way of retaliation, and issued his orders to the  
people of Savoy to send deputies from their towns  
to take the oaths of allegiance to him (PHILIP)  
and settle their contributions.

This success of the Spaniards in Savoy obliged  
the King of Sardinia to separate his forces from  
Count Traun, the Austrian General, and return  
to Piedmont to defend his frontiers. And now  
the Austrian and Spanish armies in the Bolognese  
were pretty near equal: for as the King of Sardinia  
was obliged to return with his forces to Pied-  
mont; so the King of the two Sicilies was com-  
pelled to withdraw his forces from his Spanish al-  
lies by the British fleet, of which Mr. ALLEN, the  
British Consul at Naples, sent the Duke of New-  
castle the following account, viz.

On Sunday morning, the 19th of August, N. S. a  
squadron of his Majesty's ships, and four  
bomb vessels commanded by Commodore MAR-  
TIN, appeared in the bay of Naples. And some  
hours before they came to an anchor before  
the town (which was about four o'clock in  
the afternoon) the Duke of Montecallegre sent  
to his Majesty's Consul to desire him to go on  
board the Commodore, to know whether they  
came as friends or enemies, the appearance seem-  
ing hostile, but that his Sicilian Majesty would  
be glad to receive them as friends, desiring nothing  
more than the amity of his Britannick Majesty.  
The Consul thereupon went on board the Com-  
modore, who communicated to him the purport  
of the order he had received from Vice Admiral  
MATTHEWS, and a message to be delivered in the  
King's name to his Sicilian Majesty (namely)  
That his Britannick Majesty being in alliance with  
the Queen of Hungary and the King of Sardinia,  
and the King of the two Sicilies having joined his  
forces with those of Spain to invade the Queen of  
Hungary's dominions, contrary to all treaties, he,  
the Commodore, was sent to demand that the King  
of the two Sicilies should not only forthwith with-  
draw his troops from acting in conjunction with  
those of Spain, but that his Sicilian Majesty  
should promise not to give them any farther as-  
sistance of any kind whatever. Captain de LAN-  
GLE of the Dursley galley was charged with this  
message, and the Commodore desired the Consul  
to accompany the Captain and be his interpreter.  
They went to the Secretary's office at five o'clock,  
the King was then at church, and was not to re-  
turn till six; but the Duke of Montecallegre receiv-  
ed the message, and told them when the King re-  
turned he would give an answer. Accordingly  
about eight the Duke of Montecallegre came down  
from the King in council, and told them the de-  
mand would be complied with, and in writing as  
required, but desired some answer also in writing,  
importing, that upon the said compliance no hos-  
tilities should be committed on their side. They  
then returned on board with General BOURKE,  
who was sent from his Sicilian Majesty to desire

this of the Commodore; but he said his orders  
were absolute, and did not authorise him to give  
any answer, but that he expected a compliance in  
half an hour's time, or at furthest an hour, after  
the Captain and Consul's being on shore. The  
Duke of Montecallegre then desired that he might  
insert in his letter, That upon the Consul and  
Captain's assurances by word of mouth, that no  
hostilities should be committed, his Sicilian Ma-  
jesty did promise, &c. Captain DE LANGLE desired  
the Consul to tell the Duke, that he apprehended  
the Commodore would not be satisfied  
with that condition; upon which the Duke desired  
the Consul to assure the Commodore, that if he  
objected to it, it should be left out, and that the  
substance of the letter being fully what was requir-  
ed, he hoped it would be sufficient for that night.  
It was two hours past midnight when the Consul  
returned on board, and the Commodore was so  
far satisfied as to promise he would not commence  
any hostilities upon the assurances given him by  
the Consul, that any thing he objected to in the  
form would be altered: And accordingly in the  
morning another letter was wrote in the exact  
words required, and upon the receipt of it the  
Commodore ordered all the ships to prepare for  
sailing, and they were under sail before night, and  
out of sight the next morning (the 21st N. S.)  
having been only 24 hours at anchor in the bay.  
The whole city was in the greatest consternation  
imaginable, during this negotiation.

The letter written by the Duke of Montecallegre to  
Commodore MARTIN.

SIR,

August 20th N. S.  
THE King had already resolved and given  
orders that his troops, which are joined with  
those of Spain, should withdraw in order to the de-  
fence of his own dominions. His Majesty commands  
me to promise you in his name, that he will forth-  
with repeat his orders, that his troops withdraw-  
ing from the Romania, where they are at present,  
shall immediately return into the kingdom, and  
that he will not in any manner whatsoever either  
aid or assist those of Spain any more in the present  
war in Italy.

Signed

The Marquis of SALAS,  
Duke of MONTEALLEGRE.

To Capt. WILLIAM MARTIN  
Commander of the English  
squadron.

The court of Spain it seems were so ill satisfied  
with the Duke of MONTENAR's conduct, who com-  
manded their army in Lombardy at this time, that  
he was recalled, and succeeded in that command  
by the Count DE GAGES an Irish nobleman in the  
Spanish service.

The King of Sardinia advancing as far as Mont-  
melian to oppose the Spaniards, who had already  
penetrated into the heart of Savoy, received in-  
telligence on the 7th of December, that the ene-  
my had formed a design to attack him the next  
morning; whereupon he drew up his army in or-  
der of battle, and expected their approach; but  
while the Marquis de MINAS the Spanish Gen-  
eral faced the King of Sardinia with the gros of  
his army, he detached a body of four thousand  
men through the mountains of Dauphine, and at-  
tacked the castle of Appremont, which com-  
manded an important pass, and made himself mas-  
ter of it after battering the walls 48 hours, tho'

CHAP.  
XXVIII.  
Italy and  
the Italian  
Islands.

CHAP. XXVIII. Italy and the Italian Islands.

it is said the little garison made a brave defence, and did not surrender till they saw their walls tumbling down.

On the loss of this post the King of Sardinia found himself obliged to abandon his camp at Mians on the 17th of December, and retire to Montmelian, from whence he marched the 18th with his army towards St. John de Maurienne and the Tarentaise, in order to retire into Piedmont, which he did without much loss, though pursued by the Spaniards. But the poor Savoyards being thus abandoned, were soon made sensible of all the miseries of war. Their houses were burnt and plundered, men, women and children murdered in cold blood, and a general desolation among the villages about Chamberry. Upon this retreat, the King of Sardinia wrote the following letter to the King of Great Britain.

S I R, my brother,

YOU have already been acquainted, by my Minister at your court, with the reasons which obliged me to withdraw my army from Savoy, and to cause it to return to Piedmont. Your Majesty ought to have been informed, at the same time, that I did not take this step till I was reduced to the last extremity, and till after it was impossible for me to support myself against an enemy greatly superior to me in strength. Those persons, who are desirous of rendering suspicious the most faithful exactness in fulfilling engagements, will not fail of endeavouring to cause this retreat to be attributed to other motives, than those which are actually the true ones. Evil-minded people will not fail too, according to their accustomed manner, to use their utmost artifices to give a colour to their suggestions, which are as false as they are malicious, by insinuating, that propositions have been made me. But I expect, from the penetration of your Majesty, that you will easily discern the truth, and not suffer yourself to be imposed upon by such illusive insinuations, but will be more than ever persuaded of my unshaken fidelity to the engagements which I have entered into, not only with your Majesty, but likewise with the Queen of Hungary and Bohemia, for the mutual defence of our dominions in Italy. I also flatter myself that your Majesty, by your Ministers residing at the court of that Princess, will at a proper time use your utmost endeavours to cause to be performed the particular engagements which are understood and couched in those which induced me to take up arms, and was the occasion of our troops joining.

Your good brother and ally,

CHARLES EMANUEL.

1743. The Austrians victorious in Italy.

To make some amends for the loss of Savoy, the Austrian and Sardinian forces, commanded by Count TRAU, obtained a victory over the Spanish forces in Lombardy, commanded by the Count de GAGE. The Spaniards it seems passed the Panaro in the evening of the 8th of February, N. S. and attacked the Austrians at ten at night, in hopes of surprising them before their forces were joined, but found their whole army ready to receive them; whereupon an obstinate battle ensued, wherein both sides claimed the victory; but it was evidently on the side of the Austrians, the Spaniards retreating over the Panaro at four the next morning, and retiring to their old quarters at Bologna. In this action the Spaniards had

VOL. II. NUMB. LXXVIII.

upwards of three thousand men killed, and two thousand wounded. And the Austrians twelve hundred killed, and four hundred wounded. Count BYERSBERG, Lieutenant Field Marshal of the Queen of Hungary's armies, received two and twenty wounds in the battle, of which he died soon after. Count APREMONT, a General of the King of Sardinia's, also died of his wounds.

Count de GAGE retiring into the Pope's territories, and being followed by the Austrians, the Pope's subjects were obliged to furnish both parties with provisions for a considerable time, which almost ruined the country, and occasioned lamentable complaints from his Holiness to the respective powers, who made so free with the lands of the Church; but they both represented the necessity they were under to supply their troops with provisions, and the plundered inhabitants met with no redress.

This summer the plague was brought into Sicily from Turkey, and the city of Messina almost depopulated by it. It was afterwards carried over into Calabria in Naples, so that the Italians were afflicted with war and pestilence at the same time.

DON PHILIP made several attempts this campaign to penetrate into Piedmont through the passes of the Alps, but was constantly repulsed, and lost a great many men in the attempt. And at the same time the Count de GAGE continued to retreat before the Austrians, and fortified his camp, not being in a condition to act offensively.

In the mean while, it was agreed at a treaty between the Ministers of his British Majesty, the King of Sardinia, and the Queen of Hungary, that the town and territory of Final in Genoa should be transferred to the King of Sardinia, tho' the Genoese lately purchased it of the house of Austria, at which that Republick was greatly alarmed, and prepared to defend their possession.

*Some conjectures why Naples is so subject to earthquakes and fiery eruptions: by the Royal Academy of Sciences at Naples, founded by DON CARLOS, the present King of the two Sicilies.*

THE kingdom of Naples in most places abounds with vast quantities of strong minerals, especially such as are most subject to inflammation, and most capable to preserve a long time the heat they have once contracted; to this cause it is owing that these provinces in all ages have been so subject to natural accensions, or conflagrations.

That there is plenty of sulphur, bitumen, nitre, allum, vitriol, and salts of every kind, as well as minerals of a more exalted quality, is evident from the mineral springs that frequently occur, and the innumerable places where these minerals appear on the surface of the earth, either by mere chance, or by the easy industry of the inhabitants, who make a profit of their discovery.

The Neapolitans say it is to the fiery quality of the soil they are indebted for the prodigious fertility of their lands, the purity and wholesomeness of their air and water, the virtue and efficacy, as well as the variety of those remedies their mineral springs and baths; and for all those advantages that have given Naples the reputation of the most agreeable and healthy country in Europe.

Be this as it will, it is easy to imagine, how such inflammable materials as these, scattered and hid beneath the soil, have increased and amassed themselves in some particular place, where by the

assistance of some internal motion they have caught fire; and of consequence this fire has split the upper stratum that confined it, to give vent to its rage, with all those violent phenomena that usually attend the eruptions of volcano's.

In imitation of this operation of nature it is, that the chemists have contrived their aurum fulminans. This artificial composition not only kindles at the least approach of any thing hot, but it breaks out, thunders, bursts the vessels in which it is inclosed, and produces all those violent effects that have given it so terrible a name.

In the same manner, the celebrated Lemery made an artificial volcano, by a paste composed of two equal parts of sulphur and steel-dust mixt up with a little water. This he buried in the earth at a proper depth, and in about nine hours the ground began to swell and open in several places, from which issued a hot and sulphureous smoke, which in a few minutes was succeeded by flames. These chemical experiments, with others of the same nature, are sufficient to explain what has been said with regard to the natural disposition of the soil.

Hence it appears that the sources of fire have been ever found in this country. Many of them have been forgot, either because their force has been exhausted ages ago, or because they were too weak to be of long duration, or for other reasons which cannot at present be assigned.

As we now behold on the rising grounds that lie about Naples to the west, north and east, vast quantities of burnt stones, ashes, and other bodies that bear visibly the marks of fire, it has given occasion to some authors to think, that formerly these places have suffered a conflagration, the memory of which time has effaced; whereas the case is quite different with Vesuvius, whose fire has preserved itself unextinguished from time immemorial.

The Dominican Fathers, a few years ago, having occasion to dig a well in their convent of Notre Dame de l'Arc, the workmen at the depth of thirty feet, discovered the vestigia of an old torrent; continuing to dig they were stopped again by a second, and then a third, and in short, in less than an hundred foot they found four strata, all resembling the petrified torrents which are daily to be seen near the southern declivities of this mountain.

If the igneous matter is either generated or increased by internal mutations in the subterraneous caverns, a volcano may suddenly break out in a place where it is least suspected, as by the same rule an ancient volcano may as unexpectedly be extinguished for want of proper fuel. Natural history affords us examples of each kind.

The first memorable eruption of Vesuvius, of which we have any distinct account, is that which happened in the reign of Titus, A. D. 79. Of this PLINY the younger, whose uncle perished by his curiosity on this occasion, has given us a particular relation in two letters. DION in the life of Titus, as well as the historians of that age, mention it; and the Poets speak of it in a very expressive manner. It is highly probable that on this occasion the face of Vesuvius underwent some remarkable change.

Since that time to the present there have happened several successive eruptions, of which modern authors have given us a detail. If there be some little variation in their accounts, it is because some have placed in their catalogue, eruptions of little

note, which others have neglected to particularize.

As to the rest, these successive conflagrations have been quite uncertain as to their seasons, intervals, violence, and duration, all which have been regulated by the caprice of nature. We shall only observe that the eruption in 1630 was one of the most dreadful ever happened, and has left behind it marks of its fury, which are visible to the present age. The red hot stones, and other fiery substances which it threw out on this occasion, burnt up trees, destroyed all the neighbouring villages, and set the country in a flame. Seven villages were entirely ruined by the torrent of liquified fire, and near ten thousand (some reduce the loss to five thousand) persons perished either by the ashes or the flames.

However, the eruption of 1730 deserves our notice, not only on account of its fury, but because it made a sensible alteration in the summit of the volcano, for a great quantity of combustible and liquid matter, settling near the mouth of the volcano, rendered the top much higher and more pointed than it was before.

Another particularity remarkable in the same eruption was, that the flames were much brighter and livelier than usual, and rose into the air to a prodigious height. The fiery torrent which descended on the slope of the mountain, made no great progress, but on the side, where the southern borders of the volcano were sheltered by the rocky circuit of Mount Somma, a horrid inundation of fire covered all the bottom of the plain called the valley of Atria.

The chief damage sustained arose from the burning cinders, that set fire to a large wood in the district of Ottajano, which would have been entirely consumed, if, by cutting down the trees that lay in the way, a stop had not been put to the progress of the flames.

*An account of the great eruption of Vesuvius, in 1737.*

EVER since the eruption of 1730 to 1737, the ancient basin of Vesuvius has constantly emitted smoke, often intermingled with flames, so that every day gave new tokens of the conflagration spreading within, and seemed to warn the neighbourhood of an approaching eruption. These marks or symptoms for three or four months preceding the event, became still more violent. An unintermitted smoke with bright flames daily increased. This is no new object to the people of Naples. A long series of years has made it familiar, and the vulgar are so far from being alarmed at it, that they look on it as a favourable sign, believing that the better these subterraneous fires vent themselves, they have less cause to apprehend violent eruptions or earthquakes, which many imagine to proceed from one and the same cause.

Whatever truth there is in this popular notion, with respect to the danger of eruptions, the last shewed it was not to be depended on; for towards the end of April and beginning of May 1737, even when the volcano discharged itself in clouds of smoke, the conflagration began.

On the 14th and 15th of May the flames and smoke increased to that degree, that on the night of the 15th the volcano threw out red-hot stones, at the same time a torrent of liquified matter, descending from the mouth, seemed to threaten Bosco, a village situated at the foot of the mountain to the east.

CHAP.  
XXVIII.  
Italy and  
the Italian  
Islands.

On the 17th and 18th of the same month the flames increased violently, and the smoke augmented in proportion; and what gave new force to the inflammation was, that the cavity of the volcano was at that time almost covered with sulphur, which had been incruited there for a long tract of time.

Sunday, May 19th, the conflagration spread with new rage. The thick and black smoke that issued, formed clouds of darkness that covered the air, and by the force of the flames were carried to a surprizing height. The mountain made a roaring noise, which was echo'd from the hills adjacent. Then first a panic appeared in every face, and the terror of the people hourly increased at so dreadful a spectacle. Such it really was, to behold through so gloomy a smoke a prodigious quantity of stones and rocky substances red-hot hurled in the air to an amazing height, and falling down with incredible noise along the sides of the mountain. This terrible scene continued till the next day, the eruption still gaining new strength.

On Monday, May 20, at eight in the morning, the storm of burning stones and cinders became more furious than ever, and the inflammation rose to that degree, that in spite of the sun, the flames were visibly observed through the smoke of the volcano, as bright as rockets in a dark night.

Towards the evening the tempest grew more outrageous, and was attended with an inundation of burnt stones, pumice, and ashes. The smoke changed its dark colour to a clear brown, but the circles it made in the air were larger than ever. In the mean time the fire of the summit plainly spread, as every moment some part of the cavity fell into the gulph beneath. Filled with horror, and dreading the worst, the inhabitants of the neighbouring villages began to retire with their effects.

The same day, about two o'clock, the mountain gave a peal astonishing beyond the loudest thunder. Some attributed this to a large rent made in the side, the effects of which did not appear till about seven o'clock the same evening.

This rent or crack was made in the lower part of the S. W. side of Vesuvius, properly so called. The first thing observable was, that it flamed violently even when the top of the volcano seemed itself inflamed the most; and as the smoke of the upper part now received a new additional supply, so it had certainly obscured all the W. coast of Naples, if the brisk southerly winds had not stopt its progress, and dissipated it.

During this time the noise of the volcano was no less horrible than uninterrupted. About 8<sup>h</sup>. 22<sup>m</sup>. the mountain was all covered with a thick cloud, thro' which every moment the flames darted like lightning. They are indeed a sort of lightning which are peculiar to this volcano in its eruptions, and much resemble the rockets used in fireworks.

Soon after a fiery torrent appeared from this new opening, taking its course along the descent with a visible rapidity towards the village of Refina; but about 9<sup>h</sup>. 25<sup>m</sup>. it seemed to deaden in its progress, and lose its fiery aspect. Just the same thing happened to another stream of the same sort, that issuing from the mouth of the volcano bent its way towards Bosco. Many from hence concluded these Lavangi, or torrents of liquified matter, were in reality extinguished, and that there was no more to fear.

In the mean time all the symptoms of the eruption, such as the smoke, flames, stones, &c. continued strong as ever, the noise no way decreased,

and the air seemed tormented with unabated fury.

Thus matters continued till 11<sup>h</sup>. 22<sup>m</sup>. at night, when the new aperture broke out afresh, with a storm more violent than before, even throwing out stones of a large size, which it had not done hitherto since the first eruption. At the same time the fiery torrent issuing from it, renewed its course with greater impetuosity. The whole mountain seemed on fire, both on account of the flames, and their reverberation from the darkness with which they were by the smoke surrounded. In one moment the whole mountain gave a crack as if it was falling into ruin; and this noise continued some moments without intermission. The earthquakes that accompanied it were as violent as frequent, so that all who had as yet the courage to stay in their houses, were now obliged to quit them. Nothing could be seen but crowds of people flying on all sides for a place of safety.

Immediately after, the torrent of fire filled up a great part of that flat called Terra-plana, which lies opposite to the new aperture, and which we have described as the basis of Vesuvius, making an inundation of about 500 foot in length, and 300 in breadth, where it settled from 11<sup>h</sup>. 22<sup>m</sup>. the night of the 20th till three o'clock in the morning on the 21st.

Scarce had the next day, May 22 begun, or about half an hour after one that morning, when the Lavangi, or torrent that had issued from the summit extending towards Bosco appeared totally extinct. A second stream from the same source still crept to the westward, but very slowly. The last, which issued from the new breach, and which without dispute was the largest, after forming a lake in the bottom, as we observed, being continually pushed forward by new supplies, fell into the adjacent vallies, dividing itself into several branches, according to the situation of the grounds it passed through.

The first of these branches took its way towards Refina, but by the way broke into a valley where several improved grounds, planted with trees, were the prey of its consuming heat. In the eruption of 1698, which also fell out in May, this same valley met with the like fate.

It appeared that the first branch was the most considerable of all, its front extending near 30 foot in breadth. It stopped at length, but had it continued its progress in the same direction, it had probably fallen on the Greek tower, by the convent of the Capuchins.

From the extremity of this branch, a fiery rivulet detached itself, which, though inconsiderable, did some damage in the low grounds adjacent.

The violence of another branch of this torrent was more considerable. It penetrated into a valley, through which it made its way in a body to a place called the White Ditch [fossa bianco] where spreading into two arms, that on the right ruined some fields, the left made little progress, and did no great mischief. This White Ditch had been infested before with a torrent from Vesuvius in the eruption of September, 1696.

Notwithstanding this second branch of the torrent from the aperture seemed thus stopped, yet on Tuesday May 22 it resumed its course, not by either of the arms beforementioned, but by an intermediate channel, falling first into some vineyards, where it formed a kind of burning lake. Though this seemed to exhaust a great part of the fiery liquified matter, yet it still continued its course, till after destroying some country-seats, it fell

CHAP.  
XXVIII.  
Italy and  
the Italian  
Islands.

CHAP.  
XXVIII.  
Italy and  
the Italian  
Islands.

fell towards the west side of the Greek tower. Here it destroyed a bridge which had been erected to carry on the King's road over a narrow valley about twenty five foot deep, between the chapel of purgatory, and the Carmelite monastery; and having crossed this valley, it proceeded towards the sea.

These two divisions of the second branch, thus falling into the highway, were about twenty three foot each in front, and took six hours to complete their course, i. e. from seven o'clock on Tuesday morning to some minutes after one the same day.

Another rivulet exhausted its fury on some inclosed grounds, where it stopped: all the rest were done at half an hour past one, except a small branch, which bending slowly towards the shore, determined its course at four in the afternoon.

During all this time, till May 23, the summit of Vesuvius ejected violent flames, accompanied with showers of burnt stones and cinders. On the 24th, after a long explosion of lightnings usual on these occasions, the fire at top seemed to abate a little of its rage, but the smok and ashes still continued to be ejected as before.

The 27th the flames sensibly subsided, though the smok was whirled out with as much impetuosity and as high as ever, but its blackness was considerably lightened and decreased.

On the 28th the fire of the summit was reduced almost to nothing; and on the 29th and following days, totally disappeared.

May 30 and 31st and from the 1st to the 5th of June, there still issued a great quantity of smoke, but of a pale and whitish colour.

June 5 and 6, there fell a great deal of rain, which occasioned the Lavangi, or fiery torrent extinct, to exhale a great smoke, so thick as to prevent the distinguishing of objects near them: that especially near the Greek tower cast a strong sulphureous smell, which had never been observed there while it continued its course. This noxious vapour infected the ground for about six hundred foot in circumference, withering the leaves of the trees and blasting the young fruits.

After some days interval, a second rain occasioned the torrent to smoke as before, but this new exhalation had no sulphureous odour, but one much more offensive to the head. It was the more remarkable as it had no resemblance with any known smells, and it continued to be felt in that place for a long time after.

As to the fire of the torrent, it preserved its fierceness outwardly till May 25th, when, the surface being exposed to the air, began to cool, the heat retiring to the heart of the Lavangi, where it continued about a month so intense, that when it was opened half a foot, and a stick introduced through the aperture, it took fire instantly.

The build-  
ings of  
Naples  
shaken  
without an  
Earth-  
quake.

The most remarkable thing in the last eruption, was, the thundering noise heard from the bottom of the volcano, especially on Monday May 21, at which time, not only the strongest edifices in Naples felt the shock in a sensible manner, but the effects of it extended to the distance of 15 miles or further. That this phenomenon did not proceed from the shaking of the mountain, or that of the adjacent parts, it seems reasonable to believe. To what then could it be ascribed? To the agitation the air sustained, by the successive torrents of flame; so gunpowder, thrown on a plate of metal red-hot, sparkles and cracks with double impetuosity.

The thunder that followed the lightnings of the volcano, differed from the common in this, that

it consisted of one clap, without either echo or prolongation, as happens to the former, from the repercussion of air through the sinosity of the clouds, or the obstruction of other bodies. The noise of the Vesuvian thunder was momentaneous, like the discharge of a cannon fired at sea at a small distance.

CHAP.  
XXVII.  
Italy and  
the Italian  
Islands.

Among the various appearances that attend the eruption of Vesuvius, the first place is due to those fiery streams of liquified matter called Lavangi. The excessive hardness they contract, in losing their heat, leaves them to the view, as eternal monuments of the force of that furnace, that is able to dissolve them, and give them such a fatal fluidity.

We do not find in the most ancient writers any distinct account of these Vesuvian torrents, but we know that in 1630, they forced a passage from the summit of the mountain to the sea. The dreadful conflagration of Aetna in 1669, left, near the city of Catania, a monument yet more remarkable, for the stream of fire penetrated so far into the sea, as to form a mole or key, whose harbour was capable of receiving vessels of good burthen. It will not here be amiss to observe the use to which the stones of those ancient petrified torrents have been for many years employed by the people of Naples: they hew into large squares that consolidated rock, which once was a stream of fiery liquified matter, and pave their streets with them.

The length of the principal Lavangi proceeding from the lower aperture, and ending near the sea, was found to be about 3350 Neapolitan canes. (The Neapolitan cane is 8 palms, a Neapolitan palm is  $\frac{2}{3}$  of the Paris foot; so that six of their palms equal five feet French measure. This makes the length of the torrent 134,000 French feet.) For the first 750 canes (or rods) reckoning from the source of the torrent, its breadth was the same, and its depth eight palms. For the last 2800 canes, estimating it at a medium taken from observations in ten several places, the breadth was 188 palms, the depth 30. As to the streams that are branched from it, the one which fell into the vineyard was found to be 1150 canes in its whole length, of which, by a like computation, 1050 were 250 palms broad, and 10 deep, and the rest about 100 palms broad. The other stream, which extended towards the Capuchins, was 1800 canes long, its breadth 548 palms, its depth 20.

So that from the preceding calculation it follows, that the total quantity of the fiery liquified matter, ejected by the volcano in the last eruption, amounts to 595,948,000 cubic feet, excluding the stones and ashes thrown out, as well as the torrents that issued from the summit, and which made no considerable progress.

It is one thing to consider these torrents in their fluid state, and another to regard them when or fiery they have been consolidated by the impression of the external air.

Lavangi  
fluid state,  
or when  
they have  
been  
consolidated  
by the  
impression  
of the  
external  
air.

In the first case, a Lavange shews but three remarkable qualities, 1. Its state of fluidity, by which it flows like other liquid bodies. 2. Its red or fiery colour. 3. Its consuming heat.

These torrents, beheld at a distance in the dark, give a light, not like that of a bright flame, but more dull and faint, such as bodies heated in a furnace red-hot. When you approach them pretty near, you presently are sensible of their violent heat, which is fatally destructive to houses, trees, or whatever else lies near their passage.

As soon as the rage of this fire begins to abate, the torrent losing its fluidity, congeals into a hard and brittle stone, it next loses its fiery colour, and lastly its heat, which it retains longer than all the rest of its qualities.

The fluidity of the Vefuvian torrents resembles that of melted pitch, or rather of glass in its state of liquefaction. However it is neither equal in all the torrents, nor even in different parts of the same torrent; for besides the diversity arising from the mixture of heterogeneous bodies, more or less susceptible of fusion, the degree of fire has certainly a great influence in giving a proportional degree of fluidity.

Hence it is easy to account, why in the last eruption the torrent that issued from the new aperture at the foot of the volcano, was much more liquid than those that flowed from the summit, as was apparent from their motion; no doubt it was owing to the activity of the fire, which was greater at that part of the mountain than at the top. The same rule also proves, why the torrents are always more fluid towards their source, and in proportion to the length of their course grow less and less liquid.

If the melted substances that compose the Lavangi are not equally liquid in all eruptions, or if their fluidity appears stronger or weaker in various parts of the same torrent, the inequality is the same with respect to the external surface, and the inside of the same streams; for several have remarked, that in striking with a stick the outside of a Lavange, yet running, they found it hard, sometimes to that degree as to give a hollow sound, while the inside was certainly fluid, otherwise it could not have held on its course.

These Vefuvian torrents are composed either of metals, or inflammable minerals, or stones, or other bodies subject to fusion, or similar substances, or rather, perhaps produced by a mixture of all these together.

That these fluids are wholly metallic is contrary to experience, for we know all metals are malleable bodies, i. e. subject to bend under the hammer without breaking, a property not to be found in the fragments of the Lavangi, for chuse what piece you will, it will fly in pieces, rather than yield to the most violent blow.

If these torrents are not purely a composition of metals, much less are they an intire mixture of salts, sulphur, bitumen, and other inflammable minerals; for neither the excessive hardness, nor the prodigious heaviness of the Vefuvian torrents agree with the nature of such a mixture.

The appearances of the masses that constitute our Lavangi are innumerable varied. Nothing can be more confused; but then nothing is more easy, on a closer view, than to distinguish them from each other than their principles. Every one may conceive, how by the excessive action of such a subterraneous fire, and by the mixture of a hundred various bodies, things must change their aspect in so violent an operation. We may even doubt if they may not be so metamorphosed as to lose their natural figure, and assume a delusive appearance. Willing therefore, to keep close to truth in our enquiry, we shall only speak of those minerals that are most visible, and in greatest quantity, viz. salts, sulphur, and a certain fat and bituminous substance, which we may call petroleum or rock-oil.

Of the last this volcano seems to contain an inexhaustible fund, as appears from great quantities.

ties of this oily or unctuous matter, which constantly floats on the sea, near the coasts of the bay. But in all the eruptions sulphur has the preponderancy, the volcano itself is quite lined with sulphureous concretions; lastly, the third mineral abounding in the Vefuvian fluids is salt, which, by the observations and experiments made on it, is judged by some to be sal-armoniac.

The stones thrown up seem not to be original substances formed in the cavities of the mountain, but rather concretions arising from masses formerly melted down and lodged in the cavities of the volcano.

The Italian architects highly value these spongy, perforated stones (the pumice stones) for the building of vaults or arches, not only on account of their lightness, but because they closely receive the mortar, two points that greatly contribute to the solidity of architecture. Vitruvius praises these stones and the mortar of Puzzoli for their great usefulness in the perfection and strength of architecture.

It is observable that the Mofetti, or pestilential exhalations always attend the conflagrations of the volcano.

*Of the state of Vesuvius since the last great eruption, A. D. 1737.*

**B**EFORE the eruption, the southern summit of Vesuvius, from whence the flames proceed, was both higher and more piked or sharp than at present.

The inside of the volcano, or its gulf, has also changed its aspect, as appears from this, that the smoke which continually exhales from thence is no longer united in one body as formerly, when it proceeded from one aperture, but is divided into five or six streams springing from so many funnels separate from each other, as may be easily seen before sun-rise, when the air is clear and calm; and if the smoke sometimes whirls out as if from one vent, it is owing to the quantity of the vapour or to the briskness of the wind.

Thus much is visible from Naples, but it is necessary to give the reader a nearer view taken on the spot, in which were observed the following particulars.

1. The perimeter or circuit of the base of Vesuvius in its utmost extent, is near forty Italian miles, but its nearest circuit does not exceed thirty; by the nearest circuit is meant, the place where it begins to rise above the plain.

2. The height of the northern summit, measured from the level of the sea, is about 720 Neapolitan canes, that of the southern point, or volcano, 646.

3. The new aperture, which is broke out on the declivity of the southern summit, from whence issued the principal torrent of fire, is 552 canes above the water-level.

4. The two summits are distant from each other at their points 340 canes, at their base 150; that is to say, in the place whence the two divisions of the mountain rise, called the Val d' Atrio.

5. The top of the southern summit is hollow, and presents to the eye a gulph of a circular figure, whose largest diameter, called its bason, lies from E. to W. and is 350 canes over.

6. This bason or cavity is edged with a border or bank, which projects to the inside, like a precipice, and nearly resembles the banks of a river hanging over, whose earth the floods have carried away.

14 L

7. This

The form of Vesuvius altered by the last eruption.

CHAP.  
XXVIII.  
Italy and  
the Italian  
Islands.

7. This border is pretty equal round all the gulph, only to the W. it is interrupted by the advance of some fragments of rock exceeding hard, and which seem to be of the same substance with the internal matter of the Lavangi.

8. On the east side, where this bank is smoothest, is a sloping descent which leads to the bottom of the gulph, so that one may go down it though with much difficulty.

9. All this opening, such as now described, is the mouth of an abyss that pierces the intrails of the mountain in form of a truncated cone, of which the circumference of the opening makes the base.

10. The sides of this bason are all covered with cinders towards the east, unless where some pieces of rock appear through, near which lie several unperceived vents, from whence exhales the smoke; and about them are found various concretions of salts and sulphur. This is the side, which affords the easiest descent to the bottom of the bason.

11. Towards the south, the declivity appears much steeper, though naturally laid with great ranges of stone. The thickest smoke arises from this quarter, (at least during the time these observations were made) which is without doubt the cause that the mineral salts and sulphur are here found in greater quantities than towards the eastern side.

12. On the W. and N. the sides are almost perpendicular, formed of vast stones, some of which project out, and are as it were varnished or coated over with sulphur, the effect of the prodigious smoke which issues on that side.

13. The bottom of the bason lengthens a little between the north and south, its smallest breadth is about 50 canes.

14. When these observations were made on the internal state of the volcano, there was towards the south-side a small collection of rain-water, which covered near half the bottom of the bason.

15. The water was blackish and warm. It appeared frothy towards the edges, and had a bad taste of salt and sulphur. Its depth did not appear to exceed two palms, or thereabouts, as was judged from several stones, which the observers threw in.

16. This lake of rain-water was closed on one side by a bank of ashes, on which were observed the traces of several streams, that had run over into the empty part of the bason, but now lost and dried up.

17. The dry part of the bason appeared extremely rough and uneven, full of holes and breaks, and covered with salts and yellowish sulphur, ending like the hollow of a sea-shell between the north and west, and from this cavity, which was deeper than the lake, arose the thickest smoke.

18. It was impossible to measure the depth of this part of the bason, for want of a proper place to fix the instruments necessary for such an operation. The observers, however, willing to examine this matter as well as the situation of things would permit, took the following method; they chose that part of the north side of the rock where the precipice was steepest and least interrupted, so that by casting in stones, from hence, had hopes they would meet with least obstacles in the descent. They threw very large stones five or six times, while persons, placed on the other side the bason, measured the time of their fall by the beating of the pulse. The pulsations each time exceeded forty, so that taking each for a second, and suppos-

ing the stone to fall to the bottom with the same degree of velocity, the depth must be 84 canes. But as the man whose pulse was examined was much fatigued with climbing the mountain, and as the air was no doubt heated by the quantity of hot and sulphureous vapours, as well as by the weather, it being the heat of summer, no doubt the pulsations were too quick for an estimation of them at a second each: on the other hand, they supposed the degree of velocity in the fall of the stone to be equal, excluding the acceleration of it, as well as the obstacles it might meet in the descent, and believe their calculation not far from truth.

Such was the state of this volcano, at the time of the examination of it. I shall here add the opinion of some concerning this lake; which though the rains had been great, yet in September it took up but the half of the cavity of this bason.

They think then, that from hence they may account for the origin of those mineral springs that abound at the foot of the mountain in different places, and whose waters are impregnated with a salutary virtue.

By the former measures it is computed, that the mouth of the volcano, taken in breadth and length, contains 6,160,000 square palms. Now the rain that falls in the territory of Naples for the course of a year, amounts to about three palms in depth. By this computation it follows, that the cavity or bason of Vesuvius receives about 18,480,000 cubic palms of rain water annually: It is said about this quantity, because it is doubted whether the quantity be so great, for at the top of the mountain the rain falls always in less quantity than on the plain. This is known by the convergence of the drops in their descent from the clouds.

Now though a great part of this water is evaporated by the subterranean heat, yet it may be supposed there remains sufficient to supply perpetually the wells and rivulets adjacent to the foot of the mountain. This quantity is also decreased by what the surface of Vesuvius drinks in, which falling or sinking through its cavities, forms a new supply to the springs beneath.

Hence it is easy to judge that the springs which rise at its foot become impregnated deeply with several minerals, especially those of the saline and sulphureous kind. And hence may proceed their diuretic quality, and that they are gently purgative and softening in several indispositions; of this there is a remarkable instance in the baths of Piscarielli, which rise behind the Solfatara near the lake of Agnano, and very probably do proceed from the snow and rains, which fall in the cavities of the volcano.

As the bason of Vesuvius is only a plain sunk in the middle, the water can find no issue but by passing through the cavities of the Solfatara, where it takes a strong tincture of sulphur and allum, and springs out very hot at the foot of one of those rocks that form the basis of the mountain.

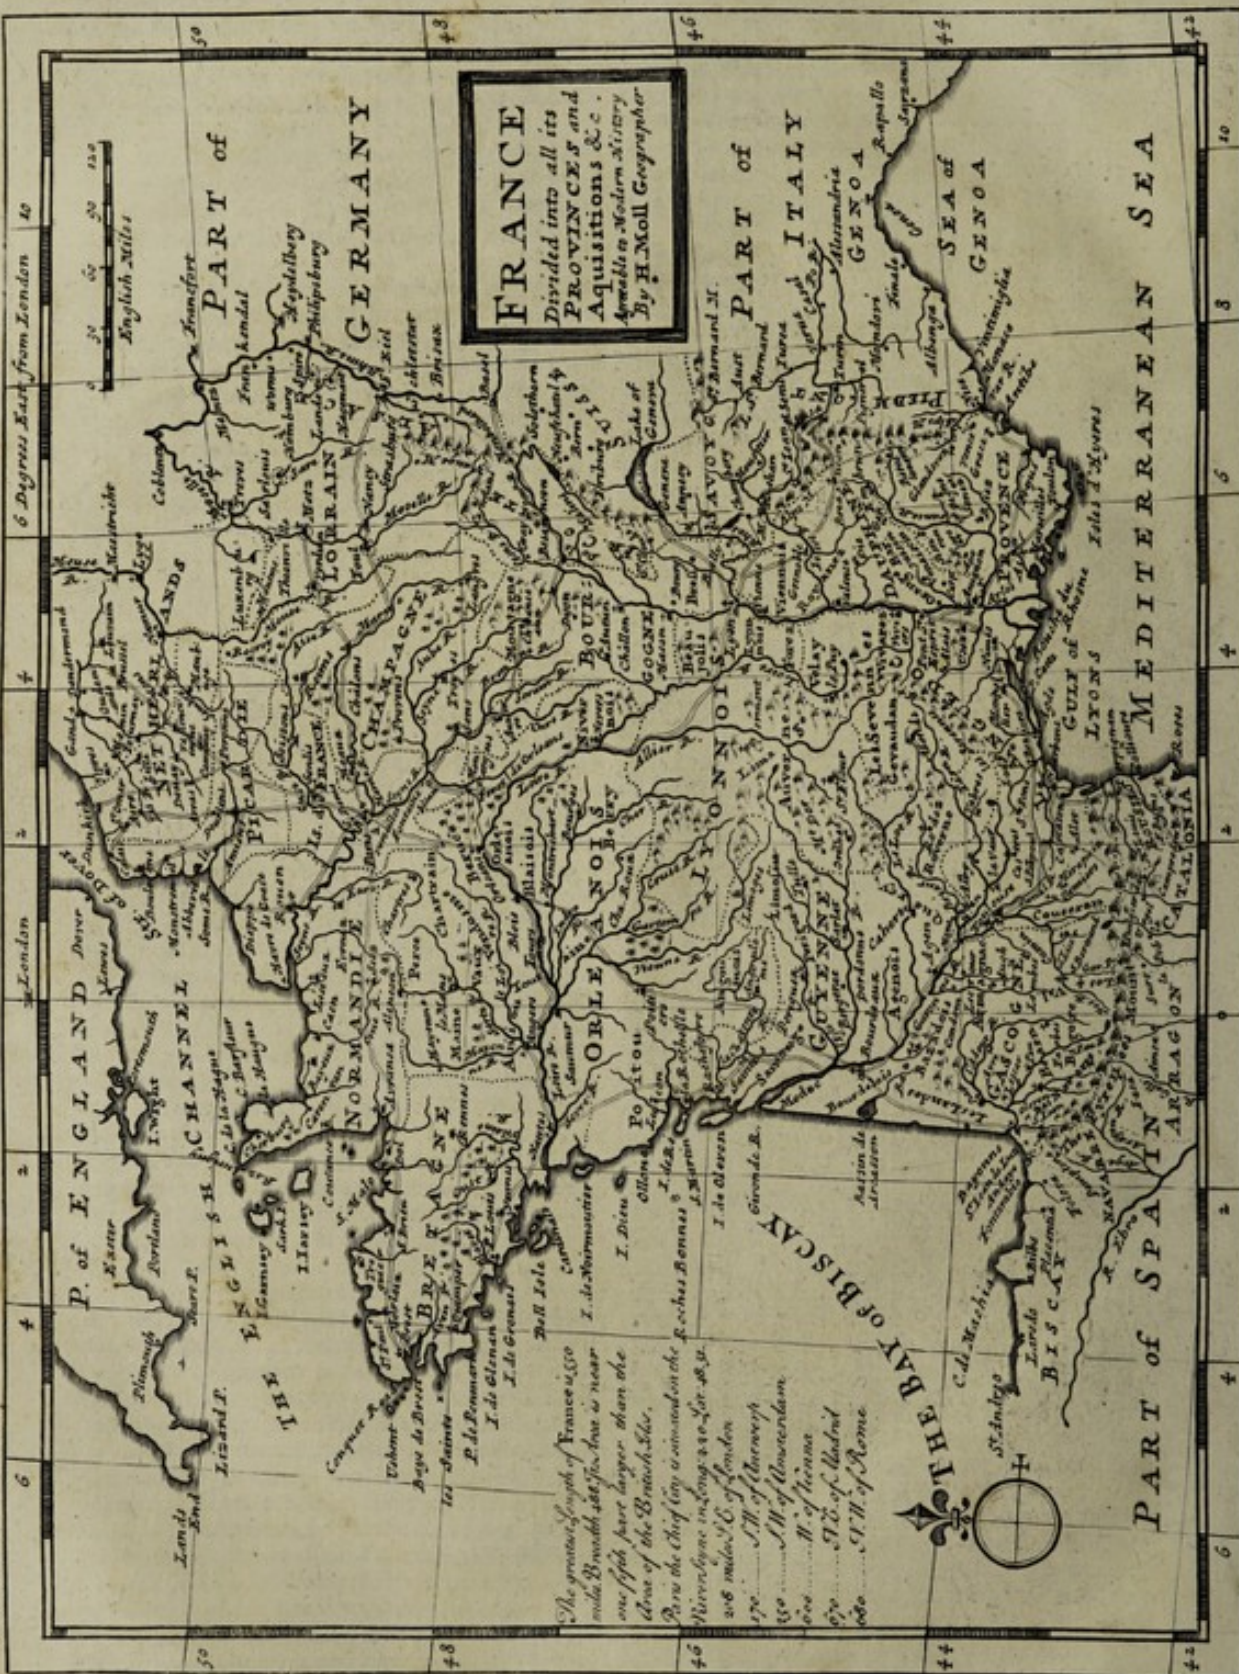

Amongst the changes produced by the last eruption, may be reckoned the impediment of the high road near the E. side of the Greek tower, for the way is there yet interrupted by the vast torrent which advanced near the sea-side. A prodigious bank was raised by it, which would have prevented all passage, if the labourers had not wrought to clear a way through this Vesuvian mound, and carried off the largest of the stones; it is still a little troublesome to cross the remains. The rest of the torrents did little damage.

XXVIII.  
Italy and  
the Italian  
Islands.

The republick of Geneva also has been in some confusion lately, by an insurrection of the populace, and made France umpire of their differences; but all is quiet again there.

As to the republick of Venice, they seem to have remained in a state of indolence of late years,

studying nothing more than to be at peace with all their neighbours; however, they happened to give some disgust to the court of Great Britain, by the honours they paid the son of the Chevalier St. George, and their minister at the British court was thereupon commanded home.

# THE PRESENT STATE OF FRANCE.

## CHAP. I.

*Treats of the name, situation, extent and boundaries of this kingdom; and of the air, seas, rivers and mountains.*

CHAP.  
I.

The  
name.

**M**ODERN France contains a medley of nations, which in their turns have had the sovereignty of this country; as the Gauls, Romans, Franks, Goths, Burgundians, Normans, &c. but the Franks, a German people who inhabited the banks of the rivers Maine and Salii, (which province is at this day called Franconia) had the honour of communicating their name to this desirable country; and this name it hath retained ever since the fifth century. It is true the learned generally agree that the name of Franken, or free people, was not appropriated to any one class or tribe of Germans, but to all those powers that confederated themselves against the Romans in defence of their liberties: it is not however improbable that the inhabitants of Franconia might first propose the entering into this alliance, and lay the foundation of it, which might occasion their country to be called by way of eminence Frankeland.

Situation  
and ex-  
tent.

The kingdom of France is bounded by the British channel and the Netherlands towards the north; by Germany, Switzerland, Savoy, and Italy on the east; by the Mediterranean and Spain on the south, and by the Atlantick or western ocean on the west; extending from the 42d to the 51st degree of north latitude, and taking up above eleven degrees of longitude, the most easterly part of Provence, lying seven degrees to the eastward of London, and the most westerly part of Bretagne, four degrees odd minutes to the westward of London. Were it not for the province of Bretagne, which stretches itself above an hundred miles farther into the ocean than any other part of the kingdom, the form would be almost square, and the breadth and length pretty near equal, viz. about five hundred and forty miles; but making allowances for hills and valleys, and the winding of the roads, it must be above six hundred miles over either way in a traveller's account; and was exceeding populous till persecution, war, and famine lessened their numbers: scarce a country in Europe

that is not crouded with French servants, or French refugees; and their armies, which in the last war consisted of four or five hundred thousand men, could not but contribute to depopulate the kingdom: the famine which happened at the same time also in Paris only, swept away about an hundred thousand people, and more in proportion in the rest of the kingdom; so that if there was ever any colour for those high calculations of their numbers which some of their writers have made, computing the souls in France at nineteen millions and upwards; those who now estimate them at five or six millions, possibly come much nearer the truth.

The air is temperate, equally exempted, say the French writers, from the extremities of heat and cold, and on that account France is preferable to Germany and the northern countries on one hand, as it is to Spain and Italy on the other; and this happy situation occasions a great plenty of all things desirable in life, as corn, wine, oil, flax, &c. But I propose to give an account of the soil and produce in the description of the respective provinces, and return to the temperature of the air, which the natives so much boast of. Certain it is, that the northern provinces of France, and even the neighbourhood of Paris, is much colder in winter than England; as we are surrounded by the sea, we are not so subject to continued frosts, nor are we so sensible of the cold, because we are much better supplied with firing. The poor people in France often undergo much greater hardships in a severe season than they do in England, or more northern situations; I must confess, that clear settled weather, which we usually meet with on the continent, both in winter and summer, is preferable to that perpetual change which islanders are subject to, provided there is no want of fuel: but the northern people in this respect seem to have the better of the French, whose bodies are not only better prepar'd to endure cold, but have furs to clothe them when they go abroad, and stoves to lie in at night, so that they are in no danger of perishing by

CHAP.  
I.

CHAP.  
I.

by the severity of the winter, as the common people in France sometimes are: and as the summers in France are hotter, this may probably be one reason they are more sensible of cold weather in winter than their northern neighbours are. But to conclude this head, every country has its conveniences and inconveniences, and whenever we hear a foreigner boasting of the clemency of the air, the beauty or fertility of his native place, we may safely conclude there are allays to be met with which may possibly counterpoise the happiness he boasts of: and on the contrary, how cold and comfortless soever some places may be represented, the natives still find something to render their condition tolerable, and in their opinion perhaps preferable to their southern neighbours.

**The seas.** In one respect indeed we must allow, that France has the advantage of any kingdom of Europe, and that is in the seas which border upon it, which afford them an easy communication with the rest of the world; the British channel washes all its northern shores, the Atlantick ocean the western coasts, and the Mediterranean the south; no country therefore can be better situated for the advancement of trade and navigation, of which however they do not make the advantages they might, as will appear hereafter.

**Rivers.** It is also extremely well watered with navigable rivers, of which the chief are the Loire, the Rhone, the Garonne, and the Seine. Of these the Loire is the largest; it rises in the mountains of the Se-  
**The Loire.** vennes in Languedoc, and taking its course north and north-west, runs by Nevers to Orleans, and from thence directly west by Tours, Angers and Nantz in Bretagne, and falls into the ocean forty miles below Nantz, receiving in its course the Aller, the Cher, the Indre, the Vienne, Sarta, the Mayenne, and several other rivers, and communicates with the Seine by the canals of Briare and Orleans; the whole course, with all its windings from the source to the sea, is computed to be about five hundred miles. 2. The Rhone, which  
**The Rhone.** rising in the mountain La Fourche in Switzerland, runs westward through the country called the Valais, dividing it into two parts; after which it passes thro' the lake of Geneva, and having visited that city, becomes navigable at Seissel, four or five leagues below Geneva, which it is not before, on account of the falls and cataracts that are met with in it: afterwards it flows on south-west to Lyons, where it joins the Soan, and then runs on due south till it falls into the Mediterranean by three several channels, having received the Isere at Valence, and the Durance at Avignon, and passed by the city of Arles. 3. The Garonne, or Gironne, which rising in the Pyrenean mountains, takes its course first north-east to the city of Thoulouse, and afterwards north-west to Bourdeaux, and fifteen leagues below that city falls into the ocean near the tower of Corduan by two channels, having received in its course the Auriege, the Sare, the Tara, the Lot, the Dordonne, and several other lesser streams, and has a communication with the Mediterranean by the royal canal, the work of  
**The Garonne.** Lewis XIV. 4. The Seine, which rises near Dijon in Burgundy, and runs to the north-west, visiting Troyes, Paris and Rouen in its way, and falls into the British channel near Havre de Grace: it begins to be navigable at Troyes, the capital of Campagne, and receives in its course the Yonne, the Loing, the Marne, the Oise, and the Eure, and several other less considerable streams. The highest  
**The Seine.** mountains are the Alps, which separate France from

Mountains

Italy; the Pyrenees, which divide it from Spain; and the Cevennes, which run through the Lower Languedoc to Auvergne.

## CHAP. II.

*Treats of the persons and habits of the French, of their genius and temper, diet, exercises and diversions.*

**T**HERE being such a multitude of French families in London, and other parts of England, it may seem unnecessary to say any thing on the heads enumerated in the title of this chapter; many will be apt to say they are perfectly acquainted with the persons and manners of this people, and that I cannot give them a truer notion of the French than they have already, and this may be true in a great many instances: I shall however, for the sake of those who have not had the opportunity of conversing so familiarly with them, attempt a character of the French according to the best of my judgment.

The French then as to their persons are generally of a lower stature than their neighbours of Germany or Holland, and of a much slighter make, but nimble, active and well proportioned, their hair and eyes are for the most part black, and their complexions brown; the northern people it must be owned have an advantage of them in this respect, as well as in point of stature, their features also are small and not very engaging, at least to an English eye: I must confess however, that I have seen some tall personable men of good complexions, and several beautiful females amongst them; and there is no reason to suppose that those provinces of France which border upon Flanders and Germany, and intermarry with the natives of those countries, should not equal them in these respects: nay, I am apt to think that the breed must be much mended on both sides, where a tall phlegmatick Dutchman happens to join issue with a little airy French lady. It is observable also, those of the French who come over hither very young and remain long amongst us, have more florid complexions than those who have been bred up in France; and another observation I believe all that have been acquainted with this people must make is, that both men and women wear very ill, and that as they grow into years, their features appear very harsh and shocking.

As to their habits we may see them imitated by our gentry all over England, tho' it must not be thought that the same dress is ever in fashion at Paris at the same time it is at London, for by that time it has got over hither, the French are infallibly in a new mode; and if a gentleman should go over to France in clothes that were made here by the best French taylor in town, he would probably find himself under a necessity of making several alterations on his arrival there; and therefore an Italian painter, when he was directed to draw a Frenchman, drew him with a pair of shears and a piece of cloth, intimating, that he was ever cutting out something new; and of all the bubbles in Europe, no nation follows their foppery so closely as the English: the Italians, the Spaniards and the Dutch, who are their nearest neighbours, despise their levity, and do not alter the fashion of their clothes once in an age.

As to the temper of the French, they are a merry sprightly generation, who seldom lay any thing to heart, familiar and acquainted at first sight, but excessively vain and talkative. If a native of  
**Their temper and genius.**

CHAP.  
II.

The persons of the French.

CHAP.  
II.

France speaks of his country, he tells you in the phrase of one of their authors who now lies before me, that it is the most ancient and illustrious kingdom in the world; that the fertility of the soil and clemency of the air is no where to be paralleled; that their religion, laws and government are the best that ever were instituted, and their prince the greatest monarch in the universe; and that arts and sciences never arrived at such a pitch as in this glorious kingdom; even the Hugonots, who fled from thence on account of the persecution, will subscribe to every part of this description, unless it be the point of religion.

The vain-glory and obsequious flattery so natural to the French, is sufficiently evident from the inscriptions on some of their royal palaces and statues, which I shall have occasion hereafter to recite in the description of them, and shall here only give a specimen or two of them; and first on the Louvre we meet with an inscription which tells us, that their King, their nation, and that palace, are the three wonders of the world, and that God only excels their King, as heaven does this house.

Under the statue of Lewis XIV. in the place of Victory is another modest inscription, viz. *Viro immortalis*, to the immortal man: and there they tell us also that their grand monarch gives laws to the whole world, which never was truer perhaps than at this day. Nor is it only at court that flattery is predominant, but in imitation of their superiors the lowest class of men seem to reverence, and even adore those who are a degree above them, and by this fawning insinuating behaviour many of that nation have raised their fortunes amongst us, and been on a sudden metamorphosed from lackeys into gentlemen; they have that wisdom where there is a prospect of advancement to suffer themselves tamely to be trod upon, and not only to put up all ill usage, but even to seem pleased and contented with it, and as they see the silly animals they serve delighted with the worship that's paid them, never fail to let them have their fill of it. But as this people are so exceeding humble while they are in a state of dependance, they are no less imperious when their fortunes happen to mend; they expect the same homage from their inferiors, which they were used to pay to those above them. To proceed in their character; they have a genius, says PUFFENDORF, fit to undertake any thing, whether it be in learning, trade, or manufactures, especially those things which depend more upon ingenuity and dexterity, than hard labour. Another author rightly observes, that they have generally quick and ready apprehensions, but too often run away with a superficial knowledge of things, not having patience to dive to the bottom of them: they are much commended by some for their hospitality to strangers, but I am really at a loss to discover wherein it consists, unless it be in formal compliments and ceremony, which they are ready enough to afford foreigners, or one another, but are not much given to make entertainments, or relieve the distressed; our refugees scarce meet with so good entertainment there, as the French do here. They are more extravagant in their dress, than in eating and drinking: it has been observed in Flanders, that a French officer covered with gold lace shall dine upon a roll and a few raisins, or perhaps a dish of soup and herbs, when an English officer of the same rank shall spend three or four shillings at and ordinary; and this brings me to enquire into their diet. It is very certain that the French do not eat that quantity of flesh that we do, nor do they often dress it

Their diet.

in the same manner; soups, fricassees, ragouts and hashes, disguised with onions, herbs, and spices, are preferred before whole joints boiled or roasted, and what they do boil or roast, has scarce a drop of gravy left in it; they chuse to hang up their meat also before it is dressed, till it is so very tender, that an Englishman would think it fit for nothing but the dunghill, and were it not for the high seasoning and herbs they use with it, would scarce be eatable: but if the French eat less meat than we do, they are perfect devourers of bread, of which they usually eat twice the quantity, and their bread is generally exceeding light and good.

They have also a great variety of wines which are their ordinary drink, and are supposed to contribute to that sprightliness and vivacity, so conspicuous in the French; those people that use malt liquors, and eat great quantities of flesh, may well be supposed to be heavier and slower of apprehension, tho' they may be of a larger size and better fitted for laborious employments: cyder is pretty much drank in the northern provinces of France, which yield little or no wine; and we are not to imagine that they commonly drink in the other parts of France, such good old generous wines as they transport abroad: no, they content themselves usually with those poor thin wines which will not keep, and are but a degree better than cyder, and send their best to market; inasmuch that it is the opinion of many, that there is more good old wine drank in London, if we may take Portugal and Spanish wines into the account, than there is in Paris. It is within our memory that port bore an equal price with French wine here, nor was the ordinary French valued without a mixture of port, or some such strong wine; it was the high duty laid upon it that contributed chiefly to that mighty esteem we have for it at this day; the vanity also of being able to drink a wine that our neighbours pockets can't reach, may have had some share in the setting such an unreasonable value upon it. A native of France tells me, that they have several sorts of wine that will not bear the bringing over, and must be drank at such certain seasons, or they are good for nothing, a month sooner or later makes a great alteration in them; but I shall have occasion to treat farther of their wines when I come to enquire into the produce of the country. I proceed now in the character of the people. It is observed that they allow their women all imaginable freedoms, and are seldom troubled with jealousy; a Frenchman will suffer you almost to court his wife before his face, and will even take it amiss if you do not admire her person; and by the freedom the lady takes in company, it is difficult sometimes to distinguish which is the husband and which is the stranger; nor are they much surprized if you find them doing the offices of nature; an English woman would sneak and put herself to great inconveniences, rather than a man should see her going towards the place where those things are usually done; whereas a French woman would not be out of countenance, or avoid you if she was actually about it; and to say no more of them on this head, all that have had any conversation with them must allow, that they are not the cleanliest people in the world.

Their women.

Another observation made of the French is, that they are a very litigious people, and ready to people. commence a suit of law upon every trifle. Some have carried it so far as to say, there are more lawyers and law-suits in France, than in all the king-

CHAP.

duelling.Esteemed  
good sub-  
jects.

doms of Europe, and these indeed find business for the several parliaments of the kingdom, who are the last resort in civil causes where the crown does not think fit to interpose. Another instance of their peevish querulous temper is, their being so much addicted to duelling, which cost LEWIS XIV. more pains to break them of, than any one transaction of his reign. This was really a noble attempt, and reflects true glory on that monarch, and is a thing that could never have been effected but by a despotick prince, who would admit of no evasions of his decrees. Whatever stated laws are made may be eluded, but if this Prince or his judges believed the party guilty but of designing or intending a challenge, they were sure to be punished with the loss of their lives and estates, and consequently the entire ruin of their families: not that I am an admirer of such arbitrary proceedings, but am observing that it would have been exceeding difficult to suppress this itch of duelling, in a government where the judges were not vested with such arbitrary powers. We see amongst our selves that the pretence of a sudden quarrel, and the fact being done in the heat of blood, renders all our laws ineffectual against this species of murder: if a formal settled malice is not proved beforehand, or there be not some extraordinary aggravations of the offence, the criminal ever escapes.

The French are commended much for their ready obedience to their governors, and the uncommon veneration they pay their prince; but very late histories will inform us it was not always thus, rebellions and civil wars have been as frequent in France as in any other country, while the people had any thing left to contend with the crown for; but now as the king is entirely master of their fortunes, and dispenses to them all temporal blessings, no wonder that they adore him as a god; upon his frowns or smiles their happiness or misery depends. They have the name of cities and possessions, but are really no more than tenants at will, vassals and factors for him. Their lands are taxed at that rate, that they will scarce afford the proprietor a subsistence who has not a place: and it is true, there is scarce a considerable family in the kingdom that has not some preferment in the church, the court, or the army, which are all in a manner in the disposal of the crown, and consequently the surest way to advance their fortunes is, by expressing an unlimited devotion for their Prince. In Russia they say, God and the Great Duke knows every thing, and does every thing; and so it is in France, God and the Prince are equally adored, as the subjects look upon themselves to be equally in their power. What would all their struggling for their ancient privileges avail them now, against such numerous armies of regular troops paid with their own money? They have neither forces or treasure to oppose against them; it is their wisdom therefore to make a virtue of necessity, and pretend to be contented with what they cannot remedy: nay, they do well to seem to be moved by a principle of love and affection for their Prince, because on his approbation depends their own and their families welfare.

It is observed of the nobility and gentry of France, that they never apply themselves to trade or merchandize, and that they lose their quality whenever they do; but if this was not the case, it is no wonder that they decline this way of making their fortunes, when there are so many other more suitable to their genius. A French gentleman seems naturally cut out for a courtier or an officer,

and if he happens to be of a melancholy disposition, or a man of letters, here are always convents and numerous preferments to be met with in the church; and the court having given great encouragement the last hundred years to the liberal arts, France has produced many learned men in most arts and sciences: for tho' people may be inclin'd themselves to ingenious studies, they seldom make those advances as when they are morally sure their labours will be rewarded with honours and preferments.

As to their military virtues, it must be acknowledged that the French have brought the art of war to great perfection; there are no people who attack or defend a place better than they do, or are better versed in fortification: their horse also, especially their gendarmerie, were deservedly esteemed as good as any troops in Europe, till the battle at Hockstet, when they were miserably broke: by the continuance of a long war they had taught their enemies to equal them, if not surpass them. There is no wonder that the French had some advantage of us in the beginning of the war, their King having during a long reign made it his business to establish a good body of horse, and the nobility and gentry of France being fond of this service, and perpetually qualifying themselves for it; and it was to his superiority in cavalry, that his successes at the beginning of the war were principally owing. Their foot are also exceeding well disciplined, but unless they were assisted by Swiss or Bavarians, they were liable to be born down by the weight of the Dutch and German infantry, who are generally much larger bodies of men, for which reason they were seldom successful where they had not a superiority in point of number, after the confederates came to be equally disciplin'd: for to suppose that the courage of the French or the confederates gave them any advantage over their enemies is very idle; war is become a trade, and any people who have been seven years in constant service will be good soldiers: if there be any advantages to be expected, it must be from the conduct of the general, or the weight and superiority of his troops; horses and men of a small size will never be a match for those of a larger bulk, and that side which hath the greatest weight and numbers, will infallibly carry their point, if there be not a very great disparity in the skill and conduct of the generals. It was indeed a profane saying of LUXEMBURGH, that give him a superiority of ten thousand men, and he would give providence leave to take the enemies side; but this we may say in regard to the courage of any people, that let the contrary party out-number them by ten thousand men in an hundred thousand, and they will run a great hazard of being defeated, let their natural or acquired courage be never so great.

As to their exercises, there are few French gentlemen that do not learn to dance, to fence, and ride the great horse; hunting also after their way is pretty much used, but we must not think they often ride a fox chase: when a French gentleman goes a hunting, he equips himself with a heavy pair of jack-boots, a huge war saddle, and a monstrous curb bridle, that you would think he was going to charge an enemy, rather than ride after a timorous hare or deer, but these gentlemen go rather to see the game killed than hunted; this is the business of the huntsmen, who only call their Lords to see the game destroyed, which they have brought into the toils, or direct them to proper stations where they may take a view of the chase now and then. Their other diversions are much the same with ours, or rather

CHAP.  
II.Military  
virtues.Their ex-  
ercises and  
diversions.

CHAP. II. rather we have introduced almost every French game amongst us, we follow them as closely here, as we do in the fashion of our clothes; nothing will go down with us that is not French, and therefore it is perfectly unnecessary to enlarge upon this head. I proceed in the next place to a description of the several provinces.

## CHAP. III.

*Shows the several provinces, or general governments the kingdom of France is divided into, and treats particularly of the government of Paris.*

General division of France.

36 general governments.

FRANCE, when the three estates of the kingdom, the clergy, nobility and commons used to assemble in parliament, and give their consent to such laws as were enacted, was divided into twelve provinces, from whence they used to be summoned, viz. from Normandy, Picardy, the Isle of France, Champagne, Bretagne, Orleanois, Burgundy, Lyonois, Guienne, Languedoc, Dauphine and Provence: but these parliaments having been discontinued ever since 1614, there is now no foundation for this division. The kingdom is at present actually divided into thirty-six provinces, or general governments, which ordinarily go under the name of generalities, viz. 1. The general government of Paris. 2. Of the isle of France. 3. Picardy. 4. Champagne. 5. Burgundy. 6. Dauphiné. 7. Provence. 8. Languedoc. 9. The government Du Foix. 10. Navarre and Bearne. 11. Guyenne and Gascony. 12. Saintonge and Angomais. 13. D'Aunis. 14. Poitou. 15. Bretagne. 16. Normandy. 17. Havre de Grace. 18. Du Maine and Perche. 19. Orleanois. 20. Nivernois. 21. Bourbonnois. 22. Lyonois. 23. D'Auvergne. 24. Du Limosin. 25. De la Marche. 26. The government of Berry. 27. Touraine. 28. Anjou. 29. Saumur. 30. Flanders. 31. Dunkirk. 32. Metz and Verdun. 33. Toul. 34. Alsace. 35. Franche Compté. And, 36. Roussillon. These I shall endeavour to describe in their order; but because the limits of the governments of Paris and the isle of France are not exactly settled by any of their writers, I shall throw them both together.

The Isle of France.

The isle of France, so named from its being encompassed with rivers, is bounded by Picardy on the north, by Champagne on the east, by la Beausse and Orleanois on the south, and by Normandy on the west, and is near fifty French leagues in length, and about as much in breadth, and is divided into the following districts, viz. 1. The isle of France proper, or the Paris. 2. La Brie Francoise. 3. Le Hurepois. 4. The Beauvaisis. 5. The Valois. 6. The Soissonois. 7. The Laonnois. 8. The Noyonois. 9. The Vexin Francoise. 10. The Gatenois. 11. The Mantois; and 12. The county of Senlis. And the principal rivers are the Seine, the Marne, and the Oise.

The Isle of France proper.

The Isle of France properly so called, in which Paris stands, is not above fifteen French leagues in length, and nine in breadth; this district alone was anciently called France, and afterwards communicated its name to the whole monarchy; the most remarkable places in it are, 1. Paris. 2. The forest of Vincennes. 3. Montmorency. 4. Dammartin. 5. Charenton; and 6. St. Dennis.

Chief places.

Paris city, the name.

The city of Paris was anciently called Lutetia, from its miry situation according to most writers, but this etymology some modern French authors

seem very much ashamed of, they cannot conceive that the metropolis of this glorious kingdom should ever have so filthy an epithet belonging to it as dirty, the *dirty town*: they object, that it was called Lutetia before the time of the Romans, and that it is strange, the Gauls, who were unacquainted with their language, should give it a Roman name; but still they do not give any other account of the original of the name which is more satisfactory. However certain it is, that this town being the capital of a people, called Parisiens, at the time it was conquered by the Romans, from them afterwards obtained the modern name of Paris, but took up no more ground then than the little islands enclosed by the branches of the Seine, which is scarce a twentieth part of the whole town at this day. But to proceed; modern Paris is of a circular form, encompassed with a wall, and divided by the river Seine, almost into two equal parts, being situated in 48 degrees 50 minutes north latitude, two degrees some odd minutes to the eastward of London, from which it is about two hundred miles distant, an hundred and twenty-eight to the southward of Calais, near six hundred north-east of Madrid, and as much to the westward of Vienna, and about seven hundred miles north-west of Rome.

Those who describe this city, usually divide it into three principal parts. 1. The town, which is the largest, situate on the north-side the river, containing the suburbs of St. Anthony, the temples St. Martin and St. Dennis, with the palaces of the Louvre, the Tuilleries, the royal palace, the place royal, the Bastile, and the arsenal. 2. The city, which is much the least, but the most ancient, consisting of three little islands in the middle of the Seine, called the Palais, the isle of Notre Dame, and the Louviers, which have a communication with the rest of the town, and with each other by several bridges. And, 3. The university, which lies on the south-side of the river, and comprehends besides the colleges, the suburbs of St. Germain, St. Michael, St. James, St. Marcellus, and St. Victor: and these, as well as those on the other side the water, are denominated suburbs, not because they are without the present walls, but because they were all built since that part of the town which stands upon the little islands and the river, and is still called by way of eminence the city. I shall take an opportunity to observe farther, that all that part of the town, which stands on the north-side of the river, and to which the name of Town is appropriated, lies upon a perfect flat, and was heretofore a morass; the city also lies low, but that part which lies on the south-side of the river, and has obtained the name of the University, has several rising grounds and eminencies in it. The air of Paris is something gross, but generally esteemed healthful; the hills, which lie to the southward, abound in pleasant springs, and the adjacent country is full of stone quarries, from whence they fetch their materials for building; and there are some pleasant groves on the banks of the Seine and Marne. The hills in the neighbouring country also afford excellent wine, as the plains to the southward do corn: all the country about Paris is watered with innumerable little streams, which fall into the Seine and Marne; and several of their springs are medicinal. Having thus given a pretty exact description of the situation of Paris, I shall next proceed to give an account of the quarters it is at

CHAP. III.

bers in it.

present divided into, and of the most celebrated palaces and publick buildings in them. About the year 1702, there passed an act of their council of state, for dividing the whole town into twenty several quarters or wards, as follows, viz. 1. The city, containing fifty-three streets, 2. St. James's of the shambles, containing fifty-five streets. 3. St. Oportune, thirty-four streets. 5. The Louvre quarter, comprehending St. Germain, l'Auxerrois, and containing twenty-five streets. 5. That of the palace royal, or St. Honorius, containing forty-nine streets. 6. Mont Martre, containing forty-one streets. 7. St. Eustace, containing twenty-nine streets. 8. The halls, containing twenty-seven streets. 9. St. Dennis, containing fifty-five streets. 10. St. Martin's, containing fifty-four streets. 11. The Greve, containing thirty-eight streets. 12. St. Paul's, or the Mortellerie, containing twenty-seven streets. 13. St. Avoye, or the Verrerie, containing nineteen streets. 14. The temples, or Du Marais, containing fifty-two streets, 15. St. Antony's, containing sixty-eight streets. 16. The place Maubert, containing eighty-one streets. 17. St. Bennet's, containing sixty streets. 18. St. Andrew's, containing fifty-one streets. 12. The quarter of Luxemburg, containing sixty-two streets. And, 20. St. Germain de Prez, containing fifty-five streets.

According to the author of the late description of Paris, written in French, the whole town is about two common French leagues in the diameter, and six in the circumference; but notwithstanding most of the French writers boast, that it takes up more ground than any town in Europe, and especially London, all foreigners who have viewed both, and some of their own authors, do agree, that it is not so large as London. And it is easily demonstrated, that it is not so populous from the bills of mortality of each city, those of London exceeding the other one third usually: and though it be objected, that we take in some of the adjacent villages about London into the weekly bills; it is certain, that these are not equivalent to the numbers which belong to the shipping, and are annually sent from London to the plantations, and other foreign countries who die abroad: and it being generally agreed, that London is one of the most healthful towns in the world, it cannot be supposed, that there die greater numbers in proportion here, than there do in Paris; therefore, when the French writers talk of their being eight or nine hundred thousand souls in Paris, they are certainly under a very great mistake, the bills of mortality in London seldom amount to more in one year than seven or eight and twenty thousand people of both sexes, and supposing that one in thirty dies, which is the general estimate, as one in forty is for country places, and we multiply 28 by 30000, this makes but eight hundred and forty thousand. And as the bills at Paris are at least a third less, if we allow there are six hundred thousand souls in that city, we certainly over-do it: notwithstanding which, the French author above cited says, he can boldly affirm, that the city of Paris contains more inhabitants than any city in Europe, and that they amount to eight hundred thousand at least. Nay, before the late war, and the famine which happened in the year 1709, that they amounted to an hundred and fifty thousand more. He supports his assertion by another calculation, perhaps as wide as this; namely, the numbers of oxen, sheep,

and other animals consumed annually in this city, CH A P.  
III. telling us, that they do not kill less than seventy thousand oxen, seven hundred thousand sheep, &c. but this is a very uncertain way of computing, for an ox or sheep of one country, may be three times as large as those of another. We find here, that those of Lincolnshire far exceed the cattle of Wales and Scotland; and so no doubt they do the cattle in many of the provinces of France. He adds, that they use no less than twenty thousand coaches, and an hundred thousand horses; and yet gentlemen who have visited Paris, don't observe that there appear to be more there, than there are in London; and I believe every body, at first view, must admit, that this would be a very extravagant estimate even for London. He tells us farther, that there are twenty-four thousand houses in Paris, that they are generally seven or eight stories high, and filled from top to bottom, there being frequently several families in one house: now, if we allow, that there are one with another four families in every house, and six people in every family, that is, twenty-four in each house, which is a very large allowance, the number of inhabitants will not this way (multiplying 24000 by 24) amount to more than five hundred and seventy-six thousand men: but tho' some of the meaner tradesmens houses may be crowded with several families, it is to be observed, that the royal palaces, noblemens houses, colleges and monasteries, with the gardens belonging to them, take up a considerable part of Paris, and the inhabitants in these parts are but very thin. Can any one think, that when all the space between Temple-bar and Westminster was taken up with noblemens houses, gardens and monasteries, there were a fortieth part of the inhabitants there are now in the Strand, and the adjacent streets which have been built in the room of them? And this is the case at Paris at this day, there is scarce a French nobleman but has his hotel and gardens in that city, which take up an extent of ground equal to some streets; besides the royal palaces of the Louvre, and others, which may be some miles in circumference; so that put all things together, I believe it will be easily admitted, that Paris is neither so large or so populous as London is. I might observe farther, the vast resort of ships to the port of London, which Paris wants, that must contribute to fill our streets and houses with people; but whether London or Paris be the largest or the finest city, I must confess is not worth while to contend; much less would a writer render his veracity suspected, by making untrue or extravagant calculations in favour of his native place: it is school-boy like, thus to be ever magnifying the town or society we happen to be of, and despising every thing that is foreign. By the encomiums the French are ever giving their country and their prince, they would have us I presume applaud their happiness, and imagine, that some uncommon privileges are derived to them beyond the rest of mankind: but some will be apt to retort upon them; if this be true, how come we to find so many of you in all the kingdoms of Europe, who voluntarily banish yourselves from this desirable place? Those who are forced out of France on account of religion, are not so many as those who leave it out of pure necessity and want, and who are content to submit to a state of servitude in Spain, Italy, Germany, England and Holland, in popish as well as protestant countries, rather than remain in your own, which you have represented in

CHAP. III. in such beautiful colours, suitable to the inscription on the Louvre;

*Non orbis gentem, non urbem gens habet ullam,  
Urbisve domum, dominum nec domus ulla parem.*

The buildings of Paris.

The houses in Paris are generally built of hewn stone, five or six stories high, with sash windows; there are abundance of spacious streets and squares in it, and the royal palaces and those of the nobility are many of them exquisite pieces of architecture, much beyond any thing we can pretend to in or about London: but then they have no streets of tradesmen, which make an appearance comparable to those of Cornhill, Cheapside, Fleet-street, and the Strand, for near two miles together; and tho' some of their writers have been so vain to boast of the rich merchants that are found in Paris, I may modestly say, there are many more to be met with in London; that our rich companies and banks are not to be paralleled there. And lastly, which I am very sorry to observe, the taxes raised in London, tho' our government is not commonly thought arbitrary, I doubt exceed those of Paris, if we reckon the customs, excise, land-tax, &c. And I am informed, that Paris does not pay less than three millions sterling per annum to the crown. But to be a little more particular, the things which best deserve a traveller's attention at Paris, are, their palaces, their churches and abbeys, their university, academies, libraries, hospitals, squares, statues, gates and bridges.

Palaces in Paris. The royal palaces are four in number. 1. The old palace which gives name to the island on which that quarter of the town stands, which is called the city. 2. The Louvre. 3. The Tuilleries. 4. The palace royal; to which I shall add the palace of Luxembourg or Orleans, the Bastille, and the Hotel de Ville or town-house, tho' not properly royal palaces.

The old palace. 1. The palace situate at the east end of the island of that name, which was the constant residence of the Kings of France, till the reign of LEWIS XII. who assigned it to the use of the parliament and courts of justice; it is a spacious old edifice, particularly the great hall, which is arched with stone, and supported with pillars, and serves like Westminster-hall for a kind of Exchange, where milliners, perfumers, booksellers, &c. keep their shops, as well as to accommodate the courts of justice. The great chamber of this palace is the place where the King holds his bed of justice, as it is called, and the Peers of France have their session; here also are the court of requests, the court of aids, &c.

The Louvre. 2. The Louvre, said to have been anciently a hunting-seat of the Kings of France, standing then out of the town, and the wolf being their principal game, from thence obtained the name of Lupara, and afterwards by corruption that of Louvre, according to the French writers: it is situated in that part of Paris called the town, on the north-west bank of the river Seine, but was never finished according to the original design, consisting at present only of two piles of building three stories high, the first adorned with the Corinthian order, the second with the Composite, and the third with the Attick. LEWIS XIII. finished the west front, and built a large pavilion in form of a dome, in the middle over the gate, which is supported by two rows of large pillars of the Ionick order. LEWIS XIV. expended immense sums on the east front, in the middle whereof is the principal gate

of the palace, being in length fourscore and seven toises and an half, or a hundred and seventy-five yards; the beauty of the architecture, sculpture, incrustations of marble, paintings, and other rich ornaments, says an English gentleman who viewed it, are surprising, and had it been finished according to its first design, would have been one of the most glorious palaces in the world; but this it is never like to be, now Versailles is built, whither most of the fine statues and paintings which adorned the Louvre have been carried. The reader may form a tolerable idea of the east front of this celebrated palace, if he has ever seen the hospital of Bethlehem in London, which was built after the same model, tho' it falls much short of it in the value of the materials and ornaments, as well as in the situation, the Louvre standing on the banks of a fine river.

The Tuilleries is another fine palace, or as some will have it part of the Louvre, because it is joined to it by a long gallery, which fronts the river Seine, and stands within that circuit of ground that was at first laid out for the Louvre. The front of the Tuilleries is an hundred and sixty-eight toises and an half in length, or twice so many yards, having four great square pavilions, with pillars of the Composite order, and a fifth pavilion covered with a dome in the middle, under which is the great hall and stair-case, which leads to the apartments. It was begun by CATHERINE de Medicis, and finished by LEWIS XIV. having on one side three fine courts, and on the other beautiful gardens, which, if completed according to the first design, it is said, would fall little short of those of Versailles; and here it is the quality walk in fine evenings, as they do in the Mall at London. The terrace, which runs parallel to the river, is esteemed one of the greatest ornaments to these gardens, being two hundred and eighty-six toises long, and fourteen broad, and planted with trees, from whence there is an admirable prospect both of the town, the river, and the adjacent country: the long gallery is also much admired, which runs from the Louvre to the Tuilleries, being two hundred and twenty-seven toises long, and four toises five feet broad, in which the painting and sculpture is admirable. Under this gallery is the royal printing-house, and the apartments of several ingenious artificers, employed and encouraged by the crown, as engravers, painters, watch-makers, goldsmiths, cabinet-makers, &c.

The Palace Royal stands not far from the Louvre, having been built by Cardinal RICHELIEU, and given by him to LEWIS XIII. in his life-time, on condition it should never be alienated from the crown; it consists of several large piles of buildings, separated from each other by spacious courts, of which the two largest are in the middle, the outside makes no great shew, but is exceeding plain, tho' the apartments within are very noble. It is said, the Cardinal avoided the making too great an appearance without, lest it should create him the envy of the nobility; and as it was, he thought it his wisest way to make a gift of it to the crown at last. What is most admired in this palace is a gallery, wherein most of the illustrious personages that France has produced, are drawn by the greatest hands. The gardens are small, but admirably well designed.

The palace of Orleans, generally called the palace of Luxembourg, from its being erected on the ruins of the Hotel de Luxembourg, is situated on

CHAP. III. an eminence in that part of the town called the University, and was built by Queen MARY of Medicis, the dowager of HENRY IV. who laid the foundations of it about the year 1615, and having finished it in six years, left it by her last will to her second son JOHN GASTON, Duke of Orleans. This palace consists of one large court,

at the end whereof is the principal building, having five pavilions or advanced works, two at each end, and one in the middle; in the last whereof is the stair-case and passage to the garden, and before it is a terrace the whole breadth of the court paved with marble. The outward building, by which we enter the court, consists of an open gallery or terrace, with a pavilion in the middle covered by a dome, adorned with pillars and statues, and at the end of each gallery on the right and left, is a large square pavilion which jets out, and is advanced beyond the rest of the front: the court is terminated on the right and left with galleries and piazza's, both fronts of the principal building are adorned with double pilasters. The orders observed chiefly here, are the Tuscan and the Dorick with the Attick above them; and they have also added the Ionick to the pavilions, which renders them more lofty than the rest. But there is nothing more admired in this palace than the great gallery on the right, painted by the celebrated RUBENS; containing the history of MARY of Medicis, from her nativity to her death, in twenty large pieces, ten foot in height each, and placed between the windows.

The Bastile. The Bastile is an antique fortification, consisting of an ordinary wall and eight towers, encompassed with a ditch, and serves chiefly at present for the confinement of state prisoners; near it is the Arsenal, furnished with arms and old armour, not unlike the armoury in the Tower of London.

The town-house. Their town-house or guild-hall makes no great appearance; it stands upon the Greve, a void space by the river-side, where the people assemble on festivals and rejoicing days; and here also criminals are executed.

Notre Dame cathedral. The great church or cathedral of Notre Dame, is situated on a little island of the Seine, to which it communicates its name, and is joined to the larger island of La Palais and the rest of the town by several bridges. The church is a majestic old Gothick structure, sixty-five toises or fathoms long, and four and twenty broad, and its height seventeen toises or fathoms: it is supported by an hundred and twenty large pillars, and the front admired for its sculpture, on which are the statues of eight and twenty of their Kings; the last being that of PHILIP AUGUSTUS. Here are forty-five chapels built without, but opening into the body of the church, and two square towers in the front thirty-two toises in height, with galleries about them on the outside. But the greatest curiosity in this church, is the high altar, begun by LEWIS XIII. and finished by LEWIS XIV. composed of the finest Egyptian marble: at the upper end of the choir where the altar stands, is an image of the virgin, in a sitting posture, at the foot of the cross, with a dead Christ upon her knees. On the right hand is the figure of LEWIS XII. upon his knees, clothed in his royal robes, offering his crown and scepter to the virgin; and on the other LEWIS XIV. in the same posture. Six angels guilt, large as the life, carrying the several instruments of our Saviour's passion, are placed three on each side. The principal altar stands a little farther advanced in the

middle of the sanctuary, an angel of a large size in the posture of adoration being placed without the rails at each end of it: the whole choir is beautified in an extraordinary manner, scarce inferior in the richness of the materials, the carving or workmanship, to any in Italy. The other churches and chapels in Paris, which make the best figure, belong generally to the abbies and convents, as the church belonging to the abbey of St. Genevieve, that belonging to the ancient abbey of St. Germain, and the church in the nunnery of Val de Grace, founded by Queen ANNE, upon the miraculous birth, as it is called, of LEWIS XIV. after she had been married two and twenty years without children. The cupola and high altar here are mightily admired, but nothing renders it more remarkable than the inscription over the portal, viz. *Jesu nascenti Virginique matri*: To the infant Jesus, and to his virgin mother.

The university. The university, which gives name to that part of the town that is situated on the south-side the river Seine, the Parisians pretend is one of the most ancient in Europe, and that it formerly consisted of an hundred colleges, though there are but fifty-four houses at present that bear that name, and of these not more than ten where exercises are performed; these are the colleges of, 1. Navarre. 2. Du Plessis, which prepares the students for the Sorbonne. 3. The college of Harcourt. 4. The college of Beavois. 5. The college of the Cardinal Moine. 6. The college De la March. 7. The college de Liseux. 8. The college de Montagu. 9. The college de Grassins. And, 10. The college of the four nations. It is needless, says my French author, to name the rest, where no lectures are read: in this university are professed divinity, law, physick, and the liberal arts, comprehending humanity, languages and philosophy: the Sorbonne and the college of Navarre, are appropriated chiefly to divinity; the schools for law are in the college of Cambray, and in the street Beavais; and the physicians have a noble anatomical theatre in the street de Boucherie, and a hall where they read lectures. The Sorbonne, esteemed one of the finest colleges in Europe, not only on account of its buildings, but the learned doctors who inhabit it, received its name from ROBERT de Sorbonne its founder, and made but a very mean appearance till Cardinal RICHLIEU rebuilt and beautified it; the church is a very elegant structure, having this inscription over the portal, viz. *DEO OPT. MAX. ARMANDVS CARDINALIS DE RICHLIEV*. It has a dome and four towers, and on the side of the court next the house, is a handsome portico ascended by sixteen steps, where we read another inscription, viz. *Armandus Joannes, Card. Dux de Richlieu, Sorbone Provisor, edificavit domum & exultavit templum sanctum Domino 1642*. The inside of the church is adorned with pilasters of the Corinthian order, between which are niches filled with statues of angels and apostles; the dome is finely painted, and the high altar adorned with six marble pillars of the Corinthian order; their bases and chapters brass gilt, and on it a fine crucifix of white marble is placed, esteemed an admirable piece of workmanship. The tomb of the Cardinal is in the middle of the choir, on which he is represented in an almost emblematique posture, supported by religion, and the afflicted sciences weeping at his feet: the library is a handsome fabrick, extremely well furnished with manuscripts as well as printed books, having the Car-

CHAP.  
III.

dinal's picture at one end of the room, and his bust in brass at the other, the fathers and school-divines are regularly placed one after another, with their respective annotators under them; the college contains apartments for thirty-six doctors, those who are admitted amongst them before they have obtained their doctor's degree, are only said to be of the hospitality of Sorbon, and not of the society; such is the reputation of this college, that the whole university is sometimes denominated the Sorbon. After the students have attended public lectures three years, they are qualified for the degree of bachelors, and wear lambkins and tippets two years; afterwards they are advanced to the degree of licentiates, when they are generally made opponents to those who come for their doctor's degree; transubstantiation, the trinity and incarnation, are frequently the topics they dispute of; and in these debates my author observes, they take as much liberty almost as they would in protestant countries. The university of Paris, according to their own writers, was founded about the latter end of the eleventh century, their first statutes were instituted anno 1215, by ROBERT CORCEON, legate of the holy see, in which there is no mention made of any other faculties, but arts, philosophy and divinity. INNOCENT III. introduced the canon law about the year 1216. And it appears by a bull of Pope GREGORY's, anno 1231, that there were physicians then members of this university: canon law only was read in the university till the last century, when lectures were instituted for the civil law, and the common law of the nation, their schools being first founded for the liberal arts only. The head of the university, who is called rector, is always elected from that body, and never of the other faculties. He has the precedence in the university of all persons who are not princes of the blood; his habit of ceremony is a violet-coloured gown with a mantle of ermins; he is elected every three months. The faculty of arts is distributed among the four nations. 1. The nation of France. 2. The nation of Picardy. 3. The nation of Normandy. And, 4. The German nation, which comprehends all foreign nations, as German, English, Irish, Italian, &c. The head of each nation is called the procurator, and is of the rector's council, without whom he transacts nothing of consequence. The usual titles given to the four nations are, *Honoranda Gallorum Natio* for France; *Fidelissima Picardorum Natio* for Picardy; *Veneranda Normanorum Natio* for that of Normandy; and *Constantissima Germanorum Natio* for that of Germany: the other three faculties also have their titles, as *Sacra Theologie Facultas*, for that of divinity; *Consultissima Decretorum Facultas*, for law; and *Saluberrima Medicorum Facultas*, for that of physick. Before a person is admitted a graduate in the university of Paris, he ought to continue his studies five years, namely, two in philosophy, and three in divinity, law, or physick.

This university had formerly civil jurisdiction, and if any of its members had committed a crime, he was not answerable for it in other courts; but the case is far otherwise now, they have lost most of their privileges, and other colleges, academies and societies for improving arts and sciences, have been erected of late years by the royal licence and encouragement, in opposition as it were to the university, which have no dependance on it; to which the university made a strenuous opposition, but could not prevent it.

The revenues of the university which arose from a grant of the letter-office were resumed by the government, and only a pension of forty thousand livres allowed to the ten colleges where exercises were held, till the year 1619, when the duke of Orleans by letters patent raised it to an hundred and twenty thousand livres and upwards, which may amount to eleven thousand pound per annum sterling. But I do not perceive the colleges are endowed with any estate in lands, but lie wholly at the mercy of the government; and whenever the court have extraordinary occasion for money again, probably the university will have their pension reduced. What contributes most to make arts flourish in this university at present, is that emulation that is between them and the other colleges and academies set up against them, and an apprehension that they may one day be judged useless by the state, if they do not exert their talents.

The colleges which have no dependance on the university are, 1. The college royal, founded by FRANCIS I. about the year 1531, for philosophy, eloquence, mathematicks, physick, the eastern languages, &c. situate near the college of Cambray. 2. The Jesuits college, on the front of which is written in capitals, *Collegium Ludovici Magni*; besides which, the Jesuits have another college or two, wherein they observe their own discipline; but the students cannot take their degrees, unless admitted of some college in the university.

Their academies are, 1. The academy Francois, which was at first only a society of ingenious men, who met once a week at their respective lodgings for conversation, who being encouraged by Cardinal RICHELIEU, attempted the improving and polishing the French language, and in 1635 the academy was established by a royal edict; LEWIS XIV. appointed them an apartment in the Louvre, for holding their assemblies.

The royal academy of sciences was established by Mr. COLBERT, about the year 1666, and is composed of the most celebrated philosophers, mathematicians, &c. for whose use the King built the royal observatory in St. James's suburb, their institution being much of the same kind as that of the royal society in London.

There was also a royal academy established for painting and sculpture by LEWIS XIII. and another for architecture by LEWIS XIV. and the Gobelins was erected by royal authority, wherein all mechanic arts are exercised and improved, as the manufacture of tapestry, mosaick work, wrought plate, hard ware, or works of iron, steel, copper or brass, embroidery, &c.

The principal libraries in Paris are, 1. The royal library, containing according to the French account sixteen thousand volumes of valuable manuscripts in the Oriental, Greek, Latin, French, and other living and dead languages; and about eighty thousand printed volumes: and in the year 1720, it was ordered by an arret of the council of state, that the books, medals, and rarities which were in the king's cabinet at the castle of Versailles, should be conveyed to Paris to be kept in his Majesty's library there; that no book or medal should be lent out on any pretence, but by the King's express order; but that all persons, as well foreigners as others, should be admitted to peruse the books, &c. and accommodated with conveniences for their studies.

Libraries.

CHAP.  
III.

The library of St. Victor, famous for its manuscripts, and a great number of excellent books, is open to the publick three days in a week.

The library of Cardinal MAZARIN also has been publick ever since the year 1688.

The library of M. RIVONFONDS, advocate of the parliament of Paris, was left to the order of advocates, on condition it should be publick.

The library of the fathers of the christian doctrine near the gate St. Marnel, has been made publick since the year 1718.

There are several other excellent libraries, which are only open to the respective societies to which they belong, as the library of St. Martins in the Fields, the library of St. Genevieve, that of the Sorbon, the Jesuits, &c.

Hospitals

I come now to the hospitals of Paris, which are about thirty in number, some founded for poor old infirm persons, some for foundlings, or children whose unhappy parents know not how to provide for them, whether legitimate or not; others for orphans, mad people, blind, vagrants, and incurables; of which the four chief are those called, the Hospital General, the Hotel Dieu, the Hospital of Charity, and the Hotel Royal des Invalides. The Hospital General is a vast pile of building, containing six distinct houses, one whereof is for poor old women and girls: another for poor families and foundling children, the others for poor women sent hither to lie-in: beggars, vagrants, &c. in all the six, it is said, there are frequently ten thousand people who are made to work when they are well, and taken care of when they are sick: it was finished by Cardinal MAZARIN, anno 1657. The Hotel Dieu is the most ancient hospital in Paris, and entertains all people who are brought thither, whether natives or foreigners; whereupon it is often too much crowded: the sick are attended here by the nuns of St. Austin with great tenderness, and the danger and trouble of this office making it esteemed meritorious here, the ladies of the first quality have sometimes undertaken it; the Dutches of Nemours being among these heroic ladies thus charitably employed, took the small pox and died of it: the number usually taken care of here amounts to about two thousand.

In the Hospital of Charity, the friars of St. John perform the same offices as the nuns do in the former.

The Hotel Royal des Invalides, or the royal hospital for wounded and infirm soldiers, is much the most magnificent; it is composed of five handfom quadrangles built of hewn stone, of which the largest stands in the middle of the rest, the squares being surrounded with piazzas and galleries above them make a very splendid appearance. In the refectories where the soldiers eat, are all the famous battles and sieges painted which have been fought of late years; the apothecary's shop is extremely well contrived, and furnished with drugs, and the sick are attended by the sisters of St. Lazarus. Our countryman Dr. NORTHLEIGH is of opinion, that Paris is the best school in the world for young physicians and surgeons, on account of the freedom allowed to strangers to be present at their operations performed in all their hospitals, the advantage of their chymical lectures, physick-garden, and frequent practice of anatomy. There are usually entertained in the hospital of Invalides two hundred officers, and three thousand common soldiers; the officers lie two in a chamber, and the private men six or seven in a room, but every one has a bed to himself, and may follow what busi-

ness he thinks fit: they eat in common, but every man has his portion of meat served up to him, and they are permitted to go out and negotiate their affairs two days in a week.

The Jardin Royal, or physick-garden, in the suburb of St. Marcel, is well stored with all kinds of plants, and committed to the care of one of the King's physicians, being maintained at his Majesty's charge; and here botanick lectures are held during the best season for plants: it is something longer, but not broader than that of Oxford, there belongs to it also a good anatomy-school well provided with skeletons. In the King's laboratory every body is admitted to see the operations; and the medicines made here are bestowed on the poor.

The Observatory already mentioned stands in St. James's suburb, and was built by LEWIS XIV. for astronomical observations; it is a vaulted fabrick without either wood or iron work, three stories high, and you descend from it into a cave with little alleys two hundred steps, from whence one may see quite through the top of the house to the sky: by this contrivance they proposed to observe the motion of the stars in the day-time, but it does not answer expectation, no stars being seen from hence, for none they say pass through the Zenith of Paris; but this defect might have been foreseen by the learned, as my author observes, before they had given themselves the trouble of digging this subterraneous apartment.

As to the places or squares in Paris, some reckon up near fourscore, of which the principal are, Le Place de Louis le Grand, or of conquest, Le Place de Victoires, Le Place Royal, the Greve, the Place Dauphine, and the Place Maubert; the square called the Place of Lewis the Great, or des Conquetes, is a large octagon, open towards the street of St. Honore, capable of containing ten thousand men, and surrounded with glorious buildings; but the greatest ornament is the fine equestrian statue of the late King LEWIS XIV. in the middle of it, twenty foot in height, and made of brass, said to be run at one cast; it stands on a marble pedestal filled with inscriptions, containing the great actions of this prince's reign.

The Place de Victoires is not of a great extent, but of an oval figure, and encompassed with uniform magnificent buildings; in the middle of it is an admirable statue of the late King, brass gilt, and thirteen feet in height, dressed in his robes, with a Victory standing behind him of the same size and metal crowning him, and under his feet is a three-headed Cerberus: the whole was cast at once, and weighs thirty thousand pounds and upwards, exceeding, say the French, any thing that ever was done of this kind, either by the Greeks or Romans; under the statue is that inscription already mentioned: *Viro immortalis, to the immortal man.* The pedestal is of white marble twenty foot high, having at the corners the figures of four slaves in brass, much larger than the life: the pedestal also is adorned with bass-reliefs and inscriptions, shewing the most memorable events of his reign. This proud monument was erected by the Duke de la Feuillade, to his master's glory in the year 1686. The tenour of the grand inscription is as follows, viz. *Ludovico Magno, Patri Exercituum & Duftori, semper Felici, domitis Hostibus, protectis Sociis, adjectis Imperio fortissimis populis, extructis ad Tutelam Finitum firmissimis Arcibus. Oceano & Mediterraneo inter se junctis, praedari Vetitis toto mari piratis: Emendatis legibus. Deleta Calviniana Impietate; Compulsis ad Reverentiam*

CHAP. III. *tiam Nominis Gentibus remotissimis, cunctisque summa providentia & virtute domi forisque compositis.*—Franciscus Vicecomes Daubusson, Dux de la Feuillade, ex Franciæ paribus, Tribunus Equitum unus, in Allobrogibus Prorex, & prætorianorum peditum Præfektus, ad memoriam posteritatis sempiternam P. D. C. Englished thus; To LEWIS the great, the father, and always successful leader of his armies, having subdued his enemies, protected his allies, added mighty people to his empire; built impregnable citadels to defend his frontiers; joined the Ocean and Mediterranean; cleared the sea of pirates, reformed the laws, eradicated Calvinistical impiety, compelled the remotest nations to revere his name, and settled all things at home and abroad by his great prudence and valour: FRANCIS Viscount Aubusson, Duke de la Feuillade, Peer of France, Colonel of horse, Viceroy of Savoy, and Captain of the royal guards, to perpetuate his memory to posterity, has erected, dedicated, and consecrated this statue.

The Place Royal. The Place Royal is perfectly square, and one of the largest in Paris, about the same dimensions as Lincoln's-inn-fields in London; it has a piazza on every side, and the buildings are magnificent and uniform; in the middle of it is an equestrian statue of LEWIS XIII. erected by Cardinal RICHELIEU, with several inscriptions, expressing the most remarkable events of his reign.

The Greve. The Place of the Greve, I have observed already, lies by the river side, and is the place where the people assemble on rejoicing days, and here also offenders are executed for capital crimes.

The Place Maubert. The Place Maubert serves for the holding one of the greatest markets in Paris, on Wednesdays and Fridays weekly, and lies near the keys de Tournelle and St. Bernard.

The gates. The principal gates are those of St. Denis, St. Martin, St. Antony and St. Bernard, which are not unlike that of Temple-Bar in London.

The port of St. Denis. The port of St. Denis was the design of the Sieur BLONDEL, master of mathematicks to the late Dauphin; it is seventy two foot broad and of the same height, being built after the model of an ancient triumphal arch; there are two little portals on the sides of the great one, the largest is twenty four foot in height, and on it are bas-reliefs, representing the French armies passing the Rhine, Waal, &c. with the following Inscription, viz.

*Ludovico Magno quod Diebus vix sexaginta Rhenum Wabalim Mosam Isalam superavit, subegit Provincias tres, cepit Urbes munitas quadraginta, Emendator male memori Batavorum gente. Præfektus & Ediles P. CC. Anno Dom. M.DC.LXXII.*

And indeed the rapidity of his conquests surprised all Europe, the Dutch were unprovided of forces, and quarrelling about a Stadtholder; some of their towns would not admit of the States troops to defend them, and others were probably corrupted with French money, insomuch that many of them surrendered to the French King without giving him the trouble of sitting down before them. But this inscription ought to have informed us also, that when the Dutch were recovered from their consternation, and their allies marched to their assistance, this mighty conqueror left all his boasted acquisitions, and retreated with almost as much precipitation as he advanced, scarce retaining any one town he had made himself master of.

The port of St. Martin. The gate of St. Martin was built in the year 1674, after the same model as that of St. Denis, resembling a triumphal arch, having three overtures, one great one, fifty foot in height, and as

many in breadth in the middle, with a little portal on each side, and this inscription, *Ludovico Magno, Vespotione Sequanisque Bis Captis, Et Fraetis Germanorum Hispanorum & Batavorum exercitibus. Præf. & Edil. P. CC. Anno R. S. H. M.DC.LXXIV.* And on the other side the following inscription, viz. *Ludovico Magno quod Limburgo Capto impotentes Hostium minas ubique repressit. Præf. & Edil. P. CC. Anno 1674.*

The gates of St. Antony and St. Bernard, are also both of them built after the model of a triumphal Arch; that of St. Bernard's is adorned with bas-reliefs on one side, representing the King distributing the wealth brought into this city by navigation with this inscription, *Ludovico Magno Abundantia parva, Præf. & Edil. P. CC. Anno R. S. H. M.DC.LXXIV.* On the other side we see a god steering a ship under full sail, with the following inscription, *Ludovici Magni Providentia, Præf. & Edil. P. CC. Anno R. S. H. M.DC.LXXIV.* And in fact most of the principal gates are so many triumphal arches, designed to eternize the memory of LEWIS XIV. the vainest King of the vainest people upon earth. But I must not here forget the great and little Chatelet, which were the gates of Paris when the city was confined to the island of the palace surrounded by the branches of the Seine.

The great Chatelet, or gate of Paris, according to tradition, was built by CÆSAR, of which there remains now no more than some antique towers, all the rest having been built since the year 1684; here the courts of justice are held for the provostship and viscounty of Paris, and it serves for a prison for criminals.

The little Chatelet also is an antique fortress and a prison for criminals, and generally pretty well stocked with them; and having a large overture in the middle, served for a gate to the city.

As Paris is divided by the Seine into three parts, there are not less than ten or twelve bridges over the several branches of it, of which the three principal are the Pont Royal, the Pont Notre Dame, and the Pont Neuf.

The Pont Royal is a plain stone bridge of five arches, built cross the united stream of the Seine, over-against the Tuilleries, about the year 1685, in the room of a wooden bridge which was broken by the floods. LEWIS XIV. to perpetuate his name, lodged in the stone-work of this bridge several cedar boxes adorned with the arms of France, in which he inclosed twelve copper medals, twelve of gold, and twelve of silver, one of which had for its motto, *Germania Servata*; another *Iussit Quiescere*; a third *Rhenus Batavique una Superavit*; and on a fourth, JUPITER is represented with this motto, *Vibrata in Superbos Fulmina*; and underneath, *Gemma emendata*. This bridge is seventy-two fathoms long, and eight fathoms four feet broad.

The Pont Notre Dame, or Our Lady's Bridge, so called from its lying over that part of the Seine which runs between the island of Notre Dame and the south part of the town, is also built of stone, and hath houses on each side as London-Bridge, but is much shorter; it was built by LEWIS XII. about the year 1507, in the room of a wooden bridge which was carried away by the stream.

The Pont Neuf, or New Bridge, is a handsome piece of architecture, and lies over both branches of the Seine, and the west end of the island of la Palais: it is an hundred and seventy fathoms long and twelve broad, raised on each side for foot people to walk on, in which respect it is more com-

CHAP.  
III.

modious than London-Bridge, but is not near so large and substantial, nor indeed is there any occasion it should, the water not running with that force it does at London, and there being no manner of tide here. This bridge was begun by HENRY III. anno 1578, and finished by HENRY IV. in 1604. On it is an equestrian statue of this last Prince, much larger than the life, set upon a pedestal of white marble, with four slaves at the four corners, and the inscriptions and bas-reliefs shew the most memorable transactions of his reign. And thus I have given such an account of the palaces and publick buildings of Paris, as is consistent with the work I am upon.

A general  
account of  
Paris.

I shall only add what the late author of the description of Paris says of this city in general, namely, that there are in it twenty two thousand houses, many of which are seven stories high, fifty two parishes, an hundred and thirty four monasteries, of which fifty six are for friars and seventy eight for nuns, and nine hundred seventy nine streets; more than fourteen thousand coaches, and seven or eight hundred thousand persons, in which he is more modest than many of his countrymen. The conventual and parochial churches and chapels amount to two hundred and upwards.

Paris an  
archbishi-  
shoprick.

Paris was a bishoprick suffragan to the archbishop of Sens, till Pope GREGORY XI. erected it into an archbishoprick, at the request of LEWIS XIII. anno 1622. the suffragans whereof are Chartres, Meaux, Orleans and Blois; and in the year 1674 the archbishops of Paris were made perpetual dukes and peers of France by LEWIS XIV. This archbishop exercises a civil as well as ecclesiastical jurisdiction in the lands belonging to his see: his revenue is computed at an hundred thousand livres per annum, which amounts to between nine and ten thousand pounds a year English money. As to the ecclesiastical government of Paris and the rest of the kingdom, I reserve a chapter particularly for it.

The civil  
govern-  
ment of  
Paris.

The civil government of Paris is distributed amongst several courts of justice, of which the highest is the parliament, that extends over several of the neighbouring provinces, and is the last resort in all causes where the court does not interpose, as will appear in the chapter set apart for treating of the civil government of France. The parliament of Paris consists at this day of the chief president, nine presidents a mortier, one and twenty presidents by commission, two hundred and fourteen counsellors, with the necessary officers, as attorney and solicitor general, register, &c. and is divided into nine chambers or houses that have their respective branches of business assigned them, on which I shall enlarge hereafter in treating of the civil government of the kingdom in general. The other courts in Paris are the chamber of accounts, the court of aids, the court des monoyes, which regards the coinage, weights and measures, the court of the treasury, the court of the waters and forests, the court of the constable and marshals, the court of admiralty, the Chatelet, or the ordinary court of justice for the civil government of the city, of which the provost or mayor, with the four eschevins or aldermen, and twenty six counsellors are judges: the court of the Hotel de Ville, or Guild-Hall, which takes an account of the city rents, and of the taxes on all provisions brought into Paris; and the court of the consuls, which takes cognizance of all things relating to commerce; in which courts the provost (by himself or his lieutenant) presides, who is nominated by the King.

And there is a military, as well as a civil government in Paris, which in this and in every other province is independent if not superior to the civil power: the courts above-mentioned are suffered to go on without interruption where the crown is not concerned, and while they obey the dictates of the ministry; but should they presume to dispute the King's pleasure, they would soon be made sensible of their error by a military force; Paris being in reality subject to a lieutenant general. The captains of the castles or palaces of the Louvre and Tuilleries receive orders also immediately from the King; and the governors of the Bastille and the Hotel des Invalides are accountable only to his Majesty.

CHAP.  
III.The mili-  
tary go-  
vernment.

The manufactures of Paris, and her trade with the neighbouring provinces, are very considerable, beyond estimation say the French.

Their principal manufactures are gold and silver stuffs, wrought silks, velvet, gold and silver lace, ribbands, tapestry, linen and glass; not to mention their wines and other provisions consumed there; and there are two great fairs annually held here, viz. one in the suburb of St. Germain, which begins on the 3d of February and lasts a fortnight, and till passion week by the royal licence; and the other at St. Laurence's, which begins on the festival of that saint, and ends the seventh of September. There are in this city six principal bodies or companies of tradesmen, out of which the consuls who have the regulation of trade are chosen, viz. the drapers, the grocers and apothecaries, the mercers and jewellers, the skippers, the hatters, and the goldsmiths: besides which, there are the booksellers, the vintners and wine-merchants, the wool-merchants and timber-merchants, who have equal privileges, and are in a capacity of being elected consuls.

Trade of  
Paris.

## CHAP. IV.

*Contains an account of the principal places in the isle of France.*

THE most considerable places in the isle of France proper, or the Paris isle, are, 1. Vincennes on the east-side of Paris, remarkable chiefly for its park or forest, as it is called, where the citizens go to take the air; in it is an antique castle or palace, in which some of their Princes formerly resided, and was repaired and beautified by the late King LEWIS XIV. 2. St. DENIS situate near the Seine, in a fine plain about four miles to the northward of Paris, said to have received its name from St. DENIS the Areopagite, who first planted religion in this kingdom, and is supposed by some to have been the first bishop of Paris: but I find the generality of their writers agree, that St. DENIS the Areopagite never was at Paris, and that the christian religion was not planted in France till the third century, when another St. DENIS preached the gospel here, and was constituted the first bishop of this city. But however that be, there is a magnificent abbey at St. DENIS founded by DAGOBERT I. about the year 636, in the place where one of the saints of this name was buried, who is generally accounted the patron of France, and in it are several magnificent tombs and monuments of the Kings and Princes of the blood royal of France, of which the chief are those of FRANCIS I. and LEWIS XI. Here also is a tomb erected to the memory of the celebrated Marshal TURENNE, by LEWIS XIV. in an elegant marble chapel built for

CHAP.

Vincen-  
nes.  
St. Denis.

**CHAP. IV.** for that purpose: the great altar of this abbey is plated with silver, and has a cross of massy gold over it seven foot high, set with pearls and diamonds: the abbot kept the Regalia used at the coronation of the King, and was vested with great privileges; but I find that in the year 1692, the title of Abbot of St. DENIS was suppressed, and his revenue given to the nuns of St. Cyr, by a bull of Pope INNOCENT XII. 3. Montmorency, a little town situate on a hill twelve miles north-west of Paris, which gives name to a pleasant valley about it, beautified with the country seats of the nobility and gentry, and gave a title to one of the most ancient families in the kingdom: it was erected into a dutchy and peerage by HENRY II. anno 1551, in honour of—de Montmorency constable of France, who being put to death by LEWIS XIII. he conferred that honour on HENRY de Bourbon Prince of Conde, with the title of Enguien instead of Montmorency, and it belongs at present to his highness the duke of Bourbon. 4. Dammartin is an ancient town and castle, twenty miles north-east of Paris, formerly the capital of a country. 5. Charenton, situate a little above Paris, at the conflux of the Seine and Marne, remarkable chiefly for a fine church, which the Hugonots had here before the repeal of the edict of Nantz, in the year 1685. Hither the Protestants of Paris used to resort to divine service, and as they generally went by water, would in the view and hearing of their enemies set a psalm or hymn, and sing all the way up the river, whereby they highly provok'd the Roman catholicks; and this is thought to be one occasion of drawing the resentment of the government upon them; for I find their conduct in this particular very much censur'd even by their friends. The protestant church was demolished on reverting the said edict, and a nunnery erected in the same place in the year 1703. Had that church been a heathen temple, the catholicks would have made no scruple of converting it into a christian oratory; but such was their hatred and detestation of the Calvinists, that no new consecration could be supposed sufficient to purify a place defiled by this sect. Thus we find it frequently happens among sects of the same religion, who have usually a greater aversion for each other, than for those of a different faith, which probably proceeds from the daily insults and provocations they give and receive.

**District of Brie Francoise.** In the district called the Brie Francoise the chief places are, 1. Lagny. 2. Brie Count Robert. 1. Lagny, the capital of the Brie Francoise, is situated on the Marne five or six leagues above Paris; it is a little town, and scarce remarkable for any thing but a convent of Benedictines, founded by St. FURSI a North-Briton. 2. Brie Count Robert, a little town six leagues south-east of Paris, considerable only for its market, and a convent.

**Hurepois district.** In the district of Hurepois the chief places are, 1. Melun. 2. Dourdan. 3. Monthery. 4. Chartres. 5. Corbeil.

**Melan.** Melun, *Melodunum*, is situated on the river Seine, ten leagues to the southward of Paris, a large ancient town, the form and situation whereof exactly resemble that capital, the river Seine forming an island in the middle, and dividing it into three parts, which have a communication by bridges: here are the ruins of an ancient temple dedicated to the goddesses *ISIS*, several handfom churches, an abbey dedicated to St. PETER, and other religious houses. It has a good trade in corn, flower, wine and cheese, which they send to Paris by the river Seine.

Dourdan stands about thirteen leagues south-west of Paris, it is a little town, considerable chiefly for its manufacture of silk stockings.

Corbeil is a pleasant little town, situated at the conflux of the Seine and the Juynes, seven leagues to the southward of Paris, and was anciently, according to tradition, a Roman colony; the principal trade of the place is in hides and tanned leather. The rest of the towns in this district do not require a particular description.

In the district of Gatenois the chief places are, 1. Nemours. 2. Courtenay. 3. Fontainebleau. 4. Moret.

Nemours, *Nemofium*, situate between two little hills on the river Loing, eighteen leagues to the southward of Paris, from whence the noble family of Nemours took their title, but not considerable on any other account.

Courtenay is a little town, situated on the river Clairy, between Montargis and Sens, about five leagues from either, and gave name to several French princes celebrated in the histories of Constantinople, of which they were some time sovereigns.

Fontainebleau is situated in the middle of a forest, fourteen leagues south-east of Paris, and is considerable chiefly for the royal castle or palace there, from whence it received its name, the palace being so denominated from a noble fountain in one of the courts: this palace has long been a hunting-seat of the Kings of France; and tho' it contains some magnificent piles of building, is a very irregular piece, having been built at several times, without any order or symmetry, containing as it is said nine hundred rooms. There are some fine paintings in the galleries, and the gardens are adorned with statues, fountains, fine walks, canals, grotto's, and every thing that can render a place pleasant in the summer. The forest of Fontainebleau was anciently called the forest of Bierre, and contains six and twenty thousand acres and upwards; it is of a round form, the palace standing in the center.

In the district of Mantois the chief places are, 1. Mante. 2. Monfort. 3. St. Germain en Laye. 4. Versailles. 5. Trianon. 6. Marly. 7. Meudon. 8. St. Cloud. 9. Madrid. 10. Anet. 11. Poissy. 12. Dreux.

Mante, *Medunta*, is situated on the Seine, twelve leagues north-west of Paris, remarkable for a handfom stone bridge over the Seine of thirty-nine arches, and a convent of Celestins, which hath a little hill within its bounds that produces the best wine in France. The river Seine forms abundance of little islands hereabouts.

Montfort is a little town situate on an eminence, at the foot whereof there runs a rivulet, ten leagues from Paris, and has the additional name of D'Amauri, from several lords of that name who have possessed it. The trade of this place consists in corn, wine, cyder, fruit and wood, of which the last is the most considerable bearing a great price at Paris.

St. Germain en Laye stands four leagues to the westward of Paris, and one from Versailles; it is most remarkable for the royal castle or palace there, situate on a hill near the Seine, begun by CHARLES V. and enlarged and beautified by succeeding Princes, but by none more than by LEWIS XIV. who seems to have had the best taste for building of any Prince of the last age: he added particularly the terrace of above three thousand paces in length, the grand parterre, and the valley garden, as it is called

called, and cut most of the ridings thro' the neighbouring forest. The water-works here are very fine; in one of the grotto's is a virgin playing on the organs, and her eyes so artfully moved, that she seems to be alive: in others, artificial birds singing and chirping; and in another, the representation of ORPHEUS playing on a lute and keeping time, while the beasts, birds, woods and rocks seem to follow him, with several representations of the like nature, all put in motion by water. This palace is built in the form of a castle, and surrounded with a dry ditch, a magnificent stone gallery runs round the middle of the whole structure, which is of an oval figure, and the roof is covered with thin flat free stone instead of tiles. The prospect from this castle is admirable, especially towards the river and the plains, having Paris, St. Denis and Marli within view of it. It stands in a healthful air, and the neighbouring forest contains five thousand acres and upwards, and is cut thro' with an infinite number of large ridings, well replenished with wild beasts and game, which makes it a most agreeable situation for hunting. Here the late King of England, JAMES II. resided with his court during his exile, being hospitably entertained by his old ally, LEWIS XIV. till his death, which happened in the year 1701. His corps was afterwards interred in the convent of the English Benedictines in Paris.

Verfailles. Verfailles is situated about eleven English miles to the westward of Paris, on an eminence in the middle of the valley, encompassed with little hills at an agreeable distance. Before the reign of LEWIS XIV. neither the town or palace had any thing extraordinary to recommend them, unless their being situated in a country fit for hunting, which occasioned LEWIS the Thirteenth's building a hunting seat here in form of a castle. There are now three noble avenues to the palace leading from so many several towns, consisting each of three beautiful walks of trees, which terminate on a kind of parade, being a large void space at a proper distance from the buildings. The middle walk of the grand avenue is fifty yards wide, and each of those on the side of it twenty, the town of Verfailles stands on the right and left of it; that on the left is the old town, which the King hath enlarged and beautified; and that on the right is perfectly new, consisting of elegant uniform buildings, erected on purpose to grace the royal palace. At the upper end of the grand avenue, on the right and left, are the stables in form of a crescent, so magnificently built and adorned, that few royal houses excel them, in which the King has five hundred horses, the finest that the world can furnish him with for the coach or saddle. From the parade we pass into the first court thro' an iron palisade set upon a low wall; this court is flanked with four large pavilions, where are the apartments of the secretaries of state, comptroller-general of the finances, and other persons of distinction: from hence we ascend by three steps thro' another iron gate adorned with trophies into the second court, which is separated from the first by an iron palisade also, and is something less than the former, there being a noble fountain in the middle of it, and magnificent buildings on each wing. From the second court we pass into a third still less than the former, paved with black and white marble, to which we ascend by five steps; this court has a marble basin and fountain in the middle, adorned with statues, copper gilt, and is terminated by a noble pile of building, which with the wings constitute the

royal apartments. In the front of the palace is a glorious portico with three iron doors richly gilt and wrought, which gives an entrance into the hall and salons adorned with marble pillars, statues and paintings done by the greatest hands. The principal stair-case is above ten yards wide, and consists of the finest marble that could be procured, and is beautified with admirable sculptures and paintings. The grand apartment consists of a long succession of large lofty rooms exquisitely furnished, where the very bedsteads and tables are of massy silver, or more valuable materials. The cabinet of rarities is of an octagonal figure, and receives its light from the vaulted roof, being in the form of a dome or cupola. Here are an infinite number of curiosities in agate, crystal, jewels, and precious stones, medals, coins, and other antiquities, with several admirable paintings. The gallery, esteemed the finest in Europe, is seventy-two yards long and fourteen broad, having seventy windows towards the gardens, from whence there is a most delightful prospect: between the windows are pannels of looking-glass and marble pilasters, with a great variety of busts and statues, ancient and modern; the painted ceiling contains the battles, and other memorable occurrences of the late King's reign.

The finest front is next the gardens, on which side there is a magnificent portico, supported by marble pillars, and floored with marble an hundred yards in length: and the gardens themselves are not to be paralleled; all the beautiful models that Italy or the world affords, were considered in order to render them the most perfect of any thing of that kind, the water-works especially are inimitable: here marble and copper statues spout up water in different forms, which fall into basins of excellent workmanship; the fountain of the pyramid, the cascades, the water alley, the water parterre, the triumphal arch, the pavilion fountain, the water bower, the theatre and APOLLO's basin, require a more artful hand to describe them, and perhaps nothing but an actual view can furnish us with an adequate idea of their various beauties. The groves, grotto's, labyrinth and orangery also are exquisitely contrived. The great canal is sixteen hundred yards long and sixty-four broad, on which there are several yachts and galleys, in which the court sometimes divert themselves. Towards the middle of the grand canal is another which crosses it; at one end whereof is the menagerie, well stocked with all manner of wild beasts, and other exotic animals; and at the other end is the beautiful little palace of Trianon. The water which supplies these gardens is brought from the Seine, which is a league and a half distant from Verfailles, being carried to an aqueduct of thirty-six arches, which stands on the top of a hill, by a prodigious machine, which costs the King five and twenty thousand pounds sterling per annum to keep in repair; from this reservoir the water is conveyed by large iron pipes to the fountains and canals, in the gardens of Verfailles and Marli. The fountains do not play but upon some extraordinary occasions, and when they do, it is no small expence: it is a common observation, that if the King had chosen a proper situation where there was plenty of water, these works would not have cost him a tenth part of the money they did; but it was to shew his grandeur, or rather his vanity, that he made choice of a place which had no water near it, to erect the finest water-works in the world, and which nothing but a boundless treasure could have effected.

CHAP.  
IV.

And

CHAP.  
IV.

And thus it was, this Prince by the most extravagant expences at home, and unnecessary wars abroad, propoſed to eternize his memory, and acquire a reputation equal to any of the ancient Greeks or Romans. But poſterity ought to know, that to effect all this, he beggared his ſubjects, and depopulated his country; that he brought his people low by exceſſive taxes, and then enſlaved them; that the nobility and gentry were forced to depend on the court for their bread, and that many of them, becauſe the King's duties exceeded the profits of their lands, choſe to let them lie uncultivated. And this is too frequently the caſe, where a people happen to be governed by heroes, or glorious monarchs, as the world are pleaſed to call the great oppreſſors of mankind.

Trianon.

The palace of Trianon already mentioned, is of an oval figure, the architecture and ornaments not inferior to Verſailles, only the building is much leſs; both the outſide and inſide are adorned with the fineſt porcelain or china, even the floors are laid with it, and the ſides of the rooms lined with china inſtead of wainſcot, but this is rather looked upon as a ſummer-houſe to the gardens of Verſailles, than a diſtinct palace.

Marli.

Marli is another palace built by Lewis XIV. between Verſailles and St. Germain, containing one large pavilion and twelve little ones, ſix on each ſide. The ſituation is lofty and extremely pleaſant, but the buildings are not comparable to thoſe of the palace laſt mentioned. The water-works are very beautiful, being ſupplied from the ſame reſervoir that furniſhes Verſailles, and the grand Cascade reſembles a river tumbling from a precipice; the baſins below it are adorned with groups of figures, and the gardens afford a vaſt variety of pleaſing objects; inſomuch that the late King and Madam MAINTENON choſe to ſpend a great part of their leiſure hours here.

Meudon.

The palace of Meudon was the reſidence of the late Dauphin, and ſtands on an eminence in the middle of a foreſt; there is a noble avenue that leads to it three quarters of a mile in length; on the right of which is a convent belonging to the Capuchins, and on the left the vineyards of Meudon. At the entrance of the court of the palace there is a large pile of building on the right, and another on the left, which open in form of a ſemi-circle, but are diſjoined from the body of the houſe. In the middle of the front is a lofty advanced building with a portico, entered by three doors; above it runs an order of architecture, conſiſting of arches and pillars finely deſigned, and above them another order accompanied with pilasters; over all is a fronton containing two ſtatues in a cumbent poſture, admirably well done; the wings are not ſo high as the principal building, and each of them terminated by a ſquare pavilion. The inſide of this palace was adorned with the richeſt furniture, and a fine collection of ſtatues, paintings, medals, and other antiquities, in the life of the late Dauphin, which have been ſince removed. The front towards the garden alſo conſiſts of a lofty advanced building, with wings conſiderably lower, which terminate on the right and left in two pavilions of the ſame height with the body of the building. The gardens of this palace are much admired for their fine walks, parterres, canals and water-works; and adjoining to them is a ſpacious park encompassed with a brick wall, and adorned with woods, baſins and reſervoirs of water; the woods being cut thro' and divided by beautiful ridings, among which there is one diſtinguiſhed by

VOL. II.

the name of the Dauphin, which leads to the gates of Paris. The town of Meudon is not conſiderable for any thing, unleſs it be a pleaſant garden belonging to the Capuchins cloyſter, and ſome excellent ſtone quarries.

St. Cloud is a large open town upon the Seine, St. Cloud. about two leagues weſt of Paris, as populous as moſt in France, which is occaſioned by the great reſort of the citizens of Paris, who come hither by water on Sundays and Holidays to divert themſelves. This town was erected into a duchy and peerage, in the year 1674, when FRANCIS DE HARLEY archbiſhop of Paris, and his ſucceſſors were created perpetual Dukes and Peers of France, with the title of St. Cloud. The royal palace here belongs to the Dukes of Orleans, and is ſituated at the ſide of a mountain, at the foot of which the river Seine runs. The avenue to the palace is upon the declivity of the hill, adorned with three fine walks of trees having the town on the right, and the park on the left, and terminates at the baſe court, from whence we proceed to the grand court at one of the angles, on account of the irregularity of the ground. The palace conſiſts of a large advanced building in the middle of the front, and two wings, each of them flanked with a pavilion; nothing can be conceived more rich and beautiful, ſays my French author, than this palace is within: the gallery and the ſalon are eſteemed the beſt pieces of MIGNARD, the King's chief painter; and the orangery behind the body of the building is an excellent piece: notwithstanding the gardens are irregular, they are exceeding pleaſant, having terraces one above another with an unbounded proſpect, the caſcade is one of the fineſt in France; and the neighbouring park has every thing that can render it agreeable. The town of St. Cloud is moſt remarkable for the fine earthen ware made there, which the French after their way of magnifying every thing their country produces, are pleaſed to compare to china, of which they ſay it falls ſhort but very little; there is a ſtone bridge over the river Seine here, conſiſting of fourteen arches.

Madrid is another royal palace, ſituate at a little diſtance from Paris, built by FRANCIS I. It has the river Seine on one ſide, and a wood on the other, and conſiſts of one large pile of building of three ſtories beſides the ground-floor, and is flanked by two grand pavilions; but it ſeems to have been neglected, being neither finiſhed or furniſhed; the reſt of the places in the Mantois, do not require a particular deſcription.

In the Vexin Francois, the principal places are, The Vex.  
1. Pontoife. 2. Cheaumont. 3. L'Iſle Adam. in Fran-  
4. Magny. 5. The caſtle of Rocheguyon. cois.

Pontoife, *Pons ad Aſiam*, is ſituated on the river Oyſe, ſix leagues to the northward of Paris, upon the deſcent of a hill, which extends to the banks of the river. It has a caſtle which commands the town, in the outer court whereof ſtands a collegiate church; it conſiſts of two pariſhes only, and has a ſtone bridge over the Oyſe of fourteen arches, from whence it takes its name: the principal trade of the place is in corn, which is brought hither from Picardy by the river; the reſt of the towns in the Vexin Francois do not merit a particular deſcription.

The county of Beauvais, or the Beauvaiſis, is a little country between the river Oyſe and the province of Normandy, being bounded by Picardy Proper on the north; by the county of Senlis on the eaſt; by the Vexin Francois on the ſouth; and

CHAP.  
IV.

Beauvais.

by the Vexin Norman on the west: the chief towns whereof are, 1. Beauvais. 2. Clermont. 3. Gerberoy. 4. Bulles. And, 5. Merlou.

Beauvais, *olim Bellovacum* and *Cesaromagus*, is situated on the river Therin, sixteen leagues north of Paris, almost surrounded with hills. CÆSAR having besieged and taken this town, it is said, gave it the name of *Cesaromagus*. It is memorable also for the English besieging it in vain, anno 1443; and its making a brave defence afterwards against CHARLES Duke of Burgundy, in 1472, when the women signalized their courage under the conduct of that heroine JOAN HATCHET, whose picture they preserve in the town-house. And in memory of this action also, the women are allowed to march first in a procession they observe annually on the tenth of July. It is the see of a bishop suffragan of Rheims, whose revenue is computed to be fifty thousand livres per annum. The cathedral dedicated to St. PETER is a magnificent building; it is a fortified town, but of no great strength, being commanded by the neighbouring mountains. Here is a pretty good manufacture both of linen and woollen; the adjacent country abounds in corn, good pasture and fruits, and affords some of the best mutton in France.

Clermont.

Clermont is situated on a hill near the river Breche, five leagues from Beauvais, and as many from Senlis, and formerly gave the title of Count to the family of Bourbon. The devotion of the neighbouring country for their patron St. GENCON, brings a great concourse of people hither annually on the eleventh of May.

Gerberoy.

Gerberoy is a little town strongly situated on a mountain, the foot whereof is washed by the river Therin, five leagues north-west of Beauvais; it was besieged by the English under the command of the Earl of Arundel, who lost his life before it, and the field where he received the mortal wound, is still called the valley of Arundel; it was taken by the English in the year 1437, who kept it till 1449, when it was retaken by the French.

Bulles.

Bulles is a very pretty town, four leagues to the eastward of Beauvais, in the neighbourhood whereof grows excellent flax, of which they make cambricks and the finest linens.

Valois  
dutchy.

The dutchy of Valois is situated between three great rivers, viz. the Seine, the Marne and the Oyse, extending fourteen leagues in length and seven in breadth; the late King LEWIS XIV. erected it into a dutchy, and peerage, and conferred it on PHILIP Duke of Orleans his brother: the chief places in it are, 1. Crespy or Crepi. 2. La Ferte Milon. 3. Villers Cotrets. 4. Senlis. 5. Creil. 6. Pont St. Maxence. 7. Compeigne. 8. Bithify. 9. Chantilly.

Crespi.

Crespi, the capital of the dutchy of Valois, is situated thirteen leagues north-east of Paris, on a peninsula almost surrounded by rivulets; it is a pretty good town, and at the end of it stands an old castle. The shrine of St. ALBIN draws a great concourse of people hither, for they believe the intercession of this saint goes a great way in preventing or abating the plague, and other contagious distempers. The church dedicated to St. ALBIN is collegiate and a royal foundation; and the church of St. DENIS is said to have one of the finest choirs in France.

La Ferte  
Milon.

La Ferte Milon is situated sixteen leagues north-east of Paris, on the river Ourques, which divides it into the high and low town; it is a pretty large place, and defended by a castle.

Senlis.

Senlis is situated ten leagues to the northward

of Paris, on the side of a hill, at the foot whereof runs the little river Nonete. It is of an oval figure, encompassed with a wall, a ditch, and other fortifications, the bastions and half moons some of them faced with stone. It was anciently called *Sylvanectum*, *Augustomagus* and *Silviacum*, and is a bishop's see suffragan of Rheims, having in it seven parochial and two collegiate churches; and here are the ruins of an old castle and some other buildings, which they conjecture were the works of the ancient Romans.

Creil, *Creolium*, is a little walled town situate on the Oyse, two leagues north of Senlis; and has an old castle said to be built by CHARLES V.

Pont Sainte Maxence, *Pons Sanctæ Maxentia*, is a little trading town, situate also on the Oyse, three leagues north-east of Senlis.

Compeigne stands on the river Oyse, seven leagues north-east of Senlis, and seventeen north-east of Paris, fortified with a wall, half-moons and bastions, and defended by a castle, which is looked upon to be one of the most ancient palaces of the Kings of France. It was repaired and beautified by the late King LEWIS XIV. The abbey of St. Bennet here was founded by CHARLES the Bald, but united to the nunnery of Val de Grace in Paris about the year 1656. The Jesuits also have a college in the place. The town does not consist of more than two parishes. It was here that the famous JOAN of Arc, or maid of Orleans, was taken prisoner by the English in the year 1430, in a sally she made out of the town, and our wife ancestors were pleased to burn her for a witch. The neighbouring forest, which takes its name from the town, contains near thirty thousand acres, and affords variety of game.

The Soissonois, which receives its name from Soissons, the only considerable city in it, is bounded on the north by the Laonois, on the east by the Rhemois, on the south by the Brie, and on the west by the Valois; the chief towns whereof are, 1. Soissons. 2. Brenne. And, 3. Veilly.

Soissons, *Augusta Sueffionum*, supposed to be the *Noviodunum* of CÆSAR, is situated in a pleasant fruitful valley on the river Aisne, two and twenty leagues north-east of Paris, and was the capital of the kingdom under the first race of their Kings. It is a large populous place, encompassed with a wall and other fortifications, and has a good trade in corn. The castle is an antique building, flank'd with great round towers; the walks by the river extremely pleasant. It is a bishop's see, suffragan to Rheims, and famous for several councils held here; as it will be hereafter probably for the congress of ambassadors and plenipotentiaries from all the powers of Europe, who attended here to receive their doom from the French. This nation have by their dexterity obtained the umpirage of all their differences, and thereby rendered themselves much more considerable than ever they did by their arms, even in the reign of LEWIS le Grand: and it is well if some of these wise powers don't find themselves shortly in the condition of the ass that hunted with the lion.

The Laonois is bounded by Picardy on the north, by champagne on the east, and by the Soissonois on the south and west; the chief places whereof are Laon and Liefie.

Laon, *Laudunum*, is pleasantly situated on the top of a hill, in a healthful air, about twenty miles north-east of Soissons. It is strong by its situation, but has no modern fortifications. It is well built, the streets spacious, and supplied with water.

CHAP.

sonois.

Soiffons.

The Lao-  
nois.

Laon.

**CHAP. IV.** water by wells, which do not lie very deep. They lay up great magazines of corn here, with which they supply Picardy and Hainault in scarce years. It is the see of a bishop, suffragan to Rheims, who is also a Duke and Peer of France, and carries the sacred phial, called the St. Ampoule, at the consecration of their Kings.

**Lieffe.** Lieffe is a little town, about four miles to the northward of Laon, consisting only of one street, but considerable on account of the perpetual pilgrimages made to the church of Notre Dame, and the image of the blessed Virgin there, which, according to tradition, was miraculously made and brought hither from the Holy Land. The French King himself comes hither in pilgrimage soon after his coronation, till when his touch for the evil, it is said, is of no virtue.

**The Noyonois.** The Noyonois is bounded by Picardy on the north, and by the Soissonois and Beauvaisis on the south; the chief places whereof are Noyon, Chauny and Premontre.

**Noyon.** Noyon, *Noviodunum Belgarum*, stands two and twenty leagues north-east of Paris, on the little river Verfe, which a little below falls into the Oyse. It is an ancient town, tolerably large, and advantageously situated for trade. It is the see of a bishop, suffragan of Rheims, who is also a Peer of France; but more memorable for the birth of JOHN CALVIN, who was born here the 10th of July 1509, and died at Geneva the 27th of May, 1564; about whose character the Papists and Presbyterians will never agree, the one looking upon him as an infamous heretick, and the other adore him as equal, if not superior to any of the Apostles.

**Chauny.** Chauny is a little town situate on the Oyse, nine or ten miles to the eastward of Noyon, where the river begins to be navigable. It has a chate-lany belonging to it; but I don't find it considerable on any other account.

**Premontre.** Premontre, *Præmonstratum*, is only taken notice of for a great abbey of canons regular of St. Austin's called *Præmonstratenses*, three leagues from Soissons.

**The military government of the Isle of France.** These are the principal places in the isle of France, the military government whereof is committed to a governor general, and lieutenant general, and four other lieutenants, who have their respective commands; one in the Vexin Francois, the second in the Beauvaisis, the third in the counties of Senlis, Soissons, Noyonois, Laonois, and that part of this government which extends beyond the Marne and the Seine as far as Champagne and Picardy; and the fourth commands in the remainder of the isle of France, which lies on the left of the Seine; besides which, every great town has its particular governor. The trade and produce of this government has been already taken notice of in the description of the particular towns and districts.

## CHAP. V.

*Contains a description of Picardy.*

**CHAP. V.** THE province or general government of Picardy, is bounded by Hainault, Artois, and the Straights of Calais, towards the north; by Champagne and the Netherlands, on the east; by the Isle of France, on the south; and by the English channel and Normandy, on the west; being a long narrow province, usually resembled to a bent arm, and in this winding figure may be about an hundred and fifty miles in length, but not more than forty in breadth, and in many places not half so broad. It is generally a plain

open country, without mountains or woods; neither does the country produce wine, but abounds in corn, pasture, and fruits of all kinds. The wood of Creci, near Amiens, is the largest they have in the country; and indeed firing is so scarce amongst them, that they generally burn stinking turf. They pretend to have something like a coal-mine; but it is inconsiderable, and not comparable to the Newcastle coal. The chief rivers are the Oyse, the Somme, the Canche, and the Authia.

The Oyse, *Oesia*, *Isara*, has its source in Picardy on the confines of Hainault, and takes its course thro' the generalities of Soissons and Paris, receiving the Verre, the Delette, the Aisne, the Terrein, the Aronde, and many other lesser streams, becoming navigable at La Fere, and falls into the Seine a little below Conflans Sainte Honorine.

The Somme, *Somona*, or *Samara*, rises in the Vermandois, two leagues below St. Quentin, and runs to the westward by Abbeville, almost the whole length of Picardy, till it falls into the British channel between Valery and Crotoy. It begins to be navigable at Brug, and is very deep, most of the merchandize from England and Holland being brought up this river.

The Canche, *Cancius*, or *Quentia*, rises in Artois, six leagues above Hesdin, and runs westward to Montreuil, where it becomes navigable, and afterwards falls into the British channel below Estaples.

The Authie, *Authia*, *Ætilia*, has its source on the confines of Picardy and Artois, a little above the castle of Authie, and running westward, falls into the British channel between the mouths of the Somme and the Canche.

Picardy is usually divided into the Higher, the Middle, and the Lower Picardy. The Higher includes the Vermandois and the Thierache; the Middle comprehends the county of Amiens, and the country of Santerre; and the Lower consists of the Bolonois, the Reconquered Country, and the county of Ponthieu and Vimen.

The Vermandois, *Ager Veromandensis*, is bounded by the Cambresis on the north; by the Thierache on the east; by the isle of France on the south; and Santerre on the west; the chief towns whereof are, 1. St. Quentin, 2. Ham, 3. Catelet.

St. Quentin, *Quintinopolis*, or *Fanum Quintini*, is situate on a rising ground, near the head of the Somme, having the river on one side, and a precipice on the other, lying about fifteen miles to the westward of Guise, and as many to the northward of La Fere. The collegiate church is a handsome pile of buildings; and there are several other fine churches and monasteries in the place. They have a prodigious manufacture of fine linen, of which, it is said, they make in the town and neighbourhood no less than sixty thousand pieces annually.

Ham is a little fortified town, situate in a plain on the river Somme, four leagues to the westward of St. Quentin, defended by a castle.

The Thierache is the most eastern part of Picardy, lying between Hainault, Champagne, Vermandois and Laonois; the chief towns whereof are, 1. La Fere, 2. La Capelle, 3. Guise, 4. Marie, 5. Vervins.

La Fere is situated on the confines of the Isle of France, in a morass near the river Oyse, naturally strong, and defended by a castle; but most

**C H A P. V.** of the fortifications have been demolished. In the neighbouring forest, to which this town communicates its name, is abundance of glass made of all kinds, which occasions a pretty brisk trade here.

**Vervins.** Vervins stands upon an eminence near the river Serre, not far from Laon, famous for a treaty of peace concluded there between France and Spain, anno 1598. They have a pretty good trade in corn.

**Guise.** Guise, *Guiffa*, *Guiffum Castrum*, is situated on the river Oyle, fifteen miles north-east of La Fere, a fortified town, defended by a castle and other works, and was erected into a duchy and peerage by FRANCIS I. which title was conferred on CLAUD, the youngest son of the Duke of Lorraine, whose grandson HENRY, Duke of Guise, was head of the catholick league, and fomented a rebellion against HENRY III. and HENRY IV. of France for several years. He was near advancing himself to the throne, but was at length reduced by HENRY IV. and peace restored to the kingdom.

**Middle-Picardy.** Middle Picardy comprehends the county of Amiens, and the country of Santerre. The county of Amiens, *Ager Ambionensis*, is bounded by Artois, on the north; by Santerre, on the east; by Beauvaisis, on the south; and by the country of Caux, on the west; the chief towns whereof are, 1. Amiens. 2. Dourlans. 3. Corbie. 4. Conti. 5. Pecquigny. 6. Poix. And, 7. Ligniers.

**Amiens city.** Amiens, *Ambianum*, a large city, the capital of Picardy, pleasantly situated on the river Somme, which here divides itself into three channels, and having run through the town, unites its streams again. It stands about twenty-eight leagues north of Paris, and as many to the southward of Calais. The houses are well built, the streets spacious, and it is adorned with some handsome squares. It is a Bishop's see, suffragan of Rheims. The cathedral is esteemed one of the largest and finest in France, and boasts much of its valuable reliques. CÆSAR having taken this town, convened a general assembly of the Gauls here. The Emperors Antoninus, Marcus Aurelius, Constantin, Constant, Julian, and several others, resided here a considerable time; and here King EDWARD III. did homage to PHILIP de Valois, King of France, for the duchy of Guienne. It is encompassed with a wall and other fortifications, and the ramparts pleasantly planted with trees. They have lately erected societies of men of wit and learning in this and several other great towns of France, in imitation of the cities of Italy.

**Corbie.** Corbie is a little fortified town on the Somme, six miles north-east of Amiens, most remarkable for its abbey founded by BETHILDA, Queen of France, anno 662, the abbot whereof is lord of the place and of the adjacent country.

**Conti.** Conti is a little town situate on the Selle, five leagues south-west of Amiens, considerable only for giving title to a prince of the house of Bourbon.

**Santerre district.** The district of Santerre is bounded by Vermandois on the east, and the county of Amiens on the west; the chief towns whereof are, 1. Montdidier. 2. Roye. 3. Peronne. 4. Ancre. 5. Nefly. 6. Chaunes. 7. Halluin. 8. Morevil. 9. Crevecoeur.

**Montdidier.** Montdidier, *Mons Desiderii*, a little strong town situate on a hill five leagues to the southward of Amiens, containing five parishes and several convents, besides the priory of Notre Dame.

**Peronne.** Peronne is situated in a morass on the river

Somme, twenty-five miles to the eastward of Amiens, and esteemed a very strong town. The country about it is famous for the linen manufacture. The other towns of this part of Picardy do not merit a particular description.

The Lower Picardy, as has been observed, comprehends the Boulonois, the Reconquer'd Country, the county of Ponthieu and the Vimen.

The Boulonois, *Comitatus Boloniensis*, lies between Artois, the county of Ponthieu, the Reconquer'd Country and streights of Calais; being about twelve leagues long and eight broad; the chief towns whereof are, 1. Boulogne. 2. Ambleteuse. 3. Monthulin. 4. Estaples.

Boulogne, supposed to be the *Icius Portus* of CÆSAR by some, and *Getoraicum* by others, is situated on the sea-coast at the mouth of the little river Liane, about fifteen miles south-west of Calais; it was formerly very considerable on account of its trade, but the harbour is spoiled, and will not admit of vessels of burden. It is divided into the upper and lower town, the whole encompassed with a wall and other fortifications, and defended by a citadel. It is a bishop's see, suffragan of Rheims, and has a cathedral, two parochial churches, an abbey, and several other monasteries within its walls. King HENRY VIII. of England took this town, but restored it by a treaty afterwards for eight hundred thousand crowns; the English ministry being of opinion, it seems, that it would cost more keeping than it was worth.

Ambleteuse is a little town situated on the sea, about seven miles to the northward of Boulogne, where, it is said, a good harbour might be made for receiving men of war of forty guns; but the French, though they begun it in the last war, did not proceed in this work, which inclines me to believe that they did not find it feasible.

Estaples, *Stapule*, is situated at the mouth of the river Canche, four leagues to the southward of Boulogne, a little fortified town, but upon the decline at present.

The Reconquer'd Country obtained its name from its being retaken from the English, and contains the counties of Guines and Oye, lying to the northward of the Boulonois. The county of Guines is about four leagues long and as many broad, the chief towns whereof are Guines and Ardres.

Guines is a small town situate in a marsh, four miles south of Calais, and about six distant from the sea. The English possessed themselves of it, and it was confirmed to them by treaty in the year 1360, and they kept possession of it near two hundred years.

Ardres is a little town situate also in a morass, four miles south-east of Guines.

The county of Oye is contiguous to that of Guines, the chief town whereof is Calais, *Cale-tum*, situate in a flat marshy country upon the sea-coast, about ten miles to the westward of Graveling, and twenty-four south east of Dover.

The figure of the place taking in the citadel is an oblong square, of which the two longest sides are about twelve hundred yards, and the shortest five hundred. It extends itself along the sea-coast, on which side it is fortified as well as towards the land, and is surrounded with a good covered way. The fort Nieulai, which stands at one end, is looked upon as an excellent piece of fortification, and the citadel is advantageously situated, so as to command the town, the harbour, and the adjacent country; and there are sluices by which they can

**CHAP. V.** can overflow the country on the land-side. The harbour is choaked up, and will not admit of vessels of burthen. There is but one parish and four convents in the place, and yet the French compute the inhabitants to be about five thousand. King EDWARD III. of England took this town in the year 1347, after eleven months siege, and peopled it with English, who held it till 1558, being two hundred years and upwards, when it was taken by the Duke of Guise, during that weak and unfortunate reign of Queen MARY I. There is a noble canal at Calais, by which the town has a communication with St. Omers, Graveling, Dunkirk, Bergues and Ypres.

Ponthieu county.

The county of Ponthieu lies between the rivers Somme and Canche, and takes its name from the great number of bridges laid over the several rivers and marshes, with which the country abounds; the chief towns are, 1. Abbeville. 2. Crecy. 3. Montrevil. 4. Pont de Reny. 5. Rue. And, 6. St. Riquier.

**Abbeville.** Abbeville, *Abbatis Villa*, the capital of Ponthieu, forty miles south of Boulogne, is situated on the river Somme, which divides it into two parts, in a marshy dirty country, and consists of twelve parishes, besides several monasteries of both sexes. Here is a considerable manufacture of coarse linen, and a pretty good trade, the town being but fourteen or fifteen miles distant from the English channel, with which it has a communication by the river Somme.

**Crecy.** Crecy, or Cressy, is a little town situate on the river Authie, three leagues to the northward of Abbeville, remarkable for the victory which the English obtained over the French, the 24th of August, 1346, under the conduct of King EDWARD III.

**Montrevil.** Montrevil, *Monasteriolum*, is a fortified town situated on a hill, the foot whereof is washed by the river Canche, being about three leagues to the eastward of the British channel, from whence boats of good burthen come up to the town; it contains eight parishes, besides several monasteries.

**The Vemen.** The Vemen is a little district, sometimes reckoned part of Ponthieu, the chief towns whereof are St. Valeri, Gamaches, and Crotot.

**St. Valeri.** St. Valeri, *Favum Sancti Valerici*, is situated at the mouth of the river Somme, four leagues below Abbeville, and is a place of some trade. Picardy lying upon the sea, and abounding in navigable rivers and canals, with several good manufactures both of linen and woollen, is one of the most considerable provinces for trade in the kingdom.

**The military government of Picardy.** The governor of Picardy has under him three lieutenants-general, viz. one for Picardy; a second for Santerre; and a third for Artois, which last, notwithstanding it is one of the provinces of the Low Countries (and was described amongst them) yet since it has been conquered and yielded to France, is included in the general government of Picardy. The towns within the government of the lieutenant-general of Picardy are, Calais, Ardres, Boulogne, the town of Montreville, St. Valeri on the Somme; Abbeville, of which the mayor and aldermen have the government, only in time of war the King sends them a commander; Dourlans, the town and citadel of Amiens, St. Quentin, the town and castle of Ham, Guise, La Fere, Rebemont and Marle. The general lieutenancy of Santerre comprehends Peronne, Roy and Montdidier. And in the general lieutenancy of Artois are the towns of St. Omers, Aire, Fort St. Francis, Hesdin, the town and citadel

VOL. II.

of Arras, and Bethune, which are all fortified towns, and most of them very strong places. It is to be observed also, that in time of war, the inhabitants of the Boulonois are all obliged to be under arms, and signalized themselves in the late wars; they consist of ten regiments of infantry, of ten companies each, the officers are named by the governor, and have the King's commission as regular troops; the cavalry is composed of five regiments, of four troops each, besides which they have a troop of carabineers, and two troops of dragoons, making in the whole a body of three thousand men.

## CHAP. IV.

*Contains the description of Champagne.*

**CHAP. VI.** Champagne obtained its name from the face of the country, consisting chiefly of wide fields and plains, and is bounded by Picardy and the Low Countries, on the north; by Lorraine, on the east; by Burgundy, on the south; and by the Isle of France, on the west; extending fifty-four leagues in length from north to south, and forty-six in breadth from east to west: but tho' the middle of the country is plain and open, the extreme parts are covered with woods, mountains and little fruitful hills, producing corn, and excellent wine and fruits. It was the feat of the Rhemi, so often mentioned by Cæsar, who were divided into the Tricasses, Lingones, Catalauni, Meldæ and Senones. The principal rivers are the Maese or Meuse, the Seine, the Marne, the Aube, and the Aisne, which have already been described. They have also some excellent mineral waters, and the air is temperate and healthful, which occasions the natives, according to my author, to be of a mild sweet disposition, but soft and simple even to a proverb.

It is usually divided into eight almost equal parts, viz. 1. Champagne proper. 2. The Reims. 3. The Perthois. 4. The Rhetelois. 5. The Vallage. 6. Boffigny. 7. The Senonois. And, 8. The Brie Champenoise.

Champagne Proper, is situated about the middle of the country, the chief towns whereof are, 1. Troyes. 2. Chalons. 3. St. Menchoud. 4. Verlus. 5. Espernay. 6. Pont sur Seine. 7. Méry. 8. Rameru. 9. Plaucy. 10. Ai. And, 11. Dormans.

Troyes, *Augustomana* and *Civitas Tricassium*, is supposed to have taken its name from three castles anciently erected here. It is the capital of the province, and situated on the river Seine, about fourscore miles south-east of Paris, in a fruitful country, being surrounded with a wall and other fortifications, and contains two collegiate, six parochial churches, and three abbeys, besides the cathedral, for it is a bishop's see, suffragan of Sens. The principal trade is in linen, and it was once computed to contain fifty thousand souls, but so much declined, that there are not fifteen thousand people in it at present.

Chalons, *Catalaunum*, is situated in a pleasant fruitful plain on the river Marne, by which it is divided into three parts that have a communication by bridges, being fifty miles to the northward of Troyes, and eighty east of Paris. It is encompassed with a wall and other fortifications, and contains twelve parishes, three abbeys, and several other monasteries; the streets and publick places are neat and spacious, and make the better

14 Q

appearance

CHAP.  
VI.

appearance on account of the houses being built with white stone; it is a bishop's see, suffragan of Rheims, the cathedral dedicated to St. STEPHEN is remarkable only for its high tower. This city was anciently governed by Counts, who transferring their right to the bishop, he was dignified with the title of Count and Peer of France. The plains about this city being exceeding large, the French writers are of opinion, that these were the fields where that memorable battle was fought between MEROVEE, King of the Franks, THEODORICK King of the Goths, and ÆTIUS the Roman general, on one side; and ATTILA the Hun, on the other; wherein, according to tradition, the Huns lost two hundred thousand men. This town has a pretty good trade in linen and woollen cloth, and corn, which they transport to Paris by the Marne. The parliament of Paris was adjourned hither during the rebellion of the Guises and the League.

Pons sur  
Seine.

Pons sur Seine, *Pons ad Sequanam*, is a little town situate on the Seine, seven leagues below Troyes, remarkable for a magnificent castle or palace built here, by Monsier CHAVIGNY, secretary of state to the French King, and for its beautiful gardens.

The Rhe-  
mois.

The Rhemois lies on the north-west part of Champagne, on the confines of the Isle of France; the chief towns whereof are, Rheims, Fimes, and Chateau Portien.

Chief  
towns

Rheims.

Rheims, *Civitas Rhemorum* and *Durocortorum*, is situated in a fine plain on the river Vesle, about seventy miles north of Troyes, and as much north-east of Paris, encompassed with a wall a league in circumference, being one of the most elegant cities in France. The houses are well-built, the streets and squares spacious, the churches magnificent and beautiful, especially the cathedral dedicated to the VIRGIN MARY, built by CLOTILDIS, the wife of CLOVIS, the first christian King of France. It is a vast Gothick building, but admirably well designed; in the front whereof is abundance of good sculpture, containing part of the sacred history; besides which, there are four abbeyes, several convents, and a university established by CHARLES Cardinal of Lorraine, formerly archbishop of this see. This city is held to be very ancient, three of the gates still bearing the name of so many heathen Gods; as the gate of the SUN, and the gates of MARS and CERES. In the year 1677, a triumphal arch was dug up, which was formerly the northern gate, supposed to be erected to the honour of CÆSAR, or, according to others, of JULIAN the apostate, when after the conquest of the Germans, he passed by Rheims in his way to Paris. It is composed of three arches of the Corinthian order, that in the middle being thirty-five foot high and twelve broad; the bass-reliefs whereof represent a woman with a Cornucopia, to shew the fertility of the country; and that on the right, hath RHEMUS and ROMULUS sucking a wolf, with the shepherd FAUSTULUS and LAURENTIA his wife standing by them. On the third arch, LEDA is seen in JUPITER'S embraces, metamorphos'd into a swan, and CUPID holding a lighted torch in his hand. Near this arch are the remains of an ancient Roman castle, and about two hundred paces from the town, the ruins of an amphitheatre, and of another triumphal arch. The abbey of St. Remy is a spacious building, and in the church belonging to it are the tombs of King LEWIS de Outremer, LOTHAIRE and LEWIS V.

who were of the line of CHARLEMAIN. In the CHAP. VI. treasury they have abundance of precious reliques, and among the rest the holy phial, which contains the oil used at the consecration of their Kings, and the pastoral staff of St. Remi, whose tomb is beautifully adorned with sculptures, pillars and statues, and in the middle of them the bust of LEWIS XIII. in his robes of state. The holy oil, according to tradition, was brought from heaven by a white dove, at the consecration of CLOVIS I. The Archbishop of this see, ever since the reign of LEWIS VII. has been deemed to have right to consecrate the Kings of France, being the first Duke and ecclesiastical Peer of the realm; besides whom, that Prince appointed eleven more to assist at this ceremony, viz. The Bishops of Laon and Langres, who are also Dukes and Peers; the Bishops of Beauvais, Noyon and Chalons, who are Counts and Peers, and six of the lay nobility, viz. the Dukes of Burgundy, Guienne, and Normandy, and the counts of Thoulouze, Champagne, and Flanders; the ceremony being always performed in the metropolitan church of this city, if nothing extraordinary happen to prevent it, as the plague, civil wars, or the like.

The Perthois lies on the frontiers of Lorraine, The Perthois, chief towns. between the rivers Marne and Ornay, the chief towns whereof are, 1. Vitry le Francois, And, 2. St. Disier.

Vitry Francois, *Vitloriacum Francium*, is a fortified town situated in a fine plain on the river Marne, seven leagues south-east of Chalons, and received its name from FRANCIS I. The principal trade of the place is in grain.

St. Disier, *Fanum Sanctum Desiderii*, is situated also on the Marne, seven leagues above Vitry; the forges in the neighbourhood occasion its having a pretty good trade in iron ware.

The Rhetelois is the most northerly part of the The Rhetelois. province of Champagne, the chief towns whereof are, 1. Rhetel. 2. Mesieres. 3. Charleville. 4. Doncheri. 5. Ronoy. 6. Sedan. 7. Roncourt. And, 8. Monfan.

Rhetel is situated on the Aisne, about twenty miles north of Rheims, and is the capital of a Dutchy, remarkable for little but a victory obtained near it by the French over the Spaniards, in the year 1650.

Mesieres, *Maderiacum*, situate on the Meuse, thirty miles north-east of Rheims, strongly fortified and defended by a citadel, being a pass towards Luxemburg.

Charleville, *Carolopolis*, stands also on the Meuse, five miles north-west of Meziers, esteemed one of the prettiest towns of France; and on the opposite side of the river lies the fortress of Mount Olympius.

Rocroy, *Rupes Regia*, is a little fortified town advantageously situated on the Frontiers of Hainault, so encompassed with woods that it is of very difficult access, remarkable chiefly for a victory obtained by the French, commanded by the Duke of Anguien, afterwards Prince of Conde, over the Spaniards, anno 1643.

Sedan is situated on the Meuse, fifteen miles south-east of Charleville, and twenty-five west of Luxemburg, and gives title to a little principality. It is a small town, but well fortified and defended by a castle, where the famous Marshal Turenne was born, being descended from the family of DE LA TOUR, formerly Princes of Sedan.

The Vallage is a little country which takes its name from its valleys, and lies between the Perthois and Bassigny; the chief places whereof are, Chief towns. Joinville, The Val-  
lage.

- CHAP. VI.** Joinville, Vassé, Escaron, Briene, Vignoris, Bar sur Aube, Clairvaux and Chateau-Villain.
- Joinville.** Joinville is situated on the Marne, at the foot of a mountain six leagues south of St. Disier. It is a small town, and most remarkable for the holy league being formed here an. 1552, which occasioned such distractions in France.
- Bar sur Aube.** Bar sur Aube, situate on the river Aube, twenty-five miles east of Troyes, is remarkable for its excellent wine.
- Bassigny.** Bassigny is situated on the south-east part of Champagne, the chief towns whereof are, Langres, Chaumont, Montigni le Roy, and Bourbonne les Bains.
- Langres.** Langres, *Civitas Lingonum*, is a fortified town, situate on a hill near the confines of Lorrain and Franche Comte, thirty miles to the southward of Joinville. It is a bishop's see, suffragan of Lyons, the bishop being one of the Dukes and Peers of France, and temporal as well as ecclesiastical Lord of this city. The town of Bourbonne, famous for its baths, lies about six leagues from hence.
- Bourbonne.** Chaumont is situated on the top of a high mountain, at the foot whereof runs the river Marne, thirteen miles north-west of Langres.
- Chau-  
mont.** The Senonois is the south-west part of Champagne, the ancient inhabitants whereof made great conquests in Italy, giving their name to the town of Senigallia, *Senonum Gallia*, Sienna, &c. The chief towns are Sens, Pont sur Yonne, St. Florentin, Tonerre, Brais, Chablais, and Nogent sur Seine.
- The Seno-  
nois.** Sens, *Civitas Senonum*, is situated on the river Yonne, twenty-six leagues south-east of Paris, and fifteen to the westward of Troyes. It is a large well-built town, and the see of an Archbishop (who calls himself primate of the Gauls and Germans) the cathedral dedicated to St. STEPHEN is a magnificent structure; at the altar whereof is a golden table enriched with precious stones, and upon it in bas-relief the four Evangelists, with St. STEPHEN on his knees in the middle of them.
- Chief  
towns.** Chably, about thirty miles south-east of Sens on the frontiers of Burgundy, is a good town, and remarkable for its excellent wines growing in the neighbourhood.
- Sens.** The Brie Champagnoise lies on the north of the Senonois, between the rivers Seine and Marne, and abounds in pasture, corn and fruits; the chief towns whereof are Meaux, Provins, Chateau-Thierry, Colomiers, Sezanne, and Montereau-faut-Yonne.
- Chably.** Meaux, *Meldarum Urbs*, is situated on the river Marne, ten leagues to the eastward of Paris, a well-built flourishing populous city, divided into two parts by the river; it is the see of a bishop, suffragan of Paris, the cathedral is dedicated to St. STEPHEN, besides which there are several collegiate and parochial churches and monasteries in the place. Here CALVIN's doctrine was first preached in the kingdom, for adhering to which, several of the inhabitants were executed in the year 1525. The English took this town in the year 1421, after a three months siege. The adjacent country produces corn, wine, and wool; but their wine is not the best.
- The Brie.** Provins is situated on the little river Vouse, about thirty miles to the southward of Meaux, not considerable for any thing at present, unless the Provins roses, which this town has communicated its name to.
- Chief  
towns.** Chateau-Thierry is a strong town with a castle pleasantly situated on the Marne, about thirty miles to the eastward of Meaux, being the ca-

pital of a dutchy and peerage; the adjacent country abounds in corn and wine, which they transport to Paris.

Montereau is situated at the conflux of the Seine and Yonne, twelve leagues south of Meaux, most remarkable in history for the murder of the Duke of Burgundy, an. 1419, in the presence of the DAUPHIN, afterwards King of France, by the name of CHARLES VII. Whereupon PHILIP, Duke of Burgundy, his son, introduced the English into France, and caused the spilling of more blood in the kingdom, than in any of their former wars. The rest of the towns in Champagne do not require a particular description.

CÆSAR found Champagne inhabited by the Rhemi, Tricasses, Lingones, Catalauni, Meldæ and Senones, being so many petty principalities or states, of whom the Rhemi were the most powerful. It afterwards constituted part of Celtick and part of Belgick Gaul. In the division, which the sons of CLOVIS I. and CLOTAIRE I. made of their dominions, Champagne made part of the kingdom of Austrasia, of which Metz was the capital. These Princes established Dukes and Counts in this country, with a limited authority, who at length however assumed the absolute sovereignty of the province, and became so potent, that they maintained wars against the Kings of France and Burgundy. The French historians relate, that ROBERT the Son of HERBERT II. was the first hereditary Count, whose posterity took the title of Palatins, about the year 958. This country continued to be governed by Counts upwards of three hundred years, but that they were vassals or feudatories of France is evident, say the French historians, because they were Peers of that kingdom, and carried the royal banner at the consecration of their Kings; and possibly they might be as much subject to France, as the Kings of Great Britain and Prussia are at this day to the Emperor, who have their respective offices at the coronation of the Emperor, and the titles of Electors and Princes of the empire. But however that be, the Counts of Champagne had a power of assembling their states, by directing their writs of summons to the seven Counts, who were their subjects, and to enact laws without asking leave of the French King. The last Count of Champagne was HENRY I. King of Navarre, who leaving issue one only daughter named JANE, that married PHILIP the Fair, King of France, about the year 1285, this province thereby became united to the kingdom of France.

The province of Champagne produces corn, wine, wool, iron, wood, cattle and good pasture; their principal manufactures are those of linen, woollen and iron ware. The wine of Champagne which they export has a mighty reputation, but there is a great deal of wine spent in the country that is very indifferent, the best goes to market.

The government of Champagne is one of the most considerable in the kingdom; besides the governor-general, and his lieutenant-general, there are four other lieutenant-generals, who have each of them their separate divisions; one of them commands in the baillage of Rheims; a second the baillages of Vitry and Chamont; a third the baillages of Troyes, Langres and Sens; and a fourth the Brie Champenois. Of all the fortified towns, there were in this province before the late King extended his conquests beyond it, there are not more than three of any strength at present, viz. Mezieres, Rocroy and Sedan; but several other towns however

The ancient state of Champagne.

Fortified towns.

however still retain their respective governors, as Troyes, Chalvas, Menchead, Vitry, Langres, Chaumont, St. Dizier, Espernay, Bar sur Aube, Vaucouleurs, Sefanne, Fimes, Vassy, Sens and Meaux. The city of Rheims has no governor, only a captain of the gates.

## CHAP. VII.

*Contains a description of the Dutchy of Burgundy.*

## CHAP. VII.

**T**HE government of Burgundy comprehends the Dutchy of Burgundy, the Bresse, Bugey, and the Baillage of Gex; and is bounded by Champagne, on the north; by Franche Comte, or the county of Burgundy, on the east; by Lyonois, on the south; and by the Bourbonnois and Nivernois, on the west; extending about five and forty leagues in length from north to south, and thirty in breadth from east to west.

**Rivers.** The rivers which water this province are the Seine, the Saone, the Armaucon, the Dehune, the Brebince, the Ouche, the Tille, and the Aine. The Saone rises in Lorrain, and runs the whole length of this province from north to south, uniting its streams with the Rhone at Lyons, and is much the most considerable of the above-mentioned rivers.

**Subdivi-  
on.** The French geographers divide the government of Burgundy into thirteen districts, or subdivisions, viz. 1. The Dijonois. 2. The Autunois. 3. The Chalonois. 4. The Baillage of the Mountains. 5. The county or Baillage of Auxerre. 6. The Auxois. 7. The County of Chalons. 8. The Brienois. 9. The Masconois. 10. The Bresse. 11. The Principality of Dombes. 12. The Bugey. And, 13. The country of Gex.

**The Dijonois.** The Dijonois lies between Champagne, Franche Comte, the Auxois and the Autunois; the chief towns are Dijon, Nuits, Beaume, St. John de Laune and Aulsonne.

**Dijon city** Dijon, *Divio*, capital of the dutchy, is situated between two small rivers which surround it, namely, the Ouche and the Suzon, about sixty miles south of Troyes in Champagne, and about an hundred and forty south-east of Paris. It is an hour's walk in circumference, fortified after the antique way, and defended by a castle flank'd with great round towers. There are in it seven parishes, two abbeys, and several other convents and hospitals; the Jesuits college is one of the finest in France, and there is a large ancient palace of the Dukes of Burgundy; but neither this or the town-house have any thing very remarkable in them. The rest of the towns in this district do not require a particular description.

**The Auto-  
nois.** The Autunois lies south-west of the Dijonois, the chief towns whereof are, 1. Autun. 2. Bourbon Lancy. And, 3. Montcennis.

**Autun city** Autun, *Bibraete*, *Augustodunum*, is situated on the river Aroux, at the foot of three great mountains; one whereof is so replenished with springs, that it supplies every part of the town with water. It is about a quarter of a league in length, and as much in breadth, a bishop's see, contains besides the cathedral church eight parishes, and several convents and hospitals, and is a place of very great antiquity. In the middle of the town is an open space, called the Field of Mars, and there are still the remains of three Pagan temples, one of them dedicated to J A N U S, and another to D I A N A. Here are also the ruins of a theatre, a cirque and a pyramid; which last to all appearance hath been

a tomb. There are also two ancient gates of excellent workmanship, which some have taken for triumphal arches.

**Bourbon Lancy**, *Borbonium Anselmum*, is situated on the side of a mountain, twelve leagues south-west of Autun, near the river Loire. It is divided into three parts, and defended by an old castle, and other antique fortifications, and contains three parishes; but what it has been famous for ever since the time of the ancient Romans, is its hot baths and mineral waters, which are in good esteem at this day.

The Chalonois is bounded by the Dijonois, on the north; Franche Comte, on the east; La Bresse, on the south; and the Charolois, on the west; being about fifteen leagues long and ten broad; the chief towns whereof are, 1. Chalon. 2. Verdun. 3. Seurre. And, 4. Lohans.

**Chalon**, *Cabillonum*, is pleasantly situated on the river Saone, in a large fruitful plain, thirty miles south of Dijon. It is surrounded by a wall and other fortifications, and defended by a castle, a bishop's see, suffragan of Lyons, the cathedral a magnificent structure; besides which, there are several convents of both sexes; it is also a place of good trade.

The Baillage of the Mountains is bounded on the north and east, by Champagne; on the south, by the Dijonois; and on the west, by another part of Champagne. The chief towns are, 1. Chatillon. 2. Bar sur Seine. 3. Mussy-l'Eveque. 4. Aisey le Duc. And, 5. Val des Choux.

**Chatillon** sur Seine, *Castellio ad Sequanam*, is situated on the river Seine, partly on a hill, and partly in a bottom, resembling an amphitheatre. It consists but of one parish, besides which there are several collegiate and conventual churches, and an hospital for the entertainment of poor travellers, with a college for teaching humanity.

The Country or Baillage of Auxerre, is bounded by Champagne, on the north and east; and by Nivernois, on the south-west. The chief towns are, 1. Auxerre. 2. Crevant. And, 3. Coulange.

**Auxerre**, *Autissiodorum*, is situated on the river Yonne, eighteen leagues north-west of Dijon. It is a bishop's see, suffragan of Sens, and contains eight parishes, besides several convents and a college for Jesuits.

The Auxois lies between the Dijonois, the Autunois, and the Auxerrois. The chief towns are, 1. Semur. 2. Flavigny. 3. Montbard. 4. Noyers. 5. Avalon. 6. Arnay le Duc. 7. Saulien. And, 8. Tanlay.

**Semur** is situated on the river Armancon, thirty miles north-west of Dijon, the greatest part of it on a steep rock, and is about two thousand four hundred paces in circumference, besides the suburbs, being surrounded by a wall and other fortifications, and defended by a castle.

The county of Charolois hath the Chalonois on the north, and the Masconois on the east, being twelve leagues in length and seven in breadth. The chief towns are, 1. Charolles. 2. Paray le Monial. And, 3. Toulon.

**Charolles** is a little town situate on the Recouse, thirty miles south-west of Chalons; it is a pleasant place, but not remarkable for any thing but the remains of an ancient castle which belonged to the Counts of Charolois.

The Brienois is a little baillage, not above four leagues over, on the south-west confines of Burgundy, and hath in it only one little town called

CHAP.  
VII.CHAP.  
VII.

called Semur, situate about half a league from the river Loyre.

**Semur.** The Mafconois is divided from Bresse by the river Saone, and contains the towns of, 1. Mafcon. 2. Tournus. 3. Clugny. 4. St. Geugoux. And, 5. Mercigny.

**Mafcon.** Mafcon is situated on the west side of the river Saone, which separates it from La Bresse, but has a communication with it by a fine stone bridge; the town extends it self in form of a crescent, and is about three thousand paces in circumference, containing about six thousand people, but the streets are narrow and ill paved, and there are scarce any squares or open places; it is a bishop's see, suffragan of Lyons, the cathedral a dark old building, besides which there are several convents of both sexes, and hospitals.

**Clugny.** Clugny is situated in a valley between two hills upon the little river Grosne, about three leagues south-west of Mafcon, and is of a larger extent, but not so populous, famous chiefly for its fine abbey, which depends immediately on the Pope. The church whereof is one of the largest in the kingdom, and great numbers of illustrious persons have been interred there, particularly Cardinal BOUILLON, who erected a most magnificent mausoleum here for himself and his family. This abbey was possessed anciently of a prodigious treasure, which the Catholics complain they were plundered of by the Calvinists in the civil wars, as they were of their library, which contained abundance of valuable manuscripts.

**La Bresse.** La Bresse is situated to the eastward of the Mafconois and the river Saone, being about sixteen leagues in length from north to south, and nine in breadth from east to west. The chief towns are, 1. Bourg. 2. Pont de Vaux. 3. Pont de Vesse. 4. Montluel. 5. Chastillon. And, 6. Beauge.

**Bourg.** Bourg, the capital of La Bresse, is situated in a flat country on the river Refouffe, twenty miles south-east of Mafcon, and is about two thousand six hundred paces in circumference, being divided into seven quarters or wards. The church of Notre Dame is both collegiate and parochial; besides which there are convents of Cordeliers, Jacobites, Capuchins, Jesuits, and several nunneries, which have their respective churches or chapels. All the trade of the place consists in horses, black cattle and skins; their horses are in great esteem. The Dukes of Savoy were heretofore possessed of this town and country; and in the beautiful church of St. Brou, which stands about a mile to the eastward of the town, are still several noble monuments of that family, particularly the tomb of PHILIBERT II. Duke of Savoy, and of MARGARET of Austria his widow which stand in the choir, and are esteemed admirable pieces of workmanship.

**The principality of Dombes.** The principality of Dombes, formerly a part of Bresse, is bounded by the Mafconois on the north, by La Bresse on the north-east, and by Lyonois and Dauphine on the south and west, being about nine leagues in length, and as many in breadth, a pleasant fruitful country, and divided into twelve chatellanies. The chief towns are, 1. Trevoux. 2. Thoissey. And, 3. Montmerle.

**Trevoux.** Trevoux, *Trivotium*, is situated on an eminence near the river Saone, twenty-five miles south-west of Bourg, and is said to have taken its name from its situation on one of the highways which AGRIPPA made into Gaul, and here divides into three branches. It is the capital of the principality of Dombes,

which belongs to the Dukes of Maine, who have built a handsome palace for the parliament and courts of justice held here, a palace for the governor, a mint, a printing-house, and other publick edifices; besides which, there are several convents, and an hospital founded by ANNE-MARY-LOUISE of Orleans, late sovereign of Dombes.

The district of Bugey is bounded by Franche Comte, or the county of Burgundy and Gex on the north; by Savoy, from which it is separated by the Rhone, on the east; by Dauphiné, from which it is also separated by the Rhone on the south, and by La Bresse on the west, being sixteen leagues in length and ten in breadth; the Savoyards were anciently lords of this country also, which they yielded to the French in 1601. The chief towns are, 1. Belley. 2. Nantua. 3. Seiffel. And, 4. St. Rambert.

Belley, *Bellica*, is situated at the south-east part of the country, not far from the Rhone, about thirty miles south-east of Trevoux, being two thousand paces in circumference. It is a bishop's see, who is both spiritual and temporal Lord of the place, and while it belonged to the empire claimed a seat in the diet. The cathedral is dedicated to St. JOHN BAPTIST; besides which, there is but one parish church and some convents of both sexes.

Seiffel is a large town situate on the river Rhone, by which it is divided in two parts that have a communication by a bridge, being about twenty miles to the northward of Belley, and fifteen to the westward of Annecy in Savoy. Here the Rhone first begins to be navigable, and here they unload all the salt that is carried into Savoy and Switzerland. The church of Notre Dame is the only parochial church; besides which there are several convents in the place.

The country of Gex is bounded by the country of Vaux in Switzerland towards the north; by the lake and town of Geneva on the east; by the Rhone and the Genevois, a county of Savoy, on the south, and by the mountains of St. Claude a Jura, and the Franche Comte toward the west, being about seven leagues in length and three in breadth. This country, as well as La Bresse, was yielded to France by the Duke of Savoy, in the year 1601. The only considerable town whereof is Gex, situate at the foot of mount St. Claud, which divides it from Franche Comte, being twelve miles north-west of Geneva. The church of St. Peter and St. Paul is the only parish church in the place; besides which, there are three convents of friars, and one of nuns; which last gives entertainment chiefly to such as are new converts to the catholic faith, of whom they pretend to have a great many from the neighbouring country of Switzerland and Geneva.

The Burgundians, according to the best historians, were comprehended under the general name of Vandals, in the reigns of AUGUSTUS and TIBERIUS, who after having remained some time in that part of Poland called the Arch-bishoprick of Gnesna, advanced into Germany and possessed the Palatinate; from whence they proceeded along the banks of the Rhine, in the time of VALENTINIAN, and entered Gaul about the year 408, settling themselves in Switzerland and part of Franche Comte, from whence they extended themselves insensibly to the Rhone and Saone, and at length established their first kingdom, which lasted an hundred and twenty years under six kings, who reigned here successively. This kingdom was united to the monarchy of France by CLOTHAIRE I.

CHAP.  
VII.

and possessed by his descendants under the title of the kingdom of Burgundy. It was afterwards divided into Burgundy Trans-Jurana, and Burgundy Cis-Jurana, on account of mount Jura, at present mount Claud, which separated the one from the other. The Lower Burgundy called the Dutchy, which we have now described, was given by CHARLEMAIN to HUGH his natural son, surnamed the Great, and CHARLES the Bald confirmed that grant to ROBERT, who married the only daughter of the said HUGH. This dutchy continued to be possessed by the Dukes of Burgundy of the line of France, till the year 1361, when Duke PHILIP dying at fifteen years of age without issue, it was united to the crown of France. King JOHN granted it afterwards to PHILIP the Hardy his fourth son, on condition to revert to the crown on default of heirs males, which happened not long after, on the death of CHARLES IV. Duke of Burgundy, whose only daughter married the Arch-duke MAXIMILIAN I. afterwards Emperor; but the Emperor however kept possession of the county of Burgundy.

The dutchy of Burgundy is the first Peerage of the kingdom, and the ducal coronet was enriched with the like ornaments as the royal crown, on account of their being the successors of the ancient Kings of Burgundy. And by a decree of the council of Constance 26 May 1433, the Dukes of Burgundy were ordered to sit next the King in all christian assemblies. It is now the title of the Dauphin's eldest son.

Produce of  
the coun-  
try.

This province does not only abound in grain, good pasture, fruits, cattle and game, but produces the most excellent wine in France, which from the place of its growth has obtained the name of Burgundy; the places most celebrated for it are Nuis, Chamberlin, Beze, Coulange, Chassagne, Beaune and Volenai.

The mili-  
tary go-  
vernment  
and forti-  
fied towns.

As to the military government of this province, it has a governor general, who is usually a person of the first rank; the Dukes of Bourbon, of the branch of Bourbon-Condé, have of late been governors of it, under whom is a lieutenant general, besides six lieutenants general who have their particular commands; the first commands the Baillages of Dijon, of the mountains, and that of Bar sur Sein; the second, the Autunois, the Auxerrois, and the Auxois; the third commands in the Chalonnois; the fourth, the Mâconnois; the fifth, the Charolois; and the sixth takes in the Bresse, Bugey, the valley of Romey, and the country of Gex; besides which, most of the towns have their respective governors. They don't reckon there are above five places well fortified in the dutchy of Burgundy, and those are, 1. Dijon. 2. Auxonne. 3. Chalon upon the Saone. 4. Bourg in Bresse. And, 5. Pierre Châtel.

## CHAP. VIII.

*Contains a description of Franche Comte, or the county of Burgundy.*

CHAP.  
VIII.

FRanche Comte is bounded by Lorraine on the north; by Switzerland on the east; by La Bresse on the south; and by the dutchy of Burgundy and Champagne on the west.

It was a woody country till the last century, when it came into the hands of France; since when, great part of the woods have been destroyed to supply their iron-works. It is very mountainous, especially on the sides of Switzerland and Lor-

rain, mount Jura runs along all the eastern boundaries and separates it from Switzerland. The chief rivers of this country are, 1. The Saone. 2. The Lougnon. 3. The Dou. 4. The Louve. And, 5. The Dain.

CHAP.  
VIII.  
Rivers.

It is usually divided into four baillages, viz. 1. Subdivisi-  
Befançon. 2. Amont. 3. Dole. And, 4. That  
of Aval.

The Baillage of Befançon was constituted by LEWIS XIV. a little after the conquest of this country, an. 1674. the capital whereof and of the whole province is the city of Befançon or *Vesantium*, called by some historians Chrysopolis: it is an ancient town, and according to the tradition of the natives founded some hundred of years before Rome; it is situated in 47 deg. 10 min. north lat. about 150 miles south-east of Paris, and 70 north of Geneva, on the river Dou or Doux, which divides it into two parts, of which one is called the high and the other the lower town. It is surrounded by a wall and other fortifications, and defended by a citadel which stands on a steep rock, and is an oblong square flanked with four irregular bastions, the ground here and about the town being too uneven to admit of regular works. It is a bishop's see, and the cathedral dedicated to St. JOHN, stands at the foot of mount St. Stephen, anciently called mount Cælius. There are in the town also seven parish churches, two chapters, two abbeys of men and two of nuns, a seminary, a college of Jesuits, seven convents of friars and five of nuns, an hospital for the education of poor children, an hospital for foundling or expos'd children, and another general hospital; and the town is supposed to contain eleven thousand inhabitants and upwards. The town-house, the governor's palace, and that of Granville are the most remarkable buildings in the place; the last of which is furnished with a great variety of excellent statues and pictures, and a library containing abundance of valuable books and manuscripts. There are also five noble fountains in the town embellished with statues and other ornaments. Befançon was a free imperial city till the peace of Munster, when the Emperor exchanged it with the King of Spain for Frankendal (which his Catholick Majesty was then possessed of) but it continued however to be governed as a Republick by its own magistrates, till the French King possessing himself of it in the year 1674, altered the form of government and constituted a Baillage, of which this was made the capital, as hath been intimated already. In the neighbourhood of Befançon there are several places, the names of which shew that the ancient Romans were possessed of this town, as mount Jovot, *Mons Jovis*; Mercurio, *Mons Mercurii*; mont Delie, *Mons Delii*; Cham Vacho, *Campus Bacchi*; Chamuse, *Campus Musarum*. There are still to be seen also the ruins of an amphitheatre, an hundred and twenty feet in diameter, and of some Pagan temples, and a triumphal arch dedicated to the Emperor AURELIAN, in whose time this town is supposed chiefly to have flourish'd, it being then the capital of the Sequani. But I must not forget the holy handkerchief, a precious relique, which draws multitudes of devout people hither annually at Easter. They don't pretend however to have more than a piece of it here, tho' at Turin, and I think at Rome, they assure us they have the whole; for which I refer to the description of those cities. The rest of the towns of this baillage, tho' very numerous, their writers have not thought fit to give us a particular description of.

The

The Baillage of Amont or Gray lies north-west of that of Besançon; the chief towns whereof are Gray, Vesoul, Marnay, Beaume, Jonvill, Dampierre, Amance, Belvoir, Bouilans, Faucogney, Lure, Montbelliard and Pesme.

Gray is a pretty trading town, situate on the Saone, about ten miles north-west of Besançon, and was well fortified till taken by LEWIS XIV, who demolished the works. Here they embark great quantities of corn, iron, and other merchandizes, which they transport to Lyons. The place consists but of one parish, five convents, a collegiate church, and a college of Jesuits. The inhabitants are computed to amount to about four thousand.

The Baillage of Dole lies south-west of Besançon, and is much less than either of the former, the chief towns whereof are Dole, Quingey and Ornans.

Dole, *Dola Sequanorum*, is situated on the river Doux, about fifteen miles south-west of Besançon, in a pleasant fruitful country, and was anciently the capital of Franche Comte, and the residence of the sovereign. The French King demolished the fortifications when he took it in 1674, but it is still a pretty town, the streets spacious, and the houses tolerably well built. The public edifices best worth the viewing, are the church of our Lady, the Jesuits college, and the palace where their parliament was held. There is also a university in the place, founded by PHILIP the Good, and eleven convents of both sexes. The inhabitants are computed to amount to between four or five thousand. Here are still the ruins of several Roman antiquities, particularly of two aqueducts. Their great highway also from Lyons to the Rhine lies thro' this town. The French were confirmed in the possession of this place and the rest of Franche Comte by the treaty of Ryswick.

Sampans. The village of Sampans, two miles from Dole, is remarkable for its fine quarries of jasper and other marble.

The Baillage of Aval is the most southern part of Franche Comte: the chief towns are, 1. Salins. 2. Arbois. 3. St. Claude. And, 4. Poligny.

*Salines Villa*, and *Puteus Salinarum*, so called from an excellent salt-spring, which yields the crown a great revenue, is pleasantly situated on a rivulet between two mountains, twenty miles south of Besançon. It is a long town, consisting chiefly of one street, in which are four parishes, and nine or ten convents. The churches have nothing extraordinary in their fabrick; but the hall in which they have their magazine of salt, and where their courts of justice are held, is a magnificent building. It is defended by a wall, and some forts, and was formerly reckoned a very strong place. It contains at present between five and six thousand inhabitants.

Franche Comte, or the country of Burgundy, was inhabited by the Sequani, who were more anciently comprehended under the name of Helvetians. They implored CÆSAR's protection against ARIOVISTUS, a German monarch who invaded them: CÆSAR having driven him beyond the Rhine, put his army into winter quarters in this province, which afterwards continued faithful to the Romans. The Burgundians made themselves masters of it in the time of the Emperor HONORIUS, and united it to their kingdom of Burgundy. CLOVIS having conquered that kingdom this part of it remained under the power of THIERRY King of Austrasia, who had married the daughter of SIGISMOND, King of Burgundy; and THEOBALD

the son of THIERRY dying without issue, CLOTHAIRE reunited it to the crown. A considerable time afterwards, LEWIS the Debonaire granted it to LOTHAIRE his eldest son, to whom succeeded CHARLES the Bald. But not to tire the reader with a long dry pedigree of the Princes of this house, I shall pass them over till we come to the Arch-duke MAXIMILIAN of Austria, afterwards Emperor, who having married MARY the only daughter of CHARLES Duke of Burgundy, became possessed of this province by virtue of that marriage, (tho' the French King seiz'd the dutchy of Burgundy, as reverted to him.) His grandson CHARLES the Fifth uniting it with the Netherlands, constituted the tenth circle of the empire, under the title of the circle of Burgundy; and the Kings of Spain of the house of Austria enjoyed it till the year 1668, when LEWIS XIV. made himself master of it under pretence that it was devolv'd on his Queen, but was forced to restore it by the treaty of Aix la Chapelle. He made a second conquest of it in the year 1674, and it was confirmed to him by the peace of Ryswick, anno 1697, being since new modelled, and reduced into the form of a French province.

This country abounds in corn, wine and cattle, Produce of and the mountainous part of it, it is said, produces the coun- better pasture than the valleys. Their wine will try. keep five or six years, and about that age it is admirably good: those of them who can afford to keep stocks by them, usually get estates by it.

There are several iron-mines and works in this country, that have consumed abundance of the wood with which this province was replenished when the French conquered it. There are no less than thirty forges or furnaces along the banks of the rivers Doux, Saone and Lougnon, where they make bombs, grenades, and bullets for the artillery. There are also abundance of good armourers, cutlers, and artificers in hard-ware at Besançon, especially gun-smiths; the French being about to establish a magazine of arms at Besançon, which lies conveniently for supplying the garisons on the frontiers of Germany and Italy with arms. They cut also masts for shipping on the mountains of this country, and breed a prodigious number of oxen and cows, with which, and the cheese and butter they produce, they drive a great trade. Their breed of horses also brings a great deal of money into this country, for they sell one year with another five thousand colts, besides full-grown horses, of which some serve for draught, and others to remount the cavalry and dragoons. In the campaign of 1696, it is said, there were not less than four thousand horses bought up here for the King's service. The inhabitants of the mountains have also a considerable trade in hogs; but the country is not proper for sheep, and the wooll of those they have is not good, which is the reason they have no woollen manufactures in the country. Their quarries of alabaster are exceeding white and clear, and there are others of jasper about Salins, of which the blocks are so large that they will make pillars of twelve or fifteen foot in length; and in some pits they find a black marble. But scarce any thing brings so considerable a revenue to the crown as the salt-works in Franche Comte, and particularly those of Salins. They make also, as 'tis said, annually, twelve hundred thousand weight of salt-petre.

As to the military government of this province, The mili- it hath a governor general, who is also governor of tary go- Besançon, and hath under him one lieutenant ge- vernment- neral, and forti- fications.

CHAP.  
VIII.

neral, and as many particular governors as there are fortified places; viz. the governor of the citadel of Belançon, the governor of fort Grifson, of Salins, of fort St. Andrew, of the fort de Blin, of the castle of Joux, and the castle of Blamont.

### CHAP. IX.

*Contains a description of Dauphiné.*

#### CHAP. IX.

Dauphiné, its situation and extent.

Face of the country.

Rivers.

**D**AUPHINÉ is almost of a triangular figure, each side of the triangle near an hundred English miles in length, being bounded by La Bresse and part of Savoy on the north, by another part of Savoy and Piedmont on the east, by Provence on the south, and by the river Rhone, which separates it from Languedoc, on the west. It is a very mountainous country, especially towards the east, being separated from Piedmont by the Alps. The chief rivers are the Rhone, the Durance, the Isère and the Drome.

The Rhone, which has been already described, washes the west side of the triangle.

The Isère has its source in mount Iseran in Savoy, from whence it runs south-west to Grenoble, and so on till it falls into the Rhone about a league and half from Valeure, receiving in its passage the rivers Aire, Drap, Vence and Gie, and begins first to be navigable for small boats at Montmelian, and for larger at Grenoble.

The Drome rises in the valley of Drome, near the village of Bastie, and running first north-west and afterwards west, falls into the Rhone four or five leagues below the Isère.

Division.

This province is usually divided into high and low Dauphiné; the higher and more barren lies to the eastward, and the lower and fruitful part of the country to the westward, near the banks of the Rhone. The higher is again subdivided into six districts, viz. 1. The Graivaudan. 2. The Briançonois. 3. The Ambrunois. 4. The Gapençois. 5. The Royanez. And, 6. The Baroniens. The lower comprehends, 1. The Viennois. 2. The Valentinois. 3. The Diois. 4. The Tricastra. And, 5. The Principality of Orange.

Subdivision.

The Graivaudan.

The Graivaudan, *Gratianopolitanus Ager*, lies between the rivers Isère and Drap, on the confines of Savoy, the capital whereof is Grenoble. The other places of any note are the great Chartreuse, Les Eschelles, and fort Barraux.

Grenoble.

Grenoble, *Cularo, Gratianopolis*, is pleasantly situated at the foot of a mountain on the river Isère, which divides it in two unequal parts, of which the largest is much the finest. The streets are wide and well paved, and it contains several handsome public buildings; as the cathedral dedicated to our Lady, the collegiate church of St. Andrew, the hospital general, the palace where the parliament meets, the hotel de Lesdeguieres, the arsenal, and the governor's house. It consists of two parishes only, and nine or ten monasteries, and is about a mile in length. The Bishop is suffragan to the Archbishop of Vienne.

Fort Barraux.

Fort Barraux is situated at the entrance of the valley of Graivaudan, two leagues from Montmelian, and is esteemed the strongest fortress on the confines of Savoy.

Chartreuse.

The grand Chartreuse, which is the mother of all the convents of the same denomination, is situated seven miles north-east of Grenoble, upon a high rock, to which we ascend by a very strait passage for above a league, and it is surrounded by

an almost impenetrable forest of fir-trees. It is a magnificent building, and endowed with large revenues. The general meeting of the order by deputies from all other countries assemble in this convent, there being about two hundred monasteries under its direction; and travellers who come to view the place are entertained with abundance of humanity. The monks are not allowed to speak to strangers, or to one another, but at certain hours, and in certain places. In the way to this convent, the monks have a house where they follow all manner of mechanick arts. They spin the wool of which their gowns are made; they do joiners work, cutlers work, &c. and their store-houses and cellars are well worth the viewing. On Sundays and holidays they are allowed to walk out for their diversion, and as soon as they have passed the courts of the convent, are permitted to open their mouths, and pay their compliments to each other; which is certainly no small refreshment to a Frenchman, who has had the mortification to have silence imposed upon him for several days before.

The Briançonois is bounded by the Graivaudan on the north-west, and Piedmont on the south-east; a very mountainous country, about eighteen leagues long and sixteen broad, and was anciently the seat of the Brigantes; in which a way being cut through the rocks to facilitate the passage from Italy to Gaul, some suppose this to be the work of HANNIBAL, others of CÆSAR, and some ascribe it to COTTIUS, a Prince of the Gauls, whose dominions lay in this part of the country; and tho' they were but small, their situation enabled him to defend himself so well against the Romans, that they thought it more expedient to receive him into their alliance than to attempt the conquest of it. From this Prince it is supposed that these mountains obtained the name of Alps Cottiani. The chief places are, 1. Briançon. 2. Exilles. 3. Fenestrelles. 4. Oux. And, 5. Queyras.

Briançon, *Virgantia Brigantum*, is situated on the side of a steep rock, on the top whereof stands a castle; this is supposed to be the highest part of the Alps, and consequently the highest ground in Europe, being about seven leagues to the westward of Suza in Piedmont, and as much north-east of Ambrun in Dauphiné. Two small rivers, the Dura and the Ancre, unite their streams a little below this town, and form the river Durance. It is a town naturally very strong, and the fortifications no doubt improved, since France has been obliged to yield the forts of Exilles and Fenestrelles, on the frontiers of Piedmont, to the King of Sardinia. Upon one of the old gates is this inscription, *D. Cæsari Augusto Dedicata, Salutate eam*, over which 'tis supposed the statue of CÆSAR was placed.

Exilles, *olim Ocellum*, is situated on the river Doire, five leagues north-east of Briançon, and two to the westward of Suza, defended by a strong castle which stands upon a pass between France and Piedmont; it was taken from the French by the Duke of Savoy, in the year 1708, and confirmed to him by the peace of Utrecht.

Fenestrelles is a strong fort on the confines of Dauphiné and Piedmont, which was taken by the Duke of Savoy in the year 1708, and confirmed to him by the peace of Utrecht; Pignerol being also then surrendered to him, he has thereby obtained a pretty good barrier against France.

Oux or Oux, formerly Admartis, from a temple here dedicated to MARS, is situated on the river Doire, about three leagues to the westward of Suza.

The

CHAP. IX. The Ambrunois is bounded by the Briançonois on the north; by Piedmont on the east; by Provence on the south; and by Gapençois on the west. The chief towns whereof are, 1. Ambrun. 2. Gillestre. 3. St. Crespin. 4. Mont Dauphin. 5. Chorges. And, 6. Savius.

Ambrun. Ambrun, *Embrun, Ebroadunum*, which in the Celtick language signified a fruitful mountain, is an ancient town situated on a steep rock, at the foot whereof runs the river Durance, and is about twenty miles south of Briançon. It is a strong place both by art and nature, an Archbishop's see, who is metropolitan of the Maritime Alps, and stiled Prince of Ambrun; besides the cathedral, it contains five parish-churches and several monasteries; the archiepiscopal palace is a magnificent structure, standing in the highest part of the town.

The Gapençois, a mountainous country, lies to the westward of the Ambrunois, being about eighteen leagues long and fourteen broad. The chief towns are, 1. Gap. 2. Tallard. 3. Veines. 4. Lefdeguières. And, 5. Aspres.

Gap. Gap, *Civitas Vappincensium*, is situated at the foot of a mountain about fifteen miles south-west of Ambrun; it is a bishop's see, but neither the cathedral nor the other buildings deserve a particular description, nor are the fortifications considerable: about a league from hence is a church and image of the Virgin, called Notre Dame du Lait, which occasions a great concourse of the country people from all parts, who come hither in pilgrimage; the church is a handsome edifice built with a kind of marble.

Tallard. Tallard is a little town two leagues to the southward of Gap; most remarkable for giving a title to Marshal Tallard General of the French, who was taken prisoner at the battle of Hochstet, anno 1704, and remained prisoner in England till the peace of Utrecht.

The Royanez. The Royanez is a little country about six leagues in length and four in breadth (which received its name from a town called Pont de Royance) formerly a principality, but at present a marquissate.

The Baronies. The Baronies are the most southern part of Dauphiné, and lie on the confines of Provence, being about sixteen leagues in length and seven in breadth, being so called from the several Baronies into which it is divided. It is a country that produces good wine, olives, oranges, pomegranates, figs, and other fruits. The chief towns are Buis and Nions.

Buis. Buis is a little town on the river Oreze near the borders of Provence, of which the French geographers have not thought fit to give a further description.

Nions. Nions is a little town situate in a valley on the river Aigues, the bridge whereof according to tradition was the work of the Romans: near this town is a mountain from whence issues a cold wind that refreshes the country, which would otherwise be excessive hot.

Lower Dauphiné. The Lower Dauphiné consists of the western part of the country next the Rhone, and comprehends, 1. The Viennois, the most north-west part of Dauphiné, being almost surrounded by the Rhone and the Isère, about twenty four leagues in length and eighteen in breadth, and was anciently part of the country of the Allobroges. The chief towns are, 1. Vienne. 2. St. Saphoria. 3. Pont de Beauvoisin. 4. St. Rambert. 5. St. Vallier. 6. Tain. 7. Romans. 8. St. Anthony. And, 9. La Tour du Pin.

Vienne. Vienne, *Vienna Allobrogum*, is situated at the foot of a mountain on the river Rhone, about forty

miles north-west of Grenoble, and sixteen south of Lyons; it was the capital of the Allobroges, afterwards a Roman colony, the metropolis of *Gallia Narbonensis secunda*, and the first of their conquests on this side the Alps. JULIUS CÆSAR resided a considerable time here, and here are still the remains of an amphitheatre and other Roman buildings. The Burgundians took it from the Romans and made it the capital of their kingdom; it is much less than it was anciently, being now but one league and a half in circumference. The Archbishop of this see, it is said, disputes the primacy of France with the Archbishop of Lyons, the cathedral is a magnificent Gothick structure and stands on an eminence, to which we ascend by twenty steps and upwards; there are besides in Vienne several beautiful collegiate churches, abbeys and convents, and a college of Jesuits. The fifteenth general council was held here in the year 1311. The situation of the town is not pleasant, being almost covered with the mountain, the streets narrow, uneven and ill paved. On the other hand the neighbouring fields on the sides of Avignon, and the banks of the Rhone, are exceeding beautiful: the most considerable manufactures here are sword-blades, and other iron and steel wares, and paper.

The church of St. Severus, according to tradition, is built in the place where formerly grew a tree, under which the Pagans sacrificed to an hundred Gods, which St. Severus ordering to be pulled up, to remove the superstition the people had for it, found under the root a man's skull filled with gold and silver enough to erect this church, and a pillar with the following inscription, viz. *Arberem Deos Severus evertit Centum Deorum*. The chapel of St. Maria de la Vie was the Roman *Prætorium*, over the door of which is a stone ball with this inscription, *Hoc est Pomum Sceptri Pilati*; and they pretend to shew the house where PONTIUS PILATE lived during his banishment, the tower where he was imprisoned, and the lake where he drowned himself, to which they have given his name.

St. Saphoria lies two leagues to the northward of St. Saphoria. Vienne in the road to Lyons; but I don't find it remarkable for any thing but the post-ales which go from hence to Lyons, and perform their stage as well as horses, but are not to be driven beyond it by any means whatever.

Pont Beauvoisin is situated on the river Gier near Pont Beauvoisin. the frontiers of Savoy, about thirty miles to the eastward of Vienne, and is one of the most considerable passes between France and Savoy.

Taine or Theine is a little town situated near the Taine.

Rhone, about twenty-five miles to the southward of Vienne, remarkable chiefly for that excellent wine called hermitage wine.

Romans is situated on the river Isère, over which it has a bridge, thirty miles to the southward of Vienne; the situation of this town is said to resemble that of Jerusalem, having a hill in it with buildings not unlike those on mount Calvary, by which name the convent is called that is built upon it.

The Valentinois lies to the southward of the Viennois, from which it is divided by the river Isère. It was anciently a county, and has been three times erected into a duchy. The chief towns are, 1. Valence. 2. Montelimart. 3. Livron. 4. Pierre Late. And, 5. St. Marcellin.

Valence, *Valentia, Croitas Valentinarum*, is situated on the Rhone, a little below its confluence

CHAP.  
IX.

with the Isère, thirty-five miles to the southward of Vienne. It was once a Roman colony, and is still a pretty large well-built town, and the see of a bishop suffragan to Vienne; the cathedral is a noble structure, besides which there is a collegiate church, the fine abbey of St. Rolf, with several other convents, and it has an university in which the civil and canon laws are chiefly studied, founded by LEWIS XI. anno 1452. In the church of the Jacobins they shew the bones of a gaint of a prodigious size; for according to the dimensions of those we saw, says my author, the whole body must have been sixteen foot long. The neighbourhood of this place is extremely pleasant, the hills lying about it in form of a crescent on the one side, and the Rhone with its beautiful meadows open to it on the other.

Monteli-  
mart.

Montelimart is situated on the river Robion, about a league from the Rhone in a fruitful plain about thirty miles to the southward of Valence. It is a little populous place, remarkable for several councils held here against the Albigenes in the 13th century; and it was, says my French author, one of the first towns that followed the errors of CALVIN; but since the revocation of the edict of Nantz, they have been very faithful to God and their King: that is, the government has put it out of their power to dispute its commands. It suffered very much on occasion of its adhering to the Hugonots in the civil wars. The learned CHAUCIER, so celebrated among the French Protestants, was minister of this place,

The Diois

The Diois lies to the eastward of the Valentinois, being eighteen leagues in length and sixteen in breadth, and is the most mountainous part of the Lower Dauphiné. The chief places are, 1. Die. 2. Crest. 3. Bourdeaux. 4. Chastillon. 5. Valdrone. 6. Saillans. 7. Luc.

Chief  
towns.

Die.

Die, *Dea Vacentiorum*, and *Dea Augusta*, is situated at the foot of the mountains on the river Drone, thirty miles to the southward of Grenoble. It is the see of a Bishop, who has also the title of Count of the place. The Protestants had a university here before the revocation of the edict of Nantz, and were very numerous in this city; but it suffered very much in the civil wars, the castle and several of its churches being demolished.

The Tri-  
castin.

The Tricastin is bounded by the Valentinois on the north, and the Venaissin on the south, a district of a small extent; the only considerable town whereof is,

St. Paul 3  
Chateaux.

St. Paul trois Chateaux, known anciently by the name of *Augusta Tricastinorum*, situated on a rising ground about a league to the westward of the Rhone, and four to the southward of Montelimart. It is the see of a Bishop suffragan of Arles, who is also styled Count.

The prin-  
cipality of  
Orange.

The principality of Orange was always esteemed a part of Provence till the year 1714, when an edict passed for annexing it to the government of Dauphiné; it is bounded by the county of Venaissin or Avignon on the north, east and south; and by the river Rhone, which divides it from Languedoc, on the west. It was governed by a Prince of its own for many years, the last of whom was WILLIAM III. of England; for the King of Prussia, who pretends to be heir to that Prince, exchanged it with the last French King LEWIS XIV. at the treaty of Utrecht for part of Guelderland, which the French King had possessed himself of during the war; his Prussian Majesty still retaining the title of Prince of Orange. It is a very small district, being no more than four leagues in

length and three in breadth, and the Prince's revenue amounted to about five thousand pounds per annum. The chief towns are, 1. Orange. 2. Courtezon. 3. Jonquieres. And, 4. Gigondos.

Orange, *Aurasso*, is situated in a fine large plain watered with abundance of little rivulets, about three miles to the westward of the Rhone, and eighteen north of Avignon. It has been of much larger extent than it is at present, and was a town that made a considerable figure in the time of the Romans, as appears by the remains of part of a cirque, an ampitheatre and a triumphal arch almost entire. MAURICE of Nassau, its sovereign, also built a regular fortress, consisting of eleven bastions, on a neighbouring eminence, in the year 1622, which LEWIS le Grand demolished in the year 1660, with all the other fortifications about it. It is still a university and a bishop's see, suffragan of Arles; and there have been three councils held in this city.

The province of Dauphiné was part of the country of the Allobroges, who joining with HANNIBAL, were subdued by the Romans about an hundred years before the birth of our Saviour. Upon the declension of the Roman Empire, they fell under the dominion of the Goths and other barbarous nations that ravaged Italy and Gaul; after which Dauphiné became part of the kingdom of the Burgundians. The Counts of Albon made themselves masters of the country, (in the reign of RODOLPH the slothful) whose successors reigned here under the title of Dauphins of Vienne. The name of Dauphin was the christian name of GUY, the eighth Count of Albon, who governed this province in the year 1130; his successors made it a name of dignity, and annexed it to the province. Dauphiné has twice fallen to the females for want of male issue: the first time in the year 1184, by the death of GUIGUES IX, who leaving only one daughter named BEATRIX, she married to HUGH III, Duke of Burgundy, who was the founder of the second race of the Dauphins of Vienne. The second was after the death of GUY X, who leaving issue an only daughter named ANNE, she was married in the year 1282 to HUMBERT, Lord Tour Dupin. This Prince begun the third race of Dauphins, which ended with HUMBERT the Second, a weak Prince, who becoming inconsolable for the loss of his only son, whom he let fall into the river Isère as he was playing with him at a window in his palace at Grenoble, he transferred his dominions to CHARLES Duke of Normandy, the grandson of PHILIP de Valois, King of France, upon condition that the eldest son of France should always bear the name of Dauphin, and his arms be quartered with those of France. And the King on his part promised the Dauphin an hundred and twenty thousand gold florins; which treaty was executed the sixteenth of July, 1349. HUMBERT the next day shut himself up in a cloyster, and Dauphiné has ever since been annexed to the crown of France.

The soil of this country in some parts is tolerably fruitful, producing corn, wine, olive, salt, silk and hemp, besides which they have some mines of copper, iron and lead; but two thirds of the province is so barren, occasioned by the high mountains which encumber it, that the natives are many of them obliged to remove their habitation one part of the year, to get a livelihood elsewhere, and to enable them to pay their taxes. Their mountains however produce a great variety of beautiful flowers, simples, timber, precious stones and minerals.

CHAP.

transferred  
to the  
house of  
Valois.The soil  
and pro-  
duce.

**CHAP. IX.** There are also upon them abundance of deer, game, wild goats called Chamois, bears, and wolves. Their goats, particularly on the mountains of Diois, are red in summer and grey in winter. There are also on the Alps in this province great numbers of white hares, and partridges, eagles, goshawks, pheasants, &c. And in the duchy of Tallard are several salt-springs. Two leagues from Die is a hill called the inaccessible mountain, being in form of a pyramid reversed; but some people have however found means to ascend it, and report that there is a plain on the top of it a quarter of a league in length, on which they found herds of the wild goats call'd Chamois, tho' it is not to be conceived how they climbed up thither. They tell us also of a kind of manna which is found in the district of Briançon, upon the leaves of a tree called Meleze, resembling a pine, which falls as soon as the sun comes upon it, and is never so plentiful as in excessive hot weather. There are reported to be abundance of other merveilles, or strange productions in Dauphiné, as a burning fountain, an unfathomable gulph, &c. which I find their best writers do not give much credit to.

**Military government.** It was one of the privileges of Dauphiné anciently to have their governor and lieutenant general natives; but this is now frequently broke through. Besides the governor and lieutenant general, the King has four other lieutenants general of particular districts, and governors of the fortified towns.

**Strong towns.** The fortified places are Grenoble, Valence, Die, Montelimart, Gap, Ambrun, Mont Dauphin, Guillestre, Chateau de Queyras, Briançon, Exilles, Barrault and L'Ecluse.

## CHAP. X.

*Contains a description of Provence.*

**CHAP. X.** After the Romans had made themselves masters of the country of the Salii, Cavari, Desuviati, &c. they gave it the name of Provincia, the province, being the first they conquered on this side the Alps, and it retains the same name to this day, having only changed the letter i for an e, and instead of Province is call'd Provence. It is bounded by Dauphiné on the north, by the river Var and the Alps, which separate it from Piedmont and the county of Nice, on the east; by the Mediterranean on the south, and by the Rhone, which divides it from Languedoc, on the west; being about forty leagues in length from east to west, and thirty in breadth from north to south.

**The air.** The air is temperate in the mountainous part of this province, but in the valleys excessive hot, unless on the sea-coast, where they have usually refreshing breezes, which blow from nine or ten in the morning until the evening; and whenever the wind sits north east, it brings cool weather along with it.

**Rivers.** The chief rivers are the Rhone, the Var, the Durance, the Verdon, the Argens, the Sorgue and the Larc.

**The Rhone.** The Rhone has been already described, which washes the western boundaries of this province.

**The Var.** The Var hath its source on the mountains, on the north-east part of Provence, and running to the southward, falls into the Mediterranean between Nice and Antibes, dividing Italy from France.

**The Durance.** The Durance rises in the eastern part of Dauphiné, and running above an hundred miles to the

south-west, joins its streams with the river Verdon; after which it takes its course to the westward, till it falls into the Rhone near Avignon. The river Argens, so called from the pureness of its waters, rises in the south-west part of the country, and taking its course almost directly east, falls into the Mediterranean near Frejus.

The Sorgue has its whole course thro' the county of Venaissin, where it rises, and running south-west, falls into the Rhone two leagues above Avignon. The springs where it rises throw out the water so plentifully, that it bears the name of a river from its very source, and immediately carries small boats.

The Larc is a little river, or rather a dangerous torrent, which rising in the south part of this province, takes its course to the westward of Aix, from whence it runs on south-west till it falls into a bay of the Mediterranean sea near Berre.

There are also mineral-waters and salt-springs in several parts of the country.

The most considerable roads and harbours on the coast of Provence are those of Marseilles, Toulon, Hieres, Grimaud and Lerins, which will be described hereafter in treating of those places.

The country is very mountainous towards the north and east, being taken up by the Alps, which divide it from the Duke of Savoy's dominions in Italy. The rest of the province next the sea and the river Rhone, is for the most part plain and even. Neither the one nor the other abounds in wood, tho' few countries are better stocked with fruits, as will appear when I come to treat of the soil and produce of the country.

The French geographers divide Provence into 15 parts or dioceses, besides the islands, which make a sixteenth: 1. The diocese of Aix. 2. The diocese of Riez. 3. That of Senes. 4. The diocese of Digne. 5. The Archbishoprick of Arles. 6. The diocese of Marseilles. 7. The diocese of Toulon. 8. The diocese of Frejus. 9. The diocese of Grasse. 10. The diocese of Vence. 11. The diocese of Glandèves. 12. The diocese of Sisteron. 13. The diocese of Apt. 14. The county of Venaissin, or Avignon. 15. The valley of Barcelonnette. And, 16. The islands.

The diocese of Aix extends itself along the banks of the river Durance; the chief towns whereof are, 1. Aix. 2. St. Maximin. 3. Brignole. And, 4. Lambesc.

Aix, *Aque Sextie*, called *Aque* on account of its baths, and *Sextie* as it was enlarged and beautified by *SEXTIUS CALVINUS*, a Roman consul. It is situated in a plain, at the foot of the hill St. Eutropius, and about a musket-shot from the little river Arc, in the latitude of 43 degrees 30 minutes, twenty miles to the northward of Marseilles, and thirty-five south-east of Avignon. It is a large well-built city, and, according to my French author, resembles Paris the most of any town in the kingdom, in the magnificence of its buildings, the politeness of its inhabitants, its spacious squares and beautiful fountains. The Courfe consisting of three fine walks of trees of a great length, with elegant uniform buildings on each side of it, and embellished with fountains, is very much admired by travellers, as are the baths and mineral waters. The principal publick buildings are the palace where the parliament and courts of justice are held, the town-house, the cathedral, the church of the fathers of the oratory, and the Jesuits church. Aix is an Archbishop's see, and a university founded by Pope ALEXANDER V, anno

CHAP.  
X.

1409, where the students enjoy equal privileges with those of the university of Paris.

St. Maximin.

St. Maximin is situated to the eastward of Aix, and consists of one parish only; but is famous for a convent of Dominicans, where, according to the tradition of the place, they have preserv'd the head of MARY MAGDALEN, and a phial containing the drops of blood which she collected at the foot of our Saviour's cross; with many other reliques of that saint, which draws a great concourse of superstitious people thither.

Riez  
diocese.

The diocese of Riez lies on the river Verdon, north-east of that of Aix; the chief towns whereof are, 1. Riez. 2. Monstiers. And, 3. Val-fole.

Riez city.

Riez, called by the Latins *Alaboece Reiorum Apollinarium*, because the inhabitants had a particular devotion for APOLLO, is situated about forty miles north-east of Aix, being a handsom little town, and a bishop's see, suffragan of Aix. The county about it yields the best wine in Provence.

Senez  
diocese.

The diocese of Senez lies along the river Verdon, to the north-east of Riez. The chief towns are, 1. Senez. 2. Castellane. And, 3. Colmars.

Senez city.

Senez, *Sanitium*, or *Sanecium*, situated about twenty miles north-east of Riez, is now reduced to a very small city, or rather a village, but remains however a bishop's see, suffragan to Ambrun.

Castellane.

Castellane is a handsom town, situate at the foot of a mountain on the river Verdon, where the Bishop of Senez usually resides.

Digne  
diocese.

The diocese of Digne lies to the northward of Senez; the only town of any note is,

Digne  
city.

Digne, *Dinia*, situated at the foot of the mountains; five or six leagues north of Senez, is the see of a bishop, suffragan of Ambrun, formerly the capital of the Senii, but of no great consequence at present.

Arles  
diocese.

The diocese, or Archbishoprick of Arles, lies in the south-west part of Provence, having the Mediterranean on the south, and the river Rhone on the west, and is about eighteen leagues in length, and fourteen in breadth. The chief towns are, 1. Arles. 2. Salon. 3. Berre. 4. Les Beaux. And, 5. Troies Maries.

Arles city.

Arles, *Arelatum*, by PLINY called *Arelate Sextanorum*, because the Romans sent a colony of the sixth legion hither, is situated on the east bank of the Rhone, upon very uneven ground, and almost surrounded by a morass, which renders the air thick and unhealthful. They have a bridge of boats over the Rhone, that preserves their communication with Languedoc, on which side CONSTANTINE the great built great part of the town, but there is scarce any thing remaining of it at present. This Prince it seems was mightily taken with the situation of the place, and made it the seat of the Roman Empire in Gaul, giving it the name of *Constantium*. Among the antiquities that remain here is an obelisk of granite marble, all one entire stone, fifty two foot high, and seven feet in diameter at the base, like those of Rome, says my French author, only there are no hieroglyphicks upon it; but 'tis perfectly plain, and thus happily reserv'd, as he observes, to record the actions of LEWIS le Grand, who caused it to be dug out of the ruins and set upon a pedestal in the year 1676. The town consecrated this monument to the glory of his Majesty, placing an azure globe on the top of it, strewed with golden flowers de lys, and a sun, which was this Prince's device. The four angles of the pedestal were adorn'd with four lions in marble, and the several faces contained inscriptions

pointing out the most remarkable events of his reign.

CHAP.  
X.

There are also the ruins of an amphitheatre, which the French writers are confident was built by JULIUS CÆSAR. It is of an oval form, and an hundred and ninety four fathoms in circumference; the longest diameter of the area seventy one fathoms, and the shortest fifty two. The portico's are three stories high, built with free stone of a prodigious size; every story contains sixty arches, which still remain. The walls are of a surprising thickness, but very much battered and defaced.

The more modern publick buildings are the cathedral, a vast Gothick structure, the front whereof is charged with an infinite number of figures. The high altar is adorned with a fine tabernacle of silver, representing the martyrdom of St. STEPHEN, to whom the church is dedicated, which is an admirable piece.

The town-house is an elegant regular building, and finely situated. It is of a square figure, built with white stone, and adorned with three orders of architecture one above another. The portico is magnificent, and embellished with the busts of the Counts of Provence, and the roof sustained by twenty double pillars.

There is a territory of thirty miles extent depending on this city, which contains the islands made by the three branches of the Rhone, called Camargne and the Cran, the *Campi Lapidei* of STRABO and PLINY, which is a large country covered with stones, extending to the sea of Martigne from the banks of the Rhone; which notwithstanding the stony surface, according to the French writers, makes excellent pasture for sheep, who turning up the stones, find an herb underneath that fats them.

Berre is situated on a bay of the Mediterranean, Berre. most considerable for the great quantities of salt that are made here. But good Catholics, I find, have a mighty veneration for the place, on account of the present reliques that are preserv'd here, as the hair and milk of the blessed Virgin, some of her clothes, the bones of St. LAURENCE, and the finger of St. GERMAIN. It stands in a very unhealthful air.

The diocese of Marseilles lies along the coast of the Mediterranean, to the eastward of the diocese of Arles. The chief towns are, 1. Marseilles. 2. Roquevaire. 3. Ambaigue. 4. Avriol. 5. La Ciotat. 6. La Sainte Beaume. And, 7. Gemenos.

Marseilles  
diocese.

Marseilles, *Maffilia*, is situated on the Mediterranean, twenty miles south of Aix, and thirty north-west of Toulon, being divided into the old and new town. The old stands on an eminence above the fort, the streets whereof are narrow and dirty, and the houses very indifferent. On the other hand, the new town is perfectly well built, particularly the street called the Course, which is one of the finest in Europe, the houses on each side being uniform and magnificent, and a noble walk of trees between them. The cathedral is said to have been the temple of DIANA, and the ancientest in France. On the land-side there is one of the most beautiful plains in the world, in which there are no less than eight hundred country-seats of the citizens, with their gardens and vineyards, whither they retire from the noise of the town; for, says my author, the multitude of slaves in the streets, with their rattling chains, would make one think he was in the confines of hell: some of

Marseilles  
city.

CHAP. X. of them serve as porters; and others have little shops and huts, where they are allowed to work at their trades.

The abbey of St. Victor is a beautiful edifice; the Hotel de Ville, or town-house, has a noble front; the hospital and the arsenal are well worth the viewing, and there are abundance of fine convents in the place. The town is fortified and defended by a castle and two citadels; the harbour one of the safest and most commodious in Europe, where the French King lays up his galleys, but it will not admit of ships of above five or six hundred tons. It is a populous city, the natives being computed at an hundred thousand souls and upwards before the last plague, which happened anno 1720, and swept away great numbers of the inhabitants. It has as brisk a trade as most towns in the Mediterranean, and several beneficial manufactures, particularly their silk-manufacture is in good esteem, and those which relate to their shipping; their magazines of arms and warlike stores are said to be equal to any in Europe. This city is held to be of great antiquity, generally said to be founded by the Phocians, a people of Ionia in the Lesser Asia. It was celebrated for a fine academy anciently, whither the Romans, Greeks, and Gauls resorted for education; inasmuch, that it obtained the title of the learned city. They were also considerable on account of the brave defence they made against the Roman power, who thereupon entered into an alliance with them, but afterwards deprived them of their privileges, and used them as a conquered people.

St. Beaume St. Beaume is situated on a rocky mountain, almost inaccessible, between Aix, Marseilles and Toulon; where, according to tradition, MARY MAGDALEN did penance thirty years. The grott, where this Saint is supposed to have resided, is enclosed with an iron grate, having abundance of flambeaux burning day and night before it. On the side of it is a fountain which cures many diseases, and runs on every side of the rock except the place where the Saint reposed herself, where there never was seen a single drop. Near this grott they have built a pretty little church and a convent of Jacobins; from hence devout people ascend to the holy pillar, whither, according to the same tradition, the Saint was lifted up seven times a day by Angels.

Toulon diocese. The diocese of Toulon lies south-east of that of Marseilles; the chief towns are, 1. Toulon. 2. Hieres. 3. Sixfours. 4. Olioules. And, 5. Cuers.

Toulon city. Toulon, *Tolonium*, is situated in a bottom, almost encompassed with hills on the land-side, and on a bay of the Mediterranean sea, which forms a secure and commodious harbour, in the latitude of 43 degrees 8 min. six degrees to the eastward of London, four hundred miles almost south-east of Paris, and fourscore south-west of Nice. The town is not large or beautiful, tho' there are some fine buildings in it, especially the magazines and offices, which the late King erected for the use of the navy: for here the French lay up their largest men of war, and have the finest docks and yards in the kingdom for fitting out a royal fleet; such as, in the strain of the French writers, are not to be paralleled in the world: but those that have seen Portsmouth and Chatham, or the Dutch magazines and yards in Holland, possibly may be of another opinion. I shall however give a short abstract of what the French say of their naval magazine and works at Toulon. They tell us,

VOL. II.

that there is a covered rope yard of a surprizing length, that a man cannot see from one end to the other; and over it is an infinite number of workmen employed in sorting of hemp and spinning, &c. That they have schools for the marine guards, where they are taught navigation, and their exercises. That the hall of arms is a noble fabrick, where they make muskets, pistols, halberds, &c. That in another magazine, they have all manner of utensils for cannoners and bombardiers; that the offices where the smiths, carpenters and coopers work are of a vast extent; that the park where the cannon, bombs, and bullets are piled up in a regular manner, and the vast number of anchors, astonishes a man; that the storehouse, where the sails and rigging for the men of war are laid up, is of a prodigious length; that the foundery, where all manner of cannon and mortars are cast, requires our attention; and the royal bake-house, with its numerous ovens, is admirably contrived; that the machine for putting masts into ships at the old dock is the admiration of all that see it; and lastly, that there have been found in Toulon at one time near six hundred brass cannon, upwards of three thousand iron guns, sixteen first rates, eight second rates, twenty-four third rates, and six fourth rates, besides frigates, bomb-vessels, fire-ships, &c. There were not less in the place, they assure us, when the allies came before it in the year 1707, the miscarriage of which attempt was partly occasioned by the perverseness of some of the confederates, and partly by some unavoidable accidents: for though the town be as well fortified as the nature of the ground will admit, yet there being two hills which command it, the place could not have held out long against such a force as was at first designed for this expedition. The first false step that was made therefore in this great attempt, was the detaching fifteen thousand men from that army to Naples, which would have fallen into our hands of it self, if we had been once masters of Toulon, and as it was, cost but very little blood-shed; but the confederate army was so much weakened by making this detachment, that when they came before Toulon, they found the enemy almost as numerous as themselves, and possessed of all the heights about it; for on two sides of the city, as has been observed, lie steep, and almost inaccessible hills, viz. that of St. Anne, on the north-east, and mount St. Catharine, on the south-east; and as the hill of St. Anne perfectly commands the town, so the possession of it secures it against any attack; therefore the French general, Marshal Theffe, having made a very expeditious march, and entrenched himself on this hill before the confederates arrived, did thereby in a good measure frustrate their design. The hill of St. Catharine, which the allies possessed, is more to the eastward, and on the south-east is the hill of Maigne, between which and the town there is a morass. Over the mouth of the harbour lay a boom, between which and a little neck of land there was a deep passage defended by a great tower, on which were thirty guns mounted. This was the tower the confederate fleet attacked, and was in a fair way of taking it, if an unlucky shot had not blown up the magazine of gunpowder in Fort St. Laurence, which they had taken before, and thereby deprived them of the shelter they had gained from the shot of the great tower, &c. after which they found it impracticable to carry on their attacks against it. The army at land also not being able to dislodge

**CHAP. X.** the enemy from St. Anne's hill, and intelligence being brought of the French troops marching towards them from all parts, which would have been superior to the allies in a very short time, it was thought advisable to draw off their forces, and return to Italy the same way they came, as they did without any disturbance from the French, having destroyed several men of war in the harbour, and set fire to part of the town with their bombs. Had this design succeeded, the French would have suffered a prodigious loss in their shipping and naval stores; such a one as they could not have recovered in an age, tho' the confederates had been obliged to quit the town again. But as the allies were masters at sea, and could have poured in fresh supplies from time to time, it might have been difficult for the French to have retaken it; tho' I must confess I never desire to see England carry on a war at such a distance, where every man and horse must stand us in seven times the expence it does the enemy, as it actually did in many instances during the last war.

The first account we have of Toulon is, that it was a castle built by the Marfilians, to defend the coast against pyrates; and that **TELO MARTIUS** the tribune settled a colony here, calling it by his own name. Upon the decline of the Roman Empire, it underwent the same revolutions as the rest of Gaul, and was afterwards governed by Sovereigns of its own, till the heirs of this district transferred it to the Counts of Provence, since which it has had the same Princes. The Kings of France finding it a commodious harbour, enlarged and fortified it, and made it the station of the royal navy; but none of them improved it so much as the late King **LEWIS XIV.** to whom it owes all those fine docks, yards, founderies, &c. above-mentioned; and indeed before his reign the French had scarce any royal navy. It was he that laid the foundation of their greatness at sea, and built more men of war than any Prince or State in Europe was master of; tho' it is true, he could never half man them with sailors, for want of a proportionable foreign trade.

**Hieres.** Hieres is a pretty little town situate near the sea, about three leagues to the eastward of Toulon, which gives its name to the islands that lie opposite to it in the Mediterranean. This was also a colony of the Marfilians, and here pilgrims anciently used to embark for the Holy Land. It is considerable at present on account of the excellent salt which is made here, both from the seawater and salt-pools. Here also are some of the finest gardens in France, which are no less profitable to the natives than pleasant; some one of them having yielded more than ten thousand livres a year to the proprietor, before the hard winter in 1709, which destroyed most of their fruits and plants. This misfortune probably they have pretty well recovered by this time; but with all their advantages, it seems, they are situated in a very unhealthy air.

**Sixfours.** Sixfours is a borough situate on a mountain to the westward of Toulon, whose founder the natives pretend was **SEXTUS FORIUS**, upon account of some inscriptions found there. Its inhabitants are said to be of a larger size, and considerably taller than their neighbours; on which account anciently they had a law amongst them which prohibited their marrying with any but their own people, that they might not lessen the breed.

**Frejus diocese.** The diocese of Frejus lies on the sea-coast, north-east of that of Toulon. The chief towns

are, 1. Frejus. 2. Barjols. 3. Draguignan. 4. **CHAP. X.** Bargemon. 5. Favos. 6. Pignans. And, 7. St. Tropez.

Frejus, *Forum Julium, Colonia Orlavannorum*, is Frejus a fortified town situate forty miles north-east of city. Toulon, on the river Argens, about half a league from the sea. It was the naval arsenal of **AUGUSTUS**, where he laid up his fleet; and here, it is said, the celebrated **AGRICOLA** was born. There still remain several monuments of its antiquity; though the French writers do not think fit to enter into a particular description of them. It is at present a bishop's see, who is temporal as well as spiritual Lord of the place, and suffragan of Aix.

The diocese of Grasse or Grace, lies on the Grasse coast of the Mediterranean north-east of Frejus, diocese. being bounded towards the east by the river Var, which separates it from the King of Sardinia's territories. The chief towns are, 1. Grasse. 2. Antibes.

Grasse or Grace, is situated on a hill two leagues from the sea, about twenty miles north-east of Frejus, and fifteen south-west of Nice. The cathedral and parish church are the same; besides which there are a great number of convents, and the town is said to be rich and populous, but not very large. There is a fine prospect from it over one of the pleasantest parts of Provence; the episcopal seat was removed from Antibes thither, on account of the unhealthfulness of Antibes, and the frequent visits of the corsairs of Barbary, and other pirates.

Antibes, *Antipolis*, is one of the ancientest towns in Provence, situate on the sea-coast, about three leagues south-west of Nice, considerable on account of its port and the antiquities that are found here; it has also a pretty strong citadel for its defence. **Antibes.**

The diocese of Vence lies north of Grasse, being bounded by the King of Sardinia's territories towards the east. The chief towns are, 1. Vence. And, 2. St. Paul. **Vence diocese.**

Vence, *Civitas Vincienfium*, is situated on the Maritime Alps, about five miles to the westward of the river Var, and twelve north-east of Grasse; the city is not large, tho' it was anciently a Roman colony, and celebrated for a temple dedicated to **MARS**. It is at present a bishop's see, suffragan of Ambrun. **Vence.**

The diocese of Glandèves, or Glandeves, extends along the banks of the river Var to the northward of that of Vence. The chief towns are, 1. Glandèves. 2. Guillaume. And, 3. Entrevaux. **Glandeves diocese.**

Glandèves, *Glanateva*, stood near the banks of the Var, but being destroyed by the inundations of that river several hundred years ago, the inhabitants removed to Entrevaux, a little town on the confines of Savoy and Nice, where the bishop now resides; and there remains nothing of Glandèves at present, but a little fortress erected on an eminence. **Glandeves**

Guillaume, which lies about four or five leagues to the northward of Glandèves, is a good town, the most considerable in this diocese. **Guilleaume.**

The diocese of Sisteron lies in the north part of Provence to the westward of Digne. The chief towns are, 1. Sisteron. 2. Forcalquier. And, 3. Monosque. **Sisteron diocese.**

Sisteron, *Segufterorum Urbs*, is strongly situated on the river Durance, at the foot of a rock, and defended by a castle, being about fifty miles to the northward of Aix, and twelve north-west of Digne, the bishop whereof is suffragan of Ambrun. **Sisteron city.**

The

CHAP.

X.

Apt diocese.  
Apt.

The diocese of Apt is situated to the westward of the Venaissin; the chief town whereof is of the same name.

Apt, *Civitas Aptensium*, is situated near the mountains on the river Caleron, about twenty-four miles to the northward of Aix, and as many to the eastward of Avignon: this was one of the most considerable cities of the Celtæ, and the capital of the *Vulgentes* in the time of the Romans; the Bishop is first suffragan of Aix, and styled Prince of Apt. There still remain several monuments of its antiquity, and good catholicks esteem the place for the precious reliques found in the cathedral and monasteries here, among the rest the reliques of St. ANNE, the mother of the Blessed Virgin.

Venaissin  
country.

The county of Venaissin is bounded on the north by Dauphiné; on the east, by the diocese of Apt; on the south, by the river Durance, which separates it from Arles; and on the west, by the river Rhone, which divides it from Languedoc. It does not derive its name from *Venatione*, a country fit for hunting, as some have suggested, but from *Venasque*, heretofore an imperial city, and the chief of the country. It is not at present under the dominion of France, but of the Pope; for RAYMOND VI. Count de Thoulouse, who was sovereign of it, taking part with the Vaudois and Albigenes, the French King and the Pope, about the year 1210, invaded his territories, and divided them between them. The King seized all those on the west-side the Rhone, and the Pope held those on the east-side of the river, which consisted of the country of Venaissin. RAYMOND VII. however was re-established in his father's dominions; but he marrying JANE, the daughter of ALPHONSUS, Count of Poitiers, and leaving no issue, Pope GREGORY X. after some struggles got possession of the Venaissin again, which the holy see have held ever since. The city of Avignon indeed was not formerly deemed part of the county, but was sold to Pope CLEMENT V. by JANE Queen of Naples and Countess of Provence, about the year 1348, for eighty thousand gold florins.

Chief  
towns.

Notwithstanding this little state is under the dominion of the Pope, yet the natives are not deemed aliens in France, but are allowed the privileges of natives of the kingdom, by the edicts of several of their Kings; and the university of Avignon enjoys the same privileges as other French universities. The chief towns are, 1. Avignon. 2. Tarascon. 3. St. Remy. 4. Cavaillon. 5. Carpentras. 6. Vaillon. 7. Venasque. 8. Pont de Sorgue. 9. Lisle. And, 10. Perues.

Avignon.

Avignon, *Avenio*, is situated on the river Rhone, about twenty miles north of Arles, and near as many south of Orange. It is surrounded with a stone-wall, rather beautiful than strong, and contains some magnificent churches and palaces, particularly the cathedral dedicated to the VIRGIN MARY; in which are the tombs of Pope BENNET XII. and JOHN XXII. besides those of several archbishops and bishops. The high altar is exceeding fine, and the treasury of the sacristy rich. The Hugonots, who make it another Babylon, on account of the Pope's residing here, observe, that it has seven parishes, seven monasteries, seven colleges, seven markets, and seven gates. The palace of the vice-legat was the residence of the Pope when the see was at Avignon; that of the archbishop's is a handsom structure, from whence there is an admirable prospect over

the neighbouring country; there was a stone-bridge over the river, but being decayed, it is rebuilt with wood. This city was erected into an Archbishoprick, in the year 1475, by Pope SIXTUS V. and the university was founded in the year 1303, by CHARLES II. King of Jerusalem and Sicily, and Count of Provence. There is also a court of inquisition here; the civil government is administered by the vice-legat, the viguer, or the rota. The viguer, who is an officer that resembles the provost of the merchants in other cities of France, or an English mayor, decides all causes finally, where the matter in contest is not of the value of four gold ducats. The police is under the direction of the consuls of the merchants and their assessors. From these courts there lies an appeal to the vice-legat, who refers them to the rota, being his council, and composed of five auditors; and from this tribunal the parties may appeal to Rome. Among the many fine churches at Avignon, that of the Celestins seems to have the preference, in the middle of the choir whereof is the tomb of Pope CLEMENT VII. Seven Popes successively resided in this city seventy years, viz. from 1307, to 1377.

The valley of Barcelonette is a little principality in the Maritime Alps, having the Ambu-  
netto val-  
nois, and part of Dauphiné, on the north;  
the county of Nice, on the east; and Provence,  
on the south and west; the only town of any  
consequence being so named.

Barcelonette situate on the river Hubaye, twen-  
ty miles south-east of Ambrun, built about the  
year 1230, by RAIMOND BERENGER, Count  
of Provence, who gave it that name in memory of  
his ancestors, who came from Barcelona in Ca-  
talonia. This principality was anciently a part  
of Provence, but the natives in the year 1388,  
revolted from the French, and recognized AMA-  
DEUS VII, Duke of Savoy, for their Sovereign.  
By the treaty of Utrecht, an. 1713, it was yielded  
to France; and by an arret of the council of  
state the following year, it was united again to  
Provence.

The islands of Provence are, 1. Those of St. Margaret and Honorat. 2. The Hieres. And, islands of  
3. Those of Marseilles. The isles of St. Marga-  
ret and Horet lie a little to the southward of  
Antibes; which, with Cape Garoupe, form a  
noble road, called the Gourjean, where there is  
excellent anchorage. The isle of St. Margaret lies  
three leagues south-east of Cannes, being a mile  
in length, and a quarter of one broad, defended  
by three forts, and was known to the ancients by  
the name of Lerus.

The island of St. Honorat, *olim* Lerina, is a  
little island separated from St. Margaret's by a  
channel a quarter of a league over, and is defended  
by a great tower.

The islands of Hieres lie south-east of Toulon, The  
and with the opposite shore form one of the finest  
roads in the Mediterranean, being about ten  
leagues long, and six broad, and is usually the  
place of rendezvous of the royal navy; these islands  
are three in number, viz. the Island of Porquerolle,  
the Island of Portecroz, and the Island of  
Levant. That of Porquerolle was called by the  
ancients Proten, and is about four miles in length,  
and one in breadth. The island of Portecroz,  
known to the ancients by the names of Pomponi-  
ana and Mefen, lies six miles to the eastward of  
Porquerolle, and has a castle of the same name  
situated on a rock.

The

CHAP.

X.

The  
islands of  
Marseilles.

The island of the Levant, *olim* Hypæa, lies the most easterly of any of them, being four miles in length, and one in breadth.

The islands of Marseilles lie a little to the southward of that city, and are three in number, viz. If, Ratoneau, and Pomegues. CÆSAR called them the Massilian islands. The Isle of If took its name from the yew-trees which grew there, If being French for a yew-tree: it has a castle in the middle of it well furnished with artillery. The isle of Ratoneau is a dry barren rock, about a mile and a half in length, and half a one in breadth, having a fort on the top of it. The isle of Pomegues is almost as large as Ratoneau, and defended by a large tower.

The ancient  
state of  
Provence.

Provence, like the rest of France, before the Romans subdued it, was divided into several little principalities and states; of which the Cavares and Salii were most powerful. In the division of Gaul by AUGUSTUS, this was stiled *Gallia Narbonensis Secunda*. On the decline of the Roman Empire, about the year 416, the Goths possessed themselves of it; then it became part of the kingdom of Arles, or Burgundy; afterwards it was governed by its own Counts for above four hundred years; and about the year 1481, CHARLES the last Earl of Provence, left it by will to LEWIS XI. King of France, to which kingdom it has been ever since united.

Trade of  
Provence.

The trade of this province, according to the French writers, is exceeding great; and indeed in this, and in every other instance, where these people speak of themselves, some allowances must be made for their partiality. Nor is this species of folly confined to the French alone; every son of ADAM is apt to enlarge and magnify things beyond their due proportion, when they have any relation to himself. When a man treats of the power, wealth, or trade of the country where he was born or educated, he always makes the most of them; imagining, I presume, that it may reflect some honour upon himself, who is a subject or member of it. But notwithstanding allowances must be made for the partiality of the natives, certainly they are best qualified to give us a state of these things, and therefore we are obliged to have a regard to their estimates.

To Italy.

The French relate, that they export annually from the port of Marseilles to Italy, the value of three millions fifty thousand livres of the product and Manufactures of Languedoc, Dauphiné, and Provence, viz. six thousand bales of cloth, serges, and other woollen manufactures, being of the value of two millions of livres, (I presume they mean when they come to market, and not prime cost.) Of almonds, the value of two hundred thousand livres. Two hundred barrels of honey, amounting to fifty thousand livres; and as much in prunes and figs. The value of fourscore thousand livres in salted eels, olives, and anchovies. The value of twenty thousand livres in oil, grain and flour. Six thousand bales of cotton-wool made at Marseilles, of the value of three hundred and fifty thousand livres. Strong waters, the value of an hundred thousand livres. Cotton waistcoats and stockings, and thread and worsted stockings, the value of two hundred thousand livres. All which amounts to 3,050,000 livres, being about three hundred thousand pounds English money.

On the contrary, they import annually from Italy to Marseilles, six thousand quintals of the hemp of Piedmont, at six livres the quintal or hundred weight. As many quintals of rice from

the same country, by way of Nice and Onelia, at seven livres the quintal. Two thousand quintals of rice from Lombardy, by the way of Genoa and that coast, at the same price with that of Piedmont. Fifteen thousand charges of bread-corn from Venice and Ancona, at fourteen livres a charge, which I take to be about a quarter, or eight bushels English. A thousand charges or quarters from Sardinia and Sicily; and as much from Civita Vecchia, at the same price. Fifteen hundred quintals of sulphur or brimstone from Civita Vecchia and Ancona, at four livres ten sols the quintal. Two hundred quintals of anniseeds from the Pope's territories, at eighteen livres the quintal. Seven hundred and fifty chests of manna, which they gather in Sicily, the Pope's territories, and about mount St. Angelo in Calabria, (of which the last is the best) amounting to three hundred thousand livres. Two thousand six hundred bales of fine silk, of the growth of Savoy, Piedmont, the Milanois, Lombardy, Bologna, Ferrara, and Sicily, consisting of two quintals the bale, at nine hundred livres the quintal, which is brought into France by the way of Pont Beauvoisin. A thousand bales of fine silk of two quintals each, imported into Marseilles by sea. All which merchandizes, and some other small articles, amount to 3,335,350 livres.

The trade from Marseilles to Spain is much more considerable than that to Italy. They send to Spain annually the value of above twelve hundred thousand livres in linen of all sorts, stuffs of Tours, brocades, taffeta's, and other wrought silks. The value of thirty thousand livres in galloons and gold and silver lace; in counterfeit galloons, lace and pins. The value of ten thousand livres in box-combs and others, made at Marseilles and in the neighbourhood. But all this is nothing in comparison of the trade of gold and silver stuffs from Lyons, brocades, wrought silks, ribbands, Chaumont laces, Avignon taffeta's, hard ware, Puy laces, linen of Britany, Rouen, &c. the camlets of Lisle in Flanders, the serges and coarse woollen cloths of Nismes and Auvergne, with their fustians and dimities, which amount in the whole to the value of six millions two hundred and fourscore thousand livres. Other merchandize of Marseilles, consisting of hats, galls, paper, tobacco, prunes and thread, amounting to an hundred and fourscore thousand livres. Cotton-thread of Jerusalem, gum-arabick, galls of Aleppo, drugs of all kinds, saffron, &c. amounting to fifteen hundred thousand livres. The total of all which sums, is nine millions an hundred and seventy thousand livres.

On the contrary, they annually import from Spain the value of eight millions an hundred and fourscore thousand livres in cochineal, quinquina, indigo, Campechy-wood, wool of Segovia and other places, sarsaparilla, sugar, vermilion, silk, liquorice, pieces of eight, oil, dried raisins, &c.

As to their Turkey or Levant trade, they send annually to Constantinople twelve or fifteen sail, of which there are four or five ships, and the rest small barks. The merchandize they carry thither of their own growth or manufactures, or woollen cloths or serges, caps, paper, hard ware, clocks and watches. The goods they carry, which are the produce of other countries, are spice, cochineal, powdered sugars, indigo, sarsaparilla, quicksilver, arsenick, Brasil and Campechy-wood, white lead, tin-plates, wire, and other small articles.

The

CHAP.  
X.

The goods imported from Constantinople to Marseilles, are sheeps wool, goats hair and goats wool, buffaloes hides, and other skins, yellow wax, allum, mastick, chagrin-skins, box-wood, cotton, and other small articles. The customs at the port of Constantinople do not amount to more than three per cent. on merchandizes inwards or outwards.

To the port of Smyrna, the French send annually seven or eight ships, and about as many small barks. The merchandizes exported thither, are much the same as those sent to Constantinople; only the French find a greater vent for their caps, which the Arminians and Greeks take off their hands.

The returns from Smyrna to Marseilles are made in cotton, cotton-linens, hempen yarn, sponges, goats, wool, camlets, Turkey carpets, goats hair, yarn, galls, drugs, mastick, and Scio-turpentine, which is esteemed the best in the Levant.

To Salonica, or Thessalonica, they export from Marseilles English cloth, or such as they make in imitation of it, paper, cochineal, spices, tin, wire, tin-plates. And they import from thence hides, wool, wax, silk, cotton-thread, allum, sponges, and tobacco.

The number of ships which go to Canea in the isle of Candia, are very uncertain, it depends upon the crop of corn and oil. Some years an hundred barks sail thither, carrying English-cloth, French-cloths, serges, caps, spices, and about an hundred thousand livres in silver; making their returns from thence in oil for the making of soap, wax, bread-corn, and some cheese.

They have some pedling trade also with the islands of the Archipelago; and there is a particular company of merchants at Marseilles, who trade to Satalia, a sea-port of Pamphylia in the Lesser Asia, who carry only silver thither, and bring back wool, goats hair, wax, cotton-thread, gum-dragant, opium, and corinths or currants.

They do not send above two or three ships in a year to Scanderoon, the port-town to Aleppo, which carry and bring back the same goods as those which trade to the other ports of Turkey above-mentioned. The trade thither was heretofore more considerable, but the excessive duties which the Bassa's lay on the caravans from Persia and India, occasions their travelling on to Smyrna, where the neighbourhood of the port prevents those extortions.

The trade to Tripoli and Sidon, in Syria, is inconsiderable, as is that to Cyprus.

To Alexandria, the port town to Grand Cairo in Egypt, they usually send from Marseilles ten or twelve ships, and four or five barks with merchandize and treasure. The goods are caps, paper, spices, drugs for painting, coral, wire, and other hard ware: for which they bring back in return, hides, flax, wool, cotton-thread, saffron, wax, dates, aloes, incense, coffee, myrrh, white plumes, herons feathers, elephants teeth, and gum lacque. The customs here also are three per cent. upon all merchandizes; but nothing is demanded for treasure.

The military government of Provence, and fortified towns.

As to the military government of Provence, they have a governor-general and a lieutenant-general; besides four other lieutenant-generals, who command in their respective districts; the first in Aix and its dependance; the second in Arles; the third at Marseilles; and the fourth at Grasse. The fortified towns in this province are very numerous, and are, Sisteron, Seyne, the castle of

VOL. II.

St. Vincent, Guillaume, Colmars, Entrevaux, Antibes, the islands of Lérins, which comprehend those of St. Margarets and St. Honorats, Grasse, St. Tropez, Hieres, Toulon and its forts, Marseilles and its citadel, the islands of Chateau d'If, Portegue and Rattonneau, Notre-dame de la Garde, Aix, Pertuis, Arles, Tarascon, Forcalquier, Apt, Brignoles, St. Maximin and Barjols.

## CHAP. XI.

*Contains a description of the province of Languedoc, olim Occitania, seu Volcarum Regio.*

Languedoc is supposed to have taken its name from the language of the country, where the people say *oc* instead of *oui*, yes; and that which renders this opinion the more probable is, that in some of their ancient records it is called *Lingua-doc*.

CHAP. XI.  
Languedoc, the name.

This is the most southerly part of France, and is of a very irregular figure, large at both ends, and slender in the middle, like a wallet, being bounded by Lyonois and Guienne on the north; by the river Rhone, which divides it from Dauphiné and Provence on the east; by the gulph of Lyons and the Pyrenees, which separates it from Spain, on the south; and by Gascony, on the west; extending in length from east to west above seventy leagues, but is so indented about the middle by the province of Rouergne on the one hand, and the gulph of Lyons on the other, that it is not above ten or twelve leagues broad in that part, tho' it be thirty-two leagues broad towards the east, and almost as many on the west.

Situation and extent.

The north-east part of this country is very mountainous, being taken up by the Cevennes; but the western generally plain and low till we come towards Rouffillon and the Pyrenees. The air is for the most part extremely pleasant and healthful, insomuch, that the air about Montpellier is reckoned an infallible cure for a consumption, where the patient is not too far gone; and they are said to abound in medicinal herbs more than any country in Europe.

Face of the country.  
The air.

The principal rivers are the Rhone, the Garonne and the Loire, which have been already described. Here are also the Tarn, the Agout, the Allier, the Aude, and several other rivers.

The Tarn rising in the Gevaudan, takes its course westward, and passing by Alby, unites its streams with the Agout, and afterwards with the Aveson, and a little below falls into the Garonne. The Allier also rising in the Gevaudan, runs northward thro' the Lyonois till it discharges itself into the Loire. The Aude rises in the Pyrenees, and taking its course first northward, then turns about to the eastward, and falls into the gulph of Lyons to the eastward of Narbonne. The Agout rises in Rouergne, and running westward, unites its waters with the Tarn and some other streams, and afterwards falls into the Garonne.

But what is most admired in this country is the canal royal, upwards of an hundred miles in length, by means of which there is a communication between the Ocean and the Mediterranean. It is related by some of their historians, that the Romans had a design to have effected this, and after them CHARLEMAIN and FRANCIS I; but in the reign of HENRY IV, anno 1598, it was actually examined into and adjudged to be feasible. The Constable MONTMORENCI ordered a view to be taken of the grounds thro' which the canal was to

Rivers.

CHAP.  
XI.

be conducted. Cardinal RICHLIEU also had determined to put this project in execution, but was prevented by other affairs. And according to the French writers, this glorious undertaking was happily reserved for LEWIS le Grand, whose conduct they can never sufficiently admire. He appointed commissioners to examine into it in the year 1664, and by the advice and direction of that celebrated engineer Monsieur RIQUET and his sons, it was begun in 1666 and finished in the year 1680, when the old engineer died before he had made any experiment of the success of his labours, his sons making the first essay the following year 1681. They found great difficulties in effecting this work: the unevenness of the ground, the mountains, rivers and torrents they met with in their way, seemed to render the execution of it impossible. but where the ground sunk, they raised the water by sluices, of which there are fifteen towards the Ocean, and forty-five on the side of the Mediterranean, reckoning from the highest ground where they began to work. When they met with any mountains, they either levelled them or pierced them through. The most considerable overture is that of Malpas, which they dug thro' two hundred and forty yards, to make a passage for the canal, though it was almost all rock. The canal here is eight yards broad, besides the banks on the side for horses to draw the boats. When they found rivers or torrents in their way, they laid bridges and aqueducts over them, and the rivers frequently run underneath the canal, and sometimes they diverted the current another way. There are abundance of large basins and reservoirs to supply the canal with water when there is occasion; the most considerable of which is at St. Ferreol, that being about two thousand fathoms in circumference, and near ninety foot deep, which receives the waters from the black mountains, that are kept up by a caufey and three strong walls. This reservoir lies upon the highest ground which the canal goes over, so that the water can be let out either towards the Ocean or the Mediterranean. The voyage between the one sea and the other by the way of the rivers Garonne, Lers, and this canal, may be performed in about fifteen days. But what renders it less advantageous than it would otherwise be, is the dangerous coast of Languedoc, there not being one port on that side where shipping can ride with any tolerable safety. There is not a more turbulent stormy sea in the Mediterranean than the gulph of Lyons, nor a worse shore for ships to come upon which require any depth of water, and this no doubt makes the merchants avoid it as much as they can; accordingly we find most of the produce and manufactures of Languedoc shipped at Marseilles in Provence.

There is no part of France which afford so many springs of mineral waters as Languedoc; but of these hereafter.

Division.

This province is usually divided into the higher and lower Languedoc; the higher Languedoc is again subdivided into, 1. Part of the diocese of Montauban. 2. The diocese of Alby. 3. Castres. 4. Lavaur. 5. Thoulouse. 6. Rieux. 7. St. Papoul. 8. Mirepoix. And, 9. Part of Cominges.

Subdivision.

The lower Languedoc comprehends, 1. The diocese of Alet. 2. Carcassone. 3. Narbonne. 4. St. Pons. 5. Beziers. 6. Ladeve. 7. Agde. 8. Montpellier. 9. Nismes. 10. Uzes. 11. Viers. 12. Alais. 13. Meude. And, 14. Pui.

Upper Languedoc.

There are not more than forty parishes of the diocese of Montauban in the province or govern-

ment of Languedoc; of which the chief are, 1. CHAP. Castle-Sarasin. 2. Montech. And, 3. Villemur. XI.

Castle-Sarasin, *Castrum Saracenum*, is a little town situated at the confluence of the rivers Aisn and the Garonne, four leagues from Montauban, considerable for little but the ruins of an ancient castle.

The diocese of Alby, *Albigensis Tractus*, is bounded by Rovergne on the north and east, and by the diocese of Thoulouse on the south-west. The natives of this country, the Albigenes, seem to have made the earliest and the most vigorous opposition to the errors and superstitions of the church of Rome, particularly their doctrine of Transubstantiation, of any people in Christendom; and were frequently encouraged and supported by their own and other Princes. For instance, the Count of Thoulouse, the King of Arragon, the Counts of Foix, Cominges, Bearn, &c. who were also sovereign Princes, which occasioned the Pope's arming a Croisado against them, about the beginning of the thirteenth century, and transferring their dominions to those that could conquer them. This gave the French King a handle to fall upon the Count of Thoulouse, and deprive him of his territories, which he united to the crown of France, assigning only the county of Venaissin to the Pope for his share of the plunder, as has been observed already in treating of the Venaissin. The chief towns in the diocese of Alby are, 1. Alby. 2. Gaillac. 3. Rabesteins. 4. Cardelins. And, 5. Realmont.

Alby, *Albiga*, is situated on an eminence near Alby city. the river Tarn, which encompasses the better half of it, about three hundred miles to the southward of Paris, and forty north-east of Thoulouse, admired for the fine prospect it affords of the neighbouring country, especially from a noble terrace beautifully planted with trees, upon which the citizens walk out in the evening. It has been an Archbishop's see ever since the year 1676, who is temporal as well as spiritual Lord of the place. The cathedral is dedicated to St. CECILIA, the choir whereof is one of the finest in the kingdom.

Gaillac is situated on the river Tarn three leagues below Alby, remarkable for an abbey of Benedictines, and for producing some of the best white wine in France. At this place the river Tarn begins to be navigable.

Rabesteins is situated also on the same river to the westward of Gaillac, and remarkable for its excellent wine.

Realmont is pleasantly situated on the river Agout, two leagues to the southward of Alby; it was one of the first towns that embraced the reformation, and became a place of arms for the Protestants during the civil wars of France.

The diocese of Castres lies to the southward of that of Alby, the chief town whereof is Castres, *Castrum Albigensum*, situated twenty miles south of Alby: It is a fair city; divided in two parts by the river Agout; a bishop's see, who is suffragan of Alby, and capital of a country, govern'd by its own Lords till the year 1518, when it was united to the crown of France.

The diocese of Lavaur lies between that of Alby and Thoulouse. The chief towns are, 1. Lavaur. 2. St. Paul. 3. Revel. 4. Sorreze.

Lavaur is situated on the river Agout, fifteen miles to the eastward of Thoulouse; it was one of the principal cities of the Albigenes, which occasioned the Catholics to call it, *Sedes Satane, atque erroris baretici primatia*. Pope JOHN XXII. established

CHAP. XI. established the episcopal see about the year 1318.

The diocese or archbishoprick of Thoulouse extends itself along the banks of the river Garonne, being bounded by the diocese of Alby on the north-east, the county of Foix on the south, and Languedoc on the west. The chief towns are, 1. Thoulouse. 2. Verfeuil. 3. Ville-franche. 4. Hauterive. 5. Montequiou. And, 6. Mongiscar.

Thoulouse, *Tolosæ Colonia, Civitas Tolosatum, Tectosagum*, the capital of Languedoc, is situated in a large plain on the river Garonne, in the latitude of 43 degrees 40 minutes near the confines of Gascony, about an hundred miles to the westward of the Mediterranean, and sixty north of the Pyrenees: it is one of the largest cities in the kingdom, and has a fine stone bridge over the Garonne; the houses are built of brick and make but a mean appearance generally, tho' there are some magnificent edifices. It is said to be extremely well situated for trade, lying almost in the midway between the Ocean and the Mediterranean, and near the west end of the royal canal, by which those seas have a communication; and yet the place is neither rich nor populous, there being not more than eighteen or nineteen thousand families in it. And indeed after all the boasts of this mighty canal, it seems there are so many sluices upon it, that the trouble and charge of the navigation make it very little used. The merchants chuse to send their goods by long sea, round about Spain in time of peace, rather than by the way of this canal; though it must be confessed that in time of war it is of use to the country, as they can transport their goods from one part of the country to the other, without hazarding their being taken at sea. The publick buildings most taken notice of are, the cathedral dedicated to St. STEPHEN, the choir whereof is very fine, lofty and well enlightened, but the Nef or Nave is not answerable to it. The church of St. Sernim or Saturnin, first Bishop of Thoulouse, is a large magnificent edifice, but very dark; much valued however by good Catholics for its vast treasury of reliques, as the church of the Jacobins is for the shrine of THOMAS AQUINAS. The Dorade, the church of the Carmelites, that of the Dominicans, and the Dalbade are esteemed noble structures; besides which there are a great number of handfom colleges, but the university is in a manner abandoned. The college of the Jesuits is a large and beautiful edifice; but this does not belong to the university. The Charreufe also is well worth the viewing, as are the Archbishop's palace and the town-house. Along the Garonne there is a handfom quay or key, with a Course, consisting of a fine walk of trees, as they have in most of the great cities in France.

This town is of great antiquity, ancient histories speak of it as one of the most flourishing cities of the Gauls, and the capital of the Tectosages, who inhabited this province, and conquer'd several countries in Greece and the lesser Asia, and planted colonies there. It was afterwards the capital of a Roman colony, of the kingdom of the Visigoths and of Aquitain; and lastly, it was the seat of the Earls of Thoulouse, who were sovereigns of this country for several hundred years, till the French King and the Pope divided their territories between them, as has been mentioned already. Here are still the ruins of some Roman buildings, as of an amphitheatre, capitol, &c. And we must not forget the relation they give us of Q. SERVILIUS CÆPIO's covetousness, who being consul in the 658th year of Rome, plundered their temples of

a great quantity of gold, and sent it to Marseilles, ordering the convoy to be cut in pieces, that he might engross all the treasure to himself, and not be accountable to the senate for it; which being discovered by the Romans, they confiscated his estate and applied it to publick uses, and the consul died in exile; whence came the proverb, *Aurum Tolosanum*, to signify an ill-gotten estate.

The diocese of Riez lies to the southward of that of Thoulouse, on the confines of Gascony, the only considerable town whereof is Riez, situate on the river Garonne, about five and twenty miles to the southward of Thoulouse: the cathedral has nothing remarkable, but the episcopal palace is a handfom structure; which is all the description the French writers give us of this city.

The diocese of St. Papoul lies to the southward of that of Alby; the chief towns whereof are St. Papoul, *Fanum Papuli*, situate at the foot of mount Moire, about thirty miles south-east of Thoulouse, considerable on account of its being a bishop's see. And,

Castelmandary, *Castellum Arinorum*, situate on a hill about a league to the westward of St. Papoul; the royal canal passes thro' this town, and on account of the steepness of the hill here, which would occasion too precipitate a flood of waters, they have erected five locks upon it with great sluices one above another, and large basins between each, whereby the water is retained, and the navigation continued.

The diocese of Mirepoix lies to the southward of that of St. Papoul. The chief towns are Mirepoix, Carlat, La Roque, and Fangeaux.

Mirepoix, *Mirapicium, Mirapicis Castrum*, is situated on the river Lers, about twenty miles south-west of St. Papoul.

Carlat lies about four leagues from Mirepoix, and is only remarkable for being the place of Monsieur BAYLE's nativity, who wrote that excellent critical dictionary which goes by his name, and many other valuable tracts. He was born in the year 1648, and died at Rotterdam the 28th of December 1706.

The diocese of Cominges is part of the province of Guienne, only eleven parishes of it belong to Languedoc, and are called Little Cominges; the chief parishes whereof are Valentine and St. Beat. But I shall give an account of this diocese in the description of Guienne.

In the Lower Languedoc lies, first, the diocese of Alet, south-east of that of Mirepoix; the chief towns whereof are, 1. Alet. 2. Limoux. 3. Quilla. 4. St. Paul. And, 5. Caudies.

Alet, *Elesta*, is situated at the foot of the Pyrenees, upon the river Aude, twenty miles south-east of Mirepoix.

The diocese of Carcassonne lies to the northward of Alet. The chief towns are, 1. Carcassonne. 2. Arebes. And, 3. Grace.

Carcassonne, *Carcaso*, is situated on the river Aude, twenty miles to the northward of Alet, and thirty west of Narbonne. It is divided into the high and low town by the river. The lower town is well built, and the streets spacious. It has a brisk trade, very populous, and esteemed one of the finest towns in Languedoc. The churches, convents and publick buildings all make a good appearance; and there are very beautiful walks of trees about it. The manufacture of cloth here is considerable. The castle is strongly situated, and commands the town.

CHAP. XI.

The diocese and city of Riez.

The diocese and city of St. Papoul.

Castelmandary.

The diocese and city of Mirepoix.

Carlat, where Mr. Bayle was born.

Part of the diocese of Cominges

Lower Languedoc.

The diocese and city of Alet.

The diocese and city of Carcassonne.

CHAP. XI. The diocese of Narbonne lies upon the gulph of Lyons, to the eastward of Carcassonne. The chief towns are, 1. Narbonne. 2. Capetan. 3. Bisan. 4. Caunes. 5. Peyriac. 6. Sigean. 7. Burban. And, 8. Tuchan.

The diocese of Narbonne city. Narbonne, *Narbo-Martius, Decumanorum Colonia*, is situated in a bottom, almost surrounded by mountains, on a canal which affords it a communication with the canal royal and the river Aude on the one side, and with the Mediterranean on the other; from which last it is about two leagues distant, and sixty from Montpellier to the west. It is a large town, and was strongly fortified, but their late Kings demolished the fortifications on account of their adhering to the Calvinists, leaving nothing standing but the ramparts. The cathedral is an old Gothick structure, which has very little in it to be admired, except the picture of the resurrection, and the raising LAZARUS from the dead. There are besides five parish-churches in the place, and several monasteries. They suffer great inconveniences when any heavy rains happen to fall, by the floods, which run down in torrents from the mountains; and the dampness of the country makes it very unhealthful, tho' anciently, when it was well drained, they had a very good air. The Romans esteemed it so much, that they made it the capital of their first colony in Gaul, and beautified it with a capitol and amphitheatre of marble, aqueducts, and other useful and magnificent edifices, the ruins whereof are still visible. It is at present the see of an Archbishop, who by virtue of his office is president of the States of Languedoc. The Archbishop's palace is a kind of fortress, encompass'd with large square towers. The other publick buildings have little remarkable in them.

The diocese of St. Pons. The diocese of St. Pons is situated to the northward of that of Narbonne, in a barren mountainous country, where the produce of the soil will scarce pay their taxes, but they have excellent marble in their quarries. The chief towns are St. Pons, Orlagues, Cessenon, and Oloufan.

St. Pons city. The little city of St. Pons stands among the mountains, about thirty miles to the northward of Narbonne, and was made a bishop's see in the year 1318; but I don't find it considerable on any other account.

The diocese of Beziers. The diocese of Beziers lies between that of Narbonne and the province of Rouergne, and is one of the most fruitful parts of Languedoc, producing corn, wine and oil in abundance. The chief towns are, 1. Beziers. 2. Celles. 3. Bec de Roux. 4. Colombiers. 5. Marviel. And, 6. Vendres.

Beziers city. Beziers, *Biteria*, is situated fifteen miles north-east of Narbonne and two miles north of the Mediterranean. It stands on a hill, at the foot whereof runs the river Orbe: the royal canal also passes by it. The prospect from the terrace or belvedere before the cathedral church, says my French author, is altogether enchanting, extending over the valley thro' which the river Orbe passes, and the hills beyond it rising insensibly, form a kind of amphitheatre covered with olives and vineyards. The town is large, but not proportionably populous. The cathedral has nothing remarkable in it. The Jesuits college is a very elegant building. The Romans made it a colony in the time of JULIUS CAESAR, sending the young soldiers of the seventh legion thither, which occasioned it to be called *Colonia Septimanorum Juniorum*; and here were two temples erected in honour of JULIUS and AUGUSTUS. It was governed by its particular Counts before it was united to the crown,

which happened about the year 1247. The famous engineer PAUL RIQUET, who made the royal canal, was a native of this city.

The diocese of Lodeva. The diocese of Lodeva is a dry barren country, bordering on the province of Rouergne and the Cevennes, which does not produce corn enough for the subsistence of the natives; but their trade in cattle, which they feed upon their mountains, and their manufactures of cloth and hats, brings a great deal of money into the country, and renders it one of the richest parts of the province. The chief towns are, 1. Lodeva. 2. Clermont. And, 3. Canet.

Lodeva, *Luteva, Forum Neronis*, is situated at the foot of the mountains of the Cevennes, thirty miles to the northward of Beziers and the Mediterranean, more remarkable for its antiquity than its present grandeur. The Bishop is temporal as well as spiritual Lord of the place, and assumes the title of Count of Montbrun, an adjacent castle.

Clermont. Clermont is a little town situated on an eminence, at the foot whereof runs the river Lergue, near which is a royal manufactory, where they make most part of the cloth which is carried to the Levant.

The diocese of Agde lies upon the Mediterranean, and the royal canal, to the eastward of Beziers, and south of Lodeva. It is one of the richest countries in the kingdom, having a great trade in corn, wine, oil, silk and wool. The chief towns are, 1. Agde. 2. Pezenas. 3. St. Tiberi. 4. Brescon. 5. Sette. And, 6. Meze.

Agde, *Agatha*, is situated on the river Eraut, about half a league from the place where it falls into the Mediterranean, and stands fifteen miles to the eastward of Beziers. It is a little populous town, extending along the river Eraut, which forms a port for small barks, and is for the most part built of a black stone. There is a little fort at the mouth of the river for its defence. Most of the inhabitants are merchants or seamen. There is a chapel near this place dedicated to the blessed Virgin, which brings a great concourse of people hither, particularly seafaring men, who make their vows before her image for the success of their voyages, and resort hither with their offerings when they have had any remarkable escape.

Sette. Sette is a port-town, situate on the bay of Maguelonne, to the eastward of Agde, which the late King fortified for the protection of the trade of this coast.

Pezenas, *Piscene*, stands on an eminence near the river Peyne, three leagues north of Agde, esteemed one of the finest situations in Languedoc. There is in it a collegiate church, a college of the priests of the oratory, several convents and other handsome buildings.

The diocese of Montpellier. The diocese of Montpellier is a mighty agreeable country, being covered with olives and vines, and the air preferable to any in Europe. Tho' their lands are not the richest, they are so well cultivated that they yield all kinds of grain. It lies upon a bay of the Mediterranean sea called Maguelonne. The chief towns are, 1. Montpellier. 2. Gange. 3. Lunel. 4. Frontignan. 5. Agnana. 6. Montferand. And, 7. Barave.

Montpellier city. Montpellier, *Mons Pessulanus, Mons Puellarum*, is pleasantly situated on a hill, at the foot whereof runs the river Lez, two miles to the northward of the bay of Maguelonne, and sixty to the eastward of Narbonne. To the northward there is a prospect of a fine country, and to the southward they have

CHAP.  
XI.CHAP.  
XI.

have a near view of the Mediterranean. Nor does the agreeable situation more recommend it than the healthfulness of the air, which occasions foreigners of consumptive or weakly constitutions to resort hither from all parts. The city is not large, or generally well built, though there are some good houses in it. The inhabitants are computed to amount to between two and three thousand. There is a citadel which commands the place, erected to bridle the Protestants, who were masters of it in the civil wars, till LEWIS XIII. took it from them anno 1623. The principal buildings are the palace of justice, where their courts are held, the royal college, instituted for human learning, and the churches of St. Peter and St. Mary. But what this city is most considerable for, is its university, chiefly frequented by students in physick, who could not, says my author, have chosen a more agreeable or commodious situation in France, for the climate is extremely serene and temperate, and the country so abounds with vegetables, that it is but one large physick-garden. The number of apothecaries in this small city is incredible, some say near two hundred, who all live very well however on the many compositions they make, which from hence are distributed to all parts of Europe, as confection of alkermes, Hungary-water, oil of spike, capillary-syrup, essences, perfumes, treacle equal to that of Venice, &c. The King's physick-garden without the town is well stored with medicinal herbs, digested into several partitions, each having an inscription over the door, shewing what kinds it contains. The inhabitants are polite and sociable; their women the handsomest in France, and extremely free in conversation, insomuch that there is a French proverb that says, the women of Montpellier are so wise, that they have nothing to learn on their wedding-day. This town was called *Mons Puellarum* from a hermitage which stood here before the city was built, inhabited by two young women, of whose sanctity the people had a very great opinion.

An English physician who travelled to Montpellier, says he found several consumptive people there, who came from all parts of Europe, but especially from England, to breathe this air; and he observed the good effects of it upon bodies of a moist and phlegmatick temperament; but in dry and choleric constitutions the remedy rather exasperates it, and the patient soon breathes his last. One of the gates of this town is built after the model of a triumphal arch, on which there are several bas-reliefs and inscriptions expressing the glorious actions of LEWIS XIV. for this being a place to which foreigners resort from all parts of Europe, he could not gratify his vanity better than by erecting such a monument of it here. On one side we see religion trampling upon heresy with this inscription, *Extincta Hæresis*. On another part are represented the two seas joined by the royal canal, the inscription, *Junctis Oceano & Mediterraneo Mari*. The other side is adorned with trophies, towns and provinces conquered by France, with this inscription, *Sub Oculis Hostium, Belgii Arcibus Expugnatis*, and others of the like nature. The walks about the town are extremely pleasant, where the company who resort to this city divert themselves in the evening: and though the houses don't make a very grand appearance without, as has been observed already, yet they are most of them built with free stone, and very commodious. The principal manufactures besides those mentioned above, are those of silk and wax; the last of which

they employ a great many hands in refining and whitening, as they do others in making verdegrease, *Viride Aëris*; of which I shall give a further account hereafter.

Frontignan is situated on the bay of Maguelone, 4 leagues south-west of Montpellier, famous for the muscadine-wine which grows in a valley, and on the sides of the hills which surround it, and for the delicious raisins which are made of these grapes.

The diocese of Nîmes has the mountains of the Cevennes on the north; Provence, from which it is separated by the Rhone, on the east; the Mediterranean on the south, and the diocese of Montpellier on the west. It is generally a plain level country, abounding in corn, wine and oil, besides abundance of silk, which the natives work and improve to great advantage. The chief towns are, 1. Nîmes. 2. Sommieres. 3. Aymargues. And, 4. Beaucaire.

Nîmes, *Nemausus Metropolis, Civitas Nemausensis*, is situated in a fine plain, eight leagues to the eastward of Montpellier, and five leagues north-west of Arles, and is supposed to have taken its name from the woods which anciently surrounded it. It is a large town, containing about twelve thousand families, the streets are spacious, the houses well built, and travellers commend the gardens and fine walks about it. The cathedral and other publick buildings don't seem to have any thing remarkable in them. What Nîmes is most famous for, is the antiquities that are found here, particularly an amphitheatre, the most entire of any in Europe. It is of an oval figure, having two rows of arches which form two open galleries one over the other, consisting of sixty arches each, being an hundred and fourcore and fifteen fathoms in circumference. The entrance is by four doors, placed east, west, north, and south. The building consists of vast large stones, as durable as marble. The arena in the middle of the theatre, where their combats and shews were exhibited, is an hundred feet in diameter, filled up at present with little houses. On several of the stones are bas-reliefs, with the figures of ROMULUS and REMUS suckled by a wolf, combats of gladiators, bulls, &c. The seats of the spectators are demolished, and the dens of the wild beasts filled up, but the outside still makes a tolerable appearance. Here are also the ruins of a temple dedicated to DIANA, and another oblong square building, supposed to be a Roman temple, with antique statues, pillars, and the figures of Roman eagles finely wrought, which sufficiently shew its antiquity, as well as the numerous brass medals and inscriptions dug up here. From the medals our antiquaries conjecture that AUGUSTUS fixed a Roman colony here immediately after the battle of Actium.

The Pont du Gard is three leagues north of this city; it lies over the river Gardon, and is an amazing structure. It is indeed three bridges one upon another, and joins two mountains together: the uppermost serves to support an aqueduct which brought water to the city, and served to fill the arena of the theatre above mentioned when they had sea-fights represented upon it. This aqueduct taking in all its windings, is not less than nine leagues in length. The lowest bridge which lies over the river Gardon has six arches, each of them fifty eight foot wide, and is fourcore and three feet in height. The second bridge is supported by eleven arches, and is sixty seven foot in height. The third, which stands upon thirty five arches, and supports the aqueduct, is five hundred

C H A P.  
XI.

and fourscore feet and an half in length: and the whole height of the three bridges, an hundred fourscore and two feet. The water of the river Gardon was brought into the city by another aqueduct, of which there are still some remains. The aqueduct which was supported by the Pont du Gard, when it came near the city was divided into three branches, one of which brought the water to the theatre, as has been already observed; the second supplied a great fountain at Nîmes, and the third served several private houses.

Beaucaire.

Beaucaire is situated on the west bank of the Rhone, over-against Tarascon, four leagues to the eastward of Nîmes, in which is a collegiate church. But this place is chiefly considerable for the fair of St. Magdalen which is held here, to which merchants resort from all parts.

The diocese of Ufez.

The diocese of Ufez is one of the largest in Languedoc, extending from the mountains of the Cevennes to the Rhone. It produces corn, wine, oil and silk, and feeds great numbers of sheep. The chief towns are, 1. Ufez. 2. Vens. 3. St. Ambrose. 4. Pont St. Esprit. 5. Bagnols. And, 6. Roquemaure.

Ufez city.

Ufez is situated among the mountains, upon the little river Eyfeut, about twelve miles to the northward of Nîmes. It is but a small town, containing seven or eight hundred families. The cathedral is dedicated to St. THIERRY: the terrace on the side of it affords an admirable prospect of the neighbouring country. It is the capital of a Duchy as well as a Bishoprick, and here is the fountain d'Aure, which furnishes the water of the aqueduct of Pont du Gard. All over the town we see great numbers of stone arches, which, according to the natives, were erected to defend them from the heats of the sun in summer.

Pont Esprit.

Pont Esprit is a little town situated about twenty miles to the northward of Ufez, famous for a noble stone bridge over the Rhone, which here runs with incredible rapidity, and was a very dangerous passage while it continued a ferry. This bridge is eight hundred and forty yards long, and five yards sixteen inches wide, sustained by twenty-six arches. It was begun in the year 1265, and finished about the year 1309, being built with the offerings made by devout people at a church or chapel dedicated to the Holy Ghost, and famous for many pretended miracles wrought there. Pope NICHOLAS V, in one of his bulls, which grants indulgencies to those who should visit the said chapel and hospital of the Holy Ghost, says, that God being touched with the misfortunes of his faithful servants who visited the church and hospital of the Holy Spirit, who were frequently shipwrecked at this passage of the Rhone, had sent his angel under the form of a shepherd, who had marked out the place where they should build a bridge; and the church, the hospital and bridge, have still a very good revenue for their support, arising from the charities of devout pilgrims, which the King has augmented by a duty laid on all salt that passes the bridge, amounting to eight or nine thousand livres per annum. There is a strong citadel also at the foot of it for its defence, it being a very important pass.

Bagnols.

Bagnols, or Baignols, *Balneolum*, is situated on the side of a hill near the river Cese, two leagues to the southward of St. Esprit. It is a little town, consisting of about nine hundred houses, inclosed with a wall, and fortified against the Camisars in the late civil wars. The great square in the middle of the town is one of the finest in Languedoc,

having a piazza on all sides under the houses which surround it. The river Cese, which passes by it, carries a gold sand.

C H A P.  
XI.

The diocese of Viviers comprehends the lower Vivarez and part of the higher, the residue whereof belongs to the Archbishoprick of Vienne. This country lies along the west bank of the Rhone, to the northward of the diocese of Ufez, and constitutes part of the Cevennes. In the Higher Vivarez the chief towns are Annonay Tournon, Crusol or Cursol. In the Lower Vivarez are Monlaur, Boulogne, Etrange, Privas, Poussin, Viviers, Andiol, Villeneuve and Berg.

Annonay is a small town, situated two miles to the westward of the Rhone, upon the confines of the Lioinois, the capital of a Marquisate belonging to the family of Ventadour, but not considerable on any other account.

Tournon, *Taurodunum*, *Turnonium*, is situated on the side of a mountain, the foot whereof is washed by the river Rhone, having a castle above it. It stands four leagues south of Annonay. The Jesuits have one of the finest colleges in the kingdom here, and there is a handsome convent; besides which, there are several other monasteries in the place. But the French writers do not give us any farther description of it.

Viviers, *Vivarium*, *Abba Helviorum*, the capital of the Vivarez, and the See of a Bishop who styles himself Count of Viviers, is situated among the rocks, a little distance from the Rhone, fifteen miles north of Pont Esprit, and seventy south of Lyons. It is a little ill-built town: the cathedral is a large edifice, and stands above it, but is not admired for its beauty.

The diocese of Mende comprehends the country of Gevaudan, and lies to the westward of the Vivarez; the ancient inhabitants were called Cavali, Gabales and Gabali, and is divided into the higher and lower. The higher is almost entirely inclosed by the mountains of Margarete and Aubrac; the lower makes part of the Cevennes, a barren mountainous country. The chief towns are Mende, Javoux and Marvejols.

Mende, *Mimatum Gabalorum*, or *Mimata*, is a small city of a triangular figure, standing in a valley surrounded with mountains, near the head of the river Lot, seventy miles north of Montpellier, and fifty to the westward of the Rhone. It is an ill-built dirty town, but well peopled, and admired for its excellent fountains. It is the See of a Bishop, who styles himself Count, and is joint Lord of the place with the King. Travellers mention no other publick buildings but the cathedral church and some few convents, which have nothing extraordinary in them. Near this place is an hermitage and chapel cut out of a rock, much frequented by the devout people of the country, who have a tradition that St. PRIVAT suffered martyrdom there.

Marvege is situated in a fine valley, watered by the river Colange, about twenty miles north-west of Mende. It is generally a regular well-built town, considering the country it stands in. It has four gates, at every one of which there is a church and a fountain. The principal square is large, adorned with a fountain and two basins. There are in the town about a thousand families, and they have a good trade, especially at their six annual fairs.

The diocese of Alais has that of Mende on the north-west, and Ufez on the south-east. The chief towns are Alais, Aguemortes and Anduze.

The diocese of Alais.

CHAP.  
XI.

Alais city.

Alais is situated on the river Gardon, about thirty miles to the northward of Montpellier. It is a large populous trading town, with seven gates. The cathedral is the only public building mentioned by the French writers, and this has nothing extraordinary in its structure. It is commanded by a fort, which was built here in the year 1689, to keep the people of the Cevennes within the bounds of their duty. A little below the fort is a noble terrace, which affords a fine prospect of the adjacent country.

Aguemortes.

Aguemortes, *Aqua Mariana*, stands about five miles to the southward of Nîmes, and one to the northward of the Mediterranean; though in the time of St. Lewis it was a port and stood close to the sea-shore, where he built a pharos or lighthouse for the direction of mariners; and here it was he embarked in his expeditions to Africa.

Anduze.

Anduze is situated on the river Gardon, south-west of Alais, and is a considerable place on account of its trade.

The diocese of Puy.

The diocese of Puy comprehends the country of Velais, the most northerly part of Languedoc, and consists altogether of mountains and rocks perpetually covered with snow. The chief towns are Puy, Montfalcon, St. Disier, St. Paulian, Solignac and Alegre.

Puy city.

Puy is situated on the mountain Anis, near the banks of the Loire, about forty miles to the northward of Mende. It is a large city, and has abundance of monasteries in it, but is most remarkable for the cathedral dedicated to the blessed Virgin, in which they pretend to have a great many precious reliques, that draw multitudes of devout people hither, some of which a writer would be cautious of naming, lest it should render the Christian religion ridiculous. And indeed the Roman catholics are infinitely to blame, in giving occasion to men of loose principles to scoff at every thing that's sacred, by making such fooleries the subject of ignorant people's devotions.

The ancient state of Languedoc.

Languedoc was anciently possessed by the Volcæ and the Tectosages; the first inhabited the higher Languedoc, and the other the lower. The Romans made a conquest of it under the consulate of *Quintus Fabius Maximus*, six hundred and thirty-six years after the foundation of Rome; after which it obtained the name of *Gallia Narbonensis*. It remained under their dominion till the reign of the Emperor *Honorius*, who finding the Vandals possessed of Spain, and making frequent excursions into Gaul, which was too far removed from the seat of the Empire, transferred both Gaul and Spain to the Goths, according to the French historians, under the following conditions: 1. That the ancient laws and privileges of the country should be preserved. And, 2. That the Emperor *Honorius* and his successors, notwithstanding a prescription of thirty years, should be at liberty to resume this grant, upon assigning other lands to the Goths. And it was by virtue of this grant that the Goths took possession of *Gallia Narbonensis* under the reign of *Adolphus*. This Prince took up his residence at the mouth of the Rhone, at a place anciently called the palace of the Goths, and Pons St. Giles's. The successors of *Adolphus* enjoyed *Gallia Narbonensis* near three hundred years, under the reigns of thirty of their Kings; the last of whom was killed in battle by the Saracens when they invaded Spain, about the year 714. The Saracens took the advantage of their victory and advanced into Languedoc, extending their conquests as far as Lyons; but

CHAP. XI.  
marching on to Tours, they were encounter'd by *Charles Martel*, and entirely defeated, losing upwards of three hundred and sixty thousand of their men, if we might credit the historians of those times: however, certain it is, they were totally routed and driven out of France by *Charles Martel* and his son King *Pepin*. *Charlemain*, upon the birth of his son *Lewis* the Debonaire, erected the kingdom of Aquitaine, to which he united Thoulouse and great part of the higher Languedoc. During his son's minority he appointed Dukes, Counts and Marquisses in the principal towns and districts, who were confirmed in their governments by *Lewis* the Debonaire. And tho' they had those commands at first only during pleasure, their posterity who succeeded them look'd on the territories they governed as their respective inheritances, and claimed the dominion of them: though the French historians alledge, that they always remained vassals to their Kings, and receiv'd the investiture of their territories from them. *Corson* or *Torson* being appointed Count of Thoulouse by *Charlemain*, was the head of that family, who by their alliances and intermarriages with other petty sovereigns of this province, became in time possessed of the greatest part of it, and so continued till the thirteenth century, when the Albigenes who oppos'd the errors of the church of Rome chose *Raymond VII.* Count of Thoulouse, for their general, which occasioned the Pope to publish a croisade against him; and after a tedious struggle of many years, the territories of the Counts of Thoulouse were divided between the Pope and the French King, as has been taken notice of already; but Languedoc was not expressly reunited to the crown of France till the year 1361. And the author of the new description of France says, their Kings now possess it by right of conquest, and wonders upon what foundation *Moreri* went, when he says that Provence was united to the crown of France upon three conditions: 1. That the governor of it should always be a Prince of the blood. 2. That the King should impose no taxes but by the consent of the States. And, 3. That this province should be governed by written laws, and not by will and pleasure.

The trade and produce of Languedoc is very considerable. The product of the soil and the merchandizes they export are, their wines, which they vend in Italy; oils, which they send to Germany and Switzerland; corn, which they send to Spain, when they happen to have plentiful crops: chestnuts and raisins, which they export to Tunis and Algier; woollen cloth, which they send to Germany, Switzerland and the Levant, and with which they clothe the King's troops: their silk-trade is also very great, tho' it has not been introduced into this province much above fourscore years. After this general account of the trade, my author proceeds to shew what is the proper product of every diocese and great town as follows:

The principal trade in the diocese of Thoulouse, consists in corn and woad used for dying, of which they have vendid formerly more than the value of a million of livres annually; but since the use of indigo has been introduced, the cultivation of woad has been neglected, tho' it dyes a much finer blue. The trade of the city of Thoulouse is inconsiderable in proportion to the extent of the town; it consists in Spanish wool, coarse hangings, and stuffs made of silk and wool, of small value. They search also the sands of the rivers Garonne and Ariège for gold dust, but it is scarce worth their trouble.

Trade and  
produce of  
Montpe-  
lier.

That part of the diocese of Montauban which is in Languedoc produces plenty of corn and wine, but they convert most of the latter into brandy. They have also a great deal of woad, and breed abundance of horses.

In the diocese of Alet, the district of Limoux produces excellent white wine, but it will not bear transporting. They have also a woollen manufacture, and a staple of iron here.

The diocese of Mirepoix produces all kinds of provision and cattle, but they send scarce any goods abroad, except box-combs that are vended in Spain and Italy.

The plains about Castle Manduary abound in corn.

The trade of the diocese of Castres consists in cattle and woollen stuffs, such as serges, bays, &c.

The diocese of Alby has plenty of corn, wine, saffron, cattle, prunes, woad and wool. They export great quantities of dried prunes, crapes, serges, bays, and their Gaillac-wines, which are the only wine of the province that will bear the sea; they carry them to Bourdeaux, where the English buy them up. They pretend also to some coal-pits, but these are not, I have reason to believe, so considerable as they make them.

The trade of the diocese of St. Pons is inconsiderable; what they have consists in corn and cattle, and some woollen manufactures, with the fine marble which their mountains produce.

The diocese of Narbonne produces plenty of corn, esteemed the best in the Kingdom, on which account there are considerable merchants at Narbonne that deal in nothing else. They have also a great deal of oil, but little wine. The salt-works of Periac furnish upper Languedoc with salt.

The diocese of Carcassone is so barren a country, that it does not produce sufficient food for the inhabitants; but they are abundantly supplied by the industry of the natives. The city of Carcassone, says my author, is but one great woollen manufactory, as well as the country about it. What wine they have is good, and they have some excellent quarries of marble of various colours: one is reserved solely for the King's use, which is a white marble with a vein of carnation.

The diocese of Beziers is the richest of the province, producing great plenty of corn, wine and oil. They have also quarries of marble and coal-pits. They make some fine druggets, which are exported to Germany; but the natives in general have not a genius for trade.

The diocese of Lodeve is a dry barren country, and yet one of the richest on account of their woollen manufactures, and that of hats.

The diocese of Agde is of a small extent, but one of the richest in the kingdom. Their wool is fine, and their country produces plenty of corn, wine, oil, silk and salt.

The soil in the diocese of Montpellier is not extremely rich, but is cover'd nevertheless with vines and olives. Most part of the trade of this district is carried on at the city of Montpellier, where they have some species of manufactures almost peculiar to themselves, as particularly that of Verd-de-gris, or Verdegreafe, *Viride Aris*, used in painting and surgery, which is made with copper-plates, and chiefly the business of the women. The copper-plates are about the size of a playing card, but something thicker. They first put two pints of wine at the bottom of an earthen pot, and over the wine lay little sticks across, on which they lay a layer of dried grapes, and upon them a layer of

copper-plates, and then grapes again, and so alternately plates and grapes till the pot is filled; and having covered it with a straw-cover, and left a passage for the vapour of the wine to ascend, they let it stand ten or twelve days. The strength of the wine at the bottom having occasioned a certain green matter to arise on the copper-plates, they take them out of the pots, and lay them in the air to dry, after which the women scrape off the green matter, and this is what we call verdegreafe. The same plates are put to the same use again for two or three years, till they are scraped so thin that they are forced to take others. The wine has the best effect on the copper in summer, when every pot will produce about a pound of verdegreafe. They make at Montpellier annually about two thousand quintals or hundred weight, and the ordinary price is twenty pence a pound. It is vended chiefly in Holland, Germany, England, and Italy.

The wool-trade is the most considerable which is carried on at Montpellier, they import their wool from Smyrna, Constantinople, Sally, Tunis and Spain, and either manufacture it themselves, or vend it unwrought in the neighbouring provinces. They also whiten great quantities of wax, which they bring from the Levant, amounting annually to an hundred thousand livres and upwards, which is in much greater esteem than that made in Holland.

The tanners of Montpellier and Ganges have a good trade in skins, amounting to the value of two hundred thousand livres and upwards. And their strong waters, brandy, cinnamon-waters, Hungary water and other distill'd liquors, are computed to bring them in five hundred thousand livres in time of peace. Salted pilchards is another article, which they vend in Roussillon, Liois and Dauphiné. Their vermilion and confection of alkermes also bring them in a great deal of money, the last of which they vend chiefly in Germany.

They do not make less than four thousand pieces of fustian annually here, at seventeen livres the piece, importing the cotton of which it is made from the Levant, which manufacture is exported chiefly to Spain.

The diocese of Nismes is generally a level country, and one of the richest in France, producing corn, wine, silk, and all manner of provisions in abundance. There are also a great variety of manufactures at the city of Nismes, the merchants whereof have engross'd most of the silk and woollen trade of the province.

The diocese of Uzez, the largest in Languedoc, produces corn, wine, oil, silk and wool, besides abundance of cattle.

In the Vivarez, the mountains called Boutieres are barren, producing little but chefnuts and hemp, and affording pasture for sheep. The mountains near Velay are well cultivated, and yield all manner of provisions but wine; and the country between those mountains and the Rhone is as fruitful as any in Languedoc.

The Gevaudan is a mountainous country, one part of it perfectly barren, and the other produces little but rye and chefnuts. The people are generally mechanicks, and have a good manufacture of serges and other woollen stuffs, which they export to Germany, Switzerland and the Levant, to the value of two millions of livres.

The diocese of Alais is part of the Cevennes, the principal riches whereof consist in woollen manufactures, such as druggets, serges, &c. which are reckon'd stronger and better than those of Gevaudan.

CHAP.

The

CHAP.  
XI.

The Velay is a little country in the mountains, covered with snow for half the year, and exceeding cold; notwithstanding which, they have more than corn sufficient for the inhabitants, and the cattle they feed brings a great deal of money into the country, as does their lace, which they vend in Spain, Germany, and other places.

The commerce of this province is chiefly transacted at fairs in the great towns, of which the most considerable are those of Pecenas, Montagnac and Beaucaire; at the last of which places there has been the value of six millions of livres returned, if I may credit my French author.

The chief springs of mineral waters in this province at Valhs in the Vivarez, five leagues west of the Rhone.

At Youfet and Peyret, in the diocese of Uzez, the last of which is not a quarter of a league from the city of Uzez.

Near Peroul, about a league from Montpellier, is a fountain where the water bubbles up as if it boiled; and if you dig a hole near it, and put water in it, it will bubble like the spring.

At Gabian, a day's journey from Montpellier, in the way to Beziers, is a spring of Petroleum, black, burning like oil, and of a strong pungent scent, issuing from the rocks all the year long, but chiefly in summer. They gather it with ladders, and putting it into a barrel, separate the water from the oil by letting out the first at a tap towards the bottom of the vessel.

The baths of Balleruch near Frontignan, about a quarter of a league from the road leading from Thoulouse to Montpellier, are in good esteem.

The mili-  
tary go-  
vernment  
of Lan-  
guedoc.

As to the military government of this province, it is subject to a governor-general, who has under him three lieutenant-generals that have their respective divisions assigned them: 1. The lieutenantancy of the Higher Languedoc, which comprehends the dioceses of Montauban, Alby, Castres, Lavaur, Carcassone, St. Papoul, Mirepoix, Rieux and Thoulouse. 2. That of Lower Languedoc takes in the dioceses of Alet, Limoux, Narbonne, St. Pons, Beziers, Agde, Montpellier and Lodeve. And, 3. The general lieutenantancy of the Cevennes, which extends over the dioceses of Nismes, Alais, Mende, Puy, Viviers and Uzez. Besides which, the King has nine lieutenants of particular places in Languedoc.

The Ce-  
vennes.

## CHAP. XII.

*Treats of the province or general government of Foix.*

CHAP.  
XII.Province  
of Foix.  
Situation  
and ex-  
tent.

THE government of Foix is one of the least in the kingdom. It consists only of the county of Foix, and the county of Dounefan and Andorre, and is bounded by the Thoulousan and Lauragais, on the north; by Narbonne, on the east; by the pyrenees and Roussillon, on the south; and by Gascony, towards the west; the two chief rivers whereof are the Ariege and the Rize. It is generally a mountainous barren country.

Chief  
towns.

The chief towns are Pamiers, Foix, Mazeres, Tarascon, Saverdun, Ax, La Bastide de Feron, Varilles, Le Maz, D'Azil, Dounezan, Le Carlat, St. Ibars, Lezat and Montault.

Pamiers.

Pamiers, *Pamia* and *Apamia*, the capital of this province, is situated on the Ariege, about five and twenty miles south of Thoulouse. The town is moderately large, and a bishop's see. The only considerable buildings taken notice of however by the French writers, are, the castle,

the cathedral, the bishop's palace, and the Jesuits college, which make a good appearance. It is computed there are between four and five thousand inhabitants in the place.

CHAP.  
XII.

Foix, which gives name to this province, is also situated on the Ariege, seven or eight miles to the southward of Pamiers. It is defended by a castle situate on a rock, and has a handfom stone bridge over the river. It contains about three thousand inhabitants.

The county of Foix was governed by Counts of its own till 1062, when GASTON, Count of Foix, obtained the kingdom of Navarre, by his marriage with ELEANOR, the only daughter of JOHN King of Navarre; and their descendants possessed it till the reign of HENRY IV. who was King both of France and Navarre; whereby it became united to the crown of France.

The an-  
cient state of  
Foix.

The trade of the country consists in cattle, which are fed upon their mountains, in rosin, turpentine, pitch, marble and iron; but chiefly in iron, which they carry down the Ariege and the Garonne, and vend in Guienne and Languedoc.

Trade,

This province is commanded by a governor and lieutenant-general, besides which there is a distinct governor of the town and castle of Foix, and one of the King's lieutenants commands in the castle of Arfin.

Military  
govern-  
ment.

## CHAP. XIII.

*Treats of the province or general government of Roussillon.*

Roussillon, in which I comprehend Conflent and the French Cerdagne, is bounded by Languedoc, on the north; by the Mediterranean, on the east; by Catalonia, on the south, from which it is divided by the Pyrenean mountains; and by another part of Spain, on the west; extending about eighteen leagues from east to west, and twelve from north to south, and consists of a plain, surrounded with mountains on all sides, except towards the sea, which makes it excessive hot in summer. The natives have generally swarthy complexions and meagre visages. There is scarce any wood in the country, and no navigable rivers: the chief of them are the Tet, the Tec, and the Agly; which rising in the mountains, and falling suddenly into the Mediterranean, may be deemed rather torrents than rivers. The sea-coast hath no good road or harbour, and very indifferent anchorage. There are some hot baths in the country, particularly at the village which goes by the name of Bains, from the hot springs in the neighbourhood, and at Vernet.

CHAP.  
XIII.Roussillon,  
Situation,  
&c.

Rivers.

The chief towns are, 1. Perpignan. 2. Elne. 3. Arles. 4. Ville-Franche. 5. Mont Lewis.

Chief  
towns.

Perpignan, *Perpinianum*, the capital of Roussillon, is situated on the river Tet, thirty-five miles to the southward of Narbonne, and about three to the westward of the sea. It stands partly on a hill, and partly in a bottom, is strongly fortified, and defended by a citadel, being a frontier against Spain. It is a bishop's see, the cathedral dedicated to St. JOHN, a fine large old edifice, the choir whereof is inclosed with white marble. There are also several other churches, convents, and hospitals, two colleges of Jesuits, and a seminary in the place. The inhabitants are a mixture of French and Spaniards, and both languages spoken indifferently: for this was formerly a Spanish town, and not confirmed to the French till the

Perpignan

CHAP. XIII. Pyrenean treaty, anno 1659. There is a great scarcity of good water in this town.

Elne. *St. Helena*, is a little town, situate on a hill near the river Tec, about fifteen miles to the southward of Perpignan, said to have taken its name from the Empress HELENA; formerly a town of some consequence, but makes no great figure at present.

Ville Franche. Ville Franche, the capital of the district of Conflent, is situated among the mountains, twenty-five miles south-west of Perpignan, strongly fortified, and defended by a castle, being another frontier garison against Spain.

Mont Lewis. Mont Lewis, *Mons Ludovici*, the capital of the French Cerdagne, stands on the Pyrenean mountains, about thirty miles to the westward of Perpignan. It is a pretty little town, built and fortified by LEWIS XIV. in the year 1681, to which he added a fine citadel, and made it one of the strongest fortresses on the side of Spain.

The ancient state of Roussillon. This province was also governed anciently by its proper Counts, till the death of GUINARD the last Count, who dying without children, about the year 1178, gave it to ALPHONSUS, King of Arragon, whose successors continued Sovereigns of it, with some interruptions from the French, till the reign of LEWIS XIII, who made an absolute conquest of it; and it was confirmed to France by the Pyrenean treaty anno 1659, ever since which it has been united to that crown.

Military government. This province has a governor or captain-general, like the rest, with his lieutenant-general and King's lieutenant; besides which, there are distinct governors in several of the fortified towns.

Trade and produce. The plains of Roussillon are very fruitful, producing plenty of corn and wine, and some excellent pasture; but they have however very little trade. Olives are the greatest riches of the country, and oranges are as plentiful as apples and pears in England. They have little or no wood, except what is brought them over the mountains upon the backs of mules. They feed pretty large flocks of sheep, and have excellent mutton. On the other hand, black cattle and horses are very scarce. Mules are generally used for riding and carrying burthens, being much surer-footed and fitter for the mountainous country, which surrounds them. I don't find they have any manner of trade by sea; which is ascribed partly to the dangerous coast and want of harbours, and partly to the laziness of the inhabitants, who seem to have no genius or inclination for manufactures or commerce.

#### CHAP. XIV.

*Treats of the province or general government of Navarre and Bearne.*

CHAP. XIV. THE Lower Navarre, which belongs to France, is but one of the six baillages of which the kingdom of Navarre was anciently composed, and is bounded by Lapourd, or Labourd, on the north; by the Pyrenees, which separate it from the Higher Navarre, on the south; and by Bearne, on the east; and is not more than eight leagues in length, and five in breadth. The other five baillages, which compose the Higher Navarre, belong to Spain.

The Lower Navarre is a barren mountainous country, which produces scarce any thing without a great deal of labour; but the little fruit they have is excellent. Their principal rivers are the

Nive and the Bidouze; the first rises in the mountains of Spain, and passing by St. John Pied de Port, enters the country of Labourd, and falls into the Adour at Bayonne. The Bidouze has its source in the mountains of the Lower Navarre, and passing by St. Palais and Bidache, discharges it self into the Adour below Giche.

The chief towns are, 1. St. John Pied de Port. Chief towns.

2. St. Palais. And, 3. The Bastide of Clarence. St. John Pied de Port, *Fanum S. Joannis Pedes Portuensis*, is situated on a hill near the river Nive, about twenty miles to the southward of Bayonne, and is a strong place both by art and nature. The citadel, which stands on an eminence, commands the passes from Spain.

Bearne lies to the eastward of the Lower Navarre, being about sixteen leagues in length and twelve in breadth, a dry mountainous country generally, but the valleys are tolerably fruitful. They sow very little but Indian Corn, which is the food of the natives. The soil also bears flax, which they manufacture themselves. Upon the lesser hills there are a great many vineyards, and the wine in some parts is excellent. In the mountains are found some mines of lead, copper and iron, and good store of fir-trees, which serve for masts and planks of ships; and there are several springs of mineral-water in the country, particularly near Escot and Oleron. The two principal rivers are the Gave de Bearnois, and the Gave de Oleron, both of which fall into the Adour.

The chief towns of Bearne are, 1. Pau. 2. Town. Lescar. 3. Navarreus. And, 4. Oleron.

Pau, *Palum*, is the capital of Bearne. It stands on an eminence, at the foot whereof runs the river Gave-Bearnois, and is about thirty miles to the eastward of Bayonne. It is a very handsome little town, and has a castle at the end of it, where HENRY IV. of France was born, having been the ordinary residence of the princes of Bearne. The park and gardens, it is said, deserve a traveller's curiosity.

Oleron is situated on the Gave d'Oleron, four leagues to the westward of Pau. It is a populous place: the citizens, who are generally merchants, have a pretty brisk trade with the Spaniards, and particularly with those of Arragon.

The commerce of Bearne consists in wines, which the English and Dutch take off their hands, in linen, cattle, and a small breed of horses, which they vend in Spain; the last being very proper for that mountainous country. And many of the Bearnois go into Spain, to cultivate and manure their lands, by which they acquire considerable fortunes; for the Spaniards are generally lazy, and have no genius for husbandry.

Lower Navarre and Bearne have the same governor-general, lieutenant-general, and King's lieutenant. St. John Pied de Port is the only town which has a particular governor in Navarre, as that of Navarreus is in Bearne.

#### CHAP. XV.

*Treats of the province or general government of Guienne and Gascony.*

CHAP. XV. THE province of Guienne and Gascony, comprehending the generalities of Bourdeaux and Montauban, is bounded by Saintonge, Angoumois and Marche, on the north; by Auvergne and Languedoc, on the east; by the Pyrenean mountains, on the south; and by the Ocean, on the

**CHAP. XV.** the west; extending fourscore leagues in length from north to south, and near as much in breadth from east to west.

**Rivers.** The principal rivers are, 1. The Garonne above-mentioned; and, 2. The Dordonne, which having united their streams below Bourdeaux, obtain the name of the Gironne. 3. The Adour. 4. The Tarn. 5. The Aveyron. And, 6. The Lot.

**Garonne.** The tide comes up the Garonne as high as Langon and St. Maccaire, which are eight leagues above Bourdeaux, and thirty leagues from the mouth of the river: and the spring-tides go up the river Dordonne as high as Castillon, which is six or seven and twenty leagues from the mouth.

**Adour.** The Adour rises in the Pyrenean mountains, and taking its course first to the north, turns about to the westward, and having received the Gave d'Oleron, and several other small streams, falls into the sea a little below Bayonne, beginning to be navigable at Grenade in the Marfan.

**The Tarn.** The Tarn rises in the Gevaudan, and running westward through Languedoc, discharges itself into the Garonne on the confines of Guienne and Gascony.

**The Lot.** The river Lot also rises in the Gevaudan, and running westward, falls into the Garonne at Aiguillon. This river is of great service in transporting the wine, brandies, and other merchandize, of the inland country to Bourdeaux.

**Ports.** The ports and roads belonging to this government, are those of Cape Brecon, Old Boucat, Arachon and Socoa; of which Arachon is the most considerable, being a fine basin of eight leagues in circumference, but of a difficult entrance, there being no more than two fathom water upon the bar.

**Mineral waters.** They have several springs of mineral waters, as, 1. At Mier. 2. At Craufac, in the election of Ville Franche, to which there resort great numbers of people in May and September. 3. At Pont de Camarez. 4. At Vabrez. 5. At Barbazan. 6. At Encausse. 7. At Capbern.

**Baths.** The most remarkable hot baths are, 1. at Bag-niers, which takes its name from thence; and, 2. at Barege.

**Mines.** This government also affords mines of copper and iron, quarries of marble, and coal-pits; and they mention an extraordinary plant called Radoul, which is of great use both to the tanners and dyers,

The province of Guienne and Gascony is not near so extensive as the ancient Aquitain was, but is however the largest government in the kingdom, comprehending the districts hereafter mentioned, viz. 1. Guienne Proper. 2. Bazadois. 3. Agenois. 4. Querci. 5. Rovergne. 6. Perigord. 7. Armagnac. 8. Chalosse. 9. Condomois. 10. Landes. 11. The country of Labourd. 12. The Viscounty of Soule. 13. Bigorre. 14. Comenge. And, 15. Conserans.

**Guienne Proper.** Guienne Proper, or the Bourdelois, *Ager Burdigalensis*, is bounded by the river Gironne, which divides it from Saintonge, on the north; by the Agenois and Perigord, on the east; by the Bazadois and Landez, on the south; and by the Ocean, on the west. The chief places are, 1. Bourdeaux. 2. The Tower of Corduan. 3. Blaye. 4. Bourg. 5. Libourne. 6. Fronzac. 7. Coutras. And, 8. Cadillac.

**Bourdeaux** Bourdeaux is situated on the west-side of the river Garonne, fifty miles south of the mouth of that river, and nineteen south of Rochelle.

**CHAP. XV.** The town and suburbs lying in the form of a crescent about the river, make a capacious harbour for small ships. It is surrounded by an old wall and towers; but its principal defence consists in three strong forts, viz. the Trumpet Castle, the Castle of Hau, and Fort St. Lewis or St. Croix, which are all ancient castles, but enlarged and improved by Monsieur VAUBAN, in the reign of LEWIS XIV. for the defence of the town and harbour, which they entirely command.

Bourdeaux is one of the largest and richest towns in the kindom, there being five thousand houses in the city and suburbs, and upwards of forty thousand souls. The antiquity of it is evident from the remains of an amphitheatre and other Roman buildings. It is the See of an Archbishop, and the principal modern edifices are, the metropolitan church of St. ANDREW, esteemed one of the fairest in France; the archiepiscopal palace, a magnificent building; the church of St. MICHAEL, the Jesuits college, and the Chartreuse are elegant pieces of architecture; but the town in general is none of the most beautiful, the streets being narrow, and the building old; and the usual inconveniencies are met with here that are found in other sea-port towns, that is, a great deal of noise, hurry and insolence. As to its trade, this will be considered hereafter.

The tower of Corduan is situated on a rock at the mouth of the river Garonne or Gironne, and serves not only to defend the entrance of it, but as a pharos, or light-house, for mariners.

Blaye, *Blavium*, a little strong town situated on the river Garonne, about seven leagues to the northward of Bourdeaux, having a citadel and two strong forts; one of which is erected on an island in the middle of the river, and the other on the opposite shore, called Fort Medon, from its standing in a district of that name. These defend the passage of the river, and no ships can go up to Bourdeaux without their permission.

The Bazadois lies south-east of the Bourdelois; the chief towns whereof are, 1. Bazas. 2. Reole. 3. Casteljaloux. 4. Nérac. And 5. Langon.

Bazas, *Cessum Vasatum*, is an ancient town situated on a rock, two leagues and half to the westward of the Garonne, and thirty south of Bourdeaux. It is a bishop's see, but not considerable on any other account.

Reole is a little trading town situate on the Garonne, nine leagues to the southward of Bourdeaux, whither the parliament and courts of Bourdeaux were sometimes removed in the last reign to mortify that city.

Nérac, the capital of the dutchy of Albret, is situated two leagues to the westward of the Garonne, and is a town of good trade, said to be well replenished with Calvinists; but I presume, they mean those who are inclined that way, for none are permitted to profess themselves Protestants openly. Here is an old castle built by the English when they were sovereigns of this country.

The Agenois lies to the eastward of Bazadois, from which it is separated by the river Garonne; the chief towns whereof are, 1. Agen. 2. Clairac. 3. Villeneuve. 4. St. Foi. 5. Tonneus. 6. Monheurt. 7. Marmande. 8. Salvétat. And, 9. Aiguillon.

Agen, *Agennum Nitobrigum*, the capital of the Agen county, a town of great antiquity, is situated on the north shore of the river Garonne, about fifty miles south-east of Bourdeaux. It is a large place and

CHAP.  
XV.

and a bishop's see, and though it be well seated for trade, has very little, the natives having no genius for commerce.

Villeneuve de Agenois stands on the river Lot, and is one of the finest situations in the country.

St. Foi. St. Foi, *Fanum Sanctæ Fidei*, is situated on the river Dordogne, three leagues below Bergerac, and has a brisk trade in corn, wine and brandy.

Marmande. Marmande stands on the river Garonne, six leagues north-west of Agen, and twelve south-east of Bourdeaux. It is a pretty large town, and has a good trade.

Aiguillon. Aiguillon situate at the confluence of the Lot and Garonne, is a fortified town, the capital of a dutchy and peerage, and a place of good trade.

Querci district. The district of Querci lies to the eastward of the Agenois; the chief towns are, Souillac, Lantzerre, Martel, St. Cere, Gourdon, Roquemadour, Figeac, Capdenac, Cahors, Montauban, Moissac Negrepelisse, Caussade, Caylus, Montpezat, Molières, Realville la Francois, Burniquel, Montricons and Montclar.

Cahors. Cahors, *Divona Cadurcorum*, the capital of Querci, is situated on the river Lot, thirty miles north-east of Agen: a very ancient town, as appears by the ruins of several Roman buildings. It is at present the see of a bishop, suffragan of Bourdeaux, who styles himself Count, and contains about eight thousand souls; but is a poor place, and makes a very indifferent appearance.

Montauban. Montauban, *Mons Albanus*, is situated on an eminence, at the foot whereof runs the river Tarn, over which there is a handsome stone-bridge that joins it to a suburb in the province of Languedoc, and stands about thirty miles to the southward of Cahors. It is a well-built populous town, and the see of a bishop, suffragan of Thoulouse. The things best worth the viewing here are the bishop's palace, the Griffon fountain, and the Falese, which is an agreeable walk on the banks of the Tarn. It is computed there are about eighteen thousand souls in the place.

Rovergne. Rovergne has Querci on the west, and the Cevennes and Gevaudan on the east; being about thirty leagues in length, and twenty in breadth; the chief towns whereof are Radez, Milhaud, Ville-Franche, and St. Antonin.

Rodez. Rodez, *Urbs Rutena*, the capital of Rovergne, is situated on a hill surrounded by mountains, between the river Aveyron and a little rivulet, sixteen leagues to the eastward of Cahors. It is a bishop's See, and has a fine cathedral of an octagonal figure, the tower whereof is admired for its extraordinary height. They preserve in the treasury here one of the Virgin MARY's shoes; tho' it be a question whether she wore any. The Jesuits have a fine college in this city, and the convents of the Cordeliers, Dominicans, Capuchins, and Chartreuse are handsome structures. Here are also the nunneries of the congregation of our Lady, the Urselines, and the abby of Monstier. It is computed there are about six thousand souls in the place.

Milhaud. Milhaud the capital of Upper Rovergne, is situated on the Tarn, ten leagues south-east of Rodez; the fortifications whereof were raz'd on account of their adhering to the Calvinists. It contains about three thousand souls; but the French writers do not think it merits a farther description.

Vabres. Vabres, situated on the river Dourdan to the southward of Milhaud, is no more than a little

village at present, and only mention'd on account of its being a bishop's See.

Ville-Franche, *Francopolis*, is situated on the river Aveyron, eight leagues to the westward of Rodez, remarkable chiefly for the copper-mines in the neighbourhood. It contains about six thousand souls; there are several fine convents and religious houses in the place.

Perigord lies to the northward of Agenois, from which it is divided by the river Dordogne, being about thirty-three leagues long, and twenty-four broad. The chief towns are, Perigueux, Bergerac, Sarlat and Castillon.

Perigueux, *Vesuna Petrocorum*, the capital of Perigord, is situated on the river L'Isle, fifty miles north-east of Bourdeaux, a populous town, and the See of a bishop, and is very ancient, as appears by the ruins of several Roman buildings, particularly of an amphitheatre and a round stone tower, which has neither doors nor windows, but is entered by two subterraneous passages, supposed to have been a temple dedicated to VENUS, for which they don't seem to have any other authority than its obscurity.

Bergerac is situated on the river Dordogne, five leagues south of Perigueux. It was fortified by the English in the fourteenth century, and was a place of importance, commanding a pass on the river above-named. It was often taken and retaken during the religious wars in France, and the fortifications at length razed on account of its adherence to the Calvinists, of which sect there were not less than forty thousand in this city and the neighbourhood, at the revocation of the edict of Nantz. It is still a populous wealthy town, being the center of trade between Lyons and Bourdeaux.

Sarlat is situated in a bottom surrounded by mountains, a league and a half from the river Dordogne, and ten south-east of Perigueux. It is a poor place, and scarce deserves mentioning, but upon account of its being a bishop's See.

Castillon, *Castilio*, situate on the Dordogne, two leagues to the westward of St. Foy, memorable chiefly for a bloody battle fought between the English and French, about the year 1453; wherein the famous JOHN TALBOT, Earl of Shrewsbury, and his son were killed, and all the province of Gascony lost soon after.

The district of Armagnac lies to the westward of the Thouloufan, from which it is separated by the river Garonne, being two and twenty leagues in length, and sixteen in breadth. The chief towns are, Auch, Lectoure, Nogaro, Mirande, Leyrac, Eauze, Vic, Fleurence, Castelnau, Verdun, and Grenade.

Auch, *Augusta Ausciorum*, the capital of Gascony, is situated on the side of a mountain near the river Gers, about thirty miles west of Thoulouse, and seventy south-east of Bourdeaux. It is the See of an Archbishop, one of the richest in France, the revenue being computed at an hundred thousand livres per ann. He has the joint sovereignty of the town with the Count of Armagnac, and styles himself Primate of Aquitain; the cathedral dedicated to the Virgin, is one of the finest in France, where they pretend to have preserved a bottle of the Virgin's milk. The town is small, containing not above three thousand souls; and I don't find any building of consequence mentioned by the French writers besides the cathedral, unless it be the archiepiscopal palace, from whence there is an admirable prospect of the adjacent country.

- CHAP. XV.** *Lezouze, Lellera*, is situated on a mountain, at the foot whereof runs the river Gers, twenty-five miles north of Auch. It is surrounded by a triple wall, and defended by a castle, the see of a bishop, and computed to contain about four thousand inhabitants.
- Verdun.** Verdun, capital of a district, called the Verdunois, is situated five and twenty miles north-east of Auch, and contains between two and three thousand souls; which is all the description I meet with of it.
- The Chalosse, or Proper Gascony.** The Chalosse, or Proper Gascony, lies to the westward of Armagnac, and is about thirteen leagues over either way. The chief towns are St. Sever, Aire, Gabaret and Arzac.
- St. Sever.** St. Sever is situated on the river Adour, about thirth miles north-east of Bayonne, which some look upon to be the capital of the Gascon country. Here they put on board their wines to carry them to Dax and Bayonne.
- Aire.** Aire, *Adurium, Vicus Julii*, stands upon the Adour, about twelve miles to the westward of St. Sever, and tho' it be still a bishop's See, is dwindled into a village.
- The Condomois.** The Condomois lies to the northward of Armagnac, and is about twenty leagues in length from east to west, but extremely narrow. The chief towns are Condom, Gavaret, and Mont de Marfan.
- Condom.** Condom is situated on the river Gelise, twenty-five miles to the northward of Auch. It is the See of a bishop, but a poor town of no manner of trade. The Catholicks complain of the ravages committed here by the Hugonots in the civil wars, who plundered the cathedral, burnt six parochial churches and five monasteries.
- Mont Marfan.** Mont Marfan is only considerable for being the capital of the Viscounty of Marfan, which anciently belonged to the Princes of Bearn. It stands on the river Medouze, about four and twenty miles to the westward of Condom.
- The Landes.** The Landes, or Lannes, lies upon the Ocean to the southward of the Bourdelois. It is a barren sandy country, producing little but broom and heath. The chief towns are, Dax, Tartas, Albret, and Peyronrade.
- Chief towns.** Dax, *d'Aqu's, Aquæ Augustæ, Civitas Aquensis*, is situated on the river Adour, about sixteen miles to the northward of Bayonne, and takes its name from the hot spring in the middle of the town. It is defended by some antique fortifications and a castle, a populous trading town, and a bishop's See; there are also a great many convents and religious houses in the place.
- Tartas.** Tartas stands on the Medouze, seven or eight miles to the northward of Dax, considerable chiefly for its market.
- Labourd.** The county of Labourd lies upon the sea of Gascony to the southward of Landes, and was part of the country of Basques, a people originally of Cantabria. It formerly extended as far as St. Sebastian in Spain; but the Spaniards are now masters of all the country on the other side the river Bidassoa. The chief towns are Bayonne, St. John de Luz, Sibour, Ustarits, Andaye, Bidaçte, Guiche.
- Chief towns.** Bayonne, *Lapurdum*, situate on the rivers Nive and Adour, fifteen miles north of the confines of Spain, about an hundred to the westward of Thoulouse, and three to the eastward of the sea of Gascony. It received its name from the Basquish words Baia and Ona, which signify a good bay or harbour, and is divided into three parts by the rivers, strongly fortified in the late reign by that celebrated engineer Monsieur VAUBAN. The citadel commands the town, the harbour and the adjacent country; besides which, it has several other good forts for its defence. The town is tolerably large and populous, and is of consequence as well on account of its foreign trade, as its being one of the strongest frontier garisons on the side of Spain. It is a bishop's See; but neither the cathedral or the other publick or private buildings, have any thing in them that merits a particular description. The harbour is tolerably good, but of a difficult entrance.
- St. John de Luz.** St. John de Luz stands on a bay of the sea, ten miles south-west of Bayonne, and ten north-east of Fontarabia in Spain. It is a pretty large borough-town, but no city.
- The Isle of Pheasants.** The Isle of Pheasants ought not to be forgot in this place, which lies in the middle of the river Bidassoa, that divides France from Spain, and to which therefore both Princes have an equal claim, was pitched upon for a treaty of peace between these kingdoms in the year 1659; and from the neighbourhood of the Pyrenees, was called the Pyrenean treaty. Here King CHARLES II. of England attended in person, to solicit the assistance of those powers, while he remained in exile; but was shamefully deserted by both of them: tho' the following year, when his subjects voluntarily sent for him and restored him to his throne, he was as much courted by these and the rest of the Princes of Europe, as he had been neglected in his distress.
- The Country or Valley of Soule.** The Country or Valley of Soule makes part of the country of Basques, and lies along the river Gave de Suzon, between Bearn on the east, and the Lower Navarre on the west, consisting of sixty-nine parishes, the only considerable town being that of Manleon Malleo, situate on the Gave de Suzon; and this the French writers do not give us any particular description of, only observe, that the celebrated HENRY SPONDE, bishop of Pamiers, was born here.
- The county of Bigorre.** The county of Bigorre lies south-east of Bearn, on the confines of Spain, being about eighteen leagues in length, and three in breadth. The chief towns are, Tarbes, Vic de Bigorre, Lourde, Bagneres, Barege, St. Sever de Ruitan, and Jor-nac.
- Tarbes.** Tarbes is situated on the river Adour, about thirty miles south-west of Auch, and twelve south-east of Pau, in one of the most pleasant fruitful valleys in the country. It is a pretty little town divided in four or five parts by the several branches of the river; a bishop's See, the cathedral whereof is dedicated to the Virgin, besides which there is only one parish-church and two monasteries. It is defended by the castle of Bigorre, which it is said gives name to the county.
- Bagueres.** Bagueres, *Aquæ Convenarum*, situate on the Adour, is considerable for its hot baths, which occasions a great resort of people hither.
- The county of Cominges.** The county of Cominges lies between the Thoulousan on the north-east, and Bigorre on the south-west, being about eighteen leagues in length, and six in breadth. The chief towns whereof are, St. Bertrand, Lombez, Muret, Montregean, St. Beat, St. Gaudens, and St. Martory.
- St. Bertrand.** St. Bertrand is a little town situate on a hill near the river Gironne, about thirty miles to the eastward of Pau, and as much south of Auch. At the foot of the hill whereon it stands, lay the ancient Cominges, *Lugdunum Convenarum*, which was a larger town than Thoulouse, as appears by

CHAP.  
XV.

the ruins of its walls. St. Bertrand is a bishop's See, and has a cathedral; but the inhabitants scarce amount to five hundred souls.

Lombes.

Lombes stands upon the little river Seve, about twenty miles to the northward of St. Bertrand, containing about two thousand five hundred inhabitants, only considerable on account of its being a bishop's See.

Muret.

Muret situate on the Garonne, about thirty miles north-east of St. Bertrand, where the Roman Catholics say, they obtained a miraculous victory over the Albigenses. They relate, that PETER, King of Arragon, the Count de Thoulouse, and many other sovereign Princes, having besieged Muret with an army of an hundred thousand men, in the year 1213, and that St. DOMINICK, with the bishop of Thoulouse, being shut up in the place, and calling to their assistance SIMON Earl of Montford, they sallied out upon the besiegers with fourteen thousand men, St. DOMINICK carrying a crucifix before them, and totally routed the King of Arragon's army, who was killed upon the spot. They pretend to have preserved St. DOMINICK's crucifix to this day at Thoulouse, with three arrows sticking in the wood of the cross, with the Christ untouched. And tho' we should not be much in the wrong to suspend our belief as to some circumstances in the story, yet we may observe from hence and other relations we have met with, that almost all South France, part of Italy and Spain, as well Princes as people, were very early united in a confederacy against the church of Rome and its superstitions, and maintained their ground for some ages, till a general croisade was proclaimed against them; and then it was with no small difficulty they were suppressed.

St. Beat.

St. Beat is situated on the Garonne, two or three leagues to the southward of St. Bertrand, so inclosed between two mountains, that there is only room for the buildings and the river between them; and tho' it be a very indifferent place in other respects, they can say what few others can, namely, that the whole town is built with marble, which is the only stone to be found in their neighbourhood.

St. Gaudens.

St. Gaudens is a little populous trading place on the Garonne, situated north-east of St. Bertrand, the best town in the Cominges, and the capital of the Nebouzan.

Conserans.

Conserans lies south-east of Cominges, adjoining to the Pyrenean Mountains; the only town

St. Lizier.

of any consequence is St. Lizier, *Fanum Sancti Licerii, Civitas Conseranorum*, situate on the river Salat, at the foot of the Pyrenees, fourteen or fifteen miles to the eastward of St. Bertrand. It is the See of a bishop, but not considerable on any other account.

The ancient state of Guienne and Gascony.

The government of Guienne and Gascony is part of the ancient Aquitain, so called *ab aquis*, from the great number of hot baths and mineral waters in it. In the Roman division of Gaul, it comprehended all that country which lies between the river Loire and the Pyrenean mountains, and was transferred to the Goths by the Emperor VALENTINIAN III. The Franks having made a conquest of it, CHARLES the Great erected it into a kingdom for his youngest son LEWIS, who afterwards succeeded him in the Empire. It falling to the Kings of France in the division of the Empire, they governed it by Counts and Dukes, who at length assumed an unlimited dominion, and made it hereditary in their families. ELEANOR

the heiress of WILLIAM, the ninth Duke of A-CHAP.  
quitain, married LEWIS VII, King of France, who  
XV. having divorced her, she afterwards married HEN-  
RY of Anjou, son to the Empress MAUD, and  
grandson of HENRY I, King of England; who  
succeeding his grandfather in the crown of England,  
enjoy'd the dutchy of Aquitain also in the right of  
ELEANOR his wife, whom he married about the  
year 1152, and his descendants enjoy'd it till  
1202, when the French King LEWIS VIII seizing  
some part of it, a war broke out between the  
two kingdoms of England and France; which ended  
in a treaty, wherein it was stipulated, that the  
English should enjoy the dutchy of Guienne, as it  
was bounded on the north by the river Charente,  
and on the south by the Pyrenean mountains;  
which tract of land was of a larger extent than the  
present province or government of Guienne and  
Gascony, tho' not so large as the ancient kingdom  
of Aquitain. This the English enjoyed for more  
than two hundred and fifty years afterwards,  
namely, till the fatal year 1453, when JOHN  
TALBOT Earl of Shrewsbury and his son were  
killed in a decisive battle near Castillon in Gas-  
cony, during the unfortunate reign of HENRY VI.  
This Prince had been crowned at Paris, and was  
once actually sovereign of the rest of France, as  
well as England, but saw himself deprived of both  
before his death, and the English have never since  
had any considerable footing in France.

The produce as well as trade of Guienne con- The trade  
sists chiefly in wine. In time of full peace, when and pro-  
their commerce is not interrupted, it is computed duce of  
that the foreign shipping which comes to Bour- Guienne  
deaux does not take off less than an hundred and Gas-  
cony.  
thousand tons annually: but these wines are not all of  
the growth of this province, great part of them  
are brought hither from Languedoc, &c. They  
have two great annual fairs at Bourdeaux of fifteen  
days continuance each, when foreigners chiefly re-  
sort hither; one begins the first of March, and  
the other the fifteenth of October; the last is  
much the most considerable, being after the vin-  
tage, when there is the greatest plenty of wine and  
fruit, and then we may sometimes see four or five  
hundred sail in the port of Bourdeaux, some of  
them of five hundred tons, whose cargoes consist of  
brandies, vinegar, prunes and fruit, as well as  
wine: and we may judge of the trade of Bour-  
deaux, says a French writer, by the customs paid  
there, which in some years amount to four mil-  
lions of livres.

Bayonne is the most considerable port on this  
coast next to Bourdeaux. Hither the Spaniards  
bring their wool over the mountains on mules,  
and take sugars in return: and from Bayonne the  
Spanish wool is distributed to all the provinces of  
France where there are woollen manufactures.  
Timber for shipping, as masts and yards, are also  
brought down the rivers in floats from the Pyre-  
nean mountains to Bayonne, and sent from thence  
to Brest and other ports, where the King's ships  
are built and repaired. The merchants of this  
town also fit out ships every year for the whale-  
fishery in Greenland, and pretend to have been  
the first who found out and were engaged in this  
branch of trade. True it is, their neighbours the  
Biscayners of Spain, were the first we are acquaint-  
ed with that followed the whale-fishery, and on  
account of their dexterity in that art, the English  
took several of them into their service when they  
first established the whale-fishery in the Greenland  
seas: and under the name of Biscayners it is highly  
probable

**C H A P. XV.** probable the mariners of Bayonne and other ports on this coast might be included. But it appears they followed this employment in more southern latitudes, and not in the seas of New Greenland, till they were carried thither by the English.

From Port Blaye on the Garonne, below Bourdeaux, they also export wine, and in plentiful years corn; and from the bay of Arcathon, pitch, tar and rosin.

That part of this province which is called the Election of Montauban, produces corn, wine, prunes, tobacco, saffron and silk, which are sent down the rivers Garonne and Tarn to Bourdeaux; and it is computed that the English and Dutch lay out annually in prunes only, above an hundred thousand crowns. Their saffron and silk are sent chiefly to Lyons.

This country also has some manufactures of linen and woollen, but not much of these to export. They abound in mules, which the Spaniards purchase of them, being very proper for carrying burthens, and travelling over the Pyrenean mountains.

Military government of Guienne and Gascony.

The governor general of Guienne has under him two lieutenant-generals, the one for Guienne, and the other for Gascony and Bigorre; besides which, the King constitutes lieutenants-general in every election, and in every fortified town, of which last there are a great number in this province.

## C H A P. XVI.

*Treats of the province or general government of Saintonge and Angoumois.*

**C H A P. XVI.** **T**HIS government comprehends almost all Saintonge and Angoumois. Saintonge is bounded by Poitou and Aunis on the north; by Angoumois and Perigord on the east; by the Bourdelois and the Gironde on the south; and by the Ocean on the west; being five and twenty leagues in length, and twelve in breadth.

Angoumois is bounded by Poitou on the north; by Limosin on the east; by Perigord on the south; and by Saintonge on the west; being eighteen leagues long and fifteen broad.

**Rivers.** The principal rivers of this government are the Charente and the Boutonne.

**Charente.** The Charente having its source in the Limosin, first takes its course north-west into Angoumois, and then turning about to the southward, visits Angoulesme; after which taking its course south-west again, it visits Saintes, discharging itself into the Ocean a league and half below Rochefort.

**Boutonne.** The Boutonne rising in Poitou, takes its course south-west till it falls into Charente at port Carillon. The other rivers of this province are but small, but it is observed that their waters make excellent paper.

**Face of the country.** The air of this country is esteemed hotter than that about Paris. The country is full of little hills, but has not one considerable mountain in it, unless that on which Angoulesme is situated. The soil produces corn, wine, saffron, and all manner of fruits in abundance. They have some good iron-mines, which afford a great quantity of that metal, but no others wrought. Those of Rancogne and Plancheminier are the most considerable.

**Chief towns.** The chief towns in Saintonge are Saintes, Marrennes, Arvert, Sanjon, Royan, Tallemont, Mortagne, Pons, Barbefieux, Chalais, St. John de Angeli, Tonnai-Charente, Taillebourg.

The chief towns of Angoumois are Angoulesme, Cognac, Jarnac, Rochefoucaut, Blanzac, Chateaufort, Bouteville, Ruffec and Vauguyon.

**Saintes, Mediolanum, Urbs Santonica,** a little ill-built city on the river Charente, sixty miles to the northward of Bourdeaux, and twenty to the eastward of the Ocean, is the capital of Saintonge, and a Bishop's See, but not very considerable on any other account at present, unless it be for the noble ruins found here, which sufficiently discover its antiquity; as a triumphal arch, supposed to be erected in the reign of TIBERIUS, the ruins of an amphitheatre, several aqueducts, and a capitol, the last of which edifices were only erected by the Romans in towns of the first magnitude.

St. John de Angeli, *Angeliacum*, stands on the river Boutonne, five leagues north-east of Saintes. It was anciently a magnificent castle, built in the middle of a forest named *Angeliacum*, where the Dukes of Aquitaine had their residence. It afterwards grew to be a considerable town, and was strongly fortified, but the inhabitants adhering to the Calvinists, it was besieged and taken by Lewis XIII, whereupon they were deprived of their privileges, and the fortifications demolished.

Angoulesme, the capital of Angoumois, *olim Incusima*, is situated on the top of a mountain surrounded with rocks, at the foot whereof runs the river Charente, thirty miles to the eastward of Saintes. It is a Bishop's See, the cathedral church dedicated to St. Ausonius, besides which there are eight churches and six convents in the place. It is supposed to contain eight thousand souls.

Cognac, situate on the Charente, seven leagues to the westward of Angoulesme, in one of the most desirable countries in the world, and remarkable for being the place of the nativity of FRANCIS I, but better known to us by the excellent wine and brandy it produces.

Rochefoucaut, *Rupes Fucaldi*, situate on the Touvre, four leagues to the eastward of Angoulesme, has the title of a duchy and peerage, but I do not meet with any particular description of it.

The principal trade of Saintonge is in salt, of which they make a surprizing quantity in their salt-marshes, much better than that of Bretagne, or any other part of France; but the duties are so much higher in this province than they are in Britany, that they make much less than they have done.

The Angoumois have a good trade in wine, brandy, paper and salt, but they are a lazy generation, pretty much addicted to pleasure, and do not make all the advantages they might of the fertility of their country. Their manufacture of paper is esteemed the best in Europe, which it seems has been discouraged of late, and is not equal to what it was.

The governor of this province hath a lieutenant-general under him in Saintonge and Angoumois, and a lieutenant of the King's in each of those cities, besides which the town of Cognac has its particular governor.

## C H A P. XVII.

*Treats of the province or government of Aunis.*

**T**HIS government comprehends the country of Aunis, the country of Brouageois, the isles of Re, Oleron, &c. and is bounded on the north and east by Poitou; by Saintonge on the south, and by the Ocean on the west.

The

CHAP.  
XVII.Rivers.  
Ports.Chief  
towns.

Rochelle.

Rochefort

The principal rivers which pass through this country are the Charente and the Seare. And tho' it be but a small government, it has the advantage of several good ports, of which the most considerable are Rochefort, Rochelle, Brouage, St. Martins in Re, Tremblade, and Tonnai-Charente. This country is generally dry, and yet produces good corn and wine. In the maritime parts, where there are large meadows, they feed abundance of cattle, and in their salt-marshes make the best salt in Europe.

The chief places in this government are Rochelle, Rochefort, Brouage, Marennes, Alvert, Tremblade, Saujon, Royan, and the isles of Re and Oleron.

Rochelle, *Rupella*, is situated on the sea-coast, twelve leagues north-west of Saintes, two south-east of the isle of Re, and four north-east of Oleron, is forty-six degrees twelve minutes north latitude, strongly fortified by that great Engineer VAUBAN. The town is of a square figure, and about three miles in circumference. Queen ELEANOR of Guienne brought it, with the rest of her territories, to HENRY II. King of England, about the year 1152; the French surprised it in 1224, but by the treaty of Britany, anno 1360, they were obliged to deliver it up to the English again. The town revolted ten years after, and put themselves under the protection of France. Upon the reformation they declared for the Protestants, who defended the place against the Kings of France from the year 1567, till 1628, being supported by the English; but the Duke of Buckingham, who was going to their relief with a powerful fleet, being stabbed by that assassin FELTON, the expedition miscarried, and they were forced to surrender, after having suffered a terrible famine, and all other miseries of a long siege, whereby two thirds of them were destroyed before the town was taken; after which the fortifications were demolished, and lay in ruins till the year 1689, as has been intimated already, when that famous Engineer Monsieur VAUBAN fortified it after the modern way, to prevent a descent of the English. It is at present a Bishop's See, and a place of very great foreign trade, as will appear under that head.

Rochefort, *Rupisfortium*, situate three or four leagues from the mouth of the Charente, and seven or eight to the southward of Rochelle, was but a little castle in the year 1665, when the French King LEWIS XIV. observing that the coasts on the Ocean were generally very dangerous and of difficult access, and that there was scarce a port or road except that of Brest, where the royal navy might ride with any security, he ordered several places to be founded, and discovered at length that a good port might be made in the mouth of the river Charente, and that there was depth sufficient in that river for the largest vessels, he purchas'd the above-mentioned castle of Rochefort, and ordered the plan of a town to be traced out of the bigness of Bourdeaux, and having surrounded it with a wall and other modern fortifications, erected an arsenal and magazines, and gave all manner of encouragement to his subjects to build and settle there; and it is now one of the finest towns, and the best provided to accommodate the royal navy of any upon the coast, except Brest and Port-Lewis. Here is a noble hospital also for disabled seamen: but the place is still very unhealthy in August, September and October, supposed to proceed from the badness of the water, and its being covered by the hills from the north wind. The entrance of the river

and the port is defended by several forts that render it inaccessible to an enemy by sea.

Brouage is situated on a bay of the sea about eight leagues south of Rochelle; it is surrounded by a salt-marsh where they make vast quantities of salt, as will appear under the article of trade; but the harbour is in a manner choaked up.

Soubize is situated on the river Charente two leagues from the sea, considerable chiefly for being the capital of a principality, and for its healthful air, whither the natives of Rochefort frequently retire for restoring their broken constitutions.

The isle of Re, *Rea Insula*, lies five or six miles to the westward of Rochelle, and is four or five leagues in length, and one and a half in breadth, producing plenty of wine and salt, tho' their wine is but indifferent, and serves chiefly to convert into brandy and strong waters. They have neither corn, grass or trees upon the island: it is however populous, and stands very advantageously for a foreign trade. The chief town is that of St. Martins, besides which there are five or six parishes upon it.

St. Martins is but an inconsiderable town in itself, but of great consequence on account of the fortifications about it, which were erected in the late reign by Monsieur VAUBAN. They consist of a good wall with six royal bastions and five half-moons, a ditch and covered way well lined, and a fine citadel which commands the town, the harbour and the adjacent country. The entry of the port is narrow and defended by a fort.

Fort Free stands on the north-west part of the island, and defends the entrance of the channel called Pertruis Breton. Fort Samblancan stands on the south-east point of the island, and defends the channel called Pertruis Antiole. Besides which, there is another fort on the coast called Fort Martray, raised by the above-mentioned celebrated engineer: so that it would be much more difficult to make a descent upon this island now, than when the Duke of Buckingham landed here in order to relieve Rochelle in the year 1627. It seems he was master of the whole island except Fort Free, which holding out against him, and the Rochellers stupidly refusing to admit him into the city, upon some foolish insinuations of their brethren the saints in England, he was forced to return home without effecting any thing; and being stabbed by FELTON while he was recruiting his troops in England in order to return to their relief, Rochelle was taken, and the inhabitants, as well as the rest of the Protestants of France, suffered sufficiently for their distrust and ingratitude towards the English court, who had done so much to support them.

The isle of Oleron, *Uliarus*, lies two or three leagues to the southward of Re, and as much to the westward of the continent; being about five leagues in length, two in breadth, and twelve in circumference; containing six parishes, and ten or twelve thousand inhabitants. It is defended by a castle situated on the east part of the island, and some other forts. The natives had formerly a mighty reputation for their skill in navigation; and in conformity to their customs it was, that Queen ELEANOR, Dutches of Guienne, made those constitutions in relation to sea-affairs, which obtained the title of the laws of Oleron, and became a model for all other maritime powers on the Ocean, as those of Rhodes were in the Mediterranean in the time of the Romans. Upon each of these islands of Re and Oleron there is a pharos or light-house for the direction of mariners in the night. The soil of Oleron

Oleron.

**CHAP. XVII.** Oleron is very fruitful, producing corn and wine in abundance; besides which, the natives make great quantities of salt of the sea-water.

Trade and produce of the province of Aunis.

The great foreign trade which is driven at Rochelle enriches all the towns and villages of this little province. The Rochellers trade to St. Domingo, and the rest of the American islands; to Senegal, Canada, Mississippi, Cadiz, Portugal, the isles of Azores, Sweden, Denmark, Muscovy, England and Holland, whither they send great numbers of ships laden with wine and brandy, salt, paper and linen; and some say stuffs, ferges, and other woollen manufactures to the northern kingdoms. They send to the American islands almost all the necessaries of life; and in return bring back sugars, indigo, tobacco, skins, Brazil and Campechy-wood, cotton, and other lesser articles: and they receive from the side of Domingo cochineal, quinquina, cocoa nuts, vanilles, pearls, emeralds and dollars. Their colonies in North America furnish them with dried cod, stock-fish, salmon, salted eels, fish-oil, hides, masts, yards, and other naval stores. They import from Africa skins, wax, gums, and a small quantity of gold-dust. From Portugal they bring Brazil-tobacco and snuff, chocolate, dried citrons and oranges; and in time of war Lisbon was the staple of all the merchandizes of Spain, England and Holland.

The principal manufacture at Rochelle is that of refining and baking sugar, as that of linen is at Rochefort and Barbezieux: to which we may add the distilling brandy and strong waters here and in every other town of the country. But nothing turns to so much account as their salt, which is made by letting the sea at high water into shallow basins or pans, where the water being evaporated, the salt subsides, and they find a kind of crust of salt at the bottom. Then they let in the sea again, and so from time to time till the crust is come to the thickness they desire it, when they take it out and lay it on heaps, and then repeat the experiment again. This brings in a good revenue to the proprietors of the salt-marshes, but a much greater to the crown.

The military government of Aunis.

There is a governor-general of Aunis, Rochelle, Brouage, Re and Oleron, who has under him a lieutenant-general, the King's lieutenant, and several governors of particular places and forts: besides which there is a captain or general, who has the command of nine or ten thousand militia, to prevent any surprize or descent on the coasts in time of war.

## CHAP. XVIII.

*Contains a description of the province or general government of Poitou.*

**CHAP. XVIII.**

Poitou province. Situation, &c.

Face of the country.

Rivers.

Vienne.

**T**HE province of Poitou, *Pictavia*, is bounded by the territories of Nants and Anjou on the north; by Touraine and Berry on the east; by Saintonge, Angoumois and Aunis on the south; and by the Ocean on the west; and is forty-eight leagues in length from east to west, and two and twenty in breadth from north to south.

This country is diversified with champain, woods and pasture grounds, (very little of it mountainous) and some few forests.

There are but two navigable rivers in it, which are those of Vienne and the Sevre Niortoise.

The Vienne rises in the Limosin, and running north west, falls into the Loire two or three leagues to the eastward of Saumur.

VOL. II.

The Sevre Niortoise, so called to distinguish it from the Sevre Nautois, hath its source in the east part of Poitou, and taking its course westward, passes by Niort, where it begins to be navigable, and continuing its course westerly, falls into a bay of the Ocean a little below Marans.

There is but one fountain of mineral waters of Miravilles, any consequence in the country, and that is at w<sup>a</sup>.

They reckon up nine ports on the coast of Poitou, but they are of little service to any vessels but fisherboats and small craft, except that of Sables d'Olonne, which it is said will admit vessels of an hundred and fifty tons.

Poitou is divided into the higher and lower, of which the higher is the largest division, and comprehends the towns of Poitiers, Thouars, Loudun, Chief Mirebeau, Châtelleraut, St. Maixent, Lusignan, Montmorillon, Chauvigny, Richelieu and Mortemar. And in the lower Poitou are Niort, Maillezais, Luçon, Fontenai le Compté, Parthenai and la Rochefuryon.

Poitiers, *Augustoritum Pictavium*, the capital of this province, is situated on an eminence near the little river Clain, fourscore miles to the eastward of the Ocean, and about as much north-east of Nantes. It is the largest town in France next to Paris, if we regard the extent of the walls; but then there is a great deal of ploughed lands, gardens and waste ground included within those bounds. The town however is not small, containing two and twenty parishes, nine convents of friars and twelve of nuns, besides several abbeys, two seminaries, and three hospitals; and is governed by a mayor, five and twenty aldermen, and sixty-five burgesses. They have a very little trade, which is ascribed to the lazy indolent temper of the inhabitants, who are nevertheless esteemed a polite and sociable people. Poitiers is a Bishop's See, and has a university of some credit; there are also the remains of several Roman edifices in the place, as of an amphitheatre, a triumphal arch, which still serves for one of the gates, and some aqueducts. In the middle of the town is a great round tower called the castle of Maubergeon: the black Prince, son to EDWARD III, King of England, took JOHN King of France and his son PHILIP prisoners, about two leagues from this city, anno 1357.

Thouars, *Toarcium*, situate on a little hill near the river Toue, ten leagues north-west of Poitiers, considerable chiefly for being the capital of a dutchy.

Loudun, *Castrum Losaunum*, stands eight leagues north-west of Poitiers, is a pretty town, and has a great number of convents and religious houses in it; but was much more remarkable in the last century for its attachment to the Protestants: here it seems they had one of their last synods in 1658.

Lusignan, *Liciniacum Castrum*, is a little town situated five leagues south-west of Poitiers, famous formerly for one of the strongest castles in France, which is now demolished, the Lords whereof were Kings of Cyprus and Jerusalem.

Richelieu, an elegant town and castle, ten leagues north of Poitiers, enlarged and beautified by the celebrated Cardinal RICHELIEU, and made the capital of a Dutchy and Peerage; the Duke's palace or castle, with the park, gardens, &c. are esteemed equal to most in France.

Luçon is situated three and twenty leagues south-west of Poitiers, considerable only on account of its being a Bishop's see.

The name,  
situation.Face of the  
country.

The air.

Fontenai le Comte, the capital of the lower Poitou, is situated twenty leagues south-west of Poitiers, and is a well-built town, consisting of three parishes and several convents; but the French writers do not give us any farther description of it. Poitou is part of Aquitania, and erected into a county by CHARLEMAIN in favour of ABSON, whose posterity were Dukes of Guienne for several generations; the last of them was WILLIAM the Ninth, whose only daughter and heiress marrying HENRY of Anjou, afterwards HENRY II. King of England, brought this province with Guienne and Gascony to the crown of England, as has been observed already, and which was possessed by the English with some interruptions from the French, till the unfortunate reign of HENRY VI. anno 1453.

The trade of Poitiers and the district belonging to it is inconsiderable, consisting only in worsted stockings, hats, and shammy leather. They sell also some wool and cattle at their fairs, and druggets, which are the manufacture of Parthenai.

The district of Chatelleraud is a pleasant fruitful country, the inhabitants esteemed witty and industrious, and to have a genius for trade. The town of Chatelleraud is famous for watches, clocks, knives, scissors, and other hard ware.

In the district of Maixent their trade consists chiefly in corn and cattle, which they vend to the merchants of Auvergne, Lions, Piedmont and Savoy; and in the town of Maixent they have a woollen manufacture.

In the district of Niort they vend great numbers of cattle, horses and mules; and at the town of Niort, their manufacture of woollen stuffs and shammy leather is considerable.

In the district of Fontenai they drive a good trade with their horses, mules and corn; and at the town of Fontenai they have a manufacture of woollen cloth, serges and stuffs. On the sea-coasts they make salt of the sea-water, as has been intimated already.

The governor-general of this province hath under him one lieutenant-general, and two of the King's lieutenants for the higher Poitou; and one lieutenant-general and two of the King's lieutenants for the lower: besides the governors of particular places, as those of Loudun, Poitiers, Chatelleraud, Lusignan, St. Maixent, Niort, Fontenai le Comte, and the castle of Chaune.

## CHAP. XIX.

*Contains a description of the general government or province of Bretagne or Brittany.*

**B**retagne, Britany, Little Britain, anciently called Armorica, i. e. *Ad mare sita*, from the situation on the sea, is a peninsula bounded on the north, south and west, by the Ocean, and on the east by Anjou, Maine and part of Normandy, being sixty leagues in length from east to west, and forty five in its greatest breadth, that is, from Nantz to St. Malo's; but grows less gradually as we proceed to the westward, so that in some places it is not half that breadth.

This country is pleasantly diversified with mountains and valleys, but the lower Britany is the most mountainous, a chain of hills called Mount Arre running cross it. There is also a happy variety of champain and woods. The trees in their forests are for the most part beech, oak or chestnuts. The air is generally healthful, but thick and moist to-

wards the sea-coasts. The principal rivers are the Loire, the Vilaine, the Oust, the Blavet and the Rance; of which the two first only are navigable. The Loire has been already described, which runs through this province from east to west, and falls into the Ocean ten leagues below Nantz. The Vilaine rises on the eastern confines of this province, and running south-west, falls into the ocean about twenty miles north-west of the mouth of the Loire. The rest of the rivers rise within the province, and running but a very short course before they discharge themselves into the Ocean, are not any of them navigable farther than the tide flows. There is no part of France abounds with so many good ports and roads as this; for here we find St. Malo's, Brest, Conquet, Port Lewis, Nantz, and several others, which I shall describe when I come to treat of those places.

Bretagne is usually divided into the higher and lower Britany: the higher lies towards the east, and the lower towards the west; but the latest French geographers chuse to describe the several dioceses it contains without regarding whether they stand in the higher or lower Britany; and these are nine in number, viz. 1. The diocese of Rennes. 2. That of Nantz. 3. Vannes. 4. Quimper. 5. Leon. 6. Triguier. 7. St. Brien. 8. St. Malo. And, 9. That of Dol.

The Bishoprick of Rennes is an inland country, having the diocese of Dol on the north, and the duchy of Maine towards the east; the chief towns whereof are Rennes, Fougères and Vitre.

Rennes, *Civitas Redonum*, the capital of the province, as it was anciently of Armorica, is situated on the river Vilaine, about fifty-five miles to the northward of Nantz, and forty-five south of St. Malo. It is divided by the river in two parts, which have a communication by three bridges; a large populous town, the See of a Bishop, and the place where the States or Parliament meets: it hath some fine squares in it, but the streets are generally narrow and the houses high, which makes them very dark. The cathedral and Jesuits college are the only buildings that travellers mention as worth the viewing.

The diocese of Nantz is bounded by that of Rennes on the north; by Anjou on the east; by Poitou on the south, and the Ocean on the west; being divided in two parts by the river Loire. The chief towns are Nantz, Chateaubriand, Gueraude, Croisic, Clisson, Ancenis, Machecoud and Paimbœuf.

Nantz, *Condivionum*, *Civitas Namnetum*, is situated on the Loire, about thirty miles to the eastward of the Ocean, and forty-five to the westward of Angers, in 47 degrees 15 minutes north latitude, a degree and half to the westward of London. It is a large, populous town, surrounded by a wall and other fortifications, and defended by a castle. The suburbs are larger than the town. As to the trade, which is as considerable as that of any town of the kingdom, I shall speak of it under another head; only observe here, that no ships or vessels of any burthen can come up hither on account of the sands, tho' the tide runs up a great deal higher, but are forced to unload their merchandize into hoys and lighters at Paimbœuf, near the mouth of the river. There is a fine key along the river-side, on which stand the merchants houses, and a handsome bridge over the river. The principal buildings mentioned by the French writers are the cathedral, a magnificent Gothick structure, in which are the tombs of several of the ancient Dukes

Nantz city

**CHAP. XIX.** Dukes of Bretagne; the town-house, a modern building, and the episcopal palace. Near the city is a famous hermitage situated on a rock, from whence there is a fine prospect of the town, the Loire, and the adjacent country. Here the hermits have with their own hands hewn a handsome chapel out of the rock, cells for their lodging, and other conveniences, to which they have with great labour added a pretty garden. But this town is remarkable for nothing more than the famous edict of Nantz, so called from its being granted here by King HENRY IV. surnamed the Great, in the month of April, 1598, by which the Protestants were allowed the free exercise of their religion: it was confirmed by his successor LEWIS XIII. and some say by LEWIS XIV. But however that be, certain it is that LEWIS XIV. revoked it in the year 1685, upon which followed that persecution which occasioned so many thousands of his subjects with their families to take refuge in other kingdoms, to the irreparable damage of his own. The principal inducement to which, seems to me rather an insatiable thirst to make himself absolute, than from any prejudice he had to the reformed religion; for this body of men ever joining with those who were for defending their civil rights, he could never hope to establish an absolute dominion over the lives and fortunes of his subjects till they were extirpated.

**Paimbœuf.** Paimbœuf is situated on the southern bank of the Loire near its mouth, and may very properly be stiled the port-town to Nantz; for here all merchandize are unloaded that go up thither, and here whatever they export is put on board, and the whole town consists only of inns and taverns for the reception of sea-faring men.

**Gueraude.** Gueraude is situated to the north-west of the mouth of the Loire, and is considerable for the salt-marshes about it, which yield vast quantities of salt.

**Bourgneuf** Bourgneuf lies to the southward of the mouth of the Loire on a large bay of the sea, where they also make abundance of salt, which they export to Holland and other countries.

**Vannes diocese.** The diocese of Vannes, or Vennes, lies on the sea-coast, north-west of that of Nantz. The chief towns whereof are, 1. Vannes. 2. Auray. 3. Hennebont. 4. Redon. 5. Port Lewis. 6. Pontray. 7. Malestroit. The peninsula of Rhins; and lastly, the island of Belle-Isle.

**Vannes city.** Vannes or Vennes, *olim Dariorigum* and *Civitas Venetum*, is situated on a canal through which the tide flows, two leagues from the sea, and twenty north-west of Nantz, and is looked upon as one of the most ancient towns of the province, and indeed of Old Gaul; it is still a Bishop's See, but the town is small, the streets narrow and ill-built; the suburbs are much larger than the town, where are their fairest buildings, as the college of the Jesuits, the grand hospital, and the Dominican convent.

**Auray.** Auray is a little trading town, situate on the sea-coast to the westward of Vennes, consisting only of a large key and one fine street.

**Port Lewis** Port Lewis is a considerable town situate on a bay of the sea at the mouth of the river Blavet, ten leagues north-west of Vennes. It has a good harbour that receives the largest ships, and here the India company have their store-houses and principal magazine; here also in time of war part of the royal navy are fitted out: but notwithstanding the seeming advantage of the situation, there are not many merchants resort hither, which my author supposes to proceed from their meeting with a bet-

ter and quicker market at Nantz, which is always ready to take off any cargo they export; and perhaps another reason may be, because it is one of the ports of the royal navy; for merchants seldom care to be under those restraints that are put upon them by the military power; arms and trade cannot flourish in the same place.

Pontivi is situated on the river Blavet, eight or nine leagues north-east of Port Lewis, and is the chief town of the duchy of Rohan, the Dukes whereof are said to be descended from the ancient Dukes of Britany: HENRY II, Duke of Rohan, was in great esteem among the French Protestants, being one of their generals, and died of the wounds he received at the battle of Rhinfield in the year 1638.

Belle-Isle, *olim Calanefus*, lies about six leagues south-west of the continent of Britany and ten from Vennes; it is almost encompassed with rocks, which make it of difficult access, and is six leagues in length and two in breadth. There is a pretty good road to the northward of the island, defended by forts and other works, in which there is always a good garison; and here the French fleet usually rendezvous before they put to sea. This island was erected into a marquise in the year 1573. The most remarkable places upon it are the parishes of Lauzon, Palais, Locmaria and Bangor.

The diocese of Quimper stretches it self along the coast of Britany to the north-west of that of Vennes; the chief towns whereof are, Quimper, Corentin, Quimperler, Concarneau, Carhaix, Chateaufort, Gourin, Rostrenin, Chateaulin, Faou, Audierne, Pont Croix, Pont l'Abbe, Bouarnez and Crozon.

Quimper, which in the British language is said to signify a place surrounded with walls, is situated on the river Oder, twelve or thirteen leagues north-west of Port Lewis, and two or three from the sea. It is the capital of a county to which the Britons who transported themselves from Great Britain to Armorica gave the name of Cornwal or Cornouaille, being the country from whence they are supposed to come. The town is tolerably large, a place of some trade, and the See of a Bishop, who also stiles himself Count. The cathedral is a noble old structure, and the Jesuits have a fine college here, which are the only considerable buildings mentioned by the French writers.

The diocese of Leon takes up the most westerly part of Britany, extending it self along the sea-coast from the harbour of Brest to the river of Morlaix, and forms a kind of peninsula, the sea encompassing it on three sides. The chief towns are St. Paul de Leon, Brest, Lesneven, St. Renaud, Landernau, Porfal, the isles of Ouessant or Ushant.

Leon, or St. Paul de Leon, so denominated from one of their first Bishops, who has the reputation of a saint, is situated near a bay of the sea in the north-west part of the province, an hundred miles north-west of Rennes, and thirty north-east of Brest. It is the See and residence of a Bishop, who is also a temporal Lord, and would not be very considerable upon any other account, were it not for the suburb of Roscof, which with the isle of Baz forms an excellent road or harbour, where their shipping usually touch which are bound to or from the English channel.

Brest is situated on an eminence on the north side of a fine bay, called Brest or Cameret Bay, in 48 degrees 30 minutes north latitude, four degrees odd minutes to the westward of London.

The

CHAP.  
XIX.

The harbour, in the phrase of the French writers, is the finest in the world; seeming to have forgot that much finer of their own at Toulon, for their largest ships are always built and laid up at Toulon, because (as I presume) Brest will not easily admit of ships of that bulk. They have indeed a great number of men of war at Brest, but not one of the first rate, as I can learn; the entrance of the harbour is too shallow or too rocky to admit them: which is however a security against the fleet of an enemy. The town and the entrance of the harbour are fortified as well as the nature of the ground will admit; and the port, it is said, will contain five hundred sail of ships. The yards and magazines here are so considerable, if we may credit the French writers, that they can equip out seventy sail of men of war from this port; but they must certainly mean of the lesser sort, from what has been hinted already. Their small squadrons and privateers which sheltered themselves here used to be extremely troublesome to our merchant-men in the late wars; for which and other reasons it was thought proper by the confederates to make a descent here in the year 1694, in order to have taken the town and destroyed their shipping; but the attempt miscarried, having been so long discovered before the English fleet sailed from their ports, that the British government had intelligence that the design was betrayed, and yet were so sanguine as to proceed in the expedition, to the no small loss and disgrace of their fleet and forces: for there was an army more numerous than themselves ready to receive them, and batteries of guns planted on the sea-shore wherever there was any possibility of landing. Here the brave TALMASH, who commanded the land-forces, received his mortal wound as he was about disembarking the first six hundred men, who were most of them killed, wounded or made prisoners; the tide leaving the boats they were in upon the sand. This disappointment so discouraged us, that in the last two long wars we scarce ever made a descent upon the French coasts afterwards, though we were masters at sea, and might certainly have very much weakened their armies elsewhere by it, and distracted their affairs. I must say it was a brave and wise attempt of my countrymen to endeavour the destruction of the French shipping, and the only two harbours they have of any consequence, namely, Brest and Toulon; though neither of these enterprises succeeded according to expectation: for as the French in one reign increased their royal navy to such a degree as to dispute the empire of the sea with the united fleets of England and Holland more than once, what may we not dread if we should see another enterprising monarch at their head?

**Conquet.** Conquet is a little port-town in the most westerly part of Britany, near the entrance of the bay of Brest, the sea between which and the isles of Ushant has obtained the name of Conquet Road.

**Ushant isles.** The island of Ouessant or Ushant, *Uxantius*, lies four or five leagues to the westward of Conquet, and is about eight miles in circumference; there are some little villages upon it, and a castle for its defence. There are a great many other lesser islands near it, which from the larger have obtained the name of the isles of Ushant.

**Triguer diocese.** The diocese of Triguer extends it self along the northern coast of Britany, from the river of Morlaix to the town of St. Brieu. The chief towns whereof are Triguer, Morlaix, Guingamp, Lannion and Lanmur.

**Triguer city.** Triguer, *Lantriguet*, is situated on the sea-coast

thirty miles to the eastward of Leon, the cathedral is dedicated to St. TUDAL, said to be their first Bishop and an Englishman: the Bishop is temporal as well as spiritual Lord of the place, and stiled Count. The town stands almost in the midst of the water, and has a port for small vessels.

Morlaix, *Mons Relaxus*, stands on a little river, Morlaix. to which it communicates its name, two or three leagues to the southward of St. Paul de Leon, and will admit of small vessels. The road at the mouth of the river has good anchorage, and is much frequented.

The diocese of St. Brieu lies also upon the northern coast, between that of Triguer and St. Malo. The chief towns whereof are St. Brieu, Montcontour, Lambale and Quintin.

St. Brieu is situated ten leagues to the eastward of Triguer, in a bottom surrounded with mountains out of sight of the sea, tho' it be within half a league of it, where there is a tolerable port for small vessels. The churches, streets and squares make a good appearance, and there are several convents in the place, but neither wall or ditch about it: the Bishop is both temporal and spiritual Lord of the town.

The bishoprick of St. Malo lies between that of Brieu and Dol. The chief towns are St. Malo, Concale, Chateau-Neuf, Dinant, Tintiniac, Combourg, Montfort, Breal, Guer, Ploermel, Josselin, Trinity, and Comper.

St. Malo is situated on a rock called St. Aaron, surrounded by the Ocean, but joined to the continent by a causey; it lies about eight or nine leagues to the eastward of Brieu, and twelve north-west of Rennes. The town, especially that part of it contiguous to the causey, is strongly fortified. The harbour is said to be one of the best upon the coast, but of difficult access, and will not admit of very large vessels. The cathedral, the Bishop's palace and the town-house stand in the Place, as they call it; which I perceive is no more than a common market-place, though some writers have given it the elegant title of a square. They tell us also there are some other beautiful places and squares in it, though their best writers confess it is generally an ill-built town with narrow streets, a sea-port of the worst kind, being inhabited chiefly by people who have made their fortunes by privateering, or common mariners; though some will have it that it is become rich and populous by the West-India trade: this nest of privateers did us so much damage in the late wars, that our government were provoked to bombard them; but I question whether the damage they received, amounted to much more than the powder and shot that was spent upon them, their flats and sands keeping the fleet at such a distance. The garison of this town, it is said, turn their dogs out of the gates every night to prevent a surprize, in imitation of some of the ancients.

Dinant or Dinan is situated on a mountain, steep and almost inaccessible on every side, and is also defended by a wall and castle; it stands about five leagues south of St. Malo, and is the capital of a county to which it gives its name.

The bishoprick of Dol lies upon the coast between St. Malo and Normandy, and is the smallest in the province, not being more than five leagues in length, the only considerable town whereof is Dol.

Dol, *Dolum*, is situated in a marshy country two leagues from the sea, and four to the eastward

CHAP. XX. of St. Malo; it is a little unhealthful town and poorly peopled, the Bishop is temporal Lord of the place.

The ancient state of Britany. This country, which, with part of Normandy, constituted the ancient Armorica, was divided into several little principalities and states, which were confederated together against the Romans when CÆSAR subdued them.

The account the French give of its being called Britany or little Britain, is as follows: they say, that part of the natives of the island of Great Britain being driven out of their country about the middle of the fifth century, in the reign of the Emperor VALENTINIAN, by the English or Anglo-Saxons, fled for refuge into Armorica, which thereupon began to be called *Britannia*, *Britannia Cismarina*, and *Britannia Minor*. And that the Romans who were then masters of Armorica, received them as friends and allies, who might assist them to resist the incursions of the barbarous nations, particularly the Visigoths, who then began to be very powerful about the Loire, that they committed the defence of this province to RIOTHAME, captain or general of the Britons, conferring on him at the same time the title of Count and General of the Empire. That CLOVIS King of France attempted to make a conquest of their country, but at length came to an accommodation with the Counts of Bretagne, and settled the limits of their respective dominions. That the Counts, Dukes, or Sovereigns of Bretagne, with some interruptions from the French, enjoyed their territories till the reign of FRANCIS II. the last Duke of Britany, whose daughter ANNE marrying CHARLES VIII. of France, brought with her the dutchy of Britany; but CHARLES dying without issue, and ANNE surviving him, it reverted to her again, and was afterwards united to France by another match, about the year 1532, till when it was under a different government and administration from the rest of the kingdom.

Neither the French or English historians are agreed either on the time or the occasion of the Britons transporting themselves in such numbers into Armorica as to obtain the dominion of it, give new names to the most considerable places as well as the country it self, and to introduce their own language, tho' these are facts not to be controverted. The British or Welch tongue is still spoken here, many places retain their British names, and their laws and constitutions were lately very different from the rest of France. Nor does it appear that the Franks, or any of the Kings of France were sovereigns of this country, till it was lately united to that crown by marriage of the heiress of Britany with one of those monarchs. But I shall enlarge on this head in their general history.

Trade and produce of Britany. The commerce of the province, both foreign and domestick, is indeed very great; the briskest and most considerable in the kingdom, according to the French writers, and is carried on chiefly at Nants and St. Malo. The merchants of Nants trade principally to America and the West-Indies, whither they send annually about fifty sail, from sixty to three hundred tons. Five and twenty or thirty of these vessels are bound to Martinico, eight or ten to Guardeloupe, as many more to St. Domingo, and three or four to Cayenne and other little ports. Their Cargoes consist of all manner of provisions and necessaries for the plantations, and by the way these vessels take in wines at Fyal and Madeira, which are strong-bodied and will

bear the sea. Other ships touch at the isles of Cape Verd, where they load themselves with salt and tortoises, which sell well in the islands of the West Indies. These ships usually set sail in November and December, and are five and forty or fifty days in their voyage outward bound. They make their returns from the West Indies and the continent in sugar, cocoa, ginger, cotton, wool, indigo, hides, tortoise-shells, and other small articles. They are not permitted to carry sugars unrefined out of the kingdom, but these are refined at the sugar-works at Nants, Saumur, Angers and Orleans. As for the rest of the merchandize imported, it is exported to Holland, Denmark, Hamburgh, Dantzick, Stockholm, &c. to great advantage.

In their fishery at Newfoundland and the Isle-royal they employ thirty sail of ships, which usually set out in July, August, December or January, and return in three or four months, most of them making two voyages every year. Their gains are proportionable to the shoals of cod-fish they meet with: sometimes a thousand cod will not make more than two hundred livres, and at other times they are sold for twelve hundred. Nants is as it were the staple for this kind of fish, the ships which go from Rochelle and Oleron to this fishery unloading their cargoes in the river Loire, and they are sent from Nants not only to all the towns on that river, but to Paris by the canal of Lyons, to Auvergne, and all over the kingdom.

The merchants of Nants also have a good foreign trade to Spain, particularly to Bilboa, St. Sebastian, Corunna, and all the coast of Galicia; but it is in small barks loaden with paper, linen, silk-stuffs, gold and silver lace, sugar, iron-wares and mercery. And they bring back in return, iron, wool, sheep-skins, oranges, citrons, and a great deal of specie. They have also a trade with Portugal, whither they send the same species of goods as to Spain, and bring back much the same merchandize. Most of the nations of Europe, and particularly the northern kingdoms, drive a great trade with Nants. The Dutch carry thither their cinnamon and other fine spices, starch, lead, copper, tobacco, pipe-staves, timber, deal-boards, masts, pitch, tar, cordage, hemp, wire, Russia-leather, tallow, oil, whalebone, and a great deal of iron or hard ware, and mercery or haberdashers wares; taking in return wine, brandy, paper and prunes; but chiefly salt, which they embark at the bay of Bourgneuf and Pouliguen.

The English bring to Nants lead, tin, copers and sea-coal; and take in return also, wine, brandy, paper, prunes and salt: but as the value of the goods they bring is not equal to what they take, they pay the difference in treasure.

Provisions from Ireland bear a good price at Nants, as barrelled butter, salt beef, tallow, herrings, hides, tanned leather, and wool, when they dare hazard the running of it.

The Hamburgers, Danes, Swedes and Dantzickers, bring steel, copper, planks, masts, pitch, cordage and hemp.

The city of Nants also has a very considerable trade with Flanders, and all the ports of their own kingdom; and the adjacent country feeds great herds of cattle, of which they make a considerable advantage.

The city of St. Malo also has as good a foreign trade as any town in the kingdom, with England, Holland, Spain, &c. To England they export the linens of Rouen, Laval, Quintin, Vitre, Pontorson

CHAP.  
XIX.

Pontorson and Rennes; and the English give them in return, woollen-cloth, lead, tin, sea-coal, flax, copperas and galls: but as the goods they bring do not amount to half so much as they receive, the exchange is here also prodigiously against them, and they pay the difference in bills or specie.

The English in time of peace send a hundred ships to St. Malo one year with another, and the Dutch a great many; but the French traffick with Spain is the most considerable and profitable, and consists chiefly in linens, which they buy up in all parts of the kingdom; the fattins of Lyons and Tours, gold and silver-stuffs, the woollen manufactures of Amiens and Rheims, castors, &c. which are sent directly to Cadiz, and from thence to the Spanish plantations in America, the returns from whence are made in specie, rich merchandizes, hides, cochineal, indigo, Campechy wood and Spanish wool; but it is eighteen months or two years before the returns are made from New Spain, and then indeed they are very large, amounting sometimes to twelve millions of livres in specie, and never less than six or seven. And the French observe, there is no trade more advantageous, either to particular men, or the publick, as it furnishes them with most of their treasure.

The merchants of St. Malo also have a great dependance on the cod-fishery, to which they send annually abundance of ships, from a hundred to three hundred tons, selling their cargoes at their return at Bourdeaux, Bayonne and Bilboa, for wines, brandy, prunes, raisins, and other fruits. They also carry their fish to the coast of Provence and Italy, bringing back fruits, soap, oil, alum, &c.

Privateers  
of St.  
Malo.

When the late war interrupted their trade, the people of St. Malo in general applied themselves to privateering. They armed all the ships they had for that service; and as the English and Dutch, their enemies, have a much greater share of foreign trade than the French, they did them an inconceivable damage, and enriched themselves more by their piracies, than by all their foreign commerce in time of peace. They also bred up and entertained great numbers of mariners, which were of service to the state, say the French writers, and became a terror to all the maritime powers of Europe. And indeed the French King did the Confederates more mischief by this piratical war, than ever they could do his subjects or territories, tho' they were always masters at sea.

I shall conclude this head with an account of the produce and manufactures of the province. The diocese of Rennes yields wheat, rye, oats, and abundance of buck-wheat, or French-wheat, fitter to fat hogs with than to be the food of men; tho' use, it seems, will bring a man to like any thing, for I have heard some people admire the flower of buck-wheat. In Flanders, by way of derision, they say such a fellow lives on *Buck-a-de-cooks*, which are pancakes made of buck-wheat, and sold to the poorest people at the corners of the streets. They feed also a great many cattle in this diocese, and have excellent butter, with which they supply their neighbours of Nants and Anjou.

The manufacture of sail-cloth for shipping, and twisted thread is considerable. They dye their thread of all colours, and vend it at Paris, Rouen, and other great cities throughout the kingdom. It is exported also to England and Spain, and even to the Indies.

The diocese of Vannes produces abundance of corn, which they export to St. Sebastian, Portugal, Bayonne, and other places; and from Spain they

usually bring back specie in return. They salt up also great quantities of pilchards, congers, &c. which they vend at Bourdeaux, Rochelle, Nants and St. Malo. The town of Port-Lewis alone, it is said, vends four thousand hogheads of salted pilchards to the merchants of St. Malo, who export them to Spain and the Mediterranean. The Natives of Belle-Isle also drive a great trade with pilchards, the vessels employed in this fishery are not above two or three tons burthen a-piece, and are manned with about five hands every boat, carrying a dozen nets at least, of twenty or thirty fathoms in length. They salt them, barrel them up, and sell them to the merchants before they come on shore.

The diocese of Quimper abounds in corn and cattle, which they vend in Normandy; for which they receive money in return, as they do wine for the corn they carry into Gascony.

The principal trade of the bishoprick of Leon is in horses, paper and linen. They have not corn enough for their subsistence, which is therefore frequently imported from the north, as well as flax for their linen manufacture.

The bishoprick of Triguier on the contrary abounds in corn and cattle, with which they supply the sea-ports of Brest and St. Malo. Their hemp also turns to good account, the King purchasing of them the value of three millions of livres a year to supply his magazines at Brest.

Linen and thread are the principal manufactures in the diocese of Brieu; the soil also produces corn and fruits in abundance, particularly apples, of which they make cyder, the common beverage of the province, for there is no wine grows in the country.

The diocese of St. Malo also produces plenty of apples, which they convert into cyder; and abounds in corn and cattle.

The government-general of Bretagne has in it two general lieutenantcies, one of them consisting of the diocese of Nants only, and the other of the remaining eight dioceses; in each of which the King hath also a lieutenant: and as Britany is a peninsula encompassed almost on every side by the sea, there are abundance of castles and forts erected on the coasts for its defence; the strongest of which are the castle of Belle-Isle, the castle of Brest, the citadel of Port Lewis, the castles of St. Malo and of Nants, the castle of Torro, which defends the entrance of the river of Morlaix, and many others were erected during the late wars, when the confederate fleet frequently visited their country.

## CHAP. XX.

Contains a description of the province or general government of Normandy.

Normandy, known to the Romans by the name of the eleven confederated cities or provinces of Gaul, and afterwards by that of Neustria, or West France, of which kingdom it made a part, received its modern name from the Danes and other northern people, who went under the general name of Normans, and made a conquest of it about the year 912, under the conduct of ROLLO, or RAUL, as the French call him, their General or Prince, who is always looked upon as the first Duke of Normandy.

This province is bounded by the British channel on the north; by Picardy and the Isle of France on the East; by Beaufie, Perche and Maine, on the south; and by Bretagne on the west;

CHAP.

west; extending sixty leagues in length from east to west, and thirty in breadth from north to south; being one of the largest and most fruitful provinces of the kingdom. There are indeed scarce any vineyards; but then they abound in apples and pears, of which they make cyder and perry, the ordinary drink of the natives. The country has some hills in it, but no high mountains. It consists of an agreeable variety of arable, meadow, pasture-grounds and forests. The air is colder here than in any part of France, but not unhealthy. The principal rivers are the Seine, the Eure, the Aune, the Iton, the Audelle, the Rille, the Dive, the Touque, the Careutone, the Aute and the Orne.

Division.

Caux di-  
strict.Chief  
towns.

Caudebec.

The Seine, already described, runs north-west through this province, and having visited Rouen, falls into the British channel near Havre de Grace.

The Eure rises in Perche, and taking its course first to the eastward, then turns to the north, and having crossed part of Normandy, discharges it self into the Seine near Pont de Larche.

The Orne rises near Sees, in the south of Normandy, and taking its course first to the westward, afterwards turns about to the north; and having visited Caen, falls into the British channel a little below that city.

The principal ports are those of Diepe, Havre de Grace, Honfleur, Cherbourg and Grandville; and some add St. Valery and la Hogue; but these scarce deserve the name of ports.

And as this country abounds in iron-mines, so it does in mineral waters, the chief whereof are those of Belesme, St. Paul de Rouen, Hebecrevon, Menitoue, Bourberouge, Pont Normand, Mont Bosque, and those of Forges; of which the last are in much the greatest reputation.

This province is usually divided into the Upper and Lower Normandy. The Upper Normandy comprehends, 1. The country of Caux. 2. The Roumois. 3. The Vexin Norman. 4. The country of Bray. 5. The country of Campagne. 6. The country of Ouche. And, 7. The Lieuvin. The Lower Normandy contains, 1. The country of Auge. 2. The district of Caen. 3. The Bessin. 4. The Cotentin. 5. The Avranchin. 6. The country of Bocage. And, 7. The Marches.

The country of Caux received its name, say the French writers, from the Caletes, its ancient inhabitants, tho' I must confess, I don't find any great resemblance in the two names. It extends from Rouen to Havre, and from Caudebec to Picardy. The land is generally high, but plain, having few valleys in it. The French look upon it as a very cold country, and inconvenient on account of the scarcity of good water; but the plenty of corn here makes them some amends. The chief towns are Caudebec, St. Valery, Diepe, Arques, Eu, Aumale, L'Isle-bonne, Yvetat and Longueville. 'Tis true, Havre de Grace, Montivilliers, Harfleur and Fescamp, are also in Normandy; but as these constitute another government by themselves, they will be considered in another chapter.

Caudebec, *Calidobecum*, is situated on the river Seine, at the foot of a mountain covered with woods, seven leagues north-west of Rouen, and eleven south-east of Havre, a little populous trading town, considerable formerly for its manufacture of hats, which were transported to other countries; but they don't make more than will supply their own at present.

Diepe, *Juliobona Caletorum*, obtained its modern name, according to the French, from its standing in a bottom. It is situated on the north-east coast of Normandy, fourteen leagues to the northward of Rouen, being of a triangular figure, and strongly fortified, tho' the works are very irregular, occasioned by the uneven situation of the ground. It is one of the most considerable ports upon this coast, but will not admit of men of war of the line, or merchant-ships of great burthen. During the war it was a nest of privateers, and did considerable damage to the British trade; whereupon the English Fleet bombarded it in the year 1694, since which it has been rebuilt to advantage, and some new works added to the fortifications, by Monsieur VAUBAN. The natives are most of them mariners. One of their own writers observes, that tho' the air here is very gross, and their bodies still grosser, it has produc'd several bright men, and excellent mechanicks. The town contains about thirty thousand souls.

Eu, *Ou, Auga*, is situated on the confines of Eu-Picardy, near the mouth of the river Breffle, six leagues north-east of Diepe, considerable chiefly for its being the capital of a county and peerage.

The Roumois lies between the rivers Seine and The Rou-Rille, and abounds in corn, fruit and cattle, but especially sheep. The chief towns are, Pont Audemer, Quillebeuf and Elbeuf.

Pont Audemer is situated on the Rille, twelve leagues from Rouen. LEWIS XIV. endeavour'd mer- to make it a port.

Elbeuf is situated on the Seine, four or five miles north-west of Pont de l'Arche, considerable for its woollen manufacture, and for its being erected into a dutchy and peerage.

The Vexin Norman lies on the north-east side of the Seine, and is a very fruitful country, comprehending the towns of Rouen, Gisors, Audely, and Ecomi.

Rouen, *Rotomagus*, the capital of Normandy, and formerly of the Velocassies, is situated in a bottom on the north bank of the Seine, encompassed on three sides with hills, and only open towards the river, being seventy miles north-west of Paris, and forty-five south-east of Havre de Grace and the British channel. It is surrounded by a wall, defended by round antique towers, but of no great strength in this age. As the town is very populous, containing sixty thousand souls, but not extremely large, the streets are narrow, and the people seem to be crowded together. It contains thirty-six parishes, several hospitals, thirty-five fountains, sixteen monasteries, nineteen nunneries, and a fine college of Jesuits. The cathedral, the churches of St. Owen and St. Maclou, in the phrase of my French author, are perfectly fine. In the cathedral are the tombs of several Kings, Princes, Prelates and Noblemen, particularly those of HENRY III. and RICHARD I. Kings of England, and Dukes of Normandy, on each side of the high altar in the choir, and that of CHARLES V. King of France, in the middle of the choir. They reckon up a great many publick places and squares in Rouen; seven of which the French esteem very fine ones; but several of them are no better than the market-places in our great towns, and put to the same uses. There was a handfom stone-bridge over the river between the city and suburbs, said to be built by the Empress MAUD; but this being broken down, the place is now supplied by a bridge of boats. The famous JOAN of Arce, or Maid of Orleans,

CH A P.  
XX.  
Diepe.

CHAP. XX. Orleans, was burnt here by the English for an impostor: but the French, when they became masters of the city, erected a statue to her memory, as she had been a means of turning the fortune of the war, and preserving their country from an entire conquest by the English.

Rouen, it is said, hath been burnt and rebuilt twelve or thirteen times, but stands so very advantageously for trade, upon the Seine, between Paris and the British channel, that it will never be deserted; and is at present looked upon as the center of the French trade on this side, on which I shall enlarge when I come to that head. It is the See of an Archbishop, and the place where the parliament of the province have their sessions. The corporation consists of a mayor and six aldermen, the mayor being elected every three years.

The neighbourhood of the city of Rouen is extremely fine. On every side of it are pleasant walks and beautiful country-seats; and at about a league distance stands the Charter-house, which is one of the most agreeable solitudes imaginable. The polite world will certainly have an opinion of the situation of Rouen, when they remember that the late Earl of Clarendon, grandfather of Queen ANNE, a gentleman of the most refined taste, chose to make it the place of his residence during his exile.

The country of Bray is bounded on the north and west, with the country of Caux; the Beauvoisis, on the east; and the Vexin Norman, on the south. This district is partly hilly, and partly marshy, fit for the feeding of cattle. The arable land also bears rye; and they have plenty of fruit, of which they make cyder and perry, but very little wheat. The chief towns are Neufchatel, Gournay, Le Ferte and Forges.

Neufchatel. Neufchatel is situated five or six leagues south-east of Diepe, and is a pleasant town, consisting of three parishes, the chief of this district, but not considerable upon any other account.

The country of Campagne lies south-west of the Seine; the chief towns whereof are, Pont de l'Arche, Louviers, Neubourg, Harcourt, Evreux, Gaillon, St. Andre, Nonancourt, Vernevil, Breteville and Concles.

Pont de l'Arche. Pont de l'Arche, *Pons Arcus*, takes its name from a stone-bridge of two and twenty arches, built over the Seine at this place, about four leagues south of Rouen. It is inclosed with a wall, and defended by a castle, which stands on an island in the river. There is one parish-church in the place, and two convents.

Evreux. Evreux, *Mediolanum Aulercorum*, is situated in a fruitful plain on the river Iton, eight or nine leagues south of Rouen, the capital of a county, to which it communicates its name, and a Bishop's See. It contains nine parishes, and several religious houses. The cathedral and the magnificent castle of Navarre near this town, are worth the viewing.

The district of Ouche. The district of Ouche lies to the westward of that of Campagne. The chief towns are Bernai, Beaumont le Roger, and L'Aigle; but none of them merit a particular description.

The country of Lieuvain. The country of Lieuvain lies to the northward of Ouche, and abounds in corn, flax, and good pasture. The chief towns are, Corneilles, Lieuvrai and Tiberville; none of which my French authors have thought worth describing.

The country of Auge. The country of Auge lies to the westward of the Roumois, and consists for the most part of

pasture-grounds. The chief towns are Lisieux, Honfleur and Pont l'Eveque.

Lisieux, *Civitas Lexeviorum*, is situated at the confluence of two small rivers, partly on a hill, and partly in a valley, eighteen leagues to the westward of Rouen. It is surrounded by a wall, and some antique towers of no great strength. The cathedral and bishop's palace are the only buildings mentioned as worth the viewing.

Honfleur, *Huneflotum*, is situated on the west bank of the river Seine near its mouth, three leagues south-west of Havre de Grace, and sixteen west of Rouen, a port-town, which the late King endeavoured to improve, by making a basin fit to receive shipping, and a large key about it. The town is supposed to contain about twelve thousand souls. Here they unload the salt which is brought from the bay of Brouage, and distribute it to all the towns on the Seine.

The country of Caen lies to the westward of that of Auge; the chief town whereof is Caen, *Cadomus*, situate at the confluence of the rivers Orne and Odon, in a valley between two large meadows, about two leagues south of the British channel, and eight to the westward of Lisieux. This city, which is the second of the province, consists of twelve parishes, two abbeys, eight monasteries and seven nunneries. The most remarkable publick buildings are the castle, the episcopal palace, the hotel, called the grand cheval, the office of the exchequer, the new buildings of the university, the town-house or guild-hall, and the buildings about the place-royal, where they erected a statue of their grand Monarch in the year 1685. The inhabitants of Caen are computed to amount to near forty thousand souls. They are a trading people, and have a communication with the sea by the little river Orne, by which they bring their merchandize up in boats; and their university is said to be in a flourishing condition. The Normans first made this town considerable, WILLIAM the Conqueror having laid the foundation of their castle, according to the tradition of the place. Certain it is, the Conqueror and his Queen built two abbeys here, of which some French historians give the following relation. They say, that this Prince having married MATILDA, the daughter of BALDWIN Earl of Flanders, who was nearly related to him, without a dispensation from the Pope, his Holiness, by way of penance, enjoined them to build these two abbeys; whereupon the Conqueror founded that of St. Stephen, in which he was afterwards interr'd; and his wife that of the Trinity, in which she was buried. The first is possessed by monks, and the other by nuns. Both the abbeys are of the order of St. Bennet, and richly endowed. The Conqueror, besides the lands he had granted to that of St. Stephen in France, gave several manors in England to the monks of that house by his last will.

The Bessin lies along the sea-coast to the west. The district of Caen; the chief towns whereof are Bayeux and St. Lo.

Bayeux, *Civitas Baiocassium*, is situated on the river Aure, a league and a half from the sea, and six to the westward of Caen. It is the See of a Bishop, and contains seventeen parishes; but is not populous. The cathedral church dedicated to the Virgin, is one of the finest of the province.

The Coutantin, or Costantin, is bounded on three sides by the British channel, and on the east by the Bessin, and is a hilly uneven country, but

CHAP. XX. but affords good pasture. The chief towns are, Coutance, St. Saviour, Cherbourg, Barfleur, Valogne, Carentan, Villedieu, Granville and La Hogue.

Coutance. Coutance, *Constantia*, *Cosedia*, pleasantly situated among the meadows and rivulets, about two leagues distant from the sea, and ten south-east of the isle of Jersey; the See of a Bishop, suffragan of Rouen, and has a magnificent cathedral, esteemed one of the finest pieces of Gothick architecture in Europe. There are also several convents and monasteries, and two parochial churches. It is not a place of any great trade, and the fortifications are demolished; but by the remains of a Roman aqueduct, and other ancient ruins, is held to be a place of great antiquity.

Cherbourg. Cherbourg, is situated on a bay of the sea, fifteen leagues north of Coutance. It is a small seaport, and fortified by LEWIS XIV. but he ordered the works to be demolished in the year 1689. This was one of the last towns the English possessed in Normandy.

Barfleur. Barfleur is situated on the sea-coast, four or five leagues to the eastward of Cherbourg. It was formerly one of the most considerable ports in Normandy; but the harbour is now filled up with sand, and there remains only a small basin. Here part of the French fleet was burnt by the English after the victory obtained near Cape la Hogue, in the year 1692.

La Hogue. La Hogue is a village from whence the most north-west cape or promontory of Normandy takes its name; remarkable chiefly for the victory obtained near it by Admiral RUSSEL commander of the English fleet, over the French commanded by Admiral TOURVILLE, on the 19th of May 1692, wherein no less than one and twenty of the largest French men of war were destroyed: the Rising-Sun particularly, the Admiral, was set on fire in sight of the French army on shore, who were making preparations to invade England.

The Avranchin. The Avranchin lies on the south of Coutantin. This country produces corn, cyder, flax, and hemp, but has very little pasture. The chief towns are Avranches, Pont Orson, St. James, Mount St. Michael and Mortain.

Avranches. Avranches, *Civitas Abrincatum*, is situated near the sea-coast on the top of a mountain, at the foot whereof runs the river See, being about eight leagues south of Coutance. It is a Bishop's See; the cathedral dedicated to St. ANDREW; besides which, there are three parochial churches, an abbey, and several monasteries. As the Normans and Britons were perpetually at variance, while they were subject to different Sovereigns, this was one of the most considerable frontier garisons of the Normans against Britany.

Mount St. Michael. Mount St. Michael is situated on a rock, in a bay of the sea, formed by the coasts of Normandy and Britany; the nearest of which is a league and half distant from it. The sea, twice in four and twenty hours at high water, covers all the strand between the rock and the continent; and consequently there is no coming at it by land, but at the tide of ebb. It stands about three leagues to the westward of Avranches, and to add to the strength of its situation has a castle for its defence. Here is also an abbey of Benedictines; the Prior whereof is governor of the place in time of peace, and has no other garison but the burgeses; tho' in time of war the King sends them a commander and regular troops. And as this is a place of great security, hither the government sometimes send

CHAP. XX. their state-prisoners, whom they immure in dungeons, at the bottom of this rock, when it is not convenient to punish them openly. The abbey is also famous for the crouds of pilgrims that annually resort hither, to adore the precious reliques they have in their custody.

The country of Bocage lies to the southward of The Boffin; the chief towns whereof are Torigny, Vire, and Conde sur Noireau, none of which deserve a particular description.

The Marches, which comprehend the Holme, The Mar is a little country, so called from its lying on the confines of Perche and Maine. The chief towns are Alençon, Seez, Argentan, Falaife and Domfront.

Alençon, *Alençon*, *Alencio*, is situated on the river Sarthe, near the borders of Perche. It is surrounded by a wall, flanked with antique towers, and a castle, which are rather an ornament than defence to the place at present. It consists but of one single parish, the church whereof is dedicated to the Virgin, in which are the tombs of the Dukes of Alençon, the last of whom, brother to the then French King, made his address to Queen ELIZABETH, and was long kept in suspense by her. It has been of late years erected again into a dutchy and peerage.

Seez is situated on the river Orne, five leagues north-east of Alençon. It has the honour of being a Bishop's See, but is a poor place, almost deserted. There are however besides the cathedral, four parish-churches, an abbey of Benedictines, and several convents; in one of which, they pretend to have a thorn of our Saviour's crown, which St. LEWIS made them a present of.

This great province, as has been hinted already, consisted of eleven confederated cities or communities, while it remained a part of the ancient Gaul, who were brought under the dominion of the Romans, by SABINUS the lieutenant of CÆSAR. Upon the decline of the Roman Empire, they underwent the fate of the rest of Gaul, till CLOVIS made a conquest of them. And the territories of this Prince being divided among his children after his death, this province made part of Neustria, or West France, sometimes denominated the kingdom of Soissons. The Danes, and other northern nations, who went under the general name of Normans, having ravaged the kingdom of France, in a terrible manner, established themselves at length in Neustria, in the ninth century, and three times besieged Paris itself; to which city they were become so terrible, that the people made it part of their litany to be delivered from the Normans; *Afuror Normannorum libera nos Domine*, were the words of the petition. And, say the French historians, CHARLES the Simple found himself under a necessity of yielding this part of Neustria to them, that he might enjoy the rest of his dominions in peace: but it was upon condition, they add, that their Prince should hold it as a fee of the crown of France. Neustria, in changing its masters, changed also its name for that of Normandy, the name of the people that had conquered it. CHARLES the Simple, when he surrendered Neustria to the Normans, in the year 912, gave his daughter GISELE or GISELLE in marriage to ROLLO or RAOUL, their Prince or Captain, the first Duke of Normandy, who thereupon embraced the Christian religion, and took upon him the name of ROBERT at his baptism. He was succeeded by the following Princes of his blood, Dukes of Normandy, viz.

12. WILLIAM, surnamed Longsword, An. 917
13. RICHARD I, siled Dreadnought, or the Old, ————— 943
14. RICHARD II, called the Undaunted, 996
15. RICHARD III, ————— 1026
16. ROBERT II, ————— 1028
17. WILLIAM the Conqueror, King of England, ————— 1035
18. ROBERT III. ————— 1087
19. WILLIAM II. called Rufus, King of England.
20. HENRY I, King of England, 1107
21. STEPHEN, King of England, 1135
22. The Empress MAUD. —————
23. GEOFFREY V, Earl of Anjou, and husband of MAUD. —————
24. HENRY II, King of England, 1154
25. HENRY the Younger, surnamed Courtmante, who died before his father.
26. RICHARD IV, surnamed Cœur de Lyon, 1189
27. JOHN, King of England, who lost Normandy to the French about the year 1202. It was afterwards reconquered by HENRY V, King of England, about the year 1420, and possessed by the English thirty years; but regained by the French during the unfortunate reign of HENRY VI, and was formally united to the crown of France, about the year 1464.

The account the French give of these Dukes of Normandy, who were Kings of England, being attended with some circumstances omitted by our English historians, may be acceptable to the reader. They relate that the Conqueror was the son of Duke ROBERT II. and of HERLEVE or HARLOT, the wife of a citizen of Falais. That ST. EDWARD (EDWARD the Confessor) being driven out of England by a faction, fled for refuge to ROBERT II, Duke of Normandy, and resided in his court and his son WILLIAM's a considerable time. That the Saint being restored to his dominions, by way of gratitude, appointed WILLIAM his successor: but the English not approving the choice, crowned HAROLD the Queen's brother. WILLIAM thereupon invaded England with a great army, and defeated HAROLD at the battle of Hastings, the 14th of October 1066, which victory made him master of England, WILLIAM the Conqueror dying in the year 1087, and leaving three sons, ROBERT, WILLIAM and HENRY, ROBERT suffered his brother WILLIAM RUFUS to supplant him in the kingdom of England first, and afterwards in his duchy of Normandy. And WILLIAM II. dying in the year 1100, ROBERT suffered himself a second time to be deprived of the crown of England, by his youngest brother HENRY I. ROBERT indeed made some attempts to prevent it; but HENRY having defeated him and taken him prisoner, put out his eyes. HENRY dying in the year 1135, the male line of the Dukes of Normandy failed, that duchy descending to MAUD or MATILDA his daughter, who married GEOFFREY, Earl of Anjou, by whom she had issue HENRY II, King of England and Duke of Normandy; who, by his marriage with ELEANOR, Duchess of Guienne, whom LEWIS the Younger had divorced; became master of Guienne, Poitou, Saintonge and Aunis; which, with Normandy, made a very considerable part of the kingdom of France. HENRY II, died anno 1189, leaving three sons, viz. RICHARD, GEOFFREY, and JOHN. RICHARD succeeded him, but was killed at the siege of Chalons, anno 1199; whereupon his brother JOHN possessed himself of the kingdom

of England, in prejudice of ARTHUR Duke of Britany, the son of GEOFFREY his eldest brother. Nor was he content with usurping his nephew's dominions, but killed him with his own hand; for which parricide or felony, he was cited to appear before the court of Peers in France, and by an edict deprived of the territories he possessed in that kingdom, in the year 1202; which PHILIP-AUGUSTUS so far put in execution, as to wrest Normandy from him; and this province was thereupon united to the crown, till the civil wars happened between the houses of Orleans and Burgundy, about the year 1420, when the English did not only make themselves masters of Normandy again, but of almost all the kingdom of France, possessing this province particularly for near thirty years.

As to the trade of Normandy, especially of Rouen, and the country about it, it consists chiefly in their woollen and linen manufactures, leather, hats, combs, paper, playing-cards, pins, and abundance of other haberdashery-wares. The woollen manufacture employs several thousand hands, of which they vend the greatest part in France: they export scarce any woollen-cloth or stuffs. The manufacture of linen is much more advantageous to the kingdom, for the greatest part is sent abroad to Spain and other countries. And their linen or canvas, of which they make sails for ships, is valued in all the countries of Europe. They have also manufactures in glass, where they make glass-plates for looking-glasses and coaches, and all other glass-ware whatever.

Their fisheries for cod, herring, &c. employ abundance of hands, and bring them in a great deal of money, and they drive a great trade with their cattle, butter and cheese, which they vend in the southern provinces. Their butter is salted up, and sent to Paris and other great towns by the Seine.

And as there is no country abounds more in apples and pears, they make vast quantities of cyder and perry, the common drink of the country, and supply almost all the other provinces in France with it. Nay, they have such plenty of fruit, that they transport some years a great deal of it to England, and other foreign countries: but then they have little or no wine, but what is brought them from the southern provinces.

The government of Normandy being one of the Military most considerable in the kingdom, is always committed to a person of distinction. There are in it two lieutenant-generals, one for the Higher, and the other for the Lower Normandy; and the King has also a lieutenant in every baillage, which are seven in number. The fortified places in this province are, Cherbourg, La Hogue, Caen, Honfleur, Havre, (but this is a distinct government) Diepe, St. Valeri, and Treport, which have each of them a particular governor.

## CHAP. XXI.

Contains a description of the government of Havre de Grace.

THE government of Havre de Grace lies in the country of Caux, to the northward of the mouth of the Seine, comprehending the towns and districts of Fescamp, Montvilliers, Havre de Grace, and Harfleur. This little district is only separated from the rest of Normandy in respect of its military government; for as to the ecclesiastical

CHAP.  
XXI.

cal and civil government, it is comprized under the general government of Normandy. The only town of any consequence is that of Havre de Grace. As to those of Fescamp, Montvilliers, and Harfleur, they do not deserve a particular description.

Havre de  
Grace.

Havre de Grace, *Franciscopolis, Portus Gratiae*, had its former name of Franciscopolis from FRANCIS its founder; but the French writers don't pretend to guess how it came by its present name of Havre de Grace. It is a small fortified town, situate in a flat country at the mouth of the river Seine, fourteen or fifteen leagues north-west of Rouen, and as many north-east of Caen. It is almost of a square figure, divided into two parts by the port, surrounded by a wall and other works, and defended by a citadel; of great consequence on account of its situation at the mouth of the Seine, its harbour and foreign trade, and is looked upon as one of the keys of the kingdom; which, I presume, is the reason it is made a distinct government from the rest of Normandy. In the religious wars in the year 1562, it was surprized by the French Protestants, and delivered up to the Queen of England, who sent the Earl of Warwick thither with a good garison; but the plague raging in the place, and carrying off most of his men, he was forced to surrender it again the following year. Here the French used to arm out their privateers and small squadrons in the late war, which occasioned its being bombarded by the confederate fleet in the year 1694.

## CHAP. XXII.

*Treats of the general government of Maine and Perche.*

CHAP.  
XXII.Maine and  
Perche.  
Situation  
of Maine.

THE government general of Maine and Perche, comprehends the district of Maine, with the county of Laval, and the greatest part of the county of Perche.

Maine is bounded by Normandy on the north; by Perche on the east; by Touraine and Vendomois on the south; and by Britany and Anjou on the west; being about five and thirty leagues in length from east to west, and more than twenty in breadth from north to south, and about ninety in circumference. In it we meet with arable lands, vineyards, meadows, agreeable little hills and forests, and abundance of rivers; the chief whereof are the Maienne, the Huifne, the Sart, and the Little Loire.

Rivers.

Maine,  
Sart, Huif-  
ne.

Loire.

The Maine and the Sart rise in the confines of Normandy, and having received the Huifne, run to the southward till they unite their streams near Angers.

The Little Loire rises on the eastern confines of Perche, and running westward, joins the above-mentioned rivers near Angers; two or three leagues below which city, these united streams fall into the great river Loire.

Iron mines  
and mine-  
ral waters.  
Marble  
quarries.

There are several iron mines in the parishes of Andouilly, Chasson, Silly and Bourgon; and the mineral waters of Baignols and Linieres are in some reputation. There are also some quarries of fine marble at St. Berthevin, Argentre, Bernai and Villedieu.

Perche.

Perche is bounded by Normandy on the north; by Timerais and the county of Chartrain on the east; and by Maine on the south and west. It is one of the least provinces in the kingdom, being not above fifteen leagues in length, and twelve in

breadth. It is a hilly uneven country. The higher grounds bear scarce any thing; nor are they cultivated indeed, but serve only for grazing sheep and cows. The valleys and flat country on the contrary bear all kinds of grain and hemp; and they abound in apples, of which they make cyder, the common drink of the country. As to their vines they have but few; and those produce such poor thin wines, that cyder is preferred before it. They have here also some iron mines and mineral waters. Their rivers, which are the Huifne and Loire, have been already described in Maine.

The chief towns of Maine are Mans, Laval, Maienne and Sable.

Mans, *Civitas Cenomannorum*, the capital of Maine, is situated on a hill, at the bottom whereof runs the river Sarte, which here unites its waters with the river Huifne, about ten leagues south of Alençon, thirteen north-west of Tours, and thirty-two south-west of Paris. In the city and suburbs are seventeen parishes, three thousand two hundred houses, and about fifteen thousand souls. It was anciently much more considerable than it is at present; however, it is still a Bishop's See, and besides, the cathedral dedicated to St. PETER, has several fine convents within its walls.

Laval is situated on the Maine, eight leagues to the westward of Mans, and is surrounded by a wall and other antique fortifications. It hath also an old castle of the same kind, but not capable of making any great defence, since the art of war has been improved. It contains three parishes, and several monasteries. This town was taken by escalade in the year 1446, by the famous TALBOT Earl of Shrewsbury, General of the English.

Maine, *Maduana*, is pleasantly situated on the river Maine, twelve leagues north-west of Mans. This place was anciently so strong, having a castle situated on the brow of a rock, besides its other fortifications, that it was esteemed almost impregnable. The English General, the Earl of Salisbury, however, took it in the year 1424. It was erected into a duchy and peerage anno 1573, and belongs now to the Duke of Mazarin, consisting of two parishes.

Sable is situated on the Sarte, nine or ten leagues south-west of Mans. It was formerly a strong place, but is only considerable at present on account of its being erected into a marquisate and peerage.

The chief towns in Perche are Mortaigne, Bellesme, Nogent and Chateaufort; none of which the French writers have thought fit to give a particular description of.

The province of Maine, like the rest of France, was subdued by the Romans, and afterwards by the Goths, Franks, &c. CHARLEMAIN established Counts here, who became hereditary, and after a long succession the heiress of Maine, about the year 1110, married FOULK Earl of Anjou, of which marriage was born GEOFFREY V. named PLANTAGENET, who married MAUD the Empress, and was father of HENRY II. King of England, Duke of Normandy, Earl of Maine, &c. and the Kings of England were sovereigns of this country till King JOHN lost it, together with Normandy, in the beginning of the thirteenth century, when it was united to the crown of France, or became an appenage of some of the blood-royal. The Earls of Perche also were hereditary, like those of Maine, till the earldom became annexed to the crown.

CHAP.  
XXII.

CHAP.  
XXII.  
Trade.

As the province of Maine affords good arable and pasture land, and abounds in corn and cattle, the peasants furnish their neighbours both with the one and the other, which brings a great deal of money into their country; and in the towns they have both woollen and linen manufactures, those of woollen being serges, and other slight French stuffs. The whitening of linen and wax also employs a great many hands.

Perche also affords corn and cattle, but not in such abundance as Maine, tho' they have the advantage of lying nearer Paris, where they vend most of their cattle, corn, fowls, and other provisions. They make also some slight French stuffs, and have a manufacture of coarse linen. The woollen stuffs of Nogent are vended at Paris, and exported to other countries. There are several iron forges in the country, insomuch that they furnish Paris, and other great towns, with iron to the value of fifty thousand livres annually. The tanners trade once flourished here; but the French writers acknowledge that this is almost ruined, as well as their other manufactures, by the extreme poverty of the country, most people being reduced to wooden shoes, by the tyranny and oppression of the government.

Military  
govern-  
ment.

The military government of Maine and Perche comprehends all Maine, the county of Laval and Perche, except Perche Gouet, which belongs to the government of Orléans, and the Tineris, which is annexed to that of the Isle of France. The governor-general has under him one lieutenant-general, and two of the King's lieutenants, one for Maine, and the other for Perche. It being an inland country, there are scarce any towns fortified after the modern way: the old towers, and other antique fortifications are held sufficient here, where they can scarce ever expect to see an enemy.

### CHAP. XXIII.

*Contains a description of the general government of Orléans.*

CHAP.  
XXIII.  
Orléans  
division.  
Situation  
and extent

THIS government comprehends the Orléans Proper, the Pais Sologne, the Beauce or Beauce, the Blaisois, the greatest part of the Gatinois and the Perche Gouet; being bounded by Perche and the Isle of France, on the north; by another part of the Isle of France, Champagne and Nivernois, towards the east; by the government of Berry, towards the south; and by Maine and Touraine, towards the west; being about two and thirty leagues in length, from east to west, and twenty-eight in breadth from north to south.

Soil and  
face of the  
country.

It is an exceeding healthful pleasant country, divided by the river Loire in two parts, and watered by several other considerable streams, on the banks whereof are some of the best vineyards in France, with arable lands, forests and little hills, which form a most agreeable prospect, insomuch, that some have given it the name of the Enchanting Country; and others the Granary of Paris, from which the north-east part of it is not ten leagues distant.

Rivers and  
canals.

The principal rivers are the Loire, the Loiret, the Cher, the Laconia, the Ergle, and the Hyerus; besides which, there are two canals, by which the Loire and Seine have a communication; and the navigation is continued from the Ocean, to the British channel.

The Loire

The Loire has been already described, which,

after having visited the city of Orleans, takes its course to the westward, and discharges itself into the Ocean ten or twelve leagues below Nants. The merchants, who inhabit the towns on this river, have obtain'd a grant of the King for laying a duty on all goods passing and repassing it, towards cleansing this river, and preserving the navigation, which is of great consequence to the whole kingdom, but more immediately to them.

The Cher rises in the Lionois, and running northward till it reaches the eastern borders of this country, turns about to the west, and falls into the Loire between Tours and Saumur.

The Canal of Briare is so called from a little village on the Loire where it begins, and is carried on north-east to the river Loing, which falls into the Seine, near Moret, and was esteemed vastly advantageous, as it preserved a communication between Nants (and consequently the western Ocean) and Paris, and all the fine provinces situated on the Loire, the Seine, &c. But the canal of Orleans, which has been made since, is much more commodious, insomuch that the canal of Briare is very little used.

The canal of Orleans begins at the Loire, about two leagues above that city, and having travers'd the forest of Orleans, and the plain beyond it, joins the river Loing also about a league below Montargis, being about eighteen leagues in length, whereas that of Briare is not a fourth part of that length. The canal of Orleans was begun in the year 1682, and finished in the year 1692; and the trade is so great upon it, that the duties on goods passing and repassing in one year, have amounted to an hundred and fifty thousand livres. There are about thirty sluices upon it.

The forests of this country are those of Blois, Ruffy, Boulogne, Chambord, Montargis, Dourdans and Orleans; of which that of Orleans is much the most considerable, as well upon account of its extent, containing fourscore and fourteen thousand acres, as for the wood that grows in it, viz. oaks, elms, and aspen-trees; of which they cut as much as amounts to an hundred thousand livres annually.

Orléans-Propre is bounded by La Beausse towards the north; by Gatinois and Nivernois on the east; by Sologne on the south; and the Blaisois on the west. The chief towns are Orleans, Beaugency, Meun, Lorris, Sully, Gergeau and Pluviers.

Orléans, *Genabum, Aureliana Civitas*, stands on the river Loire, two and thirty leagues almost south of Paris; and if we may compare a small city with a great one, the situation resembles that of London: for it is on the north-side of the river, on the declivity of a hill, the buildings reaching down to the water-side, and the town winding with the river, is much longer than broad. The cross-streets are most of them narrow, and make a very indifferent figure; but there is one handfom broad street which runs the whole length of the town, and is the beauty of it, being above a thousand fathoms long: but then the buildings are old and ill-contrived, so that in this respect it can by no means be compar'd to London. There is a large handfom stone-bridge over the river to one of the suburbs, which stands upon an island. This bridge is an hundred and seventy fathoms long, and upon it is a brazen statue of the blessed Virgin, sitting at the foot of the cross, and holding in her arms a dead CHRIST. On one side of her is King CHARLES VII, in armour,

city.

CHAP. XXIII. **CHAP. XXIII.**  
 mour, on his knees, and on the other JOAN of Arc, called the Maid of Orleans, in armour also, and on his knees, designed to perpetuate the story of the deliverance this city received by the address of that heroine, the Maid of Orleans, when it was closely besieged by the English, and on the point of surrendering, in the year 1429. And indeed it is an event that deserves to be commemorated. The English were at this time masters of Paris and of almost all the rest of France; when it is said JOAN of Arc, a poor shepherdess about eighteen years of age, presented herself to CHARLES the French King, styled by the English in derision King of Berry, having scarce another province left him, declaring, that she had received a revelation from heaven, that he should drive his enemies from Orleans, and shortly be crowned King of France at Rheims, the usual place where the Kings of France are crowned, and then in possession of the English, offering to lead his troops in person, and shew them the way to victory; and was so fortunate in the sallies she made, say the French, that she soon after raised the siege of Orleans, revived the courage of the French, and gave such a turn to their affairs, that the English were defeated in every encounter, and the French King, according to her prediction, was crowned at Rheims, which established her fame, and made her adored by the French as their tutelary Goddess: tho' most men, I believe, at this time of day, look upon this occurrence as a pure state-trick. The people were dispirited upon the repeated victories of the English, and the King's affairs become desperate; which put him upon counterfeiting a revelation from heaven in his favour, knowing how great things had been effected by such stratagems as these in all kingdoms of the world. When a people can once be brought to think, they are fighting the cause of God, and are supported by his almighty arm, all dangers are contemned; like the Turks or English Enthusiasts, they are confident of victory if they live, or if they die of going immediately to paradise. But this stratagem alone would not have restored the affairs of the French, especially when she so soon after suffered the disgrace of being defeated, made prisoner, and burnt by the English for an impostor, as she really was. There was a great many other concurring circumstances which contributed to the success of the French; as first, the English Generals having a misunderstanding with their great ally the Duke of Burgundy at this very time, which was the principal occasion of raising the siege of Orleans. 2. The minority of the King of England. 3. The York faction distressing his affairs. And, lastly, the disagreement among the English Governors and Generals. But I shall have occasion to consider these things more particularly in the history of France, and return now to the modern account of this city, which has in it four handsome publick places or squares. The cathedral is said to be one of the finest in the kingdom. Here is also a university; but as far as I can learn, law is the chief or only study attended to in it. The town contains two and twenty parishes, and is near four thousand common paces in circumference, being encompassed on the land-side with an old wall, flanked with antique towers, which are at this day rather an ornament than defence to the place. There is no city in France at such a distance from the sea which hath so brisk a trade, having an opportunity of exporting and importing all manner of mer-

chandize, by the way of Nants, and the western Ocean; and on the other hand, by the Seine and the Loire, they have a communication with most of the northern and southern provinces of France. Their commerce with Paris alone is very considerable. The city is very ancient: some will have it founded by the Druids; but certain it is, we find it mentioned by CÆSAR, under the name of *Genabum*. Its name of *Aurelianum*, it is supposed to have received from the Emperor AURELIAN, who enlarged and beautified it. It was since the capital of the kingdom called Orleanois, which fell to the share of CLODOMIR, the second son of CLOVIS, which kingdom lasted about fourscore years. Orleans is a Bishop's See, suffragan of Paris, and capital of a duchy, giving a title to the second son of France, who is called Monsieur the Duke of Orleans. The French tongue is said to be spoken in its greatest purity here and at Blois. The natives are witty, and extremely given to raillery and ill-natured reflections in their conversation, which has occasioned some of their neighbours to give them the character of a waspish generation. There have been several councils held at Orleans, particularly in the years 511, 533, 538, 541, and 549.

Beaugency is situated on a little hill, at the foot whereof runs the river Loire, over which there is a bridge of twenty-two arches. It has been a town of some consequence, but is now only considerable for being the capital of a county. It stands about five leagues south-west of Orleans.

Jargeau, or Gergeau, is situated on the Loire, four leagues above Orleans. It is a small town, but of some importance on account of its bridge over the Loire.

The Pais de Sologne lies south-east of Orleans, between the rivers Loire and Cher, and is a very barren soil, producing scarce any thing but rye. The inhabitants are chiefly husbandmen, and have but very little commerce with their neighbours; the chief town whereof is Sully.

Sully, *Solliacum*, is a little town situated on the Loire, seven leagues above Orleans, remarkable chiefly for being erected into a duchy and peerage.

The Beausse, or Beauce, comprehends, 1. Beausse Proper, or the Pais Chartrain; 2. The Dunois. And, 3. The Vendomois. Beginning about eight or ten leagues from Paris, and extending over vast fertile plains as far as the river Loire, abounding particularly in wheat, but has very few vineyards, woods mountains, rivers or fountains in it; and their wells are very deep, inasmuch, that the natives are obliged to preserve the rain-water in cisterns and reservoirs.

The Beausse Proper, or the Pais Chartrain, is the most northerly part of the Orleanois, being but a small district, and comprehends the towns of Chartres, Nogent le Roy, Gallerdon, Bonneval and Maintenon.

Chartres is situated on the river Eure, about fourteen leagues south-west of Paris. It is divided into two parts by the river; the largest of which stands upon an eminence. It is a Bishop's See, and has a noble cathedral; but the town is not beautiful, the streets being narrow and the building old. It contains ten parishes in the city and suburbs, and has been much larger, and is agreed by all to be a town of great antiquity, tho' not so ancient perhaps as the natives make it; who say, it was founded by a grandson of NOAH soon after the flood. They have another tradition of equal authority; namely, that the town was once possessed

CHAP.  
XXIII.CHAP.  
XXIII.

possession by the Druids, who built a temple, and dedicated it to the *Virgin of whom a child should be born*, and pretend to shew the place where it stood. Among other hospitals and charitable foundations, here is an hospital erected for an hundred and twenty blind people. The chief trade of the place is corn.

The Dunois.

The Dunois lies to the southward of the Pais Chartrain, or Beauce Proper, being ten leagues in length, and seven in breadth. The chief towns are Chateau-Dun, Marchenoir, Freteval, Patai and Puisseau.

Chateau-Dun.

Chateau-Dun stands on an eminence, at the foot whereof runs the Little Loire, or Loirette, and is supposed to take its name from its situation; Dun, in the language of the Gauls (says my French author) signifying an eminence, which I will not vouch for: but certain it is, this word has that signification in more modern languages. There is in the town four parochial churches, and several convents, and a castle, which is at present most admired for its antiquity.

Vendomois.

The Vendomois lies south-west of the Dunois. The chief towns are Vendome, Montoire, Savigny, and St. Calz.

Vendome.

Vendome, is situated on the Loirette, about eight leagues to the westward of Orleans, and is the capital of a county; but the French writers do not think it worth a particular description. They only tell us that there is an old castle, a collegiate church, and several monasteries in the place, which I presume therefore is all that deserves mentioning.

The Blaisois.

The Blaisois is bounded by la Beauce on the north; by Orleanois Proper towards the east; by the government of Berry on the south; and by Touraine on the west. This is one of the finest countries in France, abounding in corn, wine, cattle, game and fish. The pastures about Blois are so rich, that the milk of their cattle, according to my French author, will restore a broken constitution, and produces the best butter in the kingdom. The chief places are Blois, Chambord, Mer, St. Die, Romorantin and Millancy.

Blois.

Blois, *Castrum Blesense*, the capital of the Blaisois, is situated on the Loire, in an admirable good air, ten leagues south-west of Orleans. The body of the town lies upon an easy ascent of a hill on the north side of the river, and is joined to a suburb on the other side by a bridge, being placed in the middle of one of the finest countries in France. It is a large handsome town, but the greatest beauty of it is the castle or palace, the residence of several of their Kings, with gardens, fountains, water-works and park, suitable to the magnificence of the buildings. In the grand court before the palace stands a collegiate church, one of the largest in France. The stair-case of the castle is much admired, as well as the gallery, which is an hundred fathoms long; and the equestrian statue of Lewis XII. over the great gate. Blois was erected into a bishoprick but in the year 1697, and is suffragan to Paris. It is observable, that there is an image of the Virgin over every gate of the town, set up in the year 1631, when they suffered pretty much by the plague, and were miraculously delivered from this calamity by the Queen of heaven, (as they stile the blessed Virgin) according to the tradition of the place. The parish-church of St. Solenne, the largest in Blois, having been destroyed by a tempest, was magnificently rebuilt by Lewis XIV. and converted into a cathedral. The Jesuits also have a beautiful college here, the front whereof is adorned with the Dorick, the Ionick

and the Corinthian orders of architecture. The other publick buildings mentioned by the French writers as worth the viewing, are the town house, and the palace where the courts of justice are held. Their fountains also are very spacious, being supplied by a noble aqueduct, supposed to be the work of the ancient Romans. The natives, remarkable for their good sense and genteel behaviour, as well as for their speaking French in perfection, supposed to proceed from the frequent residence of the court here. There is a fat sort of earth found about two leagues from this city used by their physicians, and esteemed equal to the *Terra Sigillata* brought from the Levant.

Chambord is a little hamlet, but considerable on account of a royal palace built there by Francis I, which the skilful in architecture say exceeds any Gothick building in France, and has such various beauties, that the greatest masters may learn something from it. Four large pavilions compose the body of the building, and the whole is surrounded with a wall of hewn stone flanked with towers, which give it a very magnificent appearance at a distance. So very large is this palace, according to some authors, that it would accommodate all the sovereign Princes in Europe; but I presume they speak by way of figure: this vast fabrick however was never finished. There is a winding staircase in it of two hundred and seventy-four steps, so extravagantly wide, according to the French writers, that a person would hazard his reputation who should repeat what they say of it. But I find it is two stair-cases united, one for ascending and the other for descending. The anti-chamber, chambers, halls, wardrobes, cabinets and galleries, are all of a most exquisite architecture, and the garden and park answerable to the buildings.

There are abundance of other royal palaces and noblemens seats at a little distance from Blois, which were probably erected when the court resided there, the chief whereof are those of Montfauit in the forest of Boulogne, a league from Chambord. The Montils, two leagues from Montfauit. Herbault, four leagues from Blois. Villefavin, at the same distance. Beauregard, in the forest of Ruffi, two leagues from Blois. Chiverny, Menards Nozieux, &c.

Romorantin, *Ricus Morentini*, is situated on a rivulet, seven or eight leagues south-east of Blois. It consists of one parish only, but is considerable on account of its woollen manufacture, which is esteemed one of the best in France.

The Gatinois or Orleanois hath the Isle of France on the north east, and Orleans Proper on the west. The chief towns are Montargis, Chateaufort, Milly, Chatillon-sur-Loing, Briare, Gien, Estampes, Blesneau, St. Fargeau and St. Amant.

Montargis, the capital, is situated on the river Loing, not far from the place where the canal of Orleans falls into it, five and twenty leagues south of Paris. The town is not large, but having been burnt down is handsomely rebuilt, and has a castle pleasantly situated on a hill, which commands the town and the neighbouring country. Here are also a great number of convents, especially nunneries; and besides the parish-church, there are ten chapels founded by the inhabitants. The rest of the towns in the Gatinois are of no great consequence.

The district of Perche Gouet, or Little Perche, lies on the north-east part of the Greater Perche, and contains the baronies of Autou, Bafocche, Montmirail, Alluye and Brou, but has no considerable town in it.

The

**CHAP. XXIII.** The traffick carried on by the river Loire, say the French writers, is certainly the most extensive of any in the kingdom; since it not only takes in all that is produced in the southern and western provinces of France, but also the merchandize of foreign countries. This commerce consists in corn, hay, wine, brandy and strong waters, silk, wool, sugar, hemp, oil, iron, steel, fresh and salted fish, fruit, cheese, timber, oak-planks, deals, fire-wood, sea-coal and charcoal, earthen-ware, leather, and other goods, of which the greatest part is sent to Paris. Almost all these species of merchandize are unloaden at Orleans, and from hence distributed to the several cities and provinces of France as they are called for. But the most considerable articles in their trade are those of wine, brandy, corn and grocery-ware.

The vineyards of Orleans, as has been observ'd, are some of the finest in the kingdom: it is computed that they produce annually an hundred thousand tons of wine. The corn arises chiefly in the Beaulieu. Their grocery-ware, come from Provence by the way of Lyons, or from the American plantations by the way of Nantz: and they have large sugar-works at Orleans where the sugars are refined, in great esteem with the merchants of Paris. Here is also a considerable manufacture of stockings, and another of shammy-leather.

The trade in the towns of Blois and Beaugency consists chiefly in wines and brandy. They have also a manufacture of ferges, and other light woollen stuffs; but those of Romartin are much more considerable. At Vendôme the drapers, tanners and glovers ingross most of the trade of the place.

**Military government of the Orleans.** The governor-general of Orleans hath under him three lieutenant-generals; one for the Orleansois, a second for the Pais Chartrain, and a third for the Blafois.

The general lieutenancy of Orleans comprehends the dutchy of Orleans, the Dunois and Vendomois.

The general lieutenancy of the Pais Chartrain comprehends that district, and the greatest part of the Gatinois.

The general lieutenancy of the Blafois takes in the country of that name; and in this and every one of the other general lieutenancies there is a lieutenant deputed by the King.

The towns which have particular governors of their own, are Chartres, Montargis, Gien, Jargeau, Pluviers and Beaugency.

## CHAP. XXIV.

Contains a description of the general government of Nivernois.

## CHAP. XXIV.

Nivernois, Situation, &c.

Soil.

Rivers.

**N**ivernois is bounded by the Gatinois on the north; by Burgundy on the east; by the Bourbonnois on the south; and by Berry on the west; being almost of a round figure, and about twenty leagues over either way. It produces corn, wine and fruit, except in the district of Morvant, which is a mountainous country, where there grows scarce grain enough for the subsistence of the inhabitants. They have also large woods, some pit-coal, and abundance of iron mines. The country is watered with a great many rivers, of which three are navigable, viz. the Loire, the Allier and the Yonne. The Loire runs from south to north along the western borders of this

country, receiving the Allier a league below Nevers. The Yonne rises in the south-east part of the Nivernois, and running northward, passes by Clamecy, Auxerre and Sens, and falls into the Seine at Montereau-faut-Yonne, beginning to be navigable at Clamecy in this province, the other streams only serve to render the country fruitful and pleasant. The mineral waters taken notice of here, are those of St. Parise and Pognes near Nevers, of which the latter are in the greatest reputation.

The Nivernois is usually subdivided into eight parts, viz. 1. The Vaux de Nevers. 2. The Amognes. 3. The valleys of Montenoison. 4. The valleys of Yonne. 5. The Morvant. 6. The Bazois. 7. The country between the Loire and the Allier. And, 8. The Donziois. But it not being consistent with a work of this nature, to enter into a particular description of every little district and subdivision, I shall proceed to specify the towns of this province, mention'd by the French writers, which are Nevers, La Charite, Chamleney, Montenoison, Premery Ville, Champalemand, Clamecy, Tannay, Domecy, Vezelay, Corbigny, Chateauchinon, Auroux, Moulins, Engilbert, Montrouillon, Cercy, Desize, St. Saulge, Chatillon, Luzy, St. Pierre le Moutier, la Ferte Chaderon, Donzy, Entrain, Dreve, St. Saviour, Corvon, Billy, Estais, Cosne sur Loire; the chief of which is,

Nevers, *Nivernum, Noviodunum, Eduorum*, the capital of the Nivernois, built in the form of an amphitheatre upon the banks of the Loire, thirty leagues south-east of Orleans. Here is a stone bridge of twenty arches, between which and the building, is a large space on the side of Moulins, which makes that part of the town look very magnificent, but the rest of the streets are narrow, and the ground uneven. The cathedral dedicated to St. Cyr is a fine structure; besides which there are eleven parochial churches, and a great many religious houses of both sexes. It is computed there are about eight thousand souls in the place. The French writers mention no other publick buildings but an old castle of the ancient Counts, which fronts a large square, consisting of fine houses, uniformly built. The fields about the town are exceeding pleasant, particularly the publick walks in the adjoining park. The principal manufactures are those of glass and earthen ware, in which they are said to excel the rest of the towns of this government, but do not deserve a particular description.

The trade of Nivernois consists chiefly in corn, hemp, and wood; and in the district of Morvant, it is said, they dig as much pit-coal annually as brought them in an hundred and twenty thousand livres. Their iron and tin wares which they send abroad, amounts to three hundred and fifty thousand livres, and their glass and earthen ware is computed to produce two hundred thousand livres. Their manufacture of Cloth at Chateau-Chinon, says my French author, would be very considerable, were it not for the extreme poverty of the inhabitants, who are not able to purchase any great quantity of wool to work upon. Their manufactures of glass and earthen ware have been mentioned already; besides which, they traffick pretty much in hogs and fish. This government supplies the King's magazines with iron for guns, bullets, anchors, grenades, and other warlike and naval stores.

This province hath a governor-general, one lieutenant-general only, and one King's lieutenant,

## CHAP. XXV.

CHAP. XXV.

Bourbonnois. Situation, &amp;c.

Soil and face of the country.

Air.

Rivers.

Mines and mineral waters.

Baths.

**T**HE Bourbonnois is bounded by Nivernois on the north; by the duchy of Burgundy on the east; by Auvergne on the south; and by Marche and Berry on the west; being about thirty leagues in length, and twenty in breadth. It is generally a plain even country, and tolerably fruitful, chiefly in corn, and has some good pastures for feeding of cattle. They have abundance of game, and a pretty many woods and lakes. Here grows also very good wine, but it will not bear exporting, and is therefore spent in the country. The air is for the most part temperate, except in that part of the country which borders upon the mountains of Auvergne, where it is sometimes excessive cold, occasioned by the snows that cover them, and the frequent storms and tempests from that quarter, mixed with hail, which frequently destroy their harvest; and the torrents of melted snow so swell the river Allier, ordinarily about the month of July, that the floods do very considerable damage to the towns and countries which lie upon the banks of that river.

The three principal rivers of this province, are the same that were mentioned in the preceding, besides which there are a great many small rivulets peculiar to the country; both the Loire and the Allier run from south to north through this province, from whence they take their course into the Nivernois.

There are no mines in the Bourbonnois, unless some of pit-coal, which are inconsiderable; but scarce any country affords greater variety of mineral waters, as the mineral spring of Bardour near Moulins; the waters of Neris, a league from the town of Montlucon; of St. Pardeaux; of Tranliere; but the most celebrated are those of Bourbon-Archambaud, and Vichy: those of Bourbon-Archambaud are contained in three basins, which have different sources. Below these basins or reservoirs, is a great square-bath, called the poor-bath, and two or three paces from thence, a house in which there are three vaulted ground-rooms for bathing; one appropriated for men, a second for women, and the third is seldom used. The waters of the springs or basins above mentioned are clear and limpid, and so hot that there is no bearing one's hand a moment in them without scalding. These waters, it is said, partake of an equal quantity of nitre and sulphur, exactly mixed and incorporated, and are as good for drinking as bathing; and besides these hot wells they have a cold one, of an iron taste, which is supposed to contain some vitriol in it.

Near Vichy are six mineral springs, of which, that in the greatest reputation, is about three hundred paces from the town, called the grate-fountain, from its being inclosed with an iron grate; the water whereof is hot and limpid, and of a poignant taste, and abounds with salt, mix'd with earth. Fifteen paces from this spring, is another less limpid, but hotter, called the Capuchins fountain, from its neighbourhood to a Capuchin cloyster; this has more salt and less earth than the former. The King's house is between these two fountains, wherein are two baths, one of which receives its waters from the grate-fountain, and the other from the Capuchins: the salts they extract

from all the six fountains are of the same nature, namely, nitrous salts. CHAP. XXV.

They reckon up two and twenty great towns in the Bourbonnois, viz. Villeneuve, Moulins, Montlucon, Neris, Gannat, Bourbon-Archambaud, Vichy, Sovigny Billy, Varennes, St. Pourcain, Verneuil, Le Veudre, Jaligny, La Palice, Hericon, Montmeraut, Gonson, Huriel, Ville Franche, Le Monteraux, Moines, and St. Amand; the chief whereof are,

Moulins, *Moline*, the capital of the Bourbonnois, Moulins. situated in an agreeable fruitful plain, upon the river Allier, twelve leagues south of Nevers, and sixty-four south of Paris, said to have taken its name from the many mills in the neighbourhood. The palace built by the Princes of the house of Bourbon is much admired, and the town itself is one of the handsomest and most agreeable in France, but without wall or fortification, containing a great number of religious houses; among which the Chartreuse and the Nunnery called the Visitation, are the most magnificent; the last was built by Madam DE MONTMORENCY, who retired hither after her husband the last Duke of Montmorency was beheaded, in the year 1632, and died Superior of the convent, anno 1666. There are about eleven or twelve thousand inhabitants in the place. Here are fine walks of elms along the banks of the Allier, which the French call the Course. There is scarce a great town in France without something of this kind; but the neighbouring fields of Moulins in general are extremely pleasant.

Montlucon is situated on the river Cher, nine or ten leagues south-west of Moulins; it stands on the side of a hill, which gently descends to the river, over which there is a stone-bridge that joins it to a suburb on the other side. It is surrounded with an antique wall and towers, which serve rather for ornament than defence, and contains about three thousand souls. It is looked upon as the second town of the Bourbonnois.

Bourbon l'Archambaud is situated in a bottom, surrounded by four hills; on one of which is an old square castle, supposed to be built by one of the Archambauds, sovereigns of the country. The town stands about five leagues to the westward of Moulins; it is small, containing only one parish-church and some chapels and convents, but it is neatly built and much resorted to on account of its baths, and the walks about it are exceeding pleasant.

Vichy is a little town situated on the river Allier, most remarkable for its mineral waters and baths, which, with those of Bourbon, have been already described. This town lies about ten leagues south of Moulins, and contains but one parish; it is in one of the pleasantest countries in France, and has a pretty brisk trade occasioned by the numbers of people of quality that resort to the baths.

The Boii are generally held to be the ancient inhabitants of the Bourbonnois, who, with their allies the Aedui, were subdued by the Romans. On the decline of that empire it underwent the fate of the other Gallick provinces, till at length it was governed by a Prince of its own, the first of whom, call'd AIMA, liv'd about the year 921. The last male of this family was ARCHAMBAUD the IXth, who left only one daughter named AGNES, that married JOHN of Burgundy; the second son of JOHN IV, Duke of Burgundy, of which marriage was born BEATRIX of Burgundy, the wife of ROBERT of France, Count of Clermont, from whom descended the present French King LEWIS, XV.

Chief towns.

Montlucon.

Bourbon l'Archambaud.

The ancient state of the Bourbonnois.

XV, of whose pedigree I shall give a larger account in the general history of France.

Trade of Bourbonnois. The trade of this country consists in corn, wine, hemp, cattle, wood, fish and hard ware; and they vend of mineral waters only, it is computed, the value of an hundred and fifty thousand livres per annum.

Military government. The Bourbonnois hath a governor and lieutenant-governor, besides two of the King's lieutenants, one for the country between the Loire and Allier and the other for the towns of Bourbon, Montlucon, and the country to the left of the Allier.

## CHAP. XXVI.

*Treats of the general government of the Lyonois.*

CHAP. XXVI. **U**nder the title of Lyonois it is not intended to describe the ancient government of Lyonois, which comprehended great part of Gallia Celtica, but only the three small districts of Lyonois Proper, Le Forez and Beaujolois, which constitute the modern Lyonois. and are bounded by Burgundy on the north; by Dauphiné and la Bresse on the east; by the Vivarez on the south, and by Auvergne and Velay on the west. Lyonois Proper is about twelve leagues in length and seven in breadth: Beaujolois is near the same extent; but Le Forez is something larger than both of them.

Soil. This country produces corn, wine and fruits, but abounds most in excellent chesnuts, and is watered by three large rivers already mentioned, viz. the Rhone, the Saone and the Loire, which are a great advantage to its commerce; and besides these there are abundance of other lesser streams and mineral waters, but the latter are not in such reputation as those of Bourbon.

Chief towns. The chief towns of the Lyonois Proper are Lyons, Tartara, Bresse, St. Chamond, Condieu and Ance.

Lyons. Lyons, *Lugdunum*, is situated at the confluence of the rivers Rhone and Saone, seventy-five leagues almost south-east of Paris, and fourteen west of Savoy. It stands partly on the hills of Tornir and St. Sebastian, and partly along the banks of the above-mentioned rivers. The body of the town lies between the Rhone and Saone, and a considerable part of it on the western shore of the Rhone, besides which there are four suburbs, viz. that of Veize on the road to Paris; that of the Red Cross on the side of Bresse; that of Guillotiere towards Dauphiné; and that of St. Justus, or Irenæus, on the way to Mombriçon. That of Guillotiere, the most considerable, belongs to Dauphiné. The whole town consists of eleven parishes, which are divided into thirty-five wards, containing ninety thousand souls, which is a pretty large calculation, if there be but four thousand houses in the place, as the same French writers inform us, making above two and twenty people in every house. The several parts of the town have a communication by four bridges, one over the Rhone, and three over the Saone. The first is of stone, and consists of twenty arches: but what seems particular in this and the Pont Esprit, is, that it is not built in a right line, but has an angle in the middle, the convex part whereof stands opposite to the stream, and is thus the better enabled to resist the violence of the current. It was also made so narrow at first, that not more than one carriage could pass the bridge at a time, which they have remedied by joining another bridge to it of the same dimensions as the former.

VOL. II.

One of the bridges over the Saone also is of stone, but it is the narrowest and most inconvenient: the other two are of wood, and one of them looked upon as a very bold piece of workmanship, as it consists but of one arch. The town hath six gates, and is about six miles in circumference.

The most eminent publick buildings are the cathedral church, formerly dedicated to St. STEPHEN, but now to St. JOHN. It is a large magnificent fabrick, and better enlightened than the Romish churches usually are. The high altar stands in the middle of the choir, and the front was adorned with abundance of fine statues and images, which the Calvinists defaced during their religious wars.

The parochial and collegiate church of St. Nizier is little inferior to that of St. John's, the choir whereof is filled with fine paintings, containing the history of our Saviour.

The church of St. Irenæus is the most ancient, where they pretend to shew part of the pillar Christ was tied to when he was scourged.

The hospital of Charity, which stands on the square of Lewis le Grand, is remarkable for its extent and the commodiousness of the building.

The Jesuits have two colleges in the town, the largest whereof is one of the most magnificent in the kingdom, and is dedicated to the most Holy Trinity. It consists of the four first orders of architecture, of which the Tuscan very naturally serves for the base: the Dorick order, with all its ornaments, is above that of the Tuscan; the Ionick is the third, and the Corinthian crowns the whole. But as some parts of the work are higher than the rest, in the most elevated they have added the ornaments of the Composite. And in every great town of the kingdom, it is observed the Jesuits college makes one of the principal ornaments in it. Besides these, there are abundance of other fine abbeys and convents at Lyons.

The square of Bellecourt, which in the year 1713 changed its name for that of Lewis le Grand, on the erecting an equestrian statue of that Prince in the middle of it, is of a vast extent, and surrounded by houses, in the phrase of my author, of admirable beauty. It is an oblong square, one end whereof terminates at the river Saone, and the other at the river Rhone, near which are planted twelve walks of chesnut-trees, which form an agreeable grove. The square of Terreaux also hath its beauties, of which the abbey of St. Peter, and the Guildhall of the city, which stand upon it, are the greatest ornaments. The last is one of the finest pieces of architecture of the kind in Europe. The paintings and ornaments within, are answerable to the building without; amongst which, those of the grand stair-case, where Lyons is represented in flames, are exquisitely fine. The exchange is less admired for its magnificence, than for the numbers of merchants that assemble there, who, in the language of the French, manage all the commerce of that kingdom and of foreign countries. No doubt the trade of this place is very great. The situation at the confluence of those great rivers the Rhone and Saone, and the neighbourhood of Italy and Switzerland, are such advantages as scarce any other town in France enjoys. Next to Paris it is esteemed a place of the greatest trade of the kingdom, though some except Rouen. It is the See of an Archbishop, who is stiled Primate of Gaul. The civil government is administered by a provost of the merchants and four aldermen; but I perceive the King takes the

CHAP.  
XXVI.

liberty of altering their form of government as often as he pleases, and has done it not many years since.

It is a town of very great antiquity, tho' authors, as usually, differ much about the original of it. Certain it is, that in the reign of AUGUSTUS it was enlarged and beautified, and the usual seat of the Roman governor. AUGUSTUS resided here some time, and CLAUDIUS CÆSAR was born here. It was entirely burnt down in NERO's reign, who contributed largely to the rebuilding it. SUETONIUS, in the life of CALIGULA, mentions an Athenæum, or publick school here, wherein orators disputed before an altar erected to AUGUSTUS CÆSAR, and the person who had the worst of the argument, was obliged either to retract his opinion, or be tumbled headlong into the river. The abbey of Aisnay was built on the ruins of this academy, and bears the name of *Monasterium Alabanense*. Here are still visible the ruins of some Roman palaces, and of an ancient aqueduct: and every traveller mentions the tomb of the two lovers, erected on pillars near the gate of Vefey, which some suppose to belong to HEROD and HERODIAS, who, according to tradition, were starved to death here: and others, that it was a monument erected to a married couple, who had made vows of perpetual virginity. There have been two general councils held at Lyons, the first in the year 1245, and the other in the year 1274.

Le Forez.

Chief towns.

St. Estienne.

Montbrison.

Beaujolois.

Chief towns.

Villefranche.

The ancient state of the Lyonois.

The trade of the Lyonois.

The district of le Forez was anciently called the country of the Segusians, the chief towns whereof are Feurs, St. Estienne, St. Galmier, Montbrison, Rouane, St. Rambert and St. Bonnet.

St. Estienne is situated at the foot of a hill on the little river Furens, whose waters are said to be very proper for the tempering iron and steel, in which manufactures the natives are very expert, and particularly in fire-arms.

Montbrison is situated on a rivulet, thirty miles west of Lyons, esteemed the capital of the country, and was the residence of their ancient Counts. It is still a considerable town, consisting of several parishes besides convents; the inhabitants computed to amount to between four and five thousand.

The district of Beaujolois is a fruitful country; the chief towns whereof are Beaujeu, Villefranche, Belle Ville and Lay.

Villefranche is situated on the Morgou, in a fine fruitful plain, five leagues to the northward of Lyons, and is at present the capital of Beaujolois, in which there is little that deserves notice, unless it be the collegiate church.

The Lyonois was part of the ancient Gallia Celtica, and afterwards of the kingdoms of Burgundy and Orleans. Their Archbishops had for some time the sovereignty of it, or at least disputed it with their Counts, who pretended to the same dominion here as those officers did in other parts of France, till it came at length to be re-united to the crown about three hundred years ago.

The trade of the Lyonois Proper, Le Forez and Beaujolois, consists of chefnuts, paper, hard ware, great guns, fire-arms, and all manner of utensils of iron; but the commerce of the country, though very considerable, is a trifle compared with that of the city of Lyons, the merchants whereof have a great trade with Spain, Italy, Switzerland, Germany, England, Holland, the northern kingdoms, &c. Their commerce with Spain is carried on by the Italians, and particularly the Genese, in which the Spaniards are but their factors and trustees in reality; and it is observed, very rarely falsify the trust reposed in them. The merchants of Lyons

send to Spain cloth, linen, fustians, saffron, paper, and other small articles: and import from thence wool, drugs for painting, dollars, ingots of gold and silver; which traffick, say the French writers, never flourishes to that degree as when France is at peace with Spain, and at war with England and Holland. They export from Lyons to Italy, cloth, linen, some silk-stuffs, gold and silver lace, haberdashery ware and alamoses: bringing back in return silks, velvets, damasks, brocades, satins and taffeta's, with rice, which comes from Piedmont and the Milanese. It is computed that the merchandizes exported annually from Lyons to Italy, amount to six or seven millions of livres; and that those imported from Italy thither, amount to ten millions; so that this commerce seems to be disadvantageous to the French: but as they manufacture some species of goods brought from Italy, and export them again, it may not be detrimental in the main.

They send to Switzerland coarse cloth, hats, saffron, wine, oil, soap, and haberdashery wares, which amount to about a million annually; in return for which, they receive cheese to the value of six hundred thousand livres, and in linen the value of fifteen hundred thousand livres; and in time of war they are furnished with horses from thence, which amount to a very considerable sum.

The great towns of Germany take off the same species of goods as those of Switzerland, together with gold and silver stuffs, amounting to more than fifteen hundred thousand livres per ann. for which the merchants at Lyons receive in return tin, copper and tin-plates, and the rest in silver; so that this trade is very advantageous to them, unless upon the breaking out of a war, when the Germans, to whom the French always give credit for their goods, make no conscience of running away with all the money they have in their hands belonging to the merchants of Lyons.

They export to Holland about the value of five hundred thousand livres annually in taffeta's and gold and silver-stuffs: for which they receive double the value in cloth, thread, fine linen and spices; but the greatest benefit the merchants of Lyons receive from the Dutch is by negotiating bills of exchange, both for natives and foreigners, which are frequently made payable at Amsterdam.

They export annually to England, according to their own account, the value of two or three millions in merchandize, for which they do not receive a fourth part in goods in return, and consequently the rest is paid in specie. The merchandize they receive from England consists in fine woollen cloth, serges, stockings, lead, tin, grocery and haberdashery wares, drugs for dying and Campechy wood, and sometimes silk of the Levant, when it is scarce at Marseilles.

They drive also a considerable trade with the other provinces of the kingdom; for example, they take off great quantities of oils and dried fruits of Provence; of the cloth, wine and brandy of Languedoc; of the saffron of Guienne; of the slight stuffs of Champagne; of the linen of Picardy, Maine, Normandy and Bretagne, and of the corn of Burgundy, &c.

These three small districts of the Lyonois Proper, Le Forez and Beaujolois have but one governor-general, one lieutenant-general, and two of the King's lieutenants; one of whom commands in the Lyonois and Beaujolois, and the other in Forez. The city of Lyons is the only fortified place in this government, which has three forts for its defence;

## CHAP. XXVII.

*Contains a description of the general government of Auvergne.*

## CHAP. XXVII.

Auvergne.  
Situation,  
&c.

THE province of Auvergne is bounded by the Bourbonnois on the north; by Le Forez on the east; by Rouergne and the Cevennes on the south; and by Quercy, Limosin and La Marche on the west; extending forty leagues in length from north to south, and thirty in breadth from east to west. It is divided into the Upper and Lower Auvergne. The lower, which is also called the Limagne, is one of the most beautiful and fruitful countries in the world; abounding in corn, wine, hemp, fruits, fine meadows which yield three crops annually, and arable lands so rich that they never lie fallow. Their fruits have a delicious taste, and there are such abundance of walnut-trees that they burn scarce any other wood. The mountains of the higher Auvergne are much less fruitful: however here they breed and fat great herds of cattle, and make abundance of good cheese.

**The air.** The air of the Lower Auvergne is serene and warm; whereas that of the mountainous country of the higher Auvergne is excessive cold, being covered with snow eight months of the year, and subject to continual storms.

**Rivers.** The principal rivers of this country are the Allier and the Dordogne, of which the former runs from south to north, and the latter from east to west, and have been already described.

**Mineral waters.** Here are a great many springs and mineral waters, of which the chief are those of St. Myon, whose waters are called vinous and eager; and the waters and baths of Mont d'Or, which are both hot and cold, and proper either for drinking or bathing; the latter of which it is evident were known to the Romans by the ruins of the baths which are still visible. These are not so hot as those of Bourbon and Vichy, for a person may bathe in the very spring head.

**Mountains.** The highest mountains of Auvergne are, 1. those of Le Puy de Dome, *Mons Dominans*, upon which the celebrated Mr. PASCAL made his experiments of the weight of the air. This mountain is sixteen hundred and twenty yards above the surface of the earth. 2. The mountain Cantal, which is nineteen hundred and sixty yards high. And, 3. The Mont D'Or, which is two thousand and sixty yards above the surface of the lower grounds.

**Chief towns.** The towns of the Lower Auvergne are Clermont, Montferrand, Riom, Volvic, Aignepèrse, Thiers, Ambert, Maringue, Pont du Chateau, Yffoire, Saucilanges, Brioude, Usson, St. German Lambron, Aulon, Cusset, Ebreville, Billon, Ardes, Vic le Comte, Langeac, St. Amant, Hermant, Artonne, Corpiere, Besse, Montaign, Chambon and Evaux.

**Clermont.** Clermont, *Nemossus, Augusta Nemetum*, the capital of Auvergne, is situated on a little eminence, between the rivers Artier and Bedar, twenty-six leagues west of Lyons. The streets are narrow and the houses dark, but it is esteemed a rich populous place. The cathedral is a vast structure, and resembles that of Notre-dame at Paris. The Jesuits college is an elegant building, as is the hall belonging to the court of aids,

and the Courfe or publick walks are finely painted.

Riom stands two leagues north of Clermont, and is much admired for its beautiful situation and its elegant buildings. It is also the capital of a duchy, but I do not find it considerable on any other account.

St. Flour, the capital of the Higher Auvergne, is situated on a steep rock, about twenty leagues south of Clermont. Its being a Bishop's See is the principal thing which makes it taken notice of.

Aurillac, or Orillac, is situated in a valley on the little river Jordan, twelve leagues south-west of St. Flour, and is one of the most populous and flourishing towns of Auvergne. It contains however but one parish, besides an abbey and some convents.

The people of Auvergne made a great figure among the ancient Gauls, and pretended to be descended from the Trojans as well as the Romans. CÆSAR and LIVY mention several of their Kings; as AMBIGATUS, LUKIUS, BITUITUS and VERCINGETORIX, the last of whom is said to have commanded four hundred thousand men against CÆSAR. But then this must be understood of a general confederacy of the rest of the Gaulish Princes under VERCINGETORIX, and not of the natives only of this province, which now goes under the name of Auvergne. This Prince being defeated and carried to Rome about the year 702, from the building of that city, Auvergne became a Roman province, and made a part of Aquitania. Upon the fall of the Roman Empire it underwent the same fate as the rest of the Gallick provinces, and like them came at length to be governed by its particular Count, and was reunited to the crown about three hundred years since.

Notwithstanding the French boast that the province of Auvergne is exceeding fruitful, I find they spend most of their corn and wine in the country, and export very little. Hemp is one of the most considerable articles they send abroad, and of this they vend large quantities at Brest, Rochefort, Havre, and other ports. Cattle and cheese are the chief articles of their trade in the lower Auvergne; and it seems there go a great many thousand people out of this province annually to work in Spain, either as mechanicks or husbandmen, by which they make their fortunes, and return into their own country in good circumstances. Here are also some woollen manufactures, in which they make serges and other slight French stuffs, but I don't find they are very considerable. Thread-lace is another manufacture here; and they make also some cutlers ware, with which they traffick in Spain. They furnish the neighbouring provinces with playing cards and excellent paper, but complain this manufacture is not encouraged. Of sea-coal and timber they are said to vend large quantities abroad: their coals are carried as far as Paris; and their timber, which consists of oak and fir, is cut in their mountains, and sent down the rivers in floats to the port-towns, and used in building of ships.

The governor-general of Auvergne has under him two lieutenants-general, and two of the King's lieutenants, one for the higher and the other for the lower Auvergne. But there is not one fortified town in the whole government: those that were there formerly were demolished, that they might afford no shelter for the malecontents of this country, and the Cevennes their neighbours.

## CHAP. XXVIII.

*Contains a description of the general government of Limoufin.*

**CHAP. XXVIII.** **L**imoufin is bounded by Marche and Poitou on the north; by Auvergne on the east; by Quercy on the south; and by Perigord and Angoumois on the west; being about five and twenty leagues in length from north to south, and almost as many in breadth from east to west.

**The face of the country.** This province also is divided into the higher and lower, the first being mountainous and cold, and the other level, warm and pleasant. The country is almost covered with woods of chefnuts, which are the principal food of the inhabitants. Their arable lands are more fit for rye and buck-wheat than better grain. The wine of the higher Limoufin is scarce fit to drink, but that in the lower part of the country is better.

**Rivers.** The principal rivers are the Vienne, the Vezere, the Coureze and the Dordonne.

The Vienne has its source between the confines of the lower Limoufin and Marche, and crossing the north part of this country, passes by Limoges; after which, it takes its course north-west thro' Poitou.

The Vezere has its source not far from that of the Vienne, and taking its course south-west, falls into the Dordonne, which runs from east to west through this province.

**Mines.** The French about the year 1703 discover'd some mines of lead, copper, tin and steel near Limoges; but not any of them, it seems, would turn to account, to their great mortification, who stand very much in need of those metals.

**Chief towns.** The chief towns in the Higher Limoufin are Limoges, St. Junien, St. Leonard, Pierre Buffiere, St. Irrier and Chalus. The chief towns in the Lower are Tulle, Brive, Uzerche, Uffel, Bord, Neuvi and Turenne.

**Limoges.** Limoges, *Vicus Ratiensis*, the capital of the province, is situated on the river Vienne, partly on a hill and partly in a valley, by the river side, thirty leagues west of Clermont. The town is about a league and half in circumference, but ill-built, and has not one fine publick place or square in it. The houses are generally of wood, small and dark. The cathedral is a magnificent edifice, said to be built by the English, to whom, my French authors observe, their people ascribe most of their ancient structures that have an appearance of grandeur and magnificence. A false opinion, say they, with which all our provinces seem to be infatuated; as if our own architects were not capable of erecting a fine building. Here are three abbeys and several convents in the place; but their writers do not give us a particular description of them, or their other publick buildings.

**Tulle.** Tulle, *Tutela Lemovicum*, the capital of the lower Limoufin, is situated in a bottom on the river Coureze, fifteen leagues south of Limoges, being about half a league in circumference. It contains about twelve hundred houses, and five thousand people. It is the See of a Bishop, who has the title of Viscount of the place.

**Brive la Gaillarde.** Brive la Gaillarde is situated near the confluence of the Coureze and Vezere, seventeen leagues south of Limoges, and five west of Tulle, in a valley surrounded with little hills planted with vines and chefnuts, being a most beautiful situation. It is the only fine town of the province: the houses are elegantly built, and the walls about it ex-

ceeding pleasant. One finds in this place all the pleasures and conveniences of life. It contains about a thousand houses, and five thousand souls.

Limoufin was part of the ancient Aquitain, and followed the fortunes of that principality, being subdued by the Romans, Goths, Franks, &c. **ELEANOR** of Guienne brought this province with the rest of her dominions to **HENRY II.** King of England, and the English held it about three hundred years with some interruptions from the French, who regained the entire possession of it about the year 1429, in the reign of King **HENRY VI.** of England.

**The trade of the Limoufin** consists chiefly in Trade and cattle, which they sell to the neighbouring provinces, and send great droves of them as far as Paris. And though this country be at a great distance from any sea-port, and upon that account should seem very ill situated for traffick, yet we find it the center of trade between Paris and Thoulouse, and between Lyons and Bourdeaux, particularly for leather, cloth and paper; and their iron ware and fire-arms are in good esteem.

The governor-general of this province has Military under him one lieutenant-governor, and two of govern-ment, the King's lieutenants, one for the higher, and the other for the lower Limoufin. But being an inland country, and at a great distance from the frontiers, there is not one fortified place in it.

## CHAP. XXIX.

*Contains a description of the general government of Marche.*

**THE** government of Marche is bounded by Berry on the north; by Auvergne on the east; by Limoufin on the south, and by Poitou on the west: being two and twenty leagues in length, and eight in breadth. It is divided into higher and lower, like Limoufin, and the soil and climate are much the same. There are vineyards about Bellac and Dorat, and the higher Marche yields corn.

The principal rivers are the Vienne, the Cher, the Creuse and the Gartempe.

The Creuse, so denominated for its depth, rises in the south-east confines of this province, and taking its course north west to Berry, falls into the Vienne.

The Gartempe rises at Gueret in this country, and taking its course through it from east to west, afterwards turns about to the northward, and falls into the Creuse.

The province of Marche, as hath been observ'd, is usually divided into the higher and lower. In the higher the chief towns are Gueret, Felletin, Jarnage, Aubusson, Ahun, Chenerailles. In the lower, Dorat and Bellac.

Gueret, *Varadicum*, situate near the head of the Gartempe, ten leagues north-east of Limoges, is the capital of the country, and the place where their courts of justice are held; but the French writers give us no farther description of it.

Aubusson is situated in a bottom on the Creuse, five leagues south-east of Gueret. It is a little town of an irregular figure, surrounded by rocks and mountains, but considerable on account of its woollen-manufacture.

Dorat is a little town situate near the Gartempe, ten leagues north-west of Limoges, containing about four hundred houses.

This county of Marche, or the Marquisate, is said to have taken its name from its situation on the

the marches or confines between the territories of France and those of the English in Guienne and Poitou, and was possessed by one or the other as their arms met with success. Their trade consists chiefly in cattle, and in the woollen manufactures which are made at Aubusson and Felletin.

The military government.

It has one governor-general, one lieutenant-general, and two of the King's lieutenants, one for the higher and the other for the lower Marche. There is not one fortified place in the country.

## CHAP. XXX.

*Contains a description of the general government of Berry.*

CHAP.  
XXX.

The province of Berry. Situation, &amp;c. Air and soil.

THE province of Berry is bounded by Sologne on the north; by the Nivernois and Bourbonnois on the east; by La Marche on the south; and by Touraine on the west: extending thirty-six leagues in length from north to south, and twenty in breadth from east to west.

The air of this country is temperate, and the soil produces both corn and wine. Their wine in some places is not inferior to that of Burgundy, but in most is weak and ill-tasted. They abound in excellent fruits, and have good pastures for sheep, that are valued for the fineness of their wool. This Country also produces flax and hemp. They pretend to have some mines of silver and iron, but they are not wrought. Their stone-quarries on the contrary are of great advantage to them.

Rivers.

The chief rivers of Berry are the Creuse, the Cher, the Indre, the Orron, the Evre, the Aurette, the Moulon, the Soudre, and the Nerre; most of which have been already described, and the rest are but inconsiderable streams. The lake of Villiers, which lies about ten leagues from Bourges, is seven or eight leagues in circumference.

Berry is divided into High and Low; the Higher extends eastward from the Cher to the Loire; and the Lower is inclosed between the Cher and the Creuse.

Chief towns.

The chief towns in the higher Berry are Bourges, Dun-le-Roy, Chateaufort, Meun, Vierzon, Argens, Catillon sur Loire, Aubigni, Concoult, La Chapelle-dam-Gilon, Les Aix-dam-Gilon, Henrichemont, Sancerre and Montfaucon.

Bourges.

Bourges, *Avaricum Bituricum*, the capital of Berry, and the See of and Archbishop, is situated on a hill between the rivers Evre and Orron, to the banks of which it gradually descends; thirty-five leagues south of Paris, and seventeen almost south-east of Orleans. The two rivers above-mentioned encompass it on every side, except on that next the gate of Bourbonnoux. It is a large spacious town, containing sixteen parishes, but has nevertheless several void spaces within its walls, and the rest is not well peopled. We meet with a great many ecclesiasticks, gentlemen and scholars here; and it is computed there are in all about fifteen thousand souls, but not many of them tradesmen, the place having no other commerce than what is necessary for the subsistence of the inhabitants. It is the privilege of Nobility which LEWIS XI. granted to the Mayor and Aldermen of this city, which occasioned such numbers of gentlemen resorting hither, and is the mother of that indolence for trade which is so conspicuous in the inhabitants. The cathedral church, dedicated to St. STEPHEN, is the finest Gothick building (says my French author) that I have ever seen, and is situated in the highest part of the town.

VOL. II.

The palace built by Prince JOHN of France, Duke of Berry, is a magnificent edifice; in one part whereof called the King's Apartment, the governor resides, and the other is taken up by their courts of justice. The great hall in the latter is esteemed one of the largest and finest in the kingdom; it hath no pillars to support it. Here the States of the province have their sessions; and here it was CHARLES VII. assembled the clergy of France, and established the Pragmatick Sanction. The town-house erected by JACQUES COEUR is one of the most elegant buildings that ever was undertaken by a private man, which was purchased by the celebrated COLBERT, prime minister of France, and given to the corporation of this city.

The square of Bourbon is the largest in Bourges, where anciently stood a Roman amphitheatre; the publick walks and the malls, without which no great town in France is thought to be complete, are much admired by the French writers; but a long description of their various beauties is scarce consistent with a work of this nature. The great number of religious houses are another considerable ornament to the place. CÆSAR took Bourges by storm, and destroyed near forty thousand of the natives, on account of some cruelties they had exercised on the Roman foldiers that had fallen into their hands. CHARLES VII. of France made this the place of his residence, when the English were masters of almost all the rest of the kingdom in the fifteenth century; which occasioned his being called King of Berry in derision by the English. It is at present a Bishop's See and University, instituted chiefly for the study of the law.

Yffoudun is situated on the little river Theol, eight leagues south-west of Bourges. It is a large town, containing the parochial and collegiate church of St. DENNIS and others, several parishes and convents, and about ten thousand inhabitants. The most remarkable thing in it is the castle, which commands the town; within the walls whereof are an antique tower, and the abbey of Notredame.

At the time when ancient Rome was governed by Kings, Gallia Celtica had theirs, and the citizens of Bourges elected a sovereign from among themselves. This form of Government continued till JULIUS CÆSAR subdued the Gauls, and took Bourges by storm. The dominions of the Romans lasted till the year 475, and then this city fell into the hands of the Visigoths, who were afterwards conquered by CLOVIS. Berry was governed by the Franks, as it had been by the Romans and Goths; namely by Counts, who at length obtained an hereditary dominion. Those of this province were stiled Counts of Bourges, as those of Landguedoc were Counts of Thoulouse. BOLLON or OLLON, is the most ancient of these Counts upon record. To these Counts succeeded Viscounts, of whom Berry had one for about an hundred and seventy years, reckoning from GEOFFREY, who lived about 917, to EUDES, who sold this province to PHILIP I. of France in 1100, when it was united to the crown. It afterwards became an appenage of some of the Princes of the blood, and was not long since the title of the Dauphin's third son, called Duke of Berry.

The trade of Berry consists chiefly in the sale of cattle and sheep; the latter also furnish their manufacture with wool, wherewith they make coarse cloths, serges and stockings. They sell also great quantities of hemp that grows in the country; but make no linen. The districts of Chateau-

Trade and produce of Berry.

roux and Blanc are as barren as any parts of France, and that of Chatre is no less fruitful. In some places their wine is not fit to drink; and in others they pretend it equals Burgundy: but in general, I find this country is not considerable, either for its commerce or the produce of its soil.

Military  
govern-  
ment.

Berry hath a governor-general, a lieutenant-general, and two lieutenants of the King's. There is not one fortified town in the country.

CHAP  
XXXI.  
Touraine.  
Situation,  
&c.

Air and  
soil.

Rivers.

Chief  
towns.

Tours.

**T**HIS province, which takes its name from an ancient people called Turones, lies upon the Loire, and is bounded by Maine and Beaulieu towards the north; by the Blaisois and Berry on the east; and by Poitou and Anjou on the south and west; being about four and twenty leagues in length from north to south, and two and twenty in breadth from east to west. The air is temperate, and the country generally pleasant and fruitful; insomuch that some have given it the title of, The Garden of France. The most considerable forests are those of Amboise, Loches and Chinon. It is watered with abundance of rivers; of which, the chief are the Loire, the Cher, the Vienne, the Indre, the Creuse, the Vendre, the Amasse, the Bren, the Choissille, the Braule, and the Cisse; most of which run from east to west through this country, and have been already described.

The chief towns are Tours, Langeai, Chateau-Regnaud, Amboise, Mont-Trichard, Loches, Chinon.

Tours, *Cæsarodunum*, *Civitas Turonum*, is situated in a plain on the south-side of the Loire, between that river and the Cher; thirty-six leagues south-west of Paris, and fifteen south-west of Orleans. It is built of fine white stone; the streets spacious and extremely clean, occasioned by several rivulets, which form six publick fountains. The cathedral dedicated to St. GATIEN has nothing remarkable in it; but there is another church dedicated to St. MARTIN, who is the favourite Saint of the place, and by whom they pretend many miracles have been wrought, that is one of the largest structures in the kingdom. The key upon the river is the most beautiful part of the town, and their mall, which is a thousand paces in length, passes for one of the finest in France. There are also abundance of handfom convents in the place, and the royal palace built by LEWIS XI. with the park and gardens, are well worth the viewing. One of their gates goes by the name of Hugon, in memory, as it is said, of one HUGON a very wicked Prince, once Earl of Tours, whom the superstitious will have to walk the streets at midnight to terrify the inhabitants; and that the Protestants were first called Hugonots, from their walking and assembling near this gate in the night-time: though some of the French Protestants tell us, it was for their adhering to the present royal family, who descended from HUGH CAPET, that they obtained the name of Hugonots; the other faction setting up the Duke of Guise, who descended from CHARLEMAIN. Tours is the See of an Archbishop, as well as the capital of a duchy, and has had the honour of seeing the States of the kingdom several times assembled here, particularly by LEWIS XI. anno 1470; by CHARLES VIII. in 1484; and by LEWIS XII. in 1506.

Amboise, *Ambacia*, is situated at the confluence of the Amasse and the Loire five leagues to the eastward of Tours. This town is not large, consisting only of two parishes and two streets; but has a fine castle, which is a great ornament to it. Here they pretended to shew the horns of a stag of a prodigious size, which being examined by the present King of Spain, and his brothers the Dukes of Burgundy and Berry, in their passage to Spain; they discovered them to be the work of some artist, and not natural. LEWIS XI. instituted the order of St. MICHAEL in this castle anno 1469. There is little else, that deserves notice here unless the Course or publick walks, which the French writers observe are very fine, as they do of those of every other town.

Chinon, *Castrum Chinionis*, is situated on the Vienne, ten leagues south-west of Tours. It consists of four parishes and fifteen religious houses, containing about a thousand families. It was remarkable formerly for the residence of CHARLES VII. and the first publick appearance of JOAN of Arc, or the Maid of Orleans, before him, which gave such a turn to the affairs of France, when they were looked upon as desperate. The famous RABELAIS was a native of this town.

Touraine underwent the same fate as the rest of the Gallick provinces, and was, like them, at length governed by its proper Count. In the year 1044, it was conquered by GEOFFREY MARTEL Earl of Anjou, and passed to his descendants Earls of Anjou, and Kings of England, who held it till they lost their other territories on that side the water.

The principal manufactures of this province were those of cloth, leather and silk; of which the silk, though the last established, is the most considerable. As to the woollen manufacture, it is at present scarce followed any where but at Amboise, and here they only make slight French stufts. That of leather also is sunk to nothing; and the silk, which in the time of Cardinal RICHELIEU, employed above twenty thousand weavers in the city of Tours only, scarce employs sixty at this time: which loss of their trade the French ascribe to several causes: as first, their small foreign traffick. 2. Their expelling such numbers of workmen out of the kingdom. 3. The obliging the merchants of Tours to buy their Silk at Lyons. And, 4. The wearing calicoes and Indian silks. This, says my author, has destroyed the commerce of Touraine, which anciently brought them in more than ten millions of livres annually.

This province has a governor-general, a lieutenant-general, and a King's lieutenant. Besides which have their particular governors, as the towns of Amboise, Beaulieu and Chinon.

### CHAP. XXXII.

*Contains a description of the general government of Anjou.*

**T**HE province of Anjou is bounded by Le Maine on the north; by Touraine on the east; by Poitou on the south; and by Bretagne on the west: extending twenty-six leagues in length from east to west, and four and twenty in breadth from north to south.

The air is temperate, and the country agreeably diversified with hills and plains, but rather level than mountainous, except on the banks of the Loire, and in some parts of Mauges; and it is computed there are thirty-three forests all of oak and beech in it.

Soil.

Rivers.

Chief towns.

Angiers.

Chateaugontier.

La Fleche.

The soil produces white wines, wheat, rye, barley, oats, peas, flax, hemp, nuts, chefnuts, and all manner of fruits: and their pastures feed great numbers of cattle and sheep, which are the greatest riches of the province. Here are also coal-pits, quarries of marble, and some iron-mines.

The chief rivers are the Loire, which divides Anjou almost in two equal parts; the Vienne, the Toue, which runs from south to north, and falls into the Loire at Saumur, the little Loire, the Sarthe and the Maine; all which run from north to south, and unite their streams at Angers, and a little after fall into the Loire. Besides which, there are abundance of other lesser streams that render the roads impassable sometimes for want of bridges.

The chief towns are Angiers, Chateaugontier, La Fleche, Le Pont de Se, Chateau-Ceaus, Dove, Craon, Montforeau, and Montrevil-Bellay.

Angiers, *Inliomagus Andigavorum*, the capital of Anjou, is situated a little above the place where the little Loire, and the Sarthe fall into the Maine, the last of which rivers divides the town into almost two equal parts: it lies fifteen leagues almost east of Nantz, and about fifty-three south-west of Paris. It was first enclosed with a wall by JOHN King of England, which was demolished by LEWIS VIII. ST. LEWIS his son rebuilt the wall in the manner we see it at this day. The town contains nine thousand houses, and about thirty-six thousand inhabitants, which are divided into sixteen parishes, twelve within the walls and four in the suburbs. Besides the parish-churches, there are eight collegiate, and a great number of convents. The cathedral church is a noble structure, the roof high and broad, and yet is not sustained by one pillar. The choir is also very fine, and its three lofty steeples are much admired for their architecture. Part of the town is pleasantly situated on the side of a hill, and the rest in a bottom. The castle stands on a steep rock and commands the whole, being flank'd with antique round towers, which at present serve rather for ornament than defence. In this town is annually a great procession of all the clergy and inhabitants, to shew their detestation of the errors of their Arch-deacon BERENGUS, who in the year 1019 preached against their doctrine of transubstantiation; which opinion however they say he adjured afterwards at Rome before Pope GREGORY VII. They pretend to shew here one of the pots which held the water that our Saviour turned into wine at the marriage in Cana. This city is the capital of a dutchy, a Bishop's See, and a university chiefly for the study of the law; and LEWIS XIV established an academy here in 1685, upon the same foot with that of the royal academy at Paris. The fathers of the oratory also have a college here, wherein they instruct their disciples in divinity and philosophy, as in other great towns of France.

Chateaugontier is situated on the Maine, seven leagues north of Angiers. It is divided into two parts by the river, and consists of three parishes, fourteen hundred houses, and five or six thousand souls. Besides the parish-churches it hath a collegiate church and several monasteries.

La Fleche, *Flechia Castrum*, is pleasantly situated in a beautiful plain on the little Loire, eight leagues north-east of Angiers. It consists of one parish, but contains however six thousand inhabitants. HENRY IV, who was born here, enlarged and beautified it: he converted his castle or palace, which was very spacious, into a college for the Jesuits; and his heart lies buried under the steps

of the altar. The palace of the late Marquis of Vauvenne, a favourite of HENRY IV, is at present the greatest ornament of the town; the garden and water-works are suitable to the magnificence of the building. Among the illustrious persons who have been educated in the Jesuits college at La Fleche, the celebrated DESCARTES is one.

Pont de Se stands about a league and half to the eastward of Angiers upon the river Loire, which having broken its banks looks like a sea at this place, and is most considerable for its stone bridge, said to be a thousand paces long, and one of the most important passes on that river. The town consists of about four hundred houses, and has a castle for its defence, or rather ornament.

Doue or Doe, *Theotudum Castellum*, is situated half a league to the southward of the Loire, containing about four hundred houses, most remarkable for an amphitheatre cut out of a rock sixteen hundred feet in circumference, and capable of holding fifteen thousand people; which some are of opinion was the work of the ancient Romans, and others of the French. In this town also is one of the finest fountains in France.

Anjou, like other parts of Gaul, was conquer'd by CÆSAR; and on the decline of the Roman empire underwent the same revolutions as the neighbouring provinces, till it came to be govern'd by Counts of its own, of whom GEOFFREY III, surnamed PLANTAGENET, married MAUD the Empress, daughter and heiress of HENRY I, King of England, by whom he had issue HENRY II, who inherited both England and Anjou. This Prince left three sons, viz. RICHARD, GEOFFREY and JOHN. RICHARD succeeded him, who leaving no issue, and his second brother GEOFFREY being dead and leaving one son named ARTHUR, this Prince ought to have inherited both England and Anjou; but his uncle JOHN, his father's younger brother, usurped his dominions and murdered ARTHUR. Whereupon the French King cited JOHN the usurper before the Peers of France; and on his not appearing, adjudged him guilty of felony and murder; for which it was pretended all his French dominions were forfeited, and accordingly the French King seized Anjou and Normandy, and most of the territories the English had in France about the year 1202, except Guienne and Gascony, which the English remained possess'd of till (the reign of HENRY VI,) about the middle of the fifteenth century. Anjou was afterwards an appanage of some of the blood royal of France, and lately gave a title to the Dauphin's second son, the present King of Spain.

The trade and produce of Anjou consists in white wines, cattle, corn, fresh-water fish, hemp, flax, thread, linen, slight woollen stuffs, dried sweet-meats, game, saltpetre, brandy, vinegar, prunes, honey, refined sugar and white wax.

Anjou has a governor-general, a lieutenant-general, and two of the King's lieutenants; besides which, there are particular governors in La Fleche, Beaufort, Chateaugontier and Baugé.

## CHAP. XXXIII.

Contains a description of the government of Saumur.

ALTHOUGH Saumur be really in Anjou, it is nevertheless made a separate government, and comprehends part of Anjou which lies south of the Loire, and a part of the higher Poitou. The chief towns whereof are Saumur, Richelieu and Mirebeau. Saumur,

CHAP. XXXIII.

The government of Saumur.

CHAP.  
XXXIII.  
Saumur  
city.

Saumur, *Salens Murus*, and *Salmurum*, is pleasantly situated on the river Loire, seven or eight leagues to the eastward of Angiers. It is said to be called *Murus* from a rock under which it stands, that resembles a wall. The castle and fortifications might render it a strong place in the last age, but rather serve for ornament than defence at present. This was one of the cautionary towns given the Protestants, and here they had an academy, where JOHN CAMERON the Scot, whose disciples from him were called Cameronians, and many other celebrated saints of that class receiv'd their education; but being suppressed by LEWIS XIV, in the year 1684, and a liberty of their religion denied them, most of the inhabitants left their country. The three parishes do not contain above five or six thousand souls, tho' before the persecution they consisted of twice the number. The principal manufactures of Saumur are the refining of sugar, and those of hard ware and toys.

Military  
govern-  
ment of  
Saumur.

This little government has its governor-general, lieutenant-governor, and King's lieutenant, independent of the governor of Anjou. Richelieu and Mirebeau have their particular governors, which towns have been already mentioned in Poitou.

French  
Flanders,  
Dunkirk,  
Metz, &c.  
and Alsace  
described  
elsewhere.

The towns in the government of French Flanders have been already describ'd in treating of the Low Countries: as has the town of Dunkirk, which makes a distinct government in the French plan. The towns also in the government of Metz, Toul and Verdun, and those of Alsace having been already treated of in the description of Germany, are omitted here.

#### CHAP. XXXIV.

*Contains an abstract of the ancient history of France; together with the modern history of that kingdom.*

CHAP.  
XXXIV.  
An ab-  
stract of  
their an-  
cient history

THE limits of the ancient Gaul were far more extensive than those of the present kingdom of France; comprehending on one side all the north part of Italy, namely, the territories of the King of Sardinia, of the republick of Genoa, and Lombardy: and on the other, the Low Countries, and all that part of Germany which lies to the westward of the Rhine. That part of Gaul which lay to the eastward of the Alps was by the Romans called *Gallia Cisalpina*, on account of its situation in respect of Rome; and that part of Gaul to the westward of the Alps was for the like reason denominated *Gallia Transalpina*. It is the latter of these that is the subject of the present history, and even part of this is dismembered from modern France.

The Gauls

The first account we have of the Gauls which can be relied on, is from the Romans: it seems they were a brave people, had stormed even Rome itself, and were very near putting a period to that aspiring republick. Nor did the Romans think fit to attempt the conquest of them till they had reduced most of the other powers in the then known world under their dominion. FULVIVS FLACCUS the consul, about an hundred and thirty years before our Saviour, first invaded the Transalpine Gauls, and five years afterwards FABIVS MAXIMVS reduced *Gallia Narbonensis* into the form of a Roman province. CÆSAR, after a ten years war, brought all the powers of Transalpine Gaul under the dominion of the Romans about 48 years before Christ. He found the whole country divided into three principal parts, the first of which was inhabited by the Celtæ, the second by the

Conquer-  
ed by Cæ-  
sar.

The three  
principal  
nations of  
them.

Aquitains, and the third by the Belgæ. The Celtæ were the most considerable, their country extending from the Alps to the British channel. To the west of them lay the Aquitains, bordering on the Ocean and the Pyrenees; and to the north-east the Belgæ, who inhabited Picardy, Champagne, the Low Countries, and that part of Germany which lies to the westward of the Rhine. These great nations were again subdivided into a multitude of little principalities or states, who frequently united under some one head for their common defence against the Roman arms; of whom CÆSAR mentions between sixty and seventy: every great town and community he speaks of frequently as a distinct nation: as the Allobroges, the people of Savoy and Dauphiné; the Segusini, the inhabitants of the city of Segusium and the district belonging to it; the Datii, the inhabitants of the city of Dax and its territory; the Gabali, the people of Gevaudan; the Sueffiones, the inhabitants of Soissons and its district, &c.

CHAP.  
XXXIV.

The learned are not entirely agreed about the language of the Gauls, or their manners; accord-

Their lan-  
guage.

ing to CÆSAR, the Celtæ, Aquitani, and Belgæ had very little resemblance in either: while SIDI- NIUS is of opinion that their language was the same, and they had only different dialects. Their religion also is variously represented by these Roman authors: TULLY affirms they had none, while CÆSAR and LIVY say they worship'd a multitude of Gods; that the chief of them were MERCURY, whom they called Teutates; and JUPITER, whom they named Taranis or the Thunderer. They thought him best represented by the tallest oaks, the noblest productions of nature; for I don't perceive they had any images, which might occasion some of the Romans to apprehend they had no Gods. Their priests were the Druids, and as the mysteries of their religion as well as their morals and history were taught in songs; it was by the Bards, an inferior order of Druids, that their disciples were instructed. Their Vates or Eubages sacrificed animals, and foretold, or pretended to tell, future events by the disposition of their entrails; and some relate that upon extraordinary occasions they sacrificed men, to which I do not give entire credit; but if they did, it is no more than their politer neighbours the Romans did before them.

Religion.

The term Druid is said to be derived from the Celtick word *Deru*, which signified an oak: the mistletoe, which grew about the oak, was deemed sacred as well as the tree, and directions were given as to the time and manner of gathering it. The Druids seem to have presided in civil as well as religious matters; insomuch that a malefactor could not be executed but by their approbation; and the chief of the Druids, or the high priests, had an uncommon veneration paid him. A late French writer has pretended to collect some of the sacred rules and maxims given by the Druids to their disciples; and as they are agreeable to what we find in other authors, I shall take the liberty to recite the principal of them, though I will not vouch for their being genuine.

1. They directed that none should be instructed in the mysteries of their religion but in the sacred groves.

2. That mistletoe be gathered with reverence in the sixth moon, and cut with a golden bill.

3. That care be taken in the education of children, who are to be taught that every thing is derived from heaven.

4. That

CHAP.  
XXXIV.

4. That the Arcana of their religion and sciences be not committed to writing, but to memory.

5. They taught that the soul is immortal, and after death goes into some other body.

6. That the world will be destroyed by fire or water.

7. That upon extraordinary emergencies men are to be sacrificed; and as the body falls, or moves after it is fallen, and as the blood flows from the wound, future events may be foretold.

8. That prisoners of war are to be sacrificed on their altars.

9. That they who kill themselves to attend their friends in the next world, will enjoy their conversation there.

10. That the disobedient be outlawed and excluded the society of men.

11. That the heads of families have sovereign power in their own houses, and may put their wives, their children, and servants to death.

As to the government of the Gauls, they were divided into a multitude of little principalities and states, as has been observed already; every one of which had their captain or leader, who judged their affairs at home, and commanded their armies in the field; which officer or magistrate *LIVV* properly enough stiles their King, while others are very angry with him for giving him this title; because, say they, he was elective, and might be restrained in his power by the people, and even deposed for male-administration. But what the prerogatives of these Princes were, or what the privileges of their people, no one sure will be so arrogant to describe particularly at this day. What seems probable is, that in some of these states, the power of the Prince was more limited than in others; and perhaps in some he was under no limitations at all; as we find it is in several countries at this day, where there are a variety of little kingdoms and states.

Habits.

The cloathing of the Gauls seems to differ according to their situation: those who lived on the eastern side the Alps next the Romans were distinguished by the term *Togata*, as they wore gowns like the Romans; and next to them the inhabitants of Savoy, Dauphiné, and Languedoc were sometimes called *Bracata*, from their covering their loins, or wearing something in imitation of breeches. The *Celtæ* also were called *Comata*, from their wearing long hair; but I question whether they were much better clothed than the Britons, because the rest of the Gauls who lay nearer the Romans, seemed to be distinguished from them by their being clothed.

Houses.

Their houses were no better than round huts covered with straw, which they usually built in the woods, or on the banks of rivers; and their beds were the skins of beasts. Their fortifications consisted of little more than trees cut down and formed into a kind of wall with a trench about them. They eat bread and flesh, chiefly that which was taken in hunting; and those that bordered on Italy drank their wines: but I don't find there was any wine made in France when *JULIUS CÆSAR* came amongst them, though in some places they had malt liquors.

Gaul divided into provinces.

*AUGUSTUS CÆSAR* having restored peace to the empire, visited Gaul, which he divided into four provinces, viz. 1. *Gallia Narbonensis*, so denominated from the city of Narbon in Languedoc, which comprehended Languedoc, Provence, Dauphiné, and part of Savoy. 2. *Aquitania*, so called

from it's capital the city of *Aquæ Augustæ*, now *Acqu's* in Guienne. It contained Guienne, Gascony, Querci, Xantoigne, Poitou, Perigord, Limousin, Auvergne, Bourbonnois, and Berry; extending from the Pyrenees to the river Loire. 3. *Celtica*, to which he gave the name of *Lugdunensis*, from it's capital *Lugdunum*, now Lyons; which comprehended the Lyonnois and Orléannois in their largest dimensions, Tournois, Burgundy, part of Champagne, the isle of France, Britany, and Normandy. 4. *Belgica*, so named from the Belge, which contained all the north-east part of Gaul, viz. Picardy, the residue of Champagne, Franche Comte, the Netherlands, and all that part of Germany which lies to the westward of the Rhine. *CONSTANTINE* afterwards divided Gaul into seventeen provinces or governments, viz.

The Romans having introduced their laws and customs, and civilized this people, continued to govern them about five hundred years. But in the reign of the Emperor *HONORIUS*, the Goths having first ravaged Italy, settled themselves there, and in France and Spain. The Burgundians and several other northern people followed their steps, till at length the Franks, a German nation, subdued or drove these powers out of Gaul, giving their name to the country, which it has ever since retained. This great event the generality of the French historians compute to have happened about the year of our Lord 420. Since that time the crown of France has been enjoyed by three several families, viz. the Merovingian, the Carolovignian, and the Capetive. *MEROVEE*, from whom the first line is denominated, according to most of their writers, was their third King, and *PHARAMOND* the first; but the judicious Father *DANIEL* justly rejects the history of their four first Kings, and seems to me to have made it very evident, that *CLOVIS* was the first King of the Franks who reigned in France; and that he founded this monarchy about the year 486, which is sixty-six years after the common account. But I shall first present the reader with the ordinary tables of their several Kings reigns, and then make my remarks on such of them as most require our attention.

The first line of their Kings.

This table begins with PHARAMOND, to whom succeeded CLODION, MEROVEE, and CHILDERICK: but Father DANIEL shews that these Princes only made irruptions into Gaul out of Germany from time to time; that none of them fixed their residence in Gaul, but being content with plunder, or beaten back by the Romans, returned to their habitations on the other side of the Rhine, till CLOVIS passing this river at the head of a numerous army, laid the foundation of the French monarchy, in the fifth year of his reign, and the twentieth of his age, anno 486.

At the time of this expedition of CLOVIS, Gaul was divided between the Romans, the Visigoths, and the Burgundians. The Roman territories comprehended almost all the provinces which lie between the Rhine, the Ocean, and the Loire. The Burgundians possessed the countries between the Saone and the Rhone, and several towns on both sides those rivers, as Lyons, Vienne, Geneva. The Visigoths possessed all the rest of the country from the Alps to the Pyrenees, which lie to the southward of the Loire. THEODORICK, King of the Ostrogoths, or eastern Goths, was at this time King of Italy, and the Visigoths had the dominion of great part of Spain.

While the affairs of Europe were in this situation, CLOVIS passed the Rhine with a formidable army, bending his march directly for Soissons, the capital of the Roman territories in Gaul, where SIAGRIUS the Roman governor then resided. SIAGRIUS drew together all the forces he could assemble to oppose his march; but having the misfortune to be defeated, fled to ALARICK King of the Visigoths, or western Goths, for protection; who delivered him to CLOVIS, and he was not long after beheaded: whereupon most of the towns in the Roman government made their submission to the conqueror.

While CLOVIS was settling his new acquired dominions, the King of Thuringia fell upon his territories in Germany, and obliged him to repass the Rhine; but having defeated his enemies on that side, he returned to Soissons in triumph; after which he endeavoured to strengthen himself by alliances, and married CLOTILDA, the niece of GOUDEBAND King of Burgundy; which Princess being a Christian, gave him a favourable opinion of that persuasion. However, they tell us, he deferred the declaring himself a Christian, till being engaged in a desperate battle with the Alemanni, who had invaded his country, he vowed he would become a Christian, if Heaven should grant him the victory: which happening to fall on his side, he made no delay to perform his vow, but was baptized at Rheims on his return, with three thousand of his officers and great men. But whatever was the occasion of his conversion, his professing Christianity procured him the affections of his new subjects the Gauls, who

The march of CLOVIS against the Romans.

CHAP.  
XXXIV.

who were at this time generally Christians: and perhaps the reason that none of his predecessors could fix their thrones here, was the difference of religion between them and the Gauls; for the Germans were still pagans. As to the tradition of the St Ampouille, or holy bottle of oil used at the consecration of their Kings, being brought him by a dove at his baptism, with the royal standard called the Oriflamme, the reader will give it the weight it deserves; as well as that other tradition, of his having the gift of healing the King's Evil conferred upon him at the same time. But to proceed in his history; this King it seems, whose ambition was never satisfied, fell first upon **GOUDEBAND** King of Burgundy, and afterwards upon **ALARICK** King of the Visigoths; defeated both of them, and killed **ALARICK** with his own hand; but **THEODORICK** King of the Ostrogoths interposing, prevented **CLOVIS** making himself entire master of their countries. Whereupon, he bent his arms towards Bretagne, and obliged that Prince to lay aside the royal stile. He deprived also the Princes of the Alemanni in Germany, of the titles of Kings, appropriating that honour to himself; and from that time, it is said, they took upon them no other title than that of Duke. And those of his own family, who had erected themselves little kingdoms, and would not submit to this rule, he deposed, or put to death. Infomuch, that the French historians, who seem to worship him on other accounts, acknowledge that he left behind him the character of an ambitious cruel Prince; and suggest, that his benevolence to the clergy, and his religious foundations, were undertaken by way of atonement for the many barbarities he had committed.

**CLOVIS**  
dies, and  
is succeed-  
ed by his  
sons.

**CLOVIS** died at Paris in November 511, being the forty-fifth year of his age, and the thirtieth of his reign, leaving four sons behind him, viz. **THIERRY**, **CLODOMIR**, **CHILDEBERT**, and **CLOTAIRE**, who divided his dominions between them; **CHILDEBERT** was King of Paris, **CLODOMIR** of Orleans, **CLOTAIRE** of Soissons, and **THIERRY**, the eldest, who had the largest share, was King of Austrasia, or eastern France, between the Rhine and the Meuse, the capital whereof was Metz in Lorraine. He possessed also several other provinces of France, and all that belonged to the Franks in Germany, to the eastward of the Rhine. In the reign of these Princes, Gaul obtained the name of France. The Visigoths were at this time in the possession of Spain and South France, and their King **ALARICK** being a minor, **THEODORICK** King of the East Goths in Italy, took upon him the guardianship and protection of that Prince, who was the son of his daughter and of **ALARICK** their late King. This re-union of all the Gothick nations under one head, rendered them very formidable to France on the south, as the Danes and Normans now began to be towards the north.

**CLODOMIR** being killed in a battle against the Burgundians, his three brothers shared his kingdom of Orleans amongst them, and murdered his children. Soon afterwards **THEODORICK** the powerful King of the eastern Goths dying, the French Kings began to think of enlarging their dominions: **THIERRY** King of Austrasia entered into an alliance with his brother **CLOTAIRE** King of Soissons, and made a conquest of Thuringia, a part of the modern Saxony; while **CHILDEBERT** King of Paris, invaded the dominions of

the Goths, made himself master of great part of Languedoc, and killed **ALARICK** their King. The pretence for this last war was, that **ALARICK** having married **CLOTILDA**, sister to the French Kings, would compel her to become an Arian. And indeed, the history of the Church at this time informs us, that almost all the Christian world were hereticks of one denomination or other, and only the French Princes deemed true Catholics by Rome. But, notwithstanding, the pretended concern of these Princes for the Catholic Faith, we find them imbruing their hands in the blood of helpless orphans, their brother **CLODOMIR**'s children, and dividing their inheritance amongst them. The holy See therefore, has very little to be proud of, in these strenuous defenders of the purity of her faith. Another observation historians make is, that these French Princes made no scruple of having three or four, or half a dozen wives and concubines at a time; and would frequently take to their beds women that were already married to others; and were indulged in all these irregularities by the Church of Rome, so long as they continued protectors of the holy See. **THIERRY**, King of Austrasia, dying in the year 533, was succeeded by his son **THEODEBERT**, who with his two uncles, the Kings of Paris and Soissons, attacked Burgundy, and having defeated and killed King **GONDENOR**, divided that country amongst them. **VITIGES** King of the Ostrogoths, also yielded up Provence to the French Kings, in consideration of their assisting him in his wars against the Emperor **JUSTINIAN**. But these treacherous French Princes, instead of assisting either **VITIGES**, or **BELISARIUS**, the Emperor's General, with whom they were in alliance, marched a great army into Italy, and fell upon those powers, in hopes of wresting that country from both of them. They were however, soon after obliged to retire over the Alps again: and **BELISARIUS** having reduced great part of Italy to the Emperor's obedience again, carried **VITIGES** to Constantinople, where he was made a patrician, and had a fortune given him capable to satisfy the ambition of any private man, in my author's phrase, who had not been a King. This happened about the year 539.

The Goths still made further efforts for restoring their affairs in Italy upon **BELISARIUS**'s retiring to Constantinople, and having elected the famous **TOTILA** for their King, recovered great part of the country from the Romans: among the rest, Rome itself was twice stormed and taken. Hereupon, the Emperor sent his General **NARSES** into Italy, who defeated **TOTILA**, and killed him in the field of battle; and after him **TEIAS**, whom the Goths chose for King in his room: whereby he obliged them to abandon Italy, and promise never to return thither again. All the Goths however, did not leave the country, but called in the French to their assistance, who passing the Alps with a vast army, laid Italy waste from one end to the other, till they were met by **NARSES** the Imperial General, and entirely defeated. The plague happening among their forces at the same time, very few of the French lived to return home. In the mean time **THEODEBALD** King of Austrasia died without issue, and **CLOTAIRE** King of Soissons, his great uncle, seized upon his dominions, without suffering his brother **CHILDEBERT** to share any part of them with him, which occasioned a war between them: but

doms.

but CHILDEBERT King of Paris dying in the year 558, CLOTAIRE thereby became sole master of the French empire. He enjoyed it about a year, when a fever put an end to his life, in the fifty-first year of his reign, leaving four sons, viz. CHILPERICK, CHARIBERT, GONTRAN, and SIGEBERT.

CHILPERICK succeeded to the kingdom of Soissons; CHARIBERT to that of Paris; GONTRAN to Orleans with Burgundy, which thereupon obtained the name of the kingdom of Burgundy again; and SIGEBERT to Austrasia.

NARSES having driven both the Goths and the French out of Italy, governed that country in peace, till the death of the Emperor JUSTINIAN, which happened about the year 566, when being recalled by his successor the Emperor JUSTIN, and treated with indignity by the Empress SOPHIA, NARSES was so provoked by this usage, that in revenge he invited the Lombards, another tribe of the northern people, into Italy. ALBOIN their King, who had formerly served in Italy under NARSES, against the Goths, and was acquainted with the beauty and fertility of the country, very readily accepted the proposal; and being joined by a good body of Saxons, marched into the Milanese, making almost an entire conquest of Italy: after which he marched into Savoy and Dauphiné, and struck a terror into the Kings of France.

CHARIBERT King of Paris dying, his territories were divided amongst his three surviving brothers, but in a very odd manner, according to the custom of those times; for each brother had a share in almost every province, and in every city of his dominions; each of them had his share in the capital city of Paris itself: which occasioned frequent disputes and misunderstandings between them, and sometimes an open war, as it happened in the year 575, when SIGEBERT King of Austrasia, having beaten his brother CHILPERICK out of the field, and forced him to shut himself up in Tournay, was killed by an assassin as he was carrying on the siege of that town. CHILDEBERT, the son of SIGEBERT, succeeded his father in the kingdom of Austrasia, between whom, and his uncle CHILPERICK, King of Soissons, there were almost continual wars, till CHILPERICK was assassinated in his turn, and left his kingdom of Soissons to his son CLOTAIRE, an infant, whom his uncle GONTRAN, King of Burgundy, took under his protection: and clapping up a peace with his other nephew CHILDEBERT, King of Austrasia, the French Kings entered into a war with the Visigoths of Languedoc and Spain on the one hand, and with the Lombards of Italy on the other, with various success; tho' in the end, the French historians relate, that the Burgundians agreed to pay the French an annual tribute in acknowledgment of their dependance on them. These wars being ended, the French Kings lived at peace among themselves and with their neighbours about four years, when GONTRAN, King of Burgundy, died without issue, in March, 593, leaving the greatest part of his dominions to his nephew CHILDEBERT, King of Austrasia: so that at this time we find the French dominions divided between CLOTAIRE, King of Soissons and Neustria, and CHILDEBERT, King of Austrasia and Burgundy, the latter of which Princes had large dominions to the eastward of the Rhine, in Germany, Hungary, &c. The kingdom of

Paris was neither divided or long possessed by the one or the other, but occasioned several wars between these Princes and their successors, and the towns and territories frequently changed their masters, as the one or the other met with success.

CHILDEBERT King of Austrasia died in the year 596, leaving issue two sons, to the eldest of whom, named THEODEBERT, he left the kingdom of Austrasia, and to THIERRY, the youngest, that of Burgundy: the latter resided at Orleans, making this city the capital of his dominions. These two young Princes confederating together, took from CLOTAIRE, King of Neustria, great part of his territories, and afterwards carried their arms into Spain, making the Gasccons beyond the Pyrenees tributary to them. But falling out among themselves, THIERRY obtained a decisive victory over THEODEBERT, took him prisoner with his son, and put them to death; uniting thereby the kingdom of Austrasia to that of Burgundy: but dying soon after, and leaving four sons infants behind him, and his kingdoms in some distraction, CLOTAIRE, King of Soissons and Neustria, took advantage of the opportunity, seized upon his dominions, and murdered two of his sons; another of them escaped and was never heard of more; and of MEROVEE the fourth, it is said, he had some compassion, because he had stood godfather to him, and this young Prince lived a considerable time as a private man; so that now the French dominions were again united under one head. CLOTAIRE had the good fortune to die a natural death, and leave his dominions entire to his son DAGOBERT, whom he had before made viceroy, or, as some say, King of Austrasia. He left indeed another son named CHARIBERT, to whom his brother assigned the kingdom of Aquitaine: but he died soon after without issue, and DAGOBERT remained sole monarch of the French empire. He resided for the most part at his capital city of Paris, and was a Prince pretty much devoted to pleasure, having three wives at the same time, to whom he gave the title of Queens, and a numerous herd of concubines, who drew him into many extravagancies, and occasioned his oppressing his subjects with heavy taxes, tho' at the beginning of his reign, he was esteemed one of the best Princes that had sat upon the throne. While he was thus diverting himself with his women at Paris, his frontiers in Germany were attacked by the northern nations, and his forces defeated in several battles, with whom he was glad to clap up a peace on such terms as he could obtain. The Duke, or Count of Britany, also invaded his territories, but the differences between them were accommodated, and he died in peace in the year 638, leaving two sons minors, (viz.) CLOVIS II, to whom he gave the kingdoms of Neustria and Burgundy; and SIGEBERT II, whom he constituted King of Austrasia. In the reign of these infant Princes it was, that the Mayors of the palace, or prime ministers of the French, began to assume sovereign power, allowing their Kings little more than the name of Royalty. EGA was now Mayor of the palace to the King of Neustria, and PEPIN to the King of Austrasia, the grandfather of the famous PEPIN, who shewed his posterity the way to depose their sovereigns, and usurp their thrones, and from whom the second line of the French Kings descended, generally called the Carolovignian line, from CHARLEMAGNE, or CHARLES the Great.

PEPIN

**CHAP. XXXIV.** PEPIN dying two years after DAGOBERT, his son GRIMOALD succeeded him in the office of Mayor of the palace in Austrasia. This gentleman had so much address, that he prevailed upon the young king to promise him that his son should succeed him in the throne if he had none of his own; and tho' the King lived a considerable time afterwards, and had a son, yet was he so weak as to commit him to the care of this GRIMOALD; which, in the words of my author, was to deliver him up to the discretion of an ambitious wretch, who had already a design upon the crown. SIGEBERT died about the year 655, of whom the French historians give us no other account than that he was a devout Prince, and founded several churches and monasteries, and had variety of women about him; which was scarce deemed a vice in those days. GRIMOALD; it seems, had not so much cruelty in his nature, as to murder his son DAGOBERT, but privately conveyed the infant into Scotland, where he hoped he never would be heard of more; after which he crowned his own son CHILDEBERT King of Austrasia, under pretence that the late King SIGEBERT had adopted him his successor.

CLOVIS, whom their historians also make an indolent Prince, did not long survive his brother: he left three sons behind him, viz. CLOTAIRE III, CHILDERICK, and THIERRY; of whom CLOTAIRE the eldest succeeded him in the kingdoms of Neustria and Burgundy; and the grandees in Austrasia refusing to be governed by the usurper CHILDEBERT the son of GRIMOALD, found means to depose him and place CHILDERICK the second son of CLOVIS upon the throne. GRIMOALD was taken and carried to Paris, where he died in prison. As to THIERRY the third son of CLOVIS II, I don't find he had any share assigned him in the French territories at first.

EBROIN,  
Mayor of  
the palace.

EBROIN was constituted Mayor of the palace, or prime minister, to CLOTAIRE III, King of Neustria; of whom the French historians give the following character, that he equally exposed to sale justice and injustice for a price, that he burthened the people with taxes, abused the nobility, and would condemn and banish persons of the highest quality for trifles. Of CLOTAIRE the French historians say very little more than that he died about the year 663, without issue, and that thereupon his dominions devolved upon CHILDERICK, King of Austrasia, and the French Empire became united again under one head. CHILDERICK behaving himself in an insolent tyrannical manner towards the nobility, was assassinated with his Queen, who was big with child, and one of their sons: the other escaped and shut himself up in a monastery for several years, tho' he afterwards found means to ascend the throne of his ancestors. Upon the death of CHILDERICK, THIERRY the third brother was declared King of Neustria and Burgundy; but EBROIN, formerly Mayor of the palace, repaired to Austrasia and set up an impostor against him, with whom he returned into Neustria at the head of a very great army, plundered Paris, and obliged THIERRY to make him Mayor of the palace again: whereupon he deserted the pretended King he had set up, and the Dukes PEPIN and MARTIN were constituted Dukes or Governors of the kingdom of Austrasia. MARTIN dying soon after, PEPIN became the sole Duke of Austrasia, being the same who in history is called PEPIN the Gros, on the account of his stature, being short and thick.

VOL. II.

EBROIN, Mayor of the palace to THIERRY, having tyrannized over the French nobility four or five and twenty years, so provoked some of them at length, that he was assassinated; after whose death THIERRY had several other Mayors, and particularly one named GISLEMAR, who made war upon Duke PEPIN in Austrasia, but not meeting with success, PEPIN soon after returned his visit, and entering Neustria, came before Paris, which city opened her gates to him, delivering up the King and Court into his hands: whereupon the regal power in Neustria, Burgundy, and Austrasia became vested in PEPIN, who governed them under the title of Mayor of the palace, leaving THIERRY no more than the empty name of King, the ensigns of authority, and a suitable equipage. PEPIN endeavoured to render himself popular by his wise regulations in Church and State, and defending the frontiers against the Spaniards and Saxons, in which he met with success beyond his expectations. In the mean time THIERRY died, which made little alteration in the state of affairs. He left two sons behind him, viz. CLOVIS and CHILDEBERT; PEPIN caused CLOVIS to be proclaimed King, who dying after a reign of five years, he gave CHILDEBERT the title, of whom the French historians say little more than that he lived sixteen or seventeen years after his brother; for neither the one or the other had any share in the administration, this was left entirely to the Mayor of the palace. PEPIN it seems had two sons of his own, DROGON and GRIMOALD; the first he made Duke of Burgundy, and the other Mayor of the palace to the King, reserving the duchy of Austrasia to himself, which he governed as an absolute sovereign, and not as viceroy to the French King; and in the same manner his son DROGON governed Burgundy. CHILDEBERT being dead, PEPIN thought fit to advance his son, DAGOBERT, to the throne, who made the same figure his predecessors had done. The French historians observe, that we hear no more of this line of their Kings for the last hundred years, than their advancement to the throne and their deaths. But these Mayors of the palace met with many mortifications before they could establish their usurpation, PEPIN saw both his sons, DROGON and GRIMOALD, murdered by the nobility, who could not bear to be tyrannized over by their fellow-subjects. Whereupon PEPIN made his grandson, THEOBALD, Mayor of the palace and governor of the King, tho' he was but an infant; but he died before he could accomplish his principal project of settling the crown in his family.

After the death of PEPIN, THEOBALD his grandson continued Mayor of the palace for some time, under the direction of PLECTRUDE his grandmother, PEPIN's relict; but an Empire of this extent could not be governed long by an old woman and an infant, who had neither of them any pretence to the crown. An insurrection was formed against them in Neustria, and they were driven from the palace, RAINFROY being made Mayor of the palace in the room of THEOBALD. In the mean time CHARLES MARTEL son of PEPIN, by a second venter, and who had been imprisoned by PLECTRUDE, made his escape into Austrasia, where he was joyfully received as their Duke and successor of PEPIN.

DAGOBERT III, having borne the name of King for about five years, died, whereupon the Neustrians set CHILPERICK II upon the throne. He was one of the sons of CHILDERICK II, who

had escaped from the persons that were to have murdered him, as has been related above, and had been shut up in a monastery till now. This Prince the Neustrians thought fit to prefer to THIERRY the son of DAGOBERT, on account of THIERRY's being an infant, and probably they were not unacquainted with his abilities, and hoped he would rescue both himself and them from the tyranny of the Mayors of the palace, and bring things into their antient legal channel; for, says my author, the French Lords made RAINFROY the Mayor of the palace yield him the command of the army, where he always behaved himself with conduct and bravery becoming a Prince, till adverse fortune, and the violence of his enemy, deprived him of the liberty of acting: he ought not therefore to be reckoned in the number of their slothful indolent Kings. He made an alliance with the Duke of Frize, and invaded Austrasia, of which CHARLES MARTEL had assumed the government. The war was carried on for some time with various success, and several obstinate battles fought between the contending parties; but fortune did not favour CHILPERICK in the end, he was defeated and made prisoner by CHARLES MARTEL, who thereupon set THIERRY the son of DAGOBERT II, upon the throne, and constituted himself Mayor of the palace, in which station he took all occasions to make himself popular. He was now peaceably possessed of all the French dominions as Duke of Austrasia and mayor of the palace to THIERRY, and finding himself in this situation, he attacked the German nations who had shaken off the French yoke, and sent missionaries amongst them to instruct them in the doctrines of Christianity; protecting Bishop BONIFACE, whom Pope GREGORY II had sent thither on the same design. In the mean time EUPES Duke of Aquitaine confederating with the Saracens, who had at this time possessed themselves of great part of Spain and Languedoc, marched into the heart of France with a prodigious army, threatening destruction not only to France, but to all Christendom. Whereupon CHARLES MARTEL assembled all the forces he could muster both in Austrasia and Neustria, and gave them battle, obtaining a compleat victory over the infidels, killing three hundred thousand of their men and upwards, according to the French historians; which made him esteemed the hero of the age, not only in France, but in all the neighbouring nations. The Pope especially, who had felt the fury of the Saracens in Italy, became his fast friend upon this great event, and looked upon him as the protector of Christendom. From this victory, 'tis said, he obtained the surname of MARTEL, having as it were with a hammer (Marteau) beaten the Saracens to pieces. While his fame was thus at the height, THIERRY, who had borne the name of King for some years, happened to die: whereupon CHARLES thinking himself established in his power, and at liberty to erect what sort of government he saw fit, took upon himself the title of Duke of All France, without supplying the vacant throne even with a nominal King. It appears however, notwithstanding the great defeat of the Saracens above-mentioned, that they continued in possession of part of Languedoc and Provence, and maintained the war against CHARLES MARTEL for several years afterwards, and that he was not able to take Narbonne from them at last; which would incline one to believe, that the victory above-mentioned was not so compleat as the French

writers pretend. Indeed there are frequent instances throughout their whole history, where according to their own accounts they have made an entire conquest of their enemies, and subdued their territories; and yet immediately after such relations we find them still in the possession of those Princes they pretend to have taken them from, even in the very same authors. If the French have a great deal of wit, they have certainly very little memory, or they would not write flat contradictions so often as they do. Another thing to be observed is, that they are very good at working up a novel; where they meet with a chasm in history, they never fail to supply it out of their own brains, adding and altering circumstances at their pleasure. Therefore as the history of the times we are speaking of, is in general extremely dark and confused, I look upon that of France less to be depended on than any other: where it is not supported by the concurrent testimony of other nations, it must be read with abundance of caution. But to proceed in our history.

The Pope having quarrelled with the Emperor LEO ISAUURIUS, on account of his breaking down the images of the Saints in churches, and prohibiting the adoration of them; and LUTPRAND King of the Lombards falling upon his Holiness at the same time, he had no other refuge to fly to but the heroick CHARLES MARTEL, to whom he sent a solemn embassy, inviting him into Italy, promising to proclaim him Consul and Sovereign of Rome, and to renounce his allegiance to the Emperor, whom he calls the author of the heresy of the Iconoclasts, or Image-breakers, and a persecutor of the Catholics. But whilst CHARLES was preparing to enter Italy with a powerful army, he fell ill of a fever, and died in the fiftieth year of his age, anno 741; and the Pope and the Emperor it seems died the same year. CHARLES MARTEL used no other stile in all publick instruments, than that of Mayor of the palace, to which he added the epithet Illustrious, as the Kings of the first family had done. He permitted foreign Princes to stile him Viceroys and Lord Lieutenant of the kingdom. Historians sometimes call him Duke, and at others, Prince of France; also Consul and Patrician: and in his epitaph he is stiled King. He left three sons, two by his first wife, viz. CARLOMAN and PEPIN, and one by his second, called GRIFON; but he divided his territories between the two former. To CARLOMAN the eldest, he gave Austrasia and his German dominions; and to PEPIN, Neustria, Burgundy, and Provence. PEPIN, for what reason does not appear, was pleased to set up another cypher of a King named CHILDERICK, who was of the royal family, but of what branch remains uncertain. He was declared King only of PEPIN's part of the Empire, but not of Austrasia, which was governed by CARLOMAN, as Duke, in his own right. The two brothers soon found their frontiers attacked both on the side of Aquitaine and Germany; but uniting their forces, they were every where victorious, and became very terrible to their enemies. In the midst of this success CARLOMAN thought fit to relinquish the sovereignty of Austrasia, and retire into a monastery at Mount Soracte, whereby his brother PEPIN became possessed of the whole French Empire; but still he wanted the title of King, which he was ambitious of. To prepare his way to the throne, he courted the clergy, nobility, and people, and omitted nothing that might render him

popular; but the principal stratagem, which removed all obstacles, was the getting Pope ZACHARY into his measures. He consulted him in all things relating to ecclesiastical affairs, and caused his determinations to be read in council, and received with the greatest deference. On the other hand, the Pope being every day harassed by the Lombards or Saracens, and detested by the Emperor CONSTANTINUS COPRONYMUS, who was as zealous against the worship of images, as his predecessor LEO ISAUURIUS, was very glad of PEPIN's friendship to support him against those powers, and ready to grant whatever he could ask. In this juncture, PEPIN resolved to communicate to him his design of assuming the title of King of France, and to desire his approbation of it. Nay, 'tis said, he sent a formal embassy to the Pope, and proposed it as a case of conscience, Whether considering the situation of affairs then in Europe, it was proper for the title of King to be separated from the royal power in the Empire of France, which alone was in a condition to protect religion? To which the Pope answered, That in regard to the state of affairs, he who was in possession of the power, might add the title of King to it. Which determination of his Holiness removed the objections of the most scrupulous of the French nation. Whereupon they unanimously agreed to depose King CHILDERICK, and make a Monk of him, and crown their favourite PEPIN. And to make the ceremony more solemn and significant, the famous Bishop BONIFACE, who had been employed in the conversion of the Saxons, and was esteemed the greatest Saint of the age, was pitched upon to consecrate the hero, and set the crown upon his head.

Pope ZACHARY dying soon after the coronation of PEPIN, was succeeded by STEPHEN III. About the same time ASTOLPHUS, King of Lombardy, took Ravenna from the Emperor, which was the capital of the Exarchate in Italy, and by virtue of this conquest claimed the sovereignty of Rome itself: whereupon the Pope retired into France, and put himself under the protection of King PEPIN; where, meeting with a favourable reception, he persuaded PEPIN to declare war against the King of the Lombards. And to encourage him in this enterprize, he again consecrated him with his own hands, conferring on him the title of, Protector and Defender of the Church. PEPIN hereupon marched with a great army into Italy, and having defeated ASTOLPHUS, and recovered the Exarchate of Ravenna out of his hands, he made a grant of it to the Pope, whereby he became a considerable temporal Prince. The rest of King PEPIN's reign was taken up with suppressing insurrections in Germany and France, in both which he was successful, and having entirely reduced the duchy of Aquitain, re-united it to the crown of France. Soon after which he was taken ill of a dropsy, and died on the 23d day of September, 768, in the fifty-fifth year of his age. He left behind him two sons, viz. CHARLES, afterwards called CHARLEMAGNE, or CHARLES the Great, and CARLOMAN. To the first he gave the kingdom of Neustria, Burgundy, Aquitain, and that part of the kingdom of Austrasia, which lay to the westward of the Meuse; and to CARLOMAN the youngest, he gave the rest of Austrasia, and all his territories beyond the Rhine.

CHARLES at the beginning of his reign entered into an alliance with the King of Lombardy, and to cement it the stronger, married his daughter,

tho' he was before married to another woman, and this expressly against the consent of the Pope; so far was he from suing for a licence for it: nor was any thing more common among the French Princes at this time of day, than to put away one wife, and take another, whenever their interest or pleasure prompted them to it, without the ceremony of a formal divorce.

CARLOMAN, King of Austrasia, died in the year 771, leaving a widow and two sons. The Queen being apprehensive, that her brother CHARLES would seize her person and her children, and force them into a monastery, fled to DIDIER, King of Lombardy, for protection. Hither he pursued them, being encouraged by ADRIAN I, then Pope of Rome, who dreaded nothing more than the King of Lombardy. CHARLES, or CHARLEMAGNE, as I shall call him for the future, easily defeated DIDIER, and made a conquest of two thirds of Italy, leaving the Greek Emperor only in possession of Venice, Naples, and Sicily. As to DIDIER, he shaved his head and shut him up in a monastery, adding to his other titles that of King of Lombardy. He visited the Pope at Rome, where he was received in triumph; and, 'tis said, confirmed the grant of the Exarchate of Ravenna to his Holiness, which PEPIN had made the Holy See.

This Prince having settled his Affairs in Italy, was called into Germany by the revolts of the Saxons. According to the French, he gained numberless victories over that people, but was no sooner removed at a distance from their frontiers, than they renounced his authority, and had recourse to arms, defeating his forces in several encounters; which provoked him to that degree, that besides the many thousands he had destroyed of them in the field of battle, he ordered four thousand five hundred of the chief men of the country to be executed in cold blood, which served but to exasperate that people the more, who maintained the war against him for thirty years and upwards. However, by erecting fortresses, by destroying their country by fire and sword, and the terrible executions he made of the revolters, he compelled them to be quiet sometimes for a year or two, when he carried his arms into Bavaria, Hungary, and Slavonia on the one hand, and into Spain on the other, enlarging the bounds of his Empire on every side. He had at this time three sons, viz. PEPIN by a former Queen, who seems to have been in disgrace with his father; another PEPIN, and LEWIS by his present Queen, the first of whom he created King of Lombardy, and the last King of Aquitain; which so provoked the eldest PEPIN, that he entered into a conspiracy against his father, who was so fortunate however to discover it; and having executed his accomplices, imprisoned his son PEPIN the elder in a monastery. TUSSILON, Duke of Bavaria, also being condemned in a council at Franckfort for his revolts, and obliged to make a formal renunciation of that duchy, CHARLEMAGNE united it to his dominions. Still the Saxons gave him fresh disturbance; he refused to pardon them therefore but upon these two conditions, 1. That they should receive the Christian priests and missionaries amongst them whom they had expelled. And, 2. That one third of them should be transplanted to some distant country: to both which they were obliged to submit.

From Saxony CHARLEMAGNE went to Italy, to do justice to Pope LEO the third, who had been

been deposed by PASCHAL and CAMNUTE, two nephews of the preceding Pope, and forced to fly into France; and, if we may credit the French historians, had his eyes and tongue pulled out. But as it is certain, that this Pope both saw and spoke afterwards, few people gave entire credit to the latter part of the relation. CHARLEMAGNE having examined into the insults that had been committed on his Holiness, whose enemies charged him with the most scandalous crimes, in order to justify their conduct, he condemned the late Pope's nephews to death, who were the authors of these outrages; but at the instance of Pope LEO, 'tis said, their punishment was turned into banishment.

CHARLE-  
MAGNE  
crowned  
Emperor  
of the Ro-  
mans, an-  
no 800.

The Pope, in gratitude to CHARLEMAGNE for restoring him to his See, determined to confer on him the title of Emperor, and without his knowledge, as the historians of those times affirm. While CHARLEMAGNE was on his knees at mass in St Peter's church at Rome on Christmas-day, anno 800, he placed a crown upon his head; whereupon the whole chapter and people cried out, as they had been taught no doubt, God bless CHARLES AUGUSTUS, crowned by the hand of God, life and victory to the grand and pacifick Emperor of the Romans! After which CHARLEMAGNE being placed on a throne, the Pope came and paid his reverences to him, saluting him as Emperor of Rome, and presenting him with the Imperial habit. And tho' CHARLEMAGNE pretended he knew nothing of the Pope's design of crowning him Emperor, it appears that he was very well pleased with the honour afterwards, and expected to be treated accordingly.

The King of Persia a little before this having made himself master of Jerusalem, granted it to CHARLEMAGNE; and a priest named ZACHARIAS, brought a banner and the keys of the city to that Prince, whereby he was ceremoniously put into possession of it, which gave occasion to the fabulous account of CHARLEMAGNE's march to the Holy-land, and his conquering Jerusalem. But to proceed: CHARLEMAGNE being now Emperor of the West, began to think of reducing the rest of Italy to his obedience, which was in the possession of the Greeks. This the Empress IRENE endeavoured to prevent; but despairing of defending it by force, she sent an embassy to CHARLEMAGNE to propose a marriage between them, by way of amusement, as 'tis generally thought.

IRENE  
usurps the  
Empire of  
the East.

This Empress had put out the eyes of her son CONSTANTINE, who dying soon after of the wounds, caused herself to be proclaimed Empress. CHARLEMAGNE however finding it an advantageous proposal, and that he might by closing with it unite the Empires of the East and West in his own person, received her Embassadors with all imaginable honours, and sent another embassy to Constantinople, with powers to conclude the match. The Pope, to whom the Emperor communicated the affair, readily came into it, and did all that was in his power to promote it, not doubting but by this means he should have had an opportunity of modelling the Greek Church, and making it conformable to the Latin. But the Grandees of Constantinople apprehending they should be looked upon as subjects and dependants of the Roman Empire, both in spirituals and temporals, deposed the Empress IRENE in that very instant, and proclaimed NICEPHORUS the Patriarch, Emperor. CHARLEMAGNE finding the

thing was become impracticable, and that the Germans were again in arms, and his presence required on that side, accepted of the proposals of peace that were made him by NICEPHORUS, and consented to settle the limits of their respective Empires in Italy.

CHAP.  
XXXIV.

CHARLEMAGNE being arrived in Germany, and finding the Saxons were never to be tamed while they remained in a condition to disturb him, ordered ten thousand families of them to be transplanted to the westward of the Rhine, and brought other people to supply their places. He decreed also, that none of those who continued in Saxony, should for the future inherit the estates of their ancestors, if they were found disaffected to his government. And by this means, 'tis said, he entirely put an end to the revolts of that people.

And now finding himself peaceably established in his Empire, he called a general Dyet at Thionville in Luxemburg, where he divided his dominions between his three sons, CHARLES, PEPIN, and LEWIS, reserving however the supreme command in the whole to himself. PEPIN had Italy, LEWIS Aquitain, and CHARLES, who was generally near his father's person, had the superintendency of the rest. Each of these Princes had their hands full for the most part. The Greeks and the Saracens attacked PEPIN's territories in Italy; the Saracens of Spain were perpetually breaking in upon Aquitain; and the Danes and Normans entered Germany, defeated the Emperor's troops, and recovered great part of the country from him: and had not GODFREY King of Denmark been assassinated, CHARLEMAGNE would have found it very difficult to remove them; but upon the death of this Prince, the Danes re-embarked their troops and returned home.

CHARLE-  
MAGNE  
divides his  
Empire  
between  
his three  
sons, anno  
803.

PEPIN, King of Italy, dying in the year 810, left one son named BERNARD, and five daughters; whereupon the Emperor constituted his grandson BERNARD King of Italy: but we are to remember, that his territories consisted only of part of Italy; for the Emperor of the East was still master of Venice, Naples, Sicily, and part of Sardinia. In the year 812, the Emperor lost his eldest son CHARLES; and having only LEWIS, King of Aquitain left, of all the sons he designed should succeed to his dominions, he associated him with him in the Empire, and caused him to be crowned at Aix la Chapelle, the place of the Emperor's usual residence. The Emperor had many other sons, and some of them elder than any of those above-mentioned: but the French Sovereigns took the liberty in those days of appointing whom they pleased their successors. Sometimes they married women of an inferior rank; and this was thought reason sufficient to set aside their children. At others, a second, third, or fourth wife got the ascendant of the old doating Prince, made him divorce his former wife, and declare all his elder children incapable of inheriting; got them shaved and thrust into a monastery and perhaps assassinated.

CHARLEMAGNE died the latter end of January, 814, in the seventy-first year of his age, and forty-seventh of his reign, (as King) and fourteen after his being crowned Emperor. His piety and virtue are much cried up by the French historians, tho' at the same time the facts related of him by those very writers must give us an indifferent idea of this Prince. Even his planting the Christian religion in Saxony, which is esteemed so very meritorious, if we consider with what in-  
justice

CHARLE-  
MAGNE's  
death and  
character.

CHAP.

justice and cruelty it was effected, will perfectly efface the merit of it. The Turks may have an equal claim to piety, who plant their religion wherever they come with their scymitars, and water it with the blood of the conquered.

LEWIS his  
son suc-  
ceeds him  
in the Em-  
pire, anno  
814.

LEWIS, surnamed the Godly, succeeded his father CHARLEMAGNE in the Empire, and his nephew BERNARD did homage to him for the kingdom of Italy. The Pope also made the Romans take an oath of fealty to the Emperor, and came into France to crown him and the Empress HERMINGARDE with his own hand. In the year 817 the Emperor associated his eldest son LOTHAIRE with him in the Empire: his second son PEPIN he constituted King of Aquitain; and LEWIS the youngest, King of Bavaria. At the same time his nephew BERNARD, King of Italy, raised a rebellion against him; but the Emperor took him prisoner and bored out his eyes, of which he died soon after, and Italy was re-united to the French Empire. This punishment of boring out the eyes of rival or rebellious princes was become very common in France about this time. They are supposed to have learned it of the Grecian Emperors, with whom they were pretty conversant.

The Saracens  
succeed against  
Christen-  
dom.

The Saracens in the year 828 were very successful against both the western and eastern Emperors dominions. From the French they took several places in Spain and South France, and from the Greeks the island of Sicily; but what distracted the affairs of the Emperor LEWIS most, was his marriage with a second wife by whom he had children; and as he had parcelled out all his dominions amongst his sons by the first venter, the present Empress was ever soliciting him to revoke what he had done, and make some provision for her issue. The old Emperor was ready to comply with her; but it coming to the ears of his sons by the first wife, they apprehended they should be disinherited, and immediately formed a conspiracy against their father, in which they met with such success, that they deposed the Emperor. He had the address however to create a misunderstanding among the brothers, and was restored to his throne; whereupon he assigned his son CHARLES by the second venter the kingdom of Neustria and the country of the Alemanni beyond the Rhine, and soon after the kingdom of Aquitain, upon the death of PEPIN, though he left two sons, named PEPIN and CHARLES. The old Emperor a little before his death, which happened anno 840, constituted the eldest son LOTHAIRE Emperor, and gave him all the rest of his territories, but those assigned to CHARLES and to LEWIS King of Bavaria, afterwards King of Germany. LEWIS the Godly was no sooner dead, but LOTHAIRE his son formed a design of making himself universal monarch, attacked the territories of his two brothers CHARLES and LEWIS, and made himself master of great part of them. But these Princes entering into a confederacy against LOTHAIRE, brought him to terms, and a new division of the dominions of France was agreed on between them.

Lo-  
THAIRE  
Emperor,  
anno 840.

The di-  
tracted  
condition  
of France.

During these intestine divisions, the enemies of France took an opportunity of attacking it on every side. The Normans entered the mouth of the Seine, took Rouen and Paris, and laid all the country waste on that side. The Saracens ravaged Italy with fire and sword, fixing themselves there; and the Duke of Bretagne enlarged his territories at the expence of the French, obliging them to give him the title of King, which he had lately

VOL. II.

assumed. The Normans also entered the Loire, plundered Nantz and all the fine towns upon that river without opposition.

LOTHAIRE the Emperor died the 29th of September, 855, leaving three sons, viz. LEWIS, LOTHAIRE, and CHARLES. LEWIS was appointed King of Italy, &c. and Emperor. LOTHAIRE had the countries lying between the Rhine and Meuse, and several other provinces to the southward, which from him were called the kingdom of Lotharingia, and afterwards Lorrain; tho' the modern Lorrain takes up but a small part of the country which anciently went under that name. CHARLES the youngest succeeded to Provence, Dauphiné, and Transjuran Burgundy, which division obtained the name of the kingdom of Provence.

I shall not trouble the reader with all the divisions and subdivisions made by the French Princes of their territories the next twenty years, but proceed to the reign of the Emperor CHARLES the Gros, in whom all their dominions were again united under one head, which happened about the year 884. This Prince, the French observe, was one of the most powerful of their monarchs, being Emperor and King of Italy, Sovereign of Germany, Pannonia, and all France, with a considerable part of Spain as far as the Ebro: he was the son of LEWIS of Bavaria King of Germany above mentioned; and though he was not very famous for his good sense, yet he shewed himself a true descendant of the French Kings by his treachery: GODEFROY, a Norman Prince to whom the French had given up Friizia and part of the Low-Countries, being at war with CHARLES the Gros, he invited the Norman to a treaty, where he procured him to be assassinated. To revenge which, the Normans poured into France, destroyed the country with fire and sword, and laid siege to Paris, which lasted two years, when the Emperor gave them a large sum of money to remove their quarters. This rendered him very contemptible in the eyes of his subjects, who dethroned him in the year 888, whereupon ARNULPH Duke of Carinthia, and bastard of CARLOMAN late King of Bavaria, procured himself to be chosen King of Germany; and Eudes Count of Paris, who had bravely defended that city against the Normans, was advanced to the throne of France, Italy, and the rest of the French territories, which had a abundance of pretenders to them, who vanished in a little time.

The kingdom of France was in a very indifferent state when Eudes had the name of King of it. Every Duke and Count looked upon himself as sovereign of the territories he governed, and made war upon each other without any regard to the French King, filling all places with blood and devastation; while the Normans, on the other hand, ravaged the country from one end to the other. The Lords indeed were obliged to assist the King with a certain number of troops when he demanded them; but if they were in a different interest they frequently disobeyed his summons. And this time we find them caballing and confederating against Eudes, whom they had but a little before elected their King, and setting up against him CHARLES the son of LEWIS the Stammerer, an infant, who shared the kingdom of France with Eudes till he died, which happened in the year 898, when CHARLES, surnamed the Simple, succeeded to the whole.

936.

The first remarkable thing in this reign is the cession of that part of Neustria now called Normandy, to ROLLO, a Prince or General of the Normans, whom the French stile the most powerful of all the Norman chiefs who had harassed their country. He kept them in perpetual alarms, marching his troops from province to province, till he became so formidable, that deputations were sent to the King from all parts, desiring him to purchase peace of ROLLO on any terms; and a treaty being set on foot, a peace was concluded upon the following conditions: 1. That the country now called Normandy should be granted to ROLLO and his heirs; and as it had been pretty much ruined by his troops, Bretagne also should be put into his hands till the country had recovered it self. 2. That ROLLO should become a Christian. And, 3. That the French King should give him his daughter GISELA in marriage. Which articles were duly performed in the years 911 and 912.

ARNULPH King of Germany had procured himself to be declared Emperor, which title he enjoyed three years; but leaving no legitimate issue, the German Princes elected CONRAD Duke of Franconia for their Emperor. From this time therefore we may look upon the Empire of Germany to be elective, and France a distinct kingdom. The succeeding Emperors may be found in the State of Germany. But to proceed in the history of France: CHARLES the Simple, it seems, was a soft good-natured Prince, and suffered his nobility to encroach on his prerogative, and impose upon him to that degree, that at length they dethroned him, and advanced Duke ROBERT to the crown, brother of the late King EUDES. ROBERT was killed in a pitched battle with CHARLES soon after: but HUGH the son of ROBERT, afterwards called HUGH the Great, maintained the fight against the King, and entirely routed his army. The French Lords hereupon offered the crown to HUGH, who for some reasons declined the honour himself, and recommended RODOLPH Duke of Burgundy, his sister's husband, for their sovereign, whom they accepted: while HERBERT Count of Vermandois, a treacherous courtier, who had been most instrumental in this revolution, kept the unfortunate King CHARLES prisoner at Chateau-Thierry.

RODOLPH had a reign of perpetual vexation; sometimes attacked by the Emperor of Germany; at others, by the Dukes of Normandy and Aquitaine; and the faithless HERBERT, Count of Vermandois, not thinking his treachery sufficiently rewarded, threatened to restore CHARLES to his throne, which gave him abundance of disquiet, till the death of that unfortunate Prince, which happened in the year 929. RODOLPH dying without issue in the year 935, the French Lords sent for LEWIS the son of CHARLES the Simple from England (whither his mother OGIVA, the sister of King ATHELSTAN, fled with him on the dethroning of her husband) and crowned him at Rheims. He had remained in exile thirteen years, and was about sixteen years of age at his advancement to the throne. HUGH the Great, already mentioned, took upon him the administration of affairs; at which the young King seemed impatient, dismissed HUGH from his employment, and sent for his mother OGIVA from England, to assist him with her advice: HUGH hereupon entered into a conspiracy with some other Lords, and maintained a rebellion for several years against his Sovereign. But these troubles were at length

accommodated by the mediation of the Duke of Normandy, who happening to die soon after he had performed this friendly office, the French King very basely seized upon his son, the heir of his dominions, with an intent to have deprived him of them. But the governor of the young Prince had some notice of it, and fled with him into Normandy, where he raised an army for his defence. The French King marched against him, and being drawn into the country under pretence of a treaty, was made prisoner in his turn, but was released from his confinement on confirming Normandy to the Duke, and releasing him of all future services on account of that duchy. The King was no sooner set at liberty in Normandy, but HUGH the Great made him a prisoner again: nor would he release him till he obliged that Prince to deliver up Laon, which was almost the only city he was master of. The rest of his reign he continued to be insulted by HUGH and his confederates, whom he sometimes revenged himself upon by the assistance of the Emperor OTHO, but could never entirely suppress the factions that were formed against him. He was killed by a fall from his horse as he was hunting, in the nineteenth year of his reign, and the thirty-third of his age, anno 954, leaving behind him two sons, viz. LOTHAIRE and CHARLES, LOTHAIRE succeeding to all his dominions: whereas 'tis observed, that before this time the French Kings used to divide their territories among their sons.

LOTHAIRE was crowned, but HUGH the Great, as he was called, had the administration of the government: nothing was transacted at court without him. And tho' he was already Duke of France, Count of Paris and Orleans, and Duke of Burgundy, he would not be contented till he had procured a grant of the duchy of Aquitaine, to the prejudice of the Count of Poitiers, which if he had gotten possession of, would have made him master of the best part of France. The Count of Poitiers refusing to deliver up Aquitaine, HUGH obliged the King to make war upon him: but to the great satisfaction both of the King and the Count, HUGH died in June 955, whereby they were both delivered from his tyranny. Nor would his ambition have stopped here: it is not at all doubted but he had a design upon the crown, and only waited a proper opportunity to usurp it. He left four sons, the eldest of which was HUGH, surnamed CADET, afterwards King, to whom he left the counties of Paris and Orleans. The second was OTHO, who succeeded him in the duchy of Burgundy: and the other two, viz. EUDES and HENRY, were successively Dukes of Burgundy after the death of OTHO.

It is observed of King LOTHAIRE, that he was a Prince without territories: that many of his vassals had greater possessions than himself; for Laon was almost the only city he had a property in. During most of his reign he was but a spectator, and sometimes arbiter of the differences of the petty sovereigns, who gave him the title of King, while they plundered and pillaged each other's lands, took and retook cities, and sometimes came to a pitched battle, without any regard to him: and it was well if his own demesns did not sometimes suffer by their insults. And what was very unfortunate for the Kings of this second line was, that having very few cities or territories that depended immediately on themselves, and the royal armies being always composed of forces which belonged to

CHAP.  
XXXIV.Lo-  
THAIRE  
succeeds  
his father  
LEWIS,  
954.

CHAP. XXXIV. the great Lords, the King was often at their discretion, and forced to purchase their assistance on such terms as he could.

LOTHAIRE therefore to remedy these inconveniencies, considered how he might enlarge his territories. The most popular way he could think of was by driving the Normans out of the kingdom, and seizing the countries they possessed; which he attempted first by way of surprize; and that failing, he declared open war with RICHARD Duke of Normandy, who was so provoked at this usage, that he ravaged the rest of the kingdom of France in a most terrible manner, insomuch that the nobility and clergy begged of the King to clap up a peace, which the Duke at length yielded to, on condition that the French King would restore what he had taken, and confirm the grant of Normandy to him.

LOTHAIRE met with better success in another place: for ARNULPH, Count of Flanders, succeeding to that earldom, and being summoned to pay his homage, or, as some say, to furnish his quota of troops, and refusing to obey the summons, the King entered Flanders at the head of a powerful army, and seized upon the earldom as forfeited. He afterwards governed the kingdom of France in peace for many years, till a dispute about Lorrain with the Emperor ORTHO, engaged him in a new war, that was carried on with various success, and continued almost to his death, that happened in the forty-seventh year of his age, and the thirty-second of his reign, anno 986. He had procured his eldest son LEWIS to be recognized King during his life-time, and at his death recommended him to the Lords, and particularly to HUGH CAPET, so little was he apprized of his ambitious

views. LEWIS reigned but a year and three months, supposed by some to be poisoned; and leaving no children, should have been succeeded by CHARLES Duke of Lorrain, his father's brother: but HUGH

HUGH CAPET usurps the throne 987.

CAPET stepped into the throne, and begun the third line of the Kings of France, from whom his present majesty LEWIS XV descended; of which event the French historians give the following account. There had been a dispute between the Emperor and the French about the duchy of Lorrain, as hath been observed already; and Prince CHARLES, brother of LEWIS the late King, had accepted it of the Emperor upon condition of becoming his vassal; which so provoked the French nobility, that they entertained an aversion to him. While, on the other hand, HUGH CAPET had so distinguished himself by his courage and prudence in the two last reigns, that he was become the darling of the people, and looked upon as the only man that could protect them against their enemies. True it is, this family had long been in the administration, and had the command of their armies, which gave them great opportunities of forming their interests, and opening a way to the crown, which they aimed at for several generations, and now found an opportunity of usurping, when the heir of the crown was at a distance, and sufficiently blackened, no doubt, by their artifices. But Prince CHARLES did not easily relinquish his pretensions; for he entered France with an army, and besieged Laon, one of the strongest and most important towns in the kingdom, and made himself master of the place. Whereupon HUGH, who had been proclaimed King by his party, came and besieged him. CHARLES did not only make a brave defence here, but sallied out with the best of his troops, forced the enemies trenches, and

cut their army in pieces; HUGH himself escaping with great difficulty. He afterwards over-run the Soissonois, took Rheims and several other towns, and probably had found means to ascend the throne of his ancestors, if he had not been betrayed by the villainous Bishop of Laon, who let the enemy into that city when they were not expected to be near it; and thus the unhappy CHARLES was made a prisoner, and probably soon after murdered, for he was never heard of more: whereupon HUGH CAPET governed for the future without a competitor. This was the glorious beginning of that house which the French seem to adore, and from whence the present King is descended. By the encomiums every where given to this and other usurpers by historians, one would be tempted to think, that murder and rebellion were virtues, and that killing or deposing an innocent Prince, and taking possession of his dominions, constituted a hero: for such are most of the heroes we meet with on record.

HUGH CAPET, 'tis observed, begun his reign with greater advantage than many of the former Kings, on account of his having larger demesns. He was in his own right possessed of the duchy of France, and the counties of Paris and Orleans; and the duchy of Burgundy he was secure of, as being in the hands of his brother: so that he could raise a considerable force without being obliged to his vassals, and was in a condition to keep the greatest of them in awe. Accordingly we are told that he made a greater figure than his predecessors, and settled his government so firmly, that during the ten years he reigned there was not one insurrection against him. But it seems he contented himself with restoring tranquillity to the distracted country, keeping the nobility within bounds, and cultivating the acts of peace, for which he is highly applauded by the French; and did not trouble himself about extending the bounds of his dominions; making good the old proverb, The worse title the better King. And true it is, usurpers are generally obliged to do abundance of popular things to obtain the affections of their new subjects; for where the people find themselves under an equitable and gentle administration, they don't much trouble themselves about the title of the Prince. On the other hand, where a usurper despairs of bringing the people into his interests, he is obliged to govern them with a rod of iron; by standing armies, grievous taxes, and other oppressions, that they may not be in a condition to contest his title.

HUGH CAPET was succeeded by his son ROBERT, who in the beginning of his reign met with some disturbance from the Pope. He had married a near relation, and refusing to part with her, his Holiness thought fit to excommunicate him. Nor would he be reconciled till he dismissed the lady; whereupon the King married another named CONSTANTIA, a turbulent woman, who gave him a great deal of uneasiness. The Pope also obliged King ROBERT to set the Archbishop of Rheims at liberty, whom his father had imprisoned; such an influence had the Pope over Christian Princes in this age. And as he found he should never enjoy his dominions in quiet without keeping in good terms with the Holy See, he proceeded to persecute, and even to condemn to the flames, a set of people whom the Church were pleased to denominate hereticks; though I perceive by their own writers, their principles were the same with the Albigenes; of whom the Protestant world

have a very favourable opinion. There was little more remarkable in this reign, unless some wars between the vassal Princes; and a rebellion of two of the King's sons against him, by the instigation of their mother CONSTANTIA; which was suppressed without much blood-shed. This Prince died in the sixty-first year of his age, anno 1031. He had three sons, HUGH, HENRY, and ROBERT, (of whom, HUGH he associated with him in the kingdom, but he died before him) and a daughter named ALIX, or ADELA, married to RICHARD III, Duke of Normandy.

HENRY I, succeeded his father; against whom the Queen-mother CONSTANTIA entered into a confederacy with her younger son ROBERT, and obliged the King to fly to the Duke of Normandy for protection: but he was soon after restored to his throne by the assistance of that Prince; and his mother dying, he took his brother ROBERT into his favour, and either made or confirmed him Duke of Burgundy; and in gratitude to the Duke of Normandy, for the assistance he had given him in his distress, he transferred over to him the cities of Gisors, Chaumont, and Pontoise, with all the Vexin Norman. And that intimacy there appears to have been between these two Princes, that the Duke of Normandy chose to commit his son WILLIAM to the French King's care while he went a pilgrimage to the Holy Land. This was that WILLIAM afterwards surnamed the Conqueror, from his conquest of England. He was indeed illegitimate, but succeeded to Normandy by the donation of his father. The Princes of those times taking the liberty of disposing of their territories to whom they saw fit, especially if they had no legitimate issue. ROBERT Duke of Normandy happening to die in his return from the Holy Land, we find the French King acting a very odd part; sometimes in the interest of young Duke WILLIAM, and at others in an alliance with those who disputed his title, on account of their descent from former Dukes. However, Duke WILLIAM, having defeated King HENRY and his allies in a decisive battle, gained a mighty reputation, and enjoyed his dominions in peace till his expedition into England, which he conquered in the year 1066. There is little more remarkable in the reign of HENRY I, unless a rebellion formed against him by his brother EUDES, which he had the good fortune to suppress. Finding himself very ill, he associated with him his eldest son PHILIP, in the government in the year 1059, who was then about seven years of age, and died the following year, being the thirtieth of his reign.

PHILIP the first took all opportunities of lessening the power of the Duke of Normandy, and inciting the neighbouring Princes against him; sometimes he encouraged the Duke of Bretagne to renounce all dependance on Normandy, (for Bretagne as well as Normandy was granted to ROLLO,) sometimes he joined his forces with ROBERT the conqueror's son, who was in rebellion against his father, and after the death of the conqueror he kept up the divisions and misunderstandings among his children: but there happened an occurrence in his own family which had liked to have rendered him incapable of intermeddling with the affairs of his neighbours; PHILIP having fallen in love with BERTRADE the wife of the Earl of Anjou, took the liberty to divorce his first wife, by whom he had several children, and marry BERTRADE; whereupon he was excommunicated by the Pope, and begun to be contemned by his subjects; which put

him upon associating with him his son LEWIS in the government, who being a prudent and active Prince, kept the great Lords within the bounds of their duty, and restored the credit of his father's administration: but BERTRADE, who had children by the King, studied all means to destroy this young Prince and advance her own, and when nothing else would do fairly, gave him a dose of poison, which being timely discovered, his life was preserved with a great deal of difficulty; but his constitution appeared to be broken, and he always looked very pale afterwards. Notwithstanding this vile attempt, the poor old dotting King procured a reconciliation between his son LEWIS and this execrable woman, and had a licence of the Pope to retain her for his wife upon the death of his first Queen. But the most remarkable thing which happened in this reign was the setting on foot the crusado's: ALEXIS the Grecian Emperor had desired the assistance of the Pope and the Christian Princes of the west against the Mahometans, who were become masters of all the Lesser Asia, and advanced even to the shores of the Bosphorus over against Constantinople. The Pope and clergy immediately preached up the merit of defending christiandom against the infidels, and proposed the conquering even of Jerusalem and the Holy Land, and rescuing the sepulchre of our blessed Saviour out of their impious hands; and this in so moving a manner, that all Europe seemed impatient to enter up that holy war.

An innumerable multitude of people of all conditions and sexes immediately took the cross for their badge: the most backward seem to have been the Kings of this part of the world, there was not one of this exalted dignity in the first expedition; but a great number of Princes and Lords, especially of the French, Flemings, and Germans: the chief of these were HUGH Count of Vermandois, the King's brother, ROBERT Duke of Normandy, son of the Conqueror, RAYMOND Count of Thoulouse, ROBERT Count of Flanders, STEPHEN Count of Blois and Chartres, and the celebrated GODFREY of Bouillon Duke of Lorraine, with EUSTACHIUS and BALDWIN his brothers; and an infinite number of Lords and gentlemen, that drew almost whole provinces after them. They began their march in the year 1096. Besides those who went as soldiers, there were old men, women, children, priests and monks, engaged in the enterprize, not less than seven or eight hundred thousand souls of all nations; most of whom had very little considered the length of the journey, or how they should subsist till they came into the enemies country; and, in fact, one half of them perished before they arrived; if perishing be a proper term where the people were infallibly sure of being received into Paradise as soon as they left this world.

As they observed very little discipline, many of them were destroyed even in the Christian countries through which they passed, by the sword, sickness, or famine; and those of them that arrived at Constantinople, and had procured vessels to transport them to the opposite shore, were many of them cut to-pieces as soon as they landed, for want of conduct; but these, 'tis true, were for the most part a confused multitude, the fore-runners of the army; the Princes and generals, who had been used to military exploits, marched with more caution. GODFREY of Bouillon, and other commanders, who observed an exact discipline, arrived at Constantinople with their troops

CHAP.  
XXXIV.Crusado's  
first set on  
foot.

CHAP.  
XXXIV.CHAP.  
XXXIV.

troops in petty good condition. And indeed they appeared so numerous upon their rendezvous, that they put the Grecian Emperor into the utmost consternation. He began to stand much more in fear of them than he did of the infidels, and instead of joining his arms with theirs, took all opportunities underhand to distress the forces engaged in the crusado: he durst not deny the generals shipping to transport their troops, 'tis true, lest they should make him sensible of their resentment; and perhaps he thought this the readiest way to get rid of them: but notwithstanding all their losses and difficulties, when they came to draw up their troops upon the Asiatick shore, they found they had still near an hundred thousand horse, and almost twice that number of foot; whereupon they immediately laid siege to Nice in Bythina, almost over-against Constantinople, and the usual place of Sultan SOLIMAN's residence. The Sultan marched to the relief of the town, but was defeated; whereupon the place capitulated, and was put into the Emperor's hands, as had been agreed on when he engaged to furnish them with shipping and provisions, and to join them with his forces.

Nice in  
Bythina  
taken  
from the  
Turks.Antioch  
taken.

From Nice, the Christian Princes advanced to besiege Antioch, and SOLIMAN opposing their march with an army of two hundred thousand men, they gained a complete victory, and had the plunder of his camp, which was very rich; after which they over-ran great part of the Lesser Asia, and having made themselves masters of Antioch, sent to the Emperor to join his forces with them as he had promised; instead of which he only sent them complaints, because Antioch was not delivered into his hands. Whereupon they resolved to have no concern with him, but to act independently of the Greeks for the future.

Jerusalem  
taken.

From Antioch these heroes marched to Jerusalem, which they invested; though it is said their numbers were so diminished, that they did not amount to fifty thousand men, and that the garrison in the town was as numerous. But it seems, a fleet of English, Normans, Flemmings, and Genoese, luckily arrived at this time with supplies, which gave fresh vigour to the Christian army; who making an assault upon the outward wall, carried it sword in hand. At another attack, which had lasted from break of day to noon, when the besiegers began to faint, and give way, the famous GODFREY of Bouillon encouraged them, with an assurance of success; pretending he had seen an horseman descending from the clouds, and that heaven fought on their side: which so animated the troops, that they carried all before them, and the town was taken by storm.

The celebrated GODFREY, who had distinguished himself by his conduct and bravery thro' the whole expedition, was by universal consent crowned King of Jerusalem, who afterwards made Ptolemais, Cesarea, Antipatris, Ascalon, and other cities, tributary to him: but did not live to enjoy his kingdom more than one year. He was succeeded by his brother BALDWIN: and fresh detachments of Christians arriving every day, who were encouraged to take the cross upon them by the news of the taking of Jerusalem, BALDWIN conquered several other cities and provinces, making a large addition to his dominions.

But to return to PHILIP King of France; the greatest advantage he and his successors made by these crusado's, seems to be the uniting some

fiefs to the crown; for several of the great Lords mortgaged or sold their territories to the King, to enable them to undertake the crusado; and we find ROBERT Duke of Normandy engaged his duchy to his brother the King of England, with the same view.

France enjoyed a perfect tranquillity during the last ten years of PHILIP's reign, who died in the 57th year of his age, anno 1108, leaving his dominions to his son LEWIS VI, surnamed the Gros.

The beginning of the reign of LEWIS VI, was disturbed by some insurrections and rebellions promoted by his mother-in-law, and her son, but he had the good fortune to suppress them. HENRY I, King of England, proved a much more formidable enemy; for having ascended the throne of England while his brother ROBERT was engaged in the crusado to the Holy-Land; he also deprived that Prince of the duchy of Normandy at his return, and made him prisoner: and having formed an alliance with the Duke of Bretagne, and Earl of Anjou, he attacked the frontiers of France, and took Gisors. The war between the English and French monarchs lasted many years, in which the English, according to their own writers, were generally victorious; and yet the French pretend, that upon the conclusion of the peace, the King of England submitted to do homage for the duchy of Normandy: which ought to be well proved before it is entirely credited. In these disputes between France and England, King LEWIS made great use of WILLIAM CLITO, as he was called, the son of ROBERT Duke of Normandy, to draw off the Norman Lords from their allegiance to King HENRY. He gave him the Vexin François upon the frontiers of Normandy, and afterwards the county of Flanders; but this unhappy Prince could never recover the inheritance of his father. He died of a slight wound in his hand, which happened to gangreen, according to the French writers. LEWIS VI, died in the year 1137, leaving five sons and one daughter, of whom LEWIS his eldest son succeeded him.

LEWIS  
VI, anno  
1108.LEWIS  
VII.  
1137.

The crown of England being disputed by MAUD the Empress, and STEPHEN of Bologne, France had time to breathe in the beginning of the reign of LEWIS VII, who found his dominions in a state of such tranquillity, that he thought it a proper season to undertake a crusado in person to the Holy-Land; and CONRAD the Emperor of Germany agreed to join with him in the enterprize.

Under-

Emperor.

The Christians, who had now been in possession of the Holy Land and the adjacent countries for forty years, had formed out of them four considerable states, viz. 1. That of Edeffa, which comprehended the countries on the banks of the Euphrates. 2. The district of Tripoli, which lay in the neighbourhood of the sea. 3. The district of Antioch. And, 4. The kingdom of Jerusalem. And had the Princes of these several territories been unanimous, they would have been able to have maintained their ground against the Mahometans: but falling out among themselves, SANGUIN, sultan of Aleppo, and afterwards NORADIN his son, made great advantages of their ill-timed disputes, and recovered most of the conquests they had made; which occasioned the King of Jerusalem and the Prince of Antioch to desire succours of the European Christians, and gave birth to this second crusado.

CHAP.  
XXXIV.

The Emperor CONRAD was first ready, and began his march in Easter, 1147, with an army of an hundred thousand men, of whom seventy thousand were horse, armed back and breast. When he arrived on the frontiers of the Grecian Empire, he found but a very indifferent reception from the subjects of the Emperor MANUEL COMMENIUS: they cut off the stragglers of the army, and refused to furnish CONRAD's troops with provisions but at excessive rates: and in some places their disputes arose to such an height, that they were upon the point of coming to a general battle. And it must be confessed, that the Grecian Emperor, if he was not consulted in this affair, had reason to be upon his guard; and might very well entertain apprehensions, that these mighty preparations were designed against his dominions. The difference of religion also between the Greeks and Latins might contribute to heighten their aversion to each other. Nor was it at all improbable, if the Emperor CONRAD had met with success in this expedition, but he would have put what terms he pleased upon the Greeks; and the Pope and western Churches would have been for forming their Church after the model of their own, and reducing the whole Christian world under one spiritual head. We cannot therefore entirely blame the Grecian Emperors for discouraging these crusado's; tho' the treacherous part they acted in Asia afterwards, if the French and German accounts are to be credited, are never to be justified. To proceed therefore, the Emperor MANUEL having furnished CONRAD with vessels to transport his army, cross the Hellespont, supplied him also with treacherous guides, who led them into ambuscades, and in effect delivered up this fine army a prey to the Mahometans; insomuch that after they had traversed the greatest part of the Lesser Asia, and undergone inconceivable hardships, CONRAD found himself obliged to return to the Hellespont again, having lost more than three parts of his forces; where he had the satisfaction indeed of meeting with the French King at the head of much such an army as he had lost. The Emperor advised the French King to continue his march by the sea-coasts, to prevent his being surrounded by the Mahometans; which precaution he observed for some time, passing by Smyrna and Ephesus: but finding it very troublesome crossing the mouths of rivers, he altered his march, and turned off into the inland country, where the Turks being possessed of all the passes, destroyed most part of his army, and the King with a very few of his Lords escaped to Antioch, after which he proceeded to pay his devotions at Jerusalem, and returned to France. The Emperor CONRAD also found means to visit our Saviour's sepulchre privately, before he returned to Germany: and thus ended all these mighty preparations for subduing the infidels.

But I must not forget an adventure in this expedition, which afterwards had a considerable influence on the kingdoms of France and England. LEWIS had married ELEANOR, the heiress of Guienne and Gascony, frequently called the kingdom of Aquitaine, and thereby made a considerable addition to his dominions. She was a beautiful princess, of whom he was infinitely fond, which induced him to take her along with him to the Holy-Land: but unluckily at Antioch she engaged in an amour with the Prince of that territory, who was her Uncle. So open they were in the matter, that the King seemed fully convinced of their criminal correspondence, and was forced to make use

of a stratagem to bring her away with him. At his return he procured a divorce, tho' he had two children by her, and was forced to return her the territories she brought in marriage. HENRY Duke of Normandy, son of the Empress MAUD, finding the lady at liberty, struck up a match with her within six weeks after the divorce, by which means he added to his dominions Aquitaine, Maine, &c. and became as formidable to STEPHEN his competitor in England, as he was to LEWIS in France, who thereupon entered into a confederacy against him. But HENRY maintained his ground against both of them: and STEPHEN having buried his son EUSTACHIUS, and finding the English weary of the war, entered into a treaty with HENRY, wherein 'twas agreed, that STEPHEN should enjoy the crown of England during his life, and that HENRY should succeed him.

STEPHEN dying not long after, HENRY came with the title and equipage of a King, say the French historians, to do homage to LEWIS, who ought to have trembled when he received it, it being for Normandy, Aquitaine, Anjou, Touraine, Maine, &c. that is, for the best part of the kingdom, which he was in effect absolute master of. THIERRY of Alfatia also making a journey to the Holy-Land, left the guardianship of his son PHILIP, Flanders, and all his other territories, to the care of King HENRY; so that LEWIS was hemmed in by him on every side. But the affair of THOMAS à BECKET, Archbishop of Canterbury, happening about the same time, gave the King of England so much vexation, that he had not an opportunity of making those advantages he might otherwise have reaped by the vast increase of his dominions.

Archbishop BECKET being assassinated by some who thought to do King HENRY good service, he was threatened with an excommunication by the Pope; whereupon the King caused his son HENRY to be proclaimed King, to prevent any ill consequences: but this step had near occasioned the loss of his crown, for young HENRY having the name of King, and none of the power, was incited by the Queen and the French King to raise a rebellion against his father, into which his brothers RICHARD and GEOFFREY were also drawn, with many of the French and English nobility. But the conduct and bravery of King HENRY was such, that he reduced his rebellious Queen and sons, defeated his enemies, and prescribed what terms of peace he saw fit to them. The two kingdoms being in full peace, King LEWIS, called LEWIS the Pious, desired leave of the King of England to come in pilgrimage to the tomb of THOMAS à BECKET at Canterbury, to perform his devotions for the health of his son PHILIP, which was complied with; and heaven, say the French historians, was pleased to hear the prayers of the devout King upon this occasion; his son's health was restored: so meritorious was the intercession of THOMAS à BECKET thought in a very few years. The following year, 1180, King LEWIS died at Paris in the sixtieth year of his age, and the forty-fourth of his reign, being succeeded by his son PHILIP, surnamed AUGUSTUS by some of their historians; but this title was never given him during his reign.

PHILIP began his reign with banishing the Jews, and persecuting the Albigenes, whom the French writers call Hereticks. Next we find him inciting and encouraging RICHARD and JOHN, the sons of HENRY King of England, in their rebellion

rebellion against their father; and after the death of HENRY, he became no less an enemy to his son RICHARD, who had been his ally; but the Pope persuaded them to lay aside their private quarrels, and join in a crusade for recovery of the Holy-Land, which was almost lost through the dissensions of the Christian Princes on that side.

The armies did not take the same rout as in the preceding wars; but were transported to Palestine by sea, and Sicily was appointed by the two Kings for the place of rendezvous. The French King embarked at Genoa, and RICHARD King of England at Marseilles; and finding the year pretty far advanced when their forces arrived in Sicily, it was thought convenient to winter there. Here arose a misunderstanding between the two Kings, which the French ascribe to King RICHARD's refusing to marry ALICE the French King's sister according to his engagements; but RICHARD making it appear, that this Princess had been faulty in her conduct, King PHILIP seemed to be satisfied. Some of the French writers go so far as to say, that this Princess had a child by King HENRY II, RICHARD's father; and the English historians suggest something of the same nature: but however that matter was, the two Kings were never afterwards heartily reconciled. In the following spring, they failed to Palestine, and assisted in the siege of Acon or Ptolemais, where there were perpetual misunderstandings between them. They agreed however to attack the place by turns; and when one of them was busied in carrying on the siege, the other defended the lines against Sultan SALADIN, who lay within a bow-shot of their camp. At length the town being taken, the two Kings divided it between them and had each their governor in it. The summer not being half spent, it was expected these Princes would have entered upon some further action; but the French King, who seems all along to have had some base treacherous views with regard to King RICHARD, resolved to return to Europe, leaving only a small body of troops in Palestine, under the command of Eudes of Burgundy. King RICHARD had that precaution indeed before he went, to make King PHILIP swear, that he would undertake nothing against his dominions in his absence; but there are not many instances in history, where the French Kings have kept their oaths or promises longer with the English, than they have found their interest in observing them; at least thus it happened on this occasion. The King of England remained a year after him in Palestine, and made some further conquests; he had continued there longer, if he had not received intelligence of the practices of King PHILIP and his brother JOHN against his dominions; and as he was hastening home to prevent the consequences of this confederacy, he was detained by LEOPOLD Duke of Austria, and put into the hands of HENRY VI, the German Emperor, with whom he remained a prisoner upwards of a year, by the artifices of PHILIP, who spared no treasure to prevent his returning to his kingdom. In the mean time he incited JOHN to mount the throne of England, and promised him his assistance in it, upon condition he would become his vassal. Accordingly JOHN paid his homage to him for his brother's territories in France; and some of the French writers affirm, for England also. JOHN went over to England, and gave out that his brother RICHARD was dead, demanding to be acknowledged their Sovereign; which some of the

The prac-  
tices of

RICH-  
ARD.

Lords did, but most of them continued unshaken in their loyalty. PHILIP in the mean time did not only use his utmost endeavours to get King RICHARD put into his hands, but entered Normandy with an army, and seized on several towns and provinces belonging to the English. The Emperor having squeezed what money he could out of the French King, began to listen to the proposals which were made him by the English for the ransom of their Sovereign; and having worked them up to an immense sum, gave that Prince his liberty, without consulting PHILIP in the matter.

RICHARD being returned to England, and having drawn off his brother JOHN from PHILIP's interest, went over into Normandy, to revenge the treachery of his faithless ally. He defeated him in several battles, retook the towns he had lost, and had probably made him pay very dear for his breach of faith, but was unfortunately killed at the siege of the castle of Chalons. Indeed, the French writers relate extravagant stories of the conduct and bravery of their Prince, as that he gained a victory over the Emperor's troops at Bovines in Flanders, (who was become the King of England's ally,) when the numbers were three to one against him. But they all agree, that King RICHARD died in very good time for PHILIP; and that if he had lived much longer, their august Monarch would have run the hazard of being driven from his throne: whereas the sudden death of this Prince furnished him with glorious work, and gave him an opportunity of enlarging and establishing the French empire. I must confess his first attempt had a plausible appearance: he pretended to assert the rights of King ARTHUR against the usurpations of his uncle JOHN, who had ravished from him both his English and French dominions. But it appears pretty evident from the event, that PHILIP's real intention was to set one against the other, that he might enlarge his own territories at the expence of both of them; a game that the French have ever played, when the English have been divided into factions.

RICHARD was no sooner dead, but the hero PHILIP, as the French writers call him, had the courage to march into Normandy, Maine, Anjou, and the rest of the English provinces, burning and destroying the country with fire and sword, and possessing himself of all the defenceless places. JOHN, who had procured himself to be proclaimed King of England, having a defective title, and ill-beloved by his subjects, was not able to resist the torrent. He drew an army together however, defeated the forces of his nephew Prince ARTHUR, and made him prisoner; and if we may credit some French writers, he murdered him with own hand: certain it is, that Prince never obtained his liberty afterwards. This gave King PHILIP a handle to summon King JOHN before him and the Peers of France, to answer to a charge of felony and murder, in seizing his nephew Prince ARTHUR's territories, and afterwards taking away his life. And JOHN not appearing, the Peers, by the direction of PHILIP, adjudged him guilty of the charge, and that he had forfeited all his dominions in France. JOHN having his hands full in England, could not prevent the French King's making himself master of Normandy, and several other fine provinces, under pretence of that sentence; but the English retained however that part of France, which was called

Aquitain, now Guienne and Gascony, with Rochelle, and the country contiguous to it.

The next remarkable thing in the reign of King PHILIP, was the Pope's publishing a crusade against the Albigenses, a people who opposed the idolatry and other errors of the Church of Rome. They were possessed of Languedoc and all South France, extending themselves into Piedmont in the east, and to Spain on the west. The Pope, it seems, thought them so considerable, that nothing less than a crusade could suppress them. He granted remission of sins therefore to all that would take up arms against them for forty days; so that these armies consisted of volunteers only, who chose the celebrated SIMON MONTFORT for their General, and not of troops paid or commanded by the King. And tho' these armies consisted frequently of three or fourscore thousand men, yet was it some hundred of years before these Hereticks, as the French call them, were entirely suppressed: for not only the people, but their Princes, the Count de Thoulouse, the Count de Foix, and other Sovereigns, were, in the Catholick phrase, infected with it; and we find the Pope depriving them of their territories, and granting them to Catholick Lords by the connivance of PHILIP.

The French writers in their relations of these wars, give incredible accounts of the miraculous victories the Catholicks obtained over the Hereticks, particularly that at the siege of Moret, SIMON MONTFORT made a sally from the town with eight or nine hundred men, and gained a compleat victory over the King of Arragon, and other chiefs of the Albigenses, who commanded an army of an hundred thousand forces; only fit to amuse women and children with. However, they admit, that their hero SIMON MONTFORT, was knocked on the head at last, by a stone thrown from the walls of one of the towns he besieged; and the posterity of the Count de Thoulouse found means to recover great part of the possessions of their ancestors. Nor were the Albigenses ever entirely suppressed, tho' the French King's son marched in person against them, exercised unheard-of cruelties on these poor people, and demolished most of the castles and fortified places of the country, to prevent their taking shelter in them.

The French King had no sooner broke the power of the Albigenses, but he turned his eyes towards England, endeavouring to pick a new quarrel with King JOHN; but the Pope saved him the labour: for King JOHN having insisted on his right of nominating the Archbishop of Canterbury, his Holiness, without any regard to the royal prerogative, appointed STEPHEN LANGTON to fill that See, whom the King refusing to acknowledge, the Pope excommunicated him, published a sentence of deposition against him, and gave his dominions to King PHILIP. Whereupon, PHILIP assembled a fleet of seventeen hundred ships, and a proportionable land-army, in order to invade England; and that he might leave no enemy behind him, first fell upon the Earl of Flanders, who was in alliance with King JOHN, and took the best part of his country from him. In the mean time, King JOHN and the Earl got together all the shipping they could, and attacking the French fleet, while they lay on the coast of Flanders, and in the mouth of the Scheld, destroyed almost every ship in the fleet.

The Pope  
gives En-  
gland to  
King  
PHILIP,  
an. 1213.

During these transactions, the Pope's Legate PANDULPHUS came to Dover, where he found King JOHN, and offered him, that if he would consent to hold his dominions of the Pope, he would oppose any further attempts of the French King. He accepted the proposal, and his Holiness immediately prohibited PHILIP to act any more in a hostile manner against England, for that it was become a fee of the Holy See. The French King, however, permitted his son LEWIS, to accept the invitation of the disaffected Lords in England, who actually proclaimed him King in London, and he maintained a war against King JOHN till he died; though the Pope excommunicated LEWIS and all his adherents.

It was generally expected, that the death of King JOHN would have fixed LEWIS upon the throne of England; but it was so far from it, that the English united themselves upon the death of this Prince, drove out the French, and proclaimed HENRY the son of JOHN their King; which put an end to the hopes the French had of adding England to their Empire.

After this the two nations lived in peace till the death of PHILIP AUGUSTUS, which happened in the forty-fourth year of his reign, and the fifty-ninth of his age, anno 1223. The French writers make him the greatest Prince that ever sat on the throne of France, except CHARLEMAGNE; but the principal reason is, I find, because he added Normandy, Maine, Anjou, Touraine, and Poitou, to his dominions, which formerly belonged to England. But if these same writers would consider the base and treacherous artifices he made use of against the Kings of England in order to effect this, and that when he swallowed up these provinces there was scarce any power in the field to oppose him, they would surely cease to admire either his virtue or courage. Among common minds, it is true, success alone creates the hero; they seldom consider the honour or justice of the enterprize.

LEWIS VIII, being advanced to the throne on the death of his father PHILIP, the court of England demanded of him the restitution of Normandy, and the rest of the provinces in France belonging to the English, which had been taken from them in the last reign, in pursuance of the treaty made at London. (LEWIS, as has been intimated already was besieged in that city, and had no way of escaping the fury of the English, but by promising to deliver up those provinces when he should succeed to the crown.) LEWIS answered this demand with a complaint, that King HENRY had not attended in person at his coronation, as he ought to have done, for the territories he held of him in France, and suggested, that he had broke the treaty of London first, by not restoring his subjects their ancient privileges, as was promised on his part. But surely if the French King had been a Prince of any honour, he would not have hesitated to have yielded up those provinces, with which he ransomed his life and liberty. However, his refusal occasioned a war between the two nations, wherein the French made themselves masters of Rochelle. We find the English very backward in assisting either King JOHN, or his son HENRY, in maintaining their foreign dominions. They were taxed and harassed from time to time to carry on these wars, without reaping any manner of advantage from them: so early had the people of England learned, that foreign dominions and foreign wars were infinitely destructive

destructive to them. But we were never more sensible of this truth than at present, when our revenues are mortgaged for ages to come; the consequence of which must be eternal poverty and slavery, unless we are saved by a miracle. To proceed: The French writers assure us, that we had at this time infallibly lost Guienne and Gascony, as well as Rochelle, if their King had not been diverted from this war by another crusado, published by the Pope against the Albigenses; at the head of which King LEWIS marched in person, took Avignon, and many other cities, and would have extirpated those Hereticks, as they were called at this time, if he had not been unfortunately taken ill in the midst of his conquests. What his distemper was, none of them pretend to tell us, tho' they acquaint us with the recipe prescribed by his physicians, which was a very odd one: they let him know, that nothing but a young girl could save his life; and when his scruples would not suffer him to follow their advice, they took an opportunity of putting a virgin to bed to him, when he was asleep: the King waking and discovering the lady, called to one of his servants to take her away, pronouncing that noble sentence, says the Jesuit my author, That it was better to die than save his life by a mortal sin. He died therefore, according to the same writer, the most noble death that a Christian King could wish; a martyr to chastity, with his sword drawn in defence of religion against heresy, in the fourth year of his reign, and the fortieth of his age; and was succeeded by his son LEWIS IX, an infant of twelve years of age, the Queen-mother BLANCHE of Castile, being appointed Regent. This Princess is highly applauded by the French historians for her administration during the minority of her son. She suppressed several dangerous rebellions of the vassal Princes; carried on the war against the Albigenses, till she brought the Count de Thoulouse to consent to marry his daughter JANE to ALPHONSO the King's brother; by which the territories of the Count were in the next generation united to the crown of France.

During the civil wars of France, in the King's minority, the English had a fair opportunity of recovering the provinces they had lost. The Duke of Britany, and several other disaffected Lords, invited the King of England to come over and join them; but he was engaged in a civil war with his Barons himself, which found him full employment at home; and the Count of Bretagne, and the rest of the malecontents, were forced to submit to such terms as the Court of France were pleased to impose upon them. And it being observed, that nothing had occasioned more distraction in France than the vassal Princes matching into the families of foreigners, they were prohibited to enter into any treaty of marriage with other powers, without the leave of the French King.

The Queen-mother did not quit the title of Regent of France till the King was full one and twenty years of age; tho', by the present constitution, the King takes the government upon him at fourteen. His Majesty also continued to be advised by her as long as she lived, this Princess being esteemed a perfect mistress in politics.

Pope GREGORY IX, taking upon him to excommunicate the Emperor FREDERICK in this reign, for not submitting to his usurpations in Italy, and proceeding to publish a sentence of deposition against him, made a present of his dominions to Prince ROBERT, the brother of King LEWIS.

VOL. II. NUMB. LXXXIV.

But as remarkable as the French King was for his respect to the Pope, it appears he did not at all approve of the precedent, any more than the other Princes of Europe; and tho' several succeeding Popes gave the Emperor a great deal of trouble, by interdicting his dominions, and absolving his subjects from their allegiance, he remained upon the throne till his death. But to return to France.

LEWIS IX, having been taught that the holy war was the surest way to Paradise, after three years preparation undertook a crusado in the year 1248, declaring Queen BLANCHE, his mother, Regent in his absence. The Queen-confort attended the King, with many other ladies of the first quality, and the fleet sailed first to the island of Cyprus, where the King had many large magazines.

At the undertaking of this crusado, the affairs of the Christians in Palestine were in a very desperate condition; and had not the Mahometan powers been engaged in civil wars among themselves, they would infallibly have been driven from thence. There were however still four Christian states remaining here, that had been formed by the Europeans, viz: 1. That of Acon or Ptolemais, which was defended by the Venetians, Genoese, and Pisans. 2. Tyre and it's district. 3. Tripoli. And, 4. Antioch. Jerusalem had been wrested from them, and was in the hands of the infidels, who surrounded them on every side. The most formidable of the Mahometan powers at this time was the Sultan of Egypt, who had possessed himself of great part of Palestine as well as Jerusalem. At a council of war therefore that was held before LEWIS, in the island of Cyprus, it was thought proper first to invade Egypt; which, if the Christians could have made themselves masters of, Palestine would have fallen into their hands of course. In pursuance of this resolution, the King having assembled a fleet of eighteen hundred vessels great and small, embarked his land-forces, amounting to sixty thousand men and upwards; amongst which were twelve or thirteen thousand Knights, French, English, and Cypriots, and set sail with them for Egypt the beginning of June 1249; but a violent storm happening to disperse the fleet, the King was forced back to Cyprus with a very small number of his ships. He set sail again on Trinity-sunday, and having joined the best part of the scattered navy, they arrived in four days within sight of Damietta, then one of the strongest towns in Egypt, and situated at the mouth of the most eastern branch of the Nile. They found a great fleet of the infidels in that river, and a numerous army of them on shore ready to oppose their landing; but upon the first charge, both the one and the other thought fit to quit their stations, and suffer the Christians to land with very little opposition; and a rumour being spread in the Mahometain army, that their Sultan was dead, the garrison retired from Damietta without waiting to be besieged; whereupon King LEWIS immediately possessed himself of that important post. Here the French historians observe, that while the King was taken up with acts of piety and devotion, in his army, on the contrary, was seen nothing but revelling and lewdness. They had succeeded at first so much beyond their expectations, that they thought there was nothing more to do, but to march and possess themselves of the capital city of Cairo, and all would fall before them; but the Nile having overflowed the country, as usual at this time of

The Christians defeated, and made prisoners, with the French King their General.

the year, they were obliged to wait in their camp near Damietta, till that river was fallen: where, as it has been observed, they spent their time in all manner of excesses and extravagance; the merit of taking up the cross they held to be sufficient to atone for all the crimes they had been, or could be, guilty of.

A new supply of forces being arrived from France, the King left the Queen with a good garrison at Damietta, and began his march towards Grand Cairo, with an army of twenty thousand horse, and forty thousand foot; with whom the Infidels did not think fit to come to a general battle; but so harassed them, and cut off their provisions, that in three months time, the Christians were scarce able to advance forty miles; and the Mahometans taking an advantage of the King's army, when the van was separated at a great distance from the rear, and most of them in a bad state of health, they fell upon them and entirely routed the Christian army, making the King Prisoner, with all his forces that were not killed in the battle: and one could have expected no less from this barbarous people, as they are represented, than that they should have murdered every one of them, considering the provocations that had been given them. The Christians would certainly have requited the Saracens in this manner, had they confederated together, and invaded their country without any colour; for surely the difference of religion can never justify murder and rapine in the opinion of any considering man; tho' it seems, it was the opinion of the Roman Catholics then, as it is still, that dominion is founded in grace, and that the Pope could authorize the destruction of Infidels and Hereticks, who did not believe as the Church believes. Our English sectaries and enthusiasts therefore were not the authors of these accursed doctrines; they did but borrow them from the Papists. But to return to the King and the rest of the prisoners. It was debated, it seems, among the Emirs and Saracen Chiefs, whether they should not cut the throats of every one of them, whereby they might deter the Europeans for the future from undertaking these romantick expeditions again: but the prospect of enriching themselves immediately by the ransom of so many considerable men, prevailing above their revenge, or any political considerations, they agreed to give the King and his people their liberty, upon their delivering up Damietta, and paying an immense treasure for their ransom, such as the Sultan and his Emirs could never have expected to be masters of by any other means; and for the raising of which France was sufficiently fleeced. They had rejoiced indeed for the taking of Damietta, and many other imaginary successes, as the conquest of Grand Cairo, and Alexandria, and even for dethroning the Sultan: and we may easily believe they were sufficiently mortified, when they understood that the King with the Princes and Lords, and the best part of the army, lay at the mercy of the Infidels. But to proceed: The King having paid down a fourth part of their ransom, and left hostages for the rest, and delivered up the town of Damietta, withdrew the garrison, and embarked with his court for Acon, or Ptolemais, in Palestine; where he arrived the beginning of May 1250. The Pope and the Princes of Europe expressed abundance of concern for this unfortunate attempt upon Egypt. His Holiness sent Missionaries into every kingdom in

Europe, to preach up the crusade, in hopes to have supplied the French King with such a force, that he might have redeemed the credit of the Christian arms in Palestine before his return: but all men were so confounded and astonished at the disgrace so fine an army had met with, that nothing could induce them to run the like hazard again, while it was fresh in their memories; all that the Pope could do, was to send the French King such supplies as might enable him to put the places in the Holy-Land, which remained in the possession of the Christians, in such a posture, as they might not become an easy prey to the Infidels; which he effected during his stay in Palestine, where he continued four years; returning to France in July 1254, he found all things in peace and quietness at home, nor had there been any disturbance in his absence, unless what was occasioned by a parcel of Enthusiasts; who, on the news of his defeat in Egypt, immediately took into their heads, that God had on purpose confounded the designs of the great ones of the earth, to manifest his glory in delivering the Holy-Land out of the hands of the Infidels, by the meanest of the people. They took upon them the title of shepherds, and being encouraged in these whimsies by one JACOB an apostate Monk, increased to a prodigious number, and were joined by all the rogues and vagabonds in the kingdom, insomuch, that the government seemed to be in danger from them: but their leader JACOB, being killed, this mob was soon dispersed by the care of the Regent.

The French were mightily rejoiced on the return of their King; and he entered his capital city amidst the loud acclamations of his people, but seemed little affected with them. He lamented the ill state of the Christian world; ascribed the ill success in his last expedition to his sins; and by the negligence of his dress, and mournful aspect, sufficiently expressed his concern for the brave men he had lost in that unfortunate attempt. He continued to wear the cross upon his cloaths also, to shew that he had not quitted his design of returning to the assistance of the Christians in Palestine, which gave his subjects but a melancholy prospect.

Soon after King LEWIS's return to France, King HENRY III, of England, happening to visit his territories in Gascony, desired leave to return home thro' France, which the French King did not only agree to, but went to meet him a great way, and entertained him splendidly at Paris for eight or ten days. At a conference between the two Kings, LEWIS being a Prince of a very scrupulous conscience, proposed the restoring Normandy, &c. to the English, which had been taken from them in the last reign; but acquainted King HENRY at the same time, that he despaired of procuring the consent of his Peers and Barons to it, without which he could not alienate them. However, some time afterwards he prevailed with them to relinquish Limousin, Querci, Perigord, Agenois, and Xaintonge, to the English, upon condition that King HENRY should confirm Normandy, Anjou, Maine, Touraine, and Poitou, to France; which was agreed to; and the two Kings lived in perfect amity afterwards.

The pious LEWIS also proceeded to make such regulations at home, as might conduce to the peace and happiness of his dominions. He prohibited all wars between the vassal Lords, and put an end to that barbarous custom of clearing their innocence

CHAP.  
XXXIV.

XXXIV.CHAP.  
XXXIV.

innocence by duelling. And as the King of Arragon had pretensions on some cities and territories in France, particularly to Besiers, Agde, Narbonne, the Gevaudan, Nismes, Thoulouse, and other places in Languedoc: and France laid claim to Catalonia, Roussillon, the Lampourdan, Cerdagne, &c. in Spain; he proposed to relinquish his right in all the Spanish places, upon condition the King of Arragon should give up his right to those abovementioned in France; which was complied with. In the mean time, the civil wars in England threatened the destruction of that kingdom. The Barons had gained some advantage of their King, and obliged him to submit to certain conditions at Oxford, which had in a manner deprived him of the regal power. Both parties however agreed to refer their differences to this pious Prince LEWIS, whose justice and wisdom, say the French writers, were acknowledged by all the Powers in Europe. Accordingly the King and Queen of England, with their Court and the Lords of their party; as also the confederated Barons, except their chief, the Earl of Leicester, resorted to Amiens in Picardy, the place appointed for deciding this famous cause between the King of England and his subjects, about the Feast of Epiphany 1264: and the French King coming thither soon after, and having heard the parties with great deliberation, declared, that the articles obtained by force at Oxford ought to be abolished, as innovations that were injurious to royal majesty; and that the King's oath, which he had taken to observe them, was void. He directed also, that the cautionary towns that had been put into the hands of the Barons for the observance of them, should be delivered up to the King. That he might dispose of the great offices of the kingdom as formerly; and admit whom he pleased into his councils. That in short, he ought to be restored to all his just rights which his predecessors had enjoyed; but that the charters which contained the liberties of the people should be observed.

His award  
between  
the King  
of Eng-  
land and  
his Barons.

The disaffected Lords refused to obey this award, how equitable soever. The Earl of Leicester drew his troops together again, defeated the King, and took him prisoner, with his eldest son Prince EDWARD, and his brother RICHARD. Prince EDWARD finding means to escape out of prison, raised another army, routed the Earl of Leicester, and killed him in the field of battle: whereupon the King was set at liberty, and restored to the throne. But I shall enlarge on this occurrence in the history of England, and return to France, where we find the Pope offering the kingdom of Naples and Sicily to CHARLES Count of Anjou (his Holiness having fallen out with MAINFROY, then Sovereign of those countries). But it was on the following conditions he made the proposal to the Count of Anjou: 1. That he should renounce for himself and his successors all pretensions to the city of Benevento in Naples, to Rome, Campania, the duchy of Spoleto, the marquisate of Ancona, the patrimony of St PETER, and the rest of the demesns of the Holy See. 2. That he should take an oath to become the Pope's vassal for Naples and Sicily (at that time called the two Sicilies, the one on this side, and the other beyond the Pharos). That the Count, or his successors, should never accept of the Empire, or the sovereignty of Lombardy or Tuscany; and if they did, they should relinquish the kingdom of Naples, to the end that no power

The Pope  
gives Na-  
ples and  
Sicily to  
the Earl of  
Anjou.

in Italy might be a match for the Pope; and that Naples being dependent on him, he might give laws to the Italian Princes.

The Pope, in order to enable the Count to invade the dominions of King MAINFROY, published a crusado in his favour, anno 1266, giving remission of sins to all that would list under his colours, and excusing them from their vows of visiting the Holy-Land; which brought an incredible number of people together, with whom the Count of Anjou entered the Kingdom of Naples defeated his rival in a general battle, and mounted his throne, MAINFROY happening to be killed in the fight; whereupon all the towns in Naples and Sicily submitted to the conqueror.

A crusado  
in his  
favour.

The old French King, whose heart was always with the Christians in the Holy-Land, receiving advice from time to time of their deplorable circumstances, could not die with any satisfaction till he had undertaken another crusado. Accordingly he prevailed with the Pope to send missionaries into his kingdom to preach up the merit of such an undertaking; and by his example and influence, his three eldest sons PHILIP, JOHN, and PETER, and many others of the French nobility, were induced to take the cross. And having spent three years in making the necessary preparations, and settled a regency during his absence, he set sail from France the first of July 1270; and being arrived at Cagliari in Sardinia, a council of war was held on board the fleet, wherein it was agreed to land at Tunis on the coast of Africa, where CHARLES King of Sicily had appointed to join them. The King of Tunis it seems had given old LEWIS great hopes of his turning Christian if he had an army to support him, which was the principal reason of carrying the war thither; tho' the cunning Mussulman, as appeared afterwards, had never any intention of altering his religion. Another reason given for this expedition against Tunis, was, that it would facilitate any future enterprise against the Holy-Land, inasmuch as the Sultan of Egypt was supplied with men and horses from thence. The fleet having weighed anchor, in pursuance of the determination of the council of war, came before Tunis and Carthage on the eighteenth of July. The next day they disembarked their troops; but in such disorder, that if the Saracens had not run away before the vessels approached the land, a very small body of men would have obliged them to retire to their ships. They found great difficulties on their first coming on shore, for want of water; but making themselves masters of the old castle of Carthage, they found good wells of water there in abundance. The infidels here behaved themselves in the same manner they had done in Egypt: they attacked the Christian army by parties from time to time, cut off their provisions, and kept them in perpetual alarms; but would never stand a charge, or come to a general engagement. As soon as they had discharged their arrows, they wheeled about and fled; and their motions were so very swift, that it was in vain for European troops to pursue them. In this condition the army remained, till the excessive heats had filled the camp with diseases; destroying most of the generals, as well as soldiers, and among the rest the King, who died in the crusado, according to his wishes, on the 25th of August, 1270, in the fifty-sixth year of his age, and the forty-fourth of his reign. And had not the King of Sicily arrived before Tunis with a fresh supply of troops in the very instant, the whole

army had infallibly become a prey to the infidels, it was so much weakened by sickness. After this new reinforcement from Sicily, and another from England commanded by Prince EDWARD, there happened some smart encounters between the Christians and infidels, in which the Christians met with success; whereupon the King of Tunis came to a treaty with them, and it was agreed the captives should be released on both sides; that the King of Tunis should pay the charges of the expedition, and a tribute to the King of Sicily: but the latter part of the agreement was ill performed. However, the winter coming on, the Christians were glad to accept such terms as they could get, and having embarked their army, arrived at Trapano in Sicily, where great part of their fleet and army which remained were destroyed by a storm; so unfortunate were these crusades, says my author, to the French nation, who were principally concerned in them: they lost an incredible number of brave men, and an immense treasure. In this last, the young King PHILIP lost the King his father, the Queen his wife, the Count of Nevers his brother, the King of Navarre his brother-in-law, and his uncle ALPHONSO, very hardly escaping with his own life; which repeated ill success had this good effect, that it pretty well weaned the Princes of Christendom from these romantick adventures.

PHILIP  
III. 1270.

PHILIP being returned to Paris, celebrated the obsequies of the King his father, and the rest of the nobility, who perished in the late expedition to Africa, with great magnificence. He assisted himself, 'tis said, in carrying the corps of St LEWIS to the abbey of St Dennis: and my author (DANIEL) observes, that in his time there were seven pyramids in the suburb of St Lawrence, which were erected by this Prince in the places where he rested with the corps.

The next thing he undertook was the humbling of some of the vaial Lords; particularly the Count de Foix, who presumed to enter into a war with his neighbours without his leave, and refused to be determined by the arbitration of the King. He made the Count prisoner, and kept him in chains a whole year, which so terrified the other Lords, that he had no more disturbances of this kind. But the most remarkable event we meet with in the reign of PHILIP III, was the Sicilian Vespers, and the war with the King of Arragon, which was the consequence of them. CHARLES Earl of Anjou, the French King's uncle, who by the assistance of the Pope had deposed MAINFROY the late king, and stepped into his throne, having behaved himself insolently in the island of Sicily, the people grew uneasy, and were ever endeavouring to throw off the yoke. They applied themselves at length to the King of Arragon, who had married CONSTANTIA, the daughter and heiress of MAINFROY, and to PALEOLOGUS the Grecian Emperor, who were both of them enemies to the King of Sicily; and these Princes promised to support them with all their power. It was thereupon agreed to massacre all the French that were in the island of Sicily, and at the same time the King of Arragon was to appear with a great fleet upon the coasts, and land Queen CONSTANTIA there with a good body of troops, to assert her right to that island. Easter-sunday in the evening, anno 1282, was appointed for the general massacre of the French, and the signal was the ringing the bells for vespers, from whence this tragical occurrence obtained the name of the Sicilian Vespers. At the

The Sicilian Vespers.

time appointed the natives fell upon the French in every part of the island, without distinction of age, sex, or condition, and murdered them all by one means or other; sparing only one single gentleman, who had distinguished himself by his equity and moderation in the post he possessed. Soon after this, the King of Arragon's fleet defeated that of King CHARLES's, and made his son the Prince of Salernum prisoner; and the sea being open to them, they landed Queen CONSTANTIA with the King of Arragon's troops, and by that means secured the island against any attempts of the French. What is most admired is, that tho' this conspiracy was three years carrying on, and several foreign Princes concerned in it, the French had not the least intimation of it till it was executed, so detestable was the tyranny they exercised over the poor Sicilians.

The Pope hereupon thundered out his excommunications against the King of Arragon, absolved his subjects from their allegiance, and took upon him to transfer the kingdom of Arragon to Prince CHARLES, one of the French king's sons; and even published a crusade, promising forgiveness of sins to all that would take the cross upon them, and list under the French King's colours. PHILIP being thus supported, and having assembled an army of an hundred thousand men, marched into Spain, where the nobility being terrified by the excommunications of the holy See, durst not join their Sovereign, or oppose the torrent, but for some time remained neuter. The King of Arragon, a Prince remarkable in his age for his courage and conduct, assembled however a flying army, with which he perpetually harrassed the French; and PHILIP sitting down before Gironne, one of the strongest fortresses in the kingdom, he cut off his provisions: and by the continual sallies from the town, and the attacks which the Spanish troops made from time to time on the French camp, their forces were so weakened, that when Gironne surrendered, King PHILIP found himself incapable of entering on any further action. A sickness also reigned in the camp, which carried off abundance of the French, and among the rest the King himself. In this distress the Arragonians fell upon the rear of the army as they were retiring through the passes of the mountains, so that very few of them returned home. Even the sick and wounded, and the heavy baggage which had been put on board the fleet, were met with by the King of Arragon's fleet, and entirely ruined: and thus ended the reign of PHILIP III. CHARLES King of Sicily died about the same time, and the King of Arragon survived him but a few months. The deaths of these Princes put an end to their quarrels, which were however revived by their posterity.

PHILIP IV, surnamed the Fair, succeeded his Father PHILIP III, and by his marriage with JANE of Navarre added that kingdom to his dominions. He entered into a war with EDWARD I, King of England, on a trifling pretence, surprizing several of his towns in Guienne, designing to have united that province also to the crown of France. But King EDWARD seems to have been an over-match for him; he was content to yield up the towns he had taken, to England again on a treaty of peace.

He had another quarred with Pope BONIFACE VIII, upon much juster grounds which was drawn out to a great length; but he succeeded at last. The Pope published a bull, prohibiting all the clergy

CHAP.  
XXXIV.PHILIP  
IV. 1285.

CHAP  
XXXIV.

clergy in Christendom to grant money to their respective Sovereigns, under whom they lived, either by way of loan, subsidy, or free gift, without the consent of the Holy See; which affected the King of France more than any other Prince at this time, as he was in great want of money to maintain the war he was engaged in with England. Whereupon the King made an ordinance, forbidding all his subjects to export out of the kingdom, either silver, gold, jewels, or any other valuable moveable; which was chiefly levelled at the Holy See, tho' not mentioned in the edict. Whereupon the Pope wrote to the King, charging him with folly, and imprudence, in pretending to lay any restraint upon the Ecclesiastics, over whom, neither the French King or any temporal Prince, could claim any authority. He told him also, that the disputes between France and England, ought to be determined by the Holy See, and if he refused to stand to his award, he threatened him with interdicts and excommunications.

The King, on the other hand, sent circular letters thro' his dominions, containing a protestation, that the government of his kingdom, as to temporal concerns, belonged to him alone: that he neither acknowledged, or had any superior in this respect; nor should be concerned at the censures of the Pope, any farther than they related to purely spiritual affairs. This quarrel was made up for a time, but broke out with greater fury than ever, on the Pope's reviving his prohibition to the clergy to grant the King any money. The King thereupon entertained the Lords of the house of Colonna, whom the Pope had driven out of Italy. He also imprisoned the Bishop of Paniez, the Pope's legate, who was a subject of France, and had threatened the King with an interdict and excommunication; which provoked his Holiness to such a degree, that he declared in a letter to King PHILIP, that as he was the Vicar of JESUS CHRIST, God had given him power over the Kings and kingdoms of the earth; and, in the words of the prophet, to pluck up, destroy, and build: and advises him therefore not to suffer himself to be persuaded that he had no superior upon earth, and that he was not subject to the ecclesiastical hierarchy; for this was a mad and foolish thought, and he who obstinately persisted in that error, ceased to be of the number of the faithful.

The King thereupon held a great council of ecclesiastical and temporal peers, and lawyers, whom he found very ready to assert the liberties of the Gallican Church, and gave encouragement to some of the nobility, assisted by the Colonna's, to draw up a petition against the Pope, wherein they endeavoured to shew, that BONIFACE was not legally chosen to the Holy See; that he was guilty of heresy, simony, and the most notorious crimes; upon which, they request the King to use his endeavours with the Cardinals for calling a general council to elect another.

The Pope also called a council at Rome, wherein several of the French Bishops assisted, notwithstanding the King's prohibition; and a bull was published by this council, declaring, that all men were subject to the See of Rome, nor could they be saved without believing it. The Pope proceeded to excommunicate the King, and to prohibit the Clergy of France to celebrate Divine Service. But these Bulls were either not published, or not much regarded: however, the

VOL. II.

King was so provoked with this usage, that he employed the Colonna's and some others, to seize the Pope's person; which they effected when his Holiness was retired to a country-seat. He was rescued afterwards out of the Colonna's hands, but they used him so roughly, that he died in a little time; which put an end to the disputes between France and the Holy See.

King PHILIP being now at leisure to attack Flanders, and having by indirect means got the Count into his hands, with his three eldest sons, made them all prisoners, and seized his territories. Whereupon the Flemings had recourse to arms; and tho' they were not successful in their first attempts to throw off the French yoke, the insurrection became so general in the year 1303, that they raised an army of three-score thousand men, and gained an entire victory over the French, killing twenty thousand men, and amongst them many of the principal nobility. The King afterwards raised another army, and engaged the Flemings, between whom and the French an obstinate battle was fought again; but neither side had much reason to boast: whereupon, a treaty was set on foot, and it was agreed, that ROBERT, the son of the late Count, who was lately dead, should enjoy all Flanders, except Lille, Douay, and some other inconsiderable places, as the old Count had done; so that the French King got little by this war but the curses of his subjects, who were taxed at an extravagant rate to maintain it.

The King being in peace, applied himself to the conclave, who were now busy in choosing a Pope; and by his artifices got a French Bishop elected, on whom he had an influence. The Pontiff reversed every thing that BONIFACE had done to the prejudice of the King and kingdom; and, to oblige PHILIP, removed the See from Rome to Avignon, where it remained seventy years. He took upon him the name of CLEMENT VII.

Till this time, the city and territory of Lyons, had been an independent state; but the Archbishop, the present Sovereign, unadvisedly provoking the King, he raised an army, and set down before it, and compelled the Bishop to surrender the town to him upon his own terms: whereupon, PHILIP re-united it to the crown of France. Lyons once made part of the kingdom of Arles, afterwards of the kingdom of Burgundy; then it was subject to the empire; and by insensible degrees, the Archbishop had possessed himself of the temporal power.

The last considerable event in this reign, was the abolishing the order of Knights Templars, not only in France, but in all the kingdoms of Europe. These Knights of the Temple, or Templars, were a religious order, who besides the usual vows of celibacy, &c. obliged themselves to defend such pilgrims as resorted to the Holy-Land from the insults of the natives, and to guard the roads leading to Jerusalem. They were established about the year 1120, and were called Templars from a house that was given them by BALDWIN the second King of Jerusalem, which stood on, or near, the place where SOLOMON's temple did. All people seemed fond of entering into this order at first, so that they became exceeding numerous, and lands were settled on them in all countries in Europe, to enable them to perform the vows they had made of protecting pilgrims, &c. Their order in time became immensely rich, where-

upon they grew lazy and indolent, and were as remarkable for their lewdness and immoralities, as they were at first for their virtue. Nay, the charge against them, which was fully proved by witnesses and their own confession, was such, that it could never have been credited if their convictions did not still remain upon record, and that they were so universally detested as to be extirpated in every Christian nation at one and the same instant. But notwithstanding they were grown the most impious of human race, the historians of that time observe, that their monstrous crimes were concealed from the world by the vows of secrecy, they imposed on all that entered into their society; and had it not been that two of the order had been thrown into prison and dealt very severely with by their superiors, their impieties might have remained a secret to the world much longer. These two prisoners made an offer to the French court, of laying open the whole matter, if they might be protected: with which the King being acquainted, he ordered they should be examined. They discovered matters of that atrocious nature, that the King thought fit to communicate the examination to the Pope; but finding him not inclined to prosecute them, as believing their crimes had been magnified only with an intention of seizing their estates, the King determined to act independently, and in one night, ordered all the Knights Templars to be seized throughout the kingdom, viz. on the 13th of October, 1307. The grand master himself was apprehended at the temple in Paris; their estates also were seized, and that the Pope might not take umbrage at it, they were sequestered into the hands of two Cardinals. The Pope afterwards examined seventy-two of the Knights himself, and was surprized to find them confess the principal part of the charge. An hundred and forty more of them were examined at Paris, who confessed the whole matter also.

1. They deposed, that at their admission into the order, they were obliged to renounce JESUS CHRIST, and the better to express their contempt of him, they were to spit three times upon a crucifix.

2. That upon their admission they kissed the mouth, the navel, the back, and anus, of the person who received them.

3. They promised to have no concern with women, but were permitted to commit sodomy with their brethren.

4. They obliged themselves to adore a wooden head with a great beard, partly gilded and partly silvered; which was exposed at their general chapters.

5. If any one of the Knights acquainted another of his brethren with any sin he had committed, and such brother should reveal it to the world, he should suffer the punishment the person deserved who had committed it.

6. GEOFFREY of Gouneville, who had been admitted in England, declared, that refusing to deny JESUS CHRIST, the superior said, this need not trouble him, it was a custom introduced by one of their grand masters, who obtained his deliverance from captivity in Turkey, by swearing he would introduce this usage in his order.

As to their drunkenness it was so very common, that it was become a proverb, to be as drunk as a Templar.

The Pope being satisfied of their guilt, issued his Bulls to England, Scotland, Germany, Spain,

Italy, &c. for abolishing the order, and seizing their estates; which were readily put in execution by their respective Princes, after the sentence against them had been confirmed by the council of Vienne, anno 1312; so that this order continued near two hundred years from their first institution. In France the lands of the Templars, it is said, were given to the knights of St JOHN of Jerusalem, now the knights of Malta, as they were in some other countries; but in others they were applied to the uses of the state.

While the King was thus expressing his detestation at the immoralities of the Templars, there broke out in his own family some scenes of lewdness, which gave him much more uneasiness: the wives of every one of the three Princes his sons were charged with being false to their husbands beds; and upon two of them it was sufficiently proved, viz. upon MARGARET daughter of ROBERT Duke of Burgundy, and wife of LEWIS King of Navarre, the King's eldest son; and upon BLANCHE the wife of Prince CHARLES: they were convicted of having been familiar with two gentlemen of the household, who were brothers, viz. PHILIP and GAUTIER LANNAY, who were seized alive, and hanged upon a gibbet; and the two Princesses were shut up in prison. So true it is, that people in the most exalted stations are often as unhappy in their families as their inferiors, and that crowned heads are not exempted from horns. Whether this melancholy discovery contributed to impair the King's health or not, I shall not pretend to say; but he was taken ill of a languishing distemper, that his physicians could not find a name for, and died on the 29th of November 1314, being succeeded by his eldest son LEWIS X, King of Navarre, who was surnamed HUTIN.

LEWIS X, named HUTIN from his hasty passionate temper, was hardly crowned when there happened an insurrection of the Barons against him, who had been grievously oppressed by taxes in the last reign; to appease whom, the Count de VALOIS, the King's uncle, proposed the sacrificing of EUGUERRAUD MARIGNI, who had been prime minister in the last reign, and supposed to be the author of that variety of impositions which had been made use of to raise money: but by destroying of this minister, he proposed more the gratifying his own revenge it seems, than the satisfaction of the nation; for they had not a very good understanding. MARIGNI therefore was seized and thrown into a dungeon, and articles drawn up against him; but he was not permitted to make his defence: his mercenary judges, by the direction of the court, condemned him without hearing him, and though he was a person of quality, he was hanged upon a gibbet, without the town, erected for exposing the bodies of the most notorious malefactors. He protested his innocence at his death, which was not then much regarded, but the King being convinced of the injustice of the sentence afterwards, considered his children in his will; and the Count de VALOIS himself, in a dangerous fit of sickness, when he thought he was going to give account of this barbarous prosecution, amongst his other sins, ordered a large sum of money to be distributed to the poor of Paris; and when any person received this alms, he who gave it was ordered to say, pray for the soul of my Lord EUGUERRAUD, (who had been executed) and for my Lord CHARLES of Valois, Which

LEWIS X.  
A prime minister sacrificed to the rage of the people.

CHAP. XXXIV. abundantly cleared up the reputation of that minister.

LEWIS being in as great straits for money as his father had been, several ways and means were proposed to him, among which he fixed upon two; one was the enfranchising the lower sort of people for a sum of money, who were yet in a state of villinage, and no better than slaves to their respective Lords; and the other by introducing the Jews, who had been banished in the last reign, for which they paid him a round sum: and having thus replenished his treasure, he was about entering into a war with the Count of Flanders, but died before he effected any thing, leaving a daughter by his first wife, and his second big with child: whereupon his brother PHILIP took the regency upon him. The Queen was afterwards brought to bed of a son named JOHN, who did not live a month; whereupon PHILIP changed his title of Regent for that of King: his nephew JOHN, tho' really King, is not reckoned among the number of their monarchs by the generality of the French historians.

JOHN,  
1315.  
PHILIP  
V, 1316.

When PHILIP V. ascended the throne, it was objected to his title, that JANE the daughter of the late King LEWIS X. was nearer in blood: but the nobility being assembled, they declared, that the crown of France could not descend to a female. Whereupon they all acquiesced in PHILIP the brother of LEWIS. The King's next care was to settle the peace between France and Flanders upon a lasting foot; for no nation had given his predecessors more uneasiness than that people; whereupon he married his daughter MARGARET to LEWIS the grandson of the Count of Flanders; and it was agreed that he should succeed to the county of Flanders before his father; also that Lille, Douay, and Orchies, should belong to France. And having settled all things at home, he began to make preparations for a crusade to the Holy-Land, which he had formerly vowed: but the Mahometan Princes hearing of it, we are told, hired the Jews, who had lately been hardly used, to poison all the wells and springs in France, hoping to prevent another invasion by the death or sickness of that people. The Jews, 'tis said, employed the Lepers in this affair, who were excluded the society of other people, (of whom there were then a great many in France,) and generally disaffected to the government, who had laid such restraints upon them. The wells were accordingly poisoned in some places, and people died with drinking the waters; but it being discovered before the calamity became general, several of the Jews and Lepers were burnt; and the Jews again for ever banished the kingdom: and according to my author, they have never been admitted into the kingdom by legal authority ever since, tho' they venture to reside there. The King however never performed his crusading vow, being taken ill with an aguish distemper and a dysentery, which carried him off in five days, not without suspicion of his being poisoned. He died in the 29th year of his age, and the sixth of his reign, anno 1322, leaving only three daughters; whereupon his brother CHARLES, surnamed the Fair, succeeded to the crown.

CHARLES  
IV, 1322.

CHARLES IV. would never be reconciled to his wife BLANCHE, who had been false to his bed, as has been mentioned already; but on his accession to the crown procured his marriage to be declared null by the Pope, for what cause it is not said; and thereupon married MARY the

daughter of the late Emperor HENRY of Luxemburg, who living with him not much above a year, he married JANE the daughter of the Count of Evreux his uncle.

About this time a war broke out between France and England, but all things were settled upon the old foot by the peace which succeeded; to conclude which, ISABELLA Queen of England, who was a daughter of France, came over to Paris with her son Prince EDWARD. The King of England, after they had remained some time at the French Court, by the advice of the two SPENCERS, father and son, sent for them over into England. The Queen answered, the SPENCERS were her enemies, and she could not return in safety while they were at the head of his council. But she concealed the true reason, says my French author, namely, that she might have an opportunity of enjoying her gallant ROGER MORTIMER with the greater freedom.

The  
Queen of  
England  
resides at  
Paris with  
MORTIMER.

Hereupon the English court applied to the King of France to send her and the Prince over; which King CHARLES seemed averse to at first; but, say the French historians, the SPENCERS distributed so much money among King CHARLES's ministers that he at length insisted on her going, and was determined to send her over by force: but the Queen did not think fit to wait till things came to this extremity, and therefore set forwards on her journey to England, at least she took the road that led thither, till she found an opportunity of getting to Valenciennes to the Count of Hainault, who had agreed to take her into his protection. To engage him to assist her the more heartily, she married the Prince of Wales to his second daughter. Here she raised a considerable body of troops, and the Count, who was Earl of Holland as well as Hainault, providing a fleet of ships to transport them, she landed at Harwich in England, where the disaffected Lords having joined her with their troops, she marched to London. The King and the SPENCERS retired before her till they came to Bristol, which the elder SPENCER pretended to defend, but was taken and hanged without any form of law. The younger SPENCER being taken soon after, underwent the same fate; and the King, who also fell into their hands was deposed by a parliament held in January 1327, and afterwards murdered in prison, as is supposed; but I shall enlarge upon these things when I come to the description of England, and only give such an account of these transactions at present as I meet with in the histories of France. EDWARD III. having ascended the throne of England, the court of France demanded that he should come over and do his homage in person, for the lands he held on that side the water. He first only desired to defer it, as the French historians tell us, on account of his affairs being unsettled at home: but certain it is, he afterwards absolutely refused it, and set up a title to the crown of France, as will appear hereafter. We meet with nothing more remarkable in the reign of CHARLES IV, unless it be an attempt he made to be elected Emperor of Germany, in which he did not succeed. He died on the first of February in the thirty-fourth year of his age, and the seventh of his reign, anno 1327-8, leaving only one daughter by his first wife JANE, and his last big with child of a daughter, as it appeared afterwards; whereupon PHILIP of Valois, the son of CHARLES of Valois, cousin-german to the late King, took upon

upon him first the regency, and afterwards the title of King.

PHILIP VI., surnamed Valois, being of a collateral branch of the Royal family, viz. first cousin to the late King, whereas EDWARD King of England was lineally descended from PHILIP IV., King of France, by ISABEL his mother, daughter of the said PHILIP, and sister of the late King CHARLES, the King of England faintly urged his title to the crown of France; and 'tis probable he had never asserted it by arms, if he had not met with some foolish and unnecessary provocations from this haughty French monarch. PHILIP, at his accession, took that precaution to get the right of succession adjudged in him by the nobility of France, for which they were pleased to give the following reasons, 1. That King EDWARD could have no right to the crown, because his mother had none, by whom he claimed. 2. Because the sons of the daughters of France had never inherited that crown: for it seems King EDWARD had insisted, that tho' by the Salique Law no female could inherit the crown of France, yet the son of a female, lineally descended from the King of France, might, and ought, where he was next of blood.

The first considerable action King PHILIP entered upon, was the humbling the Flemmings, who were never heartily affected to the French, and had compelled their count to fly for refuge into France, chiefly for his attachment to that crown, and submitting to acknowledge himself a vassal of it; and in this expedition the French relate, that he obtained a signal victory over that people, and compelled them to accept the Count for their Sovereign.

The next year PHILIP summoned the King of England to do homage in person for Guienne and his other territories in France; which King EDWARD thought fit to promise, but when it came to the point, refused to perform any thing more than a general homage. This, with the state in which he came, out-shining the French court itself, that pretended to the sovereignty over him, occasioned PHILIP to treat him with some degree of insolence; and tho' they parted friends in outward appearance, yet at this interview, it is generally held, they began to entertain that animosity towards each other which afterwards broke out into a most destructive war, that with some intermissions continued upwards of an hundred years, to the utter ruin almost of both nations. France was destroyed from one end to the other by fire and sword, and England exhausted by taxes and standing armies to maintain their romantick conquests, which they were at last forced to abandon; inso-much that we never meet with such miserable complaints from the people as in these times, celebrated by some English historians as next to the golden age, on account of two or three victories they obtained over the French. But to be a little more particular in the history of this reign:

The next year, anno 1330, hostilities began between the French and English in Guienne; which of them were the aggressors is much disputed by their respective historians: but this is not very material; for it is generally agreed, that on either side they only waited for some plausible pretence to declare war; which can never be difficult to find, or make, between two powers whose territories lie contiguous. However, a peace was again patched up by the mediation of friends, and the places that had been taken were restored. This accommodation might have been lasting, in the

opinion of the French historians, if one ROBERT de Artoir, of the blood-royal of France, who was disgusted on account of a suit of law given against him, had not left the kingdom in disgust, and incited King EDWARD to revive the war. To which may be added the encouragement he received from the Flemmings, from whose assistance the King of England proposed great advantages. It was however eight or nine years after the treaty above-mentioned, before the parties entered into actual war. In July, 1338, the King of England with a fleet of five hundred ships sailed over to Flanders, from whence he went to Cologne, and had a conference with the Emperor of Germany his ally; after which he entered the French territories, and laid siege to Cambray. The French King thereupon marched to the relief of the town, and it was expected every day that they would come to a general battle. The two Kings however contented themselves with looking at one another, and then retired without coming to blows. The French King, 'tis said, did not care to hazard his crown upon the fortune of one day; and King EDWARD found himself much inferior in numbers. One reason, it seems, of this conduct on the part of the King of England was, that his parliament were weary of the charge of the war, and refused to grant him money to carry on the siege. The English parliament (in the words of the French historians) preferred the interest of the 'people before the glory of their Kings.' But there was another inducement for the King of England to make a drawn game of it this campaign, and that was the backwardness of the Flemmings to join him. They had been obliged by the French to submit to their Count, and renew their oaths of allegiance to him; and many of them made a scruple of engaging against him on this account. King EDWARD therefore the following winter having made D'ARTEVILLE, the most popular man amongst them, his friend, assembled the heads of them, and expostulated with them upon their backwardness to join his troops: whereupon D'ARTEVILLE told him, if he would take upon him the stile of King of France, and quarter the arms of that kingdom with those of England, so that as their Lord paramount he might discharge them from their oaths to the Count their immediate Prince, they would unanimously declare for him. And tho' (say the French historians) the King of England knew very well that his pretensions to the crown of France, were chimerical, and that he had authentically renounced them by the homage he had paid the King of France, his lawful Sovereign, for the duchy of Guienne and Ponthieu, and that for this reason the thing must appear extravagant to all Europe; yet he took the title and arms of the King of France, and received homage from the Flemmings as his vassals. He signed a treaty with them, by which he promised to recover Lisle, Douay, and other places in the hands of the French, and to re-unite them to the county of Flanders: and when he embarked for England, left his Queen at Ghent, and the Earls of Salisbury and Suffolk at Ypres, to make incursions into the French territories during the winter.

King EDWARD, at his return to England, acquainted the parliament with his alliances with the Flemmings, assuring them that France would now be an easy conquest; whereupon they were induced to give him all the supplies he asked. The French King, in revenge for this defection, made incursions into Flanders in the winter destroying the

feated.

the open country with fire and sword. The French also borrowed a great fleet of the Genoese and Spaniards, with which they blocked up the mouth of the Scheld, and pretended to prevent the English joining the Flemings: but King EDWARD commanding the royal navy of England in person the next year, fell upon the French near Sluys in Flanders; and both fleets having great land-armies on board, he ordered them to throw out their grapplings, and fasten their ships to those of the enemies, whereby they stood as firmly in the engagement as if they had fought upon land; and after an obstinate battle, which lasted from morning till night, the English obtained a compleat victory, destroying no less than thirty thousand of the French, according to the English historians, and ten thousand according to the French: however, both agree that King PHILIP's fleet was entirely destroyed; and the reason assigned for the great slaughter that was made, is, that no quarter was given. This was the greatest sea-fight which had happened for many ages; tho' this may be called rather a river than sea-engagement, being fought chiefly on the river Scheld.

After this victory King EDWARD landed his forces, and joining the Flemings and the rest of his allies, formed an army of an hundred and twenty thousand men, according to the French accounts, with which he laid siege to Tournay, a town at that time extremely well fortified, and defended by a numerous garrison; where the French King suffering him to throw away the best of his troops for ten weeks, came at length to the relief of the place. But when the two armies were upon the point of joining battle, King PHILIP's sister, JANE de Valois, mother-in-law to the King of England, who had retired into a nunnery, and obtained the reputation of a saint, offered her mediation, and obtained a truce for a year between the two nations; which 'tis said the King of England only consented to, to satisfy his allies, who began to grow weary of the war: after which King EDWARD and his court returned to England; and PHILIP, while he was on that side the water, found means to draw off both the Emperor and the Flemings from his alliance. But to make him some amends, the Duke of Bretagne dying about the same time, the succession of that duchy was contested by CHARLES de Blois and JOHN Count of Montfort; and the French court taking part with CHARLES, the Count of Montfort called in the English to his assistance. But before the English succours could arrive in Bretagne, King PHILIP sent his eldest son, the Duke of Normandy, with a fine army to support the interest of CHARLES de Blois, who besieged JOHN de Montfort in Nantz, took the town and made him prisoner, after which he was confined in the Louvre at Paris.

A war in  
Bretagne.

The Countess of Montfort, a lady of an heroic courage, nevertheless maintained the war against CHARLES de Blois, till reinforcements arrived from England under the command of ROBERT D'ARTOIS above-mentioned, who laid siege to Vannes and took it; but the town was soon after surprized by the French; and the Count D'ARTOIS being mortally wounded in the dispute, was carried over to England, where he died. Soon after the King of England arrived in Bretagne with a great army, and besieged several towns; the Duke of Normandy was sent with an equal force to oppose him, and great expectations there were of a battle: but the Pope's Nuncio found

VOL. II.

means to obtain a truce between the two nations again, and King EDWARD returned to England, glad to have escaped so well, say the French historians; for his fleet had been dispersed, and his provisions cut off, that his army must infallibly have perished, but for this timely negotiation.

About this time it was, (anno 1344,) that HUBERT, Count Dauphin of Vienne, transferred his dominions to PHILIP of France, the King's second son: but afterwards it was agreed they should be settled on CHARLES Duke of Normandy, the King's eldest son; ever since which time Dauphiné has belonged to the crown of France, and it has been the title of the King's eldest son. The King also purchased the lordship of Montpellier of PHILIP King of Majorca, which was thereupon united to the crown.

Dauphiné  
united to  
the crown  
of France.

The truce which had been made for a year was but ill observed, both in Bretagne and Guienne; but the French King taking upon him to execute several Bretagne and Norman gentlemen who were in the King of England's interest, without assigning any reason for it, this occasioned the war to break out afresh. The King of England sent a considerable force into Guienne, under the command of the Earl of Derby, a gentleman celebrated for his conduct and generous spirit. He made himself master of several towns: but what has established his fame in history, is his justice and contempt of wealth, of both which they give an instance in the storming of Bergerac, where he gave every soldier the house he should seize, and all the treasure in it. One of them having made himself master of a house where the bankers had agreed to deposit their cash, and finding an immense sum, acquainted the General with it, not imagining so much wealth could be intended for any one private man: but the General told him, the greatness of the treasure should not alter the case, let it amount to what it would it was all his own; he had passed his word and honour, and he scorned to revoke it.

A disinter-  
ested Ge-  
ral.

King PHILIP to maintain the war laid a tax upon his subjects which was never known in France before, namely, that of salt. He obliged all people to come and buy it at his magazines at such a price as he was pleased to lay upon it; which made King EDWARD his rival say, he did well to support his title by the Salique law. He raised the value of money also, obliging his subjects to take it for more than it was coined, which brought him in a great deal of treasure, but impoverished his country, and disposed his people for a rebellion, especially in Normandy. The Duke of Normandy being sent to oppose the Earl of Derby in Guienne, retook several places from the English. Whereupon the King of England assembled a great fleet and army to go to the assistance of his subjects on that side; but the wind proving contrary, a disaffected Norman Lord, named GEOFFREY of Harcom, who was on board the King's ship, proposed his invading Normandy, assuring him there were numbers of malecontents that would join him in that province: which being agreed to in a council of war, the descent was made near La Hogue, where he met with little opposition, King PHILIP expecting him in another part of the country. Upon the news of this invasion, the Duke of Normandy immediately marched his forces out of Guienne, and joining with those King PHILIP had assembled, endeavoured to stop the progress of the King of England; who in the mean time had made

himself master of most of the towns in Normandy, and amongst the rest of Caen, a rich and populous city, the plunder whereof King EDWARD gave to his soldiers, reserving only one ship-load of the most valuable treasure and effects to be sent to England, which, says the French historian, was a bait for the English, and encouraged them to assist their triumphant Prince with all their might, in hopes of dividing the riches of that fine kingdom with their countrymen. He sent over also three hundred of the most wealthy citizens, who were to ransom their persons with their estates; together with the Constable of France, the Earl of Tancarville, and above threescore knights that were taken in an engagement under the walls of Caen.

Soon after, King PHILIP, and his son the Duke of Normandy, with the whole power of France, that was assembled in defence of their country, appeared in sight; of whose strength it seems the King of England was so apprehensive, that he thought of nothing but making his retreat by way of Flanders, where he had still a considerable party, which he hoped would join him. His difficulty was to pass the river Somme in view of so formidable an enemy; but by his frequent marches and countermarches having gained about a day's march of the French, and found out a ford that was practicable, he passed the river without much loss; and observing an advantageous spot of ground to encamp his army upon near the village of Cressi, he determined here to wait the approach of the French army, which overtook him the next day. King PHILIP finding his enemy so strongly posted, determined to defer the attack till his people had recovered the fatigue of so long a march: however, the van of his army being engaged without his knowledge, according to the French, he found himself under a necessity of supporting them, which brought on a general engagement, to the utter ruin of the French army. This defeat was occasioned, as 'tis said, by the cowardice of the Genoese, who were in the front, and run away upon the first discharge, which disordered the main body. Some of the French historians are so severe upon the memory of King PHILIP, as to affirm that it happened for want of conduct, and that King EDWARD was evidently the more accomplished General; for it is agreed that the French were at least double the number of the English, and that they lost thirty thousand common men, besides a vast number of their nobility and knights, and fourscore banners or colours, carried by as many Lords Bannerets, were taken.

After this victory, which the Prince of Wales has generally the honour of, the King of England laid siege to Calais; and as he found it to be a place of great strength, and defended by a numerous garrison, he determined to starve the town. Accordingly he blocked it up by his fleet towards the sea, and surrounded it on the land-side with his soldiers huts, that looked like another town, having streets and market-places, shops and taverns, and all manner of merchandizes brought hither from Flanders and England, as to some great mart. He continued in this situation about a year, when the town was obliged to surrender at discretion; whereupon King EDWARD removed all the old inhabitants, and peopled it with English. The French affairs went no better on the side of Guienne, where their enemies took one town after another, and quartered their troops in the fine countries upon the Loire. In Bretagne, CHARLES de Blois was taken prisoner

and sent to England. The French in the mean time had spirited up the Scots, as usual, to attack the English borders in the absence of their King: but they were entirely defeated by the Queen of England's army, and their King brought prisoner to London. The only consolation the French King had, was the Flemings changing sides and coming over to his interests: but as the English were now masters of Calais, they did not stand in so much need of them as formerly in their expeditions to France. And now King EDWARD was content to accept of the truce that had been long mediated, on condition that each party should continue in possession of what he was possessed of. This truce was prolonged at several times to the year 1350, when King PHILIP died, leaving two sons by his first wife, viz. JOHN Duke of Normandy, who succeeded him; and PHILIP Duke of Orleans and Count of Valois: and he left his second wife, BLANCHE of Navarre, big with child of a daughter.

The French had great expectations of King JOHN II. when he was advanced to the throne, being of a mature age, (about forty) educated in the mysteries of state, and having commanded the armies of France for a considerable time with success; and yet there is no reign wherein the kingdom suffered more by foreign enemies and intestine divisions. The King was crowned at Rheims on the 26th of September, 1350, when he made several knights, and amongst the rest CHARLES his eldest son the first, who bore the title of Dauphin on account of his being heir apparent to the crown. The rejoicings for the coronation were scarce over, when RAOUL Count d'Eu, Constable of France, returned from his imprisonment in England, having been taken at the storming of Caen. He was seized by the King's order when he came to court, and beheaded without any trial, being in a conspiracy with the King of England against the state, as was afterwards given out.

About the same time there was a battle between the French and English in Guienne, wherein the latter were victorious; after which a truce was made between the two nations, which the French complain was but ill observed, especially in Bretagne, where, among other enterprizes, a duel was fought between thirty knights of Bretagne and as many of England, and the Bretons came off conquerors, which they boast of to this day. During this truce also the King of England surprized Guines, having corrupted the governor: which, when the French complained of, they were answered that the surprizing of places was not prohibited by the truce, or they would not have attempted Calais; for CHARNI, governor of St Omers, had attempted to seize that city, having first bought the governor; but the conspiracy was discovered, and CHARNI with five or six hundred French knights made prisoners, besides a great many cut to pieces. The truce however was continued to the year 1355.

In the mean time the King of Navarre came to court, to whom the French chiefly ascribe the calamities which afterwards happened in the kingdom. He was the son of PHILIP Count of Evreux, a Prince of the blood, and of JANE of France, daughter of King LEWIS HUTIN. He had been educated at the French court, and was much admired there, as being a most accomplished young Prince. The avowed design of his waiting on the King at this time, was to desire his daughter

ter JANE in marriage, whom he obtained: but observing the perplexity the state was in on account of the conquests of the English, he took the opportunity of demanding the restitution of the counties of Champagne and Brie, and the duchy of Burgundy, of which his ancestors seem to have been unjustly deprived. The King however did not think fit to restore them, but on the contrary, gave some part of his territories in Normandy to his inveterate enemy CHARLES of Spain, then Constable of France; at which the King of Navarre was so exasperated, that he surprised the Constable and murdered him in his house; and expecting the King would resent the outrage, he put himself under the protection of the King of England. Such were the situation of King JOHN's affairs however at this time, that he durst not publicly express his displeasure: but the King of Navarre offering to return to his duty on condition he might obtain his pardon, he thought fit to agree to it. This Prince still renewed his conspiracies against the French court, keeping intelligence with the King of England, who was now come over to Calais upon the expiration of the truce, as the Prince of Wales was to Guienne; and it was expected every day that the King of Navarre would make an insurrection in Normandy, where he had large demesnes, and join the English. In this critical juncture King JOHN ordered his son the Dauphin to invite the King of Navarre to an entertainment at the castle of Rouen, (for there was a particular intimacy between those Princes) and while they were at dinner surrounding the castle with a detachment of his army, he made the King of Navarre prisoner, and cut off the heads of four of his ministers who were at dinner with him. Whereupon PHILIP, brother to the King of Navarre, being at liberty, joined the Duke of Lancaster, who was lately landed in Normandy, with a good body of troops. The English however were far from performing what was expected from them in Normandy this year, which we are told was occasioned by the backwardness of the parliament to give supplies. The Prince of Wales on the other hand made very rapid conquests with a handful of men on the side of Guienne, laying Auvergne, Limousin, and Berry, under contribution, and advancing as far as Bourges; which King JOHN having advice of, and foreseeing it would be difficult for the young Prince to make his retreat, assembled his troops and marched towards Berry with the utmost expedition. He came up with the Prince at Maupertuis, about two leagues from Poitiers, who finding his communication cut off from his own garrisons, chose an advantageous camp, and there resolved to attend the enemy. But having no provisions with him, and it being impossible almost for him to receive any, the French historians lament the rashness of their King in attacking him in a place almost inaccessible, and not endeavouring rather to starve the English, as he might have done in two or three days. The King's troops, according to their own writers, consisted of forty-eight thousand men, and the Prince of Wales's of twelve thousand; but then there was no way of coming at him but by one road, where four troopers could hardly march a breast, and where the English archers, who had lined the hedges and enclosures, took them off as they advanced, till they lay in heaps at the entrance of their camp. And the French being thus put into confusion in the front, a body

The battle  
of Poitiers.

of English horse wheeled about, and taking a circumstance, fell in upon the rear, which completed their defeat. The King with his son PHILIP, and several thousand more, were taken prisoners, and among the slain were no less than seventeen hundred lords and gentlemen.

The French relate, that the Pope's legate endeavoured to accommodate matters before the battle begun: that the Prince of Wales was so sensible of his distress, that he offered to relinquish all the conquests he had made this campaign, if King JOHN would give him leave to retire to Bourdeaux: but the King insisting that the Prince and an hundred knights should surrender themselves prisoners at discretion, he resolved to defend himself to the last extremity; and this resolution was crowned with success, much beyond his hopes. However, his troops were so few, and his prisoners so many and of such quality, that he did not think fit to enter upon any further action, but returned with them into Guienne, in order to secure them, with the rich plunder they were masters of; for they had not only pillaged a great many good towns, but rifled the French camp, which must yield them a considerable booty, the French King, the Dauphin, and his three brothers, with a numerous nobility, being in the field.

The Dauphin with his two brothers having retired out of the battle in good time, came to Paris, where the states acknowledged the Dauphin lieutenant of the kingdom during the King's absence. He was scarce twenty years of age at this time, and had a very perverse people to deal with, besides a victorious enemy, whom he might reasonably have expected at the gates of Paris in a short time: but the English of that age seem much better qualified to gain than to improve victories; they entirely lost the advantages they might have made of the confusion and ill temper the French were in, and suffered them by agreeing to a needless truce, to recover from their consternation, and reunite the several jarring parties in the kingdom: the reason of which conduct is generally ascribed to the unreasonable good husbandry of the English parliament, who refused to supply the King with money to maintain his conquests. But surely as he was master of so rich a country as France, it would have been no difficult matter to have subsisted his troops, and maintained them by the contributions he might have raised there. This, no doubt, was what the English parliament expected; they might justly be piqued, to see the demands of the court increase with their conquests, and the produce of so fine a country squandered away upon favourites or faithless allies, as was in some degree the case in a much later war with that nation. But to proceed: The Prince of Wales having brought the King of France and his son PHILIP prisoners to London, made his entry into that city upon a little black pad, while he had taken care to have the King mounted on a large fine horse with the richest furniture, appearing himself rather as an attendant on that monarch than his conqueror. This the French historians observe, was carrying his prisoner in triumph in a very different manner from that of the ancient Romans, who drew their captive Kings after them chained to their chariots. In this he shewed a much more elegant taste of glory, and which will ever be admired by the judicious beyond the most splendid of the Roman triumphs.

The Dauphin in the mean time found a faction in Paris, which rendered him very uneasy: they insisted on his having a council of citizens about him,

him, without whose direction they would suffer him to transact nothing. They took upon them to displace several ministers, and supply their rooms with their own creatures; to which the Dauphin was obliged to submit: all the satisfaction he had was to observe the nobility well inclined to his person, who were exasperated at the commons for the insults they daily received at Paris, and in most of the cities of the kingdom, after their return from the battle of Poitiers, the people upbraiding them with cowardice and deserting of their King. Paris, says my author, was now become a garrison town, the tradesmen having formed themselves into troops and regiments; the nobility and peasants in the country had entered into a kind of war, in which thousands were slaughtered; armies of robbers were got together, who fell upon both parties without distinction, plundering all the open towns, and none durst stir out of the greater cities for fear of meeting them. In the mean time the common people continued their insults on the Dauphin at Paris; they let the King of Navarre out of prison, and placed him at their head, requiring the Dauphin to do him justice for the wrongs he had suffered, particularly to restore the places that had been taken from him in Normandy, and to repeal the attainder of those gentlemen who were taken prisoners with him at Rouen and had been executed; all which the Dauphin was obliged to grant. The Provost or Mayor of Paris, who was the head of the factious party, endeavoured to distinguish his people by ordering them to wear caps half red and half blue; but this soon ceased to be a distinction, for the rest of the people finding themselves in danger of being knocked on the head for want of such caps, immediately furnished themselves with them. At length the Mayor carried his insolence so far, that he came to the palace with several thousand armed men, to whom the Dauphin coming out and demanding what they wanted, he ordered some of his followers to seize upon two of the Marshals of France that attended the Dauphin, and murder them, which was executed before the Dauphin's face; and the Mayor made no other excuse for this outrage, but that he thought it for the publick good. Hereupon the rest of the courtiers fled, leaving the Dauphin alone. He asked the Mayor, whether they had any design upon his person. He said, no, my Lord; but that you may be safe, take my cap. The Prince took it, and gave him his own, which this fellow had the impudence to wear afterwards. And now he thought it a proper time to put his grand project in execution, which was to get the King of Navarre declared King of France; but tho' that Prince had ambition enough to aspire to the crown of France, and had a prior right to the King of England, if females were admitted into the succession, yet the fear of being abandoned by King EDWARD, who was his greatest support, made him very cautious of taking the title upon him. However, according to the French historians, measures were concerted between him and the Mayor of Paris, to let in a body of the King of Navarre's troops on a certain night, and to murder or expel all the Dauphin's party in the city; but the thing happening to take air, and some popular men in the Dauphin's interest, giving the citizens to understand, that the city was upon the point of being betrayed to the English, things took a new turn; the Mayor was cut in pieces, and the town appeared now entirely in the Dauphin's interest. The French writers do in-

The faction at Paris propose to proclaim the King of Navarre King of France.

deed suggest, that the party of the King of England and the King of Navarre was the same, and that notwithstanding the truce, the English were at the bottom of these attempts and conspiracies against the Dauphin; which, if true, may in some measure account for King EDWARD's consenting to a truce when he was victorious. He might hope to effect his designs by the King of Navarre's party and their civil dissensions, sooner than by an open war; tho' by the treaty he made with King JOHN afterwards, he does not seem to have any design upon the crown of France, but only to get the dominions which belonged to England on that side the water restored.

The truce being expired, hostilities were renewed, or rather continued, say the French writers; for they were the same troops which ravaged France before under the name of the King of Navarre, that now plundered it under the King of England's colours: but they were suspended for a while, by the coming over of the Archbishop of Sens, the Earl of Tancarville, and other Lords, who had been taken prisoners at the battle of Poitiers, with a treaty of peace concluded between the two Kings; wherein it was agreed, that Normandy, Poitou, Anjou, and all the dominions which formerly belonged to England, together with Calais, the counties of Bologne, Guines, Ponthieu, and Montrevil, should be yielded up to England, to be held independently, without paying any homage or acknowledgment to the crown of France; and that the Duke of Bretagne should hold his duchy of the King of England, and do homage to him for it; and lastly, that four millions of crowns (some make them livres) should be paid for the ransom of the French King and the Lords that were prisoners with him: in consideration whereof the King of England renounced all right to the crown of France. But this, say the French, was putting King EDWARD in possession of that crown he pretended to renounce: it was investing that part of France which was left to the King on all sides, and putting the King of England in a condition of taking it whenever he should alledge there was an infraction of the treaty. The Dauphin and the States therefore declared, they would never submit to it. Whereupon King EDWARD raised a great army and came over into France, destroying the open country with fire and sword to the very gates of Paris, where the Dauphin had shut himself up with a numerous garrison, but did not pretend to make any opposition in the field. At length heaven, in the language of the French writers, was pleased to put an end to this destructive war by a miracle; they tell us, that as the King of England lay encamped with his army near Chartres, a storm of rain and hail, attended by thunder and lightning, such as had never been known in the memory of man, fell upon the camp, and put the King and his army in the greatest consternation; insomuch, that the King in that instant vowed to give peace to France. Accordingly he immediately sent to the deputies of the States to come and treat with him, and was contented to relinquish Normandy, Touraine, Anjou, and Maine, which he had insisted on in the treaty of London. He agreed also to moderate the King's ransom to three millions of crowns. The French King was to be released forthwith, and forty hostages; among whom, LEWIS Duke of Anjou, and JOHN Count of Poitiers, the King's sons, were to be sent in his room, for securing the execution of the treaty, in which the King of Navarre

CHAP.  
XXXIV.

Rejected by the States of France, and the war renewed.

A treaty concluded with the States.

CHAP. XXXIV. Navarre was included. The King of England being returned to Calais, met King JOHN there; and both of them having confirmed the treaty by their oaths, the King of France was left at liberty to return to Paris, after having delivered up the principal hostages.

LEWIS Duke of Anjou, the King's second son, not being guarded very strictly in England, made his escape over into France; which his father looked upon as so dishonourable an action, that he determined to return to London, and surrender himself prisoner again, if he could not settle the terms of the treaty: which, when the Dauphin and his Ministers represented the ill consequences of, he answered, that if good faith was banished from the rest of the world, it always ought to be found among Princes: and that as he obtained his liberty from the King of England only upon condition of executing the late treaty, he would procure the performance of it whatever it cost him. Some malicious people indeed insinuate, that all these fine pretences were only to cover his passion for a lady he had left in England, which deserves but little credit. He went to London about Christmas 1363, where he was taken ill, and died on the eighth of April following, at the palace of the Savoy, in the fifty-sixth year of his age, and the fourteenth of his reign.

King JOHN dies at London.

King JOHN left four sons, viz. 1. CHARLES, who succeeded him. 2. LEWIS, Duke of Anjou. 3. JOHN, Duke of Berry. And, 4. PHILIP, Duke of Burgundy. His daughters were, 1. JANE, married to CHARLES I, King of Navarre. 2. MARY, married to the Duke of Bar. 3. ISABELLA, married to JOHN GALEAS, Duke of Milan. And, 4. MARGARET, who chose the life of a nun.

CHARLES V, 1364. It is observed of CHARLES V, surnamed the Wise, that he never took the field in person, or marched at the head of his armies, as his predecessors had done; which the French historians look upon as one signal instance of his wisdom: and it is very true, that the kingdom suffered extremely by the imprisonment of his father, which had been prevented, if he had committed the conduct of the army to his Generals. But it may be as prudent for a Prince to lead his troops into the field, and expose his person at one time, as it may be to keep out of danger at another. There can be no general rule therefore laid down in these cases; and Princes at last will act according to their respective complexions and inclinations; nor will they ever want people to applaud their wisdom, whether they are daring or timorous.

The first enterprize that was undertaken in this reign, was the driving the King of Navarre out of the several towns he possessed near the Seine, which interrupted the communication between Paris and Rouen; and this occasioned a battle between the French King's troops and those of the King of Navarre in Normandy, in which the latter were defeated. On the other hand, the English, who assisted the Duke of Montfort in Bretagne, obtained a compleat victory over CHARLES de Blois, his rival, who was supported by the French. CHARLES was killed in the field of battle; and MONTFORT was acknowledged Duke of Bretagne, even by the King of France. Soon after a peace was made between France and Navarre; and there only remained those bodies called the Companies, which gave any disturbance to the kingdom. These were composed of

VOL. II.

deferters from the several armies, or such as had been disbanded, joined with robbers and vagrants, amounting in the whole to thirty thousand men, commanded by experienced officers, inasmuch, that it was not easy to suppress them: but there happening a civil war in Castile, the King prevailed with them to accept an invitation, which one of the parties gave them to enter into the Spanish service; and by that means cleared the kingdom of them. And here it will be necessary to give some account of the wars in Castile, because both the French and the English at length became parties in them. The French account is briefly this:

PETER, King of Castile, usually called the Cruel, from the many barbarities he committed, imprisoned his wife BLANCHE, sister to the Queen of France, and finding there was a general conspiracy of his subjects against him, who were supported by the French King, he proceeded to poison her; and it was upon this occasion, that the Companies above-mentioned were sent into Castile, to serve under HENRY, the bastard brother of PETER the Cruel, who was at the head of the male-contents in that kingdom. Upon the approach of these troops, PETER's subjects universally abandoned him, and proclaimed his brother HENRY King; whereupon PETER fled to the Prince of Wales, who was then at Bourdeaux, and implored his assistance against his rebellious subjects; which the Prince promised him. And as the Companies who had been instrumental in deposing PETER, consisted most of them of English, or Gascons, the subjects of England, he prevailed on them to quit the service of HENRY the Bastard, and list themselves under his colours. The Prince also having received a great reinforcement from England about the same time, which were brought him by his brother the Duke of Lancaster, he marched over the Pyrenees into Spain, with a gallant army, where he found the enemy however far more numerous, consisting of French, Arragonian, and Castilian troops, who were confederated together to oppose PETER, and maintain HENRY his bastard-brother, on the throne. After some skirmishes, in which the Castilians were successful, the two armies came to a general battle on the third of April 1367; and the Prince of Wales having obtained a compleat victory, restored the deposed King PETER; who, if we may credit the French historians, satiated his blood-thirsty humour, by the death and torments he inflicted on the great Lords, and the rest of his subjects, who had contributed to depose him. But however that matter be, certain it is, there was some misunderstanding between the Prince of Wales and King PETER; and the Prince withdrawing his troops soon after, there happened another insurrection in favour of his brother HENRY, wherein PETER was killed, and HENRY advanced to the crown again; and what was an inconceivable disadvantage to England, the Prince of Wales contracted a distemper in this expedition, which he never recovered. His army also, great part of it, was destroyed by the heat of the climate, which gave the French an opportunity of insult in the English territories in France; a thing they never durst attempt till this misfortune happened. But the wise King CHARLES, as the French historians call him, before he thought fit to declare war against England, took care to form such alliances, as might enable him to act with

success against that potent nation; and particularly he secured the Earl of Flanders in his interests, who having one only daughter, the heiress of his dominions, he procured her to be married to his brother PHILIP, Duke of Burgundy, and thereby prevented her being given to EDMUND, Earl of Cambridge, son to the King of England; which proved of great advantage to CHARLES V, but brought a multitude of misfortunes on his successors, as will appear in the course of this history. But the great art or wisdom of CHARLES V, it seems, consisted in setting the neighbouring Princes together by the ears, and fomenting discontents among their subjects. We find him creating disputes between the Spaniards and the English; and at the same time inciting the subjects of Guienne to revolt against their Sovereign, under pretence of a capitation-tax, that the Prince of Wales had imposed, to discharge the arrears due to his army. He was also so wise as to defer his attempts against the English, till the Prince of Wales was in a declining state of health, and old King EDWARD had left the administration of his affairs to a concubine in the years of his dotage. In these circumstances, he had the courage to summon the Prince of Wales before him as his supreme Lord; and for his pretended contumacy in not appearing, to declare the English territories on that side of the water, forfeited to the crown of France, and immediately seized upon such places as were in a defenceless condition: but King EDWARD transporting an army to Calais, under the command of General KNOLLS, they destroyed France with fire and sword to the very gates of Paris, and afterwards marched towards Guienne, ravaging that part of the country as they had done the other; the wife King of France shutting himself up in his capital all the while, and never attempting to oppose their march; for which their historians applaud his conduct, and the more, for that he was successful in beating up the English quarters the following winter. But what proved of the most fatal consequence to the English in this war, was, the destruction of their fleet on the coast of Guienne by the Spaniards, who were in a confederacy with the French, in the year 1372; whereupon Rochelle, Poitiers, and most of the towns belonging to the English, except Bourdeaux, and Bayonne, surrendered to the enemy. A second fleet also, which sailed from England with a great body of land-forces on board, was dispersed and driven back by a storm; so that had the wife King CHARLES been possessed of a grain of courage, he had now a fair opportunity of driving the English from the continent. But notwithstanding all these advantages, we find an army commanded by the Duke of Lancaster, marching the next year, 1373, from Calais to Guienne, that is, from one end of France to the other, plundering the country at their pleasure; and the French still applaud the wisdom of their Monarch in not fighting them, comforting themselves, that the English lost a great many men by sickness in this expedition; as if the loss of part of the English army were a sufficient equivalent for the destruction of a fine country of that extent. In the year 1374, a truce was concluded between the two nations, by the mediation of the Pope's Legate. Soon after which the Prince of Wales died, who had been long a terror to France; and the King of England himself did not live above two years after his son; whereupon RICHARD II, son of the Prince of Wales,

and grandson of King EDWARD, succeeded to that crown, who being an infant, the French King took advantage of his minority, and made himself master of no less than an hundred and thirty fortresses belonging to the English in France, if we may credit the French writers, who a very little before tell us, that the English were not possessed of five places in that kingdom; both which accounts can never be true, unless the places the French had taken were restored to the English by the last truce. They boast also mightily of plundering the Isle of Wight, and several towns upon the English coast, about the time of King EDWARD's death, being assisted by the Spanish fleet; but they were not so hardy, it seems, as to attempt to keep the possession of any one place they surprized on this side the water, but fled to their ships as soon as the ordinary militia of the country appeared.

The King of Navarre, it is said, about this time, employed his agents to take off the French King by poison, as he had attempted once before in the beginning of his reign, and two persons were executed for it. Whether there was any such design or not, is not easy to determine at this distance of time; but certain it is, that the French made this a pretence for putting very hard conditions upon the King of Navarre.

The next thing King CHARLES attempted, was the uniting Brittany to the crown of France, which he looked upon as no difficult matter, most of the nobility and gentry of that duchy being already in his interest, and many of them in his service; nor did he want a plausible pretence for this proceeding, that Duke being declared a rebel, and an enemy to the kingdom. He cited him therefore before the Court of Peers; and on his not appearing, declared that duchy to be forfeited. But the Lords of Bretagne apprehending, that they should be deprived of all their privileges by such an union, immediately left the King's service, and entered into an association to stand by their Duke, and receiving a reinforcement of troops from England, drove the French out of their country, and so put an end to the project of an union for this time. Soon after King CHARLES died, viz. on the sixteenth of September 1380, being the forty-fourth year of his age, and the seventeenth of his reign. He left behind him two sons, namely CHARLES, who succeeded him; and LEWIS, Duke of Orleans; and one daughter named CATHERINE.

The late King CHARLES V, did not constitute a Regent of the kingdom during the minority of his son CHARLES VI, who was about eleven years old when his father died, but recommended him to the care of his three uncles, the Dukes of Anjou, Berry, and Burgundy, and the Duke of Bourbon; who seemed to act at first with great unanimity, calling to their assistance the prime nobility, without whose advice nothing of moment was entered upon. But the Duke of Anjou looking upon himself to be entitled to the regency, as he was the eldest of the three brothers, it was resolved to advance the King's majority, and perform the solemnity of his coronation in a few months, and to permit the Duke of Anjou to enjoy the title of Regent in the mean time; after which, it was agreed the kingdom should be governed in the King's name by the counsel and advice of the Lords his uncles. This scheme the Duke of Anjou would never have come into, if the rest had not suffered him to ingross most of the late King's treasure

Preparations for the invasion of England.

treasure and jewels. But it was observed of this Prince, that tho' he had a great deal of ambition, avarice had still the ascendant of him: as short as his Regency was, he oppressed the people with taxes to that degree, that it occasioned an insurrection. They were a little pacified however when they saw the Princes making preparations for the coronation of his Majesty, when the Duke of Anjou's administration was to be at an end; but finding the same taxes continued afterwards as before, the people rose again, plundered the houses of the collectors of the taxes, and committed other outrages, not only in Paris, but all over the kingdom. Nor were the distractions less in the court itself, for the Dukes of Anjou and Burgundy constantly opposed each other; and the Duke of Berry, who was a weak indolent Prince, was however discontented at his having scarce any share in the administration. The Duke of Burgundy, tho' he was the youngest of the three brothers, yet as he was a Prince of a superior genius, and possessed of large territories in his own right, and heir apparent to Flanders, made much the most shining figure in the French court; and the Duke of Bourbon adhered to him. To satisfy the Duke of Berry, they gave him the government of Languedoc; and the Duke of Anjou, who was adopted by JOAN Queen of Naples, and declared her successor, going to take possession of that kingdom (in which expedition he lost his life) the administration remained solely in the hands

of the Duke of Burgundy, who having quieted the disaffected at home, and made peace with the Duke of Britany, marched to the assistance of his father-in-law the Earl of Flanders, against whom the Flemings had revolted. He defeated them in a decisive battle, and restored the Earl to his government, returning with the young King in a triumphant manner to Paris; where he disarmed the inhabitants, caused all the chains of their streets to be taken away, and executed many of those who had been the authors of the late tumults. This city and Rouen also were obliged to pay very great sums for their former insolent behaviour, and submit to pay those taxes they had procured to be suspended by the late insurrections. In the mean time the war was faintly carried on between the French and English, both courts being inclined to pacific measures. The schism that was in the Church at this time, seems to have been the principal occasion of that war. England, and most of the powers of Europe, had acknowledged URBAN for Pope, while the French alone adhered to CLEMENT, who had been elected by the Cardinals at Avignon. Whereupon URBAN the Italian Pope, sent a bull into England to SPENCER Bishop of Norwich, directing him to publish a crusade against the French or Clementines. The Bishop having raised twenty or thirty thousand men, transported them to Flanders, which was then dependant on France, and made himself master of several towns: but the Bishop not being supported in this expedition by the King or Nobility, the French soon retook the Flemish towns; and the Bishop was obliged to return to England, where he fell under the displeasure of the court, and had his temporalities sequestered.

1384. The following year the Earl of Flanders died; by whose death the Duke of Burgundy, who had married his only daughter MARGARET, became possessed of that fine country.

1385. The French King being in the seventeenth year

of his age, his uncles married him to the Princess ISABELLA, daughter of the Duke of Bavaria. After which, it was proposed in the French court to invade England, and great preparations were made for it; but the King of England having procured another revolt in the Netherlands, the troops that were designed for that enterprize, were employed in reducing the Flemings; only fifteen hundred of the French joined the Scots, and made an incursion into England. They were soon repulsed, and Edinburgh itself burnt and plundered by the English in return.

The King of Navarre having been dispossessed of the towns and territories he held in France, and not being able to recover them by open force, about this time formed a design of poisoning the King and the most considerable Lords about the court; and, according to the French writers, the agent he employed was actually taken in the King's kitchen with the poison upon him: whereupon a process was formed against the King of Navarre, as a vassal to the crown of France for the county of Evreux, and by sentence of the Peers he was adjudged guilty of high treason: but the Prince kept close in Navarre, and did not come within their reach; and only the agent he employed suffered for it.

It is observed by the French historians, that the Kings of England and France were much in the same condition at this time, both of them young, and in a manner under the direction of their uncles, who took the administration of the government into their own hands. The Duke of Lancaster was almost absolute in England, as the Duke of Burgundy was in France, and both the one and the other had their private interests in view; but in this the King of France had the advantage, that however his uncles might contend for the ministry, none of them aspired to the crown, as the Duke of Lancaster and his brothers evidently did in England.

In the year 1386, the French again made preparations to invade England, as the most effectual way to oblige the English to abandon the countries they were possessed of in France. But the Duke of Berry, who found he was consulted in this enterprize only for form sake, determined to make it miscarry, and did not bring the troops he was to raise to the general rendezvous till September. Had the French made a descent in England at this time, they had all the reason in the world to hope for success; for that court was not only divided into factions, but the Duke of Lancaster had carried the flower of their forces into Portugal, in order to assert his title to the crown of Castile, having married the daughter and heiress of PETER the Cruel; but the heats of that country having destroyed the best part of his army, he was obliged to abandon that enterprize.

The French renewed their design upon England a third time in the year 1387, and because that kingdom was actually engaged in a civil war, fourteen thousand men were thought sufficient for this expedition, who were to have been commanded by DE CLISSON the Constable; but just as they were ready to embark in Britany, the Duke of Britany caused the Constable to be seized and detained prisoner, either because he suspected him of some design upon this duchy, or to make good his engagements with the court of England, under whose protection Britany usually was, and must have been united to the crown of France long before this, if the English had not from time to time prevented

prevented it. The French King was highly provoked with the Duke of Bretagne for seizing the Constable, the first officer of the crown, and possibly would have made him sensible of it, if the Dukes of Burgundy and Berry had not interposed, who prevailed with the King to pass by the affront on his setting the Constable at liberty. His Majesty being now weary of the tuition of his uncles, declared he would take the reins of government into his own hands; whereupon the Duke of Burgundy retired to his dominions, and the Duke of Berry to his government of Languedoc; but the Duke of Bourbon, of whom the King had a more favourable opinion, he kept near him. All the rest of the great officers were changed.

The new ministry, to ingratiate themselves with the people, struck off abundance of pensions which the Dukes of Burgundy and Berry had procured for their creatures, and eased the people in their taxes. About the same time, LEWIS, the eldest son of the Duke of Anjou, raised an army and reduced the kingdom of Naples, which he looked upon as his inheritance, tho' at present it was possessed by LADISLAUS the son of CHARLES DURAS, his father's competitor. He was not long after however driven out of Naples again, and forced to content himself with the county of Provence, which was part of the territories left his father by Queen JOAN. The Duke of Bourbon either not approving the present administration, or weary of a court-life, desired leave of the King to raise a body of troops, and assist the Genoese in an expedition they were entering upon against Tunis, near which city the Christians landed, and obtained a victory over the Turks; but were forced to raise the siege of Carthage they had undertaken, and re-embark their troops, the King of Tunis consenting first to release the Christian captives, and pay them part of their charges of the enterprise.

While the Duke of Bourbon was engaged in this undertaken against Tunis, there happened an accident at Paris, that very much alarmed the court. The Constable CLISSON, who was in a manner Prime Minister, was attacked in the streets in the night-time by one CRAON, a person of figure, whom he had displaced, and twenty other armed men, who wounded him, and left him for dead, tho' he had the good fortune to recover. CRAON made his escape with his followers into Britany, and that Duke refused to deliver him up when the King sent to demand him; which made it suspected, that he was not altogether a stranger to the attempt upon the Constable. And the King being dissatisfied with the Duke upon many other accounts, and particularly for not delivering up the places in Britany to the Constable which belonged to him, (for the Constable was a native of Britany) his Majesty raised an army, and begun his march against the Duke, summoning the Dukes of Berry and Burgundy to attend him, which they obeyed very willingly. But while the King was about to revenge himself on the Duke of Britany, his Majesty was taken with a most unaccountable frenzy, which occasioned infinite miseries to France. An eye-witness who was then in the army relates, 'That on the first August, 1392, they observed a disorder in his Majesty's gesture and discourse; that sometimes he appeared quite stupified, and at others let fall extravagant expressions, and then would be composed again, and converse as at other times. This continued by fits for four days. On the fifth, he gave

orders for drawing up his troops, as if he designed to take a review of them; and placing himself at the head of them compleatly armed, he led them to an hospital a little distance from the town of Mans. While he was there, a beggar of a very mean aspect having broke thro' the croud, rushed into his presence, and cried aloud, My Prince, where is it you are going? They are about to betray you, and give you up into your enemies hands. Whereupon the King started back in a fright. In that very instant, a soldier who was near him dropt his sword from his scabbard, and taking it up, the sight of a naked sword, with what he had heard before, gave such a turn to his mind, that he became perfectly distracted; and apprehending there was a design upon his life, drew his sword and killed the soldier that had just taken up his, and three others, one of whom was a gentleman of quality. As he continued fighting with every thing that stood before him, at last his sword broke, and they carried him back to Mans, where he fell down in a kind of lethargy, almost motionless, insomuch, that some thought him dead. The third day after he came to himself, and was acquainted with what had happened; whereupon he begged pardon for the mischief he had done, was confessed, and made a vow to visit the churches of our Lady of Chartres and St DENNIS.'

This misfortune occasioned the laying aside the expedition to Britany; and on his return to Paris, the Dukes of Burgundy and Berry made their court to the King with that address, that he placed them again at the head of affairs; whereupon the Constable was disgraced, and an entire change made in the ministry. The Duke of Orleans however, the King's brother, constantly opposed the Dukes of Burgundy and Berry, on account of their refusing to let him have any share in the administration.

Not long after another accident happened, which was near proving as fatal to his Majesty as the former. At the marriage of a lady of the Queen's household in January 1393, there being a ball and masquerade after supper, the King entered the hall disguised like a satyr, with four young Lords of the court in the same dress. The better to represent these silvan Deities, their habits were made close to their bodies, and the hair, or materials which were to resemble it, was stuck on with rosin. The Duke of Orleans not foreseeing the consequence, wantonly set fire to one of these masks; whereupon the rosin was immediately in a flame, and the whole habit took fire; and as the chains prevented their being separated, the fire took hold of them all. They cryed out most distemperedly, but no body durst come near to help them; the Duchess of Berry only had the presence of mind to pull off her gown and wrap the King up in it, whereby she extinguished the flame and saved his life; the other four were burnt to death. It was expected, that this would have occasioned a return of the King's disemper again, but he was not seized with his frenzy till summer following, when it having continued on him several months, he appeared perfectly well again: people were however perpetually apprehensive of a relapse. In his lucid intervals, his Majesty was generally employed in endeavouring to put an end to the schism which had so long continued in the church, as indeed were most of the Princes in Europe, who proposed, that both the Italian Pope, and the Pope

Pope should resign, and submit to a new election. But these angry old gentlemen, instead of conforming to this reasonable proposal, excommunicated each other for several successions, and made themselves the jest of all mankind, till the temporal Princes called a General Council, which deposed them both, and set up a third person: but this happened some time after.

1396.  
Peace between  
France  
and Eng-  
land.

In the year 1396 a treaty of peace was set on foot between France and England, and the two Kings had an interview near Calais, when a marriage was concluded between RICHARD King of England and ISABELLA the daughter of CHARLES VI of France, a Princess of about seven years of age. At this treaty the French writers relate, that the King of England restored Breft to the Duke of Britany, and Cherbourg to the King of Navarre. About the same time the Genoese put themselves under the protection of France, and received a French governor; though it was not many years after that they dismissed him, and expelled all the French out of their territories.

An expedition  
against the  
Turks.

The young nobility of France having now no enemy to employ their arms against at home, were invited by SIGISMOND King of Hungary, son of the Emperor CHARLES IV, to come to his assistance against BAJAZET, Emperor of the Turks; whereupon PHILIP of Artois, Count of Eu, Constable of France, the Admiral, and two thousand noblemen and gentlemen more with their servants and dependants, making a very considerable body, and commanded by the Count de Nevers, eldest son of the Duke of Burgundy, marched to join the King of Hungary. Soon after their arrival there happened a general battle between the Christians and Turks, wherein the French behaved themselves very gallantly at first, but pursuing the flying enemy too far, and breaking their order, they were surrounded by a body of BAJAZET's army which had not yet engaged, and most of them cut to pieces, among whom was the Constable. The Count of Nevers their General, with some few of the principal nobility, were made prisoners, and forced to pay very extravagant ransoms for their liberty. The Emperor afterwards obtained fresh supplies of France and England and other powers; but all had been too little to save him, if in that very instant the celebrated TAMERLANE had not invaded the territories of BAJAZET with an innumerable army, defeated him and made him prisoner, whereby Constantinople was for this time delivered from the terror of the Turks. But there was another Prince that the King of France would more gladly have assisted, if he could have done it with that expedition the case required; and that was RICHARD King of England his son-in-law, who having seized the inheritance of HENRY Earl of Derby upon the death of his father the Duke of Lancaster, and banished him into France, the disaffected English invited the Earl into England again, advanced him to the throne within ten days after his arrival, and soon after imprisoned the deposed King RICHARD in the tower of London, where it is usually said he was put to death after a renunciation of the crown had been extorted from him in parliament.

Richard  
II, of  
England  
deposed.

This revolution was like to have produced a war between France and England. The French attacked the English territories in Guienne and Gascony, gave the Dauphin the title of Duke of Guienne, which belonged to the King of England, and treated HENRY Earl of Derby as an usurper. On the other hand, King HENRY

VOL. II.

sent a reinforcement into Gascony to oppose the French, detained the Princess ISABEL, who had been contracted to King RICHARD, and appeared to be in a condition to defend himself against his enemies on all sides: but being more concerned to establish himself at home than to engage in foreign wars, he agreed at length to send back the Princess ISABEL, and to renew the truce between the two kingdoms for six and twenty years. France, according to their historians, would have made greater advantage of these distractions in England, if the King's distemper had not so frequently returned upon him. He relapsed, say they, seven times in the year 1399, and all sorts of remedies, both natural and supernatural, were made use of to cure him. [What they mean by supernatural remedies I must confess I am at a loss to discover, unless they were charms and witchcraft, for the common people generally supposed he was bewitched.] While the King was thus indisposed, the government was lodged in the Dukes of Berry and Burgundy, but with this difference, that the Duke of Burgundy, tho' the younger, being superior in point of capacity as well as in wealth and territories, took upon himself much the greatest share in the regency. The Duke of Orleans, as hath been observed already, was disgusted to see his uncles in the possession of that power which he apprehended belonged to him as the King's brother. Formerly indeed he was excluded on account of his youth, but being now near thirty years of age, that pretence was at an end; and from hence arose that violent antipathy between the Dukes of Orleans and Burgundy, which descended to their posterity, and set that kingdom in a flame. The misunderstanding between the Duchesses of Orleans and Burgundy was at least equal to that of their husbands. The Duchess of Burgundy took place of the Duchess of Orleans, as her husband was the King's uncle, according to the custom of those times. The Duchess of Burgundy also had the advantage in point of birth, as Countess of Flanders. On the other hand, the Duchess of Orleans was superior in beauty, and had most of the King's favour, which could never be forgiven. Thus were these Princes at the greatest distance that can be conceived; whatever the one advanced, the other opposed with all his might.

The  
Dukes of  
Orleans  
and Bur-  
gundy op-  
pose each  
other.

The Duke of Burgundy being obliged to take a journey into his own territories to solemnize the marriage of his second son, the Duke of Orleans laid hold of this opportunity to represent to the King the injustice that was done him in preferring his two uncles before him in the government of the state; and being seconded by his Duchesses, whom the King tenderly loved, he obtained an ordinance for declaring him lieutenant-general and governor of the kingdom, while the King's distemper would not permit him to attend the administration of affairs in person. The Duke of Burgundy however on his return resumed his office, revoked the ordinance, and was restored to the post the Duke of Orleans had possessed himself of in his absence. The Duke of Burgundy dying soon after, the administration became vested in the Duke of Orleans and the Queen, who at this time agreed perfectly well; but JOHN the son of the late Duke of Burgundy having taken possession of the large provinces which descended to him, and coming to court afterwards, appeared to be animated with the same resentment against the Duke

CHAP.  
XXXIV.

of Orleans as his father had been, and made it his business to form parties against him: and finding him too well established in the King's favour to be easily removed, he retired again into his own territories, where he raised a body of six or seven thousand men, at the head of whom he marched towards Paris, under pretence of doing homage to his Majesty for the provinces he held of him. The Queen and the Duke of Orleans receiving advice of his approach in this hostile manner, retired to Melun in order to raise forces to oppose him. The Duke of Burgundy at his arrival, in order to gain the favour of the Parisians, prevailed with the King to restore them their arms, which had been taken from them on the late insurrections, and that the chains might be again replaced in the streets for their defence, which rendered him extremely popular; and being in possession of the King and Dauphin, and the latter contracted to his daughter, he seemed now to have a great advantage of his competitor. He invited the Queen and the Duke however to return to Paris, and to assist in the administration: but the Duke of Orleans absolutely refused to share the administration with him at first, and took upon himself the title of lieutenant-general and governor of the kingdom under his Majesty. By the mediation of friends however the two Dukes were at last reconciled in appearance, and the Queen and Duke of Orleans returned to Paris. After which the Dukes of Burgundy and Orleans agreed to march with their respective troops against the territories of the English. The Duke of Orleans was to attack Guienne, while Burgundy besieged Calais: but both enterprises miscarried, and they returned to court much chagrined, and their old animosities were revived: they took every occasion to disoblige each other, and frequently without any regard to discretion or good manners, till at length the Duke of Burgundy was worked up to that degree of rage, that nothing less than the life of his competitor would satisfy him.

1407. The Duke of Orleans going to pay a visit to the Queen one evening, a page of the King's, who held a correspondence with the Duke of Burgundy, came to him and told him his Majesty required his presence upon an affair of moment. His Royal Highness immediately mounted, attended only by two gentlemen and three pages who carried torches before him (tho' since his quarrel with the Duke of Burgundy he had never stirred abroad till then without a guard): he had not rode the length of a street before he found himself surrounded by eighteen assassins, with a Norman gentleman at their head, whom he had lately discharged from an employment he held about the King: 'twas he who gave him the first blow, and cut off his hand with an ax which he had laid upon the saddle. His Royal Highness cried out, I am the Duke of Orleans. 'Tis he whom we want, said the assassins; when the same hand gave him a second blow on the forehead and dismounted him, and with a third he cleft his skull; after which, the murderers made their escape.

1408. None of the assassins being discovered, the author of this outrage was concealed for two or three days, when the Duke of Burgundy acknowledged to the Duke of Berry he was concerned in the fact; and retired to his own dominions that he might put himself into a condition to justify it. Accordingly he soon after returned to Paris with an armed force, where he was received

by the people, to whom he was very dear, with the highest acclamations of joy. Having demanded audience of the King, who was not in a condition to deny it, he ordered one of his creatures to charge the deceased Duke with tyranny, and a multitude of other crimes, affirming that the whole kingdom was indebted to him for delivering them from a man of the Duke of Orleans's temper. But the discontent of the court appeared by the retreat of the Queen and the Dauphin to Melun again, who were soon followed by the Dukes of Berry and Brittany; leaving the King in the Duke of Burgundy's power, who extorted a justification of the fact from him, and put his own creatures into all the considerable places about his Majesty. This was so resented by the rest of the Princes of the blood, that the Duke of Berry, and the young Duke of Orleans, with the Dukes of Brittany and Bourbon, and the Counts of Alençon, Clermont, and Armagnac, entered into a confederacy against him, and wrote a letter to the King, wherein they lamented the servitude in which his Majesty and the Dauphin were detained by the Duke of Burgundy; and begged of him that he would not take it amiss if they used force to deliver him. They wrote circular letters to the prelates and nobility, as also to the great towns in the kingdom, to engage them in the same design. The Duke of Burgundy however had several advantages of his enemies, being master of the King's person and the Dauphin's, and all his orders sent abroad in their names and under their seals; whereas his adversaries wanting the colour of authority, were looked upon as a rebellious faction. The war was vigorously carried on by both parties for some years; and the Duke of Burgundy was at one time so hard pressed, that he was forced to call in two thousand of the English to his assistance, which gave great offence to the French nobility. However, in the course of the war the Dukes of Berry and Orleans having the disadvantage, made proposals also to the King of England, offering to deliver up to him Normandy and all the countries he claimed in France, on condition he would send them a reinforcement of troops. But the wisest among the French on both sides considering that the introducing an English army into their bowels would probably be attended with the ruin of their country, a peace was on a sudden clapt up between the contending parties; and the English, who were already landed in Normandy, were paid the charges they had been at in this expedition, and prevailed on to return home. The next year the civil wars in France were revived, the Duke of Burgundy made himself master of the King's person again, and executed several of the adherents of the Duke of Orleans: but his Royal Highness getting into the administration in his turn, compelled the Duke of Burgundy to leave Paris, and retire to his Flemish territories. At this time the Duke of York came over to France from HENRY V. King of England, to demand the Princess CATHERINE, daughter of the French King, in marriage; but nothing was concluded on that subject. However, the truce was renewed for some months between the two nations.

The Dauphin and the Duke of Orleans, upon the retreat of the Duke of Burgundy, procured him to be declared an enemy to his country; whereupon the civil war was carried on with more fierceness than ever, towns taken and retaken, the country ravaged and plundered on all sides, till at length the Flemings declaring for France against the

the Duke; and his brother the Duke of Nevers deserting him, he found himself under a necessity of treating with his enemies. The Duke of Orleans, who had still the murder of his father fresh in his memory, was for pushing things to the last extremity; but another embassy arriving from England, and demanding the restitution of Normandy, and the Dauphin apprehending that the Duke of Burgundy would throw himself into the hands of the English if he was driven to despair, thought fit to close with the offers the Duke made, that they might be in a condition with their united forces to oppose the invasion they were threatened with, by the King of England; and a peace was accordingly concluded and sworn to by the contending parties with the greatest solemnity on the 14th of May, 1415.

1415.

HENRY  
V, of Eng-  
land in-  
vades  
France.

King HENRY, notwithstanding this reconciliation, proceeded in his enterprize against France, and having assembled a fleet of fifteen hundred sail of ships, on which he embarked six thousand men at arms, and four and twenty thousand archers, (for muskets were not yet brought into common use) he landed near Harfleur in the mouth of the Seine about the middle of August, and laying siege to that town, which was bravely defended, the place did not capitulate till about six weeks after he sat down before it: and now the season was so far advanced, it being the latter end of September, and so many of his men were fallen sick, that he did not think it proper to enter upon any further action this campaign, but determined to march his army cross Picardy, and take winter quarters in the neighbourhood of Calais. The English must certainly have a very mean opinion of the French troops at this time, or they would not have attempted such a march thro' an enemy's country in the face of an army of three or four-score thousand men, when according to their own historians King HENRY had not above fifteen or twenty thousand at most; especially when that Prince might have transported his army by sea to Calais, if he had apprehended any hazard in marching by land. The French it seems did give him some disturbance in passing the river Somme, but he found a ford at last where he got over with very little bloodshed. And now, when he had conquered the greatest difficulty, the French writers tell us he was so discouraged on a sudden, that he offered their Generals to deliver up Harfleur, and pay the charges of the war, if they would permit him to march to Calais. But if he ever had made such an offer, it is much more rational to suppose he should have done it before he passed the river. But let that be as it will, it is evident the French did not accept the offer if he made it; and having got between the English army and Calais, King HENRY found himself under a necessity of fighting. They permitted him however to make choice of a very advantageous spot of ground to draw up his army upon, where each wing was flanked with a wood, and the French could not extend their front beyond that of the English, who had planted sharp stakes before them much in the nature of the modern Chevaux de Frize, I presume, which defended them against the attack of the French horse. Their writers seem to insinuate, that their Generals were not apprized of this barrier of stakes (though they tell us the English made use of them in almost every engagement). Certain it is, this precaution of the English contributed very much to the victory they afterwards obtained; for the squadrons of horse which were ordered to charge and

The bat-  
tle of  
Agin-  
court,  
1415.

break the archers, falling upon the stakes, and being at the same time overwhelmed with a shower of arrows from those bowmen, (who according to the French were a body that had not their equal in the world in this kind of fight) the horse immediately fled, broke through the lines that were drawn up in the rear, and put them into confusion. Another occasion of their defeat, as the French relate, is to be ascribed to the heavy armour of their men at arms; for it seems it was the custom of that time for the horse to dismount and fight on foot, and except the first two thousand that charged the archers, all the rest of the French horse were dismounted; and the ground being at that time very wet and miry, the English, who had no armour on, and consequently were much lighter, when they had delivered their arrows, and came to attack the French gend'armes with their axes and clubs, had a great advantage of them. The King of England observing the enemies confusion, ordered a body of horse he had in reserve to wheel about and attack them in the rear, which occasioned a general rout, several bodies that were entire quitting the field without striking a stroke. The French writers, from whence I take this relation, say, that there was very little blood shed on the side of the English, and no persons of distinction killed unless the Duke of York the King's uncle, and the Earl of Suffolk: but on the side of France there were ten thousand men killed in the field of battle, of whom eight thousand were gentlemen, and fourteen thousand made prisoners. Among the slain were the Count of Nevers and the Duke of Brabant, two of the Duke of Burgundy's brothers; the Duke of Alençon, and the Constable the Count d'Albret, and three other French Princes, as they call them: and among the prisoners the Dukes of Orleans and Bourbon, the Counts of Eu, Vendome, and Richmond, and the Marechal de Boucicaut. It is related of the Duke of Alençon, that seeing all was lost, he determined to die gloriously, and with a troop of young gentlemen who attended him, broke through the English archers and the horse that were about King HENRY, and struck the Duke of York off his horse at one blow, and afterwards killed him; and the King stooping down to assist his uncle, the Duke of Alençon cleft the crown that was wrought in his Majesty's helmet in form of a crest, and if Alençon had not been killed in that very instant, his Majesty had run a great hazard of his life. But to proceed: After the battle King HENRY continued his march to Calais without interruption, and the French King, who was then at Rouen, having put the remainder of his army into the garrison-towns, retired to Paris, appointing the Count d'Armagnac, uncle to the Duke of Orleans, and the greatest enemy the Duke of Burgundy had, Constable of France, and Governor of Paris; soon after which, LEWIS the Dauphin fell sick of a dysentery, and died the 18th of December, being succeeded by his brother JOHN, Duke of Touraine.

The Emperor SIGISMUND coming over into England in 1416, and mediating a peace between the two nations, there was no considerable action happened in France that year. The two factions therefore being delivered at present from the terror of the English arms, renewed the civil war. The present Dauphin being in the Duke of Burgundy's interest, he proposed great advantages from it: but this Prince also dying, his brother CHARLES became Dauphin, who was about

seventeen years of age, and entirely governed by the Count d'Armagnac. The Count being informed that the Queen had heaped up a considerable treasure, and a vast quantity of jewels, put the Dauphin upon procuring an order from the King to seize them for the service of the war, which was immediately put in execution. This exasperated the Queen to the last degree, who retiring to Vincennes, the Count and the Dauphin accused her of criminal conversation with one of her household, and proceeded to execute the Lord they had charged with this piece of gallantry. As they were sensible that the Queen would infallibly retaliate this usage if ever it was in her power, they set a guard upon her, and made her in a manner their prisoner. Whereupon she applied herself to the Duke of Burgundy, proposing a reconciliation with him, and to unite their Interests against the Dauphin and the Orleans faction, who were generally called Armagnacs, from the Count of Armagnac, who was governor of Paris, and the soul of that party. The Duke received this intimation from the Queen with joy, and marching immediately with a select body of troops to Tours, where her Majesty was confined, he brought her off before the Constable Armagnac had any notice of the design. The Queen now took upon her the title of Regent by virtue of a former edict, and in confederacy with the Duke of Burgundy carried on the war against the Armagnac faction with more vigour than ever; of which the King of England having advice, made a second descent in Normandy, in the year 1417, where he made himself master of Caen, Cherbourg, and several other towns. In the mean time the Duke of Burgundy surprized Paris, and put to death the Count d'Armagnac, and most of the heads of that party; but the Dauphin with some of his followers had the good fortune to escape to Bourges. And now the Queen and Duke having the King and the capital city in their power, seemed to act by royal authority, while the Dauphin and his friends constituted a distinct court, possessed themselves of Berry and part of Langue-doc, and became pretty formidable in that part of the kingdom.

The King of England proceeded in his conquests in Normandy, reducing Rouen the capital, and indeed almost every other town in that duchy, in the year 1418. The English carried on the war in a much more prudent manner than they had done in the reign of EDWARD III, who made large conquests indeed, and over-run France several times from one end to the other, but did not make himself master of the strong towns and fortresses as he went along; so that he usually lost in the latter end of a campaign, or the following winter, all he had gained in the summer. HENRY V, seems to have been better versed in the art of war, securing his conquests as he advanced: and had he lived a little longer, or not left an infant upon his throne, 'tis highly probable the English had remained Sovereigns of France to this day. Tho' perhaps we need not much lament the loss; for as the lesser kingdom is usually dependent on the larger, we might probably have become a province to the nation we conquered; or have been in the condition Scotland is in respect to this kingdom, who have had the honour of giving us a King indeed, but have now neither King or Parliament amongst them. The progress of the English arms so alarmed both the Dauphin and the Duke of Bur-

gundy, that notwithstanding that implacable animosity they seemed to entertain for each other, they thought fit to stifle their resentments for the present, and clap up a truce, and the Dauphin consented to an interview with the Duke, in order to provide for their common defence. But the dependants of the late Duke of Orleans suggesting to the Dauphin that the kingdom would never long remain united unless the Duke of Burgundy was taken off, a second interview was treacherously appointed, at which the Duke of Burgundy was cut in pieces by the Dauphin's attendants, the first blow being given by a servant of the late Duke of Orleans, whom the Duke of Burgundy had caused to be assassinated in the streets of Paris about twelve years before. And tho' some people looked upon this proceeding as a piece of justice on that account, yet most men were struck with astonishment and indignation at the Dauphin's treachery. He pretended indeed in his apologies and memorials on this subject, that it was a pure accident, and was occasioned by some insult of the Duke's at that conference; which did not obtain much credit. But however that was, none expressed a greater resentment at the fact than the Queen, tho' the Dauphin was her only son then living: and indeed she was sufficiently exasperated against him before, for seizing her treasure, imprisoning her, and charging her with being false to the King's bed. These were such provocations as scarce any lady would have borne: and tho' the French writers are very severe upon her character on account of the opposition she made to the Dauphin, it must be acknowledged he had first thrown off all regard for her as a mother, before she abandoned his interests. She no sooner heard of the Duke's death, but she dispatched a courier to his son PHILIP, to assure him that the King, herself, and the city of Paris, would all join with him to revenge the murder: and the King of England being now master of great part of France, she proposed to him the marriage of her daughter the Princess CATHERINE, and that he should succeed to the crown upon the demise of the present King, to the exclusion of the Dauphin, and in the mean time be declared regent of the kingdom; which proposal the King of England readily came into, and the treaty was signed at Troyes in Champagne upon the 21st of May, 1419, being ratified afterwards by the parliament of Paris. In pursuance of this treaty the Princess CATHERINE was twelve days afterwards married to King HENRY, and the Dauphin declared a publick enemy. He was also summoned to the marble table to answer for the murder of the Duke of Burgundy, and on his not appearing, convicted of contumacy, and banished the kingdom for ever. But he continued still in the province of Berry, waiting for a favourable opportunity to restore his affairs.

The English having taken Melun, the two Kings, with the Queen and the Duke of Burgundy, came to Paris the first Sunday in Advent, and the Duke of Clarence, the King of England's brother, was made governor of the city. From that time, the French writers observe, the courts of the two Kings made a very different appearance. The court of the King of England was splendid and magnificent, and crowded with a numerous retinue, whilst that of the King of France was deserted; which gave occasion to many of the French to lament the fate of their country in private, say their historians. And what still gave them greater uneasiness, was, that King HENRY made the people

ple he had conquered contribute to the establishment of his government; for having assembled the States, he required a subsidy of them, which they were not in a condition to refuse, but granted without one dissenting voice, expressing at least a seeming readiness in granting that which they knew was in the conqueror's power to levy in an instant by a military force; and which, if it had been denied, might have furnished him with a pretence of demanding a great deal more. But this prudent Prince chose to let every thing run in the same channel, and to make as few alterations as possible, that he might reconcile that people to his government. He might reasonably expect that what was given by the States would be levied with less murmuring than what he should raise by a despotick power. We cannot but observe at this day, that this Prince was equally versed in the arts of war and peace. We see how he made his advances gradually in the enemy's country, and secured what he made himself master of as he went along; and that afterwards he made the conquered country in a great measure maintain itself, that he might not be too burthensome to his English subjects. Nor do we find him guilty of any acts of tyranny and oppression when he was at the height of his glory, and in a manner master of both kingdoms. But to proceed in our history: The King of England returning home in order to re-inforce his army, (for it was too soon to put much confidence in his new subjects) six or seven thousand Scots came over into France in the mean time to the Dauphin's assistance, and joining with his troops near Beauge in Anjou, defeated a considerable body of the English, commanded by the Duke of Clarence the King's brother, who was killed in the field of battle, and several others of the English nobility were killed or taken prisoners, which gave some life to the Dauphin's affairs, and occasioned several places to declare for him. And indeed next to the untimely death of King HENRY, which happened not long after, the Dauphin was obliged to the Scots for his re-establishment. The diversion they made in England, and the re-inforcements they sent him from time to time when his fortunes were at the lowest ebb, kept his head above water, and enabled him to wait for a favourable juncture to restore his affairs.

The Dauphin was encouraged by his late success to lay siege to Chartres; but the King of England returning into France soon after with a great re-inforcement, he was glad to quit the siege, and retire to Bourges the capital of Berry, which being the only province he was entirely master of, occasioned his being called by the English in derision the King of Berry. King HENRY in the mean time laid siege to Meaux, the capital of the country of Brie, and a place of great strength, which held out a siege of seven or eight months, when they were forced to surrender at discretion. The King ordered the head of VANRUS the governor to be cut off, and his body hanged upon a tree near the town, called VANRUS's Tree, from the numbers of English he had hanged upon it; for he was an implacable enemy to that nation.

The Queen of England, who had the year before been delivered of a son at Windsor, coming over to France with another re-inforcement of troops, rejoicings were made at Paris for the birth of that Prince, equal to those that had been made at London on the same occasion. But the King of England being soon after taken dangerously ill

V O L. II.

HENRY  
dies.

as he was upon the march to find out the Dauphin, all their mirth was damped. He expired on the last of August 1422, declaring his brother HUMPHREY, Duke of Gloucester, regent of England during the minority of his son. He advised his council to offer the regency of France to the Duke of Burgundy, and on his refusal he nominated his other brother, the Duke of Bedford, to take upon him the regency of that kingdom. The Duke of Burgundy receiving advice of the King of England's illness, immediately set forward to visit him, but found him dead on his arrival; and having consulted with the English council, agreed with them that the Duke of Bedford should undertake the regency. The old King of France did not long survive King HENRY, for he died at Paris on the twenty-first of October following. There was no Prince of the blood, the French historians observe, to assist at his interment, some of them having been killed at the battle of Agincourt, others prisoners in England, and the rest absent, they suppose, as not approving the present administration; or because they would not seem to authorize by their presence the proclaiming HENRY VI as King of France. The Duke of Bedford therefore only attended the obsequies of the French King in mourning; and the corps was no sooner interred, than a herald having exhorted the people to pray for the soul of CHARLES the Sixth, added, Long live HENRY of Lancaster, King of France and England. The deceased King had had six sons and as many daughters, and of all his sons only CHARLES the Dauphin survived him, who is from this time styled King of France by the French historians; tho' HENRY VI was actually proclaimed King of France at Paris, and in possession of the greatest part of that kingdom for a considerable time afterwards.

In conformity to the French historians, I begin the reign of CHARLES the Seventh here, tho' to me HENRY VI appears to be King of France at this time, *de jure* as well as *de facto*; for the crown of France devolved upon him by virtue of the treaty of Troyes, which was afterwards confirmed by the assembly of the Estates; and if treaties made between sovereign Princes, or acts of settlement made by the legislature of any kingdom are of any force to bind the succession, I cannot see what pretence the French have to exclude Henry VI from the number of their Kings, especially when he was actually crowned and recognized there: we may as well strike him out of the catalogue of the Kings of England, because he was afterwards deprived of that part of his dominions also. Though perhaps we have been as much in the other extreme in styling our Monarchs Kings of France ever since, when we have by innumerable treaties, virtually at least, acknowledged the French King's title to that kingdom. But to proceed:

The Dauphin upon advice of his father's death, caused himself to be proclaimed King of France, and soon after crowned at Poitiers, which gave some encouragement to his party, and brought some to declare for him who had hitherto stood neuter. On the other hand, the Duke of Bedford the regent, to strengthen the hands of the English, renewed the alliances between them and the Dukes of Burgundy and Brittany. The provinces all the while were divided into different parties and interests, and scarce a day passed without a skirmish: but the most considerable action happened near the town of Crevant in Burgundy,

where the Dauphinois having been joined by a body of Scots, were entirely defeated; and the Dauphin's troops having the worst in many other encounters this year, he found himself under a necessity of retiring to the southward of the Loire. Here he solicited his friends in Spain and Italy to send some troops to his assistance. From Spain he received a small detachment, and the Duke of Milan furnished him with a thousand foot, and about six hundred horse; but his principal supplies arrived from Scotland, amounting to five or six thousand Scots, under the command of Earl DOUGLAS. The Duke of Bedford, on the other side, having received fresh recruits from England, and being joined by the Duke of Burgundy's forces, took several considerable towns from the Dauphinois, and being set down before Yory on the confines of Normandy, the Earl of Buchan, a Scot whom the Dauphin had honoured with the title of Constable of France, came to it's relief, which occasioned a general battle, wherein the Dauphin's party was defeated, four or five thousand men killed, among whom was the Constable Earl DOUGLAS, and several other persons of distinction; which victory was attended with the surrender of Mans, Mayenne, and many other considerable places, to the English. And now it was expected every day that the Duke of Bedford would pass the Loire, and reduce the rest of France to the obedience of King HENRY; but it must be acknowledged that the Dauphin had abundance of good fortune on his side, if he had neither money, troops, or courage, for in this very instant, when, in all probability, he would have been obliged to abandon the kingdom, an unforeseen quarrel happened between the English and Burgundians, which gave his friends time to recover from their consternation, and provide for their defence; otherwise, in the opinion of MEZERAY, one of their most celebrated historians, the English had made an entire conquest of France.

The occasion of this misunderstanding between the English and Burgundians, was an unfortunate amour of the Duke of Gloucester's, regent of England, with JAQUELINE Countess of Hainault and Holland; she was already married to the Duke of Brabant, a Prince remarkably weak both in body and mind, and being no longer able to endure him, she pretended the marriage was null, and sent to Rome for his Holiness's opinion upon it, and in the mean time made an offer of her person to the Duke of Gloucester, who, as she was heiress of several fine countries, immediately married her, without waiting for the resolution of the Pontiff. He proceeded soon after to transport a considerable force to Calais, in order to take possession of Hainault his wife's inheritance; but the Duke of Burgundy sending a body of troops to the assistance of his cousin the Duke of Brabant, he met with a vigorous resistance. And what rendered this occurrence the more unfortunate to the English affairs, was, that the troops both on the side of the Duke of Gloucester and Burgundy were designed to reinforce the Duke of Bedford if this adventure had not happened, and he was obliged to remain perfectly inactive for a year or two for want of those forces. However, the Pope's determination arriving, that the Duke of Gloucester's marriage with the Countess of Hainault was null, he desisted from his pretensions, and married the Lady ELEANOR, daughter of the Lord COBHAM, who, according to common fame, had long been his mistress. And thus the occasion of the quarrel being re-

moved, the Duke of Burgundy was reconciled to the English, and sent his troops again to join the Duke of Bedford. During this long interval of inaction, the Dauphin had not only very much increased his party, but formed some advantageous alliances, especially with the Duke of Brittany, whom he had drawn off from the English. The Duke of Bedford however, marching into Brittany, soon compelled their Duke to quit the Dauphin's party, and sign the treaty of Troyes, whereby the King of England was declared successor to the late King of France. And now the Duke of Bedford determined to put the design in execution he had so long suspended on account of the misunderstandings between the courts of England and Burgundy, namely, to pass the Loire, and make himself master of the countries to the southward of it; and in order to this, he detached a part of his army to invest, or rather block up the city of Orleans, for it was of too large an extent to be entirely surrounded by such a handful of men as this army consisted of; and it is surprizing to think that the English, who scarce ever exceeded five and twenty thousand men in the field, should be able to undertake a siege of that consequence, and keep such a large populous kingdom in awe at the same time. The person the Duke of Bedford pitched upon to carry on this siege was THOMAS MONTAGUTE, Earl of Salisbury, esteemed one of the most accomplished Generals in the English Service; he sat down before the town on the side of Sologne on the twelfth of October 1427. Thus the place was invested but on one side; and the Dauphin left at liberty to throw in supplies of men and provision, as he did from time to time during the siege. The English however stormed a great bastion at the foot of the bridge, and a small castle called the Torettes, and carried them, and had great hopes of succeeding in the enterprize, till their General the Earl of Salisbury was unfortunately killed by a musket-shot as he was viewing the breach in order to make a general assault. Their courage was however revived by the approach of the Duke of Burgundy's troops in the month of December 1428; they took post on that side of the town towards la Beaufie, but still not having forces enough entirely to encompass the city, they built forts and redoubts at certain distances round the town, not so near however but there were yet some intervals, by which relief might be put into the place; and this occasioned several smart actions between the besiegers and the Dauphinois, as provision was sending to the city or the camp; the most remarkable of which happened on the 12th of February, 1429, between the Count de Clermont and the celebrated Sir JOHN FALSTAFF; the latter was conveying a supply from Paris to the English camp, and being attacked by the French, defeated them. This was called the battle of Herrings, there being great quantities of them among the provisions.

Notwithstanding the frequent opportunities the Dauphin had of throwing supplies of men and provisions into the town, the siege was carried on with such vigour, that it was evident it must surrender in a short time: whereupon the besieged cunningly offered to put the city into the hands of the Duke of Burgundy; to which the Duke of Bedford answered, he hoped they did not think to make a tool of him; that he should beat the bush, and leave others to catch the birds: intimating, that as the English had been chiefly instrumental in carrying on the siege, it was not fit the Burgundians should run away with all the advantage;

siege.

tage; for it must be remembered that the Duke of Burgundy's troops did not join the English before Orleans till half a year after they were set down before it. But however rational the answer was which the Regent gave on this occasion, the besieged gained their point by it, creating such a difference between the English and the Duke of Burgundy, that he immediately withdrew his troops from before the place.

The English still carried on their attacks; but as most part of the town was now open to the Dauphinois, it could not be a very difficult matter to bring them relief, especially when the army of the besiegers did not consist of ten thousand men, and the garrison was at least as numerous: but the French were at this time so dispirited, that notwithstanding the disadvantages the besiegers laboured under, their soldiers could hardly be prevailed with to march to the relief of the place. The Dauphin and his Generals therefore finding they had apparently a great superiority in the field in point of numbers, and the country unanimously in their interest, considered that if they could find any expedient to animate their men, their affairs must soon put on a new face: having met with a young maid therefore of a masculine courage on the confines of Lorraine, they brought her to the Dauphin's court, pretending that she was sent from Heaven to deliver Orleans from the English. They had taught her the exercise of arms, and instructed her in all manner of military operations before she was brought upon the stage, so that she knew how to behave at the head of a company or squadron as well as most of the officers of the army; and this was all to pass for inspiration. The gracefulness of her person and address, and the uncommonness of finding one of that soft sex so daring and well skilled in martial affairs, sufficiently prejudiced the vulgar in her favour. There was no great difficulty in bringing them to believe she was raised up by Heaven for their deliverance; and in this persuasion they crowded to march under her colours to the relief of Orleans, by which the Generals of the Dauphinois gained their point: for nothing but an unaccountable dread of the enemy could have prevented their throwing supplies into Orleans as often as they pleased, if we consider the small number of the English before it, and the great extent of the place. The Dauphin therefore having assembled an army of fourteen or fifteen thousand men, commanded by his most celebrated Generals, with the Maid of Orleans (as the impostor was afterwards called) at their head, sent them to re-inforce the besieged, and found but little difficulty in entering the town on that side which was open to them. This was cried up as one of the most daring enterprizes that ever was undertaken, and the success looked upon even as miraculous by all the Dauphin's party through the kingdom. And now the garrison consisting of about three times the number of the besiegers, they ventured to attack the forts and redoubts which the English had built about the place, some of which they carried. This was ascribed to the conduct of the holy Maid, and the people thereby induced to believe, that they should always be victorious while this heroic virgin remained at their head. Certain it is, the English finding the garrison so very numerous, and being deserted by the Burgundians, had now no hopes of taking the place: they raised the siege therefore, and marched off in good order with about eight or nine thousand men, being all the forces they had there. And though their num-

ber was so very small, the courage of the French was not yet so much raised as to venture to give them any disturbance in their retreat. The Dauphin's Generals would by no means however have this conduct to be thought the effect of their fears, but pretended it was the express order of Heaven, by the mouth of the Maid of Orleans, that they should not pursue the enemy. The truth is, they found their affairs upon the mending hand, and they had no mind to attack a body of nine thousand veteran troops, and put the fate of their country upon the issue of a battle, when a little time and patience would probably produce the same effects they could hope for by a victory.

The raising the siege of Orleans was attended with the surrender of several places to the French, and the Duke of Alençon not long after surprized part of the English army at Patay, where they killed about fifteen hundred of them, and took the Lords TALBOT and SEALE prisoners; and tho' the rest of the detachment made a regular retreat, it was esteemed a great victory, and ascribed also to the conduct of the Maid of Orleans. This defeat was imputed to the negligence or cowardice of FALSTAFF, though it appears from our histories that he had formerly behaved himself like a man of honour. He was not only sufficiently lampooned however upon this occasion, as appears by some ballads still in being, but degraded from the order of the Garter, which he had been formerly admitted to upon his good success in some former expeditions. Though the defeat of Patay was not very considerable in itself, yet it was of great consequence to the French; it shewed them that the English they so much dreaded were but men like themselves, and encouraged many people to come over to the Dauphin's party who had taken oaths of allegiance to the English. They pretended they were absolved from their oaths by Heaven itself, who had sent the Maid of Orleans to assert the right of their natural Sovereign: such excellent use we find may be made of an impostor artfully managed. This train of success so exalted the Dauphin, that he left his fastnesses beyond the Loire, and ventured to march cross the country as far as Rheims, and having surprized that city, caused himself to be crowned there a second time, which gave still greater credit to their heroine, who they pretend had foretold that he should shortly be crowned at Rheims, when there appeared scarce any possibility of it's being effected. But however that be, it is not to be conceived what a turn this coronation in the city where his ancestors had been consecrated gave to King CHARLES's affairs: many great cities immediately submitted to him, and it was with the utmost difficulty that the Regent prevented the revolt of Paris itself.

But after all these successes, which had been ascribed to the divine aid brought them by the Maid of Orleans, she was taken prisoner in the year 1430, and burnt for an impostor in the city of Rouen, at the time King HENRY arrived there in his way to Paris, whither he was going to his coronation; the Regent apprehending that the performing this ceremony in the capital city of the kingdom might prove advantageous to his cause. The King of England, as the French stile him, made a very magnificent entry into Paris on the second of December 1431, being consecrated and crowned on the seventeenth of the same month by the Cardinal of Winchester; this was performed rather according to the ceremonial of England, than the customs of France, say the French

writers; from whence I presume they would infer some defect in the ceremony. He returned to Rouen the day after Christmas, the regent apprehending he would be more secure there than in Paris, which was almost surrounded by the enemy; but he seems to have been in equal danger in that city, the castle of Rouen being surprized at the very time the King was there, tho' it was retaken by the English indeed the next moment, and the city secured, which happened, as the French relate, through some misunderstandings among their Generals; otherwise they had made King HENRY prisoner, and put a final end to the war. This Prince was crowned King of France when he was about nine years of age.

As the Duke of Bedford had married the Duke of Burgundy's sister, this Princess had found means to reconcile her brother and her husband, and the war was again carried on against the French with tolerable success; but the Duchess of Bedford happening to die in the year 1433, and the Duke marrying a person that the Duke of Burgundy did not approve of, the latter was pleased to resent it, or rather took this opportunity of expressing that aversion to him and the English cause, which he had entertained some time before; however, he proposed a congress to all the parties concerned in the war, in order to adjust their several differences, and Arras was appointed for the place of conference. The plenipotentiaries of England and France soon discovered that it was not possible to come to any agreement, both their masters insisting on their title to the crown of France; whereupon the English ministers withdrew, and left the French and the Burgundians to treat by themselves: where the Duke of Burgundy obtained whatever he asked, for the French were determined to gain him over to their party at any price; and granted him such terms, as, in the words of the French historians, nothing but the necessity of their affairs could justify; it was, say they, a very shameful peace, but a very useful one: among other things, it was stipulated, that King CHARLES should disavow the murder of JOHN the present Duke's father, that he should beg of him to forget the injury, and be reconciled to him, and that all persons should be brought to justice who were concerned in the murder; that the King should erect a church where the murder was committed, the presentation to which should be in the Duke and his successors.

That the King should grant the county of Burgundy, as well as the duchy, with many considerable cities specified in the articles, to him and his heirs; that he should transfer over to him all the towns and fortresses on both sides the Somme in Picardy, the county of Ponthieu, Dourlans, Bologne, &c. and that the Duke should not be obliged to do fealty, homage or service to the King for any of the countries or places he possessed. Which were such conditions, as scarce ever any vassal obtained from his Sovereign before.

King CHARLES having strengthened himself by this alliance with the Duke of Burgundy, many of the French Lords were induced to desert the English service, and make their court to him: the Duke of Bedford however continued the war, and took St Dennis, and several other considerable towns, as the French on their side did others from the English; and so equal were their forces at this time, that there appeared very little hopes of putting a period to the distractions of the kingdom, till the death of the Regent,

which happened on the fifteenth of December, 1435, to whose conduct, according to the French, the English were indebted for the greatest part of their conquests, and standing their ground so long, when they received scarce any supplies from England. He was succeeded in the government of France by RICHARD Duke of York.

The English, to shew their resentment for the Duke of Burgundy's deserting them, plundered his country, and took several of his towns, whereby they rendered him their most inveterate enemy, which certainly was an error in politicks, when he was willing to have stood neuter. In the condition the English were at this time from their divisions at home, and so large a country abroad to defend with a handful of men, they had no occasion to have made themselves new enemies. The year after the Duke of Bedford's death, the Parisians entered into a conspiracy against the English, and let the Constable of France into that city with a detachment of King CHARLES's army; the Governor WILLOUGHBY had just time enough to retire into the Bastile with his garrison, and upon articles of capitulation, was permitted to retire to Rouen with his garrison, arms, and baggage: and thus the capital of the kingdom was lost without striking a stroke. And it is to be wondered how the English so long maintained themselves in such a vast populous city, with a garrison which seldom ever exceeded two thousand men, and at this time not twelve hundred. The Duke of Burgundy at the same time laid siege to Calais, but did not meet with the like success, he was forced to rise from before it; and the Duke of Gloucester soon after transporting thither ten thousand men, returned his visit, burning and destroying his country of Artois with fire and sword. Pontoise and several other places also were taken from the French this year, and the war seemed yet to be vigorously carried on, on all sides. The weight of it however fell chiefly on the Duke of Burgundy, the English being determined to make him sensible of the dishonourable and imprudent part he had acted. And indeed, during all the time he had been in alliance with England, his Flemish territories never suffered so much as they did at present. But it was the happiness of France, their historians observe, that he was much more provoked at these ravages than inclined to change sides by them. Nor were the French much displeased when they heard of his misfortunes: for however they might have put on a fair outside to bring him over to their party, his haughty behaviour and over-bearing manner at the treaty of Arras, with the hard conditions he had extorted from the French King, were not forgotten. Besides, since the reduction of Paris, and the revolt of the nobility from the English, the Duke was become less necessary than formerly. And now King CHARLES thought it a proper time to make his public entry into the capital city of Paris, which he performed with the utmost splendor on the twelfth of November 1437, having been driven from it near twenty years, during most of which time it had been in the possession of the English. It is natural to suppose the French were mightily rejoiced on this occasion; for how mild or equitable soever the English administration might have been, the people will ever be fonder of a native than a foreigner; and there is a great deal of reason for it: foreigners will have foreign favourites, and oblige them at the cost of the natives, whatever stipu-

XXXIV. government had been avowedly in the hands of  
the English Nobility and Generals, and the French  
totally excluded from it. It is no wonder if after  
this therefore there were great rejoicings, when  
they saw a Prince of their own nation making his  
publick entry into his capital city: we should  
have believed as much if their historians had not  
left it upon record. But their joy was very short-  
lived it seems: the King had not been here many  
weeks, before Paris and France in general suffered  
as much by plague and famine as they had before  
by the war, converting it into a perfect desert.  
The King was obliged to leave the city on  
the third of December, and the very soldiers ab-  
andoned it; so that the English might have re-  
turned and possessed themselves of it again, if they  
had not dreaded the pestilence more than the e-  
nemy. What added to the misery of the country  
was, that the nobility who had left the English  
service, and had now nothing to subsist on, under  
pretence of making incursions on their own estates  
which were in the power of the English, plundered  
friends and foes alike, and maintained themselves  
by these kind of robberies, which it was not in  
the power of King CHARLES to prevent, having  
no other means of subsisting these gentlemen, who  
had in a literal sense left all to follow him, and  
were frequently of service to him by the incursions  
they made into the enemies quarters.

A conspi-  
racy  
against  
King  
CHARLES

There being great disputes at this time between  
the council that was held at Basil and Pope EU-  
GENIUS IV, King CHARLES in some things ad-  
hered to his Holiness, and in others seemed to be  
governed by the Council, receiving neither of  
their regulations absolutely, but with such addi-  
tional modifications formed by the French clergy,  
as the usages of the Gallican Church it was said  
required; and from these determinations of the  
Ecclesiasticks in France was composed what has  
since obtained the name of the Pragmatick Sancti-  
on; whereby it was declared, That the Council  
was superior to the Pope; the ancient form of  
ordaining Bishops was revived; and many things  
retrenched, from whence the Holy See formerly  
reaped great advantage: with which the Pope was  
extremely offended, but could not procure the  
decree to be abolished till the reign of FRANCIS I,  
who, with the consent of LEO X, established the  
Concordat in it's room.

The French court was at this time pretty much  
divided; and the dissatisfied Lords, the chief of  
whom were the Dukes of Bourbon and Alençon,  
and the Counts of Vendome, Dunois, and La Tri-  
mouille, had insinuated themselves so far into the  
Dauphin (King CHARLES's son) that he agreed  
to appear at their head. He was now about eigh-  
teen years of age, weary of being under the tu-  
tion of a governor, and of leading a private in-  
active life, and consequently the easier wrought  
upon. At a time appointed between them, they  
surprized his governor, took him out of his  
hands, and marched with the Prince to Blois be-  
fore the King had any notice of their design: but  
the King pursued them so briskly, that within a  
few months they were obliged to submit to mercy,  
which they obtained by the mediation of the Duke  
of Burgundy. The King afterwards changed all  
the officers of the Dauphin's household, and put  
those about him he could rely on.

About this time CHARLES Duke of Orleans,  
who had remained prisoner in England ever since  
the battle of Agincourt, being five and twenty

V O L. II.

years, obtained his liberty on agreeing to pay a  
ransom of three hundred thousand crowns; of  
which he raised one himself, and the Duke of  
Burgundy advanced the other two for him; these  
two families being now perfectly reconciled, whose  
former differences had in a great measure occa-  
sioned the civil wars of France.

The King, who was so very cautious of ha-  
zarding his person in his juvenile years, deter-  
mined now, according to the French historians, to  
lead his army in person, and soon found the happy  
effects of it. The first enterprize he undertook  
was the siege of Creil, and afterwards ventured on  
that of Pontoise, an important post near the con-  
fluence of the Seine and the Oyse, and well defend-  
ed by the English; in both which however he was  
successful. The following winter, he was exercised  
again with the discontents of several of the Princes  
of the Blood, who thought themselves too little  
concerned in the administration; particularly the  
Dukes of Orleans, Alençon, and Bourbon; and he  
had some intelligence of their caballing with the  
Dukes of Burgundy and Britany: but they did not  
break out into actual rebellion; the King found  
means to pacify them without having recourse to  
arms. The Duke of Orleans he invited to court,  
and returned him great part of the money his ran-  
som had cost him, knowing that the uneasiness of  
his circumstances was the principal reason of his  
discontent. The Duke of Burgundy also, whose  
dissatisfaction arose principally from the neglect  
that had been shewn the Duke of Orleans, had no  
further quarrel with the court: and these two  
Princes being thus taken off, the other Lords  
thought it most prudent to be quiet and reconcile  
themselves to his Majesty.

The King being at liberty from civil dissen-  
sions, carried the war into Guienne and Gascony,  
where he took several places from the English;  
but while he was at this distance, the French lost  
some towns in Normandy: and thus the war  
continued with various success between the two  
nations till the year 1443, when a truce was con-  
cluded between them, which being renewed from  
time to time, was continued till the year 1448.  
King CHARLES therefore having now no occa-  
sion for his troops, sent them to SIGISMOND,  
Duke of Austria, to be employed against the Swit-  
zers; in which service, 'tis said, they gained a  
great deal of honour.

The truce being at an end in the year 1448,  
the war with the English was renewed; and be-  
fore the end of the year 1449, the French reco-  
vered Rouen, and all the towns in Normandy and  
North France, except Calais; for the court of  
England was at this time distracted with civil  
dissensions, and perfectly abandoned their late con-  
quests. The French historians, some of them,  
applaud the courage and conduct of their Mo-  
narch upon this occasion, who led his troops in  
person; but there needed very little courage or  
conduct to reduce a country which had no regu-  
lar forces to defend it, and the natives entirely in  
their interest. The last place the English lost in  
Normandy was Cherbourg, which surrendered on  
the twelfth of August 1450; and tho' it was then  
a port of great consequence, which the English  
might have supplied every day by sea with forces  
and provisions, they never attempted to relieve it.  
And the French annually observed a thanksgiving  
at Rouen for the reduction of Normandy on the  
twelfth of August very lately, if they do not still.

The latter end of the year King CHARLES marched his army towards Guienne and Gascony, where he took Bergerac, and several other towns from the English; but the season not permitting him to keep the field any longer, he put his army into winter quarters. The following year, 1451, the English having no army in the field, Bourdeaux surrendered, with many other towns, and the rest made but a feeble defence; so that he was master of the whole country within less than six months. General TALBOT arriving in Guienne with a fleet of fourscore sail, and four thousand land-forces on board, the following year 1452, Bourdeaux, and most part of the country of Guienne, submitted to the English again; but Earl TALBOT being unfortunately killed, with his son the Lord Lisle, in an engagement near Castillon, on the seventeenth of July, 1453, Bourdeaux, and the rest of Guienne were again reduced to the obedience of the French before the end of the campaign.

In the mean time the Dauphin, who was very uneasy at the restraints put upon him by his father, and having no body about him he could confide in, desired leave of the King to visit his principality of Dauphiné, which the King did not at all approve of; but however permitted him to go, upon condition he would return within four months. The Prince no sooner found himself at liberty, than he took a resolution never to put himself in the King's power again. He had conceived a most inveterate hatred against all those who were concerned in the administration, as he apprehended them to have occasioned his Majesty's coldness towards him; but the most specious pretence he had for residing at a distance from court, was the King's ill usage of his mother, his father always keeping wenches in the very palace where she resided: but she that had the greatest influence on him, was one AGNES SORREL, a celebrated wit, who for that reason was the principal object of his aversion.

The Prince having remained in Dauphiné several years, and refused all his Majesty's invitations to come to court, the King was determined to take a journey thither, and bring him away with him by force; but the Dauphin had intelligence of it, and fled with some few of his friends to Flanders to the Duke of Burgundy, who took great pains to reconcile him to the King, to no purpose: the Prince chose to reside at Genep on the frontiers of Hainault, rather than return to court. The Duke of Alençon also became a male-content again about this time; and 'tis said, made an offer to the English court to introduce their forces into Normandy: but he was betrayed by his Almoner, who instead of carrying his dispatches into England, presented them to the French King; and the Duke being apprehended, was convicted of high-treason in conspiring against the government, sentenced to be degraded from his Peerage, to have his head cut off, and his estate confiscated; but the King pardoned him his life, confining him prisoner to the castle of Loches. The same year PETER LE BRASSE, Seneschal of Normandy, was ordered to make a descent on the coast of England with four thousand men, which he performed near Sandwich, and having plundered the town, he returned to France; though we are told the intention of King CHARLES in this enterprize, was to make himself master of some considerable town in England, which he might exchange for Calais.

The Genoese again put themselves under the protection of the French in the year 1459; but revolted soon after, and established a form of government of their own: however, this has given the French occasion frequently to revive their claim to that city.

Notwithstanding this King had been so fortunate to see his kingdom from a most distracted condition restored to perfect tranquillity, the Dauphin's disobedience rendered him extremely unhappy: it was the continual subject of his thoughts, and disturbed his rest every night. He was once upon the point of disinheriting him, and declaring his younger son CHARLES heir to the crown. Amidst these uneasy reflections, a favourite of the King's, in whom he very much confided, acquainted him with a rumour that went about of certain persons being dealt with to poison his Majesty: whereupon he immediately fell into a deep melancholy, refusing to take any nourishment, lest it should be poisoned. In this humour he remained seven or eight days, till his physicians represented to him that this unaccountable caution would as certainly dispatch him, as a dose of poison. Whereupon he was prevailed on to eat; but his stomach and bowels were now so disordered by his long fasting, that nothing would pass thro' him. He fell ill of a fever, of which he died the twenty-second of July, 1461, in the sixtieth year of his age, and the thirty-ninth of his reign, according to the French account; tho' the English can look upon him to be no better than a usurper, the crown being settled upon HENRY King of England, by CHARLES VI, and the Three Estates. But what are acts of settlement any longer than there is power to support them?

LEWIS XI being at Genep, when he received advice of his father's death, went immediately to Rheims, and was crowned. After which, he turned out almost every one of his father's ministers, and introduced a new set of men into the administration, cunning crafty Statesmen, like himself, say the French historians. Having made his brother CHARLES Duke of Berry, his next step was to lessen the power of the other Princes of the Blood and great vassals of the crown, particularly that of the Dukes of Burgundy and Brittany, whom he had observed in the last reign frequently to have given laws to their Sovereign.

HENRY VI King of England, being driven from his throne about this time, MARGARET of Anjou his Queen, applied her self to LEWIS for assistance; but she could obtain only a loan of twenty thousand crowns, for which she undertook that King HENRY should surrender Calais into his hands, if he was restored; but EDWARD IV, who afterwards ascended the throne of England, prevented the execution of this bargain. The French King also sent troops to the assistance of the King of Arragon against Castile, upon the same view that he supplied the Queen of England; namely, upon condition that he would mortgage part of his territories to him; by which means he got possession of Roussillon and Cerdagne for 300000 crowns. At his return from this war, he redeemed the towns in Picardy, which had been given to the Duke of Burgundy, and proceeded in his design of reducing the power of the Grandees and Vassals; to effect which, he sent an officer and fifty bold fellows into Holland to surprize Count CHAROLOIS, eldest son of the Duke of Burgundy, from whom he apprehended the greatest opposition: but the Count received intelligence of

A conspiracy of the Princes of the Blood against him.

of his design, and made the party prisoners. This treacherous attempt of the French King rendered him very odious both at home and abroad, and increased the confederacy that was already forming against him by the Nobility and discarded Ministers. The conspirators, of whom the principal were the Dukes of Britany and Bourbon, prevailed with the Duke of Berry, the King's brother, to appear at their head. This Prince was about seventeen or eighteen years of age, and engaged in the design, in hopes of getting a more considerable appenage or territory assigned him than he had at present.

1465.

The disaffected Lords having recourse to arms in every part of the kingdom, the King made the best provision against them he could, and marched in person against the Dukes of Bourbon and Nevers, and the Count of Armagnac, with 80000 men, so suddenly, that they were forced to quit the field, and shut themselves up in the town of Riom; and had not the King been called from thence by the march of Count CHAROLOIS towards Paris, they must have submitted to his mercy; but his affairs obliging him to return to Paris, he allowed the Lords to march out with the garrison and their baggage, on condition they should not bear arms against him again, and should use their endeavours to persuade the rest of the malecontents to return to their duty. Count CHAROLOIS in the mean time being come before Paris, the King hastened back to prevent the revolt of his capital, and gave him battle at Montelery; the advantage being rather on the Count's side, the King retired into Paris; where understanding that the Lords had since joined their forces with the Count, notwithstanding their promise not to bear arms against him, and having little hopes now of prevailing by force, he proposed a personal conference with the chiefs of the malecontents, in hopes of gaining his point that way. He trusted himself even in the Burgundian camp to treat with them. Their principal demand was, that the King should grant the duchy of Normandy to the Duke of Berry; imagining, that if they could carry this article, it would secure all the rest, because the Dukes of Burgundy, Normandy, and Britany, would always be a match for their Sovereign. The King saw their drift, but considering that if he could once prevail with them to lay down their arms, it would not be a difficult matter to divide them, as it afterwards happened; he consented to every thing they asked, and the treaty was signed at Conflans, on the 15th of October 1465. Count CHAROLOIS hereupon retired into his own country, and most of the French Lords into Normandy with that Duke, not daring to trust themselves in the King's power. They all made their court to the young Duke of Normandy, and every one expected to have the direction of his affairs, which occasioned a quarrel among them, and gave the King an opportunity of drawing over the Duke of Bourbon to his interest; by whose assistance he easily possessed himself of Normandy again, and the young Prince fled into Britany, dreading nothing more than falling into his brother's hands. During these transactions, the Duke of Burgundy died; and Count CHAROLOIS his son succeeded him, who being engaged in a war with the Liegois, the King took an occasion while he was on that side, to fall upon his friend the Duke of Britany, and compelled him to renounce all alliances with the enemies of France. After this he desired a personal conference with the Duke of Burgundy;

1467

and tho' he knew him to be his most implacable enemy, trusted himself again in his territories, which rashness he had like to have had sufficient cause to repent; for it seems the Duke, upon discovering some of the King's practices against him while he was at Peronne, was in suspense, whether he should not seize his Majesty's person, and was with difficulty dissuaded from it by one of his Ministers, who acquainted the King with the design; and it is amazing, that LEWIS XI, who was naturally jealous and suspicious of every body, should more than once put himself into the hands of a person, whom he knew both hated and feared him. However, after he had suffered a great deal in apprehension, and concluded a treaty with the Duke, whereby he again yielded the duchy of Normandy to his brother the Prince, he had the good fortune to be dismissed by the Duke of Burgundy, and returned safe to Paris. Not long after, he prevailed with his brother to accept of the duchy of Guienne, instead of Normandy, which disconcerted all the Duke of Burgundy's measures; for they could not now give each other any assistance, if the King should for the future put hard terms upon them, Guienne being one of the most distant provinces in France from the Duke of Burgundy's territories. Thus the King had made a considerable progress in disuniting the Princes who were in a confederacy against him; what he most feared was, that EDWARD the fourth, who had been advanced to the crown of England, and was his enemy, on account of the assistance he had given his competitor HENRY VI, should assist the Dukes of Burgundy and Britany, if he attempted to reduce them. But the Earl of Warwick having deposed King EDWARD, and restored HENRY VI to his throne again, freed him from these apprehensions for a time. HENRY VI however was a second time deposed, and EDWARD the fourth got possession of the crown of England, by the assistance of the Duke of Burgundy, which brought the King into the same perplexity he was before. He had intelligence, that this Prince, with the Dukes of Burgundy and Britany, were actually entered into a confederacy against him, and raising forces to invade him; but, happily for LEWIS, the Duke of Burgundy spent his time in reducing some towns upon the Rhine, instead of joining his allies, who could not prevail on him to defer that enterprise. In the mean time the King entered into a league with the Swiss and Germans, and set them upon the Duke of Burgundy, and while he was employed on that side, attacked his territories in the Low-Countries, beat his troops in two set battles, and took several towns from him. But the King of England landing at Calais with a fine army, to join the Duke of Burgundy, the French King had all the reason in the world to apprehend that he should soon be deprived of his new conquests, and perhaps attacked in his turn: and this would infallibly have been the case, if the Duke of Burgundy had kept his word with King EDWARD, and had had an army ready to have invaded the French territories; but his troops had been so harassed in his German expedition, that they were still in their winter quarters, and in no condition to take the field. The Duke endeavoured to bring the King of England into temper, by discovering a correspondence he held with the Constable of France, who had promised to deliver up the town of St Quintin to him upon the confederate army's appearing before it; and upon this advice, the King of England ordered a detachment of his forces

forces to march that way and summon the place; but the town refused them admittance. The Constable, who was playing a treacherous part between the French King and the Duke of Burgundy, did not yet think it a proper time to declare himself; which so exasperated the King of England, that he could not stifle his resentment, and parted from the Duke in a great passion; of which the French King having intelligence from the spies he kept in the English court, he sent to sound his Majesty's inclinations as to a peace; and finding him not averse to it, a treaty was set on foot, wherein it was agreed, that the French King should not support the English malecontents, nor the King of England those of France: And in order to a stricter union between the two crowns, CHARLES, the Dauphin of France, should marry the Princess ELIZABETH, the King of England's eldest daughter. After the signing of this treaty, the two Kings had an interview at Pequigny, where the French King perfectly purchased the English court; not a minister but had a pension from him, and even the King himself accepted an annuity of fifty thousand crowns per annum, which ever after made him look with indifference upon the encroachments the French King made on the Duke of Burgundy's territories in the Low-Countries. Soon after King EDWARD's return to England, a truce was concluded between France and the Duke of Burgundy; and now it was expected, that the French King would have entirely crushed the Duke of Britany; but the court of England, notwithstanding the sums that were dispersed among them, would not so far sacrifice the interest of their country as to abandon this useful ally, who could at any time introduce their forces into the heart of France in case of a rupture with that kingdom, and had generally furnished them with a safe retreat in all their wars. They insisted therefore at the celebrated interview above-mentioned, that the Duke of Britany should not be molested on any account whatever. And indeed while they preserved a friendship with that Duke, the alliance with the Low-Countries was not so necessary as it became afterwards, when Britany became united to the French crown.

The Duke of Burgundy, who is represented as a Prince of an ambitious restless temper, after the truce with France, attacked the duchy of Lorraine, and made himself master of Nancy the capital, and the whole country; and elated with this success, determined to revenge himself on the Swifs, who had assisted the Germans against him: but the Swifs being supported underhand by the French King, gave the Duke two remarkable defeats. Not long after Lorraine revolted from him, whereupon he laid siege to Nancy a second time, when the Duke of Lorraine and the Swifs fell upon him again, entirely defeated his army, and he himself was found dead in the field of battle: whereupon the French King immediately seized upon his towns in Picardy, and endeavoured to procure an insurrection among the Flemings in his favour: nor could the Princess MARY, daughter and heiress of the late Duke, have prevented a revolt probably, if she had not married MAXIMILIAN Archduke of Austria, and son to the Emperor, whereby the Low-Countries and the country of Burgundy were preserved from falling under the dominion of France. The English court was at this time so corrupted with French money, that they made no attempt to prevent it, though England would have been first affected by so large a coun-

try's being added to France, which lay just over-against it, and abounded in shipping and the most useful manufactures. During the continuance of the war between the Archduke and the French, the latter first entertained several regiments of Swifs, and found them so useful, that they have ever since retained a body of them in their service. These two powers being pretty equally matched, and the French King declining in his health, a truce was concluded between them. In the mean time the Archduchess died at Bruges of a fall from her horse, leaving behind her a son named PHILIP, and a daughter named MARGARET. The French King made such an interest with the States of Flanders upon this occasion, that he prevented the Archduke's being declared guardian to his son PHILIP, and contracted with the States for the marriage of the Dauphin with his daughter MARGARET, carrying the young Princess, who was scarce two years old, into France to be educated as Dauphiness, against her father's consent: at which the King of England was pretty much alarmed, who till then had depended on the Dauphin's being married to his daughter ELIZABETH, in pursuance of the treaty of Pequigny, anno 1475. This had been his Majesty's principal inducement for making that peace, and abandoning his old ally the Duke of Burgundy; and, according to the French historians, he was so touched with the perfidiousness of King LEWIS, whom he had suffered to make such a progress in the Low-Countries, upon a prospect of this marriage, that the disappointment contributed to his last illness, of which he died. The French King did not survive him a year, of whom their writers give this character: That he was by nature neither beneficent nor liberal, though he seemed to be so when his affairs required it. He spared no costs to purchase an interest in the councils of the neighbouring Princes, or to debauch their chief Ministers; to gain the Governors of towns, corrupt Ambassadors, and embarrass his enemies. To take an estimate of him from his outward behaviour, he was a very religious prince: he went to confession once a week, took frequent pilgrimages, paid a great veneration to the relics of Saints, and bestowed many gifts on churches. But this did not make him a strict observer of his promises and oaths, or less deceitful and vindictive; tho' he does not seem to have acted so much the hypocrite in religion, as to have entertained a notion that those external performances would atone for the defects of true piety, which made him scrupulous sometimes in trifles, while he perpetrated the greatest villanies without remorse. He accomplished his design of making himself absolute master of his nobility, which he had always aimed at, but was not very nice in the means of effecting it, and wanting the hearts of his subjects was never perfectly easy. He left one son named CHARLES.

CHARLES VIII, at his accession was about fourteen years of age, and consequently had passed his minority according to the irrevocable ordinance, as it is called, of CHARLES V; but as the understanding of Princes is not superior to that of other people of these years, and the late King had taken particular care that his son should not be versed in politicks, or let into the mysteries of state, lest he should be practised upon by designing courtiers, this Prince, of all others, could not be supposed at such an age to bear the weight of government in his own person; and therefore

LEWIS

CHAP. XXXIV. LEWIS XI, had before his death appointed one on whom he might rely for the management of his affairs, and exercise the supreme authority in his son's name; and this was Madam de Beaujieu, the wife of PETER de Bourbon of Beaujieu, the late King's eldest daughter, and sister to his present Majesty, a lady every way qualified for such a trust. He designed however, that her husband, Monsieur de Beaujieu, should assist her in the administration, tho' he did not name him, because there were some Princes of the Blood nearer to the crown, that might dispute this post with him, who could not make the same objection to the Princess the King's sister.

But notwithstanding all the prudent foresight of LEWIS XI, he was no sooner dead, but there arose two powerful competitors, who disputed the supreme direction of affairs with Madam de Beaujieu, namely, LEWIS Duke of Orleans, the presumptive heir of the crown, and JOHN Duke of Bourbon, eldest brother of Monsieur Beaujieu, whose mature age, and the services he had done the kingdom, rendered his pretensions plausible; but Madam de Beaujieu offering to refer the matter to the determination of the States, which the rest could not with any colour oppose, and having the administration in her hands, in the mean time so established her interest, that the pretensions of the Duke of Orleans were scarce considered; and she had bought off the Duke of Bourbon, by promising him the post of Constable, which she knew he was ambitious of.

The Duke of Orleans, piqued at his disappointment, entered into a confederacy with the Duke of Brittany, and several of the French Nobility, against the court; but Madam de Beaujieu was so expeditious in assembling an army, and marching against them, before the confederates could join their troops, that the Duke of Orleans submitted, and agreed to lay down his arms, upon condition he might obtain the King's pardon, which was granted him. But I should have remembered, that while the Duke of Orleans was at the court of the Duke of Brittany, forming this confederacy against Madam de Beaujieu, he saw there the Princess ANNE, eldest daughter and heiress of that Duke, to whom he made his addresses as a lover, in which he was rivaled by several of the greatest Princes in Europe; and this was the foundation of several great events, as will appear in the ensuing history.

HENRY Earl of Richmond, the heir of the house of Lancaster, being at this time a prisoner in the court of the Duke of Brittany, and the Duke expecting every day to feel the resentment of the French court for his assisting the Duke of Orleans, offered to give the Earl his liberty, and furnish him with ships and forces to mount the throne of England, upon condition that he would assist Brittany against the attempts of the French, when he should see himself master of that kingdom; and this he apprehended would be easily effected, as King RICHARD, who had murdered his two nephews, and been guilty of many other barbarities to make his way to the crown, had rendered himself universally detested by his subjects. The Earl of Richmond, who had been confined near fifteen years, was not backward we may be sure to exchange his prison for a crown, and made no scruple of promising to support the Britons against their enemies if he succeeded. The Duke of Brittany therefore having provided him fifteen large ships, and put five thousand men on board, the

Earl set sail with them for England; but the fleet being soon after dispersed by a storm, he was forced to return to Diep, which indeed was his preservation: for King RICHARD having discovered the conspiracy, had fallen upon the Earl's adherents, and defeated them, and it is highly probable, the Earl would have fallen into his hands, if the storm had not prevented the descent. The Earl at his return to Brittany found that court strangely altered; for the old Duke being taken ill, and for some time delirious, King RICHARD had by bribing LAUDOIS his Prime-Minister, won him over to his interest, and obtained a promise from him to deliver the Earl of Richmond into his hands, of which he had scarce an hour's notice before he was to have been seized; he fled immediately to the French court; desiring their protection: here he met with fair words and promises, but that court did not seem very forward in promoting his enterprize upon England. The French historians indeed relate, that they furnished him with a fleet of ships, and four thousand of their best troops; but notwithstanding there were several Noblemen and Gentlemen in this expedition, I don't find that the Earl of Richmond's whole force amounted to two thousand men, when he made his second attempt upon England. He set sail from Havre de Grace the first of August 1485, and arrived at Milford-Haven in Wales, a few days after, where he was joined by the gentlemen of the country; and their numbers increasing every day, he marched to Leicester, and gave battle to King RICHARD on the two and twentieth of August. The King being defeated and killed in the engagement, the Earl of Richmond was immediately proclaimed King of England by the army, by the name of HENRY VII: on which great event I shall enlarge in the Description of England.

In the mean time the Duke of Orleans not being pleased with the administration in France, retired again into Brittany, where the ministry had made an alliance with the Archduke of Austria, now King of the Romans, who, since the decease of his late wife MARY of Burgundy, made his addresses also to the Princess of Brittany. The French court being determined to pursue the Duke of Orleans, marched with an army towards the frontiers of Brittany; whereupon the King of the Romans attacked France from the Low-Countries, and obliged them to desist from that enterprize for the present.

The French renewed their design against Brittany in the year 1487, and at the same time attacked the territories of the King of the Romans in the Netherlands, and having corrupted the subjects of these Princes, and fomented an insurrection against them in their very bowels, were very confident of success in both these enterprizes; nor were their expectations disappointed, for they surprized Terouen and St Omers in the Low-Countries, and defeated the forces of the King of the Romans. In Brittany they obtained a decisive victory, and took the Duke of Orleans prisoner; after which they put what terms they pleased upon the old Duke of Brittany, they obliged him to dismiss all such foreigners as had come to his assistance, to deliver up several of his strong towns into their hands, and promise not to marry his daughter and heiress to any person without the consent of the French court. This treaty was made the twenty-eighth of August, and about ten days after the Duke of Brittany died. In the mean time the

States of Flanders confederated together against the King of the Romans, and made him prisoner at Bruges, which occasioned a War between Flanders and the other provinces, so that the French had nothing to apprehend on that side. The King of the Romans was indeed restored to his liberty again after four months imprisonment, one of the conditions whereof was, that he should use his utmost endeavours to make peace with France. But the Emperor, father to the King of the Romans, soon after marching to his assistance, MAXIMILIAN was about to take a severe revenge of the rebellious Flemings, who thereupon called in the French, and found him employment for some time.

But to return to Britany: The French court pretended that this duchy was devolved on the crown of France for want of heirs male, and thereupon ordered their troops to make themselves masters of as many towns as they could. The King of England apprehending the ill consequences of suffering this country to be united to the crown of France, sent six thousand men to the assistance of the Dukes, who obliged the French to abandon several towns they had possessed themselves of, and prevented their reducing Britany this campaign. However, the English receiving no pay, and the Briton nobility disagreeing among themselves, most of the English returned home. The French King had now a fair opportunity of subduing this province; but considering he was never likely to enjoy it quietly, if the Princess ANNE should happen to marry any Prince of figure in Europe, he determined to marry her himself, notwithstanding he was already contracted to MARGARET of Austria daughter to the King of the Romans. While the King was deliberating on this project, the Princess ANNE and the King of the Romans came to an agreement, and were married by proxy, at which the French were very much alarmed; for as the King of the Romans was master of the Low-Countries, if he had been so of Britany he would always have had it in his power to give the French a great deal of disturbance: King CHARLES therefore not regarding his contract with MARY of Austria, or the espousals of the King of the Romans with the Princess, sent a deputation to her with proposals of marriage, and having bribed every one of her council to persuade her to it, he promised himself success; but the Princess, young as she was, discovered a great deal of spirit and resentment on this occasion: she had conceived an opinion of the King of the Romans, and had a perfect aversion to the French King and his whole nation, for the calamities they had brought upon her father and her country. Upon the first proposal of the match therefore she broke out into the most passionate exclamations against them: she reflected on the alliances she had made with the Kings of England and Spain, who had engaged to support her: but insisted with the greatest warmth on her marriage with MAXIMILIAN in the face of the Church, and declared she could never do a thing so shocking to her conscience; and had her allies been as near with their reinforcements as her enemy was, there is no doubt but she would have persisted in her resolution: but the King of France, who had already assembled his troops, and was not far from the confines of her country with a powerful army, attending the success of this negotiation, being acquainted with the resolution of the Princess, and at the same time advised by her treacherous council to hasten his march

before any succours could arrive to her assistance, he invested the city of Rennes, where the Princess was, before she had any notice of his march, and so terrified her with his preparations to storm the city, that she submitted to the advice of her council, who persuaded her that she had no other means left to preserve her country: they represented also, that as the former marriage was not consummated, a dispensation might easily be obtained from the Pope, which in those days was thought sufficient to satisfy the most scrupulous conscience. Thus this villainous ministry betrayed their sovereign into the hands of a man whom of all others she detested: and the marriage was solemnized and consummated the 13th of December 1491, even before any application was made to the Holy See for a dispensation; it was apprehended soon enough to procure that at any time before issue was born: I don't find the French King's precontract with MARY of Austria was much regarded neither, though she had borne the title of Dauphiness for several years; that Princess was upon this occasion sent back to her father to complete the affront: which sufficiently manifests how little the most solemn oaths and contracts of Princes are to be depended on. This very King CHARLES, by a treaty between the Kings of France and England, was first to have married the Princess ELIZABETH, daughter to EDWARD IV, which was broke through without any manner of excuse, that he might espouse MARY of Austria; and now this Princess is discarded in order to ravish the Princess of Britany: I can call it no better than a rape, where one comes with an armed power, and forces a lady to his bed. By the same means he obliged her to marry him, he compelled her to sign an instrument to which he gave the name of a treaty of marriage, where, in consideration of the honour he did the Princess in taking her to his wife, she resigns all her right in the duchy of Britany to the King and his successors, notwithstanding it should happen that she died without issue before him: and in case he died before her, she was obliged to marry the succeeding King, or next Prince of the Blood; but if she had no issue by his present Majesty, it was granted in her favour that she should possess her duchy of Britany during life. As to the success of this forced marriage, it is observed, that tho' the King had three children by her, viz. a Dauphin and two Princesses, they all died in the cradle, and after a very short reign the kingdom descended to a collateral branch of the royal family; and had the children survived, their legitimacy might very well have been questioned on more accounts than one.

The King of the Romans was provoked beyond all bounds when he heard of the match, and spoke of it in such terms as it deserved: and not content with drawing up memorials and declarations against it, he formed an alliance with the Kings of Spain and England, in order to revenge so insupportable an affront. The two Kings readily came into his measures, and the parliament of England were so sensible that the union of Britany to the French crown would be of dangerous consequence to them, that they made no scruple of granting his Majesty the supplies he asked. The King thereupon immediately assembled a gallant army of twenty-five thousand men, and transported them to Calais; but when he arrived there the King of the Romans forces were not raised, and the Spaniards he found were as much

much unprepared as the Germans; whereupon the French King making proposals of peace to him, and backing them with such a bribe as was not easily to be resisted, especially by a Prince of HENRY the Seventh's covetous disposition, namely, seven hundred and forty-five thousand crowns, an immense sum in those days, he consented to a peace and returned to England, by which, and the money that was given him to carry on the war by the parliament of England, and some other rapacious projects, he heaped together a prodigious treasure, inasmuch that he was esteemed one of the richest Princes that ever sat on the English throne.

1493.

An expedition  
of the  
French  
against  
Naples.

The King of the Romans, we may believe, stormed sufficiently upon this occasion, nor were the English parliament perfectly satisfied, to see the taxes they had raised for the war put in the King's pocket, without having effected any thing; but they were answered, that the King had done very prudently, and saved them a great deal of treasure, by putting so sudden an end to the war, and therefore they had no reason to complain. The French King and the King of the Romans soon after clapt up a peace, whereby the French renounced the Earldoms of Artois, Burgundy, and Charolois, which were to have been the portion of MARGARET of Austria if the King had married her: the French King also gave up his right in Roussillon and Cerdagne to the Spaniard, whereby he procured a peace with that Prince; and all these concessions he was induced to make, that he might be at liberty to pursue his favourite project upon the Kingdom of Naples. Some writers are of opinion he had a design to have subdued all Italy. He had indeed a specious pretence to the Kingdom of Naples, as he was heir to the Duke of Anjou, whom JOAN Queen of that kingdom had adopted, tho' scarce any of the family had been in possession of it for any time. The French also laid claim to Genoa, and some other territories in Italy, and could they once have established themselves in Naples, possibly would not have wanted pretences to have seized the rest; which the Italian Princes could not but foresee, and for that reason were generally in a confederacy against France. But LEWIS, surnamed MORUS, or the Black Duke of Milan, who had the regency of that duchy during the minority of his nephew JOHN GALEAS, the true heir, and had found an opportunity of making himself master of it to the exclusion of his ward, apprehending he might be deposed by FERDINAND King of Naples, whose grand-daughter had married JOHN GALEAS, incited the French King to assert his title to Naples, promising he would favour his pretensions, upon condition that France would maintain him in the duchy of Milan. The Pope also, upon some assurances given him that the French King would advance his family, and grant him a territory in the kingdom of Naples, was induced to come into their measures.

1494.

FERDINAND King of Naples, 'tis said, was so terrified at this formidable confederacy against him, that he fell ill, and died upon it, and was succeeded by his son ALPHONSUS, a Prince hated by the Neapolitans and feared by the neighbouring powers, as his father had been. In the mean time the French King ordered the rendezvous of his forces to be at Lyons, from whence he marched through Piedmont, and arrived at Asti on the ninth of September, where he fell ill of the small-pox; but being out of danger in a week's time, he sent ambassadors to the several States of Italy, to declare that he had no design upon their liberties, his only

view was to procure the restitution of the kingdom of Naples, which belonged to him, and afterwards to march against the Turks for the general advantage of Christendom. The King afterwards continued his march thro' the territories of Milan, where he was attended by LEWIS the usurper, with great professions of friendship and esteem, tho' the French understood he was endeavouring at the same time to embarrass their affairs, and even entering into a confederacy with the rest of the Italian Princes to ruin their army; whereupon the King held a council of war, to deliberate whether he should advance any further, and it being carried for proceeding in the enterprise, he continued his march to the frontiers of Tuscany, where that Duke came to meet him, and delivered up to him Serefana, Serefanello, and Pietra Santa, which defended the passes into his country, to the surprise of the rest of the Italian Princes; for by this means he gave the French an opportunity of seizing his territories, when great part of their army must have perished if he had opposed them in that barren country, the French having brought scarce any provisions along with them. This submission of the Florentines removed the greatest difficulties in the expedition. The French King continued his march, and made a kind of a triumphant entry into Lucca and Pisa, in the last of which places he left a garrison, and advanced to the city of Florence, where the inhabitants unwillingly raised him 50000 ducats. He came with his army soon after into the neighbourhood of Rome, to the great terror of the Pope, who notwithstanding he had invited the French King into Italy, had since altered his mind, and entered into a conspiracy to destroy his army, which the King was not unacquainted with: he durst not however oppose his coming to Rome; whereupon the King made his entry into that city on the 31st of December 1494, by torch-light, at the head of his troops, whom he ordered to seize upon all the important posts about the town. The Pope at first shut himself up in the castle of St Angelo; but upon his Majesty's summoning him, and bringing his artillery before it, his Holiness consented to a treaty, wherein he agreed, that the French should remain in possession of Viterbo, Teracina, Civita Vecchia, and Spoleto, which the King had made himself master of in his march. Afterwards the Pope returned to his palace of the Vatican, where the King made him a visit. It was observed, that his Holiness was very lavish of his honours towards this Prince, of whom he stood in the utmost dread, and even gave orders that justice should be administered in his name while he staid in Rome; in all outward appearance there was a perfect reconciliation between them, and that the King might not suspect his sincerity, he ordered his son, the Cardinal of Valence, to attend him in the expedition. His Majesty having staid about a month in Rome, advanced with his army towards Naples, hearing every day of the revolt of some town or other in that kingdom, ALPHONSUS being universally hated for his tyranny, of which that Prince was so sensible, that he surrendered his crown to his son FERDINAND, as the most effectual way to preserve it in his family, and afterwards fled to Sicily. But FERDINAND, was not

CHAP.  
XXXIV.The  
French  
King enters  
Rome.

1495.

able to stop the progress of the French, his army abandoned him; Capua, and even the city of Naples, surrendered without striking a stroke, every town in the kingdom submitted except Brundisium and Gallipoli; whereupon FERDINAND retired

C H A P.  
XXXIV.

tired to the island of Iſchia, with his family and ſome troops that remained faithful to him, in hopes of maintaining himſelf there, till he ſhould meet with a favourable opportunity of returning to his throne, for he knew that the Emperor and the Italian States had entered into a confederacy againſt the French King; and this Prince ſeems apprized of it by the haſte he made from thence: he begun his march towards France the twentieth of May 1495, with an army of nine or ten thouſand men; the reſt he left with the Count of Montpenſier to ſecure his conqueſts. When he came to Rome, the Pope had retired to Perugia, and would not ſee him; and his ſon, whom he had left with the King as an hoſtage, had made his eſcape. Here his Maſteſty received intelligence, that his enemies had drawn their forces together, and would render his retreat very difficult, as he afterwards found it; for they fell upon him at Tortona, and had infallibly defeated him, if part of their army which had routed his left wing, had not fallen upon the baggage, and thereby given him an opportunity of rallying his troops, and continuing his march, which he did with the utmoſt hazard, and came to Lyons the ſeventh of November. The French King had no ſooner left the kingdom of Naples, but FERDINAND aſſiſted by GONſALVO, a celebrated Spaniſh General, returned thither, and attacked Reggio, which ſurrendered to them, with ſeveral other towns; they afterwards met with a defeat, but being re-inforced, and making a ſecond attempt, the whole country in a ſhort time returned to the obedience of King FERDINAND, moſt of the French perishing either by ſickneſs or the ſword. Such, ſays a French hiſtorian, was the ſucceſs of CHARLES the Eighth's enterprize upon Naples: an enterprize undertaken with much imprudence, continued with wonderful ſucceſs, and at length ſhamefully abandoned with the loſs of a great number of brave men. This was the laſt remarkable event in his reign. He died ſuddenly on the ſeventh of April 1498, in the twenty-eighth year of his age, and fifteenth of his reign, leaving no iſſue, tho' he had ſeveral children who died in their cradles. He was ſucceeded by LEWIS Duke of Orleans.

1497.

1498.

LEWIS  
XII.

LEWIS XII began his reign at a mature age, being in his thirty-ſeventh year; and as he was naturally a Prince of an excellent temper and genius, improved by experience, rendered his people extremely happy. He continued all the officers of ſtate in their poſts, ſome of whom had dealt very roughly with him in the preceding reign; but he endeavoured to forget all the ill uſage he had received when he came to the crown: And that the people as well as the court might taſte of the lenity of his adminiſtration, he remitted firſt a tenth, and afterwards a third of the uſual taxes. He alſo regulated the courts of juſtice, and endeavoured to redreſs the extortions that were committed under the colour of law. But among ſo many commendable actions, there was one which carried but a very indifferent aſpect, and that was his marriage with the late Queen, the heiress of Britany; to effect which he was forced firſt to divorce the Princeſs JANE the daughter of King LEWIS XI, who had lived with him as a wife for twenty years. He pretended indeed that her father had obliged him to marry her when he was but fifteen years of age, and that he then privately made a proteſt in form, and declared he would never touch her, tho' outwardly to avoid the King's diſpleaſure he treated her as a wife. But had not the Queen he

1499.

afterwards married been heiress of Britany, with which he muſt have parted if ſhe had married elſewhere, poſſibly he had never thought of a divorce from the Princeſs JANE; unleſs the diſagreeableneſs of her perſon might be ſome inducement, for ſhe was very deformed and infirm; tho' this one would have thought ſhould have occaſioned it ſooner, if at all. He had indeed the approbation of the Pope for all this, which was thought ſufficient in thoſe days to ſanctify the moſt flagrant crimes; and as it was in his Maſteſty's power at this time to oblige his Holineſs in ſome temporal concerns, he ſoon procured the matter to be diſpatched at the court of Rome. Pope ALEXANDER VI was now about to make the fortunes of his ſon the famous CÆſAR BORGIA, who quitted a Cardinal's cap in order to be a temporal Prince; his Holineſs hoping to effect his deſign chiefly by the aſſiſtance of the French King, made CÆſAR the bearer of the bull for the divorce, and in purſuance of a treaty concluded between them, the King then gave him the duchy of Valentinois, a penſion of twenty thouſand livres per ann. with a poſt in the army. He alſo agreed to procure him CHARLOTTE the ſiſter of the Queen of Navarre for a wife, and to put him into poſſeſſion of ſeveral towns in Italy; for the Pope and the French were in a confederacy againſt the Duke of Milan, and the King was juſt upon the point of entering Italy with his army to attack that duchy, while the Venetians penetrated it on the other ſide.

C H A P.  
XXXIV.

The Duke of Milan had aſſembled an army of eighteen or twenty thouſand men to oppoſe the French and Venetians; but having no allies, and being betrayed by his officers and generals, the whole duchy was loſt within twenty days, except the caſtle of Milan, and he himſelf forced to retire into Germany: the caſtle alſo ſurrendered within a few days, whereupon the French King made a triumphant entry into that city on the ſixteenth of October 1499; after which he gave CÆſAR BORGIA the command of four thouſand Swiſs and three hundred launces, in order to recover thoſe towns he had ſtipulated to put him in poſſeſſion of: and having conferred the government of the Milanefe on TRIVALCA, a perſon of a haughty violent ſpirit, he returned to France. The new governor behaved himſelf with that tyranny and indifcretion, ſuffering his ſoldiers to inſult the natives and abuſe their women, that they ſoon became ripe for a revolt; of which their old Duke LEWIS MORUS having advice, aſſembled eight or ten thouſand Swiſs, and coming before the city, eaſily made himſelf maſter of it by the aſſiſtance of the diſaffected within; the gariſon retiring into the caſtle: moſt of the towns in the duchy followed the example of the capital.

The  
French  
invade  
Milan.

The French King receiving advice of the revolt of the Milanefe, aſſembled a great army and re- paſſed the Alps; but what was of more ſervice to him than his forces, was a treaty he made with the Swiſs, who for a ſum of money betrayed the Duke LEWIS MORUS into his hands, and he was carried priſoner into France, where he died about ten years after. His two ſons fled into Germany to the Emperor; whereupon the Milanefe once more came under the power of the French. I don't find any title they had to this duchy, but their writers ſeem to juſtify the enterprize, on account of the diſturbance the Duke gave them in their retreat from Naples; adding that he was a uſurper, and had poiſoned his nephew to obtain the ſovereignty, and therefore did not deſerve a better fate.

This conquest being effected, the King had a design to reduce Naples; but the Emperor being offended at his seizing of Milan, which was a fief of the Empire, and deposing the Prince who had been legally invested in that duchy, and on this account inviting the Princes of the Empire into a confederacy against France, the King did not think it prudent to march his army so far from home. Besides, FERDINAND King of Spain made him an offer to divide the kingdom of Naples with him, and depose the present Prince FREDERICK, who was descended from a base branch of the house Arragon, and therefore, as they were pleased to infer, could have no legal title. And it was accordingly agreed, that FERDINAND King of Spain should have Apulia and Calabria, as it lay most convenient for him in the neighbourhood of Sicily which belonged to him; and that the French King should have the north part of Naples, containing the Abruzzo and Naples Proper. The Pope also came into this treaty in hopes of augmenting the territories of his son CÆSAR BORGIA, now Duke of Valentinois.

The King of Naples in the mean time published manifesto upon manifesto, asserting his right to that kingdom; but having neither forces or allies to support him, the Kings of France and Spain, each of them, sent an army, and took possession of the country, dividing it between them according to the above-said treaty, and the Pope granted them the investiture of their respective shares. King FREDERICK having shut himself up in the castle del Ovo in Naples, soon found himself obliged to capitulate, and was permitted by the French General to retire to the island of Ischia; some time after he obtained leave to come to France, and transferred all his right to the kingdom of Naples to King LEWIS, who whereupon granted him the duchy of Anjou, and thirty thousand ducats per annum, which he enjoyed till he died.

A war be-  
tween the  
Kings of  
France  
and Spain  
on the di-  
vision of  
Naples,  
1502.

The settling the limits in the kingdom of Naples between the Kings of France and Spain, occasioned a war between them, which lasted about two years, when the Duke of Nemours, the French General, was entirely defeated and killed in the field of battle, whereupon the whole country submitted to the Spaniards. The French writers relate, that their troops were successful till their King suffered himself to be amused by a treaty, which occasioned his not sending timely reinforcements, while the King of Spain continued to send supplies from time to time, and thereby gained such a superiority that there was no making head against him; whereupon the French were driven out of the country, and most of them perished before they reached France (which has been their fate more than once in their attempts upon Naples). The same year the French were defeated in two enterprises against Spain on the side of the Pyrenees; but a truce was at length concluded between the two nations for three years, which gave the King of France, and his allies the Pope and King of the Romans, an opportunity of falling upon the Venetians, whom these Princes were determined to destroy. The French King was highly provoked with them for their treacherous underhand dealings, whereby they crossed his designs in the Neapolitan war. The Pope was exasperated against them for seizing some of the towns he laid claim to in Romania; and the King of the Romans had much the same cause of complaint against them. The Duke of Ferrara, the

1504.  
A confe-  
deracy a-  
gainst the  
Venetians.

Marquis of Mantua, the Republick of Florence, and the King of Hungary, also came into the confederacy against them, every one of these States having pretensions to some town or territory the Venetians had possessed themselves of; in so much that it was evident if every one of the parties in the confederacy were to be satisfied in their respective demands, Venice would not have a foot of land left upon the Continent. The design of the allies was indeed entirely to demolish their State: they were animated more by a spirit of revenge against that proud republick, for pretending to be the umpire of the affairs of Europe, and to hold the balance amongst them, than by the hopes of obtaining satisfaction on their antiquated claims. And had the execution of the treaty been as speedy as it was intended, the Venetians had infallibly been ruined: but the delays made by the King of the Romans, and a dangerous fit of illness which seized the French King, gave the Venetians an opportunity of applying to the Pope, and drawing him off from this formidable alliance; whereupon all the other parties laid aside the design for the present. This confederacy against the Venetians was however revived again in the year 1508, and the King of Spain also came into it, on account of some towns in Apulia which they had possessed themselves of during the Neapolitan war, and refused to deliver up. The Venetians offered the Pope a town or two, in order to appease him, and made their application to the Emperor to divert him from the war; but all the parties to the league were immovable, and remained determined to destroy the Republick; whereupon they raised an army, garrisoned their towns, and made all necessary preparations for their defence. The King of France took the field against them first, and having passed the Alps, sent a herald to declare war against them. The Pope at the same time published a thundering bull against the Republick, requiring them to restore the towns and territories they had usurped from the Holy See, on pain of an interdict and eternal damnation; which the Venetians answered by a manifesto.

1508.

In the mean time the French army advanced, and came to an engagement with the forces of the Republick on the fourteenth of May 1509, and defeated them; and within less than three weeks after the French King made himself master of Cremona, Bresse, Bergamo, Crema, and of all the other towns and castles he pretended belonged to him as part of the duchy of Milan, and had been dismembered from it. At the same time the Duke of Ferrara, who commanded the Pope's forces, entered Romania, and took Ravenna and Faenza, the most considerable towns he had demanded of them. He seized also upon the territory denominated the Polesin de Rovigo, which he alleged the Venetians had dismembered from his duchy of Ferrara. The Duke of Brunswick, the Emperor's General, also retook Trieste and several other towns from them; and the Marquis of Mantua others, which put the Republick into the utmost consternation. They applied themselves hereupon to the Emperor, the Pope, and the King of Spain, offering to submit to any terms if they would break with the French: and they were so successful in their negotiations with the King of Spain, that he offered to make peace with them on condition they would restore the towns in Apulia, which they did. The Pope they found alarmed at the great progress of the French arms in Italy,

CHAP.

1512.

The French driven out of Italy, and the Venetians almost out of the continent.

and prevailed with him to desert his confederates and join in an alliance with the Swiss and their State to drive the French out of Italy. The King of England also acceded to this treaty, and was to attack France on the side of Picardy by way of diversion. The King of France, on the other hand, entered into a more strict alliance with the Emperor, and by the assistance of five Cardinals devoted to their interest who fled from Rome, they called a General Council at Pisa to enquire into the means by which the Pope acquired the Pontificate, and threatened to depose him and set up another in his room, which gave his Holiness no small uneasiness. The French King also attacked and took the city of Bologna from the Pope, and defeated his forces; and, as the French writers affirm, was in a condition at this time to have made himself master of Rome itself, and even of all Italy, if he would have attempted it: but he observed, that the greater were his conquests, and the further he advanced in this country, the more enemies he created. The Spaniards were afraid of Naples; and neither England or the Emperor could with good policy see the French add Italy to their monarchy. The Pope therefore knowing he should be very well supported, was so far from submitting to the French, that he called a General Council at St John de Lateran's in Rome, in opposition to that of Pisa, in order to render all their decrees ineffectual; and proceeded to anathematize the Cardinals and Prelates that composed it. He laid the town of Pisa also under an interdict for harbouring them, whereupon a tumult was raised by the citizens, and they were forced to remove to Milan.

In the mean time the Swiss attacked the French in the Milanese on one side, while the Pope and the Spaniards made head against them on the other. The King's forces nevertheless were successful still against the Pope, the Spaniards, the Venetians, and the Swiss, till England declared war against France, and then the French found themselves under a necessity of withdrawing most of their forces out of Italy, whereby they lost Milan and all their conquests on that side the Alps, in almost as short a time as they made them. The King of England demanded Normandy, and all the territories in France which formerly belonged to the English; and having the Emperor for his ally, the French King thought it more advisable to abandon his foreign conquests, than hazard the loss of his own kingdom. Upon the retreat of the French, MAXIMILIAN SPORZA, son of the late Duke, had the duchy of Milan restored him by the Venetians and the Swiss. The republic of Genoa again revolted from the French, and all the Princes in Italy enjoyed their respective territories again, only there were some disputes which still remained between the Pope, the Emperor, and Venetians. About the same time the Spaniards made a conquest of the kingdom of Navarre, though that Prince was supported by France. The French King still looked with a covetous eye upon the duchy of Milan, and observing that the Venetians were on ill terms with the Pope and the Emperor, entered into an alliance with that Republic against them; and sending some troops over the Alps that joined the Venetians, he recovered great part of the Milanese again. The Swiss and Spaniards however soon after obtained an entire victory over the French army, and compelled them once more to fly the country, while their miserable allies the Venetians were beaten almost out of the Continent,

retaining no other towns there but Padua and Trevisa.

CHAP. XXXIV.

The French ascribe all their ill success in this Italian war, to the invasion of their country by the English and Imperialists on the side of Flanders, of which I am next to give an account; only for the satisfaction of those who may be inquisitive to know what became of the council of Pisa, I must first take notice, that this council having been adjourned from Pisa to Milan, was upon the late revolution in the Milanese adjourned to the city of Lyons in France; whereupon the Pope laid that kingdom under an interdict, and especially Lyons where it was held. While the King in vain endeavoured to establish the council, and persuade other Princes to join with him upon that occasion, the Emperor declared that he adhered to the council of Lateran, and revoked every thing he had done in favour of the other, condemning all the resolutions of the Gallican Church on that subject. And though this Pope died in February 1512-13, and was succeeded by LEO the Tenth, a prelate of a much more peaceable disposition, the interest of the French at Rome was not at all improved, and they were at length obliged to drop the council of Pisa.

1513. The end of the council of Pisa.

The war between France and England was carried on as well by sea as land: their fleets engaged twice, but there happened nothing decisive at sea. The most considerable action was near St Malo's in Brittany, where the two Admirals grappling together, took fire and were blown up, whereby a multitude of men were lost; for the French Admiral alone, 'tis said, had 1200 men on board. The first attempt the English made by land was in Guienne in the year 1512, whither the English sent a good body of troops to join the Spaniards; but the latter instead of uniting their forces with the English for the recovery of that duchy, as had been stipulated, took the opportunity of this diversion to seize upon the kingdom of Navarre, as has been related above; whereupon the English returned home. The following year 1513, HENRY the Eighth, King of England, embarked with an army of five and twenty or thirty thousand men, and landed at Calais, from whence he marched and laid siege to Terouen in Flanders, being joined by the Emperor MAXIMILIAN with a body of forces almost equal to the English. The French made an attempt to raise the siege, and were handsomely beaten: and as their gens d'arms did not behave very bravely, but made less use of their lances than their spurs, this engagement obtained the name of the Battle of Spurs. The French say this was but a detachment of their army that came to the relief of Terouen, and that they did not make their utmost efforts to raise the siege, because they were obliged to send part of their troops into Burgundy to make head against the Swiss and Imperialists, who had entered their country on that side. But whatever their reasons were for not venturing a general battle, Terouen surrendered after a siege of nine weeks, after which the confederates laid siege to Tournay, and took it, and this put an end to the campaign. JAMES the Fourth of Scotland, according to the custom of that nation, invaded England while King HENRY was engaged in the French war, but had the misfortune to be defeated and killed at Flodden-field. The French King after such a train of ill success, endeavoured to obtain a peace with England, which he effected by marrying the Princess MARY, the sister of King HENRY the Eighth, and paying that Prince a million of crowns towards

wards the charges of the war. Some English politicians were not pleased with this treaty, apprehending that King HENRY had such a superiority of troops, and such powerful allies, that he might have made himself master of Normandy, and even of all France: while others held, that admitting the conquest of France could have been effected, it must have cost England a great deal of blood and treasure; for which the English could have expected nothing in return, but to have been made a province to the larger kingdom; and had they retained Normandy, or any other part of France, this would only have engaged them in perpetual wars, to maintain which the nation must have been burthened with taxes. Nor is this the only reason why a subject of England should be averse to foreign conquests, there is still another more substantial than the former, and that is the endangering his liberty and property; for foreign territories must be maintained by standing forces, which an arbitrary Prince may bring over at pleasure, and with them levy what money he pleases upon his subjects at home. Nothing is more evident than that as money will raise soldiers, so soldiers will raise money if they want it, provided they are quartered in a country where it is to be had: and for this reason some people are against our having so much as a single town on the other side the water, because it will ever furnish the Prince, with a specious pretence to raise an army to defend it, when he is pleased to say it is in danger.

But to reflect a little further on the wisdom of our ancestors. The reason of their entering into this war was to reduce the exorbitant power of France, then as well as now a very powerful kingdom; and as soon as they had compelled her to relinquish all her new acquisitions, and reduced her to her former bounds, they had gained their point: they had no intention to destroy the French nation, or bring it to such a state that it might not be in a condition to check the ambition of the Emperor: this had been over-doing it, and only pulling down one exorbitant power to create another. And the same wisdom seemed to reign in the English councils at the peace of Utrecht: they found the French sufficiently humbled, and had put the Imperialists in possession of several fine countries that were taken from them. But they thought it highly advisable to stop here, and not aggrandize the Emperor to that degree as to render him as terrible in Europe as the French had been. And yet had we a set of politicians among us, that nothing would satisfy but a total extirpation of the French. They had not foresight enough to discern, that in a very few years we might want their assistance to balance the power of the Emperor, tho' they have since been sufficiently convinced of their mistake.

But to return to the French King LEWIS XII. He survived the peace and his marriage but a very little while: and those people who will suffer no event to pass without assigning the cause of it, assure us that his death was occasioned by his too great complaisance for the young Queen, who was one of the finest Princesses in Europe, and whose demands 'tis supposed the old King was perfectly unable to satisfy. But leaving these gentlemen to their conjectures, certain it is he was taken ill of a fever attended with a dysentery, of which he died on the first of January 1514-15, in the fifty-fourth year of his age, and the seventeenth of his reign, having never had any legitimate issue,

whereupon the crown devolved on his second cousin FRANCIS, Count of Angouleme and Duke of Valois,

FRANCIS Count of Angouleme and Duke of Valois, nephew of the late King, succeeded to the crown in January 1514-15, in the 21st year of his age.

Immediately after his accession he renewed the alliances which his predecessor had made with the King of England and the Venetians. By the treaty with the latter they were obliged to assist him in the conquest of the Milanese, and France engaged to recover the towns the Republick had lost in Italy. On the other hand, he found the Pope, the King of Spain, and the Swiss, in a confederacy against him for the defence of the Milanese, and MAXIMILIAN SPORZA the new Duke. He determined however to pass the Alps, and attempt the recovery of that duchy once again, and was encouraged in this enterprize by the Genoese, who at this time put themselves under the protection of France.

The Swiss having notice of his design, possessed themselves of all the usual passes of the Alps; but the King discovered another, a very difficult one, by the valley of Barcelonetta, thro' which the French armies had never before penetrated into Italy; and making a feint with part of the army, as if he intended to march the common road, he sent a strong detachment of his forces, and seized that on the side of Barcelonetta without any opposition; whereupon the Swiss withdrew their troops from the Alps, and retired into the Milanese, whether the French followed them. The Pope and the Spaniard finding the King had actually entered Italy, began to think of treating with him, and never sent their forces to join the Swiss, as had been agreed, which occasioned their defeat at Marignan, not far from Milan, after they had maintained the fight bravely for two days, and lost ten or twelve thousand of their men: the French also were so severely handled that they did not think fit to pursue them. Upon the loss of this battle, most of the towns in the Milanese, with the capital city itself, opened their gates to the conqueror: whereupon the Duke, MAXIMILIAN SPORZA, who had retired into the castle of Milan, with a good garrison, capitulated, and agreed to surrender his duchy to the French King, upon condition he should allow him a pension of sixty-thousand ducats per annum; and thus the French became entire masters of the Milanese within less than a month after the battle of Marignan. Their allies the Venetians in the mean time recovered most of the towns they had lost in the last war. The Pope hereupon entered into a treaty with the King, by which he yielded Parma and Placentia to him: and his Majesty on the other hand promised to assist the Pope in the recovery of the duchy of Urbino, and consented to abolish the Pragmatick Sanction, and to establish the Concordat in the room of it; whereby it was agreed that the King should have the nomination of bishops and abbots in France, but that the Pope should retain certain profits out of the principal ecclesiastical benefices.

His Majesty while he continued at Milan endeavoured to bring the Swiss to temper, and was so successful as to renew the ancient alliances with eight of the cantons. As to the rest of the powers on that side of the Alps, they all came and congratulated him on the success of his expedition, though many of them dreaded nothing more than to see the

CHARLES  
V. chosen  
Emperor.

the French established in Italy. His Majesty having constituted the Duke of Bourbon Lieutenant-General of the Milanese, returned home, and arrived at Lyons in the beginning of February 1515-16. The French historians relate, that he was under great apprehensions at this time of being invaded by the King of England, whose Prime-Minister Cardinal WOLSEY was piqued at his denying him the bishoprick of Tournay; but the rest of the English Council being against a war with France, that enterprize was laid aside for the present. WOLSEY however gratified his spleen, by inciting the Emperor to fall upon the French in Italy. This Prince recovered several places in the Milanese; but when the Generals were upon the point of coming to an engagement, the Swiss on both sides, of whom the greatest part of each army was composed, refused to fight. One reason they gave was, that they had stipulated by their respective treaties with these powers, that they would not serve against their own countrymen: but the principal was, that they were not paid, either by the French or Germans, and therefore took the liberty of returning home; from whence came that common saying, No Money, no Swiss: after which the Emperor thought fit to retire into the Trentin, and abandon his conquests, while the Swiss plundered all the country in their return, according to custom, and paid themselves. The French King about this time furnished the Pope with a body of cavalry, with which he reduced the duchy of Urbino, taking it from the true proprietor Duke FRANCIS MURY, and transferring it to LAWRENCE DE MEDICIS, his Holiness's nephew, in pursuance of the late treaty between the Pope and his Majesty.

The following year produced a peace between France, Spain, the Emperor, and Venetians, whereby Verona was restored to the last. And now that republick saw themselves in the possession of all the places that had been taken from them by the confederacy of Cambray.

The King of France having bribed Cardinal WOLSEY, the Prime-Minister of England, easily found means to purchase Tournay afterwards of the King of England for six hundred thousand crowns, and a peace was thereupon concluded between the two nations; to cement which, the Dauphin, who was under two years old, was married to the Princess MARY, the eldest daughter of HENRY VIII, and under four years of age; but this match, like most others that are made so very early, came to nothing. WOLSEY, the French historians assure us, had agreed also to deliver up Calais to the French; but the King of Spain having notice of it, out-bid the King of France, and having drawn off the Cardinal from his interest, ever after played him upon France with great advantage.

About this time the Kings of France and Spain became competitors for the Empire upon the death of the Emperor MAXIMILIAN, which happened on the nineteenth of January 1518-19. CHARLES King of Spain proved the fortunate man: the German Princes, 'tis said, were apprehensive that if they had chosen FRANCIS, he would have endeavoured to reduce them to the same condition the vassal Princes of that kingdom had been reduced, and that they should lose the Sovereignty they enjoyed in their respective principalities. It is natural also to suppose, that CHARLES, who had resided in the Emperor his grandfather's court during his minority, and was personally known

to the Electors, should have a better interest among them than a foreign Prince, whom they had always looked upon as the greatest enemy to their country.

This union of the Empire and Spain under one head gave the French King some uneasiness. He found his dominions almost surrounded by the territories of his rival, and considered how he might form an alliance sufficient to oppose him: and first he procured an interview with the King of England near Calais, as the French relate, and represented to him the danger they were both in of CHARLES's rendering himself universal monarch; and 'tis said he procured a promise from the King of England to assist him if he should be attacked. However true this relation may be in the main, certain it is the French writers are mistaken in one circumstance, namely, as to the Kings of England and France having had an interview before the Emperor's conference with the King of England; for the Emperor passing by sea from Spain to the Low-Countries, was entertained by HENRY VIII at Dover, before he went to Calais to meet the French King. The historians of both nations however agree, that the Emperor and King FRANCIS were very lavish of their presents and promises to WOLSEY, whose ambition for the Popedom they were well acquainted with: It is even said, that the French King assured him of fourteen voices in the conclave at the next election; but that the Emperor demonstrating to the Cardinal that he could procure him a greater number, he immediately deserted the French interest, and went over to the Imperialists. Thus the fate of kingdoms is frequently determined by designing ministers; Princes made to prevaricate and break their contracts to their eternal dishonour, and sometimes utter ruin, only to advance the particular views of the treacherous adviser; and this perhaps because the Sovereign will not give himself time to consider his own, or his people's interests, but takes things upon trust without examination. And what wonder is it in such cases, if the Minister has the adoration of the croud, while the Prince is contemned, and perhaps scarce thought of, even while he lives and bears the royal title? He may be stiled God's Vicegerent on earth, but unless he imitates the Deity in all his imitable perfections, his truth, his justice, and concern for the welfare of mankind, particularly his own subjects, the people will infallibly withdraw their veneration and dependance on him: nor is it fit a Prince should enjoy the splendor of a crown, while he refuses to bear any of the weight of it. But to return to our history: The Emperor, 'tis said, obtained a promise of the King of England that he would not assist France, but offer his mediation in case any differences arose, and take up arms against either of the parties who should refuse his arbitration.

While the Emperor was absent from Spain, there happened a rebellion in that kingdom, which the French King looked upon as a favourable opportunity to attack his territories on that side; therefore he first assisted the deposed King of Navarre to recover his country, and afterwards penetrated into Castile: but the regency of Spain having assembled their troops, defeated the French, and recovered Navarre again the same campaign it was lost. Another attempt the French King made against the territories of the Empire on the side of Luxemburg; not openly, but by giving LE MARK, Lord of Sedan, liberty to raise forces

in France, with which he attacked the Emperor's towns, upon pretence of some injustice that Prince had done him. The French King indeed disavowed what the Lord of Sedan had done; nor did he raise an army to support him. However, the Emperor being satisfied his Majesty was at the bottom of it, after he had ravaged the territories of that Lord, and razed his fortified towns to the ground, he entered the dominions of France, and took Tournay, and some other places; while the French on their side made themselves masters of Bouchain, Landrecy, and some other small towns: and thus a war was commenced between these two powers, which lasted many years, the King of England in vain offering his mediation.

The war was about the same time begun in Italy, where the Pope, the Emperor, the Duke of Tuscany, and other Princes, had entered into a confederacy to drive the French out of that country, and constitute FRANCIS SFORZA, the brother of MAXIMILIAN, Duke of Milan. The French, who had behaved themselves very insolently, made this no difficult matter to effect: the inhabitants of the Milanese were all ready to join them. The death of Pope LEO X, however put some stop to the operations of the war; but Cardinal ADRIAN, preceptor to the Emperor, being elected in his room, all things went on to the wish of the confederates. (The Emperor it seems had made a tool of WOLSEY, and never intended to advance him to the pontificate.) They marched towards Milan, and having made themselves masters of several places, that capital opened its gates and received FRANCIS SFORZA for her sovereign. Soon after the French being joined by the Venetians, and having received some other reinforcements, attacked the Imperialists and Italians, commanded by the Pope's General PROSPER COLONNA, at Bicoque, a palace and park of the Dukes of Milan, about a league from that city, surrounded by a wall and ditch. They were not able to force the Italian camp, but were repulsed and entirely defeated; whereupon Genoa and the whole Milanese revolted from the French, except the castles of Milan, Novara, Pisighitone, and Cremona. The Venetians also deserted the French interest, and made an alliance with the Emperor against all powers that should disturb the repose of Italy for the future; never expecting to see the French in Italy again so soon as they were, having so much business upon their hands on the side of the Pyrenees and Picardy; for the English the year before had declared war against them, and in pursuance of that declaration landed thirteen thousand men at Calais, under the command of the Duke of Suffolk, who was to have been joined by a like number of Imperialists; but the latter not bringing more than five or six thousand men into the field, and throwing the whole charge of the war on that side upon the English, according to custom, no considerable action could be undertaken; whereupon the Duke contented himself with ravaging the country till he came within ten or eleven leagues of Paris, and then returned to England.

In the mean time the castle of Milan surrendered to the confederates, but the French King notwithstanding made great preparations for the invasion of that duchy, and was upon his march thither when he received advice that the Duke of Bourbon, Constable of France, being disgusted, was treating with his enemy the Emperor. He charged the Duke with it; but there being no direct proof

of the matter, he continued his march towards Lyons, where he was assured that the Constable was actually fled into Germany, and thereupon ordered the fortified towns belonging to that Duke to be seized, and his adherents apprehended: and not thinking it proper at such a juncture to leave the kingdom, he committed the care of the Italian expedition to the Admiral BONNIERET, who passed the Alps and recovered several places in the Milanese, taking up his winter-quarters in that country.

But the following spring 1524, the Swiss deserted his army, and the Imperialists, who were now commanded by the Duke of Bourbon, with the Venetians, Neapolitans, &c. having assembled their forces fell upon the French, and fairly beat them out of Italy again: after which the confederates passed the Alps, and besieged Marseilles; but having lain before that town forty days, and made little progress in the siege, their army being pretty much lessened by sickness, they raised the siege and returned into Italy, King FRANCIS following them close at the heels with an army of forty thousand men. Upon his appearance in the Milanese, the city of Milan itself, which always submitted to the strongest side for fear of being plundered, opened her gates to him; and the confederates not being in a condition to keep the field, the King laid siege to Pavia. The place was defended by a numerous garrison, and the besiegers were so incommoded with the rains and snows, that they had not much advanced their works in two months they had lain before it. In the mean time the Imperialists having received large reinforcements from Germany, attacked the King in his camp on St MATTHIAS's day, 1524-5, and after a brave resistance, entirely defeated his army and took him prisoner. It is computed that there were eight or nine thousand of the French killed upon the spot, and of the Germans scarce so many hundred. The loss of this battle was followed by that of all the Milanese.

The King of England upon this occasion shewed himself a Prince of great honour: he had assembled an army to invade France on the side of Picardy, and hearing of the distress that the French were reduced to upon the imprisonment of their King, he declared to the Regency of France that he would not proceed in the enterprise, or give them any disturbance: whereas nothing is so common as to see Princes taking advantages of the misfortunes of their neighbours. But one great inducement to this conduct no doubt was, an apprehension that the Emperor would soon become too powerful for all the Princes in Europe, if he did not change hands: he entered into a defensive alliance therefore with France, and engaged to procure the liberty of King FRANCIS upon reasonable terms.

In the mean time the Emperor had caused his royal prisoner to be brought from Italy to Madrid, where after about a year's confinement a treaty was made between them. The King to obtain his liberty yielded up the duchy of Burgundy, renounced his pretensions to Naples, Milan, and Genoa, and all sovereign jurisdiction over the countries of Flanders and Artois, and all other demesns in the possession of the Emperor; and a marriage was at the same time concluded between the King and ELEANOR Queen dowager of Portugal, the Emperor's sister. About a month after the King was permitted to return to France, leaving his two sons, FRANCIS the Dauphin, and HENRY Duke of Orleans as hostages for the performance of the articles. Being required to put the

Emperor into the possession of the duchy of Burgundy soon after; the States of the kingdom represented to him, that he could not alienate the demesns of the crown without their consent, and therefore that part of the treaty was void. This occasioned a rupture with the Emperor, whereupon King FRANCIS entered into an alliance with the English, the Venetians, the Swiss, the Florentines, and the Pope, for preserving the liberty of Italy, and restoring the duchy of Milan to FRANCIS SFORZA.

The Duke of Bourbon, the Imperial General, having notice of this league, marched directly to Rome, partly to be revenged on the Pope, and partly to satisfy his forces with the plunder of that city, having received no money to pay them for a considerable time. He demanded a passage for his forces thro' Rome, pretending he was marching towards Naples; and this being refused him, he ordered scaling-ladders to be brought to the walls, and as he was standing at the foot of one of them animating his men, he was wounded with a musket-ball, of which he died; whereupon the Prince of Orange took upon him the command of the Imperial army, and carried the city by storm, committing greater outrages there, if we may credit the French writers, than ever the barbarous nations were guilty of when they made themselves masters of it. The Pope having retired into the castle of St ANGELO, was besieged there; but the Imperial Generals finding, that the French and the rest of the confederates were marching to his relief, agreed to raise the siege, on condition he would advance them four hundred thousand ducats, and yield up some places to the Emperor, which belonged to the Ecclesiastical State. The confederates, on the other hand, having made themselves masters of great part of the Milanese, marched afterwards into the kingdom of Naples, and laid siege to the capital city, which induced the Imperialists to abandon Rome, in order to prevent another revolution in that kingdom.

The city of Naples being blocked up by the Genoese fleet by sea, and invested on all sides by the confederates by land, was reduced to great extremity for want of provisions. The plague also carried off great numbers of the garrison as well as inhabitants; but the condition of the besiegers was not at all better. Of six and twenty thousand men that first invested the place, there were not six thousand left; and, to compleat their misfortune, ANDREW DORIA, Commander of the Genoese fleet, went over to the Imperialists, and gave them an opportunity of supplying the place with forces and provisions; whereupon the confederates found themselves obliged to raise the siege. The Prince of Orange pursued them to Aversa, and having invested the place, they were glad to accept of such conditions as he was pleased to grant them. The French officers and soldiers had leave to return to France, leaving all their arms, standards, and colours behind them. The Swiss were allowed to go home; and the Italians obliged themselves not to serve against the Emperor for six months; and their General, the Marquis of Saluzzo, agreed to do all that was in his power to oblige the Governors of towns in possession of the allies to surrender to the Imperialists, for the performance whereof he remained a prisoner amongst them.

The following year a peace was concluded between the Emperor and France, by the mediation of the Queen Dowager of France, and MARGARET

of Austria, Governess of the Netherlands, whereby the Emperor desisted from his pretensions on the duchy of Burgundy, and the French King obliged himself to pay the Emperor two millions of crowns, as a ransom for the two Princes his sons. He promised also to withdraw the forces he had still remaining in Italy, and renounce all sovereignty over Flanders, Artois, &c. The treaty of marriage also was confirmed between King FRANCIS and the Emperor's eldest sister the Queen of Portugal. The Pope had already made a separate Peace with the Emperor; and the Venetians obtained one on condition of delivering up the towns they were possessed of in the kingdom of Naples. The Emperor consented to grant the investiture of the duchy of Milan to Duke SFORZA, upon condition he would let him put a garrison in the castle of that capital, and in the city of Cosmo. As to the Republick of Florence, the Emperor besieged, and took their capital city, and obliged them to accept ALEXANDER de Medicis for their Sovereign, whom they had driven away.

The French King being now in peace with all his neighbours, solemnized his marriage with the Queen of Portugal. He afterwards applied himself to remedy such disorders in the state, as the long war had occasioned, and gave great encouragement to arts and sciences, whereby he obtained the title of the Restorer of Learning in France. And in the year 1532, he caused the duchy of Britany to be formally united to the crown of France. He proposed also the modelling his militia, after the pattern of the ancient Romans, by forming them into legions or bodies of men, consisting of six thousand each; Normandy, Britany, Picardy, and Burgundy, were each of them to furnish one, to be called by their respective names, and so the rest of the provinces in proportion to their extent; and this he began to execute about the year 1533. In the mean time, the Protestant or Lutheran Princes of Germany, finding themselves in danger of being crushed by the Emperor, who had published a decree, that no other religion should be tolerated in the Empire but the Catholick, applied themselves to the French King for his protection: and he accordingly entered into a defensive alliance with them, not with an intent to support the Protestant religion, for he was a zealous Catholick, and had executed several for heresy in his own kingdom, but in order to break the Emperor's power, and render him less terrible to himself and the rest of the powers of Europe, who were apprehensive that CHARLES the Fifth aimed at nothing less than universal monarchy. This confederacy of the Protestant Princes being entered into at the town of Smalcald in Germany, obtained the name of the Smalcaldick League. The Emperor finding so formidable an alliance of the German Princes formed against him, supported by the King of France, and the Turks threatening to fall upon him at the same time with an army of three hundred thousand men, begun to use the Protestants more mildly than he had done, and notwithstanding the decree he had published at the conclusion of the Dyet of Augsbuurg, prohibiting the exercise of any other religion than the Catholick, he granted the Protestants liberty of conscience till a General Council should be assembled to settle the points in dispute; and these temporary indulgences obtained the name of Interims, as all things were to remain in the same state they were in the mean time.

The King of England, HENRY VIII, having been disgusted also on account of the opposition the Emperor made to his separation from Queen KATHERINE, who was the Emperor's aunt, had engaged to support the Protestant Princes of Germany; and that Prince being afterwards excommunicated by the Pope, on his marriage with ANNE BULLEN, threw off the Pope's supremacy, and stiled himself Head of the Church of England. The French King, their writers inform us, did all that lay in his power to prevent matters being brought to this extremity, by applying himself first to King HENRY, and then to the Pope: but things were carried with that violence in both courts, that his mediation was to no purpose, tho' there were at this time a very great intimacy between the French King and the Pope, on account of his Holiness's niece KATHERINE de Medicis marrying the King's second son, HENRY Duke of Orleans, to solemnize which, the Pope made a journey into France on purpose. One of the articles of this marriage was, that the Pope should assist the French King in making his son the Duke of Orleans Duke of Milan; but the Pope dying the next year, anno 1534, this part of the treaty was never executed.

War in  
Italy be-  
tween  
France  
and the  
Emperor.  
1535.

In the year 1535, the war broke out again between France and the Emperor. FRANCIS SPORZA Duke of Milan, happening to die about this time, the French King resumed his claim to the Milanese, alledging, that on the death of SPORZA without issue, it reverted to him: but being conscious that the Emperor would oppose his pretensions, he waited till he found that Prince engaged in an expedition to Africa against the infidels; and that he might be able to make good his retreat, in case of a misfortune, he found some pretence of falling out with the Duke of Savoy, and seized upon his capital city of Turin, and most of his other towns, quartering his army in that country. But the Emperor being returned from his expedition to Tunis, marched with an army into Piedmont, and obliged the French to quit all the Duke of Savoy's towns, except Turin. He afterwards passed the Alps, and entered Provence, where he found all the country wasted by the French, that they might meet with no subsistence for their troops; the Emperor however possessed himself of Aix, and afterwards laid siege to Marseilles; but his army was so weakened by sickness and famine, that he was obliged to return on a sudden into Italy. The French relate, that of fifty thousand men with which he invaded Provence, he had scarce five and twenty thousand left when he came to Genoa. The Imperialists met with no better success on the side of Picardy, where they laid siege to Peronne, but were forced to raise it by the brave defence the garrison made. In the mean time the French follow the Imperialists into Italy, where there were perpetual skirmishes between them during the winter. JAMES the Fifth of Scotland, it seems, was so zealous in serving the French King in this war, that, of his own accord, he raised an army of sixteen thousand men, and transported them to Provence, which gave the French that superiority over the Emperor, as to oblige him to return to Italy. In gratitude to the King of Scots therefore, he gave him his daughter MAGDALEN in marriage, which created a misunderstanding between the Kings of England and France; the Scots being the constant and avowed enemies of the English nation.

1536.

The French King at his return to Paris, had the vanity to summon the Emperor as his vassal before the court of Peers, to do homage for Artois and Flanders, pretending that the cessions he had made of all homage and service from the Emperor at the treaty of Cambray, were void, by that Prince's having invaded France on the side of Provence; and upon the Emperor's not appearing, that court declared him guilty of rebellion and treason against his sovereign Lord the King of France, and deprived him judicially of the provinces of Flanders, Artois, and Charolois, which the Emperor and the rest of the Princes of Europe laughed at very heartily.

The French, also to shew their resentment against the Emperor, entered into an alliance with the Grand Seigneur, whereby it was agreed, that the Turks should invade the kingdom of Naples, while the King of France attacked the Milanese; and accordingly BARBAROSSA the Turkish Admiral, made a descent near Otranto, burnt and plundered the country of Apulia, and carried off captives without number. But the French did not perform their part of the treaty; the Imperialists found them so much business on the side of the Netherlands, that it was as much as they could do to maintain themselves in Piedmont; they were not able to penetrate into the Milanese, and a truce was concluded between France and the Emperor the following winter, by the mediation of the Pope, who gave both parties a meeting at the city of Nice, in order to settle the articles.

During the continuance of this truce, there being an insurrection in the Netherlands, the Emperor desired leave to come through France to Flanders, for he was at that time in Spain; which the French King consented to, and received him suitable to his dignity on his arrival at Paris. There seemed to be a perfect reconciliation between the two Princes; and the Emperor promised to grant the investiture of the Milanese to one of the sons of France, if we may credit their historians; tho' the Emperor, when he was put in mind of it on his arrival in Flanders, declared, he never made any such promise. This, and the murdering one of the French Envoys in the Milanese, who was going to the Ottoman Port, occasioned a misunderstanding between these two powers again, tho' the French did not think fit to break the truce till they found the Emperor engaged in another expedition to Africa; in which he lost a very great fleet and army, and was obliged to return to Spain without effecting any thing.

The following year, 1542, the French King declared war against the Emperor, on account of the murder of his Envoy, and for some other reasons; and having raised two great armies, sent one to the confines of Spain, and the other to the Low-Countries. The latter penetrated Luxemburg, and reduced several considerable towns; but the other army having besieged Perpignan three months, was forced to rise from before it, and return home, after they had lost a great many men.

The next campaign the French, as usual, took some places on the side of Flanders and Luxemburg before the Emperor's forces came into the field, but lost most of them again before the end of the summer; and the Emperor at the same time fell upon their ally the Duke of Cleve, and the rest of the German Princes, who were in a confederacy against him, and forced them to submit to very hard conditions. The King of England also entered into an alliance with the Em-

peror, being provoked to it by the French King's sending over forces into Scotland, and opposing him in the match he had proposed between his son EDWARD, and the young Queen of Scots, whereby HARRY VIII hoped to have united the two kingdoms. In pursuance of this treaty, ten thousand English were soon after sent over to the assistance of the Emperor in the Netherlands.

The French King finding himself hard pressed on all sides, united his forces with the Turks, and laid siege to Nice, while BARBAROSSA the Turkish Admiral blocked it up by sea. He did not succeed in his enterprize however, being forced to raise the siege of the castle, after he had made himself master of the town: and this confederacy with the Turks rendered the French extremely odious to all the Princes in Europe; tho' now 'tis become a common practice, when any power is at war with the Emperor, to bring the Grand Seignior upon his back by way of diversion.

1544.

The French were very successful in Piedmont in the year 1544, where they gave the forces of the Emperor and the Duke of Savoy a very signal defeat, but could not make any great advantage of their victory, being forced to withdraw part of their army to the frontiers of Picardy, where the Imperialists and English were drawing together an army of fourscore thousand men, giving out, that they intended to march directly to Paris. The Imperialists however, not being ready to take the field so soon as the English, King HARRY laid siege to the cities of Bologne and Montreuil, and the Emperor retook Luxemburg and some other towns, which the French had possessed themselves of in that duchy. These sieges took up so much of their time, that their grand design of carrying the war into the heart of France became impracticable. The King of England took Bologne, after a siege of three months; but could not make himself master of Montreuil, and the winter approaching, he left a garrison in Bologne, and returned to England. A treaty was soon after set on foot between the Emperor and France, whereby it was agreed, that the French King's second son the Duke of Orleans, should marry either MARY of Austria the Emperor's eldest daughter, or the second daughter of the King of the Romans; and that upon his marriage, he should be invested either in the Milanese, or the Netherlands, with the counties of Burgundy, and Charolois, at the election of the Emperor: but the Duke of Orleans dying a few months afterwards, this part of the treaty was never executed.

The English and Imperialists invade France.

Bologne taken by the English.

1545.

The following year, 1545, was most remarkable for a terrible execution committed in France on account of religion; the zealous King FRANCIS had before burnt several of his subjects for adhering to the doctrines of the Reformed; but in pursuance of a decree made five years before, by the President of Provence, he was still guilty of greater cruelties, ordering a detachment of his army, to burn the city of Cabrieres down to the ground; together with the large town of Merindol, and several other towns and villages; to burn the master of every family at the stake, and plunder all their goods, leaving their wives and children to starve. In which execution the soldiers committed the most unheard of barbarities, on pretence that the inhabitants were infected with what the Pope was pleased to call heresy. So early were the French Princes remarkable for their inhuman persecuting spirit.

Several towns destroyed with the inhabitants on account of religion.

The French King, after he had made peace

with the Emperor, bent all his forces against England, being determined to recover Bologne and Calais from them, and drive them from the Continent. But as this was impracticable, till he could make himself master at sea, he first fitted out a fleet of two or three hundred sail, which stood over to the coast of England, where they met with the royal navy of that kingdom. The Commanders on both sides were so prudent, that after firing upon one another at a distance for some time, they thought fit to part without coming to a close engagement. The French afterwards plundered some villages in the Isle of Wight; and the English returned their visit, and ravaged Normandy. There were several skirmishes also between the armies at land in the neighbourhood of Calais and Bologne; but nothing decisive happened either this or the following year: and the Council of Trent being assembled about this time, where the King of England was apprehensive something might be decreed against him to his prejudice, began to listen to the offers of peace that were made him by France, and a treaty was set on foot accordingly; wherein it was agreed, that upon the French King's paying eight hundred thousand crowns to the King of England, or so much as the war and the fortifications of Bologne had cost him, within the space of eight years, that city should be resigned up to France. And thus a peace was again established between these two Princes a very little before their deaths, King HARRY dying in January following, and the French King on the last day of March, 1547, being succeeded by his son HENRY.

CHAP.  
XXXIV.

1546.

The Kings of England and France make peace, and die soon after.

1547.

HENRY II, son of FRANCIS I, ascended the throne on the thirty-first of March, 1547, being that day nine and twenty years of age. He discharged most of the officers of state at his accession, and brought the famous Constable MONTMORENCY, (who had been in disgrace, and banished from court in the late reign) and FRANCIS Duke of Aumale, afterwards Duke of Guise, into the administration.

HENRY II.

He expected every day to have his dominions invaded by the Emperor CHARLES V, who was now grown very formidable, having entirely defeated the Protestant Princes of Germany that formed the Smalcaldick League at the battle of Mulberg, and taken two of their Chiefs prisoners, namely, FREDERICK Elector of Saxony, and PHILIP Landgrave of Hesse, with whom the French were in confederacy. But the Emperor being engaged in settling his affairs in Germany, the King found himself at leisure to defeat the designs of the English, who were about to marry their young King EDWARD the Sixth to the infant Queen of Scotland, MARY STUART, by forming a party among the Scots, and sending over troops to their assistance, he procured the negotiation with England to be broke off, and the young Queen brought over to France, in order to be married to the Dauphin; whereby he again prevented a union between the two kingdoms.

The Emperor obtains a victory over the Protestant Princes.

The next thing he undertook was to discourage all innovations in religion: accordingly he revived his father's severe edicts against the reformers; for tho' he assisted the Protestant Princes in Germany against the Emperor, it was not out of any opinion he had of their principles, but purely upon a political account.

In the year 1548, he visited all his frontier towns, especially on the side of Flanders and Germany, and put them in a posture of defence. In the

1548.

CHAP. XXXIV. the mean time an insurrection happened in Guienne, on account of the excessive duties on salt; several of the King's officers were killed, and among the rest the Governor of the castle of Bourdeaux: but some troops being sent against them, they were soon reduced, and severe examples made of the ring-leaders of them.

1549. The English court being in great distraction, the King looked upon this as a favourable opportunity to attempt the recovery of the Bolognois; but he first transported a body of troops to Scotland, to join his party there, and make a diversion, and then attacked the forts about Bologne, which he easily carried, the English having no army in the field. However, when he came before the town itself, he found it to be so strong, that he contented himself with blocking it up. But the dissensions increasing in the English court, which made it impracticable to send any relief to Bologne, the English Ministry entered into a treaty with the French, and agreed to deliver up the place on the payment of four hundred thousand crowns of the value of a noble each; and a peace was concluded thereupon between the two nations, in which Scotland was included.

1550. Bologne yielded to France.

The following year hostilities were renewed in Italy between the French and Imperialists, on account of the duchies of Parma and Placentia, the right to which was contested by the Emperor with the family of Farnese, who apprehending they should be overpowered, called in the French to their assistance.

1551. The war being thus begun between France and the Empire, the German Princes, who were disgusted by the Emperor's haughty behaviour since his victory at Mulberg, and his establishing the Catholick religion in several Protestant towns, proposed to enter into an alliance again with the French King. Even MAURICE, whom the Emperor had made Elector of Saxony, in the room of JOHN-FREDERICK, that was taken prisoner at Mulberg, and JOACHIM Elector of Brandenburg, who had till now been in the Emperor's interest, were among the number. The King by this treaty engaged to maintain the liberties of Germany; to raise two great armies, and make himself master of the Imperial towns of Cambray, Metz, Toul, and Verdun; and to furnish the German Princes with very great sums towards the charges of the war. By the same treaty, MAURICE, Elector of Saxony, was declared Head of the league of the German Princes, and General of the army to be formed of their troops, who published a manifesto declaring the motives of their entering into this war, viz. The security of the Protestant religion, the defence of the liberties of Germany, and the deliverance of PHILIP Landgrave of Hesse, his father-in-law.

1552.

An alliance between France and the Protestant Princes of Germany.

The French possess themselves of Metz, Toul, and Verdun.

The French King was very ready to execute that part of the agreement which obliged him to attack Metz, Toul, and Verdun, and accordingly marched an army immediately into Lorraine, and made himself master of those towns, and indeed of the whole country of Lorraine. In the mean time, the Elector of Saxony and the Marquis of Brandenburg, having assembled their troops, were very near surprizing the Emperor at Inspruck; but he fled from thence with the utmost precipitation, when he heard of their approach, not being in a condition to oppose them. They advanced however, and plundered the town, together with the Emperor's baggage, and put the Council of Trent in such a fright, that the Cardinals and

VOL. II.

Ecclesiasticks, who composed it, thought fit to break up their session, and were adjourned to another place.

CHAP. XXXIV.

The invasion of the French, and the progress of the confederate Princes, had such an effect also on the Emperor, that he consented to a treaty with them at Passau; wherein it was stipulated, that he should release the Prince of Hesse; assemble a Dyet of the Empire within six months, and redress their grievances: that in the mean time liberty of conscience should be allowed, and that those of the Augsbourg confession should sit in the Imperial chamber, from whence they had been excluded.

The treaty of Passau.

The Emperor was now at leisure to take his revenge of the French, and accordingly ordered his armies to ravage their country on all sides, while, with the greatest part of his forces, he invested Metz; but as he did not open the trenches before that place till November, and it proved a very severe winter, he lost a fine army by the rigour of the season, and was forced to raise the siege at last. He met with the like ill success in Italy, and in every place where the war was carried on between him and France this year, which he looked upon as the most unfortunate of his life, and occasioned his saying, That fortune was a friend to young people; meaning chiefly the French King, who was successful against him every where.

The Emperor unsuccessful in his wars with France.

The following year, the Emperor took Terouen and Hedin in the Low-Countries, and razed them to the ground. On the other hand, the French fleet, in conjunction with that of the Turks, ravaged the coast of Calabria, and made a descent on the island of Corsica, maintaining themselves in the southern part of it for several years; and in other places, the war was carried on with various success. In the mean time, EDWARD the Sixth King of England, being taken dangerously ill, the French King sent an Embassy thither with a compliment: but the real design of it was to prevent the Princess MARY's ascending the throne, because the Emperor, had proposed a marriage between her and his son PHILIP, which would probably bring England into an alliance against him. The French writers therefore suggest, that it was their King who influenced EDWARD the Sixth to exclude her, and settle the crown upon JANE GREY. But whatever share that Prince might have in it, we are very well satisfied, that religion and private interest were the principal inducements to the English Ministry, for setting the Princess MARY aside. And notwithstanding this settlement, we find she succeeded against her rival JANE GREY, and married King PHILIP afterwards, which brought England to be a party in the war against France.

1553.

An obstinate battle was fought the next year between the Imperialists and the French near Renti, in the Netherlands, where both sides claimed the victory; but it seems to have been a drawn battle. A more decisive action happened near Marciano in Tuscany, where the French were routed, and beaten out of several places they possessed in that duchy, by the Imperialists.

1554. The battle of Renti.

What rendered the succeeding year most remarkable was, CHARLES the Fifth's resignation of the Empire and all his other dominions, and retiring to a cloyster. He surrendered Spain, Naples, Milan, the Low-Countries, and Burgundy, to his son PHILIP at Brussels, and the Empire to his brother FERDINAND King of the Romans. After which he sailed to Biscay in Spain, from

CHARLES V resigns the Empire, &c. and retires into a monastery.

15 X

whence

whence he went to the monastery of Just, where he lived two years, employing himself in works of piety and devotion. About the same time, a truce was concluded between the French and Imperialists, by which it was agreed, each party should keep what they were in possession of.

1556.

This truce was broken the year following on the Pope's account; he was a mortal enemy to the house of Austria, and under some pretence of some insults he had received from the Viceroy of Naples, he invited the French to come into Italy to his assistance; giving them hopes, that both Milan and Naples would now become an easy conquest. The French immediately sent two of their Generals with a good body of troops to Rome to defend his Holiness, who were followed by the Duke of Guise, and an army of between twenty and thirty thousand men the next spring. The French recovered some of the Pope's towns, that had been taken by the Spaniards, and offered the Duke of Alva the Spanish General battle; but he finding the country as fatal to the French, as it had been in former enterprises, and that their army would soon be destroyed by sickness, declined fighting till the French were reduced to such a condition, as to think of nothing else but of making good their retreat over the Alps again.

The French send an army into Italy again.

1557.

The French defeated at St Quintin.

In the mean time, the French army in the Low-Countries was routed near St Quintin, which event alone would have obliged their countrymen to have abandoned Italy, if no other misfortune had happened to them. The Pope, upon the French General's deserting him, was obliged to beg a peace of the Spaniards, which was granted him upon much better terms than he could have expected, considering the provocations he had given them. But to be a little more particular as to the war in the Low-Countries: The French tell us, that when they made that great detachment to Italy, they did not imagine the enemy would have been so numerous in Flanders; they were surprized at the Queen of England's declaring war against them at this time, presuming, that as King PHILIP was neither beloved nor esteemed by the English, they would have left him to end his quarrels with France by himself. But on the contrary, about the end of July, they saw the Spanish army commanded by EMANUEL PHILIBERT Duke of Savoy, amounting to upwards of fifty thousand men, joined by twelve thousand English, set down before St Quintin, which being a place of importance, they endeavoured to throw a supply of forces and provisions into the town; and, contrary to their intentions, this brought on a general battle, in which they were totally routed, their General the Constable MONTMORENCY, and a great number of their Nobility taken prisoners. Upon this misfortune, the Duke of Guise was immediately sent for out of Italy, and declared Lieutenant-General of the kingdom. This gentleman, to raise the spirits of the people, and establish his own reputation, took the field in the depth of winter, and disguising his intention by several marches and countermarches, sat down before Calais, which having but a small garrison, and very ill provided with necessaries, (the English not expecting a visit so soon after the loss the French had sustained at St Quintin) the garrison was obliged to capitulate in eight days, and had no better terms allowed them than of being transported to England, except the Governor and fifty more, who were to re-

1558. Calais taken by the French.

main prisoners of war. Thus was this place lost, which was once deemed impregnable, after the English had been in possession of it two hundred years and upwards. It is impossible, say the French historians, to express the joy which this glorious conquest caused throughout the kingdom, and the surprize all the courts of Europe were in to see it effected at a time when France was thought to be at it's last gasp. The King looked upon it to be so considerable, that he soon after made a kind of triumphant entry into Calais; and as this place rendered the English masters of both sides the channel, the loss of it was extremely regretted by that nation.

While the French were engaged in the enterprise against Calais, Guisnes, and Hammes, and the other little forts about it, the Scots their faithful allies, made an incursion into England, in order to give a diversion on that side; and the April following, MARY STUART Queen of Scotland was married to FRANCIS the Dauphin, which proved a considerable advantage to the house of Guise, she being a niece of that Duke. It was about this time, that that fatal emulation began between the families of Montmorency and Guise, which occasioned infinite distractions in the kingdom. The change of religion also contributed to these intestine divisions: the Duke of Guise was esteemed the head of the Papists, and the Constable and the Admiral COLIGNI the support of the Protestants; but both the Constable and the Admiral having been made prisoners at the battle of St Quintin, the Guises had now the administration almost entirely in their hands. They took this opportunity of charging Monsieur DANDELOR the Admiral's brother, who was General of the infantry, with speaking irreverently of the Mass, and procured an order from the King to commit him to prison. About this time, the French laid siege to Thionville in Luxemburg, and took it; while Marshal de Tormes, Governor of Calais, with another part of the army, surprized Dunkirk; but he was attacked by Count EGEMONT Governor of Flanders, in his retreat near the mouth of the river Aa, on the third of July, and routed, Marshal de Tormes himself being made prisoner. The French ascribe the loss of this battle to a squadron of English ships, which lay at that time in the mouth of the river, and cannonaded the French while they were engaged with the Spaniards.

The factions of Guise and Montmorency.

This ill success of the French induced them to think of peace, tho' their writers impute it to another motive; they relate, that the Duke of Guise and the Cardinal of Lorraine his brother, looking upon their interest at court to be so well established as to need no support, treated the King's mistress, the Duchess of Valentinois, with great insolence; whereupon she prevailed upon his Majesty to send orders to the Constable MONTMORENCY, who was then a prisoner in Flanders, to make proposals of peace to the Spaniard, to the end that the Constable might return home, and assist her against the power of the Guises. She applied herself also to the Duke of Savoy, who was General of the armies of Spain, to influence that court to enter into a treaty, assuring him, that his dominions in Savoy and Piedmont should be restored him if he could effect it. But I find there was little occasion for all this artifice to bring about a peace, for King PHILIP having just buried his father the Emperor, and his wife the Queen of England, and being about to return to Spain, was very desirous

CHAP.

between  
France,  
Spain, and  
England,  
1559.

siours to leave his dominions in the Low-Countries and Italy in peace; and the French court, as has been intimated, having the worst in the war, could not be averse to pacifick measures. But however the matter was brought about, Chateau-Cambresis was agreed on for the place of treaty the following year, where Queen ELIZABETH of England was to have her plenipotentiaries, as well as France and Spain; notwithstanding the French had encouraged MARY Queen of Scots, the wife of the Dauphin, to take upon her the title and arms of the Queen of England: to retaliate which affront, and to strengthen her interest, Queen ELIZABETH entered into an alliance with the Protestant Lords in Scotland, and had thereby a greater influence on the affairs of that nation during her reign, than their own Queen. But to return to their treaty: It was at length agreed, that the French should remain in possession of Calais for eight years, at the end of which term, they should either restore it, or pay five hundred thousand crowns to England: that the places taken either by the French or Spaniards should be reciprocally restored, only the French were to remain in possession of Metz, Toul, and Verdun: the Duke of Savoy was to be put into the possession of his country, except Turin, Pignerol, Quiers, Chivos, and Villeneuve, which the French King was to retain till some pretensions he had to the dominions of Savoy, in the right of LOUISA of Savoy, mother of FRANCIS the First, were examined: and in the mean time the King of Spain was to keep garrisons in Verceil and Asti. This peace occasioned some murmurings against the Constable, because the French had taken a great many more towns during the war, than the Spaniards had taken from them; it was even computed, that the French hereby surrendered up no less than two hundred towns and fortresses: to which the Constable and his friends replied, that these two hundred fortresses were most of them little castles belonging to the Lords of towns and villages, which had been seized in order to protect the country against the enemy's parties during the war; and that Calais and the towns of Picardy which were restored to France, were an ample equivalent for them, especially if it were considered that France was to remain in possession of Metz, Toul, and Verdun, with their dependencies, which were a noble augmentation to the kingdom, and covered it on the side of Champagne, much the weakest frontier they had: that the kingdom also received an inconceivable advantage by removing the English to the other side of the water, who had been a thorn in their sides for several hundred years past. For whatever they had stipulated concerning the restoring of Calais at eight years end, it is evident they never intended it: nor were the English ministry so weak as to expect they should; but the Queen had so many difficulties to struggle with at her accession, on account of religion, that they were in no condition to continue the war, and only got that clause inserted to satisfy the populace, who were as zealous at that time for the recovery of Calais, as we are at present for retaining Gibraltar and the island of Minorca.

There were two marriages solemnized at the French court afterwards, which were intended to cement this peace, viz. one between the King of Spain and the Princess ELIZABETH, the French King's daughter: and the other between the Duke of Savoy and the Princess MARGARET, the

King's sister. Among other shews and diversions on this occasion the King ordered a tournament to last three days: the King was the first challenger, and with the Duke of Guise, the Duke of Nemours and the Prince of Ferrara, engaged all that came the first day with abundance of applause. He was equally successful the second, being the thirtieth of June, till about the close of the evening, when they were about to give over, he proposed to break another lance with the Earl of Montgomery, Captain of the Scots guards. The Queen, as if she had some foresight of the misfortune that was to happen to him, begged of him herself, and employed her friends to dissuade him from tilting any more; but he could not be prevailed upon: he entered the lists with the Earl, they ran with all their force against each other, broke their lances, and a splinter of the Earl's pierced the King's eye through the visor of his helmet: the blood gushed from the wound in such quantities, that no body doubted it's being mortal, and in a few days his Majesty's life was declared to be in danger. However, he ordered that the Duke of Savoy's wedding with his sister should be solemnized in his chamber the ninth of July, and died the next day, being eleven days after he received the wound, in the forty-first year of his age, and the thirteenth of his reign, leaving four sons behind him, namely, FRANCIS II, who immediately succeeded him, CHARLES, HENRY, and FRANCIS; and three daughters, viz. ELIZABETH, Queen of Spain; CLAUDE, Duchess of Lorraine; and MARGARET.

FRANCIS the Second was in the seventeenth year of his age at his father's death: a Prince, says my author, weak both in body and mind, and by no means qualified to bear the weight of the government in his own person. There were three factions therefore that endeavoured to get the administration of affairs into their hands, namely, the house of Guise, that of the Constable MONTMORENCY, and that of the Princes of the blood. But the Queen-mother CATHERINE DE MEDICIS adhering to the Guises, that party carried all before them. Whereupon the Constable was obliged to retire from court, and live privately: ANTHONY DE BOURBON King of Navarre, first Prince of the blood, and the Prince of Condé his brother, were likewise in a manner banished: the Admiral COLIGNI, and DANDELOT, relations to the Constable, also were frowned upon. These gentlemen therefore, and many other persons of distinction, soon began to form a conspiracy against the court: and observing that the Reformed Religion began to spread all over the kingdom, and that those who professed it had been cruelly persecuted in the late reign, chiefly by the incitement of the Guises, and were on that account sufficiently enraged against them, they proposed to unite their interest with the Protestants, which would in all probability render their party very numerous and formidable, and they had all the reason in the world to believe they should be supported by the Queen of England, and the Protestant Princes of Germany. The Prince of Condé, it was agreed, should have the direction of the enterprize; but he was not to appear and avow it publicly till things were brought to a certain point. In pursuance of these resolutions, soldiers were lifted, and parties formed in every town and province of the kingdom. It was agreed they should all set out at a certain time, and march towards Blois, where the King was, in order to make themselves masters of the

the court. As soon as the soldiers of the several provinces were within reach of joining, a numerous company without arms was to go to Blois, to present a petition to the King for liberty of conscience; and as they expected the petition would be rejected, the soldiers were to appear in arms before the town, and oblige the King to declare the Prince of Condé Lieutenant-General of the kingdom.

The male-  
contents  
defeated at  
Amboise.

The Guises having intelligence of the conspiracy that was forming against them, carried the King to the castle of Amboise, and assembled a good body of troops to oppose the designs of the malecontents, who did not give over the enterprize, notwithstanding they had all the reason in the world to believe they were discovered. They marched boldly towards Amboise, and were advanced pretty near it, when they fell into the ambuscades the Duke of Guise had laid for them, and were most of them killed or taken prisoners; many of the latter were immediately hanged up on the ramparts of the castle, and others thrown into the Loire and drowned; after which a pardon was published for all that would lay down their arms. Neither the King of Navarre, the Prince of Condé, the Constable, or the Coligni's, appeared in this insurrection; tho' the court was satisfied that some or all of them were at the bottom of it. However, it was thought advisable not to search too far into the matter; and the Prince of Condé, who was at this time in the castle with the King, was permitted to retire and go to his brother the King of Navarre.

Treaty be-  
tween  
France  
and Eng-  
land in re-  
lation to  
Scotland.

As the Queen of Scotland was married to the French King, the court of France looked upon themselves to be equally concerned in defending that kingdom against the English as their own, and therefore sent over four thousand men to support the party that adhered to the Queen against the English; while the Queen of England on the other hand sent reinforcements to the Protestant Lords there, who appeared to be the prevailing faction. This induced the French to enter into a treaty with Queen ELIZABETH in relation to Scotland, wherein it was agreed, that the Protestants should have liberty of conscience in that kingdom; that the Queen of France and Scotland should not bear the arms of England; and that the French and English should each of them recall their troops from thence.

COLIGNI'S  
petition to  
the King  
in behalf  
of the  
Protestants

In the mean time an assembly of Lords, Prelates, and Lawyers was called by the French court to advise upon the present state of affairs, chiefly in relation to religion; but neither the King of Navarre, or the Prince of Condé, thought fit to appear in it, being apprehensive the court might confine them.

The Admiral COLIGNI here presented a petition to the King in behalf of the Reformed, telling his Majesty, that tho' it was not signed by any, there were fifty thousand in the province of Normandy only who were ready to sign it: and the King demanding the opinion of the assembly upon it, the Cardinal of Lorraine said, that the petition was seditious, foolish, scandalous, heretical, and impudent; and if there were fifty thousand factious people who would sign it, he would answer for a million of substantial persons in the kingdom who were ready to oppose their insolence. There were other very warm speeches made on the subject, and it was concluded at length to convene the States of the kingdom to deliberate on these matters.

CHAP.  
XXXIV.The King  
of Na-  
varre and  
the Prince  
of Condé  
seized by  
the court.

This council or assembly was no sooner broke up, but the malecontents entered into another conspiracy against the government, or rather against the faction of the Guises: Lyons and several other cities were to have been surprized; but their designs were discovered and defeated. In the mean time the States of the kingdom were summoned to meet at Orleans; where the King of Navarre and the Prince of Condé venturing to attend, were both seized by the King's order, and the Prince was tried and convicted of high-treason by a special commission, though he insisted that as a Prince of the blood he could only be tried in parliament by his peers. He had infallibly been executed, and probably the King of Navarre would have undergone the same fate, if the King of France had not in this very instant been taken dangerously ill; and as it was, the Guises pressed the Queen to hasten the execution: but her Majesty having an eye upon the regency in the future reign, and apprehending the readiest way to obtain it would be to make these two Princes her friends, she caused the execution to be suspended, and afterwards procured both of them their liberty, which was such an infinite obligation, that they could not oppose her taking the regency upon her at the King's death, that happened on the fifth of December 1560, after a reign of a year and half, which may with more propriety be stiled the reign of the Queen-mother and the Guises.

CHARLES  
IX.  
1560.

CHARLES the Ninth, brother to the deceased King, being ten years and six months old at his accession, the Queen-mother, CATHERINE DE MEDICIS, had the address to procure herself to be declared Regent again; she gave both parties hopes of joining with them, and by that means secured both of them in her interest.

This reign began with opening the assembly of the States, which had been convened in the last. Here the regency was confirmed to the Queen; the King of Navarre was constituted Lieutenant-General of the kingdom; the Constable Generalissimo of the forces, and the office of Treasurer or Super-intendant of the Finances was conferred on the Cardinal of Lorraine.

Debates  
on reli-  
gion in the  
assembly  
of the  
States.

As the States were assembled on account of religion, their debates run chiefly on that subject. The speaker of the third Estate inveighed vehemently against the irregularities and encroachments of the clergy: the speaker of the Nobility proposed the granting of churches to the Protestants; while the speaker of the Ecclesiastics on the other hand declared against all innovations in religion, and moved that whoever should petition for any indulgence to the hereticks, should be deemed a heretick himself, and be punished accordingly; for the Admiral COLIGNI, it seems, had preferred a petition to his Majesty just before in favour of the Protestants. This assembly broke up at last without coming to any resolution. The King granted a general pardon for all that was passed; and the business of religion was to be further treated of in the next meeting of the States, which was appointed to be held at Pontoise.

About this time the Constable forsook the Hugonot party, and was reconciled to the Guises by the management of the Marshal of St Andre; and these three having a great stroke in the administration, obtained the name of the Triumvirate.

Another petition being presented to the King in behalf of the Hugonots by the King of Navarre, the Prince of Condé, and the Coligni's, he referred it to the parliament of Paris, who was very

and Pro-  
testants.

1561.

very severe upon that persuasion. They declared it to be their opinion, that the magistrates ought to put the laws in execution against hereticks: that the cognizance of religious matters ought to be referred to the ecclesiastical courts, who were their mortal enemies; and that it should not be lawful to preach or administer the sacraments in any other manner than was observed in the court of Rome. Hereupon the Protestant Lords proposed a conference between their Doctors and the Catholics, which being granted by the Queen-mother, BEZA, and all the most celebrated fathers of the Reformation, came to the French court to assist at it. These conferences were opened on the ninth of September 1561, at the abbey of Poissy, in the presence of the King, Queen, the Princes, and a great number of Lords, and Prelates. The King having in a few words signified his desire to see them united in the business of religion, the Chancellor made a speech, which the Catholics did not at all approve of; and he was answered by the Cardinal DE TOURNON. Then BEZA was permitted to speak in behalf of the principles of the Reformed; and being a man of learning and eloquence, was heard with great patience, till he came near the conclusion of his harangue, where having repeated the profession of his faith agreeable to the Apostles Creed, and explained some articles of it according to CALVIN's doctrine, he took occasion to say, That the body of CHRIST was as far removed from the bread and wine in the sacrament, as heaven was from earth; it occasioned a general murmur, and the Cardinal DE TOURNON rose up and inveighed bitterly against the blasphemy, as he called it, desiring the King not to suffer himself to be imposed upon by these new Doctors, but order them to depart the kingdom immediately, where their presence served only to corrupt the people. BEZA pressed the King, on the other hand, to give him leave to reply to the Cardinal, but could not obtain it: however, he was permitted afterwards to have some private conferences with the Catholic Doctors, in order to prevent his publishing his reply. The Calvinists sent accounts of these conferences to their brethren all over Europe, which were much to their advantage: but this, says the Jesuit my author, was no more than was to be expected.

1562.

Soon after these conferences, the Guises and the Pope's Legate applied themselves to the King of Navarre, in order to draw him off from the Protestant interest. They assure us, that the disputes at Poissy had a considerable effect upon him; but are so ingenuous at the same time to acknowledge, that they tempted him to change sides by the hopes they gave him of procuring his dominions that were possessed by the Spaniards, to be restored him. They represented also, that he was despised even by the Hugonots themselves, while his younger brother the Prince of Condé was adored by that faction. And by these and other arguments of the like nature, they prevailed on him to declare for the Triumvirate, and consequently for the Papists. This alteration very much alarmed the Queen, who apprehended that party would now become so powerful, that she should in a manner be governed by them; whereupon she entered into a stricter union than ever with the Prince of Condé and the Colignies, and published an edict, whereby the Protestants were permitted to meet in the suburbs of towns, upon condition of restoring to the Catholics the churches they were possessed of in the towns themselves.

An edict in  
favour of  
the Prote-  
stants.

VOL. II.

This edict enraged the Popish party to the last degree; for abundance of Protestants, who till then had concealed their principles, declared themselves, and went in crowds to hear their preachers: the monks and nuns also, weary of their condition, left their cloisters, pretending they had a right to enjoy the benefit of this edict, as well as others: and several priests took wives, and were married at the Hugonot conventicles. These apostacies, as the Papists termed them, they apprehended were occasioned in a great measure by the countenance that was given them by the Prince of Condé at Paris, as well as by the edict. The Guises therefore, the King of Navarre, and their friends, agreed to raise forces, and drive the Prince from that city; but as the Duke of Guise was bringing up a party of men in pursuance of this resolution, and had quartered them at Vassi in Champagne, while he was at maffs there, some of his retinue went and disturbed an assembly of Protestants, who were met together in that town for religious worship, which occasioned a quarrel, wherein three or fourscore of the Protestants were killed, and the rest dispersed; the news of which massacre, as their friends called it, being brought to Paris, the Prince of Condé demanded satisfaction of the Queen; but the King of Navarre, the Constable, and the Duke of Guise, having assembled their troops, seized upon the King and Queen-mother, and brought them from Fontainebleau to Paris. The Queen, to her unspeakable grief, finding herself in the power of the Triumvirate, and in a manner divested of the regency, sent courier after courier to the Prince of Condé, (who was retired from Paris to muster his forces) to come and rescue the King and herself out of their hands; but tho' the Prince was not in a condition to effect this, he made himself master of Orleans, where he permitted his party to plunder the churches of their plate, to support the war; after which he published a manifesto, and dispersed it in all parts of the kingdom, and among the Protestant Princes of Germany, wherein he enlarges on the massacre of Vassi, and protests they had recourse to arms purely for their defence, and to deliver the King and Queen from the captivity in which they were detained; charging the Guises with being the authors of the war. The Lords and others who joined the Prince, swore obedience to him, as Lieutenant of the kingdom till the King came of age, and promised to stand by him in protecting the King, Queen, and kingdom, at the hazard of their lives and fortunes. In the compass of a few weeks, a multitude of cities and towns submitted to his forces, of which the chief were Blois, Tours, Poitiers, Rochelle, Rouen, Diep, Havre de Grace, Bourges, Montauban, Montpelier, Nantz, Lyons, Grenoble, and Valence; and the Cevennes and Vivarez in general came over to them. The Guises on the other hand sent detachments of their forces into all the provinces, to preserve them in their interests; and with a body of their army, consisting of sixteen or seventeen thousand men, of which one half were Swiss, marched to attack the Prince of Condé, who not being yet joined by the Germans his confederates, shut himself up in Orleans with a good garrison, and put the rest of his forces into the towns of the greatest importance; whereupon Blois, and several other towns, were retaken by the Guises, and they determined to besiege the Prince in Orleans. But the Queen of England about this time sending forces into Normandy under the Earl of Warwick, to assist the Protestants on

that side, and it being apprehended if the English once established themselves here it might be difficult to remove them, it was agreed in a council of war to lay siege to Rouen, which was defended by the Earl of Montgomery and two thousand English, besides the inhabitants who were formed into companies. The town however was taken and plundered, and Montgomery found means to retire to Havre de Grace. The King of Navarre was mortally wounded at this siege, and died soon after. The Prince of Condé receiving a reinforcement of six or seven thousand men from Germany about this time, left Orleans, and marched up to the gates of Paris, where he hoped there might be an insurrection in his favour in the absence of the Guises; he attacked the suburbs, but his friends in the town not being strong enough, durst not shew themselves. He determined therefore to march into Normandy, and join the English troops, but he had not marched far before he found the Constable and the Guises posted in his way, with eighteen or twenty thousand men, in order to prevent this conjunction; which occasioned a general battle near Dreux, in which the Marshal of St Andre was killed, and the Constable, who was General of the Catholics, taken prisoner on the one side, as the Prince of Condé, General of the Hugonots, was on the other; whereupon the Duke of Guise took upon him the command of the Popish army, as Admiral COLIGNI did the command of the Protestants. The engagement was very bloody, and both sides claimed the victory, but neither had any great reason to boast: certain it is, the Admiral marched afterwards to Orleans, whither he carried the Constable prisoner, without any interruption from the Duke of Guise. The Duke however receiving re-inforcements from several parts of the kingdom, found himself strong enough in a little time after to lay siege to Orleans; the taking of which city, he apprehended, would be a decisive blow, and carry with it the entire destruction of Calvinism; but while he lay before the place, and was upon the point of accomplishing his design, he was assassinated, being shot with a pistol by one POLTROT, a young gentleman of Angoumois, upon the eighteenth of February 1563-4, in the evening. His party were of opinion, that the assassin was employed by the Admiral. This death, says the Jesuit, my author, was an irreparable loss to religion and the state. The murderer was seized, and some time after executed at Paris; but I don't perceive he charged the Admiral, or any of the Protestants, with putting him upon it.

Upon the death of the Duke of Guise, both parties seemed inclined to peace, and a treaty was set on foot, wherein it was agreed, that the Protestants should be allowed to hold one congregation or meeting in every bailiwick, and one or two in each town they were masters of, but that they should not perform divine worship in churches; that the Protestant nobility and gentry, who had high jurisdiction in their demesnes, might perform divine service in their houses with their vassals, but that the Reformed should hold no meetings, or assemblies in Paris, or the neighbourhood of that city. The Prince of Condé had several reasons for accepting this peace, his principal enemy was dead, he was to obtain his liberty by it, and 'tis said he had some hopes given him of marrying the Queen of Scotland: And the Queen, on the other hand, being now out of danger of the Triumvirate, whom the war had taken off, proposed to have the whole

administration in her hands upon a peace, without controul.

This treaty was no sooner concluded, but the Generals on both sides, Protestants as well as Papists, agreed to unite their forces, and drive the English out of Normandy, for the Earl of Warwick still remained master of Havre de Grace, which had been put into the hands of Queen ELIZABETH by the Protestants, as a cautionary town, upon her advancing them a sum of money towards the charges of the war, and she was to remain in possession of it till the money was repaid, or Calais restored to England; but the Prince of Condé and his party having served their turn, and by the Queen's assistance obtained liberty of conscience, deserted her interest, and were as forward as the Papists in recovering that place from her; which they found very little difficulty in effecting, the garrison being very much diminished by the plague; and upon the surrender of the town they carried over the infection to London, where upwards of twenty thousand people died of the pestilence.

The following year a peace was concluded between France and England, wherein no mention was made of Calais, only it was provided that the rights of the Queen of England should not be affected thereby.

The year 1564 was great part of it taken up in a journey which the King and Queen-mother made through almost all the provinces of France. In North France, 'tis said, the court observed that the popish party was much stronger than that of the Hugonots; but in Lyonois, Dauphiné, and Languedoc, the Protestants were much more numerous than the Catholics. While the court were engaged in this progress, an edict passed which bore very hard upon the Protestants, and rendered several articles useless which had been stipulated in their favour at the last peace, of which the Prince of Condé complained. Another edict or ordinance passed about the same time, which fixed the commencement of the year in January, which before began at Easter, in France, and was a very great inconvenience, on account of the moveableness of that feast.

Upon the King's arrival at Bayonne, he was met there by the Queen of Spain and the Duke of Alva; and it was agreed between the two courts (at least the Protestants of all countries apprehended it so) to form an alliance for the extirpation of the Reformed Churches in France and the Low-Countries; and what renders this extremely probable is, the introducing the Inquisition into Flanders soon after, and the sending troops thither to dragoon them into Popery; in the last of which they were imitated by the French. The following year the King procured a reconciliation, in appearance at least, between the Duke of Guise and the Admiral COLIGNI; the latter declared upon oath, that he had no hand in the death of late Duke of Guise, his father; and the other declared himself content with this satisfaction. In Flanders there were nothing but tumults and insurrections at this time, on account of religion, and the invasion of their civil liberties by the King of Spain. The Duke of Alva marched thither from Italy with an army of veterans in the year 1566, where he beheaded the Counts EGMONT and HORN, who had been governors of the country, and done the King of Spain signal service at the battle of St Quintin, and on other occasions, but would not tamely part with their liberties;

liberties; the Prince of Orange was so wise as to retire into Germany, where he strengthened his party considerably.

The Prince of Condé in the mean time observing the Queen's partiality to the Popish party in France, and the proceedings of the Duke of Alva in Flanders, made no doubt but the extirpation of the Protestants had been agreed upon between them at Bayonne, of which he sent advice into Germany and England, and entered into an alliance with the Prince of Orange and the Calvinists of the Low-Countries, who were called Guex, or Beggars, on their presenting a petition to the court for the preservation of their religion and liberties, because some of the crowd appeared in a tattered condition, tho' it is certain most of the nobility and gentry of Flanders were in the interest of the Protestants, and nothing but a foreign force could ever have established Popery there. But to proceed: When the Prince of Condé saw the French court, tho' they were at peace with all the world, take a great body of Swiss into their service, he no longer made any doubt of their intention. In order to their defence therefore, the Prince and the Admiral assembled their friends, and advanced towards Monceaux, a pleasure-house in Brie, where the King then was, with a design, as their enemies gave out, to seize on the person of the King; but however that matter was, the Swiss were so much stronger than the Prince's party, that he did not think fit to attack them. The King was afterwards escorted by the Swiss to Paris, when several of the Hugonot parties appeared, and endeavoured to give some interruption to his march, but they did not come to an engagement.

A battle  
near Paris.

The Prince being afterwards considerably reinforced, possessed himself of Montereau, Lagni, and St Denis, and blocked up the city of Paris, not so closely however but the King's troops every day entered the town, and became at length superior to those of the Prince, whereupon it was resolved to give him battle. The Constable accordingly marched out with fourteen or fifteen thousand men, and attacked the Prince, who had posted himself so advantageously, that tho' his army did not consist of more than four or five thousand men (having detached great part of it to meet a convoy of provisions) he maintained his ground, and the Constable was mortally wounded in the engagement. During the blockade of Paris, the Protestants had made themselves masters of Orleans again; and about the same time the Elector Palatine, and the rest of the Protestant Princes of Germany, sent a body of eleven or twelve thousand men to the assistance of the Prince of Condé, who thereupon raised the blockade of Paris, and went to the confines of Lorraine to meet them. The King also received large reinforcements from Germany and Switzerland, so that the country was ravaged and plundered by foreigners as well as natives from one end to the other. Nor was this the worst: the court were apprehensive that the introducing so many foreign troops into the kingdom might in a little time endanger the State; and therefore it was resolved to conclude a peace with the Prince on any terms almost, in order to rid the nation of them. A treaty was accordingly set on foot, whereby it was agreed, that the edict of pacification, concluded in the year 1562, should be confirmed, and that the King should pay the German troops that came to the assistance of the Protestants.

1568.  
A peace  
concluded.

This peace was not of long duration; for the court of France, which was at this time governed by the Queen-mother, the treacherous CATHERINE DE MEDICIS, made it with no other view than of destroying the Prince of Condé and the Admiral, the heads of the Protestant party, who were indeed so jealous of her, that they did not think fit to reside at court, but retired to their respective estates, among their friends and vassals. The King thereupon ordered his troops to be disposed in such a manner that they might by degrees surround these noblemen, and make them prisoners; and the Admiral going to pay the Prince of Condé a visit at Noyers, a large detachment of the army was sent to seize them; of which these gentlemen having some intelligence, they ordered two hundred horse to be got ready, and without communicating the reason of it to any of their domesticks, they marched at the head of them on the twenty-fifth of August in the night-time, and having forded the Loir, took the road to Rochelle. This vile attempt of the court to surprise the Prince, when they had just made peace with him, alarmed the Protestants, and put them upon assembling their troops in all the provinces for their defence. The Queen of Navarre also came to Rochelle with a strong body of troops, so that the Prince of Condé soon found himself at the head of a numerous army again. The Queen of England furnished him with considerable sums of money and warlike stores, which were the things he most wanted; and the Germans promised him a re-inforcement of troops the following spring. The winter was taken up with little skirmishes, beating up each others quarters, or surprizing places of no great consequence.

1569.

The Protestants  
defeated at  
Jarnac,  
and the  
Prince of  
Condé  
killed.

The Duke of Anjou, the King's brother, (who had had the command of the royal army, ever since the death of the late Constable MONTMORENCY, killed in the last battle near Paris) took the field early in the spring, in order to fight the Prince before he should be joined by his German allies. And tho' the Protestants avoided coming to a general engagement all they could, the Duke fell upon them near Jarnac, and defeated them, the Prince of Condé their General being killed upon the spot; not accidentally, but by design, in pursuance of the orders of the court to their Generals, to give him no quarter if ever he should be in their power. The Prince it seems, charging very briskly at the head of his troops, was dismounted, and being unable to disengage himself from the enemy that surrounded him, surrendered: the Baron DE MONTESQUIOU coming up in that very instant, demanded who he was, and being told he was the Prince of Condé who was wounded and taken, Kill him, kill him, he cried with an oath, and immediately shot him through the head. The Admiral, notwithstanding this misfortune, made a good retreat, and put the greatest part of the infantry which had not suffered much, into the fortified towns; and having still with him about four thousand horse, marched to Tonna Charente, where he met the Queen of Navarre with her son HENRY Prince of Bearn, about sixteen years of age, and Prince HENRY, son of the late Prince of Condé, who was about seventeen. Here it was agreed that the Prince of Bearn should be declared head of the Protestant party; accordingly they all took an oath to stand by him with their lives and fortunes till they could obtain an honourable peace. In the mean time the Duke of Deux-Ponts entered Franche Compté at the head of twelve thousand Germans; and notwithstanding all the opposition of

of the King's forces that harrassed his army from time to time, he continued his march quite through France, crossed the Loire, and was upon the point of joining the Admiral, when the Duke was taken dangerously ill, and died before he saw him; whereupon Count MANSELD took upon him the command of the Germans, and joined the Admiral on the twenty-third of June. The royal army was also reinforced by great numbers of Italians, Germans, and Swiss, which still rendered them superior to the Protestants, but not so much however as to hope for a speedy end of the war. The Queen-mother therefore proposed in the cabinet council, into which the young Duke of Guise had been lately admitted, to proscrib the Admiral, and set a price upon his head, believing if they could once procure him to be taken off, the Protestant interest must sink. Whereupon the Parliament of Paris, at the instance of the Attorney-general, condemned the Admiral to death as a traitor and a felon, offering fifty thousand crowns to any person that should take or kill him; which had such an influence on one of his valets, that he attempted to poison his master, and was hanged for it. This stratagem not succeeding, the Duke of Anjou assembled all his forces, and gave battle to the Admiral near Moncontour, and defeated him. The Admiral hereupon determined to abandon all the towns in Poitou, and to keep possession only of St John d'Angeli, Rochelle, Angouleme, and la Charité beyond the Loire, which were in a condition to sustain a siege; to retire to the mountains of Auvergne, Viverrais, Languedoc, and Gasconne, and to endeavour to join the Earl of Montgomery, who had still a good body of forces in Navarre; and he did not neglect to send couriers to England, Germany, and Switzerland, to acquaint them with his circumstances, and desire re-inforcements.

The Admiral having joined the Earl of Montgomery, undertook to march quite cross France, to meet the Germans who were coming to his assistance: but before he had effected it, terms of peace were again offered him by the court with a treacherous view indeed, which he had sufficient reason to suspect; but his circumstances were such (great part of the forces which were designed to join him from Germany being carried into the Low-Countries by the Prince of Orange) that he thought it expedient once more to enter into a treaty with the King; wherein, besides the concessions made the Protestants by former pacifications, the towns wherein they were permitted to hold their assemblies for divine worship were specified; the cities of Rochelle, la Charité, Montauban, and Coignac, were granted them for cautionary towns; the Protestants were declared capable of publick employments and dignities, and the Prince of Orange was put into possession of the principality of that name; which were such advantageous conditions as the Protestants could scarce have expected if their affairs had been ever so prosperous. This was called the treaty of St Germans, from the place where it was held.

The following year, 1571, the King solemnized his marriage with ELIZABETH of Austria, daughter of the Emperor MAXIMILIAN; and in order to draw the heads of the Hugonot party to court, about the same time proposed another marriage between HENRY Prince of Bearn, son to the Queen of Navarre, and his sister the Princess MARGARET, which the Queen of Navarre joyfully accepted of, and set out with her son for Paris in

order to see it solemnized. The King went as far as Blois to meet her, and at the first interview gave her all imaginable testimonies of his friendship and confidence in her; and was so delighted with the treacherous part he had acted, that he asked the Queen-mother with joy, whether he had not played his part well; the Queen answering it signified nothing to begin unless he finished it, he replied with an oath, that he would have them all in the net.

The next point was to draw the Admiral into the snare; and while they were deliberating about it, he furnished them with a specious pretence of inviting him to court himself. The King, in order to induce the Protestants to put the greater confidence in him, had declared that he would make war on the King of Spain, which court was known to be the great support of the House of Guise, the authors of most of the severe proceedings against the Protestants in this kingdom. The King proceeded so far as to suffer the Prince of Orange to raise troops in France to oppose the Spaniards in the Low-Countries, and did many other things that looked as if he had really designed a rupture with Spain. Whereupon the Admiral sent Count NASSAU to his Majesty, to offer his advice and assistance in that service: the King let the Count know, that he looked upon the Admiral as the most experienced soldier in his kingdom, and the person who could best advise him in an affair of this consequence; and if he should declare war against Spain, he would intrust him with the command of the army, having some suspicion of the other Generals, meaning the Guises and their faction, on account of the correspondence they held with that court: but that it was necessary the Admiral should come to him, that they might consider together what measures were proper to be taken in an enterprise of that importance. Count NASSAU returning to the Admiral, conjured him to lay hold on this favourable opportunity, which tended to raise him to the highest pitch of credit and power, and put him in a condition of being serviceable to his friends, both at home and in the Low-Countries. The Marshals MONTMORENCY and COSSE, wrote to the Admiral also, to persuade him to come to court. After he had taken some little time to deliberate upon the matter, he resolved to set out for Paris. The King received him in all appearance with the greatest respect and kindness, and ordered him fifty gentlemen of his own choosing for his guard, defrayed his charges, and admitted him into his council. He gave the Earl of Rochefoucault, la Noue, and the rest of his friends the like reception, and seemed to discourse as freely with these Lords, as with any about the court. To disguise his intentions the more, SCHOMBERG was sent to the Protestant Princes of Germany to make an alliance with them. The negociation with the Queen of England concerning her marriage with the Duke of Anjou also was revived, and a treaty concluded with that Princess, purporting, that if the King of Spain should seize or detain the ships of either nation in his ports, which often happened, they should reciprocally assist each to procure satisfaction. And the King of Spain took such umbrage at these steps, that he actually recalled his ambassador from the court of France, all which confirmed the Admiral and the Protestants in the sincerity of the King's intentions. But while they were making preparations at court for the marriage of the Prince of Bearn with the King's sister, the Queen of Navarre, his mother,

CHAP.

mother, was taken ill and died in a few days, supposed to be poisoned. It was given out however, that she died of an ulcer in her side on her being opened, which made the Admiral take little notice of it, any more than the Prince of Bearn her son, who upon her death took upon him the title of King of Navarre. But two or three days after, as the Admiral was returning home, and reading a petition that had been presented him, a musket was fired at him from a window, and one of the bullets struck off the second finger of his right hand, and the other wounded him in the left arm: upon this he stood still, and observing from whence the shot came, This, says he, is the fruit of my reconciliation with the Duke of Guise. MANREVEL, the assassin, had a horse ready, and fled out of the port St Antoine. The King soon after came to visit the Admiral, and swore he would punish the author of this villainous attempt; and expressed so much concern on the occasion, that the Admiral was persuaded of his sincerity, and would not remove into a place of security as his friends advised him. The rest of the Protestants however were sufficiently alarmed at the accident, and began to consult how they might defend themselves in case they were attacked; which the Queen-mother having notice of, went to the King, and told him it was now no longer time to deliberate, that his crown and life and the safety of the whole royal family was at stake, that the Hugonots were preparing to revenge themselves on the Duke of Guise, and that Paris would be made a scene of blood and confusion, and it was better to prevent his enemies than fall a sacrifice to them. Thus far the Jesuit my author, who forgets that he himself has told us more than once, that this scheme for destroying the Hugonots was laid long before, tho' now he would have it appear, that his Majesty and the court only consulted their own security; so barbarous did the ensuing tragedy appear, even to the Roman Catholics themselves, that they seem to acknowledge, nothing but a view to their own preservation could justify the authors of it. But to proceed; a cabinet council being held upon the occasion, it was resolved that the Admiral and all the Hugonots throughout the kingdom should be put to death, except the young King of Navarre and the Prince of Condé: and that it might be done effectually, the Duke of Guise, their mortal enemy, was trusted with the execution of it. The Duke, says the Jesuit my author, never received a commission that was more agreeable to him: he immediately ordered the Provost of Paris to give directions to the captains of the several wards to raise the citizens, and that upon the ringing the alarm-bell in the palace on the eve of St BARTHOLOMEW, they should set up lights in their windows, break into the houses of the Protestants, and murder them without mercy: all which they executed with such expedition and secrecy, says the same writer, as nothing but the extreme hatred of the Catholic Parisians to the Hugonots could have made them observe. About midnight the Duke of Guise, with the Duke of Aumale, the Grand Prior of France, several officers, and three hundred soldiers, broke open the Admiral's gates, and sending some of their number directly into his apartment, they stabbed him in abundance of places, many of them after he was dead, and then threw his body out of the window, and afterwards cut the throats of all them that were in house. The like executions were made in the pa-

VOL. II. NUMB. LXXXVII.

lace of the Louvre, whilst the citizens and soldiers dispersed themselves through the city, and massacred all the Protestants they found in private houses. Messengers also were dispatched to all the great towns and provinces in the kingdom to invite the Catholics to take up arms and fall upon the Protestants, which they did not fail to do in every place where they were not overpowered; but Meaux, Orleans, Troyes, Bourges, Angers, Thoulouse, Rouen, and Lyons, signalized their barbarity in executing this cruel and treacherous order beyond any other places. When the fury of this massacre was a little over, the King sent for the young King of Navarre and the Prince of Condé into his closet, and told them in a haughty tone, that he was now revenged of his enemies, who, under the umbrage of their names as Printes of the blood, had made war upon him, and would have deprived him both of his life and crown. That he required them both to return to the religion of their ancestors, or it would not be in his power to protect them from the fury of the people. The King of Navarre answered, he was ready to obey his Majesty in all things; but the Prince of Condé said, nothing should induce him to act contrary to his conscience: however, upon the King's threatening him that he should not be alive three days if he remained obstinate, that young Prince thought fit to follow the example of the King of Navarre.

The King went to the parliament soon after, and acquainted them with the reasons of this horrid execution; whereupon CHRISTOPHER DE THOU first president highly commended his prudence and conduct in this affair. The Advocate-general prayed that the Admiral and his accomplices, who were dead, might be proceeded against according to the forms of law; which being done, the Admiral was hanged in effigy on a common gibbet, to which the mob had some days before fastened his body, and from whence it had been taken away by his friends. The court, during the consternation this massacre had put the Protestants in, endeavoured to recover the towns that had been granted them, but Montauban and Rochelle both held out against their forces, whereupon the latter was besieged in form by a numerous army, commanded by the Duke of Anjou, but the town being well supplied with provisions, and having abundance of gentlemen in it who had fled thither upon the late massacre, baffled all their attempts; but the Duke of Anjou being about the same time elected King of Poland, was glad of this pretence to raise the siege, after he had lost twenty-four thousand men before it. Soon after a treaty was set on foot with the Rochellers, the principal articles whereof were, that the Protestants should be permitted to keep garrisons in Rochelle, Montauban, and Nismes, but should not assemble for divine service in other towns of the kingdom.

The Protestants of the Cevennes and other parts, were not at all satisfied with the treaty of pacification the Rochellers had made, but petitioned the King for the publick exercise of their religion in pursuance of former edicts, in which they were encouraged by the Duke of Alençon, the King's brother, and the family of Montmorency, who were become malecontents, on the Guises engrossing the administration of affairs to themselves, and not on account of religion. The Court having intelligence that the Dukes of Alençon and Montmorency were upon the point of joining the Protestants, caused them both to be secured in

the castle of Vincennes, together with the King of Navarre, and proceeded to put to death some of the Duke of Alençon's accomplices; whereupon the several factions had recourse to arms in many parts of the kingdom, between whom there were perpetual skirmishes, particularly in Languedoc, the Vivarez, and Normandy, and the Earl of Montgomery, who commanded the Protestants in Normandy, had the misfortune to be taken prisoner. In the mean time the King fell dangerously ill, and died on the thirteenth of May, at the castle of Vincennes, of which the Queen-mother sent immediate notice to her son the King of Poland, advising him to return to France as soon as possible. The late King left only one daughter named MARY-ELIZABETH, who died about five years of age, and one son that he had by a concubine, who was afterwards Duke of Angoulême.

HENRY the Third, at the death of his brother CHARLES the Ninth, was seated on the throne of Poland, where he was so acceptable to the people, that he despaired of their permission to resign that crown, and therefore stole away from them in the night, as if he had fled from an enemy; and thought himself very happy when he arrived in the Emperor's territories and had got out of their reach, as he did the next day. He passed through Vienna, and from thence went to Venice and so to Savoy, where that Duke so ingratiated himself with him, that he restored him Pignerol, Savillon, and Perouse, which the French had kept possession of to this time: he was guarded by a great body of the Duke of Savoy's troops from Turin to Lyons, because the Hugonots were pretty strong in Dauphiné, and had possessed themselves of several passes in his way.

The Queen-mother, who had governed the kingdom during his absence, met him at Lyons, and expressed the greatest tenderness and affection for him imaginable, this being her favourite son. On the other hand he assured her he would continue to be governed by her counsels, notwithstanding his advancement to the throne; which gave her a most sensible pleasure, for no Prince was ever so fond of power as CATHERINE DE MEDICIS (she had actually governed the State most part of the two preceding reigns, as she did great part of this). Here she presented his brothers, the Duke of Alençon and the King of Navarre, to him, whom she had kept in a manner prisoners till his arrival, apprehending that the disaffected part of the kingdom would gladly have set the present King aside, and have advanced one of these Princes to the throne before his arrival: the Hugonots she knew were sufficiently prejudiced against his Majesty, on account of the share they apprehended he had in the late massacre; but I look upon the Queen-mother herself to be the real author of that butchery, and that her two sons were only her instruments in the execution of it.

The King having consulted with the Emperor MAXIMILIAN, the Venetians, and other Italian powers in his way home, 'tis said, was generally advised to lenity and pacifick measures in the beginning of his reign, but whether he was moved by his own prejudices, or the Queen-mother's counsels, the bloody CATHERINE DE MEDICIS, he was scarce arrived at Paris before he took a resolution of destroying the Protestants; to effect which, he found himself under a necessity of uniting with the Guises, whom he hated in his heart, almost as much as he did the Reformed. Where-

upon the politicians, as they were called, whose disaffection to the court proceeded rather from their aversion to the Guises, than upon account of religion, joined with the Hugonots, and their united forces became very formidable; of these the Marshal DOMVILLE, brother to the Duke of Montmorency, was the chief, who being governor of Languedoc, called an assembly of the States of that province, declared himself head of an association for re-establishing peace in the kingdom, and exhorted all good Frenchmen to join with him, in order to the obtaining a meeting of the Estates of the realm, for redressing their grievances. And now the war was actually commenced in all the provinces between the royalists and the faction of the Guises on the one side, and the Protestants and the politicians or malecontents on the other. Not a day passed without skirmishes, or the taking or retaking of towns; the kingdom was a scene of blood and confusion. About this time died the Cardinal of Lorraine, uncle to the Dukes of Guise and Maine, an implacable enemy of the Protestants, and upon that account in great esteem with the Catholics, whose death was much lamented by them.

The King, before he ascended the throne, 'tis observed, was a great admirer of MACHIAVEL's politics, especially that part of them where he recommends a constant and profound dissimulation, and the bringing about designs by ways in appearance the most remote from them: accordingly to deceive and amuse the heads of the several parties, he affected to appear negligent in affairs of state, and to employ himself only in his devotions or pleasures; but he mixed his penances and debauches so very oddly, that he became even in the beginning of his reign the contempt of his subjects and of all Europe. At Avignon he went in procession with the penitents, clothed in sack cloth, followed in the same manner by the court Lords, who were the greatest libertines upon earth; at other times he shut himself up in his apartment with these lewd young fellows, who made their court to him by giving an account of their amours, and betraying the secrets of the ladies they had been familiar with; while he on the other hand lavished away his credit and treasure upon them. This occasioned infinite jealousies, quarrels, and assassinations, about the court. The women, to be revenged on him for exposing them, revealed his secrets in their turn, magnified his irregularities and unveiled his hypocrisy, which rendered him extremely odious to all mankind. But notwithstanding the King was so much taken up with his favourites and mistresses, he was married about this time to LOUISA DE VAUDEMONT, of the house of Lorraine, a Guise, whom he had seen in his passage through Lorraine to Poland, when he was much smitten with her beauty.

The following year a conspiracy was discovered against his Majesty, in which the Duke of Alençon the King's brother was concerned; but upon making his submission the Duke obtained his pardon: however, not thinking himself safe at court, he retired from thence, and associated himself with the malecontents, and the Count Palatine and other Protestant Princes of Germany raised forces in order to join him: their vanguard indeed was defeated by the Duke of Guise, who gained a great deal of honour by it. But the Queen-mother finding the King too weak in condition to resist the united forces of the malecontents and the foreign

troops, advised him to clap up a peace, which he negotiated in person with the Duke of Alençon; the conditions whereof were, that his Majesty should pay the German auxiliaries; that the Protestants and Malecontents should be allowed eight towns for their security more than they had already; that the King should dismiss all his troops the Swiss and Scots guards, and that the Protestants should have the free exercise of their religion in all places, except Paris and two leagues about it; that the courts of justice should consist of Protestant as well as Popish Judges; that the attainer of Admiral COLIGNI, and others of his party should be reversed; that Marshal DOMVILLE should have his offices, dignities, and governments, restored to him; that the government of Picardy should be given to the Prince of Condé, and that the Duke of Alençon's appenage should be augmented with the duchies of Anjou, Touraine, Berry, and Maine. Whereupon the Duke obtained the title of Duke of Anjou, and returned to court in a kind of triumph; where the King, dissembling his resentment, received him with a thousand caresses. What induced his Majesty to make many of these concessions to the malecontents was, the escape of the King of Navarre from court during the negotiation: when this Prince found himself out of the King's reach, he declared, that the profession he had made of the Romish religion after the massacre of St Bartholomew, was only the effect of fear and violence, and that he now professed himself to be of the Reformed religion, in which he had been educated. Upon his coming into his government of Guienne, the malecontents resorted to him in much greater numbers than they had done to the Duke of Alençon, looking upon him as a Prince that might be much more depended on, than that Duke; and this circumstance, as has been observed, was one principal motive of hastening the treaty above-mentioned, and procuring those advantageous conditions for the Protestants and other malecontents.

The King  
of Navarre  
escapes  
from  
court, and  
declares  
himself a  
Protestant.The Holy-  
League  
formed by  
the Pa-  
pists.

This edict of pacification, it was supposed, would have produced great quiet in the nation; but, on the contrary, it was no sooner published than the Papists entered into a confederacy or association for the preservation of their religion, and extirpation of heresy; which alliance obtained the name of the Holy-League, and afterwards simply the League. Some leading man in every province assembled the Popish party, and saw them sign an association, and take an oath for the maintenance of it; the King and Queen-mother encouraging or at least conniving at it; for by this means they hoped to see the Hugonots destroyed more effectually, and with less hazard than by an open war: and if we may judge by some occurrences in the former reign, the last pacification was probably consented to with this view; his Majesty did not then foresee that the leaguers would become so powerful, as to trample on his authority, and render him no more than the shadow of a King, as it afterwards happened. The placing garrisons also in the great towns where the Hugonots were most numerous, and the officers of the troops supporting and encouraging the leaguers in their insults on that people, leaves little room to doubt that the court were at the bottom of those outrages.

Encourag-  
ed by the  
court.The Duke  
of Guise  
the Head  
of the  
League.

The Duke of Guise, though he did not yet appear, was the chief manager and contriver of all these associations, and entered into alliances with foreign Princes for the support of them; among

whom he found none more ready to espouse their interests than PHILIP II, the bigotted King of Spain. The insurrections and revolts of the Reformed in the Netherlands, had sufficiently prejudiced him against that sect; and he was apprehensive, if those of the same persuasion in France should once be established there, they would support his disaffected subjects in Flanders. Thus religion, inclination, and interest, all contributed to render the King of Spain a zealous and fast friend to the leaguers. But to return to France: The King having summoned an assembly of the States at Blois, made all the interest he could to get the friends of the League returned, and declared himself to be the head of it, in order, as 'tis said, to prevent the party chusing the Duke of Guise for their leader, of whose ambition he had reason to be jealous; and still to ingratiate himself the more with the Papists; he declared, that he would suffer no other than the Roman Catholick religion in the kingdom for the future. When the States of Blois were met, he procured petitions to be presented to him to the same effect: and it was accordingly carried in that assembly by a great majority, that the King should be addressed to reunite all his subjects in the Catholick Apostolick Roman religion, by the best and most wholesome methods: that the exercise of the pretended Reformed religion should be prohibited both in publick and private, and that the Preachers, Deacons, and Overseers of their congregations should depart the kingdom within a limited time, notwithstanding any former edicts to the contrary. Whereupon the deputies of the King of Navarre and the Prince of Condé, protested against the assembly as an unlawful convention, not having been called or chosen according to the laws of the kingdom; and indeed their adversaries seem to admit, that there was a great deal of foul play in returning the deputies or representatives. This protest was very little regarded: on the contrary, the Holy-League was confirmed and signed by the King, the Duke of Anjou, and most of the Catholick Lords and Princes assembled. And the war was immediately declared and begun on all sides against the Protestants; the Duke of Anjou commanding one of the armies against them, though in the late war he was engaged on the Protestant side. But notwithstanding the King had acted with all this shew of zeal against the Hugonots, either through want of money to maintain the war, or that he dreaded the foreign troops, which the Reformed had desired of the Queen of England and the German Princes, or whatever else was the motive, he thought fit to conclude a peace with the King of Navarre and the malecontents the following year; the terms whereof differed but very little from the last. The Queen-mother afterwards made a journey to the court of the King of Navarre, to invite him to come to Paris; but that Prince had so narrowly escaped the last massacre, that she could not with all her cunning prevail upon him to venture his life in her power again. The old Queen afterwards visited other parts of France, and seems to have a much greater share in the administration at this time than her son: he was content to let her take all the fatigue of government upon her, that he might indulge in pleasure. At her return to court in the year 1579, she found he had been trifling away his time in her absence with his mistresses and favourites; and three of the latter having lost their lives, two in a duel, and a third by

affassination, he was inconsolable; and the manner of expressing his grief for them, 'tis said, was much beneath his royal dignity. The latter end of this year the leaguers obliged the King to come to a rupture with the Protestants again, and several towns were taken on both sides; but by the mediation of the Duke of Anjou this breach was made up in a few months: for the Duke had two great designs carrying on at this time abroad, which were not consistent with the deposing the Protestant interest in France. The one was a treaty of marriage with the Queen of England; and the other the obtaining the sovereignty of the Netherlands, which was offered to him by the Prince of Orange and the malecontents there. In both which views he was supported by the court of France.

The Low-Countries having withdrawn their allegiance from the King of Spain, and invited the Duke of Anjou to take the Government of those provinces upon him, he marched with a gallant army to the relief of Cambray in the year 1581, which was then besieged by the Spaniards, commanded by the Duke of Parma; and the siege being raised on his approach, the inhabitants received him with joyful acclamations, and here he began to take the government of the Low-Countries upon him; but because he looked upon this as the key of the country, he withdrew the Walloon garrison, and placed one of French in the room of it, which rendered his new subjects a little jealous of him.

He afterwards embarked for England, where he was received by the Queen, as the French historians relate, with all the most tender marks of affection: and the matter proceeded so far, that on the twenty-second of November, in the presence of the French ambassador and several English Lords, she put a ring upon the Duke of Anjou's finger, and told him, she betrothed him that moment: she ordered an instrument to be drawn up in Latin, containing the form that should be observed in celebrating their marriage, namely, the terms the Duke of Anjou was to make use of in espousing the Queen, and the words which were to be pronounced by her Majesty in accepting the Duke of Anjou for her husband. This instrument, they add, was signed by the Bishop of Lincoln, and several English Lords, and the Ambassador gave advice of it to the King of France; insomuch, that the affair was looked upon as concluded, both in France and England. But the Duke of Anjou going to visit the Queen the next day, she told him, she had passed the night in great uneasiness, and that three such nights would bring her to her grave: she mentioned a great many scruples she had, and HATTON, one of the privy-council, added many more. Some English Preachers had inveighed vehemently against the marriage, by a private order of the Queen, (as was supposed) and given her some pretence for this conduct; while the Catholick Doctors at Paris appeared no less zealous against the match, than the Protestants were in England, declaring, that this alliance of the presumptive heir of the crown of France with an heretical Queen, was a certain prelude to the destruction of religion in that kingdom. The Queen however amused the Duke for three months with hopes of succeeding; and when she permitted him to return to Flanders, it was upon condition he should come over again within a month; and promised him, that she would constantly persevere in her resolution of

marrying him. Thus far the French account of that match.

CHAP.  
XXXIV.

There is no doubt but QUEEN ELIZABETH made the most of the treaties of marriage that were proposed between her and the Dukes of Anjou, (for HENRY III, when he was Duke of Anjou, had made love to her as well as his brother;) she seems to have kept them in suspense upon political views. It was the hopes of succeeding in these treaties, that prevented the French and Spaniards joining in the extirpation of heresy (as they called it) in pursuance of the agreement at Bayonne. The Queen of England here shewed herself superior to CATHERINE DE MEDICIS, the Queen-mother of France, and her two sons, who were all three of them bent upon the destruction of the Protestants, as well as the King of Spain and the Pope, and could not have been diverted from it by any other means, than the hopes they had of adding England to their Empire by this match. And when the Queen of England could no longer prevent the ruin of the Protestants by her treaties, we see her assisting them with arms, in France, the Low-Countries, Germany, and Scotland. To her address therefore in a great measure is to be ascribed the establishing of the Protestant religion in Europe.

The Reformed in France, the Low-Countries, and Scotland, had infallibly been crushed in their infancy, if they had not been supported by the Queen of England; and as to her amusing the Dukes of Anjou, and keeping them long in suspense to obtain so glorious an end; this rather advances than lessens her character, in the opinion of all wise men. I don't find any thing criminal on her part in these transactions, as they are related by our own historians. It appears indeed, that there was once articles of marriage signed between the Queen and the last Duke of Anjou; but then they were to be void unless they were ratified by the French King, and that Prince refused to ratify them. 'Tis admitted also, that she did once, in a merry mood, put a ring upon the Duke's finger, but used no such words as the French recite, That she betrothed him with it, or indeed any other words, that were serious, on that occasion. It is ridiculous, to think, that the Queen should seriously use the words of espousal, without the Duke's reciting his part of the contract, which it is not pretended he did; and consequently since it was not reciprocal, by their own account, very little stress could be laid upon it. The Roman Catholics no doubt, were sufficiently exasperated against her, and did all that was in their power to blast her memory; she prevented their religion becoming universal, and 'tis natural to expect they should frame ten thousand falsehoods in relation to this transaction; but those who are of opinion that the world was at all bettered by the Reformation, must for ever applaud her conduct.

The Duke of Anjou returning to the Low-Countries, was met by the Prince of Orange and the States at Flushing, and being conducted to Antwerp, was there declared Duke of Brabant, and afterwards at Ghent, Earl of Flanders. In the mean time, the King of Spain set a price upon the Prince of Orange's head, promising a reward of twenty-five thousand crowns to the Person (or his heirs) that should destroy him; whereupon JOAUNEL JAUREGNI, a Biscayner, undertook to assassinate him, and having obtained leave to present a petition to the Prince, fired a pocket-pistol close to his head while he was reading it, and

and one of the balls went through both his cheeks; and the assassin was immediately cut to pieces; but the wound not being mortal, the Prince of Orange soon recovered. It was reported immediately among the mob, that the Duke of Anjou had been the author of this attempt, in order to take off the Prince, who, he thought, had too much authority among the Flemings; whereupon all the French were seized and disarmed, and the Duke of Anjou himself was in danger of being pulled in pieces, if the Prince of Orange had not sent a letter to assure the people, that neither the Duke, or any of the French were concerned in the attempt, but that the authors of it were discovered by papers found upon the assassin.

The Duke of Anjou attempting an unlimited power, is expelled the Low-Countries.

The Duke of Anjou, however, being joined by some re-inforcements from France soon after, was the author of another attempt, which quite ruined his interest among the Flemings. He was really piqued to see the Prince of Orange govern all in the Low-Countries, while he himself had scarce any authority amongst them, to support the glorious titles they had given him of Duke of Brabant and Earl of Flanders. He determined therefore in a council he held with his own officers, to make himself master of the principal towns, and garrison them entirely with French forces; and on a day prefixed, viz. the thirteenth of January, they were at one and the same instant to have seized Antwerp, Bruges, Dunkirk, Dendermonde, Vilvorde, and other places, and expelled the Prince of Orange's troops. But at Antwerp, which he designed to have seized himself, and in most other towns, the French were overpowered by the Flemings, and great numbers of them killed. They were successful only at Dunkirk, Dixmude, and Dendermonde, and these places they were forced to abandon soon after; whereupon the Duke of Anjou retired into France, and notwithstanding the French King sent Ambassadors to the States, and offered his mediation to reconcile these differences, the Flemings were so alarmed at the attempt to seize their towns, that they would not admit the French among them again. This dissension between the French and Flemings was an advantage to the Duke of Parma the Spanish General, as if he had obtained a victory: he took Dunkirk, and many other places, and prevailed on the provinces of Flanders, Artois, and Hainault, to return to the obedience of their Sovereign the King of Spain; and the ill success of the Duke of Anjou, together with his disappointment in England, as is said, had such an effect upon him, that it broke his heart. But however that was, certain it is, the Duke died at Chateau Thierry, on the tenth of June 1583; upon whose death the King of Navarre, the next Prince of the blood, became presumptive heir to the crown of France, to the no small mortification of the Leaguers, this Prince being a Protestant.

1584.

The Heads of the League therefore assembled on this occasion, under pretence of preserving the Catholick religion, and resolved that in case of the King's death, the Cardinal de Bourbon, brother to the Prince of Condé, should be acknowledged King of France; and that in the mean time all those who had signed the League should be ready to take up arms. They applied also to the Pope, the King of Spain, and other Catholick Princes, who promised them their assistance; the Pope particularly declared, that the Catholick Princes might take up arms for the defence of the Catholick religion in France: That a war against

V O L. II.

the Hugonots was just and lawful; and that it was not only allowable to make war upon them, but upon all those who favoured and assisted them, even tho' they bore the royal character (meaning the French King). The Duke of Guise also put the Cardinal of Bourbon upon publishing a declaration, wherein he and his associates say, that, the King having no children, they were in danger of seeing an heretical and apostate Prince King of France, notwithstanding the oath of their Kings at their coronation, obliged them above all things to maintain the Catholick Apostolick and Roman Religion. Then they proceed to villify and asperse the King and his administration in a most scandalous manner, insinuating, that he was a debauchee and favourer of hereticks; and for these weighty reasons, adds the Cardinal, We CHARLES of Bourbon, first Prince of the blood, assisted by the Princes, Cardinals, Peers, Prelates, Governors of provinces, cities, and others the soundest and best part of the kingdom, do declare and have sworn not to lay down our arms till our religion shall be secured, the taxes taken off, which have been introduced since the reign of CHARLES IX, &c. The names of the King of Spain and a great number of Catholick Princes, who had entered into this association, being placed at the head of the declaration. This made an impression on the minds of the Catholicks of all conditions; many of whom left the court to repair to the Heads of the League, who proceeded immediately to action, and besides the towns that their friends were already masters of, they surprized Lyons, and several others.

The poor indolent King was so frightened at these proceedings, that he empowered the Queen-mother, who, at bottom, was a friend to the Leaguers, to make peace with them on any terms: and it was agreed between them, and there should be but one religion in France; that the Hugonot preachers should leave the kingdom within a month, and all other hereticks within six months; that they should be incapable of any office or dignity, and that they should be deprived of the cities that had been yielded to them; that the King and all the societies and corporations in the kingdom should confirm it by their oaths, and that the Cardinal of Bourbon, the Duke of Guise, and other heads of the League, should have cities and guards assigned them for their security, which the King should maintain, and also advance them a considerable sum of money. And Pope SIXTUS V, tho' he is represented as no friend to the League, published a bull, whereby he excommunicated the King of Navarre and the Prince of Condé, and deprived them and their heirs of all their estates, particularly of their right of succession to the crown of France, and absolved their subjects and vassals from their oaths and allegiance.

The Leaguers at the same time compelled the King to enter into a war with the Protestants, to recover the towns they were possessed of; but the King of Navarre defended them so well, that the Leaguers gained few advantages of them this campaign; one reason might be, that the King was not very desirous at this time of seeing the Hugonots exterminated, and therefore carried on the war but faintly. The year 1586 was as favourable to the Protestants. And the following year, 1587, the King of Navarre obtained a complete victory over one of the armies of the Leaguers near Coutras; he is extremely blamed however, that he did not afterwards endeavour to meet the Ger-

man auxiliaries; who, to the number of thirty thousand and upwards, were marching to join him, but suffered them to be surrounded and dispersed by the Leaguers, and rendered perfectly useless, without ever coming to a battle. About this time the Prince of Condé died, whose ambition and jealousy of the King of Navarre, it is observed, prevented his doing his party the service he was capable of.

The Leaguers drive the King from Paris.  
1583.

Besides the general League, there was a particular league or association entered into by the citizens of Paris, who were ten times more zealous for the destruction of the King and the Protestants, than the rest of the Catholics in the kingdom. The university and preachers there maintained publicly, that Princes might not only be deposed for heresy, but for male-administration, with which they made no scruple to charge the King; and his Majesty shewing some resentment at these proceedings, they sent for the Duke of Guise, and, by his assistance, fairly drove his Majesty out of Paris, who thereupon retired the Rouen. The Queen-mother was again employed to negotiate a peace between the King and the Leaguers, which she soon effected, by granting them whatever they demanded. After which the King went to reside at Chartres, refusing to return any more to Paris, where he had been so notoriously insulted, and his authority trampled upon: tho' he gave them no other reason for his residing at Chartres, but that he should be nearer Blois, where he had ordered the States of the Kingdom to meet the September following. The Queen-Mother, the Cardinal de Bourbon, and the Duke of Guise went to pay their compliments to him at Chartres; he received them with all the outward marks of esteem imaginable, declared the Cardinal first Prince of the blood, and heir to the crown, and the Duke of Guise Lieutenant-General of the kingdom; after which he set out for Blois to meet the States, being followed thither by the Duke of Guise.

He studies the destruction of the Leaguers.

The King, notwithstanding the favours he had so lately heaped upon the heads of the League, hated them heartily, and having chosen a select council at Blois, the first thing he determined (after opening the assembly of the States) was the death of the Duke of Guise. The most convenient time to dispatch him was held to be as he came into the council-chamber, when he would have discharged his domesticks of course. The King committed the execution of it to an officer and fifteen or twenty of his guards. On the morning he summoned the Duke to council he told them, that that day either the Duke of Guise or he must perish, that his own safety and that of France was in their hands, that he should owe his crown and his life to them if they succeeded, and that his gratitude should be stinted by no bounds.

They all assured him, they would act answerably to the trust he had honoured them with; whereupon he sent for as many daggers as there were men, and on delivering them into their hands said, That this was an execution of justice, which he committed to them upon the most criminal person in his kingdom, whom he had a right, both by the laws of God and man, to punish; and since it could not be done by the ordinary methods of justice, he authorized them to do it by virtue of his royal prerogative.

The Duke of Guise had some intimation, that there was a design upon his life, and was advised by his friends to retire; but he answered, he was

too far advanced to go back, that the King and he were like two great armies facing one another, and that if one retreated, the other would have the victory. The very day before the execution, sitting down at table, he found a note under his napkin, advising him to take care of himself for that there was some treacherous design formed against him; which when he had read, he took his pencil and wrote underneath, *They dare not*, and threw it under the table. At other times, he declared to his friends, that he laid no manner of stress on the professions of kindness the King made him, he was sensible of his dissimulation; but the King knew very well, that if any attempt was made upon his person, it would infallibly destroy himself.

But to proceed: The Duke of Guise being come to court, and attending in the antichamber, one of the Secretaries of State came to acquaint him that the King wanted him in his closet, and in his way thither, being to pass through a door where he was obliged to stoop, as he was lifting up the hanging to enter it, he received six stabs from the guards, who were ranged on each side under pretence of doing him honour, and had only time to say, *Lord have mercy upon me*. The King, having notice he was dispatched, went out of his closet, and the Lords about the court being assembled, he told them, that he was now King, and would have his enemies learn by the example he had just made, that the same vengeance hung over their heads, if they durst attempt to lessen his authority. He afterwards went down to the Queen-mother's lodgings, who lay dangerously ill, and acquainted her with what had happened; in answer to which she only demanded, if he had considered the consequences of the Duke of Guise's death, and made provision for all events. He afterwards ordered the Cardinal de Guise to be dispatched; which made the court of Rome set all their engines on work to destroy him. He afterwards endeavoured to seize the Duke of Maine, brother to the Duke of Guise; but this gentleman had the good fortune to escape to Paris, where he was adored by the Leaguers, as well on his brother's account as the zeal he had shewn for the cause. About this time died the Queen-mother, who had had a very great share in the administration, in this and the two former reigns; tho' 'tis said, that the King, for some time before, did not shew that regard to her advice as he used to do; which proceeded possibly from the discoveries he made of her promoting the designs of the Leaguers underhand.

The death of the Duke of Guise was so far from terrifying the Parisians, that their council of sixteen, and their bigotted preachers, incited the mob to revenge themselves on their Sovereign by all the ways imaginable: they defaced his statues and pictures, published the most scandalous invectives against him, and proposed it to the faculty of Theology as a case of conscience, whether the people of France might not take up arms, raise money, and unite in the defence of the Catholic religion, against a Prince who had violated the publick faith at the assembly of the States, and whether this did not discharge them from their oaths of allegiance? which was resolved in the affirmative. After this, they no more gave him the title of King, or mentioned him in their publick prayers, but as a perjured, excommunicated person, an heretick, and the most detestable of mankind. They swore upon a crucifix never to depart
