depart from the League, but to pursue, with the utmost vengeance, all that had been concerned in the death of the Duke or Cardinal de Guise. They declared the Duke of Maine Lieutenant-General of the royal state and crown of France, and vested him with almost sovereign authority. The King hereupon found himself under a necessity of uniting his forces with the King of Navarre and the Protestants, who received him with open arms. The two Kings, after having secured the Cardinal de Bourbon in the castle of Chinon, and made themselves masters of some towns in their way, marched and invested the city of Paris, into which the Duke of Maine had thrown himself (after some conquests he had made in Normandy) with a numerous garrison. The King took up his quarters during the siege at St Cloud, and the King of Navarre at Meudon; and it was very likely that the city of Paris would have been obliged to surrender in a short time for want of provisions; but JAMES CLEMENT, a young dominican fryar, who had been worked up by the preachers of Paris to a belief that it was lawful, and even meritorious, to deprive a tyrant of his life, and especially a favourer of hereticks, as they had represented his Majesty to be, found means to be admitted to the King, by virtue of credential letters which he pretended he had brought from HARLAY the first president of the parliament of Paris. While his Majesty was examining these credentials, having only two persons with him in his closet, from whom he withdrew to a little distance on the monk's telling him that he had something to say to him in private, the villain, at that instant, drew a knife out of his sleeve, and having stabbed the King in the belly with it, left it there: his Majesty took the knife out of the wound himself, and struck the assassin in the eye with it, who was immediately knocked down and cut in pieces by the guards, who came running in on hearing the noise, and he was afterwards thrown out of the window.

The surgeons were immediately sent for, and found the wound four fingers below the navel, and about a finger's length, the gut, part of which came out at the orifice, not being hurt; but the pain, and a cold sweat which succeeded, with the alteration of the King's pulse, gave little hopes of his life. The King of Navarre therefore coming to wait on his Majesty, he told him he left the crown of France to him as his lawful successor, but assured him he never would enjoy it quietly unless he became a Catholick, which he exhorted him to be: after this he called for the Lords about the court, and commanded them to acknowledge the King of Navarre for their lawful Sovereign if he did not recover, which they all swore to do. His Majesty's fever increasing, he received the Viaticum, declaring he died in the faith of the Catholick Apostolick Roman Church, and afterwards expired on the second of August about four in the morning; in whom ended the branch of Angoulême, which was a part of the house of Orleans, and all the race of Valois, who had swayed the scepter for two hundred and sixty years, and now left it to HENRY King of Navarre, of the family of Bourbon, styled HENRY the Fourth.

HENRY of Bourbon derived his pedigree from ROBERT Count of Clermont, Lord of Bourbon, the fifth and youngest son of ST LEWIS. He was the head of the branch of Bourbon-Vendôme, and nearest in blood to the crown after the extinction of the house of Valois, by the death of HENRY III.

The late King was no sooner dead, but the popish Lords about the court came to his Majesty with the Duke of Longueville at their head, and pressed him to profess the Roman Catholick religion: to whom the King answered, that he was not obstinate in his present persuasion, but that so sudden a change would induce all considering men to think that he had in reality no religion at all, and that they must give him time to consider of a point of such importance; with which answer many of the popish Lords were satisfied, and took the oaths of allegiance upon his Majesty's promising to support the Catholick religion: but there were others, of whom the Duke of Espernon was the chief, who retired with their troops in discontent into their respective provinces, and left the King's army so thin that he was soon obliged to raise the siege of Paris; and had not the body of Swiss been kept in good humour by the address of the Marshal DE BIRON, he would have run a great risk of falling into the hands of his enemies.

The Parisians were so elated at the desertion they observed among the King's troops, that they talked of nothing less than setting up another upon the throne. They looked upon JAMES CLEMENT as a martyr to their cause, comparing him to EHUD, and others whom God had raised up to deliver his people the Jews from the tyranny of their oppressors. The Duke of Maine made his advantages of the fury he saw the people in. He wrote to the towns and governments devoted to the League, exhorting them to improve the opportunities that providence had put into their hands for the advancement of religion, which he insinuated was upon the point of being extirpated. He wrote also to the bigotted King of Spain, desiring him to support them with his forces, whereby he might prevent heresy gaining a superiority in France, as it had done in England and Germany.

The King in the mean time finding his army so much weakened by desertion, put garrisons into the most considerable towns in his interest, and with a very small body of horse and foot, bent his march towards Diep in Normandy, to wait for a reinforcement that was promised him by the Queen of England. The army of the League being increased at this juncture to thirty thousand men, the Duke of Maine followed his Majesty into Normandy, and finding him intrenched about a league from Diep, attacked him very briskly, but was repulsed with very great loss. It is not to be conceived what a reputation this success gave his Majesty at the beginning of his reign: his friends magnified his courage and conduct to the last degree, and his enemies were sufficiently terrified, when they had seen him with an army of seven or eight thousand men defeat one of four times that number. Soon after this battle the King being joined by four thousand English and some national troops, marched and invested Paris again, to the no small surprize of the citizens, who had been made to believe that if he was not fled beyond sea into England, they should have seen him at this time led as a prisoner through their streets in triumph by the Duke of Maine. The King attacked the suburbs and carried them, and was very near entering the town itself with the flying enemy; but the Duke of Maine throwing himself into the city with an army equal, if not superior to the King's, his Majesty drew off his troops, and marching to Touraine, and from thence into Normandy, made himself master

of a great many considerable towns. This Prince's moderation, (says my author) the exact discipline he made his soldiers observe, the care he took to prevent the plunder of the churches, and preserve the privileges of the clergy, contributed very much to those sudden conquests he made.

In the mean time the Leaguers observing that the want of royal authority was a considerable disadvantage to their cause, proposed the setting up a King in whose name they might act. But in this they were very much divided. The Spaniards proposed the marrying some Prince to the Infanta; and declaring them King and Queen of France; the Duke of Lorraine made interest for his son, and the Duke of Guise would gladly have usurped the throne himself, but he did not think his interest strong enough to carry that point, and therefore set up CHARLES Cardinal of Bourbon, the next in blood to the crown, if the Protestant Princes were excluded. He was a poor decrepid old man, and imprisoned by the royal party at that time, and therefore could be of no other use to the Leaguers than by affording them his name, and keeping out a foreigner, whom the Spaniards and some of the most furious of that party had agreed to set up. The Cardinal was accordingly proclaimed, all publick acts run in his name, and he is by some historians stiled CHARLES the Tenth, but not generally placed in the catalogue of their Kings; this perhaps would have been disagreeable to the present royal family, who look upon themselves to have been possessed of the throne of France ever since the death of HENRY III.

This struggle about the choice of a Sovereign among the Leaguers, set the King of Spain and the Duke of Maine at variance. The council of sixteen at Paris, and all the furious part of the Leaguers, were in the interest of Spain; while the parliament and the politicians, as the more moderate were called, followed the directions of the Duke. The King of Spain made large promises of assistance to the Leaguers, but afforded them no more from time to time than he thought was necessary to keep them from sinking, that they might find themselves under a necessity at last of throwing themselves under his protection; and by this means he proposed, either to give France a sovereign, or to unite that kingdom to his own. The Duke of Maine, on the other hand, endeavoured to strengthen himself against the King by the reinforcements he received from Spain, but never designed to put himself or the kingdom in the power of this Prince: and these different views occasioned both parties to have a jealous eye on each other. The Duke found means at length to dissolve the Council of Sixteen, which had given him the greatest uneasiness, and took upon himself the exercise of the whole regal power, under colour of his being elected Lieutenant of the kingdom at the same time the Cardinal DE BOURBON, in whose name he acted, was proclaimed King. His authority being thus established, in order to procure the esteem of the Parisians, he took the field and made himself master of Pontoise, the castle of Vincennes, and Meulan; and the King having besieged Dreux, a town of importance, he immediately marched to its relief; whereupon a battle was fought on the fourteenth of March, 1590, near Ivry, in which the Duke of Maine was entirely defeated, and the King gained abundance of honour, as his army was much inferior in numbers to that of the enemy. The same day the King's troops in Auvergne obtained another victory over the Leaguers.

Upon these repeated successes, several towns opened their gates to his Majesty, and 'tis thought if he had marched immediately to Paris, that city would have surrendered; but the Swiss mutinying for want of pay, he was forced to remain inactive for some time, and the people had pretty well recovered their consternation before his Majesty invested the town: it was, however, at length blocked up, and the Royalists having made themselves masters of all the rivers above and below Paris, so that no provision could be brought thither, the place was reduced to great extremity by famine; for the King's army not consisting of above fifteen or sixteen thousand men, and there being eight thousand foreign soldiers in the place, besides a great many thousand citizens who were so well disciplined by the continuance of the civil war, that they were not much inferior to regular forces, the King did not propose to make himself master of the city itself any other way than by starving it, tho' he had carried the suburbs and quartered his soldiers in them. The besieged, to supply the want of other food, eat dogs, cats, rats and leather, and, 'tis said, made a kind of paste of dead-men's bones ground to powder; so zealous were they in defence of their superstitions, which, they imagined, would be abolished if the King should take the town. The Duke of Nemours, the Governor, is much admired for the many expedients he found out to keep up the spirits of the people in this distress; notwithstanding there was so great a scarcity of provision, he took care to see those supplied who were in the greatest reputation among the people, that they might keep up the courage of the rest. The Governor also persuaded the nobility and wealthy citizens to sell their plate and jewels to supply the soldiers wants, and the Spanish Ambassador imitated them; nor did the Duke of Nemours fail to make his advantage of the madness and bigotry of the clergy and religious, the preachers were extremely useful to him in declaiming against heresy, and the King as the great supporter of it; they assured the people that they fought in the cause of heaven, that those of them who survived would infallibly be conquerors, and if they died under their sufferings, they would be rewarded with the crown of martyrdom: in short, according to the Turkish doctrine, they might depend upon glory in this world or paradise in the next. And thus the courage of the Parisians was buoyed up by their leaders, till the Duke of Parma, the Spanish General, came from the Netherlands with an army of veterans to their relief, who being joined by the Duke of Guise, the army of the Leaguers was much superior to that of the Royalists, and his Majesty found himself under a necessity of raising the siege; after which he divided his forces, sending detachments into the several provinces to support his interests, and only kept a flying army about his person, to march wherever his presence should be most necessary, and harra'ss the enemy. The Duke of Parma having introduced a sufficient quantity of provisions into Paris, and taken some towns upon the Seine which opened their communication with the neighbouring country, returned to Flanders, leaving a large detachment of his forces with the Duke of Guise and the Leaguers.

While the two principal armies were employed in the attacking or relieving Paris, the civil war was carried on with great fury in other parts of the kingdom: the Royalists had generally the

advantage in Maine, where several bloody engagements happened: on the other hand, the Duke of Mercœur, one of the heads of the League, having married a lady whom he pretended to be a descendant of the antient Dukes of Britany, attempted to make himself Sovereign of that province in her right, and being assisted in his pretensions by the Spaniards, the Leaguers became much superior to the King's forces there. At the other end of the kingdom, the Duke of Savoy made himself master of great part of Provence, and attempted the conquest of Dauphiné, but was defeated in several engagements by LESDIGUIERES the King's General. The Duke at first only assisted the Leaguers, but having got footing in France, claimed the sovereignty of what he possessed himself of. So that there were three armies in this part of the kingdom in as many different interests, and consequently, the inhabitants miserably harassed amongst them.

The Cardinal de Bourbon dies.

1591.

About this time died the Cardinal DE BOURBON, whom the Leaguers had acknowledged for their King by the name of CHARLES the Tenth, and notwithstanding the Duke of Maine derived his authority from this pretended Prince, his death made no alteration in their affairs, the Duke of Maine continued to exercise sovereign authority over his party as before. The same year died Pope SIXTUS V., who was succeeded by URBAN the Seventh; but this Pontiff not living above thirteen days, GREGORY the Fourteenth was advanced to the papal chair, a person entirely devoted to the Spanish interest and the League: he sent them forces and money, excommunicated the King and all that adhered to him, deprived him of his dominions, as far as lay in his power, and absolved his subjects from their allegiance. These violent proceedings of his Holiness gave the Royalists some disturbance, but the divisions among the Leaguers made them an ample amends: the council of sixteen, after the siege of Paris and the absence of the Duke of Maine, had regained their former authority and influence, and were become so arbitrary, that they hanged up the first President of the parliament and two other members of that body without bringing them to a trial; which so terrified the principal citizens, who began to look upon their lives as very precarious under such a tyranny, that they sent to the Duke of Maine to march to their relief. The Sixteen did design to have opposed his entrance into Paris, but he was so expeditious, that he arrived before they had taken their measures to prevent it; and having called an assembly in the Hôtel de Ville, and heard the complaints of the citizens on this head, he caused four or five of the principal members of the Council of Sixteen to be apprehended that night, and hanged them in the hall of the Louvre; some others who had been equally criminal escaped out of town: and tho' the Duke established his authority for the present by this act of justice, the greatest advantage accrued to the Royalists, who gathered strength by the misunderstandings among the Leaguers.

Both parties call in foreign forces.

1592.

In the mean time both parties having called in foreign troops to their assistance, the Pope's nephew, the Duke of Monte Marciano, marched from Italy at the head of ten thousand Italians and Swiss to join the Leaguers. The Queen of England on the other hand sent the King a supply of money, ammunition, and six thousand men, and the Protestant Princes of Germany furnished him

with another body of troops; whereupon his Majesty laid siege to Rouen, but was obliged to raise it by the Duke of Parma, who again marched into France at the head of a powerful army of Spaniards and Walloons on this occasion. The King's forces under the command of LESDIGUIERES in Dauphiné and Provence had much better success, driving the Duke of Savoy out of those provinces, and carrying the war into his own country.

The year 1593 was more memorable for the meeting of the States at Paris than for military exploits. The King of Spain had obliged the Duke of Guise to assemble them (at least such of them as were not in his Majesty's interest) in order to chuse a sovereign, or rather to confirm one of his nomination; for he insisted that the person whom the Infanta of Spain married should be their monarch, and afterwards let them know that he designed the Archduke ALBERT for her husband: but most of the chiefs of the League opposed him. The King so far acknowledged this assembly of the States, (though no such body could be legally convened without his summons) that he permitted the Catholics of his party to invite those at Paris to a conference upon the affairs of religion and the state; which being agreed on accordingly, the commissioners on both sides met at Surenne, a village about a league and half from Paris; and the King, to facilitate matters, thought fit about this time to declare himself a Catholic, at which the Protestants being alarmed, he gave them a promise under his hand, that whatever the necessity of his affairs might oblige him to, they should be secured in the profession of their religion and liberties pursuant to former edicts. A truce was soon after concluded between the Royalists and the Leaguers, and the King made his abjuration of the Protestant religion openly in the Abbey of St Dennis, on the twenty-fifth of July 1593, of which he sent advice to all the parliaments in the kingdom. He also sent an Ambassador to the Pope, to desire absolution, and to be reconciled to the Church. His Holiness was extremely pleased with the news of his conversion, but refused to give the Ambassador audience for fear of incurring the displeasure of the Spaniard.

CHAP.  
XXXIV.

The King forced to raise the siege of Rouen.

1593.

The King declares himself a Roman Catholic.

The King's declaring himself a Catholic had a mighty effect on the people in general, and the cities of Meaux, Lyons, Orleans, Bourges, and many others, soon after surrendered to him; upon which success the King was crowned, or consecrated, in the French phrase, at Chartres, on the twenty-seventh of February 1594; and instead of the holy oil of Rheims, which was then in possession of the Leaguers, they made use of that which is kept in the convent of Marmoutier, and supposed to confer equal blessings on the Sovereign. Soon after this solemnity, the gentlemen of the other party deserted over to him in troops, and all the great towns seemed ready to declare for him. The Duke of Guise observing the like inclinations in the people of Paris, thought it no longer safe to reside among them, and therefore retired from thence with his family to prevent his being delivered up to his enemies; but before he left the town, he procured a promise from the Count DE BRISSAC the Governor, to have a watchful eye over the Royalists, and do all that was in his power to defend the place against them. BRISSAC notwithstanding observing that the kingdom was generally disposed to submit to his Majesty, and that it would not be in his power long to hinder the revolt of the city, agreed with the commissioners appointed

to treat with him to deliver it up into the King's hands, which was effected on the twenty-second of March, with some little resistance from the Spanish forces who were in garrison here, of whom there were about three or four-score killed, the rest were permitted to return to their own country. VILLARS, Governor of Rouen, followed the example of BRISSAC, and surrendered that city to his Majesty, making advantageous terms for himself, as the Governors of the rest of the great cities had done who were so wise as to submit in time. The great men in such revolutions as these generally have foresight enough to make their own fortunes, whatever becomes of the cause or the people they have deluded. The young Duke of Guise came to an accommodation with his Majesty the same year. There were some desperado's however left among the malecontents, who could never patiently submit to a Prince whom they were persuaded was still a heretick in his heart, and whom they had been taught it would be meritorious to destroy. One of these having got into the presence-chamber while his Majesty was surrounded by the Lords of the court, made his way through them, and stabbed his Majesty in the mouth with a knife, and had he not stooped forward at that very instant to salute a Nobleman, the knife had been in his breast; but the greatest damage he received by the blow, as it happened, was the loss of one of his teeth. The assassin was a draper's son of Paris, who being examined concerning the fact, confessed that he had received his education among the Jesuits; from whence, and other circumstances, it was concluded he had been encouraged to commit this villainous attempt by that order; at which the King's friends were so exasperated, that they procured an edict for banishing them the kingdom. One, of whom they had the greatest suspicion, was put to death, and others were imprisoned, without ever having been heard in their defence, if we may believe their friend DANIEL.

1595. The King receiving very little hurt by the blow the assassin gave him, soon after took the field in order to reduce the Duke of Maine, who was still at the head of an army in the province of Burgundy, of which he was governor; and the Duke declining to come to an engagement, most of the towns revolted to his Majesty. The King afterwards marched into Provence, where the Leaguers were still in arms, and met with the like success. The Pope apprehending that the whole kingdom was upon the point of submitting to his Majesty, thought fit to send him his bull of absolution, which was published with great solemnity, and the King from that time esteemed a true son of the Church.

In the mean time the King's arms were unsuccessful in the Netherlands; the Spaniards made themselves masters of Cambray, Dourlens, and several other fortresses; and the Duke of Mercœur still maintained himself in Brittany, against the utmost efforts of the Royalists. On the other hand a peace was concluded this year between the King and the Duke of Lorraine, whereby France was delivered from the miseries of war on that side. The Protestants could not conceal their uneasiness, however, at the partiality that was shewn the Catholics, and what made them more so was his Majesty's taking the young Prince of Condé out of their hands, who was the presumptive heir of the crown, in order to breed him up a Papist; but this, it seems, was one of the

conditions on which the Church of Rome was reconciled to him, and granted him absolution.

The year 1596 was remarkable for the submission of the Duke of Maine, the Duke of Joyeuse, the Duke of Nemours, and several other great men, to whom the King was pleased to grant very advantageous conditions, in order to restore peace to his dominions. He seems to have been governed by the same principle the court of England was at the Restoration, of forgiving and preferring his enemies, while his friends, many of them, were left in a starving condition. It was thought sufficient for the Protestants, who had run all hazards for him, and supported him in the most calamitous circumstances with their lives and estates, that they were permitted to enjoy the free exercise of their religion, and that but for a little time. That very house of Bourbon, which they raised to the grandure we see it at this day, in a few years ungratefully destroyed that people which had advanced them to the throne, and lavishly squandered away their possessions upon those men that had been the most obstinate rebels to their family. From this, and many other instances of the like nature, methinks men would do well to consider before they engage in the quarrel of any Prince upon earth; and if they do it out of principle rather than affection or interest, let them expect no other reward than what usually attends on such uncommon virtue. But to proceed: The city of Marseilles, which had, during the civil war, set up for an independent State under the protection of the King of Spain, and had a Spanish garrison in it, was about this time reduced to the King's obedience by the conduct of the Duke of Guise, who kept a correspondence with some of the leading citizens; whereupon the Duke of Espernon, who was at the head of a body of malecontents in that part of France, was induced to lay down his arms, and was received into favour, notwithstanding he had continued long obstinate to all the offers of peace the King had made him.

The Spaniards were still superior to the French on the side of the Netherlands and Picardy, and took from them this campaign the towns of Calais and Ardres, which occasioned an offensive and defensive alliance between France, England, and Holland, against Spain. The King's ill success in Picardy is charged upon the obstinacy of the Hugonots (by their enemies) who refused to assist him in that war; but admitting this to be true, they seem to have had sufficient reason for their discontent; they found themselves under great discouragements, while those who had been the greatest enemies to the crown, were possessed of the most considerable employments in the State: but from what occasion soever the King's ill success proceeded, the Spaniards remained masters of the field in the year 1597, and took Amiens the capital of Picardy, though 'tis true the king had the good fortune to retake it the same campaign; and about this time LESDIGUIERES obtained a victory over the Duke of Savoy, who still refused to hearken to proposals of peace.

The following year the King marched at the head of his army into Brittany, and reduced that province to his obedience, obliging the Duke of Mercœur, who had commanded the forces of the League, and made some pretensions to that duchy in his wife's right, to surrender to him in form; whereupon the King was pleased to marry CÆSAR, one of his illegitimate sons, to the Duke's only

CHAP. only daughter, and give him the government of  
XXXIV. that province. By the submission of Mercœur  
the League was entirely destroyed; and while  
the King remained at Nants the capital of Britany,  
to satisfy the Hugonots in some measure, he  
passed that famous irrevocable edict, as the French  
Protestants term it, called THE EDICT OF  
NANTS; whereby they were secured in the  
free exercise of their religion in all parts of the  
kingdom, except Paris and the neighbourhood  
of it.

The edict  
of Nants  
passed.

This year also a peace was concluded at Ver-  
vins in Picardy between France and Spain, where-  
by the Spaniards restored Calais, Ardres, and the  
rest of the towns they had taken on the frontiers  
of France, and Spain was confirmed in the posses-  
sion of the county of Charolois in Burgundy. The  
Duke of Savoy thought it time also to conclude  
a truce now France had no other enemy, and  
was content to relinquish all the conquests he had  
made during the civil war in Provence and Dau-  
phiné; whereby HENRY the Fourth became en-  
tire master of all the French dominions.

1599.

The King was now at leisure to indulge his  
pleasures, especially with the ladies; and indeed  
he was never without a variety of mistresses, even  
in his most calamitous circumstances. This seems  
to be a foible which most of his predecessors were  
guilty of; but he proceeded farther, and solicited  
the court of Rome for a dissolution of his mar-  
riage with Queen MARGARET, sister to King  
HENRY the Third, with whom he had lived for  
many years, under pretence she was forced to marry  
him, by her brother CHARLES the Ninth, and  
as she was prevailed upon to give her consent to it,  
the Pope made no scruple to declare the marriage  
null; whereupon the King found himself at li-  
berty to look out for another, by whom he might  
have issue, for he despaired of having any by this.  
The Duchess of Beaufort, his mistress, dying  
about the same time, he drew up with Madam  
D'ENTRAGUES, and proceeded so far as to give  
her a promise of marriage under his hand, which  
created him very great difficulties afterwards, for  
he married MARY of Medicis, daughter of FRAN-  
CIS late Duke of Tuscany, and niece to FER-  
DINAND the reigning Duke, the following year;  
and having children by her, their legitimacy was  
disputed by some on account of the pre-contract  
with Madam D'ENTRAGUES. In the mean time  
the truce with the Duke of Savoy was turned into  
a peace, whereby he yielded Bresse, comprehending  
Bugey and Le val Romey to the King, in ex-  
change for the marquisate of Saluces, which he re-  
tained; whereby France was entirely freed from  
foreign as well as civil wars, with which she had  
been afflicted for many years.

1600.

1601.  
A Dau-  
phin born.

Marshal  
Biron's  
conspi-  
racy.

A Dauphin being born on the twenty-seventh  
of September 1601, it occasioned a great deal of  
joy in the French court, which was however in-  
terrupted by a conspiracy formed by the Marquis  
of Biron, the Duke of Bouillon, the Count  
d'Auvergne, and several others of the prime no-  
bility, who had laid a scheme to erect the great go-  
vernments of France into so many principalities,  
which were to be no further dependent on the  
King, than the Princes of the Empire are on the  
Emperor. And 'tis said, they had agreed to depose  
the present King, and set the Count de Soissons, a  
Prince of the blood, upon the throne: and they  
were to have been supported in this enterprize by  
the King of Spain and the Duke of Savoy.

1602.

LA FIN, a confidant of Marshal BIRON, dis-

covered the whole matter to the King; where-  
upon his Majesty sent for the Marshal to court, and  
told him that if he would make a full confession,  
it should cost him nothing but the repentance  
of his faults: but he having been assured by LA  
FIN that there was no evidence against him, answer-  
ed in a haughty manner, that he had no need of a  
pardon for he had committed no fault. The King,  
'tis said, having no mind to destroy him, spoke to  
him in the same manner the next day, after he  
had given him time to consider of it, but could  
obtain no other answer; whereupon he ordered him  
to prison, where he was put to the torture, and  
afterwards condemned and executed. The King  
pardoned the Count d'Auvergne, as 'tis said he  
designed to have done the Duke of Bouillon;  
but he not caring to venture it, fled first to Ge-  
neva, and afterwards to the court of the Elector  
Palatine, for he was a Protestant. The crime  
must certainly have been very great, and the evi-  
dence exceeding plain, or the King could never  
have taken away the life of BIRON, a man who had  
done him more service than any person in the king-  
dom; he had commanded his armies from first to  
last, and generally been successful: but great men  
frequently take disgust unaccountably; and Princes  
as often take an occasion to ruin their officers and  
ministers who have been most serviceable to them,  
either thro' pique, or an apprehension that they as-  
sume too much, when in reality they have been guilty  
of no more than common failings. But however  
the fact was, 'tis impossible to read this piece of hi-  
story, without being sensibly grieved to see the man  
who had the greatest share in fixing his Prince upon  
the throne, and had accomplished it by innumerable  
hazards and hardships, ruined in a moment by that  
very Prince, and those who were his Majesty's  
greatest enemies, loaded with all the favours and  
honours he could bestow upon them.

CHAP.  
XXXIV.

He is ex-  
cuted.

The year 1603 was most remarkable for the re-  
stitution of the Jesuits in France, and the death of  
the Queen of England, who was succeeded by  
JAMES the Sixth of Scotland, and first of England,  
by virtue of an instrument (if we may credit the  
French historians) in which Queen ELIZABETH  
appointed him her successor: but this instrument  
I believe no Englishman ever saw. The French  
and Dutch renewed their alliances with England  
on this occasion, in order to put themselves in a  
condition to oppose the power of Spain, which was  
then looked upon to be as exorbitant and dangerous  
as that of France proved afterwards.

1603.

Not long after another conspiracy was discovered  
against his Majesty, in which the Spaniards had,  
'tis said, engaged the King's mistress Madam D'EN-  
TRAGUES and her father, with the Count d'Au-  
vergne and others; but he pardoned them all,  
which gave some people occasion to suspect it to be  
a sham plot, especially since the King contented  
himself with only taking away the written instru-  
ment from Monsieur D'ENTRAGUES which he  
had given him, containing a promise to marry his  
daughter, and which the Spaniards gave out they  
would one day make use of against the issue he had  
by his Queen. But there were another set of con-  
spirators who had agreed to deliver up Guienne and  
Gascony to the King of Spain, who did not expe-  
rience so much mercy, for he ordered ten of the  
principal of them to be beheaded. The Baron de  
Mairargues also, one of the most considerable  
Lords in Provence, was the next year beheaded  
for treating with the Spaniards to deliver up Mar-  
seilles to them. Thus was this Prince exercised  
with

with continual plots after the conclusion of the civil war till the year 1604: from that time to the end of this reign the nation seems to have enjoyed perfect tranquillity; unless it be that in 1609 the King entered into a confederacy with the Dutch, to prevent the Archduke ALBERT's possessing himself of the duchies of Cleves and Juliers. But his Majesty pursued his amorous intrigues to the last moment of his life. The Prince of Condé was so alarmed at the complaisance he shewed his spouse, daughter to the Constable MONTMORENCY, that he carried her away with him on a sudden to the Low-Countries, and afterwards to Milan, and did not think fit to return into France till after the King's death.

The latter end of this year and part of the next was taken up with raising a numerous army, supposed to be designed against the house of Austria; but the villain RAVAILLAC, a monk, put an end to this and all other designs of this great King, by stabbing him to the heart in his coach in the streets of Paris, on the fourteenth of May 1610. The assassin was taken with the knife in his hand, and afterwards put to the torture in order to compel him to discover his accomplices; but his confession was part of it made a secret: some charge the Spaniards, and even the Queen, with being concerned in it, to which they tell us she was provoked by his being false to her bed; but this seems to be mere conjecture. It is much more probable to be done by this enthusiastical friar on the score of religion, to which he apprehended the King an enemy; for it is observed that he had escaped from above fifty conspiracies, most of them contrived by priests or votaries of Popery, who questioned the sincerity of his conversion. He died in the fifty-eighth year of his age, and thirty-eighth of his reign, as King of Navarre; and in the twenty-first year after his accession to the throne of France.

He had no children by Queen MARGARET, sister of HENRY the Third; but by his second wife MARY de Medicis he had three sons, viz. LEWIS the Thirteenth, who succeeded him; the Duke of Orleans his second son, who died at four years of age; and GASTON-JOHN-BAPTIST, Duke of Anjou, afterwards Duke of Orleans, who survived him many years. He had also three daughters, namely, ELIZABETH, married to the Prince of Spain, afterwards PHILIP the Fourth; CHRISTINA, married to VICTOR-AMADEUS, afterwards Duke of Savoy; and HENRIETTA, married to CHARLES the First, King of England. He had besides these, natural children in abundance by his several mistresses.

LEWIS the Thirteenth was almost nine years of age at the death of his father, being born on the 27th of September, 1601. The Queen-Dowager his mother was advised by her friends in the ministry to dry up her tears as soon as possible, and procure herself to be declared regent during the minority of her son in the absence of the Princes of the blood. The Dukes of Guise and Espernon, noblemen of an unbounded ambition, thought that in doing the Queen so singular a piece of service, as she was a stranger, and unacquainted with the art of government, they should thereby entirely engross the administration of affairs in their own hands. Having assembled therefore the provost of the merchants, the sheriffs, and other magistrates of Paris, they harangued them in such a manner, that they gave their consents to the Queen's being declared regent, and the parliament followed their

example; though there were some in the assembly who lamented the misfortune of their country, in being left at the discretion of an Italian, a profuse and unexperienced regent, who would probably be influenced by GALIGAI and CONCHINI her husband, the Queen's chief confidants, and creatures of the court of Spain, and who were suspected of suborning RAVAILLAC to assassinate his late Majesty.

The Count de Soissons, second Prince of the blood, was extremely surprized to find the regency disposed of on his arrival at Paris; but the Queen gave him the government of Normandy to pacify him. The Dukes of Guise and Espernon, who had been so serviceable at this juncture, she rewarded according to their respective inclinations and circumstances. To Guise, who wanted money to pay his debts the most of any thing in the world, she gave two hundred thousand crowns. The haughty Espernon she loaded with honours, ordered him an apartment in the Louvre, and that the Secretaries of state should communicate all their dispatches to him.

In the mean time the parliament were taken up with the trial of RAVAILLAC. By the interrogatories and depositions that are left upon record, it appears that he was an enthusiast, and apprehending that the King was about to make war on the Pope, and encourage the Hugonots, he took up the resolution of killing him. He had imbibed an opinion, that it was lawful for any private man to kill his prince if he was an enemy to his Holiness. He told the judges that to make war against the Pope was to make war against God, because the Pope was God, and God was the Pope. He constantly averred to his last breath, that no man, neither French or foreigner, had incited him to commit this murder. He was broke alive upon the wheel on the 27th of May, in pursuance of his sentence. The same day the parliament ordered the faculty of Paris to revive their censure against those who teach, That a private subject may and ought to destroy tyrants by all the ways they can, and that such an action is not contrary to the oath of allegiance the subject takes. And however clear the Jesuits may be of the late King's murder, the preachers at Paris inveighed severely against them at the time of his funeral.

It was proposed at the beginning of this reign to proceed in the double match with Spain, that had been concerted in the time of HENRY IV; namely, of the present King with the Infanta, and of the Prince of Spain with the eldest daughter of France. The Queen being prepossessed by the Italians about her, whom the Court of Spain had corrupted, laid it down as a maxim that the establishment of her authority depended on a good understanding with the Pope and King of Spain. The court of Rome did not doubt to find their account in this double alliance, as believing it the most effectual way to ruin the Protestants: as the one destroyed them in Germany and the Low-Countries, they projected that the other might extirpate the Hugonots in France, if they were united in their councils. The Queen however, in order to keep all quiet in the beginning of her administration, thought fit to issue a proclamation confirming the edict of Nants, and to relinquish or lessen several of the taxes which were grievous to the subject, particularly that of salt was abated a fourth part.

While things were in this situation, the Prince of Condé returned to court from Milan, whither he had retired with his wife to prevent the late King's

King's abusing his bed. The Spaniards upon the death of HENRY the Fourth would have persuaded him to take the title of King, insinuating that the marriage of his late Majesty with MARY of Medicis was void, on account of his former marriage with the Princess MARGARET, who was then living, and his contract with Madam D'ENTRAGUES, and consequently his issue by MARY were illegitimate: but the Prince slighted the proposal, chusing to rest satisfied with his present circumstances rather than hazard all in the uncertain pursuit of a crown. He shewed the same moderation or meanness of spirit, as some were pleased to term it, on his arrival at Paris; when the Dukes of Bouillon and Sully, and other chiefs of the Protestants, offered to assist him in obtaining the regency, and removing his enemies from about the King, he suffered the Queen quietly to enjoy the regency he found her possessed of. It is observed of him, that his avarice much exceeded his ambition. He continued however for some time head of a party, in opposition to Count Soissons; CONCHINI, now Marquis d'Ancre, the Queen's favourite, playing one of these Princes against the other, that they might not be at leisure to animadvert on his conduct, and made himself the umpire of their differences: however, he seemed to court the favour of the Prince of Condé most.

CONCHINI  
sets the  
Princes of  
the blood  
at variance.The  
French  
and Dutch  
take the  
city of Ju-  
liers.

The Emperor, upon the death of the last Duke of Cleves and Juliers, designing to annex those countries to his hereditary dominions, had sent the Archduke LEOPOLD to take possession of them, under pretence of sequestering them till the several claimants should have made out their respective titles. He possessed himself accordingly of the strong city of Juliers; but the French and Dutch, whose interest it was to prevent the aggrandizing of the house of Austria, laid siege to Juliers, and took it, delivering it into the hands of the Elector of Brandenburg and Duke of Newburgh, who pretended to it by virtue of their having married two of the daughters of that house: and thus these countries became involved in the war of the Netherlands, to which they lie contiguous. But to return to the French court:

1611.

The favourite CONCHINI took care to keep the principal nobility at constant variance, to prevent their intermeddling too much in the administration; however, both Condé and Soissons united in getting the Duke of Sully disgraced, and Marshal DE BOUILLON, tho' a Protestant, contributed all he was able to have that great man removed from his posts of superintendant of the finances, &c. It was the misunderstandings between these Protestant Lords that at length proved their ruin. Their numbers and their quality were so considerable, that they could never have been depressed, if they had not by their unseasonable quarrels done their enemies work for them.

An assem-  
bly of the  
Protestants  
at Sau-  
mur.

The Protestants had been allowed their general assemblies in the reign of HENRY the Fourth, where they used to draw up representations of their grievances, and elect six deputies, of whom the King chose two, these were constantly to attend the court, and take care that nothing passed to the disadvantage of their religion. Such an assembly was permitted to meet this year at Saumur by the Regency, at which the Dukes of Sully, Rohan, Trimouille, Soubize, Chatillon, la Force, and the Marshal BOUILLON were present, the last of which noblemen expected to have been chosen president; but being opposed by the rest, the

V O L. II.

choice fell upon the celebrated DU PLESSIS MORNAY, at which BOUILLON was so disgusted, that he is said to have done the Protestants many ill offices at court afterwards. This gentleman seems to have been more concerned to render himself the head of a party, than to promote the interests of the religion he professed. The general assembly were so sensible of the ill consequence of these divisions among their chiefs, that they proposed a reconciliation, and in outward appearance effected it between SULLY and BOUILLON; who seemed to be the most exasperated against each other; but it did not prove sincere, at least on BOUILLON's part. This assembly not receiving any satisfactory answer to the representations they made of their grievances, renewed their usual oath, namely, That they would die in defence of their faith, and never depart from their allegiance due to the King; with which they were afterwards reproached, as entering into a seditious engagement.

In the year 1612, the double marriage between France and Spain was agreed on. The Queen squandered away incredible sums at the rejoicings that were made on this occasion, while the Protestants were under the utmost consternation, believing their ruin to be chiefly intended by this union of the two crowns. They endeavoured therefore again to reconcile the Lords of their communion, and procured a promise from them to forget their former quarrels, and to assist each other as far as religion and their allegiance to their Prince would allow, and to do nothing that might prejudice the union and uniformity of the doctrine and discipline established in the reformed churches of France. The Dukes of ROHAN and SULLY, the Marshals BOUILLON and LESDIGUIERES, CHATILLON, SOUBIZE, LA FORCE, and DU PLESSIS MORNAY, signed this agreement, and sent it to the Governors of the towns given them for their security, and to the gentlemen of distinction of their persuasion in the several provinces; who all subscribed this engagement.

The national assembly held in the year 1610, having been dissolved before they could obtain any redress of their grievances from the court, provincial assemblies were afterwards held without a licence from the court, and two deputies from each of the eight provinces were sent to Paris, to solicit for a favourable answer to the representation that had been made by the last national assembly; but the court refused to give them audience, under pretence that these provincial assemblies were illegal, not having been convened by the King's authority; and did not only prohibit the holding such assemblies for the future, but also national synods, where any other persons besides their preachers, elders should be present, or any thing treated of but what concerned the doctrine and discipline of the reformed churches of France; and the general assemblies held since that of Saumur were declared unlawful. However, that those who had been at them might not be under any uneasiness, the King declared, that as he did not believe they had any ill design in attending those assemblies, he would grant them a pardon for it. The Protestants were more offended than pleased with this pardon: they insisted they had committed no crime; and at a national synod that was held this year at Privas, they made a solemn protestation, that the provincial assemblies had not been held illegally, and that the Reformed looked on the pardon his Majesty had granted them as a disgrace, that they should never make use of it, and would disown such Protestants as did.

And the regency not caring to irritate the Hugonots at this time, published another declaration in softer terms, which was called an explanation of the former.

1614.  
The Prince of Condé &c. cabal against the court.

The Prince of Condé finding himself slighted at court, and that CONCHINI had the administration solely in his hands, retired in disgust, and was followed by the Dukes of Nevers, Maine, Vendôme, Longueville, &c. The reasons they gave for their discontents were the wasting of the public revenues, the bestowing the highest dignities on foreigners and worthless persons, the arbitrary power of the ministry, the little regard had to the Princes of the blood, and Peers of the kingdom, the controlling the parliaments in the exercise of their jurisdiction, the excessive price demanded for offices of judicature, the destruction of the nobility and oppression of the people, and the precipitate conclusion of the King's marriage before his coming of age. To these complaints, which were most of them just, were added some demands, such as the calling a convention of the Estates within three months, the suspending the King's marriage and his sister's, and the employing men of integrity about the King's person.

The Queen, in answer to this declaration, published a manifesto, wherein she observes, that the covetousness of the Prince of Condé and the other great Lords, had forced her to consume a great part of the treasure left by the late King; that they continually formed cabals and fomented insurrections, which obliged her to distribute money amongst them to keep them quiet; that the irresolution and softness of the Prince made him the tool of all the factions at court; that she was ready to assemble the States of the kingdom, and redress whatever was amiss; and in the conclusion, offered the malecontents terms of accommodation. She did not neglect, however, to raise a body of troops and strengthen herself, in order to give her commissioners the greater weight at the treaty which was agreed on. The Prince of Condé, on the other hand, assembled his friends, and invited the Protestants to join him; but they had no great opinion of his conduct, and generally excused themselves. At length a peace was concluded between the Court and the Prince of Condé; some of the malecontents accepted money, and others preferments: as to the public good, which was the pretence of the insurrection, that was neglected as usual. The convention of the Estates, which was the only thing of moment this treaty produced, was so modelled and managed by the ministry, that they effected little of any moment. It was in this assembly that the famous RICHLIEU, Bishop of Lucon, first appeared upon the stage, being one of the representatives of the clergy, and had a commission to present a paper to the King on the breaking up of the States, at the delivery whereof he made a speech of an hour long, and was heard with great attention.

An accommodation between the Court and the Prince.

RICHLIEU first appears upon the stage.

1615.  
The parliament oppose the arbitrary measures of the court.

The people remained still generally discontented that none of their grievances were redressed in the assembly of the States, and murmured that the Marshal d'Ancre had still the disposal of every thing. The parliament of Paris also published an arret, wherein they invited the great men, and all that were well-affected to their country, to join them in maintaining the liberties of the nation. Whereupon the council issued a declaration in the King's name, making the said arret of parliament void, and prohibiting all people under severe penalties to intermeddle with affairs of state.

The parliament not then used to such haughty treatment, presented a remonstrance to the King, wherein they took a great deal of freedom, and advised him not to make use of absolute commands in the first year of his majority (for he was now in his fourteenth year). The Prince of Condé, Marshal BOUTILLON, and the rest of the malecontents, also had again recourse to arms; but laid them down soon after upon advantageous conditions offered them by the court, leaving the Protestants, who were their principal support, to shift for themselves. This peace was called the treaty of Loudun, from it's having been concluded there.

The court still remained in great confusion, and several removes were made of the great officers. Bishop RICHLIEU took this opportunity of soliciting the Marshal d'Ancre for some preferment, and having contracted a friendship with one of his creatures, procured the place of grand almoner to the Queen-consort ANNE of Austria. The Marshal finding him to be a man of parts, consulted him on the most important affairs, and at length advanced him to the degree of a privy counsellor and secretary of state. And it was by his advice, 'tis said, that he resolved to seize the Prince of Condé, and all the disaffected Lords; in pursuance of which, the Prince was actually made prisoner, and confined in the castle of Vincennes; but the rest had notice of the design against them, and made their escape.

The Marshal had still so many enemies left, that by means of LUVES, who used to attend the King in his sports, and had some influence on him, they gave his Majesty a jealousy of this minister, and procured an order to take him off; though some say they were only to have apprehended him, and that the captain of the guards, who had a commission to seize the Marshal, shot him under a pretence of the resistance he met with. Thus fell CONCHINI, Marshal d'Ancre, a Florentine, after he had tyrannized over the French nobility and parliaments for near seven years, and inspired that court with arbitrary views; which his successors in the ministry so improved, that before the end of this reign the French were in a manner deprived of their liberties.

Upon the death of Marshal d'Ancre all his creatures were turned out, particularly RICHLIEU: the old ministers resumed their places. The Queen-mother was ordered to retire to Blois, where she was confined; and RICHLIEU serving her there in quality of steward of her house, LUVES, who succeeded CONCHINI in the King's favour, being apprehensive of the busy active genius of this prelate, ordered him to retire to Avignon. In the mean time he entertained the King with childish diversions, or exercises of devotion, to which this Prince was naturally addicted, while he governed the State in as despotick a manner as his predecessor CONCHINI had done, not suffering any person to approach his Majesty till he was acquainted with their business.

The year following the Queen-mother, by the assistance of the Duke of Espèron, made her escape from Blois; which gave LUVES great uneasiness, apprehending she would one time or other ruin him by her intrigues. RICHLIEU sending him a submissive letter about this time, and offering to serve this minister without reserve, he laid hold of the opportunity, and ordered him to attend the Queen again, and acquaint him from time to time with the measures she was about to take, but not to let her Majesty know he had any correspondence

respondence with the court; and according as he discharged this trust, gave him hopes of preferment.

**RICH-  
LIEU** em-  
ployed by  
**LUINES** to  
discover  
the Queen-  
mother's  
intrigues.

This order **RICHIEU** very readily obeyed, and played his game so well, that he was relied on by both parties, of which he afterwards made his advantage. The Queen particularly looked upon him as her most faithful servant: that he had hazarded every thing to attend her in her distress, and therefore communicated her most important secrets to him. A treaty was soon after set on foot between the King and his mother, and all their differences in a manner adjusted; but **RICHIEU** dissuaded her from going to Paris, unless she could be admitted into the administration as formerly. In the mean time **LUINES** apprehending he might want a support if the Queen-mother returned, proposed the making a friend of the Prince of Condé, by restoring him to his liberty; and accordingly procured it for him of the King, after he had been a prisoner upwards of three years: whereupon the Prince in gratitude promised to support his interests, and gave him all the assistance that lay in his power in the administration of the government. **LUINES** about the same time procured a patent to be made a Duke and Peer of France.

The Prince  
of Condé  
set at li-  
berty.

The  
Queen and  
disaffected  
Lords take  
the field.

The Queen still remaining at a distance from court, was applied to by the Hugonots and disaffected Lords to oppose the arbitrary proceedings of the ministry; and her party at length became so numerous, that it made the prime minister tremble: nor was it long before they took the field. As to the King, their historians inform us that he was an indolent Prince, and applied himself to nothing. That he had neither resolution to undertake any thing himself, or constancy to pursue good advice when it was given. That he wanted an able minister possessed of the royal qualities of which he was destitute: whereupon every great man about the court knowing his weakness, pretended to the direction of affairs, and this occasioned those divisions that frequently distracted the state.

1620.  
The King  
marches  
against  
them.

While **LUINES**, who was more a sportsman than a soldier, was confounded at the repeated advices he received of the strength and numbers of the malecontents, the Prince of Condé advised the King to take the field as soon as possible, and attack his enemies before they had assembled their whole force. He assured his Majesty that if this conduct had been observed in those insurrections in which he was concerned, he must have submitted. The King it seems at this time was so wise as to follow the Prince's advice; and giving him the command of the army, marched with him in person into Normandy, where the Duke of Longueville and the malecontents were reported to be very strong; but they retired upon his approach, and the King with very little difficulty made himself master of Rouen, Caen, and most of the towns in that province. From hence he continued his march against the Queen, who had assembled a great body of troops in Anjou. At the same time he sent to offer her terms of accommodation, and a treaty was actually set on foot between them. The King still advancing, the Queen was advised to send to the Dukes of Maine and Espernon to join her with their forces; but **RICHIEU** apprehending that if those two noblemen were about the Queen, he should lose that influence he had on her Majesty's affairs, and not be able to play the game he intended, persuaded her that she was secure with the forces she had at Angers, and

procured an order from her that those Lords should remain in the provinces where they were; and by this means ruined the affairs of her Majesty and her confederates: for the King's troops having a great superiority, soon after fell upon a body of the Queen's, and defeated them; which so terrified her, that though she had insisted on very extravagant terms before, she was now content with such as the King was pleased to grant. There was one secret article however consented to in favour of **RICHIEU**, which let people into the mystery of the matter: he had made a merit of betraying his mistress, and thereby obtained a promise from the King to procure him a Cardinal's cap of the Pope. When people saw therefore the whole body of malecontents ruined by the advice of this Prelate, the Queen obliged to return to court, and several Princes and great Lords excluded out of the treaty, and none of them any gainers by it but himself, they made no doubt of his having betrayed the Queen to whom he was so infinitely obliged, both before and afterwards. They were further confirmed in this conjecture, when they saw the Bishop's niece married to the son of the Duke of Luines the prime minister: but the Queen was still so far from believing him false to her, that she made a considerable addition to his niece's portion.

To proceed: The Dukes of Espernon and Guise, and the rest of the malecontents, having laid down their arms, the Pope's nuntio used all his interest with the Duke of Luines to fall upon the Hugonots: and though this minister seemed to disapprove of it, yet there were so many persons about the court for suppressing them, that it was resolved about this time to strike at the whole body. They determined to begin with the province of Bearn, where the Protestants were most numerous: accordingly the King marched thither from Poitiers, where he then was with his army; but meeting with no resistance, he contented himself with ordering mass to be said in the principal churches of the province, after it had been abolished about fifty years.

The Duke of Luines the following year procured a patent to be Constable of France; and the people of Bearn making an insurrection on account of their religion, he sent the Duke of Espernon, who was a mortal enemy to that persuasion, to suppress them. He found on his arrival that they had abandoned all their towns and villages, and were fled to the mountains: but the General ordering his soldiers not to hurt any of them, and observing an exact discipline, many of the people returned to their houses again. However, these two attempts alarmed the Protestants pretty much; and as their churches at Tours, Poitiers, and other places had been burnt by the popish mob with impunity, they were pretty well assured there was a design formed against them to divest them of those privileges they enjoyed by the edict of Nantz.

The Protestants hereupon called a general assembly to consult of their defence: the King ordered them to break up, but they refused, which was interpreted an overt-act of rebellion, and the court determined to seize on those cities and towns which had been given them for their security. The Protestants on the other hand had recourse to arms, and did not fail to retaliate the injuries they received. Towns were taken and retaken, and thus a war was on a sudden commenced on all sides. The first place that made any considerable defence against the Royalists

was that of St John de Angeli, which held out a siege of two months, and then surrendered on condition of preserving their religion, lives, liberties, and estates; but the houses had been in a manner destroyed by the besiegers, and the King razed their fortifications. After this the royalists took several other places, and being encouraged by their success, laid siege to the strong town of Montauban, but were forced to raise it after they had lain three months before the place, and lost an incredible number of men; the disgrace whereof is said to have affected the Duke of Luines to that degree, that it threw him into a fever, of which he died.

The Queen-mother was about this time re-admitted into the council, in order to balance the Prince of Condé, who was thought to bear too great a sway in it. Both of them were very zealous in prosecuting the war against the Hugonots, who being deserted by most of their Chiefs, had the worst of it every where. SULLY, BOUILLON, LESDIGUIERES, and CHATILLON, all went over to the court: they alleged, that their party would be under no government; that their general assemblies, and even synods of the clergy, pretended to direct their military operations; and that it was impossible to hope for success where anarchy and confusion reigned. However, a great part of the country was destroyed by the continual ravages of the one or the other party, the taxes consequently fell short, and the King was forced to take some extraordinary ways to raise money; some of which appeared so illegal and oppressive, that the parliament of Paris refused to ratify them, till the King coming thither in person, with the Princes of the blood, and great officers of state, terrified them into a compliance. In this reign, it is observed, their parliaments had but very little authority; the court made no other use of them than to record the acts of the King and Council.

The royalists went on successfully, taking one place after another from the Hugonots. The Marquis de la Force also, who commanded their troops in Guienne, thought fit about this time to reconcile himself to the court, receiving of the King a Marshal's staff, and a considerable sum of money, in consideration of his deserting his party, and delivering up the town of St Foy. The war yet continued very bloody: the town of Negrepelisse particularly having been taken by the royalists, and the garrison afterwards over-powered and put to the sword by the inhabitants; the King, upon the retaking it, ordered all the people in the town and castle to be massacred, except the women, who were nevertheless exposed to the brutality of the soldiers. Cruelties of this kind were exercised in several other places; no wars, 'tis observed, being ever carried on with that rage and violence as those which are occasioned by difference in religion: murder and rapine are sanctified in the opinion of both sides, by the righteousness of the cause.

About this time LESDIGUIERES was made Constable of France, on account of his skill in military affairs, and his complaisance to the court in turning Papist: and the Protestants being induced by their ill Success to desire peace, the Constable procured them a pardon and liberty of conscience, which put an end to the war; though there were some of the Ministers whom nothing would satisfy but a total extirpation of the Hugonots.

RICHLIEU this year received his Cardinal's cap by the solicitations of the Queen-mother, for

which he promised everlasting gratitude; tho' it is observed, his gratitude and acknowledgments lasted no longer than her friendship was advantageous to him. She would have procured him also a place in the council, but was not able to effect it till near two years after, the Ministry had such a jealousy of him; whereupon he still continued to exercise the office of Steward of the Queen's house, and made his court to her with his usual diligence.

The kingdom now enjoying peace at home and abroad, nothing remarkable happened this year, unless some changes in the Ministry; Count SCHOMBERG was turned out of his places of Superintendent of the finances, and Grand Master of the ordnance, and the old Chancellor SILLE-  
RY was obliged to resign.

The year 1624 was propitious to Cardinal RICHLIEU, who, at the repeated instances of the Queen-mother, was admitted into the council of state, where there being scarce any person of great experience or capacity at this time, he soon obtained the entire disposal of publick affairs. One of the first things that fell under his management was the match between CHARLES Prince of Wales, and the Princess HENRIETTA the King's sister. The principal articles the French insisted on were liberty of conscience for the English Catholics; a church for the Princess's retinue, who were to be all Catholics, and the education of the children of this marriage in the same religion. The two first were absolutely refused by the English Ambassadors; and as to the last it was agreed, the children should remain in the hands of the Princess till ten years of age, and that she might have the direction of their education in the mean time. The French were to pay eight hundred thousand crowns for her marriage-portion, one half at London the evening before the marriage, two hundred thousand crowns a year afterwards, and the remainder six months after that. Her jointure was agreed to be sixty thousand crowns per ann. which is but a trifle to that settled on the present Queen of England, tho' voluntarily granted after marriage, without any consideration had to the marriage-portion.

The affair of the Valteline came upon the carpet next: The Spaniards, it seems, in the reign of HENRY IV, had built the Fort of Fuentes in the Valteline, which belongs to the Grisons, to preserve their communication between Germany and Italy, that they might not be always obliged to ask leave of the Swiss or the Grisons when they had occasion to march their troops that way. France and Italy were both alarmed at this step, imagining the house of Austria had some great design in view; but the Spaniards pretended they had built this fort only to protect the Catholick religion in the Valteline, which they apprehended would be extirpated by the Grisons, who were Sovereigns of it. This appeared afterwards only a sham to lull the Italian States asleep, the Spaniards proceeding to build four other forts, in order to make themselves entirely masters of this valley, which is a country about thirty miles in length, and naturally so well defended by rocks and precipices, that whoever possesses it, may, with a small force, prevent the greatest armies passing between Germany and Italy.

The French spent a great deal of time in treaties and negotiations to prevail with the Spaniards to demolish these forts, which they often promised to do, but never effected. An alliance was there-  
upon

upon entered into between the French, the Duke of Savoy, and the Venetians, in the year 1623, to compel them to quit the forts, and restore the Grisons to the sovereignty of the Valteline. The Spaniards finding it would be difficult to maintain their ground, put their forts into the hands of the Pope, assuring his Holiness they had no other design than the preservation of the Catholick religion; and by this artifice they avoided a war, and engaged the Pope on their side. In the mean time the passes remained open to their troops, and they did not doubt the getting the forts out of the hands of the Pope again, as soon as the alliance above-mentioned should be dissolved. When the Cardinal came into the ministry, he determined to spend very little time in negotiations on this affair: the Spaniards and Pope refusing to demolish the forts, he immediately hired six thousand Swiss and Grisons, and sent them into the Valteline, under the command of the Marquis de Cœuvres, to endeavour to recover the possession of it. The Pope's troops were so terrified at their approach, that they abandoned most of the forts, and gave the Marquis an opportunity of seizing the best part of the country, which he held a considerable time with the consent of the Grisons, who were glad to shake off the Austrian yoke, and recover their sovereignty. In the mean time, the Pope made loud complaints of the injustice and dishonour that was done him at the court of France, which were not much regarded by the Cardinal.

1625.  
The French and the Duke of Savoy attempt the conquest of the state of Genoa.

Another enterprize was concerted the following year between the Cardinal and the Duke of Savoy, which made a great noise. The French and the Duke having each of them their pretensions on the Republick of Genoa, it was agreed privately to raise an army of thirty thousand men, and attempt the conquest of that country; and if they succeeded, to divide it between them. The Genoese, and the rest of the Italian Princes, observed the preparations of war that were making on their frontiers, but imagined they were designed to support the French troops in the Valteline, till they saw them join and march directly for Genoa. The country being utterly unprovided against such an invasion, they made themselves masters of all the towns in the Genoese territories, except the capital and Savona: but the Constable LESDIGUIERES, who commanded the French, and the Duke, falling out about dividing the spoil, and the Spaniards sending an army of thirty thousand men at the same time to the assistance of the Genoese, the French and Savoyards were forced to abandon their conquests with the same speed that they made them. The French might have supported their troops in the territories of the Genoese indeed by timely reinforcements, but they had no mind to enter into a formal war with the Spaniards, while the Rochellers and the rest of the Hugonots were in arms.

The war breaks out again between the Hugonots and Papists.

The French court, it seems, on the conclusion of the last peace with the Rochellers, had stipulated to demolish Fort Lewis near that city, which was built in order to block them up on the land-side. The government taking no care to put this part of the treaty in execution, the Rochellers presented a petition to his Majesty on that subject, and meeting with nothing more than fair words, were resolved to do themselves justice forthwith; whereas, says my author, had they waited till the King had been engaged in a war with Spain, which seemed almost inevitable at this time, necessity would have obliged him to have kept his

word with them; but being governed more by their passions than good policy, they assembled a fleet to make reprisals, and giving the command of it to SOUBIZE, he seized upon seven of the King's ships in the port of Blavet or Brest. They afterwards attempted to surprize Fort Lewis, in which they did not meet with so good success. However, they made frequent excursions, and ravaged all the country round in the possession of the royalists, which the Governor of Fort Lewis was not able to prevent. SOUBIZE also possessed himself of the islands of Rhee and Oleron, on the last of which he built three forts for the defence of it. The Hugonots also in Languedoc, being assembled by the Duke of Rohan, had frequent skirmishes with the royalists.

The French King about this time hired twenty or thirty ships of the Hollanders, and procured seven or eight more of the court of England, to be employed in the expedition against Genoa; but the Rochellers being masters of all the sea-coasts, so that no ships could go in or out of their ports without danger of falling into their hands, the King determined to send the ships he had procured of the English and Dutch, to suppress the naval power of the Rochellers, and deprive them of the islands they had possessed themselves of. The English mariners understanding they were to fight against their friends the Rochellers, left their ships, of which seven were merchant-men, and the other a man of war, with the French Admiral, and returned to England, where great complaints were made to the government against the court of France for abusing the English, in employing their ships against Rochelle, which were lent for another service. The King of England however being just married to the Princess HENRIETTA a daughter of France, and entered into an alliance with that crown against Spain, did not think it proper immediately to break with his brother-in-law, till he had first expostulated the matter with him by way of negotiation.

The Hollanders were not so scrupulous as the English on this occasion; for tho' the Rochellers were Calvinists, of the same communion with themselves, yet in consideration of a pension of six hundred thousand crowns per annum, which they annually received of the French King, and in hopes of his entering into an alliance with them against their old enemy the Spaniard, they suffered their admiral and his whole fleet to assist in the destruction of their Protestant brethren. They put themselves under the command of MONTMORENCY, the French Admiral, and having assisted THOYRAS, Governor of Fort Lewis, in his descent on the isles of Rhee and Oleron, out of which he beat SOUBIZE, they afterwards ruined the best part of the Rochelle fleet, and among the rest their Admiral who perished bravely however; for three of the enemies ships being grappled with him, he set fire to his powder, which blew them all up into the air together.

The Rochellers being reduced to very low circumstances, blocked up on the land-side by the forts which had been built by the royalists, deprived of the supplies of provisions they used to receive from the isles of Rhee and Oleron, and incapable of procuring supplies by sea on the loss of their fleet, sent deputies to the French King, imploring his mercy, and desiring peace on almost any terms. However, as nothing less would satisfy the court than the surrender of their town, and the demolishing the fortifications, they

chellers  
again.

returned home with out effecting any thing. But the court of England, about this time, demanding the restitution of the ships that had been lent the French King, which were refused, and resolving to assist the Rochellers, the Cardinal was inclined to grant that people better terms: He insisted on no more at this time, than that the Roman Catholicks should be allowed the free exercise of their religion in Rochelle, and that the estates and goods of the Ecclesiasticks should be restored to them: and, on the other hand, he agreed the Hugonots should have the benefit of the edict of Nantz, and should not be molested by Fort Lewis, or any of the forts erected in the isles of Rhee or Oleron, but might peaceably enjoy the estates they had there. And when the Cardinal was reproached with being a friend to Hugonots on this occasion, because he would not extirpate them when it was in his power, he let those be was most intimate with understand, that he fully intended to destroy them, and only granted them this peace (which he designed to break the first opportunity) till he had settled some foreign negotiations: and the Protestants themselves were so sensible of this, that they sent *SOUBIZE* to England notwithstanding the peace, to solicit for a re-inforcement. The Cardinal had two great inducements for concluding this agreement with the Hugonots; one of them was, that he might make the better terms with Spain, which court remained very intractable while they found France engaged in a civil war: the other was the breaking of the power of the Princes of the blood and great Lords, who, from the beginning, were uneasy to see the administration of the government entrusted solely in his hands by the King.

Peace with  
Spain.

The peace with Spain he accomplished the same year; the principal articles whereof were, that the Valteline should be put into the same condition it was in the year 1617; that the sovereignty of that country should be left to the Grisons; that they should be masters of the passes as formerly, but that the Roman Catholick religion only should be exercised in the Valteline; that they should be at liberty to chuse a Catholick Grison Governor, and their Magistrates also be all Catholicks; that the forts in the Valteline should be immediately razed, and that neither party should give any assistance to their allies who refused to acquiesce in this treaty.

The Cardinal sets  
himself to  
depress the  
power of  
the Princes  
of the  
blood and  
great men.

The Cardinal being arrived to such a degree of power at this time, that more court was made to him than to the King or the Princes of the blood, began to think how he might establish his grandeur, and prevent the cabals of the great men against him. The person he was most apprehensive of, was the Marshal d'Ornano, Governor to the King's brother the Duke of Orleans: for the King being infirm, and having no children at this time, the nation began to cast their eyes upon the Duke, as like to succeed to the crown; and as d'Ornano was observed to have no less influence over that Prince, than *RICHIEU* had over the King, the Cardinal at first proposed the making d'Ornano his friend, not doubting, if he was supported by the favourite of the first Prince of the blood, the presumptive heir of the crown, he need not be concerned at the envy of the rest of the Grandees. But *RICHIEU* not finding d'Ornano tractable, or disposed to support his tyranny, began to look upon him as his enemy, and it was not long before he resolved his destruction; to effect which, he made use of Father *JOSEPH*, a Ca-

puchin, who pretended a great esteem and friendship for the Marshal, led him into discourses which rendered him obnoxious to the government. He also put him upon demanding of his Majesty, that Monsieur the Duke of Orleans might be admitted into the council, and made General of the army; with which the King immediately acquainted the Cardinal, and demanded his opinion. This Prelate put the most odious constructions imaginable upon these propositions; and as he knew his Majesty to be of a fearful jealous temper, he said the Marshal had inspired too ambitious thoughts into his brother, who was immediately to succeed to the crown, in case his Majesty had no children; that he demanded the command of the army only to make use of it against him that gave it, or at least, that he might share the government with him; and that the Marshal would infallibly, one time or other, draw Monsieur into some destructive scheme against the state. He acquainted the King also with some arguments which was reported d'Ornano had used to dissuade Monsieur from marrying Mademoiselle de Montpensier; as that if he espoused one of the King's subjects, he would himself become more a subject than before, and his fortune would be absolutely in the hands of the King's Minister; whereas if he made a foreign alliance, it might be of use to him if the King gave himself up to the haughty and violent spirit of the Cardinal.

The King giving credit to these insinuations, in order to take Monsieur out of the hands of d'Ornano, admitted him voluntarily into the cabinet-council; whereupon the Marshal desired, that he might be admitted also as had been promised him under the ministry of *LUINES*, or at least that he might stand by him in council as one of the Secretaries; but both were denied him: whereupon 'tis said, he shewed his discontent in terms very displeasing to his Majesty, and two days after he was arrested with some other of Monsieur's officers, and carried prisoner to the castle of Vincennes, being charged with conspiring against the King and the prime minister, in order to render himself master of the government. But whether the Marshal and his friends were in any plot or not, 'tis certain, this violent proceeding against him occasioned a plot against the Cardinal, which was very near being fatal to him.

For Monsieur having notice of the imprisonment of the Marshal, went to his Majesty and demanded the reason of it, and told him, if he put the Marshal to death, who was an innocent man, he would die with him; that he saw he was fallen into the snare his enemies had long laid for him, and he hoped, that the justice of his Majesty would not abandon his brother, and an officer of the crown, to the fury of their enemies. That if he ever discovered the author of the Marshal's imprisonment, nothing but the arms of his Majesty should save him from his revenge. These transports only serving to augment the distrust, which the Cardinal endeavoured to raise in the King's mind against Monsieur; and there being no hopes of procuring d'Ornano's liberty, nine or ten persons of distinction, friends to the Duke of Orleans, entered into a resolution to assassinate the Cardinal at Fleury, where he then was. The Marquis de Chalais, who was one of the number, discovered the design to *VALENCAY*, one of his intimate friends, in hopes he would have engaged with them; but *VALENCAY*, on the contrary censured the enterprize, and assured him, that he would discover

CHAP.  
XXXIV.A conspi-  
racy a-  
gainst the  
Cardinal.

CHAP.  
XXXIV.

discover it to the Cardinal, unless he would do it himself, and thereby make his peace with that Prelate. Whereupon they went together to Fleury, where Chalais made such a discovery of the matter as he saw fit; particularly he told the Cardinal, that Monsieur, under pretence of coming to dine with him the next day, would send his officers early in the morning in order to provide a dinner for him, but that the true design was to increase the strength of the conspirators. Accordingly at three of the clock in the morning, Monsieur's people came to Fleury, as if they were to prepare a dinner; whereupon the Cardinal left his apartment, and with a numerous retinue came to Fontainebleau, where the King then was. He went immediately to Monsieur's chamber, who was just rising, and extremely surprized to see him there; he expostulated with him, that he would not permit him to get a dinner for him, and told him, that he had left his house to the Duke's people as soon as they appeared. The Cardinal's enemies could not apprehend how he had discovered the design, there being none concerned in it but those whom they believed they might rely upon. The Cardinal, to conceal the person he had it from, pretended he had received the intelligence from abroad, and ordered Count Chalais to dissemble himself to be of the same party still, that he might the better penetrate into the depth of his enemies designs. Chalais accordingly deceived his friends a second time; he confessed he had made a discovery in part, to prevent VALENCAY's doing it before him, but that he would still be faithful to them, and assist in the execution of the matter.

Besides the Duke of Orleans, several others of the first quality were accused, as Count Soissons another Prince of the blood, the Duke of Longueville, the Duke of Vendosme, the Grand Prior of France, the Duke of Espernon, the Duke of Chevreuse, the Marquis de Valette, and many more; of whom the Grand Prior, the Duke of Vendosme, and several others were apprehended and carried to the castle of Vincennes. Monsieur hereupon was about to withdraw himself from the court; but the Cardinal apprehending this might be to the disadvantage of his projects, employed some of his agents to divert him from it; and having sufficiently terrified him with the threats of the King's displeasure, offered him at length, that if he would desert the party, who had put him upon the late attempts against his person, he would become his fast friend, and procure him whatever he could desire of his Majesty. The Duke of Orleans considering, that if he complied with the Cardinal, he should not only escape a prosecution, which might be fatal to him, but be restored to the King's favour, and might advance his interest in many other particulars; let that Prelate know, that if he would stay the proceedings against Marshal d'Ornano, and increase his revenue an hundred thousand florins per ann. and admit him to marry whom he pleased, he would unite his interests with him. The Cardinal, after some consideration, agreed to indulge him in all these particulars.

In the mean time a special commission was issued for the trial of Count Chalais; for tho' RICH-  
LIEU had promised him his favour on making a full discovery, and his testifying some particulars which he had suggested to him, yet under pretence he had not been ingenuous in his confession, he resolved to proceed with the utmost severity; and because he was apprehensive, that the parlia-

ments or ordinary courts of justice might not convict him, or rather, says my author, to let the great men see, that if they caballed against him, there was no way of avoiding his revenge, he instituted this new method of trial, which the Ministers frequently made use of afterwards to destroy those that opposed them. And it seems the Cardinal had prevailed upon the Duke of Orleans himself to testify, that Chalais had advised him to withdraw from court, and offered to furnish him with the means of doing it. It was deposed against him also, that he had reconciled himself to the party that were to destroy the Cardinal, and engaged in that design a second time. To which the prisoner answered, He had indeed pretended to do so, but it was in order to serve the Cardinal, and by his and the King's particular orders. But however that matter really was, it seems, he thought it convenient to take Chalais off; and sentence being passed on him to lose his head, this Minister suffered it to be executed. So dangerous is it to play a double game; or rather, so little dependance is there to be had on the promise of a Minister.

Among other discoveries that, 'tis said, were made on this occasion, it is reported, that d'Ornano had told the Queen-consort, that if the King died, the Duke of Orleans might lawfully marry her: nay, that they had talked of declaring the King impotent, and putting him into a monastery, and even of marrying her to Monsieur his brother, in his life-time. But these probably were suggestions of RICH-  
LIEU's, to render his Majesty's nearest relations suspected, that he might depend solely on the prime minister. And indeed Count Soissons, one of the Princes of the blood, having seen the fate of Chalais, and been charged with a design of going to Rochelle, to put himself at the head of the Hugonots, as many other of the Nobility were with other crimes, they thought fit to leave the kingdom, or retire and live privately on their estates: so that the Cardinal had now a clear stage; scarce any of the Grands were left at court, except the Duke of Orleans, and him he had made dependent on him. As to d'Ornano, he died in the castle of Vincennes of a fever, as it was given out, tho' some reported he was poisoned. In his last moments, being about to take the sacrament, he swore upon his salvation, that the Duke of Orleans had never harboured a thought against the King's person as he could perceive, and that those about him had never given him any such advice; but that the Duke seeing himself entirely excluded from the government, which was passed into the hands of the Cardinal, had only sought means to lessen the excessive power of that Minister, and to obtain a share of it himself. That whatever more had been said was false, or never came to his knowledge.

RICH-  
LIEU having reconciled the King to his brother the Duke of Orleans, and made him his friend, in appearance at least, procured his Majesty's consent for his marrying Mademoiselle de Montpensier. The King also gave his Highness the duchies of Orleans and Chartres, with the county of Blois, besides five hundred and sixty thousand livres annual pension; and his wife brought him an estate of three hundred and thirty thousand livres per ann. and being possessed of so noble a revenue, this Prince now thought of nothing but indulging his pleasures, and seemed to have forgot the ill usage he had received: but he

was the only person, it is observed, that was concerned in the conspiracy against the Cardinal, that did not suffer either in his person, his fortune, or reputation. Even the Queen-consort was brought before the Council, and reproached by the King, for entertaining thoughts of a second husband in his life-time.

A guard  
appointed  
the Cardi-  
nal.

As the Cardinal had exasperated the Princes of the blood, and acquired the hatred of most of the Nobility by his arbitrary and contemptuous behaviour towards them, he was sensible this would not be the last conspiracy formed against him. He procured the Pope's Nuncio therefore to represent to his Majesty the danger he had incurred by the zeal he expressed for his service; whereupon the King appointed him guards like a sovereign Prince for his security, believing that his crown and government depended entirely on the life of this Prelate. He ordered also, that whoever had any business with him, should first apply to some other minister, from whom he was to obtain a licence in writing to see the Cardinal, before the Captain of his guard might permit the person to enter his gates.

An assem-  
bly of the  
Notables  
called.

Thus having fortified himself against all surprise, he determined to render the King (or rather himself) absolute in his dominions. And first he summoned an assembly of the Notables, to approve and give a sanction to his administration. This assembly consisted of Monsieur the Duke of Orleans, President; the Cardinal de la Vaillette; the Marshals de la Force and Bassompierre; the first and second Presidents of the parliament of Paris; of the first Presidents of the eight other parliaments of the kingdom; of the Procurators, or Attorney-Generals; of the first and second Presidents of the chambers of accounts of Paris, Rouen, and Dijon, with their Attorney-Generals, and those of the three courts of aids; the Lieutenant-civil of Paris; six Knights of the order of the Holy Ghost; six of the Council, and twelve Prelates.

Antiently when the state of the kingdom was to be considered, new laws made, or taxes raised, it had been usual to convene the three estates of the kingdom, that is, the representatives of the Clergy, Nobility, and great towns, without whose approbation nothing passed into a law. But the Cardinal despairing of having his measures approved by these, resolved entirely to disuse it, and convene the Notables, who were sometimes also called together upon emergencies, when there was not time or opportunity for a meeting of the States: and the court being at liberty to pick out whom they pleased to constitute these assemblies, seldom failed of having their conduct approved by them. These therefore the Cardinal did not doubt of modelling according to his wishes, and to make them ratify whatever he had transacted.

His Majesty being present at the opening of the assembly, acquainted them, that he had called them together to remedy the disorders of the state; and that the Keeper of the Seals would further declare his pleasure. The Keeper MURILLAC thereupon said, that the King had convened them to receive their advice on the important affairs of the government, in imitation of his predecessors, who sometimes assembled the three Estates, and sometimes the Notables (or Persons of Distinction) consisting of a less number: then having made a panegyric on his Majesty, he thanked heaven for the discovery of the conspiracies formed against him (or rather the Cardinal). He let them know

that the government was greatly in debt, by the charges the civil war had occasioned, and the pensions given to the allies of the crown and the great men of the kingdom. That the King had been obliged to raise money by various means, and yet the treasury was above fifty millions in debt, from the constant deficiencies of those supplies. That his Majesty would endeavour to retrench his private expences, and regulate his finances; but still means must be found out to augment his revenues, and to put him into a condition to repress the frequent conspiracies and rebellions formed against the government; and that his Majesty would order the estimates for these purposes to be laid before the assembly. The reader will forgive me reciting the heads of this speech for the resemblance it has to some more modern speeches, that have been frequently made in a neighbouring kingdom.

When money, the ultimate end of all speeches of this nature, was proposed to be raised, it was with the greatest readiness agreed to be done by the creation of a multitude of new offices, or a charge upon those that were already in being; by customs and duties on goods, manufactures, and the produce of the earth, such as were never known before. And one design of assembling the Notables, no doubt, was, that the people might discharge their rage upon them for these oppressions, while the Ministry, who were the contrivers of them, escaped their censure. The Notables shewed an equal zeal to raise what forces the court demanded for sea and land-service; and, in short, like some other assemblies in these days, denied nothing that was demanded of them. Nor is it to be supposed they should, when most of them had places or pensions; and while they gave the King with one hand, received part of the supplies they granted with the other. The interest of the nation, we may be sure, was much studied by these mercenary creatures.

There was a great deal of talk, says my author, of re-establishing navigation and commerce, of which Cardinal RICHELIEU was made superintendent; but his projects produced very little fruit, any more than a great many others that were set on foot during his administration to amuse the nation and render him popular. The subjects were exhausted and impoverished by taxes, to maintain unprofitable wars while he was at the helm, and consequently foreign trade could not be carried on to any great advantage.

In the mean time there happened some misunderstandings between the courts of France and England, which at length broke out into an open war. The French had employed the English ships which were lent them to assist in the siege of Genoa against the Rochellers, and refused to restore them, as has been observed already; whereupon the English made reprisals, by stopping several French merchant-ships in the ports of England. The court of France on the other hand seized the effects of the English merchants in that kingdom to the value of two or three hundred thousand pounds. But these differences had been accommodated, and the ships and merchandizes reciprocally returned. A further breach however was made between the two nations the following year 1627, by the indiscretion of some of the Queen of England's servants, that did ill offices between the two courts. The Queen, as has been mentioned already, was allowed, by the articles of marriage, to entertain French Roman Catholics and

CHAP. XXXIV. and popish priests in her service; who were ever endeavouring to promote the interest of their country and religion, and making what proselytes they could to their faith; which gave great offence to some English Protestants, and occasioned ill-natured reflections on his Majesty, as his being inclined to popery, encouraging it, &c. But the priests in the Queen's retinue still gave the King greater occasion to complain, when they engaged her Majesty to walk to the common gallows at Tyburn, to adore the saints and martyrs of her religion, who had been executed there in the two preceding reigns. This, and the differences they daily created between the King and her, occasioned his Majesty to dismiss them all at once, to the number of two hundred and twenty; among whom was the Bishop of Mende. They received, however, in wages and presents, the value of two and twenty thousand pounds and upwards, before they were sent back.

Insolence of the popish priests in England.

The French King complained of this transaction as a breach of the articles of marriage, and ordered the English shipping in his ports to be detained, tho' the King of England sent over the Lord CARLETON to represent the necessity of proceeding in this manner for the peace of the nation, as well as that of the royal family.

The King of England sends relief to the Rochellers.

The French court remaining inexorable, the court of England hearkened to the solicitations of SOUBIZE in behalf of the French Protestants, and determined to send a fleet of ships to the assistance of the Rochellers, who were in a manner blocked up by the forts built about their town; and a declaration was drawn up in the name of the Duke of Bucks, who was appointed both Admiral and General in the expedition, wherein there are three motives mentioned for entering into this war:

Declaration of war against France.

1. That the French having entered into an alliance with the English for the restoration of the Elector Palatine, and agreed to join their forces with those of his British Majesty, and march in conjunction into Germany to his assistance, the French did not only fail in furnishing their quota of troops for that expedition, but denied the English forces that came over to Calais in order to join them, the liberty of landing there; whereby most of the forces perished on board, and the expedition was ruined. 2. That the French King, contrary to his treaties with his Protestant subjects, of which the King of England was guarantee, had blocked up their towns and forts. And, 3. That he had seized all the English shipping and merchandise in his ports. But whatever were the declared or concealed reasons for assisting the Rochellers, the Duke of Bucks with a fleet consisting of an hundred sail of men of war and transports, set sail from Portsmouth the seventh of June, and came before Rochelle about a month afterwards, when they refused to admit him or any of his people into the city, notwithstanding they had sent SOUBIZE, brother to the Duke of Rohan, over into England to implore aid of the English court; nor could SOUBIZE with all his importunity prevail with the Rochellers to act in concert with the English fleet. They said, they thanked his British Majesty and the Duke for their kind intentions; but as there was a treaty of union between them and the rest of their brethren in the several provinces of France, they durst not accept of foreign succours till they knew their resolutions. But this surely should have been thought of before they had put the English to the charge of this great armament, and drawn them

into a war against this kingdom; and no doubt the Protestants of the other provinces had long since been consulted upon that point: but the true reason of this abundant caution, was certain advice they had received from their brethren the English sectaries, that King CHARLES either designed to make himself master of their city, and perhaps introduce episcopacy there, which they dreaded equal to popery; or that the King of England would make peace with France, and deliver them up to the mercy of their enraged Sovereign. The Duke might justly have been provoked at the fickleness and unkind suspicions of the Rochellers, and left them to shift for themselves; but because he was unwilling to return to England without effecting any thing, after the kingdom had been at such a vast expence to send relief to the French Protestants, he determined to land his forces on the isle of Rhee, which lies near Rochelle, to give the citizens time to consider their true interest. I don't doubt but SOUBIZE represented to him how ungovernable the Hugonots generally were, even when they were commanded by those of their own nation of the first quality: that their preachers would frequently defeat the best-laid designs of their Generals, through their superstition and bigotry: that his father, the Duke of Rohan, who was at that instant drawing their forces together to oppose the Prince of Condé, was far from being obeyed as he ought, and as the necessity of their affairs required; and that most of the heads of their party had gone over to the court, as despairing of success where the multitude were under no command; but that they were a well-meaning afflicted people, and it would be glorious to him if he should attempt to deliver them from the tyranny and oppression they laboured under, even without their concurrence. These considerations, or something of the like nature, was probably suggested to the Duke by the French Protestants on board the fleet, or he would not have made a descent on the isle of Rhee, where there was a considerable body of French troops drawn together to oppose his landing. The French historians say he was repulsed three times, in which he lost a great many brave men, but carried his point at last, and obliged THOYRAS, the Governor, to retire into the castle of St Martin's, and other forts upon the island, with his troops. Had the Duke immediately laid siege to the castle, it is computed he might have carried it in a fortnight's time: but he seems to have been totally unprovided for a siege, and therefore proposed only to block up the forts, and prevent any supplies of ammunition and provision being thrown into them, till he could be furnished with materials proper for a siege from England or Rochelle. And indeed the Rochellers, when they had considered the advantage the possession of the isle of Rhee would be to them, that many of their estates lay there, and they had great part of their provision from thence, they did vouchsafe to supply the Duke with some forces and other necessities towards the reducing of St Martin's. But it was now too late: Cardinal RICHELIEU had found means to transport such numbers of troops into the island, that the French were become much superior in numbers to the English. Whereupon the Duke, after having remained there three months, found himself under a necessity of raising the siege, and re-imbarking his troops for England; which was done with less loss than could have been expected, considering they were to retire in the face

CHAP.  
XXXIV.

of a numerous enemy. According to the English account, which seems to be the truest, they lost two thousand men in this expedition; but the French say eight; which is near as many as they had when they made the descent. The Rochellers, now sensible of the sincerity of the English, parted good friends with the Duke of Bucks; and he promised to return with a more powerful reinforcement to their assistance the next spring.

One great occasion of the Duke's not carrying the castle of St Martin's, and making himself master of the isle of Rhee, was the dilatoriness of the Earl of Holland; who being intrusted to carry the necessary stores and ammunition to the isle of Rhee for a siege, had got no further than Plymouth with them when the Duke returned to England; and it was by no means advisable to hazard so great a fleet as the Duke had with him, longer upon the French coast in winter, if there had not been an army to oppose the operations: but as he began to want all necessaries, and the French troops were much superior to those he had with him, the Duke's retreat does not seem to deserve any manner of censure, tho' the fanatics, and the rest of his domestic enemies, used him very scurrilously on this occasion.

The French King continues the blockade of Rochelle.

The French continued the blockade of Rochelle after the retreat of the English fleet, and during the winter built forts on the lines of circumvallation at little distances, which entirely cut off all communication between Rochelle and the country on the land side; and as the mouth of the harbour was about a mile in breadth, they began an amazing work, a stone wall twelve fathom wide at the foundation, and strengthened with huge piles on each side, which was to be extended from either shore so far into the sea, as to leave only a small space for the flux and reflux of the tide, in which they designed to sink so many vessels, as should render the entrance into the harbour impracticable. The Rochellers observing they were in danger of being shut up by sea and land, begged of the court of England to hasten their preparations, before these works were finished. They represented that if this should once be effected, no provisions could be got into the town, and all the strength of Europe would not be able to deliver them; they must be forced to submit to a victorious and exasperated Prince.

1628.

A second fleet sent to the relief of Rochelle.

Whereupon the King of England gave orders to work night and day on the fleet designed for the relief of Rochelle, which actually set sail from Plymouth, under the command of the Earl of Denbigh, about the middle of April 1628, and arrived before Rochelle on the first of May. Notwithstanding the wall or barricado above-mentioned gradually decreased in thickness as it was raised in height, yet was it broad enough at the top to erect little works upon it, to shelter the soldiers who were placed for the defence of it, and they ranged armed vessels along the side of this mole for its greater security. The French also had now so good an understanding with the Spaniards, that they procured a large squadron of men of war of them, which, joined with their own, composed a fleet of an hundred sail, that prevented a great convoy of provisions the English had got ready during the winter being put into the town. The Earl of Denbigh also found the works at the mouth of the harbour so far advanced, and the passage blocked up by vessels that were sunk in it, that if it had not been defended by the French fleet, yet would it have been impossible for his large ships to have entered it; whereupon after some fruitless at-

tempts against the works, he was forced to return back without effecting any thing. The French Hugonots were very angry with the English that they had not sent ships of less burthen, which they observed might have got into the harbour at this time, tho' these great vessels could not; which possibly would have been complied with, if the Rochellers had given them a particular account of their circumstances: but it would not certainly have been prudent to have gone to the relief of this town only with small ships, when the English court had received certain advice that the French and Spaniards lay before it with a fleet of an hundred sail. But to return to the French army which blocked up Rochelle by land: The Cardinal, to animate the soldiery, who were almost wearied out with the length of the siege, prevailed upon the French King to remain with his army in person great part of the year; but the King having waited seven months, and there being still no prospect of the town's surrendering suddenly, he pretended extraordinary business, and returned to Paris, giving RICHIEU a commission, though a Cardinal and a Bishop, to be Lieutenant-General of his armies, laying his commands on the Duke of Angoulême, the Marshals BASSOMPIERRE and SCHOMBERG, and the rest of his officers, to obey the Cardinal as they would his Majesty if he were actually present.

CHAP.  
XXXIV.

RICHIEU made Commander in chief of the army.

The Cardinal, though he understood very little of the conduct of an army, yet as he was of an active penetrating spirit, was very capable of receiving the advice of the Generals, and distinguishing what was feasible and what not; nor would he refuse the being concerned in person in the most difficult and hazardous enterprizes, tho' very foreign to his profession, if he might be indulged with the supreme command and superintendency of the affair. And how incongruous soever it might seem to make a Bishop General of an army, as he was apprehensive the siege might miscarry in his absence by the misunderstandings or private views of the general officers, those that saw farthest into things thought he could not more effectually advance the service than by taking the command upon himself. When the King left the army, he expressed the greatest concern imaginable, that his affairs would not suffer him to take the Cardinal with him, and charged him not to be too prodigal in exposing his person in the trenches every day as he was used to do, intimating that he could not live without him.

RICHIEU apprehending that the army would suffer pretty much by a winter's campaign, took care that they should be well paid and clothed, and the camp always abounded with plenty of provisions, which were brought in from the neighbouring country; his troops observed so exact a discipline, that the peasants brought corn, wine, and flesh, thither with as much security, and were better paid for it than they could expect to be in another market.

At the time the English fleet was expected under the command of the Earl of Denbigh, (as has been mentioned already) the Cardinal thought it advisable that the King should return to the camp for the encouragement of the soldiers, and his Majesty accordingly arrived before Rochelle again on the 24th of April. When they saw the English squadron, and observed they were composed of large vessels, they soon conjectured they would be able to do them very little hurt, because there was not water enough at the entrance of the harbour for vessels

vessels of that burthen to ride in : and so it proved ; the English were obliged to retire without introducing any supplies of men or provisions into the place, as has been related above.

The Duke of Buckingham, notwithstanding this disappointment, was determined to attempt the relief of Rochelle in person once again : accordingly he gave orders for a greater sea-armament than ever ; he looked upon his reputation to be at stake, and seems resolved to carry his point or perish in the attempt ; and as he apprehended it to be an enterprize of infinite difficulty and hazard, since such stupendous works had been raised both on the sea and land-side of the town, he took leave of his friends, as our historians inform us, as if he never expected to see them any more : particularly when he parted from Bishop LAUD, it is reported that he desired him to put his Majesty in mind to be good to his wife and children ; soon after which he repaired to Portsmouth, in order to go on board the fleet, but was stabbed there on the twenty-third of August by that assassin FELTON, a violent enthusiast, who had been taught by the fanatics his brethren, that the killing the Duke would be acceptable to God, and the greatest service he could do his country.

The King still pursued the design of relieving Rochelle, and made the Earl of Lindsey commander of the fleet, which set sail from Portsmouth on the eighth of September ; but when they arrived there, they found the huge wall at the mouth of the harbour finished, and all the shore covered with French troops, and batteries raised at every place where there was any possibility of landing. The Earl, however, made several brave attempts to force his passage, but could not break through. Whereupon the Rochellers, who were now reduced to the last extremity (no less than fifteen thousand of them having perished by famine) despairing of relief, thought fit to capitulate, and surrendered the eighth of October. The best terms they could obtain were a general pardon, and security as to their lives, liberties, and estates, upon which they were to deliver up the town, and take an oath never to bear arms against his Majesty again. Nor had the terms been so good, but that the English fleet still remained upon the coast, and there was some expectation that the tides, which are very high at the approach of the winter season, might have demolished part of the barricado at the mouth of the harbour, and given admission to the English fleet. They were obliged consequently to his British Majesty for the enjoyment of their lives and estates, which had not been granted them, but for the countenance the royal navy of England gave them. And surely no Prince ever met with harder usage than King CHARLES did on this occasion : his own Protestant subjects thought it a sufficient cause to enter into a rebellion against him, because he did not support the Protestant interest so effectually as they apprehended he might have done ; and the French Catholics thought themselves justified in fomenting the insurrection of his subjects, because he had so strenuously supported the Protestant Rochellers. It is agreed on all hands that the taking of this place gave the greatest blow to the civil liberties of France, as well as to the Protestant religion there ; for no sooner were the Protestants disarmed, and their cities, of which this was the most considerable, reduced, but the court found themselves in a condition to put what terms they pleased on their

fellow-subjects : whereas if the ministry were guilty of any acts of tyranny before this misfortune, the people, by the assistance of the Protestants, were generally able to make a stand, and defend their invaded liberties : and this was indeed the true reason that Cardinal RICHELIEU was determined to put them out of a condition of resisting again : till he had effected this, he could never hope to establish a despotick power in that kingdom.

The destruction of the Calvinists in France is generally ascribed to the mercenary temper of their chiefs, and the ungovernable disposition of their people. The court, by offering pensions and places to the grantees, drew off many of them ; and the reluctance of the generality of the Hugonots to be under any command or government, disgusted many more. When their Generals had concerted schemes for their advantage, it was ten to one but they were controuled and defeated by their ignorant enthusiastical preachers, under pretence that God did not approve either of their persons or their conduct ; and thus the best-laid designs were often blasted. Ambition and Emulation among their leaders for the supreme command, contributed also in a very great degree to the ruin of this people. But to proceed in our history : The King having taken possession of Rochelle, published a declaration, whereby he restored the publick profession of the Roman catholic religion in that city, and the country of Aunis contiguous to it. He ordered that the demolished churches should be rebuilt, and their revenues restored to the clergy. That a cross should be erected in the square of the castle, with an inscription shewing the time and manner of the reduction of the city. That the church where the Hugonots were used to assemble for divine worship in the castle, should be converted into a cathedral, and the city by the Pope's permission made a Bishop's See. That the offices of Mayor and Sheriff should be suppressed, and the corporation entirely dissolved, and the city for the future governed by an intendant of justice appointed by his Majesty. And finally, that the walls and fortifications should be demolished.

Compliments were made his Majesty on the reduction of Rochelle by the Pope and other sovereign Princes ; an event, says my catholic author, of the utmost importance for the security of the King's dominions ; a mortal blow to Calvinism, and the most glorious to Cardinal RICHELIEU's administration.

While the King was at the siege of Rochelle, the Prince of Condé and the Duke of Montmorency, each of them, commanded an army in Languedoc against the Duke of Rohan and the Protestants who were in arms there ; where being much superior to their enemies, they ravaged the country, and used the poor Hugonots in the open towns very barbarously, but did not make themselves masters of Montauban, Nismes, or any of their strong places, which held out till the King returned victorious from the war in Italy, of which I am next to give an account.

VINCENT Duke of Mantua and Monterrat, dying in the year 1627 without issue, his honours and territories devolved on the Duke of Nevers ; but the Spaniards, being averse to the succession of a French nobleman, favoured the pretensions of CÆSAR DE GONZAË, Duke of Guastalla, who pretended also to be heir of the late Duke, and prevailed with the Emperor to grant him the investiture of the duchy of Mantua. The French King

King was no less zealous in supporting his subject the Duke of Nevers, than the Spaniards were in the behalf of the Duke of Guastalla; but being engaged in the siege of Rochelle, could afford him no other assistance at present than what was to be procured by negotiations with the Pope, the Venetians, and other Italian Princes. In the mean time the Spaniards and the Duke of Savoy seized on the greatest part of the Montferrat, and agreed to divide it between them; scarce any considerable place except Casal held out for the Duke of Mantua in that territory, and the Duke was reduced to great extremity in Mantua itself by the Emperor, who required him to sequester the territories of Mantua into the hands of Count NASSAU, till his Imperial Majesty should have determined the right of the several pretenders.

The siege of Rochelle being now over, the King was determined to send an army to the relief of the Duke of Mantua, of which he at first declared the Duke of Orleans Lieutenant-General and Commander in chief: but his Majesty, 'tis said, envying his brother the glory of the enterprise, or rather the Cardinal not daring to trust his Royal Highness at the head of so powerful an army, persuaded the King to take the field in person; whereupon his Majesty began his march towards Italy on the sixteenth of January 1628-9. The Duke of Orleans attended him as far as Lyons, and then returned to Paris, declaring he would not serve in an army where the Cardinal would command both him and the King.

1629.  
The French force the pass of Suza.

A treaty between France and Savoy.

A war against the Hugonots in Languedoc.

The army being arrived at the foot of the Alps, his Majesty sent to the Duke of Savoy to demand passage for his troops into the Montferrat; but the Duke refused it, and began to fortify the pass of Suza against him: whereupon the King attacked it, and having ordered part of his forces to climb the mountains and charge the Piemontois in flank, they immediately took to their heels, making but a very poor resistance. The next day his Majesty continued his march to the city of Suza, which surrendered upon the first summons. And now the Duke of Savoy, finding himself unable to defend his country, thought fit to enter into a treaty with his Majesty, whereby he obliged himself to give free passage for the French troops thro' his territories into the Montferrat, and to furnish them with provisions: that he would prevail with the Spanish General DON GONZALES to raise the siege of Casal, and withdraw his troops out of the Montferrat, and leave the Duke of Mantua in the peaceable possession of his dominions; and that he would enter into an alliance with the Pope, the King, the Venetians, and the Duke of Mantua, for the defence of the Duke's territories. And the French King on his part promised to obtain of the Duke of Mantua for the Duke of Savoy, the town of Trino in the Montferrat, and lands to the value of fifteen thousand crowns per annum.

The French King having relieved Casal, and put the Duke of Mantua into the possession of the rest of the Montferrat, returned over the mountains with his army and marched into Languedoc, in order to give the finishing stroke to the Hugonot war. The Duke of Rohan was not strong enough to keep the field, and therefore distributed his forces in the towns of security, which still remained in the hands of the Protestants. The King thereupon laid siege to Privas in the Vivarez, which was garrisoned by some of the bravest troops the Duke of Rohan had, and

defended the place admirably well; but looking upon their strength to be greater than it really was, they neglected to capitulate till all their works were taken, and could obtain no terms: they were obliged to surrender at discretion, and most of them cut in pieces, or executed in cold blood. One occasion whereof might be, that after the town was taken, and in a manner in possession of the Royalists, one of the soldiers of the garrison set fire to the magazine of powder, and blew up a great many of them. From hence the army marched to Alets or Alais in the Cevennes, which being terrified by the fate of Privas, surrendered after a short resistance, as did several other small places. Upon these repeated successes the Cardinal sent to the Duke of Rohan, advising him to submit to his Majesty, and not expose himself and his party to inevitable ruin. He promised to the Duke himself, his brother SOUBIZE, and the rest of the Protestants, a pardon, and security for their estates and religion, on condition they would demolish the fortifications of Nîmes, Castres, d'Uzès, and Montauban, which were still in their power: and the Protestants considering their low circumstances, thought fit to comply with these terms. The treaty was signed at Alets on the 27th of June 1629. After which, the Duke of Rohan, with his Majesty's consent, left the kingdom, and retired to Venice, obliging himself not to return without his permission. Soon after, the fortifications of the Protestant towns being demolished in pursuance of the said treaty, the Cardinal made his entry into Montauban, where he was complimented, and even flattered by the Hugonot clergy to a very high degree. The Cardinal thereupon let them know, it was not the custom of France to receive them as the body of a church on any occasion whatever, but he received them as men of learning; that under that notion they should always be welcome to him, and he should endeavour to demonstrate, on all occasions, that the difference of religion should never hinder his doing them all manner of good offices. But the Hugonots having parted with their cities of security, and depending solely on the pleasure of the ministry, who never kept their words with them any farther than they conceived it for their advantage, the party decreased insensibly; and notwithstanding the submission and ready obedience they shewed to the commands of their sovereign, he laboured continually to ruin them, under a notion that he was bound in conscience to do it as soon as he had an opportunity; tho' it was not effected absolutely till the repeal of the edict of Nants in the next reign.

They submit, and deliver up their towns of security.

While the King was engaged in the wars of Montferrat and Languedoc, there happened some misunderstandings in the royal family, which afterwards occasioned great alterations at court: the Duke of Orleans, having buried his first wife, entered into a new amour with the Princess MARY GONZAGA, daughter of the Duke of Nevers and Mantua; to which match the Queen-mother shewed an unalterable aversion, pretending that this Princess was of an unhealthy constitution, and not likely to have any children: though the true reason of her opposing it, was Monsieur's refusing to marry one of the daughters of the Duke of Florence, her near relation; by which she proposed to support her interest at court in case of the King's demise. The Queen, whom his Majesty had constituted regent in his absence, to prevent the match with the Duke of Mantua's daughter,

Misunderstandings in the royal family.

CHAP.  
XXXIV.

daughter prevailed on him to send for her into Italy, of which the Duke of Orleans receiving intelligence, laid a scheme to intercept her in the journey and marry her. The Queen having notice of his design, seized on the Princess of Mantua and the Duchesses of Longueville, and confined them both in the castle of Vincennes. The Duke of Orleans, vexed at this disappointment, and disgusted because the Cardinal had deprived him of the command of the army in Piedmont, retired to Nancy in Lorraine. However, being soon made sensible that the Cardinal equally designed his ruin and the Queen's, he was reconciled to her Majesty, and sent to the Duke DE BELLEGARDE to court to desire the Queen-mother not to be reconciled to the Cardinal, of whom he was determined to be revenged for the many affronts he had received, and to assure her he would marry into what family she pleased. He offered the ministry also to return to court, on condition they would augment his revenue an hundred thousand livres per ann. which at length was complied with. But to return to the war in Italy.

The war  
in Italy.

The Cardinal was no sooner returned over the Alps with his army into Languedoc, but the Emperor's General, the Count DE MERODE, entered the country of the Grisons with an army of twenty thousand men, and possessed himself of the passes of the Valteline, whereby he secured the communication between Germany and Italy again. The motive of this expedition he declared was, that he might be in a condition to decide the differences concerning the succession to Mantua and Montferrat, which were fiefs of the Empire. And the Imperial Generals having summoned the Duke of Mantua to surrender his territories into their hands till the Emperor had determined the right, on his refusal to comply with them, they took possession of the greatest part of his country.

The Cardinal hereupon raised another army to march to the relief of his Italian allies, of which the King did not only give him the command, but the honour of representing his person with the title of Generalissimo, which at this time, 'tis said, was first made use of to satisfy his vanity, and give him the superiority of the Marshals of France who served under him. The army being arrived at Lyons, the Cardinal sent to the Duke of Savoy to demand a passage through his country, and that he would unite his forces with those of France, as he had promised, to recover the Mantuan and Montferrat from the house of Austria. The Duke of Savoy denied he had made any such promise. However, he agreed to give the French passage, rather than come to a rupture with them: but the Cardinal resolving to put it out of the power of the Duke to prevent the French armies entering Italy for the future, or to cut off their retreat from thence, on some other trivial pretence, took an occasion to quarrel with the Duke, and surprized the fortrefs of Pignerol, which opened a way to the French to enter Italy when they pleased, and rendered the Duke of Savoy dependent on them.

1630.  
The  
French  
take Pig-  
nerol.

The Cardinal, who was Generalissimo in this expedition, as has been related already, when he passed the river Dore at the head of the army, was dressed in bright armour, his hat adorned with plumes of feathers, and a brace of pistols before him, and seemed to take a pleasure in shewing the soldiers how dextrous he was in managing the fine horse he rode upon, prancing before the ranks, and bidding the officers take notice of his skill; and indeed this prelate had been

V O L. II.

taught these exercises before he was designed for holy orders. But to proceed in our history: The French were not content with the taking of Pignerol, but made a conquest of all Savoy except Montmelian; they seemed to have forgotten their original design of relieving the Duke of Mantua, suffering the Imperialists to take his capital city, and drive him entirely out of his territories, except the city of Casal, which was still in the hands of the French. It is said, they looked upon the taking of Pignerol, and the reducing Savoy, of much greater consequence to them, than the marching to the assistance of that Prince: or rather, the Cardinal foresaw that he should be able to relieve him by another method, for it was about this time that the celebrated GUSTAVUS ADOLPHUS invaded Germany, with whom the Cardinal entered into a confederacy, and engaged to give that Prince four hundred thousand crowns per annum towards the charges of the war. He renewed the alliance also with the Protestant Princes of Germany, by whose means he so distressed the Emperor, that his Imperial Majesty found himself under a necessity of withdrawing his troops from Italy, and of coming to terms concerning Mantua. The Emperor promised to grant the investiture to the Duke of Nevers, on condition of his giving a sum of money to the other pretenders.

About this time CHARLES-EMANUEL Duke of Savoy died, leaving his dominions to his eldest son VICTOR-AMADEUS, brother-in-law to the French King LEWIS the Thirteenth, between whom, and the French and Spaniards, the Pope's Nuncio MAZARIN negotiated a treaty, by which the French were great gainers; and this, 'tis said, laid the foundation of MAZARIN's greatness in France. By this treaty the Spaniards agreed to evacuate Mantua and Montferrat, on condition of the French King's evacuating Savoy and Pignerol: but the French, by MAZARIN's address, found means to purchase Pignerol of the Duke of Savoy; and if they had not had it this way, it seems the Cardinal was determined never to part with it, he apprehended it to be of such importance to France.

RIN the  
Pope's  
nuncio.

During these transactions the King of France and the Court were at Lyons, where his Majesty fell dangerously ill, insomuch that his life was despaired of. The Queen-mother and Queen-confort thereupon, 'tis said, entered into a cabal with the two MARILLACS, (one of whom was Keeper of the Seals, and the other a Marshal of France) the Princess of Conti, the Duchesses of Elbeuf, VAUTIER the King's first physician, and others, to ruin the Cardinal; of which that Prelate having intelligence from the spies he always kept about his Majesty, he determined, upon the King's recovery, which happened not long after, to endeavour the destruction of all that had been concerned in the design against him, and few of them escaped his vengeance.

A cabal  
against the  
Cardinal.

The Queens did not want sufficient provocations to study the ruin of the Cardinal; he was perpetually suggesting to the jealous timorous King, that they had a design against his Majesty; that the Queen-mother had more affection for the Duke of Orleans than for him, and was perpetually consulting fortune-tellers to know when he should come to the crown; that the Queen-confort was uneasy at her having no children, and had thoughts of marrying the Duke of Orleans in case of the King's death: and his Majesty

really

CHAP.  
XXXIV.

really believed these calumnies; while, on the other hand, all that the two Queens could say against the Cardinal had no effect upon him. The Court being arrived at Paris, things came to an open rupture between the Queen-mother and the Cardinal; she proceeded so far as, in the King's presence, to call him cheat, ingrate, malicious, the wickedest man in the kingdom, and disturber of the publick peace; and turning to the King told him, that was the man who would take the crown from his head and give it to Count Soissons, who was about to marry his niece. But the King replied, the Cardinal was an honest man, and had served him faithfully; that she had disobliged him, and put him to the utmost torture, and he could never forget the affliction she had given him. Whereupon the Cardinal retired, and the King soon after followed him, saying, as he left her cabinet, that he had had too much patience.

1631.  
The  
Queen-  
mother  
seized.

The King soon after came to a resolution to make the Queen-mother prisoner; but as she had a great authority in Paris, the Cardinal advised his Majesty to remove to Compeigne, where it would be much easier to seize her; and the Queen, who had no suspicion of the design, followed the King thither. On the 23d of February 1630-31, the King and Cardinal returned early in the morning to Paris, having ordered five hundred horse to surround Compeigne, and not permit the Queen to stir from thence. When the Queen was informed the Court was gone without her, and saw herself surrounded with soldiers, she was out of all patience, and vented her spleen against the Cardinal in such terms as the case deserved. She wrote to the King also to justify her conduct; but he was so influenced by the Cardinal and his creatures, who continually besieged his Majesty, that he would not open her letters. The Queen receiving intelligence that the Cardinal was sending twelve hundred horse to remove her from Compeigne to some other place, where she should be more closely confined, found means to make her escape, and retired to Flanders, where she was kindly received by the Infanta, who had the government of the Netherlands. This, 'tis said, was what the Cardinal most desired; for having charged her frequently with being in the Spanish interest, the King looked upon her retiring to Flanders to be a demonstration of it. The Cardinal had ordered the guards, it seems, to give the Queen an opportunity of escaping, or it had been very easy for him to have prevented it; but he thought she would be able to do him less mischief abroad than at court. The Duke of Orleans also retired out of France about the same time, having first sent a memorial to the parliament of Paris, wherein he declares the reason of his leaving the kingdom to be the attempts the Cardinal had made against his person, and that of the Queen-mother, in order to render himself master of the kingdom.

fairs of  
state.

The King having published an edict declaring the adherents of the Queen-mother and the Duke of Orleans guilty of high-treason, sent it to the parliament of Paris to be confirmed; which they refused to comply with, till the parties charged with the crime had been heard before them. Whereupon RICHIEU prevailed with the King to send for the parliament to the Louvre, and the Keeper in his Majesty's name let them know, that their authority extended only to private right, and not to matters of state, the cognizance whereof belonged only to their Sovereign. Then the King

ordered a decree of the council to be entered in the parliament register, which prohibited that court to deliberate for the future on declarations concerning affairs of state: and to shew his displeasure at their presumption, suspended and banished two of the Presidents of the chamber of inquests. The King also strictly forbid all persons to keep any correspondence with the Queen-mother or the Duke of Orleans, and declared all their manors, lands, and tenements, forfeited to the crown.

CHAP.  
XXXIV.

The Cardinal having thus gratified his revenge on the Queen-mother and Monsieur, obtained a grant of the King for erecting his lands of Richlieu into a duchy and peerage. He was also made Governor of the province of Britany, which he suggested was very proper for him, as he was superintendant of trade and navigation, because the ports of Britany lie extremely convenient for the carrying on a foreign trade: and from this time he obtained the title of the Cardinal Duke.

The Car-  
dinal  
created a  
Duke and  
Peer.

The Prince of Condé and the other grantees finding this Prelate so firmly established in the King's favour, that the united interests of the Queen-mother and the Duke of Orleans could not prevail against him, but that their opposition to his schemes had occasioned their destruction, courted RICHIEU in the most abject manner: the Prince particularly went from province to province to execute his orders, and publish the praises of this minister; in a speech to the States of Britany he dwells much on the capacity, the valour, and great services of the Cardinal; he tells them he had confounded hereby, pulled down and defeated rebellion, extended the limits of the kingdom, &c. and might have added, that he had obtained an entire conquest over the liberties of the people, and rendered the assemblies of the States and Parliaments entirely useless.

RICHIEU still continued to pursue the friends and adherents of the Duke of Orleans with the utmost severity, particularly the Duke of Lorraine, from whom he took several towns and ravaged the country, because he apprehended that Prince to be in Monsieur's interest: he obliged him also to renounce all treaties and alliances with the enemies of the court. Then he erected a court of justice to try the adherents of the Queen-mother and the Duke, and obliged the parliament of Paris to consent to this manner of proceeding, notwithstanding they had remonstrated against it, and alledged that Peers could only be tryed in parliament. The Marshal DE MARILLAC was made the first victim to the Cardinal's fury: he had erected one court of justice to try him, and because they were not villains enough to condemn him without proof, he appointed other commissioners, consisting of his own creatures, that he was sure would do as they were directed. Against this court in general, and several of the judges in particular, the Marshal excepted on account of their declared enmity against him, but to very little purpose; he was condemned to lose his head. Great intercession was made for his life, but the Cardinal was inexorable. The Marshal was executed at the Greve, protesting his innocence; and it seems his greatest crime was his advising the Queen to apprehend the Cardinal, when the King lay dangerously ill at Lyons, which was never to be forgiven.

ment.

In the mean time the Duke of Orleans entered France in a hostile manner at the head of two thousand horse, declaring that he had taken arms to procure a redress of the people's grievances and oppressions under the Cardinal's administration.

The Duke Or-  
leans in  
arms.

He

CHAP. XXXIV. He was joined by about three thousand foot in Auvergne, but the provinces were generally cautious of rising in his favour, having seen so many instances of the Cardinal's vengeance.

The King on the other hand raised two armies and sent them against the Duke, and at the same time published an edict, declaring that the male-administration and oppressions mentioned in the Duke's declaration were all pretended and fictitious; that the kingdom was never in so powerful and flourishing a condition as at this time, and that the Cardinal's merits and services were so well known, that none but those who envied his Majesty's glory and prosperity would endeavour to defame him; declaring Monsieur's adherents again guilty of high-treason, and that they should be proceeded against with the utmost severity.

These declarations were soon followed by actions. The Duke of Montmorency, who had surrendered his office of High Admiral, in hopes of having that of Constable conferred upon him, became malecontent on his being disappointed by the Cardinal, and raised forces in the province of Languedoc, of which he was Governor, to join the Duke of Orleans: he procured the States of Languedoc also to espouse his interest, and promise him to raise money and to stand by him with their lives and fortunes. But coming to an engagement afterwards with the King's troops, the Dukes of Orleans and Montmorency were defeated, and the latter of them made prisoner. Whereupon Monsieur thought fit to submit and lay down his arms; but the Cardinal causing his friend the Duke of Montmorency to be condemned and executed as a traitor, notwithstanding his intercession to spare him, his Highness retired in discontent to the Low-Countries again, where he was well received by the Spaniards.

The victorious GUSTAVUS ADOLPHUS was killed on the sixth of November this year at the battle of Lutzen. The French, as has been related already, had entered into an alliance with him and the Protestant Princes of Germany, to whom they granted considerable pensions to support them against the Emperor, tho' France was then at peace with his Imperial Majesty; but GUSTAVUS ADOLPHUS meeting with surprising success in the German war, Cardinal RICHLIEU became no less jealous of him than of the house of Austria. However, upon the death of the King of Sweden the case seemed to be altered, and the Cardinal resolved to assist the Swedes in Germany more vigorously than he had done, to prevent their sinking; for had the Swedes been forced to accommodate matters with the Emperor, he would infallibly have fallen upon France with all his forces: he could not be ignorant of the share France had in maintaining the war against him, tho' there was not any war declared between these two powers at this time. The Cardinal therefore promised to continue the payment of a million of livres annually to Sweden, and the regency of that kingdom on the other hand engaged not to make peace with the Emperor without the consent of France. The Cardinal also concluded a treaty of much the same nature with the States-General and the Protestant Princes of Germany, whereby he found full employment for the house of Austria, without entering into a formal war. About the same time he procured himself to be made a Knight of the Holy Ghost, and seemed to be as proud of the blue ribbon as some modern statesmen are at this day.

While the house of Austria was engaged in that terrible war with Sweden and her confederates, the Cardinal took the opportunity of surprising the Valteline again; whereby he cut off the communication between Germany and Italy, of which the Spaniards made loud complaints, as they did on their keeping Pignerol and Casal contrary to the last treaty of peace between these two powers: but it is observed of the Cardinal, that he never parted with any thing that he apprehended was for his advantage to keep. The representations of the Spaniards on these heads, were as ineffectual as those for their evacuating Triers and the towns of Lorraine, which the French had seized on with equal justice; and under pretence that the Duke of Lorraine had assisted the Spaniards, and had clandestinely married his sister to the Duke of Orleans, the French King made himself master of Nancy, the capital, and all the rest of his country. Whereupon the Duke transferred his dominions to the Cardinal of Lorraine, his brother, and joined the imperial army with his troops.

The Queen mother, weary of residing in the Netherlands, where she did not meet with that respect she apprehended was due to her quality, and being deprived of all her revenues by the Cardinal, made her submission to this haughty Prelate in the most abject manner, in order to obtain a permission to return to court: but the Cardinal, either to gratify his revenge, or really fearing she might find means to ruin him in the King's favour, appeared inexorable, and persuaded his Majesty that he must never expect to live in any tolerable quiet if he suffered her to return to court, or if she was allowed her revenues while out of the kingdom; so that this Princess was reduced to very great extremities. But as RICHLIEU was of opinion the Duke of Orleans might embarrass his affairs more by remaining out of the kingdom than in it, he consented to his return, procuring a general pardon for him and his domesticks except three or four, and a grant of all his former revenues and appanages that had been taken from him, with a large sum for the paying off his debts and providing his equipage: he was also to have a troop of Gens d'armes, and another of light horse for his guard. However, the Duke thought fit to leave Madam his wife in the Low-Countries, not daring to trust her in the power of the Cardinal, who seemed determined to get his marriage with her declared void.

In the mean time the Imperialists obtained a signal victory over the Swedes at Norlingen, which gave the Cardinal some apprehensions of his losing Lorraine again, and even of the enemy's penetrating into the heart of France. Whereupon he sent the Marshals de la Force and de Breze towards the Rhine with an army of thirty thousand men, to support the Swedes, who put several towns in Alsatia and the Palatinate, which they were not able to keep, into the hands of the French, and amongst the rest the important city of Philipsburg; which last gave the Cardinal great satisfaction, inasmuch as it put him in a condition to stop the progress of the Imperialists, in case they designed to pass the Rhine and force their way into Lorraine.

The Cardinal had tried all the ways imaginable to persuade the Duke of Orleans to consent that his marriage with the Princess of Lorraine should be declared null, and believing that the Duke's favourite PUILAUREUS persuaded him to remain immovable on that head, he ordered him to be apprehended

apprehended with another of the Duke's domesticks and carried to the castle of Vincennes; which gave Monsieur no small uneasiness. But he proceeded farther, for having summoned an assembly of the clergy to meet at Paris, he proposed this question to them, viz. Whether the Princes of the blood, and especially those who stood nearest to the crown, might marry without the King's consent, and even against his express prohibition? To which they returned such an answer as it was supposed the Cardinal had dictated, namely, that marriages might be rendered null by ancient customs, founded upon reason, and authorized by the Church. That the custom of France did not permit Princes of the blood, and especially the presumptive heir of the crown, to marry without the King's consent, much less against his positive commands. The Queen-mother receiving advice of this determination, wrote to Rome, desiring his Holiness to prohibit the clergy of France proceeding in this affair, because it was notorious that this assembly was wholly composed of Court-Bishops, who were ready to declare whatever the prime minister would have them; and if he desired it, would frame another declaration directly opposite to this to-morrow. Monsieur also still insisted on the validity of his marriage. However, when he was pressed on this head, he told his Majesty that if the Pope declared he might marry again, he would obey him.

RICHIEU about this time prevailed with the King to let the councils be held at his house, under pretence of his want of health, and his Majesty usually came thither from St Germain's and Versailles. Most people believed, that this proceeded from the perpetual fears the Minister was in, not daring to trust himself much abroad, and when he did go out, his people were never acquainted with it till the moment he took coach; for the Princes of the blood and the Nobility, whom he treated with the utmost contempt, as well as the people who were oppressed by taxes, equally hated him: so that it seems this mighty authority, founded wholly upon the King's weakness and a perpetual series of acts of violence, was attended with no small inquietude. He rendered himself dreaded by every man, and yet feared every man himself; conscious that the people, whose liberties he had invaded, would lose no opportunity to destroy him. The ill success of the French arms this campaign also was a considerable mortification to the Cardinal; for the Germans surprized Philipsburg, in which were their magazines and a considerable treasure, and afterwards took the city of Triers, making the Archbishop of the place their prisoner, who was in the French interest: Worms and several other towns also submitted to the Imperialists. Whereupon the Cardinal thought fit to strengthen himself by entering into an alliance offensive and defensive with the States-General against Spain (for hitherto he had carried on that war under-hand, by supplying the Dutch and other Powers with money). It was agreed by this treaty to divide the Spanish Netherlands between the French and the States, when they should have made a conquest of them. The pretence of the French for declaring war against Spain, was their refusing to release the Archbishop of Triers, who had put himself under the protection of France. The Spaniards, on the other side, declared, that it was not in reality the King of France that made war upon them; but Cardinal RICHIEU, who had usurped the government of that kingdom. But whatever were the grounds of the war, the French

and Dutch having joined their forces, amounting to forty thousand men and upward, took Tirlemont, and afterwards laid siege to Louvain, which they were obliged to raise on the approach of the Spaniards and Imperialists. Nor did this great army perform any thing answerable to the expectation of the French court; which proceeded, 'tis said, from the misunderstandings among their Generals, or rather with the Dutch; who observing the haughty and imperious behaviour of the French, began to be afraid of having them for their neighbours, and therefore would not enter upon any considerable action. 'Tis observed also, that the Dutch so contrived matters, that the French were destitute of all necessaries in their camp, whereby they lost abundance of men, while the forces of the States had plenty of provision among them.

About the same time the King of France entered into an alliance with the Dukes of Savoy, Mantua, and Parma, whereby the Cardinal proposed no less than the conquest of the Milanese. The first enterprize they undertook was the siege of Valentia; but the misunderstandings among the Generals on this side also prevented the taking of it, and they were forced to raise the siege. It is observable, that whatever Powers have entered into an alliance with France, unless their Ministers and Generals might govern the confederacy, and have the absolute command of the troops, they have constantly ruined the undertaking, or so managed matters, as to be the chief gainers by it. This is a truth their allies have experienced more than once. But to proceed: The next campaign the French and Italian Generals agreed no better than the former; and the Duke of Parma's territories, which lay next to the Milanese, were in a manner ruined by the Spaniards, while the Duke of Savoy and the French General the Marshal de Crequi retired towards Piedmont.

The French had no better success in Franche Comte, where the Prince of Condé commanded; for having laid siege to Dole, the second town of the county, he was obliged to raise it on the approach of the Duke of Lorraine and the German army. On the side of the Pyrenees the Spaniards were superior to the French; but the latter prevented their taking of Bayonne, which was threatened by the Spanish Generals. In the mean time the frontiers of Picardy being very ill guarded, the Spaniards took several towns there; and having passed the Somme, put Paris itself into a great consternation: but the French assembled their forces, and obliged them to retire.

The Duke of Orleans and Count Soissons now commanded the grand army of France; for the success of the Spaniards was such in Picardy, at the beginning of the campaign, that the Cardinal found it absolutely necessary to place the Princes of the blood at the head of the troops, in order to keep up the spirits of the people, and induce them to submit to those heavy taxes which were levied on this occasion for the defence of the kingdom; though he was very well satisfied, that both Monsieur and the Count were his mortal enemies: and indeed the giving them the command of the army had very near proved fatal to him; for consulting with some of the principal nobility, whom this Prelate had equally disoblinded, they resolved to take him off, and had employed four assassins for that purpose; but the Princes were so irrefutable, that though these Bravo's had surrounded the Cardinal, and demanded the sign to fall upon him, neither of them durst give it, pretending they

were restrained by the reverence they bore to his character as a Priest; and while they hesitated, the Cardinal took coach and escaped their hands, not knowing at that time the danger he was in. Monsieur and Count Soissons afterwards determined to endeavour the disgrace of this Minister, by acquainting his Majesty with his ill conduct, which they affirmed had occasioned all the calamities the nation laboured under; and particularly his engaging in a war with Spain, which he knew not how to maintain with honour. But the Cardinal being apprized of their intentions, caused a report to be spread, that the King designed to apprehend them; at which they were so alarmed, that they both made their escapes, and left the Cardinal in the sole possession of the King's ear. Monsieur retired only to Blois, and soon after returned to court, when he understood it was a false alarm; but Count Soissons went to Sedan, and did not think fit to trust himself any more in the Cardinal's power.

1637.

The campaign of 1637 proved successful to the French and Dutch in Flanders; FREDERICK-HENRY Prince of Orange took Breda, and the Cardinal de la Valette, General of the French, took several other towns from the Spaniards on that side; but in Italy they had the worst of it. The Duke of Parma, their ally, was obliged to make his peace with the Spaniards; and the Grisons, with the assistance of the Spanish troops, drove the French out of the Valteline, which they had been at a very great expence to take and defend.

The French driven out of the Valteline again.

The King's Confessor ruined by the Cardinal.

Father CAUSSIN, the King's Confessor, either concerned to see his Majesty and the nation perpetually imposed on by the Cardinal; or, according to others, hoping to succeed him in the post of prime minister, if he could procure his disgrace, took an opportunity about this time to lay his ill conduct before the King, instancing in four particulars: 1. The banishment of the Queen-mother, who wanted even the necessaries of life. 2. This Prelate's usurping the royal authority, so that his Majesty had no more than the bare name of King. 3. The oppression of the people, who were reduced to the utmost misery by the exorbitant taxes. And, 4. His supporting the Swedes and German Protestants against the Catholics, to the ruin of their religion in the Empire. And though this charge was for the most part true and notorious to all the world, such was the Cardinal's interest with his master, that he procured the poor Confessor to be thrown into prison, where he remained till the King died.

1638.

An alliance with Savoy.

The Duke of Savoy being dead, as has been related already and leaving behind him a son an infant, to whom the Duchess, his mother, sister to the French King, was guardian, the Cardinal obliged her to enter into an alliance offensive and defensive with France against the Spaniard; and sent the Cardinal de la Valette into Italy, to command the Army there, upon the death of Marshal Crequi; for 'tis observed of RICHLIEU, that he chose to employ Ecclesiasticks upon almost all occasions, how foreign soever to their profession. The Archbishop of Bourdeaux was Admiral, Valette General, and most of the foreign Ministers in holy orders: he either thought these gentlemen better qualified for publick employments, or more devoted to his interests than other men. But to return. The Spanish General, the Marquis de Leganeze, finding himself superior to the French and Savoyards, laid siege to Vercil in Piedmont,

The Cardinal employs Ecclesiasticks in the fleet and army.

and took it; but declared at the same time, that he came into Piedmont and Montferrat only to expel the French, and not to make war against the Duke; for the Cardinal had insisted that the Duchess should put all her strong towns into the hands of the French.

The Duke of Weimar, whose troops were paid by France, engaged the Imperialists this campaign near the border of Switzerland, and defeated them; in which battle the Duke of Rohan, who formerly commanded the French Protestants, was killed. Afterwards the Duke of Weimar took Rhinfield, Friburg, and Brisac; and the country of Brisgow, and several towns in Suabia submitted to him. In Artois the French did not meet with equal success; for having laid siege to St Omers, the Spaniard marched to its relief, and obliged them to raise it. It seems, the Cardinal, with all his policy, had a good share of superstition and credulity: a nun who pretended to the spirit of prophecy related, that in one of her visions, she saw two armies fighting near St Omers, and that the King's was victorious; which, 'tis said, was his principal inducement for consenting to this unfortunate siege, for which he was by no means provided. But this was not the Cardinal's weakness alone; most of the great men of that age seem to have had great faith in visions, prophecies, and the magick art.

The Duke of Weimar defeats the Imperialists, and takes Friburg, Brisac, &c.

The Cardinal's weakness.

This year the French invaded Spain on the side of Guipuscoa, took Port Passage, with several Spanish men of war and galleons, and afterwards laid siege to Fontarabia: but the Spaniards obliged them to raise it, to the great mortification of the Cardinal, as well as the Prince of Condé, who commanded the army. The King, however, was extremely rejoiced at this time to find his Queen big with child, after they had been married two and twenty years, no signs of her pregnancy having appeared before. This one would have thought should have so much endeared her to his Majesty, that the Cardinal might have been afraid to offend her; but this insolent Prelate having discovered that the Queen held a correspondence with her brother the Cardinal Infant, on the subject of peace, and that the letters which passed between them were lodged in a closet she had in an oratory in the nunnery of Val de Grace, he procured an order from the King to seize them, and sent the Chancellor to execute it; but he being afraid of the Queen's resentment, discovered the matter to her Majesty, and gave her an opportunity of removing all obnoxious papers before he came, so that the thing was not attended with any ill consequences, as it happened; tho' had not the Queen been big with child, 'tis said, the Cardinal would have proceeded against her in a more violent manner. Another instance historians give us of the intolerable insolence of the prime minister, and weakness of the King, deserves to be related; the King it seems had a mistress called Mademoiselle DE FAYETTE, of whom he was infinitely fond, insomuch that the Cardinal was apprehensive she might influence his Majesty to his prejudice: this lady of a sudden retired into a convent, and resolved to have no farther commerce with his Majesty; at which he was much surprized, and being determined to know the reason of it, took an opportunity to hunt in the forest where the convent stood, and leaving his attendants, had a long conversation with her, in which he discovered that one of his pages who used to carry the bills between him and the lady, used to bring them to the Cardinal, who altered or suppressed them

The Queen of France with child after she had been barren 22 years.

The Cardinal forgets the King's hand, and alters his letters.

CHAP.  
XXXIV.

them as he saw fit, making no scruple of counterfeiting the King's hand on this occasion; and it was the unkind expressions the Cardinal had made use of in these letters that went under his Majesty's name to the lady that induced her chiefly to think of retiring to a convent; tho' he made use of other means to effect it, for he threatened several of her friends with banishment, unless they persuaded her to shut herself up in a nunnery. Notwithstanding all these provocations, the poor King durst not express his resentment against the high and mighty Cardinal, any otherwise than by dismissing the page that had been his tool. The same evening the King and Madam FAYETTE had this conversation, in which they discovered the villany of the prime minister, the Queen was brought to bed of a son, viz. on the 5th of September 1638, who afterwards succeeded his father by the name of LEWIS the Fourteenth.

LEWIS  
XIV born.

The Cardinal will not suffer the Queen-mother to return to France.

Soon after the birth of the Dauphin the Queen-mother passed through Holland to England, to visit her son and daughter there, hoping by the intercession of their British Majesties to prevail with her son the King of France to re-call her to court, or at least to procure a revenue suitable to her quality, for the Cardinal would not suffer a penny to be paid her out of her estate. She desired the French Ambassador at the English court also to acquaint the Cardinal, that the afflictions she had suffered since she left France, had inspired her with different sentiments from those she had entertained formerly; and conjured him to deliver her from the misery and necessity of begging her bread: that she desired indeed to be near the King, but should not concern herself in publick affairs, and if he would procure her return to court, would dismiss all her servants that were suspected by him, and do every thing he should advise her to. But the Cardinal, far from shewing the least compassion for his great benefactress, who had advanced him to the post he possessed, considered the natural inclination that women generally have to revenge themselves, and the humour of her Majesty in particular, who would infallibly ruin him if it was in her power, for the repeated slights and provocations he had given her. Nor was he a little moved by his own implacable malice, who was never known to forgive any one that had offended him, and which alone would have determined him to reject all the offers that this afflicted Princess could make him. He caused a letter therefore to be written to her in his Majesty's name, wherein the King tells her there was no longer room to rely upon her fair promises, who had always been accustomed to dissemble, and that her unquiet temper would not suffer her to live in peace at any place; that if she should come to France she would immediately cabal with the malecontents again, and occasion new disorders: that he insisted therefore upon her retiring to Florence, her native country, where she should receive an allowance suitable to her quality; concluding that he thought himself justified before God and man, as he had done all that was in his power to give the Queen satisfaction, without hazarding the peace of his kingdom.

1639.

The Queen of England also wrote to the French King in behalf of the Queen-mother, and ordered the Lord JERMYN, who resided at that court, to use his utmost endeavour to procure her return, or at least a maintenance while she remained out of France; but they could obtain no other answer than his Majesty had given already. Thus

did the Cardinal triumph over the whole royal family; the Queen-mother he had banished, the Queen-consort he rendered suspected to his Majesty, as being in the interest of Spain her native country; and the King's brother, the Duke of Orleans, and the rest of the Princes of the blood, were charged with designs upon the crown, and used accordingly. Not long after the Queen-mother was obliged to retire out of England (on account of the jealousies some people stupidly entertained of her negotiations here) and went to Cologne, where she spent the remainder of her life in greater want than could be imagined, considering she was so nearly related to the greatest Princes in Europe; which would not have happened if the King and Queen of England had not soon after been reduced to greater distress themselves by an unnatural rebellion.

The Duke de la Valette, son to the Duke of Espernon, was the next mark of the Cardinal's vengeance. He was already fled into England under an apprehension that this Prelate would destroy him; but not content with his banishment, he ordered a special commission to try him, charging him with high-treason in preventing the reduction of Fontarabia. He was summoned to surrender himself on a certain day, and not appearing, he was condemned to be executed in effigy, and his estate confiscated. The parliament of Paris remonstrated against this proceeding, the offences of Peers being only cognizable in that court. To which the King answered, they were a pack of ignorant wretches, and he would make them sensible their privileges were founded only upon unwarrantable usage. That by his prerogative he had a power of trying Dukes and Peers by a special commission, and assisted in the court in person in order to get him condemned: a thing, says my author, without precedent in France till this time; but he looked upon himself obliged to execute the Cardinal's schemes, how unjust and arbitrary soever they seemed to be.

The Duchess of Savoy, the King's sister, was at this time hard pressed by the Spaniards and her brothers-in-law Prince THOMAS and the Cardinal of Savoy, whom the Emperor had constituted guardians of the young Duke. But RICHLIEU refused to send her any re-inforcements unless she would put the strong towns she was possessed of in Piedmont into the hands of the French King's troops, which she was at length obliged to consent to; and this occasioned the revolt of great part of the country, who dreaded coming under the dominion of France; even the city of Turin itself surrendered to Prince THOMAS to avoid it, but the castle was still garrisoned by the French.

In the Low-Countries the Marshal DE CHATILLON was defeated near Thionville; but the French army commanded by the Marquis of Meilleraye made themselves masters of Hedin this campaign. On the side of Roussillon the armies of France and Spain faced each other, but there was no action of any consequence, unless the taking and retaking of Saluces. The greatest success the French and their allies met with this year, was on the side of Germany, where the Duke of Weimar commanded a separate body of Germans. This General had possessed himself of Brisac, Friburg, and many other considerable towns in Franche Comte and Alsace, and happening to die soon after, the French distributed their money so artfully among his officers, that they delivered them into the hands of the French, though the Duke by

his will had given his conquests to his two brothers. 'Tis supposed that the Cardinal had procured the Duke to be poisoned for this very end. Upon promising his army some addition to their pay, he prevailed on them also to accept the Duke of Longueville for their General, and to take an oath of fidelity to the King of France. By these and other services the Cardinal looked upon himself to have merited so much of the crown, that there was nothing how unreasonable soever that he durst not attempt. He obliged the Queen-consort to turn off her first Maid of Honour, and the Comptroller of her household, because of their unshaken fidelity to their mistress, and put two of his own creatures in their room, for whom her Majesty had the greatest aversion. He was afraid the Queen might establish herself in the King's favour now she had been so happy as to bring him a Dauphin, and would suffer none but his own people to be about her, lest they should contrive his ruin. It was his constant maxim, that a man should never have friendship for, or confidence in, those whom he had treated ill. His conduct was the same towards the King's mistresses as it was towards her Majesty: whenever he found them like to have an ascendant over his mind, he drew him from Paris, either under pretence of hunting, or viewing his frontier towns, and never let him return again till he imagined his passion was cooled; and then he often had the assurance to banish them the court, and perhaps propose some new amour to make him forget the former.

1640.

But to return to military affairs: The French having augmented the army of the late Duke of Weimar with a considerable reinforcement of national troops, commanded the Duke of Longueville their General to pass the Rhine, and act in concert with the Swedes against the Imperialists; but there happened such jealousies among the officers, that they effected nothing considerable this campaign.

In the Low-Countries the Cardinal resolved upon the siege of Arras, which was invested by Marshal MEILLERAYE on the 12th of June; but the Cardinal Infant marching to it's relief, RICHLIEU began to be apprehensive of the success of the enterprize, and therefore ordered another body of forces under the command of DU HAILLER to join MEILLERAYE. The King fearing that DU HAILLER and MEILLERAYE might both be defeated before they could unite their troops, which would give the Spaniards an opportunity of penetrating into the heart of the Kingdom, positively forbid DU HAILLER to advance: but RICHLIEU sent him an order notwithstanding to endeavour a conjunction, and he would be answerable for his conduct; whereupon DU HAILLER chose rather to obey the Cardinal than the King; and meeting with all the success he could desire in this expedition, the town was taken, and the King did not think fit to express any resentment at the Cardinal's presumption in contradicting his orders on such an important occasion; nor was DE HAILLER punished for disobeying his Majesty.

The Catalo-  
nians &  
Portuguese  
revolt  
from  
Spain.

The Catalonians revolted from Spain the same campaign, and put themselves under the protection of the French, who immediately possessed themselves of Barcelona. About the same time the Portuguese threw off the Spanish yoke, and placed the Duke of Braganza upon the throne of that kingdom, who took upon him the title of Don JOHN the Fourth; in contriving which revo-

lution the Cardinal is said to have had a considerable share. In Italy also the arms of France were very successful. The Spaniards were defeated and forced to raise the siege of Casal, in which was a French garrison, and the city of Turin surrendered to Count HARCOURT. The Cardinal about this time had two great projects on foot; the one was the conversion or banishment of the Hugonots, and the other the making himself Patriarch of France: but he had too much business of another kind upon his hands, and was too little beloved to effect either of them.

The Queen on the twenty first of September was delivered of another son, named PHILIP, afterwards Duke of Orleans. It was apprehended that her Majesty would now have a considerable influence at court, but the Cardinal still carried it as high towards her as ever, and, 'tis said, extorted a promise from the King, that in case he died and declared the Queen Regent, he should be the chief of her council, and the Queen obliged to follow his advice. And that he might meet with no further opposition from the parliament of Paris, he prevailed on the King to assemble all the chambers, and cause a declaration to be read to them, wherein he prohibited that body to concern themselves any more in matters of state; and to receive his edicts, not to deliberate upon them, but to confirm them. He asserted his prerogative also in disposing of all the offices of parliament, and at the same time deposed the President BARILLON, and the Counsellors SCARRON and SALO, and some others. He further ordered that the parliament should give an account of their proceedings to the Chancellor every three months, and obtain a licence from his Majesty to continue in their respective functions every year, whereby the King absolutely destroyed the authority of the parliament of Paris.

authority.

The Duke of Lorraine about this time made his submission to the King, or rather the Cardinal, and procured part of his territories to be restored him; but the French still retained Nancy the capital, and several other places; and under pretence that the Duke began to fortify his towns, and enter into an alliance with the Spaniards, they seized upon his country again, obliging the Duke to retire to Flanders, where the taking of Aire by the French, and the retaking of it by the Spaniards, were the most considerable occurrences that happened this campaign. In Italy Count HARCOURT took Coni, and some other fortresses, while the Spaniards and Prince THOMAS retook several places the French had seized; but in general the Spaniards had the worst of the war on that side. The Marshal DE BREZE was this year sent to Barcelona in quality of Viceroy of Catalonia for the French, with orders to possess himself of Roussillon, in order to preserve the communication between France and that province. About this time RICHLIEU procured his friend JULIUS MAZARIN a Cardinal's cap, who had done him signal services by his negotiations in Italy while he was nuncio from the Pope.

In the mean time the prime minister was once more in great danger from a conspiracy formed by Count SOISSONS, the Dukes of Guise, Bouillon, and many others of the principal nobility, who being supported by the Spaniards, had recourse to arms. They published a manifesto, complaining, of the Cardinal's practices to destroy them: they charge him with ruining the kingdom by unnecessary wars; draining the nation of it's treasure to pur-

chase foreign towns and territories at extravagant rates, as Brisac, Philipsburgh, and others; squandering away large sums to procure himself friends in Italy and elsewhere. They shew also that all his Majesty's allies were a charge to him, and only made feeble diversions at the expense of France. That the Cardinal had caused the principal nobility to be imprisoned or banished who opposed his arbitrary proceedings, and others had been condemned to death by corrupt commissioners of his own nomination. That he had violated and abrogated all the laws of the kingdom, under the specious pretence of asserting the King's prerogative. That he had robbed the provinces of their ancient privileges, and vacated the compacts made with former Kings. That the nation was beggared by taxes, and trade entirely lost by the high duties on merchandize. That the country was ruined by quartering soldiers, and even tillage and manufactures at a stand, inasmuch that many of the peasants perished by famine. The greatest part of which charge against the Cardinal, says my author, was without doubt very well grounded; but such was his good fortune, that when the malecontents had assembled an army and defeated that of the King's near Sedan, Count Soissons, his greatest enemy, was killed by a pistol-shot after victory had declared for him. It is generally said he fell by the hands of one of his own guards, whom the Cardinal had corrupted to take him off in the engagement. But however that was, certain it is the Cardinal had run a very great hazard of being disgraced if this Prince had survived his victory, for the King began to be very impatient at the danger RICHIEU had exposed him to by his oppressions. The Duke of Bouillon, and the rest of the malecontents, being offered advantageous terms by the Cardinal, consented to lay down their arms, and the minister thereupon became as firmly established in his Majesty's favour as ever.

The year 1642 was as fortunate to France as any of the preceeding. Count GUEBRIANT having joined a body of Hessians, defeated the Imperial General LAMBOY and took him prisoner, making himself master of great part of the electorate of Cologne. On the side of Catalonia the French defeated a body of five thousand Spaniards; after which the King and Cardinal marched at the head of a great army and laid siege to Perpignan, the capital of Roussillon. This grand expedition obliging the French to withdraw some of their troops from the Low-Countries, the Spaniards became superior here, and took the town of Lens, and afterwards defeated Marshal GUICHE; which is the only success they met with this campaign, and this the Spaniards made no manner of improvement of.

While the King's troops were marching to the siege of Perpignan, another conspiracy was formed against the Cardinal. HENRY DEFFIAT, Marquis of Cinque Mars, Master of the Horse to his Majesty, (frequently called Monsieur le Grand) having been disoblged by RICHIEU, determined to destroy him; and knowing that the Duke of Orleans, notwithstanding his outward reconciliation with this prelate, was still his enemy, he easily prevailed with his Highness to join in the design. The Duke of Bouillon and de Thou engaged also in the enterprize. It was agreed by them to treat with the King of Spain, in the name of the Duke of Orleans, and that ministry promised to furnish them with twelve thousand foot and four thousand horse veteran troops, besides a great sum of money.

The Cardinal was sensible that the master of the horse was contriving some mischief against him, but could not fathom the bottom of it. There was a current report that the affection the King had for the prime minister apparently declined, and that the master of the horse had much the greatest share of his Majesty's favour. How true soever this might be, the Cardinal was resolved to lose no opportunity to re-establish himself in the King's good opinion: while they were on the march towards Roussillon therefore, he lodged always in the same place with his Majesty, and never failed to see him every morning and evening, to dissipate by his presence all the schemes that might have been laid to prejudice his Majesty against him; and as the Master of the Horse was young and thoughtless, and consequently fell infinitely short of the dexterity of the minister in the art of cajoling their master, the Cardinal easily broke all his measures. It is said that the favourite had several times proposed to the Duke of Orleans and de Thou to assassinate the Cardinal, but they would not consent to it. In the mean time the Master of the Horse, who ought to have endeavoured to preserve and cultivate the friendship the King had for him, seemed to take a pleasure in contradicting him, and frequently absented himself when the King desired his company; and when his friends represented that this conduct would infallibly ruin himself and them, he told them that he could not bear the smell of the King's breath: so very arrogant and indiscreet was this young nobleman, even while he was engaged in an affair which required the nicest management. It is surprizing therefore that persons of that figure as the Dukes of Orleans and Bouillon were, durst be concerned in a conspiracy with him.

While the King lay before Perpignan, the Cardinal by his spies at Madrid procured a copy of the treaty between the Spaniards and the malecontents, which he communicated to his majesty; whereupon the conspirators were apprehended, and tried by a special commission, except the Duke Orleans, who betraying his friends according to custom, and making an ample confession, was pardoned. The Duke of Bouillon also escaped with his life on surrendering his principality of Sedan to the crown, but the master of the horse and de Thou were beheaded: after which Perpignan having been blocked up till the seventh of September, surrendered, the garrison having suffered extremely for want of food.

The Cardinal being taken very ill in his return from Roussillon, and not able to bear the jolting of a coach, contrived a kind of portable chamber, so large that it would hold his bed, a table, and seats for a friend or two, and was carried on the shoulders of eighteen men bare-headed. In this state he travelled near two hundred leagues; and as the machine was too large to enter the gates of several towns, they beat down their walls to let it through, and the roads were frequently enlarged and levelled for the ease of this haughty Prelate in his journey.

As RICHIEU owed his grandure chiefly to the divisions he fomented in the neighbouring States, and maintaining parties in almost every kingdom against the Sovereign, England among the rest unhappily suffered by the intrigues of this minister; nor was he contented privately to foment the rebellion against King CHARLES the First, but permitted the Ambassador of France publickly to apply himself to that assembly which bore the name of

of a Parliament, and countenanced their usurpations, of which the King of England complained to his brother of France and procured the Ambassador to be recalled. RICHIEU's friends indeed excused his conduct in this matter, by saying it was a just retaliation for the assistance King CHARLES had given the Rochellers: but the case seems to be widely different; for the religion, rights, and liberties of the Protestants of France having been established by the most solemn edicts, which RICHIEU thought fit to invade, that people had certainly a right to defend themselves, and the Protestant powers of Europe had an equal right to interpose and afford them their assistance. Whereas the sectaries in England without any just provocation withdrew their allegiance from their Sovereign, and refused to live in subjection to him or any other government ecclesiastical or civil, till in the end they entirely subverted the constitution in church and state, sequestered the lands of the crown, of the bishops, the nobility, and of every loyal subject, and divided them among their factious brethren. But to return to France: Prince THOMAS of Savoy who commanded their forces in Italy, was as successful there as their Generals had been in other places this campaign, taking Nice de la Paille, Tortona, and other towns, from the Spaniards. And now when the Cardinal seemed to be arrived at the highest pitch of glory, or at least what he esteemed such, and was laying schemes of universal monarchy, his distemper increased upon him and put an end to all his mighty projects. But before I come to describe the last scene of his life, I cannot forbear giving another instance of his unparalleled arrogance and presumption. He was, or pretended to be, afraid of being assassinated by the King's guards, who had a particular affection for the master of the horse whom he had beheaded; he desired therefore that whenever he came to wait on his Majesty, he might introduce into the palace a number of his own guards equal to the King's, which the easy Prince consented to, tho' 'twas such a proposal, as my author observes, that would have been construed high-treason in another.

The Cardinal's last illness.

The Cardinal did not enjoy this mark of distinction long, for his fever and the pain of his side increasing, together with a difficulty of breathing, the physicians pronounced that he had but a short time to live; of which the King being informed, made him a visit, and speaking to him with a great deal of tenderness and concern, he answered, that he took his leave of his Majesty, knowing he must shortly pay that common tribute which all men owe to nature; that he felt a sensible satisfaction in reflecting that he had never done any thing in his whole life contrary to his Majesty's service, and left France in the highest reputation it had ever enjoyed in the world, her enemies being humbled to his wishes; and advised his Majesty to continue the present ministry, among whom his friend MAZARIN was the chief, as extremely capable of serving the crown. Soon after he received the viaticum, and as the curate entered with the host he said, Behold my Judge, who will soon pronounce my sentence! I desire with all my heart he may condemn me, if in my ministry I have proposed any other end to myself than the good of religion and the state. Being asked if he forgave all his enemies, he answered, that he did it with all his heart, and after the same manner as he besought the divine justice to use him. And 'twas in general observed, that no man who had lived con-

VOL. II. NUMB. LXXXIX.

stantly conformable to the precepts of the gospel could have testified a greater confidence in God than this minister, who had imbrued his hands in the blood of the nobility, oppressed the people with heavy taxes, subverted the liberties and privileges of the subject, and fomented wars and rebellions in most of the kingdoms of Europe. He gave his palace, with furniture for the best apartments, and fifteen hundred thousand livres, to his Majesty, which sum he said had been of singular service to him in many exigencies of the state, and advised the King always to keep such a sum by him, to employ on pressing occasions when his treasury might be exhausted. He gave large legacies to his relations and all who had served him, besides a vast estate he left to his nephew ARMAND DE MAILLE. But to enter a little into his character: The ambition of this minister was insatiable, nothing less than the direction of all affairs at home and abroad would satisfy him, to which end it was requisite to preserve his post and make himself necessary to the King; this he affected by engaging him everlastingly in some new enterprize or other, which the poor Prince was sensible he could not carry on without him. He is said to have laid the foundation of an universal monarchy, and had a prospect of effecting it by the ruin of Spain, to which he gave two dangerous blows, by supporting the insurrections of the Catalonians and Portuguese; and as it was necessary to facilitate the execution of his vast projects, above all things to secure France from foreign invasions, and put himself in a condition to pour his forces into any country he designed to reduce, he covered her frontiers on the side of the Low-Countries, where it was most exposed by the conquest of Artois: for the same reason he undertook the conquest of Roussillon, which would have been a barrier to France on the side of the Pyrenees; and with the like views he seized Brisac on the Rhine, and Pignerol on the confines of Italy, which he would never suffer the King to part with on any consideration whatever. And if the stretching the prerogative of the crown beyond all bounds, surprising the territories of the neighbouring Princes by the basest arts, and thereby rendering France terrible to her neighbours; if the subverting the constitution of his own country and enslaving his fellow-subjects, were meritorious acts, he might deserve the epithet of great, nay, of the greatest minister that ever sat at the helm, as his admirers frequently stile him; otherwise we may still continue to rank him among the plagues and scourges of mankind.

The Cardinal before he died received news of the Queen-mother's death at Cologne; and tho' they had of late years been mortal enemies, yet as she was once his benefactress and had introduced him into the ministry, he thought it but decent to pay some respect to her remains, and accordingly celebrated her obsequies with abundance of magnificence. The King, 'tis said, was extremely grieved at the news, and began to reflect with remorse on the ill usage he had shewn his mother to satisfy an inexorable minister; but RICHIEU knew how to divert him from these disagreeable subjects, and appears to have gone off the stage in full favour with his master; and the King, according to his advice, advanced his friend Cardinal MAZARIN to his post of prime minister.

His Majesty did not long survive his favourite; the fatigues of his journey to Roussillon, which the Cardinal had put him upon, 'tis thought, was

CHAP.

very prejudicial to him: he was seized by a slow fever in April following, and perceiving his health gradually decay, he declared his Queen, ANNE of Austria, Regent of the kingdom during the minority of the Dauphin, and under her the Duke of Orleans Lieutenant-General of the State and President of the Council; the other members whereof were HENRY Prince of Condé, the Chancellor, Cardinal MAZARIN, and the Sieur DE CHAVIGNI. He died on the fourteenth of May, in the forty-third year of his age, and the thirty-fourth of his reign; leaving behind him two sons, viz. LEWIS who succeeded him by the name of LEWIS the Fourteenth; and PHILIP, afterwards Duke of Orleans,

LEWIS  
XIV.

LEWIS the Fourteenth succeeded his father at the age of four years, eight months, and nine days, and the parliament of Paris confirmed his mother Queen ANNE Regent during his minority, as the late King LEWIS XIII had appointed. And notwithstanding the Queen mother had been formerly very ill used by the late ministry, yet Cardinal MAZARIN foreseeing the King's death, having made his court to her for some time, and procured her to be appointed Regent, she forgot the affronts she had received, and determined to continue him and the rest of the late King's council in the administration, to the great mortification of her friends who had been sufferers with her, and had reason to expect to be advanced to the principal posts in the government. But Princes when their turn is served do not always remember past services; and she had this to allege in MAZARIN's behalf, besides his having procured her the regency, that he was by all acknowledged to be an able minister, and well versed in the state of the nation, which she could not be so well assured of in any one she should have taken in to supply his room. SEGUER the Chancellor was the only man who was turned out of all the late ministers, which could hardly be avoided, as he had been guilty of some rudeness in searching for the Queen's letters which she endeavoured to conceal from the King.

The  
French  
gain a vic-  
tory near  
Rocroy.

The Spaniards apprehending they were superior to the French this year on the side of Champagne, laid siege to Rocroy, which the Duke of Enguien, son to the Prince of Condé was sent to relieve, it being esteemed a place of great importance. This young General was at this time but two and twenty years of age. He marched with all imaginable expedition, fell upon the besiegers, gained a complete victory, and raised the siege. He afterwards took Thionville in Luxemburg; and receiving advice that the Marshal DE GUEBRIAN was hard pressed by the Dukes of Bavaria and Lorraine on the confines of Germany, he marched to his assistance, and made them retire in their turn. Prince THOMAS of Savoy, and the French Generals in Italy, also took several towns from the Spaniards; and in Catalonia the Marshal DE LA MOTTE drove the troops of Spain before him. The French fleet likewise defeated that of the Spaniards near Cartagena; so that France was every where victorious. These successes established the credit of the ministry at a very critical juncture; for their enemies were numerous and powerful, and the least misfortune would at this time have hazarded their disgrace. It is observed of MAZARIN, that by ascribing all the glory of these actions to the Duke of Orleans and the Prince of Condé, and secretly creating in these Princes a jealousy of each other, he had in a manner the

direction of the council, both of them appealing to him when any dispute arose. The civil war continuing in England, the French court sent over an Ambassador thither under pretence of mediating between that King and his people; but in reality to foment their divisions, for they were apprehensive his British Majesty would have taken the part of Spain and the Emperor if he had not been engaged in these disputes, or they might with a very small assistance have enabled him to crush that rebellion.

1644.

The French were engaged in another mediation between the Pope and the Duke of Parma, they tell us, and ascribe the conclusion of the peace that followed between them to the address of their ministers. The Pope it seems had taken the duchy of Castro from the Duke of Parma; whereupon the Republic of Venice, the Dukes of Tuscany and Modena, entered into an alliance with Parma for the recovery of it. The Duke of Parma marched up to the gates of Rome, and possessed himself of several places in the ecclesiastical State, and his Holiness was glad to relinquish Castro, on condition the Duke would retire out of his territories; and this would probably have been the case if the French had never been concerned in the affair: but according to the vanity of that nation, no considerable event can happen in Christendom which they do not pretend to have the direction of; and indeed they seem at this day to have the fate of most of the kingdoms in Europe too much at their disposal, whatever they might have then. But to return to France: An insurrection happened this year in the Province of Rouergue on account of the Taille or land-tax; and tho' the court had the good fortune to suppress it, and punished some of the mutineers, yet they thought fit to ease the people this year of ten millions of livres, or one million sterling, in their taxes.

The  
French re-  
new their  
alliance  
with the  
Dutch.

The French renewed their alliance with the States-General about this time, whereby the States obliged themselves to maintain an army against the Spaniards in the Low-Countries, consisting of twenty thousand foot and five thousand horse, and to fit out a fleet of thirty men of war to block up the mouth of the Scheld, or assist in the conquest of any port town; and the French on the other hand agreed to pay them twelve hundred thousand livres. The following campaign the Duke of Orleans took Gravelin; and the Dutch, Sas van Ghent, in Flanders. Upon the Rhine the Imperialists having taken Friburg, the Duke of Enguien marched to stop their progress, and gained a complete victory over them near that city, and afterwards took the strong town of Philipsburg; whereupon Worms, Spiers, Mayence, Oppenheim, Creutznach, Landau, Newstadt, Mannheim, and Magdeburg submitted to the French. And in Italy Prince THOMAS of Savoy, who commanded the troops of France, took the castle of Asti. The King of England's affairs appearing desperate at this time, the Queen retired to the court of France, where she afterwards married her daughter HENRIETTA to the Duke of Orleans.

They are  
victorious  
in Ger-  
many, and  
take Phi-  
lipsburg,  
and abun-  
dantly of  
towns  
there.

The campaign of 1645 was not less fortunate to France than the two preceding: in Catalonia they took the city of Roses, which surrendered on the 21st of May; and afterwards defeated a great body of Spaniards: Balaguer and Agramont also were taken. And in Germany the Duke of Enguien on the first of August gained a victory over the Imperialists commanded by General

and Ger-  
many.

MERCY,

CHAP. XXXIV. **MERCI**, who was himself killed in the field of battle; whereupon Nörtlingen surrendered at discretion, and Dunkesfel four days after. In Lorraine the French took several towns; and in Italy Prince **THOMAS** made himself master of Vigevano. While the Duke of Orleans in the Low-Countries reduced Mardyke, Lillers, St Venant, Armentiers, and Meurin (but Mardyke was retaken by the Spaniards). Before the conclusion of the campaign the French took the city of Triers, and re-established their friend the Elector in the government of it.

1646. In order to encourage the Dutch to continue the war against Spain, the French, besides the vast sums they advanced to the States, gave them very considerable advantages in point of trade this year. And while they made a considerable diversion on the side of Antwerp, the Duke of Orleans took Courtray, Berg, and Mardyke: and Monsieur returning to court, the Duke of Enguien, who commanded the army in his absence, made himself master of Furnes and Dunkirk by the assistance of the Dutch fleet; and in Italy the French reduced Piombino and Porto Longone. There happening a dispute in a cavalcade at Rome about this time between the attendants of the Cardinal d'ESTE, Protector of the affairs of France, and those of the Spanish Ambassador, the Spaniards were beaten, and the Ambassador's coachman disabled, so that the minister was obliged to get another to drive him home; but the greatest mortification was, that the ambassador was prohibited to dispute the precedence with the Cardinal any more. To return to more bloody encounters: Marshal **TURENNE** having defeated the Bavarian forces, afterwards took Aschaffenburg, Solingenstadt, Darmstadt, Scornдорff, Landeberg, and Lawingen; so that the Electors of Mentz and Cologne, and the Prince of Hesse-Darmstadt found themselves obliged to accept of a neutrality for their respective territories; and the Duke of Lorraine was perfectly driven out of his country. **HENRY DE BOURBON** Prince of Condé happening to die at the latter end of this successful campaign, his son the Duke of Enguien succeeded him in his honours and estate.

The great progress of the French in Germany.

1647. The Spaniards imputing their ill fortune in a great measure to the unskilfulness or misunderstandings among their Generals, gave the government of the Low-Countries, and the command of their armies there, to **LEOPOLD** Duke of Austria, who in the beginning of this campaign took Landrecy and Armentiers, and was about to besiege Dunkirk; but the French Generals found him other employment: Marshal **RANTZAU** took Dixmude, Nieufdam, Lens, and Sluys, from the Spaniards, and defeated the Marquis de **CARACENA**.

The Duke of Enguien (now Condé) being made Viceroy of Catalonia, besieged Lerida; but here his usual good fortune seemed to have deserted him, for he was obliged to rise from before it. However, the people were so indulgent to the young hero, that they would by no means impute this ill success to him, but threw the odium of it upon the prime minister, affirming that he had neglected to furnish the Duke with necessaries for the siege on purpose to destroy him, because he was jealous of the power and reputation he had obtained.

The treaty of Westphalia being now in a great forwardness, a suspension of arms was agreed on between France, Sweden, and the Regency of Hesse, on the one part, and the Electors of Bava-

ria and Cologne, and Prince **MAXIMILIAN** on the other.

Notwithstanding the conquests the French had made on every side, the ministry were very desirous of peace; for the long continuance of the war had brought the treasury very low, and occasioned the laying innumerable taxes on the subjects, which made them express no small disaffection to the administration. Besides which, the Dutch had entered into a separate treaty with the enemy, and without their assistance the French could not propose to carry on a war against the house of Austria with any advantage. However, there were some impediments which prevented the conclusion of it till the year 1648. In the mean time Count **SEHOMBERG** laid siege to Tortosa in Catalonia and took it, by which the French opened a passage into the kingdoms of Arragon and Valentia. The Prince of Condé also made himself master of Ipres in Flanders. While he lay before this place, the Spaniards retook Courtray, Furnes, and Lens: however, the Prince met with their army near the last town, and gave them a signal defeat.

The parliament of Paris about this time began to resume their antient authority; which the ministry were so offended at, that they ordered **MESSIEURS DE BROUSSEL** and **BLANCMENIL**, two of their busiest members, to be taken into custody, and some others were banished: but this proceeding was so resented by the city of Paris, that they barricaded their streets, insulted the Chancellor, and committed many disorders, which the government were forced to wink at while the war continued.

The parliament of Paris oppose the ministry.

The memorable insurrection at Naples raised by **MASSANELLO**, a young fisherman, on account of the insupportable taxes levied there by the Spaniards, happened about the same time. The people gave him the title of their Captain-General, and in a few days he entirely subverted the government. But his fall was as sudden as his rise; he was forsaken of a sudden by the mob, who submitted themselves again to the Viceroy: but he continuing or increasing the impositions, which were the occasion of their uneasiness, they had recourse to arms a second time, and offered the Duke of Guise, a French nobleman, who was then at Rome, the government of the city. He accepted the command; but before he arrived there, the ministry found means to suppress the insurrection, and made the Duke prisoner.

At length the famous treaty of Munster, in which most of the powers of Europe were concerned, was concluded on the 24th of October. The preliminaries of this treaty had been debated several years. The negotiations were carried on at Munster, the capital of Westphalia, and at Osnabrug, a town in the same circle about thirty miles from it; from whence this treaty is sometimes called the treaty of Munster, sometimes of Osnabrug, and at others of Westphalia. It was appointed to be held at two places, to prevent any differences that might happen among the plenipotentiaries on account of precedence, especially with the Pope's Nuntio, whom the Swedes and other Protestant Princes refused to have any commerce with; whereupon their ministers generally met at Osnabrug, as those of the Popish powers did at Munster, which occasioned continual journeys from one place to the other.

The peace of Munster concluded.

This treaty was begun the eleventh of July N. S. or the first of the same month O. S. 1643,

CHAP.  
XXXIV.

The principal articles between France and the Empire.

Territories yielded to France.

Territories restored to the Empire.

The parliaments re-assume their authority.

so that it lasted upwards of five years. The most material articles whereof, as far as it related to the Imperialists and the French, were, That the circle of Burgundy should continue a member of the Empire: That the controversy about Lorraine should be referred to arbitrators: That the Electors, Princes, and States of the Empire should be re-established in their ecclesiastical and temporal estates, which they enjoyed before the war: That the electoral dignity, with the Upper Palatinate, should go to the house of Bavaria; but that an eighth Electorate should be re-established in favour of CHARLES-LEWIS, Count Palatine of the Rhine, and his heirs, who should enjoy the Lower Palatinate: That those of the confession of Augsburg should be put into the possession of their churches and ecclesiastical estates, and enjoy the free exercise of their religion.

That the right of sovereignty and other rights to the bishopricks of Metz, Toul, and Verdun, should be confirmed to, and be incorporated in, the crown of France. The Emperor and Empire also transferred all their right of sovereignty to Pignerol to the crown of France; as also all their rights, properties, jurisdictions, &c. in the city of Brisac, the landgraveship of the Upper and Lower Alsatia, Sultgow, and the provincial lordship of ten imperial cities situate in Alsatia, viz. Haguenau, Culmer, Schlettstat, Weisenburg, Landau, Oberenheim, Rosheim, Munster in the valley of St Gregory, Keyserburg, and Turingam, and all the villages depending on them, to the most Christian King and the kingdom of France, with a right to keep a garrison in the castle of Philipsburg.

The most Christian King, on the other hand, agreed to restore to the house of Austria, the four forest towns of Rheinfelden, Seckingen, Lawfsinberg, and Walschutten, with their territories, villages, and appurtenances: Also the county of Hawenstein, the Black Forest, the Upper and Lower Brisgow, and the towns situate therein, viz. Newburg, Friburg, Eudingen, Kenzingen, Waldkirk, Willingen and Brunlingen, with their territories and appurtenances. Also all Ortnavien, with the imperial cities of Offenburg, Gengenback, Cellaham, and Hamorspach. And it was agreed that for the future, the commerce and passage should be free to the inhabitants of both banks of the Rhine, and the adjacent provinces, especially the navigation of the said river, under the usual tolls. And his most Christian Majesty, in consideration of the towns and territories thus transferred to him, agreed to pay to the Archduke FERDINAND-CHARLES three millions of livres within three years. The King of Spain was not comprehended in this treaty.

France had no sooner concluded a peace with the Empire, but the kingdom began to be distracted again with intestine divisions: the many heavy taxes that had been laid to support the war, but chiefly the arbitrary manner of levying them, had created abundance of ill blood. The parliaments also, which had been deprived of their authority during the administration of RICHELIEU and MAZARIN, entered into a confederacy (or act of union as 'twas called) to vindicate their own and the people's privileges. They received the petitions of grievances which were brought them from all parts of the kingdom favourably, and promised to see justice done them; whereby they obtained the titles of the saviours and deliverers of their country: and those of them that were most zealous in their opposition to the court were usually called *Frondeurs*,

or Slingers, perhaps from their throwing or slinging at the ministry. But the Prince of Condé having obtained a victory over the Spaniards at Lens about this time, MAZARIN and the court-party looked upon their interest to be so much strengthened by it, that they ventured to seize upon some of the principal members of the parliament of Paris and imprison them; whereupon the citizens of that capital had recourse to arms, barricadoed their streets, and obliged the ministry to release the imprisoned members, as has been mentioned already; and might have carried their resentments farther, had not the Prince of Condé, who was equally in the good graces of the court and the people, made up the difference for the present. But it appearing soon afterwards that nothing less would satisfy the parliament and the people than the disgrace of MAZARIN, the Queen, in order to protect her favourite, implored the assistance of the Duke of Orleans and the Prince of Condé, but especially the latter, who had such an interest in the army and the kingdom in general, that she did not doubt carrying her point if she could gain him; she spared neither prayers or tears, the usual artillery of the sex, to bring him over: the Cardinal also vowed perpetual submission to his will, if he would protect him against his enemies; and by these and other arts prevailed on the Prince to espouse their cause. Whereupon he threatened the parliament and city of Paris with his resentment of they continued disobedient to the Regent; and advised her to retire with the young King from Paris to St Germain, that he might block up that city, and make them sensible of their error. After which, he possessed himself of Lagni, Corbeil, St Cloud, St Dennis, and Charenton, with his forces, whereby he cut off their communication with the country, and stopt all provisions coming to town; which reduced them to great distress, and made the people alter the good opinion they formerly had conceived of him.

The parliament on the other hand charged the Cardinal with male-administration, declared him a disturber of the publick peace, and enemy to the king and kingdom, requiring him to leave France within eight days. They also levied forces, and voluntarily taxed themselves to maintain them; and were seconded by great numbers of the principal nobility, particularly the Prince of Conti brother to the Prince of Condé. But notwithstanding this vigorous beginning, when the city began to be straitened for want of provisions, the Parisians thought fit to accept of a general indemnity, which was offered them by the court, and to lay down their arms again.

The Cardinal having obtained his end, and growing weary of his dependance on the Prince of Condé, endeavoured to foment the divisions between him and the Slingers. He also put the army under the command of other Generals whom he could confide in, and laid siege to Cambray without asking the Prince's advice, tho' he was forced to raise the siege, and had the mortification to see the Spaniards make themselves masters of Ipres the same campaign. The following winter the Cardinal, in order to render the Prince and the Slingers irreconcilable, ordered a report to be spread that they had a design upon his life; and to confirm him in this suspicion, he caused his coach to be attacked and shot through, by a mob he had spirited up, as it went empty through the city: which affront being represented by the Prince in the manner the Cardinal expected it would, the people were

CHAP.

Their disputes with the ministry.

1649.

The parliament obliged to submit to the court.

CHAP. XXXIV. no longer at his devotion. Whereupon this Pre-  
 late caused the Prince himself, and his brother the  
 Prince of Conti to be apprehended, with the Duke  
 of Longueville, and sent prisoners to the castle of  
 Vincennes; nor did any one attempt to rescue  
 them. But the Parliament and the Slingers, as well  
 as the Duke of Orleans, being sensible how much  
 they had been abused by the Cardinal's artifices,  
 they all determined to set the Princes at liberty;  
 and this Prelate finding himself unable to resist  
 the general current, seemingly agreed to it, but  
 thought fit at the same time to retire from court.  
 The Queen, however, being impatient at the ab-  
 sence of her favourite, soon made way for his re-  
 turn, putting his friends into all posts of honour or  
 profit; which so disgusted the Prince of Condé,  
 that he retired in discontent to Guienne, and raised  
 an insurrection there. Bourdeaux and several o-  
 ther considerable towns declaring for him, another  
 civil war was commenced, and the Prince, with  
 whom the Duke of Orleans and the parliament of  
 Paris joined their forces, were at first much superior  
 to their enemies; but the Cardinal, who was now  
 returned to court, pretending to be desirous of  
 peace, engaged the Prince in fruitless negotiations  
 till his party dwindled away, and most of his troops  
 deserted. The Prince, however, came to Paris  
 with the remainder of his forces, between whom  
 and the royalists there happened a smart encounter  
 in the suburb of St. Anthony, and he was so well  
 supported by the Parisians at this time, that the  
 Cardinal was once more obliged to retire from  
 court. But the Prince of Condé's party falling  
 out among themselves, their enemies prevailed a-  
 gainst them, and his Highness thought fit to leave  
 the kingdom and join the Spaniards in Flanders,  
 who gave him the command of their troops for se-  
 veral years. Whereupon the Cardinal returned to  
 his former post in triumph, and became more  
 arbitrary than ever, neither the parliament or city  
 of Paris durst afterwards lift up a hand against  
 him.

During these commotions at home their foreign  
 wars succeeded very ill: In Catalonia Don JOHN  
 of Austria besieged Barcelona and took it. In I-  
 taly the Spaniards made themselves masters of Ca-  
 sal; and in Flanders they besieged and took Gra-  
 velin and Dunkirk. These ill successes obliged  
 Cardinal MAZARIN to look out for foreign as-  
 sistance, and CROMWELL the Protector, as he was  
 called, in England, being in great reputation for  
 his warlike exploits, he entered into an alliance  
 with him against the Spaniards.

In the year 1653 the Prince of Condé entered  
 France at the head of an army of Spaniards; but  
 was so narrowly observed by M. TURENNE, that  
 he gained no other advantage than the taking of  
 Rocroy. The year 1654 was remarkable for lit-  
 tle else but the coronation of the King; as the  
 following was for a massacre of the Protestant  
 Vaudois, in which several French regiments as-  
 sisted, and committed unheard-of cruelties. The  
 French having laid siege to Valenciennes in 1656,  
 Don JOHN of Austria obliged them to raise the  
 siege, and gained a victory over their troops near  
 that city. About this time CHRISTINA Queen  
 of Sweden arrived at Paris, having resigned her  
 crown to lead a private life.

A misunderstanding happened this year between  
 France and her old allies the States-General, on  
 account of some French ships the Dutch had taken  
 in the Mediterranean, said to have committed se-  
 veral acts of piracy; whereupon MAZARIN seized

the ships of Holland in the harbours of France by  
 way of reprisal; and the Dutch took as many  
 French ships as they could meet with; but the  
 difference was made up without entering into a war.  
 The same campaign the French were obliged to  
 raise the siege of Cambray by the Prince of Condé;  
 but they made themselves masters of Montmedy  
 in Luxemburg: and now being joined by six thou-  
 sand of CROMWELL's veteran troops, they be-  
 came superior to the Spaniards in the Low Coun-  
 tries. By one of the articles between the English  
 and French they were to endeavour the taking of  
 Dunkirk, which was to be put into the hands of the  
 English: accordingly that town was besieged in  
 the year 1658, and the Prince of Condé and Don  
 JOHN of Austria marching to the relief of it, were  
 defeated by the French and English; after which  
 the town surrendered and received an English gar-  
 rison, as had been stipulated. But I should have  
 remembered that the preceding year BLAKE the  
 Admiral of the English fell upon the Spanish fleet  
 and galleons at the Canaries, and burnt them all,  
 while they lay under the command of the forts  
 upon the island; which was looked upon as a very  
 desperate action, such a thing not having been  
 heard of at that time of day, as attacking a fleet  
 defended by castles and batteries on shore, though  
 now it is become very usual.

Most writers take notice of the figure CROM-  
 WELL, the Protector of the commonwealth of  
 England, as he was called, made about this time.  
 He had humbled the Dutch and the Spaniard,  
 and made the French entirely dependent on him;  
 none of the powers of Europe durst oppose him;  
 and if he had lived a little longer, he had laid a  
 scheme, as 'tis said, to bring all nations into his  
 fold, under the pious pretence of making them  
 subjects of Jesus Christ, whose Vicegerent on earth  
 he would no doubt have pretended to be, and  
 thus have rivaled the Pope in the power he assumed  
 of disposing of the kingdoms of the world. They  
 tell us, that when the Protestants of Nismes in  
 France had made an insurrection, and Cardinal  
 MAZARIN had sent a detachment of the army  
 to cut them in pieces, CROMWELL obliged him  
 to countermand those troops, and grant them a  
 pardon: and it was he that obliged the Duke of  
 Savoy to desist from persecuting the Protestant  
 Vaudois; so that 'tis no wonder that the Reformed  
 Churches abroad have his memory in great vene-  
 ration at this day. Cardinal MAZARIN com-  
 plained of him, that he would be denied nothing;  
 constantly alledging, that the people would not  
 be otherwise satisfied. PUFFENDORFF observes  
 of him, that in the treaty of alliance between  
 France and Spain, CROMWELL would not suffer  
 their sovereign LEWIS XIV to be stiled King of  
 France, but the French King; and insisted that  
 his own name and stile, as protector of the com-  
 monwealth of England, should stand before that  
 of the French King's in the instrument of the  
 treaty. This shews what a Prince or Usurper may  
 do when he has made himself absolute master of  
 the purses and persons of the people: the kingdom  
 is then but one great farm let out at a rack-rent,  
 and the people entirely slaves, whose business in this  
 world is only to support the grandeur of their mas-  
 ter; and though trade and navigation, manufac-  
 tures and tillage must in these cases be under the  
 utmost discouragement; and perhaps the produce  
 of the country not yield half so much as it would  
 if the people were in a state of freedom, as it is in  
 France at this day; yet as the Sovereign is master

of all that's left, he will make a greater figure among his neighbours than while he remained limited by laws: he could not bully the world about him so effectually when he depended only on the aids the subjects granted him, as when he had made himself master of all. Therefore it has always been the practice of ambitious Princes, first to make a conquest of their own people, and reduce them to a state of slavery, before they pretended to enlarge their dominions much by foreign conquests. It is not to be supposed that any free trading people would be willing to sacrifice their persons and wealth for the glory of their monarch, as 'tis called, in the same measure as he would himself if their estates were at his disposal. Self will be always at the bottom: the subject while he is free, will certainly rather lay out part of his money in trade and commerce, in increasing his own estate and supporting his family, than give the whole to encourage the ambitious views of a vain glorious Prince, or his rapacious ministers. And this is the reason that Princes and their favourites too often look upon the people as their enemies: they have no notion of governing with a limited authority, nor can enjoy any happiness so long as they can be controlled, or the subject retains any part of his substance for his own use. Taxes and standing armies therefore they constantly inculcate are necessary for the defence of the nation; though in reality they are generally raised for the support of an unwarrantable authority: either to purchase the leaders of the people, and induce them to give up the estates and liberties of those they represent to the crown, or to dragoon them into submission with the very forces they themselves have raised: and because national troops are not always found so compliant and ready to execute every barbarous order against their countrymen as foreigners, a good body of mercenaries are usually kept in pay as corps de reserve in case all other measures fail. The French Princes while they were employed in subduing their own subjects, ever kept a body of ten or twelve thousand Germans or Swiss in their pay, who would cut throats where they were bid without reluctance, and destroy whole towns and villages if they murmured at the taxes imposed upon them, or refused to submit to the tyranny of the court. But to return: The French being now reinforced by the English, became superior to the Spaniards in Flanders again, and not only took Dunkirk from them, but Furnes, Berg St Winock, Dixmude, Ipres, Grammont, Ninove, and many other places; and made some acquisitions in Catalonia and Italy: which successes inclined the Spaniards seriously to think of peace, and accordingly a treaty was set on foot, and conferences held in the isle of Pheasants, formed by the river Bidassoa, which divides the two kingdoms; the plenipotentiaries being Cardinal MAZARIN prime minister of France on one side, and Don LEWIS DE HARO prime minister of Spain on the other. This was generally called the Pyrenean Treaty, the conferences being held near the foot of those mountains, and was concluded on the seventh of November, 1659, within less than a month after the conferences began. The principal articles were, That the French King should marry the Infanta of Spain, but that both of them should for themselves, their heirs and successors, relinquish all right and pretensions to the Spanish monarchy, and the territories thereto belonging: which was done in the strongest terms and sworn to.

Towns

nean  
treaty.  
1659.

That the Prince of Condé, his servants and adherents, should be received into favour: the Prince made governor of Burgundy, and his son, the Duke of Enguien, great master of the household.

That the French King should give no manner of assistance to the Portuguese.

That the Duke of Lorraine should have his country restored to him, but the French reserved the liberty of garrisoning some places, and marching through it when they pleased.

Franche Comte and Catalonia were restored to Spain, but Roussillon was confirmed to the French, as well as several towns they had taken in the Netherlands.

CHARLES the Second, King of Great Britain, who was in exile at this time, went to the place of treaty, in hopes of getting something stipulated in his favour; but MAZARIN, 'tis said, refused to see him, and Don LEWIS DE HARO, though he gave him all the honour due to a crowned head, put him off with fair promises only. Had they foreseen he would have been restored to his dominions in a few months without their assistance, he would probably have met with a better reception: but Princes as well as common men, are too apt to neglect and slight the interest of a distressed brother.

The year 1660 was great part of it taken up with rejoicings for the peace, and the marriage between the French King and the Infanta. The Kings of France and Spain met in the isle of Pheasants on the sixth of June, and the next day the King of Spain delivered the Infanta, MARIA-THERESA of Austria, to his most Christian Majesty, and the marriage was solemnized at the city of St John de Luz, on the ninth of the same month.

In March following died that famous minister Cardinal MAZARIN, who following the maxims of RICHELIEU his predecessor, gave the finishing stroke to the liberties of France, and left his master the most arbitrary monarch in Christendom. The King, though but two and twenty years of age, determined to take the government upon himself, to examine the conduct of all his ministers, and suffer nothing to be transacted without his knowledge. And whereas formerly it was very difficult to procure access even to the prime minister, his Majesty appointed certain times to receive petitions himself from the meanest of his subjects. The secrecy of his councils is another subject of admiration; for notwithstanding most things were debated in full council, they received another examination in a cabinet-council, consisting of two or three select persons, and to these his Majesty seldom communicated the resolution he intended to take. And as he suspected that he had been abused in his finances, or treasury, he erected a court to enquire into the conduct of the superintendant or high-treasurer, who was sentenced to be banished, and his estate confiscated, tho' 'tis said he made a very good defence; and afterwards the celebrated JOHN BAPTISTA COLBERT, a private gentleman, was made comptroller of the finances, the office of superintendant being suppressed. The farmers of the revenue also were called to account, and obliged to refund great part of the treasure they had plundered the publick of: but the taxes, it seems, were most of them continued as when the nation was in a state of war. Few Princes, after a precedent of many years standing, will suffer a tax to be discontinued, though the service be ended for which it was first raised:

his

CHAP.  
XXXIV.

his ministers cannot want some new pretence to keep it on foot; and where the government is arbitrary, all the reason in the world can avail very little: but in a free nation, where the people have the disposal of their own money, how can we account for this practice, unless we suppose that the leading men receive a great deal more than they give, that they raise taxes to pay their own pensions, or they would never consent unnecessarily to burthen themselves and their fellow-subjects estates? But to proceed: The French entered into a new treaty with the Duke of Lorraine this year, by virtue whereof the duchy of Bar was restored to him, for which he did homage to the King. An unlucky accident happened at the same time, which might have revived the war between France and Spain, if his Catholick Majesty had not been very complaisant. The Swedish Ambassador being about to make his publick entry into London, to congratulate his British Majesty on his Restoration, both the French and Spanish Ambassadors sent their coaches and equipages to assist at that ceremony; and there happening a contest between their servants about precedence, some of the Spaniards hamstringed the horses belonging to the French Ambassador, and by this stratagem enabled their countrymen to move forward, while the French were left behind till they could procure new sets of horses. The most Christian King no sooner received advice of this outrage, but he ordered his Ambassador at Madrid to demand satisfaction: to which his Catholick Majesty answered, that he would give his son-in-law the King of France all the satisfaction that he could reasonably desire; for he was in no condition at this time to renew the war, which must have been the consequence of his non-compliance.

The Queen of France being delivered of a Dauphin on the first of November, the King on this occasion completed the number of the knights of the Holy Ghost, of whom the whole complement was an hundred, though at this time reduced to forty.

1662.  
Duels suppressed.

The gentry of France being more addicted to duelling than those of any other nation, the King in a great measure abolished this barbarous custom, by the severe punishments he inflicted on all that were concerned in them, and the solemn declaration he made that he would never pardon any person convicted of this crime. The punishment was no less than the forfeiture of life and estate in the offender that survived: the person killed also was hanged up by the heels, and his estate confiscated. This is deservedly looked upon as one of the most commendable acts in the reign of Lewis XIV; but the care he took of the poor about the same time, deserves also to be commemorated: the harvest having failed for two years successively, and occasioned a terrible famine, his Majesty caused quantities of corn to be imported from abroad, and distributed gratis to the most indigent of his subjects.

At Rome the French Ambassador met with another insult this year from Pope's guards, but his Holiness was obliged to beg pardon for it in the most abject manner. Another occurrence happened about the same time which made a great noise in England, and was variously censured, namely, the purchase of Dunkirk of his British Majesty for five hundred thousand pounds. This was looked upon as extremely detrimental to the trade and navigation of England, and laid to the charge of the Earl of Clarendon, though 'tis certain he had the

least hand in it of any person concerned in the British ministry.

CHAP.  
XXXIV.

The following year his most Christian Majesty instituted the Academy of Inscriptions, whose business it is to compose inscriptions and devices, and perpetuate the memory of great events. Accordingly, upon the taking of every town almost, and every battle which they were pleased to stile a victory, we see medals coined to set the transaction in such a light as might contribute most to the glory of the Grand Monarch.

1663.  
Academy of inscriptions.

Nothing very material occurred in the year 1664, unless the sending a body of French troops to the assistance of the Imperial army against the Turks, who were thereupon obliged to retire over the Raab.

1664:

The kingdom still remaining in full peace, the celebrated Monsieur Colbert put his Majesty upon encouraging trade and navigation, and accordingly new ports were made, and others improved, shipping was every where built, and such manufactures prohibited to be imported as the natives could work themselves; whereby the King prevented very large sums going out of the nation, which every year had been sent to purchase them.

1665.  
Trade and navigation encouraged.

A war happening to break out about this time between the English and the States-General, on account of the encroachments the Dutch had made on the British trade in India, the coast of Africa, and elsewhere, the French first offered their mediation to compose the quarrel, and at length joined the Dutch.

The following year they dispossessed the English of their part of the island of St Christopher's, and finding afterwards they should be obliged to restore it, they destroyed all the British plantations and settlements there. In the mean time the French King gave great encouragement to arts and sciences, and established another academy called the Academy of Sciences. He also enlarged his harbours, augmented his fleet, and made large magazines of naval stores, causing his subjects to be instructed in navigation and all marine exercises, which were very little attended to in France till this reign. He also reformed several abuses in the courts of justice: but he soon found other employment, for PHILIP the Fourth, King of Spain, being dead, and his dominions descended to an infant, the grand monarch laid hold of this opportunity to fall upon the Spanish dominions in the Low-Countries, which were perfectly unprovided of troops to defend them. In one campaign he made himself master of Courtray, Dixmude, Furnes, Armentiers, Binch, Aeth, Tournay, Douay, Oudenard, Aloft, and Lisse. At the same time the royal canal was finished, by which the Ocean and Mediterranean seas have a communication. The Prince of Condé the next year took Dole, Besançon, and all Franche Comte. These rapid conquests surprized the neighbouring powers, and occasioned an alliance to be formed against France, by England, Sweden, and the States-General; which treaty obtained the name of the Triple Alliance, and had that good effect, that France was content to put an end to the war, and relinquish Franche Comte, upon condition she might retain the towns she had conquered in Flanders; and a treaty was concluded accordingly at Aix la Chapelle the same year.

cure in the night-time, where robberies and murders were more frequent than in any other city; and this he effected chiefly by enlightening it with glass-lanterns hung in the middle of the streets. He also caused the town to be beautified with elegant buildings, and the streets well paved. The roads also, which before this reign were intolerably infested with robbers, he rendered very safe, by augmenting the number of officers for the discovery and apprehending of felons and highwaymen, and ordering them to be punished with the utmost severity.

The Turks made themselves masters of the island of Candia this year, the loss whereof is imputed in a great measure to the French, who withdrew their forces from thence they had sent to the assistance of the Venetians, very abruptly. About the same time CASIMIR King of Poland having resigned his crown, retired to France spending the remainder of his life in the abbey of St Germain de Prez.

Lorrain  
seized  
1670.

The French King recalling all his subjects, as well officers and soldiers as others, out of the dominions of the States-General, it created a suspicion that he intended to fall upon them: but he thought fit first to secure himself on the side of Germany, by seizing on the Duke of Lorrain's territories again, which he did without the least colour of right. The following year he employed no less than thirty thousand men in fortifying Dunkirk, and made it one of the strongest places in Flanders.

1672.  
The United  
Provinces  
invaded.

In the year 1672 the French King entered upon that memorable expedition against the United Netherlands by land, while the King of Great Britain armed against them by sea. The English did not want substantial reasons for this rupture; the encroachments of the Dutch on the British trade were not to be borne, and their libels and libellous pictures and medals on this occasion were still more provoking. The French were sufficiently exasperated against this Republic for contriving the Triple League, which had put a stop to their conquests; and the medal struck thereupon, alluding to JOSHUA's stopping the course of the sun, which was the French King's device, gave still more offence. The Grand monarch therefore was determined to chastise the insolence of this upstart Republic, as he called the States-General, who pretended to prescribe measures to crowned heads, and assume the umpirage of the affairs of Christendom.

He could not have met with a more favourable conjuncture to invade their territories than the present, when Holland was divided into two great factions, the one headed by the Prince of Orange, and the other by DE WITT; the last of which had rather have seen the French masters of their country, than have been forced to submit to the Orange party: accordingly they opposed the raising forces, and garrisoning their frontier towns, till the enemy was upon them; and, which was still worse, several of their governors and officers held a correspondence with the French, and shewed them the way to penetrate into the heart of their country. But no gentleman is more censured on this occasion than MOMBAS, a French refugee, who had been advanced to a considerable post in the army of the States, and constantly betrayed their councils.

In the beginning of May the French King having assembled an army of an hundred and twenty thousand men, including the English auxiliaries under the command of the Duke of Monmouth,

attacked the territories of the States in three different parts, whilst the Bishops of Munster and Cologne attacked them in a fourth. His Majesty passed the Meuse at Vifet at the head of forty thousand men; and coming before Orsoy, took it in three days. The towns of Bunich, Vefel, Rimbergue, Emeric, Doetum, and Groll, made scarce any defence; whereupon the French appeared upon the banks of the Rhine, which it was expected would have put a stop to the progress of their army: but some of the gentlemen of the country, 'tis said, in order to ingratiate themselves with the French, came to the Prince of Condé's quarters while he lay at Emeric, and offered to shew him a passage over the Rhine, near Tolhuys, where the troops would be obliged to swim their horses but a little way. And the Prince having ordered the Count DE GUICHE to go with these gentlemen and sound the river, the passing of it appeared to be very practicable; whereupon he immediately acquainted his Majesty with the discovery, and the army marched with great secrecy all night till they came over against Tolhuys. In the mean while the Prince of Orange had received advice from some boors that they saw a party of French examining the depth of the river near Tolhuys, which occasioned his sending the treacherous MOMBAS, with a body of horse to defend the ford if the French should attempt it; but MOMBAS coming to the place, acquainted the deputies of the States in the absence of Prince of Orange, that there was no likelihood the enemy would attempt to ford the river here, and therefore he thought it more advisable to throw himself into Nimeguen, with great part of the troops which the Prince of Orange had appointed to defend the banks of the river.

The Prince however on his return to the camp commanded WORTZ, a German officer, to march with a body of horse and foot to Tolhuys; who finding the French to be in earnest, begun to throw up intrenchments to cover his men, but he had not time to perfect them. The enemy erected a battery of cannon upon the opposite bank of the river, and obliged his men to retire into an adjoining wood, from whence they did not stir till they saw some of the French horse actually passed over, and forming themselves; and then indeed they appeared from among the trees, and drove those few troops that had got over into the river again, after which they only discharged their carbines and wheeled off: whereas, says my author, had the followed them into the river, and not suffered any more of them to reach the shore, they had probably frustrated the attempt. But the French seeing the enemy remove to some distance, were encouraged to return to the charge, and being continually supported by greater numbers, obliged the Dutch to retire to their intrenchments; where, according to the French account, they were ready to have laid down their arms upon an offer of quarter. But the Duke of Longueville, who had been drinking hard at Emeric, advancing up to the trenches, and firing a pistol, the Hollanders believed they should have no quarter, fired a whole volley, and killed several persons of the first quality, among whom the Duke of Longueville was one, and the Prince of Condé was wounded. This accident put the French into some disorder; but great part of the army having got over by this time, they soon rallied, and dispersed the Dutch forces, becoming entirely masters of the Bettaw, or Batavia proper, by this easy victory.

CHAP.  
XXXIV.The  
French  
pass the  
Rhine.

CHAP.  
XXXIV.

The Prince of Condé, and the Duke of En-  
guien his son, with many other persons of dis-  
tinction, I perceive, passed the Rhine in boats,  
tho' there were some other Generals, and particu-  
larly the Duke of Longueville, who had been pretty  
well heated with wine, that attempted to pass it  
on horseback; but the Duke was in great danger  
of being drowned, if the Prince of Condé had not  
taken him into his boat. He saved his life, how-  
ever, to very little purpose, for he was shot, as  
has been related, a few minutes after, thro' his  
own folly, in firing upon people who had already  
submitted. As for the Grand Monarch, who as-  
sumed all the glory of this action to himself, he  
came over afterwards very prudently in a boat,  
when the danger was past.

Three  
entire pro-  
vinces sub-  
mit to the  
French.

The consequence of this victory was very great,  
for the Prince of Orange immediately quitted the  
banks of the Yssel, and left all the towns on that  
river exposed to the enemy: Doefberg, Nime-  
guen, Swol, Deventer, Grave, Arnheim, Skenk,  
Crevecœur, and even Utrecht, submitted in a few  
days, and in less than two months the King found  
himself master of three entire provinces, viz. Guel-  
derland, Overijssel, and Utrecht; and the French  
King actually kept his court in the last mentioned  
city this summer. The Germans in the mean  
time being alarmed at this surprizing success, entered  
into a confederacy with the States-General and Spain  
against the French; but the Dutch were so hard  
pressed notwithstanding, that they were forced to  
break down their dams and lay their country under  
water, that they might be in a condition to wait  
for the reinforcements which were marching to their  
assistance from all parts.

1673.

At length the German forces having joined the  
Prince of Orange, they laid siege to Bon and took  
it, and thereby in a great measure cut off the com-  
munication between France and Holland. The  
English also shewing an inclination to make peace  
with the Dutch at the same time, the Grand Mo-  
narch thought it convenient to quit all his boasted  
conquests, except Maestricht, and retire into Flan-  
ders. As to the rest of the occurrences that hap-  
pened during this war till the peace of Nimeguen,  
where the English acted the part of mediators, they  
have already been related in the modern history  
of the Netherlands or Germany, and therefore I  
shall not enlarge upon them here; but content my-  
self with giving the substance of the principal ar-  
ticles of that treaty.

1678.  
The treaty  
of Nime-  
guen.

By the treaty between France and the States-Ge-  
neral, concluded the tenth of August 1678, it was  
agreed, that each party should retain what they  
were respectively possessed of, only the French  
were to restore Maestricht with it's dependencies  
to the Dutch; which indeed was all the French  
retained of their mighty conquests. And by a se-  
parate article, all the territories belonging to the  
Prince of Orange in France, Franche Comte,  
Charleroy, Flanders, &c. were restored to him.

By the treaty between France and Spain, dated  
the 17th of September, 1678, the French agreed  
to restore to the Spaniards, Charleroy, Binch,  
Aeth, Oudenard, Courtray, the city and duchy  
of Limburgh, Ghent, the country of Waes, Leuwe,  
St Gislain and Puicerda: on the other hand it was  
agreed, that the French King should retain the  
county of Burgundy or Franche Comte; the towns  
of Valenciennes, Bouchain, Condé, Cambray,  
Aire, St Omers, Ypres, Warwick, Warneton,  
Poperingen, Bailleul, Cassel, Bavay, and Mau-  
beuge, all which they had conquered in this war.

VOL. II.

By the treaty concluded between the Empire  
and France on the 3d of February, 1678-9, France  
renounced all pretensions to Philipsburg: the  
French on the contrary were to keep Friburg till  
an equivalent should be given them.

The Duke of Lorrain was to have his territories  
restored him; only the French were to retain  
Nancy, and roads through this country; and to  
give him the city of Toul in lieu of it: and the  
Princes of Furstemburg, who had made so much  
disturbance in Europe, were to have their terri-  
tories and dignities restored them by the Em-  
peror.

By the treaty between Sweden, an ally of  
France, and the Elector of Brandenburg, conclu-  
ded the 29th of June, 1679, the Elector was to  
restore Stetin, Stralsund, and all he had taken from  
the Swede in Pomerania.

By the treaty between Sweden and Denmark,  
concluded the 2d of September, 1679, they were  
reciprocally to yield up all the towns that had been  
taken by either party.

France being now at peace with all the powers  
of Europe, determined to put in execution the long  
projected scheme of extirpating Calvinism, and  
begun with suppressing the chambers of the edict,  
as they were called, which were courts consisting  
of an equal number of protestant and popish judges  
who were to see the edicts put in execution that  
were made in favour of Protestants. Those of  
Thoulouse, Bourdeaux, and Grenoble, were sup-  
pressed this year; but I defer a further relation of  
this matter till I come to the year 1685, when the  
edict of Nants was reversed. In the mean time  
LEWIS le Grand found out a way of extending  
his dominions beyond their real limits as effectually  
in time of peace as he could have done by the most  
successful war. He set up courts of enquiry in the  
frontier towns, and such countries as had been  
yielded to him; and if he could discover that any  
city or province had formerly depended on the  
places in possession, or were under the jurisdic-  
tion of the same Sovereign, he claimed them as of  
right belonging to him; and to these encroach-  
ments he gave the title of RE-UNIONS. By  
the same rule he might have extended his jurisdic-  
tion over most of the kingdoms of Europe; for,  
according to the French account, they were part  
of their Empire, and formerly dismembered from  
it. Had their scheme of universal monarchy suc-  
ceeded therefore, they would have told us, no  
doubt, that the reducing the rest of Europe to the  
obedience of their monarch would have been but  
an act of justice.

The first that felt the effects of this piece of  
French usurpation, were the ten free imperial cities  
of Alsace: that country had been yielded to the  
French by the treaty of Munster, with an express  
exception of the rights and privileges of these cities,  
which they were to have enjoyed in the same man-  
ner under the protection of France as they had for-  
merly done under the Emperor: but their privileges  
were very little regarded. The court erected at  
Brifac also proceeded to reunite what they called  
the dismembered lands of Alsatia; many of which  
lay at a great distance from it: while the chamber  
or new-erected court of Metz pretended to re-unite  
all the dismembered fiefs of the three Bishopricks  
of Metz, Toul, and Verdun; and an edict was  
issued for the execution of those decrees. Among  
the rest the King of Sweden was summoned to  
do homage for the duchy of Deux-Ponts; and  
because he did not appear, that duchy was given

to another. The Rhinegrave, and several other German Princes upon the frontiers, were obliged to do homage for their territories, on pain of military execution: and finding Spain unprepared to resist him, the Great LEWIS demanded even Ghent and Alost, as dependencies on some of the places that had been yielded to him; which put the neighbouring Princes in the utmost consternation, but none of them knew how to apply a remedy to this general grievance; for the French, as their Attorney-General observed, had at this time an hundred thousand men in arms to back their pretensions, and had fortified their frontiers so well, that they defied the resentment of their injured neighbours. The French King had built the fort of Hunninghen, within half a league of Basil in Switzerland, whereby he in a manner blocked up that Republick; and he obliged the Governor of the Spanish Netherlands to yield up the town of Charlemont. He also fortified Saar-Lewis, Landau, and Phalsbourg; and having thus strengthened his frontiers, he ravaged the German and Spanish territories, and raised contributions in them whenever he saw fit, on one pretence or other; inso-much that they had much better have been in a state of actual war, where they might have been at liberty to make reprisals. In the same insolent manner he obliged the Spaniard to relinquish his titles of Duke and Earl of Burgundy; and gave orders to his commanders at sea to force their ships to strike their flags to those of France.

The Protestants excluded places of profit.

While he thus bullied the Princes of Europe, he proceeded to mortify the poor Protestants at home, and among other edicts published against them, he excluded them from holding places of profit; and ordered, that where any persons had been born Protestants and turned Roman Catholics, if they afterwards returned to the Protestant communion again, they should be treated as apostates.

But as nothing took up more of the Monarch's care and time than the establishing a royal navy, superior to any of the maritime powers, we see him about this time enlarging and fortifying his two principal harbours of Toulon and Brest, erecting magazines, docks and yards for the building and careening of ships, encouraging the mathematics and all other sciences that might improve navigation; and 'tis said, that there were enrolled this year no less than sixty thousand seamen to serve in the ships of war, besides what were necessary for the merchants service. But these must be many of them land-men, for the trade of France was never considerable enough to furnish the royal navy with so large a compliment.

The two important towns of Strasburg and Casal, the one in Alsace and the other in Italy, were this year surprized, or rather purchased, by the French. The Burgomaster and many other of the leading men of Strasburg being corrupted with French money, opened their gates to the forces of France, who at a time concerted between them surrounded the town: and when the Emperor complained of this as a violation of the peace, he was answered, that Strasburg being the metropolis of Alsatia, belonged to France by the treaty of Munster; and the reason he had not made himself master of it sooner, was because he had been diverted from it by affairs of greater moment. But being sensible that the Imperialists would certainly compel him to restore it if he did not find them other employment, he treated with TEKELI to promote an insurrection in Hungary, while he incited the Turks to invade the Empire at the same

time. He also enlarged the fortifications of Strasburg to such a degree, as to make it one of the strongest places in Europe.

He proceeded next to insult the territories of all the Electors which lay upon the Rhine, and under pretence of dependencies, appropriated to himself all such places as he apprehended for his convenience. He even laid claim to the capital cities of the three ecclesiastical Electors, alledging that the stables of the Elector of Triers were built upon lands which belonged to him; and that the district of Ham, where the best Rhenish wines grow, were part of his demesnes: and as to Cologne and Mentz, most part of the houses he pretended had been built upon grounds yielded to him by the peace of Munster, and he would either demolish them, or make them acknowledge him for their Sovereign; but the King proposing to get his son the Dauphin chosen King of the Romans, did not think fit to put his threats in execution against those Electors. The Prince of Orange was more severely dealt with, for he seized that principality and transferred it to the Duchess of Nemours.

The year 1682 was remarkable for the contests between the most Christian King and the Pope concerning the Regale, which his Majesty insisted should extend to all the churches of France without exception: nor did this divert him from continuing his encroachments on the King of Spain's territories in the Low-Countries; and because that Prince refused to submit to all his insolent demands, he blockaded Luxemburg, till the Imperialists marched with a considerable army towards his frontiers, and then he thought fit to withdraw his troops. About the same time an edict was published for demolishing all the churches of the Protestants which had been built since the edict of Nants, with some other severe declarations against that people.

The Turks having invaded the frontiers of the Empire on one side, the French determined to attack them on the other; but the most Christian King receiving advice that the Ottoman army had passed by Raab and Comorra, and were about to lay siege to Vienna itself, he altered his resolution; for tho' he desired the Turks might favour his projects by making a diversion, he was not so bad a Christian as to wish them masters of the Empire. Besides, had he attempted to distress the house of Austria at so critical a juncture, he must have drawn all the powers of Christendom upon him, and his name would have been universally detested. He insinuated indeed to the Electors, that the Empire could only be saved by his troops, which lay ready upon their frontiers to advance against the Turks, if they would elect his son the Dauphin King of the Romans; but his credit was so bad in Germany, that they chose to run all hazards rather than admit a French army into their bowels, or a Prince of French extraction to be their sovereign. He had too lately destroyed the liberties of his own people, for foreigners to expect better usage. The siege of Vienna was no sooner raised, but the French marched a great army into the Low-Countries, under pretence of seizing Alost and several other places, which they pretended were dependent on them. They raised taxes and contributions on the very towns they had plundered, and carried off all the corn and cattle they found in the country to their magazines. They prohibited the manuring the ground, and seized all the instruments of husbandry. Nor were these outrages confined to

the district of Alost, and the places they pretended a right to, the duchies of Limburg and Guelders suffered no less than the former; and according to the Spanish Minister, who then resided at the Dyet of Ratisbon, such great and terrible desolations had not been seen during the late war, as were exercised by the French on this occasion. Nor were they contented with plundering the open towns, but afterwards made themselves masters of Courtray and Dixmude, and bombarded the town of Luxemburg.

Nurseries  
of officers  
for the sea  
and land  
service.

About the latter end of this year the French King established a nursery of marine officers, as he had done of cadets or younger brothers the preceding year for the land service. Those appointed to serve in men of war are denominated the marine guards, and those employed in the galleys the guards of the standard, and are in all about eight hundred, entertained both at sea and land at the King's charge; and being distributed in all the ports of France, are taught navigation, fencing, and all gentleman-like exercises.

1684.  
Genoa  
bombard-  
ed.

As the Republick of Holland had already felt the fury of the most Christian King's arms, he now determined to chastise that of Genoa on much the same pretence; namely, that they did not shew him that respect which a little Republick owed to a mighty monarch, and particularly that they had not renounced the protection of Spain when he required it of them. The French Admiral therefore came before the place about the middle of May, and the Genoese refusing to submit to the exorbitant demands of his master, he threw ten thousand bombs into the town, burnt great part of it, and amongst the rest the Doge's palace; after which the wind growing very high, the French fleet were forced to leave the coast. However, the Genoese fearing another visit, thought fit the following year to submit to his Majesty.

Luxem-  
burg taken  
by the  
French.

In the Low-Countries the French besieged and took Luxemburg, after which they were contented to make a truce with Spain for twenty years, in order, I presume, to execute their grand project at home, of extirpating the Protestant religion. The scheme for effecting this, it seems, had been laid by the general assembly of the Gallick Church that met in the year 1661, and every year after some new encroachments had been made on the liberties and privileges of the Reformed, tho' it was not till this fatal year that they thought fit to repeal the EDICT OF NANTS in expresse terms.

1685.

The per-  
secution of  
the French  
Protes-  
tants.

Massacres and burnings, which had been practised by their ancestors, as well as the Spaniards, for the extirpating heresy, had not succeeded to their expectation: on the contrary, both in France and the Low-Countries the numbers of the Protestants had rather been multiplied than lessened by the exercise of those severities; they thought it advisable therefore to proceed gradually, and by new edicts from time to time to deprive them of one privilege after another, by which means they hoped to avoid the scandal of persecution. They agreed also to begin with the least material articles first, and accustom them by degrees to the loss of their liberties, that they might be the less shocked when they found them totally subverted. But one of the first and most effectual ways they took to ruin this people was the prohibiting their CONVOCATIONS, or national assemblies of their clergy, by which they broke their unanimity, and rendered them a defenceless body. It has been the policy of all ages to divide a party that is not other-

wise to be forced; and wherever churches are restrained from meeting and debating upon their common interests, their ruin is not far off. What must a Church then established by the laws of the land apprehend, when all her enemies, the most impious sectaries, and even those who deny the fundamental articles of the Christian faith, are permitted and encouraged to hold their national assemblies, while she alone is tantalized with a mock summons from time to time, and never suffered to meet or consult about her interests? But to proceed: They agreed not to fall upon all the churches at once, but first to demolish those which had been erected since the edict of Nants; after that to interdict some few others, and to suffer the preachers to remain in their cures where their churches were destroyed, to keep them from clamouring too loud, and alarming the rest of their brethren: shortly after they proceeded to prosecute and banish the preachers from their respective provinces, and to prohibit the people to meet without their ministers. Then they procured a severe edict against those, who having been born Protestants, and turned Roman Catholics, should relapse; and prohibited priests and monks to turn Protestants on the highest pains. And because interest is usually one of the most prevailing arguments towards conversion, they excluded the Reformed from all offices and places of honour or profit, while at the same time they offered preferments and pensions to all that would turn Papists: this took off most of their leading men, and left them only a defenceless mob. They afterwards suppressed all their academies, universities, and schools, and took the education of their children out of their hands: and in order to starve them if they still remained obstinate, no man was suffered to follow any creditable or beneficial employment if he refused to turn Roman Catholic. At the same time lest the kingdom should be depopulated, and their manufactures ruined by their transporting themselves to foreign countries, for they were very numerous, and most of them excellent mechanicks, an edict was procured, prohibiting them to leave the Kingdom on pain of being sent to the galleys, as great numbers of them were for attempting it. And all the while, it seems, a great deal of pains was taken to make foreigners believe that the King had no design to extirpate the Protestant religion, till the year 1685, when it was impossible any longer to disguise their intentions.

They threw off the mask at this time with a witness, for they employed their whole army in forcing the Reformed to turn Roman Catholics. BOUFFLERS, an officer of a brutish savage temper, whose principal merit was the ready obedience he had always paid to the most barbarous orders of the court, was first employed in Bearn to begin the conversion. The provinces of Guienne, Saintonge, and Languedoc, were the next that were abandoned to the fury of the Roman clergy and the troops that supported them, and not many weeks after the whole kingdom underwent the same fate. The Intendant of each province, with the Bishop, went from town to town and having summoned the Protestants to attend them, let them know that it was his most Christian Majesty's pleasure, that the Roman Catholic religion only should be professed in his dominions; he required them therefore to turn Roman Catholics voluntarily without delay, or they would be compelled to it by force. To which many of the people answered, that their bodies and estates were in the King's power, he might dispose

of them as he pleased; but they desired their consciences might not be forced, they could not forsake a religion they believed to be true, or words to that effect. Whereupon the soldiers were immediately ordered to seize on the gates and avenues of the places they had invested, to prevent the escape of any one, after which they entered the town sword in hand with the utmost fury, as if it had been taken by storm, crying out to such of the Reformed as they met with, Die, or turn Roman Catholics; and it had been a mercy to some of them if they had been dispatched outright, without undergoing that variety of torments which succeeded. The troops being quartered in such Protestant houses as the Bishop or Priest directed, and all the goods secured, the first days were spent in consuming the provisions and plundering them of their money, jewels, and plate, after which they seized the household goods, and exposed them to sale; and if any Roman Catholic out of friendship or kindred attempted to conceal any of the effects of the unfortunate wretch, he was severely fined.

When this would not prevail on the Protestants to change their religion, they were abused and tormented a thousand ways. Men and women were hung upon beams, or on hooks in their chimnies by their hair and feet, and smoked with whips of wet hay till they were almost suffocated; and if they promised to abjure their religion, and refused to sign the instrument of abjuration when they were taken down, they were hung up again. Others were thrown into fires kindled on purpose, and after they were desperately scorched, let down by ropes into wells, it being demanded of them all the while if they would change their religion. They tied people to tables, and poured wine down their throats till they said they would turn. They stripped men and women naked, and in that condition tied them together. Some were stuck with pins from head to foot, cut with pen-knives, or taken by the nose with red-hot tongs, and in that manner led about till they promised to go to mass; and being dragged half-dead to churches, their presence there was sometimes taken for an abjuration. But the common torture, and that which seems to be purely of French invention, was the keeping people awake for a week together, either by pinching them, dashing water in their faces, plucking off the hairs of their beards, and drumming in their ears till they had almost lost their senses; and then no wonder if they chose any religion that was offered them. Those that have been proof against every other studied cruelty, have been overcome by this. The torment of being thus kept from sleep, 'tis said, is inexpressible. But it was not only upon those in health that they exercised this piece of tyranny, for where people of either sex lay ill of fevers, or other violent diseases, they would bring seven or eight drums to the bed-side and drum till they made them distracted or renounced their religion. In some places they would bind the husband or the father hand and foot, and ravish the wife or daughter before their faces; tho' the Hugonots acknowledge that rapes were not allowed of every where. I shall mention but two or three species of torture more which were executed upon the miserable Protestants, and these were the tearing off the nails of their fingers and toes; blowing them up with bellows till they were ready to burst, and burning the soles of their feet with red-hot shovels. *Tantum religio potuit.* But surely no persuasion can deserve the name of religion, which inspires it's votaries with such barbarous prin-

ciples. True religion, and especially the Christian, teaches universal love and benevolence even towards our greatest enemies. But to return: If no tortures could induce the miserable Hugonots to change their religion, they shut them up in loathsome dungeons, where they were suffered to see none but their tormentors. In the mean time their houses were demolished, their woods and lands wasted, if they had any, and their wives and children confined in monasteries; and those that endeavoured to escape, were shot like wild beasts. Nor was this the case only of the meanest people, men of quality and estates were treated no better. Ladies of distinction had their necks and faces gashed and scarred with knives or swords, to render them deformed; neither age, sex, or beauty could move their inhuman persecutors to spare them. And when some of them fled to Paris to avoid these outrages, believing that the court could never countenance such barbarities, they were commanded to leave the city within fifteen days, and return to their own houses, and all people were prohibited to entertain or lodge them. Some who had found means to present petitions to the King, were sent to the Bastile: and what seems extremely hard, notwithstanding the master of the house renounced his religion, the soldiers were quartered upon him till the whole family complied. The priests who attended the dragoons on these occasions required no more of the convert at first than this declaration, viz. I do acknowledge the Catholic, Apostolick, and Roman Church, as it was in the time of the Apostles; and I renounce and abjure all the errors that have crept into it since that time. And as many of them did not scruple this, they afterwards made them subscribe another, viz. that of their own motion, without any force, compulsion, or violence, they had embraced the Catholic faith. In which there does not seem to be any great harm neither; but if any one professed the Protestant religion afterwards, he was said to have relapsed, and was severely punished. Thus far the government proceeded before they formally repealed the edict of Nants.

This edict of repeal passed the seals on the 18th of October, 1685, and was ratified by the parliament of Paris on the 22d of the same month; after which it was sent to all the other parliaments of the kingdom to be confirmed. The preamble recites, That HENRY IV granted the edict of Nants in order to settle his dominions in peace, and that he might reconcile those to the Roman Church who upon slight pretences had separated themselves from it; but that his expectations were not answered. That his successor LEWIS XIII, having the same zeal for religion, had pacified the troubles of the kingdom by an edict of the same kind passed at Nismes, anno 1629; but that the greatest part of the people having since embraced the Catholic faith, the edicts of Nants and Nismes were now become useless; and therefore his Majesty thought fit to suppress them, as he did likewise all other edicts and declarations that had been made in favour of the Hugonots. Then he orders all their churches to be demolished, prohibits all assemblies for publick worship, or the exercise of their religion in private, on pain of corporal punishment and the confiscation of their estates. He orders all their preachers to depart the kingdom within fifteen days from the date of the edict, or to be sent to the galleys; offering a reward to such of them as would change their religion. He prohibits parents to instruct their children in that belief,

CHAP.  
XXXIV.The substance of  
the repeal  
of the edict  
of Nants.

CHAP.  
XXXIV.

belief, and requires that all children born after the publication of this edict be baptized by a popish priest, and brought up in that persuasion. He allows those who had departed the kingdom to return home within five months, or their estates to be confiscated: and prohibits all others to remove into any foreign country, or convey their wives or children thither, on pain of being sent to the galleys. He confirmed all declarations against those that had relapsed. And by the last clause his Majesty declares, that his subjects of the Reformed Religion may, till God enlightens them, remain in his dominions, enjoy their estates, and carry on their trades, without being molested on account of religion, provided they make no profession thereof.

The church of Charenton, and all the Protestant churches in France that were standing, were demolished on the very day this edict was published. The preachers were allowed fifteen days to depart the kingdom, but were prohibited to take along with them either father, mother, brother, or sister, or children above seven years of age. It is observed, that all the Protestant ministers had not the courage to go into banishment, some of them were tempted by the offers of preferment, and renounced their religion, to the great scandal of their people. But though the last article of the edict was so clear and express, that the Reformed expected for the future to be free from persecution, while they made no open profession of their religion; this it seems was but a snare, for the government no sooner observed that the Protestants, relying on his Majesty's honour, were returned to their habitations, but they quartered soldiers upon them again, and used them in the same barbarous manner they had done before. Monsieur DU QUESNE, one of their Vice-Admirals, 'tis said, was the only man that was exempted from this persecution, and that upon account of his skill in maritime affairs, which the King at this time was promoting with the utmost application.

The propagating the Roman Catholick religion, as they stiled it, or the persecution of the Protestants, was continued during the years 1686 and 1687; and various edicts were issued to prevent their escaping out of the kingdom: but still we find several of the neighbouring countries crouded with them about this time: either they pretended to become converts till they found an opportunity of leaving France, or their Catholick relations and friends were so touched with their misfortunes that they favoured their escape; or, lastly, as their estates were to be transferred to their Popish relations on their leaving France, it is very natural to suppose they were not backward in assisting them to escape to foreign countries. The Protestants relate, that about this time LEWIS XIV was struck with a loathsome disease (a Fistula in Ano) which they looked upon as a judgment upon him for his repeated cruelties exercised on the innocent Hugonots: certain it is, the King had a severe fit of illness, and went in a solemn procession to the church of Notre Dame in Paris to sing Te Deum for his deliverance from that or some other disease. He erected the fine nunnery of St Cyr near Versailles also, endowing it with a revenue of two hundred thousand livres per annum, for the entertainment of three hundred young ladies who wanted fortunes; where they are instructed in every thing that may render them useful or agreeable, and at twenty years of age are left at their liberty to settle in the world, or take the

VOL. II.

vow of celibacy, &c. But I should have remembered, that in the year 1686 the Grand Monarch had an opportunity of gratifying his vanity at an audience he gave to the Siamese Ambassadors, when the court appeared in it's utmost splendor. They were afterwards carried to the frontier towns and sea-ports, to take a view of the fortifications, and of the prodigious arsenals and magazines of war erected there, to their great astonishment no doubt; neither their own country, or any of the Asiatick kingdoms, being able to shew any thing comparable to them.

The French King having been for some considerable time master of the purses and persons of his subjects, had employed all the wealth of France towards rendering himself superior both by sea and land to any of the powers of Europe; and it is very evident he thought himself a match for all of them, by the provocations he gave every Prince and State almost in his neighbourhood. He seems solicitous to find occasions to quarrel with them; and where he wanted a pretence, frequently fell upon them without. And notwithstanding he might well be deemed a zealous Catholick from the persecution of his Protestant subjects, we find him insulting the Pope himself, and threatening a schism in the Church. He called an assembly of the Ecclesiasticks of his kingdom, over whom he had such an absolute dominion, that they were compelled to determine what they believed most acceptable to him. Among other things they declared, that the Pope was not infallible, and could establish no article of faith, without the concurrence of a General Council, which was superior to him: that he had no power to intermeddle in the temporal affairs of Princes, nor could absolve their subjects from their oaths of allegiance, &c. The Pope, on the other hand, had refused to confirm the Bishops of the King's nomination, and deprived the French Ambassadors, as well as those of other Princes, of the franchises of their palaces at Rome; whereupon the parliament of Paris, as they were ordered, admitted an appeal from the Pope to a General Council. Things were brought to this extremity, when the Elector of Cologne happening to die, Prince CLEMENT of Bavaria, who was espoused by the Imperialists, and Cardinal FURSTENBERG, the French King's creature, became candidates for that bishoprick; and, as the French complain, the Pope caused the Prince of Bavaria to be declared elected, though FURSTENBERG had a majority of votes in the chapter; at which the Grand Monarch pretended to be so exasperated, that he threatened both his Holiness and the Emperor to make them sensible of his resentment, which occasioned their entering into a confederacy against him, together with the Spaniards, the Dutch, and most of the Princes of the Empire: both Protestants and Papists thought it high time to put a stop to the ambitious designs of this haughty overbearing Monarch. The terms of this alliance were such a medley of contradictions, in regard to religion at least, as are scarce to be paralleled in any treaty that ever was made. Here we find the Protestants stipulating to defend the rights of the Holy See against the encroachments of the French court, and the Pope covenanting to see the Protestants of France restored to the free exercise of their religion; nay, all the parties to this alliance agreed never to make peace till these things were effected. But so unnatural, so impossible to be fulfilled must these articles appear to be on the first framing them, that it is no wonder no manner of regard was had

to them at the end of the war when a peace came to be concluded; they were only calculated to draw in the bigotted deluded mob on both sides: for when the Prince of Orange and other heads of the confederacy had brought about their particular ends, religion and the people were left to shift for themselves, as usual. But to proceed:

The French King having upwards of a hundred thousand men well disciplined at the beginning of these commotions, was in a condition to put his threats in execution before the slow Germans or Spaniards could assemble their troops to oppose him. The Dauphin was sent with a numerous army into Germany in the latter end of the year 1688, where he surprized Philipsburg, Frankendale, Mannheim, Heidelberg, Hailbron, and several other great towns; while another detachment made themselves masters of Mentz, Worms, Spires, &c. and took up their winter-quarters in the Palatinate. In the Low-Countries the Marshal d'HUMIERES took the fortresses of Huy. Nor were the French obliged only to the usual dilatoriness of the Germans for this torrent of success, but to the situation of affairs in England, whither the Dutch had sent thirteen or fourteen thousand of their best troops, commanded by the Prince of Orange, to support the malecontents of that kingdom, who brought about that surprizing Revolution, of which an account has already been given in the modern history of the United Provinces. It had been resolved indeed at the court of France, to send twenty or thirty thousand men to the assistance of the King of England; but that Prince had been over-ruled by some false friends in his council to refuse them; whereupon the French King contented himself with threatening the States-General to resent it if they assisted the English malecontents against their Sovereign, which they did not much regard; they were assured of a disposition in the English fleet and army, as well as people, to revolt to the Prince of Orange, and knew that he would soon return to their assistance strengthened with the forces of Britain; and the most the French could have done in his absence would have been to make themselves masters of a town or two. Besides, the season of the year was far advanced, and the bulk of their army in Germany. As for the unfortunate King of England, being deserted by his people and army, he sent over the Queen and the Prince of Wales to France, who arrived at St. Germain en Laye the 6th of January, N. S. and his Majesty followed them the next Day. The King of France, say their historians, received them in a manner worthy of himself, namely, with all the kindness and generosity which could be expected from so great a Prince, and assigned the royal Palace of St Germain for their residence. Soon after the convention of Estates in England declared the Prince and Princess of Orange King and Queen of Great Britain. But the French King did not only give King JAMES an hospitable reception, but fitted out a fleet, and sent him with a reinforcement of French forces to Ireland, the greatest part of which kingdom still remained faithful to that Prince. CHATEAU-RENAUD, the French Admiral, having set King JAMES and the land-forces on shore, met with Admiral HERBERT, who commanded the English fleet, and defeated him (though the English affirm it was a drawn battle). About the same time his most Christian Majesty is charged with entering into an alliance with the pirates of Algiers, by which it was agreed they should cruise upon the

English and Dutch merchants, and that he actually introduced these Mahometan rovers into the Ocean, and even into the British channel.

In Ireland King JAMES having received another re-inforcement of French troops, laid siege to Londonderry, (being almost the only city in the hands of the Prince of Orange's friends) and reduced it to the last extremity by famine, many thousands perishing for want of food; but Colonel KIRK being sent to the relief of it from England, found means to throw supplies of men and provisions into the town, and compelled King JAMES to raise the siege, after which that Prince's interest very much declined in Ireland. In the mean time the Imperialists recovered Mentz, Keyserwaert, Rhineberg, and Bon, from the French; and as the Grand Monarch was sensible he must in time restore all he had taken in the Palatinate, he had ravaged that country, destroying it with fire and sword in a terrible manner. He laid in ashes the cities of Spire, Oppenheim, Worms, and Frankendale, with all the villages and open places between Francfort and Heidelberg; which shews that he now despaired of making that fine country his own, or succeeding in his project of becoming sole monarch of this part of the world. At the beginning of the war he had hopes that the crown of Great Britain would have concurred in all his measures, at least that he should have been able to have kept up a civil war there, by furnishing his ally King JAMES with troops from time to time; but England being now in other hands, he was sensible he must sooner or later relinquish all his acquisitions on that side. The beginning of the war however was no less glorious to his arms at sea than at land, for he gained a victory over the united fleets of England and Holland commanded by the Earl of Torrington off of Beachy-head. The Dutch it seems bore the brunt of this engagement almost alone, for either the English Admiral could not or would not second them, for which he was afterwards tried and acquitted; but King WILLIAM did not think fit to employ him afterwards: however, as few of the English ships came to a close engagement with the enemy, their loss was inconsiderable. The next day (July 1, O. S.) a more memorable battle was fought on the banks of the Boyne in Ireland, which in a manner determined the fate of that kingdom, and settled King WILLIAM on the throne. The account the French writers give us of this engagement is, that Marshal SCHOMBERG, under the Prince of Orange, commanded an army of forty thousand regular troops, and that King JAMES's army consisted only of the militia of the country, except the French auxiliaries, which did not amount to ten thousand men; that the Irish were charged both in front and flank, and their foot broken without any possibility of rallying them; that the French sustained the charge bravely for some time, but were at length obliged to retire. King JAMES after the battle went to Kinsale, and from thence to Dublin; and finding it impossible to bear up against so great a superiority, thought fit to return to France: whereupon the Duke of Ormond took possession of Dublin, and King WILLIAM made his triumphant entry into that city the sixth instant.

The French had better success in the Netherlands, where they gained a compleat victory over the Dutch in the plains of Fleurus or Fleury, on the tenth of July, taking all their cannon and six thousand prisoners. But having already given an account of the war between the French and the

confederates till the peace of Ryfwick, which was concluded in the year 1697, in the modern history of the Netherlands, I should be inexcusable to tire the reader with the repetition of those occurrences here.

By the peace between France and Savoy, the French King obliged himself to restore Pignerol, (after it was demolished) and the rest of the places taken from his Royal Highness during the war, among which the chief were Montmelian, Nice, Villa Franca, and Suza. It was agreed also that the Duke of Burgundy, the Dauphin's eldest son, should marry Madam the Princess Royal, the Duke of Savoy's eldest daughter. And it was mutually stipulated, not to tolerate the Reformed Religion in either of their dominions.

Between France and England it was reciprocally agreed to restore all places that had been taken on either side: and the French King obliged himself not to disturb King WILLIAM in the possession of the crown of England, or assist his enemies; and to restore the principality of Orange, and all he had been deprived of in France.

Between France and the States-General it was agreed also to restore whatever had been taken on either side.

By the treaty between France and Spain, Barcelona, Roses, and Gironne, and all other places the French had taken in Spain, were restored to the Spaniards. And in the Netherlands, the city and duchy of Luxemburg, and county of Chinay, Mons, Courtray, Charleroy, and all other towns his most Christian Majesty had taken during the war, were yielded to Spain.

The Emperor did not sign the peace till about two months after the rest of the confederates, viz. on the 30th of October 1697. The treaties of Westphalia and Nimeguen were agreed to be the foundation of it; and particularly it was stipulated, that restitution should be made to the Emperor and Empire of whatever the French had taken during the war, provided that the Catholick religion should remain in the state it then was in the places to be restored; only it was thought proper to make an exchange of some places: Strasburg and its dependencies was to be united to the kingdom of France; and Friburg, Fort Kehl, Fort St Peter, the Star Fort, Brisac, and Philipsburg, were yielded to the Emperor. The duchy of Lorraine was to be restored to its natural Prince, except some few small places, and the fortifications of Nancy, the capital city, were agreed to be demolished. From whence it evidently appears, that tho' the French had met with such amazing success during the course of the war, they were in no condition to continue it longer, or they would never have relinquished all their acquisitions.

1698.

No sooner was the war ended, but the persecution of the Hugonots was revived. The Court of France being now no longer apprehensive of their fomenting insurrections, shewed them no favour, the army was again employed in harrassing those poor people; and accordingly, 'tis said, the French Protestants and new converts are always more desirous of war than peace. At the same time several Roman Catholick bishops, priests and monks, with their disciples, having fled from Ireland and taken refuge in France, the archbishop of Paris sent a kind of circular letter, or brief, through his province, whereby he did in a very moving manner, exhort all true Catholicks to contribute to the necessities of these their afflicted brethren.

The King of Spain being in a very ill state of

health, and the French, as well as the houses of Austria and Bavaria, having their respective pretensions to the succession of that monarchy in case of his Catholick Majesty's death, it was generally expected that the peace of Europe would be again disturbed whenever that event should happen. And indeed both the French and Imperialists were actually making military preparations, and forming alliances to maintain their respective titles to that crown in case of a demise, being satisfied that on which side soever the right should appear, the longest sword would probably carry it. But as the French were not so sanguine at this time as to hope to obtain the whole, King WILLIAM, 'tis said, proposed the making a partition of the Spanish dominions among the several competitors, to which had all the parties concerned agreed, there might have been no great hurt in the matter; but the Emperor insisted on his claim to the whole, and would consent to no treaty on this head: whereupon the Kings of England and France, and the State-General, took upon them to divide the dominions of Spain without him; and this was called the first Partition-Treaty, by which the Dauphin of France was allotted for his share the kingdoms of Naples and Sicily, the islands of Sancto Stephano, Porto Hercule, Orbitello, Telamone, Porto Longone, and Piombino, and all the places situate on the coast of Tuscany which belonged to Spain; as also the towns of Fontarabia and St Sebastian, so much of the provinces of Guipuscoa, Navarre, Alava, and Biscay, as are on this side the mountains; but the rest of Guipuscoa, &c. beyond the Pyrenean mountains, was to remain to Spain. To the Archduke CHARLES, the Emperor's second son, in lieu of all pretensions of the house of Austria, was assigned the duchy of Milan: and to the electoral Prince of Bavaria, all the rest of the Spanish monarchy and its dependencies, as well in Europe as in Africa and both the Indies. And in case of the King of Spain's death without issue, if any of the parties should refuse to accept the share allotted him, such share was to remain sequestered in the hands of the respective Governors till the controversy should be decided.

The Court of Spain being acquainted with the particulars of this treaty, were not a little alarmed at it; and in order to prevent the dismembering of that monarchy, the King by the advice of his Council made a will, whereby he gave the kingdom of Spain, with all the territories belonging to it, to the electoral Prince of Bavaria. But this Prince dying soon after, the parties to the first treaty of partition drew up and concluded a second, which the Spaniards were no less offended at than the former.

1699.

By this treaty the same share was allotted to the Dauphin as before, with an addition of Final and Lorraine, the duchy of Milan being given to the Duke of Lorraine in lieu of his own country: the kingdom of Spain, with all the remainder of its dominions within Europe and without, were allotted to the Archduke CHARLES, the Emperor's second son. This treaty was signed at London by the Plenipotentiaries of France, Britain, and the States-General, on the 3d of March 1700, N. S. or the 19th of February 1699, O. S. Before I proceed to give an account of the success of it, it may be proper to mention some occurrences that happened in France while these treaties were upon the anvil.

forces in  
sieges and  
battles.

The court of France, as has been intimated already, kept up their forces after the war was ended, that they might be in a condition to give law to the rest of Europe in case of the King of Spain's death: they discharged indeed some of the common soldiers in every regiment that were least fit for service, but retaining all the officers, their places might easily be supplied on any emergency: and as the French King had now no present employment for this vast body of veteran troops, whom a long series of war had rendered the most expert at their arms, and all military accomplishments, that had ever appeared upon the face of the earth, for the instruction as well as diversion of his three grand-sons, the Dukes of Burgundy, Anjou, and Berry, he ordered an incampment of fifty thousand horse and foot, with a train of artillery, near Compeigne in Picardy, where were represented all such actions and motions as usually happen between two armies during the most active campaigns, as sieges, battles, marches, foragings, &c. the charges of which, 'tis said, did not amount to less than sixteen millions of livres, or sixteen hundred thousand pound sterling. The expences in the camp were beyond all bounds, every great officer kept a publick table; and as to Marshal BOURFLERS, his expences are hardly to be computed. He caused several large apartments to be built, and hung with flame-coloured damask laced with gold orris, pier-glasses, marble-tables, cabinets, and China ware, &c. which he brought from his palaces in Paris; but his tapestry, his beds, chairs, and plate were all new, and made on purpose for the camp. He had four spacious kitchens, in which were two and forty cooks employed in preparing the most elegant entertainments. Expresses arrived continually with ortelans, red partridge, pheasants, capons of Bruges, and in general the most exquisite rarities from every country. Fish was brought in on fish-days from Dieppe, Calais, and Dunkirk, and horses laid to bring sturgeon and salmon from Ghent and Brussels, and others to fetch fruit and sallads from the neighbourhood of Paris; besides a vast profusion of Champagne, Burgundy, Renish, Moseller, and all foreign wines. When the camp broke up, the army marched towards the Netherlands, which gave very uneasy apprehensions to the English and Dutch.

Still the persecution of the Hugonots continued; and those who had fled into the territories of the Duke of Savoy, by the influence of the Court of France were driven from thence into Switzerland; which country being over-burthened with them, the Elector of Brandenburg invited them to settle in his country, and granted them many considerable privileges, whereby he established several beneficial manufactures, which till then were unknown in that country. In the mean time the Grand Monarch published several edicts for the encouragement of trade in his dominions, and preventing idleness and luxury: but he had done infinitely more mischief to the trade and manufactures of France, by driving such multitudes of artificers into other countries, who set up their several professions there, than ever he could hope to repair by the wisest regulations. His establishing a select Council to enquire into the grievances of merchants and tradesmen, was certainly a very prudent institution: but much the greatest grievance, the putting such hardships on the industrious peasants and mechanicks on account of religion, was left without a remedy; which natu-

rally produced the calamities they lie under at this day, when great part of their lands are actually uncultivated, and many of the towns that were famous for trade and manufactures have scarce any left,

To return to the business of the Spanish succession: Notwithstanding the French King had agreed with his British Majesty and the States-General to accept a part of the Spanish dominions on the death of that Prince, yet observing how much his Catholick Majesty and the whole Spanish nation were averse to the dismembring of their monarchy, he found means to influence their councils so far as to get a Will made, whereby the Duke of Anjou, second son to the Dauphin, was appointed heir of the whole Spanish monarchy. Soon after which (viz. on the first of November 1700, O. S.) his Catholick Majesty died; of which the court of France no sooner received advice, but orders were sent to their troops, to advance towards the frontiers of the Spanish territories to establish the Duke of Anjou on that throne. The States-General hereupon represented their surprize to the French Ambassador at the Hague, that his most Christian Majesty should reject the treaty of partition he had made with them and King WILLIAM, and accept the will in favour of his grandson. To which the Ambassador answered, that the principal design of that treaty being to prevent the union of the kingdoms of France and Spain under one Sovereign, this was as effectually provided for by the will, the heirs of the Duke of Anjou being rendered incapable of enjoying the crown of Spain if they succeeded to that of France. But how little satisfied soever the Dutch might be with this answer, they thought fit to dissemble their intentions when they found the Duke of Bavaria, Governor of the Spanish Netherlands, had put them into the possession of his most Christian Majesty's forces, by which means they were absolutely deprived of their barrier, and lay open to the insults of the French. The States-General therefore, as well as King WILLIAM, acted that mean part of acknowledging the Duke of Anjou, and congratulating him on his accession to the crown of Spain, at the same time they were forming an alliance against him. It is said indeed they were under a necessity of doing it, but all this necessity was no more than the hazarding the loss of a town or two upon their frontiers before their Confederates could have joined: we saw the Imperialists alone soon found the French sufficient employment in Italy, and the English immediately agreed to send over troops to their assistance; so that they were far from being in that desperate condition they were, when the French invaded them in the year 1672. But the several transactions and occurrences during this second war between France and the Confederates being contained in the modern history of Germany or the Netherlands, I shall pass over them here, and only take notice of some particulars which were omitted or but slightly mentioned in those relations.

The distress the Grand Monarch and his grandson of Spain were reduced to by the Allies in this war, and particularly in the year 1708, cannot appear more evidently to future ages than from some passages we find in a prayer contained in the *Mercure Galant*, printed at Paris in January 1708-9.

GREAT GOD, (says that writer) who makest those men triumph who profess a religion contrary to thy holy commandments; DIVINE BEING,

BEING, who permittest the authors of an unjust war to dethrone a monarch (the King of Spain) whom their Ambassadors had acknowledged; well may man say that thy decrees are impenetrable. Let not those who now (unhappily for themselves) triumph, boast of their victories, which Heaven permits only to enhance the glory of a Prince who had never any other designs than what are agreeable to justice, and for the good of the true religion, and to shew that he is yet greater in adversity than in the midst of the most flattering prosperity. We may say, that his enemies who think to crush him, only make his virtues shine the brighter, which would not have appeared with that lustre if he had always triumphed. The world may be convinced he is one of thine elect, seeing thy divine Majesty has touched him with the finger with which thou touchest only those who are to serve for examples in this world to all mankind, and hereafter to bear a palm in heaven.

But, O our God, if we may be permitted to offer a prayer in behalf of the people of Europe, bestow thy blessing on those unfortunate conquerors, and by making them cease to triumph, open their eyes, that they may know themselves, and one day merit admission into thy celestial kingdom. With justice has the Monarch who now governs France, acquired the name of Great; let him triumph once more, O God, and continue thou to make use of a Sovereign who places all his felicity in thee, and looks upon the good or bad that befalls him as favours from thy divine Majesty, and who not having been lifted up with pride in the time of his greatest triumphs, has never been cast down by disgraces, &c.

1709.

The various calamities France suffered at this time were sufficient to break the spirit of the proudest monarch upon earth. Money was become exceeding scarce, and their mint-bills and farmers notes, which were designed to supply the place of money, had lost their credit. Their bankers broke by whole shoals; and the merchants of Lyons, where trade used to flourish most, were not able to pay the bills of exchange drawn upon them. The people at the same time were reduced to a starving condition, by the unseasonable weather and loss of the last harvest, which occasioned tumults in all parts of the kingdom, while the bad food produced contagious distempers that carried off many of them. Add to this, all Europe almost in a confederacy against them, and ready to penetrate into the heart of their country: and it is scarce possible to form a scene of more consummate misery. This obliged the French King to think of peace in earnest; whereupon he sent his Plenipotentiaries to Holland; but the allies refused to treat till his ministers had consented to certain mortifying preliminaries, which were signed at the Hague on the 28th of May 1709; the principal whereof were,

Preliminary  
articles  
for a peace.

Art. III. Whereby the French King acknowledges King CHARLES III to be King of Spain, the Indies, Naples, Sicily, and all the dominions comprehended under the title of the Monarchy of Spain, in what part of the world soever; reserving only those parts granted to the King of Portugal and the Duke of Savoy by the high allies, and the barrier which King CHARLES III is to give to the States-General, and the upper quarter of Guelderland.

Art. IV. recites, That whereas it had been reciprocally agreed, that the treaty of Peace should be brought to a conclusion within two months,  
VOL. II. NUMB. XC.

to commence from the first of June, during which time the French King should cause the kingdom of Sicily to be delivered to King CHARLES III, and the Duke of Anjou, with his wife, children, and effects, and all persons willing to follow him, should within the said two months retire out of the Spanish dominions; it is hereby stipulated, that if the Duke of Anjou should not consent to this convention before the expiration of the said term, the French King, as well as the confederates, should take measures in concert to secure the full execution of this article.

Art. V. And to forward the said agreement, the French King should, within the said term of two months, withdraw all his troops and officers from Spain, Sicily, and the rest of the Spanish territories in Europe and those in the Indies, as soon as he could, and should not directly or indirectly assist the Duke of Anjou with forces, money, &c.

Art. VI. The French King agrees to yield up Strasburgh and Fort Kehl to the Emperor.

Art. IX. He agrees to restore Brisac to the Emperor.

Art. X. Landau is hereby yielded to the Emperor, and the rest of the imperial cities in Alsace were to enjoy their privileges.

Art. XI. The French King consents to demolish Huninghen, New Brisac and Fort Lewis, with all the other fortresses he possesses on the Rhine from Basil to Philippsburgh.

Art. XIV, XV. The French King promises to acknowledge Queen ANNE, and the Protestant Succession.

Art. XVI. Obliges the French King to restore whatever he has taken from Britain.

Art. XVII. Obliges him to demolish the town and harbour of Dunkirk.

Art. XXII. By this article the French King yields to the States-General Furnes, Menin, Ypres, Cassel, Lille, Condé, and Maubeuge, for their barrier.

Art. XXIII. By this he agrees to deliver up all the other places he had possessed himself of in the Spanish Netherlands.

Art. XXVII, and XXVIII. The Duke of Savoy to be reinstated in the possession of Savoy, Nice, and all his territories; and to enjoy Exilles, Fenestrelles, Chamont, and the valley of Pragelas, with whatever lies on this side Mount Genevre, and the other mountains.

Art. XXXV. By this the French King obliges himself to evacuate Namure, Mons, and Charleroy, before the 15th of June; Luxemburg, Condé, Tournay, and Maubeuge, fifteen days after; Nieuport, Furnes, Fort Knocque, and Ypres, before the 15th of July; and before the expiration of two months to demolish the harbour of Dunkirk.

Art. XXXIX. These preliminary articles to be ratified by the French King, the Queen of England, and the States-General, before the 15th of June next, when a congress was to be begun at the Hague.

Notwithstanding these articles had been signed by the respective Plenipotentiaries, ROUILLE, the French minister at the Hague, acquainted the ministers of the allies a few days after, that the most Christian King his master could not ratify several of them, particularly the tenth, the eleventh, and the twenty-eighth. But the President ROUILLE being pressed to declare if he had still any secret orders from his most Christian Majesty tending to peace, he said, if the allies would content themselves with

CHAP.  
XXXIV.The

King  
refuses to ratify the  
prelimi-  
naries.

CHAP.  
XXXIV.

the fifth article of the preliminaries with relation to Spain, namely, with a promise to re-call his troops from Spain, and give no manner of assistance to his grandson, without the others relating to the delivering up the Spanish Monarchy, he thought his Majesty would not insist on his other exceptions. But the allies not thinking fit to depart from any one of the articles which had been agreed on for the evacuation of Spain, Monsieur ROUILLE returned to Paris, and the war was renewed with as much fury as ever.

The following winter the French King offered to consent to all the preliminary articles, and to deliver up four strong towns to the allies, as a pledge for the observation of them, provided he might not be compelled to assist with his forces in dethroning his grandson. But this offer also was rejected by the allies.

On the 15th of February 1709-10, the Duchess of Burgundy was delivered of a son, to whom the Grand Monarch immediately gave the title of Duke of Anjou, being the same Prince that now fills the throne of France, LEWIS XV.

1710.

The French King obtained leave of the allies, with much difficulty, to send his Plenipotentiaries to Gertruydenburg in Holland again in the beginning of the year 1710: and here they were permitted to treat only with the Dutch ministers; the English and the rest of the allies were so good as to entrust their respective interests to their management, who reported, that the French King desired only Sicily and Sardinia for his grandson, and that then he would deliver up the rest of the Spanish monarchy to King Charles III. But this proposal also was rejected, and the ministers of France returned to Paris again without effecting any thing; and to add to the misfortunes of the Grand Monarch, his son LEWIS, the Dauphin, died of the small-pox on the 14th of April 1711, in the fiftieth year of his age; leaving issue by MARIA ANNA of BAVARIA, LEWIS Duke of Burgundy, PHILIP King of Spain, and GASTON Duke of Berry.

1711.

The French King makes proposals of peace to her British Majesty.

The French King not succeeding in any proposals of peace he had made in Holland, sent Monsieur MESNAGER into England the latter end of year 1711, to treat with her Britannick Majesty's ministers, who observing that neither the Germans or Dutch furnished their quota of troops or money towards the war, notwithstanding they were chiefly gainers by it, and that the British nation only exhausted herself and ruined her trade by the continuance of it, shewed themselves inclined to treat with the French on their offering to sign reasonable preliminaries: which raised a mighty clamour among the rest of the Confederates; tho' at the bottom there was no more in it than that they were very angry with the Queen of Great Britain that she would no longer consent to impoverish her people by conquering kingdoms for her neighbours, who refused to contribute themselves towards the charges of the war. But to proceed: On the ninth of October her British Majesty communicated the terms of peace offered by France to the rest of the allies; and the next month acquainted their ministers at London that she had pitched upon Utrecht for the place of congress, and that the conferences would begin there on the first of January O. S. she also wrote to the several Princes in alliance with her, to invite them to send their ministers to the congress.

The first conferences for treating of a general peace were held at Utrecht on the 18th of January

O. S. and on the last of that month the French Plenipotentiaries delivered in their proposals in writing. In the mean time the Duke of Marlborough being laid aside, the Duke of Ormond was constituted General of the British forces: and notwithstanding the conferences at Utrecht, both the French and the Confederates took the field the next campaign. But I should have remembered, that the Duchess of Burgundy, or rather, the Dauphiness MARY ADELAIDE of Savoy, died on the 12th of February, N. S. 1711-12, of the measles; and the Dauphin, who was then ill of the same distemper, died on the 18th of the same month, in the thirteenth year of his age: which the French King, in his letter to the Cardinal DE NOAILLES, requiring him to pray for the repose of their souls, laments as a very heavy affliction. The Dauphin left two sons behind him, of which the eldest, the Duke of Brittany, soon followed him to the grave, being five years of age; whereupon his brother, LEWIS Duke of Anjou, his present Majesty, succeeded to the title of Dauphin.

His most Christian Majesty having offered such terms to the Queen of Great Britain and her allies as she looked upon to be satisfactory, the Duke of Ormond, by her direction, declared to Prince EUGENE, and the rest of the confederate Generals, that he had orders not to act offensively against the French, and proposed a cessation of arms; but they could not be induced to consent to it. However, in hopes they would at length come into her plan of peace, the Queen afterwards sent orders to the Duke of Ormond to concur with the confederate Generals in the siege of Quefnoy. But this not giving satisfaction to the allies, the Duke acquainted their Generals that he had positive orders to agree to a cessation of arms with the French, declaring he should march off with the British troops, and the foreigners in the Queen's pay, within three or four days. But the foreign troops, it seems, refused to obey his orders, and remained in Prince EUGENE's camp, after the Duke of Ormond was separated from it, which happened on the seventh of July, when the Duke proclaimed a suspension of arms with France for two months, as Marshal VILLARS did in his camp at the same time with England. The allies notwithstanding proceeded to invest Landrecy, which they were soon after obliged to raise, their army meeting with a terrible defeat at Denain: of which, and other unfortunate steps that were taken by them this campaign, having already given an account in the modern history of Germany, I forbear to repeat them here. In the mean time the town, citadel, and forts of Dunkirk were put into the hands of the English troops, in pursuance of his most Christian Majesty's agreement with the Queen of England: and the Duke of Ormond having passed the Scheld, quartered his army in Ghent and Bruges.

But neither the wars of Europe, nor the negotiations that were now carrying on at Utrecht, could divert the Grand Monarch from considering the advantages that might accrue to his kingdom by enlarging the French plantations in America, and encouraging his subjects to trade thither. And therefore on the 14th of September 1712 he granted his letters patents to the Sieur ANTHONY CROZAT, Secretary of his finances; in the preamble whereof he recites, that having given a commission to the Sieur DE LA SALLE in the year 1682, to undertake a discovery of that

CHAP.

1712.

The French King proposes to plant Florida or Louisiana.

CHAP.  
XXXIV.

country in north America, situated between New France (or Canada) and New Mexico; and the Sieur DE LA SALLE having met with such success as to confirm him in the belief that a communication might be settled from New France (Canada) to the Gulph of Mexico, by means of large rivers (the principal whereof is the river of Mississippi, which falls into the Gulph of Mexico); he gave orders after the peace of Ryfwick, anno 1697, for establishing a colony and maintaining a garrison there, which had kept the possession he had taken in the year 1683, of the country situated between Carolina on the east, and Old and New Mexico on the west, to which he had given the name of Louisiana (formerly Florida, and which in reality belongs either to the Spaniards or the English): That new wars having broken out in Europe, there was no possibility of reaping the advantages that might be expected from this new colony till now. They had hitherto been under a necessity of fetching from foreigners the greatest part of the merchandizes and commodities that might be brought from thence, and for which they need only carry thither the product and manufactures of France. For which, and many other important considerations, he grants to the Sieur CROZAT for fifteen years, the sole privilege of trading to and from the said country of Louisiana, &c.

From whence my author very justly observes, that this project of the French King's, if not opposed in time, will probably in the end prove very advantageous to them, and fatal to their neighbours the Spaniards and English. If the discovery of a country already peopled can give the discoverer any right to it, no doubt the Spaniards are the proprietors of Florida or Louisiana, for they actually discovered all the coast from Vera Cruz to the cape of Florida, where they have two fortresses at this time, viz. those of St Mattheo and St Augustino; but as Spain had at this time almost an entire dependance on the Grand Monarch, it is no wonder that she connived at all his encroachments. I can never be of an opinion indeed, that the bare discovery of a large continent, or even the erecting forts and settlements on some part of it, can give the discoverer a title to more of it than he can possibly use or manure. No, admitting it to be unpeopled before, the colonies of every nation that shall arrive there, provided the country be large enough for them all, have a right to so much as they can respectively occupy, and no more. It is not for a great Prince to take a pair of compasses in his hand and describe a space of four or five thousand miles in circumference, (as Florida or Louisiana actually is) and give it his own name, that will in reality give him a title to the country; especially when others have had settlements on the confines of it long before him, as is the case of the English, who possess all the eastern coasts of America contiguous to Florida and Canada, for fifteen hundred miles, and who must, if France maintains her title to what she calls Louisiana, be debarred from extending her plantations on the continent to the westward, and consequently be pent up within very narrow bounds. Nor is this the worst of it, for if the French remain possessed of these countries, they will import the very same merchandize to Europe the English do, and consequently diminish our plantation-trade. Nay, as they lie all along on the back of our settlements, the French may at one time or other increase their regular forces

on that side to twenty or thirty thousand men, and then they will find it no great difficulty to expel us from the best of our settlements, and make themselves entire masters of the sea-coasts and the plantation-trade; which is such a consideration, as one would think should alarm even a British ministry. I do not here descend to examine what right the Spaniards, French, or English, could have to a country that was actually peopled before they discovered it; but as to so much as any of these nations have obtained by treaty with the natives, in consideration of the improvements they have made, as is actually the case of the English in some places, for so much at least they have a certain and undoubted right; but I question whether the Spaniards or French can shew any such right to any part of America. And I can't but think my friend MOLL, and the rest of our English geographers, infinitely in the wrong to follow the French charts in changing the names of the countries and rivers in America, and particularly the countries of Canada and Florida for those of New France and Louisiana, and the names of the rivers Missouri and Mississippi for those of St Philip and St Lewis. But to return to Europe again.

Nothing has made more noise in France, or given more disturbance to the Gallic church, than a decree of the Pope's this year, generally called the Constitution Unigenitus, from the words with which that bull begins, viz. *Unigenitus Dei Filius*. It was made against a book of Father QUESNEL's, entitled, 'The New Testament in French, with moral reflections on each verse: or, an abridgement of the morals of the gospel, acts of the Apostles, canonical epistles and revelation; or, christian thoughts on the text of the sacred books.' Printed at Paris 1693, and 1694. Out of this book were extracted an hundred and one passages or propositions, as the subject of the Pope's censure; of which I shall mention some of the chief, from whence the reader will be able to pass some judgment on the Papal decree.

2. The grace of Jesus Christ, a principle efficacious for all manner of good, is necessary to all good works; without it nothing is done, or can be done.

3. 'Tis in vain, O Lord, that you command, unless you give what you command.

10. Grace is nothing else but the will of Almighty God, governing and doing whatever he willeth or ordaineth.

29. No grace is given out of the Church.

34. The grace of ADAM produceth only human merit.

59. The prayer of the wicked is a new sin, and that which God grants them a new judgment.

73. What is the Church but the assembly of the children of God, living in it's bosom, adopted in Christ, subsisting in his person, redeemed by his blood, living by his spirit, acting by his grace, and expecting the glory of the life to come.

76. Nothing is more extensive than the Church; because it consists of all the elect and righteous of all ages.

80. The reading of the holy scriptures is for all men.

86. To forbid ignorant people the comfort of joining their voice to that of all the Church, is a custom opposite to the antient practice of the Apostles, and even to the intention of God.

92. To suffer excommunication, and an unjust anathema, rather than betray the truth, is to imitate

CHAP.  
XXXIV.The Cog-  
nition,  
Unigeni-  
tus.Proposi-  
tions con-  
demned by it.

CHAP.  
XXXIV.

imitate St. PAUL; far from opposing authority in the least, or breaking the unity.

97. It happens too often, that those members which are most holy, and most strictly united to the church, are regarded as unworthy of being in the church, or as if they were excluded. But the righteous live by faith, and not by virtue of the opinion of men.

101. There is nothing more opposite to the spirit of God, and the doctrine of JESUS CHRIST, than to render oaths common in the church, because 'tis to multiply the opportunities of perjury, and lay snares for the weak and ignorant, and occasions that the name and truth of God serve sometimes for the promoting impious designs.

It is time now to resume the account of the negotiations of peace at Utrecht, where we find that the ill success the allies met with after their separation from the English, induced most of them to come into the plan of peace the Queen of Great Britain had proposed to them; and the Emperor and Empire, who stood out some time longer, made worse terms at last than the Queen had obtained for them.

Treaty of  
peace con-  
cluded at  
Utrecht.

On the thirty-first of March, O. S. or the eleventh of April, N. S. the respective treaties of peace were signed at Utrecht, between the Plenipotentiaries of France on the one part, and the Plenipotentiaries of Britain, Prussia, Portugal, the States-General, and Savoy, on the other; Count ZINZENDORF, the Imperial Minister, at the same time protesting against it as injurious to his master, for the several reasons already mentioned in the modern history of Germany.

By the treaty between France and Great Britain, the French King acknowledges her British Majesty's title, and that of the house of Hanover in default of issue of her Majesty, and promises to dismiss the Pretender out of the kingdom of France, never to return thither again; and that he will never oppose the Protestant Succession. The French King also agrees, that the crowns of France and Spain shall never be inherited by the same person, and that reciprocal renunciations shall be made by the Princes interested accordingly.

He agrees also not to trade to the Spanish West-Indies in any other manner than the rest of the nations of Europe do.

The most Christian King also engages, that all the fortifications of the city of Dunkirk should be razed, the harbour filled up, and the sluices and moles destroyed at his own expence, within five months after the conclusion of the peace, and never be repaired again.

He also obliges himself to restore to Britain the bay and streights of Hudson, with all the lands, sea coasts, rivers, and places situate in the said bay and streights, which were then possessed by France. And it was naturally agreed between Britain and France, to send commissaries to settle the limits between Hudson's Bay and the places belonging to the French, which limits should not be passed either by the French or English by sea or land; and the same commissaries were to be empowered to settle the boundaries between the other British and French colonies.

The most Christian King obliges himself also to deliver to the Queen of Great Britain solemn and authentick letters and instruments on the day of the ratification of this treaty, by virtue whereof the island of St Christopher should be possessed only by the subjects of Britain; and all Nova Scotia, or Acadia, with it's antient boundaries,

the city of Port Royal, now Annapolis Royal, with their dependencies, should be yielded and made over to the British crown, in such manner that the subjects of France should hereafter be excluded from all kind of fishing in the said seas, bays, and other places on the coasts of Nova Scotia, or within thirty leagues to the eastward thereof, beginning from the island called Sable, and stretching thence towards the south-west.

And it was agreed, that the island of Newfoundland, with the adjacent islands, should from that time belong wholly to Great Britain; and the fortrefs of Placentia, and all other places there in the possession of the French, be yielded up to her British Majesty: nor should it be lawful for the subjects of France to erect any fortifications or buildings thereon, unless stages made of boards, and huts necessary for drying fish, or to resort to the said island but in the fishing season. The French however should be permitted to take fish, and dry them on the land, on that part of the said island only which stretches from Cape Bonavista to the north point of it, and from thence running down the western side of the island as far as Point Riche. But the island of Cape Breton, as all others in the mouth of the river of St Lawrence, and in the gulph of that name, should belong to the French King, who might fortify any places there.

That the subjects of France inhabiting Canada or other parts, should not molest the five nations or cantons of Indians subject to Britain, or any other of the natives of America in friendship with them; nor should the subjects of Britain molest those that were friends of France: and on both sides they should enjoy full liberty of going and coming on account of trade, without molestation from either party. But it was to be settled by commissaries, who should be accounted subjects and friends of Britain or France.

His most Christian Majesty also agreed, that a just and reasonable satisfaction should be given to all the allies of Britain, in such matters as they have a right to demand of France.

And in consideration of the friendship of the Queen of Great Britain, he grants, that in his treaty with the Empire, all things concerning the state of religion there, should be settled conformably to the treaty of Westphalia.

The most material articles in the treaty between France and Prussia were, that his Prussian Majesty should enjoy the upper quarter of Guelderland, and the principalities of Neufchatel and Valengin; in consideration whereof, he should relinquish all right and title to the principality of Orange in France.

There was little contained in the treaty between France and Portugal, unless an acknowledgment by his most Christian Majesty that both sides of the river of Amazons in South America belonged to Portugal, and that he relinquished all claim to the use and navigation of the said river.

By the treaty between France and the States-General, his most Christian Majesty obliges himself to deliver up to the States, in favour of the house of Austria, all that he had possessed himself of in the Spanish Netherlands, and which belonged to King CHARLES II, by virtue of the treaty of Ryswick; namely, the duchy, town, and fortrefs of Luxemburg, with the county of Chinay; the county, town, and castle of Namur, as also the towns of Charleroy and Nieuport, with their dependencies. His most Christian Majesty also yields to the

CHAP.  
XXXIV.

CHAP.  
XXXIV.

the States-General, in favour of the house of Austria, all his right to the town of Menin, the town and citadel of Tournay, with their dependencies and appurtenances, except that of St Amand and Mortagne. He also yields up in favour of the house of Austria, Furnes, Furner, Ambacht, Fort Knoque, the towns of Loo, and Dixmude, Ypres with its châtellany, including Rouffelaer and its other dependencies, viz. Poperinguen, Warneton, Commines, and Warwick.

And it was agreed, that no province, town, fort, or place of the said Spanish Netherlands should ever be yielded, or transferred, or fall to the crown of France, or any Prince or Princess of that house, or come in any manner whatever under their power.

The Lords the States-General on the other hand obliged themselves to deliver up to his most Christian Majesty, the town of Lille with its châtellany, Orchies, the country of Laheue and the burgh of la Gourgue, the towns and places of Aire, Bethune, St Venant and Fort François, with their bailiwicks and appurtenances.

By the treaty between France and Savoy, the French King obliged himself to restore to that Prince, the duchy of Savoy, the county of Nice, and in general, all the places he had taken from his Royal Highness during the war. He also yielded and transferred to his Royal Highness, the valley of Pragelas with the forts of Exilles and Fenestrelles, the vallies of Oulx, Sezane, Bardonnache, and Chateau Dauphiné, and all about the water which falls from the Alps on the side of Piedmont. And his Royal Highness reciprocally yields to his most Christian Majesty, the valley of Barcelonetta and its appurtenances; so that the summits of the Alps and the mountains should serve for boundaries between France, Piedmont, and the county of Nice, in such manner, that the plains which are on the said summits and the heights shall be divided, and half of the river flowing from the side of Dauphiné and of Provence should belong to his most Christian Majesty, and those on the side of Piedmont and the county of Nice should belong to his Royal Highness of Savoy.

His most Christian Majesty also agrees for himself and his Catholick Majesty the King of Spain that the kingdom of Sicily, with the islands thereon depending, should be yielded to the Duke of Savoy, and acknowledges his Royal Highness from this time to be King of Sicily.

The cessions made by the late Emperor, also to the Duke of Savoy of part of the duchy of Montferrat, the provinces of Alexandria and Valencia, with all the lands between the Po and the Tanaro, the Lomeline and the valley of Sciffa, the Vigevanese, &c. are confirmed to him.

His Royal Highness of Savoy also is left at liberty to fortify his frontiers for the security of his dominions.

Treaty of  
Rastadt.

The Emperor having carried on an unfortunate war against France for almost a year after the peace had been concluded by the rest of the allies, wherein he lost Landau and several other towns of importance, a treaty was at length concluded at Rastadt between his Imperial Majesty and the most Christian King, on the sixth of March 1713-14. And it was agreed thereby, that the treaties of Westphalia, Nimeguen, and Ryfwick, should be the basis and foundation of this. Particularly his most Christian Majesty agreed to restore to the Emperor the town and fortrefs of Brisac, the town and fortrefs of Friburg, with the fort of St Peter's and

V O L. II.

the Star Fort, and all other forts in the Black Forest, or in Brisgaw, and the fort of Kehl erected on the east side of the Rhine over against the bridge of Strasburg. And it was agreed that the fort of Pile, and others erected in the islands of the Rhine near Strasburg, should be demolished, and the navigation of the said river remain free and open to the subjects on either side.

His most Christian Majesty likewise promises to cause the fortifications erected over against Hunninghen on the right of the Rhine, and the island therein, to be demolished at his charges, as also the bridge built over the Rhine at that place. That the fort of Selingen and the forts in the islands between Selingen and Fort Lewis, should be demolished; as also the fort built over against Fort Lewis, and that it should not be lawful for either of the parties to re-edify the same; but that Fort Lewis and the island whereon it stands shall remain to the most Christian King. And in general he promises to raze, at his own expence, all the forts, intrenchments, lines, and bridges, mentioned in the treaty of Ryfwick, and such as have been erected since that treaty, either along the Rhine, or in it, or elsewhere within the Empire and its dependencies, never to be repaired again.

He promises also to evacuate the castles of Bitseh and Homburg, after the fortifications shall be demolished.

And as the most Christian King designs to re-establish a sincere union with the Emperor and Empire, he promises, that in the treaty with the Electors, Princes and States in the general congress, he will restore whatever has been taken from them during the war.

On the other hand the Emperor consents that the town of Landau, with its dependencies, shall remain to his most Christian Majesty.

He consents also that the Electors of Cologne and Bavaria be restored to all their dominions and territories.

And further, his most Christian Majesty confirms the Spanish Netherlands to the Emperor, with all those countries and places mentioned in the treaty between France and the States General, to be yielded to the said States in favour of the house of Austria.

In pursuance of the treaty between France and Britain, his most Christian Majesty, with abundance of reluctance, demolished the fortifications and filled up the harbour of Dunkirk: and under pretence of discharging the land-floods, caused another canal to be dug in the neighbourhood of it, called the canal of Mardyke, which was found capable of receiving ships of greater burthen than the former. This occasioned heavy complaints among some zealous Britons against the sincerity of the Grand Monarch; and GEORGE Elector of Brunswick succeeding to the British throne about this time, ordered Mr PRIOR, his minister at the court of France, to deliver a memorial on that subject to his most Christian Majesty. Mr PRIOR hereupon represented, that his British Majesty was very much surprized to hear that the said harbour was so far from being filled up, according to the treaty of Utrecht, that as large ships might come up the old canal to the hornwork as ever; and as long as that canal subsisted, it could not be denied that there remained an harbour at Dunkirk a thousand fathom long, which was capable of holding several hundred ships: whereas the words of the treaty were, that *portus comple-*

Mardyke.

The  
French  
King's an-  
swer to  
the British  
memorial.

atur, the harbour should be filled up, and *aggeres aut moles diruantur*, that the dykes or banks which formed the canal should be destroyed. He further represented, that his British Majesty's surprize was still greater, when he was informed, that notwithstanding the words of the ninth article of the said treaty were express, viz. *Ne dicta munimenta, portus, moles aut aggeres denuo unquam reficiantur*, that the fortifications aforesaid, the harbour and dykes of Dunkirk, shall never be re-established, they were actually at work to make a harbour much larger than the old canal, which was to come up, as the old canal did, to the town of Dunkirk; and that they had laid the foundation of a sluice much larger than the former, which served to cleanse the harbour.

If ships then can come up to Dunkirk by the old canal, which was to the north, or by the new, which is to the west, Dunkirk will be equally an harbour, equally troublesome and dangerous to the commerce of Great Britain: in both cases the treaty of Utrecht will be violated. And as the expectation of seeing the ninth article of the said treaty executed in all its parts, was the chief motive that induced Great Britain to accept the peace of Utrecht, his British Majesty had ordered him to make the most pressing instances that the said canals should be filled up.

To this memorial his most Christian Majesty answered, That the words *portus compleatur* could never be interpreted as extending to the old canal, which was very different from the harbour. Nor could he ever have engaged himself to fill up entirely a canal which is a thousand fathoms long; this would have been an incredible labour; and besides, would have been to no purpose, because the sea would in a short time carry off what remained of the dykes.

That the canal of Mardyke was made to carry off the waters of the canals of Furnes, la Moere, Bourg, and Bourbourg, which formerly were discharged by the sluices of Dunkirk, and thereby prevent the over-flowing great tracts of lands. That those four ancient canals were altogether forty-eight fathoms broad, and consequently it was necessary that the new canal should have a sufficient breadth to receive all those waters, and carry them to the sea. It was necessary also that the sluices should bear proportion with the breadth of the canal, and the quantity of the waters which they were to hold, for they were made to prevent the tides getting up into the country, and keep in the waters of the four ancient canals at high water. That these were the motives which obliged the King to cause the new canal of Mardyke to be opened, but he had no view or intention to make a new port at Mardyke, or build a town there.

This dispute between the French and British courts concerning the harbour and canals of Dunkirk, continued till the year 1717, when the French put an end to it by the following concessions, viz.

The most Christian King desiring sincerely to perform every thing that has been heretofore stipulated with the crown of France, and not to omit any thing that the King of Great Britain may think necessary for the entire demolition of the port of Dunkirk, and for removing all suspicion that there was an intention to make a new port at the canal of Mardyke, which might serve for some other use than draining the water which would drown the country, and the necessary com-

merce for the subsistence and maintenance of the people who inhabit that part of the country, which is only to be carried on by small boats, which are not allowed to be above sixteen foot wide; his most Christian Majesty doth engage and promise to execute every thing which the Sieur IBBEVILLE, his most Christian Majesty's Envoy, having full power for that purpose, did agree to at Hampton-Court, as is contained in a memorial of the 19th of September 1716, signed by the Lord Viscount TOWNSHEND and Mr METHUEN, Secretaries of State, on the part of Great Britain; which is as follows: That the great passage of the new sluice of Mardyke, which is forty-four foot wide, shall be demolished from top to bottom; that is to say, by taking away all the bajoyers, boardings, bufs, longrines, and traversines, from the whole length thereof, and by taking off the gates, the wood and iron-work thereof shall be taken asunder; and all these materials may be employed elsewhere, to such uses as his most Christian Majesty shall think fit; provided however, that they should never be made use of for any port, haven, or sluice, at Dunkirk or Mardyke, or any other place within two leagues distance from either of these two places; the intention of the parties contracting, and the end they propose to themselves by this treaty, being, that no port, haven, fortification, sluice, or bason, shall be made at Dunkirk, or the sluice of Mardyke, or any other place whatever along the shore, at such distance upon that coast. That the little sluice shall remain as it is at present as to its depth, provided the breadth thereof be reduced to sixteen feet. The jetties and fascine from the Downs, or the place to which the tide rises at high water, down to the low ebb along the shore, shall be razed on both sides of the new canal, and made level with the shore; and the stones and fascines that are above the said level may be carried away, and employed for such uses as his most Christian Majesty shall think fit; provided however that they never be made use of for any port or haven at Dunkirk or Mardyke, or any other place whatever, within two leagues distance of any of these two places; the intention of the parties contracting, and the end they propose to themselves by this treaty, being, that no jetty (or dyke) or fascine-work, shall ever be made again upon the shore of this coast, at the distance aforesaid on either side. The demolition of the jetties (or peers) on both sides of the old canal of the port of Dunkirk, shall be entirely finished and made level with the ground, over all, from the lowest ebb, to within the town of Dunkirk; and if there shall remain any piece of fort-blank chateauvered, or Bonne Esperance, it shall be totally laid even with the ground. When this treaty shall be ratified, the King of Great Britain, and the Lords the States-General of the United Provinces may send commissaries upon the place, who may be witnesses to the execution of this article.

I proceed now to shew by what methods the French King so long supported the charges of the late war against most of the Princes of Europe. It is very evident that the taxes, how high soever, nor even the rents of all the estates in France, if they had been brought into his treasury, could have enabled him to carry on the war. He found himself under a necessity of seizing all the coin belonging to his subjects, which did not amount to less than an hundred millions in specie: but this indeed he did by degrees, and under specious pretences;

CHAP.  
XXXIV.The ty-  
ranny of  
the French  
admini-  
stration.

CHAP.  
XXXIV.

Alterations made in the value of the coin.

Mint-bills given to the subject for specie.

The money called in, and issued again at a higher value.

pretences; though when he found any of his subjects obstinate, and determined not to part with their money, they were compelled to it by military execution.

This was the grand resource whereby LEWIS le Grand more than once restored his affairs when they were looked upon as desperate. But to descend a little to particulars: The Louis d'Ors, for instance, which were current before the war at eleven livres, was called in and received by the officers of his Majesty's mint at that value; after which the very same piece having received a new stamp, was paid back again to the proprietor at twelve livres, and some time after at thirteen, whereby the King got twenty or forty pence out of every Louis d'Or, without any other charge than the stamp. But the King having still further occasion for money, he ordered all the current species to be brought into his mint, and that it should no longer be taken by private persons. At first he returned other species in lieu of that which was paid at the mint; but under pretence it could not be recoined fast enough to exchange, the officers of the mint were ordered to give bills for the value of the sums they received, which were to be paid on demand when the new species should be coined: by this means he got all the ready money into his hands, and did not pay the bills the mint had given out. This we may be sure exasperated the people sufficiently; whereupon he thought fit to order, that those bills should be taken in all payments for ready money. Nor did they only give out bills for the money brought into the mint, but also for several millions more; so that had the Monarch been so honest to have returned specie for the specie he had received, yet he could never have found specie enough to discharge the supernumerary mint-bills, which had been given the subject in discharge of other debts the crown had contracted. At length these mint-bills lost their credit so much, that the King thought fit entirely to suppress them, and give the people others in the room of them, signed by the farmers and receivers of the revenue, who were ordered to pay off both principal and interest as the taxes came into their hands. But even these new bills were at 35 and 40 per cent. discount, at the conclusion of the peace at Utrecht.

In the mean time the government having parted with almost all their ready money to support the charges of the war, and the species being again come into the hands of the subjects, they found a new expedient to draw it from them, namely, by crying down all the present coin, and ordering it to be brought into the mint under the severest penalties, at the current price, giving the subject a new species, on which they set a much higher value, in the room of it: for instance, the Louis d'Or, the intrinsic value whereof is not more than fourteen livres, they issued at twenty livres, and the silver species in proportion, which brought an immense profit to the crown, but entirely ruined their foreign trade, for strangers held up the price of their merchandize in proportion to what they lost by receiving their coin at such extravagant rates; whereupon they found themselves under a necessity of lowering the coin again, which occasioned unconceivable losses to private people; for a man who looked upon himself, suppose, to be worth twenty thousand pounds in cash one year, the next found it reduced to fourteen or fifteen, notwithstanding the Louis d'Ors, or crowns, he had in his custody, continued numerically the same.

Some monied men however, observing that there were certain times fixed for lowering the coin gradually, thought of an expedient to prevent these losses, which was generally followed in France. They lent their money to merchants without interest for eighteen months (being the time appointed for the last reduction of the coin); and the merchants, in hopes that the profits they should make in that time would exceed their losses by the lowering the species, very willingly took the money, and gave notes for it, and immediately imported such goods from foreign parts as they knew were most wanted in France, particularly salt beef, butter, cheese, and other provisions from England and Ireland, which were then sold at extravagant rates in France. But the market soon became over-stocked with these goods, and they were sold thirty per cent. cheaper than the prime cost. Other people being of opinion that the bills of the farmers and receivers of the revenue would resume their credit on a peace with the Empire, laid out their specie in purchasing those bills at 40 and 50 per cent. discount: but the government finding it impossible to pay off those bills, which amounted to five or six hundred millions of livres, made such bad payments, that these new adventurers were glad to part with their bills again at sixty and seventy per Cent. discount. These practices naturally occasioned the breaking of an infinite number of merchants and bankers all over the kingdom, and reduced the people in general to the most miserable circumstances; which were still heightened by the methods some of them took to prevent their being involved in the common calamity, as the sending many millions in specie out of the kingdom to avoid the loss they were like to sustain by bills of exchange, or exporting their treasure abroad to prevent his Majesty's seizing of it.

In this deplorable condition was the kingdom of France when LEWIS the Fourteenth was summoned to give an account of his administration. He found himself indisposed on the eleventh of August, and on the fourteenth was seized with the cramp, gout, and sciatick pains; on the twenty-fourth however he apprehended himself to be so well recovered, that he designed to have dined in publick, but was afflicted with such sharp pains, that he ordered every body out of the room, except Marshal VILLEROY, with whom he remained in private two hours. He told him that he saw his last hour approaching, and must seriously think on death; and the same day was taken with a violent fever, and a sore he had in his leg appeared to tend towards a mortification: whereupon he thought it proper to receive the Viaticum; and on Sunday the first of September, N. S. about eight in the morning, he expired.

This Prince was the son of LEWIS XIII and ANNE of Austria. He was born the fifth of September 1638, and married MARIA THERESA, daughter to PHILIP IV, King of Spain, anno 1660; by whom he had issue only one son that lived, viz. LEWIS Dauphin of France, who married MARY ANNE CHRISTINA, sister to the late Duke of Bavaria; by whom he had issue three sons, viz. 1. LEWIS Duke of Burgundy, born anno 1682. 2. PHILIP Duke of Anjou, now King of Spain, born anno 1683. 3. GASTON Duke of Berry, born in 1684. LEWIS the Dauphin died anno 1711; whereupon LEWIS Duke of Burgundy, his eldest son, succeeded to the title of Dauphin. This Prince married MARY ADE-

LAIDE, eldest daughter to the Duke of Savoy, now King of Sardinia, anno 1698, and died anno 1712; leaving issue of this marriage three sons, of which the two eldest, stiled Dukes of Britany successively, died soon after him in their infancy; but LEWIS his third son, born anno 1710, survived them all, and sits at present on the throne of his great-grandfather LEWIS XIV, of whose marriage and issue I shall speak hereafter. PHILIP Duke of Anjou, the second son of LEWIS the Dauphin, and uncle to the present French King, succeeded to the crown of Spain anno 1700, by virtue of the late King's will, CHARLES II, whose marriages and issue I shall take notice of in the modern history of Spain. As to the Duke of Berry, the late Dauphin's third Son, he died without issue.

The natural children of LEWIS XIV by Madam DE LA VALIERE were MARY ANNE DE BOURBON, born in 1666, and married in 1680 to LEWIS of Bourbon Prince of Conti, who died without issue by her. By Madam DE MONTESPAN, 1. LEWIS AUGUSTUS DE BOURBON Duke of Maine, born in 1670, who by his wife LOUISA, daughter to the Prince of Condé, has a daughter called Mademoiselle D'AUMALE, born in 1697, and a son LEWIS AUGUSTUS Prince of Dombes, born in 1700. 2. LOUISA FRANCES de Bourbon Mademoiselle de Nantes, born in 1673, and married to LEWIS Duke of Bourbon in 1685; whose children are Mademoiselle de Bourbon, born 1690; LEWIS Duke of Enguien, born 1692; LOUISA Mademoiselle de Charolois, born 1693; and LOUISA ANNE Mademoiselle de Sens, born in 1695. 3. LEWIS ALEXANDER DE BOURBON Count of Thoulouze, born 1678, late Admiral of France. 4. FRANCES MARY de Bourbon, Mademoiselle de Blois, born 1681. His Majesty's only legitimate brother was PHILIP Duke of Orleans, first married to HENRIETTA MARIA, daughter to CHARLES I, King of England, by whom he had one daughter, married to the Duke of Savoy: he was afterwards married to CHARLOTTA ELIZABETH, daughter to CHARLES LEWIS Elector Palatine; by whom he had issue PHILIP Duke of Chartres, late Duke of Orleans, who married FRANCES MARY de Bourbon Mademoiselle de Blois, by whom he had issue the present Duke of Orleans, born anno 1703, and four daughters.

The admirers of LEWIS le-Grand look upon his life as one continued series of wonders; even his birth is esteemed miraculous, his mother having had no issue after a marriage of twenty years and upwards: others on the contrary ascribe this extraordinary birth to the contrivance of Cardinal RICHELIEU, who with the assistance of the Queen's Confessor, had persuaded her Majesty for the good of the church and state to admit the embraces of several gentlemen, among whom the Chevalier LE GRAND, Master of the Horse to LEWIS XIII, was so happy as to give two sons to the royal family, LEWIS XIV being the eldest: but I must confess I give very little credit to the story, the Queen and the Cardinal continuing irreconcilable enemies to the last. As to the person of this Prince, he was tall and every way proportionable, his hair almost black, his features tolerably regular, but his face a little pitted with the small-pox; he danced and performed all his exercises perfectly well: his character will best be discovered by the history of his reign; men seem to think of him very differently, according to the various notions they en-

tain of glory. But I should not be forgiven by my readers, if I neglected to give some account of his amours. He is generally said to have had five avowed mistresses, besides other ladies with whom he may have trifled away an hour or two by the bye.

The first was Mademoiselle DE MANCHINI, Cardinal MAZARIN's niece, more admired for her wit than her beauty: whom the King was so taken with, that he would have married her if the Queen-mother had not found means to divert him from it. When she was sent away, 'tis said, his Majesty shed tears very plentifully.

Mademoiselle DE LA VALIERE, one of the Duchefs of Orlean's maids, was the next; her person was not very engaging neither, she was short and thin, and had a very bad mien, her teeth also were very indifferent, but she had an inexhaustible stock of wit, good humour, and vivacity, which charmed the Monarch, and is said to be the most generous and disinterested of all his mistresses, never importuning his Majesty for any favour for herself or her friends, and behaved herself with that humility and condescension to every body while she was in favour, that she was universally esteemed. This intrigue happened soon after the King's marriage with the Infanta, for whom he had but very little complaisance; whereupon the Queen prevailed on his Majesty's Confessor to lay before him the ill consequences of that way of life; the King thanked the good father for his advice, but let him know at the same time that he had no further service for him. And 'tis observed, that the opposition the King met with in his amours rather augmented than diverted his passion for Madam DE LA VALIERE, who still remained sole mistress of his affections; and so tender he was of her, that being in great danger on her delivery of a daughter, he held her in his arms, crying out to the physicians, Save LA VALIERE, and take my crown. But even this mistress was turned off at length to make room for another; whereupon she retired into a convent, where she is said to have composed half a dozen verses on the occasion, in her own language, which have been rendered into English thus;

*For me the Kings of heaven and earth have strove,  
Which of the mighty two should gain my love.  
But conquering heaven has brought me to this place;  
What earthly happiness can mine surpass?  
Since from the greatest Prince's mistress I  
Am now become spouse to the Deity.*

The Countess of Montespan, a lady of exquisite beauty, succeeded Madam DE LA VALIERE: as she was married, great offers, 'tis said, were made to the Earl her husband to procure his consent; but no considerations could move him to part with her voluntarily; whereupon his Majesty and the lady struck up a bargain without him, and the unfortunate nobleman thought fit to retire into the country, that he might not be witness of his disgrace. The Countess of Montespan made use of the interest she had in the King to advance her own relations; and having a great many children by his Majesty, continued long in favour at court, though she had very little merit besides her beauty to engage the Monarch's heart.

Mademoiselle DE FONTANGE was the next object his Majesty cast his eyes upon; she was a young lady of abundance of wit and good humour, and had the prudence to find out an advantageous match

MAINTENON.

The celebrated Madam MAINTENON succeeded FONTAGNE; she was of the family of Aubigny, and either born in America, or carried thither very young, and was brought to Europe again by the Governor of Martinico: while she was in this family a young Marquis who admired both her wit and her beauty, made his addresses to her. She was a tall woman, well-shaped, and had an agreeable mein; her hair was black, her features regular, and had fine eyes. The Marquis her admirer either never intended to marry her, or satiated with enjoyment, left her: however, he had the honour to make her a present of a purse of pistoles of which she made so good use, that she found means of introducing herself into some of the best families in Paris, where she met with the inimitable SCARRON, who was exceedingly smitten with her charms; his person was indeed somewhat deformed, but as he was a man of quality and estate, and of a most agreeable conversation, she very readily consented to take him for better or worse. This gentleman, 'tis said, took abundance of pleasure in polishing and improving her natural parts: but Madam MAINTENON, or rather SCARRON, had too ambitious a soul to be content with leading a private life, how agreeable soever; having made some acquaintance therefore with Madam MONTESPAN, or some other of the King's mistresses, she found means to make herself known to his Majesty, who was so charmed with her wit, that he thought her conversation too great a happiness for a subject, and thereupon took the liberty of removing her from old SCARRON's bed to his own. As to her person, she was now past her bloom; but her judgment was so improved, that she is said to have had the greatest share in the administration; and in effect to have supplied the place of prime minister as long as she lived. The King had no children by her, but several by her predecessors, as appears in the account of his issue.

LEWIS XV.

LEWIS XV, the only surviving son of LEWIS, Duke of Burgundy, grandson of the Dauphin, and great-grandson of LEWIS XIV, succeeded to the crown of France on the first of day of September 1715, N. S. being then in the sixth year of his age. The late King by his will appointed a council of Regency, consisting of the Duke of Orleans, the Duke of Bourbon, the Duke of Maine, the Count de Thoulouse, the Chancellor, the President of the royal council, the Marshals VILLEROY, VILLARS, UXELLES, TALLARD, and HARCOURT, the four Secretaries of State, and the Comptroller-General of the finances; and ordered that the person of the minor King should be under the guardianship of the said Council of Regency; that the Duke of Maine should have the guardianship of his Majesty under the authority of the said Council, and the Duke of Villeroy be his Governor under him; and that all the officers of the King's guard and household should obey the Duke of Maine's commands with respect to the person of the King minor, his guard and safety. He further ordered, that all affairs which were to be determined by the King's authority, either concerning war or peace, the disposal and administration of the finances, the nomination of persons to bishopricks, abbeys, and other ecclesiastical dignities and benefices; the appointing the officers of the crown, Secretaries of state, Comptroller of the finances, and all officers of the army and

VOL. II.

navy; the officers of the courts of judicature and finances; the Governors and Lieutenant-Generals in the provinces and towns; the staff-officers, and officers of the household; and generally all offices, commissions, and employments, the filling whereof belonged to the King, should be considered in the Council of Regency, and determined by a majority of votes.

Notwithstanding the late King had appointed a Council of Regency, the Duke of Orleans, who was next heir to the crown in case of the death of the minor King, claimed the office of Regent as due to him by his birth, to which he obtained the concurrence of the parliament of Paris, and thereupon assumed an authority equal to their greatest Princes; nor was Lewis XIV himself ever guilty of more arbitrary and destructive measures, which the Duke endeavoured to excuse from the necessity he was under of extricating the crown from that load of debts with which he found it oppressed; for at the Grand Monarch's death, it is said, that the government was no less than three hundred millions sterling in debt, besides the vast sums they had struck off by raising and lowering the coin, &c.

The Regent, as usual at the beginning of an administration, published some popular edicts; by one of which he restored to the parliament of Paris their ancient privilege of debating and considering acts of State that were transmitted to them before they passed them.

By another edict dated the 12th of October 1715, he tells them, that being fully persuaded of the indispensable necessity of keeping the gold and silver species on the foot they were then fixed for ever, (being about the intrinsic value) for preserving a just balance in commerce, which was the basis and foundation thereof, the King ordained, that the last value set upon the species of gold and silver, should remain for ever fixed without alteration, viz. the Lewis d'Or at fourteen livres, the crown piece at three livres ten sols, and the other species in proportion. But the Duke of Orleans finding himself settled in his regency without opposition, within a month afterwards published another edict, whereby he raised the Lewis d'Or to twenty livres, and the other species proportionably, on it's being issued out of the mint; though at the same time he obliged the subjects to pay them into the mint at sixteen livres: so that here the government gained at once a fifth part of all the money in the kingdom. To make this still more plain, every person who brought five Lewis d'Ors or five crowns to the mint, received back but four in return, only the government were pleased to set the same value upon the four, as the five went at when they were paid in; and in this there might have been no great hurt, if those they dealt with, and especially foreigners, had not raised the price of their goods in proportion to the rise of the coin: but a Lewis d'Or, whose intrinsic value was but fourteen livres, would purchase no more merchandize when it was raised to twenty, than it would before, which inclined the balance, prodigiously against them.

Another method the Regent took to raise money, was the erecting a new court of justice, called the *Chambre Ardente*, to call all such persons to an account, as had been concerned in the management of the publick revenues during the late war, out of whom he extorted very considerable sums, to the great satisfaction of the people, who were pleased to see the instruments of their oppression

punished, and obliged to refund their ill-gotten treasure.

About the same time the Pretender and some of his adherents having embarked for Scotland in the ports of France, the Earl of Stairs, the British minister at that court, presented a memorial to the Regent, complaining of it: but this seems to have been all grimace, for the Regent constantly gave notice to the British court of the Pretender's motions from time to time; and if he did not stop those few officers and arms that were sent to Scotland, it was either because the opposing the Chevalier at that time of day, would have disoblged a considerable party in France, or because he knew those small supplies could be of little service to him; and besides his conniving at it might serve to conceal that intimate correspondence there was all this while between the Regent and King GEORGE, which proved the ruin of the Pretender's designs.

1716-

The disputes concerning the Constitution Unigenitus gave no small disturbance to the beginning of the Regent's administration; each side hoped to gain him over to their party, and wrote and preached with all the bitterness imaginable against one another. At length he hoped to have accommodated the matter between them, by issuing an edict, commanding the recusant bishops to accept it, with certain explanations. But this was far from putting an end to the controversy, both parties appeared still more exasperated than ever.

The poor Protestants were in great hopes the penal laws against them would have been relaxed during the Regent's administration; but either he never intended them any such favour, or he did not think fit to disoblge so great a body as the clergy, who perpetually importuned him to put the laws in execution against them. Nor do we find their sufferings at all abated during the Regent's ministry; all that the King of England could prevail with the Regent to do, was to release three or fourcore of those unhappy wretches from the galleys, who had been sent thither purely upon the account of religion.

A dispute  
between  
the Princes  
of the  
blood, and  
the late  
King's  
base issue.

The late King having legitimated his base issue, and conferred the same privileges on them as those born in lawful wedlock, the latter preferred a petition to his present Majesty and the parliament on the 23d of May 1715, desiring he would revoke and annul in his seat of justice, the edict of the month of July 1714, which gives to LEWIS-AUGUSTUS of Bourbon Duke of Maine, and to LEWIS-ALEXANDER of Bourbon Count of Thoulouse, and to their descendants, the right of succeeding to the crown: as also the declaration of the 23d of May 1715, which gave them the title, honours, and rank, of Princes of the blood.

Signed,

LEWIS-HENRY de Bourbon,  
CHARLES de Bourbon. And,  
LEWIS-ARMAND de Bourbon.

The Duke of Maine, in answer to this petition, published a memorial, wherein he asserts that such a petition could not be received in parliament, because it requires them to abolish an edict which they themselves had solemnly registered, and to reverse their own decrees. That the Duke of Bourbon himself also, and the rest of the petitioners, had

given their consent to the same edict, and therefore it was at least very indecent for them to endeavour to destroy it. That the granting such a petition would be of dangerous example to the state, the people would apprehend that there was nothing firm and settled, and that edicts and arrests might be subverted at pleasure.

To this the Princes of the blood replied, that both the parliament and themselves were under a force when they consented to those edicts, and it would have been to no purpose to have opposed them in the late reign. That the King could not alter the constitution of the kingdom, and transfer the kingdom to his illegitimate issue or foreigners, and that such acts of state therefore were void. But to this I perceive it was answered, that as the Kings of France were vested with the legislative authority, they might repeal or enact what laws they saw fit, and could not be bound by the edicts or customs of their predecessors.

The Peers of France interested themselves in behalf of the Princes of the blood, and presented a petition to his Majesty, insisting that he would annul and revoke the edict and declaration above-said, which gave the Duke of Maine and the Count of Thoulouse the first rank after the Princes of the blood, and vested them with a right of representing the antient Peers at the inauguration of their Kings.

This occasioned a petition from the Duke of Maine and Count de Thoulouse to his Majesty, desiring that he would determine nothing in this affair till he came of age; but in July 1717, an edict was published, whereby the King revoked and annulled the edict of 1714, and the declaration of 1715; decreeing however, that his uncles, the Duke of Maine and Count of Thoulouse should continue to receive the honours they had enjoyed in parliament ever since the edict of 1714, but that they should neither of them be styled Princes of the blood for the future.

An edict  
in favour  
of the  
Princes of  
the blood,  
1717.

The Czar of Muscovy, a Prince whose curiosity was never satisfied, arrived at Paris this summer, and had the satisfaction of viewing every thing that was worth taking notice of in that city and the neighbourhood of it. He afterwards visited the fortifications in Flanders, and especially those of the city of Namur, with which he was extremely pleased.

This year the French Court, in order to discharge that immense debt which had been contracted by the government to support the late war, laid the foundation of the famous Mississippi or India company, which was to carry on a trade to Louisiana or Florida with a stock of fifty millions of livres, and shares were to be purchased in it with state-bills. This project appeared so advantageous, that above thirty millions of livres were immediately subscribed into it: and together with the annuities, lotteries, and other methods proposed for disposing of state-bills, they were in expectation of discharging great part of their debts very suddenly. But the court had recourse to many other projects for raising money before this scheme was brought to perfection. That which was most grievous to the subject was the frequent alteration in the value of the coin, which the Duke of Orleans carried much farther than ever LEWIS XIV had done. When he found the people would be no longer imposed upon and wheedled out of their money, he robbed them of it by plain force, as will appear hereafter.

Representa-  
tion of the parlia-  
ment a-  
gainst the  
alteration  
of the  
coin.

The government having at this time got most of the money of the kingdom into their hands, re-coined it, and raised the Lewis d'Or to 36 livres, obliging those who had any state-bills, or old specie in their hands, to bring them to the mint and take new specie in the room of them, whereby they cheated the people at one clap of two hundred millions of livres. The parliament observing how prejudicial this practice would be to the publick, made a representation to the Regent against it: to which it was answered, that the matter had been duly considered, and could admit of no alteration.

The parliament not satisfied with this answer, drew up another representation, setting forth the unreasonableness of this edict, wherein they demonstrate, that a man who carries 125 marks of silver to the mint, which makes 5,000 livres at the rate of 40 livres to the mark, and 2,000 livres in state-bills, receives back 7,000 livres in new species, which weigh but 116 marks, consequently he lost nine marks out of 125 he carried thither, and all his state-bills over and above; and that foreign trade also would suffer an immense loss by the difference between the value the new edict gave to the species and their intrinsic value. The Regent told the parliament he did not send the edict concerning the new species to them to debate upon, but to register it, and that they had nothing to do to intermeddle in the affair. But this body, to whom his Highness at the beginning of his administration pretended to restore their privileges, would not part with them again so easily: they took upon them to prohibit all persons to receive or tender the new species in payment. However, after a long struggle the Regent let them know he would be obeyed; and they found he meant no more by all the glorious promises he had made them, than by their assistance to establish his tyranny, and now he looked upon himself to be secure, had no further regard to them.

The Court of Aids however were not discouraged from addressing his Majesty on the same subject: they shew, that the dearth of provisions and materials, occasioned by raising the species, would be the utter ruin of their manufactures: that their artificers, which former alterations of the coin had driven into neighbouring countries, had instructed them in the perfection of their arts, and enabled them to make all those things in which the French formerly excelled; and by a fatal reverse, that which foreigners formerly fetched from France, and purchased with treasure, they now imported from abroad, and enriched other countries with their gold and silver. That not only their workmen would be driven abroad, but many other people, whom the excessive price of provisions made it impossible to subsist here. That even in times when the kingdom was reduced to the greatest extremity, the alteration of the coin had never been carried to such an excess as now; whereas they had been promised on the word of a King, which ought to be sacred, that the species, should be reduced to its just value as soon as the war was ended. That after they had been drained for so many years to secure his Majesty in the possession of his throne against a numerous confederacy, they were like to meet with no other reward, than an edict which threw them into domestic feuds, and overturned all their fortunes; an edict which without the name of a supply, laid upon them the most heavy tax that was ever heard of.

While the finances were in the utmost confusion in France, and the Duke of Orleans was taking these oppressive and arbitrary measures to discharge the publick debts, which had exasperated all degrees of men in the nation, the King of Spain meditated how he might reunite those kingdoms and provinces to the Spanish monarchy which had been mismembered from it during the late war: he seems also to have had a design upon the regency of the kingdom of France, and the succession to that throne in case Lewis XV had died, who enjoyed a very indifferent state of health. The opportunity seemed extremely favourable; for the Emperor was then engaged in a war with the Turk, and the intestine troubles he observed in France were sufficient to discourage them from entering into a foreign war; and as to the English and Dutch, the advantages they enjoyed by their commerce with Spain, he hoped would prevent their interposing in the quarrel. The Spaniards therefore having fitted out the best fleet they had been masters of for many years, and assembled a powerful army, it was thought at first they had a design against the Emperor's dominions in Italy, which occasioned an alliance between the Emperor, France, and Britain, for the security of their respective dominions. The Spaniards however proceeded to invade the island of Sardinia, then in the Emperor's possession, and made themselves masters of it in the year 1717. The following year they made a descent in Sicily, of which the Duke of Savoy had been made King by the treaty of Utrecht, and almost the whole island revolted to them: but a further alliance having been entered into between the Empire, France, and Britain, which obtained the name of the Quadruple Alliance from the number of the parties upon the States-General acceding to it, it was resolved to oppose the designs of the Spaniards with all their might. Accordingly his British Majesty sent a fleet into the Mediterranean, which defeated the Spanish fleet, and transported such numbers of the Imperialists from Naples to Sicily, as soon put a stop to the progress of the Spaniards there, and the French prepared to attack them on the side of the Pyrenees; so that the war appeared wonderfully unequal, the poor feeble kingdom of Spain engaged with four of the most potent Kingdoms and States in Europe. And as it might reasonably be expected, the Spaniards were obliged to accept of such terms as the Confederates were pleased to grant them; they had lost Port-Pasage, Fontarabia, St Sebastian, and the whole province of Guipulcoa; nor could they have hindered the French army from penetrating even to Madrid, if they had not prevented it by accepting a peace.

This attempt therefore of the Spanish Ministry to disturb the peace of Europe, at first sight appears very romantick: but it must be considered, that when they entered upon it, as the Emperor was engaged in a war with the Turks, they could not foresee the success of their arms, or the peace that followed with the Mahometans. The King of Spain also had a considerable party in France; nay, it is questionable whether there were not three parts in four of the nation for him, who would have been glad to have been under his administration, rather than that of the Duke of Orleans. But it must be acknowledged that his Catholic Majesty did not sufficiently consider, what a fine army of veteran troops the Duke of Orleans had in his pay, an army sufficient to suppress all malecontents

malecontents at home, and to have made a conquest of the Spanish monarchy, if he had not been supported by one ally. Admitting it to be true, that the Duke of Orleans had no other friends but the soldiery, which were not the hundredth part of the nation, yet the man that commanded that hundredth part with arms in their hands, as CROMWELL upon a like occasion observed, would make no difficulty in subduing the other ninety-nine, the unarmed multitude. There is no depending on the murmurs or discontents of a people, how oppressed soever, where there is a vast standing army of regular troops: it is on these every monarch and state in Europe depends at this day, much more than in the affections of their subjects. Another very gross mistake the Spaniards made, was, that the British ministry would so far consider the interest of trade, that they would not fall out with them. That the British trade suffered extremely by this conduct, is very evident; but whether the ministry ever concerned themselves much about it, still remains a very great question. As to the Dutch, they did not come into the quadruple alliance till late, and then with so many restrictions, that they did themselves no great hurt. I come now to the terms on which the peace was made, which in short were these, that the Spanish forces should evacuate Sicily and Sardinia, and that the King of Spain should accede to the quadruple alliance. As to the conquests the French had made in Spain, it was agreed they should relinquish them; but they were not obliged to make satisfaction for the men of war they had destroyed at Port Passage, or any other depredations; though the English are still obliged to make good the ships *SIR GEORGE BYNG* destroyed near Sicily.

Quadruple  
Alliance.

By the quadruple alliance (the foundation of this peace) the Emperor renounced all right to the dominions of the Spanish monarchy, whereof his Catholick Majesty was acknowledged the rightful possessor by the treaty of Utrecht, and acknowledged PHILIP V, to be lawful King of Spain, and the Indies. King PHILIP, on the contrary, renounced all right to the Spanish dominions which his imperial Majesty possessed in Italy or the Netherlands.

And by the fifth article it was agreed, that in case of failure of male-issue of the Dukes of Tuscany and Parma, the Queen of Spain's eldest son should succeed to those duchies; and if such son should succeed to the crown of Spain, then they should be inherited by her second and third son successively, and so on.

And it was agreed, that it never should be allowed during the lives of the present possessors of the duchies of Tuscany and Parma, or their male successors, that any forces, either of the Emperor's or the King of Spain's, or even of the Prince appointed to succeed, should be introduced into the said duchies: but for the security of the said succession, garrisons not exceeding six thousand men, should be put into the principal towns thereof, consisting of Swiss troops, to be paid by the contracting powers, and that they should take an oath of fidelity to the present possessors. And lastly, the said parties guaranty to each other their respective territories and possessions.

The King of Sicily having acceded to this treaty, agreed with the Emperor to exchange the island of Sicily for that of Sardinia; which we cannot suppose he did very willingly, but the Emperor was now in possession of Sicily, and the contract-

ing powers had agreed it should be so, and he was from this time called King of Sardinia.

CHAP.  
XXXIV.

Notwithstanding the French were generally inclined to King PHILIP in this war with Spain, they were kept in such awe by the standing forces, that I don't perceive there was any considerable insurrection in his favour: the Duke of Richlieu and several great men were secured on a suspicion of being in that interest. A court of justice also was erected in Britany, where the malecontents were most numerous, and several men of quality executed for corresponding with the enemy; and no doubt the other provinces would have declared for the King of Spain if he had been superior in the field; for never was any country so peeled and plundered by an avowed enemy, as the subjects of France were during the Duke of Orleans's administration.

The next project the Court fell upon to raise money was the establishing a royal bank; in the preamble to the patent for it the most Christian King recites, that the *Sieur LAW*, soon after his accession, having presented him a project for establishing a bank, the funds whereof should be part of the royal revenue, it was examined in council, but the conjuncture not being favourable, the *Sieur LAW* then desired permission to establish a bank on account of himself and such a company as he should form, which was granted him in May 1716. The fund was to consist of six millions of livres, making 1200 actions or shares of 1000 crowns in bank each, payable to the bearer, wherein both subjects and foreigners might be interested; the usefulness of which establishment in remitting the publick money without draining the provinces of their specie, induced his Majesty to grant him his protection. That the success of this project occasioned the examining it again, and the King having found it very agreeable to the general good of commerce and to the benefit of the subject, it was thought proper the said bank should be continued under the royal name and authority; for which end the King had purchased all the actions or shares in it, and was become sole proprietor of them. For these causes, &c. he declared and ordained, that from the first of January 1718-19, the said bank should be deemed a royal bank, and a director of it established by the crown, who should receive his orders from the Duke of Orleans.

Royal  
Bank esta-  
blished in  
France.

This declaration being sent to the parliament of Paris to be registered, that body disapproved the project: they foresaw probably that they should be obliged to take bank-bills for their cash, which in time might have as little credit as other state-bills. The Court, however, determined to carry on the design without their concurrence, and published another arret thereupon, enjoining all men to look upon the said declaration as registered in parliament, notwithstanding it had been refused. His Majesty also declared further, that before the first of March, besides the general office at Paris, there should be established particular offices in the towns of Lyons, Rochelle, Tours, Orleans, and Amiens, consisting of two chests, one of ready money to pay bills on demand, and the other in bills to deliver to such as wanted them. That the species of bellon [a base mixed metal] and copper coin, should not be tendered or received in payments exceeding six livres: and as to the species of silver, it should not be received in payment in any of the said towns in sums exceeding six hundred livres, but that all great sums should be paid in specie or bills.

CHAP.

ged by the  
court.

About the same time the court of France encouraged another project formed by Mr LAW, which was to transfer all the privileges of the East-India company to that of the Mississippi or West-India company, and unite them both in one patent under the title of the India company; and to their present capital, which already consisted of an hundred millions of livres, they were permitted to add five and twenty millions more.

As a farther encouragement to this great company, the Treasurer of the royal bank was ordered to deliver them bank-bills to the value of twenty-five millions of livres, in order to promote their traffick to Louisiana: and in July 1719, in consideration that the said India company had agreed to advance the government fifty millions of livres in specie, they obtained the grant of all the advantage arising from the coinage of gold and silver for nine years. An arret also was published for enabling the directors of the bank to issue two hundred and forty millions in bank-bills, which with those issued out before, made their stock to consist of four hundred millions of livres.

Mississippi  
stock  
rises.

In August 1719, India or Mississippi stock had obtained such credit, that it was advanced to 900; that is, every share of 100 livres was sold for 900, notwithstanding there had been no dividend of any profit. This success put Mr LAW upon the boldest attempts that ever were heard of: he undertook to advance the government twelve hundred millions of livres at three per Cent. interest, towards the discharge of the annuities and other national debts; and to give fifty-two millions per annum for the general farm of the King's revenues, which was three millions and a half more than the present farmers gave: both which offers the crown accepted, and in consideration thereof enlarged their term to fifty years, to commence from January 1719-20. The company were also empowered to borrow the sum of twelve hundred millions of livres, in consideration of their having advanced the like sum for the government.

It was very much doubted whether the India company would be able to borrow so vast a sum as 1200000000 of livres at so low an interest as three per Cent. but the nation was at this time (September 1719) so insatuated, that it appears they might have borrowed twice that money by the methods they took. The first essay they made was by selling out actions or shares to the amount of fifty millions of livres at the rate of 1000 per Cent. (the price of the stock being then at 1100) This was immediately filled, whereby the company gained five hundred millions at once. Upon this encouragement they sold fifty millions more at the same rate, which were purchased in one day. Whereupon a third fifty millions were sold, for which they also found purchasers in one day's time: so that the company, instead of twelve hundred millions, offered to lend the government fifteen hundred millions. This indeed was all imaginary wealth; but it may be observed from hence, what an immense debt the crown of France still lay under, when fifteen hundred millions of livres, or one hundred and fifty millions sterling, would not discharge it, notwithstanding the many extraordinary means that had been taken to lessen it since the war.

The French nation, according to my author,  
VOL. II.

was wonderfully pleased at this time: they thought themselves all rich, their lands were raised to twice the value, they expected wonderful profits from the India company, their bank-bills were preferred to ready money, and no man thought it worth his while to attend his proper trade or business, they were all jumping into estates at once.

To keep up the credit of bank-bills, of which there had been made out to the value of six hundred and fifty millions of livres, an arret was published in December 1719, which among other things, cries down the current species in a manner, and ordains that no tender in ready money should be good, and that only bank-bills should be accepted in payment; and the bank-bills were at length increased to a million of millions. The design of the administration in this step began to be suspected, namely, that they intended to get all the ready money of the kingdom into their hands, and pay their debts with paper, which kept up its credit no longer than while the ministry had served their ends by it: however, Mr LAW, for the great service he had done the court, in bubbling the people out of their cash, and to give a credit to his scheme, was in January 1719-20 made Comptroller of the finances.

Mr LAW  
made  
Comptrol-  
ler of the  
finances.

On the 30th of December a general assembly of the India company was held at the house of the royal bank, in the presence of the Duke of Orleans Regent, the Duke of Chartres, and the Duke of Bourbon; where the management of the directors was approved; and it was agreed to divide forty per cent. their stock or actions being sold at this time at 1885, and subscriptions at 1330 per cent. The Lords, and others who had enriched themselves by India stock, thought they could not better secure their wealth than by purchasing jewels with it, and accordingly great sums were sent out of the kingdom for this purpose, which occasioned the publishing an arret prohibiting the wearing of diamonds, pearls, and precious stones, on pain of forfeiture, and a penalty of ten thousand livres; forbidding on the like penalty to import the same into the kingdom.

The Court also suspecting that a great deal of treasure was hoarded up by private men, issued an arret raising the value of it, and permitting the merchants to lend it abroad for the purchase of merchandize, which occasioned every body to bring it out, and discover what they had: whereupon the government immediately published another arret, lowering the value of the gold and silver specie, and requiring every person to bring it into the mint and take bank-bills for it, on pain of forfeiture; and because they imagined people would still endeavour to hide it, they gave the India company a power of entering all noblemens houses and convents, as well as those of private people, and to search for specie; nor were the royal palaces excused: which, 'tis observed, was such an act of tyranny as the reign of Lewis XIV could never parallel. These cruel and oppressive practices, with the Court's disposing of all their stock at once, tumbled it down as fast as it rose, and an infinite number of unfortunate wretches found themselves ruined in an instant. And left the people should convert any of the coin they had left, into plate, the making of gold plate above an ounce weight was absolutely prohibited; as was the making of silver plate without the King's permission, which was to be granted only for table-plate of a certain weight. It appears that within

three months before this prohibition, by an account  
16 P count

CHAP.  
XXXIV.

count taken from the books of the silver-smiths in Paris, they had made an hundred and twenty thousand dozen of plates, besides dishes, and other plate in their possession; and reckoning each dozen of plates at sixty pounds sterling, the value of the plates only amount to seven millions two hundred thousand pounds sterling.

1720.

In the year 1720, the ministry published an arret, whereby Mississippi or India-stock was reduced to 500, and bank-bills, which the Court had paid away as ready money, were reduced to one half, a bill of a thousand livres being declared to be worth but five hundred; and indeed their credit was now so very low, that people refused to take them for any thing; whereupon another arret was issued, to oblige the people to take them. This threw every thing into confusion, and the Regent was forced to place guards in the market-places to prevent tumults; no body would part with their goods without four times the value of them. Money growing extremely scarce, the Court, in order to render it more plentiful, repealed their edicts, which prohibited people to keep money by them, and ordered them to re-call all the money they had sent abroad into foreign countries, on pain of forfeiting double the sums they had beyond sea. They also obliged them to sell all their jewels to foreigners, which was supposed would occasion a great deal of specie to be imported.

In the mean time the publick debts seem to be as far from being paid as ever, unless wiping off part of the score may pass for payment. The government, 'tis true, had paid them in India stock and bank-bills, but then those bills ought to have been paid when the bearers came for their money; instead of which, comes out an arret, which has been mentioned already, that they should pass for half the original value, so that here at one dash the ministry got rid of half their debts; but this would never be called payment among private men, it would rather be deemed downright robbery. Nor did the government do their business by halves, but before the end of the year bank-bills and paper-money was cried down, and nothing received in payment but the gold and silver species. About the same time Mr LAW was removed from all his employments, and obliged to leave the kingdom to satisfy the clamours of the people: the government however were so grateful to him, for putting them in a way to pay their debts by cozening the subject, that they suffered him to carry off an immense treasure, and even assisted him in his retreat, and screened him from the fury of the people, from which he might have found it difficult otherwise to have escaped. The general farm and the coinage were soon after taken from the India company, and every thing returned to its usual channel. As to the commerce with Louisiana, this by consequence came to nothing; nor did those in the secret ever hope to make much of it; though to bubble and amuse the people, they were at the charge of fitting out and freighting an hundred ships, with which they never attempted to make one single settlement, or carry on any one branch of trade, so that it appeared in the end to have been only a foolish and unnecessary expence; whereupon the Mississippi or India company was absolutely dissolved, and the trade to the East and West-Indies put on another foot.

The ravages made in France by the Mississippi project, and the oppressions of the government,

were not the only misfortunes that befel that people this year, for South France was visited also with the plague, which swept away a multitude of the inhabitants. It was brought to Marseilles by a ship that arrived there from Sidon, on the 15th of June 1720, N. S. The porters employed in unloading the vessel, were immediately seized with violent pains in the head, reachings to vomit, and a general faintness; soon after they broke out in blotches and buboes, and died in three days. But the magistrates of Marseilles apprehending that the trade of the city would be lost, if the report of their having the plague amongst them prevailed, gave out that the distemper was only a malignant fever; whereupon the merchants went to the fair of Beaucaire in Languedoc, as usual at this season, and by that means dispersed it through all the southern provinces. In Marseilles alone, it was computed, that in the month of September there had died no less than forty thousand people.

The government were no sooner acquainted that the distemper which carried off such numbers in Provence was the plague, but they ordered all communication to be cut off with the places infected, and published an edict, containing rules and directions to be observed during this calamity, which very well deserve a place in the modern history of France, though by no means fit to be imitated in countries that have any remains of liberty or property left.

As soon as the King's commanding officers have notice that any places are affected with the contagion, they must without the loss of one moment, cause them to be invested at the distance of half a league, or thereabouts, so that such a part of ground may be left as may afford them the most necessary supplies for their subsistence. They are at that distance to dispose into barracks the troops which form the blockade, and to post their corps de garde so near, that they may see each other, or easily hold communication by the sentinels, to keep patrols continually all night long, and to employ officers of good understanding, vigilant, and inflexible, to take care of the blockade.

If the distemper spreads into houses situate at distance from others, so as that they cannot possibly be included within the blockade, it is left to the prudence and discretion of the commanding officer, after he shall have given orders for removing the sick of such houses into the nearest infirmaries, and for the conducting those who remain sound into houses for quarantine, either to cause the doors and windows of the aforesaid houses to be fastened up, or to burn them if he judge it necessary.

As there are few places where the inhabitants finding themselves blocked up, do not attempt by force to open themselves passage and recover liberty, it is proper to cause orders to be published and affixed, forbidding any on pain of death to stir out of the places blocked up; and if, notwithstanding such prohibition, any preparations be made to force the blockade, the officer who commands is not to hesitate a moment, but to advance with the best of his men, having their bayonets at the muzzles of their pieces, in sight of the places blocked up, and threaten the inhabitants to burn their houses and goods, and to put them all to the sword, if they offer to make any such attempt; yet without firing upon them, unless it be very proper, and in case of necessity.

If by accident some of the inhabitants should escape the watchfulness of the guards, they must, whithersoever

CHAP.  
XXXIV.

The plague brought into France from Turkey.

Rules observed in the countries infected.

CHAP.  
XXXIV.CHAP.  
XXXIV.

whithersoever they go, be pursued and taken with precaution, so as that they may not communicate the infection; and being brought back within their own bounds, they shall be shot dead in the view of their fellow-townsmen: an example absolutely necessary for keeping them under due restraint.

Within the extent of the blockade, two barriers are to be fixed at the nearest places, for furnishing the inhabitants of the place blocked up with what they may want, on settled days of the week. A prudent officer should be placed at each barrier with a detachment, to prevent communication; and there must be vinegar there, in which the money is to be dipped, as well as all letters, which are to be sent open, and not under cover, or folded up.

All dogs and cats are to be killed, as well within as without the blockade, for a league distance at least; experience having shewn, that though those animals are not affected with the distemper, they frequently communicate it.

No persons must be suffered to come to the posts of guard at the blockade, to speak to any whomsoever, that being to be permitted only at the barriers; otherwise great inconveniencies may happen.

The commanding officers shall forbid, on pain of death, the troops who form the blockade to advance ten foot from the line towards the place which is blocked up; and shall order the guards at the posts to fire upon their comrades who shall transgress this rule. This precaution is absolutely necessary for preventing the communication of the soldiers with the infected places.

It is of great importance, that five or six leagues round the places infected, all the towns, villages, and cottages should be shut up, were it only with ditches, and that there should be no entrance but at one passage only, where a barrier should be placed with a good guard, to examine passengers, their baggage or goods, and peruse the bills of health, which they ought to carry about them. As to this inclosing or shutting up of such towns and villages, all that is possibly practicable ought to be done.

The bills of health ought to contain the particulars, quantity, and quality of the movable baggage or merchandize, which the persons presenting such bills have with them; and if they have any thing found with them, besides what is specified therein, the same shall be burnt without remission, and the bearers of such bills shall be put into prison for some time, and be liable to greater punishment, according to the degree and consequences of their offence.

The commanding officers shall warn the consuls, or other municipal officers, not to give bills of health, especially in the case of removing from usual habitation, but to such persons only whom they are very sure of, and they shall be careful to stop all those who shall be suspected of having counterfeit bills; and if any one so stopped shall make his escape, they shall cause him to be pursued, and when taken, shot dead.

The said commanding officers shall take care to send to the officers at the barrier of the blockade, a list of the current price of each sort of provisions, or other commodities, with order to cause them to be delivered at those rates, for the avoiding the exactions to which the inhabitants of places blocked up are exposed. But this article ought to be executed with great prudence and circum-

spection, lest the neighbours should be discouraged from bringing supplies to the barriers; it being better to let goods be sold a little dearer, to places shut up, than to put them to the risque of wanting them. The chief officers ought also to be very careful to chuse in the places infected, some person capable of commanding there, with a number of armed men who may be depended upon, to see the orders of the municipal officers executed, and to give all encouragement to the latter, to acquit themselves well of their duty, by animating them even by promises of rewards from court, upon the representations which those commanding officers will send thither of their conduct.

Within the places infected, the first care of the commanding officers and of the municipal officers, should be to establish one or more infirmaries, according to the necessities and the abilities of the place infected, they ought to chuse as much as is possible for this use houses separate and distant from the place, and see even whether they cannot set up barracks for receiving the sick, which many think is much the better method.

Whatever place is chosen for an infirmary, care must be taken to cause the sick to be carried thither, upon the first tokens of the plague that appear upon them.

It is necessary besides to have other houses, some of which should be appointed for receiving those who grow well, as soon as they are in a condition to be removed thither; and others for those who tended the sick, or who staid with them, to perform quarantine in.

The houses which shall be appointed for these two uses should also be chosen at some distance from the other houses of the places infected.

When a rich person is carried to the infirmary, his quilts and sheets should be carried thither with him, and the straw-mats and bed-cloths, the wearing apparel and linnen which were used about the body of the sick, must be burnt, it not being sufficient to sleep and wash them with wood-ashes, which in several places has not prevented the communicating of the contagion by such linnen.

At the time the sick are carried into the infirmaries, care must be taken to have their houses perfumed with a strong perfume, then to set open the windows, and keep the door fast forty days, after which it must be perfumed again, in the ordinary manner, for it's thorough disinfection, before any be permitted to dwell in it.

To these directions is annexed the receipt of a perfume which has been used in Provence with success.

It is necessary to have a number of men that can be depended on, always armed, to make those who bury the dead do their duty, and to hinder all communication with suspected houses, to shoot dead any employed in the infirmaries, buriers of the dead, or private persons, and even women, who shall steal or hide the bed-clothes or apparel of those infected with the plague. It is also necessary to have in the infirmaries honest persons for intendants, whose great care ought to be to cause the bed-clothes and apparel of those brought thither to be burnt, but to save their quilts and sheets, which may serve other infected patients. The community is to make good to the owners, if poor, the apparel burnt, if in a condition to do it; if not, it must be endeavoured to be made up by charity and alms, which ought in an especial manner to be applied to this use.

CHAP.  
XXXIV.

It has been practised with success in Provence, to pay to private persons the price of the bed-clothes or apparel they brought in, or which they gave an account of to the parish-priests; without which method it is almost impossible to stop the progress of the contagion, because there are always such things in the hands of some miserable creatures, who will sell them, tho' at never so small a price, to others; the charge of purchasing whatever shall be produced is inconsiderable, and will be a very great good.

The Bishops shall be desired to give order, that divine service may not be performed in the churches, because of the danger of the communication, but in places quite open to the air, or in the field. No assembly, or concourse of people of what kind soever is to be suffered during the continuance of the contagion, nor till a long time after it has ceased.

By concert with the Bishops and parish-priests, convenient places shall be appointed for interring the bodies of those who die of the plague; the pits for them must be twelve feet deep at least; and care must be taken to have lime to throw into those pits, in a sufficient quantity, for consuming those bodies.

The shops of mercers, drapers, and others dealing in goods susceptible of contagion, are to be kept shut as long as it lasts, and till sufficient means have been used afterwards for their intire disinfection by perfuming; but the shops of those who sell the necessary provisions to support life, and whose houses are not suspected, are to be open.

Whereas the physicians and surgeons do often withdraw themselves, or will not attend the sick, if they cannot be brought to their duty by motives of religion and honour, or by the promise of a reasonable gratuity, they must be compelled to it, in case of necessity, by the fear of a death more certain and more speedy than that they would avoid.

Those who command without the infected places ought especially to be very active in procuring them all necessary supplies for their subsistence; and if those places want money to buy sufficient provisions, they are to give notice to the Commander in chief, or to the Intendant of the province, who shall oblige the neighbouring communities, that are able, to advance money to them; which they shall be afterwards reimbursed; and as some communities, especially in such a time as this, are not able to purchase what is necessary for furnishing their infirmaries, in that case the private persons of substance in those places shall be obliged to advance the sum necessary, according to a tax which shall be laid on them by the municipal officers, who shall promise in the name of the communities to reimburse those private persons.

As to the appointing and furnishing of infirmaries, it must not be delayed till the places are actually visited with the contagious distemper, but the places in the neighbourhood of those which are infected must be obliged to have their infirmaries ready in case of accident; for which purpose there must be collected from the inhabitants, such a number of straw-mats, quilts, and sheets, as each can furnish, allowing them to set their marks on them, to the end each may have again what he contributed, in case the distemper should not come into the place; or that the same may be made good by the community, if the contagion should enter, and if afterwards it should be

necessary to burn what was lent for the use of the infirmaries.

CHAP.  
XXXIV.

Those who shall be cured of the plague shall not be at liberty to converse with the other inhabitants of the place, till after they have performed two quarantains, and till after they have been perfumed more than once, and had in general all they wore about them burnt.

The fines, which may often be levied for breach of orders not deserving death, shall be applied to the use of the poor of the place; and probably the best use that money can be put to, will be to buy them clothes, instead of those which shall have been burnt.

The composition of the perfume (recommended in the directions to be observed by order of the government of France, with relation to the plague) is as follows:

A composition for the plague.

To make a quintal (or hundred weight) of perfume, take common brimstone, gun-powder, of each fifteen pounds; pitch, resin, black pitch, of each seven pounds and an half; white arsenick, orpiment, cinnabar, antimony, realgal (or red arsenick) of each half a pound; in the want of realgal put four ounces of red precipitate; ivy berries, juniper berries, of each fourteen pounds; the said berries to be roasted, and the whole to be reduced to a very fine powder, and to be well mixed together: for the body and basis of this perfume take twenty-five pounds of bran dried, in which the forementioned ingredients are to be mixed; the person that mixes them, with a long wooden spatula, should be muffled in such a manner, that he may not draw in the dust with his breath. For perfuming a chamber of fifteen foot square use one pound and a half of the perfume, and for larger or lesser chambers, the dose must be in proportion.

The method of perfuming is this; all the windows must be closed, the chimnies stopt, and generally all holes by which wind and air might penetrate; the closets, presses, cabinets, and trunks are to be set open; the other household-stuff to remain in it's usual situation: then a whisp of hay of three or four pound weight, is to be laid in the midst of the floor, the dose of perfume is to be spread upon it, and the person, who sets it on fire, is to retire out of the chamber as quick as he can, fastening the door after him. Care must be taken, if wearing apparel, which is not suspected, be found in infected houses, that they be hung up upon pegs, or otherwise, that they may thoroughly receive the perfume; and great care must be taken to secure the doors, and stop up the chimnies and holes in such a manner that the smoak may not get out.

Twenty-four hours after the windows may be set open, and all the openings unstopped, and the chamber be left airing for three days before any one lie in it.

For perfuming persons, the same composition of brimstone, gun-powder, pitch, resin, ivy-berries, juniper-berries, and bran is to be used; leaving out all the arsenicks and the antimony. The quantity or dose for a person may be one third less than that above specified for a chamber.

It must be acknowledged, that the measures taken by the Court of France to prevent the spreading of the plague, were of infinite service to the northern provinces of the kingdom; for though it continued a year and half in Provence and Languedoc, and destroyed vast multitudes of people there, (especially at Marseilles and Toulon)

it

CHAP.  
XXXIV.

it never reached further. People generally look upon the plague as an extraordinary judgment of heaven; though it is evidently the sense of all the kingdoms of Europe, that it may be spread or avoided by human means, or they would not oblige persons coming from places infected to perform quarantine. The same may be said in this case of drawing lines of circumvallation about the places infected, and using such other precautions as we see the French did, which certainly prevented the spreading of the contagion. And indeed, though we all allow that heaven can inflict diseases whenever it sees fit; yet on the other hand it must be granted, that they may sometimes be avoided and removed, and frequently are, by human means; or to what purpose is the profession of physick?

But notwithstanding the drawing lines, and compelling people to remain in places infected, removing a wealthy man from his family, and burning his house and effects, are methods practised in arbitrary governments, a law to authorize these rigorous proceedings may be very dangerous in a land of liberty; for under this pretence, (allowing the Court to be judges of the necessity of putting them in practice) how precarious must such a law render the lives, liberties, and properties of the subject? Better one generation suffer by the plague, than their whole posterity be reduced to a state of slavery, and be plagued for ever after.

The parliament oppose the tyranny of the Duke of Orleans.

The pestilence itself does not seem more intolerable than the acts of tyranny and oppression committed during the administration of the late Duke of Orleans. The Parliament of Paris, to their eternal honour be it spoken, constantly opposed the Mississippi project, and the rest of his destructive schemes: they had wisdom enough to see through them, and resolution to refuse the registering such edicts as evidently tended to the ruin of their fellow-subjects. The Duke-Regent hereupon assembled an army of forty-five thousand men, and quartered them in Paris and the neighbourhood of that city, in order to keep the parliament in awe; and being still apprehensive of an insurrection, he ordered that high court to remove to Pontoise, a town about six leagues from Paris, on pain of their being declared rebels; which order they were obliged to comply with, and here they remained a considerable time. And to mortify them still more, the Regent erected a new tribunal to register edicts, and administer justice during the vacation or recess of the parliament, with the same powers as the parliament used to exercise. In the mean time the miseries of the people were inexpressible, as appears from some passages in a letter from the Bishop of Castres to the Marquis of Vrilliere, Secretary of State; in which he acquaints him with the reasons that hindered the people of his diocese, from contributing to the relief of those countries afflicted with the plague, so largely as otherwise they would have done.

They are banished to Pontoise.

The miseries of France inexpressible.

‘Notwithstanding my utmost endeavours, my whole diocese has raised no more than one hundred pistoles in money, and five thousand livres in bills and other paper-effects, the inundation of which has done us an inconceivable mischief: here is no more trade, no more confidence; even the most prudent and diligent have no way left to subsist: the decay of trade has rendered even industry itself insignificant and useless: want of trust breaks all friendship, and makes men cautious of lending their money to their friends’

V O L. II. N U M B. XCI.

‘and nearest relations, tho’ formerly they parted with it cheerfully to strangers. Charity itself, which always contrives methods of doing good, has her hands tied, since there is now no other way left her, than to weep with those that despair of ever having their tears wiped away. I daily expect to see my clergy so far reduced, that they will not be able to exercise their functions; and the poor nuns wanting the relief their friends used to give them, will be obliged to leave their cloysters to seek for bread. There is nothing of an hyperbole in what I say, it is the simple naked truth, so that I find it impossible to execute the orders of his Royal Highness successfully. If the people would still be satisfied with bank-bills, and other paper-securities, they may have enough of them, but we have no money left.’

Amidst the many misfortunes that France underwent at this time, the people were infinitely pleased with one act of justice of the Regent’s, which was the erecting a court to enquire what persons had got estates by stock-jobbing in the Mississippi adventure, and obliging them to refund, whereby he acquired a prodigious sum of money. And indeed whoever were losers by that variety of projects which were set on foot at that time, the gentlemen in the administration were always sure to be gainers. And this occasioned some other courts, no doubt, to take the hint, and follow the steps of the French, as far at least as their respective constitutions would admit.

Stock-jobbers obliged to refund their ill-gotten goods.

A match being proposed between the most Christian King LEWIS XV, and MARIA-ANNA-VICTORIA, Infanta of Spain, his Majesty declared his assent to it in council on the 17th of September N. S. tho’ this Princess was then but in the fourth year of her age, being born the 31st of March 1718. This, ’tis generally said, was another project of the Duke Regent’s, to establish the succession in his own family; for if the King had died without issue, the Duke of Orleans or his posterity would have inherited the crown of France. But to proceed: Were we to judge of the condition of this kingdom from the vast preparations that were made to receive the Infanta, or by the splendor of the Court at the audience of the Turkish Ambassador about the same time, we might esteem France one of the richest and happiest countries in Europe. The King’s robes were covered with diamonds and precious stones at that audience, to the value of twenty-five millions, and weighed thirty-five or forty pounds weight: all the Princes of the blood, and great officers of the crown, were clothed in the richest habits; and in the great gallery were placed three hundred ladies of the first quality, who dazzled the eyes of the spectators with the brightness of their jewels and other ornaments: no cries of the miserable could reach these happy seats: the wretched starving people, whose spoils had contributed to render the Court thus glorious and resplendent, were driven far from hence. No foreigner could imagine, from the gaiety of the court, that the subjects in general were labouring under the most exquisite calamities, as beyond contradiction they were, if the above-cited relations may be credited: there is no making an estimate consequently of the happiness of a people, from the shining appearance of a Court and its immediate dependants.

The French King marries the Infanta.

At the same time the marriage was agreed on between his most Christian Majesty and the Infanta, another was concluded between the Prince of the Asturias, eldest son of Spain, and Madam DE

16 Q

MONTPENSIER,

CHAP. XXXIV. MONTPENSIER, daughter to the Duke of Orleans; and the two Princesses were exchanged in the Isle of Pheasants, on the frontiers of France and Spain, the ninth of January 1721-2; and on the second of March following the Infanta made her publick entry into Paris, where she was received with all the honours the Court of France could pay to the young Queen.

1722. State bills worth little or nothing. The finances were still in a wretched condition; the state-bills which the government had issued out were at 75 per Cent. discount, and not long after became worth little or nothing, the ministry issuing an order for their liquidation, as 'twas called; that is, they reduced them as low as they pleased; a person that had an hundred pounds due to him by a state-bill, was obliged to take another bill in lieu of it for five pounds or less: and thus the debts of the crown, which were said to be so great in one of the King's declarations, that they could not be computed by arithmetick, were reduced to a very moderate sum; a method of paying of debts that some other countries possibly may be obliged to imitate, who mortgaged their revenues to maintain their Confederates in the late war.

Marshal Villeroy displaced. The Duke-Regent thought fit about this time to displace Marshal VILLEROY, Governor of his most Christian Majesty, and to put the Duke of Charost in his room, and some days after communicated his reasons for it to the foreign ministers; the substance of which were, that the Marshal had insinuated things to the disadvantage of his Royal Highness; that he refused to retire when the Regent came to talk with his Majesty in private; and that the Marshal aimed at rendering himself independent of the Regency. The Cardinal du Bois was immediately afterwards constituted Prime Minister; and on the twenty-fifth of October the King was crowned at Rheims, at which ceremony the Infanta-Queen was not present, but remained at the palace of Versailles.

1723. A new sect. A new sect of fanatics were discovered at Montpellier in the year 1723, of whom some were condemned to death, others imprisoned, and some sent to the galleys. The government gave a very imperfect account of their principles, or the reasons of these severe proceedings against them: they relate only, that the civil magistrate being assisted by a guard of soldiers, broke open the doors where these people were assembled, and that a man dressed in a white surplice demanded of the officers in a big magisterial voice, what they would have; to which the Provost made no answer, but knocked him down: That another of them on his knees, holding a book in his hand, cried out to the soldiers, Reverence the word of God: that several more of them being dressed in albs or surplices, the commanding officer asked one of the congregation who they were, and was answered, they were the Levites of the Holy Ghost: and as they were pulling down their sanctuary, one of them said, Cause thy soldiers to desist, and suffer them not to destroy the temple of the Holy Ghost. The number of these fanatics was about four hundred, and assembled in a room adjoining to their sanctuary, in which there was a large pulpit, that they called the pulpit of ELIAS: over-against it was a bay-tree in a large vase, with bottles of water, wine, and brandy, and near the vase a loaf of bread, full of sugar-plumbs and almonds, a large picture representing MOSES with the tables of the law, a fountain to baptize in, streamers full of inscriptions, alluding equally to

love and religion, and in the middle of the sanctuary a large lamp. This sect began about the first of January 1721-2, as appears by an inscription on one of their tables, on which are written these words; 'Behold, the time is come when all men shall be equal; the poor shall be as the rich, and the rich as the poor. God has at length manifested his will by his spirit. His will is, that men should learn to pray of women.' And in another inscription; 'The kingdom of God the Father was first; thence came that of God the Son; at present 'tis the reign of the Holy Ghost; and 'tis by women only that the spirit can communicate itself to men.' They met regularly on Saturday nights, and continued their assemblies till Monday at break of day. They administered a kind of communion, and heard a sermon; after which (if they are not misrepresented) the lights were put out, and the preacher cried aloud, Go increase and multiply: the women were in common, every man matched himself as he could, and they were married by the preacher before they left the assembly; but these contracts were no longer binding then both parties pleased, some of them, 'tis said, had changed their husbands several times. But whether these people were not misrepresented in many things by their prosecutors, who were bigotted Roman Catholics, I find is made a question.

On the tenth of August, N. S. died WILLIAM DU BOIS, Cardinal-Priest, Archbishop and Duke of Cambray, Prince of the Empire, principal and prime Minister of State, Secretary of State for foreign affairs, first President of the general assembly of the clergy of France, &c. and formerly Preceptor to the Duke of Orleans, upon whose death his Royal Highness took upon him the administration of affairs of state, and acted as Prime Minister.

The inhabitants of French Flanders being visited with a fever the latter end of this summer, which carried off great numbers of them, it was immediately given out to be the plague, that distemper having lately raged in the southern parts of France, and several people, 'tis said, died at first of the fright; but the Court sending down physicians to examine into the nature of the disease, they found it no more than a fever, which tho' it appeared dangerous, they observed might very easily be cured, where people did not give way to fear, nor let blood after the symptoms were manifest. The patients also were advised not to provoke or hinder sweating, or to drink wine, brandy, beer, or any spirituous liquors; but they were allowed small beer, barley-water, or broth made of chickens, veal, or mutton, after having skimmed off the fat. Those that observed this regimen, generally recovered.

The King having nominated several Bishops and Abbots to the vacant benefices in France this year, was pleased to reserve considerable pensions out of them; particularly out of the Archbishoprick of Cambray, a pension of two thousand livres, payable to the Baron of Rocheplate, a Brigadier of the army, and a pension of fifteen hundred livres to the Chevalier DE HERBOVILLE: which is a way of gratifying the creatures of the court and army that our Princes have not yet hit upon.

On the second of December, N. S. died of an apopleckick fit, the Regent of France, PHILIP Duke of Orleans, Valois, Chartres, Nemours, and Montpensier. He was the son of PHILIP Duke of Orleans, brother of LEWIS XIV, and of Madam

CHAP. XXXIV. A fever in French Flanders taken for the plague. The King reserves pensions out of the bishopricks. Duke of Orleans dies, and the Duke of Bourbon made Prime Minister.

CHAP.

MADAM ELIZABETH CHARLOTTE of Bavaria. He married MARIA-FRANCISCA, a base daughter of LEWIS XIV, whom that Prince had legitimated; by whom he had issue the Duke of Chartres, now Duke of Orleans, born the fourth of August 1703, and four daughters. The Duke of Bourbon coming to court the very moment the late Duke of Orleans expired, obtained the office of Prime Minister of his Majesty, and his letters patent were signed the day following, and registered in Parliament on the fourth of December: soon after which, the Duke of Villeroy, the King's governor, who had been dismissed by the late Duke of Orleans, was sent for to court.

PHILIP  
King of  
Spain re-  
signs his  
crown to  
his son.

In January following, anno 1723-24, his Catholic Majesty, PHILIP V, made an absolute renunciation of the crown of Spain, in favour of DON LEWIS, Prince of the Asturias, having determined to retire with the Queen his consort to the palace of St Ildefonso, there to devote the remainder of his days to the service of God and the care of his soul. He wrote at the same time to the most Christian King and the Duke of Bourbon, to acquaint them with his resolution, and assure them of a continuance of his friendship, and of the Prince of Asturias, whom he had appointed to succeed him.

The con-  
gress of  
Cambray  
opened.

The so-much-talked-of congress of Cambray, where most of the Princes of Europe had their Plenipotentiaries, in order to explain or supply what was thought defective in the treaty of Utrecht, was opened on the 26th of January, N. S. 1723; the Imperial ministers having two days before delivered to the ministers of Spain, pursuant to the quadruple alliance, the original act of investiture for the duchies of Tuscany, Parma, and Placentia, in favour of DON CARLOS, son to the present Queen of Spain.

The in-  
vestiture of  
Tuscany  
and Parma  
granted to  
DON CAR-  
LOS.

The people of France were very little bettered by the change of the ministry, which happened on the death of the late Duke of Orleans. The Duke of Bourbon found himself under a necessity of lowering the coin, in order to revive their foreign trade: to this end an arret was published on the 4th of January for reducing the Lewis d'Or, which was then current at 27 livres, to 24, and the other species of gold and silver proportionably. By this means the butchers, bakers, and other retailers of provision, who had any quantity of specie by them, became very great sufferers; and expecting another reduction, they refused to part with their goods but at extravagant prices. The magistrates of Paris hereupon sent for the heads of the several trading companies, and commanded them to sell their goods at a moderate rate; but were answered, that they could not, because a second reduction of the coin was daily expected, by which they should probably lose as much as they had done by the first. The government thereupon licensed other tradesmen who were not free of the city, to sell flesh and other necessaries at more moderate rates, whereby they brought down the price of flesh from fifteen pence to seven pence a pound, and other things in proportion. But this exasperated the trading companies in Paris, especially when they found their fears were but too just; for in April 1724, the government again reduced the Lewis d'Or from twenty-four to twenty livres, and other species in proportion. This uncertainty in the value of the coin occasioned a perfect stagnation of trade, no body caring to part with their goods till the value of money was fixed, and abundance of people were reduced to a starving condition; mur-

1724-

ders and robberies were frequent in the streets of Paris, nor could any thing have prevented a general insurrection, but the drawing of great bodies of regular forces together to keep the people in awe. The clergy at the same time were engaged in a kind of civil war about the Constitution Unigenitus, and seemed to agree in nothing but the persecution of their Protestant brethren, which was carried on with the utmost fury in all parts of the kingdom. The young King was prevailed on to publish edict after edict, to cause the penal laws to be executed upon that unhappy people; in the preamble to one of which he is made to say, *That of all the great designs which his great-grandfather LEWIS XIV formed during the course of his reign, there was none he had more at heart to pursue and see executed, than that of extinguishing heresy out of his kingdom.*

CHAP.  
XXXIV.

The clergy at variance about the Constitution.

The Protestants persecuted.

Paris, like London, increasing every day in its extent, by the numerous buildings added to it, the government thought fit this year to publish a declaration for fixing the limits of it. The Court seemed determined also to compel the Bishops and Clergy of France to accept the Constitution Unigenitus; for an arret was published against the Bishop of Montpellier, the famous anti-constitutioner, confiscating his temporalities, and declaring his benefices vacant. With such rage did the clergy prosecute each other for they knew not what, the controversy being chiefly about grace and free-will, which perhaps will never be settled as long as the world stands.

LEWIS, the young King of Spain, died on the 31st of August of the small-pox, after a reign of seven months and some odd days, whereupon his father PHILIP V was prevailed on by his subjects to resume the government; and it was agreed that the young Queen-dowager, daughter of the late Duke of Orleans, should return to France and enjoy her dowry there, (which amounted to 500,000 livres) in pursuance of the marriage-articles.

Lewis  
King of  
Spain dies.

The French Court considering that his most Christian Majesty could not possibly have any issue by the Infanta of Spain in many years, determined to send that Princess home, and marry his Majesty to one of riper years. Accordingly, on the 22d of March 1724-5, the King of Spain received a letter from the King of France, wherein his most Christian Majesty expressed the great concern he was under upon his separation from the Infanta; but said, that a King being born for his subjects rather than himself, he could not excuse himself from yielding to the strong solicitations of all his States to marry forthwith, that he might have issue, and thereby prevent the troubles and revolutions which might happen in the kingdom if he should die before the Infanta (who was but seven years of age) was marriageable.

The  
French

the In-  
fanta.

The King and Queen of Spain were not a little piqued at this conduct of the French, and having received advice that the Infanta set out from Versailles to return to Madrid on the fifth of April, they sent back Mademoiselle DE BEAUJOLLOIS, daughter of the late Duke of Orleans, who had been contracted to DON CARLOS, with her sister the Dowager-Queen of Spain, and these Princesses were exchanged on the frontiers of France and Spain about the middle of May following on the Infanta's arrival there; whereupon his most Christian Majesty declared, that he had determined to marry the Princess MARY LECZINSKI, daughter of King STANISLAUS; and the marriage was celebrated first by proxy at Strasburgh, and after-

CHAP. XXXIV. wards in person by their Majesties on the fifth of September 1725; the consequence of which was an alliance between Spain and the Emperor, afterwards called the Vienna Alliance: for the Spaniards were so provoked at sending back the Infanta, that they refused the Emperor nothing he demanded; there was now no further need of a congress at Cambray to decide their differences: and had the British ministers laid hold of the same favourable juncture, probably they might have obtained what terms they pleased of Spain.

The Vienna alliance. By the Vienna treaty, after confirming the quadruple alliance, and the reciprocal renunciations of the parties to the Spanish territories in their respective possessions, the Emperor granted the investiture of the duchies of Tuscany and Parma in favour of Don CARLOS, the Queen of Spain's son: then they guaranteed their several dominions, engaged reciprocally to favour the commerce of each other's subjects, and particularly his Imperial Majesty's subjects were permitted to import merchandizes from the East-Indies to Spain; and all other powers were to be admitted into this alliance who desired it within the term of a year. Besides which, 'twas given out there were some secret articles to the prejudice of France, Britain, and the States-General; at least Britain was so apprehensive of something of this nature, that she lost all the glorious advantages she might otherwise have obtained at this time, by cultivating a good correspondence with Spain, and entered into an alliance with France, a nation whose friendship has ever been fatal to her. The King of Prussia and the States-General also became parties to the treaty; but by their future conduct, 'tis evident they never intended to concur with France and Britain in all the measures they had concerted. This obtained the name of the Hanover Alliance, having been concluded there on the 3d of September 1725.

The Hanover alliance.

By this alliance the contracting parties guarantee to each other their respective dominions and territories, rights and privileges, especially those in relation to trade: and it was agreed, that if any of the parties should be attacked or molested in any of the abovesaid particulars, that then the other powers, within two months after demand, should furnish the following succours, viz. Britain 3000 foot and 4000 horse, France 8000 foot and 4000 horse, Prussia 3000 foot and 2000 horse, or an equivalent in shipping or money; one thousand foot to be valued at 10000 Dutch florins per month, and a thousand horse at 30000 florins per month: and in case of necessity the said allies should assist each other with all their forces, and declare war against the aggressor.

They engage also to enter into no alliance with any other power, but in concert with the parties hereto, and to communicate all proposals which shall be made to any of them on that head.

By a separate article, their British and Prussian Majesties, as members of the Empire, agree not to furnish their contingent of troops in case of a war with the Empire.

In the mean time the court of France continued every year to increase their taxes, tho' the nation was in full peace, and amongst the rest a tax of two per Cent. was laid upon all real and personal estates, and even upon those who had money in the funds, which extended to the clergy and nobility; in the preamble to the declaration for levying of which tax it is recited, that the King with-

in the compass of seven years, viz. from 1716 to 1723, by raising the value of the coin, and new stamping it, had gained upwards of three hundred and fifty-three millions of livres; and in the years 1719 and 1720, by the royal bank notes which had been issued by the government, (and never paid) above three millions of millions; and that notwithstanding these prodigious profits, the crown was still so far in debt, that it paid fifty-one millions of livres annually for interest-money, tho' that interest was but two per Cent.

There were several other edicts and declarations read on his Majesty's coming to the parliament the eighth of June, which being very long, the first President desired they might deliberate upon them before they passed that assembly; but the King, as had been usual in the late tyrannical administrations, required them to be registered immediately without any debate; which was done accordingly, the members being sensible it would be to no purpose longer to oppose it: but thus much must be said to the honour of those gentlemen, that tho' it has not for many years been in their power to resist the force put upon them, they have so far maintained their character, as to deliver their opinions against most of the destructive schemes that have been introduced since the loss of their liberties: and notwithstanding that vast body of troops which the French maintain in constant pay to keep things quiet, such has been the oppression of the people, that there have been frequent tumults and insurrections of late years in this kingdom, particularly in Paris and Rouen, which are never without numerous garrisons, or bodies of forces in their neighbourhood; there were two insurrections this very year on account of the extravagant rates of provisions, occasioned by the frequent alterations in the value of the coin, &c. Bread was generally sold at eight and ten pence the pound, and other provisions proportionably at this time.

The general assembly of the clergy, and most of the parliaments of France, made their representations to the throne, against the various taxes and oppressions which were the occasion of this general distress, but none with more freedom than the parliament of Britany: they tell his Majesty, that under the calamities of the two last long wars, they had liberally and cheerfully made a sacrifice of their lives and fortunes, in hopes that at the end of the wars they should likewise see an end of their miseries; but tho' the peace they had so much longed for came at last, and they had enjoyed it now twelve years, bitter was the fruit they gathered from it. Many of the best families were ruined by paper-money, a new project introduced in opposition to the remonstrances of all his parliaments, and the nation groaned under the ill effects of it at that day: That the capitation-tax was still levied, tho' it was introduced only as an extraordinary resource in time of war, and was to cease as soon as the peace was made.

The tenth penny was only taken off in part, and instead of it four pence was laid on every livre, which was a fifth part of their revenues.

That the frequent alteration of the coin had destroyed all confidence, and the last diminution of its value alone had lessened the subject's cash almost one half.

The dearth and scarcity of the last three years, had reduced the people to a miserable condition, and under these dismal circumstances, when they expected

LEWIS the XV  
the  
Present King of France

**C H A P. XXXIV.** expected some alleviation of their miseries, a new tax was imposed.

That the strength of the State consisted in trade and agriculture, and the subjects of France were acknowledged to be extremely laborious: where they had a prospect of small gain, they would undergo any hardship or fatigue without reluctance; but where no profit was to be had, and nothing to be got by the sweat of their brows, they would be discouraged and dejected. The antient furrows in the untilled grounds, which made up one half of their lands, seemed to reproach the present generation with sloth; but it was their great misfortune, not their fault. They groaned under the burthen of so many duties and taxes, that they thought it to no purpose to labour or cultivate the earth, but for the necessary support of life; and trade, which was of no less importance, especially in that province, was perfectly at a stand, for want of credit and money to support it. For these, and many other motives equally persuasive, they desire his Majesty to look upon them with an eye of compassion, &c.

The Court force the acceptance of the bull Unigenitus.

The forcing the acceptance of the bull Unigenitus, occasioned also great disturbances among the clergy and religious orders, several of whom were imprisoned, banished, and their goods confiscated for opposing it. Even the Abbess DE CHELLES, daughter to the late Duke of Orleans, was censured for protesting against it; but she persevered in her opinion, and let her persecutors know, that she should think herself happy to suffer with so vast a number of innocent people as had been ruined for pursuing the dictates of their consciences. But the storm seems to have fallen hardest upon the Carthusian friars, who were many of them obliged to become refugees in Holland this year, for refusing to accept the Constitution.

1726.

It was expected that this year would have produced a war between the allies of Hanover and those of Vienna: France, and most of the powers of Europe, augmented their forces, and seemed prepared to take the field; but no hostile attempt was made till the siege of Gibraltar was formed in the month of February 1726-7, unless his British Majesty's sending a squadron of men of war this summer to lie upon the coasts of Spain, and another to block up the galleons at Porto-Bello, may be reckoned such, as the Spaniards insisted.

The French King takes the government into his hands.

In the mean time his most Christian Majesty thought fit to suppress the office of prime minister, and take the reins of government into his own hands; whereupon the Duke of Bourbon was dismissed, and the King made choice of the old Bishop of Frejus to assist him in the administration of affairs. The advancement of this Prelate in the French court soon after procured him a Cardinal's cap, and he has been since known by the title of Cardinal DE FLEURY. 'Tis said that the most Christian King, in order to shew how acceptable this promotion was to him, published the declaration in favour of the Constitution Unigenitus, whereby he requires it to be accepted throughout the kingdom, and observed as a law equally binding both to church and state.

The forest of Fontainebleau takes fire.

A fire broke out in the forest of Fontainebleau in the month of September this year, by some unknown accident, which continued burning twelve days together, and consumed an hundred and twenty acres of wood, and three hundred acres of broom, and was stopped with difficulty at last by the French and Swiss guards and country-

VOL. II.

people, who dug a trench of three leagues in length to prevent the spreading of it.

The most remarkable occurrence which happened in Europe in the year 1727, was the siege of Gibraltar by the Spaniards, when the King of Great Britain seemed to expect, that by virtue of the Hanover treaty, his most Christian Majesty should have attacked Spain on the side of Catalonia, and obliged them to have withdrawn their forces from before that place. But notwithstanding this boasted alliance with the French, they suffered his British Majesty to bear the whole charges of the war alone by sea and land: and tho' it is true, the English fleet suffered very little from that of the Spaniards while it lay before Porto Bello, yet the ships were most of them rotted or eaten up by the worm, and their whole crews, both officers and soldiers, perished by sickness; according to some advice, several ships were re-manned more than once: and why the French and Dutch should not have had their share in this destructive expedition as well as Britain, I believe posterity will scarce be able to discover. As to the French indeed, 'tis said they had engaged that Gibraltar should be delivered up to the Spaniard, and obtained a promise from his British Majesty to that end. They were also concerned in point of interest that it should remain in the hands of the Spaniards, who were in no condition to obstruct their passage through the streights, as the English might in case of a rupture between the two nations. But admitting these particulars to be true, why did Britain then enter into such a forced and unnatural alliance with France? Could they ever expect to see that Court so complaisant as to act contrary to their interests, and the engagements they had already entered into with Spain? If they did, 'tis evident they were deceived; for notwithstanding the frequent advices we received from time to time that the French were assembling an army to attack Spain, we do not find any one motion of their troops that tended that way; they chose rather to act the part of mediators, and in effect became umpires of the differences between Britain, Spain, and the Emperor. We received at length preliminary articles of peace from France, such as the ministry there were pleased to prescribe.

**C H A P. XXXIV.**

1727. Siege of Gibraltar.

The French give no assistance to the English in this war.

These articles were dated at Paris the last of May 1727, the most material whereof were, that the Emperor should suspend the commerce between Ostend and the East-Indies for seven years: that the privileges of commerce of the English, French, and Dutch, should be restored them: that immediately after signing the articles all hostilities should cease, and with respect to Spain, within eight days after his Catholick Majesty should receive them: that within four months a congress should be formed at Aix la Chapelle, where the rights and pretensions of the several powers should be examined and discussed.

Preliminary articles of peace between the Emperor, Spain, France, Britain, &c.

Soon after the signing of these articles, viz. in the night of the tenth of June 1727, GEORGE King of Great Britain died, and was succeeded by his son GEORGE the Second: but this event occasioned no alteration, either in the ministry or measures concerted in that kingdom. Some few days after the siege of Gibraltar was raised, in pursuance of the preliminary articles above-mentioned, and Europe once more restored to a state of peace.

King GEORGE dies.

Te Deum was sung at the cathedral of Notre-dame in Paris on the 17th of August for the birth of two Princesses, of which the Queen was delivered on the 14th instant; but the joy had been

The validity of orders in the Church of England asserted.

1723.

Disputes about the preliminary articles agreed.

Congress of Soissons opened.

much greater at court had a Dauphin been born; and indeed, their hearts were so set upon a son, that they could not conceal their chagrin at the disappointment. The King in his letter to the Archbishop of Paris on this occasion, desires his prayers that he may be blessed with a Dauphin the next time the Queen lies in.

A book having been published by Father LE COURAYER, to shew the validity of ordinations in the Church of England, was about this time censured by the Cardinal DE NOAILLES, Archbishop of Paris, as containing a doctrine false, erroneous, scandalous, injurious to the Church and Holy See, and favouring heresy, schism, &c. The most Christian King also issued an arret, dated the 7th of September 1727, requiring the said books to be suppressed, and that all persons who had them should bring them to the Register's office of the Lieutenant General of the police, under severe penalties.

A congress having been agreed upon to be held at Cambray, in order to treat of a general peace among the Princes of Europe, the Cardinal DE FLEURY, who was now become umpire of their differences, prevailed with them that it might be held at Soissons. The Cardinal, it seems, did not care to trust these negotiations to the conduct of any but himself, and at the same time was equally afraid to leave his most Christian Majesty in the hands of other ministers. The opening of the congress had been delayed almost a year, on account of some difficulties which had arisen between Britain and Spain, concerning the true sense of the preliminary articles; but at length an act was signed at the Court of Spain, dated the sixth of March 1727-8, for the due execution of them by the Ministers of the said powers; the substance whereof was, that his British Majesty should forthwith send orders to his Admirals WAGER and HOSIER, or those who commanded in their stead, to withdraw from the seas of Spain and the West-Indies. That the counterbands, and other complaints of that kind made by the Spaniards in relation to the Prince Frederick, should be decided in the ensuing congress; as also whether the prizes taken by both parties at sea should be restored. His Catholic Majesty, on the other hand, promised to raise the blockade of Gibraltar, and level the works before it; to send orders for delivering up the ship Prince Frederick and it's cargo to the English South-sea company, and to restore the commerce of the English according to the Asiento-treaty. To cause the effects of the flotilla to be distributed, and those of the galleons when returned. And lastly, that his Catholic Majesty, as well as his British Majesty, would abide by the decisions of the future congress.

The much-expected Congress was at length opened at Soissons on the 14th of June 1728, when the several ministers produced their full powers from their respective masters, viz. those of the Emperor, Britain, France, Spain, and the States-General. His most Christian Majesty, that he might not be too far removed from his Prime Minister Cardinal FLEURY during these negotiations, came with his court from Versailles to Compeigne, which is not more than thirteen or fourteen miles from Soissons, from whence the Cardinal might easily come to court when he pleased in two hours time: but it soon appearing that this congress was like to have no better success than one of the same kind held not many years since at Cambray, the French

Court returned to Versailles on the first of July, where Cardinal FLEURY also arrived about the same time, and was followed thither by most of the ministers plenipotentiaries.

While the King remained at Compeigne, as he was hunting in the forest there, his horse started on a bridge, whereupon his Majesty threw himself off, and received no manner of hurt; and, according to the French writers, he did not betray the least emotion or concern on the occasion. Those about him were no less charmed with the courage and presence of mind he had shewn, than they had been surprized and terrified just before at the accident; though it is not to be doubted, if he had behaved himself ever so meanly, his courtiers would have given it a favourable turn. Little truth is to be expected where a slave or dependant relates the actions of his prince or patron, who has his fortunes in his power.

On the 23th of July the Queen was delivered of another Princess, to the great mortification of the Court of France, who had put up their prayers for a Dauphin ever since the last lying-in. The hailstorms and unseasonable weather which destroyed the corn and other fruits of the earth in several parts of the kingdom this year, was another very great misfortune, and obliged his Majesty to make considerable abatements in the Taille, or land-tax, which the natives were in no condition to pay.

The Court of France appearing determined to compel the acceptance of the bull Unigenitus, the Cardinal DE NOAILLES, Archbishop of Paris, who had long opposed it, and could never be brought to accept it hitherto, but upon certain conditions, thought fit at this time to accept it absolutely; and to declare further, that he would prosecute all those who should presume to speak, teach, preach, or write against the said Constitution, or dissuade the clergy from the obedience they owed to it.

As the Queen of France had been twice disappointed in her expectations of a Dauphin, she determined to offer up her devotions in the metropolitan church of Paris, dedicated to the blessed Virgin, for better success in her next accouchement: accordingly on the ninth of October she came to that cathedral, and being met by the Cardinal DE NOAILLES, Archbishop of Paris, in his pontifical habit, at the head of his canons at the church-door, that Prelate made the following speech to her on the occasion, which is thus rendered into English:

‘ On this memorable and solemn day, when your Majesty gives so signal a testimony of your piety and devotion, the ministers of the Lord are bound in justice to give to this innumerable multitude which surrounds your Majesty on all sides, an example of the joy, affection, respect, and veneration your sacred presence inspires us with; what satisfaction for me that I can still be the interpreter of their sentiments, and eye-witness of the homage which your Majesty is going to pay to the Almighty in this holy temple.

‘ Come, Madam, to the foot of his altar, and even into his sanctuary, and implore the intercession of that holy Virgin whose succour and protection always proved favourable to our Kings. ‘ Beg of her, without hesitation, that precious gift which is the object of our most ardent vows, on which depends the happiness of the King, the comfort of your Majesty, the tranquillity of France, and the quiet of all Europe.

XXXIV.

'All things may be obtained by faith; and this day we may say with confidence to your Majesty, what formerly was said to that holy woman who was so earnestly praying to God for a son, Depart in peace, and may the God of Israel grant the just desire your heart has conceived.'

The King was taken ill of the small-pox the twenty-fifth of the same month, but had them so favourably, that it was attended with no ill consequences: his Majesty was in a condition to go abroad again the beginning of November.

Leave having been obtained of the Grand Signior, to transcribe the manuscripts in his library at Constantinople, whether Greek, Latin, Arabian, Turkish, or Persian; his Majesty sent the Abbots SEVIN and TOURMONT, of the academy of inscriptions, to Turkey, to copy such of them as they apprehended to be of the most importance.

A severe  
winter in  
France.

The winter was very severe in France this year, which, with the scarcity of provisions, reduced the people to great distress, especially in and about Paris; but they were in some measure relieved by the generosity of the King and the Nobility, who distributed large sums among the poor. In the mean time the snow was frozen so hard, that sledges were become the common diversion of the Court, as in more northern countries; and notwithstanding the poverty and distress of the peasants and inferior sort of people, the nobility and grandes never made a more glorious figure than in these amusements: they were usually clothed in black velvet, set thick with sparkling diamonds, when they were drawn in their sledges on the snow.

1729.

Great part of the year 1729 was taken up in fruitless conferences at Soissons, Paris, &c. to settle the differences between Great Britain and Spain; though some are of opinion that the French, who pretended to act the part of mediators, never sincerely desired to see them accommodated. The Spaniards however were at length induced to abandon their great confederate the Emperor, and enter into a separate treaty with the allies of Hanover, on their engaging to secure the reversion of Tuscany and Parma to Don CARLOS, by introducing immediately Spanish troops into those duchies. This was strenuously opposed by the Emperor, as directly contrary to the quadruple alliance. But what will be the consequence of this treaty, must be the subject of future History; no man living can divine at present. I proceed therefore to such other particulars as may best tend to illustrate the present state of France.

A peace  
concluded  
between  
Spain and  
England.

## CHAP. XXXV.

*Treats of the civil government of France.*The civil  
govern-  
ment.

THE legislative, as well as executive power in France, is vested solely in the King: his edicts are of the force of acts of parliament with us, and he appoints the judges and officers who are to put them in execution. Nothing of consequence in relation to the state was formerly decreed or enacted, but by the consent of the three estates, consisting of the representatives of the clergy, the nobility and third estate; but these assemblies are entirely laid aside, and have never been convened since the year 1614. The courts wherein justice is now usually administered are, 1. Their parliaments, which are the last resort where the court

CHAP  
XXXV.

does not interpose; but it appears by the preceding history, that state-criminals, of what rank soever, are frequently tried by judges or commissioners nominated on purpose by the Court; and that the privilege the Peers of France antiently claimed of being tried only in parliament, is in a manner abolished, for which they are chiefly indebted to the administrations of the Cardinals RICHELIEU and MAZARIN. The King has also his intendants in every government of the kingdom, who are vested with an almost unlimited authority, though the original design of appointing these officers seems to have been to superintend the King's revenues and treasure only. But to return to the courts of parliament, they are fifteen in number, viz. 1. That of Paris. 2. Thoulouse. 3. Rouen. 4. Grenoble. 5. Bourdeaux. 6. Dijon. 7. Aix. 8. Rennes or Vannes. 9. Pau. 10. Besançon. 11. Metz. 12. Doway. 13. Perpignan or Roussillon. 14. Arras. And, 15. That of Alsace, held at Colmar or Strasburgh. These parliaments consist of a certain number of presidents and inferior judges, who purchase their places either of the crown, or of those who are in possession of them; for all magistrates and officers of justice in France purchase their places openly, and the government make a considerable revenue by these sales. They enjoy their posts for life, unless they have been guilty of some notorious crime in the exercise of their offices. The parliament of Paris is much the most considerable of the kingdom, for hither the King frequently comes in person, and here his royal edicts are recorded and promulged, till when they have not the force of laws. But from many repeated instances of late, we learn that he will not suffer the parliament to deliberate and debate on the subject of his edicts, as they were used to do before they registered them, but obliges them to do it without entering into the merits of the case. This parliament also is held in the highest esteem, as it is composed of the Princes of the blood, Dukes and Peers of France, besides the ordinary judges, and takes cognizance of all offences committed by Peers, where the court does not interpose, and issue a special commission for that end.

Parlia-  
ments.Parlia-  
ment of  
Paris.

The parliament of Paris had antiently under it's jurisdiction, the duchies of Burgundy, Normandy, Guienne, and Britany, and the counties of Flanders and Thoulouse; whereupon it is evident, that the parliaments of Dijon, Rouen, Bourdeaux, Rennes, Flanders, and Thoulouse, have been dismembered from that of Paris. At present it's jurisdiction extends over the isle of France, la Beauce, Sologne, Berry, Auvergne, Lyonnois, le Forets, and Beaujolois, Nivernois, Bourbonnois, Anjou, Angoumois, Picardy Champaigne, la Brie, Maine, Perche, Tourain, Poitou, Aunis, and Rochelois.

The Princes of the blood have a seat and voice in this parliament at the age of fifteen, and the Peers of France at twenty-five; with this difference, that the Princes of the blood enter as of right, but the Peers cannot sit there till they have taken an oath of fidelity, and sworn to do justice to poor and rich, to observe the rules of the court, and keep their deliberations secret. Affairs which concern the persons of Peers, their estates and rights of peerage, ought to be determined in the grand chamber of the parliament of Paris in the first instance, for which reason it is called the parliament of the Peers: and they take cognizance in the grand chamber also of the regalia, and such things as concern

CHAP.  
XXXV.

concern the crown and the King's demesnes, exclusively of the rest of the parliaments of France.

This parliament consists of ten chief presidents, some honorary counsellors or judges, four masters of requests of the household, of one and twenty presidents a mortier, so called from the fashion of their caps, and of two hundred and thirty-two other counsellors or judges, an attorney-general, advocates, solicitors-generals, registers, notaries, secretaries, &c. These members are distributed into, 1. The grand chamber. 2. Five chambers of enquests. And, 3. Two of requests. The grand chamber is composed of ten presidents, the honorary counsellors, the four ministers of requests of the King's house, and of thirty-three counsellors or judges, viz. twenty-one lay judges, and twelve ecclesiasticks. Every one of the chambers of enquest hath thirty-two counsellors or judges. In the first chamber of requests there are fourteen, and in the second, fifteen. Besides these eight chambers, there is another called the Tournelle, which takes cognizance of criminal matters where the nobility are not concerned, for these are tried, as has been observed already, in the grand chamber; it consists of five presidents, ten counsellors of the grand chamber, who serve six months by turns, and of two counsellors from each of the chambers of enquests, who serve also three months by turns; from whence 'tis said to have obtained the name of Tournelle. In the chambers of enquest, depositions of witnesses are taken, and the proceedings are by way of bill and answer, as in the court of Chancery in England; and the chambers of request take cognizance of causes relating to privileged persons.

On days of ceremony the presidents of the parliament wear a scarlet robe, with a mantle lined with ermins, and a black velvet cap bordered with gold lace, in the fashion of a mortar, that of the chief president's being distinguished by a double gold lace: the honorary counsellors, the masters of requests, the presidents of inquests and requests, the attorney, and solicitors general, have scarlet robes and caps bordered with ermins; the chief register for civil causes, has a scarlet robe and mantle lined with ermins; the chief register for criminal causes, the four notaries and clerks, or secretaries of parliament, have also scarlet robes and caps lined with ermins; the advocates have black gowns and caps, and all the rest of the officers black gowns.

The rest of the parliaments of the kingdom have their respective districts, and are divided into chambers or houses, among which the several branches of business are distributed, as in that of Paris; only they are excluded from taking cognizance of any causes which relate to the crown or the Peers of the realm. The King's edicts also are registred in these parliaments before they have the force of laws in their respective districts.

Besides the parliaments of France, there are several other supreme courts for particular branches of business, as the chambers of accounts, established in several parts of the kingdom, and the courts of aid. The chambers of accounts are held at Paris, Rouen, Dijon, Nantz, Montpellier, Grenoble, Aix, Pau, Blois, Lisle, Aire, and Dole. This court administers the oath of fealty to the Archbishops, Bishops, Abbots, &c. examines the accounts of the treasury; receives the homage of the vassals of the crown; records treaties of peace, and other contracts and grants of the crown. The courts of aids are established at Paris, Montpellier,

Rouen, Clermont, Montferrand, Bourdeaux, Aix, Grenoble, and Dijon. These courts are the last resort in all causes relating to the taxes and revenues of the crown.

There is also a court called the court of money, which is the last resort in all causes concerning the coin, metals, mines, weights, and the officers and artificers employed in the mints.

Another supreme court is that of the waters and forests, which takes cognizance of all offences committed in the King's forests, woods, and waters; and also of all controversies between private persons relating to their woods, warrens, rivers, islands, mills, fisheries, chafes, &c.

To form a just notion of their inferior courts of justice, it will be necessary to observe how justice was administered antiently. The Franks as well as the Romans, we find, established Counts or Earls, in all the cities and great towns of the kingdom, who were the governors and judges in those places, and the territories belonging to them: these constituted Viscounts, who administered justice in their absence. In lesser towns and districts there were inferior magistrates called Vicars, and under them still lesser officers called Centeniers, *Centenarii*, as their jurisdiction extended over no more than an hundred families. These were all at first but temporary magistrates: the Count was appointed by the King, and he nominated the Viscounts, Vicars, and Centeniers under him. The courts of justice of these Counts were called Malls, and the assessors and judges, he called to his assistance, Rachimbures, of whom he usually had seven. The Duke was esteemed an officer superior to the Count, but had much the same jurisdiction. The King also held a court in his palace from time to time, to determine matters of the greatest importance, calling the Dukes, Earls, Bishops, Abbots, and other great Lords to his assistance.

Under the first race of Kings, great estates were given to the church, whereupon the Prelates, who were possessed of large fees, committed the administration of justice in their territories to officers called Vidames.

Under the second family of their Kings, the Counts, Viscounts, Vidames, Vicars, and Centeniers, continued to administer justice in the provinces; but the King from time to time deputed commissaries, to hear the complaints of the people, and reverse unjust sentences: these were generally Bishops, Abbots, or Counts. The commissaries appointed Eschevins or Aldermen in towns, chosen by the assent and approbation of the people, in the room of Rachimbures, who had been assessors to the Counts during the first race. These were ordinarily seven, and sometimes twelve; and when there was a vacancy, it was supplied out of the principal inhabitants.

Towards the end of the second race, the Dukes, Earls, and Viscounts, assumed the dominion of those territories, which they held before but as Governors or Deputies of the Prince. That usurpation was confirmed to them in the beginning of the third race, and the King had only the counties of Paris and Orleans left him, besides some demesnes in the other duchies and counties. He then administered justice at Orleans and Paris, by his Viscounts, and every year deputed officers into the other provinces, to hear the complaints of his immediate subjects; and these Deputies were called Bailiffs, because to them was bailed or given the protection or guardianship of the subject, though

CHAP.

of ac-  
counts.The courts  
of aids.

C H A P.  
XXXV.

in some provinces they were called Seneschaux, or stewards.

The King however continued still to take cognizance of affairs of the highest nature; to which end he convened assemblies of the grantees, and these were called Parliaments, the grantees that constituted them being stiled Barons of the kingdom, and afterwards Peers of France; they were either Bishops, Dukes, or Earls, great vassals holding immediately of the crown: and to these the King added other members learned in the laws, who were stiled *Maitres du Parlement*.

A little before the reign of PHILIP-AUGUSTUS, Provosts were established, who were substitutes to the Bailiffs. The great Lords, who had usurped the inheritance of the several provinces of which they were at first but governors, imitated the King in the appointment of their courts and officers of justice; they had their great councils, bailiffs, stewards, &c. in their respective territories; but instead of the office of Vicar, that of Castellan was introduced, to whom the administration of justice was committed in castles and the districts belonging to them, afterwards called chateaux. The counties of Champagne and Poitou had each of them seven Peers or Barons, who sat with their Earl in his great council; but generally the rest of the counties had but four apiece: and this was the original of Peers and Barons in the provinces.

The Bailiffs and Seneschals finding business increase upon their hands, substituted Lieutenants, who were gentlemen learned in the law, to assist them. At first their office continued only a year, as the Bailiffs did, but at length both of them became hereditary in their families. These were however always accountable to the high court of Parliament, which at first followed the Court, and was afterwards fixed at Paris; and when the distant provinces became re-united to the crown, for the ease of the subject several parliaments were erected in other parts of the kingdom, to whom the people might appeal from those inferior courts, as has been intimated already.

The Bailiffs, Seneschals, Provosts, Castellans, or their substitutes, are still judges of the inferior courts in the country; and in towns, the Provost and Eschevins, or Mayor and Aldermen, as in our corporations, to which they have added a judge of the police, who takes cognizance of some special criminal cases. But they differ from us in this very material point, that their trials are not by juries in any of their courts; the Bailiff, Seneschal, &c. with their respective assessors, are judges both of the law and fact.

The civil law generally prevails in France, besides which every province and district has its particular customs; but the King's edicts, ordinances, declarations and arrears, (for by all these names are their acts of state called) repeal and alter any of them at pleasure, the legislative authority being vested solely in the Prince.

Besides the courts and officers of justice above-mentioned, France is divided into twenty-five generalities, every one whereof hath an Intendant, on whom the King seems to rely for the due administration of justice, both civil and criminal, and the ordering of his finances or revenues, more than on any other officers in the kingdom, and to whom all the rest are in a manner subordinate. They are usually members of parliament, and of that body that are stiled masters of requests.

There are also presidial courts established in most

General-  
ties or  
Intendancies.Presidial  
courts.

great towns, who have cognizance of civil causes in the first instance, and receive appeals from the bailiwicks and inferior courts, where the sum in dispute does not amount to more than 500 livres, or twenty livres per annum.

I come next to inquire into the great councils by which all affairs of state are governed, which are six in number. 1. The council of state. 2. The council of finances. 3. The council of dispatches, or that of the Secretaries of state. 4. The privy council. 5. The council of conscience. And, 6. The council of commerce.

C H A P.  
XXXV.The great  
councils  
for state-  
affairs.

1. The council of state, consisting of the King, the Chancellor, and Ministers of State, which forms foreign alliances, determines peace and war, and the most important affairs of the kingdom, being at present the supreme council.

2. The council of finances, which has the direction of the royal revenues, established in the year 1661, on suppressing the office of super-intendant of the finances.

3. The council of dispatches, which transacts affairs relating to the respective provinces, as commissions and orders to the Governors, Commandants, and other officers of the provinces and towns.

4. The privy-council, which seems to meet only for form sake at present, the business being transacted in a cabinet-council.

5. The council of conscience, consisting of the King's Confessor, and some Ecclesiasticks, who apprise the King of the state of religion, and attend when he nominates to bishopricks and abbies.

6. The council of commerce, held at the eldest counsellor's of state, and consists of the Secretary for marine affairs, the Comptroller-General of the finances, several other Counsellors of state, six Masters of requests, who have been Intendants of commerce, and of the Deputies of twelve trading towns.

The great officers of the crown are, the Chancellor, who presides in all courts and councils of state in the King's absence; the Keeper of the Seals, four Secretaries of State, the Marshals of France, the Colonel-General of the Horse, the great Master of the Artillery, the Admiral of France, two Vice-Admirals, the General of the galleys, the four great officers of the order of the Holy Ghost, viz. the Chancellor, the Master of the Ceremonies, the Great Treasurer, and the Secretary, the chief Presidents of the several parliaments, the Governors and Lieutenant-Generals of the provinces.

The great  
officers of  
the crown.

The principal officers of the household are, the Great Master of the Household, the Great Master of the Horse, the Great Almoner, the Great Chamberlain, the Gentlemen of the Bedchamber, the Great Butler, the Great Huntsman, the four Captains of the guard du corps, and the chief Porter.

## C H A P. XXXVI.

*Treats of the finances, or revenues of the crown; and of the forces by sea and land.*

Antiently there was but one Grand Treasurer for the kingdom of France, but at present there are twenty-five, viz. one for every generality into which the kingdom is divided. Of these

Of the fi-  
nances, or  
revenues of  
the crown.

CHAP.  
XXXVI.

there are nineteen in the Pais de elections, as they are called; that is, in those provinces where courts of election are established, of which there are several in every generality; and six in the Pais d'etats, that is, in those provinces where the States are still permitted to assemble, and seemingly to give their consent to the taxes demanded. The Pais de elections are those of Paris, Amiens, Soissons, Chalons, Lyons, Montauban, Bourdeaux, Limoges, Poitiers, Rochelle, Tours, Caen, Alençon, Rouen, Orleans, Bourges, Moulins, Riom, and Auch: and the six within the Pais d'etats, are those of Britany, Burgundy, Dauphiné, Provence, Montpellier, and Thouloufe.

Every generality is composed of several elections, which comprehend a certain number of parishes.

Intendants,  
their authority.

In every generality there is an Intendant deputed by the King, who takes cognizance both of civil and criminal causes, as well as of the finances, and other matters that concern the publick good and his Majesty's interests; only the generalities of Montpellier and Thouloufe, which comprehend the province of Languedoc, have but one Intendant; so that there are but twenty-four Intendants in the twenty-five generalities. There are however six more distributed in Flanders, Hainault, Alsace, Metz, Eranche Comte, and Rouffillon, which makes in all thirty intendancies.

30 intendancies, in which are 38,502 parishes.

There are in every generality two Receivers-general of the finances, who take it by turns annually to receive the taxes of the collectors of the several parishes, and remit them into the royal treasury or exchequer. The whole number of parishes contained in the said thirty general intendancies, amount to thirty-eight thousand five hundred and two, in which are comprehended one million five hundred eighty-five thousand one hundred and twelve families, liable to pay the Taille or land-tax.

The several species of taxes.

The taxes usually levied in France, are the taille or land-tax, the taillon, the subsistence money, the aides, and the gabelles.

The manner of levying the taille or land-tax.

As to the manner of levying the taille, after the King has determined what sum he will raise, an order is issued to every generality, ascertaining what part of it shall be levied in each election. The Intendant, with the two Receivers of the generality, hereupon visit every election, and with the officers thereof, assign what proportion every parish in the election shall raise, having informed themselves of the alterations that have happened in the respective parishes since the preceding year. When the tax is settled, the intendant sends a copy of the assessment to the royal treasury, and duplicates of the sums assessed on every parish to the respective elections, who transmit to the collectors of every parish a particular of the sum to be raised by them, with an order to assess the several inhabitants according to their consciencies, in proportion to the lands and goods they possess. This assessment or roll is confirmed by an officer of the election, and the tax levied accordingly by the collectors, who transmit it to the receivers of the election every quarter, and these pay it to the receivers of their generality; from whence it is either conveyed to the royal treasury or exchequer, or wherever else the government appoints.

The Taille, or land-tax, is only paid by the third estate, that is, by tradesmen, or those that hold by base tenures, like our Copyholders in England, called in France *Roturiers*; tho' others affirm, that those that hold in socage also are included, which are the same with our ordinary

Freeholders; and this I am inclined to believe from the great numbers there are of them. The Noblesse therefore, (that is, the nobility and gentry who hold by knights service) and the clergy are exempted, unless in Languedoc, Provence and Dauphiné, where the lands and immovable estates only are chargeable. Here the Roturiers or copyholders pay nothing for that part of their estates which they hold by knights service; and on the contrary, the gentry pay the Taille for all such estates as they hold by base tenures, for the Taille is a real and not a personal tax there. In all the generality of Montauban, and in the elections of Agen and Condom, which are in the generality of Bourdeaux, as also in the election of Lanes, belonging to the generality of Auch, the tax is also real, that is, paid for the lands, without any regard to the quality of the person who possesses them: but in every other generality, the clergy and the gentry are exempt from the Tailles, as well as the officers of the superior courts, and courts of judicature, who are also exempted from watch and ward.

The Burgeses of Paris, and some other free cities, are exempted from the Tailles.

The Taillon was established by King HENRY II, anno 1549, for augmenting the soldiers pay; and is payable by the same persons as the Taille, and amounts to about a third of that tax. Taillon.

The Subsistence is a tax which was first levied by LEWIS XIV, for the subsistence of his armies in their winter-quarters, and is paid in the same manner as the Taille.

By Aides are understood all duties and customs on goods and merchandizes except salt. Aides.

The Gabelles are the taxes arising from salt. LEWIS the Fourteenth raised this duty beyond what it had been in any preceding reigns, dividing the whole kingdom into the great gabelles, the little gabelles, and the countries exempt from gabelles. The country of the great gabelles, where salt is sold at the highest price, comprehends the generalities of Paris, Soissons, Amiens, Chalons, Orleans, Tours, Moulins, Bourges, Dijon, Rouen, and Caen. The country of the smaller gabelles, where salt is sold at a less price, comprehends Lyons, Provence, Dauphiné, Languedoc, and Rouffillon: and the countries exempt from gabelles are, Poitou, Limoufin, Auvergne, Guienne, Gasconne, and Bretagne. In the bishopricks of Metz, Toul, and Verdun, and Franche Comte, the price of salt is various. The farmers of the gabelles are obliged to buy their salt at the salt-pits and bays at a certain price, and to carry it to the store-houses established by the King, where it is delivered out to the people. There is one of these store-houses, or greniers of salt, in almost every great town, which have their directors and other officers belonging to them, who are judges of all offences relating to salt, as the making and selling it without licence, and not bringing it to the King's store-houses, &c. They take cognizance also of the goodness of the salt, and of the weights and measures, and examine if every family takes such a quantity of salt annually as is prescribed them by the government. Gabelles.

The other taxes are the capitation, or poll-tax, first established in the year 1695, and taken off at the end of that war, but laid on again in the year 1701. Capitation.

The tenths of all the estates of the kingdom was levied by the crown in the year 1710, and affected not only real estates, but all offices, employments, Tenths.

ces.

ployments, and commissions, which paid proportionably to their annual revenues and incomes; as also all money in the funds, or private hands.

Another tax also has been levied of late years, from which neither the clergy or nobility are exempted, called the fiftieth penny, or the fiftieth part of the produce of the earth; against which representations have been made by the clergy, and the several parliaments of the kingdom, but to very little purpose.

The tenths and free gifts of the clergy, who are allowed for the most part to tax themselves, amount also to a very considerable sum, they being possessed of a third part of the lands of the kingdom, and it being expected that they should pay at least as great a proportion of their revenues towards the support of the government, as any other subjects.

Besides these, there is a great revenue arising from the crown-lands, and woods, fee-farms, forfeitures, fines, &c. and from the high duties imposed on all provisions brought into Paris; all which, are computed to amount to fifteen millions sterling and upwards, annually to the government; and it is supposed that the King makes as much some years by raising the value of the coin, and other oppressive ways and means, as by compelling the people to take paper for their money, and then compounding with them to take half, or perhaps a quarter of their respective debts, when they come to be paid. And in short, the whole produce of the country is the King's: he takes from the subjects what part of their estates he sees fit, and of late years has scarce left them a subsistence for their families.

Their coins, real and imaginary, are crowns, livres, sols, and deniers. 12 deniers make a sol, or sou; 20 sols a livre, or florin; 3 livres, or 60 sols, make a crown. A French crown is of equal value with 4s. 6d. English: an English crown yields in France 65 sols; a pound sterling yields 13 livres, and an English guinea 14 livres. The other monies of France are a double, which is two deniers; a liard, the fourth part of a sol; pieces of three and a half, and five sols; the quarter and the half crown; the two livre piece: and of gold, the crown, value five livres 14 sols; lys de or, value 7 livres ten sols; the half louis, the whole louis d'or, value 11 livres; double louis, &c.

The officers of the land-forces in France, who have the highest command in their armies, are the Marshals, of whom originally there was but one, afterwards there were two; in the reigns of FRANCIS I. and HENRY II. there were four, and under the reigns of LEWIS XIII. and LEWIS XIV. there number was not limited. There were actually in the year 1715, no less than fifteen Marshals of France. They enjoy their offices during their lives, and are deemed officers of the crown. They are judges of points of honour, and have Provofts or Lieutenants in the provinces, who have a jurisdiction over all vagrants, robbers, incendiaries, assassins, &c. of which offences they take cognizance, and judge in the last resort.

The Lieutenant-Generals command bodies of forces under the Marshals; and when they serve in the same army, every one of them commands his day by turns, according to their seniority.

The Marshals de camp are the next officers to the Lieutenant-Generals. Their business is to mark out the encampments, to command the van-guard, and reconnoitre the country.

The Brigadiers command a brigade of cavalry or

infantry: a brigade of horse is ten or twelve squadrons, and a brigade of foot five or six battalions.

The Mestre-de-camp is an officer that commands a regiment of cavalry, which is composed of several troops, each of which is commanded by a Captain, Lieutenant, and Cornet.

A Colonel commands a regiment of foot, which consists of several companies, each of them commanded by a Captain and two Lieutenants.

The Dragoons are deemed bodies of infantry, though they serve sometimes on horse-back, and sometimes on foot; and the commander of a regiment is stiled Colonel.

There was formerly a Colonel-General, who commanded all the infantry; but that office was suppressed on the death of the Duke of Epernon in 1661.

There is still a Colonel-General of the cavalry, a Mestre-de-Camp General, and a Commissary General, who are superior to the Mestres-de-camp. The Colonel-General of the Swifs, commands all the Swifs troops in the service of France.

The Colonel-General of dragoons, commands all the French dragoons. There is also in that body a Mestre-de-camp General under the Colonel-General.

The armies of France were never so numerous as in the reign of LEWIS XIV. In the war which preceded the peace of Utrecht, they amounted to near four hundred thousand men, and they are not much reduced at present. They retain all or most of their officers and regiments, and only discharge some of the private soldiers, which they can easily replace when they please; which method has been imitated of late in Britain.

The author of the *Description de la France*, published in the year 1719, says, that the infantry consisted then of two hundred and sixty-four regiments, without including the two regiments of the household-troops: that some of those regiments consisted of four battalions, most of them of two, and the rest of one: that their cavalry was then composed of an hundred and seven regiments, and the dragoons of thirty-six.

That the troops of the household consisted of ten thousand men, horse, and foot, the cavalry comprehending the four companies of the guards de corps, viz. that of the gendarmes of the guards, that of the guard of light-horse, the musketeers, and sixteen companies of gendarmerie, every one whereof consisted of sixty gendarmes, or light horse.

The infantry of the household comprehends the regiment of French guards, consisting of thirty-two companies, every company of an hundred and forty men, without reckoning the officers, and the regiment of Swifs guards containing twelve companies of two hundred men each. These guards are always placed at the gates and avenues of the palace where the King resides, the French guards always taking the right of the Swifs.

The Colonel of the French foot-guards is usually a Marshal or Lieutenant-General. The late King, by an edict anno 1691, gave the title and rank of Colonel to the Captains of the guards; and by another edict in 1693, he gave them the rank of Colonels before the Colonels of other regiments created since 1691, and the Lieutenants of this regiment command all Captains of infantry.

The grand master of the artillery commands all the French artillery, orders the making of gunpowder, and the founding of guns, and has the conduct of that body on marches and sieges. He commands

Number  
of regi-  
ments.

Guards.

CHAP.  
XXXVI

commands in the French arsenals, and especially that of Paris. He is always Colonel of the regiment of artillery and bombardiers, and in every army has his lieutenant, who commands the artillery. The Engineers are a body of three hundred men, commanded by the Intendant of the fortifications.

Navy royal and maritime forces.

The maritime forces of France were inconsiderable till the reign of LEWIS XIV; but in the last war, says my French author, the naval army (the royal navy) of France not only defended itself against the English and Dutch, but often beat them: though I believe he cannot give one instance of that nature in a general battle; they may have defeated some single squadrons when they happened to out-number them, but never the grand fleet, either of England or Holland. The Admiral of France is General of the royal navy, and takes cognizance of all offences committed therein; and he constitutes the members of the admiralty, who administer justice in his name concerning all controversies at sea, either relating to war, the fisheries, or merchandize. He has a right to a tenth of the prizes taken at sea. The king however at present reserves to himself the power of appointing the officers concerned in building and fitting out the fleet, and buying in provisions and ammunition for the naval magazines and arsenals. The Admirals had formerly a right to wrecks, but LEWIS XIV, by an ordinance in 1681, decreed that they should be restored to the owners, if claimed within a year and a day, after charges paid.

Prizes are adjudged by the Admiral and commissioners appointed by the King. The Admiral hath under him two Vice-Admirals, who are usually Marshals of France, and under them are Lieutenants-general of the royal navy, who have the precedence of the commanders of squadrons, and give them orders, which they communicate to the inferior officers. There are usually four Lieutenant-generals, but in the year 1715 there were five. The commanders of squadrons hold the same rank as the Marshals de camp at land; there are at present eleven of these commanders. The captains of men of war, are the next to the commanders of squadrons, and when they serve on shore have the same rank as colonels; and there are actually in France an hundred and seventy-one captains of men of war, and fifty-three captains of frigates; and of all kinds of commission officers not less than eighteen hundred, without reckoning the commanders of squadrons. In time of war there are nine hundred guards marine, distributed in three companies, viz. at Toulon, Brest, and Rochfort, who are gentlemen volunteers, taught navigation and other parts of mathematicks at the King's charge, out of whom the vacant commands are supplied. Besides which, his Majesty entertains an hundred companies of marines, of an hundred men each, commanded by the lieutenants of the men of war. It appeared in the year 1713, that there were fifty-two thousand five hundred and fifty-four seamen employed in the royal navy, besides officers, and a vast number of workmen in their ports and magazines, employed in making and providing naval stores, upwards of twelve thousand invalids, ten thousand cabin-boys, powder-monkeys, &c.

Ports of the royal navy.

The royal navy is distributed in the ports of Toulon, Brest, Port Louis, Rochfort and Havre de Grace, where there are magazines filled with all manner of necessaries and ammunition for building and rigging out a fleet; which consisted the

last war in twenty-six first rates, thirty second rates, forty-six third rates, twelve fourth rates, twenty-seven light frigates, five bomb-gallies, twenty-two fireships, besides flutes, tenders, &c. The first rates being an hundred and sixty-three feet long, and forty-four foot broad, and carrying from seventy to an hundred and twenty guns, and about nine hundred men each. In every port where the King has a magazine, there is an Intendant of the Marine, who takes cognizance of civil and criminal causes, and the revenues relating to the sea-service, and takes care to furnish the magazines with all manner of stores.

CHAP.  
XXXVI.  
Number of men of war.

Intendants of the marine.

The galleys of France are another considerable force, of which there are thirty in the port of Marseilles, and ten more in other ports. The General is independent of the Admiral, and styled General of the galleys, and Lieutenant-General, of the Levant seas. He has under him a Lieutenant-General, and five commanders of squadrons. The principal galley is called the Reale, on account of the royal standard which it carries, and the General goes on board it. The second galley is called the Patron, in which the Lieutenant-General commands. The Reale and the Patron are larger than the rest, and have three hundred slaves on board each, whereas the other galleys have but two. But besides the crew, every galley has a company of foot, consisting of sixty men, commanded by the officers of the galley. There is also a company of young gentlemen belonging to the galleys, called the guards of the standard, who are instructed in navigation at the King's charge, as those of the guards marine are, which belong to the royal navy. There are also belonging to the galleys an Intendant, Inspector, Comptroller, Commissary-General, Secretary-General, and two Treasurers General. The guards of the coast are commanded by their proper officers on all the shores of the kingdom, but are subject to the Admiral of the royal navy. These were instituted to prevent any surprise from an enemy, who should attempt to invade or harass the maritime provinces. They are exempted from serving in the ban and arrear-ban, which are the ordinary militia of France, and enjoy many other privileges, on account of their being always in readiness to prevent a descent from a foreign enemy.

Galleys.

## CHAP. XXXVII.

*Treats of their religion, and the ecclesiastical government of France.*

AS to the religion of the antient Gauls, the first establishment of the Christian religion in France, the opposition made by the Albigenes to the errors and encroachments of the church of Rome, the introduction of Calvinism, the toleration of it by the edict of Nantz, the repeals of that edict, the civil wars that happened in this kingdom on account of religion, and the persecution of the Protestants; these have been largely treated of in the chapter containing the antient and modern history of France: there remains therefore nothing more than to consider the present state of religion here.

Religion.

The established religion in France is notoriously that of the Roman Catholick; but the Gallican church pretends to enjoy greater liberties and privileges, and to be less subject to the See of Rome, than any other Christian state of that communion,

CHAP.  
XXXVII.

as will appear hereafter. However, we find the nation divided into two great parties, one of them zealous in defending the rights of the Gallican Church against the encroachments of Rome, and the other no less zealous in asserting the Pope's supremacy. Of the latter party are the Jesuits, who at this day seem to have the greatest influence, and to whose indefatigable industry we may ascribe the receiving of the Constitution Unigenitus, after so long and warm a struggle.

Ecclesiastical government.

All spiritual causes are cognizable at this day in their ecclesiastical courts, provided they are not intermixed with temporal matters, or concern the state or civil judicatures. On the contrary, all temporal matters, and those which regard the civil government, are subject to lay jurisdiction. The Bishops exercise their authority by an official, who ought to be a graduate and a priest.

Their Bishops antiently were not tried in the temporal courts, even for high-treason, but by other Bishops, or in Parliament, where all the Bishops assisted; but there are several instances of late years where they have been tried by lay-judges, or commissioners specially appointed for that purpose.

And as the Kings of France are no farther subject to the laws of the Holy See than they think fit, consequently all the privileges which the ecclesiasticks enjoy, they derive from the crown, and these may be restrained and revoked when his Majesty sees proper. To entitle any subject of France to the privileges of the clergy, it is necessary that he actually be in holy orders, or at least that he has received the tonsure, wears the habit of a clerk, serves in the church, and applies himself to no business inconsistent with that character.

Privileges of the clergy.

The privileges the clergy of France enjoy, are, 1. That they cannot be brought before any lay-jurisdiction for personal matters: on the contrary, they cannot bring laymen before their ecclesiastical courts for any cause whatever; and in real or mixed actions, the clergy themselves must try their causes in the civil courts. 2. The clergy as well as the nobility, are exempted from the tailles, or land-tax. 3. Neither their movables employed in divine service, or necessary for their use, nor their books to the value of an hundred and fifty livres, can be seized. 4. In criminal cases they may be tried before the grand chamber, if they desire it. 5. A person in holy orders condemned for any capital crime, may not be executed till he is degraded, unless for treason or assassination. 6. They are exempted from quartering soldiers. 7. Their persons cannot be taken in execution in civil actions, unless they have been guilty of some fraud.

The King nominates to all bishopricks and abbies, and the Pope afterwards grants his bulls of consecration, &c. to the Bishop, provided the party nominated be twenty-seven years of age, and a doctor of divinity or law. The age required for abbots and priors is twenty-three. The Pope agreed to the King's nomination of Bishops, &c. when the Concordat was made at Bologna, in the room of the Pragmatick Sanction; and the King, on the other hand, granted to his Holiness the annates, or first-fruits. But neither Britany, nor the new-conquered country, being comprehended in the Concordat, the King always receives a brief, or indulto, from the Pope, when he nominates to those bishopricks. Besides the usual bulls, the Pope sends to an Archbishop the pallium, which is an ornament they wear when they officiate pontifi-

VOL. II.

cally, and shews their authority over their suffragans.

CHAP.  
XXXVII.

The crown seizes the temporalities of all vacant archbishopricks and bishopricks, and this in France is called the Regale. The King has also the presentation of vacant benefices belonging to the bishopricks, till the oath of fidelity of the successor be registred in the chamber of accounts, and he has obtained an order there to take possession of it. And the King frequently grant pensions to laymen out of the bishopricks and abbies.

The liberties of the Gallican Church, which my French author makes distinct from her privileges, are two. 1. The Pope cannot intermeddle in things relating to temporal affairs in any of the King's dominions; and if he does, the clergy are not bound to obey him. 2. Though the Pope be acknowledged head of the Church in spirituals, his power is nevertheless bounded in France by canons and antient councils received in the kingdom; for the Gallican Church has always held, that a general council is above the Pope.

Liberties of the Gallic Church.

The clergy of France cannot assemble without leave of the King: these assemblies are of two kinds, the one stiled general, because it is composed of the deputies or representatives of all the ecclesiastical provinces; the other private, because it consists only of such prelates as are about Paris, who are called to treat of some matter of importance, when there is not time to chuse and assemble the deputies of the provinces.

Assembly of the clergy.

The general assemblies again are divided into ordinary and extraordinary: the extraordinary are called on great emergencies, and the ordinary have their fixed stated times, and are held every five years. The ordinary assemblies again are divided into great and lesser; the first are called great, because the provinces usually send four deputies to them, two of the higher orders, as Archbishops or Bishops, and two of the inferior orders, as Abbots, Priors, or other beneficed clergymen of the province. The second are called the lesser assemblies, because the provinces send but two deputies, one of the first order and the other of the second. The great assemblies were heretofore called *Decennates*, because they meet but once in ten years, and in the intervals are held the lesser assemblies; for example, if the lesser assembly be held in 1730, the greater will be held in 1735, so that there are five years between the one and the other.

The great assemblies are held to renew their contract for paying their tenths to his Majesty, which is in force ten years. The business of the lesser is to take the accounts of the Receiver-General: but both the one and the other grant the King a further supply, which passes under the name of a free-gift, which is levied on all the clergy of France, and is more or less, according to the exigencies of the state. There are but sixteen of the provinces that have a right of sending their deputies to the ordinary assemblies, viz. Aix, Alby, Ambrun, Arles, Auzh, Bourdeaux, Bourges, Lyons, Narbonne, Paris, Rheims, Rouen, Sens, Thoulouse, Tours, and Vienne. The other provinces were not united to the crown when the first contract for tenths was made; but they send deputies to the extraordinary assemblies, which treat of the general affairs of the church of France, of matters of faith, manners, or discipline.

The clergy of France have always two agents-general, which attend the Court to make their remonstrances to the King and Council, against

Agents of the clergy.

16 T

any

any edicts or arrets, which appear contrary to the interests of the Church, or seem to encroach on her jurisdiction, and they are allowed a seat in the Council of State and Parliament of Paris for that end. They continue five years in their office, and are named alternately by the provinces. They ought to be priests of the province that elect them, and to be possessed of a benefice that pays tenths, and are allowed each of them a salary of seven thousand livres per annum.

The controversies which happen about the levying the tenths, or other taxes or impositions on the clergy, are tried in the courts of the several dioceses in the first instance; but are afterwards frequently brought by way of appeal to some of the nine superior ecclesiastical courts, established in several parts of the kingdom, which are the last resort within their respective limits. These superior courts or councils are held at Paris, Rouen, Lyons, Tours, Thoulouse, Bourges, Bourdeaux, Aix, and Pau. The diocesan courts assess and assign what proportion every clergyman is to pay towards the tenths, &c. for though they have obtained the name of tenths, the sum raised has been sometimes more and sometimes less. The sum which is demanded by way of free gift, is usually named by the court, and they will not often take much less than they ask.

The kingdom of France contains eighteen Archbishopricks, and a hundred thirteen Bishopricks, viz.

1. The Archbishoprick of Aix, the suffragans whereof are, 1. The Bishop of Apt. 2. The Bishop of Riez. 3. The Bishop of Frejus. 4. The Bishop of Gap. 5. The Bishop of Sisteron.

2. The Archbishoprick of Alby, the suffragans whereof are, 1. The Bishop of Castres. 2. The Bishop of Mande. 3. The Bishop of Cahors. 4. The Bishop of Rodez. 5. The Bishop of Vabres.

3. The Archbishoprick of Ambrun, the suffragans whereof are, 1. The Bishop of Digne. 2. The Bishop of Grasse. 3. The Bishop of Vence. 4. The Bishop of Glandeve. 5. The Bishop of Senez.

4. The Archbishoprick of Arles, the suffragans whereof are, 1. The Bishop of Marseilles. 2. The Bishop of St Paul trois Chateaux. 3. The Bishop of Thoulon. 4. The Bishop of Orange.

5. The Archbishoprick of Auch, the suffragans whereof are, 1. The Bishop of Dax, or Acqs. 2. The Bishop of Laictoure. 3. The Bishop of Comenge. 4. The Bishop of Conserans. 5. The Bishop of Aire. 6. The Bishop of Bazas. 7. The Bishop of Tarbes. 8. The Bishop of Oleron. 9. The Bishop of Lescar. 10. The Bishop of Bayonne.

6. The Archbishoprick of Befançon, the suffragans whereof are, 1. The Bishop of Belley, &c.

7. The Archbishoprick of Bourdeaux, the suffragans whereof are, 1. The Bishop of Agen. 2. The Bishop of Condom. 3. The Bishop of Angoulême. 4. The Bishop of Saintes. 5. The Bishop of Poitiers. 6. The Bishop of Rochelle. 7. The Bishop of Luçon. 8. The Bishop of Perigueux. 9. The Bishop of Sarlat.

8. The Archbishoprick of Bourges, the suffragans whereof are, 1. The Bishop of Clermont. 2. The Bishop of St Flour. 3. The Bishop of Limoges. 4. The Bishop of Tulle. 5. The Bishop of Puy.

9. The Archbishoprick of Cambray, the suffragans whereof are, 1. The Bishop of Arras. 2. The Bishop of St Omer. 3. The Bishop of Tournay. 4. The Bishop of Ypres.

10. The Archbishoprick of Lyons, the suffragans whereof are, 1. The Bishop of Autun. 2. The Bishop of Langres. 3. The Bishop of Chalons. 4. The Bishop of Macon.

11. The Archbishoprick of Narbonne, the suffragans whereof are, 1. The Bishop of Beziers. 2. The Bishop of Agde. 3. The Bishop of Carcassonne. 4. The Bishop of Nîmes. 5. The Bishop of Montpellier. 6. The Bishop of Lodeve. 7. The Bishop of Uzez. 8. The Bishop of St Pons de Tomieres. 9. The Bishop of Alet. 10. The Bishop of Alais. 11. The Bishop of Elne, or Perpignan.

12. The Archbishoprick of Paris, the suffragans whereof are, 1. The Bishop of Chartres. 2. The Bishop of Meaux. 3. The Bishop of Orleans. 4. The Bishop of Blois.

13. The Archbishoprick of Rheims, the suffragans whereof are, 1. The Bishop of Soissons. 2. The Bishop of Chalons sur Marne. 3. The Bishop of Laon. 4. The Bishop of Senlis. 5. The Bishop of Beauvais. 6. The Bishop of Amiens. 7. The Bishop of Noyen. 8. The Bishop of Bologne.

14. The Archbishoprick of Rouen, the suffragans whereof are, 1. The Bishop of Bayeux. 2. The Bishop of Avranches. 3. The Bishop of Evreux. 4. The Bishop of Seez. 5. The Bishop of Lizieux. 6. The Bishop of Coutances.

15. The Archbishoprick of Sens, the suffragans whereof are, 1. The Bishop of Troyes. 2. The Bishop of Auxerre. 3. The Bishop of Nevers. 4. The Bishop of Bethlers.

16. The Archbishoprick of Thoulouse, the suffragans whereof are, 1. The Bishop of Pamiers. 2. The Bishop of Montauban. 3. The Bishop of Mirepoix. 4. The Bishop of Lavaur. 5. The Bishop of Rieux. 6. The Bishop of Lombez. 7. The Bishop of St Papoul.

17. The Archbishoprick of Tours, the suffragans whereof are, 1. The Bishop of Mans. 2. The Bishop of Angers. 3. The Bishop of Rennes. 4. The Bishop of Nants. 5. The Bishop of Vannes. 6. The Bishop of Cournouailles, or *Quimpercorantim*. 7. The Bishop of St Paul de Leon. 8. The Bishop of Treguier. 9. The Bishop of St Brieux. 10. The Bishop of St Malo. 11. The Bishop of Doll.

18. The Archbishoprick of Vienne, the suffragans whereof are, 1. The Bishop of Valence. 2. The Bishop of Die. 3. The Bishop of Grenoble. 4. The Bishop of Viviers. 5. The Bishop of Geneve.

19. The

CHAP. XXXVIII. 19. The three Bishopricks are those of Metz, Toul, and Verdun, all suffragans to the Archbishop of Triers in Germany.

20. The Bishop of Strasburg, is suffragan to the Archbishop of Mentz.

21. The Bishop of Perpignan in Roussillon, to the Archbishop of Terragona in Spain.

They compute there are about seven hundred and fifty abbeys of Monks, and two hundred of nuns in France, and about ten thousand other lesser convents. That there are in all upwards of two hundred thousand monks and nuns in the kingdom, and that the revenues of the clergy and religious houses of all kinds, amounts to twenty-six millions sterling, per annum.

#### CHAP. XXXVIII.

*Treats of the King's succession to the crown; of his minority and majority; titles, prerogatives, ornaments, arms, coronation, orders of knighthood; and of the Princes of the blood, nobility, gentry, and commonalty.*

Of the succession to the crown.

THE French boast much of their Salique Law, which limits the succession of the crown to the male issue: but whether by that law the eldest son only was to inherit the kingdom, or it was to be divided equally among the sons, they do not seem to insist much upon. If we were to be guided by the custom that prevailed during the two first races of their Kings, all the sons would have an equal right; where the deceased King made no disposition or division of his dominions, they were parted of course between his male issue. *LOTHAIRE* was the first that succeeded to the whole monarchy where there were more brothers than one, and this was not till the year 954. But further, notwithstanding this pretended Salique Law, the Kings of France, when the legislative authority was lodged in them solely, and the King and States or Parliaments, when the legislative authority was vested in them jointly, have taken upon them to set aside the eldest son of the preceding King, and fix another upon the throne. As in the case of *HENRY V*, King of England, who having married the daughter of *CHARLES VI*, King of France, was declared presumptive heir to the crown of France, to the exclusion of the Dauphin; which settlement was approved and ratified by the Parliaments and States of the kingdom, and *HENRY VI*, King of England, son of *HENRY V*, in pursuance of that settlement, was afterwards recognized, and crowned King of France in Paris.

At this day, according to the French writers, their King never dies; but in that moment the eyes of the preceding King are closed, his eldest son, or in default of male issue, the next Prince of the blood succeeds to the throne, and is vested with the supreme authority, before he is either anointed or crowned. But where the King is a minor, that is, before he has entered the fourteenth year of his age, the administration of the government is lodged in a Regent, usually the Queen-mother, if she survive the deceased King, or the first Prince of the blood, according as either of them can make interest, or influence the parliament of Paris, whose determination in this matter is usually acquiesced in by the rest of the king-

The Regency during a minority.

dom. But if the deceased King appoints a regent by his will, there is seldom any dispute about the matter.

When the King is become major, or entered into the fourteenth year of his age, he goes in great state to the parliament of Paris, attended by the Princes of the blood, Peers, and great Officers of state, which assembly is usually called his bed of justice, and here his majority is declared; notwithstanding which, the regent frequently procures himself to be constituted prime minister, and under that title continues to govern the kingdom till his Majesty thinks fit to take the reins of government into his own hands. There have been instances where the prime minister has continued in the same power during the King's whole life, as in the reign of *LEWIS XIII*, when Cardinal *RICHELIEU* had in effect the administration of all affairs, and the King was little more than a cypher. Some Princes, it is observed, cannot go without leading-strings; and if you take them out of the hands of one minister, they immediately put themselves under the conduct of another.

The French King styles himself, *LEWIS*, by the grace of God, King of France and Navarre. The Pope in his bulls gives him the title of eldest Son of the Church, and the most Christian King, as he is styled by foreigners; but his subjects, in writing or speaking of him, call him the King, or his Majesty only, and in speaking to him give him the appellation of Sire.

Style of the King.

The arms of France are three flowers de lys. Or, in a field Azure, supported by two angels in the habit of Levites, having each of them a banner in his hands with the same arms; the crest is an open crown; the whole under a grand Azure pavilion strewn with flowers de lys Or and ermins, and over it a close crown with a double flower de lys Or; on the sides of it are flying streamers on which are written the words used in battle, *Montjoye, St Denis*, and above them on the royal banner or oriflame, *Lilia non laborant neque nent*, taken from scripture; which are, 'tis said, an allusion to the Salique Law that excludes females from the supreme command.

Arms.

The marks of sovereignty, or royal ornaments, as the French call them, when his Majesty appears on solemn occasions, are the scepter, which he wields in his right hand, and the hand of justice, which is a kind of scepter too, that he holds in his left; the latter is a staff about two foot long, at the end of which is an ivory hand: the King uses it chiefly at the coronation, the scepter only on other days of ceremony.

There is no set time prescribed for the coronation, or anointing of the Kings of France; but the ceremony is performed whenever the court thinks fit. They are usually crowned at Rheims, by the Archbishop of that city, assisted by five other ecclesiastical Peers, and six noblemen, who represent the other six ancient lay peers of France. The oil with which his Majesty is anointed, according to their traditions, was brought from heaven by a dove, and is kept in a phial called the holy bottle. The crown of *CHARLEMAGNE* is at first set upon the King's head; but being very weighty, is exchanged for another. As for the rest of the ceremony, I refer the reader to the French historians, who are very large upon this head, as they are upon all matters of ceremony.

Coronation.

As to the prerogative of the Kings of France, in taking place of all the Kings of Europe, which their writers endeavour to maintain, it was never yielded

Prerogative of the Kings of France above other Princes.

CHAP.  
XXXVII.

yielded them by Spain, till that monarchy was reduced so low, that the Spaniard was in no condition to dispute it; and I am apt to think that the Sovereign of Russia, who hath of late assumed the imperial title, ever did, and always will, expect the precedence. The Sovereigns of Britain have never given up this point, nor is there any manner of reason they should, since France has been actually conquered by England, and our Princes have always given England the precedence in the royal stile. It would be ridiculous while they write themselves Kings of Great Britain, France, &c. that they should give place to the French King. Even CROMWELL, who only called himself Protector of the commonwealth of England, in his treaties with that nation, obliged them to place his title before that of the French King's, as he called him; for he insisted that the French King had no right to stile himself King of France; and this happened but in the reign of the last Monarch, LEWIS le Grand.

Of their  
touching  
for the  
evil.

The Kings of France touch for the evil as well as the Kings of England. According to tradition, CLOVIS received this privilege from heaven, at the time he became a Christian; though others say, their Kings have not used it more than six hundred years. Before his Majesty touches, the first physician and the physicians of the place examine the patient: the King makes a cross upon the party's forehead, and says to every one of them, The King touches, and God heals you.

Nobility.

The nobility of France consists of four degrees; 1. That of the Princes of the blood. 2. The higher nobility. 3. The ordinary nobility. And, 4. The nobility lately made. He is denominated first Prince of the blood, who stands next the crown after the King's children. The late King legitimated his base issue, and gave them the precedence of all the nobility after the Princes of the blood. The Duke of Maine and the Count de Thoulouse, two of his sons by his mistresses, by an edict in July 1714, he declared legitimate, and them and their children and descendants, born in lawful marriage, capable of succeeding to the crown of France after the last of the Princes of the house of Bourbon. And by another edict in 1715, he declared, that in parliament, and all other courts and places, there should be no distinction made between these and the Princes of the blood. But in the year 1717, LEWIS XV reversed both those edicts, reserving only to the Duke of Maine and the Count de Thoulouse the honours they enjoyed in parliament by the edict of 1714.

The  
twelve an-  
tient Peers  
of France.

The Dukes and Counts, Peers of France, after the Princes of the blood, have the precedence among the higher nobility. Antiently there were but six ecclesiastick and six lay-peers: three of the ecclesiasticks were Dukes, viz. the Archbishop of Rheims, and the Bishops of Langres and Laon; the other three ecclesiasticks were Counts, viz. the Bishop of Beauvais, the Bishop of Chalons, and the Bishop of Noyons: the three Lay-Dukes were the Duke of Burgundy, the Duke of Normandy, and the Duke of Guienne; and the three Counts were those of Champagne, Flanders, and Thoulouse. The lay-peerages have been re-united to the crown, except Flanders, which at present has another sovereign; and the Kings of France have since created many Dukes, Counts, and Peers, without limiting them to any certain number; and these take place according as they are registered in par-

liament. However, at a coronation six Princes or Noblemen are appointed to represent and perform the offices of the six antient lay-peers. Those who are Dukes and Peers have a right to sit in parliament, and several other privileges annexed to their peerages: but there are a great many Dukes who are not Peers, and consequently are excluded from those privileges; but are ranked however among the higher nobility. The officers of the crown also are in the same degree, as the Chancellor, the Grand Master of the Household, the Admiral, the Marshals of France, the Grand Master of the Artillery, and, according to some writers, the Grand Chamberlain, the Great Huntsman, the Great Master of the Horse, and the Great Almoner, the Gentlemen of the Bed-chamber, and the Captains of the Guard du Corps.

The knights of the order of the Holy Ghost also are ranked with the higher nobility; as also the Governors of provinces and Lieutenants-general.

In several provinces, as in Normandy, private gentlemen have the title of Noblemen; but in much the greatest part of the kingdom they go under the denomination of Esquires.

The ordinary nobility are divided into those who have been such for time immemorial, and those families who have been created by patent: if the first can shew they have enjoyed that honour an hundred years, it is sufficient to give them the privileges of the Noblesse (as they are called) and exempt them from the tallies, and some other taxes.

The nobility which is obtained by being members of parliament, or of the superior courts, is but personal, and does not descend to their posterity, unless the grandfather and father have enjoyed such offices successively, and exercised them twenty years, or died possessed of them. The crown has also granted the privileges of nobility to the Aldermen or Magistrates of some cities.

Nobility may be lost by following any trade, or taking a farm of lands; but when LEWIS XIV endeavoured to restore maritime affairs in France, he did by his declaration expressly permit persons of quality to apply themselves to foreign commerce, without derogating from their nobility.

The exercise of mechanick arts, or any mean office or employment, deprives a person of his nobility.

The gentlemen of Britany waive their nobility while they apply themselves to trade, and when they leave it off, resume their privileges again without a new grant.

Thus we see the French include all their gentry under the general title of Nobility or Noblesse. As for the third estate, the Roturiers, the most wretched of these miserable people, which comprehends their tradesmen, yeomen, and husbandmen, or peasants, they are liable to the land-tax and many others from which the nobility and gentry are exempted, as well as to the quartering of soldiers. Nor is this all, they are as much tyrannized over by the quality, as the quality and the rest of the subjects of France are by the court. If a peasant or a tradesman meets a gentleman upon the road, he gets out of the way as soon as possible, and makes ten thousand cringes as he passes by, or he may expect to be well drubbed without remedy: whereas an English farmer, or a common waggoner, will frequently dispute the way with a person of quality and a numerous equipage, and perhaps turn a coach and six out of the road; and

and gen-  
try.Nobility  
forfeited.

CH A P. XXXIX. and if a law-suit is commenced on any damage received, shall have as much justice done him as a nobleman.

The Protestant refugees happier than the present subjects of France.

The poor Protestants have been often pitied that they have been forced to fly from their dwellings and take refuge in foreign countries; but considering how kindly they have been received every where, especially in England, where they have been naturalized by thousands, and obtained the privileges of free-born Britons for a trifle; that many of them have gotten great estates, and most of them are in a way to maintain themselves and their families very handsomely; they may thank heaven for suffering them to be expelled a country which about that time began to be a scene of so much misery. How have those they left behind them either been forced into the army, where they have undergone inconceivable hardships, or plundered of their goods and money to maintain the glory of their grand monarch. No man at this day can say he is master of any thing in France: if he is suspected to have any treasure, it shall be borrowed of him, or the money shall be called in and paper-bills given him in the room of it, which shall first be compounded for half the money they were given for, and then the remainder paid, if ever, in money that is not of half the intrinsic value which is put upon it. Add to this the discouragement that these arbitrary proceedings have given to trade and industry, insomuch that great part of their lands lie uncultivated, they plant and sow no more than for their present necessity; and this has of late years occasioned frequent famines, insomuch that they forsake their country to find bread, as the Protestants did formerly to avoid persecution. But the Sovereign of this miserable people is our good ally, and therefore I shall not dwell any longer on this melancholy subject; only give me leave to wish, that none of the Princes of Europe may endeavour to imitate the maxims that Court has been governed by, to aggrandize a single family, or immortalize their names in the manner LEWIS XIV attempted to establish his.

Orders of knight-hood.

The three orders of knight-hood in France are, the order of St MICHAEL, the order of the Holy Ghost, and the order of St LEWIS. The order of St MICHAEL was instituted in the year 1469 by LEWIS XI, in honour of St MICHAEL the archangel, and consisted of thirty-six knights at first, but has been since enlarged to an hundred. It is not esteemed very honourable at present, only it is necessary a person should be admitted of this order before he receives that of the Holy Ghost.

The order of the Holy Ghost was instituted in 1578 by HENRY III, King of France and Poland. This order is composed of an hundred persons, without including the Sovereign, and is conferred on the Princes of the blood, Peers, and other great men of the first quality.

The order of St LEWIS was instituted in the year 1693, by LEWIS XIV, and was designed purely for the encouragement of the Generals and officers of the army.

#### CH A P. XXXIX.

Contains a further account of their diet and diversions.

Their diet.

THE diet of the French consists chiefly of bread and herbs: the common bread, or pain

*de gonette*, which is brought twice a week to Paris, is purely white, firm, and light, and made altogether with leaven, mostly in three pound loaves. That which is baked in Paris is coarser and much worse.

As for the fine manchet, or French bread, it is of late, since they have made it of yeast, so bitter, that it is not to be eaten, and we far exceed them now in this particular; but the grey salt they make use of is incomparably better, and more wholesome than our white salt.

In Lent the common people feed much on white kidney-beans and white lentils, of which there are quantities in all the markets, and to be had ready boiled. This lentil is a sort of pulse we have none of in England.

Their roots differ much from ours: here are no round turneps, but all long ones, and small, but excellently well-tasted, and are of a much greater use, being proper for soups also, for which ours are too strong; we have indeed of late got them into England, but our gardeners understand not the managing of them. The sandy plains of Vaugerard near Paris are famous for this sort of excellent root.

Potatoes are scarce to be found in their markets, which are so great a relief to the people of England, and very nourishing and wholesome roots; but there are store of Jerusalem artichokes.

They abound in vast quantities of large red onions and garlick, and the long and sweet white onion of Languedoc; also leeks, rockambole, and shallots are in great use.

The leeks are here much smaller than with us; but to recompence this, they are blanched with more care and art, and are three times as long in the white part, which is by sinking them early so deep in mellow earth. There is no plant of the onion-kind so hardy as this, and so proper for cold mountains, and it is excellent against spitting of blood, and all diseases of the throat and lungs.

Though the lettuce be the great and universal salad in France, yet it does not come near ours for the largeness and hardness of it, except the long Roman lettuce, which is incomparably beyond our Silesian.

In April and May the markets are served with vast quantities of white beets.

The asparagus here are in great plenty, but for the first month they are very bitter.

They are so great lovers of sorrel, that they plant whole acres of it in the fields; and nothing is more wholesome: it supplies the place of lemons against the scurvy, or any ill habit of the body.

But after all, the French delight in nothing so much as mushrooms, of which they have daily, and all the winter long, store of fresh and new gathered in the markets. They raise them on hot beds in their gardens.

Of forced mushrooms they have many crops in a year; but for the months of August, September, and October, when they naturally grow in the fields, they prepare no artificial beds.

They make in the fields and gardens of Vaugerard long narrow trenches, and fill them with horse-dung two or three foot thick, on which they throw up the common earth of the place and cover the dung with it like the ridge of a house, and over all they put long straw or long horse-dung: out of this earth springs the champignons after rain; and if rain comes not, they water

water the beds every day in winter. They are six days after their springing or first appearance before they pull them up for the market. On some beds they have plenty, on others but few; which demonstrate they come of seed in the ground, for all the beds are alike.

They destroy their old beds in summer, and dung their grounds with them: they prepare their new beds the latter end of August, and have plentiful corps of mushrooms, towards Christmas, and all the spring till after March.

The Moriglio mushroom is much esteemed in France, and is mostly gathered in woods at the foot of oaks. There are some of them as big as turkey-eggs. They are found in great quantities in the woods in Champagne about Rheims and Nostre Dame de Liefse. They string them and dry them, and they seem to have a far better relish than the champignons.

The city of Paris is well served with carp, of which there is an incredible quantity spent in Lent. They are not large, but very clean of mud, and well-tasted.

They have a particular way of bringing fresh oysters to town; they put them up in straw-baskets, cut from the shell, and without the liquor. They are thus very good for stewing, and all other manner of dressing.

There is a vast plenty of *macreuse*, a sort of sea-ducks, in the markets all Lent, which are esteemed as fish, and therefore they take them with great industry. They have a rank fishy taste, yet for want of other flesh are very welcome.

As for their flesh, mutton and beef, if they are good in their kind, they come little short of ours; but their veal is not to be compared with ours, being red and coarse. Their meat is leaner and drier, and is long kept before it is spent, which gives it a higher and saltier taste; for as meat rots, it becomes more urinous and salt. Our people indeed covet the freshest meat, and cannot endure the least tendency to putrefaction; and we have good reason to do so, because our air is twice as moist as theirs, which does often cause in the keeping of meat a mustiness which is intolerable; whereas the air of France being so much drier, keeping of meat not only makes it tender, but improves the taste; so that could we secure our meat in keeping it from that unfavourable quality, it would far out-do the French meat, because much more juicy.

As for their fruits, the *bon-chretien* and *virgoleuse* pears are admirable.

The Kentish pippin, as we call it, also is excellent: but two other sorts of apples stock the markets; the winter calvil, or queening, which though a tender and soft apple, yet continues good till after Easter: also the *pome d'apis*, which is served here for show more than use, being a small flat apple, very beautiful, very red on one side, and pale or white on the other, and may serve the French ladies at their toilets, for a pattern to paint by.

Wines.

The wines about Paris are very small, yet good in their kind; those de *Surene* are excellent some years. In all the taverns they have a way to make them into the fashion of Champagne and Burgundy.

The tax upon wines is now so great, that whereas before the war they drank them at *retale* at 5 d. the quart, they now sell them at two and three shillings the quart, and dearer; which has

enhanced the rates of all commodities and workmen's wages, and also has caused many thousand private families to lay in wines in their cellars at the cheapest hand, which used to have none before.

The wines of Burgundy and Champagne are most valued, and indeed not without reason; for they are light and easy upon the stomach, and give little disturbance to the brain, if drawn from the hoghead or loofe bottled, after their fashion.

The most esteemed are *Vin de bonne* of Burgundy, a red wine which is *Dolce piquante*.

*Volne*, a pale Champagne, but exceeding brisk upon the palate, is said to grow upon the very borders of Burgundy, and to participate of the excellency of both counties.

There is another sort of wine called *Vin de Rheims*; this is also a pale or grey wine, it is harsh, as all Champagne wines are.

The white wines of value are those of *Mafcon* in Burgundy.

*Mulso* in Champagne is a small and not unpleasant white wine.

*Chabri* is a quick and sharp white wine well esteemed.

*Vin de Turenne* in Anjou of two years old, is one of the best white wines drank in Paris.

*Gannetin* from *Dauphiné* is a very pale and thin white wine, very like the *Verde* of Florence, sweet and of a very pleasant flavour.

The red wines of Burgundy, *des quatres Feuilles*, as they say, or of four years old, are rare, but they are esteemed very wholesome, and are permitted to the sick in some cases to drink of. They are fine, and have a rough but sound taste, not prick. This term *des quatres Feuilles*, is used also to *Velne*, or any other sort of wine which is kept any time.

There are also in esteem stronger wines at Paris, as *Camp de perdrie*, and *Coste bruslee*, both red wines from *Dauphiné*, of very good taste, and hot upon the stomach.

*De l'hermitage* upon the *Rhone* is much admired. But the most excellent wines for strength and flavour are the red and white *St Laurence*, a town betwixt *Thoulon* and *Nice* in *Provence*; this is a most delicious muscat. These are of those sorts of wines which the Romans called *vinum passum*, that were made of half sun-dried grapes, for the grapes (especially the white muscadine grapes) being usually sooner ripe than the common grapes of the country called *Esperan*, viz. the latter end of August, they twist the bunches of grapes, so breaking the stalks of them that they receive no longer any nourishment from the vine, but hang down and dry in the then violent hot sun, and are in a few days almost turned into raisins of the sun; hence from this insolation the flavour of the grape is exceedingly heightened, and the strength and oiliness, and thick body of the wine, is mightily improved.

Besides these, here are also the white wines of *Orleans*, *Bordeaux claret*, and those excellent wines from *Cahors*; also *Cabreton* white and red from about *Bayonne*, strong and delicious wines; and all sorts of Spanish wines, as sack, palm, mountain *Malaga*, red and white *sherries*; and indeed the French are of late very desirous to drink of the strongest wines.

Besides wines, there is no entertainment without drinking at the desert all sorts of strong waters, particularly *ratifia's*, *citron-waters*, &c.

*Vattee* is a sort of perfumed strong water from *Provence*, made (as it is pretended) of *Muscat* wine,

CHAP. wine, distilled with citron-peels and orange-  
XXXIX. flowers.

Fenouillet de l'isle de Ree is valued much, 'tis like our anniseed-water.

These and many other sorts of strong waters and strong wines, both of France, and Italy, and Spain, are brought in at the latter end of the desert in all great feasts, and they drink freely of them, which custom is new, the late long war introduced it: for the nobility and gentry suffering much in those tedious campaigns, applied themselves to these liquors to support the difficulties and fatigues of weather and watchings, and at their return to Paris used them at their tables. The Parisians, both men and women, are of late strangely altered in their constitutions and habit of body, from lean and slender they are become fat and corpulent, the women especially; which is supposed to proceed from nothing so much as the daily drinking strong or sweetened liquors, as coffee, tea, and chocolate, which are as much used in private houses in Paris as in London. These sugared liquors, 'tis said, add considerably to their corpulency.

Cyder.

But amongst the drinks that are in use in Paris, cyder from Normandy must not be forgot. It is the best of that kind of liquor, of the colour of claret, reddish and brown. The apple that it is made of is called Frequin, round and yellow, but so bitter that it is not to be eaten, and yet the cyder that is made of it is as sweet as any new wine. It keeps many years good, and mends of it's colour and taste.

The French given to tippling of late.

There are also many publick coffee-houses, where tea, coffee, and chocolate may be had, and all the strong waters and wines above-mentioned; and innumerable ale-houses, where the natives tinkle very freely: the French are far from being that sober people they were in the last age.

Water of Paris.

There are two sorts of water which they drink at Paris, water of the river Seine, which runs through the town, and the water brought in by the aqueduct of Arcueil, which is one of the most magnificent buildings about Paris. This noble canal of hewn stone conveys the water fifteen miles to Paris.

The river-water is very pernicious to strangers, and to the French also that come from any distance, but not to the natives of Paris, causing looseness, and sometimes dysenteries; the many ponds and lakes that are let into it to supply the sluices upon the canal de Briare, are in part the cause of it; but those who are careful of themselves purify it by filling their cisterns with sand, and letting it sink through it, which way clears it, and makes it very cool and palatable.

As for the spring-water from the Maison des Eaux, it is wholesome in some respect, and keeps the body firm; but it is very apt to give the stone, which the people of this town are infinitely subject to.

Diversions.

The usual diversions of the French are either plays, gaming, walking, or taking the air in coaches. They have two kinds of play-houses, one for opera's, and another for comedies; their opera's in Paris are extremely fine, the musick and singing admirable, the stage large and magnificent and well filled with actors, the scenes well suited and changed almost imperceptibly; the dancing exquisite, and the cloathing rich, proper, and with great variety; many of the nobility frequent them every day, and sing them, all frequently joining

their voices with the actors. The disposition of the theatre for comedies is much the same, but less; there is some little comical entertainment exhibited at the end of almost every play, which 'tis to be presumed the English took from them. They avoid all obscenity and immorality upon the stage as much as possible, and yet they are frequently prohibited acting, at the desire of the clergy, who look upon them as tending to incite and encourage vice.

They are pretty much given to gaming; but games of meer hazard are prohibited. Great part of the time of people of quality is taken up in visiting in their coaches: in the evening they take the air in the Courfe, which consists of three pleasant walks of trees along the banks of the river Seine, inclosed at each end with magnificent gates, and in the middle is a circle to turn in. The middle alley contains four lines of coaches, and the side alleys two a-piece, and they may amount in the whole sometimes to six or seven hundred. Those who have a mind to take the air further out of town drive to the Bois de Boulogne or the Bois de Vincennes; and as Paris is of a round form, it is but a little way to the fields from any part of the town.

About eight or nine o'clock in the evening most of the coaches return to the gate of the Tuilleries, where the company alight, and walk in the fine gardens of that palace; nor can there be a more delightful scene, as one of our countrymen observes, than the middle walk of the Tuilleries when it is filled with so much good company. This garden is vastly great, bounded with a terrace wall planted with trees and the river Seine on one side, and another terrace on the other, having great parterres in the middle, and fountains always playing: at one end of the gardens is the magnificent palace of the Louvre, and at the other a fine prospect of the neighbouring fields: the rest is disposed into walks of trees, copses of wood, and grass-plots, with alcoves and seats at convenient distances.

Baron POLLNITZ seems to admit that London exceeds Paris about one fifth in bigness, and as much in the number of it's inhabitants; but observes, that Paris abounds in elegant palaces of the nobility, and fine convents, which are not to be met with at London. In the character he gives of the natives, he says, Tho' the French have their faults as well as other nations, they have, however, a thousand good qualities; and I think them, says he, much more amiable at home than they are abroad, where, be a man ever so much prepossessed in their favour upon other accounts, he is surfeited with their eternal criticisms, and to hear them incessantly remarking, They don't do so at Paris; You don't see this in France. Here they are polite, good-natured, humane, civil, and engaging; and a foreigner, who can bring himself ever so little into their way of thinking, acting, and speaking, will always be sorry to leave them.

But that itch of gaming, adds the Baron, which has infected the generality of the French, is looked upon as one of the plagues of the nation. I can't imagine how 'tis possible for people, who can scarce stay a quarter of an hour in one place, but are generally restless wherever they are, to sit five or six hours together in cutting and shuffling the cards. 'Tis however, a necessary evil, especially for a foreigner, who must otherwise make a very silly

NITZ's re-  
marks.

CHAP.  
XXXIX.

filly figure, till he is initiated in the customs of the country. The ladies say of a man who does not play, that he is a useless piece of lumber; and the most flaming lovers cease to make love as soon as cards are brought upon the carpet.

There are some houses, however, where this passion for gaming is not quite so prevalent; 'tis said too, that the lawyers houses are not so liable to the contagion; but I own I am not conversant enough with them to know the difference. 'Tis certain that at court they play deeper than any where; and very many of the nobility have impaired their fortunes, for the sake of having the honour to be one of a party with the King. His Majesty commonly plays at lansquenet; the party consists of twelve cutters, who set a lewis d'or upon the card. The King, and the principal gamesters, as the Count DE THOULOUSE, the Duke D'ANTIN, the Duke DE GRAMMONT, and the like, set two, and sometimes four lewis d'ors upon a stake. The King is reckoned to have the best luck of all that play in the Queen's apartment. Any body that is well dressed, is admitted to make one of the company, which forms a great court tho' a mixed assembly. All the ladies sit round the gaming table, and the men stand. The French say, that gaming sets every body upon a level. There is one St REMI, who had been a lackey, first to the Marshal DE ESTREES's, lady, and then to the Duke of BOURBON, who preferred him to be his valet de chambre, and at the Queen's arrival gave him a post in her Majesty's household, which he held at the same time that he officiated as the duke's valet de chambre: I have seen this man raise or fall the mirth of the King's company at pleasure. It is true he does not cut, but he is at every card, and makes very good pastime. At Fontainebleau, I heard him one day bet the King twenty lewis d'ors upon his own card against his Majesty's. The King answered coolly, No, marquis; which is a nickname his Majesty has given him, and may, nevertheless, be transmitted to the posterity of this St REMI, who is moreover sop enough to be a marquis.

This medley of people at play has been the custom in France at all times.

It is certain, however, that this liberty, with which all sorts of people are indulged, of coming in for a game and away, renders them saucy. That noted comedian BARON, the greatest coxcomb of all men living before the QUINAULTS, was one day at the house of the Prince DE CONTI, the same that had been chose King of Poland, where they were playing at lansquenet. BARON, pulling his purse out with a careless air, said to the Prince, Ten Lewis d'ors upon the knave, M. DE CONTI. Done, Britannicus, said the Prince DE CONTI, who knew that BARON had been just acting that part in a play. It is certain, that at many of the womens houses, the gamesters are as much pampered, as a father confessor is by his female votaries. A great many houses subsist here by the emoluments of gaming; where, were it not for the money arising from their cards, their suppers would be very light, and many that now ride would go on foot. The Duke DE GESVRES, Governor of Paris, and the Prince of Carignan,

who have a grant for licencing all manner of gaming, have farmed it out, and get one hundred and twenty thousand livres apiece by it, clear money, which one shall hardly find in any city of the world.

In speaking of Mr LAW's scheme, or the Mississippi project, he observes, that the debts of LEWIS XIV, a little before he died, amounted to Two thousand two hundred millions of livres; but by the reduction of the principal and interest of the revenues of the town-house (of Paris) by striking off two fifths upon all contracts, and by reducing interest to four per cent, the debts of the state were reduced to One thousand eight hundred millions, which was the very sum that was owing from the crown when LEWIS XV came to it. The debts of the government were afterwards reduced to One thousand four hundred millions, by sinking a quarter, a half, and three fourths, upon the state-bills, as well as other debts owing by the King, as also on pensions, and by the recovery of great sums thro' the chamber of justice.

And in this state were the finances in France, when Mr LAW undertook to pay the remainder of the debts of the crown by the Mississippi scheme, which he did in a manner effect, but it was by robbing multitudes of private people of their fortunes.

The players are much more respected at Paris, according to the same writer, than here, which makes them insolent to the last degree. The nobility are fond of their company, and admit them to their parties of pleasure: as they are kings upon the stage, and equals and companions at table with the best lords in the kingdom. The actors in the opera, as well as they divert the publick for lucre, have indeed the privilege, that a gentleman may be admitted among them without disparagement to his title: this is a favour, says a modern author, very justly, which had never yet been granted to those who perform in the publick spectacles, and who give diversion for money; because in most of the ages of Christianity they had been looked upon as persons excommunicated and infamous, by reason of the corruption in morals, owing to their then too licentious representations, which, perhaps, is no longer apprehended to be the case at present. It is certain, that if a performer in an opera may be noble, I cannot see why a person may not be the same in a comedy; tho' it is my opinion, that if stage-players may be gentlemen, rope-dancers and tumblers have a title to it: for, besides the honour they have of diverting the publick, they run the risk of breaking their necks every day; and is not that the lot of the nobility?

Tho' lackeys are not commonly the subjects of conversation, yet, I think, that those of Paris deserve some notice. They form so considerable a body, that there are many Kings who have not so numerous an army. Besides, these fellows make such extraordinary fortunes, and often rise from valets to be masters and gentlemen, that really they ought not to be confounded in the lump with the European lackeys. Those of them that set up for fine fellows, as many of them do (for in the livery of Paris, you meet with every thing that is handsome and gay) such, I say, as are in the service of some

CHAP.  
XXXIX.

CHAP.  
XXXIX.

some young noblemen, are commonly equals and companions with their masters. There are others, who are the darlings of the fair sex; and, if satire may be credited, and appearances perhaps, into the bargain, there are ladies even of the first quality, who do not always treat their lackeys as servants. It is true, they most commonly take them out of the livery, and in order to bring them near their persons, they make them their pages, or valets de chambre. Nothing is thought too good for these favourites of VENUS; they are rigged out like Princes, and were you to see one of these fortunate lackeys, you would naturally take him for some person of consequence. And, indeed, there are some who act the man of quality to such a perfection, that nothing can exceed it, and they have often better manners than their masters. The airs of importance, and of quality, are very natural to the French. There are others of the menial class that enjoy the favour of their young masters, in a way so uncommon, that one knows not what to think of it; and many of these young gentlemen, forgetting the respect that is due to their own persons, and their families, make parties at supper with them, at which time, I fancy, conversation is the least part of the entertainment. But such is the spirit of debauchery, that has infected the generality of the young people at court, tho' it is true enough that it ever was so.

I do not say that excessive debauchery is the universal goût — of the nation; for, on the contrary, the French are virtuous from the cradle to the grave, if they are but so happy as to get over the four or five years of juvenile fury, and to surmount the tumultuous passions which their great vivacity kindles in their breasts, and prompts them to do things at twenty years of age, which at thirty they detest and abhor: and I affirm of the French, in general, that they are not vicious by inclination. The nobleman is infinitely more so than the bulk of the people; and whether it is bad company, bad counsel, or whatever it is that misleads him, he thinks that to be debauched gives him a fine air, and many of them really boast of being greater debauchees than in fact they are.

But this does not seem to me to be the case of the women (I mean those that are not very rigidly attached to the precepts of virtue). They always preserve an appearance of decency, which imposes on such as do not know them: nor is their conversation licentious; and if they are naughty, it is in private. It is certain, that our countrymen do not do the French ladies justice. Many of our young fellows, when they come home from Paris, affecting to be coxcombs, tell stories so much to the disadvantage of the fair sex, that most of the German gentlemen, and especially of our ladies, think the reverse of what they ought to do. Virtue and modesty are as eminent among the sex here as elsewhere; and those whiffers that give themselves the liberty of scandalizing them, very often know not how to call one woman of quality by her right name, and even never saw her antichamber. It is certain, that there are women of quality here who have laid aside the mask; but of these there are so few, that the whole sex ought not to be reproached for their

VOL. II.

CHAP.  
XXXIX.

misconduct. I give you my word and honour, that there are fine young ladies here, born to charm our sex, whom calumny itself is obliged to respect, and I do not see what more can be desired. I will not vouch the same for the young gentlemen, of whom, indeed, the greatest number is very much debauched; but there are some that have quitted the reins of modesty. A TREMOUILLE, a LUXEMBOURG, a BOUFFLERS, and many more may be set up as examples to our youth, who perhaps would be worse than the youth of France, if they were entered as young into company, and seated in the centre of joy and pleasures.

The history of France was brought down to the year 1729, in the former part of this work; and as to the French wars in Poland, Germany, and Italy, since that time, they have been already treated of in the continuance of the history of the respective countries above-mentioned. I proceed now to enquire, what other occurrences of consequence have happened in the history of France, between the year 1729 and the present time: and the first we meet with is the birth of a Dauphin, on the 24th of August, O. S. 1729, to the unspeakable joy of the French nation. The queen had three daughters before, as was related in the former edition of this MODERN HISTORY.

In the month of November 1729, the Marquis of Villeneuve, ambassador of France at Constantinople, sent to his master, the most Christian King, a dictionary of the Turkish and Arabian languages, being the first book that was printed in the Grand Signior's press at Constantinople; and they had begun an impression of the Alcoran there.

The Duke of Lorraine arriving at the court of France at Christmas 1730, did homage to the French King at Versailles on new-year's-day following, for the duchy of Bar, and other domains of that crown. The duke made but a short stay in France, but during his residence there, presented the officers and attendants of his most Christian Majesty, with the value of an hundred and fifty thousand livres. And, on the other hand, the King gave the Duke eight pieces of rich tapestry, representing the works of RAFAEL, wrought in gold, valued at two hundred thousand livres. And now the controversy relating to the bull Unigenitus being revived in France, his most Christian Majesty published a declaration on the 24th of March 1730, ordaining, that the Constitution Unigenitus should be inviolably observed; and that as it was become the law of the Church, the acceptance of it should be looked upon as a law of the kingdom; and caused the said declaration to be registered in his presence, at his bed of justice, held on the third of April 1730; tho' several counsellors spoke with great warmth against it, desiring the King to suspend the registering the declaration, since it might be attended, as they suggested, with fatal consequences.

There were about three hundred and twenty presidents or counsellors present, of whom not above thirty or forty voted for the registering of the declaration; and yet, the chancellor commanded, in the King's name, that the said declaration should be registered simply, that is, without any restriction or limitation. Among the opponents, some were for making remon-  
strances

16 X

stances to his Majesty, and others, for desiring  
CHAP. XXXIX. that Prince to revoke his declaration.

Amongst the rest, the abbot GUILLEBAUD said: 'To accept the bull in the sense required by the declaration, they must think as the author of the bull did, on all the propositions condemned therein: this is required upon pain of excommunication. Now every body knows, says he, what the Pope thinks in the ninety-first proposition: he believes he hath a right in certain cases, to wrest the scepter from the King's hand, and dispose of his crowns as he shall think fit.' Here the chancellor interrupted him, and said: Pray, Sir, where have you learned, or who has told you, that the Pope thinks so? In the legend of GREGORY VII., replied Monsieur GUILLEBAUD, and several other counsellors with him. To which the abbot added, for the conclusion of his vote, 'This is so frightful and terrifying, that we have no other part to act, or any other course to take, but humbly to request his Majesty to withdraw his declaration.'

Monsieur DELPECHE said, 'I should think myself guilty of high-treason, if I consented to the registering of this declaration.'

M. VERRIN expressed himself in these words, directed to the chancellor. 'I believe, Sir, this declaration cannot but kindle a fire both in Church and State.' This, said the chancellor, is very far from our intentions, seeing that, on the contrary, we design to restore peace to both. 'A false and insidious peace,' replied M. de VERRIN, which would tend to subject the King to the Pope, whereof, the dismal consequences ought to strike all good subjects, and especially magistrates, to the very heart: therefore, Sir, my opinion is, that his Majesty may be most humbly addressed to recall his declaration.'

When the King's declaration for the acceptance of the bull Unigenitus was produced in the parliament of Normandy, it was resolved, by a majority of voices, to appoint a committee to examine that declaration; who having made their report, it was agreed to make remonstrances to the King: those remonstrances were accordingly drawn up and read in an assembly of the chambers, the 17th of May, and sent to court the same day: but the parliament having received a lettre de jussion (a letter of command) containing an express order from his Majesty to register the King's declaration, they obeyed his Majesty's intentions the nineteenth. The remonstrances above-mentioned were to this effect: 'That when they registered the Constitution Unigenitus, in 1714 and 1720, it was done with modifications and explanations, especially with regard to the XCI proposition, which was condemned by the Pope's bull, and implied, That the fear of an unjust excommunication ought not to hinder us from doing our duty: that his Majesty's new declaration, ordering the Constitution to be observed according to its form and tenor, seems to annul these modifications: that the safety of his Majesty's sacred person, and the rights of the independency of his crown, ought not

to be grounded upon ambiguous propositions, which may make room for interpretations, of which the Ultramontains may take advantage for the support of their doctrine, concerning the temporalities of Kings; especially at a time, when the legend of GREGORY VII. shews the secret motives of the 91st proposition: that by condemning this proposition, it follows, that the fear of an unjust excommunication should hinder the parliament from doing their duty; since, if it should happen, that the court of Rome should threaten his Majesty's subjects to fulminate his excommunication upon their heads, they would then be discharged from the oath of fidelity they have taken to him, &c.

Our fear increases, they add, when we reflect that the legend, which does a Pope the honour to rank among the saints, one who reckoned it a privilege annexed to his dignity, to exercise an authority of dethroning Emperors and Kings, and disposing of their crowns as he pleased, came from the same hand, and the same power, that published the Constitution Unigenitus. What difficulties, Sir, nay what dismal consequences, may we expect, if the subjects, being accustomed to look upon the Constitution as a law of the Universal Church in point of doctrine, as it is called in your declaration, should persuade themselves, that there are certain occasions, wherein they may fall off from their fidelity to their King.'

Forty advocates of the parliament of Paris, who had opposed the registering of the bull Unigenitus, were afterwards restored to the King's favour, on making a submission of the following tenor, viz.

'We were always thoroughly convinced, and shall always take a pride in publicly professing, that the kingdom of France is a state absolutely monarchical: that the supreme authority resides in the single person of the sovereign: that your Majesty holds in your kingdom the place of God alone, of whom you are the lively image: that the submission which is due to you is a duty of religion, which ought to be performed, not for fear of punishment, but out of motives of conscience: that there is no power upon earth that can discharge people from the inviolable fidelity which they owe to their sovereign: that excommunication itself, so terrible, when it is pronounced upon just grounds, can never break the sacred knot which binds subjects to their King: that his authority is no ways to be struck at under any pretence whatsoever: that he is the only sovereign legislator in his dominions: that the Parliaments, and other courts of the kingdom, hold of your Majesty alone, the authority they exercise: that the respect and submission which are paid to their arrêts center in your Majesty, as the fountain from whence they spring, and that for this reason, justice is administered there in your Majesty's name: that it is your Majesty that speaks in the arrêts, and that they are no farther to be executed, than as they are stamped with your Majesty's seal.

'These,

CHAP.  
XXXIX.

' These, Sire, are the truths, in which we are daily confirmed by the exercise of our office, in the presence of the parliament, so careful to maintain all the prerogatives of your sacred authority. Our consciences shall never reproach us for departing from them; we will never abandon them, and shall be ready at all times, and upon all occasions, to sacrifice our lives and fortunes in the support of these same truths.

' Moreover, Sire, we look on it as an unalterable principle, that the ministers of the Church, who are members of the State and subjects of your Majesty, are, like all the other orders of the kingdom, subject to all the laws which bear the character of the royal authority: that they hold of JESUS CHRIST alone, and of his Church, the spiritual power, of which the salvation of souls is the object, and which commands obedience, by the terror of spiritual punishment; but that it is to your Majesty alone that they owe the outward jurisdiction, which they exercise in your dominions, for the use of which they are necessarily accountable to your Majesty, and consequently to the parliament, which administers justice in your name, and to whom it belongs, under your authority, to prevent by way of appeal, any injury that might come from that quarter, to the law and maxims of the kingdom.

' This is the essential point upon which we used the liberty which we have to answer questions, concerning which we are consulted by the parties that apply to us; and which we flatter ourselves, Sire, your Majesty will be pleased to preserve to us.

' Lastly, we take the liberty to protest to your Majesty, that by the expressions in our paper, we did not mean any thing but what was conformable to the truths we have here laid before your Majesty, and in the same sense that several have used them before us, in some ordinances of the Kings, your Majesty's predecessors, in the most approved authors. Every other sense, every other interpretation, is still farther from our thoughts; we disavow, Sire, and detest, every thing that tends in the least to strike at your authority; and if we knew of any stronger terms we would make use of them, to express to your Majesty the integrity and fidelity of our sentiments.'

It appears by this submission, as a certain writer observes, that the advocates here assert the pretensions of the rights and privileges of the kingdom, against the Ultramontains, as well as the independance of the crown; and, it seems, the King was pleased to accept of it in the most authentick manner.

By an arrêt published on the tenth of March 1731, all disputes and contests concerning the bull Unigenitus, were suppressed and prohibited, and particularly in the universities of the kingdom.

The Pope, in the mean time, condemned the principles contained in the abovesaid submission of the advocates of Paris, and decreed that it should remain eternally suppressed, as containing maxims and propositions, false, scandalous, rash, seditious, tending to the destruction of the Hierarchy,

and invading the jurisdiction of the Church, and contrary to the supreme authority of the sovereign Pontiff; favouring and favouring herself; erroneous, schismatical, and heretical; forbidding to read, and keep the same upon the pain of major excommunication, that shall be incurred ipso facto: His Holiness reserving to himself, to whom only it belongs, to absolve from the same, &c.

In the mean time her Majesty was delivered of another prince, (viz.) on the 30th of August, 1730, on whom the title of Duke of Anjou was immediately conferred by his Majesty, together with the order of the Holy Ghost: and on the 12th of March, 1732, the Queen of France being delivered of another princess, the King of France had then two sons and four daughters living; but in February 1733, their Majesties third daughter died, aged four years and six months; and on the 7th of April following, their youngest son, the Duke of Anjou, died, aged two years and seven months: but to make some amends for these losses, the French Queen was delivered of a fifth princess the next month.

And now the French court, in contempt of the British nation, which they supposed durst not resent any injury offered them by their grand monarch, issued an arrêt or declaration, requiring all the English, Scotch, and Irish, out of employment in that kingdom, to enlist in their service, or transport themselves from thence immediately, on pain of the gallies; and, without giving them time to consider of it, immediately seized and imprisoned most of the subjects of Great Britain, that were then residing in France, in order to recruit their forces with them, or condemn them to the gallies on their refusal to serve; and when Earl WALDEGRAVE, the English ambassador, presented a memorial, setting forth the injustice and unreasonableness of this insult on a nation in alliance with them, the French did not think fit entirely to desist from these practices, but only told him, that gentlemen of fortune and merchants, with their servants, were excepted out of the order. However, I don't find any satisfaction given the British subjects for this outrage, many of whom suffered great hardships in loathsome dungeons before they were released: so very low is languishing Britain sunk in the eyes of her neighbours, who in the reign of the glorious Queen ANNE trembled at her frown.

Another mark of French insolence unhappy Britain suffered in the person of captain STEWARD, who putting into Dukirk to deliver some goods there, one of his sailors was debauched from him and enlisted in the French service. The captain immediately applied to the commandant, reclaiming his soldier, and complained of the violation of treaties, adding, he must write to the court of Great Britain if he was refused justice there. But instead of doing him justice, the commandant sent the captain to prison, and would not release him till he had given the sailor a formal discharge, and paid him his wages, tho' he had not performed the voyage. As soon as the captain recovered his liberty, he made a protest against this proceeding, and sent an information to the admiralty at London. But I could never learn the French made us any

CHAP.  
XXXIX.

CHAP.  
XXXIX.

any satisfaction for this insult, any more than for the former.

The same year the Bristol-merchant, captain SCOT commander, met a French ship of twenty guns and a hundred and fifty men off the western islands, bound from Africa to Spain, who hailed them, and ordered captain SCOT to come on board; but the sea running high, the captain would not venture to put out his boat; and upon his refusal, the Frenchman fired a six pounder at the English ship, which pierced her under the cabin windows, and broke one of her upper deck beams: after which he fired four or five more shot at her, which did some damage to her rigging, and then boarded her, and demanded a sight of the captain's papers and bill of health. They threatened at first to throw the captain overboard; but at last they thought fit to retire without doing any further damage to the ship, or to any person on board.

But these insults are trifles, compared with their expelling us from the islands of St Lucia and St Vincent, and their inciting the Indians in Nova Scotia, New-England, Virginia, and Carolina, to invade our plantations on the continent, and murder our people settled upon the frontiers; for an account whereof I refer the reader to the modern history of America.

The French, 'tis true, have paid off that vast debt they contracted in the late wars with Great Britain and her confederates; at least they have wiped off the score; so that the crown is no longer burthened with it. They have extended their frontiers, and enlarged their territories, by the addition of that fine country of Lorrain; and, it is said, they are treating with the Emperor for Luxemburg, and some other frontiers in Flanders, which will entirely destroy that barrier, which cost Great Britain, and the United Provinces so much blood and treasure to obtain. They are erecting a harbour at Graveling, more commodious than that of Dunkirk was, and consequently more prejudicial to the trade and navigation of Great Britain, in case of another war: they have vastly increased and enlarged their foreign commerce to Spain, Italy, Turkey, and the East and West Indies: they have improved their plantations to a miracle, and perfectly driven us out of the sugar trade and other branches of commerce. And no wonder, in these circumstances, if a people, naturally haughty and insolent, treat the nations their neighbours with much injustice, contempt, and disdain, especially when they have made the Emperor their ally, hitherto their most considerable rival on the continent, but now ready to unite with France in distressing Great Britain, tho' he cannot but remember how lately he was saved from destruction by her influence; and that he is more indebted to Britain, for the extensive territories he possesses, than to any power in Europe.

No wonder, if the French, who have so often felt the force of the British arms, are glad of every opportunity of depressing and insulting a nation they so lately dreaded. France is now become the great umpire of the world, and gives law to every other power; and will no doubt to Britain, if she suffers herself to be trampled on in the manner she has been for some years passed.

The great duties laid on Sugars, and other

The advantages the French have gained of late years, in point of trade in America, are very justly represented, in a petition of the mer-

chants trading to the British sugar colonies, to the house of commons in the year 1739, wherein they set forth, that the great disadvantage the British sugar trade lies under, proceeds from the very high duties both at home and in the plantations, on our English sugars, compared with those laid on the French; and from the supplies of provisions and other necessaries the French have from Ireland, and the British colonies in north America, without which they could not subsist; and to the restraints the British colonies are under, from sending Sugar, Coffee, Cocoa, Indigo, and Ginger, to foreign markets before they are first landed in Britain, by which means they are liable to great charges, hazard, and delays attending a double voyage. And representing, that the liberty of a direct exportation of the products of the British Sugar islands, to the several foreign ports in Europe, is the only means left to recover the foreign Sugar trade, and put the British merchants in a capacity of disputing the foreign Sugar markets with the French; and they further represent, that another great disadvantage the British Sugar settlements labour under, arises from the duties payable on Cocoa, Coffee, Ginger, and Rum, imported into Great Britain from the British colonies: and from the importation of French Sugars, Rum, and Molosses, into Great Britain and her northern colonies in America, without paying any more duty than if they were of British produce. And further representing, that the trade of Indigo, which our British colonies had formerly so large a share in, as to be able not only to supply enough for our home consumption, but to export great quantities, is now wholly gained from us by the French, from whom we are under a necessity of buying almost all the Indigo we use, the loss of which trade was entirely owing to the high duties laid on this commodity in Great Britain; that when the trade for Indigo was in the hands of the British merchants, it was subject to a greater duty than it could bear, but now it is in the hands of foreigners, it is exempted by the legislature from paying any duty at all; and that the sum we pay annually to France for Indigo, amounts to one hundred and fifty thousand pounds; they petitioned therefore that some encouragement might be given to the planting of Indigo, that they may be able to recover that trade; and that such a reduction be made in the duties on other West-India commodities, as may preserve our trade therein.

CHAP.  
XXXIX.  
produce of the plantations, have given the French great advantages.

The trade of Indigo lost.

Whereupon it was resolved, and afterwards enacted, that in order to encourage his Majesty's subjects in the British Sugar colonies in America, they should be permitted to carry sugars of British growth from the said colonies, directly to foreign parts under proper restrictions.

And that effectual provision should be made for securing the duties on the importation of foreign Sugars, Rum, and Molosses, into Great Britain, and the British plantations.

But I don't find any encouragement given for the planting of Cocoa or Chocolate-nut, Indigo or Ginger, and recovering the traffick in those articles, from the French and Spaniards.

Nor have the French encroached only on our American trade and plantations, but have of late made very free with the fisheries, upon our coast; and we are obliged to them for discovering one fishery which we ourselves were strangers to, on the southern coast of Ireland, viz. on the Nymph-

The French fishery on the coast of Ireland.

CHAP.

Nymph-bank, where they had fished with fifty or sixty large vessels, for several years without interruption, and indeed without the notice of the Irish, till the year 1736, and might have continued it much longer, if they had not entered into the smuggling trade, carried off wool from the south of Ireland, and run in brandy, alamoses, and other French goods, upon them, which the Custom-House officers taking notice of, they were obliged to remove to a further distance. And some Irish gentlemen in that part of the country, have since employed fishing vessels on this bank, where they catch great quantities of cod, hakeling, turbut, and other valuable fish. Thus we find Ireland has been of great advantage to the French of late years, for from hence their fleets were provided with beef and tallow, as well as fish. Here they found a vent for their wine, brandy, and dry goods; and from hence they fetched great part of the wool, so necessary in their manufactures; and here also they vended sugars, rum, and other produce of their islands in the West-Indies, to the unspeakable damage of Great Britain and her American plantations.

In the mean time the Kings of France, Spain, and Sardinia, concluded the definitive treaty of peace with the Emperor and Empire; preliminary articles had been agreed on, in the year 1735, but all matters in dispute were not settled till the year 1739.

In these articles are contained the Duke of Lorraine's cession of his dominions, to King STANISLAUS for his life, and the reversion thereof to France. In consideration whereof the French King agreed to pay the Duke of Lorraine, four millions and half of livres Lorrain money per. ann. till he should take possession of the Duchy of Tuscany: He also agreed to pay the Duchess-dowager of Lorraine and her heirs, the revenues payable to her out of the said territories, besides fifty-eight thousand five hundred livres of Lorrain money yearly, for the interest of that princess's portion; one hundred twenty-eight thousand one hundred sixty-one livres for her dowry, forty-two thousand eight hundred fifty-seven livres to Prince CHARLES, and twenty-four thousand four hundred twenty-eight livres to each of the two princesses for their appenage; and the French King having charged himself with the debts of that State, an account was added, by which it appears they amounted to eight million seven hundred eleven thousand seven hundred twenty-six livres Lorrain money.

Another article contains King STANISLAUS's abdication of the crown of Poland, and his recognizing King AUGUSTUS. There is an article also containing the Emperor's resignation of the two Sicilies, and the Spanish ports in Tuscany, to the King of the two Sicilies; and the King of Spain's surrender of Parma and Placentia, to the House of Austria, and the eventual succession of Tuscany to the Duke of Lorrain.

The Emperor also cedes the Novarese, Tortonese, and some other principalities in Italy, to the King of Sardinia: and the tenth article contains the guarantee of the Pragmatic Sanction, by the King of France, in manner following viz.

His Sacred, Royal, and Most Christian Majesty,  
VOL. II.

by the sixth article of the preliminaries, with relation to the dominions in part then and before possessed, by his Sacred Imperial Majesty, conform to the said preliminary articles, took upon himself, in the best manner that was possible; the defence, commonly called, the guaranty of the order of succeeding in the House of Austria, which was more fully set forth in the Pragmatic Sanction, published the nineteenth of April 1713. For it having been after mature consideration concluded, that the publick tranquillity could not long subsist or endure, and that no certain method could be thought of for preserving a durable balance of power in Europe, but by preserving the said order of succession, against all future attempts of any kind, his Most Christian Majesty, moved as well by the ardent desire he has to maintain the publick tranquillity, and preserve the balance of Europe, as by the consideration of the conditions of peace, which his Imperial Majesty had agreed to, and principally for this reason, obliged himself, in the strongest manner, to defend the said order of succession, and to the end that no doubt may hereafter arise about the effect of this security, or guaranty, his Most Christian Majesty, by virtue of this present article, engages to carry the said security, commonly called guaranty, into execution at all times, and as often as there shall be occasion; promising for himself, his heirs, and successors, in the best and firmest manner that is possible, that he will with his whole force, defend, maintain, and as it is called, guarantee against all persons whatsoever, and at all times when there shall be occasion, that order of succession which his Imperial Majesty has declared and established, by way of a perpetual, indivisible, and inseparable fcoffment of trust, in favour of primogeniture, for all his heirs of both sexes, by the solemn act published the nineteenth of April 1713, and annexed at the end of this present treaty, which act was entered in the publick records, in order that it might have the force of a valid and perpetual law and Pragmatic Sanction, and which the Holy Roman Empire engaged to defend, or as is commonly said, guarantee, by virtue of their conclusion; issued the eleventh of January 1732. And whereas according to this rule, and order of succession, in case his Sacred Imperial Majesty should, by an effect of the divine goodness, have heirs male of his Body, then the eldest of his sons, or he being dead, the eldest son, of that eldest son; and in case of failure of heirs male of the body of his Sacred Imperial Majesty, the eldest of his daughters, the Most Serene Archduchess of Austria, according to the order and right of primogeniture, which is for ever to be observed, is to succeed him, in all the kingdoms, provinces, and dominions, actually possessed by his Sacred Imperial Majesty, without any division or separations having ever any place, in favour of him, her, or them, who may be of the second, third, or any more distant branch, or degree; or in short, in any otherwise, or for any other cause that can possibly exist: the said order and right of indivisible primogeniture, being likewise perpetually to subsist in all other cases; and in all times and ages, as well in the male line, if it shall please God to grant to his Sacred Imperial Majesty, the happiness of having issue male, as in the female line, upon the former's becoming extinct;

tinct; and, in fine, always and as often as any question may arise about the right of succeeding to the hereditary kingdoms, provinces, and states, actually possessed by his Sacred Imperial Majesty; for this purpose his Most Christian Majesty promises and obliges himself to defend him, or her, who, according to the above-mentioned order, ought to succeed to the kingdoms, provinces, and dominions, actually possessed by his Imperial Majesty, and for ever to maintain him, her, or them, in the possession thereof, against all and every person or persons whomsoever, that may, in any manner, attempt to disturb or interrupt the same.

The same year a match was concluded between Madam, eldest daughter of the King of France, and Don PHILIP, Infant of Spain, the Princess being then in the twelfth, and the Prince in the twentieth year of his age; the marriage-contract was signed on the twenty-fifth of August, and on the twenty-sixth the ceremony was performed, the Duke of Orleans being proxy for Don PHILIP; she was with great ceremony delivered into the hands of those who were sent by the court of Spain to receive her, in the isle of Pheasants, on the frontiers of France and Spain, on the eleventh of October.

About the same time an arret was revived, which was issued in the year 1701, against the importation of foreign goods in British bottoms, and also the following sorts of merchandize of British produce, or manufacture, viz. all sorts of Stockings and Caps of Silk, Wool, Thread, or Cotton; all sorts of Cloth and Stuffs of Wool, Hair, Silk, Thread, or Cotton; Hats, Blankets, Hides, Gloves, Cutlery-ware, Iron-ware, Locks, Buttons, Ribbons, Watches, Clocks, Wine, Pewter, Lead, Mercery-wares, Drugs, and Grocery; but permitted the importation of Allum, Bottles, Wax, Coal, salted flesh, Horses, Glue, Horn, Copperas, Green Hides, Crystals, Elephants Teeth, Herrings, Cods, Bone, Furs, Calf-Skins, Ox-hides, salted Salmon, Tallow, English Carpets, Calicoes, Glasses, and Wool. The war having broke out the very next year, and all commerce between the two nations being prohibited, this edict did not much affect us then; and after the renewal of the peace, by the treaty of Utrecht, though commerce was not restored by a proper treaty, yet the execution of this edict, was in a great measure suspended, and the importation of foreign merchandize in British Bottoms, as also of several of these sorts of prohibited goods, connived at; but about the beginning of the last year, this edict was revived, and they began to put it so strictly in execution, that the British ships then in their ports, loaded with foreign, or any sort of prohibited goods, were not only prevented from unloading, but ordered to depart immediately, to the great loss of the merchants concerned, who had sent these goods thither upon the faith of the good correspondence, that had for so many years subsisted between the two Nations; and upon a supposition, that this edict was, in a great measure, tacitly revoked.

Towards the end of September, the French Ministry declared to the Earl Waldegrave, that their Master had, with some concern, learned, that notwithstanding the representations which been before made, against the interruption given to the trade of France by British ships of war,

those ships continued to stop and visit all French ships sailing upon the coast of Spain; that his Majesty could by no means consent to a practice of this nature, and therefore demanded, that until an open rupture was declared, the British men of war should let the ships belonging to the subjects of France pass freely, there being no pretence for stopping or visiting them till after an open declaration of war against Spain, because till then, there could be no such thing as contraband goods on board French or any other neutral ships; and, that if this demand was not complied with, he should think himself under a necessity of taking suitable measures for protecting his subjects from being stoppt and visited, as long as there was no declared war between Britain and Spain. The only answer that could be made to this, was a declaration of war against Spain, which took away all future pretence for such a complaint; because then, all neutral ships may by the law of nations be visited at sea, and if bound to an enemy's port with contraband goods on board, those goods may be taken out, and condemned as good and lawful prize, in which limited sense the latter part of his Majesty's declaration of war is to be understood.

Soon after the rupture between us and Spain, the Spanish privateers took some British merchant ships in the very mouth of the river of Bourdeaux; and about the beginning of November, one of them came up a great way, and, contrary to the law of nations, seized upon an Irish vessel in the river; whereupon the captain of a stout New-England ship then at Bourdeaux, desired leave to go and take the privateer, which he thought he could do, with the help of such volunteers as were willing to go along with him; but the Governor would neither grant him leave, nor take any other method for recovering the Irish vessel so unjustly seized within the dominions of France. Earl Waldegrave complained to the court of France of these and the like practices; and he was assured, that orders were sent to the proper officers at Bourdeaux to endeavour to seize the Spanish privateers, and to make them restore the vessels and effects they had taken in that river; but I never heard that any such attempt was made, or any of the British ships so taken restored.

Tho' the French did not declare openly against us in the war with Spain, yet from these accounts, it appears they were a little partial in favour of our enemies; but this was not all, from the very beginning of the war, they began to prepare for taking a share in it as soon as they should find a proper opportunity. About the beginning of September, orders were issued by the French court, for all the officers that had any post, or command, in their Colonies or Plantations, to repair to Rochefort, by the 20th of that month at farthest, where there should be a man or war ready to transport them to their respective posts in America; and even before the reprisals were published here, they began, at all the chief ports of France, to refit and augment their Navy; and we were told, that they had ordered six new men of war of the line to be built at their colony of Quebec in Canada, and that they had contracted for having eighteen others of the line, built for them in the ports of Sweden.

CHAP.  
XXXIX.French  
squadron  
sent to  
the Bal-  
tick.

Soon after the beginning of the year 1739, they began in France to talk of sending a squadron of men of war to the Baltick, and to equip some ships at Brest, as was said, for that purpose. This political phenomenon raised the curiosity of the whole European world, and occasioned many conjectures about the design of this squadron. Sometimes it was said to be designed to consist of a great number of capital ships, for the execution of some grand project; and at other times, it was only to be a small number of ships for the instruction and exercise of the seamen. At last, about the middle of May, this mysterious squadron set sail from Brest, under the command of the Marquis D'Antin, consisting but of four men of war of the line, and one frigate, and sailed directly to Stockholm, where they arrived the 11th of July, and staid there till the first of August, which time was principally employed in feasting, balls, and splendid entertainments at the Swedish court, which was all they did there. On the first of August this squadron set sail from Stockholm upon their return to France; where they arrived about the end of September, the frigate which attended them having put into Dunkirk, which I particularly take notice of, because that frigate was a ship that carried 18 guns, and her putting in there shews, that, in case of a war, the port of Dunkirk will again be a receptacle for French privateers to infest our trade, tho' by the treaty of Utrecht it was expressly stipulated, that the harbour of Dunkirk should be filled up, *and never again repaired*. This squadron being thus returned to France, without attempting any thing, either for or against any power in Europe, the eyes of people were then opened, and every one saw that it was sent to the Baltick, for no other reason but to furnish the new ministry in Sweden with something to amuse their people with; which sort of amusement is often necessary upon the change of an administration in every country, where there is a popular sort of government established. Tho' some people imagined, the French had another design, which was to frighten us with an invasion from Sweden, either upon the British or Hanoverian dominions, in order to prevent our sending forces for attacking the Spaniards in the West-Indies.

Press laid  
under re-  
straints.

The press has always been under a licence in France, and great penalties upon those that printed or published any book, pamphlet, or paper, without a licence; but this has of late been found insufficient, as it always will, for preventing the printing and distributing privately, such writings as are agreeable to the people, tho' unacceptable to the court. Such writings have often been suppressed by arrears of the King's council of state, and the authors, printers, and publishers, when discovered, severely punished; yet still they have found means to creep into the hands of the curious, and the prohibition has only served to make the public seek after and read them with the more industry and fondness. Therefore his most Christian Majesty's council of state issued a new regulation, by which the number of printing-houses in France is greatly lessened, and for the future limited to 36 at Paris, and 209 in the other parts of the kingdom; and all magistrates whatsoever are thereby prohibited to license Printers hereafter, to exercise the art of

printing; and Printers are likewise forbid to intermeddle in the said profession by virtue of any privileges whatsoever, without having first proved their titles and qualifications before the Chancellor, and obtaining their admission in the usual manner, by an arret of council.

A great scarcity of provisions, particularly corn, having happened in several provinces of France, in the months of April and May, his most Christian Majesty, ordered all the Archbishops and Bishops then in Paris, which were *seventeen* in number, to repair forthwith to their respective dioceses, in order to succour and relieve the poor; in which good office many of the Bishops of that kingdom contended with emulation, which of them should out-do the other; and in this glorious contention, the Bishop of Limoges was particularly remarkable; for he gave a daily subsistence for several weeks together, to near one thousand five hundred poor persons of his diocese; and in order to enable him to do so, he was obliged to sell all his plate, and the richest part of his furniture. The Duke of Orleans, who is always one of the foremost of the quality of France in all religious duties, laid out two millions of livres in buying up corn, which he distributed at a low price among the inhabitants of Berry, Maine, and Anjou, and in the countries belonging to the domains of the house of Orleans: likewise the Hôtel de Ville at Paris, ordered a certain quantity of beans and Irish butter to be delivered to each curate in that city and suburbs, to be distributed by them among the poor of their respective parishes; and the chapter of St Martin at Tours, as well as several other religious communities, forgave many of their farmers the rents of the current year, in order to enable them to support their families, during that scarcity.

CHAP.  
XXXIX.Great cha-  
rities gi-  
ven to the  
poor.

These charities shew the care the French take of their poor in time of distress; and to prevent their being so, all possible care is taken to encourage the setting up of manufactures in that kingdom. Among others, there was in November a beautiful piece of cloth, made of rabbits fur, shewn to his Majesty at Versailles, who immediately gave encouragement for the making more of the sort; and at the same time, three pieces of flannel, as good as any made in England, and which could be afforded much cheaper, were also shewn to his Majesty, and all proper encouragement promised, for improving that manufacture.

New ma-  
nufactures  
set up.

The Duke of Gesvres and the Prince of Cambrin, having long had a permission to have public gaming tables at their respective Hôtels, in the month of October, the King's advocate and his solicitor-general, the lieutenant criminal, and the lieutenant of Police at Paris, went to Cardinal Fleury, and complained, that these gaming-houses not only ruined many families, but were the cause of a great number of robberies, most of those who had for some time before been executed for robberies, having confessed, that they were driven into that course of life by their misfortunes at play. Upon this the Cardinal represented the matter to the King, who immediately ordered, that a stop should be put to the source of this grievance; but as these two noblemen had by a long possession acquired

Gaming  
Houses  
put down

CHAP.  
XXXIX.

acquired a sort of property in the revenue or profits that accrued by this grievance, the French government would not shut up these public gaming-houses, till they had found means to indemnify the Duke of Gesvres and the Prince of Carignan, which shews how much regard is had even in France to any thing that looks like private property; and at the same time it shews how inconvenient and dangerous it is to allow any man to acquire a property, in what may afterwards appear to be inconsistent with the public good.

manifesto  
thereupon.

The French having equipped a squadron of men of war at Thoulon, and another at Brest, this year they sailed to the West-Indies, arriving at Martinico in September and October, but meeting with stormy weather they were forced to remain there a considerable time to refit, before they were in a condition for action; in the mean time the French court published a manifesto, from whence it is easy to conjecture what was the original design of their voyage; for in this manifesto his most Christian Majesty censures the British court for abruptly breaking off the conferences at the Convention, and beginning hostilities in America before war was declared; he observes, that France had on her own part great cause of complaint against England, many French ships having been stopt and visited by her cruizers, and other violences committed by them, but the King had connived at these infractions till he saw the English not only make war on the Spaniards at sea, but demolish the forts of Porto-Bello and Chagre, in order to carry on a contraband trade to the prejudice of the commerce of all other European nations; that he had represented to the British Ambassador, that how patient soever France had shewn herself, it could not be expected she should look with an indifferent eye upon the enterprizes the English nation were forming in America; *or, that the King would suffer them to make any settlement in the Spanish West-Indies*; which the British Ambassador not giving any satisfactory answer to, the King judged he ought no longer to defer causing his ships to be equipped, and put himself in a condition to prevent a danger which became every day more pressing; for England had caused eight thousand regular troops to embark, in order to join those which she had ordered to be raised in her colonies, and not doubting of success, had foretold as a thing certain the conquest of the Havanna and Carthage; and that the manifesto sent by the Lord Cathcart to be published in America, sufficiently explained the tendency of these prodigious armaments, of which the like had not been seen.

It was then the King found he had not a moment to lose, in order to defeat those projects which would have destroyed the balance of commerce in Europe, and that he had at the same time taken such precautions at Dunkirk, as might prevent any surprize from English pyrates, which the insults his ships had undergone rendered the more necessary; and though the court of London had expressed the sharpest resentments at it, France had contented herself with raising only four batteries there without any fortifications, from which it was easy to judge

which side ought to be charged with the infraction of treaties.

CHAP.  
XXXIX.

From this manifesto nothing is more evident, than that France intended to join the Spanish fleet which sailed to America about the same time, and to have prevented the English attacking any of their settlements in that part of the world; and as the most effectual means of doing this, probably would have destroyed the squadron of men of war and transports which were intended for Jamaica in their passage thither, but very fortunately for England contrary winds and storms prevented Cathcart's sailing with the land forces so soon as was intended, and the same stormy weather so shattered the French and Spanish squadrons, that they were rendered unfit for action when they arrived there: and the British ministry being now sufficiently apprized of the designs of France, sent such a strong fleet, under the command of Sir Chaloner Ogle, to convoy the land forces to Jamaica, that the British fleets became much superior to the united fleets of France and Spain in that part of the world; and thereupon the French fleet was ordered to return back to Europe, after the Spaniards had reinforced their garrisons in America; and possibly the French might bring over part of the treasure of the Gallions with them; but this was all the effect of their mighty armament and threats, and they had soon after so much business upon their hands in Europe, on the death of the Emperor, that they left the Spanish settlements in America to shift for themselves, and the British commanders there were at full liberty to invade or attack what part of Spanish America they saw fit, without interruption; what success they met with there may be seen in the Modern History of Spain, in the mean time the Brest and Thoulon squadrons returned to their respective ports in Europe in a very weak condition, having lost by storms or sickness three thousand men 'tis said.

Sir Chal-  
oner O-  
gle, and

sail to A-  
merica.

France did not only suffer by this disappointment in the West-India expedition, but by prodigious inundations in all parts of that kingdom; this winter a third part of Paris was laid under water, and Lyons, Rouen, and other great towns suffered extremely, boats plied in their streets instead of coaches; and in the country the lands were overflowed for many miles, horses, sheep, and oxen, driven down the stream; nothing was able to resist the force of the numerous torrents, multitudes of people, as well as cattle and houses, were destroyed.

But among the losses and disappointments the French sustained about this time, there was one event by which they hoped to restore their affairs, and make as considerable a figure in Europe as ever their ancestors had done, and that was the death of the late Emperor Charles VI, which happened on the twentieth day of October 1740, N. S.

The Em-  
peror  
Charles  
VI. dies.

Several months after the death of this Prince, the French court expressed the highest friendship for the Queen of Hungary, his eldest daughter, who succeeded to all his hereditary dominions, and promised to perform their engagements relating to the guaranty of the Pragmatic

matick Sanction, but at the same time augmented their forces and marched great bodies of their troops towards the frontiers of Germany; but in the beginning of August 1741, his most Christian Majesty began to pull off the mask, by publishing a declaration of the following tenor, viz.

That some Electors and Princes of the Empire had informed him (as being guarantee of the treaty of Westphalia) of their uneasiness at the King of Great Britain's assembling a considerable body of troops, which might be made use of to influence the approaching election of an Emperor, or be employed against some member of the Empire: and therefore, in order to make good his engagements, he had caused some troops to advance towards the Rhine, that they might be ready to march to the succour of the Electors and Princes who should claim his guarantee, and that this step ought not to be interpreted as acting contrary to the Pragmatic Sanction: his sole view being the preservation of the tranquillity of Germany, and the protecting the freedom of the election of an Emperor, and immediately after a French army of near forty thousand men, commanded by the Marshals BROGLIO and BELLEISLE, passed the Rhine at fort Lewis, and marched towards Bavaria, while another army of thirty thousand men, commanded by Marshal MAILLEBOIS, marched into Westphalia, where they were joined by the forces of the Elector of Palatine and the Elector of Cologne.

Con-  
futes the  
Duke of  
Bavaria  
General.

And another declaration was soon after published, wherein his most Christian Majesty sets forth, that the Elector of Bavaria having demanded succours of him, to frustrate the designs of his enemies, he was inclined to send an auxiliary army into his dominions, having himself an interest in supporting that prince; and had constituted him his Lieutenant-General, to represent his person in his army in Germany, as well over the French as foreigners, to oppose the designs of his enemies, and even enter their dominions, besiege and take their towns, give them battle, &c.

trality.

The march of the French army into Westphalia, and even to the frontiers of Hanover, so terrified and confounded that ministry, who were not in a condition to oppose them, that the French charge them with begging a neutrality for that Electorate, and promising a vote for the Duke of Bavaria in the approaching election of an Emperor, on condition their forces would advance no further: and we began to be in some pain, lest his British Majesty should be surrounded by the armies of France and Prussia, and prevented returning to his dominions. And now the French court ordered their Thoulon squadron, commanded by DE COURT their Admiral, to set sail for the coast of Spain, (which he did on the 9th of October, N. S.) and took upon him to protect the Spanish fleet against Admiral HADDOCK, as is related in the Modern History of Spain.

VOL. II.

ner, not only by the Elector of Bavaria, who laid claim to the Austrian dominions, but by the King of Prussia, who, notwithstanding his pretended friendship for the Queen of Hungary, invaded her duchy of Silesia within two months after the late Emperor's death, and by this time had made almost an entire conquest of that province, being joined afterwards by the Elector of Saxony (King of Poland) who formed pretensions also on the Austrian dominions, as will be seen more at large in the Modern History of Germany.

About the same time that the French court published the declaration with their pretensions for invading the Empire, the Elector of Bavaria assembled his forces near Scharding, and took possession of the city of Passau on the Danube, which facilitated his march into Austria, and in the beginning of September he penetrated into the Upper Austria, and took possession of Linz, the capital city thereof; from thence he continued his march so near Vienna, that the Queen of Hungary and her court removed from thence, expecting to be besieged, but the Elector afterwards bent his march another way, and entered Bohemia, where several detached parties of his army had already taken some posts of consequence; and in November the King of Poland caused a large body of his Saxon troops to assemble on the frontiers of Bohemia, and having joined the French and Bavarians near Prague, the capital of that kingdom, they took that city by surprize on the twenty-sixth of November, and made the garri-son prisoners of war: but while the French and their allies were so successful in Bohemia, the Austrians defeated several bodies of their troops in Upper Hungary, retook Entz and some other towns on that side: however, it appears that the Queen of Hungary was still in imminent danger of being overpowered by her enemies, for the King of Prussia had entered into a formal alliance with France, before their army passed the Rhine, to which the Electors of Bavaria and Saxony acceded; the conditions whereof 'tis said were, that the kingdom of Bohemia, with the Upper Austria and Tyrol, should be given to the Duke of Bavaria; the Upper Silesia, and Moravia to the Elector of Saxony; and the lower Silesia, with the town and territory of Niefs, and the town and county of Glatz, to the King of Prussia.

Queen of  
Hungary's  
Speech in  
her dis-  
tress.

In their distress the Queen of Hungary having assembled the states of that kingdom, made a speech to them in Latin of the following tenor.

'The perplexed situation wherein I find myself, by the permission of the divine providence, is attended with such dangerous circumstances, that I see no hopes of extricating myself, unless I am speedily and powerfully succoured. — Abandoned by my friends, persecuted by my enemies, attacked by my nearest relations; the only resource I have left is to stay in this kingdom, and commit my person, my children, my scepter and crown, to the care of my faithful subjects. I don't hesitate a moment to entrust them with all, their courage and loyalty leave no room to doubt that they will employ all their forces to de- fend

16 Z

CHAP. XXXIX. 'fend me as well as themselves speedily and resolutely in this mournful conjuncture.'

While her Majesty spoke the whole assembly dissolved in tears, and unanimously cried out, We will support the Queen; we will defend her against her enemies; we will sacrifice our lives and fortunes for her; and they made good their resolutions by their future actions.

Practices for electing the Duke of Bavaria Emperor.

In the mean time the French were driving on their grand design of placing the Duke of Bavaria on the Imperial throne, by their Ambassador Marshal BELLEISLE, in which they did not make any great progress, till the King of Prussia entered into that alliance with France and Bavaria already mentioned; but then his Prussian Majesty and the King of Poland declaring for Bavaria, and the Elector of Mentz; soon after the Elector of Hanover was obliged to follow their example, to obtain a neutrality for his German dominions, which lay exposed to the attacks both of the French and the King of Prussia, with whom the court of Hanover had no very good understanding; it was agreed also by the Electors in the French interest, to suspend the Queen of Hungary's vote as Queen of Bohemia, to which the Elector of Hanover made no opposition, any more than the other Electors, who were all of them indeed under French influence at this time, overawed by the numerous forces on their frontiers, or in the heart of their dominions: the Elector of Bavaria made his publick entry into the city of Prague on the 9th of December, and was that evening proclaimed King of Bohemia, and on the 13th of January he was elected King of the Romans and Emperor of Germany at Frankfort, and he was crowned there the 21st of the same month.

He is proclaimed King of Bohemia, and Emperor.

1741-2.

The Queen of Hungary recovers Upper Austria, and reduces Bavaria.

Her Hungarian Majesty however protested against it, declared the election void, and her Generals did not only recover the Upper Austria, but reduced all the duchy of Bavaria, obliging the capital city of Munich to surrender.

Action at Budweis Moravia invaded.

Marshal BROGLIO, who commanded the forces of the allies in Bohemia, receiving advice of the progress of the Austrians in Bavaria, assembled his forces and attacked Prince CHARLES of Lorraine, in his intrenchments at Budweis; four attempts were repulsed with very great loss.

On the other hand, the Prussians made themselves masters of the capital city of Olmuts, and almost all Moravia; about the same time the French accommodated the differences between his Prussian Majesty, and the Elector Palatine, concerning the succession to Bergues and Juliers, which the King of Prussia yielded up 'tis said, on condition the French would guarantee Silesia to him.

Italian war commences.

The war in Italy, which commenced at this time between the Spaniards and Austrians, will be treated of in the modern history of that country. I shall only observe here, that when the French Ambassador demanded a passage for fifteen thousand of the Spanish troops, to join with those already in Italy, the King of Sardinia declared he should oppose the attempts of any power that should endeavour to disturb the repose of Italy.

France, in order to supply her exhausted treasury, this year extended the tax of the tenth penny or two shillings in the pound, to mechanics, and manufacturers, which occasioned an insurrection at Lyons; on the other hand, the Queen of Hungary's Generals levied considerable contributions in Bavaria, and began now to receive large remittances from Great Britain, and the States-General, to enable her to make head against the French and their allies.

C.H. & P. XXXIX. Remittances from England and Holland to the Queen of Hungary.

At this critical juncture, the treaty of subsidy between Great Britain and Denmark expiring, the Danish troops returned home; and 'tis said, agreed to enter into the service of France; but however that was, the new ministry in Great Britain thought proper to embark a good body of forces in April, in order to oppose the designs of the French and their allies, who proceeded to reduce such places in Bohemia, as remained in possession of the Austrians; and Marshal BROGLIO having invested Egra, that town surrendered to him on, on the eighth of April.

The Danish mercenary troops return home.

British troops embark for Flanders.

Prince CHARLES of Lorraine in the mean time obliged the Prussians to evacuate Moravia, and following them into Bohemia, there was a smart engagement between the two armies, in which both sides claimed the victory: another engagement happened in Bohemia, between Prince LOKOWITZ and the two French Marshals, BROGLIO and BELLEISLE, in which the Austrians seem to have had the worst of it: however the Austrians soon after became superior to the French in Bohemia, for the King of Prussia made peace with her Hungarian Majesty, on condition of her confirming Silesia to him, and the Saxons about the same time quitted the interest of France; and now the French were left in Bohemia, to contend almost singly with the forces of the House of Austria, for the Emperor was able to afford them but little assistance; the reason of this sudden change in the Prussians and Saxons, is said to be, that they began to discover the treachery of the French, in setting the German Princes together by the ears, and making them weaken one another, that they might have an opportunity of subduing their country with the greater ease.

Battle between the Prussians and Austrians.

The Prussians and Saxons quit the French interest.

The French Marshals BROGLIO and BELLEISLE being thus deserted, were forced to shut themselves up in the city of Prague, while the Austrians cut off their provisions on every side, and reduced them to the last necessity: but several smart actions happened between the Austrians and the French, during this blockade, in which sometimes one side had the advantage and sometimes the other.

The French shut up in Prague.

In the mean time the British court out-bidding the French, entered into another subsidy treaty with Denmark, and took eight thousand Danes into their pay. And the regency of Hanover received orders to detach sixteen thousand Hanoverians, and six thousand Hessians in the British pay, to the Austrian Netherlands; a considerable train of artillery also was embarked at the Tower of London for Flanders, which shewed that the King of Great Britain was now in earnest, and determined to make the Queen of Hungary's cause his own.

A new subsidy treaty with Denmark.

Hanoverians and Hessians march to Flanders.

The French marching another army through Germany this year, commanded by Marshal MAILLEBOIS, the Austrians were obliged to quit

1742. Another French quit

CHAP. XXXIX. quit Bavaria, and Marshal BELLEISLE found means to escape out of Bohemia in the depth of winter, with the greatest part of the garrison of Prague (amounting to sixteen thousand men) many of whom perished by the severity of the season, the fatigue they suffered in forced marches, and by the Hussars and Croats, who skirmished with them continually in their retreat, till they reached Egra.

The Eng- In February following the troops of the King-  
lish march from Fland-  
ers to Germany.  
1743.

In February following the troops of the King of Great Britain in Flanders, consisting of English, Hanoverians, Hessians, and Flemings, began their march towards Germany; and the latter end of April his Majesty and the Duke of Cumberland embarked for Holland; about the same time his Imperial Majesty thought fit to retire from Frankfort and reside at Munich, demanding at the same time of the circle of the Upper Rhine, that they should furnish the French army commanded by Marshal NOAILLES with provisions, on his entrance into Germany: The Earl of Stair, who commanded the British forces in their march to Germany, signified to the several Princes of the Empire, that he had no orders to act against the Emperor, but only to oblige the French to leave Germany: at the same time he pressed the Dutch to join him with the twenty thousand men they had promised the Queen of Hungary; but that cautious republick still delayed to give orders for their march, terrified, as 'tis said, by the French ministers, who threatened them with certain ruin if they joined the British forces, and magnified the power of their Grand Monarch, as if his forces were irresistible amounting at this time to four hundred thousand men, and his revenues answerable as they gave out: However, the Dutch did at length order the twenty thousand men to march and follow the British forces into Germany, but they were so very slow in their motions, that they were at a considerable distance when the battle was fought at Dettingen, between the forces of Great Britain, and the French commanded by Marshal NOAILLES near Dettingen, on the banks of the Mayne.

Bohemia and Bava-  
ria almost recovered again by the Austrians.

But before I come to give a further account of that battle, it may be proper to observe what was doing in Bohemia and Bavaria, and in both those countries we find the Austrians very successful this campaign, but the most considerable action was at Brunau in Bavaria, where the French and Bavarians were defeated on the first of June N. S. by the Austrian Generals, and lost between four and five thousand men; soon after which Landshut, Deckendorf, and most of the towns in Bavaria, submitted to the Queen of Hungary a second time; whereupon the Emperor abandoned Munich again, and resorted to Augsbura a neutral city.

The Eng- In the mean time the English and Austrians-  
lish pass the Rhine  
and Mayne.

continued their march into the Empire, and passed the Rhine and afterwards the Mayne near Frankfort, of which Marshal NOAILLES receiving advice, and understanding that not only the Dutch but the Hanoverians and Hessians, were at a great distance from them, assembled an army of thirty thousand men, passed the Rhine, with a design to attack the English before they were joined, of which the Earl of Stair had

notice just time enough to retire over the Mayne, and encamp at Hochst, near Hannau; the English some few days after continued their march up the Mayne to Aschaffenburg, whereupon the French passed the Mayne with part of their army at Selingenstat, and thereby endeavoured to cut off the communication of the English with Hannau, which their Generals being apprized of, quitted Aschaffenburg, and on the fifteenth at night marched back again towards Hannau; this the French observing, took possession of Aschaffenburg and some other posts, whereby they cut off the communication of the English, with most of the towns from whence they received their provisions on that side; they also planted their cannon on the southern bank of the Mayne to annoy the English which ever way they should attempt to march, and disengage themselves, and thus hemmed in, they depended that the English must have perished for want of subsistence, or laid down their arms; and all accounts agreed, that the British forces were in great danger of starving, and had already suffered very much for want of food: but the French 'tis said lost all these advantages by the Duke of Gramont's attacking the English contrary to his orders, for the French were driven back again over the Mayne with very great slaughter, and if the Earl of Stair's advice had been followed, their whole army had been ruined. The greatest loss the English sustained, was from the batteries of cannon on the Mayne, and a furious attack of the French black musketeers who were almost all cut to pieces; but having already given a particular account of the battle of Dettingen in the Modern History of Germany, I shall not enlarge upon it here, only observe that the Earl of Stair soon after the battle resigned his post of General, and some other great men threw up their commissions, observing their advice or orders not attended to, and consequently they were disabled from doing their country that service which might have been expected from them.

Egra surrendering about this time to the Austrians, as Prague had done before, and Bavaria being reduced, the Emperor's General Count SECKENDORF agreed to a neutrality, and the Emperor returned to Frankfort. Whereupon the French retired over the Rhine, to which river Prince CHARLES of Lorraine advanced with a design to pass it, if the English would have made a diversion on the Lower Rhine, but they contented themselves with marching into the Palatinate, the Dutch forces attending then at some distance, and when the French retired into their own territories near Landau, neither the English or Dutch would be persuaded to advance beyond the frontiers, as it must infallibly have occasioned a war with France, which Marshal NOAILLES being sufficiently apprized of, detached great part of his forces to the Upper Rhine, to oppose Prince CHARLES's passing that river, and this rendered all that Prince's designs abortive; for unless the English and Dutch would have agreed to invade the territories of France, on the side of Landau, and made a diversion, the army of France under Prince MAURICE of Saxony on the opposite side of the Rhine, would have been much superior to that of the prince, and in such circumstances

circumstances it would have endangered the loss of his whole army if he had attempted it.

The German war was scarce commenced when Cardinal FLEURY died, and possibly had never been prosecuted if he had lived; for it is observed of that prelate, that he had so happy a talent at negotiation, that he made greater acquisitions to

the French monarchy by treaties, than LEWIS the fourteenth had done by conquest; he was so perfectly versed in the art of corrupting the powers of Europe, or their ministers, that he seldom had occasion to make use of force to accomplish any of his projects.

*Treats of the situation and extent of Spain; of its name and original inhabitants; of the air, the face of the country, mountains, rivers, plants, animals and minerals.*

CHAP.  
I.  
Situation  
and extent

**S**PAIN, including Portugal, once a province of it, is the most western part of the continent of Europe; being bounded by the sea, or bay of Biscay, on the north; by the Pyrenean mountains and the Mediterranean sea towards the east; by the Mediterranean and the Atlantick ocean on the south; and by the same ocean on the west: extending from the thirty-sixth to the forty-fourth degree of north latitude, and taking up thirteen degrees of longitude; Cape Creus, or the most easterly part of it, lying three degrees to the eastward of London, and Cape Finisterre, or the most western part, ten degrees to the westward of London: so that its breadth from north to south in a direct line is exactly 490 miles, and its length from east to west about 680 miles. The form of it is generally said to resemble an ox-hide spread upon the floor, of which the Pyrenean mountains, which divide it from France on the north-east, may be reckoned the neck.

Name.

The most ancient names we meet with of this country, are those of *Iberia* and *Hesperia*; the first of which it is said to have obtained from its being looked upon as the end of the world, the word *Iberia* signifying as much: or according to others, from the river *Iberus*, now *Ebro*. The Greeks gave it the name of *Hesperia*, on account of its western situation in regard to them, *Hesperus* signifying the western or evening star. The story of its having had two Kings called *IBERUS* and *HESPERUS*, who communicated their names successively to this country, is looked upon as fabulous. As to the common name of *Spania*, (*Spain*) or *Hispania*, or as it is called by the Spaniards, *Espania*; this, a French writer of credit is of opinion, was given it by the Phenicians, from the vast flock of lapwings they found here, *Sepana* in their language signifying a lapwing; and in confirmation of this opinion it is urged, that upon the Emperor *ADRIAN*'s medals, the lapwing is the device for Spain.

Original  
Inhabitants.

There is no manner of certainty as to the original inhabitants of this country; only in general it is very reasonable to suppose, that it was peo-

pled either by the Gauls, who lay contiguous to it, or from the coast of Barbary, from which it is separated by a very narrow streight, called the Streight of Gibraltar.

The Phenicians, or Canaanites, were the next that planted colonies here, who being obliged to abandon their country to the Israelites, coasted along the Mediterranean seas, settling themselves first at Carthage on the African side, and afterwards on the Island of Cades or Gades near the continent of Europe. Here they trafficked with the people of the country, and either by permission or force built several towns and fortresses on the main land, as Malaga, Andera, &c. The inhabitants of Marseilles, who were originally Phocians, a people of Greece, that subsisted by trade and navigation as the Phenicians did, planted colonies in the most eastern parts of Spain, between the Pyrenees and the river *Ebro*, building the town of Rhodes, now *Roses*, and several other places on the coast of Catalonia. But the Phenicians becoming the most considerable maritime power, possessed themselves at length of all the south part of Spain, which they held without a rival for between two and three hundred years, till the Romans, jealous of their power, entered into a war with them about the year 513 from the foundation of Rome, and compelled them to relinquish that part of Spain which lies to the eastward of the *Ebro*. By a second war, which ended A. R. 553, the Carthaginians were obliged to abandon the rest of their territories in Spain to the conquering Romans. The northern parts however being mountainous and difficult of access, and possessed by several warlike nations, maintained their liberties for an hundred and seventy years afterwards, till the Emperor *Augustus* being at peace with the rest of the world, determined to bring the whole country under his dominion; and notwithstanding they held out some time among their rocks and almost impenetrable forests, being attacked on every side by such numerous armies of veteran troops, they were at length obliged to surrender, whereby the Romans became

CHAP.

CHAP.  
I.

The air.

Face of the  
country.  
Mountains

masters of all Spain. I shall not enter farther into the history of the country here, having reserved a chapter on purpose to treat of the ancient and modern history of it, as usual.

They generally breathe in Spain a pure dry air, hot, but exceeding healthful: indeed in some provinces it is moist, as in Galicia, and in Catalonia and the northern parts; and upon the mountains it is excessive cold in winter. In the rest of the country it rarely rains, unless in spring and autumn: the heavens are serene, and the sun is seldom intercepted by a single cloud. The winter is so moderate in the valleys, that they have very little occasion for fires nine months of the year. If there be ice sometimes, it is not above the thickness of a crown-piece, and snow is hardly ever seen but near the mountains. The fields are covered with flowers and odoriferous herbs, at the time we are locked up in frost. On the contrary, it must be confessed that during the months of June, July and August, the heats are insupportable to foreigners, especially in the heart of the country and towards the south; the heat of the sun at those times is so intense, that many of their small rivers and brooks are entirely dried up, and the roads and fields are insufferably dusty; and what adds to the excessive heat, is the calmness of the summer season, when we seldom meet with the least breath of air, the wind not blowing so frequently as it does in more northern countries. Those that live upon or near the mountains, or near the sea-coast, indeed are often blessed with refreshing breezes, and the nights are generally cool and refreshing; nor is there any danger of continuing in the open air till midnight, as there is in some other hot countries.

The face of the country is rough and uneven, encumbered with abundance of high mountains, whose tops seem to touch the clouds, some of them running the whole length of the country from east to west: among these the Pyrenees have been always the most celebrated; nor are they inferior to the Alps, of which the poets have said so many wonderful things. They separate Spain from France, as has been observed already, extending from the Mediterranean to the Ocean, which is a space of about eighty-five leagues, and the greatest breadth of them is about forty-five. They begin at Port Vendres in Roussillon on the Mediterranean, and extend to Fontarabia on the bay of Biscay, traversing Catalonia and Arragon, and dividing Navarre into two parts: but in this space it has several names, according to the countries it borders upon: in Roussillon it is divided into two branches, of which that that separates it from Languedoc is called the Anti-Pyrenees, and that which divides it from Catalonia is called the Col de Pertuis. There are other branches of it bordering on these countries, called Mont Canigon, Sierra de Guara, Col de Praxa, Col de Argentiére and Port de Viella. Those which divide Gascony from Arragon are the mountains of Jaca and St. Christian, where is the famous Pic de Midi, resembling a sugar-loaf upon a table, which is said to extend to the middle region of the air; and in Navarre, between Pampeluna and St. John de Pie de Port, we meet with the mountains of Adela and Roncevaux. The ancient geographers made the Pyrenees extend the whole length of Spain to the Atlantick ocean; nor were they much in the wrong, the rest of the mountains of Spain seeming but branches of these. There are but five passages over that part of them which lie between France and Spain, and those exceeding difficult and dangerous; but they are

well planted with trees, and interspersed with a great number of valleys.

The Sierra d' Occa, anciently called Mount Idubeda, is a mountain which issues from the Pyrenees, and extends to the Mediterranean sea near Tortosa, west of the Ebro. Another branch of it stretches from east to west, traversing the whole kingdom of Spain as far as Cape Finisterra, running through Biscay, part of Old Castile, and the two provinces of Leon and Galicia. In South Spain, below Mount Cayo, there issues a branch from this called Orospeña, which rises insensibly, and near the mouth of the Tagus obtains the name of Sierra Morina, which stretching still farther south, is called Sierra d' Alcaez, where the river Guadalquivir rises; then turning to the south-west, it traverses the kingdom of Grenada, and is continued to the Straights of Gibraltar, where we see the celebrated Mount Calpe, opposite to Mount Abila in Africa; which two mountains are called HERCULES'S pillars, the *ne plus ultra* of the ancients. There are abundance of other mountains of less note, which will be mentioned in the description of the respective provinces.

Spain is said to be watered with an hundred and fifty rivers, of which six only deserve that name; viz. 1. The Ebro. 2. The Guadalquivir. 3. The Guadiana. 4. The Tagus. 5. The Duero. And, 6. The Minho.

The Ebro, in Latin, *Iberus*, by some said to have communicated its name to the whole country, from thence called *Iberia*, hath its source in the mountains of Asturia. It rises from two sources, of which the principal is near the town of Fuenti Ebro, or Fountain Ebro, taking its name from this spring. It runs from the north-west to the south-east near five hundred miles, receiving in its passage upwards of sixty rivers, of which the most considerable is the Arragon in the province of that name, and the Segra in Catalonia. It traverses good part of Old Castile and Biscay, then enters Navarre, and inclining to the southward, divides that province from Castile, and passing on to Tudela, becomes navigable for small boats there. From Navarre it continues its course to the province of Arragon, which it divides almost in two equal parts, washing the walls of the city of Saragossa. From thence it runs on to Catalonia, and some miles below Tortosa it throws itself into the Mediterranean with great rapidity, forming at its mouth the little islands of Alfaches.

This is almost the only navigable river in Spain, and even this is of little advantage to them, unless between Tortosa and the sea; for notwithstanding it carries vessels for the space of two hundred and fifty miles down the stream, it runs with that rapid force that a boat cannot go up against the stream higher than Tortosa, and it is very difficult to go down on account of the rocks which lie in the channel about twenty leagues from Saragossa. The water of it is esteemed very wholesome and palatable, on which account it is transported to most towns in the neighbourhood, and to distant provinces. Upon the conclusion of the first Punic war, the Ebro was made the boundary between the Roman and Carthaginian territories, from whence Spain was afterwards divided into two very unequal parts, viz. the Hither and the Further Spain in respect to Rome, that to the westward of the Ebro being nine times as large as the other.

The

**H. A. P.** The Guadalquivir, anciently called Bætis and Tartessus, and by the Moors, Vadalcabir, which signifies in Arabick a great river, was by corruption afterwards called Guadalquivir by the Spaniards. It rises in the most eastern part of Andalusia, on the confines of Grenada and Murcia, near the celebrated mountain called by the ancients Orospeða, and by the modern Spaniards, Sierra Segura; at the foot of which several rivulets rise, and meeting together form a lake, from whence this river issues. It traverses the whole length of Andalusia from the north-east to the south-west, passing by Cordoua, Seville, and St. Lucar, falling into the Atlantick ocean about fifteen leagues south-west of Seville, and eight to the northward of Cadiz. Its waters glide very gently along, and it is navigable as high as Seville for pretty large vessels, and has the advantage of the tide so far; but is so full of sands, that they frequently miscarry. From Seville up to Cordoua it will carry only small boats, and above Cordoua the rocks that lie in it spoil the navigation.

**Guadiana.** The Guadiana, in Latin, *Anas*, rises in New Castile, in the vast plains of Monteil, or la Mancha. It issues from certain lakes, called by the natives the lakes of Guadiana. It takes its course at first from east to west, passing by Calatrava, Medelin, Merida, and Badajos in Estremadura, after which it turns about to the southward, and falls into the Atlantick ocean near Agramonte. Both ancients and moderns relate abundance of odd stories of this river, as that it runs ten leagues under ground near Medelin, for which reason the Latins called it *Anas*, or the Duck; but this our modern geographers affirm is an error: thus much however is agreed to be true, that a little below its source it passes between high mountains which prevent the sight of it for three or four miles, after which it appears again in the lakes which the Spaniards call the Eyes of the Guadiana. Afterwards in its course a little above Calatrava, it is so covered with rocks which hang over it, and rushes, that the river does not appear. From Merida to Mertola, two towns about thirty-five leagues distant from each other, it is so full of rocks, on the right and left, that no boat can go upon it, and it is very dangerous crossing of it. In summer-time there is very little water in this river, and the little that remains does not seem to run. It appears among the rocks to have more of the nature of a torrent than a river, which, during the rainy season, has rolled down great heaps of stones from time to time from the neighbouring mountains. It is no wonder therefore if some people have imagined that it had lost itself under the earth, since it scarce appears for several miles during the scorching heats.

**Tagus.** The Tagus is the largest and most considerable of all the rivers of Spain. The Portuguese, who reap the greatest advantage from it on account of trade, call it the King of rivers. It has its source in New Castile, near Albarazin, and runs about four hundred miles from east to west, first taking its course over New Castile, and washing the walls of Toledo, passes by Almaraz and Alcantara in the Spanish Estremadura, after which it enters the Portuguese Estremadura, and passing on forms a little bay about a league over, which serves for a port to the city of Lisbon, and six or seven miles below falls into the Atlantick ocean. This river was famous anciently for its golden sands, but I don't find there is any of that rich mineral to be met with in this river at present.

The river Duero rises on the confines of Navarre and Arragon, that part of the mountain Idubeda which goes under the name of Sierra de Cogollo, near the town of Aguillac del Campo. It first runs through the middle of Old Castile, and passing by Soria and Aranda, traverses the kingdom of Leon, washing the walls of Tordeissil, Toro and Zamora, and entering Portugal, after a winding course falls into the Atlantick Ocean a little below Porto. The entrance is very dangerous on account of the rocks and sands that lie at the mouth of it, insomuch that vessels can only come in at high water. It runs about three hundred miles from east to west, but is not navigable on account of the rocks and cascades with which the passage is obstructed.

The Minho, the least of the six Spanish rivers, Minho. rises in the north-east part of Galicia, near the town of Castro del Rey, and running south-west through that province, passes by Luga Ourese and Thuy, falling into the Atlantick Ocean near the confines of Portugal.

If we were to follow the ancients in their descriptions of Spain, it would appear the richest, the pleasantest, and the most beautiful country in the universe, little short of a terrestrial paradise. Some of them place the Elysian fields here, while others assure us it is more fruitful than Africk or Gaul: that it is neither parched by the excessive heat of the sun, as the former, nor disturbed by winds and storms like the latter: that it abounds in corn, wine, and the most delicious fruits: that their olives are to be preferred to those of other nations, and their vines give place to none: that those parts which do not produce corn afford excellent pasturage: but above all, that here are found all kind of precious minerals in the greatest abundance, as gold, silver, &c. in their mountains, and their rivers carry golden sands: that they had not only sufficient of every thing desirable to supply their own country, but served as a granary to Rome, and almost all Italy: that the mountain Orospeða, which signifies the silver mount, obtained its name from the silver it produced: that in Galicia gold was so plentiful, that the husbandman often broke up great pieces with his plow: that Lusitania and Asturia were equally rich, where they sometimes found pieces of gold of half a pound weight: And that to this country the ancients sent their fleets in search of these precious minerals as the Europeans now do theirs to the continent of America. The Phenicians, who first arrived at these happy shores, it is said, found silver so very common among the Turdetani, that their most common utensils and moveables were made with it, and that they purchased it of the natives for toys and baubles; and that having amassed such prodigious quantities that their ships could not contain it, they were obliged to make anchors of the rest.

This relation has certainly very much the air of fiction at this day, and yet is not entirely to be rejected: allowances indeed must be made for the poetical vein of their writers, and the eastern manner of expression; they certainly never expected to be understood literally and strictly, any more than the modern Asiatics or Italians; their words ought to be taken in the sense they were understood at the time, and in the country they wrote; and as in prophane, so in sacred story the want of this caution has occasioned a multitude of mistakes. But to proceed: A late French writer seems to insinuate, that the Tarsis from which

Produce of the country according to the ancients.

CHAP. I.

HIRAM and SOLOMON fetched their treasure, was situated in the south-west part of Spain, there having been a town of that name between the branches of the river Bœtis, or Guadalquivir, and that river itself, formerly called Tartessus. The situation of Tyre in the Levant sea, and the Tyrians and Phenicians trading hither also, would render this surmise extremely probable, were it not expressly said, that these fleets of HIRAM and SOLOMON were built in the Red Sea, in the land of Edom, and set sail from thence, and consequently must steer their course either to the Indian or African shores. I shall only observe further, that the Scripture says, silver was as plentiful in Jerusalem as the stones of the street in the reign of King SOLOMON, which I hope few people understand literally, any more than they do, the above-mentioned figurative expressions in prophane histories. Having premised thus much from the concurrent testimony of the ancients, I make no manner of doubt but there were formerly mines of gold and silver in Spain, as there are no doubt still, though not worth the working, since better are discovered; or, which is the same thing, others that may be wrought much cheaper. The richest silver mine the ancients discovered in Spain, was two or three miles distant from Carthage, where forty thousand workmen were continually employed, and yielded the Romans daily twenty-five thousand drachms of that precious metal. Asturia, Galicia and Lusitania, furnished them annually with twenty thousand pounds weight of silver. Near the Pyrenees a mine was discovered which yielded HANNIBAL three hundred pounds a day. When SCIPIO AFRICANUS took Carthage in the second Punic war, he found there two hundred and seventy-six thousand cups or vessels of gold, most of them of near a pound weight, a vast quantity of silver coin, and an infinite number of other silver vessels and utensils; by the riches of which one town, as my author observes, we may make some estimate of the rest of Spain.

If it be demanded, what are become of those rich mines that produced all this treasure? Are they exhausted that they have afforded no gold or silver for several ages? To which it is answered, there may be the same mines still, but as gold and silver are of late years become more plentiful, and easier come at in other places, it may not be worth the while to open these. Before the gold on the coast of Africk, in China, and in the East Indies was discovered, and before we had any communication with Potosi, and the other gold and silver mines of America, those metals were more scarce, and consequently more valuable than they are at present, and it might turn to a much better account to work them then than it does now: the slaves who dig in them also are maintained at a much less charge in the Indies than they could be in Spain, especially since we are very well assured, that Spain was much better cultivated, and yielded greater quantities of corn and other provisions, than it does under the management of the present lazy generation, who plant or sow little more than will serve their own necessities; whereas the Romans drew a great deal of their provision from thence. But besides the rich minerals above-mentioned, they have at this day good mines of quick-silver, sulphur, lead, alom, copper, and the iron and steel of Biscay is in the greatest esteem of any in Europe. Here are also found several kinds of precious stones, as agates, cornelians, garnets, crystal, marble, alabaster and jasper.

As to the produce of the earth at present, their mountains are generally covered with oaks, fir-trees, and other excellent timber, and the lower parts of them with grass and a variety of sweet herbs, on which are fed large flocks of sheep and goats the wool of the former esteemed the finest in Europe, and without a mixture of which the most valuable cloths cannot be made. The Spanish wheat is excellent, and their bread would be equally good if it was not sometimes spoiled in the making. They have plenty of barley, the food of their horses and mules, but scarce any oats. They do not think it worth their while to make hay, though they have grass enough, but feed their horses and mules with straw in the room of it: and indeed there is scarce any part of the year they want pasture for their flocks and herds, so that hay is by no means so necessary here as it is in colder countries, where our grounds yield little or nothing in winter. They have very rich wines, and in great plenty, such as Malaga, Galicia, Alicante, Barcelona, and many others. Besides the fruits common to us here, they abound in oranges, lemons, citrons, prunes, raisins, olives, figs, capers, chesnuts, pomegranates and almonds. Many medicinal and odoriferous herbs and flowers grow wild here, which with us will not arrive at any perfection with the utmost care; and their oil, wax and honey, is as good as any in Europe. There is so much silk grown in Spain, that it is said to employ a million of people, in feeding, gathering and curing the worms; spinning, weaving, and other manufactures of silk or velvet. Other parts produce flax, hemp, cotton, sugar, saffron, pitch, rosin, &c. And as to their animals, their horses have always been esteemed for their swiftness, as their mules are for their strength, and being sure-footed, on that account are generally used in travelling over this mountainous country: nor do they want very good horses for draught. The flesh of their sheep is admired as well as the wool they produce; the flesh of their goats and kids also is good food, and their hogs and dried bacon are reckoned equal to those of Westphalia. Wild hogs, deer, rabbits, hares, fowl, and all manner of game, are plentiful, especially in their mountains and forests, and the seas, which almost surround them, well stocked with fish. But of all these particulars I shall give a more distinct account in the description of the respective provinces.

## CHAP. II.

*Treats of the persons and habits of the Spaniards; of their genius and temper; diet, diversions and way of travelling.*

THE Spanish men are generally tall and well made, but few of them corpulent. Their complexion is swarthy, their hair black, their features just, with brisk sparkling eyes. They shave their beards, leaving long mustachios on the upper lip. The women are generally small and slender, and value themselves much on their pretty little feet, and fine hands and arms, and take abundance of pains to prevent their breasts growing out of size, by binding plates of lead upon them.

The men who pretend to dress, part their hair and tie it behind with ribbon. Their habits are generally black, and consist of a fine shirt, a short waistcoat, and breeches close to their thighs; fine black stockings, and white thread underneath. On their feet they wear pumps made of very pliant

Their ladies paint their swarthy skins.

pliant leather; and every peasant almost has a monstrous long sword on one side, and a dagger on the other. The collars of their waistcoats are stiff, and covered with a kind of ruff, but not so large as those formerly worn in England, and over all they throw a short cloak, but so contrive it as to have the right hand at liberty.

The ladies in Spain lay on their paint very thick, and are not at all ashamed of it; and not only on their faces and hands, but a great way down their backs, for they wear their stays so low behind, that their tawny shoulders without it would make but a very indifferent appearance. They dress in their hair, wear stays, and fardings, or hoops of brass-wire, to bear out their clothes. Their gowns are black, and under them, it is said, they wear half a dozen other garments. Their coats are so long that they trail upon the ground and hide their feet, for these they conceal as carefully as any of their hidden beauties. When they go abroad they wear a kind of clogs or pattens, which make them appear half a foot taller than they really are, and a veil which covers them from head to foot. Flanders lace, muslin and fine linen are much worn by the quality, and most of them have several sets of jewels. On the top of the stays the Spanish ladies wear a breast-plate of diamonds, to which there hangs a chain of pearl, or other precious jewels. Necklaces are not in use here, but they have abundance of bracelets upon their arms, and rings on their fingers, and such weighty pendants in their ears, as stretches them to an unreasonable length. The *Agnus Dei's*, and little images and pictures of the saints, may be reckoned part of their dress, for we seldom see either men or women without a great many of these trinkets, besides their beads. Spanish gravity being become a proverb amongst us, it is almost needless to observe with what deliberation they do every thing: their pace is so extremely slow, that at a little distance it is not easy to discern whether they move at all; and in short, the air and mien of this people is the very reverse of the French; and this brings me to treat of their genius and temper.

Their genius and temper. Natural and acquired parts.

The Spaniards are generally men of a piercing wit and elevated genius, but very little improved by study or conversation, for want of schools and academies where the sciences are taught in the modern way; for those that do study, apply themselves chiefly to the ancient philosophy or school-divinity, and are such slaves to the opinions of the ancients, that they will admit of no other systems. ARISTOTLE, SCOTUS, and ST. THOMAS, as they call him, are infallible oracles with them; and he would be thought a poor physician, who did not follow HIPPOCRATES, GALEN or AVICENNA. On the contrary, they slight the rules of the ancient poets, and take up with very mean compositions of their own; from whence my author observes, that they have neither good philosophers, poets, or physicians among them; notwithstanding which, he admires them for their wisdom, secrecy, constancy, and patience in adversity: he says they are slow in determining, but usually conclude judiciously at last; that they are generous, magnificent, liberal, delicate in the point of honour, sincere friends, agreeable companions, grave in their discourse, true to their words, great enemies to lying, and extremely temperate in eating and drinking. As to their veracity, many signal instances have been given of it by those who have written of this country;

VOL. II.

CHAP.  
II.

among which, I shall relate but one. A gentleman having killed another in a duel, fled into the house of a noble lady, and begged her protection against the officers of justice that were pursuing him. The lady, upon his earnest entreaty, promised to conceal him; and she had no sooner put him into a private place, but the officers entered her doors; and having searched, as they thought, every part of the house without finding him, they concluded he had escaped from thence, and went about their business. Not long after the only son of the lady was brought home dead, whom she understood had been murdered by the very man she had concealed; however, such was her regard to her word and honour, that she gave the offender an opportunity of escaping from her house in the dark, letting him understand at the same time, that now she had performed her promise to him, he must expect to be prosecuted with the utmost vengeance; and that she should leave no place unfought till she had found him, and delivered him up into the hands of justice.

But to proceed: The Spaniards being naturally devout, the clergy, who have the government of their consciences, have converted this commendable quality into the grossest superstition and bigotry, and taught them such a veneration for their priests, that they kiss their hands, and the very hem of their garments, paying them a worship very little short of what they pay the Deity. Nor have they, as foreigners observe, less respect for the ladies than they have for their priests, they do in a manner idolize that sex; they never say anything shocking before them, and their well-bred men frequently approach them with bended knees, kissing their hands instead of their lips; and if a lady does them the favour to commend any thing they have, as a ring, a watch, a jewel, or other toy they are masters of, they never fail to make her a present of it; by which means, it is said, some young gentlemen have run through considerable fortunes; for the ladies knowing their power, too often exercise it in this particular: but none of them are such tyrants as the big-bellied women, who command every thing they are pleased to long for; and a Prince would be thought a brute who should deny them any thing.

Among their foibles, the great opinion the Spaniards have of themselves, and their contempt of foreigners, are none of the least. As they seldom travel, they know little of the beauties of other countries, and look upon their own as a terrestrial paradise. One of their preachers in a Lent sermon observed, that if the Pyrenean mountains had not interposed when the devil shewed our Saviour the kingdoms of the world, and thereby prevented his viewing Spain, he had probably been overcome by the temptation.

To the pride and vanity of the Spaniards are added many other vices, as their wretched indolence and laziness, their revenge, avarice, lust, and credulity in believing the feigned miracles and fabulous stories of their monks without examination. As to their revenge, when a gentleman apprehends himself affronted, he does not think himself obliged to run the hazard of a duel, as in other countries, but makes no scruple of destroying his enemy privately, by causing him to be poisoned, shot, or otherwise assassinated. Their neglecting to apply themselves to agriculture and husbandry, is generally looked upon as the effect of idleness; whereas it is certainly to be imputed to their pride, or rather the custom of their country, where a man is

17 B

looked

CHAP.  
II.

looked upon with the utmost contempt who submits to these vile employments, as they are esteemed: their pretended quality will not suffer them to plough their lands, or plant their vineyards. There is not a peasant among them without a roll of his pedigree: every one of them can shew that he is descended in a right line from the old Gothick Christians, who assisted their King PELAGIUS in expelling the infidel Moors; and big with the pretended honour, their lands must lie unmanured, if foreigners did not plant and sow them for the whimsical proprietor, and generally run away with the best part of their profits. The French usually do them this favour, and carry home considerable fortunes into their country; but this is to be understood chiefly of the two Castiles and the midland provinces; for the natives of Galicia do not only manure their own lands, but assist the Castilians in their husbandry: and in Grenada, Andalusia, and the southern provinces, peopled chiefly by the descendants of the ancient Moors, they do not look upon husbandry as a contemptible employment. King PHILIP III. in order to break his subjects of this unaccountable humour of starving in the midst of plenty, or at least on lands that might be rendered extremely fruitful by a moderate industry, published an edict, declaring that every owner of lands should be deemed a gentleman, and have the title of an Esquire, who applied himself to husbandry, besides being exempted from going to the wars. PHILIP IV. published a declaration to encourage foreigners to reside in Spain, offering all those who should apply themselves to husbandry, trade or grazing, that they should be exempted paying of taxes, or any duties to the crown, which encouraged great numbers of artificers and labourers to resort thither from the provinces of Auvergne, Limousin, Guienne, Languedoc, and Bearn in France; but after they have raised a tolerable fortune, they usually return home to spend it, and leave the Spaniards as poor as they found them. It is a miserable thing, as my author observes, to see a peasant sitting before his gate, or on a bulk in the street, in a tattered cloak, and his arms a-cross, or perhaps playing upon a wretched guitar in summer, when he should be gathering in the fruits of the earth, while foreigners are reaping his corn, and getting in the vintage, and perhaps go away with the best part of the crop for their pains, while the owner remains almost destitute of necessaries. But surely no people sustain their poverty with such an air of gravity and satisfaction, we hear no murmuring on this account let their wants be ever so great: nor do they know how to keep any more than they do how to improve what they have; economy is a perfect stranger here; it is beneath them to look into their affairs; they live as it were from hand to mouth, and never did people observe that precept better, of taking no thought for the morrow.

The reason Spain is depopulated.

It is not without reason that foreigners are astonished to see so rich and fruitful a country, favoured with a pure healthful air, in a manner forsaken and depopulated; but there are many good reasons to be assigned for it, besides those already mentioned, of which the incontinence of the young fellows, as well as of the married men, is looked upon as one of the chief. When a lad is arrived to fifteen or sixteen years of age, his friends provide him a concubine, whom he hires for a month, a year, or as long as he sees fit, perhaps because he

should not marry to disadvantage; and as the Spaniards are generally much addicted to venereal pleasures, they are so wasted and exhausted before they come of age, that they are very unfit to perform the duties of the marriage-bed, and often contract diseases, which the miserable children feel the effects of as soon as they are born. And as they generally find more satisfaction in their mistresses than in their wives, and consequently give the latter all the reason in the world to be jealous, they take care to lock up the miserable creatures, or place spies upon them, lest they should retaliate the injury, as the Spanish women frequently do when they have an opportunity, provoked to it by the tyranny and injustice of their husbands.

Another reason given for their want of people, is the expulsion of many hundred thousand Moors and Jews in the reign of PHILIP III. from the provinces of Andalusia, Grenada and Murcia. The continual wars that the Spaniards carried on for near two hundred years in Flanders and Italy, also swept away abundance of their men: and the riches of America, where they hoped to acquire gold and silver without labour, drew over many thousand families thither. Add to this the multitudes who have taken the vow of celibacy, and are locked up in monasteries or nunneries, and all the clergy in general, to whom their religion and laws prohibit wives, and we shall cease to wonder, either at the uncultivated lands or the paucity of inhabitants in Spain.

Give me leave here, before I proceed further, to consider the different characters of the Spaniards given us by different writers. An English traveller now before me, concludes his account of them in these words: 'And thus I take my leave of Spain, in hopes of meeting with better accommodation in Italy; it being certain, that the general poverty, and villainous inclinations of the people here, will make one thank God to have passed their country with safety: and as I am taking my farewell of them, I must declare it as an undoubted truth, that all the time I staid in Spain, I neither saw nor heard of any honourable or generous action done by a Spaniard, but frequently of the direful effects of their vain pride, poverty, thefts, murders and deceits, which are too often committed here.'

On the contrary, another writer says, 'After all, to give the Spaniards their due, such of them as have had the good fortune of a liberal education, and improved themselves by travelling abroad, must be owned to be persons of a solid understanding and uncommon vivacity: that they both speak and write concisely, are very apt for politicks, temperate, constant and laborious, naturally inclined to generosity, true friendship and bravery: all which taken together, make their manners not appear so odious to me, as to some people perhaps who have not examined them.'

From the whole, the Spaniards do not seem to want natural parts or good inclinations; their greatest misfortune is their conversing so little with the rest of the world; they are situated at one extremity of the earth, as the Chinese are at the other; neither the one or the other travel themselves, or are much visited by other people, unless in their port towns: from whence it proceeds, that both nations have entertained a notion of their own self-sufficiency, and a contempt of the improvements that have been made in arts and sciences by the rest of mankind. Add to this, that

CHAP.  
II.

the Spanish clergy, lest the people should break through the clouds of bigotry and superstition that surround them, discourage all manner of learning, and intercourse with foreigners; so that where they have imbibed any false or destructive opinions, it is almost impossible they should be undeceived. I make no manner of doubt therefore, but it must be very dangerous and uneasy for foreigners, and especially Protestants, who have not a good share of patience, as well as prudence, to reside amongst them. If you touch upon the string of religion, and seem to reflect on any part of their superstition, it is well if you be not delivered over to the inquisition. If you are too free with the ladies, you will run the hazard of a poignard; and if you endeavour to expose the folly of their pride and indolence, there is no great friendship to be expected from them. On the other hand, where a man can wave his zeal for his darling notions in religion, and suspend his complaisance for the fair sex, and forbear reflecting on their absurdities, for aught I can find he may meet with a very favourable, and even hospitable reception in Spain, and especially from persons of distinction.

Their  
food.

They eat but little beef in Spain. Their mutton and goats flesh are admirably good, and their hogs, which are fed with chefnuts or acorns, make excellent pork and bacon, said to equal that of Westphalia. Their rabbits are as good as ours, and their partridges larger. The hares which feed in the vineyards while the grapes are growing, are so fat that they are easily knocked on the head, but are not eaten in any other season. Pigeons, pheasants, and other wild fowl, are plentiful enough, and their sea-fish is excellent; but they have not much good fish in their rivers. The common people live chiefly upon bread, wine, pease, beans, or other pulse, roots, herbs and fruit. Flesh is very seldom seen in their houses, any more than in their cooks shops, where you will meet with pease, beans, leeks, onions, garlick, and perhaps a little broth of ordinary meat boiled to rags. Here the servants belonging to persons of quality at Madrid usually dine and sup, both men and women, for there is no more victuals dressed in their lords houses than will serve the master, his wife and children; which is the reason that at an entertainment, the servants are ready to snatch the meat out of the dishes as it is going to table: and we are told of some gentlemen that are forced to have locks to their pots and stew-pans, lest their servants should run away with their victuals before it is dressed.

Persons of distinction usually live in a certain method. As soon as they are up they drink a glass of water cooled with ice or snow, and immediately after a dish of chocolate. At dinner the master of the family sits down to table in a chair, while the women and children sit cross-legged like Turks, and eat upon a carpet spread on the floor. Their meals are usually light and sparing, perhaps a pheasant, a pair of pigeons, an ollio, or a ragou highly seasoned with garlick and pepper; and after all, a desert of delicious fruits, which they have in great perfection. When dinner is over, they sleep till two in winter, and in summer till four, all which time the shops are shut up, and you scarce meet any thing in the streets, as one observes, but Frenchmen or dogs. When they get up again and are dressed, they eat sweatmeats, or drink a dish of chocolate, and after it a draught of water. The supper is not much heavier than the dinner; a little hash, or ragou, and a tart, or something of that kind. The lady drinks nothing but water,

and the lord but very little wine. Butter and cheese are scarce in Spain, and that they have is very indifferent; oil is used for frying and sauces instead of it, and being of the best sort, in some measure supplies the place of butter.

The evening here, as in other hot countries, is spent in taking the air, or making visits. They go from their houses about four or five in the evening, and seldom return till eleven or twelve at night. The men meet abroad in the publick places of resort, or at the play-house, where the ladies, if there be any, are always concealed from the male audience by a lattice, for which reason possibly they chuse to visit one another at their houses. The floors of their apartments being covered with rich carpets, and long velvet cushions placed round their rooms, the ladies sit cross-legg'd on them after the manner of the Turks, which being contrary to the custom of other Europeans, is supposed to have been introduced here by the Moors. When a lady makes a visit, the mistress of the house, and all the company, rise up and meet her at the door of the antichamber. They do not kiss at meeting, but shake hands, giving each other no distinguishing titles, as your Highness, or your Grace, &c. but when they address themselves to a lady, stile her Donna Maria, Donna Elizabetha, and the like. They frequently play at cards, and sometimes very deep, and observe a perfect silence while they are engaged in this diversion. As to their conversation, it runs chiefly upon politicks; and if they speak of the absent, it is very seldom to their disadvantage, as is too frequent in other places. They converse with abundance of friendship, and as they have a good share of wit, their company is very entertaining. Before they break up they are usually treated with sweetmeats, and it is no unusual or indecent thing to carry away a handkerchief full of them. Besides these the ladies frequently drink chocolate, the produce of their American plantations. Instead of candles, when it grows dark, the servants bring in fine silver lamps with abundance of branches; and as their oil is sweet, they do not create any offensive smell, and give a very good light.

Our countryman CARLTON relates, that the ladies here visit in great state: that they are usually carried in a chair by four men, the two first always bare-headed; two others walk as her guard, and another carries a lanthorn to light her home; then follows a coach drawn by six mules, with her women, and another with her gentlemen, several servants walking after, for they never suffer the servants to overload a coach, as with us; and their pace is answerable to the gravity of the people. There are few coaches except the King's drawn with horses, though there is no country affords finer for that purpose.

Their plays and opera's, it is universally agreed, are wretched entertainments. There are two play-houses at Madrid; but CARLTON says, that both their action and their musick are so very bad, that they don't deserve mentioning: the most remarkable thing he observed of them was, that whenever the Aye-bell rung, as it constantly does at six in the evening, all the actors, as well as the audience, fall down upon their knees, and having spent some minutes in their devotions, the entertainment is renewed again.

Masquerading is in fashion here as in other European countries, with this addition, that they masquerade on horseback as well as on foot. But what

CHAP.  
II.  
Bull-fests

what is peculiar to them, is their bull-fests, of which we meet with various accounts from our modern travellers. A French lady, whose works are now before me, relates, that the King, having appointed a bull-fest at Madrid, several cows were driven into the neighbouring forests, and being pursued by wild bulls, the females decoyed them into stables prepared for them near the places where the combat was to be; and sometimes there are not less than thirty or forty brought into Madrid in this manner, the streets whereof are lined and barricadoed on the sides to prevent these furious creatures doing any mischief; and if any of the bulls endeavour to return and make their escapes, they are followed by a body of men on horseback and on foot, armed with lances, spears, and other weapons, who force them along; and where a Cavalier is so fortunate as to bring back a bull that has broke from the rest, the honour is almost equal to that of having killed him in single combat.

These bulls being well fed for a certain time, the fiercest of them are made choice of for the sport; and on the day prefixed, the Place-Major, or great square in Madrid, is covered with sand, and surrounded with a strong barricade six foot high. The buildings here are uniform and beautiful, with a piazza on all sides, over which there are balconies covered with velvet or tapestry, for the reception of the quality who come to see the engagement. The King's balcony is in the middle of one of the longest sides, (for the square is an oblong) and is distinguished by the richness of the carving and gilding, and the canopy over it. Directly opposite to his Majesty, are the balconies of the foreign Ambassadors and Ministers of the popish communion, for I don't find that the Ministers of the Protestant powers have any place assigned them here any more than in the King's chapel, though they may be admitted to see the sport with them. On the right of his Majesty are the balconies of the several councils of Castile, Aragon, the Inquisition, &c. distinguished by their respective arms embroidered on crimson velvet. Next to these are placed the judges, grandees, titulados and city-companies, according to their quality: nor are their ladies or daughters excluded; all of them entertained at the charge of the publick, with dried sweatmeats, fruits, water cooled with snow or ice, &c. They are presented also with ribbons, fans, gloves, and other toys, to a very great value, the expence being borne out of the fines and forfeitures belonging to the King or the city, which are laid up from time to time for this purpose. Underneath the balconies are scaffolds erected for the common people, unless under the King's which place is reserved for his Majesty's guards. Foreign ministers, and persons of distinction, having entered the square with their coaches and equipages, take several turns before the King comes, and salute the ladies in the balconies, who on this occasion appear without their veils, being covered with diamonds and other precious jewels from head to foot, making a very dazzling appearance in a place where the sun usually shines out in its full lustre. The King being come into the square, the coaches immediately withdraw, and all the company take their places; after which the square is watered by the water-carts, and the guards with their officers are drawn up under the King's balcony, without any other barricado before them, than what they make with their half-pikes and halberts, which they present against the

bull if he approaches them, but are obliged not to retreat or stir a foot, let the danger be never so great. CHAP. II.

Every thing being prepared, six Alguazils, or city officers, enter the square, mounted on fine horses richly accoutred after the Moreisco fashion; their business is to introduce the knights who are to encounter the bulls: they are dressed in white habits, with plumes of feathers in their hats, and each of them a white wand in his hand: but this festival I am describing being appointed on account of the King's marriage, was more splendid than usual, as the lady from whom I take this relation informs us. The first day the Alguazils introduced six Cavaliers prepared for the combat, mounted on fine horses set off with the richest furniture, and feathers in their hats. They were followed each of them by a dozen led horses, and as many mules, laden with lances about five foot long, finely painted and gilded. The mules were covered with velvet, embroidered with their respective arms. The gentlemen themselves were dressed in black, embroidered with gold and silver, with diamond hatbands, and scarfs of different colours, with black cloaks tied back behind them, so as not to hinder the use of their arms. They had on their legs little white buskins, and long gilt spurs with one sharp point only, after the manner of the Moors, and like them rode in short stirrups, which brought their knees as high as the saddle. They were attended each of them by forty footmen, some clothed in gold-mohair trimmed with lace, others in carnation colour brocaded with gold or silver, but all in foreign dresses, imitating Moors, Hungarians, Indians, &c. who carried each of them abundance of lances.

Being conducted by the Alguazils over the Place-Major, on approaching the King's balcony they made a profound reverence, and demanded leave to engage the bulls; which being granted with wishes for their success, all the trumpets sounded, and the people shouted, crying, *Viva los bravos caballeros*; after which they separated, and having saluted the ladies of their acquaintance, sent away all their footmen out of the lists, except two for each Cavalier, who carried their lances, and kept close to their respective masters. At the same time entered several robust fellows from distant parts of the kingdom, in order to fight the bulls on foot.

The Alguazils having received the keys of the stables of his Majesty, let out a bull, and made their escapes as fast as their horses would carry them, fighting being none of their business. The bull no sooner came into the square, but the young fellows on foot shot their arrows or threw darts at him, which sticking in his flesh he raged and stamped, threatening destruction to every thing in his way: one of the Cavaliers hereupon approaching him with his lance, the beast ran at him with all his fury, but was dexterously avoided by the knight, who slipped on one side, and as the bull passed, wounded him with a lance; which being broken, one of the footmen supplied his master with another, with which he attacked the beast again in the same manner: this increased his fury to the last degree, and the Cavalier seemed to be in great danger; but I perceive the footmen came in to his assistance and relieved him. The author of this relation, who was an eye-witness, says, that she saw a black advance only with his dagger to one of the bulls in his full rage, and strike him with that force between his horns, that he fell down dead that moment;

CHAP.  
II.

moment; whereupon the Alguazils came in with four mules as usual, and dragged the beast out of the rails, under the sound of trumpets and the acclamations of the people. There were it seems no less than twenty bulls let out to fight on this occasion one after another, one of which run with such fury at Count CONINGSMARK, who was one of the combatants, that he wounded him in the leg, and let out his horse's guts; notwithstanding which, the Count, supported by one of his footmen, attacked the bull on foot with his sword only, and gave the beast a terrible wound in the head; whereupon turning about to the lady of his affections, he kissed his sword, and was carried off half dead with the loss of blood. It seems where the bull has insulted a Cavalier, by forcing his lance out of his hand, throwing off his hat, wounding his horse, or any of the company, the knight is bound in honour to give him a wound in return, or die in the attempt; and if the horse appears daunted at the bull, the Cavalier must light and engage on foot: the rest of the knights also are obliged to dismount and follow him, not to engage themselves, but to see if they can terrify the beast by marching against him in a body; and if the creature retires to the further end of the square, they have satisfied the law of duelling, as they call it.

The same day a Biscayner leaped from his horse on the back of the bull he was engaged with, and continued there a quarter of an hour, and in the end broke off one of the bull's horns. If a bull defends himself so long that they are tired of him, they bait him with dogs, and hamstringing him, and another bull is let out. 'Tis almost incredible with what dexterity the combatants manage their horses and arms, keeping within a foot of the beast almost an hour together without being touched. At this feast a young Gentleman of Toledo was tossed up into the air by a bull, and so bruised by the fall that he died upon the spot; two others were mortally wounded, and four horses killed; and this is nothing to the mischief that happens sometimes.

Another  
bull feast,  
by CARL-  
TON.

Our countryman CARLTON, whom I have mentioned already, relates, that while he was prisoner at la Mancha, upon the taking General STANHOPE and the English forces prisoners at Brihuega, and the retreat of Count STAREMBERG, a bull-feast being appointed to be held at la Mancha, a week's time was allowed for building stalls for the beasts, and scaffolds for the spectators; and on the day the bulls were brought into the town, the Cavaliers of the place rode out about a league to assist in forcing them along, and the beasts were put in stalls or dens, made as dark as possible, to render them the fiercer on the day of battle.

The sport being to last three days, on the first, all the gentry of the place and the neighbouring country in their richest clothes resorted to the great square, and took their places on the scaffolds, while the people having provided themselves with spears and darts, stood ready for the encounter; for the bull does not only fight with the Tauri, (who is a person usually hired on these occasions in the lesser cities) but with the whole multitude, who throw their darts at him as often as they have opportunity. As soon as the door of the stall is opened, and the bull perceives the light, he comes out snuffing up the air, and staring about him stamps upon the ground, as in defiance of his enemies. Soon after the Tauri clothed in white,

and holding his cloak in one hand and a two-edged sword in the other, enters the lists; on whom when the brute has set his eyes, he moves at first gently towards him, then gradually mending his pace till he comes within twenty yards of the Tauri, he springs forwards and runs at him with all his force. The Tauri having slipped on one side and avoided him, throws the cloak over his horns, and cuts him over the neck if he can, there being one particular place, which if he hits he easily brings him to the ground. CARLTON says, he saw a bull himself so stunned with one stroke, that he could not move, and the blood flowing plentifully out of the wound, after a violent trembling the creature fell down dead. But this rarely happens, he usually receives a great number of wounds by swords and darts before he dies; and whenever he feels a fresh wound, he redoubles his fury against the Tauri, who having avoided him again, seldom fails to give him another wound. When the Tauri is wearied out, they bring in their dogs, hamstringing the beast, and pierce him with their darts till he expires; after which, he is carried out of the barrier with the loud acclamations of the people, as if some signal victory had been obtained. Our author relates, that he saw the Tauri, who was hired on this occasion, and was esteemed one of the best in Spain, mount one of these bulls, cutting and slashing him till he had wearied the beast out, and then dismounting, killed him with ease, to the great satisfaction of the multitude, who made the air ring with their shouts; and on such occasions money is thrown to the Tauri by the spectators for his encouragement.

On the third day of the Feast, a young gentleman of quality, named DON PEDRO ORTEGA, performed the part of a Tauri on horseback, when the seats were crowded with people of fashion that came from distant places to see the encounter. He entered the lists finely mounted on a managed horse, attended by four footmen in rich liveries, who after their master had rode round the square, and paid his compliments to the company, withdrew from the danger. Then the bull was let out, and having stood a little while staring about, fixed his eyes upon his adversary, and run at him with the utmost fury. The Cavalier having dextrously avoided the brute, wounded him with a dart in the shoulder; whereupon the people shouted, their viva's were repeated, and the lady of his affections wav'd her handkerchief as a mark of her satisfaction. The Cavalier endeavoured always to keep his horse on the side of the bull, for the advantage of striking him; and throwing another dart, fix'd it in his flank: but notwithstanding the gentleman behav'd himself to admiration, and often received the viva's and huzza's of the people, the bull at length getting his horns between the horse's hinder legs, threw both man and horse to the ground, and it was expected he would have killed them both, when to the surprize of every one he withdrew to the farther side of the square, and stood staring about him. In the mean time, the Cavalier was carried off not much hurt.

The foot Tauri hereupon entered the lists again, imagining he should have met with an easy conquest; but the same bull made him frequently retreat into the places contrived for the security of footmen; nor was he able to dispatch the creature at last without the general assistance, the bull having near an hundred darts stuck in him before he fell, besides many cuts and gashes in his flesh. This sport seems so very barbarous to the

CHAP.  
II.Serenad-  
ing.Travel-  
ling.

present King, that he has been heard to say, it deserves little encouragement. At the same time his subjects are so enchanted with the diversion, that he does not think fit entirely to abolish it; though these entertainments are of late much less frequent than they were formerly.

I shall mention but one kind of diversion more, which seems almost peculiar to this people, and that is the serenading their mistresses in the night-time, with vocal or instrumental musick. Not a young fellow scarce, when the love-fit is upon him, but spends his evening, and perhaps the best part of the night, in such amusements, though they have little more knowledge of the lady they pretend to adore, than Don Quixot had of the celebrated DULCINEA. Their voices are something better than their instruments; for the last, to an Italian, and even an English ear, are intolerable.

As to their way of travelling, they find themselves under a necessity in long journeys to make use of mules or litters, the country is so mountainous; but in the plains where they go but from town to town, they frequently travel in coaches drawn by four or six mules. It is usual to carry good store of hams and tongues and other provision with them, there being but very little to be met with on the road; and their lodging is rather worse than the entertainment: it is very difficult for a man to get a room to himself in an inn, there being several little beds or cabins round the walls, he is under a necessity of sleeping with such company as he finds in the house. The muleteers and servants indeed usually lie with their cattle in the stables, and consequently do not give him much disturbance.

## CHAP. III.

*Shews the several provinces Spain is divided into, and contains also a particular description of New Castile, Madrid the capital, and other great towns, with their palaces, churches, public buildings, &c.*

CHAP.  
III.Ancient  
division  
of Spain.Tarraco-  
nensis.

Bætica.

Lusitania.

THE first division the Romans made of Spain, was into two parts, viz. Citerior or Hither Spain, and Ulterior or Further Spain, in regard to the river Ebro, which separated the two Empires of Rome and Carthage: but when the Romans had made an entire conquest of this country, they divided it into three great provinces, 1. Tarracoenensis. 2. Bætica. And, 3. Lusitania. Tarracoenensis extended from Cape Creuz in Catalonia to Cape Finiserra in Galicia, containing Leon, Galicia, Asturia, Biscay, Navarre, Arragon, Catalonia, Valencia, Murcia, and the two Castiles.

Bætica, which took its name from the river Bætis, now Guadalquivir, extended from Cape de Gates in Grenada to the mouth of the Guadiana; comprehending Grenada, Andalusia, and a good part of New Castile.

Lusitania extended from the mouth of the Guadiana to the Duero, containing Portugal and Estremadura. These were again subdivided into fourteen districts or jurisdictions, each of them having a sovereign court, of which the Tarracoenensis comprehended seven, viz. those of Tarragona, Saragossa, Carthagen, Lugo, Cruna, Braga and Astorga. Those of Bætica, were Cadiz, Seville, Cæryra and Cordoua. And those of Lusitania, Beia, Santaren and Merida.

At this day Spain is divided into fifteen provinces, exclusive of Portugal, (which being a separate kingdom, will be described hereafter by itself,) viz. 1. New Castile. 2. Old Castile. 3. Leon. 4. Galicia. 5. Asturia. 6. Biscay. 7. Navarre. 8. Arragon. 9. Catalonia. 10. Valencia. 11. Estremadura. 12. Andalusia. 13. Grenada. 14. Murcia. And, 15. The Islands.

1. New Castile, anciently the country of the Carpetani, Oretani and Vaccei, and after the conquest of the Moors, known by the name of the kingdom of Toledo, is bounded by a long chain of mountains, which separate it from Old Castile, Arragon and Valencia, on the north and east; by Andalusia, Grenada and Murcia on the south; and by Estremadura on the west.

The Tagus and Guadiana, two of the most considerable rivers of Spain, have their sources in this province, running the whole length of it from east to west. The Guadalquivir also rises here. The rest of the rivers that water it are the Xucar, the Xarama, the Tajuna, the Henarez and the Guadarrama.

This being an inland province, distant from the sea, is colder in winter, and hotter in summer than the maritime provinces, but enjoys however a purer and more healthful air. It is one of the largest and fruitfulest provinces of Spain, especially that part of it which lies along the rivers Tagus and Guadiana, producing wheat, barley, wine, oil, good pasture, great herds of cattle, tame and wild fowl, and all manner of game; but there are scarce any good fish in their rivers. It is usually subdivided into three lesser districts, viz. those of Al-garia, Sierra and la Mancha. Al-garia lies to the northward of the Tagus, and affords a great variety of pleasant prospects, consisting of mountains, plains, woods and forests; the chief towns and places whereof, are Madrid, the Pardo, Sars-nela, the Escorial, Alcala de Henares, Guadala-jara, Brihuega, Siguenza, Toledo, Aranjuez and Talavera de la Reyna.

Madrid, the ancient *Mantua Carpetanorum*, formerly a little inconsiderable town which belonged to the Archbishops of Toledo, became the metropolis of Spain about an hundred and fifty years since, when their Kings made it the seat of the government. It is situated in 40 degrees 25 minutes north latitude, 4 degrees west of London, in the middle of a large sandy plain, surrounded with high mountains at the distance of eight or ten English miles every way, being one of the barrenest spots in the whole kingdom, and affording scarce any trees or herbage. The town, for it is not strictly speaking a city, is about seven or eight miles in circumference, and has neither walls or fortifications to defend it; the gates and the guards that keep them serving only to prevent the running of goods imported and exported; for the duties on wine and all manner of provision brought into Madrid are very high. The streets are generally of a great length, strait and spacious; but miserably paved with small stones; the fairest of them are the Calle (or street) Mayor, the Calle de Toledo, the Calle d'Atocha, and that of Alcala. There are also several noble squares, as those of San Joachin, Laganites, San Domingo and Sebada; but the largest and most magnificent is that of the Plaza Mayor, in the middle of the town, being four hundred and thirty-four foot long, and three hundred and thirty-four foot broad, and surrounded by an hundred and thirty-six stately uniform houses, five stories high, with balconies at every story, the whole

Madrid.

Buildings.

whole

CHAP.  
III.

whole being sustained by pilasters and arches, like those of Covent Garden in London; they are generally inhabited by drapers, and other substantial tradesmen; and in the middle of the square the great market is held: here also their bull-fests are celebrated on any victory or other great event. The houses are generally built of brick, the apartments being commodious and magnificent; but their lattice windows take away much from their beauty; few of them are glazed, for two reasons, one is, that their women can see into the streets without being seen; and the other, that glass in this country makes their houses excessive hot. The houses of the meaner sort of people are built with clay, and make a very indifferent appearance. Building is excessive dear at Madrid, the materials being brought from distant places, and no navigable river to import 'em; therefore when any one ventures upon building, they immediately conclude he is very rich. The best houses have been built by the Viceroy of Peru, Mexico, Naples, &c. who returning from their governments, usually spend the remainder of their lives at Madrid, as most of the other grandes do. There are neither courts nor great gates before their houses, as the French have before their hotels in Paris, after the manner of Somerset-house in London; but the front of the house comes up to the very street. Whoever builds, the first floor belongs to the King, and he may either sell it or let it out, unless the owner of the soil purchase it, as is usual, which brings in a great revenue to his Majesty. In the houses of the quality there is generally one apartment for winter and another for summer, and in some we find an apartment for every season of the year.

Furniture.

Their furniture is extravagantly rich, beyond what we meet with even in France; their hangings are either tapestry, velvet, or silk trimmed with gold and silver lace or fringe; and besides fine cabinets, glasses, pictures, busts, &c. we meet with a vast profusion of plate and jewels. Instead of chairs and tables in the ladies' apartments, are seen rich carpets, and silk or velvet cushions to sit on, for the women here sit cross-legged on the floor, as has been observed already.

Without the town there is a little valley through which runs the Mancanares, which is in reality neither brook nor river, but sometimes one and sometimes the other, according as the snows on the circumjacent mountains happen to dissolve. In the heat of summer there is scarce any water discernible, or so very little, that if a person bathes in it, as they frequently do, he first makes a hole in the same deep enough to wash himself in, and he must wait some time before he finds water enough for his purpose.

Over this river, as it is called by the Spaniards, PHILIP II. built a magnificent bridge, equal almost to the finest in Europe, which is called the bridge of Segovia; and though in summer the current that runs under it seems very unsuitable to so noble a pile of building, and has occasioned abundance of witticisms by drolling foreigners, as that the natives of Madrid would do well to sell their bridge and buy water, and the like; yet in the winter, when it is swelled by the torrents which fall from the mountains, it covers the neighbouring fields, and runs with such rapidity, that it carries all before it; this noble bridge is then scarce sufficient to resist the force of the current.

Palace  
royal.

As to the palaces in and about Madrid, that called the palace royal, the ordinary residence of

the Court, is situated on an eminence at the end of the town, from whence there is an easy descent to the Mancanares. The prospect over the neighbouring plains, which takes in the fine walks on the banks of the river, render it's situation extremely pleasant. The grand avenue is by the street, or Calle Mayor, the broadest and best built of any in the town. Before the front of the palace there is a large square of fine houses, adorned with gilded balconies. This palace cannot be admired for its beauty, the pavilions at each end seem to be the only part of the building worth notice. From hence, by three great gates of no extraordinary architecture, we pass through two square courts built on every side, at the end whereof is the grand stair-case that leads to the King and Queen's apartments. There are several other courts, all surrounded by cloysters or piazza's, after the manner of Spain, being very suitable in so warm a climate to screen them from the scorching heat of the sun. In the above-mentioned squares are held their councils and courts of justice, and here are the lodgings of the ladies of the bed-chamber, and the rest of the Queen's servants. From the grand stair-case we pass through a long gallery, where the guards are placed, consisting of three companies, viz. 1. The arches, consisting of Flemming and Burgundian gentlemen. 2. The Spanish guards composed of halberdiers. And, 3. The German guards, composed of foreigners of that nation, particularly Lorrainers: each of these companies consisting of about an hundred men. From this gallery we enter the royal apartments. When the King goes out, as he usually does every day to divine service, he passes through the guards in the gallery, who are then drawn up in a double haye, being preceded by the Captain of the guards, but followed by very few people.

Notwithstanding the palace in general has no great regularity or beauty, there are some very fine rooms and apartments in it, adorned with busts and statues exquisitely wrought, and abundance of pictures by the greatest hands; particularly one by MICHAEL ANGELO, representing our Saviour in the garden of Olives, said to have cost fifteen thousand pistoles. The tapestry and the rest of the furniture is incredibly rich. The greatest misfortune is, that their apartments have scarce any light, on pretence of keeping out the sun: some of them have no light but what they receive from the door, and the rest very small windows. The whole palace is built of white stone, except the two pavilions in the front, which are of brick. The window frames are of fine marble, and glazed with crown glass, those few that there are, and every story or range of building is adorned with gilded balconies.

There is another palace called la Casa del Campo, situate on the banks of the river Mancanares, opposite to that of the palace royal, a musket-shot out of town, and about six hundred paces from the famous bridge above-mentioned; but the building is neglected at present. The most remarkable things travellers mention belonging to it, are a fine brazen equestrian statue of PHILIP III. upon a marble pedestal; a brazen fountain in form of a castle; the park, lying along the river-side, with abundance of fine walks, fish-ponds and basins, where the King and Court divert themselves.

The palace called the Buen Retiro, is situated on the declivity of a hill, at the other extremity of the town, near the old Pardo, from whence also there

CHAP.  
III.Casa del  
CampoBuen Re-  
tiro.

CHAP.  
III.

there are abundance of pleasant views of the neighbouring country. The whole edifice consists of four great ranges of building, flanked with an equal number of pavilions, which together form an exact square. It has a fine parterre of flowers in the middle of it, with a fountain that waters them. The apartments are large and magnificent, the ceilings and wainscot shining with gold and the most lively colours. The rooms are embellished with exquisite paintings, and the hall, where plays are acted, is looked on as a master-piece; the boxes are each of them large enough to hold fifteen persons, but the lattices before them hide the beauties they contain. The adjoining park, being about three miles in circumference, is a mighty delightful place: here are a great many separate pavilions, where the officers of the court are lodged when the King comes to divert himself in the hot season; every pavilion has its garden, with basins and fountains, and there is one larger than the rest, planted with oranges, citrons, and other delicious fruits, with a large basin, where the court take the fresco of the evening in little gilded ships and yachts, about which there are five or six little pavilions. But to conclude: the grotto's, cascades, basins, groves and walks of trees, render the Buen Retiro a charming place in summer, for which reason the King of Spain usually resides here during the great heats; and the grandees have many of them palaces in Madrid, equal to those of the King's in the beauty of the architecture and furniture, if not in dimensions.

The  
church of  
our Lady  
of Atocha.

In the squares and great streets of Madrid are several noble fountains, adorned with statues or groups of figures: the most remarkable are those in the square of Sebada, the square of the Sun, and that of St. Dominick. The churches and convents also are a great ornament to the town, of which the church of our Lady of Atocha, or the Grove, is the most magnificent. It stands within the walls of the Dominican convent, about a quarter of a league out of Madrid, with which it has a communication by a thick shady walk of elms. Hither people come from all parts of the town to perform their devotions, and here the King sings *Te Deum* on every happy event. To the nave of the church there joins a chapel, which has no other light but what it receives from an hundred gold and silver lamps, which burn night and day. Here we find a black image of the blessed Virgin, with a little Jesus in her arms, to which many miracles are ascribed. She is generally clothed in a widow's habit, unless on great festivals, when she is dressed like a Queen, covered with jewels and precious stones, and round her head has a glory made by the brightest gems, equal almost to the sun in its full lustre. The King has a gallery in this chapel, with a lattice before it. The monks of this convent live most austere lives, and by one of their rules never set a foot out of the house.

Chapel of  
St. Isidore.

The church of our Lady of Almunada also is a magnificent building, where there is another image of the blessed Virgin, to which they ascribe abundance of Miracles, particularly her supplying the town with corn in their great distress, when it was besieged by the Moors. The history of this event is admirably well painted on the walls of a chapel dedicated to this saint, where the rails of the altar and the lamps are all of solid silver.

But the chapel of St. Isidore, the patron of Madrid, it is said, exceeds in beauty and riches any of the sacred fabricks above-mentioned. The dome which covers it is adorned on the outside with

the images of the twelve Apostles; under the middle of it we find the tomb of this saint, with a crown of marble adorned with flowers, supported by four columns of porphyry finely wrought. The walls of the chapel are incrustated or lined with marble of various colours, and the pillars of the same materials. The paintings about it are admirably fine, and the upper part of the dome shines with gold and azure. PHILIP IV built this chapel, which is said to have cost him four millions of livres. In the same church is another chapel of white marble, adorned with abundance of marble figures in relief, where every day a mass is said for the soul of PHILIP IV.

CHAP.  
III.

Among their hospitals, one was founded by MARY of Austria, for such girls as having lost their innocence, find themselves pregnant. Here they are allowed to lie-in, and care is taken of them and their children. PHILIP the Fourth, her husband, also founded an hospital at Madrid for bastards and foundling children. The hospital of St. Jerome is vastly large, entertaining continually fifteen hundred persons. Nor is that of St. Martin's much less, erected for such as have the French disease, who are taken care of by the monks belonging to the house.

Most of the royal palaces about Madrid having goods walks belonging to them, thither people of condition resort in the evening, or to the Prado, a fine field or meadow adjoining to the town, beautifully planted with trees, where the Beau Monde make the tour in their coaches, as the gentry about London do in Hyde-Park. Besides the palaces already mentioned in and about Madrid, there are three at some distance from the city, viz. The Pardo, the Sarriela and the Escorial. The Pardo stands about two leagues from the town, on the road to the Escorial. It is a great square building, flanked with four towers, containing as many grand apartments, which have a communication with each other by galleries supported by a piazza. The rooms are richly furnished, and adorned with fine paintings; and there are belonging to it delightful gardens, and a large park, where the King frequently hunts.

The Sarriela stands something further from Madrid than the Pardo, beautifully situated in a sporting country, and is another hunting-seat of the King's; but the building has very little in it that deserves a traveller's attention.

The Escorial is the largest and most magnificent palace in Spain, and according to the natives, the whole world cannot produce such a another. It stands upon an eminence in a rocky mountainous country, about seven leagues north-west of Madrid, commanding all the plain between the palace and that city. There could not have been chosen a more barren spot of ground to erect a royal seat in, where nothing grows without forcing, or introducing foreign earth. It was called the Escorial from a village of that name, which lies about half a league distant from it. PHILIP II, the son of CHARLES V, begun this building in the year 1557, and expended upon it a great many millions of treasure during the two and twenty years it was carrying on. He built it in memory of the victory his forces obtained over the French near St. Quintin in Picardy on St. LAURENCE's day. It is said, in that doubtful war he made two vows, the one, never to go out of his country to make war again; and the other, to erect a monument to the honour of that saint, the most magnificent of any in Europe, if he gained the victory; both which

CHAP. III. which he punctually observed, for he never went out of the kingdom afterwards, and built this glorious palace to the honour of St. LAURENCE, from whence it is called St. Laurence of the Escorial.

In this fabrick is a vast variety of building. it wants scarce any thing to form a compleat town; for here we meet with a royal palace, a church, cloysters, a college, a monastery, shops of tradesmen and artificers, and the dwelling-houses of great numbers of people. Here also are fine walks, beautiful avenues, a vast park, and large garden, embellished with fountains, cascades, grotto's, groves, and every thing that can render a place delightful: and though it be situated in a barren soil, the prospects from it are inexpressibly fine. It is said PHILIP II made choice of this situation to save the expence of carriage, for all this mighty edifice is built with a grey stone hewn out of the adjacent mountains: this stone is very hard and solid, resisting all the injuries of weather, and has this peculiar to it, that it always preserves it's natural colour without tarnishing. There is an ascent from the village Escorial to the palace through fine walks of elms, planted in four rows, about half a league in length, which terminate in an Esplanade or plain that furrounds the palace. This esplanade is separated from the court before the principal front, by a dwarf wall breast-high, in which are several gates to enter the court above-mentioned, that is paved with stone.

The whole edifice is square, only a little longer than broad, built with the grey stone already described, but so perfectly well cut and polished, that it looks like marble, and each corner is flanked by a glorious pavilion. There are four stories in all the fronts, and in the other parts of the building three. It is computed that there are in the whole eleven thousand windows, seventeen cloysters or piazza's, twenty-two courts, more than eighteen hundred pillars, an incredible number of rooms, viz. halls, salons, chambers, cabinets, and no less than fourteen thousand doors.

The principal front is turned towards the west, too near the mountains, which spoils the prospect from that side; but they contrived it so, it seems, that the church might stand in full view towards the east. There are three portals in the grand front at equal distances, of which that in the middle is a noble piece of architecture, being supported by eight pillars of the Dorick order, set on a pedestal a hundred and thirty foot long, and two yards high, consisting of a fine white stone delicately wrought, it being sixty foot from the ground to the cornish, over which there are four pillars of the Ionick order, so finely polished that they appear like silver; these support the upper story of the portal, and on each side are two fine pyramids or pinnacles. Between the columns are two rows of niches, on the lower of which are the King of Spain's arms, charged with a royal crown, the whole graven upon an extraordinary stone brought from Arabia, the graving whereof, it is said, cost sixty thousand crowns; from whence, as my author observes, we may judge of the vast expences PHILIP II was at in finishing the rest. In the upper story above the King's arms stands the image of St. LAURENCE, fifteen foot in height, in the habit of a Deacon, holding a book in one hand and a gridiron in the other, intimating what kind of martyrdom he suffered, having been broiled upon a gridiron at Rome in the third century. This statue is of a pure white stone, wrought by JOHN BAPTISTA

VOL. II.

MONEGRI, a statuary of TOLEDO, a celebrated artist. The north and south sides seem to be the least embarrassed, and to enjoy the finest prospects.

Through the great gate of the principal front above-mentioned, we enter a noble portico, which leads into a large court, at the end whereof is the church, on the right the monastery, and on the left the King's apartments. We ascend from the great court by stone steps to another portico before the church, adorned with eight columns of the Dorick order, which support a fronton, on which are placed six statues eighteen foot in height, of black and white marble, representing six Kings of Israel, those in the middle being DAVID and SOLOMON, under which emblem they would represent CHARLES V and PHILIP II, the one a man of war and blood, and the other celebrated for his wisdom and peaceable disposition. The other four are HEZECHIAS, JOSIAS, JEHOSHAPHAT and MANASSES, of whom the three first were eminent for their piety, as the last was for his repentance and conversion: each of these Kings hath a crown upon his head brass gilt, of a size proportioned to the statues. In this portico are three doors which open into the church, those on the sides have the following inscriptions over them, in golden letters upon black marble, viz. PHILIPPVS II, OMNIVM HISPANLÆ REGNORVM, VTRIVSQVE SICILIÆ ET Hierosolyme REX, HVJVS TEMPLI PRIMVM DEDICAVIT LAPIDEM. D. BERNHARDI SACRO DIE ANNO MDLXIII, RES DIVINA IN EO FIERI CŒPTA, PRID. FEST. D. LAURENTIJ ANNO MDLXXXVI.

PHILIP II, of all the kingdoms of Spain, the two Sicilies and Jerusalem, King, dedicated the first stone of this church on St. BERNARD's day 1563, and celebrated divine service in it the first time on the eve of St. LAURENCE 1586.

The other inscription is as follows: PHILIPPVS II, &c. CAMILLI CAJET. ALEXANDR. PATRIARCHÆ NVNTIJ APOST. MINISTERO HANC BASILICAM S. CHRISMAE CONSECRAND. PIE AC DEVOTE CVRAVIT DIE XXX AVGVST. ANNO MDXCV.

PHILIP II caused this church to be piously and devoutly consecrated by the ministration of CAMILLO CAJETANO, patriarch of Alexandria and apostolical nuntio, on the thirtieth of August 1595.

This church is built after the model of St. Peter's in Rome, well enlightned, and paved with black and white marble; the roof finely gilt, the lamps of gold and silver, having forty beautiful chapels in it richly furnished. The principal chapel where the high altar is placed consists of one great arch, which takes up all the further part of the church, and is lined with jasper from the pavement to the roof. On the sides of it are two small oratories, in one of which is a brazen bust of CHARLES V on his knees in his royal robes, with all his children about him, as large as the life; and in the other chapel over against it, is another of PHILIP II, clothed in the same manner and in the same posture, with his children about him, all in brass. On the sides of the chapel are little cabinets, or galleries, whither their Majesties come from their apartments to hear mass. The basins which contain the holy water are two great precious stones of the bigness of a bowl, and so rich are the rest of the materials, that it is computed this chapel alone cost five millions of florins. They ascend the great altar by sixteen steps of jasper, or red marble, which extend the whole breadth of the chapel.

CHAP  
III.

chapel. On the back part of the altar is a square piece of porphyry placed in the wall, so bright and transparent that you see the whole church as in a glass. The tabernacle upon the altar is of porphyry, in the form of a dome or cupola, and under it is such a profusion of gold and precious stones, that it would amaze one to see such prodigious riches amassed together in so small a compass. The Custodia, or Pix, where they keep the sacrament, is of the height of a man, and two fathoms thick, made of a stone more esteemed than porphyry, valued at five hundred thousand crowns, and it is said no less than an hundred men were employed in the working of it for fourteen years; and the top of the Custodia is enriched with an emerald of the bigness of an egg, the price whereof is inestimable. There is room to go round the altar and view all its beauties, but laymen are not permitted to touch it. *Odit propheta vulgus & arcet*, says my catholick author.

The roof of the church is embellished with the finest paintings; the choir particularly was done by the famous TITIAN, and is a finished piece; it is a representation of paradise, where we see the Trinity encompassed with legions of Angels and the heavenly Hosts, TITIAN himself being drawn on one side in a kneeling posture.

Reliques.

Among the treasures of the church they esteem the reliques the most precious, and pretend that they have seven entire bodies of the saints, an hundred and seven heads, an hundred and seventy-seven legs and arms, three hundred and forty-six veins, nerves and sinews, and fourteen hundred other little holy reliques, as fingers, hair, &c.

The sacristy is a large room, where are kept the ornaments of the altar, and the habits of those that officiate. This also is beautified with the paintings of TITIAN and other celebrated hands. Those in most esteem are a Christ and a Magdalen. The sacerdotal habits are richly embroidered and covered with pearls and precious stones: nor is the workmanship inferior to the richness of the materials. These were most of them given by PHILIP IV, the father of the late King CHARLES II. Among other things, they shew here a cross of gold, enriched with pearls almost as large as a small nut, rubies, turquoises, emeralds, and diamonds of great value. From the sacristy we are led into another room, where are two vessels of inestimable price; the one is a single saphire, embellished with pearls and precious stones, in the middle of which is a large bright ruby: the other is in like manner enriched with precious stones, and said to be made by the Emperor MAXIMILIAN II with his own hands. These serve to carry out the host in their grand processions. Here is shewn a book also valued at four thousand ducats, where all the remarkable occurrences of our Saviour's life are admirably painted, with the psalms and ancient prophecies which have any relation to them, done by one of their monks.

The Pantheon.

From this elegant church we descend into the Pantheon, so called from its being built after the model of the Pantheon at Rome, of a round form, and vaulted like a cupola. It is the mausoleum of the Kings of Spain of the Austrian family, and placed just under the grand chapel of the high altar of the church just described. The beauty of this edifice, notwithstanding it is under ground, is at least equal to that above it. They go down to it by five and twenty marble steps, which lead to a landing-place, at the end whereof they turn and descend lower by three and thirty steps of jasper,

and grey and white marble, taken from St. Paul's of Toledo. The top and sides of the stair-case are adorned with jasper, so well-polished, that whichever way we turn we see our selves as in a mirror. At the bottom of the stairs we come to the door of the vault, on each side whereof are two pillars of jasper and two of brass admirably wrought. The mausoleum is of the same dimensions as the chapel over it, and extremely well enlightened, notwithstanding it is under ground. The gold, silver and precious stones glitter on every side, and render it, in the phrase of the Spaniards, a miracle of art. The floor consists of squares of jasper and marble in compartments. The dome, or vault, is sustained by sixteen pillars of jasper of various colours of the Corinthian order, behind which are placed other pillars in perspective, both the one and the other having brazen gilded chapters. On the further side of the Pantheon opposite to the door, is a chapel magnificently adorned; but the most remarkable thing in it is a cross enriched with diamonds and precious stones. The rest of the chapel is divided into spaces or niches between the pillars, containing twenty-six tombs of black marble, with mouldings of gilt brass; these tombs are supported by lions paws brass gilt. The Kings are on the right, and the Queens on the left. Those already interred there, as appears by the several inscriptions, are on one side CHARLES V, PHILIP II, PHILIP III, PHILIP IV and CHARLES II. On the other side the Empress ISABELLA of Portugal, wife of CHARLES V; ANNE of Austria, the fourth wife of PHILIP II; MARGARET of Austria, the wife of PHILIP III; ELIZABETH of France, daughter of HENRY IV, and MARY-ANNE of Austria mother of CHARLES II, both of them wives of PHILIP IV. And as none of the Queens are admitted here who have not brought a son into the world, there is another burying-place assigned for them and the rest of the Princes of the royal family adjoining to the Pantheon. In the middle of the Pantheon is a fine large brazen branch for lights, said to have cost ten thousand crowns. It is supported by Angels and the four Evangelists, the fathers of light, as my author calls them, all the statues being of gilded brass.

PHILIP II having thus magnificently built and adorned the church, though he designed to add to it a palace fit for the residence of so great a Prince, always intended the sacred fabrick that he had dedicated to God should excel that he erected for himself. That part of the building which is properly the palace, or the royal apartment, fronts to the north, and is entered by a noble portico. It contains five square courts, one large, and four others less, all of them surrounded by piazza's or cloysters, with open galleries above them in every story. I have already said that the paintings and furniture of the royal palaces in Spain are exquisitely fine, and shall not tire the reader with a long recital of these things over again, but proceed to that quarter which belongs to the religious or monasticks, who are of the order of St. Jerom. This part of the Escorial also is divided into five courts, of the same model and dimensions with those of the palace. The grand cloyster or piazza, which is two hundred and ten foot square, is paved with black and white marble, and adorned with admirable paintings, and the middle of the court is taken up with a fine garden of flowers. On one side of the square is an elegant chapel with a cupola, supported by pillars of porphyry of excellent

CHAP  
III.

CHAP. III. cellent workmanship, all the rest of the building being suitable to it.

The library is over the grand portico in the principal front of the building, being an hundred and ninety-four paces long, thirty-two broad, and thirty-six in height. It consists of five galleries, fixed to the walls one above another on every side; the shelves are made of the finest wood brought from the Indies, and the floor is of marble. It is said to contain an hundred thousand printed books in all languages, besides fourteen or fifteen thousand manuscripts, of which the most considerable are a St. Chrysostom in Greek, a treatise of St. Austin's concerning baptism, said to be written by his own hand, and one entire class of Arabic books, which were part of the Emperor of Morocco's library; but I perceive many of the books were burnt or lost in a fire that happened in the Escorial in the year 1671. This library is adorned with excellent paintings done by the greatest hands.

The gardens of the Escorial are very large, and well watered with fountains; but it is sufficient to say, that they contain every thing that is to be found in those of the Buen Retiro and other palaces already described, in great perfection. Adjoining to these is a park of seven leagues in circumference, encompassed by a wall, in which are woods and large fields, well furnished with all manner of game.

Alcala de Henares.

Alcala de Henares is situated in a large plain on the river Henares, about fifteen miles to the eastward of Madrid, anciently called *Complutum*, famous for its university founded by Cardinal XIMENES in the year 1517. It consists of twenty colleges, and is eminent for divinity and philosophy, as that of Salamanca is for the study of law. The Polyglot bible was printed here at the charge of the said Cardinal. It was formerly a Bishop's See, but united to that of Toledo at present. Their cathedral is a large and beautiful fabrick, and they pretend that they have a stone there which miraculously supplied them with oil for their lamps, but lost that virtue when the oil was applied to prophane uses. The soil about this town, which lies on the banks of the Henares, is very fruitful and well cultivated, but that which lies at a distance from it dry and barren, affording neither trees nor herbage for want of water. They have not only good grain near the Henares, but rich muscat wine and delicious melons; and there is a fountain of such excellent water without the walls, that the King is served with it at his table. The form of the town is oval, the streets strait and handsome, and there is one street that runs the whole length of the town, where the students are lodged. The houses are tolerably well built, and there are some squares, the largest of which is surrounded by a piazza, where the tradesmen have their shops. The town has a flourishing trade, and abounds in provisions.

Guadalajara.

Guadalajara is situated higher up the same river Henares, on an uneven rising ground, about ten leagues north-east of Madrid. It is remarkable for the fruitfulness of the soil about it, producing corn, wine, oil, flax and hemp, and here they make butter of goats milk, much esteemed by the Spaniards. The mountains about it are covered with oaks, of which they make charcoal, and supply all the neighbouring country with that kind of fuel. The houses of Guadalajara are generally lofty, and accommodated with fine gardens. The pleasantness of the situation brings abundance of people of

distinction to reside here. It is computed there are about a thousand families in the place, seven or eight monasteries, and as many nunneries.

Brihuega is situated four leagues north east of Guadalajara, on the banks of the river Tajana. It was anciently a seat of pleasure of the Moorish Kings of Toledo, and is considerable at present for its wool and cloth.

The place having a castle and a wall for its defence, was looked upon as a town of some strength before the late wars; but we find General STANHOPE in the year 1710, with a great body of English forces, most of them veteran troops, having thrown himself into this town, was forced to capitulate within four and twenty hours, before any canon brought against it; which shews that fortifications are very little to be relied on.

That unluckily conduct of General STANHOPE's, to say no worse of it, in separating from the army commanded by Count STAREMBERG in their march to Arragon, and suffering himself to be surrounded here for want of intelligence, determined the fate of Spain, and settled the present King PHILIP on that throne.

Siguenza is situated five or six leagues to the northward of Brihuega, upon a little hill, the foot whereof is washed by the river Henares, which rises but a little way from thence.

It is considerable chiefly on account of its antiquity, and being the See of a Bishop, suffragan to Toledo, and a university. As for its fortifications, which the Spaniards boast of, they are not to be depended on. There is scarce any one strong town in this part of the country. Some have taken it for the *Saguntum* of the ancients, having been deceived by the resemblance of the names; but that *Saguntum*, so famous in story, stood more to the south. It contains at present about seven hundred families. The most remarkable publick building is their cathedral. The air is cold here in winter, but they are well supplied with fuel and good wine.

Toledo, the capital city of Spain, and the seat of the Gothick and Moorish Kings, called anciently *Toletum in Carpetanis*, is situated in thirty-nine degrees forty minutes north latitude, four degrees to the westward of London, and about forty English miles to the southward of Madrid.

It is built upon a steep rock, at the foot whereof runs the river Tagus, encompassing three sides of it; the rest of the city is defended by an old wall and towers, after the Gothick manner of fortification, and was heretofore esteemed a very strong place; but being commanded by several hills, and having no modern fortifications added to it, is not able to sustain a siege at present: we find accordingly, that whoever was master of the field, was master of this city in the late war. The Tagus, which waters the adjacent country, renders it exceeding fruitful, and their manufactures of wool and silk were once very considerable. The sword-blades that are made here, are in great esteem.

Abundance of people of quality have their houses in this city, the buildings whereof are generally fair, but the streets narrow and uneven, for which reason coaches are very little used at Toledo; chairs and litters are found much more commodious in a town where people are perpetually going up or down hill.

The most remarkable publick buildings are the castle, or royal palace, and the cathedral. The castle, called by the natives *Alcazar*, is situated on a high

CHAP. III.

The English forces surprised and made prisoners here anno 1710

CHAP.  
III.

a high steep rock, which commands all the other hills in the town, and affords a fine prospect of the river Tagus and the neighbouring country. The river is not navigable here, but might be made so at a very small expence, there being water enough, as it runs between two steep rocks. The place was anciently thought impregnable on this side.

In ascending to the castle we come to a noble square, the largest in the town, the houses uniform, built with brick, supported by a piazza, and adorned with fine balconies, as usual in Spain. From hence we pass into the castle, which is of a square form, consisting of four large piles of building, with their wings and pavilions. At the entrance we come into a court an hundred and sixty foot long, and an hundred and thirty broad, surrounded by a fine cloyster or piazza. At the farther end of this court there is a handsome large stair-case, which dividing in two parts leads to the galleries above, through which we proceed to the several apartments, that are extremely large and magnificent.

Although the castle be an hundred and sixty yards above the river, it is furnished with water from thence by a pump. There is still the remains of a more considerable machine, by which they conveyed water enough from the Tagus to a reservoir in the castle, which supplied the whole town plentifully with water, but at present it is broken and useless; and there are no fountains or wells in the city, they are forced to go above three-score yards down to the Tagus from any part of it for all the water they use, which is the reason that Toledo is not so well peopled as formerly, and that their manufactures of silk and wool, in which they used to employ ten thousand people, are very much diminished.

The cathedral of Toledo.

The cathedral is the richest and most magnificent in Spain; it is situated in the middle of the town, adjoining to a handsome street, having a spacious court before it, from thence we enter the church by eight beautiful brazen doors with suitable portico's, and from the lofty steeple there is an admirable prospect of one of the finest parts of Spain. The church is three hundred eighty-four feet in length, one hundred ninety-one in breadth, and an hundred and seven in height, built of an excellent white stone. The roof is supported by eighty-eight columns which divide it into five isles, in the middlemost of which there are two choirs finely wainscotted and carved; in one of them is kept the host, and contains the sepulchres of many of their ancient Kings; the other belongs to the canons, the seats whereof are separated by pillars of marble or jasper. The great door, called the door of our Lady, is never opened but on high festivals: near it is a marble pillar, where, according to tradition, the blessed Virgin appeared to St. Ildefonso in the seventh century. This is had in mighty veneration by the people, and is kissed with great devotion, and upon it is the following inscription, *viz. Adorabimus in loco ubi steterunt Pedes ejus.*

The chapels which belong to the cathedral are richly furnished, and as large as some churches: the paintings in them are exquisite, and the gold, silver, precious stones and other ornaments invaluable.

The chapel of our Lady of Sagrario.

In the chapel of our Lady of Sagrario, which is all incrustated or lined with jasper from the floor to the roof, is an image of the Virgin as large as the life all of solid silver, with fourteen or fifteen great silver lamps burning before it. There are

CHAP.  
III.

fifteen cabinets in the walls filled with gold and silver vessels and implements, as crosses, cups, vases, mitres, &c. two mitres particularly strewed with pearls and precious stones, a golden crown of the blessed Virgin's, resembling an imperial crown, weighing fifteen pounds, enriched with diamonds and pearls of a prodigious size. The treasury contains no less riches than the chapels: we see here a group of figures all of solid gold, where our Lady sitting upon a rock of precious stones is presenting our Saviour to St. John Baptist, one of the diamonds of which the rock consists being as large as a pigeon's egg. But it would be tedious, if not impracticable, to enumerate all the precious gifts and ornaments which have been dedicated to the saints real and imaginary in this vast church, which is in a manner encumbered with them; I proceed therefore to give some account of the revenues of those gentlemen who have the guardianship of this immense treasure.

The Archbishop's revenue, by those who are modestest in computing his income, is said to be three hundred and fifty thousand crowns per annum. He is Primate of Spain, Great Chancellor of Castile, and Counsellor of State: he has the privilege of speaking in the King's council, or the assembly of the States, next to his Majesty, and is possessed of no less than seventeen towns besides villages. For keeping the church in repair, there are lands settled to the value of an hundred thousand crowns per annum.

The Grand Archdeacon has forty thousand crowns per annum; the second, fifteen; the third, twelve; and the fourth ten thousand crowns per annum. The Dean has ten thousand, and the rest of the chapter in proportion.

The Bishop's palace, which adjoins to the cathedral, is a large old Gothick edifice, but travellers have not thought it worth a particular description. Toledo is a university, where law is chiefly studied, but I don't find there are more than two colleges in the place; besides which there are thirty eight convents of both sexes, twenty-eight hospitals and twenty-seven parishes.

Aranjuez.

Aranjuez is another royal palace, as much esteemed for the beauty of its gardens as the Escorial is for the magnificence of its buildings. It stands near a poor village, from whence it takes its name, in a peninsula made by the Tagus and the Xarama, about two and twenty miles to the southward of Madrid, and eighteen to the northward of Toledo: they have of late made a perfect island of it by cutting a canal from one river to the other. The palace itself hath very little to recommend it, but the water-works are called the wonders of Spain, and by the natives thought not to be equalled in the world. There are brazen and marble statues, as at Versailles, spouting up water in different forms, which falls into basins adorned with a group of figures of excellent workmanship. Here we see most of the fictions of the ancient poets lively represented; but what I find much admired by some travellers, are the artificial trees, from every branch and twig whereof the water spouts and forms a shower of rain very naturally. A large arch of water they mention also, under which a company may walk, and not be wetted by a single drop: besides which, there are numberless fountains, cascades and grotto's, fine walks, and most delicious fruit; which during the excessive heats of summer, must render it a delightful place. Travellers usually find fault with the narrowness of the

**CHAP. III.** the walks, but these it seems were so designed on purpose to keep out the scorching sun.

The country about Aranjuez is as fruitful and pleasant as any in Spain, except that about Valencia. There are adjoining to the gardens parks and menageries for wild beasts, with hunting and baiting of which the court frequently divert themselves. Among other exotick animals they have several hundreds of camels and dromedaries.

**Talavera de la Reyna.** Talavera de la Reyna is a handsome walled town, moderately large, situate in a valley on the south bank of the Tagus, about five and thirty miles to the westward of Toledo. It enjoys a pure healthful air, and a soil fruitful in corn and wine: they have also large herds of cattle, and great plenty of honey. There are several fine churches and convents in the place, as well as gentlemen's houses. It was remarkable formerly for its woollen manufacture, but is more famous for its fine earthen ware at present.

**Sierra district.** I come now to that subdivision of New Castile called Sierra, which lies to the eastward of Alcaria, and obtained its name from its mountainous situation; for Sierra in the Spanish language signifies a mountain. This is by no means so fruitful or populous as the western part of New Castile; their flocks of sheep which feed on the mountains of Molina are its greatest riches. The chief town is,

**Cuenca.** Cuenca, situated on a little hill encompassed with high mountains near the river Xucar, about fourscore miles to the eastward of Toledo, and as many south-east of Madrid. It is defended by a wall and other works, and made a tolerable resistance when it was besieged in the late war. It is most considerable at present for being a Bishop's See, and the capital of Sierra.

**La Mancha, or la Mancha.** La Mancha is the southern part of New Castile, watered by the river Guadiana, which runs the whole length of it. This the celebrated MICHAEL CERVANTES was pleased to make the scene of his hero DON QUIXOT's inimitable adventures. Here are several fine fruitful plains in this district, as well as mountains: Sierra Morena, or the mountains of Morena, so often mentioned by Cervantes, lie on the south part of this province. The chief towns are Calatrava, Ciudad Real and Almagro.

**Calatrava.** Calatrava is situated on the banks of the Guadiana, on the confines of la Mancha and Estremadura, most considerable for giving it's name to an order of knights instituted by SANCHO III, who gave them the town to defend it against the Moors.

**Ciudad Real.** Ciudad Real is a pretty little town, south-west of Calatrava, situated in a fine plain, about a league to the southward of the Guadiana. The country about it abounds in corn, wine, cattle, game and honey, but is subject to inundations from the Guadiana.

**Almagro.** Two leagues south-east of Ciudad Real lies Almagro, a great open town, but chief of the district called Campo de Calatrava. It is situated in a fine fruitful plain, and is not ill built, but most famous for a medicinal fountain near it, the water whereof is said to be an infallible remedy for the cholick.

The rest of the towns in New Castile having little in them that requires a particular description, I shall only mention their names, which are as follow: Mancanara, Las Naves del Merques, Colmenar, Guadarama, Galapagar, Guadix, Porquerizas, Arganda, Tortosa, Hita, Cadacra, Me-

dina Celi, Arcos, Montegudo, Uzeda, Cadahalso, Escalona, Maqueda, Illecas, Leganes, Mora, Anover, Fuente Dueña, Pastrana, Zurita, Yepes, Ocagna, Villa Rubia, Molina, Caracena, Valeria, Moya, Alarcon, Alcaez, Segura de la Sierra, Velez el rubio, Orgaz, Confuegra, Miqueltorra, Elvifo, Almodavar del Campo, El Convento de Calatrava.

#### CHAP. IV.

*Contains a description of the province of Old Castile, and of the principal cities and great towns therein.*

**THE** Castiles are so called, it's said, from the great number of castles that were built there during the wars between the Christians and Moors; and the province I am about to treat of was called Old Castile on account of its having been longer in the hands of the Christians than the Castile already described. Old Castile was formerly a country dependant on the Kings of Leon, and not honoured with the title of a kingdom till the reign of King FERDINAND, anno 1016. This province is bounded by Asturia and Biscay on the north; by Arragon and Navarre on the east; by New Castile on the south; and by Leon and part of the kingdom of Portugal on the west. It is of an irregular figure, but its greatest length from the north-east to the south-west is about an hundred leagues, and its greatest breadth taken from Valladolid to Tarracona about fifty leagues. The principal rivers are the Ebro and Duero already described; besides which, it is watered by the Pizuegra, the Arlanca, the Arlancon, the Algarbe, and the Tormes.

This country is more mountainous than that of New Castile, and as the air is colder in winter upon their hills, the tops whereof are great part of the year covered with snow, so are some of their valleys hotter, occasioned by the reflection of the sun. The weather also is more changeable and uncertain here than it is in the other Castile. The principal mountains on the south are those of Molina, Siguenza and Segovia, which divide it from New Castile; those of Sierra de Tablada on the west, and a ridge of mountains that separates it from the Asturia's on the north. And if I might be allowed to assign a reason for Spain's continuing so long divided into little kingdoms and principalities, it should be the natural strength and situation of every state defended and divided from the rest by their respective mountains, which rendered the conquest of them more difficult than it would have been in a more open country, to such ambitious Princes as might have a design upon them. We find that in France, Britain, and every other country, the mountaineers ever defended themselves longest against the encroachments of their ambitious neighbours.

But to proceed: There are in Old Castile eight Cities, cities, viz. Burgos, Valladolid, Segovia, Siguenza, Avila, Osma, Calahorra, and St. Domingo de la Calcada; besides fifteen or twenty other considerable towns.

Burgos, the capital of Old Castile, is situated an hundred and twenty miles to the northward of Madrid, on the side of a mountain, extending it self down into the plain, on the banks of a little rapid river called the Arlancon, which washes one part of its walls. It has an old castle on the top of the hill for its defence, much stronger from its situation than its fortifications. The principal avenue

CHAP.  
IV.

venue to the city is by a handfom bridge over the river above-mentioned, which leads to a beautiful gate, adorned with the statues of several Kings of Spain, and of FERDINANDO GONSALVO, the first Earl that was Sovereign of Castile. The town is large, but irregularly built, almost in form of a crescent. The streets are narrow and uneven, except some few, which are strait and spacious, particularly that leading to the cathedral. There are also several handfom squares, adorned with fountains and statues over them. The great square is in the middle of the town, encompassed with fine houses built upon a piazza or cloyster, as usual in other Spanish cities. There are also several beautiful palaces, particularly those of the house of VELASCO, and that of the Archbishop, which pass for master-pieces in their kind, as well as the cathedral, which is a noble old Gothick building in form of a cross, so large, that though mass is said in five different chapels of this church every day at the same time, they give no disturbance to each other. The grand entrance is between two towers, and the middle of it is covered with a noble dome furrounded with statues. The great altar is wain-scotted, and admirably carved and gilded, representing the history of our Saviour's life and passion, and the chapels about the cathedral are equally fine. But what is most admired in Burgos, is the chapel in the convent of Augustins enlightened by two or three hundred large gold and silver lamps; besides which on each side of the altar are sixty silver candlesticks six foot high standing on the floor, each of them as much as a man can carry, and others on the altar of solid gold. Over the altar also is a crucifix of gold and silver as large as the life, with crowns suspended and adorned with pearls, diamonds and other precious stones; besides which there is abundance of fine painting and imagery, representing the miracles said to be done by this crucifix; and the whole chapel is so crowded with the rich vows of superstitious people, that they are forced to remove many of them into their treasury to make room for others. They expose it only on particular occasions, and that with abundance of ceremony; masses are said and the bells are tolled to give notice of it, when every one within hearing fall upon their knees. The people are taught to believe that it was sent miraculously from heaven.

Burgos.

Burgos holds the first rank in the assembly of the states of the two Castiles, or at least disputes it with Toledo. Their trade is not so considerable as it has been; but there being always a great resort of strangers to this town, the people are as polite and hospitable as in most Spanish cities, and their language is held to be spoken here in it's greatest purity. The corporation is endowed with great privileges, and have the revenues of fifty towns and villages that depend upon them: they have also the reputation of being industrious, and applying themselves to business, and are esteemed a brave people. It was but a Bishoprick till the year 1571, when pope GREGORY XIII, at the instance of PHILIP II, created it an Archbishoprick, of which Calahorra, Osma, Pampeluna and Palencia are suffragans. To the eastward of Burgos is a village called Val de Buertos, remarkable for it's healing waters, the bathing in which cures the bloody flux.

Vallado-  
lid.

Valladolid is situated about thirty-five miles south-west of Burgos, and ninety northwest of Madrid in a large beautiful plain on the river Pucerga, a little above it's confluence with the Du-

ero; it is surrounded by a wall, which is rather an ornament than a defence to it, though it was anciently deemed a strong place. Here are abundance of fine buildings, noble squares, porticoes and fountains; many of the nobility and gentry have houses here, and it is the seat of some of the superior courts of justice; which with the briskness of their trade render it one of the most flourishing towns of the kingdom. It is computed there are not less than eleven thousand houses in the place, many of them magnificent structures: Their squares are spacious, particularly that in the middle of the town, which is vastly large, and surrounded with uniform buildings, supported by a piazza, and adorned with gilded balconies in every story. There are no less than seventy convents of both sexes in the town, of which that of the Dominicans is most remarkable for the beauty of it's architecture, and the riches it contains.

As their Kings held their courts at Valladolid for a considerable time, there is still a noble palace here, which was repaired and beautified by PHILIP IV. There are also several other palaces of the nobility, that very well deserve the attention of a traveller; but having already given the reader some idea of the Spanish buildings and furniture, it would not be agreeable to him to dwell upon these things, unless there were something new and uncommon in the contrivance of them. It was made a Bishop's See in the year 1595, and has a university consisting of several colleges, esteemed one of the most flourishing in Spain. This city was anciently called Pintia, or rather built upon the ruins of it. The air here is good and tolerably pure, except that sometimes they are incommoded with mists from the river. The fields about the town are wonderfully fruitful and pleasant, and look like one continued garden.

Segovia is situated about fifty miles to the southward of Valladolid, and about thirty to the northward of Madrid, upon an eminence between two great mountains. It is surrounded by a wall and towers after the old way of fortification. The higher part of the hill is covered almost with religious houses, and the castle stands on the top of it, which is a place strong by situation, but not at all improved by art.

The town is large and well-peopled, and adorned with many beautiful edifices; it is computed that there are seven thousand houses in it, comprehending the suburbs. The soil about it is fruitful, and on the neighbouring mountains they feed large flocks of sheep, the wool of which makes the finest cloth in Europe. Here is also a manufacture of paper; and their trade in general is in so flourishing a condition, that there is scarce a poor family amongst them. Here is also one of the most considerable mints in Spain; but what is the greatest curiosity is, a noble aqueduct built of free-stone, without any cement, and consisting of two rows of arches one above another, that brings water enough to serve the whole town upwards of five leagues; some ascribe it to TRAJAN, but others say it was the work of the Goths. The water of the river which runs near the town is very bad, and occasions several distempers, particularly the dropy and palsy, which it is supposed was the reason of erecting this mighty fabrick. Segovia is a bishoprick and university, but the latter of no great fame.

A few miles from thence on the banks of the river Duraton is a town called Pedcaça dela Sierra, famous for being the place of the Emperor TRA-

JAN'S

CHAP.  
IV.

CHAP.  
IV.

JAN's nativity, as well as for it's cattle, where FRANCIS Dauphin of France, and Prince HENRY his brother, were imprisoned on the releasing of their father FRANCIS the first, who was taken prisoner at the battle of Pavia.

The rest of the towns of Old Castile having little remarkable in them, I shall only specify their names; which are, Miranda de Ebro, Najara, Navarrete, Guardia, Bañida, Espinosa de los Monteros, Lerma, St. Pedro d'Arlanza, Arando de Duero, St. Estevan de Gormaz, Verlanga, Almazan, Soria, (the ancient Numantia,) Logroño, Aguilar del Campo, Agreda, Crugna, Roa, Pegnafiell, Mocada, Coca, Arevalo, Olmedo, Madregal, Pegnaranda, Villa Franca on the Tormes, and Cuellar.

## CHAP. V.

*Contains a description of the province of Leon, and of the chief towns therein.*

CHAP.  
V.

Leon.  
Situation,  
&c.

THE province, or kingdom of Leon, is bounded by the mountains of Asturia on the north; by Old Castile on the east; Estremadura on the south; and by Galicia and part of Portugal on the west; and is about fifty-five leagues in length from north to south, and forty in breadth from east to west.

Rivers.

The principal rivers are the Duero, which runs from east to west, and divides it into two equal parts; the Pisuerga, the Carrion, the Tormes, the Tordo, the Tera, the Esla and the Orbeago.

Air.

The air, soil and produce of this province is much the same with that of Old Castile, and it is equally mountainous. The chief towns which have the denomination of cities, are Leon, Astorga, Salamanca, Palencia, Zamora, Medina del Rio Secco, and Ciudad Rodrigo: besides which, there are fifteen or twenty more of an inferior rank; of these Medina del Campo and Ledesma are most considerable.

Leon.

Leon, the capital of the province, and of the ancient kingdom of Leon, situated in a fine fruitful plain, at the foot of the mountains of Asturia, between the two sources of the river Esla, about fifty five leagues north-west of Madrid. It is said to have been first built by the Emperor G A L B A, and called *Legio Septima Germanica*, from the legion of that name which was quartered there; and from the word *Legio* it is generally held was formed the word Leon, which conjecture is confirmed by some of the ancient Roman bricks that have been found here with this inscription, LEG. VII. P. F. It is a large town, consisting of thirteen parishes, six monasteries and five nunneries, but is neither so rich or populous as it was heretofore. The cathedral is said to be the most elegant building of that kind in Spain, and there are no less than thirty-seven Kings of Spain and an Emperor that lie interred here. The Spaniards also value it on account of the shrines of several saints, particularly that of St. ISIDORE, whose corps King FERDINAND having obtained of a Moorish King in the ninth century, placed it in a shrine of silver upon the altar of St. JOHN Baptist. This was the first city of any importance which the Christians recovered from the Moors, and the seat of the first Christian King of Spain. It is at present the See of a Bishop, who is suffragan of Compostella.

Astorga.

Astorga is situated in a plain on the little river Astura, or Tordo, forty-five leagues north-west of Madrid, and eight south of Leon. It is neither

large or populous, nor is there any thing worth a traveller's attention, unless it be a handfom square, and the cathedral. The Bishop is suffragan to Compostella.

Salamanca is situated partly on little hills, and partly in a plain, on the river Tormes, forty leagues south of Leon, and thirty five north-west of Madrid. It is a rich populous city, and abounds in all things necessary for life. It contains about eight thousand families, and is adorned with some fine buildings, squares and fountains: but what renders it most considerable is it's university, esteemed the best in Spain, where are taught all manner of Sciences. They have eighty professors, viz. of divinity, law, physick, philosophy and languages, who have each of them a thousand crowns per annum pension. The university consists of twenty-four colleges, and about four thousand students. There are also several handfom churches, convents and noblemen's houses in the town, and it enjoys a flourishing trade. The bridge over the river Tormes is said to have been built by the Romans, and there is still also the remains of an old Roman causeway leading from thence to Merida, and so to Seville, repaired by the Emperor ADRIAN, as appears by an inscription still remaining, viz. IMP. CÆSAR DIVI TRAJANI PARTHICI DIVI NERVÆ NEPOS TRAJANUS HADRIANVS AVG. PONTIF. MAX. TRIB. POT. V. COS. III. RESTITVIT. It is at present one of the richest Bishopricks in Spain, suffragan to Compostella.

Palencia, *olim Pallantia*, situate on the little river Carrion, forty leagues to the northward of Madrid, and about eighteen to the westward of Burgos, in a very fruitful soil, the See of a Bishop, suffragan to Burgos. The most considerable public building is the church of St. Antolin, which King SANCHE the Great built to the honour of that saint.

Zamora is situated on a steep rock near the river Duero, over which it has a handfom bridge, and lies about forty leagues north-west of Madrid, and fifteen west of Valladolid. It was anciently called Senticca, but when the Moors were masters of it they gave it the name of Zamora, or Medinato Zamorata, which signifies in their language a town of turquoises; for in several of the rocks in the neighbourhood, there are mines of this kind of precious stones called turquoises. This town is also famous for possessing the body of St. ILDEFONSO, Bishop of Toledo in the seventh century.

Medina del Rio Secco is situated in a fine fruitful plain surrounded with mountains, about twelve leagues north-west of Valladolid, and is the capital of a dutchy belonging to the Admirante of Castile.

Medina del Campo lies about eight leagues to the southward of Valladolid. It was a rich trading town, but is upon the decline at present. The country about it furnishes some of the best corn and wine in Spain. The magistrates have the disposal of all places and preferments among them, and enjoy many other considerable privileges. Here was born the famous Spanish physician, who endeavoured to prove that animals were but machines. This word Medina, in the Moorish language, signifies a city, which is the reason we have so many Spanish cities of this name.

Ciudad Rodrigo stands in the south-west part of the province of Leon, about four leagues from the frontiers of Portugal, and is one of the principal Spanish garisons on that side. It is situated in a fruitful plain on the little river Aguada, or Agujar,

Agujar, and was built out of the ruins of the ancient Mirobriga, at present a Bishop's See, suffragan of Compostella.

**Ledesma.** Ledesma is a considerable town, advantageously situated on the river Tormes, seven or eight leagues to the westward of Salamanca; to the eastward whereof is a hot bath, famous for healing many diseases. The rest of the towns of this province do not require a particular description.

## CHAP. VI.

*Contains a description of the province of Galicia.*

CHAP.  
VI.  
Galicia.  
Situation.

**T**HE province, or kingdom of Galicia, is bounded by the Ocean on the north and west; by the provinces of Asturia and Leon on the east, and by the kingdom of Portugal on the south; being about forty leagues in length from east to west, and almost as many in breadth from north to south. The Sea encompassing it on two sides, it has near an hundred leagues of sea-coast, on which are several good ports; the most commodious are those of Ferrol and Corunna.

Air.

The air along the coasts is generally temperate, but moist, occasioned by the great rains, and the many springs and rivers with which it is watered, as well as by the neighbourhood of the sea. The most considerable rivers besides the Minho already described, are the Sil, the Ulla, the Tambre, the Mandeo, the Rio Major and the Vallinadares. This country, as well as the rest of Spain, is full of mountains, and the air upon them cold; they are covered however with trees, proper for building ships and other uses. The valleys and sea-coasts have plenty almost of every thing, especially oranges, lemons, and other excellent fruits, and their seas abound with fish. Here are also some mines of gold, silver, copper and lead, but the former are not wrought. The natives are said to be a lazy indolent generation, more resembling the Portuguese, who lie contiguous to them, than any other people of Spain.

Chief towns.

The chief towns of Galicia, which have obtained the title of cities, are these seven, viz. St. James de Compostella, Lugo, Orense, Tuy, Mondonnedo, Corunna and Betancos. Besides these, the towns of Ferrol, Vigo, Bayona, Salvaterra, Rivadavia, Rivadeo, Mongia, St. Mary de Finisterre, Coa, Muros, Noya, St. Marco or Marta, Castro de Ortogal, Porto Marino, Sarria, Monforte de Lemos, Villa Nova de los Infantes, Pontevedra, Rodondella and Padron, are reckoned considerable on one account or other.

Compostella.

Compostella, or St. Iago de Compostella, the capital of Galicia, is situated in a fine plain encompassed with little rising hills, and watered with a great many small streams, thirty miles south of Corunna, and upwards of forty to the eastward of Cape Finisterre, and contains about two thousand houses. It is a rich trading town, and better accommodated with provisions and necessaries than most towns in Spain, on account of it's neighbourhood to the sea. Here are also several fine squares, palaces, religious houses, and a university: but what Compostella is most famous for, is the tomb of St. JAMES the apostle and protomartyr, who according to their tradition was buried here. This occasions a vast resort of pilgrims from all parts of Europe. THEODOMIR, one of their Bishops, it is said, discovered the body of this saint here by divine revelation in the ninth century, and King ALPHONSUS the Chaste thereupon built a church

to his honour, in the place where his remains were found. ALPHONSUS the Great magnificently rebuilt this church of square stone, and adorned it with marble pillars, and the Kings his successors continued to embellish it till it became one of the finest and richest cathedrals in Spain. Pope LEO III first constituted it a Bishop's See at the request of CHARLEMAONE. Pope CALIXTUS II transferred the metropolitan dignity to it from Merida: and Pope PASCHAL II decreed, that twelve of the Canons should be Cardinals. St. JAMES, 'tis said, has wrought abundance of miracles, particularly that he destroyed the army of ALMANZOR the Moor, once sovereign of Seville; and they have often seen him, they assure us, at the head of their armies on the day of battle, which is the reason that St. Iago, or St. James, is always the word or warlike cry amongst them, as St. George for England, St. Dennis for France, &c.

It is surprizing, says my author, to see what crowds of pilgrims come hither from all parts of Europe, especially in the jubilee-year. They go in procession to the cathedral to visit the image of St. JAMES, which is placed on the high altar. They kiss it three times, and put their hats upon his head with the profoundest devotion. There are always burning before it five and twenty or thirty silver lamps, besides vast wax-candles, which are placed on six silver candlesticks of excellent workmanship five foot high. On the roof of the church are flat paved walks, to which the pilgrims ascend, and having hung some rag of their clothes upon a stone-cross erected there, they creep under it three times on their hands and knees through a very strait passage, which will scarce admit a man of any bulk; for the whole pilgrimage is to no purpose without this last act of devotion; it is this that entitles them to the indulgences proposed; and those who have happened to omit it have been obliged to return to Compostella again, after they have travelled some hundred leagues. The French pilgrims have a chapel here appropriated to their nation, and there is a magnificent hospital for the reception of poor pilgrims richly endowed, consisting of two handfom square courts, with piazzas that support the stone-galleries round about them, having fountains in the middle of each square. This Archbishoprick is one of the richest of Spain, having a revenue of seventy thousand crowns per annum, and the chapter as much more. The episcopal palace is an antique edifice, but vastly large and commodious. It was from this city that the order of knights of St. JAMES had their original, from whence they were dispersed into all parts of Spain. This is the richest order in the kingdom; they possess in the two Castiles and Leon only, eighty-seven commanderies, valued at an hundred and seventy-two thousand ducats per annum. To be admitted into this order, it is not only necessary to prove their nobility for two generations, but that they are descended from the race of old Christians, and that their blood has not been intermixed with that of new Christians, that is, either of converted Jews or Moors. They are not all obliged to reside at Compostella, only a certain number of them, to guard the tomb of the saint, where sometimes it is said, is heard the clashing of Arms, which is looked upon as ominous to the kingdom.

Lugo, the *Lucus Augusti* of the Romans, is situated on the Minho, not far from it's source, about three and twenty leagues to the eastward of Compostella. It was anciently a considerable town,

CHAP.  
V.

**CHAP. VI.** town, but much upon the decline at present, though it be still a Bishop's See, and has some hot baths, which make it resorted to.

**Orense.** Orense, falsely written in some of our maps Ortenfe, is situated at the foot of a mountain on the river Minho, about fourteen or fifteen leagues south-east of Compostella. That part of the town which lies next the mountain is extremely cold, and their winters long, while the other enjoys all the delights of spring and autumn, occasioned by the vapours which rise from the hot baths thereabout, and warm the air. Some of these baths are of a moderate heat, and others so hot that they will boil an egg, all of them famous for the cure of several diseases, and on that account it was called by the Romans, *Aque Calide*. Without one of the gates there is a noble arch, large enough for a ship to pass under with her sails standing. The fields about Orense are extremely fruitful and pleasant, and among other delicious fruits they have grapes that make excellent wine.

**Tuy.** Tuy is a strong frontier town, situated on the top of a mountain, at the foot whereof runs the river Minho, which separates it from Portugal, lying about ten leagues south-west of Orense. This is one of the garisons where the militia of Galicia rendezvous: they give themselves the title of Cavaliers, and the King's brave soldiers, and are mighty proud of appearing at a general muster, though their cloathing is no better than sackcloth, an old hat with some cock's feathers stuck upright in it, swords without scabbards, tied on with packthread instead of belts, wooden shoes and no stockings, and an old rusty musket, too heavy to fire without a rest. The other places of rendezvous on the side of Portugal, are Ciudad Rodrigo and Badajos. Tuy is a Bishop's See, and the neighbourhood of it extremely agreeable; here we meet with fruitful plains, gardens, orchards, and vineyards that produce excellent wine, and indeed every thing that is desirable in life, with a very temperate healthful air.

**Mondonedo.** Mondonnedo is situated in a fine plain at the foot of the mountains, and in a very healthful air, fourteen or fifteen leagues to the eastward of Corunna, or the Groyne, and is the See of a Bishop, suffragan of Compostella; but I don't find it considerable on any other account.

**Corunna, or the Groyne.** Corunna, or the Groyne, is situated on a bay of the sea, which forms a peninsula, and makes one of the finest harbours in Spain. It stands about twelve leagues to the northward of Compostella, and is divided in two parts, viz. The higher town, which stands on the side of a hill, and is surrounded by a wall, and the lower town, which lies at the foot of the hill, on a little tongue of land encompassed on three sides by the sea, and has a wall only on that side which joins it to the upper town. The harbour is in the form of a crescent, and large enough to entertain the greatest fleets. The two entrances are defended by two castles, called the St. Antony and the Holy Cross, and is covered by a little island from the north winds. The town is very ancient, as well as the fortifications, supposed to be the *Brigantium*, or *Portus Brigantium* of the Romans. There is still an old lofty tower, which was built for a pharos or light-house, so bold a structure that it is the admiration of all that view it; the antiquity of it is evident from the following inscription; MARTI AVG. SACR. G. SEIVS LVPVS ARCHITECTVS. A. F. DANIENSIS LVSITANVS EXVL. It is from this tower, according to some

VOL. II.

writers, that the town received it's name, for the natives instead of a tower, called it *Columna*, a column, which by corruption was afterwards converted into Corunna. In the neighbourhood of this town is a mine or quarry of jasper.

To the eastward of the bay, almost over against Betancos. Corunna, is the city of Betancos, situated in a plain on the river Mandeo, not far from the sea, remarkable only at present for being a little port-town, and the See of a Bishop.

Ferrol is situated to the northward of Corunna, Ferrol. on the opposite side of the bay, and is considerable for it's excellent harbour. It stands in a fruitful country, which produces good wine, as their seas do plenty of fish.

Vigo is situated on a bay of the western Ocean, Vigo. five or six leagues to the westward of Tuy, in a fruitful country. It is a fortified town, defended by an old fort and castle, and has an excellent harbour, where Sir GEORGE ROOK, the English Admiral, with the confederate fleet, attacked that of the French, commanded by Monsieur CHATEAUNEUF, and the Spanish galleons under his convoy, on the twelfth of October in the year 1702. The Duke of Ormond, who commanded the land-forces at the same time, making himself master of the castle and fort, of thirteen galleons that were there, four were taken by the English and five by the Dutch, and some treasure was taken on board them, but no great quantity, the plate being the first thing secured upon the apprehension of danger: the English also took five men of war, and the Dutch one, and about fourteen men of war and four galleons were sunk or burnt.

Bayona is a port-town to the southward of Vigo. Ponte Vedra is a large town, situated on a bay of the sea to the northward of Vigo.

St. Mary de Finisterre, or Finis-terre, is a little town, fifteen or sixteen leagues to the westward of Compostella, chiefly remarkable for the neighbouring cape, from whence it takes it's name, being the most westerly part of the continent of Europe.

Castro de Ortegal, an open town near the famous Cape de Ortegal, the most northerly point or promontory of Spain, well known to the seafaring part of the world.

Padron is an ancient town, situate at the mouth of the river Ulla, near a bay of the sea, about four leagues to the southward of Compostella. They shew here a venerable relique, being a hollow stone, in which, according to their tradition, St. JAMES the Apostle sailed from the Holy Land to Spain; and landing here, left it in this town, as a perpetual monument of so great a miracle. In the course of this history the reader has met with several other of these miraculous stones, that have carried the saints many thousand miles to plant the gospel, which is not more incredible than the removing the Virgin MARY's house over sea and land from Palestine to Loretto in Italy; and this is a fact so universally believed, that if any good Catholic should doubt of it, he would infallibly incur the censures of the church, and perhaps become obnoxious to the inquisition.

Air.

Rivers.

Moun-  
tains.

Oviedo.

being bounded by that sea on the north; by Biscay on the east; by Leon and Old Castile on the south, and by Galicia on the west; being about five and forty leagues in length from east to west, and eighteen in breadth from north to south, and is said to take its name from the river Asta, or Astura. The air is colder than the rest of Spain, occasioned by its high mountains and northerly situation. The principal rivers are the Miranda, which separates it from Galicia, and the Ove and Dava, that uniting their streams at Oviedo, obtain the name of Asta, which running northward, falls into the Bay of Biscay near Villa Viciosa.

This is a very mountainous country; those called the Asturia's, which are a branch of the Pyrenees, divide it on the south from Leon and Old Castile, and are covered with vast forests, so that the country is neither well peopled nor cultivated. Their valleys however afford them corn and wine enough for their subsistence, and their seas plenty of fish, of which they export great quantities. Here are also some good mines, but they have been most famous ever since the times of the Romans for excellent horses, held to be the strongest and the swiftest in Spain. Their country being naturally defended by the high mountains of Asturia, held out long against the Romans, and was never entirely conquered by the Moors; this therefore is looked upon as the nursery of the Spanish nobility and gentry, and of all the Old Christians, as they affect to call themselves, who retired hither when the Saracens had over-run the rest of Spain; and this is said to be the reason, that the eldest son of the Kings of Spain has the title of Prince of the Asturia's conferred on him. They are called the Asturia's, in the plural number, because the western part of the country is called Asturia de Oviedo, and the eastern part Asturia de Santillana, from their respective capitals. The chief towns are Oviedo, Villa Viciosa, Avila, Giron, Santillana, St. Vincent, and Llanes or Ilianes.

Oviedo, *olim Ovetum*, is situated in a plain, at the confluence of the river Ove and Dava, whose united streams afterwards go by the name of Asta, about sixteen leagues north-west of Leon, and sixty-five north-west of Madrid. It is the only town of the province which has the honour of being called a city, and a Bishop's See. PELAGIUS, who was so successful against the Saracens, made it the seat of his government, as the Kings his successors did afterwards for some time. The most remarkable public building is the church of St. Salvador, or St. Saviour's, built by a Prince named SILO, whose tomb is still seen here. It is filled with a multitude of reliques, which the Christians brought hither from all parts of Spain, when they were driven away from their dwellings by the Moors. Some of the most valuable are a golden cross, said to be made by Angels; a piece of the mantle of ELIAS; a piece of the rock of mount Sinai, where Moses fasted forty days: and a wonderful arch, said to be made of incorruptible wood by the Apostles, which does not give place to the holy house of Loretto in point of miracles, having been carried by the Angels from Jerusalem into Africa, from thence to Carthage in Spain, from Carthage to Seville, thence to Toledo, and from thence to Oviedo; but their historians have not ascertained the time of this wonderful journey. The Spaniards, however, make little difficulty in believing this and a thousand other as incredible relations, that are taught them by their monks.

The town is tolerably well built, but not considerable on account of its trade or riches. The houses about the church of St. Salvador stand on piazza's, and make a handsome appearance; but the great square in the middle of the town, where all the streets center, and the colleges which compose the university, are its principal ornaments at present.

Villa Viciosa is a little port-town, situate at the mouth of the river Asta, about twelve leagues north-east of Oviedo. Villa Viciosa.

Avila is another port on the bay of Biscay, twelve leagues north of Oviedo; and two leagues north lies a promontory well known to our mariners, called Cape de Pinas. Avila. Cape de Pinas.

Santillana, *Fanum Sancte Juliane*, the capital of East-Asturia, is situated on the bay of Biscay, two and twenty leagues to the eastward of Oviedo. It has the title of a marquise, and belongs to the Dukes of Infantado, of the house of Mendoza. Santillana.

## CHAP. VIII.

Treats of the province of Biscay.

THE province of Biscay, the ancient Cantabria, is bounded by that part of the ocean called the bay of Biscay on the north; by the Pyrenees, which divide it from France, on the east; by Navarre and Old Castile on the south; and by Asturia on the west; being about forty leagues in length from east to west, twenty in breadth from north to south in the broadest part, and not half so much in the narrowest towards the west. CHAP. VIII. Biscay. Situation.

The principal rivers are, 1. The Nervio, called by the Biscayans, Ybaycabal, or the large river, which rising in the south, runs northward cross the country by Bilboa, two miles below which city it falls into a bay of the sea. The ancients called it Charlybs, the water whereof is excellent for the tempering of arms. 2. The Deva, which rising in the south part of the province, takes its course northward by Placentia, and falls into the sea ten leagues to the eastward of Bilboa. 3. The Orio, which has its source also in the south, and running northward, falls into the same sea to the eastward of Deva. And, 4. The little river Bidassoa, that divides France from Spain, in which lies the isle of Pheasants, so famous for the peace concluded there between France and Spain in the year 1659, called the Pyrenean treaty.

Biscay is a very mountainous country, and on that account less subject to excessive heats than some other provinces of Spain. Travellers assure us that their mountains are intolerably cold, to make some amends for which, there is plenty of timber, fit for building ships as well as houses, and abundance of good fuel. The soil is not very fruitful: their apples, with which they make cyder, in some measure supplies the want of wine. They have also oranges, lemons, and other excellent fruits. Their seas abound in fish, with which they drive a good trade, as they do with the oil that their whales produce, for the Biscayners fished for whales on their own coast long before Greenland was found out; and though the country be generally a rocky barren soil, it produces corn enough for the subsistence of the inhabitants. But their greatest riches lie in the bowels of the earth, in their iron-mines, of which they make vast quantities of arms, particularly sword-blades, esteemed the best in Europe, and they

C H A P.  
VIII.

Their character.

they export a great deal of iron in bars. Here are also mines of lead, and other more valuable metals, which create them as brisk a trade as any other province in Spain enjoys.

The Biscayners have been always esteemed a warlike people, and have defended their country resolutely against all invaders, being usually one of the last provinces that submitted to the conqueror in any alteration of government. But they have been most celebrated for their skill in maritime affairs, in which they excelled all the nations in Europe till the last age. France was always forced to beg their assistance when they were at war with any powers by sea, till the reign of LEWIS the Fourteenth.

They are far from being of that flegmatick temper the Spaniards of the more southern provinces are remarkable for, but are brisk and lively, civil and obliging, open and free in their conversation, and transact their business with all imaginable application and industry, which is the reason that many of them make their fortunes at court. The Biscayners also enjoy abundance of privileges beyond their neighbours, which they obtained, says my author, partly by the bounty of their Princes, and partly by force; for they are not so slavishly submissive to their superiors, either in temporals or spirituals, as the Castilians. A Spanish Bishop (JOHN Bishop of Gironne) who wrote in the 15th century, was so provoked at their conduct, that he would not allow them the title of Christians, or that they had indeed any religion at all. He says they refused to receive any priests amongst them unless they carried their concubines with them, for as they apprehended it impossible for any man absolutely to conquer his carnal appetites, they made no doubt, if the parson had not a woman of his own, but he would be free with their wives or daughters. I my self, says the pious Bishop, was a witness of their refusing to permit any one of our order to come amongst them, even to administer the sacraments. In the year 1477, FERDINAND King of Castile being about to enter Biscay, and having the Bishop of Pampeluna in his train, the Biscayners rose in a tumultuous manner, and represented to the King that it was contrary to their laws and constitution to admit a Bishop amongst them, and his Majesty was obliged to send him back; nay, they proceeded so far as to dig up the very earth the holy man had trod upon, and burnt it.

They have a language of their own, called the Baskish, different from all the languages in Europe. It is spoken on both sides the Pyrenees; but when they write, they use either the Spanish or French. Most of their towns have both a Spanish and a Baskish name. Geographers usually divide this province into three parts, viz. Biscay Proper, Guipuscoa, and Alava. Biscay Proper comprehends the most westerly part, Guipuscoa the north-east, and Alava the south.

The chief towns of Biscay Proper are Bilbao, Porto Galette, Castro de Urdeales, Loreda, St. Antonio, St. Andero, Orduna and Durango.

Bilboa, *olim Fluvio-briga*, the capital of the province, is situated in a plain, encompassed with mountains, near the mouth of the river Ybaycabal, about a league from the sea, two and twenty leagues north-east of Burgos, and as many to the westward of Fontarabia, on the confines of France. The tides come up hither, and it is one of the best and most frequented harbours on the northern coast of Spain. The city is large, beautiful, full of rich

merchants, and stands in a temperate air and fruitful soil. They have a great demand for wool and iron-bars, and their sword-blades are in great esteem.

St. Andero is a port-town in the north-west part of the country, formerly much frequented, but so upon the decline at present.

The chief towns in Guipuscoa are Tolosa, Placentia, Orio, St. Sebastian, Irun and Fontarabia.

Tolosa is situated in an agreeable valley between two mountains, at the confluence of the rivers Orio and Araxes, about four leagues to the southward of St. Sebastian. It is not a town of any great extent or trade, though it be the capital of Guipuscoa. The principal manufacture of the place is sword-blades.

Placentia is situated on the river Deva, four or five leagues to the westward of Tolosa. This town also is most considerable for its manufacture of sword-blades and fire-arms.

St. Sebastian is a port-town, pleasantly situated at the foot of a mountain on the bay of Biscay, about four or five leagues to the westward of the frontiers of France. The harbour is large and secure, and the town fortified, but appears to be a place of less strength than the Spaniards imagined, not being able to hold out against the French army above a month in the year 1719. The streets are long and spacious, and the houses tolerably well built. Their trade is in a flourishing condition, and consists chiefly in iron and steel, said to be the finest in Europe. They export also a great deal of fine wool from hence, the growth of Old Castile. The Spanish men of war do not lie here, but at Port Passage, about a quarter of a league to the eastward of it, where the French burnt several ships of the royal navy in the late war.

Fontarabia, in Spanish *Fuentarabia*, *Fons Rabadus*, is the last town of Spain towards France. It is situated on a peninsula in the Bay of Biscay, near the mouth of the river Bidasoa, which parts the two kingdoms. It was formerly looked upon as impregnable by the Spaniards, but was taken by the French in the year 1719, after a six weeks siege. This is the only town which is honoured with the title of a City and Bishop's See in Guipuscoa, and is commonly called the key of Spain on the side of Biscay.

The most southern district, or subdivision of Biscay is Alava; the chief towns whereof are Vittoria, Salvatierra and Trevigno.

Vittoria, or *Victoria*, the capital of this division, is situated in a fine fruitful valley, about fourteen leagues to the southward of Bilbao. It has the honour of being a city and a Bishop's See, and is surrounded by a double wall. The principal square is encompassed by the town-house, two convents, and several well-built houses, adorned with a fountain; and what renders the town extremely pleasant, is the trees planted in all the principal streets. It is well inhabited by tradesmen and people of fashion, drawn hither by its agreeable situation and the beauty of the place; and is said to have been built by SANCHE King of Navarre, in memory of his conquest of the Moors of Alava, who thereupon gave it the name of *Victoria*.

Salvatierra is a little town, twenty miles to the eastward of Vittoria.

Trevigno stands on a little hill near the river Aguda, five or six leagues to the westward of Vittoria. It is the capital of a country of the same name, which belongs to the Duke of Najara.

THE province or kingdom of Navarre, part of the ancient *Tarraconensis*, was inhabited by the Vascones or Gascons. It is bounded by the Lower or French Navarre, from which it is divided by the Pyrenean mountains, on the north-east; by Arragon on the south-east; by Old Castile, from which it is separated by the Ebro, on the south-west; and by Biscay on the north-west; being about two and thirty leagues in length, and twenty-eight in breadth.

This also is a very mountainous province; the air temperate, or rather cold, in respect of the southern provinces. It does not abound either in corn, wine or fruits, but is most considerable for its pasture-grounds, herds of cattle and forests, the latter of which afford them excellent timber, and abundance of game; and they have also some mines of iron. There are besides the Ebro, which waters the south-west part of it, the rivers Arragon, Arga and Ega, all of which fall into the Ebro.

This province is usually divided into five districts or Merindades, which take their names from so many great towns, viz. Pampeluna, Estella, Sanguesa, Olita and Tudela. The rest of the towns of any note are Tafalla, Ucana, Roncevaux, Araga, Villa Franca and Miquenza.

Pampeluna, the capital of the province, and seat of the Viceroy, is situated in a plain near the Pyrenees, on the river Arga, ten or eleven leagues to the southward of Fontarabia, formerly called Pompeiopolis from POMPEY, who is supposed to be the founder of it. It is tolerably large, surrounded by a wall, and defended by two castles, one within the city and the other without. The fortifications of the city are inconsiderable, but the castle without is situated on a high rock, and esteemed a place of strength. Pampeluna is at present a Bishop's See and a University: what is most remarkable in the town is a spacious square, where their bull-fests are held.

Estella, or *Stella*, is situated in an agreeable plain on the river Ega, seven or eight leagues south-west of Pampeluna. It is a handsome town, defended by a castle, and has obtained the title of a city.

Sanguesa is a small town on the river Arragon, seven leagues to the southward of Pampeluna, which has also obtained the title of a city.

Olita is another pretty little town, situated on the river Cidaco, three or four leagues to the southward of Sanguesa, formerly the seat of the Kings of Navarre, there being still some remains of their palace. It is situated in a good soil, affording corn, wine, and fruits, flax and hemp, and well watered with springs.

Tudela is situated in the south part of Navarre, on the river Ebro. It is a fine town, inhabited by people of good fashion, and is adorned with some handsome buildings.

Tafalla is situated on the little river Cidaco, to the northward of Olita. CHARLES III, King of Navarre, built a palace here, which was his ordinary residence. It is a handsome town, tolerably large, encompassed with a wall, and defended by a castle. It is honoured with the name of a city, and has a university, and the country about it affords good wine.

## CHAP. X.

*Contains a description of Arragon, and it's chief towns.*

## CHAP. X.

Arragon.  
Situation  
and ex-  
tent.

THE province, or kingdom of Arragon, is bounded by the Pyrenees, which separate it from France on the north; by Catalonia on the east; by Valencia on the south; and by New Castile, Old Castile and Navarre towards the west; being about fourscore leagues in length from north to south, and fifty leagues in breadth from east to west.

Arragon is generally a mountainous rocky barren country, but intermixed with some fruitful valleys, which afford corn, wine and oil, especially near the banks of their rivers. The air is esteemed healthful and temperate, and the country is watered with abundance of rivers, of which the Ebro is the chief, and divides it into almost two equal parts. Most of the other rivers fall into the Ebro: Those on the north of it are, the Cinca, the Galligo and the Iluela; those on the south of the Ebro are the Xalon, or Salo, the Riquelo, the Guerva, the Agna, the rivers Martia and Guadaloque: besides which, there are the Gaudalquivir and Alhambra, which uniting their streams, run through Valencia, and fall into the Mediterranean.

The towns which have the denomination of cities are Saragossa, Balbastro, Jaca, Tarazona, Huesca, Catalajud, Albarrazin, Tervel, Daroca and Boria. The other towns of any note are Alagon, Ixar, Ricla, Alhambra, Moncon, Almudevar, Santa Christina and Fraga.

Saragossa, the capital of Arragon, is situated in a vast plain on the banks of the river Ebro, which there receives two other rivers, viz. the Gallego and the Guerva, lying about sixty leagues north-east of Madrid, and twenty west of the confines of Catalonia. The town is large, surrounded with an old wall and other antique fortifications, and consequently of no great strength. It is said to have been founded by the Phenicians, and the Romans had a colony here in the time of AUGUSTUS, from whence it is supposed to have obtained the name of *Cesar Augustus*, by corruption Saragossa. The streets are large and well paved, the houses for the most part built of brick, three or four stories high, more beautiful and uniform than those of Madrid, and adorned with a great many magnificent publick buildings. Travellers mention seventeen great churches, fourteen fine monasteries, besides many others less considerable. It is the See of an Archbishop, and a university, and the tribunal of the inquisition is held here in the palace of their ancient Kings. There are two fine bridges over the Ebro, one of stone and the other of wood, the latter of which, it is said, is not to be parallell'd in Europe for its beauty: and as the Ebro passes through the middle of the town, there is a handsome key (or Quay) on which the citizens usually walk. There are also many other publick walks, but the finest is that called the Holy Street, where people of fashion take the air every evening in their coaches drawn by mules. On each side of this street are the palaces of the nobility, particularly that of the Viceroy. It is called the Holy Street, because here great numbers of Christians suffered martyrdom under it's Pagan governors. The cathedral is a vast Gothick structure, which is not however without

CHAP.

X.

A legend  
of the Vir-  
gin.

without it's beauties; but the church most resorted to by devout people is that of Our Lady of the Pillar, esteemed almost equal in sanctity to that of St. JAMES of Compostella. They relate, that the Virgin, while she was alive, appeared to St. JAMES while he was endeavouring the conversion of the Spaniards, and encouraged him in his labours, leaving there an image of her self, and a fine jasper pillar whereon she stood when she appeared to him. They shew both the one and the other in this church, which they pretend was the first that was built in the world to the honour of our Saviour. There is nothing extraordinary in the design or architecture of the Church, but the chapel of the Virgin underneath it is much admired. This chapel is thirty-six foot long, and twenty-six broad. Here is the image of the Virgin standing on a pillar, with a little Jesus in her arms; and as the place is perfectly hid from the light of the Sun, it is enlightened with lamps and torches. Nothing can appear richer than the ornaments about her; the place where she stands, her robes and crown, are covered with precious stones; all round her are angels of solid silver, holding flambeaux in their hands; besides which, there are not less than fifty silver lamps, with a multitude of figures of legs, arms, heads and hearts, brought hither in acknowledgment of miraculous cures wrought by the blessed Virgin. Every thing here shines with gold and precious stones, and multitudes of pilgrims come hither continually to perform their devotions. These glittering shews ravish the vulgar. The pomp of the Roman worship, and that profusion of wealth found in their churches, gains them an infinite number of proselytes; in which, say they, we do but imitate the precedent that God himself has set us: The temple of Jerusalem was built and adorned by his particular directions; and the ceremonies and processions of the Jews no less pompous than ours. These we acknowledge are but faint resemblances of the glories of heaven, but by these men are led to contemplate that Divine Being whom we all adore: It is natural, when we view some magnificent temple, to reflect on the infinite attributes of the deity worshipped there, and to cry out with SOLOMON, THE HEAVEN OF HEAVENS CANNOT CONTAIN THEE.

Reflec-  
tions on the  
pomp of  
Roman  
worship.

But to proceed: In a church near one of the gates of the town there is a crucifix, whose nails are believed to grow by this credulous people. The hospital for the entertainment of pilgrims has a noble tower adjoining to it, and though there be two hundred and eighty-four steps to the top of it, if I may credit my author, it is of so easy an ascent that a man on horseback may ride up it. Among the Convents of Saragossa, that of St. FRANCIS is reckoned the finest; the church particularly is much admired, the roof having not one single pillar to sustain it, though it be of a great length and breadth. The convent of St. JEROME is resorted to with great devotion, on account of the bodies of abundance of martyrs interred there: They pretend to shew the blood and ashes of several of them, which they have preserved in crystal vessels to this day. Besides the sacred buildings, the town-house is a sumptuous edifice, as is that where the States of the province assemble, in the hall whereof are the busts of all the Kings of Arragon, large as the life.

Saragossa declared for King CHARLES III, the present Emperor, Anno 1706. After the battle of Almanza, Anno 1707, this city was obliged to submit to King PHILIP again. In the year  
VOL. II.

1710, King CHARLES obtained a victory over the forces of King PHILIP near Saragossa, which he entered in triumph the same evening; but upon the taking of a body of English forces prisoners at Brihuega, the Confederates were obliged to retire out of Arragon, and leave King PHILIP again in the possession of Saragossa, who deprived the natives of their most valuable privileges, and executed many of the citizens who had appeared in his rival's interest.

CHAP.

X.

There are no fountains in the streets of Saragossa, but it is supplied with water from the Ebro. This river, though it be as large as the Seine at Paris, is not navigable here on account of the dangerous rocks which lie in the channel. It is however a rich, beautiful and populous city, abundance of people of quality have their residence here, as well as a great many merchants and bankers: the latter are generally natives of France. Next to Salamanca and Alcala, their university is esteemed the best in Spain. The air is not so hot here as in many other Spanish towns. The neighbouring country is full of fine gardens, and orchards, and for three leagues about it the houses stand so thick, that it looks like one continued village.

Balbastro is situated in a plain on the river Vero, which a little below joins the Cinca, being eleven or twelve leagues north-east of Saragossa. It contains twelve or fifteen hundred houses, and is a Bishop's See, but not considerable upon any other account.

Jaca is situated in an agreeable plain on the river Arragon, near the foot of the Pyrenean mountains, eighteen or twenty leagues to the northward of Saragossa. It is a town of great antiquity, and was the capital city of a people called the Jaccetani. The neighbouring country abounds in corn, fruit, cattle and all manner of game; but the city is remarkable for little at present, unless it's being a Bishop's See.

Tarazona is a small city on the river Queiles, situate partly on a rock and partly in the plain, about twenty leagues north-west of Saragossa. It stands in a fruitful country, and is a Bishop's See: The principal manufacture sword-blades and other arms, which receives a good temper from the water of the Queiles.

Huesca, *olim Osca*, is a little handfom town, Hoesca, situated on the river Isuela, in a fruitful plain surrounded with mountains, five or six leagues north-west of Balbastro. The Romans erected an academy here for the education of young gentlemen. It is still a university and a Bishop's See.

Catalajud is situated at the confluence of the rivers Xalon and Xaloca, at the end of a fruitful plain, seventeen or eighteen leagues to the westward of Saragossa. It is a large handfom city, built out of the ruins of the ancient Bilbilis, which stood upon a neighbouring hill. Here the celebrated poet MARTIAL was born, who has left behind him a fine description of his country. It has the honour of being a Bishop's See.

Albarazzin, *olim Turia*, is situated on an eminence, at the foot whereof runs the river Guadalquivir, not far from the confines of New Castille, about thirty leagues south-west of Saragossa, and is only remarkable for being a Bishop's See.

Tervel stands in a large agreeable plain, at the confluence of the two rivers Alhambra and Guadalquivir, ten or twelve miles to the eastward of Albarazzin. It is a rich trading populous place and the See of a Bishop; enjoys a fine air, and almost perpetual spring. The country about it is one continued garden, abounding in delicious

fruits and odoriferous flowers. PHILIP II built a citadel here with five bastions.

Daroca.

Daroca stands on the river Xiloca, about fifteen leagues south-west of Saragossa, in a rocky and almost inaccessible situation. It consists of about a thousand families, and is a Bishop's See. Travellers are shewn here a vast grot or cave, about a mile in length.

Boria.

Boria stands at the foot of a little hill, about twelve leagues to the westward of Saragossa, and two or three leagues south-east of Taragona. It is only considerable on account of it's being a Bishop's See. The country about it is well watered with fountains, and produces corn, wine, oil, flax and excellent pasture, on which they feed great herds of cattle.

Fraga.

Fraga is situated on an eminence near the river Cinca, on the frontiers of Catalonia, about three leagues to the westward of Lerida. It is naturally strong, being defended by high mountains on one side, and the river Cinca on the other. The country about it is perfectly barren.

### CHAP. XI.

*Contains a description of the province of Catalonia, and of it's subdivisions, and chief towns therein.*

CHAP. XI.

Catalonia.  
Situation  
and extent

THE Province of Catalonia is bounded by the Pyrenean mountains, which separate it from France on the North; by the Mediterranean sea on the east and south; and Valencia and Arragon on the west; being about seventy leagues in length from east to west, and fifty in breadth from north to south.

The air.

The air of this province is pure and temperate, unless to the northward, where the mountains render it colder in winter. It is pretty much encumbered with mountains, notwithstanding which there are several fruitful plains, as the plains of Urgel, Cerdagne, Vic, Gironne, Taragona and Penedes, which afford corn, wine, oil, pulse, flax, hemp and excellent fruits. Nor are their mountains barren, being almost all covered with forests of lofty timber, as oak, beech, fir and pine-trees, besides chestnuts and several other kinds of fruit, an infinite number of cork-trees, and great variety of simples. Both mountains and valleys are watered with a multitude of rivers, brooks and springs, which render the country extremely pleasant and fruitful.

Mines.

Here are also mines of gold and silver, lead, iron, alum, salt, and quarries of marble, crystal, alabaster, jasper and amethysts, and on the coast they fish up excellent coral.

Rivers.

Their principal rivers are the Ebro, which crosses the south-west corner of it, and falls into the Mediterranean a little below Tortosa. The Francala, which falls into the same sea near Taragona. The Lobregat, which rises in the mountains of Penedis, and taking it's course directly from north to south, falls into the sea a little south-west of Barcelona. The Besos, which falls into the sea a little to the eastward of the same city. The Ter, which has it's source in the mountain Canigo, runs at first from the north-east to the south-west, and then turning short to the east, passes by Gironne, and discharges itself into the sea five or six leagues below that city: And the Fluvia, which falls into the Mediterranean a little to the southward of the gulph of Roses.

There are several other rivers which do not discharge themselves into the sea, but into the Ebro, the Cinca, &c. the chief whereof is the

Segra, the largest river in Catalonia except the Ebro. It rises in the mountains of Cerdagne, and running from the north-east to the south-west, passes by Puicerda, Urgel, Oliana and Camarasa, where having received the Noguera Palleresca, it continues it's course by Balaguer and Lerida, and having received the Noguera Ripagoreana, unites it's streams with the Cinca, after which it falls into the Ebro near Mequinenza, upon the frontiers of Arragon. The two Noguera's run in parallel lines from north to south, and fall into the Segra at the places above-mentioned. The Cervera runs from east to west, and falls into the Segra a little above Lerida: And the Noya, which falls into the Lobregat near Martorel.

Catalonia is one of the most populous provinces of Spain, the people brave, hardy and vigorous, and make excellent soldiers. Their miquelets in the last war shewed they were the best militia in Europe, defending themselves against the united forces of France and Spain, for a considerable time after they were abandoned by their allies.

The province of Catalonia was much larger anciently than it is at present, several districts having been dismembered from it by the French; particularly Roussillon and Conflans, which were confirmed to France by the Pyrenean treaty, with a good part of Cerdagne. The country of Foix, which was also formerly comprehended in Catalonia, has been yielded to France. However, it is still one of the largest provinces of Spain, and contains the fifteen following districts or vigueries, viz. Along the sea-coasts, the vigueries of Tortosa, Montblanc, Tarragona, Villa Franca de Penades, Barcelona and Gironne, in which last is comprehended the Ampurdan, or Lampurdan, as it is usually called: Along the Pyrenees are the vigueries of Campredon and Puicerda, or the county of Cerdagne: To the west along the frontiers of Arragon are the vigueries of Balaguer and Lerida; and in the middle of the province those of Agramont, Tarrega, Cervera, Mauresa and Vic.

In the viguery of Tortosa the chief towns are Tortosa, Garcia and Val de Cona.

In the viguery of Montblanc the chief towns are Montblanc and Poblet.

In the viguery of Tarragona, the chief towns are Tarragona and Tamerit.

The viguery of Villa Franca contains no other towns but Villa Franca.

The viguery of Barcelona contains the towns of Barcelona, Martorel and Mataro.

The viguery of Gironne contains the towns of Gironne, Blanes, Palamos, Palafogal, Ostalric, Verges, St. Pierre de Pescador, Castello Dampurius, Torella, Roses and Castelfollic.

The viguery of Campredon contains the towns of Campredon and Aulet.

The viguery of Puicerda, or the Spanish Cerdagne, contains the towns of Puicerda and Urgel.

The viguery of Balaguer contains no other considerable town but Balaguer.

The viguery of Lerida contains the towns of Lerida and Aytona.

The viguery of Agramont contains the chief towns of Agramont, Camarasa and Oliana.

The viguery of Tarrega has no other considerable town but Tarrega.

The viguery of Cervera contains Cervera, Cardona and Solsona.

The viguery of Mauresa contains Mauresa, Montferrat and Berga.

CHAP. XI.

Division.

The vigueries and chief towns.

The

The viguery of Vich contains Vich and Roda. I proceed now to the description of the most considerable towns in Catalonia, and first of Barcelona the capital.

Barcelona is situated in a large plain along the shore of the Mediterranean, about an hundred leagues to the eastward of Madrid, and thirty to the southward of Rouffillon. It is of an oblong, or rather oval form, containing about fifteen thousand houses, defended on the south by the sea, on the west by Fort Montjoy, which stands on a rocky mountain at a little mile's distance from it, and by it's own walls and fortifications on the north and east. There is a mole carried a considerable way into the sea, which renders it a secure harbour for small vessels, but large ships lie pretty much exposed to tempests, as well as enemies, in the road. Since the fortifications that have been added to the town and Fort Montjoy in the late war, it may be looked upon as a strong place; but then it is of so large an extent, it requires a numerous garison to defend it, and a much more numerous army to invest it. It is divided into the new and old town, which are separated from each other by a wall and a ditch, the old being enclosed by the new. The streets are large, well built, and neatly paved and kept, which is not usual in Spain. The principal publick buildings are the cathedral, a fine large old structure, the church of Our Lady del Pino, the Viceroy's and Bishop's palaces, and the palace where the States assemble, called the *Casa de la Deputation*. There are also several beautiful squares, particularly that of St. Michael, where all the great streets center. Barcelona is a rich trading town, the inhabitants industrious, civil and obliging to strangers, their women some of the finest in Spain, and the conversation of the people in general much more easy and free than in many other parts of the kingdom. It is the seat of the Viceroy of the province, the See of a Bishop and a university, and here is held one of the courts of Inquisition.

This town, with the rest of Catalonia, called in the French in the year 1640, who remained masters of it twelve years. The French took it again in the year 1697, after fifty-six days open trenches, but restored it again at the treaty of Ryswick. The French possessed themselves of it again, with the rest of the Spanish Monarchy. King CHARLES III, the present Emperor, by the assistance of the confederate fleet, and a very small army of land-forces commanded by the Earl of Peterborough, made himself master of this city on the fourth of October 1705, N. S. after a month's siege. The Spaniards and French, commanded by King PHILIP and Marshal THESSE, laid siege to Barcelona on the third of April 1706, N. S. while the French fleet, commanded by their Admiral the Count de Thoulouse, blocked it up by sea. The siege was continued till the eighth of May following, King CHARLES being all that time in the place, when the Earl of Peterborough and Admiral LEAKE with the confederate fleet, coming before the town, the French Admiral fled with their grand fleet, and on the twelfth King PHILIP and Marshal THESSE raised the siege with the utmost precipitation, and retired into France, leaving behind them an hundred and six brass canon, twenty-three mortars, and all their sick and wounded, and vast quantities of ammunition and provision: and it was observed, that there was the same morning about nine, an almost total eclipse of the sun, which is the French King's device.

A treaty having been concluded between the Confederates (except the Emperor) and Spain on the 13th of July 1713, wherein the Catalans were included, but refused to accept the terms procured for them, on the withdrawing the Confederate forces the Catalans garisoned Barcelona with their own troops, and stood upon their defence against the united powers of France and Spain. The enemy blocked them up 'till July 1714, when the Duke of Berwick joining King PHILIP's army, the siege was carried on in good earnest; eleven thousand bombs were thrown into the place, which destroyed several churches and monasteries, and above five thousand houses. The Enemy continued to batter the town with above eighty pieces of cannon and twenty-four mortars, which held out however 'till the eleventh of September, when there was a general storm, and the citizens having defended themselves with the utmost bravery 'till four the next morning, were then obliged to retire out of the new into the old city, and beat the chamade. The Duke of Berwick looked upon them as desperate men, consented to treat with them, and agreed to give them their lives and save the city from plunder; whereupon both town and castle were delivered up, and still remain in King PHILIP's possession, who upon this occasion divested them of many of their ancient privileges.

The fields about Barcelona are extremely pleasant, as well as fruitful, well watered by springs and rivulets, and thick set with villages. They have both silk and woollen manufactures, and excel in those of iron and steel. The wine they make has a good body and a fine flavour, and they export great quantities of it.

Tarragona is situated on the side of a hill by the sea-side, fifteen or sixteen leagues south-west of Barcelona, and was formerly a good harbour, but is so choaked up at present, that nothing but small vessels can enter it. It is encompassed with an antique wall and fortifications, which might contain two thousand houses, but there are not more than five hundred in the place at present; it is however the See of an Archbishop, to whom the rest of the Bishops of Catalonia are suffragans, and is still an university. The town, standing upon an eminence, enjoys a pure air and most delightful prospects, on one side over the sea as far as the eye can reach, and on the other over a pleasant fruitful country, abounding in corn, wine and oil, and interspersed with abundance of towns and villages. But this city is remarkable for its antiquity, having been built by the Phenicians, and in the time of the Romans made the capital of much the largest division of Spain, which from hence was called *Tarraconensis*. STRABO says, in his time it was as large and populous as Carthage. There are still several monuments of it's grandeur remaining, and particularly an ancient circus. Upon the taking of Barcelona in the year 1705, it surrendered to King CHARLES the present Emperor.

Tortosa is situated on the river Ebro, about four leagues north of the Mediterranean, and as many to the westward of the confines of Valencia; lying partly on a hill, and partly in a plain by the river side, over which there is a bridge of boats, defended by two redoubts or castles, as some travellers call them. It was possessed by the allies in the late war immediately after the taking of Barcelona in 1705, and esteemed by them a place of great importance, as it opened a passage into the kingdom

CHAP. XI. kingdom of Valencia on one side, and the kingdom of Arragon on the other. They ordered the fortifications therefore to be repaired, and kept a garison there till it was taken from them by the Duke of Orleans in 1708.

The town is adorned with several fine churches and religious houses, among which the cathedral, the royal college of the Dominicans and the convent of the Carmelites are most admired. They make here a great deal of silk and oil, and a fine sort of earthen ware in imitation of china. It is in general a town of good trade, to which the Ebro very much contributes, this river being navigable here, and affording it a communication with the Mediterranean.

Tortosa is supposed to be built out of the ruins of the ancient Ibera, a colony of the Romans, near which town the two SCIPIO's defeated ASDRUBAL the brother of HANNIBAL; and LIVY observes, that in his time it was one of the richest towns in Spain. It is at present a Bishop's See, suffragan of Tarragona, and a university, pleasantly situated in a country abounding in grain and fruits, having mines of silver and iron, quarries of alabaster and the most beautiful jasper.

Lerida.

Lerida is situated on a little rising hill, which descends insensibly to the banks of the Segra near the confines of Arragon, about thirty-five leagues to the westward of Barcelona, and eighteen to the northward of Tortosa. It is defended by a good wall, and other modern fortifications, but it's principal strength is the castle, which stands on a hill, that commands it. The town is generally well built with stone; the cathedral and the Bishop's palace are the most remarkable structures, from whence there is a fine prospect of the neighbouring country. The town is very ancient, having been founded by the Ilergetes, and by them called Ilezda; from whence it is supposed the modern name of Lerida is derived. Near this city JULIUS CÆSAR obtained a victory over AFRANIUS and PETREIUS, POMPEY's Lieutenants.

It has been several times taken and retaken in the wars between France and Spain. Upon the surrender of Barcelona, in the year 1705, Lerida declared for King CHARLES, in whose possession it remained till after the fatal battle of Almanza. The Duke of Orleans invested the town on the tenth of September 1707, and took it by storm on the thirtieth of the same month, the garison retiring into the castle, which held out till the twelfth of November following, and then surrendered upon honourable conditions. The garison most of them consisted of English. They lost abundance of brave officers and soldiers in the defence of it; though I question whether there did not more perish by sickness than the sword, as indeed was generally the case in this lingering unfortunate Spanish war; which if it had been well supported at first, had produced a peace seven years sooner. And this was the true reason it was so shamefully neglected by the then British ministry; their favourite General had lost his influence at court, and wanted great part of that immense treasure he left behind him, if a period had then been put to the war. I question whether the enemy was more rejoiced at our ill success in Spain, than some people in the administration. Lerida is a university and Bishop's See, suffragan of Tarragona.

Balaguer.

Balaguer stands at the foot of a hill on the river Segra, four or five leagues north-east of Lerida. It is a little fortified town, but of no great strength, declared for King CHARLES III on the surrender

of Barcelona in 1705, but was generally possessed by that party that was master of the field in the late war. It is situated in a fruitful country, that is, as far as it is cultivated; for it may be observed once for all, that their great towns are generally built near some river side, in the most fertile part of the country, which for a mile or two round, according to the extent of the place, is usually cultivated; but all beyond yields nothing, unless herbage and pasture for their flocks and herds, and is very often a barren soil.

CHAP. XI. Montserrat mountain and monastery.

In the diocese of Barcelona, seven leagues north-west of that city, lies the celebrated mountain of Montserrat, which overlooks all the plain of Barcelona as far as the sea. This mountain is not only taken notice of for it's extraordinary height, but the form of it, which rising up in a multitude of lofty pyramids, appear at a distance indented like a saw, and is supposed to have obtained it's name of *Montferratus*, from the Latin word *Serra* a saw. But this mountain is still more famous for it's supposed sanctity, on account of an image and chapel here dedicated to the blessed Virgin, which is resorted to by an infinite number of pilgrims. According to their tradition, this miraculous image of the Virgin, as 'tis called, was found in a cave by certain shepherds about the year 880; whereupon the Bishop of Barcelona and his clergy came thither with a design to have carried it to some other place; but it remained immovable, there was no stirring it from the place where the convent now stands. Whereupon GUIFRED Earl of Barcelona caused a monastery and chapel to be erected over it. PHILIP II and PHILIP III caused a magnificent church to be built in the room of the former old chapel, where the image had remained upwards of seven hundred years. The holy image now stands upon the altar of this church, being almost black, with a little Jesus in her arms: on one side of the altar is a picture of PHILIP III, and on the other a picture of his Queen; the place being enlightened with no less than ninety silver lamps, and in the treasury they shew a crown of the blessed Virgin's, valued at a million of florins. The convent is inhabited by monks of every nation, who with their servants make about three hundred persons. They entertain all who come thither, either out of devotion or curiosity, for three days gratis, with bread, wine, flesh, oil, salt, vinegar, and lodging, and there is no place to which pilgrims resort in greater crowds, unless it be to Rome or Loretto. Over the church towards the top of the mountain are the cells of thirteen hermits, hewn out of the rock with infinite labour, to which they ascend by steps cut out of the same rock. They are for the most part persons of quality, who being weary of the world, have retired thither to spend their time in solitude and devotion. Every one of them adjoining to his cell has a chapel, a garden, and a fountain springing out of the rock; over the cloyster is a leaning rock, to which they have fixed three crosses; here they say mass every day to implore the blessed Virgin that she will not suffer it to fall upon their church or cloyster, and not without reason, for in the sixteenth century part of the rock fell down upon their infirmary, demolished it, and killed several sick people. However, says my author, it is a charming solitude, they enjoy one of the finest prospects in the world, there reigns a profound silence, nothing is to be heard but the soft notes of birds, or the murmuring of springs and rivelets, which on every side fall down the rocks.

A coun-

CHAP.  
XI.

A countryman of ours (Captain CARLTON) who visited Montserrat in the late war, is in raptures when he describes this lovely mount: the relation is something long, and therefore I shall only give an abstract of the most agreeable scenes he presents us with.

Montserrat, says that gentleman, is a lofty hill in the middle of a spacious plain, which promises something extraordinary at a distance, hundreds of aspiring pyramids presenting themselves at once to the eye, but so intermingled with trees of magnitude as well as beauty, that your curiosity can never be satisfied with viewing it. Upon this hill are thirteen hermits cells, the uppermost of which lies near the summit: you gradually advance to every one by a winding ascent, by reason of the steepness; nor could a stranger easily find them out, unless he follow the old ass that daily carries them their provisions. This animal being laden at the convent with a pair of panniers, in which is a partition for every hermit filled with wine and victuals, goes up of himself without a driver to their respective cells, each man taking his proportion as he passes, and having reached the uppermost, returns back to the convent again.

These hermits our Captain esteemed extremely happy, and would willingly, he intimates, have exchanged his office for a cell. For what, says he, can be more desirable than to have every thing provided without care, the days without anxiety gratefully pass away amidst a vast variety of pleasing objects, their sleep never interrupted with any thing more offensive than murmuring springs, natural cascades, and the various notes of the pretty feathered choir? These good men seemed to me the very emblems of innocence; instead of moroseness and a pharisaical pride, too common in a recluse life, you meet with all imaginable affability and complaisance, they readily shew you all the rarities in their cells, and answer all questions with humanity and condescension. One of these reverend old men, while we were taking leave of him, whistled, and immediately a flock of beautiful little birds of several kinds surrounded him, some lit upon his shoulders, others upon his grey head and beard, whom he fed out of his mouth; and in short every hermit had some little innocent amusement to entertain the stranger with.

From these cells our traveller went to take a view of the convent, in the chapel whereof he saw the image of the Virgin so much adored: he says it appeared black and shining like ebony, though the priests assured him that the colour proceeded from it's lying concealed between two rocks when the Moors were masters of the country.

The ornaments of the chapel were so immensely rich, that our traveller tells us he thought all the treasures of the universe had been amassed together there; and yet when he was led into the repository, where the most valuable offerings are laid up, he found more costly presents, the superstitious tribute of the Roman Catholick Princes of Europe: among the rest there was a sword set with diamonds, an offering from King CHARLES III the present Emperor; and the King of Portugal had sent them a glory for the Virgin's head, every ray of which was set with diamonds, large at the bottom, and gradually lessening to the extremity of every ray, each ray being about half a yard long. But should I enumerate all the rich gifts I saw there, says the Captain, it would exceed all belief: as the upper part of the mount is a miracle of na-

VOL. II.

ture, so is this treasury a miracle of art. I shall only add, that every Sunday the hermits dine in the hall of the convent with the monks. I proceed now to the description of some other considerable places in Catalonia.

Vich is a little fortified town, situated in a fine fruitful plain on a little river that falls into the Ter twelve or thirteen leagues to the northward of Barcelona. It is remarkable for little but being a Bishop's See, and declaring for King CHARLES III, the present Emperor, the first of any town in Spain. In the neighbouring mountains are found amethysts and topazes,

Gironne, *olim Gerunda*, is situated on the side of a hill at the confluence of the Ouda and the Ter, which wash the walls of it, and stands about twenty leagues north-east of Barcelona, and seven to the westward of the sea, being the capital of the viguery called the Lampourdan. The town is moderately large and strongly fortified, and has some handsome buildings in it, particularly the cathedral church dedicated to our Lady, which is richly adorned and beautified: the high altar shines with gold and precious stones, and the image of our Lady upon it is of solid silver. The town has a flourishing trade, is honoured with a university and a Bishop's See, and stands in one of the fruit-fullest parts of Catalonia.

This town declared for King CHARLES on the taking of Barcelona in the year 1705, and remained in his possession till the twenty-third of January 1710-11, when it was taken by the Duke of Noailles, after a siege of six weeks.

Ampurias is a little sea-port town at the mouth of the Fluvia, twenty leagues to the northward of Barcelona, six north-east of Gironne, and three to the southward of Roses, a town anciently very considerable. Before the Romans entered Spain, Ampurias consisted of two distinct towns, divided only by a wall, the one inhabited by the Greeks, and the other by the natives. These nations preserved their respective manners and customs, and had no communication with each other but upon account of trade. In this state they remained for several ages, till JULIUS CÆSAR having defeated POMPEY's party, and then he built a third town adjoining to the former, and left a Roman colony in it; soon after he conferred on the natives the privilege of Roman citizens, as he did afterwards on the Greeks, and united these three people into one; after which the language and manners of the Romans became universal, and a temple was erected to the honour of DIANA of Ephesus; on one of the columns whereof was the following inscription, which has preserved the memory of this event; viz. EMPORITANI POPVLI GRÆCI, HOC TEMPLVM SVB NOMINE DIANÆ EPHESEÆ EO SECVLO CONDIDERE QVO NEC RELICTA GRÆCORVM LINGVA NEC IDIOMATE PATRIÆ IBERÆ RECEPTO IN MORES IN LINGVAM IN IVRA IN DITIONEM CESSERE ROMANAM M. CETHEGO ET L. APRONIO. COSS.

The Greeks had given this town the name of *Empurias*, or *Emperium*, which in their language signified a place of trade, which was easily changed into that of Ampurias. The territory of Ampurias is called the *Ampurdan*, (*Emporitanus Ager*) though upon the decay of this town, Gironne is become the capital of this district or viguery. The Bishop's See was also upon the same account removed from Ampurias to Gironne.

CHAP.  
XI.

Roses.

Roses is a port-town situate on a bay of the sea, a little to the westward of Cape Creus, seven or eight leagues to the northward of Gironne, two or three to the northward of Ampurias, and ten to the southward of Perpignan in Roussillon. It is well fortified, and defended by a fort, which stands upon an eminence by the sea-shore, that commands the entrance into the bay. This town rose out of the ruins of the ancient Rhoda, or Rhodopolis, which was built by the Greeks of Rhodes at Cape Creus. It was the only place in Catalonia that held out for King PHILIP all the last war, who now remains in possession of it.

Campredon.

Campredon is a pretty fortified town, situate on an eminence near the river Ter, about ten leagues north-west of Gironne, the capital of a viguery, and defended by a citadel which stands in the middle of the place. To the north of Campredon is a high mountain, where they find crystal.

Puicerda.

Puicerda, the capital of the county of Cerdagne, is situated in a fine plain, between the rivers Carol and Segra, at the foot of the Pyrenean mountains. It is a pretty large town, and fortified after the modern way, being a frontier against France. The neighbouring country abounds in fruit and game, and there are some quarries of jasper of various colours in their mountains, and two medicinal fountains.

Urgel.

Urgel is situated on the same river Segra, in a fruitful plain surrounded with mountains, and well planted with vines, four or five leagues to the westward of Puicerda, and has the honour of being a Bishop's See.

Solsona.

Solsona is situated at the foot of a mountain on the river Cardonero, twenty leagues north-west of Barcelona, and is only remarkable for being the See of a Bishop.

Cardona.

Cardona is a handsome town, situate on an eminence near the river Cardonero, nine or ten miles to the southward of Solsona, most remarkable for a prodigious mountain of salt of all colours, but becomes perfectly white on washing it. The salt, according to my author, is inexhaustible: notwithstanding it has been dug these two thousand years, it yields to the present owner, the Duke of Cardona, forty thousand ducats per annum. When the sun shines on this mountain, nothing can appear brighter, one would think it was all composed of precious stones; and notwithstanding salt generally renders the soil barren where it is found, this mountain produces lofty pines, and is planted with excellent vines.

## CHAP. XII.

*Treats of the province or kingdom of Valencia, and of the chief towns contained therein.*

CHAP.  
XII.Valencia.  
Situation,  
&c.

Air.

Soil.

VALENCIA stretches itself along the Mediterranean sea from north to south, being bounded by Arragon and Catalonia towards the north; by the Mediterranean on the east; by Murcia on the south; and by New Castile on the west; being about sixty-three leagues in length from north to south, and five and twenty in breadth from east to west, where broadest.

This is one of the most agreeable provinces in Spain; the air is pure and temperate, and they enjoy almost a perpetual spring. 'Tis true, the country is in several parts encumbered with mountains, but the plains and valleys on the sea-coast are extremely fruitful in wine, oil, sugar, rice, oranges,

lemons, pomegranates, and all manner of fruits. In every season of the year we find leaves, fruit and blossoms on the trees, nor do they want silk, flax, or honey; but the soil does not seem very proper for corn. In their hills are mines of gold, silver and alum, quarries of alabaster and marble, and the sea furnishes them with plenty of fish: but they have too often the misfortune of seeing all the fruits of the earth destroyed, with the leaves of trees and every thing that is green, for many miles in a few hours, by those innumerable armies of locusts which visit them from Africa. Nor is this the worst of it, for they have no sooner done them this irreparable mischief, but they die away, and cause such an intolerable stench, that they infect the air, and occasion a variety of diseases.

This province is well watered with rivers and brooks, of which some reckon up five and thirty; they all run from east to west, or from the north-west to the south-west, and fall into the Mediterranean sea. The chief of them are the Miglias, or Millares, the Morviedro, the Guadalquivir, the Xucar, and the Segura.

The Miglias, or Millares, rises in Arragon, and running south-east, falls into the sea a little below Villa Real.

The Morviedro rises towards the confines of Morviedro, and running eastward passes by Segorba, falling into the sea a little below the town of Morviedro.

The Guadalquivir, so called by the Moors on account of the pureness of its waters, is not so remarkable for its depth as its agreeable and beautiful banks, always covered with roses and other flowers, or the most delightful groves of trees, from its source to the mouth of it. This river rises on the confines of Arragon and New Castile, near the town of Albarazin, and runs from the north-west to the south-east cross the kingdom of Valencia, falling into the sea near the capital city of the same name.

The Xucar rising in New Castile, runs through the province of Sierra, where it receives the two small rivers of Cabriel and Oñara, after which it crosses Valencia from east to west, and falls into the sea near the little town of Cullern.

The Segura rises in Andalusia, and taking its course through the kingdom of Murcia, enters Valencia, near Origuela, discharging it self into the sea near Guardamar.

The kingdom of Valencia was much better peopled anciently than it is at present, for it was from hence that the greatest part of the Moors were banished to Africa in the year 1610, on suspicion that the converts they had made amongst them were still inclined to Mahometism, and never failed to profess it when they had an opportunity of doing it with impunity. But still there is a great mixture of old and new Christians, or of native Spaniards and Moriscoes, as they stile the descendants of the ancient Moors, and these apply themselves much more to mechanick arts and husbandry than the former, which may be one occasion of the fertility of this province.

The chief towns are Valencia, Morviedro, Segorba, Zeric, Villa Real, Villa Hermosa, St. Mattheo, Castello de la Plana, Peniscola and Morella to the northward; and Alzira, Montesa, Xativa, Gandia, Denia, Altea, Alicante, Elche, Elda, and Crigula to the southward.

Valencia, the capital, is situated in a fine plain on the river Guadalquivir, or Turia, two miles from

Segura.

Chief towns.

CHAP. XI. from the sea, lying about fifty-five leagues south-east of Madrid, and as many south-west of Barcelona. It is surrounded by a wall and some antique fortifications, but esteemed a place of no great strength. The form of the town is round, and contains about twelve thousand houses. All the travellers I meet with concur in admiring the beauty of the place, and it's charming situation; they enjoy, says one of them, a sweet temperate air, and are scarce sensible of winter; they abound in all things that can render life agreeable: the town is watered with a fine river, over which there are five stone-bridges, and their fountains are innumerable: the suburbs, large as the town, are intermixed with the most beautiful gardens: the inhabitants are of an obliging agreeable conversation, and entertain you with an air of gaiety, not to be met with in other parts of Spain: their women the finest and most inclined to gallantry of any of the sex: but here comes the curse, (for I never met with a place extremely happy or engaging in some respects, but it was as unfortunate in others) these fine ladies and their gallants occasion perpetual quarrels; and it is said there are more bravo's and assassins natives of Valencia, than of all the provinces of Spain besides, who for a dollar will murder any man you are jealous of: so that here is no safety among all this vast variety of delights, which surely must imberter every thing that carries the name of pleasure.

But I am apt to think murders are not so frequent as travellers suggest, for all the nobility and gentry almost of the province reside at Valencia, trade and manufactures flourish here, and there are abundance of rich merchants and tradesmen in the place, who would certainly find other seats if there was so little safety to be met with. Their principal manufacture is silk, they have also those of woollen, and their foreign trade in wine, oil and fruit is considerable.

In the neighbourhood of this beautiful city, there is on one side a continued regular plantation of fruit-trees and ever-greens, and towards the sea a bay is formed by the mouth of the river, three leagues in length and one in breadth, which abounds in fish and wild fowl; and about half a league to the eastward is a little fortified town, called Porto el Grujo, which may be looked upon as the port to Valencia. All the way from Valencia to Xativa, which is no less than nine leagues, looks like a garden, and the country is so populous, that the towns and villages are not half a league asunder, where we see crowds of women and children before the houses busied in spinning of silk.

But to return to the town. The most considerable publick buildings are the cathedral, the Viceroy's palace, and that of Cinta; the monastery of St. Jerom, the exchange and the arsenal. In the time of the Romans, it was esteemed the most beautiful town in Spain. From PLINY we understand it was a Roman colony, as well as by an ancient inscription, wherein it is stiled *Colonia Julia Valencia*. There are many fragments of antiquity still remaining in and about the city. It was the seat of the Moorish Kings; till they were expelled by JAMES the First, King of Arragon, stiled the Victorious, in the year 1238, who united this province to the rest of his dominions. It is at present the See of an Archbishop and a university, and was one of the first towns that declared for King CHARLES III. after the taking of Barcelona in the year 1705, but suffered suffi-

ciently for her forwardness after the loss of the battle of Almanza, anno 1707: they were sacrificed with the rest of our friends in Spain to the covetousness and ambition of a certain General, who would not suffer the English forces in Spain to be timely re-inforced, lest there should have been too sudden a revolution in that kingdom, which might have eclipsed his glory, and put an end to the war, before his insatiable avarice had acquired a treasure equal to that of many crowned heads.

Morviedro is situated at the foot of a high hill on the river Palencia, or Morviedro, four or five leagues to the northward of Valencia, and about two leagues from the sea. It is surrounded with an old wall and towers, and contains seven hundred families.

Upon the top of an adjoining rock they shew the ruins of the once famous but unfortunate Saguntum, whose citizens, in the war between the Romans and Carthaginians, being confederates of the former, after having sustained a siege of nine months, chose rather to bury themselves in the ruins of their town, than submit to HANNIBAL, for which their bravery and resolution has been often celebrated in Roman story. It was retaken eight years after by Scipio, who restored it to those that remained alive of the inhabitants. Upon one of the gates we meet with the following inscription, viz. SENATUS POPULVSQVE SAGVNTINORVM CLAVDIO INVICTO PIO FEL. IMP. CÆS. PONT. MAX. TRIB. POT. P. P. PROCOS.

At another gate near the cathedral, is the head of HANNIBAL cut in stone: from hence as we ascend the rock, we meet with the ruins of an amphitheatre, consisting of six and twenty benches hewn out of the rock, and above the amphitheatre the remains of an ancient Roman fortress.

Segorba is situated on an eminence, in the middle of a spacious plain surrounded with mountains, on the river Morviedro, ten leagues north of Valencia, and as many to the eastward of the sea. It is a walled town, consisting of about eight hundred families, and defended by a castle: the See of a Bishop, and capital of a duchy. Near it is a quarry of excellent marble, which the Romans used to transport to Rome to adorn their palaces.

North-west of Segorba stands the little town of Xerica, the capital of a county.

Four or five leagues to the northward of Morviedro stands Villa Real, upon the river Millares, about a league from the sea. It was a handsome little town, consisting of about eight hundred inhabitants, till taken by storm in the year 1706 by the Marshal DE TORRES, King PHILIP's General, who burnt it down to the ground, and put the people to the sword, as he served several other towns in the neighbourhood for adhering to King CHARLES III.

Alzira is situated on the river Xucar, six leagues to the southward of Valencia, and is remarkable chiefly for it's silk-manufacture.

Xativa was situated on a rising ground, nine or ten leagues south of Valencia. It was one of the finest towns in Spain, and consisted of about three thousand families, but after the battle of Almanza, anno 1707, it was burnt, and the fortifications razed by King PHILIP's army. This was another melancholy consequence of the Confederates deserting their friends in Spain who had declared for them, only to humour some favourite Generals in other parts of Europe. King PHILIP since ordered

C H A P. XI. ordered another town to be built in the place where Xativa stood, and called after his name.

Gandia. Gandia is situated on the little river Alcoy, within half a league of the sea, ten leagues south of Valencia, most remarkable for its sugar-works.

Denia. Three or four leagues south-east of Gandia lies the town of Denia, on the sea-coast, defended by a castle situated on a neighbouring mountain, and has a tolerable harbour.

Altea. Three or four leagues further south stands Altea, on a high hill, rather adorned than defended by an old castle, famous for its bay, where ships frequently take in water. The country-people here made no difficulty in declaring their inclinations for King CHARLES the Third, when the confederate fleet touched here in their way to Barcelona, anno 1705; for which they suffered sufficiently afterwards.

Alicant. Alicante is a sea-port town, defended by a strong castle situated on a rock, about twenty leagues south of Valencia, and as many to the northward of Cartagena. It is a town of the best trade of any in the province, particularly in red and white wines, oranges, lemons and other fruits. The confederate fleet commanded by Sir JOHN LEAKE took both the town and castle in the year 1706; but immediately after the battle of Almanza, King PHILIP's forces retook the town, and blocked up the castle; the latter however held out against all the efforts of France and Spain till April 1709. The enemy tried all imaginable ways to reduce it, and among the rest had recourse to mining, in which they made but a very slow progress, the rock being extremely hard; they lodged however twelve hundred barrels of powder in the rock, and then summoned RICHARDS the Governor to surrender, acquainting him at the same time with his danger, and giving leave to two of his officers to come out and view the mine, which they did accordingly, and upon their report the Governor held a council of war, wherein it was resolved not to surrender; whereupon the enemy sprung their mine, which made an incredible noise, but had no great effect upon the castle; only the Governor, Major-General RICHARDS, and Colonel SYBURGH, happening to be a little too near the place where the mine was, were unfortunately blown up and buried in the ruins, with several other officers. The command hereupon devolving upon Lieutenant-Colonel D'ALBON, he determined to hold out till he was relieved, and venture another mine. On the 15th of April 1709, to the great joy of the garison, Sir GEORGE BYNG, and Major-General STANHOPE, appeared before the place with a fleet of men of war, and four thousand land-forces on board; but the Spanish army being much superior to them, they did not think fit to disembark their troops, but contented themselves with sending a flag of truce on shore, with an offer of withdrawing the English garison out of the castle, which the Spaniards agreed to; and pursuant to this capitulation, the garison, consisting of five hundred men, marched out the eighteenth of April 1709, N. S. with two pieces of cannon, and all other marks of honour, and embarked on board the fleet. Either the Confederates apprehended it impracticable to throw supplies into the castle while the Spanish army were possessed of all the avenues, or they might be of opinion that another mine would totally demolish it; at least that it would be more eligible to withdraw the garison in time, than run the hazard of another experiment.

Origuela, or Orihuela, is situated in a fruitful plain surrounded with mountains, on the river Seguria, in the midway between Alicant and Cartagena, and about a league from the confines of Murcia. It is enclosed with a wall, and defended by an old castle, and has the honour of being a university and the See of a Bishop. The neighbouring country abounds in corn, wine, fruits, honey, flax and salt; infomuch that it is become a proverb, whether it rains or not, there is always plenty at Origuela.

### C H A P. XIII.

*Treats of the province of Estramadura.*

THIS province and the two Castiles are frequently comprehended in one; but I shall follow our best maps, and describe Estramadura as a distinct province from the Bastiles, and bound it with the province of Leon on the north; by New Bastile on the east; by Andalusia on the south; and by Portugal on the west; being about sixty leagues in length from north to south, and thirty-four in breadth from east to west. The mountains of Banos, Pico and Guadaloupe divide it from the two Castiles on the east, and those of Sierra Morena separate it from Andalusia on the south; but the rest of the country is plain and level, if compared with the other provinces, and esteemed the most fruitful part of Spain, to which the rivers that water it very much contribute: the chief of them are the Tagus and Guadiana, Rivers that cross it from east to west. The Alagon, which rising in the north runs southward, and passing by Coria, falls into the Tagus. The Almonte, which rising in the east takes its course north-west, and falls likewise into the Tagus. And the Zuja, which has its source in Sierra Morena, and running first to the north, then turns about to the west, and discharges itself into the Guadiana near Medelin.

The chief towns are Placencia, Coria, Alcantara, Albuquerque, Feria, Truxillo, Guadaloupe, Merida, Medelin, Badajoz, Xeres de Badajoz and Lerena.

Placencia is situated on the banks of the little river Xente, surrounded with mountains, about forty leagues south-west of Madrid. Both mountains and valleys in the district of this city are extremely fruitful. The plains produce excellent grain, and on the mountains are whole forests of fruit trees, as apples, pears, chefnuts, olives, cherries, peaches, apricots, lemons, oranges, pomegranates, figs, &c. The town itself is well built, containing about two thousand houses, which form several fine streets and squares, embellished with fountains, and is the See of a Bishop.

Coria also is an episcopal city, ten leagues to the westward of Placencia, situate in a fruitful plain on the little river Alagon. The cathedral is the only publick building mentioned by travellers, as worth the viewing. The city has the title of a marquise, and belongs to the Dukes of Alva.

Alcantara is situated on the river Tagus, ten leagues south of Coria, and three to the westward of the confines of Portugal, a frontier garison against that kingdom, most remarkable for a magnificent bridge over the Tagus, said to be built in the reign of the Emperor TRAJAN by the people of Lusitania. It is raised two hundred foot above the water, and though it consists but of six arches, is six hundred and seventy foot long, and eight

CHAP. XIII. eight and twenty broad, and has this inscription on it, viz.

IMP. CÆSARI. D. NERVÆ F. NERVÆ  
TRAJANO AVG. GERM. DACICO. PONT.  
MAX. TRIB. POTEST. VIII. IMP. VI. COS.  
V. R. P.

At the foot of the bridge there is a little antique chapel hewn out of the rock, first dedicated to TRAJAN, and afterward by the Christians to the honour of St. JULIAN. This town was built by the Moors on account of the convenience of the bridge over the river, which here runs in a very deep channel, having high craggy rocks on each side of it. The Moors give it the name of Alcantara, which word in their language signifies a bridge. ALFONSO the Tenth, King of Leon, took it from them, and gave it to the knights of Calatrava, who afterwards took the title of knights of Alcantara.

Truxillo. Truxillo, or Trugillo, *olim Trogillum* and *Turris Julia*, is an ancient town, situate among the mountains on the side of a hill, having a citadel on the top of it, fourteen or fifteen leagues south-east of Alcantara, and forty-five south-west of Madrid, contains about a thousand houses, said to have been built by JULIUS CÆSAR, and famous in these latter ages for the birth of FRANCIS PIZARRO, Marquis de las Charcos, one of the Spanish Generals that discovered and conquer'd the empire of Peru.

Guadalupe. Eight leagues to the eastward of Truxillo, on the confines of New Castile, stands the little town of Guadalupe, on a river of the same name, in a plain surrounded with mountains, which also have obtained the name of the Guadalupe mountains. The town is well built, and pleasantly situated in a country that looks like a forest of fruit-trees, where grapes, oranges, figs, and other delicious fruits abound. That which contributes much to it's fertility are three or four small brooks, which falling from the mountains, run winding through the valley, and enrich it with their waters. But what the town is most famous for is a miraculous image, as they call it, of the blessed Virgin, which, according to their tradition, lay buried many hundred years in the time of the Moors, and now performs abundance of cures; at least, devout people who have implored her assistance, upon their recovery have presented her with a great many offerings, and pilgrims visit her shrine from all parts of Spain. This image, like that of Monferrat in Catalonia, is turned almost black, also supposed to be occasioned by it's lying long under ground.

Merida. Merida is situated on an eminence contiguous to the river Guadiana, twenty-five leagues north of Seville, and fifty-five south-west of Madrid, formerly known by the name of *Emerita Augusta*, and was the capital of the ancient Lusitania. There are still some noble remains of antiquity here, as the ruins of the walls, which shew it's ancient grandeur, though the town be small at present, not containing above a thousand inhabitants. AUGUSTUS built a fine bridge over the Guadiana at this place, and two aqueducts, and caused a highway to be made from thence to Seville. The aqueducts are entirely ruined, and there is another modern one in their room, much inferior to the former, which however conveys water to the town from a considerable distance. The bridge was carried away in the year 1610 by a flood, and another built at a great expence. Among other remains of antiquity, there is a triumphal arch pretty well preserved, which seems to have been the

gate of a cirque or theatre. The town was fortified about the time that the Portuguese threw off the Castilian yoke, and in the last war with that nation the Spaniards laid up their magazines here. It is at present a Bishop's See, and by some called the capital of Estramadura.

Badajoz is situated on an eminence on the south bank of the river Guadiana, sixty leagues south-west of Madrid, ten to the westward of Merida, and about half a league to the eastward of the confines of Portugal, against which kingdom it is the strongest frontier town the Spaniards have, and is generally called the capital of Estramadura. It is a Bishop's See, and contains about four thousand inhabitants. The houses are well built, and the streets tolerably large, but the beauty of it is their great square, on one side whereof stands the cathedral church of Saint John, and on the other the Governor's palace. It is divided in two parts, viz. the high and low town, and defended by two castles, one on the side of Andalusia, called St. Michael, and the other on the opposite side of the river, called St. Christophal, which defends the entrance on the bridge, a very fine structure, built of large hewn stone on thirty arches. The town has sustained two memorable sieges without being taken, one by the Portuguese in the year 1658, and the other in 1705 by the confederates, when the British General the Earl of Galway, a French refugee, lost his right hand by a cannon-shot. The town stands in a very fertile soil: it is needless to enumerate the kinds of fruit, having done it so often already in treating of other towns in this province.

Xeres de Badajoz is a little city, about eight leagues south-east of Badajoz, and belonged formerly to the knights templars, which occasioned it's being called Xeres de Cavalleros. The principal riches of the place consists in cattle, which are fed in the fine pastures about it. It is said they send no less than fifty thousand horned cattle annually to the fairs of Escalona and Villena.

Medellin is situated on the Guadiana, six leagues to the eastward of Merida, in a fruitful country, abounding in all things, said to be founded by Q. CÆCILIVS METELLUS, a Roman Consul, and famous for the birth of FERNANDO CORTEZ, the Spanish General that conquered Mexico.

Ellerena, or Lerena, stands about ten leagues to the southward of Medellin, near the mountains of Sierra Morena, built by the knights of the order of St. James, and honoured with the title of a city. It is situated in a fruitful soil, rich in pasture.

#### CHAP. XIV.

*Treats of the province of Andalusia.*

ANDALUSIA is bounded by a long chain of mountains, called Sierra Morena, which separate it from Estramadura and New Castile, on the north; by Murcia and Grenada, towards the east; by the same province of Grenada, the streights of Gibraltar and the Atlantick Ocean on the south; and by Portugal, from which it is divided by the Guadiana and Chanca, towards the west; extending in length about ninety leagues from east to west, and about sixty in it's greatest breadth from north to south, but in many places, especially towards the east, it is not thirty leagues over. It has the advantage of near seventy leagues sea-coast. Andalusia is part of the ancient Bætica, which comprehended this province, Grenada, and that

Name. part of Estramadura which lies south of the Guadiana. It was called Vandalitia from the Vandals, who settled here in the fifth century, and from thence corruptly Andalusia. The Moors possessed themselves of it in the eighth century, and divided it into the kingdoms of Cordoua, Seville and Jaen. They enjoy here a pure serene heaven, a healthful air, and a soil answerable to the most luxurious wishes, abounding in corn, wine, oil, sugar and honey. They have large herds of great and small cattle, and the most beautiful breed of horses in Europe, and no country was more famous for it's rich minerals till America was found out. True it is, great part of the summer is excessive hot; but as the Spaniards in the southern provinces sleep away the middle of the day, and seldom travel but in the morning or evening, the natives are far from thinking the heats intolerable, especially as they are frequently refreshed by sea-breezes, and by many other ways which necessity, the mother of invention, has taught them to avoid the heats. Besides other minerals, in the mountains of Andalusia they find plenty of quick-silver and vermillion.

Rivers. The principal rivers of this province are the Guadalquivir, which runs the whole length of it from east to west, and divides the country into almost two equal parts. The Xenil, which rising in the kingdom of Grenada, enters Andalusia above Lucena, and taking it's course to the westward, discharges it self into the Guadalquivir. The Odier, or Odiel, which rising in the confines of Estramadura, runs to the southward, and discharges it self into the ocean. The river Tinto, which runs almost parallel to the Odier, and falls into the ocean a little to the eastward of that river. The waters of the Tinto are so bitter, that there is no drinking them, nor can any fish live in it. The Guadiamar runs from north to south, and falls into the Guadalquivir. The Chanca runs from north to south, and falling into the Guadiana, divides Andalusia from Portugal. The Guadalete, by the Latins called *Letbe*, rises on the confines of Grenada, and running south-west by Bornos and Arcos, discharges it self into the sea at Port St. Mary's. And the Guadarmena, which rising in New Castile, runs from north to south, and discharges it self into the Guadalquivir below Cacorra.

Division. I shall divide this province as it was formerly, into east and west: the east contains the ancient kingdom of Cordova, and the west the kingdom of Seville.

**Chief towns.** The chief towns in the kingdom of Cordoua are Cacorla, Ubeda, Baeza, Jaen, Alcala Real, Anduxar or Andujar, and Cordoua.

The chief towns in the kingdom of Seville are Medina-Sidonia, Oñuna, Ecya or Ecija, Carmona, Marchena, Seville, St. Lucar Arcos, Port St. Mary, Cadiz, Rota, Gibraltar, St. Lucar la Mayor, Xeres de Guadiana, Aymonte and Lucena.

Jaen, the capital of a kingdom in the time of the Moors, is situated at the foot of a mountain, fifty-five leagues south of Madrid, and about twenty to the eastward of Cordova, surrounded with a wall and antique towers, and defended by a castle. The town is tolerably large and populous, adorned with a handsome square, fine churches and cloysters, agreeable fountains, and the magnificent houses of many of the nobility and gentry of the province that reside here. But this city is most remarkable among the Spaniards for the image of St. Veronica, who lent her handkerchief to the blessed Jesus when he was carrying his cross, to which devout

people resort in crowds. It is at present the See of a Bishop, suffragan of Seville, and situate in a country abounding in silk, corn, wine, oil and excellent fruits.

Cordoua, the capital of a kingdom also in the time of the Moors, is situated on the north bank of the river Guadalquivir, having the mountains of Sierra Morena on the north, and a spacious plain to the south, about sixty leagues to the southward of Madrid, and twenty-four to the eastward of Seville. The form of it is an oblong square, stretching from east to west along the river Guadalquivir. The extent of the town is very large, but not populous in proportion, there being abundance of large gardens and orchards within the walls. It is adorned with some fine buildings, palaces, churches and religious houses, and has several large handsome suburbs, of which the most considerable is towards the east. The cathedral is a vast magnificent structure, built for a Mahometan Mosque by ABDACHAMAN, King of the Moors, in the eighth century, who made Cordoua the seat of his government. This church is six hundred foot long, and two hundred and fifty wide, having four and twenty large doors adorned with excellent workmanship. The roof is sustained by three hundred and sixty-five pillars of alabaster, jasper and black marble, a foot and half diameter. The new chapel in it is as large as some churches, lined with marble and richly gilded, as is all the roof of the church. That vast number of slender pillars which divide the several chapels from each other, make a very grand appearance on entering the church. The Moors were in possession of this city five hundred and twenty years, during all which time the Christians were allowed liberty of conscience, and had six churches, in which they performed divine service: for this privilege they paid a very inconsiderable tribute.

Cordoua is a Bishop's See, the episcopal palace a large edifice, chiefly remarkable for it's fine gardens, in which is a wilderness of orange-trees. The King's palace is at the west end of the town, of a vast extent, and surrounded with walls like a castle. In the stables are kept two hundred horses of the Andalusian breed, esteemed the finest in Europe. The Place Major, or grand square, is another ornament to this city; it is surrounded with fine houses, supported by a large piazza. Cordoua being thus elegantly built, and enjoying an excellent air, abundance of persons of quality have their residence in it. The town has also a flourishing trade by means of the Guadiana, which begins to be navigable at this city. Several great men, as well ancients as moderns, were natives of Cordoua, particularly the two SENECA's, the Poet LUCAN, TROGUS POMPEIUS, PORCIUS LATRO, AVICENNA, AVERROES, FERDINAND GONSALVO, AMBROSIUS MORALES, &c. The neighbourhood of Cordoua is extremely agreeable and fruitful; the mountains, at the foot of which it is built, are full of gardens, vineyards, and forests of fruit-trees, interspersed with a variety of fine valleys, watered with springs and rivulets. When their groves of oranges and citrons are in blossom, they perfume the whole country. It is one of the diversions of Cordoua to walk in the fields in a serene summer's night, to breathe that delicious air, Their vines produce wine of an excellent taste, and their fields afford such an abundance of all things, that it is with justice called the granary of Spain.

Seville is situated in a vast fruitful plain upon

CHAP.  
XIV.

CHAP.  
XIV.

on the banks of the river Guadalquivir, twenty leagues north-east of the ocean, about twenty-four north-east of Cadiz, and seventy south-west of Madrid, anciently called *Hispalis* from its situation; *Hispalis* in the language of the Phenicians or Tyrians, who were the founders of it, signifying a green plain. The city is one of the largest in Spain, of a round form, and encompassed with an old wall and towers, rather an ornament than defence to it, about eight miles in circumference, having twelve handsome gates. The houses are well built after the Moorish plan, but the streets are narrow; the inhabitants computed at three hundred thousand. There are several considerable suburbs, that called Triana on the opposite side of the river is the chief, with which there is a communication by a bridge, and on each side the river are keys, where ships discharge and receive their lading. JULIUS CÆSAR rebuilt and beautified this city, giving it the name of *Julia Romula*. It was the seat of the government in the time of the Gothick sovereigns, and afterwards the capital of one of the most considerable Moorish kingdoms, till taken from them by FERDINAND III, King of Castile, in the year 1248, after a siege of sixteen months, when he drove out most of the Moorish inhabitants, and introduced the Christians in their room, and is still the metropolis of Andalusia, being one of the most ancient Archbishopricks in Spain, the revenue whereof is said to amount to thirty thousand pounds sterling per annum. The cathedral was a Mahometan mosque, built in the tenth century by the Moors, and is one of the most magnificent structures of the kind in Spain, four hundred feet in length, two hundred and seventy in breadth, and an hundred and twenty-eight in height, and containing no less than fourscore chapels and altars, where masses are said every day. There are in the city a great many other fine churches and monasteries.

On the south side of the town is the royal palace called Alcazar, of which the finest part was built by the Moors. Here we see on every side the imperial eagle, with CHARLES the Fifth's motto, *Plus ultra*. The gardens belonging to this palace are extremely fine. Other publick buildings taken notice of by travellers are the palace of the inquisition, the exchange, the India-house, the mint, the colleges belonging to the university, which has not the reputation it had formerly; a noble aqueduct, which brings water from Carmona, six leagues from the city. Their hospitals amount to an hundred and twenty of all kinds, some of them very large and beautiful. There are a great many spacious squares also in Seville, adorned with fountains and magnificent buildings, and no town abounded more in wealth in the last age, when all the trade to Potosi and America in general was carried on here. Their traffick is still considerable, but Cadiz and other sea-ports have deprived them of a great deal of it, the river not being navigable for large vessels higher than St. Lucar. Seville is larger than Madrid; its situation on the river Guadalquivir in one of the most beautiful plains in the world, renders it a very desirable abode. The Spaniards look upon it as one of the wonders of the world, a perfect paradise, especially in a fine evening, which they seldom want, when all the quality repair to the neighbouring fields in their coaches to taste the fragrant air, perfumed with a variety of sweet flowers and blossoms that nature produces here in almost every season. Their olives are the best in Europe, and grow in the greatest quantities;

there is a wood of them not far from the city near twenty miles in circumference.

Cadiz, *olim Gades*, or, as the English usually pronounce it, Cales, is situated on the north-west point of the island of Leon, or Lions, in thirty-six degrees thirty minutes north latitude, six degrees forty minutes to the westward of London, and about ninety-four leagues south-west of Madrid. The island it stands upon bears some resemblance to a pear with a long stalk, and is in length from the south-east to the north-west about six leagues; the north-west end where the town stands is scarce half a league broad; the south-west end is about three leagues over, and has a communication with the continent by a bridge called Ponte Sanore. The island with the continent over against it form a bay four leagues long, and in most places two in breadth, only about the middle of the bay are two points of land, one on the continent, and the other on the island, so near together that the forts upon them, called the Puntal and Matagorda, command the passage, and within these points is the harbour, which it is impossible for an enemy to enter till he has taken the said forts. This was the reason that the confederates in their expedition against Cadiz in the year 1702, made their descent near Port St. Mary's on the continent, in order to attack the fort called Puntal on that side, and thereby facilitate the entrance of their fleet into the harbour. Some other reasons were given for their landing on that side, as the furnishing themselves with provisions, and giving the country an opportunity of declaring for them: it was also thought very hazardous landing on the backside of the island next the ocean, there running so great a surf upon the shore. But I find it was the opinion afterwards, both of the Generals and Admirals, that the landing on the back of the island, notwithstanding the hazard, had been the most likely way to have carried the town; and that though they had taken the fort of Puntal, the fleet could not have entered the harbour unless they had made themselves also masters of Fort Matagorda on the island. This I thought fit to observe for the animadversion of those who may hereafter be concerned in an attempt of the like nature against this place. The Earl of Essex and Sir WALTER RALEIGH, in the year 1596, took the town before they attempted the ships within the puntals.

But to return to the town: It stands upon so very narrow a point of land that there is scarce any ground between that and the sea, except to the south-west; and it is the general opinion, that part of the island has been washed away or destroyed by an earthquake, together with great part of the ancient Gades, the present dimensions not agreeing with those given us by the Greek and Roman historians. However, the city is computed to contain still about five thousand houses, and has a prodigious foreign trade, the Galleons annually taking in their lading here, and returning hither with the treasures of Potosi, and other rich merchandizes of America; and here accordingly are the finest store-houses in Europe. This also is the principal port where the royal navy of Spain have their rendezvous, and where most of their largest ships are careened and fitted out.

Cadiz is a Bishop's See, the cathedral a fine building, richly adorned and furnished; besides which there are several other handsome churches and convents, and a spacious square with a fountain in the middle of it.

The island consists of hills and plains, but produces

CHAP.  
XIV.

Cadiz.

island

no grain of any sort. Their vineyards however afford excellent wine, and their pasture is extremely rich. In the bay and on the island they make abundance of good salt of the sea-water.

The Phenicians first possessed themselves of this island, and erected a temple to HERCULES in it; after them the Carthaginians and the Romans were successively masters of it. The Romans, probably on account of its trade and wealth, resorted hither more than to any other distant town; inasmuch that it is said, no less than five hundred Roman knights resided in the city at once.

Port St. Mary's is situated on the opposite side of the bay of Cadiz on the continent, about three leagues north-east of that city, remarkable for the descent the Confederates made there in the year 1702, and the unhappy conduct of some of their officers, who too much encouraged their soldiers in plundering the place and abusing the nuns, notwithstanding they declared themselves their friends; which gave the Spaniards such an opinion of our heretick troops, as did them an inconceivable prejudice in the wars that followed in that kingdom.

Gibraltar is situated in thirty-six degrees north latitude, six degrees to the westward of London, at the foot of the famous Mount Calpe, usually called one of HERCULES'S pillars, the other being Abyla, or Sierra de las Monas, over against it in Africa. There is a chapel on each of them, the one called Our Lady of Europe, and the other our Lady of Africk. But to return to Gibraltar: It is a little fortified town, built on a tongue or slip of land that runs out into the Mediterranean sea, and forms a bay called the Bay of Gibraltar. The mountain or rock which covers it towards the land is half a league in height, and so steep that there is no ascending it by a body of troops if they are opposed. When the French and Spaniards besieged it in 1704, five or six hundred men indeed found means to climb up the rock in the night-time, but being discovered, were part of them made prisoners by the English garrison, and the rest broke their necks down the rock. In the late siege, anno 1727, the Spaniards attempted to mine under the rock, but did not make such a progress as to give them hopes of removing the mountain, and it is by most held to be impregnable on the land-side. On the other hand, if the enemies should be masters at sea, it seems much more feasible to attack it from thence; and though the place might hold out a considerable time, it must of necessity yield at length, if it is invested on all sides: there is not a town in the world, perhaps, but may be taken if it cannot be relieved, the art of war is arrived at such perfection. As to the town itself, it was little better than a heap of rubbish very lately; the native Spaniards most of them left the place upon our taking it in 1704, and there have not been many British families settled there since. The communication with the neighbouring country being entirely cut off by the Spaniards, makes it but an uncomfortable abode: they have no other provision than what is imported from abroad. The English government are indeed about to establish a corporation there, and to make it a free port; but the want of a good harbour, and the uncertainty of remaining long at peace, I doubt will discourage merchants from settling there: and as it is like to be a perpetual bone of contention, whether England will gain much by the possession of it, is a very great question. The strait to which this town communicates its name is about eight leagues in length and five in breadth. Ceuta in

Africk stands directly opposite to Gibraltar, from whence it is distant five or six leagues. There is a strong current that constantly sets into this strait from the ocean, which will carry a ship ten miles an hour, and requires a brisk gale to stem it.

## CHAP. XV.

*Treats of the province of Grenada.*

THE province or kingdom of Grenada is bounded by Andalusia towards the north; by Murcia and the Mediterranean sea towards the east; by the same sea on the south; and by Andalusia on the west: being about sixty-five leagues in length from east to west, and twenty-five in breadth from north to south, where broadest. The face of this province is very rugged and uneven, and the mountains so exceeding high, that notwithstanding the heat of the climate they are generally covered with snow.

The breezes from the mountains and the sea Air. are mighty refreshing in this province, but many of their valleys are hot notwithstanding; which, together with the scarcity of water in some places, renders travelling almost impracticable in the day-time during the heats, especially between Grenada and Seville: but still the air is not unhealthful, or so excessive hot as in Andalusia. While the industrious Moors were masters of this kingdom, it equalled most countries of Europe in plenty of corn, wine, oil, and delicious fruits. It was then crowded with inhabitants, and manufactures flourished: but the banishing the greatest part of that people has rendered it quite another thing. However, at this day 'tis said to afford every thing that can render life agreeable, that their very mountains produce vines, olives, oranges and other fruit-trees, and their grapes are the largest we meet with any where: sugar-canes thrive in their valleys, and they make vast quantities of silk. Thyme and other sweet herbs growing in their pastures, gives the flesh of their cattle a delicious relish. From hence we import oranges, pomegranates, figs, raisins of the sun, Malaga raisins, and rich wines. The soil also produces melons, flax and hemp; and the sea abounds in good fish. They have rich mines in their mountains, and quarries of precious stones. The principal rivers are the Xenil and the Daro, which uniting their streams at Grenada, run to the westward, and fall into the Guadalquivir; the Guadalentia, which rising near Guadix, runs eastward through Murcia, and falls into the sea before Lorca. In the time of the Moors it contained thirty-three populous cities, of which not more than sixteen retain that name at present.

The chief towns at this day are Grenada, Guadix, Baza, Loxa, Antequera, Malaga, Cartama, Munda, Ronda, Velez Malaga, Alhama, Almuñecar, Solebregua and Almeria.

The city of Grenada is situated at the foot of the mountain called Sierra Nevada, or the Snowy Mountain, partly on two little hills, and partly in a plain, at the confluence of the rivers Daro and Xenil, sixty leagues to the southward of Madrid, and twenty north-east of Malaga, and is said to have taken its name from the grenades or pomegranates which the country about it produces in abundance. It is surrounded with an antique wall and towers, being about twelve thousand paces in circumference, and hath twelve gates. On

CHAP.  
XV.

the west side of the city lies a delightful plain, well watered with springs and rivulets: towards the east the country is rocky and mountainous, but abounds in fountains and refreshing streams. Between the two hills above mentioned is a deep valley, through which the little river Daro runs, and having traversed part of the town, unites its waters with the Xenil, which is said to have gold dust mingled with its sands, from whence it is sometimes called the Golden River. The town is divided into four great quarters, known by the several names of Grenada, Alhambra, Albaycin and Antiquerula. That of Grenada is much the finest, and stands in the plain between the mountains, where the nobility, clergy, merchants and wealthy citizens chiefly reside. This quarter is adorned with elegant buildings publick and private, and with several spacious squares embellished with fountains: most of the houses of the quality have gardens and fountains belonging to them.

The cathedral church is in this quarter; a fine edifice, but not large: the most remarkable thing in it is the dome, supported by twelve large pillars finely painted and gilded. Near it is the chapel where King FERDINAND V, and ISABELLA his Queen, who conquered Grenada, lie interred. The altar is nobly adorned, and the sacristy richly furnished. The chancery is in the same quarter, where the sovereign council of Grenada and the officers of the treasury assemble. There is a magnificent square before it of an oblong form, adorned with fountains.

The second quarter of the town, which commands the rest, is called Alhambra from the redness of the soil, and sometimes the Mountain of the Sun. Here are situated two castles or palaces, the one built by PHILIP II, and the other by the Moorish Kings. From the lower town we ascend to this quarter by a fine walk of trees, adorned with statues and fountains. The palace built by PHILIP is of blue stone, the architecture admirable, but it was never finished. The palace of the Moorish Kings is much larger, said to contain lodgings and accommodations for forty thousand people. The walls are lined with jasper, porphyry and other beautiful marbles, which form a sort of Mosaic work; the ceilings finely painted and gilded, and on the walls are abundance of inscriptions in Arabian characters. This palace is still kept in repair, and affords an admirable prospect of the city and neighbouring country. On the outside it has the appearance of an old castle, but within is extremely magnificent. In the middle is a spacious court paved with marble, surrounded with a noble piazza and galleries over them, at the four corners whereof are as many marble fountains, and in the middle one of an uncommon size, adorned with groups of figures, from whence the water is conveyed to the bagnio's of the Moorish Kings, which are rooms with vaulted roofs lined with alabaster, having basins to bathe in the middle of them: from the bathing-room they passed to another to dry themselves, and from thence to a third, where they slept, or trifled away the time with their women during the heat of the day. Adjoining to the palace is a fine park and gardens well replenished with fountains, rivulets and shady groves, which render it a very desirable retreat in the summer.

The third quarter of the city called Albaycin was formerly looked upon as a suburb divided from the rest of the town by a wall. It stands upon an

VOL. II.

CHAP.  
XV.

eminence opposite to the other, and consists of about two thousand houses. All the inhabitants of this quarter are Morecoes, distinguished from the other Spaniards by their language, their habits and manners, and are for the most part husbandmen.

The fourth quarter of Grenada was called Antiquerula because it was first peopled by a colony from Antiquera. It lies in a bottom, and is inhabited chiefly by those employed in the silk manufacture and dyers. Grenada is a trading town, but not comparable to what it was in the time of the Moors, when they computed there were sixty thousand houses, and two hundred thousand inhabitants in the place. There are an incredible number of fountains here, and they never want ice and snow in the adjoining mountains to cool their wines, which occasions abundance of people of quality to resort hither from all parts of the kingdom during the heats.

Grenada was esteemed on account of its situation and its fortifications, one of the strongest towns in Spain while it was in the hands of the Moors, but it being of so large an extent, and having no other defence than the old walls and towers, would not be able to sustain a long siege, at this day. It was surrendered by BOABDIL the Moorish King, to King FERDINAND V. Anno 1491, on condition that the Moors should be left in possession of their lands, arms and horses, keep their Mosques, enjoy the free exercise of their religion, and be governed by their own laws; and such as desired it, had liberty to sell their effects and retire to Africk. How that capitulation was observed, will be related in the history of this country. It is at present an Archbishop's See and an University, but one of the most inconsiderable in Spain. The fields in the neighbourhood of the town are exceeding pleasant, particularly on the south and west: on that side next Antiquera, as has been intimated already, is a large plain eight leagues in length and four in breadth, called the Vega de Grenada, encompassed with little hills, and interspersed with villages, besides abundance of fine monasteries and hospitals: to sum up all, says my author, Grenada is a most delightful abode, the soil produces plenty of excellent fruit, and every thing that is desirable in life; the air is pure and serene, and not so excessive hot as in Andalusia; and so remarkably healthful, that people resort hither to restore their shattered constitutions. The Moors were so ravished with the situation, that they imagined paradise to be in that part of the heavens which is directly over it.

Guadix is situated ten leagues east of Grenada; it is an ancient town formerly called Acci, or Colonia Aceitana. It is a large place, and lies on the side of a hill, in the middle of a spacious plain surrounded by mountains on every side, and watered with four little brooks or torrents. The houses are not well built; nor is it remarkable for any thing, unless the cathedral and some fine cloisters.

Baza, or Baca, lies seven leagues north-east of Guadix, in a valley called Hoya de Baca. It is tolerably large, containing about four thousand houses; but has nothing remarkable, unless the church of Our Lady of Piety, where they tell us great miracles are wrought. The soil is well cultivated for about half a mile round, and produces corn, wine, honey, flax and hemp; but the country beyond, as in many other parts of Spain, lies unmanured.

XV.

Loya.

Loya, or Loya, lies at the foot of the mountains, on the river Xenil, six leagues to the westward of Grenada. The town is moderately large, and remarkable for its pleasant situation, the fields about it being a perfect garden. They supply Grenada with great quantities of fruit, herbs, flesh and other provisions; the neighbouring mountains being well stocked with flocks and herds of cattle as well as game.

Antiquera

Antiquera is situated twelve leagues south-west of Grenada, partly on little hills at the foot of the mountains, and partly in a plain. It is a fine large town, the streets spacious, and the houses well built; defended by an antique wall and towers, and a castle situated on an eminence at one end of the town, fortified after the manner of the Moors, and esteemed a strong place in those days, but has no modern fortifications. It stands in a fruitful country, well watered with fountains and rivulets, and the natives employ themselves in silk and other manufactures; but they are most famous for their salt-pits, where they make salt enough to serve the whole province. Two leagues from the town is a medicinal spring which cures many diseases, and particularly the gravel.

Malaga.

Malaga is situated on the sea-coast, two and twenty leagues north-east of Gibraltar at the foot of a steep mountain, between which and the sea there is but just room enough for the town, which is not very large or well built, but considerable on account of its trade; its harbour and fortifications being defended by a double wall, and two castles one above another on the adjoining mountain. It is esteemed a rich populous place, considering the extent.

In autumn every year resort hither great numbers of foreign ships, particularly from England and Holland, to load fruit, as raisins, almonds, figs, oranges, capers, &c. besides wines, some of which have obtained the name of Malaga from the place they are put on board, and are the produce of the neighbouring country. Malaga is the See of a Bishop suffragan of Grenada, and the cathedral an elegant building, richly furnished and adorned, as are most of the great churches in Spain. It was near this city that happened the last general sea-fight between the Confederates and the French, in the year 1704, when the latter seemed to resign the empire of the Ocean to their enemies, having never appeared at sea with their grand fleet since.

Ronda.

Ronda is a pretty little town, honoured with the title of a city, and stands on the top of a high rock, at the foot whereof runs the little river of Rio Verde, to which there is a descent by four hundred broad steps, cut out of the solid rock. It lies about six or seven leagues north-east of Gibraltar, on the confines of Andalusia, which is separated from this province of Grenada by a long chain of mountains, called the mountains of Ronda, vastly high and uneven, and almost one continued barren rock.

Velez Malaga.

The town of Velez Malaga lies about five leagues to the eastward of Malaga. It is situated in a fine plain, surrounded with mountains, and has an old castle belonging to it of no great strength. The principal trade of the natives is in dried raisins, which grow on the hills, about it, in oranges, citrons, and other fruits.

Alpuxar mountains inhabited by the Moriscos.

Near Velez Malaga lie the mountains of Alpuxar, containing seventeen leagues in length and eleven in breadth inhabited altogether by the descendants of the Moors, who notwithstanding they profess the christian religion, retain their ancient

customs and habits, and by their application to husbandry render this mountainous tract one of the most fruitful parts of the country.

CHAP.  
XV.

Alhama baths.

The town of Alhama is situated near the source of the river Rio Frio, seven leagues south-west of Grenada, and is a handsome town, moderately large, but most famous for its baths, esteemed the best in Spain; they rise from several fountains, and the waters thereof are so clear, that a piece of money may be seen plainly at the bottom: the heat is so moderate and agreeable, that people bathe in them with pleasure; nor have they any ill taste, and yet are allowed to heal many diseases and infirmities. The Kings of Spain have built here a vast edifice for the use of the court, from whence people go down into the baths by stone steps, to what depth they please: and hither the nobility and gentry resort, as well for pleasure as their healths, at the seasons for bathing, which are in spring and autumn. A little above these baths are frightful rocks, from whence the river Frio issues with a terrible noise, forming several natural cascades. The waters of this stream are excessive cold, from whence the river takes its name. A little below it unites its waters with those of the baths, and running southward falls into the sea near Puerto de Torres, where it forms a small bay.

Almeria is situated on a bay of the Mediterranean, fourteen or fifteen leagues south-east of Grenada, and four or five north-west of Cape de Garte, well known to our mariners. It stands in a fruitful soil, watered with fountains and rivulets, and abounds with such fruits as are common in the rest of the province, but chiefly with olives, of which they make excellent oil. The town is very ancient, and a Bishop's See, suffragan to Grenada.

## CHAP. XVI.

*Treats of the province of Murcia.*

THE province or kingdom of Murcia is bounded by New Castile on the north and west; by Valencia and the Mediterranean towards the east; by the same sea on the south, and by Grenada on the south-west; and is five and twenty leagues in length, and three and twenty in breadth, being much the least of all the provinces of Spain. This country produces good corn and wine, but not much of either, it is so very rocky and mountainous. Their greatest riches are their fruits, silk and sugar, and they have some rice. Here are also quarries of rich marble, and other stones. The air is generally pure and healthful.

CHAP.  
XVI.  
Murcia province.

The most considerable rivers are, 1. The Segura, Rivers. anciently called Terebus and Sorabis, which rising in New Castile, takes its course eastward, and running through the middle of this province, passes over the south part of Valencia, discharging itself into the sea at Guardamar. 2. The Guadalentin, Guadalentin. which rising in the kingdom of Grenada, runs eastward through the south part of Murcia, and falls into the sea near Almacaron.

The chief towns are Lorca, Murcia, Cartagena and Almacaron.

Chief towns.

Lorca is situated on an eminence, at the foot whereof runs the river Guadalentin, about six leagues from the sea. It is tolerably large, but in a declining condition, inhabited chiefly by new Christians, or Moriscos, as they are called, whose principal employment is husbandry.

Lorca.

Murcia, the capital of the province, is situated in a fine plain on the river Segura, sixty-four leagues

Murcia.

leagues south-east of Madrid, and about twelve south-east of Alicante, being four or five miles in circumference. It is tolerably well built, and besides the cathedral, has several handsome churches and monasteries. Upon an eminence a little above it stands a castle, more an ornament than defence to the place. The country about it is extremely fruitful and pleasant; it abounds chiefly in olives and mulberry-trees, the leaves whereof feed an incredible number of silk-worms, silk being their principal manufacture. Here are also some plantations of sugar-canes and rice, but very little other grain.

Cartagena

Cartagena, *Cartago Nova*, is situated at the bottom of a fine bay of the Mediterranean sea, seven or eight leagues south of Murcia. The town is not large or rich, but most considerable on account of its harbour at present. In the adjacent country, it is said, are some mines of precious stones, as rubies, amethysts and carbuncles, besides others of gold and silver, which have not been wrought for many years; their alum mines however are still very valuable. HANNIBAL, or AMILCAR, it is said, first laid the foundation of this town in the second Punic war, the Carthaginians having here their principal magazine. It increased within a short time to such a degree that it became the capital of Spain, and it was computed sixty several people were subject to it, but was taken by Scipio in the year of Rome 544, where he found prodigious quantities of gold and silver plate, and other treasures. This town was almost entirely destroyed by the Goths and Vandals, and remained a considerable time almost buried in its ruins, till the commodiousness of its harbour drew people again to settle here, whereupon PHILIP the second built the last walls and fortified it, since which it has flourished a little, but falls infinitely short of its ancient grandeur in the time of the Carthaginians and Romans. It is still however the See of a bishop, suffragan of Toledo, and one of the most ancient Sees in Spain.

Almacaron.

Almacaron lies on the sea-coast at the mouth of the river Guadalatin, six leagues to the westward of Cartagena, considerable chiefly for its alum mines, honoured with the title of a city.

## CHAP. XVII.

*Treats of the Spanish islands.*The  
Spanish  
islands.

THE principal islands belonging to Spain in the Mediterranean are the Balears, consisting of Majorca, Minorca, Ivica and Fermentera, which were sometimes called the kingdom of Majorca. They are situated between the thirty-eighth degree thirtyminutes and fortydegrees fifteen minutes north latitude; the most easterly of them, which is Minorca, lying four degrees to the eastward of London; and Ivica, the most westerly of them, forty minutes to the eastward of London. They are said to have obtained the name of Balears from the Greek word *Ballo* to throw, the natives being very expert at slinging stones, and using the sling as the principal missile weapon in their wars. They were also called Gymnesia from their going naked.

Majorca.

Majorca, the largest of these islands, and which has Minorca on the north-east and Ivica on the south-west, is situated about seven and twenty leagues to the southward of the coast of Catalonia, and thirty-two to the eastward of Valencia, being about twenty leagues in length from the south-

west to the north-east, and fifteen in breadth from the south-east to the north-west. The face of the country is very rough and mountainous, especially on the coast, but there are several fine plains and valleys in the heart of the island, where we meet with arable lands, meadows, vineyards and orchards. There are several good ports and roads for shipping on the coast. The air is healthful and more temperate than the neighbouring continent, not so hot in summer or so cold in winter; and they are said to abound in corn, wine, oil, salt, honey, saffron, cattle, wool, game and fish; but there are no wild beasts or noxious animals on the island. I don't find they have one stream that deserves the name of a river, to supply which defect however, they have a great many springs, from which they water their grounds; but in dry years they are forced to import corn from abroad for their subsistence. They resemble the Spaniards on the continent in their customs and manners, more particularly those of Catalonia. People of condition usually speak Spanish, but the common people a dialect called Limousin, a barbarous kind of French. The chief towns are Majorca and Alcudia.

No rivers.

Majorca is situated towards the bottom of a large bay, on the south-west side of the island, partly on a hill and partly in a plain, being defended by a wall and other fortifications, and contains about six thousand houses. The streets are broad and the squares spacious, the houses built of hewn stone. They reckon up two and twenty churches in the place, besides chapels and oratories; the cathedral is esteemed an elegant building. The harbour is large, and secure against all winds but the south-west. This city is the residence of the Viceroy, who had the government of all the islands till Minorca was yielded to the English, and is a Bishop's See, whose jurisdiction also extended over the whole kingdom.

Alcudia is situated on a peninsula in the east part of the island, and contains about a thousand houses. It is defended by a wall and two forts, but neither this nor the capital city made any defence, when the forces of King PHILIP landed here after the reduction of the Catalans in 1715.

The next island of consequence is that of Minorca, situate five or six leagues north-east of Majorca. It stretches itself from the north-west to the south-east, and is about ten leagues in length and four in breadth. This island also is incumbered with mountains, which are not so fruitful as those of Majorca. The language and customs of this people differed little from those of Majorca, till the conquest of it by the English in 1708. What this island is most considerable for, is the fine harbour of Port-Malon, situated in the south-east part of the island, where the greatest fleets may ride secure from tempests or enemies. The garison of Fort Philip and the other forts erected for its security, made but a mean defence when the English attacked them; but the fortifications are since so well improved, that it would require a good fleet and army to reduce them at this day. I do not meet with any rivers here any more than in Majorca; and notwithstanding the pretended fertility both of the one and the other, which most writers entertain us with, I am very well assured the English garisons in Minorca would find it difficult to subsist, if they were not supplied with provisions from abroad. The only town of any note is Cividella, or Citadella, situate on a bay of the

No rivers.

A barren  
island.

CHAP.  
XVII.

Yvica.

the sea at the west end of the island, which contains about five or six hundred houses.

The island of Yvica, or Ivica, lies twelve or thirteen leagues south-west of Majorca, and is about ten leagues in length and eight in breadth. This island also is mountainous; it produces some corn and fruits; but what it is most considerable for, is it's salt, of which they transport great quantities. The chief town is called Yvica, the ancient *Ebussa*, situated on a bay of the sea in the south part of the island, which travellers have not thought worth a description.

Formen-  
tera.

The little island of Formentera lies about two leagues south of Ivica, once well peopled, but now perfectly deserted on account of the Turkish and Barbary rovers, who frequently come on shore here. Some have pretended that it was forsaken on account of the multitude of serpents and other poisonous insects that were found here; but I am pretty well assured there are no venomous insects here, or in any other of the islands of Balears. There is another little uninhabited island called Cabreta, a little to the southward of Majorca, and several more near the mouth of the Ebro on the coast of Catalonia, but they have not been thought worth a particular description.

The islands of the Balears have usually partaken of the fate of Spain. They were possessed by the Phenicians and Greeks, and afterwards by the Romans. The Moors made themselves masters of them about the seventh century. In the year 1230, JAMES King of Arragon conquered Majorca, and two years afterwards Minorca; and in 1344, PETER IV, King of Arragon annexed them to his crown. Majorca revolted at the instance of the Catalans against the present King PHILIP V, and continued the war against him after the Confederates had withdrawn their forces out of Spain; but Barcelona being surrendered, they submitted to King PHILIP on his transporting an army of fourteen or fifteen thousand men thither without striking a stroke. As to Minorca, that was confirmed to the English by the peace of Utrecht, having been reduced by them in the year 1708. There is nothing in the island but the celebrated Port Mahon which could induce the English to be at the charge of keeping it; and this indeed, in case of a war with any of the powers that border upon the Mediterranean, might be a considerable advantage to the nation. But if Spain is determined never to entertain a sincere friendship for us, 'till this, and that other barren spot on which Gibraltar stands are yielded to them, whether we shall be gainers by keeping them in the end, may deserve consideration. I proceed in the next place to give an abstract of the history of this kingdom.

## CHAP. XVIII.

*Contains an abstract of the ancient and modern history of Spain.*

CHAP.  
XVIII.Abstract  
of the an-  
cient his-  
tory.Phenici-  
ans and  
Greeks  
plant colo-  
nies in  
Spain.

THE writers of the last and some preceding ages, have pretended to shew us from which of the sons of NOAH every people on the face of the earth are descended, unless the inhabitants of America: but as they have no records, no history, or even tradition to support their conjectures, I shall not abuse the reader's patience by entertaining him with their random guesses. Certain it is, both the Phenicians and the Greeks, who planted colonies on the coast of Spain about the time

that Rome was built, found the country well peopled at their arrival. The Celtæ also, a French nation, who passed the Pyrenees about the same time and fixed themselves on the banks of Ebro or Iberus, are said to have inter-married and incorporated with the natives they found there; and from this union the inhabitants of the north-east part of Spain, 'tis supposed, afterwards obtained the name of Celtiberians.

JOSEPHUS and some other Hebrew writers relate, that NEBUCHADNEZZAR having subdued the Phenicians, Jews and Egyptians, and being acquainted with the rich traffick they carried on with Spain, invaded that kingdom afterwards, and extended his conquests as far as Cadiz. But however that were, it is agreed on all hands, that the Phenicians were soon after in possession of Cadiz, Malaga and the other ports they had made themselves masters of on the coast of Spain again (if ever they were expelled from thence) and that the Phenicians encroaching on the natives, and building forts on the continent, so exasperated the Spaniards, that they entered into a general confederacy against them, and had well nigh driven them out of their country, when the Phenicians called in the Carthaginians, who were descended from the same ancestors, to their assistance. Which invitation the Carthaginians gladly accepted, having themselves long waited for an opportunity to make a descent on the coast of Spain, and for that end already possessed themselves of the islands of Balears. It was about the year 236 A.R. 236; after the building of Rome that the Carthaginians under the command of their General MAHERBAL came into Spain to the assistance of their brethren and allies the Phenicians. The war continued between the natives and these foreigners for several years with various success; but the Carthaginians, who are represented as much superior to the Phenicians, as well as the Spaniards in point of policy or state-craft, partly by force and partly by treaties, procured themselves at length such an extent of country, and so strongly fortified themselves, that they began to assume the dominion of the south part of Spain, and treat both the natives and Phenicians as their subjects, and especially on the sea-coasts, there being at that time no maritime power able to oppose their naval forces.

It is related, that about the year 307 after the building of Rome, the Senate of Carthage fitted out two squadrons of ships, the one under the command of HANNO for the discovery of the coast of Africk, and the other under HAMILCAR to sail northward about Spain and the rest of Europe. HANNO, whose fleet consisted of sixty galleys, on which he had thirty thousand men and women on board in order to plant colonies where he thought proper, setting sail from Cadiz to the southward, built a city on the coast of Africk which he named Thymiaterion; and having afterwards discovered some islands under the equinoctial, returned home. PLINY indeed says, he passed the Cape of Good Hope and sailed northward as far as the Red Sea, from whence he sent an account of his expedition to Carthage: but those who are acquainted with the seas about the southern part of Africk will not easily believe that the galleys his fleet is said to consist of could live in those seas. It is generally agreed, however, that HANNO was out five years upon discovery, and did not return to Carthage 'till the year 312. As to HAMILCAR, it is said he kept close to the coast of Spain 'till he had passed Cape Finiserra,

CHAP. XVIII. Finisterra, and then steering eastward discovered the coasts of Gaul and Britain, and according to some sailed as far as the Baltick, spending about two years in this voyage.

The Carthaginians did not only establish themselves in Spain about this time, but were endeavouring also to subdue the islands of Sicily and Sardinia; but the natives calling in the Romans to their assistance, the Sicilian war proved a very long and bloody one, and the Carthaginians were in the end driven from thence. Several of the cities of Spain also, being weary of the Carthaginian yoke, entered into an alliance with the Romans, particularly Roses, Empurias and Saguntum. Whereupon HAMILCAR, father of the celebrated HANNIBAL, was sent into Spain with a powerful army, and reduced some of the places that had revolted; after which he built the city of Barcelona, but was killed in a battle with the natives and their allies the Romans about the year of Rome 522, in which, 'tis said, the Carthaginians lost forty thousand men.

Hamilcar

522.

Asdrubal  
builds Car-  
thage.

528.

ASDRUBAL succeeding HAMILCAR in the government of Spain, restored the affairs of the Carthaginians, and built the city of Carthage, which so increased in wealth and power, that it soon after became the capital of their dominions on that side, to which the commodiousness of the harbour (being the best in Spain) did not a little contribute. While ASDRUBAL remained here, the Romans sent an embassy to the republick of Carthage proposing that the Ebro might be the boundary between the Romans and Carthaginians in Spain, except the city and territory of Saguntum, which lay to the westward of the river Ebro, and was in alliance with Rome, which they desired might also remain independent of Carthage. And though that republick was not very well pleased with the Romans intermeddling in the affairs of Spain, yet being acquainted with the success of that people against the Gauls at this time, they thought fit to dissemble their resentment and sign a treaty to that effect. The Ambassadors however were no sooner dismissed, but ASDRUBAL began to make preparations for a war with the Romans; in which having spent three whole years, he was assassinated by the slave of a noble Spaniard whom ASDRUBAL had put to death, about the year 532. To him succeeded the celebrated HANNIBAL, no less an enemy to the Romans than ASDRUBAL, who determining to fall upon the Saguntines, and drive them and the rest of the Spaniards who were in confederacy with the Romans beyond the Ebro, if we may credit the Roman writers, underhand incited the Spaniards in alliance with Carthage to enter into a dispute with the Saguntines about their limits; and under pretence of doing justice to the allies of the republick, laid siege to that city. The Saguntines hereupon sent Ambassadors to Rome to acquaint that state with the danger that threatened them, and to desire an army might march to their relief. But the Roman Senate, either not prepared to enter into a war, or doubting the success of it, contented themselves with sending a herald to HANNIBAL, requiring him to rise from before Saguntum, and not offer violence to the allies of Rome, which that General was so far from regarding, that he pressed the siege with the greater fury, and after eight months carried the place by storm. It is reported, that many of the inhabitants finding all was lost, and that there was no prospect of relief, took all their richest

Saguntum  
taken by  
Hannibal.

movables and set fire to them in the market-place, killing their wives and children, and afterwards themselves with their own hands, rather than submit to the enemy: insomuch that when the Carthaginians took the city, they found in it scarce any thing but a heap of ruins. Thus was Saguntum destroyed in the 536th year of Rome, or according to others the 534th, when PUBLIUS CORNELIUS and TITUS SEMPRONIUS were Consuls; a town much celebrated in Roman story for its unshaken fidelity to that republick, though the neglect the Romans shewed of that brave people does not seem to reflect much honour on their state. The town of Morviedro in Valencia, about five miles from the sea, is supposed to have been built out of the ruins of Saguntum. But to proceed: The Romans upon the destruction of this city declared war against Carthage; whereupon HANNIBAL, leaving his brother ASDRUBAL in the Further Spain beyond the Ebro with a good body of African forces, assembled an army of 12000 horse and 90000 foot, composed of Spaniards and Africans, though some make their numbers much less, and having passed the Ebro, left HANNO another of his brothers with a body of troops in the Hither Spain, continuing his march from thence through France into Italy over the Pyrenean mountains and the Alps, which were before thought unpassable for an army. The Romans did not only assemble an army and make head against this bold invader in Italy, but sent CNEIUS SCIPIO into Spain with another army to make a diversion on that side. HANNIBAL's success in Italy, especially at the battle of Cannæ, where 40000 Roman foot and 3000 horse were killed, besides 12000 made prisoners, has been already related in the history of Italy.

CHAP. XVIII.

536.

Hannibal's

France in-  
to Italy.

In Spain however the Carthaginians were every where beaten: SCIPIO defeated the army of HANNIBAL in the Hither Spain, and made their General prisoner. He gained a victory also over the Carthaginian fleet, took several towns in the Further Spain, and kept ASDRUBAL in play, whom HANNIBAL had left there, to command in his absence. The Senate of Rome hereupon sent PUBLIUS CORNELIUS SCIPIO into Spain with a reinforcement of troops to the assistance of his brother, rightly judging that if they could cut off the supplies which HANNIBAL received from Spain, he would be obliged to abandon Italy. The two SCIPIO's therefore, in obedience to their orders, fell upon ASDRUBAL, who was marching towards Italy to the assistance of his brother, and entirely defeated him; ASDRUBAL with the remains of his army throwing himself into Carthage. The Carthaginians were routed afterwards in several other encounters, but received at length such numerous reinforcements from Africa, and particularly from their friend and ally MASIENNA, an African Prince, that the Romans in Spain received a signal defeat, wherein the two SCIPIO's who commanded them were killed. And now the Carthaginian Generals believing there was no enemy left to oppose them, observed no manner of discipline, but dispersed themselves all over the country, either to plunder or revenge themselves on such Spaniards as had appeared in the interest of their enemies. Which MARCUS, a Roman tribune, observing, assembled a body of Roman troops, and falling first upon one part of the Carthaginian army and then upon another, and defeating them in several engagements, maintained his ground

'till PUBLIUS CORNELIUS SCIPIO was sent into Spain, with a greater reinforcement to his assistance. SCIPIO laid siege to the capital city of Carthage in the year of Rome 544, which he carried in a few weeks. The next year the Carthaginians were defeated in a general battle, and before the end of the year 548, driven intirely out of Spain.

The war being ended in Spain, SCIPIO returned to Rome, and being chosen Consul, attacked the Carthaginians in Africk, where meeting with a series of successs, the republick of Carthage found themselves under a necessity of recalling HANNIBAL from Italy to defend their own country; but this General being defeated also by SCIPIO, a peace followed, the terms whereof were very advantageous to the Romans, and thus ended the second Punick war, in the year of Rome

552. SCIPIO, who was son and nephew to the two SCIPIO's who lost their lives in the Spanish war, obtained a triumph on his return from Africk, and had the title of AFRICANUS conferred upon him for the signal service he had done the republick in this war. But to return to Spain.

The Spaniards had no sooner expelled the Carthaginians by the assistance of the Romans, but they found themselves in a worse condition under their deliverers than they were in the days of their former masters; for HANNIBAL and many of the Carthaginian chiefs having intermarried with the Spaniards, they were in a manner become one people, and their interests the same, though there might be some instances of partiality towards the Africans, as they received their governors from thence. But still, 'tis evident they had much better have borne with a few slight inconveniences and discouragements from the Carthaginians than have promoted another revolution in favour of the Romans; for the latter had no ties of relation or interest to induce them to use the Spaniards better than any other people they had subdued. They politickly pretended indeed, when they invited Saguntum and other cities to accept of their alliance, to have no other views but the freeing an injured people from the Carthaginian yoke, and restoring them to their liberties: but when they had driven out the Africans, and established themselves in their room, they soon gave the natives to understand they must now receive laws from their republick; and what is worse, they saw themselves frequently abandoned to the avarice and cruelty of the Governors and Generals that were sent amongst them, and lived neither under the protection of their own laws, or the institutions of that people who had acquired the dominion of them. Magistrates were sent amongst them, not to assert their liberties, or defend their rights, but to patch up their broken fortunes by pillaging the natives, as is become the general practice of our days, where any power is possessed of distant plantations, and hath established colonies abroad.

The Spaniards provoked by the cruelty and oppressions exercised on them by the Roman officers, had recourse to arms in many places, and several smart engagements happened, wherein great numbers were killed on both sides. The Roman writers have not been so particular in enumerating their own losses as those of their enemies, of whom they tell us in one engagement they killed 12000, in another 15000, &c. but still the Roman Senate were so apprehensive of a general revolt, that they thought fit to send M. PORCIUS CATO thither,

A. R. 559, (the first Consul that ever commanded in Spain) with a reinforcement of two legions, of whom their writers relate, that having killed forty thousand Spaniards in one general battle; besides a multitude of others in sieges and skirmishes, he sold abundance of the natives for slaves, demolished most of their fortifications, and reduced them to that despair, that many of them chose to die by their own swords rather than submit to the Roman government; after which he left strong garisons in the country and returned to Rome, whither he carried a hundred and forty-eight thousand pound weight of silver, and five hundred and forty pound weight of gold, which he had plundered the country of, besides a prodigious treasure that he distributed amongst his soldiers.

After CATO, Spain was governed generally by Prætors, one sent to the Hither and the other to the Further Spain, 'till the year 601, during which time we find the natives complaining to the Senate of Rome of the oppressions and extortions committed by their Governors, for which they could have no redress, which occasioned a general insurrection of the Spaniards: they defeated their enemies in several engagements, killing many thousands of them. The city of Numantia, situated in Old Castile near the source of the Duero, being at the head of this confederacy, it obtained the name of the Numantian war, and was a very long and bloody one; insomuch that the Roman Senate found it necessary to send Generals of consular dignity into Spain again, at the head of numerous armies. Of these LUCULLUS and GALBA rendered their names infamous by their treachery and cruelty: GALBA, when the town of Coca had surrendered to him upon certain conditions, was no sooner possessed of the place but he put all the inhabitants to the sword: And SERGIUS GALBA, when the Lusitanian army had submitted to him, caused them all to be murdered. Both LUCULLUS and GALBA raised prodigious fortunes by the plunder of this people, and being charged with their rapaciousness and cruelty at Rome, which had rendered the Spaniards desperate, and occasioned the continuance of the war, and a considerable loss both of men and money to the republick, they found means to buy their peace with the very spoils they had robbed the Spaniards of: from whence some have observed, that the most notorious villains often escape the hand of justice, while poor puny sinners are executed without mercy.

Upon GALBA's return to Rome, Spain was again under the government of Prætors; when VIRIATUS, a poor shepherd, a Lusitanian by birth, anno 604, caused another insurrection, and defeated the Romans in several battles: nor were they able to reduce him by pure force, but after ten years hired some of his officers to assassinate him while he lay asleep.

POMPEY, who now commanded in Spain, observing that the city of Numantia and some others who had made their peace with Rome, and were called friends and allies to that republick, affected to retain their independency, and refused to be directed or influenced by that state, studied how he might pick a quarrel with them, and reduce them under his power; and having made or found some frivolous pretence to break with that people, assembled his forces and blocked them up on all sides; nor would he accept of any condescensions or satisfactions offered by the Numantians for the pretended

tended injuries received. However, the Spaniards being at that time as well disciplined as the Romans, maintained their ground against this great man, and the Consuls that succeeded him, 'till the year 617, when C. HOSTILIUS MANCINUS, the Consul, coming into Spain, they defeated his forces, and surrounding the Consul with the remains of his shattered army, obtained such a peace of him as was very advantageous to themselves, and no less dishonourable to the Roman state: but the Senate refused to ratify it, ordering the Consul who made it to be delivered up to the Numantians. To which that people answered, the whole army ought to be delivered up if they would not ratify the treaty, since it was at their mercy when the peace was signed. But the Senate determining to reduce all Spain under their dominion, in the year 619 sent the celebrated SCIPIO AFRICANUS into the Hither Spain, as they had done DECIVS BRUTUS into the Further Spain, with numerous armies: and these experienced Generals, within the compass of two years, brought almost every city under the subjection of the Romans; even Numantia itself offered to submit upon conditions, but were told by SCIPIO they must surrender at discretion: which they refusing, he intrenched himself in such a manner round their little state, that nothing could go in or out. They endeavoured several times to break through the Roman army, but were repulsed. Whereupon being reduced to the utmost despair, they first killed their wives and children, and having set their houses and their goods on fire, threw themselves into the flames. Thus fell the Numantines in the year 621, and with them the liberties of Spain, the Romans ever after exercising an absolute dominion in that province, except among the Cantabri, who possessed some inaccessible mountains, and were not conquered 'till the reign of AUGUSTUS. And this was looked upon as so signal a service to the Roman State, that both SCIPIO and BRUTUS had a triumph granted them on their return home.

Spain now remaining in peace for several years, was governed by ten Legates or Lieutenants; and in the year 631 the Consul Q. CECILIUS METELLUS conquered the Balears or islands of Majorca, Minorca, &c. and in the years 643 and 650 the Cimbri, a northern nation, having penetrated through France, and invaded Spain, were repulsed by the Romans. About the same time were insurrections in several parts of Spain, which were suppressed by CALPURNIUS PISO, SULPITIUS GALBA and TITUS DIDIVS: and in the year 657 the Consul PUBLIUS LICINIUS CRASSUS being sent into *Hispania Ulterior*, suppressed several formidable insurrections, for which in the sixth year of his government he obtained a triumph. And in this country it is supposed CRASSUS heaped up that immense wealth which occasioned his son MARCUS CRASSUS to be esteemed the richest citizen in Rome. In the year 660 Italy was distracted with civil wars, the two factions being led by MARIUS and SYLLA; in these Spain also was involved, by the contrivance of SERTORIUS, a Roman tribune, who set up for himself, and maintained his ground against the Generals of the republic, and even POMPEY himself, who was sent against him, 'till the year 681, when SERTORIUS was assassinated by his own party for some acts of tyranny he had committed.

PERPENNA, who succeeded SERTORIUS, being entirely defeated by POMPEY, the rest of Spain made their submission: whereupon POMPEY erected several trophies upon the Pyrenean mountains, some footsteps whereof it is said are to be seen at this day; and among the Vascones or Gascons, in the kingdom of Navarre, he founded the city of Pompeiopolis, now called Pampelona. At his return to Rome in the year 683, a triumph was granted him for his successes in Spain; and METELLUS, who was joined with him in command, had the same honour.

JULIUS CÆSAR afterwards commanded in Spain in the years 685 and 693; but in 701 the government of that province was again conferred upon POMPEY, which he governed by his Lieutenants, finding it necessary to remain at Rome to support his interest in the senate. Whereupon CÆSAR, who was in Gaul, led a great body of his forces over the Pyrenean mountains into Spain, and subdued POMPEY'S party there, for now the civil wars were begun in the Roman Empire, CÆSAR being at the head of one party, and POMPEY of the other. CÆSAR, having obtained the victory at Pharsalia, in the year 706, subdued King PROLEMY in Egypt, and afterwards JUBA another African Prince, and having settled his affairs at Rome, came again into Spain in the year 709, where he had the good fortune also to vanquish POMPEY'S two sons CNEIUS and SEXTUS POMPEIUS, and having amassed together a prodigious treasure (for he did not spare even the temple of HERCULES) he returned to Rome, leaving the government of the Hither Spain to MARCUS LEPIDUS, and that of the Further Spain to ASINIUS POLLIO.

JULIUS CÆSAR being killed in the senate on the 15th of March, A. R. 710, SEXTUS POMPEIUS, the youngest of POMPEY'S sons, assembled his friends in that province, fell upon ASINIUS POLLIO, who commanded in the Further Spain, and defeated him. But this war was soon after terminated by the mediation of LEPIDUS. In the year 714, AUGUSTUS, JULIUS CÆSAR'S heir, MARC ANTONY, and LEPIDUS, divided the Roman Empire between them; in which division Spain was allotted to AUGUSTUS, which occasioned a new *Æra* to be begun in that province, called *Æra Cæsaris*, that commenced from the year of Rome 714, and was generally made use of in this country till the year of Christ 1383, when King JOHN of Castile in an assembly of the states, decreed, that all future computations of years should be from the birth of Christ. Notwithstanding which, the *Æra Cæsaris* was made use of in several parts of Spain many years after, which commenced 29 years before the Christian *Æra*, or the birth of our Saviour.

AUGUSTUS CÆSAR having subdued his rivals in the Empire, LEPIDUS and MARC ANTONY, and for some time governed the Roman Empire in peace, the Cantabri, who inhabited that part of Spain now called Biscay, trusting to their mountains, which were looked upon as inaccessible, ventured to fall upon the Roman colonies in Spain, and drew the people of Asturia and Galicia into their alliance, who were weary of the extortions, and oppressions of the Roman Governors. AUGUSTUS hereupon assembling a numerous army, went into Spain in person; but finding the enemy fortified in their mountains, after he had in vain endeavoured to bring them to a battle, falling sick with the fatigue and vexation at the disappointment,

ment, he left the continuation of the war to his General M. AGRIPPA, and retired himself to Tarragona in Catalonia to wait the event of it.

Agrippa having divided the army in three parts, ordered them to surround the three principal mountains the enemies were possessed of, and cast up such intrenchments that it was impossible they should receive any supplies of provisions; whereby the Cantabrians were at length obliged to submit, tho' many of them, 'tis said, chose rather to die by their own hands than surrender at discretion, as the Roman Generals insisted they should. And thus the war in Spain was brought to a period after five years continuance, being about two hundred years after the Romans first entrance into that country. AUGUSTUS having sold many of the most resolute of the Spaniards for slaves, obliged the rest to leave their habitations in the mountains, and come down into the valleys, that they might not be in a condition to insult the Roman colonies again. He also fortified several places, and left strong garisons in them to keep the natives in awe, as Merida, Saragossa (*Cesar Augusta*), Badajoz, Bracara-Augusta, now Braga, &c. A triumph was decreed Augustus at his return to Rome for the entire conquest of Spain, but he did not accept it; sports however were instituted in the room of it. And now the temple of Janus was shut the fourth time, all the world remaining in peace.

A. D. 15. This great Emperor died in the 15th year after the birth of Christ.

The Government of Spain from the time of Augustus.

From the time of AUGUSTUS, Spain being divided into three provinces, viz. thole of Tarracoenfis, Bætica and Lusitania, was governed by as many Prætors. In Tarracoenfis, or Hispania Citerior, which was now much the largest of the three, were fourteen colonies, thirteen municipiums, and seven sovereign courts, viz. at Carthage, Tarragona, Saragossa, Cluma now Corunna, Astorga, Luga and Braga. In Bætica were eight colonies, and as many municipiums, with four sovereign courts, viz. at Cadiz, Seville, E-zija and Cordoua. In Lusitania were five colonies, and one municipium, viz. Lisbon, called Felicitas Julia; and three sovereign courts, viz. at Merida, Badajoz and Santeren, then called Scalabis.

Trajan, a Spaniard. 99.

In the year of our Lord 99, Spain had the honour of giving an Emperor to Rome, and one of the best that had reigned for many years, viz. M. ULPIUS TRAJANUS, born at Italica near Seville. He was a Prince of great natural parts, which were improved by his preceptor PLUTARCH the philosopher; and he was as remarkable for his humanity and universal benevolence, as for his parts and learning. He built two bridges of admirable structure, one over the Danube in Germany, and the other in Spain, over the Tagus at Alcantara, which is still standing. He governed the Empire nineteen years and an half.

400. The Vandals, &c. break into Spain.

The Romans continued sovereigns of Spain till the beginning of the fifth century, when the northern Nations broke in upon the Empire. The Vandals, the Suevi, the Alans and Silingians, first settled themselves in France; but the Romans and Goths uniting their forces against them, they passed the Pyrenean mountains, wasting Spain as they had Italy and France before. The Vandals, and Swedes fixed themselves in Galicia and Castile, the Silingians in Bætica, and the Alans in Lusitania, infomuch that only Cantabria and Asturia now remained under the dominion of the Romans. These nations falling out among themselves, the Vandals went over into Africa, while the Swedes reduced

both the Alans and Silingians under their dominion, and had infallibly conquered the rest of Spain, if the Goths, another northern nation, had not stopped their Progress. That people having ravaged Italy, and plundered Rome it self, marched into Gaul, making Narbonne the seat of their Empire there, which in the beginning extended only over Languedoc and Catalonia, though afterwards it comprehended most part of Spain. ATOLPHUS, or ADOLPH their King, had scarce established his dominion in Gaul, but he was besieged in his capital by the Generals of the Emperor HONORIUS, notwithstanding he had married the Princess PLACIDA, that Emperor's sister, because he refused to deliver up ATTILA, whom ALARICK had caused to be proclaimed Emperor in Rome. ATTILA being taken at sea during this siege, and consequently the occasion of the war removed, a treaty was concluded between these two powers; but so little to the satisfaction of the Goths, who thereby lost all hopes of returning to Italy, that they assassinated ATOLPHUS, and advanced SIGERICK to the throne in his stead, who confirming the peace with the Romans which ATOLPHUS had made, was assassinated also by his subjects in the year 416, before he had reigned a whole year.

WALLIA, supposed to be the son of ATOLPHUS, was unanimously elected King in the room of SIGERICK. With this Prince the Romans joined their arms, and assisted the Goths in driving the Swedes and the other barbarous nations out of Spain. I shall pass over the reigns of the future Gothick Kings till we come to that of FURICK, esteemed one of the bravest of them; he conquered all that the Romans had left in Spain, took Galicia from the Swedes, and reduced all the southern provinces of France under his dominion, and died at Arles, his capital city, anno 483. Under the reign of RECARDA, the Son of LEVIGILDA, the Empire of the Goths was in its greatest glory, for then it not only comprehended the southern provinces of France, and the whole kingdom of Spain, but that part of Africk which lies next Tangier. Their Empire began to decline under the reign of King WITIZA, and was totally destroyed in the reign of RODERICK, who abandoning himself to his passion, ravished the beautiful CAVA, the daughter of Count JULIAN, Governor of Gothick Mauritania, and of that part of Spain which borders upon the streights of Gibraltar. This unfortunate father, to revenge the disgrace done to his family, took a resolution to do it at the expence of his country, and confederating himself with some other malecontent Lords, invited the Saracens into Spain, who defeated the effeminate Goths in a general battle, where RODERICK is supposed to be killed, and within three years after made themselves entirely masters of Spain, except some of the mountains of Asturia, Biscay and Navarre, whither such of the Gothick Christians retired as did not think fit to live under the dominion of the Infidels. Thus was the Empire of the Goths destroyed, about three hundred years after their first arrival in Spain. And here it is thought proper to give a list of their Kings.

RODERIC

He was defeated and killed in a general battle by the Moors or Saracens

I must here beg leave to detain the reader a little, and observe, that these Moors or Saracens who conquered Spain, were indebted to that impostor MAHOMET, of whom I have treated already in the State of Arabia, both for their religion and empire: as he had assumed the office of High-priest of that new religion he struck out, as well as the sovereignty of the people he subdued; his successors also pretended to the supreme power, both in ecclesiastical and temporal affairs, which they exercised for some centuries under the title of Caliphs, making Babylon the seat of their empire; and such prodigious success did the successors of this impostor meet with, that they established their dominion in most of the kingdoms of Asia and Africa within the compass of fourscore years. It was in the year of our Lord 713, and the 97th of the Mahometan Æra, that they passed into Europe and possessed themselves of the kingdom of Spain. They allowed liberty of conscience, I find, to the Christians wherever they came, tho' the Mahometan religion only was encouraged by them, and those who embraced it generally obtained the name of Saracens from the Arabs the founders of it, who had long gone under that denomination; they were also called Moors in many countries, from the darkness of their complexion.

Ulid Caliph of Babylon when the Saracens conquered Spain.

ULID, or ULIT, the ninth Caliph from MAHOMET, was Emperor and High-priest of the Saracens when they were invited over from the coast of Barbary by JULIAN and some other treacherous Christians, who were disgusted at King RODERICK's administration. They applied themselves to MUZA, then Governor of Barbary, who sent over at first a small detachment of four or five hundred men, rather to sound the inclination of the Spaniards than with any hopes of success; but finding the people generally inclined to revolt, he raised a powerful army, and sent them under the conduct of TARIF, a Saracen General, to make a descent on the Spanish coast. RODERICK on this occasion,

it is said, behaved himself with as much bravery and conduct as any of his Gothick ancestors, and bid fair for the victory when the armies came to an engagement, but was betrayed by his general officers, and even by his Bishops, who in the heat of the battle joined the Mahometans. They imagined possibly that the infidels, after they had assisted them in dethroning their sovereign King RODERICK, whose tyranny they dreaded, would have been so complaisant as to have retired on the other side the water again, and left them to have nominated a successor in his stead: but the Saracens were too well acquainted with the fruitfulness and riches of the country to abandon it; tho' in gratitude to the Spaniards, who invited them over, they indulged them in a general toleration of their religion: nay, ABDALASIS, the Son of MUZA Governor of Barbary, to whom his father committed the government of Spain, condescended to marry Queen EGILONA the widow of RODERICK, and suffered her to enjoy the free exercise of her religion in his own palace.

ABDALASIS having caused himself to be acknowledged King of Spain by the persuasion of his wife EGILONA, made Seville the seat of his government; and carrying the war into France, conquered the southern provinces, which were then in possession of the Goths.

ABDALASIS having reigned three years, was assassinated by his kinsman AJUS, who usurped the government of Spain, but not the title of King any more than his successors, till ABDARAMEN, who assumed the regal title about the year 731, against whom MUNIZ the Saracen, Governor of Gallia Gothica, revolting, ABDARAMEN marched into France, and having defeated MUNIZ, he afterwards conquered great part of France, but was opposed by CHARLES MARTEL prime minister of that kingdom, and killed in a general battle, where, according to the French historians, the Saracens lost upwards of 300000 Men; and in the year 739 the Saracens were driven almost out of France by the same successful General CHARLES MARTEL.

Not long after the Saracens erected several petty kingdoms in Spain, viz. the kingdoms of Toledo, Saragossa, Cordova, Seville, Grenada and Murcia: which division of their conquests gave the Christians a great advantage of them. And this brings me to treat of the Gothick Princes who recovered their country again from the Saracens.

The Moors having made themselves masters of all Spain, except some barren inaccessible rocks and mountains in Asturia, Biscay and Navarre, whither the Christians retired who refused to submit to their government, passed the Pyrenees in order to reduce that part of France under their power which belonged to the Goths there, as has been intimated already. During this expedition of the Moors into France, which was in the third year after their arrival in Spain, the Goths in the mountains of Asturia finding it difficult to subsist the multitudes that had taken refuge there, made choice of PELAGIUS for their leader, a gentleman who had served in the Moors army, and upon some disgust had retired to his distressed brethren, and under his conduct ventured to descend into the plains again. Having made themselves masters of Oviedo, they proclaimed PELAGIUS their King. He afterwards obtained a signal victory over the Moorish forces, and upon this success being joined by the Christians from all parts, besieged and took the capital city of Leon, subduing great part of

that province, from whence his successors afterwards obtained the title of Kings of Leon. What contributed mightily to this success, was the multitude of Christians that remained dispersed among the Moors, who found means to deliver up many places to their brethren. For the Moors having been invited over by the bulk of the people, seemed to look upon the Spaniards as their friends; and on their expedition into France trusted many of the Christians with commands in the army they left behind them, and with the government of some considerable places, looking upon this as the most probable means of keeping the people quiet while they were employed in the Gallick war; so that there is no reason to have recourse to miracles to account for the success of the Christians at this time, as the Spanish writers constantly do. But to proceed; PELAGIUS after a long and fortunate reign, died in the year 737, leaving his new-erected kingdom to his Son FAVILA, of whom nothing remarkable is related, unless it be, that he was killed by a bear as he was hunting, two years after his accession.

To FAVILA succeeded Don ALONSO, or ALFONSO, who retook several considerable towns from the Moors, extending his conquests to the most distant provinces. He died in the year 757; and had the Spaniards continued united under his successors, the Moors had probably been driven out of Spain in a few years: but about this time several others of the Gothick nobility, observing the successes of the Kings of Leon, attacked the Moors in different parts, and assumed to themselves the title and dignity of sovereign Princes, particularly Don GARCIAS XIMENES in Navarre; AZNAR Son of EUDO Duke of Aquitain in Arragon; BERNARD, a Frenchman, made Earl of Catalonia by CHARLES the Great, upon the taking Barcelona; and several others took upon them the titles of Counts and Earls in Castile, acknowledging however the King of Leon for their supreme Lord. But to return to Leon.

Don ALONSO was succeeded by his Son FROILA, who gained a signal victory over the Moors, and bravely defended what his father had acquired. He was murdered in the year 768 by his brother AURELIUS, who usurped his throne to the prejudice of his Son AURELIUS, and appointed SILON to succeed to the throne after his death; which happened in the year 774. Of SILON little more notice is taken in history, than that he died anno 783, and was succeeded by ALONSO the Son of FROILA.

MAUREGATUS, ALONSO's uncle, by the assistance of the Moors, deposed him, and having reigned five years and six months died anno 788. He was detested by the Christians as well on account of his usurpation, as his agreeing to pay the Moors annually a tribute of an hundred virgins, of which fifty were to be of noble extraction. The same year died ABDERHAMAN King of the Moors, who having united all the infidels under one head again, recovered Barcelona, and most of the towns the Christians had possessed themselves of in the reign of ALONSO I.

BERMUDO, called the DEACON, succeeded MAUREGATUS, and having declared the deposed ALONSO his companion in the government, died anno 791. ALONSO refusing to pay the tribute of virgins, was attacked by the infidels, whom he defeated, and killed 70000 of them in the field of battle, according to the Spanish writers, whom I cannot give entire credit to upon these occasions;

for the numbers of their enemies slain within the compass of a few years were so many, according to them, that there could have been no Moors left in the country.

ALONSO having no children, it is said, appointed CHARLEMAIN his successor, upon condition he would assist him in expelling the Moors out of Spain: but the Spanish nobility dreading the dominion of the Franks, united their forces with the infidels, and taking the passes of the Pyrenees about the mountains of Roncevaux, gave CHARLEMAIN a memorable defeat, wherein the celebrated ROLAND was killed, whose actions the Spanish histories as well as romances are stuffed with. ALONSO died in the year 843, having appointed RAMIRO the son of BERMUDO his successor.

The reign of RAMIRO is celebrated for a signal victory he obtained over the Moors, whereby he abolished that infamous tribute of an hundred virgins which the Christians had been obliged to pay the infidels for many years. He also defended the coasts of Galicia against the Normans, who invaded them, and obliged the Normans to return to their ships.

ORDONNO the son of RAMIRO succeeded his father anno 850. He defeated the Moors and took several towns from them, and dying in the year 862, was succeeded by his eldest son ALONSO the great.

Don ALONSO was driven from his throne, and having recovered it again, was successful against the Moors; but squandering away his treasures in magnificent buildings, and oppressing his subjects with heavy taxes to reimburse himself, an insurrection was raised against him, to appease which he was obliged to resign his crown to his son GARCIAS, anno 910.

GARCIAS was successful against the Moors, and died anno 913.

ORDONNO his brother succeeded him, and transferred the seat of his government from Oviedo to Leon. The Earls of Castile endeavouring to render themselves independent, he summoned them to meet him on pretence of consulting them, and caused them all to be put to death, and died himself soon after, anno 923.

He was succeeded by his brother FROILA, who putting to death several other Castilian noblemen, that province revolted from him, chusing two of the nobility to govern them; one of whom had the civil, and the other the military government conferred on him.

ALONSO succeeded on the death of FROILA, which happened anno 924. He resigned his crown to his brother RAMIRUS, anno 931, and became a monk.

RAMIRUS defeated the Moors and plundered the town of Madrid. He resigned his crown to his son ORDONNO in his old age, and died soon after, viz. anno 950.

ORDONNO joining his forces with the Castilians, obtained a signal victory over the Moors and died anno 955, being succeeded by SANCHEO his brother.

SANCHEO was deposed and expelled the kingdom in the beginning of his reign by ORDONNO the son of ALONSO the monk, by the assistance of the Moors; but SANCHEO recovered his throne again. He was engaged in war with the Earl of Castile, and compelled at length to renounce the sovereignty of that earldom. SANCHEO was poisoned with an apple by GONZALO, a disaffected Earl, and died anno

anno 967, being succeeded by his Son RAMIRUS, an infant of five years of age.

RAMIRUS was under the tuition of his mother and aunt most part of his reign. His cousin BERMUDO the Son of ORDONNO raised a rebellion against him; of which the Moors took advantage, and recovered several towns from the Christians. The clergy are said to be extremely wicked in this reign. RAMIRUS died anno 982, and was succeeded by his cousin BERMUDO, who had incited the rebellion against him.

BERMUDO, or VEREMUND II, obtaining the crown by a faction, was distracted with civil wars in the beginning of his reign, of which the Moors taking advantage, retook abundance of towns from the Christians, and even the city of Leon: whereupon BERMUDO entered into a confederacy with the Earl of Castile and King of Navarre, and repulsed the Infidels, driving them out of his country. He died in the year 999, and left his kingdom to his Son ALONSO, an infant.

The beginning of the reign of ALONSO was unfortunate, the Moors ravaging his territories in a terrible manner. But the infidels being afterwards weakened by civil dissensions, and dividing their country among a multitude of petty royalets (or every one that could possess himself of a city stiled himself a King) the King of Leon re-possessed himself of all the Moors had taken from him; and in confederacy with the King of Navarre and the Earl of Castile, made incursions into the enemies country as far as Cordoua; insomuch that the infidels were glad to purchase their peace on very hard terms. King ALONSO afterwards rebuilt the city of Leon which had been demolished by the Moors, and invaded Lusitania or Portugal, and laying siege to Visco, he was killed before that town with a dart, anno 1028.

BERMUDO, or VEREMUND III, succeeded his father ALONSO. During this reign it was, that SANCHE King of Navarre having married the sister and heiress of GARCIA, Earl of Castile, united Castile to the kingdom of Navarre on the death of GARCIA, who was murdered by some of his vassal Lords. SANCHE King of Navarre afterwards made war on BERMUDO King of Leon, and conquered part of his territories, which produced a treaty between the two Kings, wherein it was agreed, that Don FERDINAND, the King of Navarre's Son, should marry DONNA SANCHE, the daughter and heiress of the King of Leon, and that she should receive as a dower in present, all that had been conquered of Leon, and be declared heiress of that kingdom. SANCHE died anno 1035, most of Spain being at this time united in his house. He left four sons; to GARCIA the eldest he gave Navarre and Biscay, to FERDINAND Castile, to GONSALVO Sobrarva and Ripagorfa, and to RAMIRUS, a natural Son Arragon; and on every one of them conferred the title of King. GARCIA the eldest going a pilgrimage to Rome, RAMIRUS endeavoured to make himself master of Navarre; but GARCIA returning home, drove him even out of Arragon. BERMUDO King of Leon, while the brothers were engaged in war among themselves, invaded Castile, the dominions of his brother FERDINAND; but GARCIA coming to the assistance of FERDINAND, they defeated BERMUDO, and killed him in the field of battle, whereby FERDINAND became possessed of the kingdom of Leon in right of his wife. A war happened afterwards between GARCIA King of Navarre and FERDINAND, in which GARCIA losing his life,

FERDINAND succeeded to Navarre, and during the dispute, RAMIRO found means to recover Arragon again. FERDINAND also recovered great part of Lusitania from the Moors, and dying in the year 1065, divided his dominions among his sons.

Kings of Castile after the invasion of the Saracens.

This country was governed after the year 904 by Counts; the last was GARCIA, who was killed on the day of his marriage. His sister ELVIRA married SANCHE II, King of Navarre, by which Castile was added to the crown of Navarre. SANCHE divided his dominions among his children, anno 1037, or 1038: he gave Castile to his Son FERDINAND, who conquered Leon, and on his death divided his kingdoms among his three Sons; to SANCHE he gave Castile, to ALONSO, Leon, and to GARCIA, Galicia.

PHILIP IV.	1621
CHARLES II.	1665
PHILIP V.	1700

CHARLES III, Archduke of Austria, the present Emperor, was proclaimed King of Spain anno 1703, and is to retain that title during his life, together with Naples, Sicily, Milan and Spanish Flanders, which are to descend to his heirs: the rest of the dominions of Spain are confirmed to PHILIP V, and his heirs.

SANCHE having driven ALONSO out of his dominions, and taken GARCIA prisoner, possessed himself of the territories of his two brothers about the year 1067; but being killed at the siege of Camora, ALONSO his brother, who till this time had resided among the Moors, made himself master of Castile as well as Leon, and afterwards took Toledo, held impregnable in those days, and a vast extent of country from the Moors. Great reinforcements coming over from Africk afterwards, the infidels defeated the Christians in two general battels; notwithstanding which, ALONSO at length repulsed them again, and obliged the King of Cordoua, then the greatest of the Moorish sovereigns, to become tributary to him.

ALONSO VII dying in the year 1109, ALONSO, who had married URACA his only daughter and heiress, succeeded to his dominions; but this marriage

Divides his territories among his sons.

riage being declared void for consanguinity, ALONSO the Son of URACA, by RAYMUND of Burgundy, her first husband, was proclaimed King of Castile and Leon. About this time ALONSO King of Arragon took Saragossa from the Moors. Both ALONSO King of Arragon, and ALONSO his son-in-law, King of Castile, were very successful against the Moors, taking towns without number from them : but the King of Arragon had the misfortune to be killed in a skirmish with the infidels in the year 1134. By his will he left his dominions to the knights templars and hospitalers, but his subjects did not acquiesce in it : the Navarrais chose GARCÍAS, descended from their former royal family, for their King ; and the Arragonians elected RAMIRO a Monk, brother to their late King, whereby these kingdoms became divided again.

ALONSO King of Castile being now the most potent of the Spanish Sovereigns, caused himself to be crowned Emperor of Spain at Toledo, on Whitsunday 1135.

Two years after, the Earl of Portugal, Don ALONSO, who was then possessed of the eastern part of that country, having great success against the Moors, was saluted King of Portugal by his army, which title his successors retained for many hundred years.

Alonso the Emperor entering into a confederacy with the Kings of Navarre and Arragon against the Moors, they took from the infidels the cities of Banca, Almeria, Tortosa, Lerida and Fraga in the years 1147 and 1148, and about the same time Lisbon was taken from them by the King of Portugal.

ALONSO the Emperor died in the year 1157, his eldest Son SANCHO succeeding to Castile; and FERDINAND his youngest Son to Leon and Galicia.

SANCHE dying within little more than a year, was succeeded by his Son ALONSO an infant. During his minority, his Uncle FERDINAND King of Leon wasted his country, endeavouring to get the young King into his hands; but the nobility of Castile defended their monarch's person against all his efforts, notwithstanding King FERDINAND had made himself master of Toledo, and most of the considerable towns in that kingdom. The Castilians weary of the tyranny of FERDINAND King of Leon, invited their young King ALONSO to take the government upon him, about the year 1168; and upon his appearing, Toledo and other cities expelled the King of Leon's garisons and declared for him. Not long after the Kings of Castile and Arragon entered into a defensive alliance, and the young King of Castile to strengthen himself still more, married the Princess ELANOR, the daughter of HENRY II, King of England. And now the Spanish Kings being at peace among themselves, entered into a confederacy against the Moors. The

Infidels on the other hand having invited over vast numbers of Africans to their assistance, fell upon ALONSO King of Castile, and routed his army before the Kings of Leon and Navarre had joined him, whereupon followed a truce between the Christians and Moors. The year 1212 was more favourable to the Christians; for the four Kings of Spain, viz. the Kings of Leon, Navarre, Castile and Arragon, having assembled all their forces, and being joined by an hundred thousand foreigners, who came from France and other Christian countries, gained a signal victory over the Moors; who had been re-inforced in like manner by the

Mahometan Princes from Africk, and, according to the Christian account, killed two hundred thousand of them upon the spot.

ALONSO died in the year 1214, leaving behind Henry I. him one son named HENRY, whose minority occasioned great disturbances in the kingdom. He died without issue in the year 1217. His eldest sister BLANCH had been married to LEWIS VIII, son of PHILIP-AUGUSTUS King of France: the other, BERENGARIA, to ALONSO King of Leon. The crown should have descended to the eldest and her heirs, but the states, out of their aversion to foreigners, transferred their allegiance to FERDINAND, surnamed the Holy, Son of BERENGARIA, who immediately possessed himself of the kingdom. It is related by some, that BLANCH was not the eldest sister, and that the Castilian noblemen disputed BERENGARIA's right to the crown, only on account of the Pope's having declared her marriage with ALONSO void, and their children illegitimate, as being too near in blood.

By the death of ALONSO, Leon and Castile were reunited again under FERDINAND. The power of the Moors began to decline extremely at this time; King JAMES of Arragon took from them Majorca in the year 1230, Minorca in the year 1232, Yvica in the year 1234, the city and kingdom of Valencia in the year 1238. FERDINAND took from them in the year 1230, Merida and Badajoz, and several other places; in the year 1236, the city and kingdom of Corduba; in the year 1240, Murcia put it self under the protection of Castile; in the year 1243, Seville and the greatest part of Andalusia submitted to FERDINAND: but whilst he was making preparations to carry the war into Africa, he died in the year 1252, being succeeded by his Son ALONSO X.

ALONSO OF ALFONSO the tenth was famous among foreigners for his wisdom and great skill in astronomy; but he was unfortunate at home; and hated by his subjects; the first occasion of which was his loading his subjects with taxes, in order to replenish his exhausted treasury: he also caused the current coin to be diminished, which enhanced the price of every thing; whereupon he set certain rates on all provisions, and this occasioned a general scarcity, the people not being willing to sell at the rates prescribed them. He was by some of the Electors chosen Roman Emperor, but because his children were then very young, and great divisions arisen among his nobility, he delayed the taking possession of the imperial dignity so long, that RODOLPH of Hapsburg was elected in his stead, and when he would afterwards have accepted of it, he was excommunicated by the Pope, and obliged to renounce the title of Emperor.

Upon the death of FERDINAND his eldest Son, SANCHE the younger brother begun to form designs upon the succession, though FERDINAND had left children behind him. This occasioned a jealousy betwixt the father and son, which at length broke out into an open rebellion, the son being assisted by the major part of the states.

This commotion however ceased on the death of ALONSO, which happened anno 1284, when SANCHO usurped the crown, to the prejudice of his nephews. Under the reign of this King, many battles were fought against the Moors with various success. In the year of his accession happened the Sicilian Vespers, by which means PETER King of Arragon obtained the kingdom of Sicily. He died in the year 1295.

During the minority of his Son FERDINAND the fourth, the kingdom of Castile was in great distraction. After FERDINAND came to age, he commenced a war with the Moors, taking from them Gibraltar, and died in the flower of his age, anno 1312, leaving one Son named ALONSO, an infant about twelve months old. Under the reign of this King, JAMES King of Arragon obtained the kingdom of Sardinia by the Pope's grant, who pretended to a right of disposing of it; and the republic of Pisa being then in possession of the same, were beaten out by the Arragonians.

Alonso XI

1312.

A victory  
over the  
Moors, an.

1340.

Peter the  
Cruel.

1350.

The minority of ALONSO XI, was in like manner full of trouble, the Moors receiving great reinforcements from Africa. The Castilians however obtained a signal victory over them in the year 1340, in which battle, it is said, two hundred thousand Moors were killed, and but twenty five thousand Spaniards; upon this Algezira was taken, and a peace concluded with the King of Grenada, on condition that he should be tributary to Castile.

King ALONSO died at the siege of Gibraltar, anno 1350, and was succeeded by his Son PETER, surnamed the Cruel, who reigned very tyrannically. He drew the hatred of most of his subjects upon himself by parting from his Queen BLANCH, whom he afterwards caused to be murdered for the sake of a concubine. This occasioned a plot against him, which he suppressed with a great deal of bloodshed. In the mean while a war arose betwixt him and PETER IV King of Arragon, who assisted the rebels in Castile. They had set up for their King, HENRY the King's brother, by a concubine called ELEONORA GUSMAN. With him also joined a great many French volunteers, so that falling upon PETER of Castile, he forced him to flee into Aquitain. But PETER having prevailed with the Prince of Wales to assist him with an army of veteran troops, returned into Spain, defeated HENRY, and obliged him to retire into France in his turn. King PETER however did not desist from his tyranny, whereby he quite lost the affection of his subjects; and HENRY having gathered another army in France, re-entered Castile, where being assisted by the Castilians, he defeated his rival, and killed him with his own hands.

Henry II.

1369.

HENRY II, surnamed the Bastard, did at first labour under great difficulties, the neighbouring powers attacking him on every side; but at last a peace was made with all of them upon honourable terms. He died in the year 1379.

John.

1379.

His son JOHN endeavoured to obtain the crown of Portugal upon the death of FERDINAND it's King, whose daughter he had married; but the Portuguese, out of their aversion to the Castilians, set up for their King JOHN, natural son to PETER King of Portugal, who maintained himself against the Castilians, and gained a signal victory over them near Alimbarret. Castile was at that time in great distraction, the English siding with the Portuguese under the Duke of Lancaster, who having married the daughter of PETER surnamed the Cruel, pretended a right to the crown of Castile, and accordingly assumed the title and arms; but the dispute was at last composed, by marrying the daughter of the English Duke to the Prince of Castile. After which a peace was likewise concluded with Portugal. JOHN died by a fall from his horse, anno 1390.

Henry III.

1390.

HENRY III was a sickly Prince, under whose minority great divisions arose in the kingdom. He did nothing remarkable, except that he restored the revenues which the nobility had alien-

VOL. II. NUMB. XCVI.

nated from the crown. He died in the year 1407, leaving behind him JOHN II, a child of two months old.

The tuition of this Prince was committed to John II. his mother and Don FERDINAND his uncle, to whom the States offered the kingdom, which he refused, but accepted however the crown of Arragon. This King under the tuition of his mother being grown very effeminate, addicted to pleasure, and having no genius or inclination for publick business, committed the whole management of the State to his favourite ALVAREZ DE LUNA, an ambitious man, which occasioned great murmurings among the nobility. JOHN taking his favourite's part, a civil war ensued, wherein the rebels were headed by his own son, and the city of Toledo declared against him. At last the King tired out with protecting ALVAREZ, and the many inconveniences he had brought himself under, consented to cut off this favourite's head, and died himself the next year. Under the reign of this King a war broke out betwixt the Spaniards and the Moors of Grenada, wherein the first had great advantages. In the year 1420 King ALONSO of Arragon was adopted by JOAN Queen of Naples for her heir; but a difference arising betwixt JOAN and ALONSO, she declared the said adoption void and null, receiving in his stead LEWIS Duke of Anjou; which afterwards occasioned bloody wars betwixt France and Spain: but at last ALONSO prevailed, making himself master of Naples, and leaving the same to his natural son FERDINAND.

In the kingdom of Castile, JOHN II was succeeded by his son HENRY IV, styled by some the Scourge and Scandal of Castile, who being incapable of begetting children, to remove the suspicion of his impotence, hired one BERTRAND DE CUEVA, afterwards created a Duke, to lie with the Queen, who having been delivered of a daughter named JOAN, HENRY caused her to be proclaimed heiress to the crown. What confirmed the people in this belief was, that the Queen afterwards had another bastard by another person. To wipe off the scandal, and to exclude JOAN from the succession of the crown, the nobility of Castile entered into an association; and placing the image of HENRY upon a scaffold, they there formally accused him of this wicked contrivance, and afterwards having taken off his ornaments, threw his image from the scaffold, proclaiming at the same time ALONSO, brother of HENRY, their King. From hence arose intestine wars, which occasioned several battles. During these troubles ALONSO died.

About the same time FERDINAND, son of JOHN II, King of Arragon, whom his father had declared King of Sicily, proposed a marriage with ISABELLA, HENRY's sister, to whom the rebellious Castilians had offered the crown, and forced HENRY to confirm her right to the same: whereupon the nuptials were celebrated privately. Yet would HENRY, by making his concession void, have afterwards set up again the title of JOAN, whom he had promised in marriage to CHARLES Duke of Aquitain, brother to LEWIS XI King of France. But he dying suddenly, HENRY at last was reconciled to FERDINAND and ISABELLA, and died in the year 1474.

ISABELLA, now Queen of Castile, being married to FERDINAND King of Sicily, and presumptive heir to the kingdom of Arragon, and thereby most of the dominions of Spain becoming

subject to one house, I shall treat more largely of the future reigns than I have of the former, when this country was split into so many little kingdoms and principalities, that their history was not of such consequence as that of the succeeding Monarchs. But it may be proper here to give a list of the Kings of Arragon before it was united to Castile.

○ Kings of Arragon after the invasion of the Saracens.

This kingdom was erected in 905, and contained then Sobrarva and the country of Ripagorfa. SANCHE ABRACA was their first King, and called himself King of Navarre and Arragon. They continued in one hand 132 years, till SANCHE the Great divided his dominions betwixt his sons; and Arragon fell to his bastard son RAMIRO, who was the first of the separate Kings.

FERDINAND	1478

FERDINAND and ISABELLA met with great opposition in the beginning of their reign, as well from a powerful faction in Castile, as from ALONSO King of Portugal, who having espoused the Princess JOANNA, by some pretended to be the legitimate daughter (though generally held to be illegitimate) of the late King HENRY, assumed the title of King of Castile, and raised a numerous army to assert his title. But the King of Portugal being defeated in a general battle near Toro, desisted from his pretensions, and the Princess JOANNA, whom he had espoused, retired into a nunnery.

1479.  
Arragon  
descends  
to Ferdi-  
nand.

JOHN King of Arragon dying in the year 1479, FERDINAND took possession of that kingdom, together with Catalonia, Valencia, and Majorca, which belonged to it; so that he was now in his own or his wife's right Sovereign of all Spain, except Navarre, Portugal, and Grenada, the last of which provinces was yet in the possession of the Moors.

The people of Castile complaining that the nobility oppressed the commons, and had devoured the revenues of the crown, which was the occasion of the heavy taxes imposed on the nation, all grants extorted by force, or granted voluntarily by the late King HENRY were declared void. At the same time Prince JOHN, the son of King FERDINAND and ISABELLA, was declared heir to the kingdoms of Castile and Arragon. He was born in the year 1478.

1481.

And now King FERDINAND and his Queen being peaceably settled in their dominions, employed themselves in reforming such abuses in the administration, as had been introduced during the late wars; and particularly in the courts of justice: for lawyers are the same in every country, and if their practice is not sometimes examined into by the legislature, greater oppressions will be committed under a colour of justice, than could have happened in places where there was no law in being. His next care, say the Spaniards, was to root all errors and heresies out of the church; and to that end he established the holy Inquisition, to keep the converted Moors and Jews in awe, and deter them from returning to their idolatry and superstition. But notwithstanding the specious pretences for erecting this court, in the words of the judicious PUFFENDORF, it is esteemed by other nations an inhuman and execrable tribunal, and carries the greatest injustice with it, in making the children to bear the guilt of their parents, and not suffering any one to know either his accusers, or the particulars of the charge brought against him, in order to clear himself of it. But I shall enlarge further on this head, when I come to give the history of the persecution raised against the converted Jews and Moors of Grenada, &c.

The greatest part of Spain being united under one head, was become too powerful for the Moors of Grenada, who were also much weakened by their intestine divisions, which induced King FERDINAND about this time to endeavour the making an absolute conquest of them. The war was begun in the year 1481, by skirmishing and attacking some inconsiderable towns, which were often taken and retaken; but nothing of any great consequence happened in this war till the year 1487, when the city of Malaga was besieged by King FERDINAND with an army of twelve thousand horse and forty thousand foot. It was taken on the 18th of August 1487, when it surrendered at discretion, after it had been bravely defended upwards of three months.

1481.

1487.  
Malaga  
taken by  
King Fer-  
dinand.

There being some disturbances in Arragon, and the plague sweeping away great numbers of people in Spain the three following years, the war against the Moors was not carried on with vigour, only the country was harassed and wasted to the very walls of Grenada. In the year 1491 that capital was besieged by the Christians, said to contain at that time sixty thousand houses, and to have no less than a thousand and thirty beautiful towers on the walls. King FERDINAND sat down before it on the 24th of April 1491, and it surrendered upon articles on the 25th of November following, having held out a siege of seven months. The articles were sworn to by King FERDINAND on the one side, and by BOABDIL, the Moorish King, on the other: the substance whereof were;

Grenada  
besieged.  
1491.  
The large-  
ness of that  
city.

‘ That the Moors within sixty days deliver up  
‘ to the King the two castles, the towers, and  
‘ gates of the city. That they do homage to  
‘ King FERDINAND, and take an oath of alle-  
‘ giance to him. That they set at liberty all  
‘ Christian slaves without ransom. That till these  
‘ articles be performed they deliver up five hun-  
‘ dred sons of the principal inhabitants as hostages.  
‘ That they be left possessed of their lands, arms,  
‘ and horses, only delivering up the artillery.  
‘ That they keep their mosques, and have the  
‘ free

Articles of  
surrender.

CHAP. XVIII. 'free exercise of their religion. That they be governed according to their own laws; and to this purpose persons of their own nation be appointed, by whose advice the King's officers shall administer justice to them. That part of the usual taxes be abated during the term of three years, and never after be greater than they used to pay to their own Kings. That such as will go over into Africk may sell their goods, and be furnished with ships for their passage into any port they shall chuse. That King BOABDIL's son, and the other hostages delivered by him, be restored after the city is surrendered.'

Before the sixty days were expired a fanatick Moor raised an insurrection in the city, exclaiming against the capitulation, which King BOABDIL with some difficulty suppressed; and being apprehensive of farther tumults, sent immediately to King FERDINAND to acquaint him with the situation of affairs, offering to deliver up the city before the time was expired. Whereupon King FERDINAND made his entry into the city of Grenada at the head of his army on the day after New-Year's-Day 1491-2, being met by King BOABDIL at the head of fifty horse, who upon delivering up the keys of the town to FERDINAND, said, 'We are your slaves, invincible King! We deliver up this city and kingdom to you, not doubting you will use us with clemency and moderation.'

To King BOABDIL was assigned the valley of Purchena for his residence, with a handsome revenue; but he chose to transport himself to Africa, rather than live a subject in a country of which he had been Sovereign. And here it may be proper to insert a list of the Moorish Kings of Grenada.

#### Kings of Grenada after the invasion of the Saracens.

And being besieged in his capital city of Grenada, surrendered it, together with his king-

dom, to FERDINAND and ISABELLA, King and Queen of Castile and Arragon, on the day after New-Year's Day, anno 1491-2; which put an end to the dominion of the Moors in Spain.

King FERDINAND and Queen ISABELLA being at Grenada in the year 1492, commanded all Jews to depart the kingdom of Spain within the space of four months; but gave them leave to sell their effects or carry them with them. Whereupon it is said, seventeen thousand families of that people (and according to others, eight hundred thousand souls) quitted that kingdom; some transported themselves to Africa, others to Italy, &c. but the bulk of them went to Portugal, where King JOHN II permitted them to be received upon condition of their paying him eight crowns of gold for every head, and their promising to depart his kingdom within a certain limited time, on the expiration whereof all who remained behind were to be made slaves. But when this people came to the port towns of Portugal, in order to transport themselves, they found the King had prohibited all ships to take them on board; and notwithstanding their stay was occasioned by the King's own orders, he caused all their effects to be seized on the expiration of the time prefixed, and sold their persons to his subjects for slaves.

Doctor GEDDES adds, 'That King EMANUEL, who succeeded JOHN, reckoning it to have been both an unjust and dishonourable thing that his predecessor had done to the Jews, he set them all at liberty again; but at the same time commanded them all, upon pain of perpetual servitude, either to be baptized within a certain term of months, or to leave Portugal, promising that ships should be provided for all that would depart at the three chief ports of his kingdom. The Jews who had all left Spain, where they and their ancestors had lived for a great many generations, because they would not turn Christians, did intend to leave Portugal for the same reason, and did accordingly repair with their families to the ports appointed for their embarkation, where instead of ships to carry them off, they met with a proclamation prohibiting them upon pain of death to embark any where but at Lisbon: To which city when they were all come with their families, the King commanded all their children that were under fourteen years of age to be taken from them, and to be baptized by force. With which unexpected violence several parents were so enraged, that they threw their children that were under that age into the river and into wells, and themselves after them. But the time appointed for their embarkation being expired, and no ships being permitted to take any of them aboard, they did, rather than be made slaves again, consent to be baptized.

'The Jews who were baptized at this time, in this manner, are reckoned to have been above three hundred thousand, men, women and children. And whereas few, if any of them, were in their hearts Christians when they were thus forced to receive baptism, great numbers of their descendants do to this day in Portugal continue to breed up their children in the Jewish religion, notwithstanding the unintermitting cruelties which have ever since been exercised by the Inquisition upon all who have been convicted of having returned to that faith.

'This

\* This dispersion of the Spanish Jews is reckoned, by all of that nation and religion, to have been, both as to hardships and as to their numbers, nothing inferior to that which followed upon the destruction of Jerusalem.

America  
discovered  
by Co-  
lumbus.

It was soon after the conquest of Grenada that CHRISTOPHER COLUMBUS, a Genoese, attempted the discovery of America for the Spaniards. He had applied himself first to the court of Portugal, and afterwards to HENRY VII, King of England, for a squadron of ships in order to undertake that enterprize, and was slighted by both of them. At length FERDINAND and ISABELLA, Sovereigns of Castile and Arragon, after deliberating upon the matter seven years, assisted him with three ships and seventeen thousand ducats, which they were forced to borrow, their treasury was so exhausted by the wars: and with these COLUMBUS set sail from Palos on the third of August 1492, and having touched at the Canaries, after several days sail discovered certain islands which he named the *Prince's Islands*; and having built a fort, and left some men in garrison there, he returned to Spain.

1492.

The next year he discovered the islands of Cuba and Hispaniola, and great part of the continent, both north and south, introducing the Spaniards into a country of many thousand miles extent, rich and fruitful beyond expression, and where they found such inexhaustible mines of gold and silver, that they have supplied Europe with the greatest part of those precious minerals ever since. To establish themselves, they destroyed the two vast empires of Peru and Mexico, which they found little difficulty in effecting, the natives being perfectly naked and unarmed. But I shall not here enlarge on the discovery of America, reserving this part of modern history till I come to treat of that part of the world.

1493.  
Roussillon  
and Cer-  
dagne  
yielded to  
the Span-  
iards.

The French King designing to make an attempt on the kingdom of Naples, to which the house of Arragon had some pretensions, in order to secure the Friendship of King FERDINAND while he was engaged in that expedition, he made him a cession of Roussillon and Cerdagne in the year 1493.

Not long after, King FERDINAND possessed himself of the matterships of the three military orders in Castile, the masters whereof had claimed an exemption from the regal jurisdiction, and were become so very powerful by reason of their vast revenues and numbers of dependants, that they were formidable to the King himself. These matterships were confirmed to his Majesty by Pope INNOCENT VIII. His Holiness also gave him the title of the Catholick King, on account of the zeal he had shewn for extirpating the Jews and Mahometans.

John  
Prince  
of Castile  
dies.

1499.

In the year 1497 died JOHN Prince of Castile and Arragon, and presumptive heir to both those crowns.

Dr. Geddes's ac-  
count of  
the usage  
of the  
Moors af-  
ter the  
conquest  
of Grena-  
da.

I come now to enquire into the usage the Moors met with in Spain, after they had submitted to the Christians, of which our countryman Doctor GEDDES has given us a very full account. He observes, that notwithstanding the taking of the city of Grenada put an end to the dominion of the Moors in Spain, the body of the people in that province, as well as in the kingdoms of Valencia and Murcia, were still Mahometans; and that there were also great numbers of them still dispersed over Castile, Estramadura, Arragon, Catalonia, and other provinces of Spain,

who continued a distinct people from the Spaniards by an obstinate adherence to the religion, language, habits, and customs of their ancestors, scarce any of them having been converted to the Christian faith by the Spanish missionaries who had been employed for that end.

Whereupon King FERDINAND and Queen ISABELLA coming to Grenada in the year 1499, sent for the famous XIMENES, Archbishop of Toledo, and charged him, as he had any regard for the honour of the Christian religion, the salvation of mankind and the safety of the government, that he would take effectual measures for the conversion of their Moorish subjects, who were no less infidels than when they lived under Mahometan Kings.

XIMENES, says that writer, who was a man that would not be easily baffled in any thing that he undertook, begun that great work with courting and caressing the chief men among the Moors, and having by rich presents and greater promises persuaded some of the first quality among them to turn Christians, their examples were followed by a considerable number of the inferior sort.

The Moors both in the city and country being much alarmed and displeased with those conversions, several of their principal men, with whom the Archbishop had not been able to prevail, did go about to persuade their kindred and others neither to be flattered nor bribed out of the religion of their forefathers.

The Archbishop, as soon as he heard of those counterworkings, laying all humanity, faith the writer of his life, almost aside, he commanded all those zealots to be apprehended, and having loaded them with irons, he ordered them to be thrown into dungeons, and to be treated in them as the greatest of malefactors.

Among these zealots there was one named ZAGRI, who was of a noble family, and had been in a high command in armies, and who, among his other exploits, had in his younger days fought hand to hand with GONZALO, the Great Captain. The Archbishop reckoning that if he were but able to subdue ZAGRI's high spirit so far as to make him turn Christian, none among the Moors would after that dare to oppose him in his conversions, he committed him to the custody of one of his own chaplains named LEONI, a man of a fierce and cruel disposition, in whose keeping ZAGRI had not been many days before he begged of his keeper to be permitted to speak with the Archbishop; which having been granted, ZAGRI when he appeared before him, desired that his irons might be knocked off that he might deliver his mind with the more freedom, which having been done, he declared that he had been commanded the night before in a dream to turn Christian; adding at the same time with a smile, I am not such a blockhead as to want any more arguments to persuade me to that, besides those I have had given me by that terrible lion of your Lordship's (alluding to his keeper's name:) to whom said ZAGRI, Let my countrymen be but committed for so many days as I have been, and I will undertake they shall all be converted by him to Christianity; intimating how barbarously he had been used by LEONI.

The Archbishop being overjoyed at his having thus converted ZAGRI, commanded him to be led out and washed, and having clothed him in

CHAP. XVIII. in scarlet, he baptized him himself, calling him by the name of GONZALO FERDINANDO, the Great Captain who was at that time in Grenada, and settled a pension on him of 5000 crowns yearly for his life.

The other Moorish prisoners being no more able than ZAGRI to withstand LEONI's arguments, did yield, and were baptized likewise by the Archbishop; who after this commanded all the Moors to deliver their Alcorans and all their other Arabick books to him; which having been done, he ordered all the books that treated of philosophy and medicine to be preserved, burning all the rest in the market-place of the city, to the great mortification of the Moors who had not changed their religion. And being resolved to make his harvest as great as it was possible, he commanded the children of all the Moors, who were called Elkes, to be taken from them and baptized, upon pretence that their ancestors were anciently Christians, who had apostatized to the Mahometan sect.

These violent proceedings of the Archbishop's occasioned an insurrection in the city, which being with difficulty suppressed by the King's troops, his Majesty ordered the mutineers to be dealt with as traitors, unless they would turn Christians. Whereupon, it is said, no less than fifty thousand of them submitted to be baptized.

1500. The Moors in the country, understanding the force that had been put upon their brethren in Grenada, had recourse to arms; whereupon the Great Captain GONZALO marched against them, and having taken the town of Huyar, put all the Infidels therein to the sword, men, women, and children; which rendered the Moors desperate, and occasioned the insurrection to become still more general, inasmuch that the Great Captain was obliged to desire his Majesty to assemble the rest of his army, and march against them in person.

The Christians afterwards made themselves masters of Guadix, Almeria, and many other towns of the Infidels; but those who had retired into the most inaccessible part of the mountains, still defending themselves, obtained leave to go over to Barbary on their paying ten dollars a head, many of whom however were obliged to remain in Spain and be baptized, for want of money to pay for their passage. And in this manner it is computed about two hundred thousand Moors, men, women, and children, were made Christians within the compass of a few months.

200000  
Moors ob-  
liged to  
profess  
themselves  
Christians.

As to the usage of the Moors in the other conquered provinces, I find that in Andalusia, where the same forced conversions had been practised, the Inquisition of Seville had condemned no less than an hundred thousand of the Moriscoes, present or absent, for apostacy within the space of forty years; of which number four thousand had been actually burnt, thirty thousand reconciled to the church, and the rest had made their escapes into Barbary; inasmuch that many thousand houses, in the district of Seville only, were deserted and left without inhabitants, which had occasioned grievous complaints from the nobility, and put a stop to these barbarities for a time.

The Moors  
subject to  
Arragon  
more  
mildly  
dealt  
with.

The Moors of Valencia, who were conquered by JAMES King of Arragon in the year 1236, enjoyed the free exercise of their religion many years afterwards. That Prince had indeed ordered his clergy to endeavour to make proselytes of them by preaching, and upon their representing

VOL. II.

that the Moriscoes were such incurable Infidels that they could never be converted to Christianity but by force, and the Pope's exhorting him to banish them out of his dominions, he did propose the expulsion of them to the Cortes. Yet the thing was so warmly opposed by his Barons, to whom most of the Moriscoes were vassals, and whose lands would have been of little value to them, if these people, by whom they were cultivated, were banished, that the design was laid aside, and not revived again in above three hundred years, notwithstanding they did all that time continue Mahometans.

As to the general expulsion of this people out of Spain, I shall reserve the account of it till I come to the year 1610, when it was effected by PHILIP III.

The Princess JOANNA, the eldest surviving daughter of King FERDINAND and Queen ISABELLA, having been married to PHILIP Duke of Burgundy and Archduke of Austria, son to the Emperor MAXIMILIAN, was on St. MATTHIAS's day, 1500, delivered of a Prince, afterwards called CHARLES V, Emperor of Germany and King of Spain. And PHILIP and his Princess coming into Spain in the year 1502, were sworn heirs of the kingdoms of Castile and Leon. Thus was the Austrian family first introduced into Spain.

The Em-  
peror  
Charles V  
born.  
1502.

The French King, CHARLES VIII, having about this time made a conquest of the duchy of Milan and kingdom of Naples, FERDINAND King of Castile and Arragon entered into a confederacy with the Pope, the Emperor, Venice, and Milan, to drive the French out of Italy, sending GONSALVO FERDINAND DE CERDUA, commonly called the Great Captain, to the assistance of the Neapolitans, by whose conduct the French were expelled that kingdom. But not long after a treaty of peace was concluded between France and Spain, wherein it was agreed to depose FRÉDERICK King of Naples, and to divide that kingdom between them; Apulia and Calabria were allotted to FERDINAND the Catholic King, and Abruzzo and Campania to the French; and the Pope gave each of them the investiture of his part. The two Kings accordingly made an entire conquest of the country, and the unfortunate FRÉDERICK fled to the island of Ischia. But the French and Spaniards afterwards falling out about the limits of their territories, GONSALVO the Great Captain drove the French out of that kingdom a second time, and most of their army perished in their retreat. From this time we may look upon the Spaniards to be sole Sovereigns of Naples as well as Sicily.

The Spa-  
niards  
make a  
conquest  
of Naples.

ISABELLA Queen of Castile dying in the year 1504, appointed the Princess JOANNA and the Archduke her husband heirs to the crown of Castile: but if the Princess, on account of her indisposition (she is reported to have been distracted with jealousy) should not take upon her the government, she committed the administration of it to King FERDINAND, till Prince CHARLES, their son, arrived at the age of twenty years, according to an act of the Cortes, or three Estates of Castile, passed not long before for that purpose. She confirmed also to King FERDINAND the masterships of the three military orders, and half the revenues of the new conquests in America.

JOANNA to be proclaimed Queen, and her husband PHILIP King of Castile in right of his wife, but took the administration of the government upon himself; and in order to support his power, entered into an alliance with the King of France, which he cemented by marrying GERMANA DE FOIX, the French King's niece, on whom he agreed to confer the kingdom of Naples, in exclusion of Prince CHARLES his grandson; which his son-in-law King PHILIP highly resented, as well as his taking upon him the government of Castile. PHILIP therefore coming to Spain from the Low Countries with a great fleet and a good body of German troops, with which his friends in Castile joined him on his arrival, King FERDINAND was obliged to retire to Arragon, and leave PHILIP in the possession of Castile. However, a treaty was set on foot between them, and they parted friends, in appearance at least.

King PHILIP, as has been intimated already, entertaining a variety of mistresses, provoked his Queen to the last degree. Whereupon she took all opportunities of shewing her resentment; and the people were so disgusted at the ill usage she received from her husband, that a party was formed in the kingdom to rescue her out of his hands. PHILIP, on the other hand, gave out she was mad, and proposed the excluding her from the regency; but when the matter was mentioned in the Cortes, and they were required to take the oaths of allegiance, it was carried, that they should swear to Queen JOANNA as Queen of Castile in her own right, to King PHILIP only as her husband, and to Prince CHARLES as heir to the crown after his mother's death. Another occasion of discontent among the Castilians was the displacing the native Spaniards, and putting the Germans and Flemings into all posts of honour and profit in the kingdom; and so general was the disaffection at this time, that if FERDINAND had returned into the kingdom, the people would infallibly have deposed King PHILIP, and conferred the administration of affairs on the Catholic King again; but he was gone to Naples to secure that kingdom, being apprehensive that GONSALVO the Great Captain might set up for himself, or yield that kingdom to some other Sovereign. To prevent which, the Catholic King proposed the bringing back the Great Captain with him to Spain, under pretence of his having occasion for his service on that side; and in the mean time King PHILIP died, viz. on the 25th of September, 1506. The situation of affairs in Spain on this event is so well described by Dr. GEDDES, that I chuse to follow that gentleman in the relation of them.

Queen Jo-  
anna's be-  
haviour to  
her dead  
husband.

He says, 'That the Queen, whose brain was somewhat distempered before, did upon this loss sink into so deep a melancholy, that those who were about her had much ado to keep her from famishing herself. And as during the whole time of her husband's sickness she had never, though she was big with child, day nor night, stirred from his bed-side; so having, some days after he was buried, been told by a Monk, that he had read in some legend or other of a King who came to life again after he had been dead fourteen years, she immediately commanded her husband's body to be brought into her bed-chamber, where, having taken it out of the coffin, and laid it in a bed of state with its face uncovered, she kept it there as long as she lived, which was above twice fourteen years; and when

she was awake, was continually looking upon it, and watching when it would rise.

CHAP.  
XVIII.

And as the Queen's fondness for her husband, who had little deserved it from her, so her jealousy of him was so much increased by his death, that she would never suffer any woman but herself to go near his corps, nor none of that sex, besides her old servants and confidants, to come within the doors of the room where it lay. And having left Burgos, with a resolution never to see that nor any other city any more, she travelled in the night by torch-light, with her husband's corps drawn in a hearse by six Flanders mares from one obscure village to another, until she settled at last at Tortela, where in a very mean house she was delivered of a daughter, without the help of a midwife; for as there was no persuading of her to lie in in any other room but in that where her husband's corps was, so she would not hear of a midwife, tho' never so ancient, being brought into it.

The breath was not well out of PHILIP's body, when the Grandees were all to pieces about the administration of the government during Prince CHARLES's minority. The Nobles, who had appeared most forward in driving FERDINAND out of Castile, talked high against his being recalled to be their Governor; alledging, That if his government was grievous to his Nobles before, it would be much more so now, after he had been so highly provoked by their having joined with PHILIP against him. His being married to the Princess GERMANA, in hopes of having male issue by her, was likewise urged as an unkind thing to the posterity of their Queen ISABELLA, and which, if he were it's Governor, might prove of dangerous consequence to Castile.

The Queen, who when she would speak, which was but seldom, did always give very pertinent answers, being addressed to know to whom she would have the administration of the government of her kingdoms committed, is said to have answered, "My first-born son and heir CHARLES is too young to administer the government himself, and MAIXMILIAN my father-in-law cannot well leave the Empire and his own hereditary dominions; or if he would, he is altogether a stranger to the tempers and customs of my people, which are all perfectly understood by my father, and who has with great toil and danger much enlarged my territories." But when she was desired, after so wise an extemporary answer, by a public instrument to constitute her father Governor of Castile during her son's minority, not a word more was to be had from her, neither would she to her dying day ever be persuaded to put her hand to any writing, or to give any reason why she would not do it; only on other occasions she would sometimes say, "That it was scandalous for the widow of a good husband to let any thing trouble her thoughts but the memory of her great loss."

Cardinal XIMENES, Archbishop of Toledo, the wisest and most disinterested statesman that Spain, or perhaps any other kingdom, ever had, at first seemed to agree with the Nobles to exclude FERDINAND from the regency, to which his near relation to the Prince gave him so good a title; but being sensible that no man was so fit as FERDINAND to govern Spain at that time, he so managed the Council of State, that he pre-  
vailed

CHAP.  
XVIII.

vailed with them to send for FERDINAND, who was then at Naples, to desire him to come and take upon him the administration of the government, during the time of his daughter's indisposition, and of his grandson's minority. And though the Queen would not be persuaded to give any countenance to his coming by writing a line to invite him, yet having been desired by his Ambassador at her court, to order publick prayers and supplications to be made in all the churches for his safe arrival in Castile, she made answer, it shall be done; and added, that she doubted not but that God would both give her father a prosperous voyage, and would bless him in the administration of the government of her kingdoms.

FERDINAND being arrived in Castile, went directly to visit his disconsolate daughter; and though the place he found her in was extremely inconvenient both for herself and the court, he had much ado to persuade her to leave it, to go to Santa Maria de Campo, from whence he intended to have moved her to Burgos, and to have fixed her there, so soon as the castle of that city (which was held out against him by one EMANUEL, the great favourite of King PHILIP) was reduced. But the Queen, when she came to Arcos, suspecting that her father intended to have carried her to Burgos, would not go a step further; telling him, that she was resolved never to see the place any more, wherein she had been so unhappy as to lose the best of husbands. And though Arcos was a town of bad air, and very inconvenient for the court, it was five months before he could persuade her to leave it to go to Tordeillas, a pleasant village, and where she had a palace, in the neighbourhood of Valladolid: but having at last prevailed with her to remove, she travelled all the way by night with her hearse, stopping still at the first house she met with, though it was a cottage, after the day began to dawn, and remained there till it was dark night. And when she was desired by her father, who accompanied her, not to feed her melancholy by travelling after such a dismal manner, all the answer he could have was, "That the sun ought never to see a woman, after she was so unfortunate as to be a widow."

King Ferdinand resumes the administration.

The Emperor MAXIMILIAN did at first oppose King FERDINAND's taking upon him the government of Castile, alledging, that as his daughter Queen JOANNA was non compos, the administration of the government devolved upon him (the Emperor) during the minority of his grandson Prince CHARLES. But matters were at length accommodated between the Emperor and FERDINAND, and the latter continued Regent of Castile all the remainder of his life. The most remarkable things that happened during his administration were the Italian war and the conquest of Navarre. For in the year 1508 FERDINAND entered into a confederacy with the French King and other Princes against the Venetians, on account of that republick's refusing to deliver up to him Brundisium, Otranto, and some other cities of Calabria, which the Venetians had possessed themselves of. But the Venetians agreeing to surrender those places to him, he thought fit to change sides, and thereby prevented the French and Imperialists from making themselves masters of the Venetian territories. And this occasioned the other war against Navarre; for JOHN D'AL-

BERT, King of Navarre, entering into an alliance with the French King against Spain, FERDINAND took this opportunity of reducing all that part of Navarre, which lies on the Spanish side of the Pyrenees (which is four times larger than that on the French side) to the obedience of Castile: in which expedition he had the Pope on his side, who excommunicated the King of Navarre for joining with France, and gave his dominions to any power that could conquer it. Nor were the Kings of Navarre ever able to recover this part of their territories again. This victorious King also took Tripoli and several other towns on the coast of Barbary from the Infidels; and after a long and glorious reign, wherein immense treasures continually flowed in from the American conquests that were discovered and subdued under his administration, (and to which as well as his wisdom his successes are to be ascribed) he died on the twenty-third of January, 1515-16, leaving all the provinces of Spain, except Portugal, united under one head. He had made three wills, in all of which he named his daughter Queen JOANNA his Heiress, and her son Prince CHARLES Governor of his dominions; and during that Prince's absence he appointed his illegitimate son the Archbishop of Saragossa to be Governor of Arragon, and Cardinal XIMENES, Archbishop of Toledo, Governor of Castile, which was complied with afterwards; only the Dean of Louvain, producing the Prince's commission, was admitted joint Governor with Cardinal XIMENES. To Prince FERDINAND, his younger grandson, he left some towns in the kingdom of Naples, and an annual pension of fifty thousand ducats. He was interred in the royal chapel in the cathedral of Grenada, near his late wife Queen ISABELLA, with the splendor and magnificence due to so great a conqueror.

Prince CHARLES, upon the death of his grandfather King FERDINAND, took upon him the title of King of Spain, notwithstanding his mother Queen JOANNA was living, but did not arrive in Spain however till a year and a half afterwards; the government of Castile in the mean time being committed to Cardinal XIMENES and ADRIAN Dean of Louvain, CHARLES's preceptor, who afterwards arrived at the papacy by the powerful interest of his pupil.

Charles his grandson K. of Spain.

The Spaniards had been entertained with such a glorious character of their new Sovereign CHARLES, that they expected him with the utmost impatience, and were apt to impute his stay to the arts of the Flemings, who obtained vast remittances of treasure from Spain in the mean time. But however that was, CHARLES arrived at length with a royal fleet at Villa Viciosa in Asturia on the nineteenth of September 1517, whither Cardinal XIMENES was going to attend his Majesty, but died upon the road before he saw him; whereupon CHEVERS a Frenchman, the then favourite in King CHARLES's court, begged that noble preferment, computed to be worth fourscore thousand pounds sterling per ann. for his nephew, WILLIAM DE CROY Bishop of Cambray. Other posts of honour and profit were taken from the native Spaniards and conferred on the Germans and Flemings, which very much disgusted the Castilians, and began to make them alter the good opinion they had conceived of their new Monarch.

A Cortes was assembled in the year 1518, where King CHARLES took the usual oaths to govern according

according to their laws, and to protect the liberties and privileges of the subject: after which a motion was made by the court-party for a supply to defray the charges of the government; but the Commons insisted before they parted with their money, to have two of their ancient laws confirmed, viz. 1. That none but natives of Castile should be admitted into any office or employment in Church or State. And, 2. That no treasure should be sent out of the kingdom, on pain of death: wisely foreseeing, that if these restrictions were not complied with, Spain must sooner or later be reduced to a state of beggary. But the court-party, by places or pensions, or the hopes they gave the majority of finding their account in complying with his Majesty, procured the supply to be granted before the privileges of the subject were confirmed; and the donative, as the Castilians call a bill of supply, was immediately borrowed of the Italian bankers at a high interest, and distributed among the Flemings, though it was not to have been raised under three years: and what was a further mortification to them was, that they saw all that vast sum exported to Flanders by the King's Dutch favourites, almost as soon as it was borrowed.

Donna LEONORA, the King's sister, was about this time given in marriage to EMANUEL King of Portugal, though he had married two of her aunts before, and he was old enough to be her grandfather. This the Castilians made another subject of complaint, ascribing this match to CHEVERS the King's favourite, who, 'twas said, sacrificed this young Princess to his covetousness, being known to have received one and twenty thousand ducats of the King of Portugal. The King also sent his brother Don FERDINAND to Flanders under the tuition of a Flemish Governor; and conferred the rich archbishoprick of Tortosa on his preceptor ADRIAN, for whom he procured a Cardinal's cap; which so disgusted the Spanish clergy, that they refused to raise the tenths the Pope had granted him.

The King afterwards assembled the Cortes of Arragon at Saragossa, where he took the oaths to maintain their privileges, and then demanded a supply; but the States answered, It was not usual to give money before their grievances were redressed, and the debts of the crown were paid. But the Emperor MAXIMILIAN dying about this time, and the King desiring them not to delay the supply, because he should be obliged to go into Germany to be present at the next election, in order to prevent the French King's being chosen Emperor, the donative was granted; clogged however with so many appropriations to publick uses, that there remained but little for the King. From whence he went to Barcelona, and assembled the States of Catalonia, who were nine months before they granted any money, and then applied so much of it to the paying of old debts, that there were not above twenty-five pounds left for his Majesty's use; which the courtiers exclaiming against, were told, That the King seemed to be governed by Dutch and French Ministers, who were come into Spain as into an enemy's country, intending after they had plundered it, to carry the spoils to Flanders. They complained also, that all offices were sold by the Prime Minister CHEVERS or his Lady, a practice till then not known in Spain.

K. Charles  
chosen Em-  
peror.

The King having been chosen Emperor while he remained at Barcelona, the Spaniards foresaw

that they should now be made a province of Germany, and that as the King would generally reside there, the treasures of Spain would be exported thither, which made them still more untractable; insomuch that when the Emperor deputed Cardinal ADRIAN to hold a Cortes at Valencia, they refused to grant him a supply, or even to acknowledge him for their Sovereign, till he came amongst them, and took the oaths to observe their privileges in person, which he could not do at this time, being pressed by the Imperial Diet to hasten into Germany. However as he was in great want of money, he ordered the Cortes of Castile to assemble at the Groyne, a port-town in Galicia, from whence he intended to embark for Flanders; and threatened the electors, if they did not send representatives thither prepared to grant what money he should ask, he would remove all the Courts of Judicature out of Castile into that loyal province of Galicia.

Misunder-  
standings  
between  
the Em-  
peror and  
the Cortes  
of Castile.

The Castilians hereupon complained openly, that they were treated by their Dutch King and his ministry more like slaves than subjects; that the commanding them to meet in Galicia, a remote province, and demanding a new donative before the time for raising the former was expired, and threatening to remove the Courts of Judicature, if they did not raise such sums as the ministry demanded, were things unprecedented. This was indeed to rule them with a rod of iron, as some of his Dutch favourites had threatened; and the city of Valladolid in particular was so exasperated at the King's removing both the Courts and Cortes from thence, that they had recourse to arms, and determined to prevent his Majesty's going out of the gates; but he took the advantage of a tempestuous night, and escaped from them, going from thence to the Groyne. Here he was met by Commissioners from Toledo, who protested against his holding a Cortes in Galicia, declaring it to be unlawful. But the King, who had now so many valuable posts to dispose of in the Empire, as well as in the dominions of Spain, notwithstanding their opposition, procured the Cortes to be assembled at the Groyne, and found means to influence a majority to grant him the supplies he demanded, for which indeed they were called *tools and journeymen* to CHEVERS the Prime Minister, and charged with conniving at their country's being plundered by foreigners, that they might have a share in it's spoils. And the nation in general was so provoked at the proceedings of this Cortes, that an insurrection was looked upon as inevitable. However, the King proceeded in his voyage, embarking at the Groyne the twenty-second of May 1520; and Cardinal ADRIAN was left Governor of Castile, a man the most grateful to the Spaniards of any of the foreigners the King had brought over on account of his unblemished integrity; but he was not trusted with the disposal of any preferments of consequence, for these the Spaniards were forced to go over and solicit in Germany, and in the Spaniards phrase, *to buy them of the Prime Minister CHEVERS*.

1520.  
The Em-  
peror em-  
barks for  
Germany.

The people of Valencia had already taken up arms, and excluded the nobility of that kingdom from all employments; and the King was no sooner gone to his German dominions, but the city of Toledo proposed an association among all the cities of Castile, for redressing their grievances, and recovering their invaded liberties. Accordingly they chose them a General, formed

an army, and elected representatives in every town, who assembled at Abula, and took upon them the title of a Cortes, and the direction of all affairs. The members who had voted the supply at the Groyne were soon made sensible of the people's resentment; they fell upon them wherever they met with them, dragged them from the very altars, and tore them in pieces, crying out, that *Rogues who had betrayed their country ought not to have the benefit of it's sanctuaries.*

Their demands.

The first thing the Cortes or Junta of the disaffected Commons entered upon, was the drawing up a particular of their demands; the chief whereof were, 'That the King should reside in Castile, or appoint one of the natives his Viceroy. That no foreigner should be capable of any office or preferment. That the King should give no office or salary to any member of the Cortes. That a Cortes should meet once in three years. That the soldiers should not have free quarters. That all privileges granted to the nobility to the prejudice of the Commons should be revoked. That the lands of the Nobility should be taxed equally with the Commons. That no gold, silver, or jewels should be sent out of the kingdom, &c.'

With these demands they sent a deputation to the King in Germany; but before those gentlemen had passed through France, they understood the King had ordered them all to be made prisoners as soon as they entered his German dominions; whereupon they returned to Spain, endeavouring to heighten the discontents of the people against their Sovereign. And now the breach appeared to be so wide, that nothing but the sword could decide it; whereupon the Cardinal, who was left Governor of Castile, assembled all the forces he could, and the malecontents increased theirs. The Commons had much the advantage at first, for both the Clergy and Nobility, if they did not join them, lay still and were not displeased to observe their success; but when they found that the Commons were no less bent upon their destruction than that of the Ministers, they joined with the Court against them, which in the end brought their affairs into an ill situation. Another occasion of their misfortune was their making choice of Don JOHN DE PADILLA for their General, a nobleman of very little knowledge or experience in martial affairs. The King however having but few forces in Castile at the time of the insurrection, the Commons remained masters of the country for near eighteen months; but when the royal army advanced from the kingdom of Navarre, that had been employed against the French, the great army the Commons had assembled, consisting chiefly of an undisciplined mob, dispersed without ever coming to a battle; whereas if they had kept together but a very few weeks, the French having over-run all Navarre, and entered the frontiers of Castile, the royal army must have returned to Navarre again to have prevented the loss of that kingdom.

Upon the dispersion of the army of the malecontents, their Generals and superior Officers were made prisoners, of whom some few were executed, particularly Don JOHN DE PADILLA; but the common soldiers were pardoned, on condition of surrendering their arms, and returning to their houses. This success of the Royalists so terrified the associated cities, that they all submitted to the government in an instant. Never

VOL. II.

did any cause, says Dr. GEDDES, which was espoused by the body of a people, and which had been allowed time to put itself under some government, fall so flat at once as this of the Commons of Castile; no place besides Toledo having made the least effort to renew the war, after they heard of their army's being dispersed, and this the Clergy held out only out of prejudice to their Archbishop, who was a foreigner, and he happening to die a few months after, the town surrendered without any army's appearing before it. The war with the Commons of Valencia ended about the same time, which had been carried on with much greater fury and devastation than that of Castile, and concluded with a very great slaughter of the Commons in the last decisive battle.

In the mean time Cardinal ADRIAN, Governor or Viceroy of Castile, received news of his being elected Pope, while he was at Victoria in Biscay, carrying on the war against the French; whereupon he immediately set out for Italy, as the Emperor did for Spain, where he arrived the September following. His Imperial Majesty returning to Castile very much in debt, assembled a Cortes at Valladolid, the members whereof were generally esteemed to be in the court-interest, for the other party, since their late ill success, durst not appear to contest the elections with the Royalists; and yet when the Emperor came to demand a supply of them, they insisted that their grievances should be redressed before they raised any money; which is the more to be admired, since the Speaker in his speech to the Emperor on this occasion takes notice, *That there was not one of the Members of this Cortes, who was not either of his Majesty's household, or in some post in the government, and had been a sufferer for the crown in the late insurrection.* The Emperor answered, that he could never alter the custom introduced of raising money before any other business was entered upon. And when the Cortes addressed him in a body, that their grievances might be first taken into consideration, he told them in short, *That it was in vain to struggle with him for a thing which he was resolved never to grant;* whereupon they ceased to importune him any more, and granted the sum he required, being forty hundred thousand ducats, to be raised within three years; the consequence whereof was, that their grievances were never redressed, or their privileges confirmed. But what could be expected more from a Parliament composed entirely of creatures of the court? And what can any people ever expect, where a majority of their Representatives are always such? Private interest will ever exclude that of the publick.

The Clergy found themselves in a still worse condition than the Commons; for ADRIAN the Emperor's Preceptor being advanced to the papal chair, instead of the tenths formerly granted, conferred on the Emperor the fourths of the Clergy in his dominions. He also granted to him and his successors Kings of Spain, the power of electing and presenting to all bishopricks in their dominions, with the mastership of the three military orders for ever, of which his predecessors had only temporary grants from former Popes. But ADRIAN's pontificate proved very short, his Holiness dying in September 1523. He was the last ultramontane Pope: it is observed, the Italians have ever since chosen one of their own nation; which 'twas very easy to do, the reigning Pope always taking care to have a majority of Italian

C H A P. Cardinals. ADRIAN was succeeded by Cardinal  
XVIII. JULIUS DE MEDICIS, and took the name of  
CLEMENT VII.

War be- The French having entered the dutchy of Milan  
tween the in the year 1524, were defeated by the Imperial  
Emperor and France Generals, who afterwards passed the Alps, and  
in Italy. laid siege to Marcellis: whereupon FRANCIS  
the French King assembled a powerful army, and  
raised the siege: he afterwards followed the Im-  
perialists into Italy, and reduced great part of  
Milan. In the mean time the Emperor entred  
into an alliance with Pope LEO for driving the  
French out of Italy; by which treaty it was a-  
greed, that the Emperor should annually on St.  
PETER's day, pay his Holiness seven thousand  
ducats and a white pad, as a tribute for the king-  
dom of Naples, to which the Popes had long  
laid claim. That the Emperor should also ac-  
knowledge Sicily to be a fief of the Church,  
paying annally 15000 ducats to the Holy See for  
that island; and that the dutchy of Milan should  
be conferred on FRANCIS SPORZA, after the  
French were driven out of it.

Naples  
Sicily and  
held of the  
Pope.

1525. In pursuance of this treaty, the Pope's forces hav-  
Battle of ing joined the Imperialists, they attacked King  
Pavia. FRANCIS in his trenches before the city of Pavia,  
The King which he had besieged, and the French being en-  
of France tely defeated, their King was taken prisoner, and  
taken pri- soon after sent to Spain. This battle was fought  
soner. on Friday the twenty-fourth of February 1526, be-  
ing St. MATTHIAS's day, and the Emperor's  
birth-day.

1526. Whilst King FRANCIS remained a prisoner at  
Madrid, a treaty of peace was concluded between  
him and the Emperor, by which the French King  
renounced all pretensions to the sovereignty of Flan-  
ders, Milan, Genoa and Aste. He promised also  
to restore the dutchy of Burgundy to the Emperor,  
to marry the Emperor's sister, ELEANOR QUEEN  
dowager of Portugal, and to pardon CHARLES  
Duke of Bourbon, who had deserted the French  
service, and was at this time General of the imperial  
army. Upon the conclusion of this treaty the French  
King was set at liberty, but left his two sons, FRAN-  
CIS the Dauphin and HENRY his younger brother,  
hostages for the performance of the articles.

The Em- The Emperor afterwards deprived FRANCIS  
peror seizes SPORZA of the dutchy of Milan, and took posses-  
Milan. sion of it himself, under pretence that the Duke  
held correspondence with France; whereupon the  
Pope changed hands, and entered into a confederacy  
with France, England and the Venetians against  
the Emperor. But CHARLES Duke of Bourbon,  
the imperial General, taking the field before the  
confederates had assembled their troops, invested  
the city of Rome, where he was killed by a mus-  
ket-shot from the walls; notwithstanding which  
the Imperialists took the town by storm, and laid  
siege to the castle of St. Angelo, whither the Pope  
and Cardinals had retired. The Emperor being at  
Valladolid in Spain when this news was brought  
him, declared that Rome had been besieged with-  
out his knowledge, and ordered a fast to be pro-  
claimed and prayers put up for the safety of his Ho-  
liness, which was looked upon as a piece of grimace  
by the rest of the Princes of Europe: however,  
matters were soon after accommodated between his  
Imperial Majesty and his Holiness. The Floren-  
tines, who mortally hated the Pope, took this op-  
portunity of expelling the family of MEDICIS, to  
which the Pope was nearly related.

1527. In the mean time the French having assem-  
bled a fine army, joined their confederates, and

CH A P. marched through Italy, laying siege to Naples; but  
XVIII. the plague wasting their army, and ANDREW  
DORIA their Admiral, who was a Genoese noble-  
man, deserting their service, they were forced to  
raise the siege of Naples, and most of the French  
army perished before they reached their own coun-  
try. The Genoese at the same time, by DORIA's  
assistance, expelled the French faction, and declared  
themselves a free state, and have ever since looked  
upon the family of DORIA as their deliverers.

1528.

The following year a peace was concluded be-  
tween the Emperor and France, wherein it was a-  
greed, that the French Princes should be released  
on their father's paying his Imperial Majesty two  
millions of gold: that Burgundy was confirmed to  
the French; who on the other hand renounced all  
superiority or homage in respect to the Spanish Low  
Countries. The Portuguese also agreed to advance  
the Emperor 350,000 ducats, on condition the  
Spaniards should not trade to the Molucca islands  
in the East-Indies, where the fine spices grow, till  
that sum was repaid.

1529.

The Emperor after this went over to Italy, and  
was crowned by the Pope at Bologna, the ceremony  
being performed with the utmost splendor and mag-  
nificence. His Generals, of whom PHILIBERT  
Prince of Orange was the chief, about the same  
time besieged the city of Florence, and took it;  
whereby the Florentines lost their liberties, and  
were compelled to accept ALEXANDER DE ME-  
DICIS for their Duke and Sovereign. From Italy  
the Emperor went to Germany, and held a Diet at  
Augsburg, the principal design whereof was to de-  
press the Lutheran interest; but those of that per-  
suasion presented their confession of faith in writ-  
ing to the Diet, said to be composed by PHILIP  
MELANCTHON, which from the place where it was  
drawn up, afterwards obtained the name of THE  
AUGSBURG CONFESSION.

1530.

Florence  
taken by  
the Empe-  
ror.

The next year the Emperor procured his brother  
FERDINAND, Archduke of Austria and King  
of Hungary and Bohemia, to be elected King of  
the Romans; and the Turks threatening to invade  
Hungary, the Emperor thought fit to grant liberty  
of conscience to the Protestants, who joining their  
forces with the Catholics, formed a numerous well  
disciplined army, which obliged the infidels to re-  
tire from the confines of Christendom.

1531.

The two or three following years nothing re-  
markable happened, unless a conference between  
the Pope and the Emperor at Bologna, in order  
to extirpate heresy; and an expedition of the Em-  
peror's to the coast of Barbary, where he restored  
the deposed King MULEASSE to the crown of Tu-  
nis. From Africa the Emperor went to Naples  
and Rome, and being highly provoked at the con-  
duct of FRANCIS the French King, who had in-  
vaded Italy in his absence, he sent him a challenge,  
which was not accepted. He afterwards passed  
the Alps, and laid siege to Marcellis, but was ob-  
liged to return to Italy without taking the town.

1535.

1536.

From Italy the Emperor went to Spain, where  
nothing remarkable happened, unless the death of  
the Empress, till the year 1540, when there being  
a rebellion at Ghent in Flanders, the Emperor ven-  
tured to pass thro' France, the territories of his old  
enemy King FRANCIS, to suppress it; in which,  
the writers of those times observe, he run a very  
great hazard, it having been debated in the privy  
council of that kingdom, whether they should not  
make him prisoner, and oblige him at least to re-  
store to France, what he had extorted from King  
FRANCIS when he was prisoner at Madrid; but  
it

it seems it was carried in the negative. The same year the order of the Jesuits was first confirmed by Pope PAUL, having been instituted by IGNATIUS LOYOLA, a native of Biscay, who was a soldier, and wounded in the late wars of Navarre, before he erected this new sect.

The Emperor having pacified the tumultuous Flemings, went to Germany, with an intent, as it is said, to endeavour an accommodation between the Papists and Protestants, for which end conferences were held between the most celebrated Doctors on both sides, but to very little purpose. The Emperor afterwards had a conference with the Pope at Luca, on the subject of holding a general council to determine the disputes that were arisen about religion; which being deferred for some years, the Emperor in the mean time undertook an expedition against the Moors of Barbary, in which he was very unsuccessful, most of his fleet being dispersed or wrecked upon that coast, after which he returned to Spain.

1542. Such swarms of locusts came over from the coasts of Africa to Italy and Spain this year, as intercepted the light of the sun where they came, and destroyed the fruits of the earth.

1543. The French King and the Turk entering into a confederacy against the Emperor, and BARBAROSSA, the Turkish Admiral, ravaging the coast of Naples, while the French attacked Milan, his Imperial Majesty went thither to defend that part of his territories, and entering into an alliance with the King of England, (who made a diversion on the side of Picardy, took Bologn, and sent out parties to the very gates of Paris) the French King found himself under a necessity of accepting the peace that was offered him by the Emperor; the principal articles whereof were, that all places should be restored that had been taken since the last truce, and that both Princes should unite their forces against Turks and Hereticks.

1545. Council of Trent opened. The year following the council of Trent was opened, and great endeavours were used to induce the Protestants to submit to the decisions of that council; but the Protestants insisted that this was to refer their differences to their enemies, and thought it reasonable that their Divines should be admitted to offer their arguments, and defend their doctrines. A Diet thereupon was held at Ratibon, and conferences set on foot between the protestant and popish divines, which tended only to render the breach still wider, it was observed; and both sides not long after had recourse to arms, where- in the Protestants had the disadvantage at first, being defeated in a pitched battle, and their General the Duke of Saxony made prisoner.

1546. and conferences set on foot between the protestant and popish divines, which tended only to render the breach still wider, it was observed; and both sides not long after had recourse to arms, where- in the Protestants had the disadvantage at first, being defeated in a pitched battle, and their General the Duke of Saxony made prisoner.

1547. The council of Trent breaking up without determining any thing in relation to the matters in dispute between Papists and Protestants, a book was published by the Diet of Augsborg, allowing the marriage of priests, the communion in both kinds, and some other concessions by the Catholics, which was called the Interim, being to remain in force till the council should meet again and determine these matters. The Pope the same year published a bull, declaring that the descendants of Jews, Hereticks, or Moors, should be incapable of holding any ecclesiastical preferment in Spain.

1550. Another war broke out between the Protestants and Papists in the year 1550, in which the Protestants had the advantage, and reduced the Emperor to very great straits.

The Protestants distress the Emperor. The council of Trent being opened again in the year 1551, the Protestants were admitted to send

some Divines thither, where they presented a book to the council filed, The Wittenburg Confession: but while their opinions were under debate, news was brought to Trent, that MAURICE Duke of Saxony had possessed himself of Augsborg, and was near surprizing the Emperor at Inspruck; whereupon the council broke up in great confusion, and the Emperor, in order to pacify the protestant Princes of Germany, thought fit to release the Duke of Saxony, and the Landgrave of Hesse, whom he had made prisoners at the beginning of the war, and made several important concessions in their favour. This treaty obtained the name of the treaty of Passau.

In the year 1554, MARY Queen of England having restored the popish religion in that kingdom, which disgusted many of her subjects, in order to support her self on the throne, say the Spanish historians, married Prince PHILIP, the Emperor's eldest son, to whom his father resigned the kingdom of Naples and dutchy of Milan, on that occasion, and the marriage was solemnized at Winchester on the 25th of July 1554.

The Emperor the following year thought fit to resign all his Spanish dominions to his Son PHILIP, and the Empire to his brother FERDINAND; after which he took leave of his Flemish subjects, and went by sea to Spain, retiring into the monastery of St. JUST, of the order of St. JEROM, in the territory of Placentia, where he died two years after. Some ascribe this to his contempt of the world, and an excess of piety, which prompted him to devote the remainder of his life to divine contemplation; while others relate, that his ill success in the Protestant war, wherein he was perpetually defeated, and losing the towns of Metz, Toul and Verdun in Lorrain to the young French King, which he endeavoured in vain to recover, so soured his spirits, that it occasioned his retiring from the world in discontent. There are other writers who affirm, that this Prince in his latter days was in reality a Protestant in his heart, which induced him to grant such advantageous conditions to those of that communion at Passau. PUFFENDORF adds, that his will was so far from pleasing the Inquisition, that it was in danger of being burnt as heretical; and that his Confessor, and the rest of the Monks of the convent who were present at the executing it, were severely dealt with by that court.

The dividing the Spanish territories from the Empire on the abdication of CHARLES V, proved of fatal consequence to Spain: From that time, it is observed, that monarchy begun to decline. Nor was this unforeseen by the late Emperor, who endeavoured to persuade his brother FERDINAND to relinquish his expectations as King of the Romans to his son PHILIP; but FERDINAND would never be brought to approve that scheme. What gave the principal shock to the Spanish monarchy, however, was the insurrection that followed in the Netherlands, which might easily have been suppressed in the beginning, if PHILIP would have given himself the trouble of going thither in person, and not sent the Duke of Alva thither, whose rigid government and severities reduced that people to the utmost despair, especially when they understood that the inquisition had condemned the Catholics as well as the Protestants who had not opposed the malecontents, and endeavoured to prevent the defacing their churches and images. The introducing Spanish customs and Spanish troops into the Netherlands, had a great stroke also

in alienating the affections of the Flemings, who on King PHILIP's entering into a war with ELIZABETH Queen of England, found themselves so effectually supported by that Princess, that they were enabled to bid defiance to the haughty Spaniard. This provoked King PHILIP to equip that mighty fleet, to which he gave the name of the Invincible Armada, in order to make an entire conquest of England, which if he could have effected, his dissatisfied subjects of the Low Countries must have submitted of course. This fleet of the Spaniards, which had been several years in getting ready for this expedition, it is said, consisted of a hundred and fifty sail of men of war, carrying sixteen hundred brass guns, and above a thousand of iron; eight thousand seamen, and twenty thousand land-forces of veteran troops, besides noble volunteers and their servants, which were very numerous: they were armed also with the Pope's authority, who had excommunicated Queen ELIZABETH, and transferred her dominions to King PHILIP. This glorious fleet set sail for England in the year 1558, but never reached those shores; for first a storm, and then the English fleet, handled them so rudely, that they returned home miserably shattered, having lost so many gentlemen of the first quality, that it is said, not a noble family in Spain, but mourned for one relation or other. King PHILIP's courage and temper are much admired however on this occasion; who when he received advice of the destruction of his fleet, calmly answered, I did not send them to fight with winds and seas. And as one misfortune usually follows another, the English not long after defeated another fleet of the Spaniards near Cadiz, and having taken the city, plundered it of an immense treasure before they left it.

The Holy  
League.

Another project King PHILIP formed for enlarging his dominions, was the fomenting an insurrection in France, where the malecontents assumed to themselves the title of the Holy league. PHILIP proposed to have excluded the family of Bourbon, under pretence of their being heretically inclined, and to have annexed that fine kingdom to the crown of Spain; in which also he was countenanced by the Pope, and some other Catholick powers, as well as in his enterprize upon England: but HENRY IV broke all his measures by declaring himself a Catholick; and while the Duke of Parma left Flanders to march to the assistance of the League in France, the discontented Flemings had an opportunity of establishing themselves. HENRY IV, to retaliate the injuries he had received from the Spaniards during the civil wars, after he had reduced most part of the kingdom to his obedience, attacked the Spanish cities which PHILIP was possessed of in the Netherlands, particularly Cambray, which he took in the year 1594; but a peace was at length concluded between the two crowns at Vervins.

Wars with  
the Turks,  
&c.

PHILIP also, for great part of his reign, was engaged in wars with the Infidels. They had taken Tripoli, after it had been forty years in possession of the Spaniards: to revenge which, PHILIP assembled a fleet and army, which were defeated by the Turks, with a very great slaughter of the Christians, anno 1560. On the other hand, the Turks having laid siege to Malta, were compelled to raise it by the Spaniards, anno 1566. And in the year 1571, the united fleets of Spain, Venice, and other Italian powers, commanded by Don JOHN of Austria, obtained that memorable victory over the Turks near Lepanto,

Victory of  
Lepanto.

which quite broke their naval strength. But the loss of the island of Rhodes is at the same time ascribed to the sluggish indolence of the Spaniards, who neglected to reinforce their troops in that island.

King PHILIP in the year 1573, having resolved to attempt the retaking of Tunis, Don JOHN of Austria, his natural brother, was pitched upon to command in that expedition; and had so good success, that he took the town, and ordered several works to be added to the fortifications, in order to maintain that conquest; but the year following, the Moors laying siege to it before the works were perfected, made themselves masters of it, together with Galetta, and the whole kingdom of Tunis, to the irreparable loss of the Spaniards. About the same time there happened an insurrection by the Moors of Grenada, occasioned by the cruelties of the Inquisition. These people being continually reinforced by the Infidels from Africk, were not suppressed under three years time, and that with a great deal of difficulty, by Don JOHN of Austria. The Arragonians also had recourse to arms in defence of their privileges, which were invaded in the person of ANTONIO PEREZ, one of the King's Ministers, who being a native of Arragon, and prosecuted illegally in Castile, fled to his native country for protection.

And as nothing can tend to illustrate the Spanish history during the reign of PHILIP II, more than the account Dr. GEDDES has published of those two great men, Don JOHN of Austria, and ANTONIO PEREZ, I shall give an abstract of it before I proceed further.

Don JOHN of Austria was the natural son of the Emperor CHARLES V. He was happy in a beautiful person, and an elevated genius, improved by a good education. He endeavoured by heroic achievements, says my author, to wipe off the stain of his illegitimate birth, and had the happiness to insinuate himself into the affections of his brother King PHILIP, after their father's death. When the Moors of Grenada had baffled several of the King's Generals, his Majesty pitched upon his brother Don JOHN, who was then but two and twenty years of age, to put an end to that war; and he was so fortunate to reduce them in a very little time. This success induced the King to make him Generalissimo of the confederate fleet against the Turks in the year 1571, when he gained that decisive victory at Lepanto, that rendered his name famous throughout Christendom, and began to inspire him with ambitious views; inasmuch that when he afterwards made a conquest of Tunis, he did not scruple to discover his passion to be Sovereign of that kingdom; and notwithstanding he received positive orders from court to demolish that city, and withdraw his forces, he proceeded to augment the fortifications; at the same time dispatching an envoy to the Pope, to influence his brother so far as to make him King of Tunis. The Pope complied with Don JOHN, and used all his interest with the court of Spain to get him declared King of Tunis; but King PHILIP, who did not like this aspiring temper in his brother Don JOHN, let his Holiness know that the thing was not feasible: whereupon the project was laid aside. The King suspecting Soto his brother's Secretary had cherished, if not infused these ambitious thoughts into him, prefer'd Soto to another post, under colour of advancing him; and JOHN DE ESCOBEDO, a person that

CHAP.  
XVIII.Don John  
of Austria,  
an abstract  
of his  
history.

CHAP.  
XVIII.

King PHILIP thought he could rely upon, was made Secretary to Don JOHN in his room. But ESCOVEDO soon became more obsequious to his new master than SOTO had been, and promoted those very projects, which he was placed about that ambitious young Prince to oppose; particularly he put him upon applying to the Pope to prevail with his brother King PHILIP to invade England, of which kingdom he had procured a promise from his Holiness to make him King, when it should be conquered: and this project ESCOVEDO came from Flanders to promote, in conjunction with the Pope's Nuntio there, which gave King PHILIP abundance of perplexity; but at length, under pretence that his affairs in the Netherlands were at that time in such confusion, that a descent upon England was impracticable, he persuaded his brother and the Nuntio to lay aside the thoughts of that enterprise.

Soon after this the Court of Spain discovered that Don JOHN, who was at that time Governor of Flanders, had, in the name of his Catholic Majesty, entered into an alliance with the Duke of Guise, the head of the Holy League in France, for the extirpation of heresy in both kingdoms; which was so bold a step to undertake without acquainting his Sovereign with it, that King PHILIP apprehended ESCOVEDO would in time put his young hero upon assuming an authority equal, if not superior, to that of his own, unless he found some means to remove him from Don JOHN's Councils. Accordingly he laid his commands upon ANTONIO PEREZ his Secretary to procure ESCOVEDO to be assassinated, as he was soon after in the streets of Madrid by some bravo's or cut-throats, whom PEREZ employed. Nor did Don JOHN his master survive him many months, supposed also to be poisoned by the directions of the Court; though others relate, that the disappointment of his ambitious projects brought on the distemper which carried him off the stage. And notwithstanding all the artifices used by ANTONIO PEREZ, to avoid his being suspected of the murder of ESCOVEDO, as his going to his country-house at the time the fact was committed, and the like; yet it was no sooner done, but every body believed the Secretary PEREZ to have been the author of it, not upon a political account indeed, but for his having thwarted him in his amours with the Princess of Eboli.

The Arragonians lose their privileges by protecting Antonio Perez.

The King notwithstanding he had commanded ANTONIO PEREZ to procure ESCOVEDO to be taken off, in the manner above related, as an offender whom he durst not prosecute in the Courts of law, and had promised him his protection, yet to remove the odium of that action from himself, he suffered ANTONIO to be prosecuted and condemned for it, believing that it would be in vain for the Minister to charge his Sovereign with having authorized the fact, because he had seized his papers, and there was no living witness of his having given those commands. But ANTONIO PEREZ having secured some papers in a friend's hands, that plainly shewed he received his authority from his Majesty, found means to escape into Arragon, of which province he was a native, and referred his case to the sovereign Court of that kingdom; from which, if he was acquitted, there lay no appeal but to the Cortes, or Assembly of the States of Arragon. The King having founded the Arragonese Judges, and finding they were inclined to acquit the prisoner, ordered him to be taken out of their hands,

VOL. II.

and committed to the prison of the Inquisition for heresy and witchcraft, which he had charged him with. This the Arragonians looked upon as such a flagrant breach of their privileges, that they had recourse to arms, took ANTONIO PEREZ by force out of the prison of the Inquisition, and stood upon their defence. The King hereupon declared them rebels; and having assembled an army of veteran troops, sent them under the command of Don ALONSO DE VARGAS to invade the kingdom of Arragon; but the malecontents dispersing, and submitting themselves upon the approach of the King's army, there happened no action; the gates of the capital city were set open to the General, the Chief Justice and some of those who had been the forwardest to assert their liberties were hanged up, or otherwise executed, and Arragon from that time looked upon as a conquered province: the Cortes indeed here, and in Castile, continued to be assembled as anciently, to give a sanction to the King's edicts; but there are not many instances where they have had the courage to oppose the Court since, in any thing that has been demanded of them. It is only to amuse the people with a shadow of their ancient constitution, and to take off the odium from the Court, when their concurrence is required to any oppressive edicts. As for ANTONIO PEREZ, he had escaped into France from Arragon two or three days before the King's forces arrived there, and afterwards visited England and some other foreign Courts; but I do not find the enemies of Spain gave him any great encouragement, or that he made any mighty discoveries of the intrigues of the Spanish Court, though he and his father had been above forty years Secretaries of State in that kingdom, and had a great share in the administration there. And indeed a man that by his own confession turns assassin, to support the arbitrary views of a wicked Prince, ought deservedly to be detested by all mankind, to be prosecuted at home with all the fury this man was, and to be treated with suspicion and coldness in foreign Courts: he seems richly to have deserved the usage he complains of. But I refer the reader to Dr. GEDDES for a fuller account of this mystery of iniquity; and indeed the Doctor has laid open such a scene of state-craft in the relation he has given us of this occurrence, that I cannot but recommend it to the perusal of my countrymen.

To return to the history of Spain: We find King PHILIP caused his son Prince CHARLES to be poisoned in prison in the year 1568. What his crime was, does not appear; but it is generally said, he was engaged in a conspiracy against the life of his Sovereign and Father: though others say, that this unfortunate Prince having made love to his mother-in-law while she was single, they carried on the amour after she was married to his father; which provoked him to this severity; and the Queen herself died soon after, not without the suspicion of being poisoned.

The King marrying a fourth wife had four sons by her, of whom PHILIP, who alone survived, and afterwards succeeded him, was born in the year 1578. The same year SEBASTIAN, King of Portugal, assembling a great fleet and army, made a descent on the coast of Africa, and was defeated in a general battle by the Infidels, in which he lost his life; and leaving no issue, his uncle Cardinal HENRY was proclaimed King; and he dying in the year 1580, without children,

of Spain.

PHILIP King of Spain seized on the kingdom of Portugal, which he claimed in right of his mother ELIZABETH the Empress; and though there were many other pretenders to that crown, PHILIP being the most powerful, established himself in that kingdom; whereby all the provinces of Spain were now united under one head, and King PHILIP became master of the treasures both of the East and West-Indies.

King PHILIP having fitted out the Spanish armada, with an intent to have made a conquest of England, as has been mentioned already, ELIZABETH, Queen of England, in return of that hostile attempt, espoused the interest of Don ANTONIO, called the Bastard of Portugal, whom the Portuguese had declared their King, and sent a considerable fleet to Lisbon, in order to advance him to that throne; but the Spanish forces being too numerous in the city, that fleet returned to England without effecting any thing. Queen ELIZABETH had better success in the year 1596, when her fleet plundered Cadiz of a prodigious treasure, and burnt the galleons, which lay there bound for Mexico, as has been related already.

Cadiz  
plundered.King Philip  
dies.

King PHILIP died on the thirteenth of September 1598, after a reign of great action, having been engaged in almost perpetual wars, either in Italy, the Low-Countries, or against the Infidels, in which he exhausted an immense treasure; as he did also in his magnificent buildings, of which the palace of the Escorial was the chief. He was successful in his expedition against Portugal, but the loss of the seven United Provinces was a great blow to the Spanish monarchy; not so much for the value of those territories, as the laying the foundation of a State, which became a most implacable enemy to Spain, and rose to that greatness we see them at this day, chiefly by the spoils they acquired from the Spaniards and Portuguese.

Philip III.  
1598.A truce  
between  
Spain and  
the Low  
Countries.The ex-  
pulsion  
of the  
Moors  
from  
Spain,  
1609 and  
1610.

PHILIP III succeeded his father, and the year following was married to the Princess MARGARET, daughter of CHARLES Archduke of Austria. In this reign Philip was surprized by the Spaniards, anno 1602; and a truce for twelve years was concluded between Spain and the United Provinces, anno 1609, by which the Dutch were left at liberty to trade to the East-Indies. But the most remarkable event that happened during the reign of PHILIP III, was the expulsion of the Moriscoes out of Spain.

The learned writer above-cited ascribes the banishing of this people entirely to the bigotry and zeal of the Spanish Clergy, who threatened the King with the heaviest judgments, if he did not consent to it. The Barons, whose vassals they were, and whose lands were cultivated by the Moriscoes, made the most pathetic representations to the throne to prevent its being put in execution; assuring his Majesty, that the kingdom would be absolutely ruined, if the Moriscoes, who were the only husbandmen and mechanicks in the country, were sent away. In answer to which, they received the following letter from his Majesty.

Venerable and Beloved,

The rea-  
sons given  
by the  
Court for  
the expul-  
sion of the  
Moors.

YOU cannot but be sensible of the great endeavours that have been used through a long series of years to convert the New Christians of this kingdom, and of an edict of grace having been granted to them, and of all the other means

CHAP.  
XVIII.

which have been made use of to instruct them in our holy faith; as also of the ill success of all those endeavours, not so much as one of them (as is believed) having been converted thereby. On the contrary, their obstinacy has gone on increasing daily, with an inclination to plot the disturbance of the peace of these our Kingdoms.

Now the danger and irreparable damage, which may attend our suffering these people to remain any longer among us, having been laid before me some years ago, by several learned and holy men, and who exhorted me to a speedy remedy, and which, they told me, I was bound in conscience to make use of; assuring me farther, that I might, without any scruple of conscience, punish them all with death, and the loss of their estates, for the crimes whereof they were guilty, all of them being guilty of heresy and apostacy, and of divine and human treason: nevertheless, notwithstanding we might have proceeded against them with the rigour that their crimes do deserve, we continuing desirous, if it had been possible, to have reduced them by mild and gentle methods, did, as you know very well, order a Junta to be held at Valencia, to consult together, to see whether any new ways might be found out to convert them, that so we might not be obliged to banish them out of Spain. But while we were thus labouring their conversion, we received advice by several ways of their having sent deputies to Constantinople and Morocco, to invite the Turk and MULEY SELEM to come to their assistance, with an assurance of fifty thousand men being ready to join them when they landed in Spain, who were all as true Mahometans as any in Barbary, and would all sacrifice their lives and estates in their service: and to encourage them to enterprize it, they told them it would be an easy conquest, Spain having but few men in it that were fit to bear arms, and yet fewer that knew any thing of martial discipline. They have been guilty also of holding a correspondence with heretical and other Princes, who are enemies to the greatness of our monarchy, having offered to assist both the one and the other with their forces. Furthermore, we are certainly informed of the Turk's having concluded a peace with the Persian, and with some of his rebellious subjects, that so he may be at liberty to send his fleet into our seas; and that MULEY SELEM also has quitted his kingdom, and is treating with the northern hereticks about ships to transport an army of Moors into Spain, which those hereticks have promised to supply him with. Now in how great danger Spain would be if it should be invaded by these and some other enemies, I leave you to judge.

Now considering all that has been said, and being desirous to comply with the obligations we are under to procure the conservation and security of our kingdoms, and of this in particular, and of all our good and faithful subjects therein, who are of all our other subjects in the greatest danger; and that the heresy and apostacy wherewith our Lord is so much offended may be extirpated, after having recommended this affair, and caused it to be recommended to God, trusting in his divine favour, in a work wherein his glory is so deeply concerned, we have resolved to banish all the Moriscoes out of this our kingdom, and that of Castile, in such a manner as you

you will be advertised of; and with which, as good and faithful subjects, I have ordered you to be acquainted, on purpose to make you sensible that it is the security of your persons and affairs, and to prevent the dangers which do threaten you and them, and the great love I have for you, that move me to take this resolution, the execution whereof cannot be delayed any longer, without running the hazard of seeing Spain speedily invaded by so many enemies, and particularly the forementioned Infidels.

We do therefore earnestly charge you, to whose security and repose the effectual and speedy execution of this our purpose will redound so much, to be assistant to it, as you shall be directed by the Marquis DE CARAZENA, our Lieutenant and Captain-General of this kingdom. And this I expect from the zeal you have for God's service and mine, and your own preservation; and herein you will comply with the obligations of faithful and good Christians and subjects, and will perform the most acceptable service you can do us.

As to every thing relating to the execution of this our purpose, we do remit you to our Viceroy, who shall in my name direct you, and whose directions you shall execute.

From St. Laurence, the 11th  
of September, 1609.

This letter was on the twenty-second of the same month delivered by the Viceroy to the Barons, who having the same thoughts of the treasons mentioned in it, as they had some years before, when they called them speculations and chimaera's, were not at all satisfied with it, though the great fleet and army, that were at that time in their ports, obliged them to submit to what it ordered.

And on the same day the band for expelling all the Moriscoes of the kingdom was published by sound of trumpet, in all the publick places in the city of Valencia, and in a short time after in all the cities and towns of that kingdom.

The reasons the Doctor assigns for the Moriscoes continuing Mahometans, notwithstanding all the cruelties the Inquisition had exercised upon them for so many years, are these; 1. Their living in such numbers together, not only whole villages, but some whole towns and countries having no other inhabitants; whereby they confirmed and encouraged one another in their infidelity, and were not so easily discovered by the Inquisition, as where they were intermingled with Christians. 2. Their understanding no language but the Arabick, especially their women and children, which the Missioners sent amongst them were seldom masters of. 3. Their living so near the Moors of Barbary, with whom they held a correspondence, and might entertain hopes of regaining the sovereignty of Spain by their assistance. 4. The pride and sollicitude of the Spaniards to distinguish themselves from the Moriscoes, by calling themselves Old Christians, and the Moriscoes New Christians; and by excluding the Moriscoes from offices and employments in Church and State, by which they preserved the memory of their being descended from the Moors, which was the principal root of their persisting so obstinately in Mahometism. And lastly, The Spaniards worship-

ping images, for which the Mahometans have an insuperable aversion. There are others who ascribe their prejudices to Christianity to the cruelties exercised on them by the Inquisitors; it being impossible for people to entertain a favourable opinion of religion, which transformed its disciples into such barbarous monsters.

The substance of the band or edict for their banishment was as follows:

1. That all the Moriscoes, men, women, and children, should, within three days after the publication of it, begin their march towards the ports assigned them to embark for Barbary, where they should meet with vessels furnished with provisions to transport them. That they might take with them so much of their movable goods as they were able to carry, and lay in provisions for their voyage, besides what were laid in by the government: and whoever did not comply with this edict was to be put to death.

2. That any person might apprehend such Moriscoes as absented themselves; and if they resisted, they might be killed.

3. That if any of them should burn or destroy their houses, plantations, corn, or effects, they should suffer death; which the people of the place where it was done were empowered to execute.

5. That the sugar-works, plantations of rice, aqueducts, &c. might be preserved, six families in a hundred (to be nominated by the Barons) with their wives and children, were permitted to remain behind.

7. None shall conceal any of the Moriscoes, on pain of the galleys.

9. Such children as are under four years old are permitted to stay behind.

10. Children of six years old, where one of the parents is an Old Christian, may stay with such parent.

11. Those were also permitted to remain in Spain, who had lived amongst the Old Christians a considerable time, and had not been at the Morisco meetings for two years past, and those who could produce a certificate from the parish priest of their receiving the sacrament.

13. They were permitted to retire to any country out of the Spanish dominions provided they departed from their habitations at the time appointed.

Dated at Valencia, 22 Sept. 1609.

Most of the Moriscoes of Valencia were exported to Barbary according to this edict; but some of them retired to the mountains, and stood upon their defence: whereupon a body of regular troops were sent against them, and having defeated them with a very great slaughter, the rest were exported to Africa.

By another band or edict dated the ninth of December, 1609, the Moriscoes of Grenada, Murcia, and Seville, were in like manner banished, as those of Arragon and Catalonia were by other edicts dated the twenty-ninth of May, 1610; and those that were dispersed in the two Castiles, Estremadura, and La Mancha, were expelled by another, dated the tenth of July, 1610.

The Spaniards are not agreed as to the numbers of those that were transported at these several embarkations; some make them to be a million of souls, those who speak most moderately, compute them at six hundred thousand, who were set on shore on the coast of Africa in a starving condition.

condition. The King indeed gave all of them leave to sell their goods and cattle (except those of Valencia) and to carry the value of such effects away with them, provided it consisted in the produce and manufactures of Spain: but they were to take no gold, silver, or bills of exchange, with them, except travelling charges; so that this, which was at first looked upon as a great favour, became of very little benefit to them; the Moriscoes, who were obliged to dispose of their goods within a limited time, being obliged to sell them to the Christians for a trifle, while the Spaniards, on the other hand, held the merchandize and effects the Moors carried with them at an excessive price.

The damage done the kingdom by this expulsion.

My author observes, that notwithstanding this expulsion of the Moors to a barren coast, with little or nothing for them to subsist on, was one of the greatest pieces of barbarity that ever was committed; the kingdom of Spain, and the Christians who were the contrivers of it, were almost equally sufferers by this expulsion: for as the riches of a country is generally ascribed to the multitudes of people it contains, the loss of so many thousands at once, considering them only as common men, must have had a great influence upon Spain: but where the people expelled, as in this case, were the most industrious part of the nation, who alone applied themselves to manufactures and husbandry, the loss must be inconceivably great. And in fact we find that the Spaniards have been ever since the most inconsiderable and beggarly people in Europe; and that for want of manufactures of their own, they lose all the advantages that might be made of those rich empires of Mexico and Peru, of which they are Sovereigns; the wealth whereof only passes thro' their hands to the merchants of other nations. And this must have been the consequence of that barbarous act, though we should not suppose the divine providence to have interposed, and thrown them into these miserable circumstances by way of punishment for their injustice and cruelty. These are some of the genuine fruits of those merciless courts of Inquisition, which that bigotted people are taught to look upon as the great support of the purity of the Christian faith. It was but a very little time after, that the Court of Spain itself was made sensible how impolitic this proceeding had been; for in the same reign, anno 1618, the King having assembled an extraordinary Council to consider of the ruinous state of his dominions, and how it might be remedied, the Council, in the preamble to their representation on that subject, set forth, That the depopulation, and want of hands in Spain, was greater than ever had been known in the times of his predecessors; so great, that if God did not provide a remedy, the crown of Spain was hastening to it's final ruin and destruction. Nothing was more visible than that Spain *esta a quique de dar in terra*, is on the point of falling flat to the ground. It's houses were in ruins every where, without any one to rebuild them, and it's towns and villages lay like deserts.

1629.

To return to our history: The Valteline, a pass between Italy and Germany, revolting from the Grisons, the Spaniards endeavoured to make themselves masters of it on one side, as the French did on the other; which occasioned a war of many years continuance, sometimes one power getting possession of it, and sometimes the other, till at length the country was restored to it's former state.

In Germany the Spaniards taking part with the Catholick Princes against the Protestants, contributed to the defeating the Elector Palatine, and wresting the crown of Bohemia from him.

CHAP.  
XVIII.

PHILIP III died on the fifteenth of March, 1620-1, whom the Spaniards admire for his piety and virtue; while others relate that the horrors and remorse he underwent in his dying moments, on account of the cruelties he had exercised on the Moriscoes, were inexpressible.

Philip III dies.

PHILIP IV succeeded his father at sixteen years of age. It is observed, that every Minister of State in this reign, at the entrance on his office, was obliged to give in a particular of his estate. One reason whereof might be, that none should be admitted, whose circumstances might tempt them to rob the publick; and the other, that it might be known what addition they had made to their fortunes during their administration.

Philip IV. 1621.

The truce with Holland expiring, the war with the Dutch was renewed, wherein the Spaniards were great sufferers by sea and land, notwithstanding the Netherlanders were no longer supported by the English, who began to look upon them as their rivals in trade.

The war with the Dutch revived.

About the same time CHARLES Prince of Wales and the Duke of Buckingham arrived in Spain, in order to conclude a treaty of marriage between that Prince and the Infanta the Princess MARY: but the Spanish historians relate, that the match went off on the Court of England's insisting, that the Elector Palatine's dominions in Germany should be restored to him.

1623.

The war continuing in the Low Countries, the Marquis SPINOLA, General of the Spaniards there, took Breda from the Dutch, after a brave defence.

1624.

In the year 1628, PETER HEYN, Commander of a Dutch squadron, surprized the Spanish plate fleet, wherein he took twelve millions of florins. The Dutch also made a descent in Brazil, and plundered the Portuguese settlements there, carrying off a vast booty: and though they were afterwards driven out of Brazil, they made themselves ample amends by the settlements they surprized and took in the East-Indies, which belonged to the Spaniards and Portuguese. But the history of the Spanish wars with the Dutch, as well as the French, being contained in the former part of this volume, I shall not trouble the reader with the repetition of those occurrences.

1628.

The Catalonians having been oppressed by the Prime Minister OLIVAREZ, revolted from Spain, and put themselves under the protection of France, in the year 1639, remaining subject to that crown for eleven or twelve year afterwards. The same tyrannical measures induced the Portuguese to throw off the Spanish yoke, and advance the Duke of Braganza to the throne of Portugal, who was descended from their former Kings; and to add to their misfortunes, there happened a rebellion in Naples in 1647, whereby that kingdom had infallibly been wrested out of their hands, if the French had been at leisure to support it. The kingdom of Naples for some time after the conquest of it, was governed with great moderation by the Spaniards; the taxes demanded of them were inconsiderable, and those paid under the name of a donative or free gift of the States: but they had of late years been extravagantly increased, and in a manner forced from them by insolent collectors and receivers. But none were paid

1639. The Catalonians and Portuguese revolt.

1640.

1647. Massaniello's insurrection in Naples.

paid

CHAP.  
XVIII.

paid with more reluctance than those imposed on provisions; inasmuch that when the collectors came into the markets to demand the duties laid upon fruit, herbs and fish, they frequently met with resistance, and were some of them beaten and wounded; the officers calling the guards to their assistance, several of the common people were apprehended and severely punished. At length a bold young fisherman, named THOMAS ANIELLO, (commonly called MASSANIELLO) having had his fish taken from him for refusing the tax demanded, assembled the mob about him, and standing on a table in the market place, so effectually represented the hardships and oppressions they lay under, that the multitude, one and all, cried out there was no bearing them, and that they would get the duties taken off, or die in the attempt; whereupon MASSANIELLO offered to be their leader, and first set fire to all the little offices where the collectors used to receive the excise: from thence he led the mob to the Viceroy, demanded that all the taxes should be remitted, and the charters of their privileges granted in the reigns of King FERDINAND and CHARLES V, produced and confirmed. The Viceroy endeavoured to appease the malecontents with fair words and throwing money amongst them, but all in vain; they were increased in a day or two to near an hundred thousand men, armed with such weapons as they could get, when their General took upon him to settle the price of provisions: after which he burnt or demolished the houses of the farmers of the revenue, plundered the palaces of the nobility, and brought out their richest plate and moveables, which he set on fire; commanding his followers not to apply any of it to their own use on pain of death, which he did not fail to inflict on such as transgressed his orders. No Sovereign was ever more punctually obeyed than this mulhroom of a Prince, whose authority was scarce of four days standing. The Viceroy finding it in vain to resist the torrent with the small force he had, shut himself up in one of the castles, and privately hired a body of banditti or cut-throats to murder MASSANIELLO, which being discovered, the banditti were cut in pieces, and the Viceroy's brother, who was concerned in the contrivance, dragged through the streets till he was dead; after which a butcher cut off his head, and exposed it on a pole, which put the nobility into the utmost consternation. The Archbishop however had the courage to propose a treaty between the Viceroy and MASSANIELLO; and the Viceroy consenting to remit the taxes, and produce the charters of their liberties, and to issue a general pardon for all that was past, MASSANIELLO agreed that all acts of hostility should cease, but would not lay down his arms however, till the treaty was ratified by the King of Spain. Things being thus pacified, the Viceroy, it is supposed, found means to get the usurper poisoned, for he immediately became delirious, giving out absurd and contradictory orders; whereupon the mob abandoned him, and he was killed by some of the nobility: thus his reign ended within ten days after the insurrection begun. Some say his head was only turned with his sudden advancement, and the variety of business it brought upon him, for the dispatch whereof he did not give himself time to eat or sleep. All agree he was a wonder of a man, and managed a mob to admiration, considering the meanness of his birth and education. Notwithstanding the people had lost

VOL. II. NUMB. XCVII.

their leader, they still continued in arms, and the nobility raising their vassals to oppose them, the nation was divided, and a kind of civil war ensued. The mob, to strengthen their party, invited in the French; but they were not in a condition to afford them any great assistance, only the Duke of Guise was sent to be their General. The people finding themselves disappointed of the reinforcements they expected from France, upon a general pardon being offered them returned to their duty, and abandoning the Duke of Guise, he was made prisoner by the Spaniards.

The next considerable transaction in this reign, was the peace concluded at Munster with the United Provinces, whereby King PHILIP acknowledged the sovereignty and independency of the States-General, and consented that they should enjoy the places and countries they were possessed of; particularly Boisseduc, Bergenopzoom, Maestricht, Breda, the Grave, Hulst, and all such places as they then held in Brabant or Flanders: That the States also should retain all they possessed in the East and West-Indies, Asia, Africa and America. On the other hand, it was agreed that the Spaniards might continue their trade and navigation to the East-Indies in the same manner they then did, but not extend themselves on that side. That each party, both in the East and West-Indies, should abstain from the trade and navigation of such places as belonged to the other. That the river Scheld, and the channels of the Sas and Scoyn, and other entrances into the sea thereabouts, should remain in the possession of the States, who might lay what duties they pleased on vessels passing that way, and on all goods passing through their country by the Rhine or Maese.

The Spaniards were induced to make these concessions to the Dutch by the perpetual losses they sustained from that people by sea and land, and their despair of ever reducing them under their dominion again, and that they might have their hands at liberty to prosecute the war against France and Portugal. The Dutch were also pleased to have their sovereignty and independency acknowledged by the Spaniards, and the places and countries they had acquired during the war, with the East-India trade, confirmed to them: they began to be apprehensive also of the growing power of France, which would have received a considerable addition by the conquest of the Spanish Netherlands, and brought a much more dangerous enemy upon their frontiers than the Spaniards were.

Spain still continued the war against France and Portugal, but was unsuccessful in both, except that from Catalonia the French were expelled, and that province was reduced under the obedience of Spain again in the years 1651 and 1652; not so much by the force of arms, as the assurances the Court of Spain gave that people of restoring their ancient rights and privileges, and granting them an indemnity for what was passed.

In the year 1654, that exquisite building called the Pantheon, in the Escorial, was finished by PHILIP IV, which had been begun by PHILIP II, whereupon the bodies of CHARLES V, and all the Princes of the Austrian family, were removed thither, and their descendants have been interred there ever since.

In the year 1655, CROMWELL the Protector of the Commonwealth of England, as he called himself, without making any declaration of war, invaded the Spanish islands in the West-Indies, particularly Hispaniola, in which attempt he did

not succeed; but the fleet sailing afterwards to Jamaica, the English subdued that island: and in 1657, Admiral BLAKE destroyed the Spanish galleons at the Canaries, notwithstanding they lay under the protection of the forts on shore. The Protector the year following having entered into a confederacy with the French, they took Dunkirk from the Spaniards, which, in pursuance of articles, was put into the hands of the English.

Thus the Spaniards having the worst of it on every side, began to think seriously of peace, and as the French had been exhausted by almost continual wars, they were not averse to it; whereupon a treaty was set on foot between the two crowns in the Island of Pheasants, which lies in the river Bidassoa, and divides France from Spain. It was negotiated by the Prime Minister of each kingdom in person, viz. Cardinal MAZARIN on the side of France, and Don LEWIS DE HARO on the part of Spain, and was called the Pyrenean treaty, from the neighbourhood of the place to the Pyrenean mountains. The peace was concluded on the seventh of November 1659 being about a month after the conferences were opened; the principal articles whereof were, that the French King should marry the Infanta of Spain, that he should not assist the Portuguese, and that he should relinquish his pretensions to Franche Comte and Catalonia: on the other hand, Roussillon, and several towns the French had taken in the Netherlands, were yielded to that crown. The year following, on the sixth of June, the Kings of France and Spain had an interview in the Isle of Pheasants; and on the seventh, the King of Spain delivered the Infanta, MARIA-THERESA of Austria to his most Christian Majesty LEWIS XIV, the marriage being solemnized at the city of St. John de Luz on the ninth of the same month. Both the French King and the Infanta, on this occasion, renounced all right that they themselves, their heirs and successors, had or might claim to the dominions of Spain.

Spain being at peace with most of the powers of Europe, invaded Portugal, and at first met with some success; but notwithstanding PHILIP had now no other enemy to contend with, he was not able to reduce that petty kingdom under his dominion, so very low were the Spaniards sunk at this time; nor do I meet with any other transactions in the remainder of this reign, that deserve to be commemorated. PHILIP IV died on the seventh of September 1665, leaving his son CHARLES, an infant of four years of age, to succeed him.

CHARLES II being an infant, and under the tuition of his mother, the French took advantage of his minority, and of the declining state of that kingdom. He invaded the Spanish Low-Countries, notwithstanding he had with his Queen renounced all pretensions to them, and made himself master of Tournay, Lille, Douay, Oudenard, and Charleroy, threatening an entire conquest of that country; which so alarmed the English and Dutch, who were then at war, that they concluded a peace, and entered into a confederacy with Sweden, called the Triple League, for the preservation of the Spanish Low-Countries; which induced the French to make peace with Spain, anno 1668, a treaty having been set on foot at Aix la Chapelle for that end. By this peace the French restored Franche Comte to the Spaniard, but retained all the towns they had taken in the Netherlands.

While the Spaniards were thus distressed by France, they found themselves under a necessity of concluding a peace with Portugal, and renounced all their pretensions of sovereignty to that kingdom.

I meet with little remarkable in the history of Spain afterwards, till the year 1672, when the French invading the United Provinces, the Spaniards entered into a confederacy with that Republic and the Emperor, to prevent the loss of them, in which war the Spaniards were the greatest sufferers: for notwithstanding the French possessed themselves of three of the United Provinces, they were obliged to relinquish them all again within the space of two or three years; whereas the Spaniards lost their best towns in Flanders, together with Franche Comte, or the county of Burgundy: and by the peace of Nimeguen, which ensued anno 1678, were obliged to yield up and relinquish to the French all their right in the county of Burgundy, and the towns of Conde, Valenciennes, Cambray, Ypres, St. Omer, Bouchain, Aire, Warwick, Warneton, Poperingen, Bailleul, Cassel, Bavay, and Maubeuge.

The Spaniards remaining in that wretched defenceless condition already hinted at, LEWIS XIV, under pretence that their Commissioners did not do him justice in settling the limits of his late conquests in Flanders, and because his Catholick Majesty still retained the title of Duke of Burgundy, notwithstanding he had yielded that province to France, invaded the province of Luxemburg, making himself master of the greatest part of it, and afterwards blocked up the capital city; whereupon the Spaniards, in hopes of being assisted by the Germans and Dutch, declared war against France in the year 1683; but as their Allies made no great haste to their assistance and they were themselves unprovided of forces, and every thing else necessary to oppose so potent an enemy, the French took from them Courtray and Dixmude the first campaign, and Luxemburg the next, when the Dutch marching to their assistance, the Grand Monarch, in his haughty stile, was pleased to grant them a truce; which say the French writers, was entirely owing to his moderation, for nothing could have prevented his making himself master of the Spanish Netherlands, if he had not voluntarily withdrawn his troops.

The French again attacked the Spanish Netherlands in the year 1688, on the King of Spain's entering into a confederacy with the Imperialists and the Dutch, to advance the Prince of Orange to the throne of England: and while the Prince was engaged in that expedition, the French fell upon the confederate forces in the plains of Fleurus or Fleury in the year 1690, and gained a compleat victory, taking six thousand of the Dutch and Flemings prisoners, and all their cannon. But King WILLIAM having successfully deposed his father King JAMES, and procured himself to be recognized King of Great Britain, prevailed with the British Parliament to come into the alliance with Spain, and the other confederated powers against France; the principal articles whereof were, That none of the Allies should make peace with LEWIS XIV, till he had restored all places to the Allies, which he had taken from them since the peace of Munster, and recognized King WILLIAM's title to Great Britain.

The French, notwithstanding this formidable confederacy against them, remained superior in the field. They took the city of Mons in the year

1683.

War with France again.

Battle of Fleury. 1690.

CHAP. XVIII. year 1691, and Namur in the year 1692, and obtained a signal victory over the Allies at Steinkirk.

Battle of Steinkirk. 1692. The following year 1693, the French defeated the confederates in a general battle near Landen, and took Huy and Charleroy, as they did Palamos and Gironne in Catalonia, anno 1694.

Namur taken by the Allies. 1695. The Allies being superior to the French in Flanders in the year 1695, retook the city of Namur, but lost fourteen or fifteen thousand men before the place. The French in the mean time made themselves masters of Deynse and Dixmude, and bombarded Brussels, making that capital a heap of ruins.

A treaty was set on foot between the Allies and France in the year 1697 at Ryswick near the Hague. The French however, in order to influence their negotiations, made their utmost efforts on all sides this campaign. They laid siege to the city of Aeth in Flanders, and took it. They marched a powerful army into Catalonia, and obliged Barcelona, the capital city of Catalonia, to surrender to them. And in the Spanish West Indies, POINTI, the French Admiral, took Carthagena by storm, plundering the town, from whence he brought home twelve millions of crowns, as is reported. But at length a peace was concluded on the tenth of September, N. S. 1697, by which the French were obliged to restore Barcelona, Gironne, Roses, and the rest of the towns they had taken in Catalonia, to the Spaniards, as well as Luxemburg, Mons, Charleroy, Courtray, and all other places they had taken during this war in the Low Countries. As to the terms made with the rest of the Allies, I refer the reader to the history of the United Provinces, in the former part of this volume.

Peace of Ryswick 1697. As CHARLES the Second, King of Spain, was now in an ill state of health: and had no issue by either of his wives, it was generally expected that upon his death the war would be renewed: for the French gave out, that notwithstanding ANNE of Austria, and LEWIS the Thirteenth, King of France, on their marriage had renounced all claim and pretensions to the Spanish succession, as MARIA-THERESA of Austria, and LEWIS the Fourteenth, had done also on their marriage; yet as the Princesses married into France were elder than their sisters married into Germany, and the laws of Spain limited the succession to the eldest branch, no renunciations, how solemn soever, could extinguish their right. But the grand Monarch, however, foreseeing that the other powers of Europe would never suffer the kingdoms of France and Spain to be united under one head, proposed to WILLIAM the Third, King of England, and the States-General, to make a partition of the Spanish monarchy, between his son the Dauphin, who was descended from the Infanta MARIA-THERESA, and the Electoral Prince of Bavaria, and the Archduke CHARLES of Austria, who were descended from other female branches; and accordingly a treaty was concluded on the nineteenth of August 1698, between France, Great Britain and the States-General, whereby it was agreed,

1. That the peace of Ryswick should be confirmed.

2. That in consideration of the ill state of the King of Spain's health, and for preserving the publick peace in case the said Prince should die without issue, the kingdoms of Naples and Sicily, with the places then depending upon the Spanish monarchy, situated on the coasts of Tuscany, or the adjacent islands, comprehended

under the name of Santo Stephano, Porto Hercule, Orbitello, Telamone, Portolongo, Piombino, the marquisate of Final, the province of Guipuscoa, particularly the towns of Fontarabia and St. Sebastian, and especially the Port Passage, and likewise all places on the French side of the Pyrenees, or the other mountains of Navarre, Alava or Biscay, on the side of the province of Guipuscoa, with all the ships and galleys, and other appurtenances belonging to the said galleys, should be given to the Dauphin in consideration of his right.

3. That the crown of Spain, and the other kingdoms and places, both within and without Europe, should descend to the Electoral Prince of Bavaria, of whom his father the Elector was to be guardian and administrator till he came of Age. And

4. That the duchy of Milan should be reserved and allotted to Archduke CHARLES, the Emperor's second son.

This treaty was to be communicated to the Emperor and the Elector of Bavaria by the King of Great Britain and the States-General; and if they did not agree to it, then the proportion of the party not agreeing should remain in sequestration till things could be brought to an accommodation.

The Electoral Prince of Bavaria happening to die on the eighth of February 1699, France, Britain, and the States entered into another treaty, dated the fifteenth of March following, and called the Second Partition treaty, whereby the kingdom of Spain, and the dominions allotted to the Electoral Prince of Bavaria by the former treaty, were limited to the Archduke; both which treaties were entered into without the consent of the Emperor or Spain.

The King of Spain repented the dismembering his dominions so heinously, that he made his will, and disposed of his crown to PHILIP Duke of Anjou, second son to the Dauphin of France, and his heirs; and in default of issue of the Duke of Anjou, to the Duke of Berry, &c. remainder to the Archduke CHARLES, &c. And on the first of November, N. S. anno 1700, the King of Spain died after a lingering illness, in the thirty-ninth year of his age, and the thirty-sixth of his reign; whereupon the Court of France immediately declared PHILIP Duke of Anjou King of Spain, by virtue of the late King's will, and he was proclaimed King accordingly at Madrid on the twenty-fourth of the same month of November, against which the Emperor and Pope protested; which LEWIS XIV having very little regard to, took possession of all the Spanish territories, and amongst the rest, of Milan, Naples, and the Netherlands; into the last of which the Elector of Bavaria gave him admission, being then Viceroy of the Low Countries. The English and Dutch indeed presented their memorials, requiring the French King to withdraw his troops out of the Netherlands, and allow them a sufficient barrier, but at the same time acknowledged the Duke of Anjou's title to the crown of Spain; and both King WILLIAM and the States wrote letters to King PHILIP to congratulate his accession, which were purely by way of amusement; for they were at that very time entering into an alliance with the Emperor, and making preparations to dispute his title.

In the mean time Prince EUGENE, the Imperial General, marched into Italy at the head of thirty thousand men, to dislodge the French from such part of the Spanish territories as the French had possessed themselves of on that side; on which occasion

nifesto.

casion the Emperor published a manifesto, wherein he endeavours to shew, that the French King and his posterity were excluded from succeeding to the crown of Spain, by those memorable renunciations of the Princesses ANNE and MARIA-THERESA, the first the daughter of PHILIP III, married to LEWIS XIII, and the other the daughter of PHILIP IV, married to LEWIS XIV; and that the pretended will of CHARLES II had been obtained by unfair practices, when he was not in his senses; and if he was, that the King of Spain had no power to dispose of his territories by the laws of that kingdom. That the present Emperor was lineally descended from the Emperor CHARLES V, and was the son of FERDINAND and the Infanta MARIA, who was next in blood to the crown of Spain, after the Princesses who had renounced their claim, and by consequence had an indisputable title to the whole Spanish monarchy.

But I find the Confederates by the treaty of alliance engaged no farther in his quarrel, than that they would endeavour to conquer the Spanish Netherlands for a barrier to the States-General, and the dutchy of Milan, the kingdom of Naples and Sicily, and the Spanish towns on the coast of Tuscany for the Emperor; there was not at that time any thoughts of wresting the whole Spanish monarchy from the Duke of Anjou.

And the King of England, WILLIAM the Third, is censured for engaging thus far after he had acknowledged King PHILIP's right to the Spanish monarchy, and congratulated him on his accession. To which it is answered, that King WILLIAM was provoked to take this step by the French King's proclaiming the Pretender to his throne (JAMES the Third) on the death of King JAMES the Second, which happened about the same time. But whether King WILLIAM was not treating with the Emperor before the French King proclaimed the Chevalier, I find is made a question.

To return to the Imperial army in Italy: They marched through the Venetian territories and penetrated into the dutchy of Mantua the first campaign, notwithstanding they were opposed by a very numerous army of French and Spaniards; and the winter following possessed themselves of all the towns in the Mantuan except the capital.

King WILLIAM dying on the eighth of March 1701-2, the Confederates were under apprehensions that the English would not declare war against France and Spain; but Queen ANNE who succeeded him assuring them she would make no alteration in the measures concerted, their hopes revived, and war was formally declared against France at London on the fourth of May 1702, in pursuance whereof a great body of forces were sent to the Low Countries under the command of the Earl of Marlborough to join the Allies, who obliged the French to quit Guelderland the first campaign. A fleet of men of war and transports, with ten thousand land-forces on board, under the command of the Duke of Ormond, were about the same time sent to make a descent in Spain, and endeavour to reduce the city of Cadiz; in which expedition though they did not succeed, they destroyed the Spanish galleons, and a squadron of French men of war that guarded them on their return home, in the port of Vigo.

Spanish  
galleons  
destroyed  
at Vigo.

The Imperialists the same campaign took Landau from the French, and the Confederate army in the Low Countries made themselves masters of Venloe, Ruremond, Stevenswaert and Liege.

The Duke of Bavaria declaring for France in the year 1703, joined the French army commanded by Marshall VILLARS, and made himself master of the city of Ratibon, where the Diet of the Empire was assembled, and afterwards of the city of Augsburg. The French army under the command of Marshall TALLARD also besieged Old Brisac upon the Rhine, and took it. He afterwards made himself master of Landau, defeating the Prince of Hesse, who was detached from the Confederate army in the Netherlands to the relief of it. The same Campaign General OPDAM was surprized by Marshall BOUFFLERS near Eckeren in Flanders, and OPDAM being cut off from his army, the rest of the Dutch Generals made their retreat with difficulty, there being a great slaughter on both sides. On the other hand the Confederates, under the Earl of Marlborough, took Bonn, Huy and Limburg from the French.

CHAP.  
XVIII.

The Emperor and the King of the Romans about this time made a resignation of the kingdom of Spain and the dominions thereto belonging to the Emperor's second son the Archduke CHARLES, who was thereupon acknowledged King of Spain by the Confederates, by the stile and title of CHARLES the Third. And the King of Portugal coming into the grand alliance, it was thought proper the new-made King should reside in Portugal, whither he was conveyed by a squadron of English men of war, after he had paid his compliments to the Queen of England at Windsor.

Archduke  
Charles  
declared  
King of  
Spain.

The same year the Duke of Savoy declaring for the Allies, Prince EUGENE detached part of the Imperial army to join him. These forces were commanded by Count STAREMBERG, who after a long march of about two hundred miles in the face of the enemy, with infinite difficulty effected his design.

The Empire being in the utmost danger from the French and Bavarians on one side, and the Hungarian malecontents on the other, the Duke of Marlborough, with the flower of the Confederate army, was detached from the Netherlands to join the Imperialists on the Danube, and with their united forces they obtained that memorable victory over the French and Bavarians at Hochstet on the thirteenth of August, N. S. which preserved the Empire from destruction. The cities of Augsburg and Ulm thereupon immediately surrendered to the Imperialists, and Landau was retaken the same campaign.

1704.

Hochstet  
battle.

In the mean time an army of twelve thousand English and Dutch forces having been sent to Portugal under the command of Duke SCHOMBERG, the war with Spain commenced on that side. King CHARLES published his declaration, inviting the Spaniards to join with him against PHILIP the Usurper, as he stiled him; and the King of Portugal declared war in form against France and PHILIP. But the Spaniards were superior to the Confederates on the side of Portugal this campaign, and took several places from the Portuguese. Duke SCHOMBERG complained to the English Court that he found neither horses for mounting his cavalry, nor any warlike stores or provisions which his Portuguese Majesty had agreed to furnish. He observed also that their Generals insisted on taking place and having the command of the confederate troops, which occasioned then ill success, and therefore desired to be recalled from thence. Whereupon the Earl of Galway, a French refugee, was ordered to command the English forces in Portugal.

drid.Battle of  
Ramillies.

The Confederates receiving intelligence that the city of Barcelona was disaffected to King PHILIP, the confederate fleet sailed thither with some land-forces on board, and the Prince of Hesse, with 2500 men, landed near that town; but no body appearing or making any attempt to join them, the troops were re-embarked, and the fleet sailed for Gibraltar, which place was taken by the English on the 24th of July. On the 24th of August the confederate fleet, under the command of Sir GEORGE ROOK, engaged the French fleet, commanded by the Count DE TOULOUSE near Malaga, and obliged them to retire; but wanting ammunition, the victory was not so complete as might otherwise have been expected. The Admiral had spent a great deal of ammunition in the attack of Gibraltar, and left some there for its defence, which occasioned this deficiency.

In Italy the Duke of Savoy lost Verceil and Susa this campaign, and the beginning of the next Nice and Villa Franca. A battle was fought near Casano in Italy on the 16th of August, in which abundance of men were killed on both sides, and both sung Te Deum for the victory.

The Emperor LEOPOLD died on the fifth of May 1705, and was succeeded in the Empire by his son JOSEPH King of the Romans. About the same time the confederate fleet with a body of land-forces sailed from England, and having taken King CHARLES on board at Lisbon, appeared before Barcelona on the twenty-second of August; which city surrendered to his Majesty on the fourth of October, the whole province of Catalonia following their example, except Roses. And the winter following the Earl of Peterborough, who commanded the confederate forces in this expedition, reduced the whole province of Valencia, tho' it is credibly reported his army never exceeded six thousand men, besides the undisciplined natives who declared for King CHARLES.

The French and Spaniards uniting their forces on the side of Catalonia, laid siege to Barcelona on the third of April 1706; King CHARLES defending that city in person, while the Earl of Peterborough commanded a flying army in Catalonia and Valencia, and harassed the besiegers, tho' he was not in a condition to give them battle. The town of Barcelona held out till the eighth of May following, when the Earl of Peterborough with the confederate fleet came to it's relief. Whereupon King PHILIP precipitately raised the siege, without waiting to be attacked, and leaving all his cannon, ammunition, and wounded men behind him, retired into France by the way of Rouffillon.

The confederate Generals in Portugal receiving advice of King PHILIP's retreat, advanced into Spain, and made themselves masters of the capital of Madrid. Whereupon Toledo and several other places in Castile declared for King CHARLES, as did the kingdom of Arragon at the same time. King CHARLES thought fit to march first to Saragossa, the capital of Arragon, where he is reflected on for having trifled away too much time; for King PHILIP in the mean while re-entered Spain again with his army, and being superior to the Portuguese and English, obliged them to abandon Madrid, and to retire out of Castile into Valencia.

In the Low Countries the Allies obtained a signal victory over the French and Bavarians at Ramillies. Whereupon Brussels, Louvain, Mechlin, Ghent, Bruges, Oudenard, Antwerp, and most of the cities of Flanders and Brabant, desired the pro-

tection of the Duke of Marlborough, and declared for King CHARLES III. In Italy also the Duke of Savoy and Prince EUGENE gained a complete victory over the French, who were besieging Turin, obliged them to abandon Milan and the territories of the Duke of Savoy, and retire into France over the Alps. Thus far the Allies carried on the war with much conduct and bravery; and had they re-inforced their troops in Spain, which was now upon the point of submitting to King CHARLES the Third, they had infallibly put an end to the war the next summer. But tho' we had so vast a superiority of troops both in Flanders and Italy, none could be spared for that service; of which the Duke of Berwick, who commanded the French and Spaniards, taking an advantage, decoyed our army to an engagement on the twenty-fifth of April near Almanza, and routed them so entirely, that not one single company of foot made their retreat, being either cut in pieces or made prisoners; tho' the Portuguese horse, abandoning the English foot, run away in time with the Earl of Galway at their head, and made a shift to reach Catalonia. The conquerors thereupon satiated their revenge on the kingdoms of Arragon and Valencia and the rest of Spain that had declared for the Allies, and made them curse the hour that ever they were so credulous to confide in a people that had so little regard for them: for at this very time did the confederate fleet assist the Duke of Savoy and Prince EUGENE in that romantick project of besieging Toulon; and at the same time fifteen or twenty thousand men were detached from the confederate army in Italy for the reduction of Naples. Whereas if the same fleet and one third of the forces which were employed in those expeditions had been made use of in supporting our friends in Spain, that kingdom had been secured beyond a possibility of losing it, and Naples would afterwards have submitted, or been a very easy conquest.

The English so lost their credit by thus abandoning the honest Spaniards to the rage of their enemies, that notwithstanding their future victories in Spain, that people could never be brought to put any confidence in them, or to take their part against King PHILIP again.

Naples submitted to the Imperialists commanded by Count THAUN without making any resistance, except the city of Gaeta, which ventured to stand upon it's defence, and was taken by storm on the 29th of September 1707 and in it the Duke of Escalona the Spanish Viceroy, and most of the nobility in King PHILIP's interest. But after an immense treasure thrown away in forming the siege of Toulon, the Allies were obliged to rise from before it without making one single breach in the walls, and shamefully retire over the Alps again. The Duke of Savoy indeed gratified his revenge in destroying the vines and olives in his march, but the Allies in general were very great sufferers by this expedition.

Admiral SHOVEL, in his return from Toulon with the confederate fleet under his command, was cast away near the land's-end of England on the twenty-second of October, with three or four other men of war, the Admiral and most of the men being lost.

The Confederates having discovered their error when it was too late, sent a re-inforcement of seven or eight thousand men from Italy to Spain by sea in the beginning of the year 1708, and gave the command of their troops in Catalonia to that experienced General Count STAREMBERG, in

conjunction with Major-General STANHOPE. However, the Court of King CHARLES being taken up with solemnizing his marriage with the Princess of Wolfenbuttle, there was little action on that side this campaign; but the confederate fleet in the Mediterranean reduced the islands of Sardinia and Minorca to the obedience of King CHARLES.

Tournay taken.

1709.

Battle of Malplaquet or Blaregnies.

The Allies in Portugal defeated.

Offers of peace by France.

1710. Towns taken in Flanders.

In Flanders the French surprized Ghent and Bruges, but were beaten by the Allies near Oudenard, who afterwards laid siege to Lisle. This city was defended with great obstinacy by the French, and drawn out to a very great length. The most remarkable action which happened during the siege was between Lieutenant-General WEBB, who commanded a great convoy going to Lisle, and the French General DE LA MOTHE, near Wynendale, in which the French were defeated, tho' they were three times the number of the Allies. The city of Lisle surrendered on the twenty third of October, and the castle the ninth of December following.

The confederate Generals afterwards laid siege to Ghent which surrendered on the thirtieth of December. Whereupon Bruges, and the other towns the French had made themselves masters of at the beginning of the campaign in Flanders, submitted to King CHARLES again.

The French made some offers of peace the following winter, but the negotiations being broken off, the Confederates laid siege to Tournay on the twenty-seventh of June, which surrendered on the thirtieth of July, and the castle the third of September following. And on the eleventh of the same month was fought that memorable battle of Malplaquet or Blaregnies, the armies being upwards of an hundred thousand men of a side, all veteran troops. The Allies were commanded by Prince EUGENE and the Duke of Marlborough, and obtained the victory, but with infinite slaughter of their troops; the French, who were commanded by the Marshals VILLARS and BOUFFLERS, being intrenched up to the teeth in the woods of Sart and Janfart. Mons was afterwards besieged and taken by the Allies.

On the side of Portugal King PHILIP's forces obtained a victory over the Allies, and took one entire brigade of the English prisoners. But in Catalonia the Confederates being superior in the field, besieged and took the city of Balaguer. And the Imperialists in Italy entering the Ecclesiastical State, and seizing Comachio, obliged the Pope to acknowledge King CHARLES Sovereign of the Spanish dominions.

The following winter the French being distressed by famine, as well as the arms of the Allies, offered to recognize CHARLES the Third for King of Spain, and withdraw their forces out of that kingdom and the territories thereto belonging, to yield up Strasburg, Brisac, &c. to the Emperor, to demolish Dunkirk, relinquish Lisle, and all other places the Allies had taken in the Netherlands, and in short to do every thing the Confederates demanded of them but assist with their own forces in driving King PHILIP out of Spain; and towards this they offered to contribute a sum of money. These were the best terms that ever were offered the Allies by France during the war, and had never been rejected if some people had not occasioned the negotiations to be broke off upon private views.

The campaign of 1710 was favourable to the Allies in Flanders, where they took the towns of

Mortagne, Douay, Bethune, Aire and St. Venant: And in Catalonia King PHILIP's horse received a defeat on the twenty-seventh of July near Almenara. On the 20th of August a general battle was fought between King CHARLES and King PHILIP near Saragossa, in which the victory fell to King CHARLES, who entered Saragossa in triumph the same evening; and having staid there a few days to refresh his troops, marched to Madrid, of which he took possession again the twenty-first of September. From hence he dispatched a Courier to the confederate Generals in Portugal to join him, but the Portuguese would not be persuaded to march thither a second time. Whereupon King PHILIP being reinforced by the troops of France, and returning towards Madrid, King CHARLES marched back with a thousand horse into Catalonia, leaving the confederate army to follow him: but General STANHOPE unhappily separating from Count STAREMBERG in their return to Arragon, was surprized in the town of Brihuega by King PHILIP's army, and made prisoner, with most of the British troops. King PHILIP afterwards attacked Count STAREMBERG at Villa Viciosa, but was repulsed, and that General continued his march to Catalonia, tho' he was forced to abandon all the places in Arragon to the enemy, not having forces sufficient to garison them. The French also took the town of Gironne in Catalonia soon after; and this put an end to the unfortunate campaign of 1710, which the Allies begun with all the glory and success imaginable.

The French finding all proposals of peace that had been made by them rejected by the Dutch and the Duke of Marlborough in Holland, applied themselves directly to the Queen of England this winter; who observing nothing unreasonable in their demands began to listen to them, especially when she saw that the whole weight of the war lay upon her own subjects. Both the Imperialists and the Dutch had long refused to furnish their quota's of men or money towards the war, which they had been often put in mind of to no purpose. They had found out the way of making some leading men in the British ministry easy, who took care that the deficiencies of the Allies should be made good at the expence of their own nation; and as long as Britain was thus made the dupe, and conquered countries for the Allies at her own cost, it was not to be expected they should ever be weary of the war. It is no wonder therefore when the Queen was made sensible how much her people had been abused by their impositions, and began to entertain pacifick thoughts, that these people, with such of the British ministry as were in their pay or gainers by the continuance of the war, should raise that mighty clamour we find they did, and prevailed with her, contrary to her own judgment, to continue the war till another campaign, in which the Duke of Marlborough only entered the French lines and took the little town of Bouchain.

In the mean time the Emperor JOSEPH died on the 20th of April 1711, and CHARLES III King of Spain, having some assurance of being elected in his brother's room, was convoyed by the British fleet from Barcelona to Italy, and while he was at Milan received advice of his being chosen Emperor on the 12th of October. Whereupon he applied himself to all the Confederates to prevent their entering into negotiations of peace with the French. The Queen of Great Britain, however, proceeded

to appoint Utrecht for the place of treaty, whither she invited all the powers in the confederacy to send their Ambassadors and Plenipotentiaries; and the conferences were accordingly opened on the 29th of January 1711-12; but the ministers of the Allies laid so many obstacles in the way, that very little progress was made that winter. The Queen of Great Britain was so indulgent to them, that she consented her General the Duke of Ormond should take the field the next campaign, and assist in the siege of Quesnoy; but finding at length they were not to be moved from their determination of continuing the war, she ordered her Plenipotentiaries to let them know that she had agreed to a cessation of arms with the French, and ordered the Duke of Ormond, with the British troops, to separate himself from the confederate army. The Generals of the Allies hereupon, imagining themselves still a match for the French, proceeded to besiege Landrecy; but while they lay before this place, the Earl of Albemarle being encamped with thirteen battalions and thirty squadrons at Denain, to secure the communication of their grand army (which had invested Landrecy) with Marchiennes, where their principal magazine was, Marshal VILLARS fell upon him, and having entirely routed that body, took the Earl prisoner, with vast quantities of ammunition and provisions; and about a week after he made himself master of Marchiennes, with all their stores of war. The French afterwards retook Douay, Quesnoy, Bouchain, &c. Whereupon the Dutch, finding the Confederates were in no condition to resist the French after the English forces were withdrawn, thought fit to come into the plan of peace that had been agreed to by the Queen of Great Britain. But before the conclusion of the general peace, a treaty of barrier was signed on the 30th of January 1712-13, by which it was agreed that the Dutch should garison the following towns and forts in the Netherlands; viz. Furnes, Fort Knock, Ypres, Menin, Tournay, Mons, Charleroy, Namur, the castle of Ghent, the forts Le Perle, Philip and Damme, and fort St. Donat; the fortifications of which places, with the garisons therein, to be maintained by the revenues arising from such places and the countries about them. A treaty for the evacuation of Catalonia, Majorca and Ivica by the Imperialists was concluded also on the 13th of March following, and another for the neutrality of Italy.

1713.  
Treaty of  
peace be-  
tween the  
Allies and  
France.

On the 31st of March, O. S. and the 11th of April, N. S. 1713, the respective treaties of peace between Great Britain, Prussia, Portugal, the States-General and Savoy on the one part, and the French King on the other, were executed at Utrecht. And on the 6th of March, N. S. 1713-14, a treaty of peace was concluded between the Emperor and France at Rastadt. For the particulars of all which treaties, I refer the reader to the beginning of this volume.

The Catalans refusing the terms of peace which the Queen of Great Britain had procured for them, formed an independent state, and took possession of Barcelona on the Germans evacuating that province (viz. on the ninth of July 1713) and held it till the latter end of the year 1714; when the Duke of Berwick investing it with an army of French and Spanish troops, they surrendered on condition of having their lives spared and the city saved from plunder, after they had held out a siege of two months, and seen their town almost demolished by the bombs.

Treaty be-  
tween G.  
Britain  
and Spain.

By the treaty of peace between Great Britain

and Spain, King PHILIP for himself, his heirs and successors, yielded to the crown of Great Britain the full and entire property of the town and castle of Gibraltar, together with the port, fortifications and forts thereto belonging, without any communication by land with the country round about; saving the liberty to purchase, for ready money in the neighbouring territories of Spain, provisions and other necessaries for the use of the garison, and for the inhabitants and ships that might lie in the harbour. And in like manner his Catholick Majesty yielded and confirmed to the crown of Great Britain the island of Minorca, with Port Mahon and all other places upon it; the Roman Catholics to have the free exercise of their religion in both.

By the treaty between Spain and Savoy, the island of Sicily was yielded and confirmed to the King of Sicily. As to the island of Sardinia, the kingdom of Naples, Milan, and the rest of the Spanish territories in Italy and the Netherlands, these were left in the possession of the Emperor, as Spain and the Spanish dominions in America were in the hands of King PHILIP, without stipulating anything concerning them; each party seeming determined to revive his pretensions to such of the Spanish territories as were in the possession of the other, whenever a favourable opportunity should offer.

The Queen of Spain died on the fourteenth of February, N. S. 1714 by whom the King had four sons, viz. LEWIS PHILIP, Prince of Spain, born the 25th of August 1707; Don PHILIP, infante of Spain, who died within a few days after his birth; the infante Don PHILIP, born the 7th of June 1712; and the infante Don FERDINAND, born the 23d of September 1713. The Queen their mother was the daughter of AMADEUS Duke of Savoy (now King of Sardinia) and ANNE-MARY of Valois, daughter to PHILIP Duke of Orleans and HENRIETTA, daughter of CHARLES I. King of England.

The Queen of Spain had not been dead many weeks before the King made proposals of marriage to the Lady ELIZABETH, heirs to the Duke of Parma, to whom he was married by proxy on the 16th of September, 1714. This Lady, in default of male issue of the present Duke, will not only inherit Parma, but the duchies of Placentia, Busseto, and the Val de Toro, bounded by the duchy of Milan on the north, by the duchy of Modena on the south, and by the Apennine mountains, which separate it from the territories of Genoa, towards the west. And in default of male issue of the present Grand Duke of Tuscany, she also lays claim to that duchy. All which territories will form a noble state, and if the Spaniards were possessed of it, might give them an opportunity of recovering Naples, and the rest of the Italian territories, which were dismembered from Spain by the treaty of Utrecht. And with this view, it is said, the King of Spain married the Princess of Parma; and the Italian Princes also are supposed to have promoted it, because thereby they might introduce another power to balance that of the Emperor, who would otherwise have them all at his command, and perhaps in time make Italy a province of the Empire.

To return to Spain: The Imperialists not having evacuated Majorca, on pretence that the Spaniards had broke the treaty made for the evacuation of Catalonia, particularly in imprisoning and oppressing the Catalans, contrary to their engagements, the French and Spaniards embarked four-

teen or fifteen thousand men on the tenth of June at Barcelona, and making a descent on the island of Majorca four or five days afterwards, they summoned the Imperial Governor, the Marquis de Rubi, to surrender; who agreed, according to his orders from the Imperial Court, to evacuate the island, on condition the natives should be well used, and the Imperial troops transported to Naples; whereby King PHILIP became possessed of all the Spanish provinces and islands, except Minorca and Gibraltar which had been yielded to Britain by the peace of Utrecht.

The  
Turks con-  
quer the  
Morea.

The Turks this year invaded the Morea, which was so ill defended by the Venetians, that they made an entire conquest of it in one campaign.

1716.

This unexpected success of the Turks induced the Imperialists to enter into an alliance with the Venetians for their mutual defence; and a war soon after commencing between the Imperialists and the Porte, this encouraged the King of Spain, it is said, to make preparations for recovering the provinces belonging to Spain in Italy, which the Emperor was possessed of. There are some that go so far as to say, that his Catholick Majesty and the Grand Signior were engaged in a confederacy to attack the Emperor at the same time; but no such treaty appearing, every one is at liberty to judge as he pleases. Certain it is that the Emperor and Great Britain entered into an alliance this year for the defence of their respective territories, as apprehensive that some of them would suddenly be attacked. The Emperor seemed to be in pain for his Italian dominions in case of a rupture with the Turks; and the Court of England suspected, that the King of Spain might be in the interest of the Pretender.

Don Car-  
los born.

In the mean time the Queen of Spain was delivered of a Prince on the twentieth of January, 1715-16, afterwards called DON CARLOS, which increased her Majesty's influence on the councils of Spain, that was thought too great already.

1717.  
King of  
Spain re-  
duces Sar-  
dinia.

The Spaniards were taken up this year in increasing their navy, augmenting and disciplining their troops, and fortifying Barcelona, and other strong towns on the side of France. They confiscated also the estates of all such noblemen and gentlemen as were retired into the Emperor's territories: from whence it was easy to discern, that a rupture was not far off. Accordingly we find, that the summer following, the forces of King PHILIP, to the number of ten or twelve thousand men, commanded by the Marquis de Lede, made a descent on the island of Sardinia, which had been yielded to the Emperor by the peace of Utrecht; and having besieged and taken the capital city of Cagliari, the rest of the island submitted to them.

The King of Spain endeavoured to justify this act of hostility by the Emperor's infractions of the treaties for the evacuation of Catalonia and Majorca. He says the Imperialists, instead of delivering up Barcelona to his Troops, put the rebel Catalans in possession of it, and did not withdraw their forces from Majorca till long after the time agreed on: that injurious declarations had been published against the King at Vienna, and that the Inquisitor-general of Spain had been seized in the territories of Milan.

To this the Imperialists answered, That it was not in their power to deliver up Barcelona, that being possessed by the Catalans at the time of the treaty; and the evacuation of Majorca was only deferred in order to procure satisfaction to the Ca-

talans, who had been treated in a barbarous manner, contrary to what had been stipulated on their behalf at the treaty of Utrecht; and that as to the seizing the Inquisitor of Spain in the Milanese, that was done after the war commenced, and he could expect nothing less on his coming into his Imperial Majesty's territories without a pass.

Which of the parties were most in the right, I shall not take upon me to determine; but the Spaniards, notwithstanding the repeated instances of the Ministers of France, Great Britain, and the States-General, to forbear any further acts of hostility, invaded Sicily the year following, and made himself master of the capital city of Palermo, and the best part of the island, which had been yielded to the Duke of Savoy by the treaty of Utrecht. Whereupon the powers above-mentioned having entered into a treaty, commonly called the Quadruple Alliance, in order to compel the Spaniard to relinquish his late conquests, the Emperor sent a numerous army into Italy, and the King of Great Britain a squadron of men of war into the Mediterranean; whereby King PHILIP was obliged to quit both Sicily and Sardinia and submit to the terms prescribed by the treaty last-mentioned; whereby Sicily was given to the Emperor and Sardinia to the King of Sicily; King PHILIP was obliged to renounce all his right to the Spanish territories in the Emperor's possession; and the Emperor, on the contrary, acknowledged King PHILIP's Title to Spain and the Indies; and as to the duchies of Tuscany and Parma, it was agreed, that DON CARLOS, the Queen of Spain's eldest son, should inherit them on the death of the present possessors, provided that no forces should be admitted into those duchies for the security of the said succession but Swiss, or other neutral troops, to be paid by the contracting Powers. As to the particulars of this war, I refer the reader to the history of Germany, the history of Italy, and the history of France, in the former part of this volume. I shall only add a word or two in relation to Cardinal ALBERONI, then Prime Minister of Spain, who is charged with having been the author of all this mischief.

When the Princess of Parma was married to the King of Spain, she brought this Italian Priest, her favourite, to that kingdom with her, who soon found means to displace such Ministers as refused to be influenced by him, and introduced his own creatures in their room; and what rendered him exceeding popular among the Spaniards, was his representing to them how easy it would be for them to recover the Italian provinces, which had been dismembered from that monarchy by the treaty of Utrecht. He seems to have laid this scheme soon after the death of LEWIS LE GRAND, which happened in the year 1715, when France was plunged into such inextricable difficulties, on account of her immense debts contracted by the late war, that she could not be supposed in a condition to oppose the measures he had projected; nay, he seems to have had a view of bringing the kingdom of France itself under the dominion of King PHILIP, if LEWIS the Fifteenth, who was then an infant, and in a very bad state of health, had happened to die; and was actually forming a party in France for that end, which became very numerous; and in the mean time he prevailed with King PHILIP to take the title of Regent of France in opposition to the Duke of Orleans. He saw also the Emperor engaged with the Turk, and consequently not in a condition to defend his Italian

lian dominions; and as to Britain, he seems to depend pretty much upon the malecontents making such a diversion there, that they would not be at liberty to interpose in the quarrel. Whether he really expected that the British malecontents would be supported by Sweden, and Muscovy, as that court affected to give out, is uncertain; I have not yet seen any foundation for those surmises: But as to the Dutch, as well as English, he might well suppose they would not be forward to enter into a war with Spain, on account of the advantages they had in point of trade, while they remained in peace with that kingdom.

In this situation of affairs, ALBERONI, for whom the court of Spain procured a Cardinal's cap, applied himself to augment the royal navy, as well as their land forces, and was so successful in that attempt, that, to the surprize of all Europe, we saw them on a sudden masters of a very formidable fleet and army, with which they invaded and conquered Sardinia, before any of the neighbouring Powers had an opportunity of interposing to prevent it. But contrary to the Cardinal's expectations, the Duke of Orleans having so modelled the French army, as to secure that vast militia in his interest, and thereby prevented King PHILIP's party in that kingdom from shewing their heads; the English malecontents also being suppressed and unsupported by any of the northern Powers, and the Imperialists having gained two signal victories over the Turks, and compelled them to accept of peace, and at the same time all these formidable Powers entered into a confederacy against him; I say, the scene being thus altered, all the Cardinal's hopeful projects fell to the ground, and King PHILIP was compelled to sacrifice his Minister, in order to obtain a peace of the confederated Powers on terms by no means acceptable to that court. I should have remembered, that Cardinal ALBERONI, as a last effort in order to distress the British Ministry, invited the Pretender into Spain, where he paid him the honours due to a Crowned Head in the year 1719; but the Chevalier returned to Italy again within a few months, in order to consummate his marriage with the Princess SOBIESKI, having done the court of Spain very little service by that voyage. The Cardinal also made a feeble attempt upon Scotland, whither he sent a detachment of three hundred Spaniards to join the malecontents there; but they were all taken prisoners soon after they landed. And thus the Cardinal's projects being defeated on every side, he was banished to Italy, where the court of Rome seemed to frown on him for a time, no less than that of Spain, in complaisance to the victorious Emperor, whose displeasure they dreaded, having shewn some partiality to the Spaniards during the Sicilian war.

Congress  
of Cam-  
bray.The  
Spaniards  
expedition  
to Africa.

On the 29th of December this year died Don PHILIP, the King of Spain's second son, aged seven years and six months: to balance which loss the Queen was delivered of another Prince on the 15th of March following, baptized also by the name of PHILIP.

In the year 1720, the Powers engaged in the late war agreed to send their Plenipotentiaries to Cambray, to accommodate the differences that still remained undecided between the Spaniards and Imperialists, and between the Spaniards and the King of Sardinia; at which congress the British and French Ministers were to act the part of mediators.

In the mean time the Spaniards made a descent  
VOL. II.

on the coast of Africa near Ceuta, under pretence of driving the Moors from thence, and enlarging their territories on that side; but the principal design seems to be to keep up a body of troops, and induce the court of Rome to continue the grant of the tenths of the Clergy to K. PHILIP, which this war with the Infidels gave him a pretence to. For we find the Spaniards only intrenched themselves at a little distance from Ceuta, where they three times repulsed the Infidels; and these actions were magnified as mighty victories, tho' they never afterwards endeavoured to penetrate into the country, but gave out, that their enemies were too well disciplined and too numerous, to attempt any thing more with so small a force; and thereupon returned to Spain in the year 1721, after they had made some additional fortifications to Ceuta.

This year a contract of marriage was made between his most Christian Majesty LEWIS XV. and the Infanta of Spain, an infant of four years of age; and another between LEWIS Prince of the Asturias, and Mademoiselle DE MONTPENSIER, fourth daughter to the Duke of Orleans; the two Princesses being exchanged on the frontiers of both kingdoms by Commissioners nominated for that purpose. A third marriage was contracted the following year between Don CARLOS, eldest son of King PHILIP, by his present Queen, and Mademoiselle DE BEAUJOLLOIS, another of the Duke of Orleans's daughters; but the first and the last marriages were never consummated, and of the other between the Prince of the Asturias and Mademoiselle DE MONTPENSIER, there was no issue.

The court of Rome expressed great uneasiness at this time on the disposition that had been made of the reversion of the duchies of Parma and Placentia by the Quadruple Alliance, which they alledged were fiefs of the Holy See, and not of the Empire: and expecting that settlement would be confirmed by the congress at Cambray, his Holiness ordered a protest to be made on that subject: wherein he says, "Can Christian Princes flatter themselves with the hopes of concluding a lasting peace, when the depriving the Holy See and the Vicar of Christ of their undeniable rights is made the foundation of it? Can they promise themselves long to enjoy what they violently seize, against all manner of justice, and invade the indisputable right of an uninterrupted possession, which has been acknowledged for several ages by all the nations of Europe?" Then his Minister protests, That no body hath or had a right to settle or dispose of the duchies of Parma or Placentia, to the prejudice of the sovereignty and rights of the Roman church; and consequently, that all treaties, conventions, agreements and dispositions, with their confirmations and ratifications, already made or to be made, either at Cambray or Ratisbon, or in any other congress whatever, concerning the investiture, infeoffment or concession of the said duchies, are and will be for ever null and void, and disowns and rejects the same in the most authentick manner.

As Spain is almost every where incumbered with high mountains, and in spring and autumn there falls from them such deluges of water as are fatal to some great town or other every year, their cities being usually built on the banks of rivers at the foot of the mountains, the relation of a flood that swept away some of the principal Grandes of the Court of Spain, may not be impertinent in this place.

CHAP.  
XVIII.

It seems the Duke and Dutchess of Miranda had an assembly every night at their house in Madrid, consisting of persons of the first quality, to which all the foreign Ministers at that court usually resorted. The house where the assembly was held stood low, having a large garden behind it upon a rising ground; beyond the garden there was an eminence still higher. The assembly being met on the fifth of September, (which as it happened was much thinner than usual) a violent storm of thunder and lightning began about nine in the evening, at which the Dutchess of Miranda being frightened, left the company, and went into the chapel to prayers, which was three rooms from the assembly, but upon the same ground-floor. About ten a-clock, a torrent of water came tumbling down from the rising grounds, which broke down the town-wall, and afterwards that of the garden which was near it, and in an instant burst open the window-shutters of the ground-apartment, overturned all the tables and lights, and filled the rooms with water. The Dutchess of Miranda and her maids were immediately drowned. The men ran out into the courtyard before the house, which they found covered with water: and Prince Pio endeavouring to save himself in the street, was carried away by the torrent, and his body found the day after two leagues from Madrid. Don TIBERIO CARAFFA got upon the top of a coach, which overturning by the force of the stream, was thrown against another, by which he received a blow on his head, and was immediately drowned. The Prince of Cellamere placed himself upon another coach, which likewise overturned, but he had the good fortune to get upon the wheel, where he remained till assistance came; but he was grievously bruised, and had swallowed a great quantity of water and sand. The Duke of Liria, son to the Duke of Berwick, was in great danger; but being very tall, and observing by a flash of lightning a window over his head, he jumped up, and caught hold of the iron-bars before it, by which he held till the people in the upper apartment let down cords and drew him up. The Venetian Ambassador, not being able to get out of the assembly-room, where the water was ten foot high, supported himself two hours upon two chairs, which swam till the water abated, so that he could get out of the door. The Pope's Nuncio and the Duke of Atri had left the company two hours before the accident happened. Most of the rest of the Quality were saved, but in such a fright that they scarce knew how: and the relation does not inform us what became of the servants and inferior people, who did not probably fare much better than their Lords.

Ostend  
Company  
established.

This year the King granted a patent for establishing an East-India company at Ostend; which the British, French and Dutch Ministers protested against to no purpose. Nor did this project seem acceptable to Spain at this time, though afterwards that court came into it, and made it still more beneficial to the Flemings.

On the second of December, N. S. died PHILIP Duke of Orleans, Regent of France, of an apopleckick fit at Versailles; which occasioned great alterations in the courts both of France and Spain. About the same time the Imperial, French and Spanish Courts agreed upon the act of investiture of DON CARLOS into the duchies of Tuscany and Parma, the delay whereof had prevented the opening the congress of Cambray to this time. The King of Spain seems to have waited with

some impatience for this event, which was no sooner accomplished, but he took a resolution of resigning his crown to his eldest son LEWIS Prince of Asturias; which he did by the following act of renunciation.

CHAP.  
XVIII.

‘ Having these four years considered maturely and with due reflection the miseries of this life, through the infirmities, wars and troubles, with which God has been pleased to visit me during the twenty-three years of my reign; and having likewise considered, that my eldest son Don LEWIS, sworn Prince of Spain, is of sufficient age, is married, and has capacity, judgment, and the qualities for ruling and governing justly and happily this monarchy, I have determined absolutely to quit the possession and administration of it, renouncing the same with all its dominions, kingdoms, and lordships, in favour of the said Prince Don LEWIS my eldest son, and to retire with the Queen, in whom I have found a ready disposition and voluntary inclination to accompany me to this palace and seat of St. Ildefonso, here to serve God disengaged from all other cares, to meditate on death, and to seek my salvation.

K. Philip  
abdicates  
the Span-  
ish  
throne.

‘ This I communicate to the Council for their information, to be notified to the proper persons, that my resolution may be made known to all.”

Dated at St. Ildefonso the  
15th of January, 1724.

A circular letter was likewise sent by his Majesty's direction to the persons whom before his renunciation he thought fit to establish in the chief offices of the court and government. That letter is as follows:

‘ The King having resolved to retire, and to withdraw himself absolutely from the government of this monarchy, by renouncing the crown, with all its dominions, kingdoms and lordships, in favour of his eldest son Don LEWIS, sworn Prince of Spain; his Majesty commands me to acquaint you, that his will is you continue to serve the said Prince in the employment you now possess.”

GRIMALDO.

The Council of Castile hereupon declared, that King LEWIS might immediately take the government upon him without assembling the Cortes, having been already sworn and acknowledged Prince of Spain.

On the twenty-sixth of January, N. S. the congress at Cambray was opened, when the Ministers of Great Britain and France were admitted Mediators between the Emperor and Spain. But very little business was transacted at this congress; the Plenipotentiaries seemed to employ their time in visiting one another, or other matters of ceremony.

1724.  
Congress  
of Cam-  
bray open-  
ed.

In the mean time LEWIS King of Spain, who was advanced to the throne of that kingdom on the 16th of Jan. last, by the resignation of his father, died of the small pox on the 30th of August, N. S. 1724, being just entered into the 18th year of his age: whereupon the Council of Castile petitioned King PHILIP to re-assume the government, to which, after having consulted an assembly of Divines, he returned the following answer in writing:

‘ I have seriously considered every thing that the Council does represent to me in this supplication, as well as in the former dated the fourth instant. Although I was firmly determined never to leave my retirement upon any account whatsoever,

K. Lewis  
dies, and  
K. Philip

ment.

CHAP.  
XVIII.

foever, yet willing to condescend to the earnest instances made to me by the Council in these two supplications, to resume and take upon me the charge of the government of this monarchy, as it's natural Sovereign and proprietor, and yielding to their farther representing to me, that I am bound in justice and conscience to do it; I have resolved, out of the great value and esteem I have for the advice of the Council, and in consideration of the zeal and constant affection, which is so conspicuous in the members of it, to sacrifice myself to the general welfare of this monarchy, and the greater advantage of the subjects thereof; the more still, considering the obligation which the council finds I am under as their natural Prince and Sovereign: reserving however to myself, a power to leave the government of this monarchy to the Prince my eldest son, when he comes to due age and capacity, provided always there be not at that time too great inconveniences that may hinder it. I agree likewise to the calling as soon as possible the Cortes, to recognize the infant Don FERDINAND as Prince.

1725.

King PHILIP having resumed the government, applied himself more than ever to affairs of state; made an estimate of the debts of the nation, which appeared to be much less than those of any of the other Powers engaged in the late war. Spain had suffered pretty much by the ravages of the soldiers, it is true, in that war, but had not mortgaged her revenues for ages to come, as some other States had done. This Prince proceeded to make an estimate of the charges of his government, in order to apply the several branches of the revenue to their respective expences in such a manner, that the money raised for one service, should not be diverted to another: and the troops, which were ordered to be paid monthly, at that time are said to consist of twelve battalions of guards, eighty-eight battalions of foot, four troops of life-guards, twenty regiments of horse, and ten of dragoons; and orders were given for building of ships in the several harbours of Spain, and re-establishing their navy. But they had the misfortune to lose that accomplished General the Marquis de Lede this year, who had established his fame by those three expeditions to Sardinia, Sicily and Africa, in which he commanded in chief. But King PHILIP met with another misfortune this year, which was a much greater trial of his patience, as well as the Queen's; for the present administration in France, apprehending they should be all in confusion again, if their young King, whose health was very precarious, should happen to die without issue, they determined to send back the Infanta, to whom he had been contracted about three years, and find another Princess for him that was capable of having children, for the Infanta was not at this time above seven years of age; to excuse which proceeding, a letter was sent to the court of Spain, in the name of LEWIS XV, importing, that his most Christian Majesty was under the greatest concern upon his separation from the Infanta, but that a King being born for his subjects rather than himself, he could not refuse yielding to the strong solicitations of all his States, to marry some Princess by whom he might have issue, and thereby prevent the troubles and revolutions which might happen in the kingdom, if he should die before the Infanta was marriageable.

The King and Queen of Spain, notwithstanding

ing these apologies, were provoked to the last degree, and not only sent back Mademoiselle DE BEAUJOLLOIS, daughter to the late Duke of Orleans, who had been contracted to Don CARLOS, with the Dowager Queen of Spain her sister, but immediately broke off the treaty of Cambray, and entered into a confederacy with the Emperor, which was afterwards called the Vienna Alliance; whereby they confirmed the Quadruple Alliance, and the reciprocal renunciations of each party to the Spanish territories in the possession of the other. The Emperor also confirmed the eventual investiture of Tuscany and Parma to Don CARLOS. They guaranteed each other's dominions reciprocally; and the Spaniards engaged to allow greater advantages in trade to the Imperialists than to any other nation, particularly to their Ostend company. Whereupon the French insinuated, that there were still some further secret articles much more prejudicial to the trade of Britain than those that appeared; whereby they prevailed with the British Ministry to enter into an alliance with them, commonly called, the Hanover Alliance, in opposition to that of Vienna. This conduct of Britain in adhering to the French, after they had given so mortal an affront to the court of Spain, so provoked the Spaniards, that they seemed determined never to be reconciled to us; whether we are at war or peace, our merchants are equally sufferers.

The Vienna Alliance.

The Hanover Alliance.

By the Hanover treaty, the contracting parties guaranteed each other's dominions, and particularly their respective rights and privileges in relation to trade; which article strikes chiefly at the Ostend company. And it was further agreed, that if any of the parties should be attacked or disturbed in their trade, that then the other contracting power should furnish the following succours, viz. France eight thousand foot, and four thousand horse, Britain eight thousand foot and four thousand horse; as to Prussia, I do not mention that Prince's share, tho' he was a party, because he afterwards entered into a treaty with the Emperor in opposition to this. On the contrary, the Dutch were afterwards induced to accede to the treaty of Hanover, in order to put a stop to the trade of the Austrian Netherlands to the East-Indies.

The French King having separated or divorced himself from the Infanta of Spain, in the manner above related, immediately made his addresses to the Princess MARY LEZINSKI, daughter of King STANISLAUS, and was married to her by his proxy, the young Duke of Orleans, at Strasbourg, on the 15th of August, 1725; and afterwards in person at Fontainebleau on the 5th of September following.

The French King marries the daughter of King Stanislaus

About this time the Allies of Hanover were alarmed, or pretended to be so, at the intimate correspondence between the Courts of Spain and Russia; and some Russian ships sailing to Cadiz with the merchandize of their own country, the Dutch gave out they would put a stop to this commerce, as well as to that of Ostend with the East-Indies. These LORDS OF THE OCEAN, as they called themselves, pretended to monopolize the trade of the Baltick no less than that of the Indian Seas, and prohibit the nations of the north carrying abroad their own product and manufactures: in which piece of insolence they seemed to expect that Britain should support them.

In the mean time the Duke de Ripperda prime Minister of Spain, (a native of the United Provinces)

Marquis de Lede dies.

CHAP.  
XVIII.

vinces) who is supposed to have been the contriver of the Vienna alliance, fell into disgrace for discovering the secrets of the Spanish Court (as was furnished) to the Ministers of Britain and Holland; and what gave a colour to this suggestion, was, Riperda's being carried by the Minister of the States-General at Madrid to the house of Mr. STANHOPE the British Minister there, where he endeavoured to take refuge, and thereby screen himself from the resentment of King PHILIP; though his pretence for retiring thither, was, to avoid the insolence of the mob. The Spanish Court however took the Duke de Riperda by force out of Mr. STANHOPE's house, and sent him prisoner to the castle of Segovia; which produced several memorials and representations to the Court of Spain, Mr. STANHOPE insisting that it was a violation of the privileges of Ambassadors. The Spanish Court maintained, on the other hand, that no Ambassador could protect a criminal against his Prince: and retorted upon Mr. STANHOPE, the hostilities (as they styled them) that were committed by the British squadrons, one of which, under the command of Sir JOHN JENNINGS, had alarmed the coast of Spain, and the other blocked up their galleons in the harbour of Porto-Bello in America.

About the same time the Duke of Ormond, the Duke of Wharton, and the rest of the disaffected British nobility, resorted to the Spanish Court, expecting there would be a sudden rupture between the two kingdoms: and a messenger from the Court of England delivering a letter from King GEORGE under the privy seal to the Duke of Wharton, as he was passing through the streets of Madrid in his coach, requiring that nobleman to return to England, on pain of forfeiture of his estate, the Duke threw the letter out of the coach into the street without opening it, in contempt of his British Majesty.

On the 11th of June this year, the Queen of Spain was delivered of another Princess, baptized by the name of MARIA-ANTONIA.

The Spaniards being determined to shew the utmost resentment against Britain for the many affronts they pretended to have received, ordered their troops to assemble in Andalusia, and block up Gibraltar, in December 1726. Their first design, it is said, was to raise forts and batteries at the bottom of the bay, whereby they proposed to prevent any shipping coming up to the town, and render the place useless to the English: but this being found impracticable, they invested Gibraltar, and began to besiege it in form, on the twenty-second of February following. It was expected that the French and Dutch should have furnished their quota of troops on this occasion, and have made some diversion in favour of Britain, as they had stipulated to do by the treaty of Hanover, when the territories of any of the contracting powers should happen to be attacked. But our good Allies sent us no manner of assistance either by sea or land; they left us to defend Gibraltar with our own ships and forces: nor did they furnish one ship towards the expedition to Porto-Bello, where we lost almost an entire squadron without fighting.

Either the Allies of Hanover apprehended we had no title to Gibraltar, or they were glad to see us engaged alone in the Spanish war, that they might enjoy the trade to that kingdom by themselves in the mean time; for our merchants effects in Spain were immediately seized, while

those of the French and Dutch remained untouched. The Spaniards however meeting with greater difficulties in the siege of Gibraltar than they expected, and not being able to bring home the treasure in the galleons, while the British Squadron remained at Porto-Bello, were induced to consent to a treaty of pacification, concluded at Paris on the last of May, 1727, between the Allies of Vienna, and those of Hanover, and thereupon the siege of Gibraltar was soon after raised.

By this treaty the Emperor consented that the privileges granted to the Ostend-Company, and all commerce from the Austrian Netherlands to the Indies should be suspended for seven years. That the treaties of Utrecht, the Quadruple Alliance, &c. should be in force; and if any difficulties arose concerning the interpretation of them, they should be determined by a future congress.

Particularly that the English, French, and Dutch should be restored to their rights in trade, according to what was stipulated with each of them by treaties antecedent to the year 1725.

Endeavours were to be used to pacify the troubles in the north.

And immediately after the signing of these articles, all hostilities were to cease; and with respect to Spain, within eight days after his Catholic Majesty should have received these articles.

All ships sent from Ostend to India before this time, were to be at liberty to return home with their cargoes: as were the galleons on the other side, and the English to recall their squadrons from America and the coasts of Spain.

This cessation of hostilities to last as long as the suspension of the Ostend trade, viz. for seven years; in which time the respective rights of the parties were to be discussed.

Within the space of a month after the signing these articles, it was agreed, a congress should be formed at Aix la Chapelle, where the rights and pretensions of the respective powers were to be examined.

Soon after, viz. on the tenth of June, 1727, King GEORGE, one of the principal parties concerned, died in Germany on the road to Hanover.

Still the blockade of Gibraltar was continued, the King of Spain pretending that this was no act of hostility. He also made a difficulty in restoring the ship Prince Frederick, and other effects of the South-Sea Company, so that we had scarce any trade with Spain the year following.

At length an act was signed for the explanation of the said preliminary articles, on the sixth of March, 1727-8, whereby his British Majesty agreed to send orders to his Admirals to withdraw from the seas of the Indies and Spain; and consents that the matter relating to the counterband goods relating to the ship Prince Frederick, should be debated in the future congress; and that therein it should be decided, whether the prizes taken at sea by both parties should be restored, and that his British Majesty should be bound by what should be agreed on there.

His Catholic Majesty, on the other hand, agreed to raise the blockade of Gibraltar; to restore the ship Prince Frederick and her cargo, and to restore the commerce of the English in the Indies according to the Assiento treaty, and the second and third articles of the preliminaries: To cause the effects of the flotilla to be distributed forthwith among the proprietors; and the galleons, when returned, as in times of peace. And his

Double marriage between Spain and Portugal. of July, 1727, and baptized by the name of LEWIS-ANTHONY-JAMES; and on the twenty-fifth of December following, a contract of marriage was signed between Don JOSEPH Prince of Brazil, and the Infanta Donna MARIA-ANNA-VICTORIA, (who had before been contracted to LEWIS XV, King of France;) and within less than a month afterwards, another marriage was solemnized between Don FERDINAND Prince of the Asturias, and the Infanta MARIA of Portugal; whereby the alliances between the two kingdoms of Spain and Portugal were cemented by the strongest ties imaginable.

Congress of Soissons. The congress, which by the preliminary articles was first agreed to be held at Aix la Chapelle, was afterwards, at the instances of the French Court, appointed to be held at Cambray; and this being apprehended too far for Cardinal FLEURY, the Prime Minister of France, to travel, he prevailed with the Plenipotentiaries to assemble at Soissons, which was also complied with, and the congress was accordingly opened there on the fourteenth of June, 1728; and that cunning Jesuit being determined to manage those negotiations in person, and yet not daring to trust his Prince in the hands of any other Ministers during his absence, prevailed with his Master to come with the Court to Compiègne, within an hour or two's driving of Soissons, between which places he was perpetually going and coming; the fatigue whereof not being very agreeable to the old man, after he had heard them wrangle about a month, and gained a sufficient ascendant of them, he made the Ministers follow him from thence to Paris, and afterwards to Fontainebleau, and in short to every place whither the Court of France removed; so exceeding forward were they to refer their differences to the decision of a French Jesuit.

1728. But nothing of consequence being resolved on at these conferences, and the English merchants murmuring, that their trade with Spain had been in a precarious condition for so many years, it was found necessary to clap up a peace with that Court on any terms almost; and to allure the Queen of Spain, who governed the councils on that side, to enter into their measures, an offer was made her of introducing a body of Spanish troops immediately into Italy, to secure the eventual succession of her son Don CARLOS to the dutchies of Tuscany and Parma; which that Princess approving of, a treaty of peace was concluded, to which the French and Dutch, as well as the English, were parties. And this obtained the name of the

Treaty of Seville. 1729. treaty of Seville, it having being concluded there by the Ministers of Great Britain and Spain. But the Emperor was highly incensed at that part of it, which concerned the introducing Spanish forces into Italy, and seemed inclined to hazard every thing rather than suffer it. The year 1729, and part of 1730, having now passed in proposing expedients to compromise this difference; and the

1730. last summer the Spaniards took up transports, in order to land a body of troops in Italy; but finding their Allies not in a readiness to support them, they thought fit to disembark their forces, dismiss their ships, and wait the success of the negotiations on this head. In the mean time, if we are rightly informed, the Spaniards in America continue to take the merchant-ships of Bri-

tain, as in a time of war, and in other respects have not behaved themselves as a nation in perfect friendship with us. I shall conclude the history of Spain with observing, that the Duke of Riparda, who was the subject of so many memorials between the Ministers of Spain and England, made his escape out of the castle of Segovia on the thirteenth of September, 1728, and has since visited most of the Courts of Europe. He was very lately in Great Britain, where it is not doubted but the ministry knew how to make a proper use of him.

I proceed in the next place to enquire how Spain has requited Great Britain for those important services: viz. the settling Don CARLOS in Italy, and the opportunity she gave the Spaniards of making those valuable conquests abovementioned, by standing neuter, while the Emperor was left singly to maintain the war against Spain, France, and Sardinia, and, in the end, compelled to part with one part of his hereditary dominions to save the rest, though his allies had guaranteed to him the enjoyment of the whole.

And it appears the Spaniards were exceeding civil to us all the while we were engaged in persuading the Emperor to admit Don CARLOS, with his Spaniards, into Italy, and conveying him thither. They promised restitution for all their depredations, and assigned commissaries to inquire into all the captures that had been made, and actually sent orders to their American governors to do us justice. Nay, it is reported, they condemned and confiscated one of their guarda costa's, towards making satisfaction to some merchants, whose ships they had plundered: but they had no sooner obtained their ends, and fixed Don CARLOS in Italy, than they renewed their hostilities, took great numbers of British ships, as well in the Mediterranean, as America; and when complaints, and undeniable proofs were made of these outrages, no restitution could be obtained, but we were put off with dilatory promises from year to year, that the facts should be enquired into, and in the mean time continued their depredations to that degree, that a British ship could not sail with any safety, to and from our American plantations without a convoy; they had also the assurance to lay claim to Port-Royal, and the south part of Carolina, in which Georgia is comprehended; and actually made preparations to drive us from thence, as well as from the bays of Campeachy and Hunduras; notwithstanding the British nation has been long in the possession of those countries, and they have been confirmed to us by several treaties.

If it be sufficient for the Spaniards, to support their claim to all Florida, and among the rest, to South Carolina, to say, they were once in possession of half a dozen places on that extensive continent; the French, by the same rule, ought to relinquish Louisiana, which lies in the heart of that country: they ought also to quit that valuable island of Hispaniola, the best plantation for sugar they have; for the Spaniards were long possessed of that whole island. But will France yield up their acquisitions on the continent, or islands, to the Spaniards, because they first discovered or possessed them? No; they will certainly insist on their possession, since the Spaniards thought fit to abandon them for better. The Spaniards, indeed, would have excluded every European nation from America at first, under pretence of their being the first discoverers; and actually made a seizure of

all ships, murdering their crews, if they presumed to appear in those seas: but it being found that the Spaniards could not plant or cultivate a fourth part of that vast continent, and that the natives were far from giving them a permission to settle there, and usurp the dominion of the country, every other European people thought themselves at liberty to traffick with that new world, and to settle colonies there by the permission of the natives, without asking leave of the Spaniards; and no power in Europe, but that of Britain, will suffer it's subjects to be insulted and plundered in that part of the world, under pretence that the Spaniards are universal monarchs of it. The Spaniards never had any settlements in Carolina, or in the bays of Campeachy or Honduras: or, if they had any, they had quitted them; and surely, it is as lawful for the English, as any other people, to plant and cultivate a country they found deserted, and void of inhabitants; and here were none, except some Indians, who made no other use of the country, than to hunt in it; and we had the consent of those Indians to settle colonies there. Let the Spaniards, who use such freedoms with the subjects of Great Britain, practise upon those of France in like manner (and the French have a much weaker title to what they possess in America than the English have) and we shall soon see whether their grand monarch will be pleased to wait the event of a negotiation of seven or eight years standing, and will not immediately make reprisals on the aggressors, where his subjects are unjustly and violently attacked and disturbed in their trade and navigation. I am apt to think the Spaniards durst not insult even the dispirited English, in the manner they have done of late, if they had not some assurance of being supported by the French. It is possible the French may unite with the Spaniards, to dispossess us of some of our plantations in America, in order to succeed us there: but can the Spaniards expect ever to enjoy their own American dominions in quiet, after they have assisted the French to drive the English from thence? would not their gold and silver mines be in a great deal of danger, if the French were as powerful in that part of the world as they are in this, and there were no British colonies there to interpose for their preservation? But if the Spaniards are so insensible of their danger from that quarter, as to unite with their and our common enemies, I hope the English will take such precautions for the security of their colonies, as to bid defiance to both nations. But to proceed in the history of Spain:

This court had raised a very formidable army, with a design of taking possession of Tuscany by force, in case the Emperor opposed their introducing garisons into the fortified towns of that duchy, in order to secure the reversion to Don CARLOS, after the death of the then Duke; and it is not improbable they had then a view of recovering Naples, and the rest of the Spanish territories in Italy; but the Emperor consenting to the admission of six thousand Spaniards into Tuscany, they had afterwards no pretence to invade the Italian provinces the Emperor was possessed of: however, they did not intirely lay aside the design of recovering Naples and Sicily, but kept up their army, and even augmented it, that they might be in a condition to invade Italy the first favourable opportunity; and, in the mean time, that their troops might not want employment,

and be unfit for action, they determined to attempt the recovery of Oran on the coast of Barbary, which the Algerines took from them in the year 1708, after the Spaniards had been near two hundred years in possession of that fortress.

To recover which, the Spaniards embarked 30,000 men on board their fleet, with a suitable quantity of warlike stores of all kinds, for a siege; and setting sail from the road of Alicante, on the 24th of June 1732, arrived on the 28th at Cape Ferro, two miles from the city of Oran, where they landed their army without opposition, but the next day were attacked by a body of 20,000 Moors. The fight was long and sharp: the main part of the Moors attack was born by the Spanish left-wing, who, after an engagement of above four hours, vigorously sustained, repulsed the Moors with great loss, and drove them from the tops of the mountains with so much haste and fear, that the alarm reaching Oran, struck such a panick terror there, that the bey, or governor, and garison, abandoned the place with the utmost precipitation, and the Spaniards entered the next day, being the first of July.

The adjacent fort of Mazalquivir, which might have held out a month had it been defended, was also surrendered to the Spaniards without firing a gun. This rapid success struck a terror into all the neighbouring towns, and even into Algiers itself; but the progress of the Spaniards was soon interrupted, partly by the violent heats of the country, which brought a great sickness and mortality among the soldiers, and partly by the want of fresh water, which is very scarce on that coast, so that they could not make any distant marches. Besides this, the Moors having recovered their fright, took heart again, and began to entertain the Spaniards with very sharp skirmishes, in which the Moors were often successful; their light horse being good soldiers, though their foot are but indifferent; and once by an ambuscade they surprised a considerable body of Spanish troops, of whom they killed 300, and among the rest the duke de St. Blais, a grandee of Spain. However, the Spaniards leaving strong garisons in Oran and Mazalquivir, under the command of the marquis of Santa Cruz, the fleet returned with the rest of their army to Spain, which the Turks and Moors had no sooner intelligence of, but they assembled their army again, and with their usual fury, attacked the forts and outworks which covered Oran, and particularly that of Santa Cruz, whither the governor sending a reinforcement, and a supply of ammunition and provisions, the Turks attacked the convoy, and an engagement ensued, in which the Spaniards lost abundance of men, but threw the intended relief into the fort. On the other hand, the Turks and Moors proceeded to open their trenches before Oran, and to besiege the town in form: whereupon the marquis of Santa Cruz, the governor, made several successful sallies, in which he levelled their works, and nailed up their cannon; but in one of them had the misfortune to be wounded and made a prisoner: however the infidels, by the frequent sallies of the garison, were at length compelled to raise the siege, and the Spaniards still remain in possession of that city, and the forts about it.

The following year, 1733, happened the long-expected death of AUGUSTUS II. King of Poland; and the Emperor espousing the interest of the

the Elector of Saxony, son of the late King, against King STANISLAUS, the Spaniards, French, and Sardinians, entered into a confederacy against his Imperial Majesty, and made this a pretence for invading his dominions in Italy and Germany, and at length drove the Imperialists entirely out of Milan, Naples, and Sicily, while the English and Dutch, who had guaranteed those territories to the Emperor, stood looking on, without affording them any assistance; and his Imperial Majesty was at length compelled to sacrifice the Kingdoms of Naples and Sicily to the Spaniards, to save the rest of his dominions, as has been already related in the history of Italy: but I omitted there to observe, that Spain and her allies, apprehending the Pope to be in the interest of the Imperialists, under pretence that some of the subjects of Spain and Naples had been insulted by the populace at Rome, they marched their army up to the very gates of that city, and refused to retire till they had extorted 40,000 crowns from his Holiness; and the Genoese, and Pisans, upon slighter pretences, were served much in the same manner by the insulting Spaniard.

Before the war was well ended in Italy, a difference happened between Spain and Portugal, which was very near producing another. A country farmer, who lived in a village about a mile from Madrid, and used to serve the stables of M. DE BELMONTE, the Portuguese Minister at that court, with straw and barley, having killed a man, was brought prisoner to Madrid by the officers of the village, attended by six soldiers, on Sunday the 20th of February 1734-5, being the last day of the carnival, when multitudes of people were assembled in the streets, as usual at that time: the criminal passing by the gate of M. DE BELMONTE, which was not far from one of the King's palaces, called the Buen Retiro, the servants of this minister seeing their old friend the farmer manacled, and tied upon an ass, without enquiring what was the occasion of it, rescued the prisoner, and carried him into their master's house, where he was kept two days, and then assisted by the family, to make his escape to a place of security, as the Spaniards relate. On the other hand, M. DE BELMONTE affirmed, that he was no sooner acquainted with the matter, but he turned off the servants who were concerned in it, and ordered the criminal to be put out of his house, and immediately sent word to the governor of Castile, by whose warrant the criminal was apprehended, to excuse the outrage, and let him know he had turned off the servants that were concerned in it. However, the government taking no notice of M. BELMONTE's apology, two days after sent a detachment of soldiers to his house, apprehended all his servants, and carried them to prison; of which the minister of Portugal gave the following account to all the foreign ministers residing at Madrid, viz.

"On the twenty second of February, a great number of soldiers, of those called los banquillos, headed by three officers, forced themselves into my house, with their bayonets fixed to their pieces, and seized some of my domesticks that were under the portico and upon the great stair-case: they afterwards entered my antichamber, and had already taken one of my pages, when I went myself and demanded of them, what orders they had to commit such an outrage against my house; One of them returned for answer, that they had an order

"from the King to seize all my servants in general, without any exception, but especially those wearing my livery, and to conduct them to the publick prisons; and moreover, to search every where for those of my servants that did not appear. I asked that officer if he had this order in writing; He answered me in the negative; but that his officer, who had a verbal order, had given him the same in like manner, and that they were come to execute it. I then replied, that as I had no other arms at hand than the immunity of my character, which I saw so cruelly and outrageously violated, I should take no other step than to retire, to avoid being an eye-witness of so unheard-of a proceeding. The soldiers took nineteen of my domesticks, as well of the livery as others, handcuffed them two and two, and conducted them through the most publick streets of Madrid, and in the same livery, to prison.

"This, gentlemen, is a faithful recital of that fact, so violent and unheard of before, which entirely destroys the laws of nations, and breaks thro' all that is sacred amongst the most barbarous nations, who inspired by reason and nature, preserve the immunity of publick ministers.

In answer to this manifesto, the following letter was sent by the Spanish court, to all the foreign ministers residing at Madrid, and communicated by them to their respective courts.

SIR,

"Though the extraordinary circumstances, which attended the enterprize made the twentieth instant, by the minister of Portugal and his domesticks, are so well known, that they justify the resolution the King took the twenty-second, to cause the guilty domesticks to be arrested in whatever place they could be found; yet as the same was executed in the hotel of that minister, his Majesty has commanded me to communicate to your excellency, the motives which obliged him to take that resolution, to the end, that only your excellency may be convinced of the indispensable necessity he was under, considering the temerity of that minister, to have recourse to such violent methods; but also to be assured, that the King and his ministers observe with the utmost exactness, the regards which are owing to the character of the ministers of sovereign powers, who reside at this court.

"The publick attack committed by that minister's domesticks upon the soldiers and officers of justice, who were conducting thro' the gate of Alcala a prisoner, guilty of a very atrocious murder, and the seizing and carrying off the said prisoner, out of the hands of the officers of justice, so near the palace of Buen Retiro, make it appear, that they not only assume to themselves a publick protection of criminals, to the prejudice of the authority and sovereignty of the King; but at the same time, one may see a manifest violation of the royal residence, which has been hitherto regarded as a place sacred, as well by the natives of the country as foreigners, and so worthy of respect, that the least violation committed within it's territory was worthy of death. The precaution taken to place a person at the gate of the city, to watch the arrival of the prisoner,

soner, which makes it suspected the enterprize was a premeditated design, and was the cause, without doubt, that the arrival of the said criminal was instantly known in the house of the minister, excludes all pretences, which incidents, or any other occasion, might have furnished. The manner in which the prisoner was conducted from the gate of the palace, with a view to excite a tumult by dint of cries, that deserved punishment in the midst of a concourse of so many people in a publick walk, exposed the King's sovereignty, and dishonoured his right in the publick streets. The liberty granted to the criminal, whose irons were taken off after his coming into the minister's house, and who was afterwards exposed in the windows, to the view of the spectators, makes it evidently appear, how much the authority of those was despised who caused him to be taken.

"These circumstances did not permit decency, nor the sovereign authority to dissemble, or to leave unpunished an attempt of this nature, much less, that an affair so publick should pass over without a publick satisfaction. Nevertheless, the punishment was deferred till the third day, though the guilty had not given his Majesty the least tokens of their repentance; and though it is pretended, that a letter was written to the governor of the council of Castile, which was but an indirect way to acquaint the King of the affair, it being well known, that the dangerous indisposition of the said governor, hindered him from receiving and answering letters. But if attention should be given to that letter, what fault might not that minister be accused of? He owns therein he gave liberty to the criminal, approving thereby the conduct of his domesticks; and says, that he did it immediately after he was brought to his house, and was acquainted with the affair: it is, however, well known, that the minister was then walking in his garden, that the criminal staid above thirty hours in his house, and was afterwards conducted, with much precaution, to a place of safety. He says he had turned away his footmen, and they were all found at his house; so that all he alledges for his justification, proves on the contrary his fault, forgetting thereby the respect which is owing to a monarch in his own court, and which every sovereign will maintain without the least infraction. Wherefore his Majesty persuades himself, that your excellency will easily comprehend, that the present case cannot be compared to any of those, wherein fugitives may for some time enjoy an asylum, in the houses of characterized ministers; nor to those wherein liberty, with regard to person or place, may take effect. Dated at the Pardo, Feb. 28, 1733. Signed

DON JOSEPH PATINHO.

Upon this misunderstanding between the two courts, the troops of both kingdoms were ordered to march towards the frontiers; and it happened very fortunately for the Portuguese, that the greatest part of the Spanish army was still in Italy; for had they been in Spain, they might have marched up to the gates of Lisbon, before any foreign power could have interpo-

sed to have prevented it; the fortified towns on the frontiers of Portugal being generally out of repair, and their militia in a very wretched condition.

His Portuguese Majesty, therefore, immediately dispatched Don ANTONIO D'ALVEZEDO to the court of Great Britain, to desire their assistance; whereupon sir JOHN NORRIS was commanded immediately to sail for the river of Lisbon, with a strong squadron of men of war, and arrived there on the 9th of June 1735, and was received by the Portuguese with transports of joy, they being sensible, that nothing less could have protected them from Spanish vengeance. His Portuguese Majesty, on the arrival of the fleet, ordered them a weekly allowance of an hundred oxen, four hundred sheep, four hundred geese, as many turkeys, one thousand hens, one thousand baskets of greens, fifty arroves of sweetmeats, one hundred thousand lemons and oranges, and fourscore pipes of wine. The King of Portugal was sensible, that the instruments of so signal a service, deserved at least to be well entertained: and if he was not at any other expence towards lessening the charge of the fifty thousand pounds per month, which that fleet stood the nation in; yet this is much more than ever we received from any other power in the like circumstances. When we sent over a body of troops to the assistance of the Dutch, in the beginning of Queen ANNE's war, the French being upon their frontiers, and about to penetrate into the heart of their country, as they themselves represented, we did it generously, without demanding any part of the charges. The like conduct we observed towards the Emperor and the emperie, when they were upon the brink of ruin. I do not find, that any of these good allies contributed a shilling towards the subsistence of the forces employed in their deliverance. We did all this like the charitable man in the gospel, hoping for nothing again, though we run ourselves over head and ears in debt to save them. On the contrary, when the Dutch brought over our Great Deliverer, King WILLIAM, they demanded six hundred thousand pounds for that service, and were honestly paid it. I won't pretend to say, that none of our officers or ministers ever received a gratuity, for the important services we have done our allies. It would tempt a man to think, there had been something of this kind, in the reign of Queen ANNE, or we could never have consented to have taken so unequal a share in that war, and in a manner, borne the whole burthen of it, till we had exhausted all our treasure, and run fifty millions in debt; while those who were more nearly concerned in the event of the war, did little or nothing towards the support of it. If this was the effect of suffering our ministers to become pensioners to foreign princes, surely nothing can be more destructive to a nation. Can it be expected, that ministers in pay of foreign powers, should be faithful to their country?

But one of the most notorious pieces of ingratitude this nation ever was sensible of, was that of the Queen of Spain's; who, notwithstanding we convoyed her son, Don CARLOS, to Tuscany, and gave him an opportunity of making a conquest of Italy, to the ruin of our good ally the Emperor, has ever since treated the subjects of Britain as her enemies, and openly

penly makes war upon them in every part of the world, where she apprehends her people superior to us: though it seems, we employed both our sea and land forces in introducing Don CARLOS into Italy, at our own charges, and were not furnished even with refreshments, while our fleet lay in the Spanish harbours, without paying extravagantly for them.

There are two or three expeditions to the Baltick, that ought not to be forgotten in this place, when our powerful fleets saved both the Danes and Swedes, from the ravages of the Russians, and yet neither of those powers paid any thing towards the charges their deliverers were at, or ever made any such acknowledgment for these important services, unless their receiving pensions for troops we never used, and putting us to the charge of raising them, are to be looked upon as obligations. It is no wonder we still groan under the burthen of heavy taxes, after these numerous expeditions, at our own expence, to serve our neighbours. Can we expect to run round the world perpetually in search of adventures, without being liable to the like misfortunes as our great predecessor in chivalry was subject to?

To return to Portugal. Some time before the British fleet set sail thither, Mr. KEEN, the British envoy, communicated to the court of Spain, the design of his Majesty to send a fleet thither, assuring him that the King his master had no other design in it, but to protect the trade of his subjects, and his allies; and particularly to secure the return of the Brasil fleet to Lisbon, on board of which the English nation had a very large interest.

To which the court of Spain answered, that there could be no manner of occasion for this armament: his Catholick Majesty having already accepted the mediation of his nephew, the King of France, which secured Portugal from all acts of hostility on the part of Spain. On the contrary, nothing could have been more prejudicial to the trade of Europe, than the sending the British fleet to Lisbon. For while this was doing, all hands were employed at Cadiz in fitting out the flota for New Spain. Every one knew, that the cargo she carries thither is a deposit, to which all the nations in Europe eagerly strive to contribute, and to have a share in, that they may partake of the great profits produced by the return of the capitals employed in it; and one of the greatest motives to that confidence which people have to put their fortunes in that sort of commerce, is the good understanding, which they see between the courts of Spain and Great Britain: persuaded that they have nothing to fear for their effects, but winds and tempests, and other accidents of the sea, they have the less uneasiness and reserve in giving into a trade, whose great advantages they are so well acquainted with. The advantages they draw from it have a proportionable influence over all the other branches of trade in general, and things remaining in this condition, cause a happy circulation of wealth in Spain; and among all those nations where commerce flourishes; but it is with the body politick, as it is with the human body; as soon as the circulation is stopped in any considerable part, it immediately languishes, and becomes all over distempered.

The flota from Cadiz was equipping as usual;  
VOL. II. NUMB. XCVIII.

every body was preparing rich merchandize to put on board it, which they had purchased, either by bills of exchange for ready money, or upon credit: all on a sudden they hear of a naval armament making in England, to go and cover the sea all along the coast of Portugal, at this news the merchants tremble; confidence vanishes; every one thinks of securing his effects, and no man will risque his capital on board the galleons, which may be attacked either going to New Spain, or coming back: people had rather keep their goods in their warehouses, and run the risque of their perishing there; they had rather renounce the hopes of a return that would enrich them, than hazard an event that would ruin them without resource: this fear is communicative, and by a contagious emotion, a branch of trade, which is the soul of all the trade in Europe, loses its own proper vigor; and, in proportion as it languishes itself, it draws all the subordinate branches into the same condition. Let us add, that those who furnish goods to be sent to New Spain, have borrowed large sums, and employed them according to the best of their judgment; the goods are already bought, but they do not go; they cannot then make the reimbursements to which they stand engaged. Circumstances, in which the merchants have no part, reduce them to glaring bankruptcies; by their fall they occasion that of several other merchants, not only of Spain, but also of France, England, Holland, Italy, &c. who are unfortunately struck by the rebound.

And what effect will that naval force produce in the maritime provinces of Spain? With what eye will the Spaniards behold entering into those ports, which the present state of peace keeps open to the British nation, a fleet, friends, as you please to call them, but armed nevertheless with all the accoutrements and appearances of an enemy? The Spaniards will see the English ships freely enter their ports, while their own merchantmen will hardly dare venture out upon the smallest trip, for fear of some unforeseen insult. In what condition will then the maritime commerce of Spain be, and that of other nations which trade with her?

It will be said, perhaps, that the design of the fleet was to support a peace, which they would maintain between two crowns, animated against one another. To which it is easy to answer, that if the court of Great Britain acted upon that motive, nothing was less necessary than all that parade of a fleet, which is a pure loss to their nation. It is even easy to demonstrate, that that fleet does more harm than good to the pacifick negotiations.

To re-establish the harmony between the two nations, Portugal had no need of any other expedient than that of resuming the sentiments of moderation and justice: that would have satisfied such a King as PHILIP V. But the British fleet has very much changed the face of affairs: the King of Portugal finding so considerable a support, enlarges his pretensions. If he demands those reparations to be made him, which he himself owes to the majesty of a great King, who has been offended in the sight of two capital cities, where shall we be? what must we expect?—That the peace will be farther off than before; and that of a distemper which of itself seemed to point out its own cure, the fleet has made an incurable disease, whose  
17 X con-

CHAP.  
XVIII.

consequences will be more to be dreaded than the evil itself.

In answer to these representations, Mr. KEENE, the British minister, informed the court of Spain, that he was ordered, by the King of Great Britain, his master, to repeat the assurances already made, and declared, that the protection of the trade of his Majesty's subjects, and those of his allies, was the sole cause of sending that fleet to Lisbon; that his admiral had express orders, neither to assist or encourage the King of Portugal to attack any power whatever, or undertake any thing against them; and his Catholick Majesty might be assured, that provided the King's subjects are not molested in their trade in the East and West Indies, and in Europe, and that nothing is undertaking against the coasts and trade of Portugal, his Majesty's fleet, as long as it stays in those seas, will never give his Catholick Majesty, or his subjects, the least cause of suspicion or uneasiness.

The differences between the courts of Spain and Portugal being some time afterwards amicably adjusted, the British fleet returned to England, without committing any acts of hostility; but the Spaniards have not ceased to revenge the disappointment they met with on the British merchants from that day to this, whenever they have had an opportunity.

Such has been our situation in regard to Spain for several years, that each nation has at different times felt the effects of war, without a declaration of war published on either side.

Spanish  
war.

1739.  
Merret  
paid for  
the Isabella  
man of  
war resto-  
red to  
Spain.

A petition was presented to the house of Commons on the 5th of March 1738-9, by SOLOMON MERRET and THOMAS CLAPHAMSON in behalf of themselves and others concerned in the ship *St. Isabella*: Setting forth, that a British Squadron of ships of war, commanded by Sir GEORGE BYNG, afterwards Viscount Torrington, did in the year 1718 take several ships of war in the Mediterranean, belonging to the King of Spain, and carried them to Port Mahon, where they were condemned and put up to sale by the Agents for the Captors: And that the said ship *Isabella*, being one of them, was, after she had lain two years in the said port, purchased by the petitioners for 16000 pieces of eight; besides which, they were at a great charge in repairing the said ship, and making her fit for service: and that matters being accommodated between the two crowns of Great Britain and Spain, in the year 1721, the said ship was brought down to Cadiz, in order to trade, or to be sold; but Monsieur PATINO, the Spanish Intendant of the marine, claimed the said ship, under pretence of an agreement between the two crowns, that all the ships of war taken from the Spaniards in the year 1718 should be restored; and that thereupon the petitioners, by the directions of one of his British Majesty's secretaries of state, abandoned the said ship, and the Spaniards took possession of her. And they further set forth, that they were sufferers by this means upwards of ten thousand pounds; and therefore prayed the house would take their case into consideration, and grant them such relief as they saw fit.

The parliament hereupon granted his Majesty 5000l. for making satisfaction to SOLOMON MERRET, and the rest of the owners of the said Spanish man of war, called the *Santa Isabella*; which had been delivered to the Spaniards pursuant to a treaty between the two crowns. It has been remarked hereupon, that this seizure of the ship

*Isabella*, under pretence of the treaty made between the two crowns in the year 1721, was very unjust; because only those ships which had not been disposed of, were to be restored by that treaty in the condition they were in. And as to those that had been disposed of, the price which the purchasers paid for them only was to be restored to the Spaniards: they had no right to the ship, therefore by the said treaty, they could have demanded only the money she was sold for; and that they ought to have demanded of the British Ministry, and not of those who purchased the ship.

CHAP.  
XVIII.  
All the  
Spanish  
ships paid  
for which  
were taken  
or destroyed  
1718.

From this proceeding of the British parliament upon MERRET's petition, it appears that the Spaniards could never forget or forgive the destruction of their fleet by Admiral BYNG, on the coasts of Sicily in the year 1718; and that the British Ministry were so far convinced of their error in that enterprize, that they paid for every ship they destroyed or took, though many of them rotted in our harbours, and the captors made nothing of them; and still the Spaniards appear to have been unsatisfied; the disgrace they received there probably was one of their strongest inducements for breaking with us in the year 1739; however, I shall proceed to give an abstract of the avowed reasons both of Great Britain and Spain, for entering into this war, after the convention made between the two crowns for accommodating all their differences at the Pardo in Spain, on the 14th of January 1739, N. S. but first it will be necessary to take a view of the principal articles of that convention.

In the preamble thereof it is recited, that whereas differences had arisen of late years between the two crowns of Great Britain and Spain, on account of visiting, searching, and taking of vessels, the seizing of effects, the regulating of limits on the frontiers, and other grievances alledged on each side, as well in the West-Indies as elsewhere: The Kings of Great Britain and Spain had given their Plenipotentiaries full powers to adjust them, &c.

Articles of  
the con-  
vention.

1. And it was agreed, that within six weeks after signing the convention, Plenipotentiaries should meet finally to regulate the respective pretensions of the two crowns, as well with relation to the trade and navigation in America, and Europe, the limits of Florida and Carolina, as concerning other points, which likewise remained to be adjusted; the whole according to the treaties of 1667, 1670, 1713, 1715, 1721, 1728, and 1729. including that of the *Asiento* of Negroes, and the convention of 1716, the said final treaty to be finished within eight months.

2. During the time of the treaty, all things should remain in the state they were in Florida and Carolina, without increasing the fortifications or taking any new posts.

3. It is agreed, that Spain shall pay to his Britannick Majesty the sum of 95000l. for a balance which has been admitted to be due to the crown and subjects of Great Britain, after deduction made of the demands of the crown and subjects of Spain; to the end that the abovementioned sum of 95000l. together with the amount of what had been acknowledged on the part of Great Britain to be due to Spain, on her demands, may be employed by his Britannick Majesty, for the satisfaction and payment of the demands of his subjects upon the crown of Spain; [the sum due to Spain was acknowledged to be 60000l. which the parliament voted: most of it said to be for a further satisfaction

CHAP.  
XVIII.

to the Spaniards for the destruction of their fleet in 1718.] provided that this reciprocal discharge shall not be pretended to extend or relate to the accounts and differences which subsist between the crown of Spain and the Asiento company; or to any private contracts between the two crowns or their subjects.

4. If the ship Woolball, or the value thereof, or any other British ships included in this valuation, have been restored or paid already by orders from Spain, such sums shall be deducted out of the 95000l. but the payment of the 95000 l. shall not be delayed on that account.

5. The Ratifications to be signed at London within six weeks or sooner.

Done at the Pardo 14 January 1739.

B. KEENE SEBASTIAN DE LA QUADRA.  
(L. S.) (L. S.)

First separate article.

That BENJAMIN KEENE, Esq; and ABRAHAM CASTRES, consul in Spain, shall be the Plenipotentiaries on the part of Great Britain, and DON JOSEPH DE LA QUINTANA, and DON STEPHEN JOSEPH DE ABANA on the part of Spain, in the intended definitive treaty: and the aforesaid sum of 95000 l. is stipulated to be paid at London within four months after the exchange of the ratifications.

Second separate article.

The ship Success, taken 14 April 1738, coming out of Antigua by a Spanish guarda costa, is not comprehended in this convention; but the restitution thereof is to be decided by the said Plenipotentiaries: The taking of the Santa Theresa, seized at Dublin anno 1735, is also to be referred to the said Plenipotentiaries. And it is further declared, that the 3d article of this convention does not extend to any ships or effects taken since the tenth of December 1737: or to any that may afterwards be taken. But justice shall be done therein according to former treaties.

The convention laid before the house of Peers.

This treaty of convention being read in the house of Lords, the Lord CARTERET desired to be informed if all the papers relating to the convention had been laid before the house: to which the Duke of Newcastle answered, that a declaration relating to the South-sea company had been signed by the Spanish Minister, and delivered to his British Majesty's Ministers at Madrid; a copy whereof was afterwards laid before the house, being of the following tenor.

A protest by Spain on signing the convention.

That his Catholic Majesty reserved to himself in it's full force, the right of suspending the Asiento of Negroes, in case the South-sea company did not subject herself to pay within a short term the sixty eight thousand pounds, which she confessed to be due on the duty of Negroes; and on the profits of the ship Caroline: and that under the validity and force of this protest, the signing of the convention may be proceeded upon, and in no other manner.

Pardo, 10 January, 1739.

Address of the Lords approving the convention.

The Lords presented an address to his Majesty hereupon, acknowledging his great prudence in bringing the demands of his subjects, for their past losses, which had been so long depending, to a final adjustment by the said convention, and procuring an express stipulation for a speedy payment, and laying a foundation for accomplishing the great and desirable ends of obtaining future security, and preserving peace between the two nations.

Protest against the address.

Against presenting this address a protest was entered in the house of Lords, for the following reasons, among others.

CHAP.  
XVIII.

1. That it carried with it an approbation of the convention, and might induce his Majesty to believe it was agreeable to the sense and expectation of the nation.

3. That it did not sufficiently assert our rights, but seemed to permit the visiting and searching our ships near their coasts, which rendered our whole American trade precarious.

6. Because the reparation pretended to be made our merchants, for the losses they had sustained, was insufficient, the dark accounts of this transaction having not been fully explained, or any satisfactory reason given why our merchants demands, stated in an account signed June 14, 1738, by Mr. STERT, one of the commissaries, at 343,277 l. should be so greatly reduced.

7. Because Great Britain, as they apprehended, was to allow 60000 l. to the King of Spain, chiefly on account of the ships taken near Sicily, anno 1718, though it appeared by the instructions given to the King's commissaries, at the treaty of Seville, that the articles of the treaty of Madrid, concluded anno 1721, upon which that claim of the Spaniards was founded, had been fully executed on the part of Great Britain.

8. Because the referring the limits of Florida and Carolina to the Plenipotentiaries seemed to call in question our right to possessions, which we had long enjoyed, and which the nation had lately purchased of the proprietors under the two grants of King CHARLES II, and a part thereof called Georgia, had been erected into a colony, for the establishment and improvement whereof, considerable sums had been granted by the publick, notwithstanding which it had been stipulated by this convention, that no fortification should be encreased there for 8 months, at the expiration whereof, if a peace should not be made, it would be exposed, together with other colonies, to the violence and invasions of the Spaniards.

9. Because the British Ministers acceptance of the declaration, January 10, 1738-9, said to be agreed with reciprocal accord, had allowed the King of Spain a liberty to suspend the Asiento of Negroes, if the South-sea company did not subject herself to pay 68000 l. pretended to be owing on the duties of Negroes and profits of the ship Carolina, though that sum was never otherwise acknowledged due than as part of a plan of accommodation, wherein a much larger sum was admitted to be due to the company, whereby the King of Spain may look upon that great company as put out of his Majesty's protection, and left to the mercy of the King of Spain.

10. Because no satisfaction has been obtained by the convention for the cruelties and barbarities exercised on the British sailors, or the many insults offered to the British flag.

The commons in the mean time voted 20000 l. for establishing and improving the colony of Georgia.

They also resolved, that the sum of 60000 l. being the sum acknowledged to be due to Spain by the convention, be applied, together with the further sum of 95000 l. to be advanced by the crown of Spain, towards making satisfaction to his Majesty's injured subjects, for the damages they had sustained by the depredations of the Spaniards.

Thus it appears from the convention, that Spain was to pay at London, on or before the 24th of May, the sum of 95000 l. sterling, for a balance, which had been admitted as due to the crown and subjects of Great Britain, after the deduction

War with Spain resolved on.

duction made of the demands of the crown and subjects of Spain; and as Spain neglected to make this payment on the day appointed, his Majesty resolved to make use of force, and upon the 15th of June an order was issued privately for making reprisals upon the Spaniards in the West-Indies, with which his Majesty's ship the *Shoreham* sailed from the Downs the 19th; and about the same time it is presumed the like orders were sent to Admiral HADDOCK, then lying at Gibraltar, with the squadron under his command; for about the middle of July he began to cruize off of the bay of Cadiz, for intercepting such Spanish ships as should fall in his way.

Orders for  
reprisals  
published.

These orders for reprisals were kept private till the 10th of July; but upon that day, the following general order for reprisals was published in the London Gazette, viz.

Whereas many and repeated depredations have been committed, and many unjust seizures have been made in the West-Indies and elsewhere, by Spanish guarda costas and ships acting under the commissions of the King of Spain, or his governors, contrary to the law of nations, and in violation of the treaties subsisting between the crown of Great Britain and Spain, whereby his Majesty's trading subjects have not only sustained great losses, but have also suffered in their persons by the cruelties and barbarities which have been exercised by the said Spanish guarda costas: and whereas his Majesty has caused repeated instances and representations to be made, from time to time, at the court of Spain, in order to obtain redress and satisfaction for such injurious treatment and unjust practices, and to prevent the like violences for the future: and whereas a convention for making reparation to his Majesty's subjects for their losses by the said depredations and seizures, was concluded between his Majesty and the King of Spain, on the 14th day of January last, N. S. by which convention it was stipulated, that a certain sum of money should be paid at London within a term in the said convention specified, as a balance admitted to be due on the part of Spain to the crown and subjects of Great Britain, which term did expire on the 25th of May last; and the payment of the said stipulated sum, as agreed by the above-mentioned convention, has not been made, by which means the said convention has been violated and broke on the part of the crown of Spain, and his Majesty's subjects remain without any reparation or satisfaction for their many, great, and grievous losses; his Majesty hath therefore taken this injurious proceeding of the crown of Spain into his serious consideration, and his Majesty having determined to take such measures as are necessary for vindicating the honour of his crown, and for procuring reparation and satisfaction to his injured subjects, is pleased by and with the advice of his privy-council to order, and it is hereby ordered, that general reprisals be granted against the ships, goods, and subjects of the King of Spain, so that as well his Majesty's fleet and ships, as also all other ships and vessels that shall be commissioned by letters of marque or general reprisals, or otherwise by his Majesty's commissioners for executing the office of Lord high Admiral of Great Britain, shall and may lawfully seize all ships, vessels, and goods, belonging to the King of Spain or his subjects, or others inhabiting within any the territories of the King of Spain, and bring the same to judgment in any of the courts of admiralty within his Majesty's dominions.

On the 9th of July EDWARD VERNON Esq; CHAP. an old captain in the navy, who had for several years been laid aside, was restored by his Majesty to his rank, and at once promoted to be Vice-Admiral of the blue squadron. XVIII. Design laid for intercepting the Aslogues ships. On the 17th he set out for Portsmouth, and endeavoured to sail on the 20th, but was obliged by contrary winds to come to an anchor near St. Hellen's, from whence he sailed, with nine men of war and a sloop, under his command, on the 23d early in the morning, but was obliged by contrary winds to put back. However he sailed again that afternoon, but the wind still continuing contrary, he got no farther than Portland road, where he was obliged to come to an anchor on the 27th; and could not sail from thence till the 31st in the morning. It was thought at first that he was bound directly to the West-Indies, but it afterwards appeared, that he had orders to cruize upon the coasts of Spain, in order to intercept the Aslogues ships. On the 21st of June Sir CHALONER OGLE, soon after made Rear-Admiral of the blue, set out for Portsmouth, and on the 30th he sailed from thence with three men of war under his command; but having met with contrary winds and a violent storm in the channel, by which his ships had received some damage, he was obliged to put into Plymouth, on the 13th of July, to refit, and sailed again on the 21st. These ships were likewise sent to cruize upon the Spanish coasts, with orders to make reprisals: and were seen cruising off Cape Finisterre on the 25th. Thus we find all imaginable care was taken for intercepting the Aslogues ships in their return from the West-Indies to Old Spain; but these ships having, by an advice boat sent from Old Spain, received orders to steer north about, and to get into the first Spanish port they could safely come at, in the bay of Biscay, arrived safe in the port of St. Andero on the 2d of August; and as soon as we had an account of their escape, Admiral VERNON, with six of the men of war under his command, sailed to the West-Indies, and Sir CHALONER OGLE, with the three men of war under his command, and three of those that came out with Admiral VERNON, sailed to reinforce Admiral HADDOCK before Cadiz.

The men of war under Admiral HADDOCK's command kept cruising off Cadiz, and between that and Gibraltar, they took several small ships belonging to the enemy, and on the 23d of September a rich Spanish ship called the *St. Joseph*, bound from the Caraccas to Cadiz, and belonging to the Guipuscoan company, fell into their hands.

This ship was soon after her being taken sent home, under convoy of the Chester man of war, and arrived safe at Spithead the 28th of October. She was a ship of 800 tons burthen, had 36 guns mounted, and ports for 60; but as she was deeply loaded, and found herself encompassed by our squadron, she made no resistance.

This prize was computed to be worth near 150,000*l*. they also took another rich Caracca ship of 250 tons: on the other hand, the Spaniards seized five British merchant ships in Malaga, and several more in other ports of Spain, and fitting out abundance of privateers, they soon took above a hundred prizes. For as soon as the Court of Spain understood orders were issued for making reprisals on them, they immediately gave orders for making reprisals on the subjects of Great Britain, and seizing all the ships and effects of the British subjects that were to be found in the dominions of Spain.

CHAP.  
XVIII.

In the mean time both the French and Dutch complained that the British men of war had no right to visit their ships under pretence of searching for warlike stores and other contraband goods, as there was no war declared between Great Britain and Spain; whereupon his British Majesty caused a declaration of war to be published on the 23d of October of the following tenor (viz.)

GEORGE R.

Declara-  
tion of war  
by Great  
Britain.

Whereas many unjust seizures have been made and depredations carried on for several years in the West-Indies by Spanish guarda costas and other ships acting under the commission of the King of Spain, or his Governors, contrary to treaties subsisting between us and the Crown of Spain, and to the law of nations, to the great prejudice of the lawful trade and commerce of our subjects, and great cruelties and barbarities have been exercised on the persons of divers of our subjects, whose vessels have been so seized, and the British colours have been insulted in the most ignominious manner: and whereas we have caused frequent complaints to be made to the King of Spain of these violent and unjust proceedings, but no satisfaction or redress has been given for the same, notwithstanding the many promises made and cedula's issued, signed by the said King, or by his order for that purpose: and whereas the evils abovementioned have been principally occasioned by an unwarrantable claim and pretension set up on the part of Spain, that the guarda costas and other ships authorised by the King of Spain may stop, detain and search the ships and vessels of our subjects navigating in the American seas contrary to the liberty of navigation, to which our subjects have not only an equal right with those of the King of Spain by the law of nations, but which is moreover expressly acknowledged and declared to belong to them by the most solemn treaties, and particularly by that concluded anno 1670: and whereas the said groundless claim and pretension, and the unjust practice of stopping, detaining and searching ships and vessels navigating in the seas of America is not only of the most dangerous and destructive consequence to the lawful commerce of our subjects, but also tends to interrupt and obstruct the free intercourse and correspondence between our dominions in Europe, and our colonies and plantations in America; and by means thereof to deprive us and our subjects of the benefit of those colonies and plantations, a consideration of the highest importance to us and our kingdoms, and a practice which must affect in its consequence all other princes and States in Europe, possessed of settlements in the West-Indies, or whose subjects carry on any trade thither. And whereas besides the notorious grounds of complaint abovementioned, many other infractions have been made on the part of Spain, of the several treaties and conventions subsisting between us and that crown, and particularly of that concluded anno 1667, as well by the exorbitant duties and impositions laid upon the trade and commerce of our subjects, as by the breach of ancient and established privileges, stipulated for them by the said treaties, for the redress of which grievances, the strongest instances have from time to time been made by our several Ministers residing in Spain without effect: and whereas a convention for making reparation to our subjects for the losses sustained by them on account of the unjust seizures and depredations committed by the Spaniards in America, and in order to prevent for the future all grievances and causes of complaint, and to remove

absolutely every thing which might give occasion thereto, was concluded between us and the King of Spain, on the 14th of January last, by which it was stipulated, that a certain sum of money should be paid in London, within a term therein specified, as a balance admitted to be due on the part of Spain to the crown and subjects of Great Britain, which term expired on the 25th of May last, and the payment of the said sum was not made, according to the stipulation for that purpose, by which means the convention abovementioned was manifestly violated and broken by the King of Spain, and our subjects remained without any satisfaction or reparation for the many grievous losses sustained by them, and the methods agreed upon by the said convention, in order to the obtaining future security for the trade and navigation of our subjects, are contrary to good faith frustrated and defeated; in consequence of which we found ourselves obliged, for vindicating the honour of our crown, and for procuring reparation and satisfaction for our injured subjects, to order that general reprisals should be granted against the said King of Spain, his vassals and subjects, their ships, goods and effects: And whereas the Court of Spain has been induced to colour the open violation of the convention aforesaid by reasons and pretensions void of all foundation, and published an order for the seizing the ships, goods and effects of our subjects, and caused seizures to be actually made of the goods and effects of our subjects residing in his dominions, and ordered our said subjects to depart the Spanish dominions within a short time limited, contrary to the express stipulations of treaties, even in case of war actually declared: We therefore relying on the help of Almighty God do declare war against the said King of Spain, &c.

Dated at Kensington 19 October 1739.

13 GEORGE II.

The King of Spain, in answer to the charge of depredation, breach of faith, &c. with which he had been charged by Great Britain, published a manifesto, and afterwards a declaration of war, wherein he endeavoured to retort the charge, and shew that Great Britain was the aggressor: he observes, that notwithstanding the South Sea company had refused to give him security for the sum of 68000 l. which was acknowledged to be due to him, he had given orders to Don THOMAS GERALDINO, his plenipotentiary at the British Court, to pay the whole sum of 95000 l. agreed on at the signing the convention; that as soon as the convention was ratified, he ordered his squadron to be disarmed, and sent his orders to Florida for a cessation of hostilities, and that all things should remain in their present state, as had been stipulated by the convention: whereas England had acted a contrary part, had recalled admiral HADDOCK's squadron from Port Mahon, and stationed them at Gibraltar in the middle of the Spanish coasts, and had neglected to send orders to Carolina for the cessation of hostilities, and putting a stop to the fortifications on that side: That the British King supported the transactions of the South Sea company; whereas before the convention they were regarded only as a contract made with a private person.

That these proceedings occasioned his notifying to Mr. KEENE, the British Plenipotentiary, how much the continuance of admiral HADDOCK's squadron at Gibraltar would hinder the effect of the convention; notwithstanding which, orders

CHAP.  
XVIII.

were given to admiral HADDOCK to cruise between the Capes of St. Vincent and St. Mary, to surprise the *Aslogues* ships, and that orders were given for making reprisals in a most indecent stile, which had been put in execution in several places; and that his patience being thus provoked, he had determined to make reprisals also, by seizing the goods and effects of the British King and his subjects in the dominions of Spain. Signed,

I the King.

*The King of Spain's reasons for not paying the 95000*l.* stipulated by the convention.*

The King of Spain's reasons for not paying the 95000*l.* The convention is a contract where the engagements are reciprocal, consequently, when either party fails in the execution of them the other is thereby disengaged; from whence it follows, that the British court having first failed and contravened most of the articles, gave room to Spain to refuse executing her part.

The keeping a squadron on the coast of Spain. 1. That the court of Great Britain having given orders to the English Squadron to quit the coast of Spain, and afterwards countermanded those orders, Spain suspected that the clamours of the populace, and the party opposite to the British ministry, had prevailed with the court to recede from its engagements: for the keeping a squadron in the center of the coasts of Spain, could be designed for no other purpose than to interrupt the trade, and could be looked upon in no other light than a continual hostility.

The sending forces to America. 2. That the court of Great Britain sent no orders to Carolina to discontinue the new fortifications there, as was stipulated by the convention, and that three men of war were sent on frivolous pretensions to reinforce the English Squadron at Jamaica, besides troops and warlike stores.

The South Sea company not paying 68000*l.* 3. The third contravention was founded on that agreement, that his Catholick Majesty should have the entire right of suspending the *Asiento* of negroes in case the company did not submit to pay within a short time the 68000*l.* which was confessed to be due, the English Plenipotentiary having insisted that the effects taken in the Indies from the South Sea company by way of reprisals in 1718 and 1727, should be restored before the 68000*l.* was paid, which was the balance of a settled account, and would put it upon an equal foot with a sum not stated or settled, and which was agreed by the second separate article to be debated in separate negotiations.

The King of Spain denied the liberty of suspending the *Asiento*. 4. The English Plenipotentiaries would have it declared, that the King of Spain had no power to suspend the *Asiento* contract, as being a national treaty; whereas the contrary was expressly specified in the abovesaid declaration, on the validity of which depended the validity of the convention; and yet every body must be sensible that the English Ministry, instead of obliging the company to pay the King the 68000*l.* were seeking to elude the payment of it, thereby undermining the very foundation on which the convention was built.

The restitution of a ship insisted on. 5. The English had insisted on the restitution of a ship taken since the convention was signed, though all matters subsequent to the convention were left to the discussion of the Plenipotentiaries.

The delay of sending instructions to the Plenipotentiaries. 6. The English Plenipotentiaries were not furnished with instructions within eight months, which should have been sent within six.

The insisting on a free navigation. 7. That the English Plenipotentiaries insisted on a liberty of navigation in all the American seas, which was a direct infraction of the first

article of the convention, wherein it is stipulated, that the respective pretensions of the two crowns, with regard to trade and navigation in America, should be settled in the conferences according to the treaties therein specified: that England has no right of free navigation but to and from its own colonies, for it is declared by the eighth article of the treaty of Utrecht, Anno 1713, that the navigation of the English in America shall continue on the same foot that it was in the reign of CHARLES II, and during that reign all strangers by the fundamental laws of the kingdom were excluded, from trading with, or entering into the Spanish West Indies; and by the same article Queen ANNE obliged herself not only to observe, but to guarantee those fundamental laws; the Queen also obliged herself to guarantee the limits as they stood at that time, and where any encroachments had been made to restore and settle them upon the ancient footing: In former treaties with every nation all that had been stipulated was a free navigation to their colonies, and not to all the other seas that were within the King of Spain's jurisdiction, distinguished by the character of the Spanish Indies, whereunto all entrance and trade are prohibited, foreign nations having no colonies that require passing near those seas; and the claiming a right of free navigation to or near them, can be with no other view than to increase the illicit unwarrantable trade which the English have for a long time, and do still carry on, a trade that is already become so considerable as to yield annually several millions, as they themselves confess; a trade prejudicial to that of other nations, and greatly hurtful and injurious to his Catholick Majesty's revenues and government.

And why should the English be surprised at this demand, when they, even in the midst of Europe, assume to themselves the supreme dominion of the ocean, though it be common to all sovereigns whose dominions it washes? there they insist that all nations shall strike to their colours, and attribute to themselves the sole right of fishing in them, making other nations pay for the liberty of fishing there: how can they, who form such groundless pretensions in the seas of Europe, exclaim against the Spaniards, who possess all the coasts in those seas in America for taking just precautions against a smuggling and unlawful trade, carried on in the Spanish dominions?

In the 15th article of the treaty of 1670, it is said, *That each of the contracting parties shall have and retain the lordship of the seas, straits and fresh waters in America, which belong to them*; consequently all the seas are not free, there are some which the sovereigns ought to enjoy exclusively of all others; concluding that the only view England has is to maintain by her arms the unjust usurpation of the territories she has invaded (in Florida) in breach of the treaty of Utrecht, and to maintain herself in the clandestine trade she carries on to the prejudice of the lawful trade of the allies of Spain: whereas that crown has no other views than to defend its honour, and maintain the interest of its dominions, and those of its allies, by strictly observing treaties: offending or insulting no nation, but seeing with concern the blow given to the publick repose by England's breach of the peace.

A declaration of war succeeded this manifesto dated 28th November 1739; wherein the King

CHAP.  
XVIII.

The King of Spain's declaration of war.

CHAP.  
XVIII.

of Spain does not only authorize his subjects to commit all manner of hostilities against the King of Great Britain and his subjects, but orders their effects in his dominions to be seized, and commands all the natives of Britain to remove out of his territories immediately.

And to distress Great Britain the more, he ordered, that all goods and manufactures whatever of that nation should be seized and confiscated, though imported by his own subjects, or any neutral nation.

Another  
manifesto  
of the King  
of Spain.

The King of Spain's declaration of war was attended with another manifesto, wherein he re-criminates and charges the subjects of Britain with several acts of depredation and cruelty committed in America, particularly that in the year 1716 and 1717 the captains CUTHBERT and ARCHER, commanders of the ships Pompey and Fortune, being authorized by the British King, went to the coast of Florida in search of the wreck of some Spanish Galeons which were lost there, and joining with other Englishmen from Jamaica, drove away the Spaniards, who were endeavouring to save those effects, and landing six hundred men afterwards, killed thirty Spaniards, of one hundred and twenty that were left there, to guard the treasure they had already recovered out of the sea, and robbed them of four hundred thousand pieces of eight [4 s. 6 d.] and in their return to Jamaica the English took two Spanish vessels laden with cacao, cochineal and treasure, amounting to the value of thirty thousand pieces of eight.

That in the year 1722 the English took a ship of Porto Rico, which had a commission from the governor of that island, and carried her to Jamaica, and without pretending any other crime than that he was a guarda costa, hanged up forty three of the ship's crew, alledging for a pretence, that the governor of Porto Rico was as bad as the guarda costa.

That an English captain, who was used to carry on a clandestine trade on the coasts of Spanish America, having enticed on board his ship two Spanish gentlemen of distinction, imagining he should get more by making them prisoners than by trade, in order to force them to ransom themselves, left them without nourishment; and when he found he was not like to obtain his ends by starving them, he cut off the ears and nose of one of them, and holding a dagger to his breast, forced him to eat them.

That before the war was declared in 1727, an Englishman belonging to one of the Assiento ships at the Havanna, incited the negroes there to make an insurrection, plunder the place, and massacre the inhabitants. That the English had taken several Spaniards prisoners, and sold them for slaves in distant countries, where it was difficult to relieve or redeem them: that in the year 1725 they were so infatuated as to carry eight of these unhappy wretches to Madeira, where the Spanish consul giving notice of their misfortunes, the Spanish ambassador at Lisbon solicited their discharge.

If such instances of cruelty and injustice could be alledged by the English, then might they justify their declaration of war; but the prizes that were taken from them that carried on an unlawful trade, which the English themselves confessed, acknowledging that the gain of it amounted to six millions per ann. and the repelling by force those that endeavoured to protect such fraudulent attempts, could never justify the clamours that had

been raised: England her self ought rather to have put a stop to these enterprizes, as she was obliged by the seventh article of the treaty of Utrecht to guarantee the fundamental laws of Spain, which prohibited foreigners to enter and trade in the seas and territories of Spanish America. Are the Spaniards by any treaty obliged to leave their coasts defenceless, and suffer such swarms of English ships to enter their harbours, and carry off the produce of their mines without opposition? Have the Spaniards ever insulted the British colonies, or robbed them of their produce and effects? Wherever the guarda costas have taken any British ships, they have been restored; if full proof has not been made of their carrying on a clandestine trade with the Spanish dominions; from whence it follows, that the hostilities in America have been occasioned by the licentious enterprizes of the English, and not from any offence given by the Spaniards.

As to that complaint in the British declaration of war, the laying high duties upon British merchandise, the English and all other nations practise the like, therefore this can be no just pretence for the English to declare war.

That as to the infringement of treaties, so much complained of by the English, they themselves have been most guilty in this respect, for they obliged themselves by the 15th article of the treaty of Utrecht, to suffer the Biscayners and other subjects of Spain to fish for cod at Newfoundland; and by the second article of the treaty of 1721, they promised to give orders accordingly; but the Spaniards have been deprived of that fishery, which so justly belongs to them ever since: also by the 10th article of the treaty of Utrecht, England obliged herself not to grant refuge to any armed Moorish vessels in Gibraltar, which have notwithstanding been protected there; and though by the same article that place was yielded to England without any territorial jurisdiction, or communication with the adjacent country, they have pretended that the territory as far as their guns can reach ought to be comprehended; and though it was agreed in the year 1728 to abandon the disputed places on both sides, the English have since possessed themselves thereof; but this is not the only false proceeding in respect to this place: the late King of England, GEORGE I. by a letter dated 4<sup>th</sup> of June 1721, offered the King of Spain the restitution thereof, the translation of which letter follows,

"Sir and Brother,

"I have heard with extreme satisfaction, by the means of my ambassador at your court, that your Majesty is come to the resolution at last to remove the obstacles which for some time have delayed the entire establishment of our friendship; and since by the confidence which your Majesty declares you have in me, I can depend upon the treaties which have been disputed between us, as being now re-established, and that consequently the necessary instruments for the trade of my subjects have been settled, I shall no longer delay assuring your Majesty of my readiness to give satisfaction as to what concerns the restitution of Gibraltar, giving you my promise, that I will make use of the first favourable opportunity to regulate this article in concert with my parliament."

That the eighth article of the treaty of Utrecht has also been eluded concerning the limits in America,

CHAP.  
XVIII.

America, which were agreed to be settled by the governors of Florida and Carolina in the year 1721 and 1724; but when the governor of Florida sent an officer and twenty-five men to Carolina with a copy of that agreement, they were stripped of their arms and forced to endure a most rigorous imprisonment: that in the year 1735 Don THOMAS GERALDINO, the Spanish Minister at London, was assured that Mr. OGLETHORPE had orders to settle the limits; but on the contrary he carried over an order to people those places which were uninhabited, and proceeded to commit several hostile acts, marched up within sight of Fort St. Augustine, the British King having taken upon him to dispose of all the lands in Georgia that were not before occupied by the English, which was directly opposite to the seventh article of the treaty of 1670, which excludes them from all that they did not at that time possess.

Nor was their right to cut logwood better founded, being supported by force, not by reason, to that excess as to ruin the unfortunate people of Baculler in three several sieges, because they defended the King of Spain's rights, and proved an obstacle to those attempts.

The manifesto concludes, that the King of Spain had ordered reprisals, because they were before ordered by England; and that Spain had declared war, because England had declared war before; so that the King of Spain was no way answerable for the blood and devastations which the fury of war occasioned, though he did not doubt but the King of England had been driven into these measures by the unreasonable clamours of his subjects.

The justice of the war examined.

Before I proceed to relate the progress of the war, it may be proper to examine the justice of it; for as one side is always in the wrong, it very often happens, that neither have much right to boast of. In the present case the Spaniards charge the subjects of Britain with carrying on an unlawful clandestine trade with their American colonies, and Britain complains her ships are taken and plundered, that never were concerned in any such trade: the Spaniards again complain, that the subjects of Britain invade their country, cut logwood in the bays of Campeachy and Honduras, and maintain their usurpations there by force of arms: the subjects of Britain insist, that the countries where they cut logwood are not inhabited or cultivated by the Spaniards, or any other people, and consequently they have a right to enjoy the fruits of their labours; that the Spaniards are guilty of great injustice therefore, when they seize or destroy those ships that are laden with logwood: that the English do carry on a clandestine trade with the Spanish West-Indies, and have done so these hundred years, must be admitted; but then it must be acknowledged, that the crown of England never *authorized* its subjects to carry on such a trade, but on the contrary have several times strictly prohibited it, and I do not remember an instance of the British government's protecting any British ships that have been taken in the fact.

The Spaniards, it is true, find it impossible to cover a coast of so many thousand miles extent from being visited by foreigners, and the English, Dutch and French do and will trade with their American subjects, as long as there is something to be got by it, whatever hazards they run, especially since the subjects of Spain in America, even their Governors and Magistrates, are as ready to receive

the goods that are brought them in this clandestine way, as foreigners are to receive their money (for such goods are generally paid for in pieces of eight) and possibly Great Britain gains as much treasure by this traffick as by any branch of trade, which is the principal reason, probably, that the government of England sometimes connives at it, if they do not protect it: for if the laws of England made it as criminal to carry on a clandestine trade with the Spanish West-Indies, as it is to run goods and carry on a smuggling trade in Europe, this would very much restrain that practice, at least it might satisfy the Spaniards, and induce them to relinquish their pretended right of visiting our ships in their voyages to and from our plantations. I doubt therefore Great Britain is in the wrong in not laying more effectual restraints on that smuggling trade, their subjects carry on with the Spanish West-Indies; and the Spaniards are no less in the wrong in visiting and searching the ships of Great Britain on the high seas, sailing to and from their own plantations: it is true it would be very hard upon the English if the French and Dutch should be suffered to carry on this illicit trade in the West-Indies (as they certainly do) while the English are excluded from it, and therefore it is presumed that both the French and Dutch will be excluded from it as well as the English in the next treaty of peace.

But though this clandestine practice of running in goods upon the Spaniards in their American plantations might be restrained by the respective powers whose subjects carry it on, and though this would satisfy the Spaniards and induce them to relinquish their pretensions of visiting the ships of foreigners in their voyages to and from their respective colonies; there still remains a very perplexed affair to be adjusted, which I despair almost of ever seeing regulated to the satisfaction of both parties, whatever terms either of them may by force be obliged to submit to, to avoid greater evils, and that is the right of cutting logwood and making settlements on the continent or islands of America, not in the possession of the Spaniards, either in such countries as they have never possessed, or have forsaken for richer settlements.

The Spaniards on their first discovery of America did imagine that they were intitled to that entire continent, with the seas and islands bordering upon it; and that all other nations were excluded from settling in any part of America, or trading with the natives; and accordingly they destroyed or made prizes of all ships they met with in those seas for many years, put to death or made slaves of the subjects of all nations that navigated such vessels, and robbed and plundered them of their goods as long as they durst; that is as long as they were superior to other powers at sea.

But when the English, French and Dutch began to encrease their naval force, and to extend their traffick, they made bold to visit the American coasts, sent colonies thither, and trafficked with the natives without asking the Spaniards leave; and where they met with opposition, repelled force by force, till the respective powers entered into treaties, whereby it was mutually agreed, that each should enjoy what they were possessed of, with freedom of navigation, to and from their respective colonies: but still the English, French and Dutch pretended to plant such countries as were not occupied, or had been abandoned by the Spaniards, particularly the English extended their territories in Florida and Canada, to

CHAP.  
XVIII.

CHAP.  
XVIII.

which they gave the name of Carolina, New England, &c. The French possessed other parts of it, to which they gave the names of New France and Louisiane; and the Dutch New Netherlands and Surinam. These nations also planted several of the Caribbee Islands, and the French settled on the northside of Hispaniola, which had been abandoned by the Spaniards; and the English finding the bay of Campeachy and Honduras, where the logwood grows, unoccupied by any, settled there, and annually cut great quantities of logwood; upon this the Spaniards revived their pretensions of being proprietors of all America, whether used or cultivated by them or not, except such parts of it as were in the possession of other nations when the former treaties were concluded; they insisted that no European nations had a right to enlarge their plantations in America, or extend their commerce in the new world but themselves, and thereupon attacked our logwood cutters and drove them from the bay of Campeachy;—took their ships and effects, and murdered the people on board frequently; whereupon the British logwood cutters removed to the bay of Honduras, and fixed themselves in a part of the country almost inaccessible, where they defy all the power of Spain to expel them; but the Spanish guarda costa's frequently meet with their ships laden with logwood at sea, make prizes of them or sink them. We are endeavouring also to make settlements among the Mosqueta Indians, and in other places not under the dominion of the Spaniards, apprehending we have a right to plant any countries not subject to the Spaniards; and if they rob and murder our people engaged in such enterprizes, the English have all the reason in the world to demand satisfaction for such outrages, and may very justly enter into a war for the security and protection of their settlements and traffick; and I cannot see how this quarrel can ever be ended if the Spaniards insist on a right of destroying our settlements, and of plundering and murdering our people, who are employed in planting colonies in lands that are unoccupied and uninhabited by them.

No private man, or body of men or nation, whose subjects shall discover a country of a vast extent, such as America is (perhaps eight or ten thousand miles in length) can by virtue of such discovery and planting a small part of it, entitle themselves to the whole, so as to exclude all other nations from it; they can entitle themselves to no more than they can use, admitting there were no inhabitants; but when there are, as the case was in America, and many nations remain unsubdued by the Spaniards to this day, surely any other nation is at liberty to traffick with such independent Indians, make alliances, and purchase lands of them, and erect towns and fortresses on such lands for their security, the Indians being the only true proprietors of the soil; the Spaniards are but invaders and usurpers wherever they have settled, and have no other right than what they gained by the destruction and extirpation of the natives.

It is true, as there have been several treaties between the crowns of Great Britain and Spain, wherein it hath been stipulated not to disturb or molest each other in such acquisitions as either party was possessed of in America at the conclusion of such treaties, so far each party has limited their pretensions, and ought not to break through those agreements; but this cannot affect their

VOL. II.

making acquisitions in any other parts of the country, not then possessed by either party, or since abandoned by either: and this seems to have been the opinion of the Spaniards themselves, or they would never have suffered the French to have seized on the north side of Hispaniola, or on the best part of Florida, to which they have given the names of Louisiane and New France, when the Spaniards had not totally abandoned either, but still remain possessed of some part of these countries, particularly of the capital city and district of Domingo in Hispaniola, and of St. Augustin in Florida. If it be lawful for the French to take possession of these places, which the Spaniards have abandoned for better, or were not able to occupy, it is surely as lawful for the English to plant and occupy other parts of America not used or possessed by Spain, with the consent, and indeed by the invitation of the natives, who desire our people to protect them against the invasions and usurpations of the Spaniards, whose avarice and ambition know no bounds.

Had Great Britain therefore offered to restrain that clandestine smuggling trade her subjects carry on in the Spanish West-Indies, the war must have appeared just on her part; for as to the cutting of logwood in places unpossessed by the Spaniards, or making settlements either upon the continent or islands unsubdued or deserted by them, this could give them no pretence to quarrel with us, any more than our destroying the Spanish fleet on the coast of Sicily in the year 1718; for how imprudent soever it was to enter into a war with Spain at that time, as we had engaged to defend Sicily, and guaranteed it to the Duke of Savoy, whom we had advanced to that throne, the defeating a fleet which assisted in the invasion of Sicily was but in pursuance of engagements the Spaniards were apprised we had entered into; but admitting that enterprize was unwarrantable, we had made them ample amends for their losses; we paid them for every ship we destroyed or took, and still they made a further demand on us for the damage done, which Great Britain agreed to satisfy by the late treaty of convention; add to this that England convoyed Don CARLOS to Italy, and gave him an opportunity of mounting the throne of the two Sicilies and of driving the Imperialists out of Italy almost, which was surely more than an equivalent for what the Spanish fleet suffered in the year 1718.

The infractions of the Assiento contract, the many seizures of the South-Sea company's effects, and the frequent interruption of their trade, by which they lost the value of some millions, was certainly a just cause for our declaring war against Spain, especially when that Court insisted on being paid 68000 l. by that company, as the foundation of the treaty of convention, whether there was in reality so great a sum due from Spain to the company.

There remains another article to be enquired into, mentioned in the King of Spain's manifesto, and that is the not restoring Gibraltar as had been promised by King GEORGE I. and it does indeed appear that the late King GEORGE had in a manner agreed to deliver up Gibraltar in order to preserve a good correspondence with Spain, by his letter abovementioned, believing that the nation would not have opposed it; but he plainly intimates in that letter, that he would have the concurrence of the British parliament before he made an absolute cession of it: and therefore when he found the British parliament averse to the parting with Gibraltar,

17 Z

baltar,

CHAP.  
XVIII.

CHAP.  
XVIII.

braltar, he seems to have been at full liberty to alter his mind, and the not restoring it therefore could not give the Spaniards any just occasion to quarrel with us; it is true the King of England by his prerogative may make peace or war, and consequently may limit the terms on which it shall be concluded, without consulting his parliament; but this no wise Prince will do, where any of the British territories are to be yielded up to any foreign power as a condition of such a peace.

There is a most barbarous fact mentioned in the King of Spain's manifesto, said to have been committed by the subjects of Great Britain, which I was amazed at when I read it, and that is the cutting off a Spanish gentleman's nose and ears, they had enticed on board their ship, and compelling him to eat them; but upon enquiring into that matter, I find the people charged with this barbarity were pirates of all nations, whose cruelty ought no more to be ascribed to the English than to any other people.

And as to that instance of fishing up a wreck upon the coast of Florida, attacking and killing several Spaniards who guarded part of the treasure on shore that had been recovered, and afterwards plundering some Spanish ships in their passage to Jamaica in the years 1716 and 1717, the English concerned in these outrages were proclaimed pirates by the court of England, and ordered to be prosecuted as such, for having exceeded their commission, and their estates were confiscated to make the Spaniards satisfaction; so far were they from being authorised to commit such outrages by the British government: and after all it appears, that the Spaniards attacked the English, and not the English the Spaniards, both on shore and at sea, which very much alters the case.

Thus having enquired into the justice of the war, I proceed to observe the progress of it.

The Spaniards having for several years insisted on their right to oppose the British subjects cutting of logwood in the bay of Honduras, and having taken or destroyed many British ships and sloops in that bay as intimated already; in the month of April 1739 one of their guarda costas took in that bay a ship belonging to Boston in New England, commanded by captain COBB; and also a sloop of Bermudas, commanded by captain BURGESS. At the same time they took a sloop belonging to New England, commanded by captain COLLIS, with two of the owners, Mr. JOSEPH WILLIAMS, and Mr. WILLIAM BARBOUR on board; and what was most cruel and provoking, they murdered the captain and the two owners in cold blood, after they had taken the sloop.

About the same time, or rather in the month of March preceding, they published a proclamation at St. Augustine, giving freedom to all white servants and Negro or Indian slaves, belonging to Carolina, Purisburg or Georgia, that would go over to them, and allotted them a piece of land near that fort to settle and make plantations, which was a method of proceeding never practised by any nation in the world that pretended to be in peace and friendship with another. But this they did not satisfy themselves with, for in the month of June, a number of them came and attacked the house of captain MACPHERSON, on the confines of Georgia next to St. Augustine, where they killed some of the servants, and would probably have murdered the captain and his whole family; but the neighbourhood being alarmed, and coming to his assistance the assassins took to their heels,

as soon as they found they were like to meet with an enemy equal to them in number.

These and many such like practices made the people in all our plantations long for a war with the Spaniards, and therefore the orders for reprisals were received in every place with great joy. I have before given an account that these orders were dated the 15th of June, and dispatched to the West Indies by the Shoreham man of war, which sailed from the Downs the 19th of the same month. Upon the 5th of August she arrived at Jamaica, having in her passage thither touched at the Leeward islands, and sent the orders for reprisals to the Governor of those islands, and to the Governor of Barbadoes.

These orders were published at every place as soon as they arrived, and as soon as commodore BROWNE received them at Jamaica, he prepared for putting to sea with five of the men of war under his command. Accordingly he set sail on the 14th, and having approached very near some of the forts at the Havanna, they fired upon him, which compliment he returned, but neither did any harm to the other. He then made a cruise through the gulph of Mexico towards Porto Bello, and returned to Jamaica, without making an attempt upon any of the Spanish settlements at land, supposing himself not warranted, it is presumed, by his orders to do so. Soon after he sailed from Jamaica, he sent the Sheerness man of war, captain STAPLETON to Carthage, to observe the situation of the Spanish fleet at that place, who approaching very near to the mouth of that harbour, and making an appearance like a merchant ship with French colours, DON BLASS, the Spanish admiral there, sent his lieutenant and pinnace out to conduct him into the harbour; but as soon as he came on board, he and the boat's crew were made prisoners, and afterwards carried into Jamaica. By the immediate publication of the orders for reprisals, and by these warlike appearances, the Spaniards, at all their settlements in that part of the world, were made sensible of the rupture between the two nations.

On the 29th of September admiral VERNON, with the ships under his command, arrived at Antigua, and on the 23d of October at Jamaica, where he took upon himself the command of all his Majesty's ships in those parts, and having heard at Antigua, that there were several rich Spanish ships at La Guara, a port and little town upon the Caracca coast, he in his passage to Jamaica, dispatched captain WATERHOUSE with three men of war, to endeavour to take that place, and bring the ships off. Accordingly they sailed thither, and discovered that there were seventeen sail of ships in the harbour, which was defended by three forts. They steered up almost close to the forts, and battered them and the town for a considerable time, by which means they beat down a great part of their fortifications, churches, and houses, and would have landed, in order to have attacked the forts sword in hand, which most of the lieutenants and sailors were extremely eager for doing; but as one of the ships was pretty much damaged by the fire from the forts, and as the wind began to blow very hard, the Commodore thought it too dangerous an undertaking, and therefore would not allow his brave sailors to expose themselves to so much danger; so that after having done a great deal of damage to the forts and town, they were obliged to leave the place and return to Jamaica.

The

Three English gentlemen cruelly murdered by the Spaniards at Honduras.

They encourage the Carolina negroes to desert.

Admiral VERNON arrives and sends three ships against La Guara.

Orders for reprisals arrive in the West-Indies.

Commodore BROWNE's expedition

CHAP.  
XVIII.Account  
of the tak-  
ing of  
Porto  
Bello.

The next expedition was conducted by Vice-admiral VERNON himself, who sailed from Jamaica on the fifth of November, with his Majesty's ships the *Burford*, *Hampton-Court*, *Princess Louisa*, *Worcester*, *Strafford*, *Norwich*, and *Sheerness*, the last of which he ordered to cruise off Carthagena. On the 20th of November in the evening he came in sight of Porto Bello, having been delayed in his passage by contrary winds. There being but little wind that evening, though a very great swell, he anchored for that night six leagues off the shore, being apprehensive of driving to the eastward of the harbour.

On the 21st in the morning, the Admiral plied to windward in line of battle, having given the proper orders for the attack; but the wind proving easterly, he was obliged to confine his attack to the Iron fort only, close to which the Squadron was piloted by captain RENTONE.

Commodore BROWNE, in the *Hampton-Court*, who led the attack, executed his part as became an officer of experience and resolution; and being well followed by captain HERBERT in the *Norwich*, and captain MAYNE in the *Worcester*, the admiral perceived that some of the Spaniards fled from several parts of the fort; upon which he made the signal for the boats in which the soldiers were, to make the best of their way in order to their landing, whilst he was coming up to the fort to batter it. The Admiral luffing up as near to the fort as he could, the fire of his small arms commanded the enemy's lower batteries, and had a good effect in driving them from those batteries, from which they could do most harm; and by this means the men were also secured at landing: and this (as the enemy afterwards confessed) was the principal occasion of their deserting the lower batteries, the small shot from the former ships not having reached them, though their cannon had beat down some of the upper part of the fort. As the boats came near the Admiral's ship, he called to them to go directly on shore under the walls of the fort, though there was no breach made; but this answered as was expected, by throwing the enemy into a general consternation, the officers and men who had stood to the lower battery flying to the upper part of the fort, where they held up a white signal for capitulating. The Admiral answered with a white flag, but it was some time before he could stop his own men, and those on board the *Strafford*, captain TREVOR, which followed him, from firing.

In the mean time the seamen had climbed up to the walls of the lower battery, and struck the colours, and then drew the soldiers up after them, to whom the Spaniards, who had retired to the upper part of the fort, soon after surrendered at discretion. Their number was only five officers, and 35 men, out of about 300, the rest being either killed or wounded, or having made their escape.

The ships that went before the Admiral were fallen to leeward, so as to be out of sight of the Gloria castle; but the Admiral's ship lying open to the said castle, they kept firing one of their longest guns at him till night, but not being within point blank, their shot either fell short, or went over him; only one shot went through the head of his foretopmast, just above the rigging, so that it did no harm.

The Admiral finding they continued their firing, tried some of his lower tier at them; which being new guns, answered beyond expectation,

carrying over the Gloria castle into the town; none of the shot falling short, and one of them going through the governor's house, and some through other houses in the town.

This successful beginning was attended with a very inconsiderable loss, there being only three men killed and five wounded on board the Admiral's ship; the like number were killed and wounded on board the *Worcester*, and one man had both his legs shot off on board the *Hampton Court*. The other ships had none killed or wounded, and only two soldiers were shot going ashore, one of which died soon after of his wounds.

The next morning being the 22d, the Admiral went on board Commodore BROWNE, to call the captains to consult together, and give out the necessary orders for warping the ships up the next night, in order to attack the Gloria castle the night following, as it would not have been practicable to attempt in the day time: but in this he was prevented, by the enemy's putting up a white flag at the Gloria castle, and sending a boat with a flag of truce to the Admiral, with the Governor's adjutant, and a lieutenant of a man of war, who brought the conditions signed on which they desired to capitulate. In answer to which the Admiral immediately drew up the terms on which he would admit them to capitulation, and dispatched them back again, allowing them only a few hours to take their resolution; and within the time limited they accepted the conditions offered them. And before night, on Thursday the said 22d of November, the Admiral sent captain NEWTON, who commanded the detachment of soldiers from Jamaica, with about 120 of the said soldiers, who took immediate possession of Gloria castle and St. Jeronimo fort, being the remaining fortresses that guarded the harbour of Porto Bello, the Gloria castle lying just below the town, and St. Jeronimo fort just above it.

Articles of capitulation granted by EDWARD VERNON, Esq; Vice-admiral of the Blue, and commander in chief of his Majesty's ships and vessels in the West Indies, and Commodore BROWNE to Don FRANCISCO MARTINES DE RETEZ, governor of Porto Bello, and Don FRANCISCO DE ABAROA commandant of the guarda costas at the same place, the 22d of November 1739, O. S.

Article 1. That the garison be allowed to march out as desired, upon condition the King of Great Britain's troops be put into possession of the Glory castle before four o'clock this evening, and the garison to march out by ten o'clock to morrow morning.

That the inhabitants may either remove or remain, under a promise of security for themselves and their effects.

2. That the Spanish soldiers may have a guard if they think it necessary.

3. That they may carry off two canons mounted, with ten charges of powder for each, and their match lighted.

4. The gates of the Glory castle must absolutely be in possession of the King our master's troops by four o'clock, and the Spanish garison shall remain in all safety for their persons and effects, till the appointed time for their marching out, and to carry with them the provisions and ammunition necessary for their safety.

5. That

5. That the ships, with their apparel and arms, be absolutely delivered up to the use of his Britannic Majesty, but that all the officers, soldiers, and crew, shall have three days allowed them to retire with all their personal effects, only one officer being admitted on board each ship and vessel, to take possession for the King our master, and to see this article strictly complied with.

6. That provided the articles abovementioned are strictly complied with, and that possession be given of the castle of St. Jeronimo, in the same manner as is stipulated for the castle Gloria, then the clergy, the churches, and town, shall be protected and preserved in all their immunities and properties.

And that all prisoners already taken shall be set at liberty before our leaving the port.

Given under our hands on board his Majesty's ship Burford, in Porto Bello harbour, this 22d day of November, 1739, O. S.

EDWARD VERNON.  
CHARLES BROWNE.

There were in the harbour two Spanish men of war of twenty guns each, and a snow; the crews of which ships seeing the regular and bold attack which was made on the Iron fort, and despairing of being able to defend themselves, fell to plundering the town in the night on the 21st, and committed great outrages on the inhabitants.

The Admiral took on board his ships from the several fortresses, forty pieces of brass cannon, and ten brass field pieces, four brass mortars, and eighteen brass patereroes; and rendered unserviceable above eighty iron cannon, by knocking off the trunnions, and spiking them up: he also took on board all their shot and ammunition, except 122 barrels of their powder, which he expended in springing mines, by which all the fortifications of the forts were blown up, and entirely demolished, and the harbour left open and defenceless.

Ten thousand dollars that were arrived and designed for paying the King of Spain's troops at Porto Bello, falling into the Admiral's hands, he distributed them among his Majesty's forces for their encouragement.

The Admiral was joined at Porto Bello on the 27th of November, by his Majesty's ship the Diamond, captain KNOWLES, and on the 29th by the Windsor, captain BERKELEY, and the Anglesea captain REDDISH: he having left orders at the Leeward islands for the said ships to follow him.

The principal engineer in the mining work was, captain KNOWLES of the Diamond, assisted by captain BOSEAWEN (who desired he might serve in this expedition as a volunteer, his ship the Shoreham not being fit for the sea) and by Mr. BARNES, purser of the Worcester, who having been an officer in the army was very useful on this occasion. Commodore BROWNE had the chief direction of what was necessary to be done at Gloria castle and St. Jeronimo fort; and captain WATSON, captain of the Admiral's ship, took care of the execution of all that was to be done at the Iron fort, which was built on a rock; the walls of the lower battery which consisted of twenty two guns, were nine foot thick, and of a hard stone, cemented with such a fine mortar, that it was a long work to make any impression in it to come to mine at all.

The lower battery at Gloria castle consisted of two regular bastions, and a curtain between them, mounted with twenty two guns, besides a line of

eight guns, that pointed to the mouth of the harbour; and all the other guns they had on the moorish part of both castles, besides their battery on St. Jeronimo, rendered the entrance of the harbour very difficult and dangerous.

In consideration of the services performed by captain RENTONE (who acted as a pilot in this expedition) the Admiral thought fit to appoint him commander of the Spanish snow taken in the harbour of Porto Bello; and to send his dispatches by him to England in the said snow; and the two twenty gun ships, which were Spanish guarda costas, were by the Admiral's order fitted up, and taken along with him.

On the 6th of December the Admiral was joined at Porto Bello by his Majesty's ship the Sheerness, captain STAPLETON, which he sent to cruise off Carthagena, and which had taken two vessels, with supplies of ammunition, store and provisions that were going to Carthagena. On the 17th in the evening captain STAPLETON having taken in water, was sent by the Admiral to cruise on his former station.

During the Admiral's stay at Porto Bello, he sent a letter to the president of Panama, demanding the release of the factors and servants of the South-Sea Company, who were confined at that place, in consequence of which, the president of Panama sent an officer with Mr. HUMPHREYS, and doctor WRIGHT, factors, and also with the servants of the South-Sea Company, who were delivered to the Admiral at Porto Bello.

The governor and inhabitants of Porto Bello expressed the greatest sense of the humanity and generosity with which they were treated by the Admiral, and his Majesty's squadron under his command.

On the 13th of December, Vice-Admiral VERNON, with the squadron, sailed from Porto Bello for Jamaica; and being off Carthagena, on the 28th of December, sent away captain RENTONE in the Spanish snow for England.

To this I shall add, that among those who surrendered, and met with such generous treatment at this place, there was the very man, who some years ago cut off captain JENKINS's ear, and otherwise most inhumanly used him. The fellow had made himself rich by the depredations he had for so many years been suffered to make upon the subjects of Great Britain, and was therefore become a chief man, and one of the governor's counsellors at Porto Bello; which if our Admiral had known, he would certainly have excepted one man at least out of the capitulation; and probably if the fellow had thought that a discovery could be made who he was, he would not have trusted to the capitulation, but would have taken care to sheer off before the town was surrendered. But providence, it seems, took care to make him fully sensible of the honour and generosity of that nation which he had used so cruelly; for among our sailors who went ashore, there were some that knew him, who acquainting the Admiral with it, ordered the fellow to be brought to his presence, which we may believe raised not a few terrors in a guilty breast. The fellow appeared with all that confusion and horror which are the constant attendants of cruelty, when it finds itself discovered, and in danger of being brought to justice; but the Admiral only upbraided him in a manner proper for making him sensible of his inhumanity; and then told him, Sir, as I have given my honour that the persons of all those

Admiral  
Vernon's  
behaviour  
towards  
the fellow  
that cut  
off captain  
Jenkins's  
ear.

CHAP.  
XVIII.

who have surrendered shall be safe, you are secure for this time; but if I ever meet with you again, you must expect that treatment you justly deserve; for a generous enemy shall always meet with generous treatment from me; but such barbarity as you have been guilty of, I can never forget or forgive.

A treaty  
with the  
rebellious  
Negroes at  
Jamaica.

During the year 1739, a peace was concluded between the government of Jamaica and the rebellious Negroes; they had for many years possessed the mountainous part of that island, from whence they came down and plundered the neighbouring plantations; which has very much hindered the improvement and planting of that island. These renegadoes had formed themselves into a society under proper laws, some of which seemed to have been contrived with great policy and wisdom, so that they were become a distinct nation by themselves; and though various methods had been tried to extirpate them, yet what by the accession of new runaways, and what by the common means of generation, they seemed rather to increase than otherwise. In order to defend the country planters against these intestine enemies, and to assist in extirpating them if possible, eight independent companies had a few years before been established in that island; but as there are several parts of it very inaccessible, it was found that it would be a very difficult and expensive task to reduce them by force, and therefore his excellency EDWARD TRELAWNEY, Esq; the present governor of that island, who by the whole tenor of his government has shewn, that he has the good of his country, and of that island in particular, at heart, began to think of reducing them by fair means. For this purpose he took care to harass them with frequent attacks for some time before, in order to make them more fond of accepting terms; and then at the request of these Negroes, and with consent of the chief gentlemen of the island, a treaty was set on foot with the principal body of them, which was at last concluded, and is as follows, viz.

## J A M A I C A.

*Copy of the treaty made with captain CUDJOE, and the other rebellious Negroes, &c.*

*By order of EDWARD TRELAWNEY, Esq; governor of the said island.*

*At the camp near Trelawney, March 1. 1738-9.*

In the name of God, Amen.

Treaty  
with the  
rebellious  
Negroes.

Whereas captain CUDJOE, captain ACOMPONG, captain JOHNY, captain CUFFOE, and captain QUACOW, and several other Negroes their dependants and adherents, have been in a state of war and hostility for several years past, against our sovereign the King, and the inhabitants of this island; and whereas peace and friendship among mankind, and the preventing the effusion of blood is agreeable to God, consonant to reason, and desired by every good man. And whereas his Majesty, GEORGE the second, King of Great Britain, France and Ireland, and of Jamaica, Lord, &c. has by his letters patent, February the 24th, 1738. in the 12th year of his reign, granted full power and authority unto JOHN GUTTERY and FRANCIS SADER, Esqrs, to negotiate and finally conclude a treaty of peace and friendship with the aforesaid captain CUDJOE, the rest of his captains, adherents, and others his men; they mutually, sincerely, and amicably have agreed to the following articles.

VOL. II.

CHAP.  
XVIII.

1. That hostility shall cease on both sides for ever.

2. That the said captain CUDJOE, the rest of his captains, adherents, and men, shall be for ever hereafter in a state of freedom and liberty, excepting those who have been taken by or fled to them within two years last past, if such are willing to return to their said masters and owners, with full pardon and indemnity from their said masters or owners for what is past; provided always, that if they are not willing to return, they shall remain in subjection to captain CUDJOE, and in friendship with us according to the form and tenor of this treaty.

3. That they shall enjoy and possess for themselves and posterity for ever, all the lands situate and lying between Trelawney town and the cockpits, to the amount of 1500 acres, bearing north-west from the said Trelawney town.

4. That they shall have liberty to plant the said land with coffee, cacao, ginger, tobacco and cotton, and to breed cattle, hogs, goats, or any other stock, and dispose of the produce or increase of the said commodities to the inhabitants of this island; provided always, that when they bring the said commodities to market, they shall apply first to the custos, or any other magistrate of the respective parishes where they expose their goods to sale, for a license to vend the same.

5. That captain CUDJOE, and all the captains, adherents, and people now in subjection to him, shall all live together within the bounds of Trelawney town, and that they have liberty to hunt where they shall think fit, except within three miles of any settlement, Crawl, or Pen; provided always, that in case the hunters of captain CUDJOE, and those of other settlements meet, then the hogs to be equally divided between both parties.

6. That the said captain CUDJOE, and his successors do use their endeavours to take, kill, suppress, or destroy either by themselves, or jointly with any other number of men, commanded on that service by his excellency the governor, or commander in chief for the time being, all rebels wheresoever they be throughout this island, unless they submit to the same terms of accommodation granted to captain CUDJOE and his successors.

7. That in case this island be invaded by any foreign enemy, the said captain CUDJOE and his successors herein afternamed, or to be appointed, shall then upon notice given immediately repair to any place the governor for the time being shall appoint, in order to repel the said invaders with his or their utmost force, and to submit to the orders of the commander in chief on that occasion.

8. That if any white man shall do any manner of injury to captain CUDJOE, his successors, or any of his, or their people, they shall apply to any commanding officer or magistrate in the neighbourhood for justice; and in case captain CUDJOE, or any of his people shall do any injury to any white person, he shall submit himself, or deliver such offenders to justice.

9. That if any Negroes shall hereafter run away from their masters or owners, and fall into captain CUDJOE's hands, they shall immediately be sent back to the chief magistrates of the next parish, where they are taken, and those that bring them are to be satisfied for their trouble, as the legislature shall appoint.

18 A

10. That

CHAP.  
XVII.

10. That all Negroes taken since the raising of this party by captain CUDJOE's people shall immediately be returned.

11. That captain CUDJOE and his successors shall wait on his excellency, or the commanders in chief for the time being once every year if thereunto required.

12. That captain CUDJOE during his life, and the captains succeeding him, shall have full power to inflict any punishment they think proper for crimes committed by their men among themselves, death only excepted, in which case, if the captain thinks they deserve death, he shall be obliged to bring them before a justice of peace, who shall order proceedings on their trial equal to those of free Negroes.

13. That captain CUDJOE with his people shall cut, cleave, and keep open, large and convenient roads from Trelawney town to Westmoreland and St. James, and if possible to St. Elizabeth's.

14. That two white men, to be nominated by his excellency, or the commander in chief for the time being, shall constantly live and reside with captain CUDJOE and his successors, in order to maintain a friendly correspondence with the inhabitants of this island.

15. That captain CUDJOE, during his life, shall be chief commander in Trelawney town, after his decease the command to devolve on his brother ACOMPONG, and in case of his decease, on his next brother captain JOHNY, and failing him captain CUFFOE shall succeed, who is to be succeeded by captain QUACOW; and after all their demises, the governor or commander in chief for the time being shall appoint from that time whom he shall think fit for that command.

In testimony of the above presents, they hereunto set their hands and seals, the day and date abovementioned.

Besides this body of rebellious Blacks that were under the command of captain CUDJOE, there was another body under the command of another captain; but as it would not have been a very difficult matter to have destroyed them, with the help of captain CUDJOE's party, which they were obliged by the 6th article of this treaty to give, and the others being sensible of this, they fled for, and were received upon the same terms, being allowed another town to settle in, under the command of their proper chief; which was much better than to have brought them all under subjection to captain CUDJOE and his companions; for as they are now under different governments, they cannot so easily unite, in case a spirit of rebellion should again begin to spread among them: on the contrary it will probably raise an emulation between the two societies, which shall be the most obedient and faithful to the governor, and most useful to the white men of the island.

However, says my author, I must observe, that it will be very dangerous to allow them to continue and to increase and multiply as a distinct people from the rest of the island; and therefore all proper methods ought to be taken to induce them and their posterity to incorporate and mix with the rest, so as at last to become one and the same people. For this purpose a law should be made for naturalizing every black free man that shall become a Christian and marry a white woman, and every black free woman that shall become a Christian and marry a white man; which would in time remove those two marks of distinction, their religion, and complexion. Whatever notion some

people may have of Blacks, I must look upon them as a part of the human species, and therefore, if these two marks of distinction were removed, which may in time be done, by education and intermarriage, I believe their posterity would at last make as good and faithful subjects of Great Britain, as the posterity of any foreigners we have, or may encourage to settle amongst us; and by this means we should in a short time add greatly to the natural strength of our island of Jamaica.

To return to the war between Great Britain and Spain in the West-Indies.

Admiral VERNON returned from Porto Bello to Jamaica the latter end of January 1739-40, in which passage several ships of his Squadron received much damage by hard gales of wind. The Greenwich man of war, with the bomb vessels, fire ships and stores sent from England, arrived at Port Royal about a fortnight before. While the Admiral lay in this harbour he granted a convoy to several Jamaica merchants, for protecting the ships with which they traded to the coasts of Spanish America, notwithstanding the war with Spain was actually proclaimed at Jamaica; for whether it be war or peace, the Spaniards in America are very glad to see the English merchants on the coast, who bring them all manner of cloathing and furniture, which they cannot purchase in the country but at extravagant rates, the flota not bringing half enough to serve the inhabitants of Mexico and the Terra firma.

The Admiral sailed with his Squadron on the 25th of February to Carthagena, which he bombarded, and afterwards sailed to Porto Bello, where he arrived the 14th of March, and from thence visited Fort Chagre, which he cannonaded and obliged to surrender on the 24th: here he found the custom house full of goods intended for loading the galleons, viz. cacao-nuts, guayaquil bark, Spanish wool &c. which the Admiral ordered to be brought on board his Squadron, and then set fire to the custom house; he also embarked the brass cannon he found here, and then blowed up the fortifications. The booty taken here was valued at seventy thousand pounds, with which he returned to Jamaica the beginning of April.

Here the Admiral received advice that the Spanish Squadron was sailed from Cadiz, and supposed to be designed for the West-Indies; whereupon he cruized to windward in hopes of meeting them, but not being able to get any intelligence of the Spanish Squadron, he returned to Jamaica, where some of his cruizers brought in a large Dutch vessel, hired to bring over the new Viceroy of Mexico, but the Viceroy escaped in a sloop, leaving behind him his crown, sceptre, and other regalia, with his jewels and money, to the value of 100,000 l.

In the mean time the Spanish Squadrons from Cadiz and Ferrol consisting of twelve ships of the line, arrived at Porto Rico in the beginning of October, and about the same time two French Squadrons, consisting of thirty men of war from Brest and Toulon, arrived at Martinico, and made great preparations for some important expedition, generally supposed to be the invasion of Jamaica; but meeting with a violent storm between Martinico and Hispaniola, they put into Port Lewis in a shattered condition, and the Spanish Squadron sailed from Porto Rico to Carthagena, where they arrived the 28th of October.

Admiral VERNON having received no advice of the arrival either of the Spanish or French Squadron

squadrons in the West Indies, cruised off the coast of Hispaniola, and on the 19th of October, was joined by eight sail of transports, convoyed by the Wolf man of war from North America, which he brought with him to Port Royal, where he received intelligence of the arrival of the French and Spanish fleets, and thereupon remained shut up in that harbour, expecting a visit from the enemy; but they contented themselves with sending reinforcements to the Havanna, Carthagena, and other Spanish garisons, and putting their settlements on the coasts in a posture of defence.

The Emperor CHARLES VI, dying on the 20th of October this year, the court of Spain immediately began to form pretensions to the dominions of the house of Austria, as King PHILIP was descended from the Emperor CHARLES V; they asserted, that CHARLES V being Emperor of Germany, and King of Spain, when he abdicated both those thrones, and retired into a monastery, left Spain and the territories thereto belonging to his eldest son PHILIP II, and his German dominions to his brother FERDINAND, whom he had advanced to the empire; but upon condition, that on failure of male issue of FERDINAND and his successors, his German dominions should revert to the heirs of PHILIP King of Spain; and to support this title his present Catholic Majesty ordered an army to assemble and march towards Barcelona, in order to be transported to Italy, and take possession of the Austrian dominions there, and these were to be joined by other forces to be sent from Naples.

But to return to the West Indies, General OGLETHORPE receiving advice that there was but a small garison in fort St. Augustine, and that they were in great want of provision there, proposed to the general assembly at Charles town, the surprising that fortress, which he represented he had great hopes of succeeding in, if they would join him with part of their militia, and raise him a certain sum of money. This they consented to, but not in so great proportion as Mr. OGLETHORPE expected, and their march was delayed so long, that the opportunity was lost; the garison of St. Augustine being reinforced and supplied with provisions, and the enterprise by that means became impracticable; whereupon Mr. OGLETHORPE, after he had taken a view of the place, and fired some shot into the town, thought fit to retire; but while he lay encamped near fort Augustine, a party of sixty or seventy highlanders, commanded by Colonel PALMER, were surprized by a detachment of the garison, which sallied out of the fort in the night, and killed most of them, among whom was Colonel PALMER himself: this was the only loss almost the English sustained in the enterprise against St. Augustine, for the Spaniards did not think fit to attack them in their retreat. But a much worse misfortune happened to Charles town on the 18th of November following, when the whole town almost was burnt down, the loss computed to amount to two hundred and fifty thousand pounds, the inhabitants being able to save very little of their goods or furniture, towards which loss the British parliament raised them 20,000 l.

In the mean time complaints having been made to the French court, that several British ships had been taken by Spanish privateers on the coast of France, and in their ports and rivers; Don PHILIP, Admiral of Spain, at the instance of the

court of France, prohibited the Spanish privateers to cruise on the English upon the coasts and rivers of France: but whether he was in earnest is a question, for the Spanish privateers still continued to make prizes on the coasts of France, and were many of them manned chiefly by French sailors, and a list of the British ships which were taken in the months of January, February, March, and April, was published at Madrid, amounting to thirty seven, whose cargoes were valued at one hundred and forty thousand pounds sterling.

On the 21st of June, Sir JOHN NORRIS set sail with a strong squadron, consisting of first, second and third rate men of war, and some frigates, and having cruised on the coast of Spain, returned on the 22d of August to Spithead, without having made any attempt on the Spanish ports. On the 13th of October Admiral NORRIS sailed again with another formidable squadron, but returned to Spithead again on the sixth of November, without having made any attempt on the enemy. About the same time Commodore CORNWALL failed with some men of war to reinforce Admiral HADDOCK, but HADDOCK's squadron remained inactive all this year, unless an accidental rencounter which happened between some ships of his squadron and three French men of war near the Straits, may be called an action, of which we received the following account. Captain BARNET, commander of the Dragon, a 60 gun ship, captain BALCHEN, who commanded the Folkestone, a forty gun ship, and another English frigate, meeting with three French men of war in the mouth of the Straits, and suspecting them to be Spanish register ships, Captain BARNET would have sent his boat on board them to be satisfied, and the French refusing to permit him, he fired at them, whereupon there happened a smart engagement, in which several men were killed on both sides; but the English Captains being satisfied at length that they were French, suffered them to pursue their course. But what happened soon after sufficiently shewed what we were to expect from the conduct of our Ministry, and the Admirals they employed in Europe.

The Spanish fleet, consisting of nineteen sail, came out of Cadiz, and on the 24th of November in the night, passed the Straits, Admiral HADDOCK lying with the British fleet in Gibraltar bay at that time: the next morning a brisk east wind drove the Spaniards so far back, that they continued two days in sight of Admiral HADDOCK. On the second of December he sailed after them in order of battle, and in a few days came up with them; when a French squadron consisting of twelve sail appeared, and clapped in between the two fleets, with a flag of truce, and the French Admiral let Admiral HADDOCK know, that he had taken the Spaniards into his protection, and must obey his orders. Whereupon Admiral HADDOCK called a council of war, and it was agreed to sail to Port Mahone, and leave the French and Spaniards at liberty to execute their schemes (the English fleet then consisting of seventeen men of war.)

In the mean time the Spaniards having formed a design against the Austrian dominions in Italy, on the Emperor's death, embarked fifteen thousand land forces at Barcelona, and landed them at Orbitello, a Spanish town on the coast of Italy. Tuscany, where they joined a body of troops the King of the two Sicilies had sent thither by sea.

CHAP.  
XVIII.

I now proceed to take a view of the state of the war in the West Indies: we had the latter end of the last year assembled an army of eight thousand men, most of them new raised, and embarked them on board transports at the Isle of Wight: these forces were commanded by Lord CATHCART, and a squadron of men of war appointed to convoy them to Jamaica: they were several times driven back by stormy weather, but at length Sir CHALONER OGLE, with a fleet of four and twenty men of war of the line, set sail with the transports from St. Helen's on the 26th of November, 1740. They arrived at Dominica, one of the Caribbee islands, on the 19th of December, where the Lord CATHCART, the General, died the next day of the bloody flux: the fleet sailing from thence, arrived at St. Christopher's, the place appointed for the general rendezvous, on the 27th of December, where all the men of war and transports met, except two or three, which had been disabled in a storm at their first setting out, and were obliged to return to Europe to refit. The next day (28th of December) the fleet sailed again, and arrived at Port Royal in Jamaica on the ninth of January. But as they sailed along the west end of the coast of Hispaniola, they saw four large ships in the Offing; whereupon the signal was made for six English men of war (of which the Lord VERE BEAUCLERK and Lord AUGUSTUS FITSROY commanded two) to give chase. It was ten at night before the English came up with them, when the Lord AUBERY in the Prince Frederick, hailed one of the ships in French and English, and they not answering, he ordered a shot to be fired at them, and soon after another, which being answered with a broadside, the Prince Frederick returned it, and the Lord AUGUSTUS and three other ships coming up, they fought very warmly for an hour and an half; when captain KNOWLES came on board Lord AUBERY, and advised him to make a signal to desist, he being sure they were French, and a signal was made accordingly; but the French continuing their fire, the fight lasted half an hour longer, and then they parted by consent: as soon as it was day, the Lord AUBERY being the eldest captain, made a signal for the rest of the captains to come on board him, and they determined to send a boat on board the French Commodore, to know certainly who they were. The English officer, who went on board, finding they were French, asked the reason why they did not answer when they were hailed; the Commodore said, they did answer, and that he would report their usage to the King his master.

The Lord AUGUSTUS had seven men killed and fourteen wounded, the Lord AUBERY four killed and five wounded, and captain KNOWLES two men killed. What damage the French received is uncertain, but they appeared very much shattered; and when Lord AUGUSTUS, in his compliments at parting with the French Commodore said, he hoped they had not killed him many of his men, he answered, but too many.

Upon the arrival of Sir CHALONER OGLE, Rear-admiral of the Blue, at Jamaica, Admiral VERNON took upon him the command of the whole fleet, which consisted of thirty men of war of the line, besides frigates, bomb vessels, and fire ships, with which he sailed over to Hispaniola, arriving at Port Lewis on the 13th of January; but learning that the French fleet was failed to Europe, he took in wood and water at

Donna Maria bay, and upon the 25th set sail from thence to Carthagena, on the coast of Terra Firma, where they arrived on the fourth of March, being in all, men of war and transports, an hundred and twenty four sail. The Norfolk, Russell, and Shrewsbury men of war being commanded to anchor close under the forts of St. Jago and St. Philip, made so warm a fire, that in less than an hour they drove the enemy out of them, and the same evening the grenadiers landed and took possession of them: on the tenth, the two regiments of HARRISON and WENTWORTH and the six regiments of marines landed without opposition; on the 11th they got their tents and tools on shore, and having cleared the ground they encamped, and the artillery and stores were landed on the 15th. The Admiral receiving advice from Brigadier WENTWORTH that his men were exposed to the fire of a fascine battery, called the Barradera, on the opposite side of the harbour, he sent his boats with a number of men, commanded by captain WATSON of the Admiral's own ship, and the captains NORRIS and COLBY (and the men when landed were to be commanded by the captains BOSCAWEN, LAWS, and COTES) who landed about a mile to the leeward of the fascine battery, consisting of fifteen twenty four pounders; but happening to land under a small battery of five guns they knew nothing of, they leaped resolutely into the battery, and surprised the enemy so as to receive little damage, and secured the cannon, and another battery pointing their guns at them, they rushed forward, and made themselves masters of that as well as of the smaller battery, and spiked up all the guns, which was a great relief to the troops on the other shore.

In the mean time Brigadier WENTWORTH caused a battery of mortars to be raised, which very much incommoded the enemy in Bocachica castle, and on the 22d a battery of twenty four pounders began to play against it; and on the 23d Commodore LESTOEUX in the Boyne, with the Prince Frederick, Hampton Court, Suffolk, and Tilbury, went in to batter the castle of Bocachica with their ships; on the 24th they renewed their fire, but the Prince Frederick and Hampton Court being too much exposed to the shot of the enemy's ships, were called off, and in this station that brave officer, the Lord AUBERY BEAUCLERK was killed: about noon the Admiral sent all his boats to destroy a fascine battery that very much incommoded the camp, which they effected, and a tolerable breach being made in Bocachica castle, they prepared to attack it both by sea and land; but to their great surprise they found it abandoned by the enemy, who fled out of the castle without firing a musket: and now the enemy beginning to set fire to their ships within the boom, the boats rowed up to those ships, and boarded the Admiral Don BLASS's own ship the Galicia, in which they took the captain of the ship, the captain of Marines, an Ensign, and sixty men; then they cut the boom to make all clear for the next day: on the 26th the Admiral with the Burford and Orford got into the harbour with a great deal of difficulty, the enemy having sunk several ships in the entrance.

The next day and the day following the rest of the fleet got into the harbour, which was very fortunate, it blowing hard at this time: the Admiral sent captain KNOWLES to destroy two other batteries at the entrance of Passo Cavallo, which

he effected; whereupon the enemy seemed to despair sinking all their galleons and other ships cross the mouth of the upper part of the harbour above Castillo Grande, in order to choak up that channel. The captain then ordered his chief engineer, captain KNOWLES, in the Weymouth, to discover what he could of the enemy, who observing they were removing things out of Castle Grande, gave notice of it to the Admiral, who ordered him to advance and fire upon the castle; but finding it abandoned, captain KNOWLES took possession of the castle, of which the Admiral made him governor: and now it was resolved in a council of war, to cut off the communication of the town on the land side, and to make a descent at the most convenient place near the town; and accordingly the ships being so stationed as to secure a safe landing for the army, General WENTWORTH on the fifth of April went on shore with about fifteen hundred men, and advanced through a long narrow defile or path in a wood, where he had some few men hurt by single shot, and on coming out of the defile he found about six hundred of the enemy advantageously posted to dispute his passage; but advancing upon them, he received their fire without much loss, and forced them to retire; after which he possessed himself of a convenient piece of ground for forming a camp, a mile from the castle of St. Lazar, and that day and the next the remainder of the forces, making in all four thousand men, were landed, but they were obliged to remain three nights upon their arms without tents or tools, which could not be landed with them: the troops growing sickly, and the rains expected, it was resolved in a council of war, to attack fort St. Lazar without erecting a battery, and on the ninth of April twelve hundred men, commanded by Brigadier GUISE, advanced to the fort a little before break of day, and began the attack in two places: the grenadiers entered the enemies works, but the forwardest of them were all killed almost, and the enemy playing on them briskly with grape shot, the General was obliged to order a retreat, to cover which he directed a reserve of five hundred men to advance, by which means they retired without any further loss, and carried off great part of their wounded men: but the army, both officers and soldiers, falling sick, insomuch that there were scarce men enough left to do duty at the ordinary guards, and the water in the cisterns being exhausted, from which they had hitherto been supplied, it was resolved in a general council of war, of sea and land officers, to reembark the troops.

In the mean while the Admiral caused the Galicia, Admiral BLASS's ship, to be fitted up for a floating battery, sixty carpenters were employed in making her sides shot proof, by filling up the merlins or spaces between the guns with sand incased, and on the 16th in the morning she was moored in five fathom water, about half a mile from the town; at six she began to fire, to the great surprise of the inhabitants, who had no expectation of such an attack; however about twenty guns from several parts of the town being brought to bear upon her, they almost demolished her hull, and by shooting red hot bullets, she was three times set on fire; the attack was very furious on both sides, till two in the afternoon, when the ship being ready to sink, and her moorings cut away, she was ordered to quit the attack, and was afterwards sunk. The same evening

(16th April) the boats of the men of war were ordered to bring off the army, and on the 17th they were all embarked on board their respective ships without any loss; the next day all the guns and carriages were put on board the artillery ships, and all the works of Castillo Grande, Bocachica castle, and the rest of the fortifications being blown up, and the guns spoiled and rendered useless, the Admiral unmoored on the 25th of April, and on the sixth of May set sail for Jamaica; and though the English had not all the success they expected in this expedition, the loss of the Spaniards was very considerable; for there were six large men of war, and six galleons burnt, or otherwise destroyed, with all the rest of the shipping in the harbour of Cartagena: all the forts and strong castles for the security of the harbour were entirely demolished, and several hundred great guns destroyed, or rendered unserviceable.

The fleet arrived at Port Royal on the 19th of May, where the Admiral found a convoy of victuallers and store ships safely arrived from England some days before him, and on the 24th died at Jamaica, after a few days illness, the Lord AUGUSTUS FITZROY, captain of the Orford, esteemed a brave commander.

There was some time afterwards a more particular account communicated to us of the unfortunate attack of fort St. Lazar, of the following tenor.

On the ninth of April, about four in the morning, pursuant to a resolution taken by the General in a council of war, a body of men, consisting of five hundred grenadiers, supported by a thousand European marines, and Jamaican soldiers, marched towards the enemies lines before the fort, and were followed at a considerable distance by a large body of Americans, loaded with wool-packs, scaling-ladders and hand-grenades: the enemy who had entrenched themselves under the walls of the fort, fired upon them with great fury, which was returned by the grenadiers, who pushed forwards up to the mouths of their pieces, and stormed their intrenchments, in which the English suffered extremely, and a deserter, who had undertaken to conduct our forces, having the misfortune to be suspected by those in the van, his advice was entirely disregarded; for he proposed the attack should be made in the flanking quarter, whereas our forces unhappily made their push in the front of all, and were flanked by the enemy on both sides, as they advanced to the entrenchments, and great was their loss before they got up to them; but the bravery of the English troops surpasses all belief, they leaped into the lines among the thickest of the enemy and put them to flight; then the enemy retreated over a draw-bridge into the fort, from whence the shot was poured down upon the English without ceasing; whereupon they advanced to the walls of the fort in hopes of finding an opportunity of scaling them; but they were at length all penned up together at the end of the lines, and could neither advance or retreat, nor could they meet with their scaling ladders, so that they remained as butts for the Spaniards, who fired on them from every quarter, while the English had no way to annoy their enemies, so that great numbers were sacrificed before the retreat was beat; and then they could only retreat by the way they came; and it was a considerable time before they got out of the reach of the enemy's fire.

CHAP.  
XVIII.

The Americans finding they were knocked down, and had no arms to defend themselves, threw down the ladders, and retired to their camp: there were only three scaling ladders brought to the trenches, upon which a serjeant and ten grenadiers mounted the walls of the fort; but not being supported they were all cut in pieces, except the serjeant, who saved himself by jumping down again.

After the retreat a flag of truce was sent into the town to propose an exchange of prisoners, which was agreed to, with permission to bury the dead.

The land forces employed in this expedition were,

Six regiments of marines, consisting of ten companies each, 100 in every company, besides officers,	6930
Four other regiments, to wit, WENTWORTH's, HARRISON's, BLAND's, and CAVENDISH's. 815 men in each regiment,	3260
Raised in America,	4300
Taken out of DALZIEL's regiment in the Leeward islands,	300
Independent companies,	200
Negro pioneers from Jamaica,	500
Landmen	15490
Sailors on board the fleet	18630
Total	34120

Of the land forces seventeen officers were killed before Carthagena, and seventy seven officers died of fevers or fluxes in that camp, though they were not a fortnight on shore.

Expedition  
on to Cu-  
ba.

The fleet remaining in Port Royal harbour, till the first of July, in order to refit, and prepare for another expedition, set sail from thence, and arrived on the 18th at Waltenham harbour on the South side of the island of Cuba, being one of the finest harbours in the West Indies, secure from hurricanes, and capable of containing any number of ships, to which the Admiral gave the name of Cumberland harbour, in honour of his Royal Highness the Duke. The troops were landed here consisting of 2500 men and 1000 Negroes, on the 25th instant, and several detachments were made to reconnoitre the country, which repulsed the advanced guards of the Spaniards, and brought in plenty of provisions.

The camp was about twenty three leagues to the eastward of St. Jago de Cuba, advantageously situated, and provided with a very fine fresh water river, navigable for several leagues, the country abounding with cattle, provisions and fruit.

Another gentleman, who was in this expedition, relates, that this harbour is of so easy an access, that they could go in or sail out of it with the land or sea breezes; and that within two days, with the common sea breezes, they could sail to any port in Hispaniola (which voyage could not be performed sometimes from Jamaica in three weeks) so that in case of a French war they could easily visit the French colonies in that island.

The design of landing on the island of Cuba seems to have been to lay siege to the city of St. Jago; but that city being at a great distance, and the country full of defiles, that General, after he had taken a view of the country, in person, apprehended such an attempt impracticable by land, without a reinforcement of troops: the Admiral

also having viewed the mouth of the harbour of St. Jago, found it impossible to approach it by sea; whereupon it was agreed to reembark the troops, and the General sailed with them on the 28th of November to Port Royal, being followed on the sixth of December by the Admiral and the whole fleet.

In the mean time TRELAWNEY, the governor of Jamaica, having formed a design of fixing a colony among the Mosquito Indians, about 120 leagues to the eastward of Porto Bello, (these Mosquito Indians inhabit part of the provinces of Honduras and Nicaragua, and have never submitted to the Spaniards, but have continued in a state of war with them ever since COLUMBUS discovered that country, though great numbers of them have been massacred by the Spaniards) he gave lieutenant HUDSON a commission to command the whole Mosquito shore, who on his arrival there found that people preparing for an expedition against the Spaniards, and offered to make him their captain; whereupon he embarked with them in their periagues, intercepted 8000 pieces of eight, and made some Spanish prisoners, one of whom escaped and alarmed the Spaniards, or he had taken a million more; however in his return he took a place called Carpenter's river, and fifty thousand pounds of cacao; after which he returned to Jamaica in a very leaky vessel, in which he was in great danger of perishing: he reports that the Mosquito shore is the most healthful part of America, and would be a very advantageous situation for a British colony.

In August five hundred men were embarked at Jamaica, and conveyed by a man of war to the island of Ruatan, at the entrance of the bay of Honduras, whither the English had already sent a colony to plant that deserted island; and by this seasonable reinforcement it is presumed they will be able to defend themselves against all the power of Spain. The island is thirty miles long, and generally about fifteen broad, naturally fortified by rocks and shoals, and at the entrance of the harbour two forts are intended to be built. This will in a great measure secure the logwood trade, and what the Jamaica men value still more, give them an opportunity of trafficking with the coast of Mexico; and as it lies near the province of Honduras, where the Mosquito Indians (allies to the English) inhabit, they may be easily reinforced or supplied with provisions from thence, and may lend the Mosquito men their assistance in their incursions into the Spanish pale on the continent. It is strange we have not supported that people more effectually, and made some settlements amongst them, when we know them to be such irreconcilable enemies to the Spaniards; but it is most to be lamented, that when the expedition to Carthagena had no better success, and it was found impracticable to attack St. Jago de Cuba, our forces should have remained unactive so many months there, where great numbers of them perished, and never send a detachment to the assistance of General OGLETHORPE, who might easily have taken Fort St. Augustin with such a reinforcement, and made us masters of all Florida, whereby the British dominions on the continent would have been entire, and by fortifying our frontiers on that side, we might have bid defiance to both the Spaniards and the French: We should then have been masters of both sides the gulph of Florida, as we were already possessed of Providence in the Bahama islands, so that it would have been impracticable

practicable either for the Spaniards or French to have continued their navigation to the gulph of Mexico without our leave. It is amazing therefore that General OGLETHORPE was allowed but one single regiment to effect a design of such moment, when so many thousands were sent upon other expeditions, where the success was much more uncertain, and the importance of the service not near so considerable if we had succeeded.

1742.  
Georgia  
invaded.

But to proceed, Admiral DE TORRES, who commanded the Spanish squadron that convoyed the troops and stores which were sent to Carthagena, had the good fortune to sail from thence with his fleet to the Havanna before the British fleet, commanded by Admiral VERNON, attacked the forts that defended the harbour of Carthagena, of which advice being brought to Old Spain, and soon after news brought of the British fleet's being retired from Carthagena, they made publick rejoicings throughout the whole kingdom for three days; and now the Spaniards thought fit to return Mr. OGLETHORPE's visit and invade Georgia. They assembled a fleet of between thirty and forty small vessels at the Havanna, on which they embarked four thousand land forces, and having touched at St. Augustin's, they arrived in Jekyl sound on the 5th of July 1742, where, notwithstanding the fire that was made from St. Simon's fort, they proceeded up the river out of the reach of those guns below Gascoign's, where they landed three thousand men; whereupon the General nailed up the guns in fort St. Simon's, which he apprehended not tenable, burst the bombs, and retired to Frederica, towards which place a body of Spaniards advancing, were defeated by General OGLETHORPE, and his Indian confederates, which occasioned such a pannick in the main body of the Spaniards, that they reembarked their troops soon after, having first demolished St. Simon's fort, and taken the guns on board their fleet; the General followed them with his small craft, but was not strong enough to attack them, and the men of war sent from Carolina to his assistance did not appear till the enemy was retired.

The reasons the Spaniards gave for their precipitate retreat from Georgia, were, that General OGLETHORPE had intrenched himself with a thousand men in an inaccessible wood, through which it was necessary for them to march before they could approach Frederica: that they received intelligence that several English men of war, galleys and transports with land forces were suddenly expected from Carolina, and the rainy season was at hand, which put a stop to their further progress; and the reason they did not make the descent sooner in the year was, because the fleet from the Havanna had been dispersed in a storm, and a great many men lost.

Frederica is a town situate in the middle of the island of St. Simon's on the coast of Georgia, near the north mouth of the river Alatomalia: the island is thirteen miles long, and from two to four in breadth: the south end of it lies twenty leagues north of St. Augustin, at which end stood the fort of St. Simon's, with some barracks and huts, which the Spaniards call a large town: from St. Simon's to Frederica is seven miles, Jekyl Island lies next to St. Simon's, being about half as big; Cumberland Island is about the bigness of Jekyl's, and lies nearer the Spaniards, in which are the forts William and St. Andrew's: the general, when the Spaniards made their descent, went in

his boat and withdrew the garison out of St. Andrew's, with which he reinforced that of Fort William, being obliged to fight his way through the Spanish fleet.

The island of Amelia is thirteen miles long, and two broad, and extends to the southern mouth of the river Alatomalia, the southern limits of Georgia being within a league of St. John's river, and five leagues from St. Augustin's: the town of Savannah is sixty miles north of Frederica.

Though the grand fleet of Spain was much inferior to that of Great Britain, yet the latter seems to have been so intimidated by the French taking the Spaniards into their protection, that the Spanish squadrons were left at liberty to range wherever they pleased in Europe, and to convoy armies to Italy without any apprehension from the British fleet: and their privateers met with such amazing success, chiefly in the English channel, that upwards of four hundred of our merchant ships were taken this year, valued at a million sterling.

Both Admiral VERNON and Brigadier General WENTWORTH returned from America in the month of January 1742-3, and both were said to have been graciously received at court; but there have been some letters lately printed, which shew that there was a misunderstanding between the governor of Jamaica and the two Admirals, VERNON and OGLE, which proceeded at length to an open rupture, and might possibly be some hindrance to the publick service in the West-Indies. The Spaniards still continued to take great numbers of prizes in the seas of Europe; on the other hand some very rich ones were made by British ships, particularly the captains SIBBALDS and DONAL, two privateers belonging to Pensilvania, took two Spanish ships worth thirty thousand pounds: and the Romney man of war took another Spanish ship, which he carried into Gibraltar, valued at one hundred thousand pounds and upwards; and a Spanish man of war of seventy guns, being surprized by part of Admiral MATTHEWS's squadron in the port of Accacia in Corsica, was set on fire and burnt by her own crew, to avoid falling into the hands of the English.

The expedition of Commodore ANSON to the south seas, from which most people had great expectations, proved very unfortunate, and will scarce countervail the charges the nation was at in fitting out that squadron, repairing the loss sustained by the ships cast away, and damaged in this voyage, as appears by letters dated at Macao in China, December 1. 1742.

We were unfortunate in another expedition also, against La Guara, a town on the Caraca coast; this place Commodore KNOWLES attacked in the beginning of February with the squadron under his command, but his ships were miserably shattered, and twelve hundred soldiers and sailors, who landed near the town, were shamefully defeated, which they endeavoured to excuse by telling us there were twelve hundred seamen in the place, which belonged to the ships and galleys in the harbour; that there were also three hundred soldiers, gunners and companies servants, and four thousand Indians, Mulattoes and Blacks in the town, which the governor of the Caraca's sent thither when he heard the place was about to be attacked.—Porto Cavallo, on the same coast, was attacked by the Commodore some few days after with no better success.

## CHAP. XIX.

*Treats of the civil government, prerogatives and succession of the crown, the King's titles and arms, great officers of state, nobility and grantees.*

## CHAP. XIX.

IN the fifteenth century Spain was divided into five kingdoms, four of which were Christian, and the fifth Mahometan: 1. The kingdom of Castile, comprehending the two Castiles, and the provinces of Leon, Galicia, Asturia, and Andalusia. 2. The kingdom of Arragon, which comprehended Arragon, Biscay, Catalonia, Valencia, Murcia, and the islands of Balears. 3. The kingdom of Navarre, which contained the Upper and Lower Navarre. 4. The kingdom of Portugal. And, 5. That of Grenada.

In the same century these five monarchies were reduced to three by the marriage of FERDINAND King of Arragon, called the Catholick, with ISABELLA (ELIZABETH) heiress of Castile, and by the conquest they made of the kingdom of Grenada, anno 1492. These three kingdoms in the sixteenth century were reduced to one, and all Spain subject to one Sovereign; for first FERDINAND the Catholick took the kingdom of Navarre from JOHN D'ALBRET, anno 1512; and about seventy years afterwards the kingdom of Portugal was conquered by PHILIP II. In this state things remained for sixty years during the reigns of three Kings of the name of PHILIP; and then was Spain in the height of it's glory; for the house of Austria, which possessed it, had besides Spain large dominions in Italy, Franche Comte, or the county of Burgundy in France, the seventeen provinces of the Low Countries, besides vast territories in America, Asia, and Africa; insomuch that PHILIP II used to say, the sun never set in his dominions. But this monarchy has been since dismembered, and reduced within much narrower bounds; seven of the seventeen provinces of the Low Countries threw off the Spanish yoke at once, and declared themselves a free people; which was occasioned by the oppressions of the Spanish government, and the cruelties committed by the Duke of Alva, to which the alteration of religion in those countries very much contributed. The Catalans revolted in the year 1640, and put themselves under the protection of France, remaining for twelve years subject to that crown. The same year the Portuguese threw off the Spanish yoke, and placed JOHN Duke of Braganza on the throne, being of the race of their ancient Kings. In the last war the Emperor possessed himself of all the Spanish territories in Italy; and the residue of the Spanish provinces in the Low Countries were yielded to his Imperial Majesty by the peace of Utrecht; and at the same time Gibraltar and the island of Minorca were yielded to the English.

His Catholick Majesty however still remains Sovereign of all Spain (except Portugal, Roussillon, and part of Cerdagne;) of the empires of Mexico, Peru, &c. in America; of Ceuta and some other places on the coast of Africa, and of the Philippine islands in Asia: His dominions being still of the largest extent of any Prince's upon earth; and according to the calculations of some writers, four times larger than ever the Roman Empire was. In the continent of America alone he is possessed of a fine rich country, whose provinces lie contiguous, and extend six

thousand miles and upwards in length from south to north.

And as the King of Spain's dominions are the largest, so his prerogatives are as great as any Prince's in the known world. He is an absolute monarch, his word is a law, and he can dispose of every thing according to his pleasure, without taking the advice of any man or body of men whatever. It is true, every province almost in Spain had the privilege anciently of being governed by laws of their own framing, which could not be repealed or altered but by an assembly of the States of the respective provinces; nor could their Princes raise taxes without their consent. These States consisted of the Clergy, Nobility, and Commons; of whom the Commons seem to have been much the least number, particularly in that large kingdom of Castile, which comprehended Leon, Asturia, Galicia, Estremadura, and Andalusia; for there were not more than seventeen cities and one town that sent representatives to the assembly of the States; and those but two a piece.

The Cortes are now only assembled upon some particular occasions; as when they take the oath to the Prince of Asturias, or when the succession of the crown is limited according to treaties with foreign Princes, who look upon those compacts to be the less liable to alteration, when they have been confirmed by an Assembly of the States. And this brings me to observe, that the crown of Spain is hereditary, and descends to the females according to their seniority, in default of males; though there are instances where their Princes have passed by the eldest, and given their dominions to a younger branch: and a multitude of examples there are of their dividing their territories among their issue. It is generally held, that the first Gothick Kings of Spain were elective, and that it was some centuries before their crowns became hereditary. But certain it is, that PELAGIUS, and the other petty Spanish Sovereigns, who first dislodged the Moors, and drove them from the northern parts of Spain, were elected by the people; and the first Sovereign of Arragon, GARCIA XIMENES, was not only elected, but was limited by certain laws and conditions in the exercise of his authority, which if he attempted to break through, the people were at liberty to depose him and advance another to the throne: and a magistrate accordingly was established, called the Justice of the kingdom, who was to observe the King's conduct, and empowered to prosecute him before the States, whenever he violated the laws. This officer was only accountable to the States, and the King at his inauguration was obliged to swear to maintain their privileges on his bended knees before him.

The words used on electing their Sovereign were these, 'We, who are your equals, do make you our King and Lord, on condition you maintain our laws and liberties, but not otherwise.' Which custom continued to the eleventh century, and most of the provinces enjoyed great privileges till the reign of CHARLES V, and PHILIP II, who by purchasing votes in the Assemblies of the States, and by vast standing armies, particularly of foreigners, in a manner put an end to the liberties of Spain: though, it is true, the government, to prevent insurrections, or to reclaim revolting provinces, have sometimes indulged the people with some share of their ancient privileges, which they have resumed again as soon as their turns were served; and the King of Spain

CHAP. XIX.

The prerogatives of the crown.

Succession of the crown.

**CHAP. XIX.** is at this day one of the most absolute Princes on the face of the earth, as has been intimated already.

**Kings of Spain not crowned.** However, he takes an oath at his inauguration to maintain their rights and privileges; and on the other hand, the Cortes or Assembly of the States, who are convened on this occasion, acknowledge him for their Sovereign; but the Kings of Spain are not crowned, as most Monarchs of Europe are.

**Councils and Courts of Justice.** But notwithstanding the Kings of Spain are absolute Princes, says my author, their moderation can never be sufficiently applauded, having for many ages taken the advice of those who are versed in the laws of their country, in every thing that regards their civil government, their forces or revenues; and for that end have appointed several Councils or Tribunals for the dispatch of the respective branches of business, of which some are sovereign Courts, and others subaltern.

1. The Cabinet-Council, or Junta of general dispatches. 2. The Council of state. 3. The Council of war. 4. The Council of Castile. 5. The Chamber of Castile. 6. The Council of the Indies. 7. The Council of finances, or royal revenues. 8. The Council of Navarre. 9. The Councils of buildings and forests. 10. The Chanceries of Valladolid and Grenada.

The subaltern Tribunals are, 1. The Junta, or Council for lodging or quartering all persons belonging to the Court. 2. That of the Alcaldes of the palace. 3. The Audiences of Galicia, Seville, Arragon, Valencia, Catalonia, Majorca, and the Canaries. 4. The Jurisdiction of the Corrigidors, Rigidors, Viguers, and Alcaldes.

The Viceroyalties are those of Navarre, Arragon, Valencia, Catalonia, Majorca, Peru, and Mexico.

The Captainships general are those of Andalusia, Guipuscoa, Estremadura, and the Canaries, with those of the Indies.

**Cabinet-Council.** It is the Cabinet-Council, which consists of the principal Secretary of State, and five or six more of the Kings nomination, which determines all affairs of government both at home and abroad.

**Privy-Council.** In the Privy-Council, which consists of a great number, indeed things of the same nature are debated, but the resolutions are taken in the Cabinet; and sometimes, it is said, after things have undergone the deliberations of both Councils, the King, with the Secretary alone, takes such measures as he sees proper in relation to publick affairs; so that the principal Secretary may well be esteemed the greatest Minister in the Spanish Court, and is frequently the Prime Minister.

The business of the Council of war is the same as in other nations, only it takes in the admiralty and naval affairs, as well as those relating to the land-service; for the Admiral of Castile is now but a title of honour, he has nothing to do in maritime affairs.

The Court or Council of Castile is the highest Court of judicature in the kingdom, and determines appeals from inferior Courts within its jurisdiction: they are also a kind of Council of state for that particular province.

The Council of the Chamber of Castile are consulted by his Majesty in all his grants of honours, offices, and preferments, ecclesiastical or temporal; and all pardons and other graces pass this Court.

The supreme Council of the Indies, the Islands,

**CHAP. XIX.** and Terra Firma was established in the reign of FERDINAND the Catholick and ISABELLA, when those countries were first discovered; but the Emperor CHARLES V brought it to perfection. This Council have the supreme jurisdiction of all affairs, civil and military, by sea and land in the New World, (as their American dominions are frequently called;) where it is said the Spaniards within the space of an hundred and fifty years have built seven thousand churches and six hundred monasteries.

The Council of Finances may be resembled to the Treasury and Court of Exchequer in England, where every thing is transacted and determined relating to the royal revenues.

The Council of Navarre determine all matters relating to that kingdom, having laws and customs peculiar to themselves; and when they submitted to FERDINAND the Catholick, 'twas stipulated, that they should not be subject to the laws of Castile: but this has of late years been broken through in many instances, and the Court of Spain are as absolute here as in other places.

The Court of the royal buildings and forests have the supreme jurisdiction in all the woods and forests of the kingdom, and the direction of the King's buildings in his palaces and elsewhere.

The Chanceries of Valladolid and Grenada were established to ease the royal Council of Castile, which had too much business; and that the subjects in those parts of Spain might not be obliged to travel so far as Madrid for justice, when they found themselves under a necessity of appealing from the inferior Courts.

The Junta, or Council for providing lodgings for the Court, have a power of agreeing with such persons as desire to be excused from taking in these guests; by which compositions the Court raises a considerable annual revenue.

The Court of Alcaldes of the palaces has the jurisdiction of all causes, civil and criminal, within the verge of the Court, which extends five leagues round about the palace where the King resides, and is exercised over such persons as follow the Court, when his Majesty visits any part of the kingdom.

The Courts of royal audiences, before the late revolutions in Arragon, Valencia, and Catalonia, were but four, viz. those of Galicia, Seville, Majorca, and the Canaries: but since those provinces have been deprived of their privileges, and subjected to the laws of Castile, they have established Courts of audience at Saragossa, Valencia, and Barcelona; so that there are seven of them at present, without taking in those of the Indies, which are twelve in number.

These Courts, of which the Viceroy, or Captain-General is President, and the Alcaldes-Majors, Fiscals, &c. are Members, take cognizance of all causes criminal and civil within five leagues round about the city, where the respective Courts are held in the first instance, and by way of appeal of all causes which are removed from the Courts of the ordinary Judges within their several jurisdictions, as Alcaldes, Bailiffs, Corrigidors, Rigidors, &c.

There lies no appeal from these audiences in civil causes, where the matter in dispute does not exceed ten thousand maravedies; where it does, the parties may appeal to the Sovereign Tribunal; and in criminal cases there lies an appeal in sentences of death, mutilation, or ten years banishment.

CHAP.  
XIX.

The Governor, or his Lieutenant, with certain Members of the Court of audience, have power to visit the several Alcaldes and inferior Judges in their province, examine their conduct, displace, and punish them for male-administration: but this is now almost disused, to the great prejudice of the people, who are exposed to the extortions of the ordinary Alcaldes. These gentlemen having a commission but for three years, think of nothing else but making the most of their places during the short time their authority lasts, out of the suitors who have any causes depending in their Courts.

As to the jurisdiction of their inferior Judges and Magistrates, viz. Corregidores, Rigidors, Alcaldes, Bailiffs, and Viguers, they seem to differ little in the nature of their office, but receive different appellations, according to the dignity or extent of the city or place, wherein they exercise their several jurisdictions. Formerly the Bishops Sees only were honoured with the titles of cities in Spain; but their Princes have long since extended that privilege to a great many other towns, and most of these are not only allowed to send Representatives to the Cortes, or Assembly of the States, but have a Corregidor for their chief Magistrate, to whom the lesser towns and places within the district of his city are subject. Those cities which have not a Corregidor for their chief Magistrate have a Rigidor, or Alcaide-Major, who has certain Rigidors, or inferior Judges, for his assessors or assistants; from which Courts there lies an appeal to the Courts of Audience, Chancery, Council royal, or other superior tribunal. The towns which are not cities have their Alcaldes, Bailiffs, or Viguers, from whose sentences they may appeal to the Courts established in the cities to which they belong, where they are confirmed or reversed.

There seems to be no other difference between their Viceroy and Captain-Generals, than that the one commands in a province which has the title of a kingdom, and the other in a province which has no such title, except that of Barcelona, where the Governor has the title of Viceroy, tho' Catalonia be but a county.

Both the Viceroy and Captain-General have the command of all the forces of the province of which they are respectively Governors, and preside in all tribunals within their several jurisdictions. They have the nomination of many officers civil and military, and recommend the rest to his Majesty's favour; and all officers and magistrates, both civil and military, are responsible to him for their conduct; as are also the Governors of towns and places within their respective provinces, exercising almost royal power. Before the reduction of Arragon, Valencia, and Catalonia, indeed, says my author, the people of those provinces would insist on their respective privileges and immunities, in opposition to the authority of the Viceroy, who were obliged to act with the utmost circumspection and lenity for fear of insurrections, which frequently happened whenever the people apprehended their rights to be invaded; but since the King has deprived them of their privileges, their Viceroy acts with an almost unlimited power; at which the people may murmur in private, but dare not express their resentments in public for fear of incurring the severest punishments.

King of  
Spain's titles.

The titles of their former Kings were very pompous, as King of Kings: ALONSO VI assumed the title of Emperor; and ALONSO VII,

besides that of Emperor, took the titles of Glorious, Pious, Happy, Conqueror, &c. but at present all these are reduced to that of Catholic, granted to King FERDINAND by Pope ALEXANDER VI, in consideration of his conquering the Infidel Moors in Spain, and the services he had done the Holy See. To this title the King added that of Don, as the most noble and emphatic term in the Spanish language, being derived from the word *Dominus* (Lord.) And the Kings of Spain, notwithstanding the loss of their Italian and Flemish territories, still stile themselves Kings of Castile, Arragon, Navarre, Valencia, Murcia, Grenada, Cordoua, Seville, Algarva, Jaen, Majorca, Minorca, Naples, Sicily, Sardinia, Jerusalem, the East and West-Indies, Prince of Asturias, Duke of Milan and Burgundy, Archduke of Austria, Earl of Flanders, Burgundy, and Catalonia, Lord of Biscay and Molina, &c.

They retain also the arms of almost every province, bearing quarterly: the first quarter counter-quartered; in the first and fourth *Gules*, a Castle triple towered *Azure*, each with three Battlements *Or*, purfled *Sable*, for Castile. In the second and third *Argent*, a Lion passant *Gules*, crowned, langued, and armed *Or*, for Leon. In the second great quarter *Or*, four Pallets *Gules*, for Arragon. Party *Or*, four Pallets also *Gules*, betwixt two Flanches *Argent*, charged with as many Eagles *Sable*, membered, beaked, and crowned *Azure*, for Sicily. These two great quarters grafted in base *Argent*, a Pomegranate *Vert*, stalked and leaved of the same, opened and seeded *Gules*, for Grenada. Over all *Argent*, five Escutcheons *Azure*, placed cross-wise, each charged with as many Bezants in saltire of the first, for Portugal. The Shield bordered *Gules*, with seven Towers *Or*, for Algarva. In the third quarter *Gules*, a Fess *Argent*, for Austria. Coupie, and supported by ancient Burgundy, which is Bandy of six pieces *Or* and *Azure*, bordered *Gules*. In the fourth great quarter *Azure*, Seme of Flower de Lucis *Or*, with a border Compony *Argent* and *Gules*, for modern Burgundy. Coupie *Or*, supported *Sable*, a Lion *Or*, for Brabant. These two great quarters charged with an Escutcheon *Or*, a Lion *Sable*, and langued *Gules*, for Flanders. Party *Or*, an Eagle *Sable*, for Antwerp, the capital city of the marquitate of the holy Empire.

For Crest, a Crown *Or*, raised with eight Diadems or Semicircles, terminating in a Mond *Or*. The collar of the order of the Golden Fleece encompasses the shield, on the sides of which stand the two pillars of HERCULES, on each side one, with this Motto, PLUS ULTRA.

The King nominates to all archbishopricks and bishopricks in this kingdom, and most of the abbys, and to many other ecclesiastical dignities and preferments in the cathedral and collegiate churches, and in the several military orders of St. JAMES, Calatrava, and Alcantara or Montesa.

The King  
nominates  
to bishop-  
ricks, &c.

The great officers of the crown are, 1. The Grand Almoner, who has the precedence of all others. 2. The Grand Master of the household. 3. The Sumelier, or Great Chamberlain. 4. The Master of the Horse. 5. The Gentlemen of the bed-chamber, whose number is not fixed. 6. The Grand Falconer and Huntsman. 7. The Great Chancellor, which is now only a title of honour. 8. The Admiral of Castile, which is also a title of honour at present: as is that of, 9. The Great Constable of Castile.

The eldest son of Spain is called Prince of the Asturias, the people of this province having given the

Prince of  
the Astu-  
rias.

CHAP.  
XIX.

the first blow to the empire of the Moors, and on that account esteemed the most honourable in Spain. When he is proclaimed, the Clergy, Nobility, and third Estate are assembled, and take an oath of fidelity to him, promising to obey him as their King, after the death of the reigning Prince. The younger sons of Spain are called Infants, and the Princesses Infanta's; and where there is only one daughter, and no son, she is called Infant, as a male.

Nobility.

The nobility of Spain are generally called *Hidalgo's*, by which we are to understand that they are descended from the ancient Goths; they are either Dukes, Marquisses or Counts. But those stiled *Grandees* are the most honourable, whether they are Dukes, Marquesses, or Counts; for there are many of every degree that are not *Grandees*.

Grandees.

There are also three kinds of *Grandees*, 1. Those who have that honour only for life, 2. Those where the grant is to them and their issue, whether male or female; and in that case if it descends to the female, the husband is a *Grandee* in his wife's right. And, 3. Others are *Grandees* by inheritance from their ancestors for time immemorial. They are also distinguished on other accounts; one class of them are covered before they speak to the King, the second do not put on their hats till after they have spoke, and a third not till they have received their answer. But it must be remembered, that notwithstanding their right to be covered before the King, if one should put on his hat before his Majesty bids him he would make him sensible of his error. The King treats them as Princes in his letters, stiles them Prince or Cousin-German, and gives them the title of Illustrious, and the Queen addresses their wives in the same manner. They have the privilege of being drawn by four horses or mules in Madrid, and their long harnesses are of silk: whereas all other persons have but a pair of horses in their coaches, except when they go into the country, and then every one travels with as many as he pleases. The King and Ambassadors have six horses in their coaches in town. The title given a *Grandee* in speaking to him, or of him, is that of Eminence.

The great Lords entertain a vast number of domesticks in Spain, but keep them all at board-wages, allowing to each nine pence or ten pence a day, or thereabouts. They dress no more meat in the kitchen, than will serve the Lord and Lady of the family and their children, and seldom make entertainments for their friends. The nobility are very numerous, and have large revenues, but they have the worst œconomy in the world, which is the reason that most of them are miserably poor. They spend prodigious sums indeed in the furniture of their houses, and in the purchase of diamonds and precious stones; which has however a great appearance of wealth, and jewels no doubt appear very well on black, their usual habit. But gold-lace and embroidery are forbidden in Spain, on which account they do not make so splendid an appearance in their shews and cavalcades abroad as the French.

No gold  
or silver  
lace worn  
in Spain.Knights of  
the mili-  
tary orders

The Knights of the several military orders are reckoned also among their nobility. They were established in the long wars between the Spaniards and the Moors, as an encouragement to the brave, and had several commanderies annexed to their respective orders, consisting chiefly of towns and territories taken from the Infidels; and formerly these Knights took vows of chastity, &c. as the

Knights of Malta do at this day, but the former have a dispensation from the Pope to marry at present. The three orders are, 1. That of St. JAMES, called the Rich. 2. That of Alcantara, called the Noble. And, 3. That of Calatrava, the Gallant. That of St. JAMES being the richest, obtained its name from thence, and is the most ancient, having been instituted in the twelfth century, and confirmed by Pope ALEXANDER III, anno 1175. The Knights of this order are known by a red cross on the shoulder in the fashion of a sword. There are eighty-seven commanderies belonging to it in Castile and Leon, valued at two hundred and seventy-two thousand ducats per annum.

CHAP.  
XIX.

The order of Alcantara is called the Noble, because those who are admitted into it must prove their nobility for four generations, whereas in the others it is sufficient to prove it for two. The order of Alcantara also wear a red cross, and are possessed of thirty-three commanderies, four priories, and as many alcaides, amounting to fourscore thousand ducats per annum.

The order of Calatrava took the name of the Gallant, from the numbers of young Cavaliers who were admitted into it: they are distinguished by a green cross, and have thirty four commanderies and eight priories, worth an hundred and twenty thousand ducats per annum.

The Masters of these several orders were at one time so rich and powerful, that they would dispute the commands of their Prince; whereupon the masterhips, by the consent of the Pope, were conferred on the King, who still enjoys this privilege, and by that means keeps the Knights within the bounds of their duty. As to the order of the Golden Fleece, this is seldom conferred on any but Princes; and however honourable it may be, yet having no commanderies or revenues belonging to it, is not much coveted. See the State of Germany.

Before I leave this head of the Nobility and *Grandees*, I must observe that it is not universally true, that no subjects but the *Grandees* are covered before the King; for the Cardinals, the Pope's Nuncio's, the Archbishops, the Grand Prior of Castile of the order of Malta; the Generals of the orders of St. DOMINICK and St. FRANCIS, the Ambassadors of Crowned Heads, and the Knights of the Golden Fleece on collar days; the Knights of the three military orders of St. James, Calatrava and Alcantara, when the King assists at their chapters in quality of their Grand Master; the members of the Council-royal of the chamber of Castile, when they go in a body to advise with his Majesty on affairs of state, are all suffered to be covered, though they never pretended to the privileges of *Grandees*, which my author enumerates as follows: they have the precedence of all the other temporal Lords in all assemblies of the states, are allowed to have a sword carried before them, and to sit at chapel on benches on each side of the King; in the palace they have a right of coming into the gallery next to the King's apartment; no *Grandee* can be apprehended for any crime but by the express order of the King, which he scarce ever gives but where the offence is against the state, so that they are in a manner independent of the courts of justice. The eldest son of a *Grandee* has the title of Eminence as well as his father, and the *Grandees* of Spain pretend, that they are equal to the Electors of the Empire, and the Princes of Italy; inso-much that when the Duke d'Escalona served under the

the Elector of Bavaria in Hungary, he never came into any place where the Elector was, because he would not give his Highness any other title but that of Eminence, which belongs to the Grantees: nor would the late Duke of Alva, when he was Ambassador at the court of France, see the Duke of Mantua otherwise than incognito, because he would not give him the title of Highness. As to the Cardinals and Grantees, they give each other the title of Eminence reciprocally.

*Treats of the strength, forces and revenues of the kingdom of Spain and of their coins, foreign trade and navigation.*

#### CHAP. XX.

Strength and forces of Spain.

THERE is no kingdom on the continent better defended by nature than that of Spain, surrounded on three sides by the sea; and on the fourth, towards France, the Pyrenean mountains, accessible but in very few places, and those very strait and difficult, separate it from the rest of Europe; and yet no country has lain more exposed to the insults of its neighbours than this for many years, through the ill conduct of its Princes and Ministers. Since the Peace of Utrecht indeed, the present King having rescued the revenues of the crown out of the hands of a multitude of useless officers and pensioners, restored their military discipline, and augmented his fleet and army, Spain begins to make a figure again in Europe. They have now usually an army of thirty or forty thousand men, regular well-disciplined troops, and thirty men of war of the line, with frigates and galleys to defend their coasts; some make their land-forces a great many more. In the year 1713, the Abbe VÉYRAC, a French writer, gave us the following account of their standing troops, viz. four troops of life-guards, as numerous as those of France; twelve battalions of Spanish and Walloon guards; an hundred and twenty battalions more of foot, and an hundred and thirty squadrons of horse, which if complete, must amount to seventy thousand; and many are of opinion they are not less at this day, which is a force sufficient to repulse any enemy that should attempt to invade them, even France itself, if unassisted by the maritime powers, provided none of their provinces revolt. But what I look upon to be the greatest security they can have on that side, is the treaty of Utrecht, whereby France has renounced all future right she may ever acquire to the territories of Spain, and which all the powers of Europe are engaged, as well in point of interest as by compact, to see strictly performed. To what purpose therefore should France ever be at the expence of carrying a war over the Pyrenees into Spain, when she knows she shall be obliged to relinquish all her conquests again? And as to any invasion by sea, by any other power in Europe, it is highly probable it will never be attempted again: England suffered too much in the last war, to undertake such another enterprize; and I know no other nation that could do it with the same advantage. We undertook it when we had Portugal for our ally, and one half of the kingdom in our interest, and tho' we met with the most surprising success for several years, were not able to fix King CHARLES upon the throne, or maintain our ground there; and if it could not be effected when that crown was so extremely weak, and there were so many concurring circumstances

in our favour, it must be in vain to attempt it now. CHAP. XX. they have put their militia upon so good a foot, and have so formidable a body of veteran troops: nor can we or any other people be supposed to have the same inducements to attempt the conquest of Spain again for many ages. They may be distressed at sea indeed by the English, French or Dutch; but on the other hand, whenever these powers disturb the Spanish trade, they do but wound their own; so that it seems the interest of every Prince and State in Europe to let them enjoy a long uninterrupted peace. And if their Princes of the house of Bourbon can revive their manufactures and foreign commerce, and banish that spirit of pride and indolence, which brought them so very low, they may be as flourishing a people as any in Europe; for no country is better situated for trade, or is capable of producing more valuable fruits or manufactures, than Spain and the Spanish settlements in America. But I defer saying more on this subject till I come to the article of commerce, and proceed to enquire into the publick revenues of the kingdom.

The King's revenues arise from the customs and duties laid on all goods imported and exported; from the further duties laid on all goods brought into Madrid, or carried from one province to another; from the rents of all the houses in Madrid, the first floors of which belong to the King; from a tax laid on the peasants and other people under the degree of nobility, proportionable to their substance, (for the Nobility are not taxed but in extraordinary cases); by a duty on all eatables, being a kind of general excise; from a duty the King raises on the owners of cattle, which are driven annually in winter-time from Leon, Old-Castile, Asturia, and other northern provinces, into Estremadura and New-Castile, when the snow covers the mountains; from the croifade, which is a duty the Pope allows the King of Spain to raise upon those who eat butter, cheese, milk, or eggs in Lent; from a subsidy paid by the clergy, first instituted to maintain the war against the Infidels; from a duty the Clergy pay to be excused from carrying arms against the Infidels; by a revenue that arises to the King as master of the three military orders, and from several taxes, which the Knights of those orders pay to be excused from raising such forces as their tenures oblige them to; from a duty paid by those who cut timber in the forests of Leon, and other places; by the fifth which the King hath of all gold and silver dug out of the mines, and also of copper, lead, iron, quicksilver, pearls, musk, amber, emeralds, and other precious stones; from the indulto, or duty paid to the crown for all treasure and merchandize imported from America, &c. all which, I perceive, does not amount to more than five millions sterling; at least there does not come more into the King's treasury, after all charges deducted, notwithstanding the late regulations of their finances; and great part of this is taken up in the payment of their civil list, and other necessary expences of the court; which seems to be but a very slender revenue, considering the extent and riches of the country, and the treasures imported from the West-Indies. But there are two or three very good reasons why it is no greater, one of which is the small proportion of land that is cultivated, and the neglect of their manufactures; another is, that the Clergy and Nobility, who are possessed of most of the lands, are taxed very low; and a third may be, that the King's revenues still pass thro'

CHAP.  
XX.

through such a multitude of hands who have salaries and perquisites out of them, that though there be a great deal raised, there does not much come into his Exchequer: but still I find the government of Spain, though they were miserably plundered and harassed by the contending parties in the last long war, are not so much in debt as their neighbours; they have not anticipated their revenues for ages to come, as the English have, who so much despise the Spanish economy.

Coins.

*Of the Spanish coins.*

I shall observe in the first place, that in Castile, Navarre, Arragon, Valencia and Catalonia, there are coins peculiar to each province; but there are others that are common to the whole kingdom and the dominions thereto belonging.

There are also in every province real and imaginary coins: the imaginary in Castile are, the Maravedi, the Rial Vellon, the new plate Rial, and the Ducat.

The real are the Ochavo of copper, the Quarto of copper single and double. The silver coins are, the Half Rial of plate, the Whole Rial, and the Double Rial; the Half Piaſtre, the Whole Piaſtre, and another coin, called the Maria, from the name impressed upon it with a cross over it.

The imaginary money of Arragon is the Livre, or pound, which makes sixteen Rials of plate; their real copper coin peculiar to them, is of the value of a silver Denier: and all the gold coins which are current in Castile, are current here also, except the Maria. There is also another silver coin, called an Eighteen, because so many of them go to a Rial of plate.

All the gold and silver coin in Arragon is current in Valencia; but no copper, they have a different Denier.

In Catalonia, they have a silver coin that is neither an Eighteenth nor a Rial of plate. They have also a Denier and Sol peculiar to them; and the coins of Arragon are current in Catalonia.

The imaginary coins in Navarre are the Ochavo, the Cornado, and the Targo. The Ochavo is worth two Maravedis or Mites, the Cornado four, and the Targo eight. They have also a real coin called a Maravedis, which is the only coin peculiar to them; but all the gold and silver coins of Arragon are current here.

In Castile, two Maravedis or Mites make an Ochavo, or farthing; two Ochavos a Quarto, or halfpenny; eight Quartos and a half make a Rial of Vellon, and sixteen Quartos a Rial of plate; fifteen Rials of Vellon and one Ochavo make a Piaſtre, and eight Rials of plate make a Piaſtre; sixty Rials of Vellon make a Piaſtole.

In Arragon, Catalonia, Valencia and Navarre, twenty-four Deniers make a Rial of plate, and one hundred ninety-two a Piaſter.

The Ducat of Vellon is worth eleven Rials of Vellon, and a Ducat of plate worth eleven Rials of plate.

The Maria is valued at twelve Rials of Vellon, and is current only in Castile and the provinces depending upon it.

The Half Piaſtole is worth two Piaſters; the Whole Piaſtole four; the Double Piaſtole eight, and the Quadruple sixteen. The species of gold and silver, from the Half Rial of plate to the Quadruple, are current in all the kingdoms and provinces

in Spain, except the Eighteen, which passes only in Arragon, Valencia, Catalonia and Navarre.

The ancient way of accounting in Castile, was by Maravedis and Quinto's, the Quinto making a million of Maravedis; but this is disused, except in paying the King's household, the civil-list, and the crown-rents.

Among private people they reckon now by Rials and Ducats of Vellon in Castile; and in Arragon, Valencia, Navarre and Catalonia, by Rials and Ducats of plate.

Both the gold and silver species are miserably clipp'd in Spain, inasmuch that it is not safe taking them without weighing.

Of all the Powers of Europe, it is observed, none are possessed of such vast territories, and so well situated for foreign trade as the Spaniards. They have abundance of fine ports upon the Ocean and Mediterranean; and the produce of their soil is as rich and fruitful as that of any other nation if it was cultivated. Their wine and oil are in great reputation, their wool and silk admirably fine, and the Pyrenean mountains furnish wood and iron sufficient to cover the sea with ships; their fruits are large, and of an exquisite taste, and they abound in precious minerals. Their settlements in America furnish them with prodigious quantities of gold and silver, silk, wool, sugar, cochineal, cotton, ambergris, crystal, emeralds, turquoises, balm, amber, bezoar-stones, pearls, sapphires, jasper, Brazil-wood, ostrich-feathers, ebony, and a vast variety of other rich merchandizes. But notwithstanding their soil produces such admirable wine and oil, very little of it is cultivated, as has been frequently hinted on other heads. Their fine wool and silk is unwrought, and they import the manufactures made of it from England, France, Italy, or Holland, except it be that at Segovia they make some black cloth, and at Toledo and Grenada they weave taffetas, damasks and velvets, but none of the best; and the flota's and galeons they send to America are laden with the merchandizes of England, France, Holland, and Genoa, the Spaniards being generally no more than their factors and agents; and accordingly, most of the plate that is brought from thence in return, is exported again and distributed to foreigners. And except the fleets which sail to the New World, and do not amount to more than forty or fifty in any one year, and the Biscayners, who carry on a little trade to the coast of France in their own bottoms, all the wines, fruits, and other produce of Spain, is carried abroad in foreign ships, which occasions their navigation to be so inconsiderable, that it is impossible they should ever be able completely to man twenty men of war of the line with native Spaniards that are sailors: therefore if they have never so much wood and materials proper for setting out large fleets, and could cover the ocean with ships, as my author has it, they can never be very powerful at sea, unless they improve their former commerce, and export their own merchandize; an English or Dutch Squadron well-manned, will still be a match for their grand fleet.

As to the religion and ecclesiastical government of this kingdom, these will be considered in the State of Portugal, which has a very near resemblance to that of Spain, having been a Spanish province in the last century, and almost inclosed in it.

CHAP.  
XX.

# THE PRESENT STATE OF PORTUGAL.

## CHAP. I.

*Treats of the situation and extent of the kingdom of Portugal; of it's name, original inhabitants, air, mountains, rivers, and produce of the country.*

CHAP. I.  
Situation and extent

THE kingdom of Portugal is bounded by the Spanish province of Galicia on the north; by the provinces of Leon, Estremadura and Andalusia, on the east; and by the Atlantick Ocean on the south and west: extending from the thirty-seventh to the forty-second degree of north-latitude, and lying between the seventh and tenth degrees of longitude, reckoning from the meridian of London to the westward; being about three hundred miles in length from north to south, and generally about an hundred miles in breadth from east to west. Both the longitude and latitude may something exceed the bounds I have prescribed, tho' but a very few minutes.

The ancient and modern name.

The ancient name of Portugal was Lusitania, which BOCHART is of opinion came from the Phœnician word Lus, an almond, with which this country abounds, and Tania, the Greek word for a country. Others derive it from Lysus, the son of Bacchus, and will have Lusitania to signify *The Country of Wine*, which the sons of Bacchus in this island, that annually drink several hogheads of the wine of this country, will probably come into. The modern name of Portugal it is supposed to have received from the town of Porto, situated at the mouth of the river Duero; which place was formerly called *Portus Calis*: others hold, that this town being the port which the Gauls frequented anciently, was from thence called *Portus Gallorum*, and communicated it's name to the whole country. But I shall not detain the reader any longer with these surmises; only observe, that the bounds of ancient Lusitania were very different from those of modern Portugal; for Lusitania was bounded by the river Duero on the north, and the Guadiana divided it from Bætica and Hispania Tarraconensis on the east and south; so that Lusitania wanted all the province of Entreminho Duero on the north; and on the other hand it included most part of the province of Estremadura in Spain, and part of Castile and Leon on the south and east.

The ancient inhabitants.

The ancient inhabitants of this country were the Turdetani, whose seats were between the river Guadiana and Cape St. Vincent, olim *Pro-*

*montorium Sacrum*. To the northward of these, on the banks of the Tagus, dwelt the Barbarini and the Celtæ; and to the northward of the Tagus, as far as the Duero, dwelt the Turduli. The Pefures lay along the mountain called Sierra d'Estrella, and the Bracari and Graii between the rivers Duero and Minho. The Carthaginians and Romans successively possessed this country, the latter being expelled by the Suevi, a northern people, who enjoyed it not long, being driven from thence by the Goths, who possessed this with the rest of Spain till the Moors made a conquest of the whole country; from whom it was recovered again by the Christians of Gothick extraction, as will appear hereafter in the History of this country.

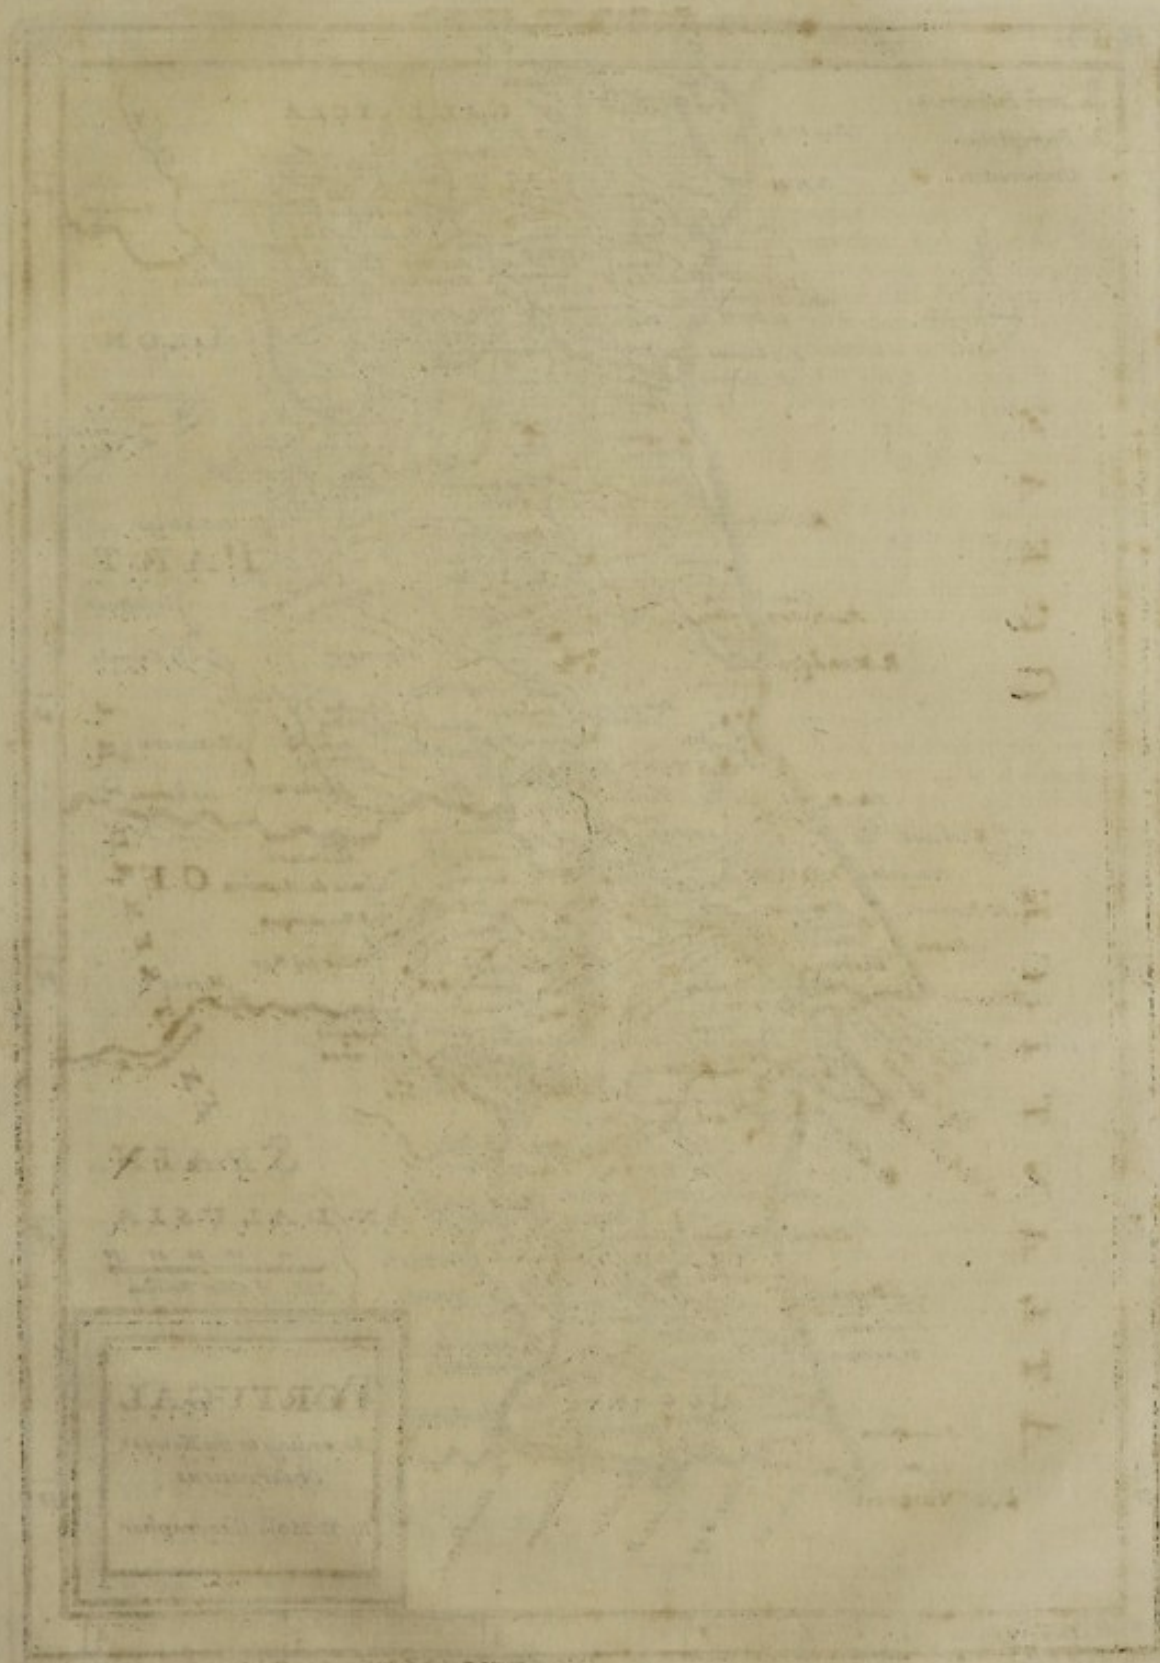

CHAP. I.  
The air.

Portugal lying along the western or Atlantick Ocean, is refreshed with cool breezes from the sea almost every afternoon, which render the heats of summer more tolerable here than in the inland provinces of Spain.

Moun-  
tains.

The country is full of mountains, the principal whereof are, 1. The Sierra d'Estrella, anciently *Mons Herminius*, which lies between the provinces of Beira and Tralos Montes, extending itself north and south: on the top whereof are two large lakes, one of them said to be unfathomable, and supposed to have a communication with the sea, because wrecks of ships have been found in it, and that it is always rough and stormy when the neighbouring ocean is so. 2. Sierra de Marvao, or Herminius Minor, in the province of Alentejo, stretching as far as the town of Marvao, from whence it receives it's name. 3. The rocky mountain of Sintra, which the English mariners call the Rock of Lisbon, being on a point of land about five leagues to the westward of that city, and anciently called *Promontorium Luce*; upon which is a monastery hewn out of the solid rock. 4. Sierra de Arabida, olim *Promontorium Barbaricum*, situated on another point of land to the southward of the mouth of the Taio; on the top of which also stands a monastery. 5. Monte Junto, or *Mons Tagrus*, contiguous to the rock of Lisbon. 6. Sierra de Algarva, olim *Cicus*, which separates that province from the rest of Portugal. And, 7. Mount

CHAP. 7. Mount Gerve, which separates Portugal from Galicia.

Produce  
of the soil.

This country does not only consist, great part of it, of mountains, but some of the barrenest mountains on that continent. Towards the bottom of them indeed they are pretty well planted with vines, which afford abundance of good wine. The soil produces also great plenty of olives; but the oil is not so good as in Spain. Of oranges and lemons also nature is very bountiful here; and their sweet oranges, which were brought from China hither, are some of the best in Europe; but their sour oranges are not comparable to those of Seville. Their plantations of mulberries feed abundance of silk-worms. Of wheat and barley they have not enough in the best years for the subsistence of the natives; and when they are not supplied from the neighbouring Spanish provinces, the English and Dutch import great quantities of grain from the north. As to the peasants and country people, they live miserably upon maize, or Indian corn, a very coarse kind of food. Nor have they much good pasture; the best is towards the north, and the flesh of their cattle is generally lean and dry. However, as bad as it is, there is such a scarcity of it, that the common people eat little flesh. As to almonds, raisins, figs, chestnuts, and some other fruits, we meet with great plenty here, but they are not reckoned so good as the fruits in the southern provinces of Spain. Among the products of their soil we may also reckon salt, for this is extracted from the sea-water let into pans on the coast, especially in a bay near Setival, or Saint Ubes, as the English sailors call it, from whence vast quantities of salt are exported to the north, and to the American plantations. Of sea and river fish also the Portuguese have good store, which brings me to give some description of their rivers, which are, 1. The Minho. 2. The Duero. 3. The Tagus. 4. The Guadiana. 5. The Mondego. 6. The Lima. 7. The Sadao. 8. The Vouga. 9. The Leza. 10. The Ave. 11. The Cavado. 12. The Zezere. 13. The Alba. 14. The Coa. 15. The Laura. 16. The Canha. And, 17. The Caya.

Rivers.

As to the four first, they have been described among the Spanish rivers; and therefore I shall take no notice of them till their entrance into this kingdom.

The Minho, the northernmost river of them, comes from Galicia, and taking its course south-west, divides Galicia from Portugal, falling into the ocean near Caminha.

The Duero comes from the province of Leon, and runs almost directly west, till it falls into the ocean a little below Porto.

The Tagus, or Taio, comes from the Spanish province of Estremadura, and running almost south-west, washes the walls of Lisbon, falling into the ocean ten or twelve miles below that city.

The river Guadiana also comes from Estremadura, and entering Portugal between Badajos and Elvas, takes its course almost full south, discharging itself into the ocean a little below Syamonte.

The Lima has its source in Galicia, and taking its course south-west, falls into the sea near Viana.

The Cavado runs parallel to the Lima, and is but a little distance from it.

The Vouga rises in the province of Beira, and running almost full west, discharges itself into the ocean below Aveira.

The Mondego rises also in the province of Beira,

and taking its course south-west, visits the city of Coimbra, and about ten leagues beyond falls into the ocean.

The Cadoa, or Sadao, rises on the confines of Algarva, and running first due north, afterwards turns about to the west, and falls into a great bay of the western ocean near Setival or St. Ubes.

The Cancha, or Chanca, runs to the southward on the confines of Spain and Portugal, being a boundary between those kingdoms for several leagues, and afterwards falls into the Guadiana.

The river Caya also runs from north to south for some leagues on the confines of both kingdoms, and falls into the Guadiana near Badajos.

The Zezere rises in the province of Beira, and running to the south-west, falls into the Tagus near Tancos. The rest of their rivers will be taken notice of in the description of their several provinces.

The principal hot baths in this country are those called Caldas, fifteen leagues north of Lisbon; and those of Alvor in Algarva: but though these waters are in some esteem, the accommodations for people of condition are very mean.

As to minerals, their mountains, it is said, afford mines of gold and silver; but I do not find there have been any opened of the former for many years. They import gold from their settlements on the coasts of Africa and Brazil: but travellers relate that there is a silver mine at Guacaldane, which produces annually a good quantity of that metal. There are also mines of lead, iron, and allum; quarries of jasper and other fine marble; with crystal, rubies, emeralds, and other precious stones.

Either their wool, or those that manufacture it, are in fault; for they make only some coarse cloth, worn by the meanest of the people; others wear English cloth or stuffs; but black bays more than any other kind: nor is their manufacture the best.

The horses in Portugal are brisk lively animals, as they are also in Spain; but of a slight make; and mules being much surer footed, are more used both for carriage and draught. Some black cattle and flocks of sheep are seen here, but they do not abound, and their flesh is generally lean and dry. Their hogs and kids are much the best food. There is scarce any country where they make more marmalade, both white and red, with abundance of other sweetmeats; and they deal very much in perfumed waters.

## CHAP. II.

*Treats of the persons and habits of the Portuguese; their genius and temper, diet, diversions and way of travelling.*

THERE is so great a resemblance between the natives of Spain and Portugal, the latter having been long a Province of the former, that I was once determined to have omitted this chapter entirely: but as some things may have escaped me in the description of Spain, and there are writers who insist, that a Spaniard would look upon himself to be disgraced by the comparison, I shall enquire farther into their respective characters.

And first, it must be admitted, that there are men in some provinces of Spain more robust, of a larger size, and who would make much better soldiers, than those of Portugal; I shall instance only the natives of Catalonia, a regiment of whose troops

CHAP. I.

II.

Persons and habits, genius and temper.

CHAP.  
II.

troops would certainly be preferred to one of Portuguese: and 'tis become almost a proverb, that a Spaniard stripped of all his good qualities makes a perfect Portuguese. But this surely was never said seriously. EMANUEL DE FARCA, one of their own writers, in describing his countrymen, says, "The Nobility think themselves Gods, and require a sort of adoration; the Gentry aspire to equal them, and the common people disdain to be thought inferior to either." But he might have said much the same possibly of the Spaniards of quality, who, as well as the Portuguese, scarce ever suffer their servants to approach them but on the knee.

As to the Portuguese ladies, one who has lately visited that country assures us, That their complexions are pretty much upon the olive; their features delicate, but the visage thin; their hair is black and shining, and their eyes sparkling; nor do they want a good share of wit. That they are for the most part generous, charitable and modest; and that their ceasing to bear children sooner than the women of other nations is a vulgar error, as well as the story of their wearing spectacles universally; that weak eyes indeed is a pretty common infirmity there, which is the true reason that some young people wear them.

Having omitted the account we meet with in the Lady's Travels of the dress of a person of quality, I shall insert it here: She says, she went to see a lady of distinction, and found her in her bed-chamber, with her head bare, without any coif or other head-dress; her hair was parted in the middle of the forehead, and tied with a ribbon; that her shift was of very fine linen, and as wide as a surplice, the sleeves large in proportion, buttoned at the wrists with diamond buttons, the neck and wristbands flowered with silk: That several small pillows trimmed with ribbons and broad lace lay upon the bed; that the bedstead was brass gilt, and the head adorned with four rows of balusters of the same metal. That the first thing she did after she was up, was to have recourse to the red pot, laying on the paint very thick, not only on her cheeks, chin, nose, forehead, and the edges of her ears, but on the inside of her hands and shoulders; and this she did every night and morning constantly; afterwards her woman smocked her with perfumes, and then sprinkled orange-flower-water upon her: and this was agreeable to the custom of Portugal, to which kingdom the lady belonged.

The Portuguese, as well as the Spanish ladies, are generally little meagre creatures, and yet wear hoops and a multitude of gowns one over another, of rich stuffs trimmed with gold and silver lace; but the uppermost is of coarse black stuff, and so long that it trails upon the ground. Their shoes are of black Spanish leather, strait as a glove, and without heels, and they seem to slide along rather than walk within doors. When they go abroad they have pattens, being a kind of silk sandals, fastened to gold rings or plates, which raise them half a foot from the ground, and make them walk very awkwardly; but in the house they neither wear hoops nor pattens. Their stays, in which they have but little bone, are high before, but scarce reach half way up their backs behind, and consequently would expose their tawny skins, if their shoulders were not covered with paint. Their hands as well as their feet are small and well proportioned, and their wide sleeves with broad ruffles to them buttoned at the wrists, make their hands

appear the less. People of quality wear very fine linen, and as it is scarce and dear, the meaner sort wear none; they will rather go without than wear coarse linen. The ladies about their necks wear a broad laced tucker, and instead of a girdle tie a string of medals or reliques, or perhaps the cord of some religious order, about their waists, the ends whereof reach down to the ground, with several knots in them, and to each knot a diamond or other precious stone is fastened; and the Spanish and Portuguese ladies have generally several sets of jewels. Cross the top of their stays they have a kind of breast-plate of diamonds, from whence there hangs a chain of pearl, or ten or twelve little knots of diamonds. They have also bracelets, rings and pendants in abundance, but no necklaces. Their bodies are almost covered with *Agnus Dei's*, and other little images; and in their hair they have a variety of precious stones, with which they form artificial butterflies, or other insects. Sometimes they adorn their hair with ribbons and feathers of various colours, but never have any head-dress. When they go abroad indeed they throw a veil over all; and women who are advanced in years wear a fine caul or coif over their hair; but the young ladies wear neither cap nor coif, night or day.

The greatest difference I observe in the dress of the Spanish and Portuguese gentlemen, is, that the Spaniards wear their breeches very strait, while the Portuguese have them large and full like trousers. The Portuguese also upon solemn occasions, as at the marriage of their Princes and Festivals, are permitted to wear lace and embroidery, which are prohibited to the Spaniards. And this was taken great notice of at the solemnization of the late double marriages between Spain and Portugal; the Portuguese made a most glittering shew, while the Spaniards, who were clothed in plain black, appeared a little upon the dismal; the fine horses and jewels of the latter were the only things taken notice of by the spectators. Generally both Spaniards and Portuguese wear black, and the Portuguese courtiers frequently follow the French fashions of late.

As to their houses and furniture, they have usually a great many rooms on a floor, rather long than broad; the floors and ceilings are a plain white plaister, that looks like polished marble. They change both their furniture and apartments according to the season of the year; upon the lower floors of their summer-rooms they throw several pails of water every morning, which will dry up in half an hour, and leave a refreshing coolness afterwards. Upon these floors they spread fine mats, and cover the walls with the same chair-high; above these are hung pictures and looking-glasses, and all round the rooms of the ladies apartments are cushions laid upon the mats, of silk or velvet, frequently brocaded, which they sit cross-legged upon, (but the gentlemen in theirs have chairs.) Between these are fine tables and cabinets, and at certain distances silver pots or boxes with orange or jessamine-trees in them, and they have frames of straw-work in the windows to keep out the scorching sun. In the upper apartments, their hangings, cabinets, paintings, looking-glasses and plate are exceeding rich; and the floors are covered frequently with Turkey carpets. In winter their beds and hangings are velvet, trimmed with gold or silver lace: in summer they use no curtains, or only such as are made of coloured gauze, to keep out the gnats. In winter they use

CHAP.  
II.

CHAP. II. the upper floors of the house, even to the fourth story, and in summer the ground or first floors.

Copper, tin, or pewter dishes or vessels are never seen in the houses of the quality; they use only silver or earthen ware: some of the Spanish Grandees have a thousand or twelve hundred dozen of silver plates, and three or four hundred dishes of the same metal in their houses, and other utensils proportionable; among which are reckoned a great number of silver ladders or steps, with which they mount up to their rich cabinets and cupboards. Most of these vessels and utensils are brought ready made from their American settlements, and pay no duties on importation. They are generally ill-shaped clumsy things, such as an English or French silver-smith would be ashamed of.

Bad economy.

Amidst all this wealth the bad economy of the Spanish and Portuguese Grandees and Nobility is scarce credible, and reduces them to a necessitous condition, even while they make this glittering appearance. Most of them pass away their lives in or near the capital city of each kingdom, without so much as ever viewing their estates, unless they happen to be disgraced at court; they leave every thing to their steward, and think it beneath them to inspect his accounts. Their tradesmen, drapers, mercers, bakers, butchers, pastry-cooks, poulterers, deliver in their goods upon trust, and set down their own prices, being pretty well assured their bills will not undergo a very strict examination; and all the overplus of the eatables is carried off by the servants (who are at board-wages) every night.

It is much beneath a lady or gentleman of quality to endeavour to beat down the price of a piece of silk or goods, or even to take change of a shop-keeper out of a piece of gold. And as the tradesman frequently gives seven or eight years credit, he sets down double the price the goods might be bought for with ready money. They seldom lose their debts however, for the Spanish and Portuguese quality are men of such honour, that they make no difficulty in assigning part of their rents for the payment of their debts, when they are pressed for money by their tradesmen.

Servants and slaves.

The houses of persons of quality are crowded with domesticks, and they are frequently obliged to hire other houses on purpose to lodge them. Their servants wages are very low, eight pence or ten pence a day for diet, clothes, and every thing; and a gentleman belonging to a person of quality has not above fifteen crowns a month, though he is obliged to dress in velvet in winter and silk in summer. And indeed they lay out most part of their salaries in clothes, living upon onions, peas, beans, and other pulse, which makes them so sharp set that they are ready to snatch the meat out of the dishes as it goes from table; and both gentlemen and ladies women, as well as the inferior servants, eat at cooks shops upon such sort of food chiefly as has been mentioned already.

One reason of their having such numbers of servants, besides the small wages they give, is a custom among the nobility and gentry of keeping all such in their pay as have served their ancestors; insomuch that some of the Grandees shall have four or five hundred in their houses of both sexes; the greatest part whereof are purely for shew, and being lodged in adjacent houses, only appear on days of ceremony.

But notwithstanding they retain so many, they are limited to a very small number when they appear abroad; three or four footmen and a groom,

VOL. II.

perhaps, besides the gentlemen and pages, with the lady's women, who have coaches to themselves. The gentlemen wear black velvet in winter, with long black cloth cloaks that trail upon the ground, and in summer black damask, or other silk, and cloaks of a light black stuff; and the women endeavour to imitate their ladies.

Besides ordinary servants, the quality retain a-bundance of dwarfs of both sexes, strange misshapen creatures, their heads as big as their bodies, but dressed up as fine as possible. They have also a pretty many slaves, both Turks and Moors, which are valued at four or five hundred crowns a-piece. Over these they had formerly the power of life and death, but the government will not suffer them to kill their slaves at present: They use them however very cruelly still upon some occasions; I have known a woman order a pretty she-slave to be tied up by the hands by the other slaves and whipped almost to death, because her master has looked kindly at her.

Where two slaves marry, their children are slaves; but if a freeman marries a slave, the children are free. These slaves are the best servants they have; for the other will stand upon terms, insisting that they have as good blood in their veins as their masters. The very beggars rather demand than ask an alms, alledging they are descended from Old Christians or the ancient Gothick nobility, and must be dismissed with a compliment if you give them no money, and then they go away contentedly.

The food of the Portuguese is much the same Food. with that of the Spaniards, and they are no less sober and abstemious.

The bull-fights, night-rambles, serenades, plays, Diversions visits, and other diversions common to Spain and Portugal, have been taken notice of already. I shall here therefore only mention their pompous processions on *Corpus Christi* day, and other great holidays, designed equally for devotion and diversion, for they frequently conclude with some pious tragedy or comedy; wretched performances, that can give but little entertainment to any but an ignorant bigotted Spaniard or Portuguese. The lady in her travels tells us, she was at one of them, where they represented an assembly of the Knights of St. Iago, or St. James, where our Saviour was introduced petitioning them to be admitted into their order: Some of the Knights agreed to it; while others alledged, that our Saviour being born of ignoble parents, could not be of that order, without breaking into the fundamental rules of their institution. And it was at length carried in the negative, to refuse him: but to compromise matters, and do honour to Christ, they hit upon this expedient, namely, to make Christ the founder of another order of Knights: And there is actually such an order, called *De Christo*, in Portugal at this day.

The way of travelling here is much the same as Travel. in Spain, except it be that they have not so many coaches, and travel more by water than the Spaniards do; their country lying along the sea-coasts, and the mouths of the great rivers which rise in Spain running through it. The mule or the litter are generally made use of on a journey; their horses, which are sprightly and well made, may serve on short visits, to prance at a procession, a cavalcade, or before their mistresses windows, but the mules are stronger and surer footed, and consequently fittest to climb their mountains. Their pace indeed is but slow; and as to strangers, who

18 E

are

are forced to have a guide with them that travels on foot, they cannot go far in a day.

## C H A P. III.

*Shows the several provinces Portugal is divided into; containing a particular description of that of Estremadura, of Lisbon the capital, and other great towns in it; and of their palaces, churches, public buildings, &c.*

C H A P.  
III.  
Provinces.Estrema-  
dura.Chief  
towns.

Lisbon.

The an-  
cient name  
of it.

**P**ORTUGAL is usually divided into six provinces, viz. Estremadura, Beira, Entre-Minho-Duero, Tralos Montes, Alentejo, and Algarva.

The province of Estremadura (in Portugal) is bounded by the river Mondego on the north, which separates it from Beira; by the same province of Beira and that of Alentejo towards the east; by another part of Alentejo on the south; and by the Ocean on the west: extending about an hundred English miles in length from north to south, and five and forty in breadth from east to west.

Besides the river Tagus which runs from the north-east to the south-west thro' this province, it is watered also by the river Zezere, already described; by the Naboan, which rising to the northward, takes it's course southerly, and having passed by Tomar, afterwards falls into the Zezere; by the Soro, the Cadoan, and abundance of other rivers of less note.

This province being so advantageously situated on the ocean and the river Tagus, and having the capital city, which is not only the seat of the government, but one of the finest ports in Europe, within it's limits, is better peopled, and consequently better cultivated, than any other part of Portugal. The chief towns and places whereof are, 1. Lisbon, the metropolis; in the neighbourhood whereof are Alcantara, Bellem, St. Julian, and Cascais, which require a description from the relation they have to that capital. 2. Cintra. 3. Almada. 4. Setubal. 5. Salvaterra. 6. Mugen. 7. Tomar. 8. Pedragan. 9. Leiria. 10. Alcobaca. 11. Peniches. 12. The Isles of Borlings, or Berlinges. And, 13. Santeren.

Lisbon the capital, an Archbishoprick and University, is situated on the north shore of the Tagus, from whence it rises with an easy ascent, comprehending in it seven little hills, and stretching itself along the banks of the river; is of a very irregular figure, broadest in the middle, and growing narrower towards the one and the other extreme. It lies in thirty-eight degrees forty-five minutes north latitude, nine degrees and a half to the westward of London, nine or ten miles to the eastward of the ocean, and near an hundred miles west of the frontiers of Spain.

Olyssippo, the ancient name of this city, is supposed by some, who are fond of making the Greeks or Trojans the founders of all the great towns in Europe, to be derived from ULYSSES, whom they have assigned for it's founder. But it does not appear however, to have been a place of any great fame or consequence till these later ages. While the Romans were sovereigns of Lusitania, Emerita, now Merida, in Spain, was the capital of this country: The Suevian Kings made Oporto the seat of their government; and the Gothick Monarchs never resided in Portugal while they had the dominion of Spain. There were several other towns in this province, which was then a part of Spain, of much greater note. It was indeed made

a Roman colony, and had then the name of *Felicitas Julia* conferred upon it, as appears by the following inscription found here, (viz.) IMP. CAES. M. IVLIO PHILIPPO FEL. AVG. PONTIF. MAX. TRIB. POT. II. P. P. CONS. III. FEL. IVL. OLISIPO. But at that time it comprehended but one of the hills it now stands upon.

They reckon it about two leagues from the hill of St. Vincent, which is at the east end of the city to the hill of St. Katherine on the west; but the breadth is very unequal, the town forming a kind of crescent on the river. Upon the hill of St. George, which is the highest, and commands all the town, stands the citadel, separated from the city by a wall, and looks like a town itself. The city is surrounded only by a single wall, and seventy-seven antique towers after the Gothick model, of no great strength at present: There are twenty-six gates on that side next the river, and seventeen on the land side. It is computed there are in Lisbon thirty thousand houses, and about two hundred thousand inhabitants; and consequently it is larger than any city in England or France, except London and Paris.

The streets are very narrow and steep; people are perpetually ascending or descending some of the seven hills, which makes it inconvenient to walk in, as well as for coaches, and occasions litters to be used pretty much. Those streets which have a descent, and are washed clean by the rain, are much the sweetest; for the rest are so full of all manner of filth thrown out of the houses, that it is not easy to pass them. The citizens houses are generally old ill-contrived buildings, and the lattice-windows are no great ornament to them. Those of the nobility indeed are fair handsome structures, built of hewn stone, and with their yards and gardens belonging to them, take up a great deal of ground, but few of them have courts before them.

There are in it; besides the cathedral, forty parish-churches, and about as many monasteries of both sexes, which make a tolerable appearance. The finest square in the town is that before the royal palace, which forms one side of it; another side of it runs along the river, and is supported by a wall, and on the opposite side is a range of fine buildings. This place, in the phrase of the French, is altogether charming; for here are the most elegant buildings in town, and here you continually see large fleets at anchor in the river, besides great numbers of ships perpetually under sail, either coming in or going out of the harbour: here they celebrate their bull-fights, and here they more barbarously bait such unfortunate Protestants as fall into their hands; the people are taught to shout and huzza at the roasting and torturing an innocent defenceless man, as if some signal victory were gained. Near to this is another great square on the bank of the river, where the principal market of the city is held; but the largest in the town is that called the Rucio, where the several hills about it form a kind of amphitheatre, and it is adorned with several magnificent houses of the nobility. Here a fair is held every week.

Among their buildings that of the King's palace is the most remarkable, which lies upon the river, and is one of the first things that presents itself to a foreigner on his arrival; it makes a splendid appearance, and was designed for a square, but only one side of it is built; some other buildings have been added by different Princes, so

CHAP. III. that it is not very regular. There is a fine prospect however from it of the port, the ocean, and the country on the opposite side of the river.

The apartments are grand, very commodious, and richly furnished in winter; but in summer they take down the hangings and curtains, and there appears nothing but bare walls, or pictures on them. There are two galleries in it about an hundred paces in length, in the first and second stories, and balconies in the windows. In the third story is the royal library, containing a great number of valuable books in presses. Adjoining to the palace is a square court surrounded with a piazza, where the merchants meet and expose their goods to sale. Within the palace are several large rooms, where the Cortes or States assemble, the Council of War, and the sovereign Courts of Justice. The King's chapel is an elegant building, richly adorned, and shining with gold and azure.

Churches. The churches in Lisbon, as in other Roman Catholick cities, are generally noble edifices, and richly adorned; but the cathedral, dedicated to St. VINCENT, that stands upon one of the seven hills, to which it communicates its name, is an old Gothick structure, which has very little to recommend it but the richness of some of its chapels, with its sacristy or treasury, where the vessels and ornaments belonging to the church are kept. The finest and most magnificent of their churches is that of the Dominicans, in which are three chapels, shining with gold from the pavement to the roof. In one is the genealogy of our Saviour in bas-relief, and in another that of St. DOMINICK; in the third is a fine crucifix, with the wound in the side open, and here the holy sacrament is continually exposed. This chapel is illuminated with wax-tapers, and a vast number of silver lamps; and over the portal we see the names of all those who have been burnt by the Inquisition. The convent is suitable to the magnificence of the church, and near it is the palace of the Inquisition, to which the Portuguese give the name of *Santa Casa*, or the Holy House; before which there is a fine fountain adorned with marble statues throwing out water on every side.

In the church of the Augustins, called our Lady of Grace, is a cross of gold adorned with precious stones, valued at an hundred thousand crowns, which is carried in procession at their grand festivals.

The Merciful Society, as it is called, have also a magnificent church, but it is much more celebrated for the humanity and benevolence of its members. It is composed of persons of the highest rank in the kingdom, the King and Princes of the blood are frequently members of it; and he who happens to be Steward, which is esteemed a post of great honour, cannot spend less than a hundred thousand livres the year he serves, if he would come off with applause. They apply themselves to relieve all people in distress, particularly those who are ashamed to beg, widows and orphans, whom they protect against their injurious neighbours. They maintain a great number of poor virgins, give them portions, and marry them as they have opportunity; and in short, says my author, suffer none to want but such as have abandoned themselves to vice. They relieve prisoners, and assist them in compounding for their liberty; and when any are condemned to death, they attend and comfort them in their last moments.

CHAP. III. In the church dedicated to the Mother of God, every Holy Thursday they shew the holy handkerchief used by our Saviour at his crucifixion; which the reader has met with in several other Roman Catholick churches, in the course of this history.

Another church is much admired, founded by the Queen of JOHN V, which is wainscotted with ebony from the pavement to the roof, and supported by pillars of the same wood; and here that Queen was interred, as she desired.

The hospital of All Saints is one of the largest and best endowed in Europe, where they entertain people of every nation and religion without exception; the sick, the lame, madmen, and foundling children; and when they are fit to go out, give them a small sum to subsist on till they are otherwise provided for.

The Jesuits have four fine convents here, being in great esteem in Portugal, where they are styled Apostles.

If we take a view of Lisbon from the river, or from the southern shore, it affords an admirable prospect; for as the town is built in the form of a crescent, and the churches, palaces, convents, and other buildings rise gradually from the river one above another, we command the whole city at once. On the other hand, if we behold the neighbouring country from the town, we have the most charming landscape imaginable; a fine large river, a league in breadth just beneath us, in which we see a forest of ships of all sizes; beyond it a beautiful country, interspersed with towns and villages, and a little farther the ocean.

The harbour of Lisbon, if we extend it from St. Benito above it, to the bay of Calcais at the mouth of the river, is four or five leagues long; but if we only take in that part of it about the town, where ships ride in the greatest security from storms and enemies, in eighteen fathom water, it will contain several thousand sail: the entry of it indeed is hazardous without a pilot; but on the other hand, ships ride securely when they are in it, being covered by the hills on which the city stands on one side, and by the opposite banks, which are very high on the other. When ships arrive they are obliged to salute the fort of Bellem, or Bethleem, two leagues below Lisbon; but they are prohibited to fire a gun when they come up as high as the town, on any pretence whatever.

It is almost impertinent to observe, what every one knows, that Lisbon is one of the greatest towns of trade in Europe, though not the greatest, as a French writer insinuates; for I believe it will be admitted, that London and Amsterdam have either of them a more extensive commerce. We see indeed merchants of all nations and complexions in this city; and I question whether the English do not send as many ships hither as to any one port in Europe, where they exchange their woollen manufactures, lead, and tin, for wine and fruit, and receive good returns in treasure. The King, with the Grandees, Nobility, and Courts of Justice residing at Lisbon, contribute to its flourishing condition, as well as its foreign trade. And as this province is pretty well cultivated, and has frequent opportunities of importing corn and cattle by sea and land, and the rivers and sea-coasts afford them plenty of fish and fowl, provisions are not often scarce, at least they are much more plentiful here than in the more inland provinces. The air is more temperate than in the Spanish

CHAP.  
III.

Spanish provinces under the same parallel; and their water is excellent, inasmuch that their people live to a great age, and not so subject to infirmities as in some other countries. And another great happiness is, that it is much safer walking the streets in the night-time, than in many other great towns in Europe: a man is in much greater danger of having his clothes spoiled by a shower of close-stools, than of being robbed or murdered.

Alcantara  
palace.

The palace and village of Alcantara lies on the river Tagus, about a mile to the westward of Lisbon. The palace is a magnificent structure, but chiefly admired for its beautiful gardens, and the delicious country in which it stands; the grotto's, fountains, and cascades, the brooks and canals, whose banks are covered with flowers, orange and citron-trees, perfume the very air, and make it a most agreeable retirement in the summer.

Bellem.

Bellem, or Bethlehem, is the name of a town, a monastery, and a fort. The monastery was first built, and communicated its name to the rest. King EMANUEL founded it in the beginning of the sixteenth century, and dedicated it to the Blessed Virgin, styling it, *The Birth of our Lord*, in memory whereof it was called Bethlehem, which the Portuguese write and pronounce Bellem or Belin. Both the cloyster and the church are noble piles of building, and plainly shew they are of royal foundation: the church is lined with jasper and the finest marbles from top to bottom; and here are the tombs of several of their Kings and Princes, being exquisite pieces of workmanship. The church and cloyster are delightfully situated on the bank of the river, and over-against them in the middle of the channel is a great square fort built upon piles, called, The Fort of Bellem, which all ships are obliged to salute, and shew their bills of discharge from the custom-house, &c. and to give an account of themselves on their arrival from abroad. This is not only a garison for soldiers, but the upper stories of it serve to confine prisoners of state.

Cascas.

Two leagues below Bellem lies the village of Cascas, on the northern shore, before which is a road that ships frequently come to an anchor in; but it is not very secure riding here, on account of the sands about it. There is a small fort in the place, and it is the capital of a marquissate.

A little above Cascas the Tagus discharges itself into the ocean by a very wide opening, encumbered pretty much with rocks and sands, called the Cackoppy, three quarters of a league in length, and half a league in breadth, that divide the mouth of the river into two channels, through which all ships enter that are bound for Lisbon, by the assistance of pilots that come off from the shore. Each of these channels is defended by a fort, without whose leave no ship can pass. The northern channel is the narrowest and most difficult, which is defended by Fort St. Julien, or Giam, built upon a rock, and furnished with forty pieces of cannon, and a garison of three hundred men.

St. Julien.

Fort Bou-  
gio.

The great channel lies to the southward, being defended by Fort St. Laurence, or the Tower of Bougio, as the Portuguese call it, and is erected on piles on a shoal of sand in the middle of the sea, being of a round form, and the works faced with free stone.

The town  
and moun-  
tain of Cin-  
tra, or the  
Moon,  
with the  
rock of  
Lisbon.

Beyond Cascas, on the ocean, near the mouth of the Tagus, is a promontory or cape which

the ancients call *Promontorium Lunæ*, or *Olyssipponense*, and the modern Portuguese, *Cabo de Rocca*, which is the same the English mariners call the Rock of Lisbon. This promontory is the spur or branch of an high mountain, which sailors make at a great distance, formerly called the mountain of the Moon, and at this day Mount Cintra. On the side of this mountain, behind Cascas, is a little town of the same name, about seven leagues from Lisbon. On the top of the mountain is a fine monastery, the friars whereof are of the order of St. JEROM, dedicated *a nostra Senhora da Rocca*, or to our Lady of the Rock, with a church, to which people resort and pay a nine days devotion. Both the church and cloyster, with an inn that stands near it for the accommodation of the devout, are hewn out of the solid rock. From hence there is one of the finest prospects in the world; on one side is the ocean, and on a second the river Tagus, and on the other two a fine country well planted and manured. At the foot of the mountain on the promontory, are the ruins of an ancient temple, dedicated to the sun and moon; on one of the pillars whereof the following inscription is still visible, viz. SOLI AETERNO LVNAE PRO AETERNITATE IMPERII ET SALUTE IMP. CAL. . . . SEPTIMII SEVERI ET IMP. AVG. CAES. M. AVRELI ANTONINI AVG. PII

CHAP.  
III.

CAES. ET IVLIAE AVG. MARTIS. CAES. DRVSI VALERIVS CAELIANVS VIATI VSI AVGVSTORVM, &c.

On the side of the mountain which looks towards the ocean is the little village of Collares, where there is an ancient grotto or cave even with the water, inhabited, as was given out of old, by Tritons and Mermaids. Between the village of Collares and the mountain is one of the most delicious vales in the world, about a league in length, which furnishes the markets of Lisbon with corn, wine, fruits, and flowers.

On the south side of the river, over-against Almada, Lisbon, stands the castle of Almada, situated on a high rock in the little bay of Couda, taking its name from a town adjoining to it. Here is a medicinal spring, whose waters are good for the gravel. A little further at the bottom of the bay lies the little village of Couda; and beyond, towards the east, the town of Aldea Gallega, on the banks of the Tagus, through which lies the common road from Seville to Lisbon.

Setubal, vulgarly called St. Ubes, is a modern town, built out of the ruins of the ancient *Ceto* or *St. Ubes*, which stood a little to the westward, and had in it a temple dedicated to JUPITER AMMON, in the times of paganism, of which there are still some remains. Setubal is situated two and twenty miles to the southward of Lisbon, near the mouth of the river Cudoan, at the bottom of a fine bay, which forms one of the best harbours in the kingdom; and on the land-side lies a fine plain, abounding in corn, wine, and fruits, two leagues in length; at the end whereof is a mountain, covered with a forest of pine-trees and other timber. At this town they make vast quantities of white salt, which is transported to the northern kingdoms of Europe and to America; and the fish with which their rivers and seas abound are vended to great advantage in the neighbouring provinces; so that St. Ubes is at this day one of the most flourishing towns on the coast of Portugal. It is encompassed with a wall and other modern

CHAP.  
III.

Cape d'Espichel.

modern fortifications, and the entrance of the harbour defended by two forts.

To the west of Setubal the land runs out into the sea, and forms a cape called by the ancients *Promontorium Barbarium*, and by the moderns Cape d'Espichel. It is a branch of the mountain last mentioned, and the rocks of which it consists, afford quarries of the finest marble, such as white, green, carnation, and other colours, of which they form pillars that take an admirable polish; in my author's phrase, you may see your face in them as in a looking-glass.

Benevento

At the confluence of the rivers Soro and Tagus lies the little town of Benevento: and further eastward Salvaterra, in a fruitful country, where is one of the King's palaces, to which he frequently resorts. Mugen stands at the confluence of the rivers Colo and Tagus, about eight leagues north-east of Lisbon.

Salvaterra

Mugen.

Tomar.

Tomar is situated in a fine plain at the foot of the mountains on the river Naboa, twenty leagues north-east of Lisbon, the country about it being a perfect forest of olives. Above the town stands a castle on a mountain, which once belonged to the Templars, but at present to the Knights of the order of Christ, of which the King is Grand Master, and the Prior of Tomar Sub-master. This is one of the richest and most magnificent houses belonging to the order. The town consists of two parishes, and has three or four monasteries in it.

To the northward of Tomar, in the mountains, are the vineyards of Figueiro, which produce excellent wine.

Pendragon

Farther to the northward lies the town of Pendragon, or Pedragoa, at the confluence of the rivers Pera and Zezere, in a good air and fruitful soil, and adorned with near two hundred fountains. Here the Kings of Portugal had a pleasure-house when they resided at Coimbra.

Leira.

Leira is situated west of Tomar, twenty leagues to the northward of Lisbon, between the two little rivers Lis and Lena, in a fruitful soil. It is defended by a citadel, and is a bishoprick, the only one in the province besides Lisbon, whose revenue is computed to be eighteen thousand ducats per annum.

Alcobaca.

To the westward lies Alcobaca, situated between the two little rivers Aleoa and Baca, from whence it takes its name. The town is moderately large, but is most considerable on account of a rich monastery of Bernardines. It has a mitred Abbot, who is spiritual and temporal Lord of the place, and frequently held by persons of the first rank; and in the church are the tombs of several Kings of Portugal.

To the southward of Alcobaca are the hot baths called *As Caldas*, which heal many diseases.

Peniche.

Thirteen or fourteen leagues north of Lisbon lies the port of Peniche, in a peninsula on the ocean, surrounded with rocks, and defended by a citadel and other fortifications.

Two or three leagues to the westward of this coast lie four little islands, called the Berlinges, or Borlings, well known to our mariners. The largest of them, which communicated its name to the rest, was called by the ancients Loudobris and Erythia, and has at present a fort in it and a garison.

Santaren.

Santaren is situated on an eminence in the middle of a large plain that lies on the banks of the Tagus, twelve or thirteen leagues north-east of

Lisbon. The country about it abounds in corn, wine and olives, but particularly corn.

Seven leagues north-east of Lisbon lies the town of Alanguer, in a plain planted chiefly with vines that produce excellent wine.

CHAP.  
IV.

Alanguer.

## CHAP. IV.

*Contains a description of the province of Beira.*

THE province of Beira is bounded by the river Duero, which separates it from the provinces of Entreminho-Duero and Tralos Montes on the north; by the Spanish provinces of Leon and Estremadura on the east; by the Portuguese Estremadura on the south; and by the ocean on the west: extending in length from the north-west to the south-east, that is from Feyra on the ocean to Salvaterra upon the river Elia, about four and thirty leagues; and in breadth thirty leagues: containing six *camarcas*, or subdivisions, viz. one along the river Duero, called Lamego; a second along the ocean, called Aveiro; two in the middle of the country, viz. Coimbra and Viseu; a fifth to the south, on the Tagus, called Castel Branco; and the sixth to the eastward, viz. that of Guarda.

This province is watered by several considerable rivers, which render it very fruitful, viz. the Duero, which bounds it on the north; the Vouga and Mondego, which run quite cross the middle of it from east to west, and fall into the western ocean; the Zezere, the Ponsul, the Aravil and Elia, which run from north to south, discharging themselves into the Tagus; and the Pavia, which runs from south to north, and falls into the Duero.

Lamago is an ancient episcopal city, heretofore called Lama, situated on the little river Balsamao, near its confluence with the Duero, and is about forty leagues north of Lisbon. It contains two parishes, and two or three monasteries, and about two thousand inhabitants. It is famous for an assembly of the States held here in the year 1143 under ALONSO I, King of Portugal, in which their fundamental laws were first established. The soil about it produces abundance of excellent wine.

Aveiro, *olim Lavara*, is situated in a fine fruitful plain, on a little bay of the sea near the mouth of the Vouga, seven leagues to the southward of Oporto, and nine to the northward of Coimbra. The bay divides it into two parts, that have a communication by a stately bridge, and it is surrounded by an antique wall and towers. The port will admit only of small vessels. There are in it four parishes, three or four monasteries and nunneries, an hospital, and about two thousand inhabitants. They make here great quantities of salt, which foreigners take off their hands.

From Oporto to Coimbra there runs a long chain of mountains, called by the ancients Mount Alcobá, which name they retain at this day. Between these mountains and the sea is a pleasant fruitful valley, interspersed with villages, but scarce a league in breadth in any place. The mountains are full of springs, which form little rivulets that fall into the Duero, the Vouga, or Mondego.

Coimbra, or Conimbra, is situated on an eminence at the end of a fine plain on the north side of the river Mondego, thirty leagues to the northward of Lisbon, and six to the eastward of the ocean.

CHAP.  
V.

ocean. It is a Bishop's See, suffragan of Fraga, and the most celebrated university in Portugal; and here is one of the tribunals of the Inquisition. The city comprehends seven parishes, five convents of men and four of nuns, sixteen colleges, a house of mercy, (of the same institution with that mentioned in the description of Lisbon) and an hospital; and there are about five thousand families in the place. The bridge is a fine stone fabric, of twenty-nine arches, and indeed consists of two rows of arches one above another, and forms a covered way, through which people pass without being exposed to the weather. The university was founded in the year 1290, by King DENNIS I, and removed from thence to Lisbon; but King JOHN III, fixed the university here again in the year 1553, and is thereupon regarded as its founder. The Jesuits college is deemed the finest edifice in the place, and is prodigiously large. The aqueduct, which brings water to the town, also is admired. The cathedral and the rest of the churches and monasteries are handsome buildings, well adorned and beautified; but the streets and private houses have no great elegance in them. As the town stands on the side of a hill, the streets are generally uneven; that called the Calzada, where the Jesuits college stands, is much the fairest. There are fifty professors in the university, and near three thousand students. The revenues are computed to be about four thousand pounds per annum. The country about Coimbra is extremely pleasant, and well planted with vines and olives.

## CHAP. V.

*Contains a description of the Province of Entreminho-Douro.*

Entreminho-Douro province.

THE province of Entreminho-Douro, or Douro, derives its name from its situation between those rivers; being bounded by the Minho, which separates it from the Spanish province of Galicia on the north; by the province of Tralos Montes on the east; by the river Douro, which divides it from the province of Beira on the south; and by the ocean on the west.

Rivers.

The principal rivers, besides the Minho and the Douro already described, are the Lima, the Tamaga, the Cavado, and the Rio d'Aves.

The Lima rises in Galicia, and taking its course to the south-west through this province, falls into the ocean near Viana.

The Tamaga also hath its source in Galicia, and running almost due north before it falls into the Douro, divides part of this province from that of Tralos Montes.

The river Cavado (*Cadavus*) rises in the mountains on the confines of Galicia, and running south-west by Braga, discharges itself into the sea a little to the southward of the Lima.

The Rio d'Aves, *olim Avus*, runs parallel to that of the Cavado, and falls into the western ocean to the southward of it.

The province is subdivided into four Camarcas, or districts.

It is naturally well defended, being separated from Spain on the north and east by rivers and almost inaccessible mountains, and on the west it has the ocean. They enjoy almost a perpetual spring, and a sweet serene air. They have little grain, and that is chiefly rye and millet: how-

Air, &amp;c.

ever, they abound in wine. Here are also great flocks of sheep, the wool and flesh of which are in good esteem; and in their mountains and forests is plenty of game.

The chief towns are Viana, Caminha, Moncaon, Ponte de Lima, Espolendo, Porto, Braga, Amarante, and Guimaraes.

Viana de Foz de Lima, so named from its lying at the mouth of the Lima, and to distinguish it from another town of the same name in the south of Portugal, is pleasantly situated on the sea-coast, five or six leagues to the westward of Braga. The town consists but of one parish, moderately large, and adorned with some handsome buildings, both publick and private, and particularly two convents of Benedictines, that make a good appearance. The streets are well paved and even, and the harbour commodious, but of difficult entrance, which renders it the securer from enemies, all ships being obliged to have a pilot from the coast to carry them in. At the entrance of the port is a good citadel, regularly fortified, and surrounded by a ditch cut out of the solid rock. It is become a place of brisk trade since the English have taken off so much Portugal wine, though the vines of this province are much smaller than those that come from the more southern parts of the kingdom. The Governor of the province and the Treasurer-General have their residence here.

Caminha is a frontier town, situated at the mouth of the Minho, over-against Guardia in Galicia, three leagues to the northward of Viana. The place is strong both by art and nature, being encompassed by the Minho on one side, and the little river Coiro on the other, and defended by walls and bastions of the modern way. At the entrance of the river Minho also, in a little island, is built a regular fort, which commands the avenues to the town and harbour. It is the capital of a duchy which belongs to the Marquis of Villa Real.

Moncaon is another little frontier town, situated on the Minho, over-against Salvaterra in Galicia. It is defended by a castle, and surrounded by walls and fortifications after the modern way, but not considerable upon any other account.

Ponte de Lima is so named from a fine bridge over the river Lima at this place. It is a pretty walled town, about twenty miles to the northward of Braga, consisting of one parish, and about five hundred inhabitants, and has in it a monastery, an hospital, and a house of mercy.

Porto, formerly called Portocale, and at this day sometimes Port-a-Port, is situated on the side of a rugged mountain, the foot whereof is washed by the Douro, and is about a league distant from the mouth of that river, which here forms a good harbour when the shipping are got into it, but it is of very difficult entrance on account of the rocks and sands, which form a bar that can only be got over at high water with the assistance of a coasting pilot. The streets are well paved and commodious enough, only the inequality of the ground the town stands upon makes it not very pleasant walking in them. There is a fine key runs along the banks of the river, close to which the shipping lies; so that a merchant may see his vessels unloaded from his own windows. It is computed the natives of this place may amount to four or five thousand people, besides foreigners that resort hither on account of trade. It is esteemed the second town of the province, and is honoured with a Bishop's See of great antiquity. Here is

**CHAP. V.** also one of the sovereign Councils or Courts of the kingdom held, and an academy for young gentlemen to learn their exercises. They have also an arsenal, docks and yards for building and fitting out men of war. Though the situation of this place be naturally strong and inaccessible from the sea, it has only an antique wall with some ruinous towers on the land-side, and a little fort with four bastions. The most elegant building in the place is a convent of the Augustins, in which there is a beautiful gallery of a vast extent: the church belonging to it is of a round form, and very richly adorned.

**Braga.** Braga is a very ancient archiepiscopal city, known to the Romans by the name of Bracara Augusta, as appears by the following inscription found there, viz.

ISIDI AVG. SACRVM. LVCRETIA. FIDA, SACERDOS. PERP. ROMAE ET AVG. CONVENTVS. BRACARAVG. V. D.

It was one of the four principal towns of Spain, and capital of a government, said to be built by the Bracares, who anciently inhabited this country, and communicated their name to it. When the Suevi came from Germany, and made a conquest of Galicia and Portugal, this was the seat of their kingdom for an hundred and seventy years; and the Goths, who succeeded them, also made it the capital of a kingdom.

The city stands on the south bank of the river Cavado, about five leagues to the eastward of the ocean, and sixty north of Lisbon. It consists of five parishes, three monasteries, and as many nunneries, and contains about three thousand families. The houses are generally old substantial stone buildings, but have no great elegance in them, any more than the Archbishop's palace and the cathedral, which are more admired for their antiquity and extent than for their beauty. The Archbishop is both spiritual and temporal lord of the place, for which reason he has a sword as well as a cross carried before him. His revenue is forty thousand ducats per annum, and he disputes the primacy with the Archbishop of Toledo in Spain. Toledo it seems lost the title of Primate of Spain when that city was in the hands of the Moors; and when ALPHONSO I, King of Leon and Castile, retook Braga from the Moors in the year 740, he transferred that dignity to this city, and all the Bishops of Spain acknowledged the Archbishop of Braga for their Primate: but the Christians having reduced Toledo under their power again, the Archbishops of that city insisted on having the primacy restored to them: but the dispute is not yet determined. However, the Bishops of Spain acknowledge Toledo for their Primate, as those of Portugal do Braga. The country about Braga produces corn, wine and fruit, and here is a great deal of pasture, on which they feed large flocks of sheep.

**Guimaraez.** Guimaraez, or Guimaranes, the capital of a district, is situated on the river Aves, about three leagues south-east of Braga, and consists of four parishes, two monasteries, a house of mercy and an hospital, containing about a thousand inhabitants. Here is a palace of the ancient Kings of Portugal, and some other handsome buildings; their chief manufactures are linen and fine thread. The country about it is as fruitful as any in Por-

tugal, producing corn, wine and fruits, and abounding in sheep, game and wild fowl.

A little to the southward of Guimaraez lies Amarante, a pretty little town, situated on the river Tamaga.

## CHAP. VI.

*Describes the province of Tralos Montes,*

**T**HE province of Tralos Montes, or Beyond the Mountains, so called from its situation with regard to the rest of Spain, is bounded by Galicia on the north; by Leon on the east; by Beira on the south; and by a chain of mountains which divide it from Entreminho-Douro on the west; being thirty leagues in length from north to south, and twenty in breadth.

The chief rivers are the Douro, the Tamaga, the Pinhaon, the Tuelo, the Sabor, and the Coa. The Douro divides the north-east part of this province from Leon, and then turning about to the westward, divides Tralos Montes into almost two equal parts. The river Tamaga enters this province from the mountains of Galicia; and running southward, divides part of this province from Entreminho-Douro. The rivers Pinhaon, Tuelo, and Sabor, also having their sources in Galicia, run to the southward and fall into the Douro. The river Coa, *olim Cuda*, rises in the mountains on the confines of Portugal and the Spanish Estremadura, and taking its course almost directly north, discharges itself into the Douro over-against Torre de Mon Corvo.

This is a barren mountainous country, yielding scarce any corn, though it produces a good quantity of wine and oil. The natives are looked upon to be as clownish and unpolished as any part of Portugal, and but few gentry among them. The chief towns are Miranda de Douro, Braganza, Montforte, Chaves, Villa Real, Almeida, and Castell Rodrigo.

Miranda de Douro, so called from its standing on that river, to distinguish it from Miranda on the Ebro in Castile, is strongly situated on a rock, at the confluence of the Douro and the little river Fresco, on the frontiers of Spain, and is a place of importance, as it opens a passage into the province of Leon, which lies exposed to incursions on this side, not being defended by mountains, woods or rivers. It is a city and Bishop's See, though it consists but of one parish, a house of mercy, an hospital, and about four hundred families.

Braganza, *olim Brigantium*, is situated in a plain, on a little rivulet near the river Sabor, about two leagues from the confines of Leon, and ten to the northward of Miranda. It is divided into the new and old town, the old standing on an eminence, and defended with antique double walls. The new city stands in the plain at the foot of a mountain, and has a fort with four bastions adjoining to it. The whole consists of two parishes, two monasteries, and as many nunneries, a college, a house of mercy, and an hospital, with about six hundred families. Braganza is the capital of a celebrated duchy, belonging to the present King of Portugal, whose ancestors were Dukes of Braganza, the most illustrious house among the nobility, being descended from their ancient Kings.

Chaves

CHAP.

VI.

Chaves.

Chaves, or Chiaves, *olim Aqua Flavia*, is situated on the river Tamaga, two leagues from the frontiers of Galicia; a fortified town, defended by a double wall, a castle and other works, and is the principal town of the province, the residence of the Governor and Treasurer-General. Here are found abundance of ancient monuments, and among the rest a pillar with the names of the ten cities of the province, viz.

CIVITATES DECEM, AQUIFLAVIENSIS, AOBRIGENS, BIBALI, COELERINI, ERVAESIL, INTERAMICI, LIMICI, AEBISOC, QVARQVERN, TAMACANI.

Montalegre.

To the westward of Chaves stands the castle of Montalegre; and to the southward, not far from the Douro, between the little rivers Corgo and Ribera, the town of Villa Real, consisting of two parishes, two monasteries, a nunnery, a house of mercy, and an hospital, and about eight thousand inhabitants.

Almeida.

Almeida is a little fortified town, situated on a hill on the frontiers of Spain, consisting of about three hundred inhabitants.

Castel Rodrigo.

Castel Rodrigo is a fortified town, situated among the mountains, a little to the southward of the Douro, and to the eastward of the frontiers of Spain, remarkable chiefly for a fine palace. The rest of the towns of this province do not deserve a particular description.

## CHAP. VII.

*Describes the province of Alentejo.*

CHAP. VII.

Alentejo province.

**A**LENTEJO, *Provincia trans Tagana*, so called in regard of its situation to Lisbon, and sometimes *Entre Tejo Guadiana*, from its lying between those two rivers, is bounded on the north by the Portuguese Estremadura; and by Andalusia and the Spanish Estremadura on the east; by the kingdom of Algarva on the south, and the Portuguese Estremadura and the ocean on the west; extending about thirty six leagues in length, and near as much in breadth.

Rivers.

The chief rivers are the Tagus and Guadiana already described, the Zadoan, the Exarama, the Campilhas, the Canha, the Odvor, the Avis and the Cava. The Zadoan, *Sadanus, olim Calippus*, has its source in the mountains of Algarva, and running from south to north, falls into the sea near Setubal, as has been intimated already. The rest of them are so inconsiderable, that they are dried up in the heat of the summer, and do not deserve a particular description.

This province is divided into five Camarca's, or districts, viz. those of Portalegre, Elvas, Estremos, Eborá and Beja; and is esteemed one of the richest and most fruitful in Portugal, especially in corn: they have also excellent wines, admirable fruit, the best sweet, or China oranges, come from hence, and they have abundance of dates: their mutton and beef are good, and they make better cheese than in any other province; and here are some silver mines, with quarries of marble and jasper.

The chief towns are Eborá, Estremos, Elvas, Campo Mayor, Aronches, Portalegre, Olivenza, Villa Viciosa, Moura, Serpa, Mertola, Beja, Portel, Viana, Alcazar de Sal, St. Iago de Cacem, Sines and Orique.

Eborá.

Eborá is situated on a hill encompassed with mountains, about the middle of the province,

twenty leagues south east of Lisbon. It is about a league in circumference, and encompassed with an antique wall and towers, and reckoned a very strong place before the modern way of fortification came in vogue. It consists of five parishes, nine monasteries, seven nunneries, a house of mercy, and an hospital, and contains about four thousand inhabitants. Prince HENRY established a university here about the year 1559, but it does not flourish. According to tradition, this city was built by the Phenicians, who gave it the name of Eborá, alluding to the fruitfulness of the soil. JULIUS CÆSAR changed its name to *Liberaltas Julia*, as appears by an ancient inscription discovered here, viz.

DIVO IVLIO LIB. IVLIA EBORA OB. IVLIVS IN MVN. ET MVNIC. LIBERALITATEM EX D. D. D. QVOVIS DEDICATIONE VENERI GENETRICI CAESTVM MATRONAE DONVM TVLERVNT.

It was a considerable town in the time of the Gothick Kings, and had the privilege of coining money, as appears by a medal of King SISEBUT, on the reverse whereof we find the words *Grutas Eborá*. It remained under the dominion of the Moors, till the year 1166, when King ALPHONSO I. retook it from them, with the rest of the towns of Alentejo. Twenty years after he erected it into a Bishoprick; and in the sixteenth century, Pope PAUL III. at the instance of King JOHN, created it an archbishoprick; Cardinal HENRY, the brother of JOHN, who succeeded to the crown on the death of his nephew the unfortunate DON SEBASTIAN, being the first Archbishop of this See. The country about Eborá, as well mountains as valleys, are exceeding fruitful, and in the former are mines of silver.

Estremos is situated six or seven leagues north-east of Eborá, on a hill which it covers entirely, and is divided into the higher and lower town, the higher serving as a castle to the lower. It was strongly fortified at the time that Portugal revolted from Spain, being not far from the frontiers of Andalusia. The houses of people of condition make a grand appearance, being built with white marble, which they find upon the spot. The town consists of three parishes, three monasteries, a nunnery, a house of mercy, and an hospital, containing about two thousand inhabitants. They make a very fine red earthen-ware at this place, which was not long since in great esteem in England and other countries of Europe, and served to adorn their tea-tables. Without the town is a fountain, so large that it turns several mills near its source, but it dries up in winter. It has the quality also of petrefying any thing almost that is thrown into it.

Elvas stands about twenty-four miles to the eastward of Estremos, and six from the frontiers of the Spanish Estremadura. It is situated on a hill which it covers entirely; it is defended by a castle, and strongly fortified, the works being of hewn stone. It contains several fair streets and handsome houses, and has a cistern so large, that it will hold water enough for the inhabitants for six months. The water was conveyed thither by a magnificent aqueduct three leagues in length, and supported in some places by five high arches one over another, which was broken by DON JOHN of Austria, when he besieged the place in 659. It consists of four parishes, three monasteries, two nunneries, a house of mercy, and three hospitals.

CHAP. VII.

CHAP.  
VII.

hospitals, and contains about two thousand five hundred inhabitants. It is a very ancient town, and was formerly called Helvis, from a people of Gaul who built it, according to tradition. On that side of the town where the aqueduct is, they have a large forest of olives, three quarters of a league in length, and cut into walks, with fountains in the middle of them. Near this place Don J O H N of Austria was defeated by the Portuguese, and forced to raise the siege above-mentioned. Besides oil, the neighbouring country affords some of the best wine in Portugal. King E M A N U E L honoured Elvas with the title of a city anno 1513, and King S E B A S T I A N procured it to be made a bishoprick in the year 1570. I find it is esteemed at this day one of the strongest fortresses in the kingdom.

Campo  
Mayor.

Two leagues to the northward of Elvas lies Campo Mayor, a frontier town against Spain, situated on the flat top of a hill, and pretty well fortified. It consists of only one parish, a monastery, a house of mercy, and an hospital, and contains about twelve hundred inhabitants.

Arronches

Arronches is another little frontier town, to the northward of Campo Mayor, and contains about five hundred inhabitants.

Portalegre

Portalegre is a fine town, honoured with the title of a city and a bishoprick, situated at the foot of a very high mountain, in an agreeable country, thirty leagues to the eastward of Lisbon, and near the frontiers of Spain. It is defended by a good wall, with some old towers upon it, a castle, and other fortifications; but I do not look upon it to be a place of great strength. It consists of five parishes, three monasteries, two nunneries, a house of mercy, and an hospital, and contains about three thousand inhabitants. They have here a very indifferent woollen manufacture.

Castello  
de Vide.

Two leagues to the northward of Portalegre stands Castello de Vide, and to the eastward of it another strong castle called Marvan, with several other castles erected on a chain of mountains near the frontiers of Spain, which formerly went by the name of *Mons Herminius*.

Marvan.

Olivenza.

Olivenza is situated in a large plain on the east-side of the river Guadiana, and as the Spanish Estremadura lies open to it on this side, is deemed a town of consequence, for which reason it is fortified after the modern way. It contains two parishes, a monastery, two nunneries, a house of mercy, and an hospital, and about two thousand inhabitants.

Villa Vi-  
ciofa.

Villa Viciofa is a fortified town, situated between Elvas and Estremoz, and is defended also by a castle, which commands the place, and has in it a palace which belongs to the house of Braganza, with an adjoining park three leagues in circumference. The town consists of two parishes, six monasteries, three nunneries, a house of mercy and an hospital, containing about two thousand inhabitants. In the suburbs is an old temple, now consecrated to St. JAMES, but formerly to PROSERPINE; and great numbers of inscriptions are found in honour of that Pagan deity, among which one is as follows:

PROSERPINAЕ, SERVATRICI C. VET-  
TIVS SILVINVS PRO EVNOIDE PLAN-  
TILLA CONIVGE SIBI RESTITVTA V.  
S. A. L. P. These last letters signify, *Votum Sol-  
vens Animo Libens Posuit*.

Moora.

Moura is an ancient town, formerly known by the name of *Arucci Nova*, situated in a plain, about a mile to the eastward of the Guadiana,

at the confluence of two little brooks which fall into the Adita, and eight or nine leagues to the southward of Eborā. It consists of two parishes, two monasteries, as many nunneries, a house of mercy, an hospital, and a fort; but being taken by the Spaniards in the late war, the fortifications were demolished on their quitting it in the year 1708.

Serpa is situated on an eminence, very rocky and uneven, a league to the eastward of the Guadiana, ten leagues to the southward of Moura, and about half a day's journey from the frontiers of Andalusia. The Spaniards demolished the fortifications of this place in the year 1708. It consists of two parishes, a monastery, a house of mercy, and an hospital; and contains about eighteen hundred inhabitants. Serpa is a very ancient town, and retains the same name it had in the time of the Romans, as appears by the following inscription found near the wall, viz.

D. M. S. FABIA PRISCA SERPENSIS C.  
R. ANN. 20. H. S. E. S. T. T. L. C. GEMI-  
NICVS PRISCVS PATER ET FABIA CA-  
DILLA MATER POSVERVNT.

The adjacent fields are extremely agreeable, being planted with groves of figs or olives: but in the great road from Cadiz and Andalusia to Lisbon, which lies through this town, for the space of fifty miles, viz. from Cubas to Aldea Galega, it is very bad travelling, the country being one sandy desert, with some poor inns upon it at fifteen or twenty miles distance from each other, that afford very little entertainment.

Mertola, *olim Myrtillis*, is an ancient town, situated on an eminence on the east side of the Guadiana, near the place where that river begins to be navigable, about twelve leagues to the southward of Serpa. It was a flourishing town in the time of the Romans, as appears by the pillars, statues, and other antiquities that are daily dug up here, as well as by the many pieces of sculpture placed confusedly in the walls by the Goths and Moors, who did not understand them.

Beja, or Bexa, *olim Pax Julia*, stands on an eminence in the middle of a fruitful plain, three leagues to the westward of the Guadiana; and thirty fouth-east of Lisbon. It is of a round form, and defended by an antique wall and towers, with a castle built by King DENIS. It consists of four parishes, three monasteries, as many nunneries, a house of mercy and an hospital, and was honoured with the title of a city by King E M A N U E L. Anciently it was a Roman colony, and three of the present gates are said to be of Roman architecture. On the steps of the cathedral church is found the following broken inscription, viz.

—PAX IVLI—Q. PETRON.—  
And lower more entire L. AELIO AVRELIO  
COMMODO IMP. CAES. AELI HADRI-  
ANI ANTONINI AVG. PII P. P. FILIO  
COL. PAX. IVLIA D. D. Q. PETRONIO  
MATRNO C. IVLIO IVLIANO II. VIR.

Eight or nine leagues to the northward of Beja, stands the little walled town of Portel on a hill, with a castle on the top of it, consisting of two parishes, two monasteries, and seven hundred inhabitants.

Four or five leagues to the southward of Eborā lies Viana, on the river Exarama, being defended by a castle, and contains one parish, a nunnery, and about six hundred inhabitants.

CHAP.  
VII.Alcazar  
de Sal.

Alcazar de Sal, *Olim Salacia Imperatoria*, is situated on the Sadoan, in the district of Setubal, and ten or twelve miles south-east of that town, famous for its salt-pits. Above Alcazar, on a high steep mountain, stands the castle, strong by art and nature. This town is not only considerable for its salt, but the fine mats which are made of the rushes in the neighbouring meadows, and vended in all parts of the kingdom.

St. Iago  
de Cacem.

St. Iago de Cacem is situated on a pleasant hill, about a league and a half to the eastward of the sea-coast, from whence there is a fine prospect of the ocean. It received its modern name partly from a Moorish lord, who was possessed of it when the Christians retook it from the Infidels, and partly from a miraculous image of St. JAMES, which, according to tradition, was found here when the town was taken. It was built out of the ruins of the ancient Merobriga, which stood about two hundred paces from it, and of which there are still some ruinous remains, as an aqueduct, a bridge in the middle of a valley, and a fountain, with a fine reservoir of hewn stone.

Sines.

Sines, or Odifines, is a port-town, south-west of St. Iago de Cacem, inhabited by fishermen, who make great advantages of the shoals of good fish which they take on their coast. To the southward of Sines lies the fine plain of Ourique, in which are twelve or thirteen villages, the chief whereof gives name to this plain, memorable for a victory the Christians obtained here anno 1139, over five Kings of the Infidels, under the conduct of ALPHONSO their General, who was thereupon proclaimed King of Portugal in the field of battle. In the 16th century King SEBASTIAN built a magnificent church upon the place, adorned with trophies, to perpetuate the memory of this signal victory,

## CHAP. VIII.

*Describes the province, or kingdom of Algarva.*

CHAP.  
VIII.Algarva  
province.

ALGARVA, or Algarb, is the most southerly province of Portugal, being bounded by the mountains called Sierra de Algarve, or Caldeiraon, which separate it from Alentejo, on the north; by the Guadiana and a ridge of mountains which divide it from Andalusia on the east; and by the ocean on the south and west; being about twenty-seven leagues in length from east to west, and eight in breadth. It is watered by a great many little rivers, but none of any length or consequence except the Guadiana already described. The Celts and Turditani possessed this country in the time of the Romans. The Moors held it upwards of five centuries, and gave it the modern name of Algarva, an Arabick word, which many writers inform us, signifies a fruitful country; but a French author before me, who pretends to be better versed in Arabick, assures us that the word *Algarbe* signifies a western country situated at the ends of the earth, which agrees very well with the situation of this province. The face of the country is generally mountainous, but affords however plenty of wine, figs, raisins, oil and almonds, inferior however to those of Spain, and it abounds in dates; but they have not always corn sufficient for their own use, and then they import it from the plains of Ourique, or from Africk chiefly.

The chief towns are Castro Marin, Tavila, Faro, Silves, Villa Nova de Portimao, Albor, Lagos, and Sagrez.

CHAP.  
VIII.

Castro Marin is a little frontier town and port, on the west side of the mouth of the Guadiana, over against Aymonte in Andalusia. The rocks and mountains on the side of Spain render it of difficult access.

Tavira, or Tavila, is situated on the sea-coast, at the mouth of the little river Gilaon, five or six leagues to the westward of the Guadiana, and is supposed to be the Balsa of the ancients. It is the capital of the province, but neither large or populous. It consists of two parishes, four monasteries, a nunnery, a house of mercy, and an hospital, and contains about two thousand inhabitants. The town is walled, and defended by a castle, and in the middle of it is a stately bridge over the little river above mentioned.

Faro is a considerable port, strongly situated on the Ocean, which here forms a bay, in the midway between Cape St. Vincent, and the mouth of the Guadiana, and is defended by a good castle and other works. It consists of two parishes, three monasteries, a nunnery, a house of mercy, and an hospital, containing about two thousand inhabitants, and is now an episcopal See, removed hither from Silves anno 1590. It was built out of the ruins of the ancient Ossonoba, which lay a little to the eastward, and is now reduced to a small village called Estoi, where was found the following inscriptions, viz.

IMP. CAES. P. LICINIO VALERIANO  
P. F. AVG. PONT. MAX. P. P. TR. POT.  
III. COS. RESP. OSSON. EX. DECRETO.  
ORD. DEVOT. — NVMINI MAIESTA-  
TIS EIVS D. D.

The sea produces abundance of good fish near Faro, and accordingly most of the inhabitants are employed in the fishery.

Silves is situated in a pleasant country, four or five leagues north-west of Faro, formerly a Bishop's See, but now reduced to an inconsiderable town of forty houses.

Lagos is situated on a fine bay of the ocean, about five leagues to the eastward of Cape St. Vincent, where the British fleet frequently took in water and other refreshments in the late war. It consists of two parishes, two monasteries, a nunnery, a house of mercy, and an old castle, and contains about two thousand inhabitants. The fishery seems here also to be the principal business of the inhabitants.

Cape St. Vincent, anciently called *Promontorium Sacrum*, is the south-west point of the Continent of Europe, near which is a little town that still retains some likeness of the ancient name, being called Sagrez, to which there belongs a tolerable road for shipping, but has little else in it that deserves a description.

As to the islands of Portugal, which are situated in the Atlantick Ocean between Europe, Africa and America, they will be treated of in another place: I shall only observe here, that the chief of them are the islands of Cape Verd, which lie near that point of land on the coast of Africa, and those of the Azores, or Terceras, which lie in much the same latitude with Portugal, but rather nearer the continent of America than that of Europe; and the island of Medena, which lies to the north of the Canaries.

## CHAP. IX.

*Contains an abstract of the history of Portugal.*CHAP.  
IX.

**P**ORTUGAL remaining a province of Spain till the Moors made a conquest of it in the eighth century, the history of Portugal till that time, and until the Moors were driven out of it by the Christians, has been already considered. The Generals of the Moors, as has been observed already, divided Portugal as they did the rest of Spain, into abundance of little principalities, every Captain almost styling himself King or Sovereign of what he had possessed himself of by force of arms.

In the year 1093 ALPHONSO, or ALONSO VI, King of Leon, and the first of Castile, demanding the assistance of all Christian powers against the Infidels, amongst other noble adventurers came HENRY, a younger son of ROBERT Duke of Burgundy, whose father was ROBERT King of France, the son of HUGH CAPET, according to some writers; tho' others derive his pedigree from the house of Lorrain. But however that be, all agree that HENRY with the troops he brought with him did signal service against the Infidels: Whereupon King ALPHONSUS gave him his natural daughter THERESIA in marriage, and so much of Portugal as was then in possession of the Christians, which consisted then chiefly in the provinces of Entreminho-Douro and Tralos Montes, together with the rest of that country as far as the river Guadiana, if he could complete the conquest of it, conferring on him at the same time the title of Count or Earl of Portugal; upon condition nevertheless, that he should acknowledge the Sovereignty of the Kings of Castile, and attend them in their wars with three hundred horse whenever he was required. HENRY died in the year 1112, leaving a son named ALONSO or ALPHONSO, then an infant; during whose minority FERDINAND PACIZ, Count of Treftamara, who married his mother, had the administration of the government. But ALPHONSO coming of age, drove his father-in-law out of the kingdom, imprisoned his mother and took the government into his own hands. She calling in ALPHONSUS VII, King of Castile, to her assistance, a battle was fought between the Count and the King of Spain, wherein the Count obtaining the victory, he looked upon it that he had thereby freed himself from the subjection of the King of Castile. ALPHONSO afterwards invaded the territories of ISMAR the Moor, whose territories lay to the southward of the Tagus, and defeated him, with four other petty Moorish Kings his confederates, in that memorable battle fought in the plains of Ourique above-mentioned, which was followed with the reduction of most of the southern part of Portugal as far as the mountains of Algarva. Whereupon he was proclaimed King of Portugal by his army; and having taken the standards of the five Moorish Kings in that engagement, he ordered five shields to be quartered in the arms of Portugal, which are retained to this day. ALPHONSO, after a glorious reign, died in the eightieth year of his age, anno 1185.

SANCHO I. his son, succeeded him, who was all his reign, like his father, engaged with the Moors, but found time however to build and people a great many considerable towns.

He died in the year 1212, and was succeeded by his son ALPHONSUS, surnamed CRASSUS, of whom we meet with nothing more recorded in history than that he made a voyage to the Holy Land and took the city of Alcazar from the Moors. He died in the year 1223, and was succeeded by his son SANCHE II, an indolent Prince, whom his subjects having deposed, he fled to Toledo, and his brother ALPHONSO III was thereupon declared Regent. Upon SANCHE's death ALPHONSO took upon him the title of King; and marrying BEATRICE the natural daughter of ALPHONSO X, King of Castile, received with her in dower the kingdom of Algarves, then lately recovered from the Moors. Whereupon the Kings of Portugal took for their arms a Border, Gules, interspersed with castles Or without number; but now reduced to seven round their escutcheon. He was an active Prince, and having added several considerable cities to his kingdom, died anno 1279, when he was succeeded by his son DIONYSIUS a Prince celebrated for his justice, liberality and constancy, and adorning the kingdom with a great many public buildings; among others, the academy of Coimbra was founded by this Prince. He died in the year 1325, and was succeeded by his son ALPHONSO IV, surnamed *the Brave*. His reign was disturbed in the beginning of it by his natural brother ALPHONSO, who was in great esteem with the people; but he defeated him at length, and compelled him to fly the kingdom. He obtained a great deal of honour also in that general battle fought between the Christian Princes of Spain and Portugal on the one side, and a confederacy of the Moorish Kings on the other, called the battle of Sellado, where the Christians obtained a signal victory over the Infidels, and killed two hundred thousand Moors upon the spot, if we may credit their historians; but nothing is so common as to find them enlarge and magnify things in their relation of these wars much beyond the truth. The greatest blemish in the reign of this Prince was the putting to death Donna AGNES DE CASTRO, whom his son PETER had married against his consent, which occasioned the young Prince to foment an insurrection against his father, which was not suppressed without a great deal of bloodshed; but at length matters were compromised between the father and son, and ALPHONSO dying in the year 1357, was succeeded by PETER, to whom some have given the name of *the Cruel*, which it is said was occasioned only by his strict execution of offenders, never sparing any that were convicted; but chiefly from his putting all those to death who had been any ways concerned in the murder of his beloved wife AGNES. He died in the year 1368, and was succeeded by his son FERDINAND, who laid claim also to the kingdom of Castile, to which HENRY *the Bastard*, who had murdered his brother PETER, surnamed *the Cruel*, had no legal title. But HENRY on the contrary invaded Portugal, and ravaged the country in a very dreadful manner, obliging FERDINAND to desist from his pretensions: But after the death of HENRY, the Portuguese being assisted by JOHN Duke of Lancaster, who had married CONSTANTIA the daughter and heiress of PETER King of Castile, renewed the war with JOHN the son of HENRY *the Bastard*, which was for some time carried on with great vigour. At length a treaty was concluded between the parties, wherein it was agreed, that JOHN King of Castile should marry the Princess

cess BEATRICE the daughter of King FERDINAND, the children of which marriage were to succeed to the crown of Portugal. FERDINAND died in the year 1383, being the last of the ancient race of the Kings of Portugal.

Upon the death of FERDINAND, the kingdom being in great distraction, there was an interregnum of two years; for ELEONORA, Queen-dowager of Portugal, being to have the administration of the government till the King of Castile's son (who by the late treaty between the two crowns was to succeed to Portugal) was of age, having married the Duke of Andeira, her quondam favourite, and thereby drew upon herself the hatred of the Portuguese, JOHN, the natural son of PETER late King of Portugal, murdered Count Andeira, and set up for himself: Whereupon the opposite party invited the King of Castile to assume the crown; but he coming into Portugal without an army, the Portuguese, out of their natural aversion to the Castilians, soon expelled him. The King of Castile thereupon raised a great army, and penetrated as far as the capital city of Lisbon, which he besieged; but his army being destroyed by the plague, he was obliged to retire out of the kingdom a second time, and the Portuguese thereupon proclaimed JOHN the Bastard their King, who reduced those places that declared for the Castilians. There was afterwards a general battle fought between the Portuguese and Castilians at Aliubarotta, where King JOHN obtained a decisive victory that established him upon the throne, and which is annually commemorated in Portugal to this day. Afterwards the Portuguese assisted by the Duke of Lancaster with a gallant army from England, carried the war into the heart of Castile: But the English suffering very much by the heat of the country, the Duke of Lancaster thought fit to clap up a peace, in consideration of a sum of money and the Prince of Castile's marrying the Duke's daughter, the Princess CATHERINE, by CONSTANTIA the daughter of PETER the Cruel late King of Castile; and not long after a lasting peace was concluded between the crowns of Castile and Portugal.

1420. Whereupon King JOHN entered upon an expedition against the Moors in Africa, and took the town of Ceuta: And it was under his administration, that the island of Madera was discovered. He died anno 1433, after a glorious reign of forty-eight years, and is mentioned with great respect by the Portuguese to this day. He was succeeded by his son EDWARD, esteemed a good Prince, but died within five years afterwards of the plague, which he got by opening of a letter, as it is said, anno 1438. During this reign his brothers made an unfortunate expedition into Africa, in which they were defeated and made prisoners. The Moors however consented to release them on condition Ceuta should be restored them; and Prince FERDINAND remaining an hostage for the performance of this article, to which the States of Portugal would never consent, he died in that country.

Alphonso  
V.  
1438.

ALPHONSO succeeded his father EDWARD, being an infant of six years of age. The Portuguese being uneasy under the government of the Queen-dowager, the administration of affairs was committed to Don PEDRO Duke of Coimbra, brother to the late King EDWARD; who being charged with some designs against his Majesty, was murdered as he was going to justify himself to the King.

CHAP.  
IX.

ALPHONSO when he came of age was successful in his wars in Africa, taking the towns of Tangier, Arcilla, Alcazar, &c. He afterwards laid claim to the crown of Castile on espousing JOANNA the supposed daughter of HENRY IV, King of Castile. He invaded that kingdom and reduced many cities under his power, but was driven out again by the celebrated FERDINAND and ISABELLA King and Queen of Castile and Arragon, and defeated by them in a general battle near Toro. Whereupon ALPHONSO was forced to renounce all pretensions to the crown of Castile, and the Princess JOANNA whom he had espoused, retired into a convent. Portugal sustained great losses in this war, the ill success whereof is said to have broken the King's heart. He died in the year 1481, and was succeeded by his son JOHN II. JOHN, who had the good fortune to defeat a conspiracy formed against him in the beginning of his reign by FERDINAND Duke of Braganza and JAMES Duke of Visco, who lost their lives in the attempt, and the latter of them was killed by the King's own hand. King JOHN was the first who projected the tracing out a way to the East-Indies round Africa by the Cape of Good-Hope, and built the castle of Minas on the coast of Guinea. He died in the year 1495, and leaving no issue, was succeeded by his cousin EMANUEL, son of the Duke of Visco and grandson of King EDWARD. MAXIMILIAN the Emperor opposed him, and laid claim to the crown, being the son of the Princess ELEONORA the daughter of King EDWARD. But the Portuguese being averse to a stranger, and finding in EMANUEL all the qualifications requisite in a Prince, they adhered to him. He married ISABELLA the eldest daughter of FERDINAND the Catholick, who it is said persuaded him to banish the Jews and Moors out of Portugal on pain of being made slaves if they remained in Portugal after a prefixed day; whereupon the Moors went over into Africa, but they took all the Jews children from them under fourteen, and baptized them by force; and most of their parents being detained under pretence there were not vessels to transport them, submitted also to be baptized rather than be made slaves: few of them were really converted, which has been the occasion that such numbers of them have professed Judaism again, and been destroyed by the Inquisition.

Emanuel.  
1495.

In the reign of King EMANUEL, it is said, Portugal arrived at it's highest pitch of glory; for then it was their fleets were conducted round the Cape of Good Hope to India by the celebrated VASCO DE GAMA, whereby they became almost sole masters of the trade between India and Europe, which was before carried on by the way of Egypt, whither the riches of India being brought, the Venetians, Genoese, and other maritime States in the Mediterranean, used to distribute them to the several kingdoms of Europe. But the beginning of the Portuguese trade with India having been largely treated of in the first volume of Modern History, I shall not enlarge upon it here; and only observe, that in making this voyage they casually discovered Brazil in America, and several rich countries on the coast of Africa; from all which there flowed in such immense treasures during this reign, that it obtained the name of the Golden Age. King EMANUEL died in the year 1521, and was succeeded by his son JOHN III.

a long, peaceful and happy reign, in which he applied himself to restore learning, arts and sciences at home, and to plant colonies in the countries that had been discovered in his father's reign in Asia, Africa and America. He also sent out abundance of Missionaries, and among the rest the famous FRANCIS XAVIER, who planted the Christian religion in China, India, the coasts of Africa, Brazil, &c. in which he was no less successful than in his civil government. He died anno 1557; and was succeeded by his grandson SEBASTIAN, an infant of three years of age, Cardinal HENRY his uncle having the administration of the government during his minority. This Prince, as soon as he arrived towards the years of manhood, seemed much addicted to martial exploits; and was advised by his courtiers to form an army and undertake an expedition into Africa against the Infidels under pretence of awaking the courage of the people, and reviving that military discipline which was almost lost by a long series of peace and plenty: And had they taken time to form and exercise their troops, and provided experienced Generals to command them, the advice might not have been amiss. But the enterprize was begun and carried on with too much precipitation; a vast army, or rather a confused multitude, was raised, without any mixture of veteran troops or experienced Generals, and transported into Africa at the instance of MULEY HAMET King of Morocco, who had been deposed by his subjects. The opportunity seemed favourable, and the people were taught to despise those cowardly Moors whom their ancestors had driven out of Europe. They advanced far into the country, where they were surrounded by a much more numerous army of the infidels. King SEBASTIAN and the deposed King MULEY were defeated and killed, with most of the Portuguese nobility, and all the common soldiers were killed or taken prisoners. The conqueror, MULEY MALUCCO, who had usurped his nephew MULEY MAHOMET's throne, died of a fever before the engagement was well over; so that there fell, according to my author, three Kings on this fatal day; which the Portuguese had the most reason to lament, receiving such a blow as they were never able to recover, but fell soon after under the dominion of Spain. For Cardinal HENRY, the late King's uncle, the only surviving male issue of the royal family, being advanced to the throne, after a weak reign of two years died. Whereupon PHILIP II, King of Spain, sent the Duke of Alva into Portugal at the head of an army, and took possession of that kingdom, which he claimed in right of his mother. The Portuguese indeed set up Prince ANTHONY, natural son to the late King JOHN III against him, and he received some assistance from England in order to maintain his pretensions. But the King of Spain was too powerful for this competitor, who after the loss of two battles was obliged to quit his claim to the crown of Portugal. Of this revolution Doctor GEDDES gives the best account I have met with: He says, "That Cardinal HENRY was extremely perplexed during his short reign with the claims that were put in by several Princes to succeed him. "The first and strongest of those pretensions was that of Philip the second, King of Spain, who claimed that crown as son and heir to the Empress Donna ISABELLA the eldest daughter of King EMANUEL.

VOL. II.

"The second was EMANUEL Duke of Savoy, as son and heir to the Infanta Donna BEATRIX, second daughter of the same King.  
"The third was Don ANTONIO, Prior de Crato, as son and heir to the Infante DON LEWIS, the third son of King EMANUEL.  
"The fourth was RAYNUCIO Prince of Parma, as son and heir to Donna MARIA, the eldest daughter of the Infante DON EDWARD, the fourth son of King EMANUEL.  
"The fifth was Donna KATHERINA, second daughter to the Infante DON EDWARD, who was married to the Duke of Braganza.  
"A remote title was also trumped up by KATHERINE DE MEDICIS Queen of France, for no other reason that I can perceive, but only to give some lustre to her blood, which on her father's side was the basest that had ever run in the veins of any Queen of France before.  
"And the Pope, who will be still fishing for himself in all troubled waters, did start a title that was yet more fantastical, which was his being heir to the King as he was Cardinal.  
"The old King being vehemently solicited by all these pretenders to be declared by him his successor, he slighted the Pope's, the Queen of France's and the Duke of Savoy's claims as altogether groundless; and though the Prince of Parma in the lineal descent was the undoubted heir to the crown after the death of the King, who was his grand-uncle, yet that Prince's claim was but little regarded, there being a law in Portugal called, the Law of Lamego, whereby all foreigners are excluded from the throne, though otherwise the right heirs to it.  
"The great struggle came therefore at last to be betwixt PHILIP II, King of Spain, the Dukes of Braganza, and ANTONIO, who being extremely beloved by the people of Portugal, would not withdraw his claim (though it was rejected by the King with indignation for his being a bastard) pretending to be able to prove that his father was married to his mother; or if he could not prove that, yet his friends, who were the people, said that ought to be no bar to him, no more than it was to the victorious Don JOHN the first, the founder of the present royal family of Portugal. And Pope GREGORY the thirteenth, when he found he should make nothing of his own claim, did promote that of Don ANTONIO, whose interest was espoused by the Pope's Nuncio in Portugal with great warmth: For that politick Pope judging the Spanish crown to be too strong and formidable already, was very unwilling to have it made stronger by the accession of Portugal to it.  
"The Dutchess of Braganza, though the King offered her and her family great advantages in the name of PHILIP, if she would resign her title to that kingdom, as the Prince of Parma was said to have done, would not hear of doing it upon any terms whatsoever; but was continually soliciting the King her uncle to do her justice.  
"The King being in a great perplexity what to do, called the Cortes to settle the succession; and in which fifteen nobles and two and twenty men of letters were named to be judges, and five nobles out of those fifteen were appointed to be Governors of the kingdom if he happened to die before a sentence was

18 H

passed,

" passed, and who were to see the sentence that should be passed executed : and thereupon an oath was taken by the three estates of the realm to stand to the decision of those judges ; or in case they did not agree, to yield obedience to the sentence of the five Governors ; and which oath both the Duke of Braganza and ANTONIO were compelled by the King to take. But when PHILIP was required to do it, who had a strong army quartered on the frontiers of Portugal, he made answer, *He would not take it ; nor could he allow his right, which was so clear, to be put in judgment.* And King HENRY dying soon after, the Spanish army under the command of the Duke of Alva marched forthwith into Portugal, and having quickly defeated Don ANTONIO, and driven him out of Lisbon, where he had been proclaimed King by the people, PHILIP was immediately proclaimed King there, and in all other places of the kingdom ; and having the five Governors under his power, he was by a majority of them declared to be the lawful heir of the crown : which declaration was soon after confirmed by the Cortes of the whole kingdom, called by PHILIP at Tomar, where he was acknowledged and sworn to as the lawful King of the realm ; which, being a foreigner, it is certain he was not ; nor could he have been, had he been a native ; the daughter of the brother, which the Dukes of Braganza was, being both by the laws of that kingdom, and by the law of representation, to be preferred to the son of the sister. For as, had the Dukes's father, the Infante Don EDWARD, and that King's mother been both alive when their brother Don HENRY died, the King's mother could not have pretended to the crown before her brother Don EDWARD ; so neither ought PHILIP, as her heir, to pretend to it before the Dukes of Braganza, who was daughter and by law heir to the Infante Don EDWARD. And PHILIP being sensible that if he did not bring the Portuguese to be better affected to him and his government than they were at present, that he must either be at the great charge of maintaining a considerable Spanish army still in Portugal, or must quickly lose that kingdom again ; to win the hearts of the Portuguese he granted them all the advantage they desired, having promised and sworn to observe the following articles.

" First, To conserve to that crown all it's prerogatives and titles, the coinage, the royal palace, and all the offices used in it by it's natural Princes ; and that the King being in Portugal should be served by none but natives.

" Secondly, That no foreigner should be capable of any office or dignity ecclesiastical or civil, nor of any military commands, nor of any title of honour, pensions, or grants, nor of having the liberty of trading to any of the Portuguese plantations.

" Thirdly, That the Viceroy of the kingdom should be always one of the royal family.

" Fourthly, That wherever the King was, a certain number of Portuguese should assist, with the title of the Council of Portugal, and thro' whose hands only all dispatches should pass, and which should be all written in the Portuguese tongue ; and that the Portuguese as well as

" the Castilians should be admitted to offices in the palace. CHAP. IX.

" Fifthly, That the Cortes should not be assembled out of the kingdom, and that all the publick affairs should be transacted in that assembly.

" Sixthly, That the King should obtain no bulls from the Pope to receive the thirds or any other ecclesiastical subsidies.

" Seventhly, That the dry ports betwixt the two kingdoms should be opened, and the merchants be allowed to trade without paying any duties.

" Eighthly, That the King should reside in Portugal as much as he could possibly, and that the Prince should be bred up in it, to beget in him an affection for the Portuguese.

" Lastly, In case the King or any of his successors should violate the aforesaid articles, it should be lawful for the three estates of the kingdom to withdraw their allegiance from him.

" But to proceed : King PHILIP having thus united Portugal to the rest of Spain, that nation became very great sufferers by it ; for as PHILIP was at this time endeavouring to reduce the Netherlands, he thought nothing would contribute to it more than the prohibiting them to traffick with Spain and Portugal, the Dutch employing a great many ships in transporting the native commodities of Spain and Portugal, as well as the produce of their foreign plantations and settlements, to the northern kingdom of Europe ; and PHILIP imagined, that if this branch of the Netherlands navigation and commerce was stopped, they would be obliged to come to any terms he should prescribe. But this project had a very different effect from what he expected, for the Dutch being excluded trading with Spain and Portugal, from whence they used to fetch spices and other valuable merchandize, the product of Asia and America, fitted out strong fleets, and followed the Spaniards and Portuguese in the road they had struck out to the East and West-Indies, and not only brought to Europe the same rich goods these nations had for many years monopolized, but drove the Portuguese from their best settlements in India, and other countries of Asia, as well as from some others they had in Brazil, and on the coast of Africa. This provoked the Portuguese to the last degree, and they would gladly have shook off the Spanish yoke, under the conduct of whose Princes they sustained such irreparable losses : but PHILIP maintained his dominion over that kingdom till he died, as did his son PHILIP the third of Spain, and the second of Portugal. PHILIP the fourth, his grandson, also succeeded quietly to the kingdom of Spain and Portugal, which he enjoyed about nineteen years ; but the Spaniards having been weakened by a long expensive war with France, and the revolt of the Catalans, the Portuguese had a fair opportunity of delivering their country from a foreign yoke ; and as the Duke of Braganza was the next in blood to their former Princes, they made him an offer of the crown, of which he did not seem very ambitious : but while he was meditating on one side the hazard of the enterprize, and on the other the glories which might accrue to his country,

try, and his family in particular, if he should succeed, the court of Spain, before he had determined with himself which part to take, had some intimation given them of the design, and King PHILIP summoned the Duke, and the rest of the Portuguese nobility, to attend him in the Catalonian war. The Duke saw the snare, and excused himself as well as he could: He alledged that his coffers were low, and he was not in a condition to bear the expence a man of his quality must necessarily be at in the field. The Court of Madrid hereupon ordered him a remittance of twenty thousand pistoles, with a promise of accommodating him with more. Things being come to a crisis, the Duke consulted his Lady upon the occasion: She was of the family of Medina Sidonia, a Princess of great spirit, and is said to have answered him after this manner; Sir, if you resolve to go to Spain, you run the hazard of your life; you do the same in attempting the crown of Portugal; but if you must die, it were better to die a King than a Duke: And this it seems determined his choice. The whole kingdom of Portugal, and all their foreign settlements, unanimously acknowledged him for their Sovereign, except Ceuta, in which was a Spanish Governor. This surprizing revolution was effected in an instant, without having cost the lives of three people, though it cost a great deal of blood and treasure to maintain it afterwards. It was undertaken, on the first of December 1640, when in the offices of the church for that day we meet with these words, taken out of the thirteenth chapter of the Romans, ver. 11. *And that knowing the time, that now it is high time to awake out of sleep; for now is our salvation nearer than when we believed.* Which the Portuguese did then, and have ever since regarded, as an oracle from heaven declaring in their favour. Thus did this Prince ascend the throne of Portugal, and was proclaimed by the name of JOHN the fourth. It is thought very strange that this design should be communicated to above two hundred persons, and a whole year taken up in preparations for its execution, and yet not be discovered to the court of Spain till it was too late to prevent it. The new King however had not been long upon the throne, before a plot was formed against him; but he being so fortunate to suppress the conspiracy before it came to a head, it served only to establish his authority over his subjects. He was esteemed a good Prince, and an encourager of learning: the greatest misfortune of his reign was the reviving the war with the Dutch, who possessed themselves of most of the settlements the Portuguese had left in India and Africa; but they had the good fortune to drive the Dutch out of Brazil. King JOHN having reigned about sixteen years, died anno 1656, leaving two sons and one daughter, viz. DON ALPHONSO his eldest son, DON PEDRO the youngest, and one daughter named CATHERINE.

His son  
Alphonso  
succeeds  
him.

ALPHONSO being very young at his father's death, reigned some time under the guardianship of his mother, who was very successful during her administration against the Spaniards, who having made peace with France, invaded Portugal, and were determined to have brought that kingdom under their dominion

CHAP.  
IX.

again; but the Portuguese being assisted by the King of England, who had married the Princess CATHERINE, and by the French King underhand, notwithstanding he had stipulated by the Pyrenean treaty not to afford them any assistance, the Portuguese defeated their enemies in several engagements, the most important victory being that of Villa Viciosa. This train of ill success, with their losses in the Low Countries, induced the Spaniards to make a peace with Portugal, and renounce all their pretensions to that crown.

King ALPHONSO coming of age, the Queen-dowager, who did not approve of his conduct, retired into a cloyster, where she died. ALPHONSO afterwards married the Princess of Nemours, of the house of Savoy, who upon pretence of her husband's impotence, retired also into a convent, and obtained a divorce from him; while DON PEDRO, his younger brother, was so fortunate as to persuade the people that DON ALPHONSO was a weak man, and incapable of governing the kingdom, and procured him to be deposed by an assembly of the States, and banished to the island of Tercera, anno 1668, from whence he was brought back some time after, and died in the castle of Cintra on the twelfth of December 1683, till when DON PEDRO took upon him the title of Regent of the Kingdom, but upon the death of ALPHONSO so he was proclaimed King. Whether DON ALPHONSO was really that weak Prince the friends of DON PEDRO gave out, when they procured him to be deposed, is not easy to determine; but when we see the wife and brother in a confederacy against him, and even contracting marriage in his life-time, and making interest to deprive him of the regal power, it is very natural to suspect that the late King had foul play. It is not a divorce purchased at Rome, or a dispensation from the Holy See to commit incest, that can sanctify injustice and adultery: They might seem to flourish for a time, and revel in polluted infamous embraces, but serenity of mind could never be found under such a load of guilt.

Some writers however, I find, give DON PEDRO a great character. They relate, that he was a Prince of excellent parts, and applied himself with all imaginary diligence to render his subjects easy and happy: and it is indeed become a proverb, *The worse Title the better King*: abundance of popular acts must be done to take off the people's attention, and keep them quiet. But the sum of their policy, both here and in Spain, seems to be the bribing the nobility and leading men, who willingly contribute to the slavery and oppression of their fellow-subjects, that they may share the plunder with the tyrant. But since the Spanish Court has been governed by French Councils, they have struck off a multitude of pensioners, and now govern both nobility and commonalty by their standing troops. We have instances in some other kingdoms where the Court is trebly guarded: 1. By an almighty band of Pensioners. 2. By a body of national troops. And, 3. If either of these should boggle at the villainous parts they are expected to act, there is a body of foreign mercenaries ready to keep the surly natives in awe. And if all these should fail, they are provided of a guaranty of most of the powers of Europe to secure their thrones, and defend the most oppressive arbitrary measures.

CHAP.  
IX.

To return; As the revenues of the crown of Portugal are not the largest, and the greatest part of them is employed in pensions among the Grandees and Nobility, and consequently the court in no condition to maintain a foreign war, it has been the wisdom of their Princes, and particularly of Don PEDRO, to promote peace with all Christian Princes and States. Accordingly, in the first long war between the Allies and LEWIS the fourteenth, we find the Portuguese stood neuter; nor did they come into the last war in Queen ANNE's reign, till the year 1703, and then it is evident the whole weight of the war on that side was borne by their Allies.

1703.  
The terms  
on which  
the Portu-  
guese  
came into  
the Grand  
Alliance.

The cautious Portuguese, before they entered into the grand Alliance, insisted, that the Archduke CHARLES, who was to be proclaimed King of Spain, should be sent to Portugal with an army of twelve thousand English and Dutch troops; that the Allies also should take into their pay thirteen thousand of the troops of Portugal, and that a large fleet should be fitted out to protect their coast and trade against the insults of the French. Accordingly Sir CLOUDESLEY SHOVEL, with thirty-five English men of war and fourteen Dutch, arrived at the mouth of the Tagus the latter end of July, from whence the confederate fleet sailed into the Streights, and having alarmed the coast of Spain, made a descent with two or three thousand men near Altea in Valencia, inviting the Spaniards to join them, declaring they were come to protect them from the tyranny of the French, and assist them in setting their lawful Sovereign the Archduke CHARLES upon the throne. Nor did the people seem averse to the proposal, but brought in provisions to the fleet, and many of them drunk the Archduke's health. However, things not being yet ripe for a general revolt, the troops re-embarked, and the fleet having in vain endeavoured to relieve the Cevennois in Languedoc, and cruised in the Mediterranean till the latter end of the year, the Admiral visited the coasts of Portugal again, and afterwards returned to England, not having been able to meet with the French fleet, which kept close in their harbours this year.

Archduke  
declared  
King of  
Spain.

On the 12th of September the Emperor and the King of the Romans signed an act, whereby they relinquished all their right to the Spanish monarchy in favour of the Archduke CHARLES: the Emperor at the same time declaring that the male branch of the house of Austria being extinct in Spain, that monarchy with the dominions thereto belonging was devolved upon him; and being importuned by his illustrious confederates, particularly the King of Portugal, to provide a successor to that monarchy, he thought proper to send over his second son, the Archduke CHARLES, to Spain, in order to put him in possession of that kingdom: to which purpose his Imperial Majesty and the King of the Romans had made this resignation of their rights, and did declare and acknowledge the said Archduke King of Spain, by the Stile and Title of CHARLES III, &c. After which another act was read on behalf of the Archduke, declaring his acceptance of the Spanish crown, and renouncing all his right to the dominions of the house of Austria in the Empire: and the Emperor, the King of the Romans, and the Archduke afterwards took their oaths at the altar for the confirmation of the said respective acts. Then the Archduke was proclaimed King of Spain, and received the compliments of the

Court thereupon. The Emperor afterwards wrote a letter to the King of Portugal, notifying his proclaiming the Archduke King of Spain, and that he designed he should shortly visit Portugal. Another letter was wrote to the Queen of England, recommending the new-made King to her protection: upon the receipt whereof, the Queen wrote to King CHARLES, assuring him she would employ all the strength of her arms in his favour.

CHAP.  
IX.

The Archduke, now stiled King CHARLES, He comes to Eng-land.  
the third, soon after set out from Vienna for Holland, where he arrived the second of November; and having continued at the Hague till the 23d of December, embarked for England. He arrived at Spithead the 26th of the same month, where the Duke of Somerset, Master of the horse to the Queen of England, waited on him on ship-board, with a letter and a compliment from her Majesty, inviting him to Windsor. His Catholick Majesty thereupon came on shore, and went to Petworth, the Duke of Somerset's seat in Sussex; where the Prince of Denmark, her Majesty's consort, was come to receive him. On the 29th his Catholick Majesty with the Prince came to Windsor: the Queen received him at the top of the stairs, and after some compliments of course, he thanked her for her generous assistance towards setting him on the throne of Spain. (For not only the British fleets and armies were employed in his service, but the very charges of his voyage, and his court in Portugal, were to be, and actually were, provided at the expence of Britain.) His Majesty supped with the Queen and Prince of Denmark that evening; her Majesty giving the King the right hand at table, and the Prince sitting at the end. His Catholick Majesty lay but two nights at Windsor, where the English court appeared in all it's lustre, nothing was wanting that might render the entertainment agreeable or magnificent: the King took the napkin from the Duchess of Marlborough, and would hold it while the Queen washed; after which he returned it to her Grace with his diamond ring wrapped up in it; but the rest of the Queen's servants were strictly prohibited to take any thing of the King, who did not abound in treasure at this time.

His Majesty having taken leave of the Queen, returned to Petworth the 31st of December, and the next day went on board Admiral ROOK in the Royal Catherine at Spithead. The Dutch Squadron having joined the fleet, they set sail the fifth of January; but meeting with a terrible storm in the latitude of 46, they returned to St. Hellens the 20th to refit. The twelfth of February the fleet set sail again, and on the twenty-fifth arrived in the river of Lisbon, where the King of Portugal with his two eldest sons came on board the Royal Catherine, and after a short stay the two Kings went on shore, where *Te Deum* was sung for his Majesty's safe arrival; and in the beginning of March all the English and Dutch auxiliary troops arrived in Portugal, being commanded by Duke Schomberg. Whereupon the Marquis de Chateaufneuf, Ambassador of France to the King of Portugal, retired from thence.

He arrives

forces.

But the English and Dutch, who had promised themselves such mighty advantages from the King of Portugal's coming into the Grand Alliance, found themselves miserably disappointed: not a third part of the horses were provided for remounting their cavalry that had been promised them,

CHAP.  
IX.

them, and those under size and not fit for service; then the Portuguese Generals, and every Governor of a province who has the supreme military command lodged in him, insisted on commanding the Confederate Generals, and that their troops should take the right upon all occasions; nor would they suffer the English and Dutch to march in a body, but distributed them into their little ragged frontier towns that were not tenable, where many of them were made prisoners by the Duke of Anjou, who invaded Portugal this year with an army of two and twenty thousand men. The Marquis das Minas pretended indeed to give a diversion by marching into Castile; but the Duke of Berwick, who commanded the Spanish army, perfectly contemned him, and having sat down before Castle-David, made the garison prisoners of war. Duke Schomberg, who commanded the English, being weary of his command in such circumstances, desired to be recalled, and the Earl of Galway, a French refugee, who made no difficulty in sacrificing the honour and interest of Britain to the Portuguese afterwards, commanded on that side in his room.

In the mean time the English Admiral Sir GEORGE ROOK having disembarked the Confederate troops, sailed from the river of Lisbon and cruised off of Cape St. Vincent, for these curity of the Turkey and Levant fleets, and then returned to Lisbon. He set sail again the latter end of April with forty ships of the line, and some land forces on board commanded by the Prince of Hesse, for Barcelona, where they summoned the Governor: but he paying no regard to their summons, and some Catalans assuring the Admiral and the Prince, that there were five to one in the City for King CHARLES, they landed some forces, and sent a second summons, but with no better success. Whereupon having thrown about threescore bombs into the city, the forces were re-embarked, and the fleet sailed towards Toulon; near which place the Admiral received advice from Lisbon, that the Count de Toulouse was come into the Mediterranean with the Brest Squadron, in order to join that of Toulon; and on the seventh of June the scouts made the signal of seeing the French fleet. The Admiral thereupon stood after them, but could not bring them to an engagement. Having lost sight of the French fleet, he made the best of his way to the Straights, where he was joined by another squadron of English men of war commanded by Sir CLOUDSELY SHOVEL, and it was resolved to attack Gibraltar with their united force. The fleet got into the bay the twenty-first of July, and at three in the afternoon, the Marines, to the number of 1800, with the Prince of Hesse at the head of them, were put on shore on the neck of land to the northward of the town, to cut off any communication with the country. The Admiral on the twenty-second in the morning ordered some ships to cannonade the town under the command of Rear-Admiral BYNG and Rear-Admiral VANDERDUSSEN; and Captain HICKS in the Yarmouth, with some other ships, were to batter the south mole-head: but the wind blowing contrary, it was put off till the twenty-third, when the ships being all in their places by break of day, the cannonading begun, and was performed with great fury, above fifteen thousand shot being made in five or six hours time against the town. The enemy being beat from their guns, especially at

Vol. II.

the south mole-head, and the Admiral considering that the gaining that work would probably reduce the town, ordered Captain WHITACRE, with all the boats armed to possess himself of it, which was performed with great expedition; whereupon the enemy sprung a mine that blew up the fortifications upon the mole, killed two lieutenants and forty men, and wounded sixty more. However, they kept possession of the great platform, and advancing to a redoubt between the mole and the town, made themselves masters of it, with a great many of the enemy's cannon. Then they sent the Governor a peremptory summons, who on the twenty-fourth in the morning desired to capitulate. Hostages therefore being exchanged, and the treaty concluded, the Prince of Hesse took possession of the town the same evening.

Soon after the taking of Gibraltar, the Brest Sea fight and Toulon Squadrons being joined, and amounting to two and fifty ships of the line of battle, and twenty-four galleys, commanded by the Count de Tholouse, encountered the Confederate fleet, consisting of fifty three-ships of the line, commanded by Sir GEORGE ROOK, on the thirteenth of August N. S. off of Malaga. The French ships were generally much larger, and being but just come out of harbour, much cleaner than those of the confederates. The fight continued till night, and the fleets remained in sight of each other a day or two afterwards, but neither side, it is evident, cared to renew the engagement; the French by their own account had been very roughly handled, and the English Admiral found that he had spent so much of his powder and shot in the taking of Gibraltar and in the engagement, that some of his ships had not three rounds left; and his being able to brave the French in these circumstances, might well be looked upon equal to a victory. The French indeed pretended he declined fighting, that is, he did not pursue them; and this is very true, he would have been a madman if he had, in that condition: but it is as certain they did not pursue him, since he remained two days in sight of them after the engagement, and then sailed no farther than Gibraltar, where they might have found him eight days afterwards, if they had had any stomach for fighting. It is plain therefore they had enough of it, especially since they never attempted to retake Gibraltar, or entered upon any further action till they returned into their harbours.

The French, in their relation of this engagement, inform us, that Sir CLOUDSELY SHOVEL, who led the Van of the English, sailed so far before the rest of the fleet, that he was in danger of being surrounded by the enemy and cut off; which obliged Sir GEORGE ROOK to begin the fight at too great a distance; and this was the true reason he had not so complete a victory as might otherwise have been expected. We may observe further, that the French were never able to man above fifty or sixty sail of men of war of the line during the late wars, though they pretend they have no less than two or three hundred large men of war in their ports; and it is true their foreign trade can never furnish them with seamen sufficient to man more than sixty capital ships, so that they are so far from being a match for the maritime powers, the English or Dutch, who are either of them able to fit out a navy of above a hundred sail, as they actually did in the Dutch war, and in the last war with France; but as

large squadrons were always taken up in protecting their coasts and their trade, the grand fleet seldom consisted of more than fifty or sixty sail of men of war, which they saw was abundantly sufficient to engage the whole force of France at sea. And when LEWIS XIV became sensible of this, we find he laid up his grand fleet, and only fitted out squadrons to ruin our trade and foreign settlements, in which he was but too successful. Another observation which cannot be passed by here, is, that notwithstanding the Portuguese are supposed able to fit out five and twenty or thirty men of war, they hardly joined our fleet with a single ship during the war, or could protect their own coasts or trade against the insults of a French squadron, but Sir GEORGE ROOK was obliged to leave them eighteen or twenty sail for their defence when he returned to England, as our Admirals did afterwards almost every year during the war. And I am satisfied, would the Portuguese have consented to have joined our fleets with a squadron of theirs, our Admirals have justly so mean an opinion of their marine force, that they would not have depended on them any more than our Generals could depend on the assistance of their horse on shore.

But to return from this digression, if it be one: The confederate fleet being returned to their ports, the French and Spaniards the following winter laid siege to Gibraltar by land, while Admiral POINTI, with a squadron of thirteen French men of war blocked it up by sea; of which Admiral LEAKE, who commanded the English squadron left for the protection of the Portuguese at Lisbon, having intelligence, set sail for the Straights, and surprising POINTI with his squadron in the bay of Gibraltar, took three men of war, and run two of the largest on shore, which the enemy immediately quitted and set fire to. Whereupon the besiegers, after they had lain six months before the place, and ruined best part of their army, thought fit to draw off their batteries and raise the siege.

The Confederates receiving repeated intelligence that the Spaniards, and particularly the Catalans, were ready to revolt on the appearance of King CHARLES with a body of troops upon their coast, the grand fleet, commanded by Sir CLOUDESLEY SHOVEL, with a detachment of landforces under the command of the Earl of Peterborough, set sail from Spithead to Lisbon, where they arrived the twentieth of June, and his Catholick Majesty coming on board them, they sailed to Gibraltar, where they took up the Prince of Hesse Darmstadt, and watering afterwards at the bay of Altea in Valencia, they found the people of that kingdom generally disposed to declare for King CHARLES III; from whence the fleet steered for Barcelona, where they did not arrive till the twenty-second of August, having been hindered by calms, contrary winds, and other accidents. The Prince of Hesse, who went before with two frigates to learn the posture things were in on that side, being returned to the fleet, and having acquainted the Generals that the town of Vich had already declared for his Catholick Majesty, as other places seemed ready to do, the troops were landed to the eastward of the city without opposition, and on the twenty-seventh some ships which had been sent to summon Denia, brought intelligence that the city had surrendered; whereupon the tents, artillery and ammunition being landed, his Catholick Majesty went on shore

the twenty-eighth of August, being received by a vast concourse of Catalans, that cried out without ceasing, *Long live King CHARLES III.* And it being agreed to attack Fort Montjoy to the westward of the town in the first place, though with very little hopes of success, a bomb luckily set fire to the powder of the Fort, and blowing up the works made it an easy conquest; but the Prince of Hesse Darmstadt lost his life in the attack.

The Earl of Peterborough afterwards ordered the trenches to be opened against the city, which was begun on the nineteenth of September, and the fleet bombarded it from the sea, setting fire to the town in several places, which put the people in a great consternation; whereupon Don VELASCO the Governor gave leave to the friars and the rest of the clergy, with the nuns, to retire out of the place, and they were kindly received by King CHARLES.

While the Confederates lay before the place, the Catalans came and offered their service to his Catholick Majesty, of whom two thousand were mounted and armed, the rest brought in provisions and necessaries, and contributed very much towards taking the town, which surrendered on the fourteenth of October, N. S. and the next day the shops in Barcelona were opened as in time of peace, and all was in a profound tranquillity. King CHARLES, in his letter to the Queen of England on this great event, dated the twenty-second of October, says, That all her Majesty's officers and soldiers had behaved themselves with uncommon gallantry, and taken a city with eight thousand men, and some few miquelets, which thirty thousand French were not able to do: that the cruelties of the late Viceroy, and a report that he intended to carry away several prisoners from thence, contrary to the capitulation, had incited the burghers and country people to take arms; and the garison being employed in loading their baggage in order to march out, were in danger of being cut in pieces, had not the Earl of Peterborough with her Majesty's troops entered the town and prevented it; and it was with a great deal of difficulty that the Earl preserved the Viceroy. And not only Barcelona, but Terragona, Lerida, Tortosa, and all the towns in Catalonia, except Roses, immediately surrendered to the Allies.

The season of the year requiring the fleet to return home, four English and two Dutch frigates were left at Barcelona to attend King CHARLES; and Sir CLOUDESLEY SHOVEL left twenty-five sail of English, under the command of Admiral LEAKE, and fifteen Dutch, commanded by Admiral WASSENAER, to winter at Lisbon, and protect the Portuguese.

The Catalans upon these successes raised six regiments for King CHARLES, besides a regiment of five hundred dragoons which his Majesty formed out of the late garison of Barcelona that took service under him, and constituted his guard; these were commanded by Count ZINZENDORF. At the same time Don RAPHAEL NEBOT, a Catalan, came over to the King with his whole regiment, consisting of five hundred horse, who were joined by a hundred and fifty other horse on the way. And a declaration being published inviting all good Spaniards to assist his Majesty in the recovery of his throne, deputies came from several towns in Valencia to make their submission. Whereupon the Earl of Peterborough, with one thousand horse, five hundred foot, and a body of

CHAP.

rate fleet.

CHAP. IX. miquelets, marched to the capital city of Valencia, and by the assistance of the inhabitants made himself master of it, making the Viceroy and the Archbishop prisoners; and thereupon the whole kingdom of Valencia, except Alicant and Penisola, revolted to King CHARLES: and had the Portuguese made any diversion, as they promised, or but permitted their Allies the English and Dutch to advance to the frontiers of Spain at this time, it is not improbable but all Spain had submitted to King CHARLES; for the Grantees were so disgusted at the influence they saw French counsels had in all their affairs, and at some promotions of the subjects of that nation, that when King PHILIP called the Grantees together to advise him in this exigence, they refused to assist him either with their purses or advice. But notwithstanding the most pressing instances of the confederate Generals, the Portuguese could not be drawn out of their quarters till the beginning of October, when they laid siege to Badajoz, and one would think only with a design to raise it; for they suffered themselves to be surprized by Marshal THESSE, who threw a supply of troops and provisions into the town after some progress had been made in the siege: whereupon the Portuguese retired, and marched into winter quarters. At this siege the Earl of Galway, who commanded the British troops, had his right hand shot off; whereupon he was carried to Elvas, whither the Portuguese Generals soon followed him, for which they had not so good an excuse.

Badajoz  
besieged.

1706.  
Barcelona  
besieged  
by King  
Philip.

Barcelona  
relieved.

The Portuguese being retreated into their own country, the Earl of Peterborough marched with fifteen hundred men to Valencia, and the city of Barcelona being drained of soldiers, by sending detachments to Tortosa, Lerida, Gironne, &c. King PHILIP on a sudden drew all the troops he could together, both French and Spaniards, and invested Barcelona on the second of April, N. S. 1706, before that city had any notice of his motions, or the breaches were well repaired; and had not the Count de Thoulouse, who was to convoy the artillery and ammunition necessary for the siege, and block it up by sea, been put back and detained a considerable time by contrary winds, the town had been retaken by the enemy before the allies could have relieved it. But the Lord Peterborough having found means to reinforce the garison, and harassing the enemy's camp with perpetual alarms, the town held out till the second of May, when his Lordship sent King CHARLES intelligence that the confederate fleet was approaching. On the seventh the Earl of Peterborough (who was Admiral as well as General) joined the fleet off Tarragona with several barks, and fourteen hundred land-forces in them, and his Excellency went on board the Prince George, hoisting the Union flag, and on the eighth the fleet came to an anchor in Barcelona bay, to the inexpressible joy of the garison and inhabitants, for Fort Montjoy was taken the twenty-fifth of April, the Lord Donnegal who commanded there being killed, and the enemy preparing to give the town a general assault.

The Earl of Peterborough going on shore with the troops he had on board, the town no longer apprehended themselves in any danger, and on the twelfth of May, N. S. King PHILIP raised the siege with the utmost precipitation, leaving behind him a hundred and six brass cannon, twenty-three mortars, all his sick and wounded, and prodigious quantities of provision and ammunition;

and it was observed, that the same morning about nine there was a great eclipse of the sun, which being the French device, superstitious people imagined portended no good to their nation. King PHILIP with his army retired into France, and the French fleet commanded by the Count de Thoulouse had retired before, on notice of the arrival of the confederates on the coast of Catalonia.

While King PHILIP was besieging Barcelona, and had withdrawn most of his forces from the side of Portugal, the Portuguese with the confederate troops ventured to enter Castile, and lay siege to Alcantara the tenth of April; which being a place of no great strength, capitulated the fourteenth, when it was expected the Portuguese would have marched directly to Madrid, where King PHILIP's Queen and Court were in the utmost consternation; but notwithstanding all the remonstrances of the British and Dutch Generals for marching to Madrid, the Portuguese absolutely refused to leave their own frontiers till they saw the fate of Barcelona determined: however, on intelligence that the confederate fleet had entered the Straights in their way to Barcelona, they laid siege to Ciudad Rodrigo the twenty-first of May, which place surrendered the twenty-sixth; and on the twenty-seventh the news of the raising the siege of Barcelona was brought into their camp; whereupon it was unanimously agreed by the Portuguese and the rest of the confederate Generals to march to Madrid, from which they were not then fifty miles distant: the army however, on account of some unpassable mountains, were obliged first to march northward as far as Salamanca, where they arrived the seventh of June. On the eighteenth of the same month they came to Espinal, where Deputies from the Escorial came to make their submission. Here, by some intercepted letters, they had advice of the victory obtained by the allies at Ramillies in Flanders the twelfth instant, and understood that the Spaniards generally looked upon King PHILIP's affairs as desperate. That Prince however, after his disgrace at Barcelona, arrived at Madrid by the way of France, and finding the Portuguese bent their march towards that capital, he retired again, and joined his troops that were returning through Navarre, commanding the rest of his forces that were dispersed through Spain to follow him.

Alcantara  
taken.

Ciudad  
Rodrigo  
taken.

Before he left Madrid, he proposed it to the Grantees and the rest of the nobility, that they would take the field with him; but they desired to be excused, and most of them retired to their country-seats. The Spaniards seemed very indifferent which party succeeded, at least they did not think it worth their while to hazard any thing for either Prince. They did not approve of French counsels, but were made to believe their religion was in danger from those armies of hereticks in confederacy with King CHARLES.

The Allies being encamped at Nuestra Signora de Ratamal, on the twenty-fourth of June a detachment of horse was sent to take possession of Madrid, from whence there came a deputation the next day to make their submission in form, and most of the nobility and persons of distinction came into the camp, to express their devotion for the house of Austria. The army moving nearer to Madrid, the twenty-seventh King CHARLES was proclaimed in that city; whereupon Toledo and many other considerable towns declared for him; and even Cardinal PORTOCARERO wrote

The Allies  
take pos-  
session of  
Madrid.

Toledo,  
&c. de-  
clare for  
King  
to Charles.

to the Portuguese General, the Marquis das Minas, offering his submission to King CHARLES, in whose name justice was administered in all courts of judicature at Madrid.

Madrid  
lost again.

The confederate Generals upon this success sent courier after courier to King CHARLES, to hasten his march to Madrid, which at first he seemed inclined to; but the kingdom of Arragon declaring for him at the same time, he marched to the capital city of that province, under pretence of receiving the submission of that people, where he trifled away so much time, that the Duke of Berwick being reinforced, appeared in sight of the Allies, and on the third of August sent a detachment to take possession of Madrid again, which the Confederates had quitted a little before, and withdrawn to a more advantageous camp, for they were now obliged to be upon the defensive. But at length, on the sixth of August, King CHARLES and the Lord Peterborough arrived in the camp of the Allies at Guadalaxara, bringing with them no more than five battalions and thirteen squadrons, which, though it did not put them in a capacity of acting offensively, enabled them to make a handsome retreat; and the Earl of Peterborough was dispatched to Italy to solicit further reinforcements, the French and Spaniards being at this time entirely driven out of Lombardy by the Allies, as they must have been out of Spain, if the Confederates had not, to humour the Imperialists and the Duke of Savoy, employed their sea and land forces in that romantick project upon Thoulon, which will be mentioned in the next year's transactions.

The Allies  
retire out  
of Castile.

But to return to the army at Guadalaxara: The Duke of Berwick having possessed himself of Madrid again, Toledo, Salamanca, and all the towns almost that had declared for the Allies in Castile, espoused the part of King PHILIP again, whereby the retreat of the Portuguese to their own country was cut off, and it was thereupon agreed to retreat into Valencia, to secure that country, Arragon and Catalonia, in the interest of King CHARLES, and preserve a communication with the sea-coasts: the army accordingly made their retreat in good order, passing the Tagus at Fuente Duenas, without any considerable loss, though the Duke of Berwick attended their rear during the whole march.

Whilst King CHARLES was retreating from Castile towards Valencia, a body of ten thousand English and Dutch arrived in the river of Lisbon, commanded by the Earl Rivers. These troops were at first designed to have made a descent in France the preceding summer, but having been detained several months by contrary winds, that enterprize was laid aside, and they were sent to reinforce the Allies in Spain. The court of Portugal, on their arrival at Lisbon, proposed to join a body of their national troops with them, and that they should march directly to Madrid through their country; but the English and Dutch having been on board six months, suffered incredible hardships in the voyage, and lost most of their horses, were in no condition to undertake such an enterprize: nor had the Portuguese any such troops as they mentioned ready to join them, or artillery or ammunition provided for such an undertaking. The Earl Rivers however thought fit to land his men, as well to refresh them as to encourage the Portuguese, whose frontiers lay pretty much exposed on the retreat of the Allies towards Valencia.

1

But to return to King CHARLES: his army having gained the frontiers of Valencia and Murcia, he put garisons into Cuenca, Requena and Cifuentes, sent a detachment of his troops to Arragon, and disposed the rest in such a manner, as to protect those countries which continued in his interest.

I find the conduct both of King CHARLES and the confederate Generals that took possession of Madrid, exceedingly blamed by some writers. They relate, that when the French retired in such a precipitate manner from before Barcelona to the frontiers of France, it was the opinion of the English Generals, that King CHARLES should have immediately gone on to Madrid by the way of Valencia, as being the nearest, most safe, and most convenient way for the subsistence of the confederate troops. Several councils of war were held upon it, and it was resolved in three of them *nemine contradicente*. According to those resolves, the Earl of Peterborough marched before with six thousand men to Valencia, and soon after his Lordship arrived there, he received certain advice that the Earl of Galway was come with the confederate army under his command to Madrid; from whence every one concluded, that King CHARLES would have gone with all imaginable speed to take possession of that capital. The Earl of Peterborough, and those who were with him, were mightily surpris'd, after a month's waiting at Valencia, to find that his Catholick Majesty had been advis'd and prevail'd upon by the Prince de L——n, and Count de C——es, to alter those measures at Tarragona, where they had resolved to go to Madrid by the way of Arragon, on pretence of conquering that kingdom, which had then declared for him. The Envoy of Portugal, and our Minister at his Majesty's court, did both of them protest against this, and urged to have their reasons entered in writing; the substance of which was, 1. That Arragon being not well furnished with provisions, it would be very inconvenient for our troops to march that way. 2. That the enemy having then six thousand good horse ready to observe his motions, his Majesty could not march that way without visible hazard. 3. That though that road were safe, it would be the loss of six weeks time before he could arrive at Madrid, and that time would be of great importance to him in such a conjuncture. Those about him who were for going by the way of Arragon, alledged, that it was not for his Majesty's honour to go to Madrid in a hurry, without his equipage and retinue. To which they say Mr. STANHOPE replied, That King WILLIAM, when he made his descent upon England, went to London in a hackney-coach, attended with a few dragoons, otherwise he had lost the crown. However, the other counsels prevailed, and King CHARLES pursued their advice, of going by way of Arragon. When the Earl of Peterborough heard of these measures, he sent several letters with the unanimous opinion of his councils of war, that it would be best for his Majesty to return and go by the way of Valencia: but his Lordship's letters, and the opinion of the councils of war, had no effect; his Majesty went on to Saragossa, where the great expectations of those who advis'd him to that road, terminated in being complimented with a *Torridore*, or bull-feast. When they saw too late that dangers approached, and that the direct way from thence to Madrid was not practicable, then they altered their measures again, took the road towards Valencia, and

CHAP.  
IX.

and sent to desire that the Earl of Peterborough would meet them with all possible haste.

The confederate army then in Castile seemed at the same time to have been under a strange restraint. The Duke of Anjou had no more than six thousand horse, and scarce any regular foot on that side, when the confederate army came to Madrid, so that it was thought they might have forced the enemy to repass the Ebro, where they would soon have been in want of provisions; or the confederate troops might have encamped and fortified themselves, so as to have covered Madrid, and laid up magazines of corn: but instead of doing either of these, they marched and encamped at Guadalaxara, where in less than a month they were reduced to want of provisions. And it seems their intelligence was not very good, since one morning they were surprized to see an army of twenty thousand men encamped on the other side of the river over-against them, though they were informed that there was no enemy within thirty miles of them; and all this while the French troops that retired from before Barcelona had time to march round through France into Spain, so that they were superior to the confederates in horse, and well nigh a match to them in foot. Perceiving this advantage, they detached a body of horse to repossess themselves of Madrid, where they killed many of the Germans, and others of King CHARLES's party: upon this, Segovia, Toledo, Salamanca, and other places which had submitted to his Catholick Majesty, revolted again to the Duke of Anjou, and our communication with Portugal was cut off.

When matters came to this pass, most of the Generals were for fighting, in order to recover that advantage which had been so unhappily lost; but of forty-five General officers, the Earl of Peterborough alone was against running such a risque: his Lordship gave his opinion in writing against it, and convinced them that it was not safe to venture all upon the issue of a battle, since in case we should be worsted, there could be no hopes of a retreat in a country where we had so many enemies.

This was the state of affairs when the Earl of Peterborough came to Guadalaxara. His Lordship was for retaking Alcala, as a proper place for covering Madrid, and offered to attempt it with five thousand men, by possessing himself of the pass of Henarez, and either to fight such of the enemy as opposed him, or to make a good retreat. His proposal was approved of by every one, but by the delays laid in his way the opportunity was lost, so that the confederate army was forced to break up, and to march higher into the country towards Madrid, for the conveniency of provisions. His Lordship's baggage was taken by the enemy at Huet: the town offered to make good the damage, which he was too generous to accept of; yet he imposed it upon them by way of punishment, to bring in all the corn of that district to the army, which was so considerable, that it served them for bread for six weeks. His Lordship finding there were Generals enough for the rest of the campaign, and that he had very little influence on their councils, retired to Valencia, and from thence went to Italy, as well to provide remittances of money for the forces in the British service, as to endeavour to procure a reinforcement of troops from thence, which might very well have been spared there, since the French were driven out of Lombardy. And if the Duke of

Savoy and the Imperial Generals would have come into these measures, Spain had been secured to the house of Austria in another campaign: that fatal project on Thoulon, for which every thing else was neglected the following summer, ruined King CHARLES's affairs in Spain, and occasioned the war to be protracted six years longer, to the irreparable damage of the Allies, especially of Britain, that bore as great a share in it as all the rest of the Confederates put together.

And now let us take a view of our acquisitions by sea this campaign. The English Admiral LEAKE it seems was no less successful in the Mediterranean than the confederate Generals had been by land: for after he had relieved Barcelona, he attacked Carthage, which surrendered to him about the middle of June; and on the eighth of August he took Alicant by storm, after which the castle surrendered. About the middle of September he reduced the islands of Majorca and Yvica to the obedience of King CHARLES III. But the confederate army being retired out of Castile, Carthage was retaken by King PHILIP's forces the following winter; and the Duke of Berwick also retook Cuenca on the confines of Castile, being a considerable frontier town in the possession of the Allies, and made the garison, consisting of two thousand men, prisoners of war.

Whilst affairs were in this situation, and Sir CLOUDESLEY SHOVEL and the Earl Rivers remained at Lisbon with the troops above-mentioned, Don PEDRO King of Portugal died, viz. on the eleventh of December 1706, in the fifty-eighth year of his age. He had been married three times: his first wife was the Princess LOUISA DE GUSMAN, daughter to the Duke of Medina Sidonia, who died anno 1666. He had by her the Infanta ISABELLA, who was declared heiress of the kingdom in 1674, and contracted to the Duke of Savoy in 1680; but died unmarried on the twenty-first of October 1690. His second wife was MARY-FRANCES-ISABELLA of Savoy, daughter of the Duke of Nemours, who had been divorced from his brother the late K. ALPHONSO. He married her the second of April 1668, and she died the seventeenth of December 1683. His third wife was MARIA-SOPHIA ELIZABETH, daughter of PHILIP-WILLIAM Elector Palatine. He married her in 1687, and she died in 1699, by whom he had issue, 1. A son born the thirtieth of August 1688, who died a few days after. 2. Don JOHN FRANCIS-JOSEPH-ANTONIO, &c. his present Majesty, born the twenty-second of October 1689, and declared heir apparent to the crown by the three estates assembled at Lisbon the first of December 1697. 3. FRANCIS XAVIER-ANTONIO-URBAN, May the twenty-fifth 1691. 4. ANTONIO-FRANCIS, born March the fifteenth 1695. 5. THERESA-FRANCES-JOSEPHA, born February the twenty-fourth 1696: she was contracted to the present Emperor, but died in 1704. 6. EMANUEL, born August the third 1697. And, 7. FRANCISCA-XAVIERA-JOSEPHA, born January the thirtieth 1699. And besides these he had a natural daughter, married to the eldest son of the Duke of Cadaval, anno 1695.

As to the Infanta, the Princess CATHARINE, sister of King PETER, born the fourteenth of November 1638, she was married, as hath been intimated already, to CHARLES II, King of England, by a treaty concluded the twelfth of May 1662; the marriage being first magnificently

King Peter died, and is succeeded by his son Don John.

The wives and issue of the late King.

CHAP.  
IX.

solemnized by proxy at Lisbon, and afterwards consummated at Portsmouth in England, whither the King went to meet her. The Queen-Regent of Portugal, her mother, gave her as a dower Tangier in Africa, and the island of Bombay in the East-Indies: the first of which was kept for some years at a great expence; but the Ministry of England being of opinion the advantages they should reap by it would not countervail the charge of maintaining it, thought fit to demolish the works and leave it, anno 1684; and King CHARLES conferred the island of Bombay on the English East-India company, which they still retain, it being the seat of the principal governor they have in India. Besides these places, the Infanta had a fortune of three millions of livres, or three hundred thousand pounds, according to some writers, but according to others two hundred and fifty thousand pounds. She continued in England about seven or eight years after the death of King CHARLES, but in 1692 retired to Portugal, where she died on the thirty-first of December 1705.

On the death of King PETER, his eldest son Don JOHN succeeded to the crown, as has been intimated already. The French had great hopes on this event to have withdrawn Portugal from the grand alliance, and things were carried so far that some acts of hostility passed between the royal navy of England and the forts in the river of Lisbon, which were ordered to fire on the cruisers Admiral SHOVEL sent out of that river. But partly by the influence of the English fleet and forces, and partly by English treasure, the Portuguese were kept steady to the Allies; they were pleased to suffer the English to continue the war on that side at their own expence.

Earl Rivers's memorial on his leaving Lisbon with the British troops.

The men of war and transports being provided with water and other necessaries to continue their voyage, the troops under the command of the Earl Rivers were embarked, and designed to sail the second of January for Alicant, according to the desire of the King of Spain; but the night before the General received orders from England to the contrary. His Excellency held a Council of War, and therein it was resolved that my Lord should present a memorial to the new King to acquaint him with the conditional orders he had received. His Excellency had accordingly audience the fourth of his Portuguese Majesty, who received him with all possible marks of esteem, and delivered his memorial, containing the conditions upon which he was ordered to land, which were in substance as follow.

1. That the King should give him positive assurances that the Portuguese troops in Valencia should be recruited to nineteen battalions, each of six hundred effective men, and the cavalry remounted; and that the said recruits and other necessaries to enable those troops to take the field, should be immediately sent away. 2. That the subsidies paid by England and Holland for the pay of 13000 men, which they are obliged to maintain by the treaty, may be remitted directly to Valencia, or wheresoever that army is, in order that those troops be punctually paid out of it by the orders of the commander in chief of her Majesty's forces. 3. That if his Portuguese Majesty cannot provide ships to transport the said recruits, his Excellency will take care to send them aboard English ships, his Majesty paying the charges, and finding provisions, or paying them. 4. That the late King having proposed by his En-

CHAP.  
IX.

voy and the Marquis de Montandre in England, to join ten thousand foot and between two and three thousand horse to the troops under the command of the Earl Rivers, to march directly to Madrid, his Excellency desires a particular assurance from his present Majesty that the same shall be performed; as also to know what measures are already taken for that purpose, what likelihood there is that a body of that number shall be ready, and in a condition to march at the time appointed, and in what manner, and which way it is proposed they should march towards Madrid. 5. His Excellency declares, that he has orders to agree beforehand, and concert with the King all things relating to the artillery, baggage, and provisions, and expects that his Majesty should furnish every thing for that service, according to the treaty relating to the first forces that were sent from England; and that the troops under his command may be furnished with provisions for themselves, and forage for their horses at their own charge, but at the same price as the King's troops. 6. My Lord declares as to the point of command, which has been liable to so many inconveniences, that he will not be commanded by any body but his Majesty alone. His Excellency desires in the conclusion his Portuguese Majesty, to let him have an answer to all these points in four days, that he may take measures accordingly; and that in the mean time the necessary provisions of straw and barley for his horses may be continued.

The Court of Portugal not thinking fit to comply with the demand in the Earl Rivers's memorial, Sir CLOUDESLY SHOVEL and the Earl, with the English troops aboard, sailed from Lisbon the eighteenth of January, and arrived at Alicant the eighth of February. The Earl Rivers having landed his forces, and left them under the command of the Earl of Galway, returned to England, together with the Earl of Essex and Brigadier GORGES, who were embarked in the first design, but for reasons best known to themselves, declined remaining in Valencia. King CHARLES also not approving the conduct of the Generals, the Marquis das Minas and the Earl of Galway, thought fit the latter end of February, to declare his resolution of leaving the army, and retiring into Catalonia; which he did soon after, taking with him a regiment of Dragoons, and another of Dutch foot. It was reported however that the army of the Allies still amounted to thirty thousand men, though it appears that at the battle of Almanza, which happened but a very little while afterwards, they were not eighteen thousand effective men. Nor was the deficiency in point of troops their only misfortune, it is evident there were great misunderstandings between King CHARLES's Court and the Generals, which gave but a melancholy prospect of the following campaign. We find the best account of the state of the armies in Spain in a letter the Earl of Peterborough wrote from Italy to the Portuguese Ambassador, that attended the Confederate army in Valencia at this time, in which he has these expressions: "Would to God, says the Earl, you were free from uneasinesses when I hope to be in quiet: it seems to me as if storms were threatening Spain, and I am the more concerned, because of the probability of your Generals continuing in a disposition of rash measures. It is certain they are only in a condition for a defensive, and that suffices for the present, since the

The Earl of Peterborough's account of the state of the war.

preparatives against France are so terrible in Italy and in Flanders. You know my opinion in the council of war held at Valencia; but the succours which are coming, and the person of the Duke of Orleans, are certain proofs of the great efforts the enemy will make in the beginning of the next campaign. If we prevent their first impetuosity, whilst Naples, Sicily and Sardinia may be secured, peace will give us all we can desire. I am obliged to give you notice that no endeavours can prevent the Imperialists from marching towards Naples, it is impossible to hinder that diversion of their troops; it is our interest to give the necessary help towards bringing that affair to a speedy conclusion: and methinks one might hope upon the success of that enterprise, that those troops might be solicited and obtained for the succour of Spain.

But, my Lord, pray consider the consequences of a lost battle in the spring: perhaps a disgrace was less fatal in Flanders. By a superiority of horse, such a misfortune may happen to the best foot in the world, which will be cut off entirely in case of a defeat, and all Spain at the same time lost, for want of garisons in the strong places we possess. If we defend well what we have, their great number of horse will consume it self for want of forage, or destroy that part of the country which is ill affected, and be called by their pressing necessities elsewhere, since we have in Italy near seventy thousand effective men, for the vigorous measures that are concerted.

I know my reasons, though good, will have little force with the Generals; they have the last campaign in their thoughts, and have not perhaps the same tranquillity of mind and quiet, which, I thank God, I enjoy, being well content with the beginnings I have made, only wishing a happy conclusion to this great affair; assuring your Excellency that nothing private shall ever mix with my thoughts for the publick. But I justly lay a stress on the great credit you have with every body, and am well assured that the interest of your country requires measures of the utmost precaution, since your best troops are in Spain, and that a defeat would expose Portugal before succours can arrive, since England has left herself almost unprovided with troops, and that the forces in Italy being designed for other services, it will be difficult to obtain any of them, though the circumstances pressingly require it. I therefore intreat your Excellency, to think again of the consequence of a lost battle: God be praised we are not in a necessity of a victory, that is the circumstance of France.

At present I have nothing to propose to your Excellency, nor to wish, but that the troops might not be fatigued in the impossible views of gaining Madrid, half the army being exposed to destruction by diseases and famine, or the whole, in a very improper time by an unequal battle. I will neglect nothing in my power to obtain in a favourable opportunity a succour of troops for Spain, that in the after-season we may push our affairs."

But the Marquis das Minas and the Earl of Galway being strangers to these prudent counsels, took the field the sixth of April N. S. and having destroyed some of the enemy's magazines on the frontiers of Castile, laid siege to the castle of Villena. Before the breach was accessible, they received intelligence that the Duke of Berwick was advanced as far as the plains of Alman-

za, with 76 squadrons of horse, and 54 battalions of foot, and that the Duke of Orleans was on the march to join him with 7 or 8000 French, while the Allies had no prospect of being reinforced by the troops from Catalonia, King CHARLES having declared his intention of marching with them to Rouffillon, and desired the Lord Galway to distribute the army on the frontiers of Valencia and Arragon for the security of those provinces: (which was certainly not bad advice, in the circumstances the confederates then were.) However, it was agreed in a council of war to march and attack the enemy, who waited for them in the plains of Almanza, the most advantageous ground they could have chosen, on account of their superiority in horse. But the Earl of Galway having supply'd his want of cavalry, as he thought, by interlining a brigade of foot with each wing of horse, ventured to engage the enemy on the twenty-fifth of April N. S. about three in the afternoon. The Earl posted himself at the head of the English dragoons on the left, and marched to attack the enemy's right wing of horse, the Portuguese being ordered to take the charge as it should come to them gradually from the left. As soon as the left wing was advanced within an hundred paces of the enemy's horse, they advanced out of their line to meet the charge, and by the weight of their squadrons forced those of the Allies to retreat about fifty paces; but Colonel SOUTHWELL's and WADE's regiments of foot, who were on the left of that brigade which was interlined with the horse of the first line, coming up and firing upon the enemy's flank and rear, and the cavalry at the same time receiving the charge in the front, drove them in disorder through their own lines with great slaughter. By this time the English and Dutch foot, under the command of Lieutenant-General EARL and Baron FREISHEM, were sharply engaged in the center, and broke through the enemy's first and second line, driving them as far as the walls of Almanza: but the enemy's cavalry of the second line falling in upon their flank, forced the English and Dutch infantry back with great loss.

The enemy observing that the Portuguese cavalry on the right did not advance with the left wing, detached some squadrons to attack them, their line following slowly to sustain them; but the Portuguese did not stay to receive them, for upon the first charge of the detached squadrons the whole right wing of the Portuguese cavalry run away, and abandoned their infantry, who were most of them either killed or made prisoners.

The battle continued still on the left wing, the enemy charging the Allies with fresh squadrons to very little purpose; for the English and Portuguese horse on that side being favoured by the fire of the English battalions that were interlined with them, broke the enemy several times. Whereupon they sent for nine battalions, most of them French, and drew up before the front line of horse, in opposition to the English brigade, and at the same time brought up several fresh squadrons to make another charge upon the left wing of horse, that had already suffered very much, and lost most of the officers who commanded the squadrons; Brigadier CARPENTER was the only one that remained un wounded. The confederate troops in this condition were not able to sustain the charge, but gave way, and

Battle of  
Almanza.

CHAP.  
IX.

and at the same time the nine French battalions charged the English brigade of foot in front and flank, and entirely broke them, giving no quarter for some time: the foot in vain cried to the horse not to abandon them. Neither of the Generals, the Marquis das Minas or the Earl of Galway, staid to see the end of the engagement, but left that brave handful of foot to the mercy of the enemy; whereupon Major-General SHRIMPTON, Brigadier MACARTNEY, Colonel BRITON, Colonel HILL, with some other officers who had engaged in the center, assembled the stragglers of the English regiments into a body, and joining some of the Dutch and Portuguese, to the number of two thousand men, retreated to the hills two leagues distant from the field of battle, repulsing the horse that pursued them: but the next morning finding themselves destitute both of ammunition and provision, and being surrounded by two lines of foot, they were obliged to surrender prisoners of war.

Brigadier KILLEGREW, who was wounded in the first charge, still keeping the field, was killed in the second. The Colonels DORMER, ROPER, LAWRENCE, GREEN and DE LOCHT, were killed at the head of their squadrons, after having behaved with the utmost gallantry; and Colonel PIERCE and Mr. HARA, son to the Lord Tirawley were wounded. Of the foot, the Colonels HAMILTON, WOOLLET and NEAL, who commanded regiments were killed, and the Lord MARK KERR, and Colonel CLAYTON wounded. As to the Earl of Galway and the Marquis das Minas, they fled with the cavalry that was left, amounting to about three thousand five hundred, to the other side of the Ebro into Catalonia. The foot were all killed or taken prisoners, I could never hear of a single company that escaped.

The day after the battle the Duke of Orleans joined the Duke of Berwick with a reinforcement of eight or ten thousand men; and the enemy having taken Xativa, Alcyra, and some other places which the Allies had garisoned on the frontiers of Valencia, the cities of Saragossa and Valencia, with the rest of the towns in Arragon and Valencia, submitted to the conquerors, were obliged to pay large sums for their revolt, deprived of their privileges, disarmed and treated in a very barbarous manner, and the town of Xativa in particular was burnt and razed to the ground, and many of the inhabitants massacred for their disaffection to King PHILIP. The Spanish Generals on the side of Portugal took Serpa and Moura this campaign; and nothing remaining in the hands of the Allies but Alicant and Denia in Valencia, the Duke of Orleans marched to the frontiers of Catalonia, where the confederate Generals having thrown their troops into the strong towns, burnt the country that the enemy might find no subsistence. These were some of the unhappy effects of the battle of Almanza, which the Allies might have prevented if the enterprizes on Thoulon and Naples had been deferred, or if the Marquis das Minas and the Earl of Galway had remained upon the defensive till those expeditions had been over. The campaign ended on the side of Catalonia with the taking of Lerida by the Duke of Orleans; and on the frontiers of Portugal King PHILIP's forces took Ciudad Rodrigo by storm. And the Dukes of Orleans and Noailles had probably made an entire conquest of Catalonia, if they had not been obli-

Lerida

of Orleans.

ged to detach part of their troops to France upon the Duke of Savoy's laying siege to Thoulon.

CHAP.  
IX.

The following year 1708, the Duke of Orleans made himself master of Tortosa in Catalonia, and of Denia in Valencia. But the Imperialists having sent Count Staremberg to Spain from Italy with a reinforcement of eight or ten thousand men, the forces of France and King PHILIP were content to be upon the defensive afterwards in that country. With these forces Sir JOHN LEAKE, the English Admiral, convoyed the Queen of Spain, the late Princess of Wolfembottle, from Vado in Italy to Catalonia, where the marriage was consummated between her and King CHARLES. After which Sir JOHN LEAKE taking some land-forces on board, reduced the island of Sardinia to the obedience of King CHARLES: and before the end of September the island of Minorca, with the fine harbour of Port-Mahon, surrendered to that Admiral and General STANHOPE. In the mean time a contract of marriage was made between the King of Portugal and the Archduchess MARY-ANNE of Austria, second sister to the Emperor and King CHARLES; and her Majesty arriving from Holland at Spithead the twenty-fourth of September, was conveyed to Lisbon by Admiral BYNG, where she arrived the sixteenth of October, N. S. And though King CHARLES's forces as well as the King of Portugal's had been considerably recruited and augmented this campaign, yet those Courts were so taken up with the preparations for solemnizing these marriages, and rejoicings afterwards, that the military operations in these countries seemed to be at a stand.

The campaign of 1709 begun unfortunately for the Allies on the side of Portugal: for the Portuguese and Spanish armies being encamped on the banks of the river Caya opposite to each other, and the Marquis de Bay making a motion towards Campo Mayor, the Portuguese Generals resolved to attack him, contrary to the opinion of the Earl of Galway. Whereupon all the horse and a body of Portuguese foot had orders to march immediately with five field-pieces and begin the engagement, while the rest of the army followed to support them. But the Spanish cavalry no sooner charged the Portuguese horse, but they fled and abandoned their foot, as they had done at the battle of Almanza. Whereupon the enemy immediately took the five field-pieces and fell upon the foot in the flank. Brigadier PIERCE's English brigade was ordered to march and favour the retreat of the Portuguese foot; which they did with so much resolution, that they recovered the field-pieces again. The Portuguese Generals however were so far from supporting them, that they quitted the field, leaving this fine brigade to be surrounded by the enemy's whole army, and made prisoners, together with Major-General SANKEY, the Earl of Barrimore, and Brigadier PIERCE himself. The Earl of Galway, it is said, had a horse shot under him, but he made a shift to escape out of the field with the Portuguese Generals, as he had done at Almanza. The Marquis de Bay afterwards pursued the Portuguese army; but they retreated beyond Elvas, and posted themselves in an advantageous camp, where it was not easy to attack them.

this year, unless the siege of the castle of Alicant, which continued, with some intermissions, from the time the town was taken last year till the middle of April 1709. The Spaniards, finding it impossible to reduce it any other way, were resolved to blow it up by a great mine, in which they lodged twelve thousand barrels of powder. They summoned the Governor and acquainted him with his danger, and proposed that two of his officers should come out and view the mine, which they did accordingly, and upon their report the Governor held a Council of War, wherein it was resolved not to surrender; and the French sprung their mine, which made an incredible noise, but had no great effect upon the castle, only the Governor Major-General RICHARDS and Colonel SYBURN, happening to be a little too near the place where the mine was, were unfortunately buried in the ruins, with several other officers. The command devolving upon Lieutenant-Colonel D'ALBON, he resolved to hold out till he was relieved, and to that end reduced his men to short allowance. And on the fifteenth of April Sir GEORGE BYNG and Major-General STANHOPE, appeared before Alicant with a squadron of men of war and four thousand land-men on board; but the Spanish army being reinforced, and the coast very tempestuous, it was not thought adviseable to land, and they contented themselves with sending a flag of truce on shore, and capitulating to withdraw the garrison from the castle and deliver it up, which the Spaniards agreed to; and pursuant to this capitulation the garrison, consisting of about five hundred men, marched out the eighteenth of April N. S. with two pieces of cannon, and all other marks of honour, and embarked on board the fleet.

glish.

1710.

A further reinforcement of troops being sent from Italy to Catalonia in the year 1710, King CHARLES advanced with his army to attack King PHILIP, who was then also at the head of his troops in Arragon: and coming up with the enemy on the 27th of July in the evening near Almenara, he gained a considerable advantage over King PHILIP's horse, but the foot retired by the favour of the night. In this action Count FRANCIS of Nassau Auverkirck, one of the Generals of the Allies, was killed by a cannon-shot from their own guns; and the Earl of Rochfort, another of their Generals, being closely engaged with the enemy, was mortally wounded by a sword.

Battle of  
Almenara

King PHILIP after this defeat retired under the cannon of Lerida, where not being able to subsist his army, he retreated to Saragossa, and being pursued thither by King CHARLES, he could not avoid coming to an engagement. The confederates being drawn up in order of battle within cannon-shot of the enemy, Count STAREMBERG with the rest of the Generals went to observe their disposition, found them posted with the Ebro on their left, the town of Saragossa on their rear, and their right wing of horse drawn up upon the brow of a steep hill, with a battery of eight pieces of cannon in their front. The day being far spent, and a great part of our foot not come up, it was thought fit to defer the attack till the next day. On the twentieth at break of day both armies plaid their cannon, and General STANHOPE, who commanded our left wing, discovered that the enemy had marched most of their horse from their left wing to their right; upon

Battle of  
Saragossa.

which he obtained of Marshal STAREMBERG four battalions of foot, which he placed at the left of our horse, and six squadrons of Portuguese horse which were brought from our right he drew up beyond the four battalions, in order to stretch our left wing as far as possible towards the extent of their right. It is to be observed that the enemy lay in an oblique line from the Ebro up the hill, so that their troops on the hill lay much nearer to us than those on the descent from it and on the plain. At twelve o'clock at noon our signal of battle was made, and our whole army being drawn up in two lines marched at once to attack the enemy in full front, except the four battalions which General STANHOPE had interlined with the horse, whom he ordered to advance and take post on the brow of the hill, by which means he gained time for his wing of horse to form after they were got up. Our left wing from their situation coming first to the enemy, began the battle, which increased towards the centre, and so continued to the right till the whole were engaged. But notwithstanding a disposition so properly made, and the goodness of our troops, the enemies with their superior numbers and advantage of ground seemed at first to have the better of the day; which probably they would have maintained, if all our Generals commanding on the left had not seasonably led on fresh troops to support and rally such as they saw pushed or disordered, by which the advantage soon began to incline to the arms of his Catholic Majesty. While the affair was obstinately disputed on the left, our foot being deeply engaged, made a great slaughter of the enemy: And at the same time their left wing of horse making little resistance, within the space of two hours we gained a complete and glorious victory. We took all their cannon and most of their colours; so that out of forty battalions not above four thousand escaped, and of sixty squadrons about the like number; all the rest being killed or taken prisoners. The King during the whole action gave the necessary orders, and with his royal presence continued to encourage the troops. His Majesty entered the town of Saragossa the same night, where he was received with the acclamations of the people, and all imaginable expressions of joy. The same night the citadel of Saragossa capitulated, and the garrison surrendered themselves prisoners of war.

CHAP.  
IX.

This victory cost the Allies two thousand men, and the enemy at least three thousand, as was given out, besides five or six thousand that were made prisoners. The Allies also took seventy-two colours and standards, two and twenty pieces of cannon, and part of the enemy's baggage. King PHILIP made all the haste he could to Madrid, where he arrived the twenty-fourth of August; and notwithstanding this misfortune, the Castilians gave him still fresh proofs of their loyalty and affection. But apprehending the Allies would bend their march that way, he thought fit to send the Queen and the Prince of the Asturias to Valladolid, whither all the grandees and officers of state attended them, though he offered to dispence with their attendance; such were the affections of the Castilians towards that Prince at this time, to which nothing had more contributed than King CHARLES's abandoning them to the mercy of their enemies, when they had made their submission and declared for him on his first taking possession of Madrid.

The affec-  
tion of the  
Castilians  
for King  
Philip.

CHAP.  
IX.

The Portuguese army desired to join that of King Charles near Madrid.

After the battle of Saragossa, the Count de Assumar, Ambassador of Portugal with King CHARLES the third, and the Count D'Attalaya, General of the Portuguese troops in the army of King CHARLES, sent an express to Lisbon to represent to the King of how great importance it was to the common cause that his Majesty's army should advance towards Castile, and second the efforts of King CHARLES. Whereupon the Portuguese General the Count de Villaverde was ordered to take the field, which he did, and in his march wrote to the army of his Catholick Majesty that he would move to join them by the way of Menda and Truxillo. He marched first to Barcarota, and then to Xeres de los Cavalleros, the last of which places being of no defence he possessed himself of; but without attempting any thing further, retired to the frontiers of Portugal. It was given out he was obliged to it by four thousand of the enemy's horse, though it does not appear the enemy had any such forces on that side as might reasonably give him the least sollicitude. At the same time came letters again from the Counts of Assumar and Attalaya, soliciting that the Portuguese army might advance to the bridge of Almaraz. And these letters were accompanied by others from General STANHOPE to the Earl of Galway, pressing to be joined by him at Almaraz, where he would be with four thousand horse. He also represented in the most urgent terms that this junction was of the greatest importance, his Catholick Majesty having been obliged to weaken his army very much by leaving bodies of troops in divers places, so that it was judged neither safe nor proper for him to pursue the Duke of Anjou, who had retired precipitately into the Old Castile to draw together what forces he could. Upon the arrival of these solicitations and remonstrances all the Ministers of the Allies at Lisbon met together, and agreed to make their joint application to the King, that he would be pleased forthwith to cause his army to march and join that of his Catholick Majesty. But the Ministers of this Court answered them, that the junction proposed was utterly impracticable, not only because of the perplexity given them by the enemy's four thousand horse on the frontiers, but likewise because the Portuguese cavalry was in no condition for service, wanting all necessaries. Another letter came from General STANHOPE, in which he desired that at least he might be joined by the forces in Portugal that were in the pay of the Queen of Great Britain. Whereupon the Ministers of the Allies renewed their solicitations, arguing the indispensable necessity of sending to Almaraz the troops in her Britannick Majesty's pay, and pressing this Court to reinforce them by only a thousand horse and three thousand foot. Likewise M. LE FEVRE, who after the departure of the Earl of Galway resided at Lisbon as Secretary to the embassy of Great Britain, offered to supply, on the account of the Queen his Sovereign, the provisions and money necessary for the said march. To procure the speedier answer, the said Ministers of the Allies went all in a body to the Secretary of State, and had a conference with him and other the Portuguese Ministers; but notwithstanding all the arguments they could use, the Portuguese Ministry refused absolutely to comply with their desires, excusing themselves from undertaking that their army should do any more than make some siege on the frontiers.

They refused to join King Charles.

CHAP.  
IX.

The allies take possession of Madrid again.

King CHARLES however having staid some time at Saragossa to refresh his troops, set out for Madrid, and on the twentieth of September arrived in the neighbourhood of Alcala de Henarez, and the next day General STANHOPE, with a detachment of the army, took possession of Madrid. On the 28th King CHARLES made his triumphant entry into that city, and having performed his devotions at the church of Nuestra Señora d'Atocha, his Majesty took up his quarters at a country-seat belonging to the Conde d'Aquilar. The city of Madrid having agreed to furnish his Majesty with a subsidy of forty thousand crowns a month for the subsistence of his army, a detachment was sent to take possession of Toledo, which lying upon the Tagus, was looked upon as an advantageous post for facilitating the intended conjunction with the Portuguese.

In the mean time King PHILIP having sent a detachment of his troops to take possession of Almaraz, and thereby render the conjunction of the Portuguese and the confederates impracticable, General STANHOPE rejoined the confederate army that had been employed in fortifying Toledo, designing to have taken up winter-quarters in Castile; but King PHILIP's army being reinforced from all parts, and become superior to that of the Allies, it was thought advisable to retreat to Arragon; and King CHARLES taking with him a regiment of dragoons and another of foot, marched away a little before the army decamped to Barcelona, in order to observe the motions of the French on the side of Roussillon. His Majesty arrived at Barcelona the sixteenth of December, and a few days after he understood that the Duke de Noailles had laid siege to Gironne.

King Charles retires again to Barcelona.

The army of the Allies, in their march from Castile towards Arragon, divided themselves into two bodies, the Germans and the Portuguese under Count STAREMBERG took one road, and General STANHOPE with the English forces another, the better to subsist the troops in their march, as is generally said; but others impute it to STANHOPE's pride, who did not care to be commanded by STAREMBERG. The eighth instant, General STANHOPE with the British troops, consisting of eight battalions, and as many squadrons, halted at Brihuega, where he was surprized the ninth by King PHILIP's army, which surrounded the place: the English defended themselves with great obstinacy till the tenth in the morning, and then having spent all their ammunition, were forced to surrender prisoners of war.

Battle of Brihuega.

Count STAREMBERG having advice of the distress the British troops were in at Brihuega, marched to their relief; but was met by King PHILIP and the Duke of Vendosme at Villa Viciosa, about a league from Brihuega, the tenth instant in the evening, whereupon a battle was fought, and General STAREMBERG gave sufficient demonstration of his military skill, by defeating the Spaniards when he was not half their number. However, understanding that the British troops in Brihuega were made prisoners of war the morning before, and not being in a condition with the small body of troops he had with him to prosecute his victory, he continued his march towards Arragon, without being disturbed by the enemy, and having withdrawn the confederate troops out of the garisons in that Kingdom, he marched afterwards into Catalonia, and arrived

Battle of Villa Viciosa.

CHAP.  
IX.

Gironne  
surren-  
dered to  
the French  
and Bala-  
guer.

arrived at Barcelona the beginning of February, with about eleven thousand effective men. A little after, advice came that Gironne had surrendered to the Duke of Noailles, and the garison Count STAREMBERG had left in Balaguer, consisting of two battalions and a hundred horse, abandoned that place also upon the approach of the enemy, and retired to Barcelona; so that King CHARLES, who a little before was master of the greatest part of the kingdom of Spain, had now no more in his possession than the province of Catalonia, and that not entire.

The Count de Salvaterra, a Spanish General, in a letter concerning the actions of Brihuega and Villa Viciosa, which was intercepted by the Allies, has these expressions, viz. 'General STAREMBERG gained a great deal of honour, which ought not to be denied him, though an enemy: his troops behaved to admiration, especially his foot, which I don't believe the world can match, whether we consider their bravery in fighting, or that gallant air with which they made their retreat, the like perhaps never seen before, as all that were present must own. As for us, though we all endeavoured to do our duty, yet our success must be attributed chiefly to God and the justice of the King's cause, and under heaven to General STANHOPE's ill conduct, for if we had not taken that body under his command, God only knows what would have become of us.'

This was the last considerable action that happened in Spain during the late war, for the Duke of Savoy, (now King of Sardinia) having some disputes with the Emperor concerning the extent of his dominions in Italy, refused to make any diversion on that side: the States-General never recruited or re-established the troops they had agreed to maintain in Spain and Portugal in conjunction with Britain; and neither the Imperialists or Portuguese had any troops scarce on foot in either of those kingdoms, but what were maintained by the Queen of England; so that the war was become an insupportable burthen to Great Britain, and the fixing King CHARLES upon the Spanish throne in these circumstances, altogether impracticable. Add to this, that King CHARLES was soon after elected Emperor, which very much altered the state of affairs; for it is evident from the Grand Alliance, and all our treaties with the late Emperors on this subject, that it never was intended the Empire and Spain should be united under one head. Upon all these considerations therefore, the Queen of England was induced to listen to proposals of peace made her by the French King, and to enter into a treaty for the evacuation of Catalonia and the rest of Spain; for the particulars whereof, I refer the reader to the former part of this volume. But the disadvantages Britain lay under in carrying on the war in Spain and Portugal, and the necessity there was of concluding a peace when the Confederates refused to furnish their respective quotas of troops or money, according to the several treaties made with us, are evident to a demonstration, from the representation made by the Commons of Great Britain to the Queen in the year 1711, part of which I have inserted, to justify the conduct of that glorious Princess in the last years of her reign, which has been so vilely aspersed by such men as found their account in continuing the war, and their creatures.

This representation sets forth, 'That as in the

progress of the war in Flanders a disproportion was soon created to the prejudice of England, so the very beginning of the war in Portugal brought an unequal share of burden upon us; for although the Emperor and the States-General were equally parties with your Majesty in the treaty with the King of Portugal, yet the Emperor neither furnishing his third part of the troops and subsidies stipulated for, nor the Dutch consenting to take an equal share of his Imperial Majesty's defect upon themselves, your Majesty hath been obliged to furnish two thirds of the entire expence created by that service. Nor has the inequality stopped there, for ever since the year 1706, when the English and Dutch forces marched out of Portugal into Castile, the States-General have entirely abandoned the war in Portugal, and left your Majesty to prosecute it singly at your own charge; which you have accordingly done, by replacing a greater number of troops there than even at first you took upon you to provide. At the same time your Majesty's generous endeavours for the support and defence of the King of Portugal, have been but ill seconded by that Prince himself; for notwithstanding that by his treaty he had obliged himself to furnish twelve thousand foot, and three thousand horse upon his own account, besides eleven thousand foot and two thousand horse more in consideration of a subsidy paid him, yet according to the best information your Commons can procure, it appears that he hath scarce at any time furnished thirteen thousand men in the whole.

In Spain the war hath been yet more unequal and burdenson to your Majesty than in any other branch of it; for being commenced without any treaty whatsoever, the Allies have almost wholly declined taking any part of it upon themselves. A small body of English and Dutch troops were sent thither in the year 1705, not as being thought sufficient to support a regular war, or to make the conquest of so large a country, but with a view only of assisting the Spaniards to set King CHARLES upon the throne, occasioned by the great assurances which were given of their inclinations to the house of Austria; but this expectation failing, England was insensibly drawn into an established war, under all the disadvantages of the distance of the place, and the feeble efforts of the other Allies. The account we have laid before your Majesty upon this head is, that altho' the undertaking was entered upon at the particular and earnest request of the Imperial Court, and for a cause of no less importance and concern for them than the reducing the Spanish monarchy to the house of Austria, yet neither the late Emperors, nor his present Imperial Majesty, have ever had any forces there on their account till the last year, and then only one regiment of foot, consisting of 2000 men. Though the States-General have contributed something more to this service, yet their share also hath been considerable; for in the space of four years, from 1705 to 1708, both inclusive, all the forces they have sent into that country have not exceeded twelve thousand two hundred men; and from the year 1708 to this time, they have not sent any forces or recruits whatsoever. To your Majesty's care and charge the recovery of that kingdom hath been in a manner wholly left, as if none else were interested or concerned in

CHAP.  
IX.

sentation  
of the state  
of the last  
war.

in it. And the forces which your Majesty hath sent into Spain in the space of seven years, from 1705 to 1711, both inclusive, have amounted to no less than fifty-seven thousand nine hundred seventy-three men, besides thirteen battalions and eighteen squadrons, for which your Majesty hath paid a subsidy to the Emperor. How great the established expence of such a number of men hath been, your Majesty very well knows, and your Commons very sensibly feel: but the weight will be found much greater, when it is considered how many articles of unusual and extraordinary charge have attended this remote and difficult service, all which have been intirely defrayed by your Majesty, except that one of transporting the few forces which were sent by the States-General, and the victualling of them during their transportation only. The accounts delivered to your Commons shew, that the charge of your Majesty's ships and vessels employed in the service of the war in Spain and Portugal, reckoned after the rate of four pounds a man per month, from the time they sailed from hence till they returned, were lost, or put upon other services, hath amounted to six millions, five hundred and forty thousand, nine hundred and sixty-six pounds, fourteen shillings; the charge of transports on the part of Great Britain, for carrying on the war in Spain and Portugal, from the beginning of it till this time, hath amounted to one million, three hundred thirty-six thousand, seven hundred and nineteen pounds, nineteen shillings and eleven pence; that of victualling land-forces for the same service, to five hundred eighty-three thousand, seven hundred and seventy pounds, eight shillings and six pence; and that of contingencies and other extraordinaries for the same service, to one million, eight hundred and forty thousand, three hundred fifty-three pounds.

We should take notice to your Majesty of several sums paid upon account of contingencies and extraordinaries in Flanders, making together the sum of one million, one hundred and seven thousand ninety-six pounds: but we are not able to make any comparison of them, with what the States-General have expended upon the same head, having no such state of their extraordinary charge before us. There remains therefore but one particular more for your Majesty's observation, which arises from the subsidies paid to foreign Princes. These at the beginning of the war, were borne in equal proportion by your Majesty and the States-General; but in this instance also, the balance hath been cast in prejudice of your Majesty; for it appears that your Majesty hath since advanced more than your equal proportion, three millions one hundred fifty-five thousand crowns, besides extraordinaries paid in Italy, and not included in any of the foregoing articles, which arrive to five hundred thirty-nine thousand five hundred fifty-three pounds.

We have laid these several particulars before your Majesty in the shortest manner we have been able, and by an estimate grounded on the preceding facts, it doth appear, that over and above the quota's on the part of Great Britain answering to those contributed by your Allies, more than nineteen millions have been expended by your Majesty during the course of this war, by way of surpluse, or exceeding in balance,

of which none of the Confederates have furnished any thing whatsoever.

Posterity will certainly be amazed, when they come to find that the nation carried on a war on so unequal a foot, with no other view than that of aggrandizing our Allies, and enriching some private families at home; (for there is not a man of that party who were for continuing the war, that at this day seems to have the least dread of the French, though they have enjoyed seventeen or eighteen years peace, and are consequently much more formidable now, than they were at the end of the last war.) What severe reflections therefore must they make on their ancestors, when it shall appear that they might have had a peace seven years before upon their own terms, and saved the nation forty millions of treasure, besides what they lost by the interruption of their trade; especially when they find such a load of debts transmitted to them, and the revenues of the kingdom so anticipated that it may be difficult for them to find funds to maintain even a defensive war? They will surely be more ready to condemn the conduct of the British Court for continuing the war so long, than for putting an end to it so soon, notwithstanding all the clamours that have been raised upon that head. They will reflect also, it is to be hoped, in our favour, that miscarriages are not always to be ascribed to a nation in general, but frequently to a few designing selfish spirits that happen to surround the throne, and are practised in the pernicious art of disguising truth, and casting a mist before the eyes of their Princes. But to proceed.

By the treaty of peace concluded at Utrecht the thirty-first of March O. S. or the eleventh of April N. S. 1713, between the Allies and France, the most material articles relating to Portugal were, That the French King should relinquish both sides of the river of Amazons in South America to his Portuguese Majesty, and quit all claim to the navigation of the said river, and never suffer any French Missioners to come into the said territories, or any other belonging to the crown of Portugal; and the Queen of Great Britain was by both parties accepted as guarantee of the said articles. And by another treaty made between Spain and Portugal in February 1714-15, the Spaniards and Portuguese mutually agreed to relinquish all places, that had been taken by the forces on either side during the war, but as to prizes, each party was to remain in possession of what they had respectively acquired; which treaty was in like manner guaranty'd by the Queen of Great Britain.

The war between the Confederates and the French was scarce ended, when another was begun between the Turks and Venetians, in which the latter lost the Morea. The Portuguese assisted the Pope and the Venetians with a squadron of men of war, and the Spaniards promised another squadron, but employed them afterwards in the reduction of Sardinia; so that the Turks were masters at sea during the whole course of the war, and were very near making themselves masters of the island of Corfu: but the Emperor gaining two considerable victories over the infidels by land, and taking Temeswaer and Belgrade, the Turks were glad to accept of peace, being permitted however to retain their conquests in the Morea, whereby the Venetians lost great part of their territories on the Terra Firma, while the Imperialists

The readiness the Portuguese had shewn in re-inforcing the Venetian fleet, and defending the coasts of Italy in the late war with the Turks, probably induced his Holiness to oblige his Portuguese Majesty in dividing the Archbishoprick of Lisbon, and erecting the chapel royal into a patriarchal and metropolitical church; ever since which, the city of Lisbon has been divided into two grand districts, the one called East, and the other West Lisbon.

Don EMANUEL, brother to the King of Portugal, having privately withdrawn himself from that court about this time, went on board a ship and sailed to Holland. He afterwards entered into the Emperor's service against the Turks; nor did he return again to Lisbon till the year 1726. His Portuguese Majesty, so soon as he had notice that Don EMANUEL was gone, prevailed on the Captain of an English man of war to pursue the ship he was in; but the vessel being two days sail before the English Captain, he was obliged to return back without him. The reason of this Prince's leaving the court so abruptly, was said to be to prevent his being forced to enter into orders; for it was usual formerly, both in the courts of Spain and Portugal, to procure some ecclesiastical preferment for the Princes of the blood, whereby they were easily maintained at the charge of the Church, and rendered in a great measure incapable of forming designs against the State.

Portugal now remaining in a profound peace, the King, in imitation of France and other polite nations, thought fit to establish academies for the improvement of arts and sciences, having a particular regard to history, in which that people have made great advances of late years; though the court of inquisition, which dreads nothing more than the rescuing the nation from ignorance and superstition, has been a great obstacle in their way: Truth is an heresy which those pious fathers ever prosecute with the greatest rage.

I don't meet with any thing else remarkable in Portugal till the year 1722, unless it be the arrival of their fleets from India and Brazil annually, with vast treasures of gold and silver on board, besides other rich merchandizes; but this year I find two British merchants, Mr. WINGFIELD and Mr. ROBERTS, prosecuted at Lisbon, and condemned to die, for exporting gold to England, which it seems is capital by the laws of Portugal: however, upon the interposition of Mr. WORSELY, the British Envoy, and the court of Great Britain, they were pardoned and their effects restored them. But since it is so very hazardous to export gold from Portugal to England, it is something strange that we meet with so much Portuguese gold here as we do.

In the month of December 1723, there happened a terrible earthquake in the province or kingdom of Algarva, which though it lasted but three minutes, did incredible mischief: they relate, that several towns were demolished, and a river entirely swallowed up for some hours, by the gaping of the earth.

A company was erected in Portugal in the year 1724, composed of men of quality and fortunes, for supplying their settlements in Brazil with Negroes, to whom his Majesty granted the space of two hundred miles and upwards on the

coast of Africa, for the purchasing of slaves; prohibiting the Portuguese, or any other nation, to trade within those limits.

The same year Don MIGUEL and Don JOSEPH, two base sons of his late Portuguese Majesty, whom he had naturalized, crossing the river of Lisbon with their attendants in a boat, were overfet by a sudden gust of wind: Don JOSEPH had the good fortune to save himself by getting upon the keel, but his brother and most of the servants were drowned.

In the same river on the nineteenth of November this year, arose such a violent storm about six in the evening, that before eight, sixty ships were driven on shore, of which twenty were rendered unfit for sea; all the wharfs of Lisbon were damaged by the storm, and the custom-house-key, with the goods upon it, was washed away: the houses of Lisbon suffered very much, and most of the churches lost their steeples or towers: the havoc in the neighbouring country is inexpressible; many houses were blown down, and almost all the trees that stood exposed to the wind torn up by the roots.

The court of Rome, to the surprize of the Inquisitors in Portugal, was about this time pleased to order, that the prisoners in the inquisition should be allowed counsel and solicitors to defend them, as in other courts; whereupon those fathers had the assurance to libel his Holiness most unmercifully.

A dispute of another nature happened about the same time between the courts of France and Lisbon. It seems the Abbot DE LIVRY, the French Ambassador at Lisbon, insisted that the Secretary of State, who is usually prime Minister in that Kingdom, should pay his Excellency the first visit; which the Secretary refusing to comply with, the Ambassador was ordered to leave Lisbon, without having an audience of his Portuguese Majesty.

In December 1727, a contract of marriage was signed between Don JOSEPH, Prince of Brazil, and the eldest Infanta of Spain, Donna MARIA-ANNA-VICTORIA, (formerly contracted to LEWIS XV, of France;) and a few days after another contract of marriage was concluded between Don FERDINAND, Prince of the Asturias, and Donna MARIA, Infanta of Portugal; and on the twenty-seventh of January following, the ceremony of the espousals of the last couple was performed at Madrid, the King of Spain representing the Prince of Brazil here, as the King of Portugal did the Prince of Asturias in the other that was celebrated at Lisbon the sixth of the same month.

About the same time there arose warm disputes between the courts of Rome and Portugal, on the Pope's refusing to give a Cardinal's cap to Monsieur BICH1, who had resided some time as Nuntio in Portugal, and shewn more complaisance for his Portuguese Majesty than for his Holiness; and the contention grew so hot at length, that it was expected the King of Portugal would have thrown off the Pope's supremacy; for he actually prohibited all the Clergy of his dominions, to apply any more to the Datary of Rome for their Bulls of confirmation, &c. The Patriarch of Lisbon gave dispensations for marriages, and final judgment in all ecclesiastical causes which were brought before him by way of appeal. The King set many of the prisoners in the inquisition at liberty, and prohibited the inquisitors to proceed

ceed in any cause without the concurrence of commissioners appointed by his Majesty: which steps so alarmed the court of Rome, that I am informed means have been found to soften his Portuguese Majesty's resentment and prevent his throwing off the Pope's supremacy.

About the middle of January 1728-9, the exchange of the contracted Princesses above named being agreed on, the King and Queen of Spain, with the royal families and a vast retinue, came to Badajoz, as the King and Queen of Portugal, with their court, did to Elvas. These cities are on the confines of the two kingdoms, which are separated by the little river Caya, that runs from north to south, and falls into the Guadiana near Badajoz. A building was erected on the Caya, having one large door on the side of Spain, and another on the side of Portugal. At one and the same instant the King of Spain entered the eastern door, as the King of Portugal did that on the west, with their respective royal families. After reciprocal compliments, and hearing the articles of both marriages read, the King of Portugal and his party took the Princess of Brazil, and returned to Elvas, where the Prince and Princess of Brazil solemnized their marriage in person the same evening. The King of Spain also having received the Princess of the Asturias of her father, returned to Badajoz, where the Prince and Princess of Asturias celebrated their marriage also in person that evening.

The two Kings, their Queens, the Princes and Princesses, had two interviews afterwards at the house of exchange, viz. on the twenty-third and twenty-fifth of January, at the last of which they took leave of each other, and returned to their respective capitals, where rejoicings were made suitable to the occasion. At the return of the King and royal family to Lisbon, all the streets through which they passed were hung with tapestry, and there were no less than twenty triumphal arches erected there, five of which were prepared at the expence of the English, French, Dutch and Hamburgh merchants, the other fifteen being erected at the charges of the several companies of tradesmen, and the King's officers. That of the English was far the most magnificent, in which they laid out above two thousand pounds sterling. The coaches, most of which belonged to the nobility, were eighty-four in number, the greatest part of them covered with embroidered velvet, trimmed with gold fringe, and one of them was of massy silver, adorned with jewels. The rejoicings continued three days successively, and every evening fire works were played off, and some days after the people were entertained with a bull-feast. And here I shall take an opportunity of giving some account of the royal family of Portugal.

The present royal family.

His present Majesty, King JOHN V, was born the twenty-second of October 1689, and succeeded his father in January 1707. He married MARY-ANNE of Austria, the daughter of the late Emperor LEOPOLD, and sister of the present Emperor CHARLES, on the twenty-seventh of October 1708, by whom he had issue, 1. MARY-MAGDALEN-JOSEPHA-TERESA-BARBA, born the fourth of December 1711, and married to the Prince of Asturias as above related. 2. Don PEDRO, born the nineteenth of October 1712, who died the twenty-ninth of October 1714. 3. Don JOSEPH-PEDRO-JOHN-LEWIS, the present Prince of Brazil, born the

ninth of June 1715, and married to the Infanta of Spain anno 1729, as above. 4. Don CARLOS, born the second of May 1716. 5. Don ——— born the fifth of July 1717. 6. Don ALEXANDER, born anno 1724, who died in 1728: and another Infanta still living, the time of whose birth I do not meet with. His Portuguese Majesty has still three brothers living, viz. Don ANTONIO, Don FRANCISCO, and Don EMANUEL, the last of whom lost the King's favour on his retiring out of the kingdom without his consent, as has been related above, and though he obtained his pardon, is not yet restored to full favour.

## CHAP. X.

*Treats of the civil government of Portugal, the prerogatives and succession of the crown, the King's titles, arms, revenues, and forces.*

THE civil government of Portugal so exactly resembles that of Spain already treated of, that there will be occasion to say little on this head. The Court of Lisbon affects to conform it self to that of Madrid, or rather to shew that she is in no way inferior to her neighbour. Others observe, that the Kings of Portugal do in reality look upon themselves as the only rightful Sovereigns of all Spain, and therefore chuse to imitate the customs of that country; they affirm that the females of Castile cannot transfer the succession to a foreign Prince by marriage, and consequently the Princes of the house of Portugal, who are not deemed foreigners, ought to have succeeded to the crown of Spain, when the male branch in that kingdom became extinct. But to proceed.

The King of Portugal, as well as the King of Spain, is looked upon to be an absolute Prince: the Cortes, or three Estates, having long since sold their part in the legislature to the crown, and only serve to confirm or record such acts of state as the court resolves upon, to declare the next heir to the crown when the King is pleased to nominate him, or to ratify treaties with foreign Princes who still esteem their consent of any weight. The courts of Spain and Portugal for many years have kept their people in subjection by purchasing their leaders; which was the reason, that though the revenues of each crown were very considerable, the state in both nations was very poor. But since King PHILIP V ascended the throne of Spain, and that court has been governed by French counsels, the salaries of abundance of officers, and a multitude of pensions, have been struck off; and that Prince, in imitation of his grandfather LEWIS XIV, has of late years tyrannized over the nobility as well as the commons by the assistance of a standing army, and entirely deprived every province in that kingdom of their liberties and privileges. This reformation, as it is styled in the court of Spain, has not yet been imitated in that of Portugal; great part of the revenues of this crown are still distributed among the Nobility and Grandees, which renders the government as well as the people exceeding poor and necessitous, though the King considered in his private capacity may be very rich.

The customs and duties on goods exported and imported are a considerable part of the publick revenues, and are usually farmed out by the crown from three years to three years. These duties are very high.

CHAP. X.  
The court of Lisbon resembles that of Madrid.

The court of Portugal as well as Spain became absolute by purchasing the leading men in the Cortes or three Estates.

A rich court, but a poor state.

The publick revenues.

Customs very high.

CHAP. X. very high in Portugal, and could not be advanced without the utter ruin of the people. Foreign merchandizes pay twenty-three per cent. on importation, and fish from Newfoundland twenty-five per cent. Fish taken in the neighbouring seas and rivers pay forty-seven per cent. and the tax upon lands and cattle that are sold is ten per cent. The duty on snuff alone amounts to fifty thousand crowns. Besides which the King draws a considerable revenue from the several orders of Knighthood, of which he is Grand Master. And the Pope, in consideration of the large sums he draws out of this kingdom on other accounts, gives the King the money arising by several bulls from the Holy See; as those for granting indulgences, licences to eat flesh at times prohibited, &c. And it is computed that the royal revenues, clear of all pensions and salaries, may amount to three millions five hundred thousand crowns. The nobility are not taxed but upon extraordinary emergencies, and then not very high. From all which it may very well be presumed, that the Portuguese are not able to raise great fleets and armies: If they have five and twenty men of war of the line they are scarce able to man or pay them, and a squadron of English or Dutch of half the number would not be afraid to engage them. They serve chiefly for convoys to their Brazil fleets, and are very often used as merchant-ships to import goods or treasure from thence. As to their troops on shore, that serve to garison their wretched frontier towns, they may amount to fourteen or fifteen thousand men; but such a miserable militia sure were never seen, half starved, and not half clothed. In the late war you might see them begging an alms of a common soldier belonging to their confederates the English and Dutch; and yet so intolerably proud were these poor despicable creatures, that they insisted on taking the right of the English, and commanding their Generals; every Governor of a province had the command of the English and Dutch troops that happened to serve within his jurisdiction, though the Allies paid both their own troops and the Portuguese; which was the occasion of innumerable losses and disgraces on that side. For the Portuguese, after the war had continued eight or ten years, proved to be the same unskilful cowardly militia they were at first, constantly run away at the first charge, especially their horse, and suffered the English or Dutch to be cut in pieces or made prisoners: such blessed confederates did they prove in the late war. Nor were the Spaniards much better troops till a French Prince ascended the throne; but they have of late been so well disciplined, clothed and paid, that they are not only much superior to those of Portugal, but perhaps at present equal to any soldiers in Europe. The Portuguese were above being instructed in military discipline by the Allies, but King PHILIP obliged his officers to conform themselves to the French in this particular more than any other: And as the Spanish foot are better bodies of men, more abstemious, and endued with more patience, possibly they may at this day be an over-match for their masters the French, supposing the numbers equal. It seems therefore to be the interest of Portugal always to remain in peace with Spain; should the French or the Maritime Powers engage in their behalf, it might be difficult to prevent their being made a province to Spain again in case a war should break out between those two crowns, the Spaniards being so much improved of late years,

Naval force.

Land forces.

Interest of Portugal to live at peace with all nations.

and the Portuguese so much sunk in their courage, discipline and conduct. And they will certainly avoid falling out with the French and the Maritime Powers, who might any of them cut off their communication with Brazil, Africa and the Indies, from whence their gold and other rich merchandizes are imported. On the other hand, it can never be to the advantage of England, France, or the States-General, to be in a state of war either with Spain or Portugal, which take off so much of the manufactures of their respective countries. It is indeed the interest of each of these powers that the other should be in no good terms with Spain and Portugal, for what the one loses in this commerce the other gains; if the English do not serve the Spaniards and Portuguese with woollen manufactures, the French and Dutch will, though perhaps much worse, or at a dearer rate; nay, these nations will buy our goods, and get a larger gain by selling them to Spain and Portugal, and their American plantations and settlements, than we do by the first sale of them. We ought therefore to be exceeding cautious how we quarrel with these two nations, especially at this time, when they seem to be so firmly united by double marriages; and if we fall out with one, we must fall out with both.

It ought to be considered farther, that the French having of late taken possession of Florida, to which they have given the name of Louisiana, and being before masters of Canada or New France, they now lie on the back of all our American plantations and settlements from Carolina in the south to Nova Scotia on the north, and by the assistance of the Spaniards and the Indians, their friends, may, and probably will, in time deprive us of our settlements there, and ruin our plantation trade, if we have not our eyes about us.

I shall conclude this head with enumerating the several countries, territories and islands that are subject to the crown of Portugal, which, besides those of Portugal and Algarva, already described, are, the country of Brazil in America: A vast tract of land, extending along the sea-coasts of South America, but not of equal breadth; much the most considerable of all their foreign plantations at present, as it yields them great quantities of gold, tobacco, sugars, cotton, ginger, indigo, hides, and other valuable merchandize. In Africa they have the fortress of Masagan, in the kingdom of Morocco; part of the Guinea coast; Angola on the coast of Congo; with the islands of Loanda, Villa de San Pao, Zofala on the Caffra coast; Zanguebar, Mozambique and Quiloa on the eastern coast of Africa. And in the Atlantic Ocean they have the western islands of Azores or Terceras, that of Madera, the islands of Cape Verde, and others of less note. In Asia they still possess Goa, Diu, Daman and Chaul on the coast of India, with a large extent of country, and the island of Macao on the southern coast of China; the last of which is now under the dominion of the Chinese, though inhabited chiefly by the Portuguese. And here I cannot but observe what a noble empire the Portuguese possessed in Asia and Africa about an hundred and fifty years ago: They were masters of Ormus and the Persian Gulph; of all the coasts of India, Siam and Malacca; of the sea-coasts on the islands of Sumatra, Java and Ceylon; of the islands of Moluccas and Banda, where the fine spices only grow. They had planted their religion in the islands of Japan, and

Danger to Britain from the union of the French and Spaniards in America.

Territories subject to Portugal.

The empire of the Portuguese in Asia and Africa 150 years ago.

C H A P.  
X.

and made such numbers of profelytes there, that the Sovereigns of that country were apprehensive of a general revolt of their subjects; which occasioned the extirpation of the Portuguese and of the Christian religion in those islands. They had planted their religion also throughout the vast empire of China, and might have maintained it there, had not the Jesuits interfered with them, and occasioned their falling under the displeasure of that court. There are now indeed no remains of Christianity to be found in Japan, the Portuguese interest is lost in China, and the Dutch have expelled them from all their valuable settlements on the continent and islands in Asia, except Goa and two or three inconsiderable places. But they were so long possessed of the trade of these countries, and had such numerous settlements here, that we find their language, with some corruption, still prevailing on the sea-coasts of the continent and islands of Asia, and a mixed breed of Portuguese and Indians, who still imitate those of Europe in their religion, habits and customs; and they still have their Bishops and Clergy in those parts, who are permitted to exercise their functions under many of the Indian Sovereigns. On the eastern and western coasts of Africa also their religion and language are every where to be met with; tho' the Dutch it is true are now masters of the best discoveries on the western coast, and the Portuguese have very little power in that part of the world. Their King indeed still calls himself Sovereign of all the vast dominions I have enumerated, which brings me to mention his stile and titles; which are.

The  
King's titles.

JOHN V, by the grace of God King of Portugal and the Algarvas on this side: And beyond the sea in Africk Lord of Guinea; and of the navigation, conquest, and commerce of Ethiopia, Arabia, Persia, India, Brazil, &c.

Arms.

The arms of Portugal are, Argent, five escutcheons, Azure, placed cross-wise, each charged with as many besants of the first, placed saltier-wise, and pointed Sable, for Portugal. The shield bordered Gules charged with seven towers, Or, three in chief and two in each flank. The crest is a crown, Or, under the two flanches, and the base of the shield appears at the end of it; two crosses, the first Flower de Luce Verte, which is for the order of Avis, and the second Pattee Gules, for the order of Christ. The motto is changeable, each King assuming a new one, but it is frequently these words, *Pro Rege & Grege*, i. e. *For the King and the People*.

The great Officers of State being the same as in Spain, I shall not trouble the reader with a tedious account of them, or of the several degrees of nobility, in which the kingdom of Portugal exactly resembles that of Spain.

Orders of  
Knighthood.

The orders of Knighthood are, 1. That of Avis, so called from a town of that name near Ebroa, founded by ALPHONSUS I, anno 1146, to honour those who distinguished themselves in the wars against the Moors. 2. The order of Christ, founded on the same account by DIONYSIUS, son of ALPHONSUS III, anno 1319, upon the abolition of the Knights Templars. 3. The order of St. James, being the same with that in Spain. And, 4. The Knights of St. John.

Councils  
and Courts  
of judica-  
ture.

They have several Councils or Courts established for several branches of business; as the Council of State, which takes cognizance of all matters foreign or domestick which relates to the State. 2. The Council, called the Desembargo do Paco,

which receives appeals from all inferior courts, and has also a power of enacting, repealing and altering the laws. 3. The Court of Treasury, or Da Fazenda. 4. The Council for foreign affairs, which determines all matters relating to the foreign plantations. 5. The Council of War, which takes cognizance of all military affairs and operations by sea or land. 6. The Casa dos Contos, which court has the jurisdiction of all officers and others concerned in collecting or farming the publick revenues. Besides these, they have two supreme courts for civil affairs, the one established at Lisbon, and the other at Porto. Tho' as the kingdom is divided into twenty-four Comarca's or districts, each Comarca has it's peculiar Judges for civil and criminal causes, and every considerable town it's Regidor, Corregidor, or Alcaid, as in Spain. But the Viceroy or Governor of each province presides in all the courts within his jurisdiction, and is the supreme civil as well as military officer there. There is also a Viceroy of Goa in the East-Indies, and another of Brazil in America, who are invested with almost regal power.

*Treats of the religion and ecclesiastical government in Spain and Portugal; and of their universities, laws and language.*

THE Christian religion it is evident both from sacred and prophane history was planted in Spain in the time of the Apostles themselves; but it is not altogether so certain that St. JAMES Major was of the number of those who preached the Gospel to that people, notwithstanding the Spaniards look upon him to be the founder of their Church, and have written as many treatises to prove the several voyages he made thither, and the miracles he wrought amongst them, as would fill a moderate library. But whoever first preached the Gospel here, met with such success, that the whole nation almost was soon converted to Christianity; and they reckon up no less than forty-nine Bishops in the reign of CONSTANTINE. Their ecclesiastical historians however lament that this, as well as other Christian churches, was early infected with Arianism; and that the Goths also were Arians, who made a conquest of Spain in the fifth century; tho' they became orthodox some little time after. But what Doctor GEDDES seems to have demonstrated is still more surprizing, viz. that the church of Spain never had acknowledged the supremacy of the Pope or Bishop of Rome, when the Moors made a conquest of this country in the year 714. He proves also that the adoration of images, praying to angels and saints, purgatory, the doctrine of the seven sacraments, transubstantiation, the denying the cup in the sacrament to the people, private masses, the adoration of the sacrament, the priest's putting the bread into the mouths of the communicants, being present at the celebration of the sacrament, and not communicating, and auricular confession, to be doctrines and practices not known in the Spanish church in the beginning of the eighth century, when it was dispersed by the Moors conquest of Spain; and that the Spanish Kings had an ecclesiastical supremacy equal to that which is now in the crown of England: That when the Bishop of Rome did in the beginning of the eighth century first attempt to introduce his supremacy into

The modern state of religion in Spain and Portugal.

The title of Catholick King.

Devotion of the people.

Penances.

Lent.

into Spain, that supremacy was rejected and condemned by the Spanish church in a Council of all her Bishops.

I proceed now to enquire into the modern state of religion in these kingdoms of Spain and Portugal, which is properly my province; and every one knows that the Spaniards and Portuguese at this day profess themselves to be of that sect or persuasion of Christians that are usually denominated Roman Catholics.

The title of Catholick King, it is said, was first given to their Princes, by the Council held at Toledo in the year 590, when RECARDEDUS the Gothick King of Spain renounced the Arian heresy, with all his people. And that title, after it had lain dormant about nine hundred years, was again revived by Pope ALEXANDER VI, and conferred on King FERDINAND about the year 1500, in consideration of the services he had done the Holy See in destroying the empire of the Moors in Spain; and his successors have enjoyed that title ever since; with a great deal of reason, as my author apprehends, no Princes having shewn more zeal for popery than the Kings of Spain and Portugal, who have suffered the Inquisition to reign, or rather rage, in their territories for so many years. Nor are the people less devoted to their religion than their Sovereigns: It is not uncommon for the women, it is said, to resort to the churches or chapels seven or eight times a day; though their enemies suggest that this proceeds rather from an inclination to ramble abroad and meet their gallants than out of pure devotion, that sex being in a manner prisoners to the other, and never suffered to stir abroad unless to prayers. None of the Saints, and even God himself does not seem to have a greater share of their devotion than the blessed Virgin; not a man but carries about him a scapulary or image of the Virgin, which has touched some shrine of hers that is held to have a power of working miracles. They are much taken with the pomp and shew observed in their divine worship, and that profusion of wealth that appears in the furnishing and adorning their churches; and they apprehend they merit by afflicting and tormenting themselves. In the holy week before Easter they practise great austerities; some will procure themselves to be fastned to a cross in their shirts, with their arms extended in imitation of our Saviour, uttering the most dismal groans and lamentations: Others will walk with naked feet over rocks and mountains to some distant shrine to perform their devotions. During Lent they eat nothing but the entrails of beasts, as they do on Wednesdays and Fridays all the year instead of fish, at Madrid, and such other parts of the country where fish are not to be had. At this holy season we find Friars and Priests in all the great streets and publick places preaching to the people, applying themselves rather to their passions and affections than their reason: The Preacher frequently beats his breast and weeps, and the croud imitate him; and he is esteemed the best Preacher who by his whining and lamentations can produce the greatest floods of tears. On Good-Friday annually there is a sermon preached to common strumpets at Madrid, who are dragged out of their lodgings to hear some Friar preach repentance to them; who if he thinks his arguments have no effect upon them, descends from his pulpit and presents a crucifix to them, saying, Behold your Saviour and embrace him; and those who are willing to leave their infamous courses will kiss and embrace it: After which these creatures are either sent to some nunnery, or married to people that are not very nice in their choice; but the greatest part of them usually are obstinate, and chuse to follow their former course of life.

brace him; and those who are willing to leave their infamous courses will kiss and embrace it: After which these creatures are either sent to some nunnery, or married to people that are not very nice in their choice; but the greatest part of them usually are obstinate, and chuse to follow their former course of life.

Solemn processions are frequent among the Spaniards and Portuguese, but the most considerable is that on Good-Friday, when all the religious orders attend, with the members of the tribunals, councils, and companies of tradesmen in their cities, and even the King himself sometimes, attended by all his Court, with wax-torches in their hands. The nobility and persons of distinction are followed by their servants with lighted flambeaux; every thing has a mournful air; the King's guards have their arms and drums covered with black, and beat a dead march, as at the funeral of some General; the trumpets and other musical instruments sound dismally, and all the colours and crosses are covered with black crape; machines and pageants are erected, whereon all the parts of our Saviour's passion are represented: True penitents in these processions lash and cut themselves unmercifully, hoping to take heaven by this holy violence on themselves; while others, it is said, are no less severe on their naked bodies, to shew their passions for their mistresses, all the ladies in the place standing in the balconies to see the procession. But this is such a piece of gallantry as I believe was scarce ever heard of in a Protestant country. There are other penitents who drag heavy crosses after them, and perform other grievous penances, and these, people of quality masked, and attended by their servants likewise masked, who support and assist them in their dolorous passage; for some, it is said, have lost their lives by over-acting their parts. Nor is it uncommon to begin these exercises a fortnight or three weeks before Easter, and continue them every Wednesday and Friday at least till that festival. At these processions in the city of Seville it is not uncommon to see five or six hundred such penitents, who have the reputation of chastising themselves more roughly than those of Madrid: Other towns endeavour to imitate these great cities; and it is said, the ladies of Lisbon will be offended if the men seem to favour themselves, and do not observe the blood follow the whip: For the devotion of these gentlemen, whether it be directed to heaven, or their mistresses, is supposed to be proportionable to the wounds and lashes they receive from their own hands.

These are the exercises of the devout Spaniards and Portuguese on days of fasting and humiliation; but on great festivals and rejoicing days the scene is very different; for then they expose the richest shrines, and all the treasures of their churches, to publick view: They are dressed in their best habits, and there are people that play on musical instruments, and dance in the processions, and before their images; but here also in the hottest weather, when the sun shines out in it's full brightness, they carry lighted torches in their hands, which, together with the sun-beams over their heads, almost melt the superstitious croud. The balconies and windows are hung with tapestry, &c. and the ladies dressed in their richest clothes and jewels, are permitted to stand and see the procession without a lattice before them; and upon these occasions it is,

CHAP.  
XI.

Processions during Lent.

Processions on the grand festivals.

**C H A P. XI.** that the young inamorato's of both sexes have an opportunity of shewing themselves, and discovering their passion to the greatest advantage; for, as has been intimated already, *VENUS* and *CUPID* in these hot countries seem to have as many adorers as any Saint amongst them, many of them frequenting their churches and processions chiefly to have an opportunity of carrying on their amours.

**Religious plays.** Their festivals usually conclude with a play wretchedly acted, containing a representation of the life and actions of some real or pretended Saints, taken from their legends, wherein they use even our Blessed Saviour with great familiarity, and seem calculated rather to ridicule than promote Christianity.

**Ecclesiastical government.** The Ecclesiastical government here does not differ much from that of other Roman Catholic countries. The Kings of Spain and Portugal, by a grant of the Popes, nominate to all Archbishopricks and Bishopricks; of which there are in Spain eight Archbishopricks and thirty-eight Bishopricks: And in Portugal three Archbishopricks and ten Bishopricks, as appears by the table at the end of this chapter.

**Inquisition.** The Inquisition reigns here, it must be confessed, with a more uncontrollable power than in any other kingdom or state. It was first instituted in the thirteenth century, for suppressing the heresy of the Vaudois and Albigenses, as 'twas called; and was received in Spain about the year 1557, in the reign of King *FERDINAND* and Queen *ISABELLA*, in order to awe the new-converted Jews and Moors, and keep them from relapsing into their former infidelity. It was established in Portugal for the same end about the year 1523, in the reign of King *JOHN III.* It is called, The Holy Office, and the Holy House; and consists of an Inquisitor-General, the Supreme Council, Inquisitors, Assessors, Qualificators, a Secretary, an Advocate-Fiscal, a Treasurer, Familiars and Goalers.

**All men subject to it.** The Inquisitor-General is named by the King, and confirmed by the Pope, acting as his delegate: His jurisdiction is so absolute and extensive, that no subject is exempted from it; the members of the supreme Court or Council are all named by him, but approved by the King before they can act, and are usually Secular Priests; and their Assessors, Divines, Civilians and Canonists, with whom they advise. The Qualificators are employed in revising and altering books that are published, and are usually Dominican Friars. The Secretary is properly the Register; and the Advocate-Fiscal the Attorney or Prosecutor. The Treasurer takes into his custody all the prisoner's goods and personal estate when he is apprehended; and the Familiars are properly the serjeants and bailiffs belonging to this office; tho' the nobility and persons of the best quality usually enter themselves of the number of Familiars, as it is a protection against the civil Magistrate, and entitles them to the same plenary indulgences as persons engaged in a crusade against infidels and enemies of the Christian name. It is computed that these amount to upwards of twenty thousand in Spain alone. As to the *Alguazils* or Goalers, they are forbidden to permit their prisoners to send to their friends, or receive any manner of support or intelligence from them, or indeed to converse with any mortal but their tormentors. The Inquisitors and their officers take an oath never to discover any thing transacted in

that court, and punish nothing more severely than the breach of that oath. As these Courts of Inquisition in a great measure deprive the Bishops of their jurisdiction, they are entitled to some privileges in lieu of it: As first, their being exempted themselves from the authority of this Court; and, 2. Their concurrence ought to be obtained, before any person belonging to their respective dioceses is condemned. But these provisions are not much regarded of late; Bishops have been confined to their houses on suspicion of heresy, till the Pope's licence has been obtained to proceed against them; and where Bishops have refused to consent to the condemnation of a prisoner, the Court of Inquisition has passed sentence without them.

This Court proceeds in a summary way on an information brought by any person whatever: If the informer names any witnesses besides himself, they are sent for privately, and before they are examined take an oath not to discover to any person their having been with the Inquisitors, nor to speak of any thing they say, saw or heard within that Court.

All people, tho' never so infamous, and tho' they stand convicted of perjury, are, in favour of the faith, and in detestation of hereticks, admitted by the Inquisition to be witnesses; mortal enemies only excepted.

This exception is of little benefit to the prisoner, by reason of his not knowing who they are that have informed and witnessed against him.

The depositions of the informer and witnesses, if there be any, being thus privately taken, a Familiar is sent for, and being come, he has the following order put into his hands.

By the command of the Reverend Father N. and Inquisitor of heretical pravity, let N. be apprehended and committed to the prisons of this Holy Office, and out of which he shall not be released, but by the express order of the said reverend Inquisitor.

If several persons are to be taken up at the same time, the Familiars are commanded so to order things, that they may know nothing of one another's being apprehended; and at this the Familiars are so expert, that a father and his three sons and three daughters, who lived together at the same house, were all carried prisoners to the Inquisition, without knowing any thing of one another's being there, until seven years afterwards, when they that were alive came forth in an Act of the Faith.

The prisoner being apprehended, and carried with all possible secrecy to the Inquisition, is delivered to the Goaler.

The prisons of the Inquisition are little dark rooms, and which have no other furniture but a hard quilt and a useful pot. The prisoners are not suffered to see any person besides their keeper, who brings them their diet, and with it a lighted lamp, which burns about half an hour; neither must their keeper, without leave from the Inquisitors, entertain any discourse with them.

After the prisoner has spent two or three days and nights in his melancholy apartment, he is carried by his keeper before the Inquisitors, who before they ask him any question, make him take an oath to return true answers to all their interrogatories; and if he has ever been guilty of any heresy, to confess it to them.

CHAP.  
XI.

The first question the prisoner is asked, is, Whether he knows why he was taken up by the Inquisition? And if he answers that he does not know, he is then asked, Whether he knows for what crimes the Inquisition used to imprison people? If he answers for heresy, he is admonished upon the oath he has taken to confess all his heresies, and to discover all his teachers and complices. If the prisoner denies that he ever held any heresy, or had ever any communication with any hereticks, he is gravely told, that the Holy Office does not use to imprison people rashly or without having good grounds for what they do; and that therefore he would do well to confess his guilt, and the rather, because the Holy Office, contrary to the custom of all other courts, is severe to those that deny, and merciful to all that confess their guilt.

If the prisoner persists in denying that he ever held any heresies, his Goaler is called in and commanded to carry him back to the place from whence he came; and the prisoner is admonished strictly to examine his own conscience, that the next time they send for him he may be prepared to make true and full confession of all his heresies, teachers and complices. The prisoner having been allowed two or three days more to do this in, he is brought before the Inquisitors a second time, and is asked whether he comes prepared to confess; and if he answers, that he cannot, without accusing himself or others falsely, make any such confession as they desire of him; they do then ask him where he was born, and what his parents were, and where he went to school, and who were his school-masters, and where he has lived all his time, and with whom he has conversed most, and who has been his confessor, and when he was last at confession and at the sacrament, with twenty more such questions. And being told, that they have sufficient proof of his being a heretick, they command him, since he cannot repent of his heresies unless he confesseth them all, to go back to his prison, and there pray to God for grace to dispose him to make a true and full confession, to the saving of his soul, which is all they seek after. And being again allowed two or three days to pray and consider on what the Inquisitors have said to him, he is brought before them a third time; and in case he persists in pleading not guilty, he is then asked some questions concerning the heretical doctrines he stands charged withal; for example, whether he believes Christ to be bodily present in the Sacrament, and that it is lawful to adore images, and to pray to Saints and Angels; and if he affirms that he did always firmly believe these and all the other doctrines of the Romish Church, he is asked, if he always believed these doctrines, how he came to speak against them? and if he denies that he ever did, he is then told, that since he is so obstinate in his heresies, of which they have a sufficient proof before them, they will order their Advocate-Fiscal to form his process and to convict him of them. But in case the Inquisitors have not sufficient evidence, notwithstanding, to draw a confession from the prisoner, they have told him oftener than once that they had, they then fall a note lower, and tell the prisoner, that though they may not have sufficient proof of his heretical words and actions to convict him of them, that yet they have sufficient to put him on the rack to make him confess them. And having fixed

the day when he is to undergo the tortures, he, when that dismal day comes, if he does not prevent it by such a confession as is expected from him, is led to the place where the rack is, attended by an Inquisitor and a publick Notary, who is to write down the answers the prisoner returns to the questions which shall be put to him by the Inquisitor while he is upon the rack. During the time the executioner is preparing that engine of unspeakable cruelty, and is taking off the prisoner's clothes to his shirt and drawers, the Inquisitor is still exhorting the prisoner to have compassion both on his body and soul, and by making a true and full confession of all his heresies to prevent his being tortured; but if the prisoner saith, that he will suffer any thing rather than accuse himself or others falsely, the Inquisitor commands the executioner to do his duty, and to begin the torture; which in the Inquisition is given by twisting a small cord hard about the prisoner's naked arms, and hoisting him up from the ground by an engine to which the cord is fastened; and as if the miserable prisoner's hanging in the air by his arms were not torment enough, he has several quassations or shakes given him, which is done by screwing up his body higher and letting it down again with a jerk, which disjoins his arms, and after that the torture is much more exquisite than it was before.

When the prisoner is first hoisted from the ground an hour-glass is turned up, and which, if he does not prevent it, by making such a confession of his heresies as the Inquisitor that is present all the while, and is continually asking him questions, expects from him, must run out before he is taken down; to promise to make such a confession if they will take him off the rack, not being sufficient to procure him that mercy, no more than his crying out that he shall expire immediately if they do not give him some ease; that, as the Inquisitors tell us, being no more than all that are upon the rack do think they are ready to do.

If the prisoner endures the rack without confessing any thing, which few or none, though never so innocent, are able to do, so soon as the hour-glass is out he is taken down, and carried back to his prison, where there is a Surgeon ready to put his bones in joint. And though in all our Courts the prisoner's having endured the rack without confessing the crimes for which he was tortured, clears him, and makes void all the evidence that was against him; yet in the Inquisition, where whatsoever humanity and right reason have established in favour of the prisoner is left to the discretion of the Judge, it is commonly otherwise; the prisoners that will not confess any thing being usually racked twice; and if they stand it out, though few of them can do that, thrice.

But if the prisoner makes the confession the Inquisitor expects he should on the rack, it is writ down word for word by the Notary, and is, after the prisoner has had a day or two's rest, carried to him to set his hand to it; which if the prisoner does, it puts an end to his process, the want of sufficient evidence to have convicted him being abundantly supplied by this extorted confession thus signed by him. But in case the prisoner when it is brought to him refuseth to sign it, affirming it to be false, and to have been extorted from him by the extremity of the torture, he

CHAP.  
XI.

CHAP. XI. is then carried to the rack a second time to oblige him to repeat and sign the same confession.

It is a very hard matter for any one that is a prisoner in the Inquisition for Heresy to escape the rack, since neither the professing and maintaining the doctrines to be true wherewith he is charged, nor the denying of them, can secure him from it; the first being commonly racked to make them discover their teachers and accomplices, and the second to oblige them to confess their own guilt. And if a prisoner does confess his having spoke some heretical words, but to save his estate stands in his having spoke them rashly and in a passion without an heretical mind, he is racked to make him discover whether it was so or not, or whether his thoughts were not the same with his words. If a prisoner either makes no confession at all, or does not confess the particular heretical words or facts wherewith he stands charged, and with which the Inquisitors will never acquaint him, he is asked, whether he has any thing besides his denial to offer in his own defence, and if he has, to make use of it: For now the Advocate-Fiscal, upon their having evidence enough against him, is ordered to form his process. Here if the prisoner alledgeth, that unless they will be pleased to let him know the particular words or facts he stands charged withal, and who the persons are that have informed him and witnessed against him, that it will not be possible for him to make any defence; he is told, that cannot be done, because to let him know the particular heretical words or facts might lead him to the knowledge of the informers and witnesses, who by the fundamental laws of the Inquisition must never directly or indirectly be discovered to him.

Now for this singular and inhuman custom of not letting the prisoners know the particular facts they stand charged withal, nor who they are that have informed and witnessed against them, the Inquisitors have nothing to say but that it is necessary to the security of the lives of the accusers and witnesses, which if they were known would be in so great danger, that none would dare to venture to inform or bear witness against hereticks in their court. Which pretence, though it might have some ground when courts of Inquisition were first erected, no city, no not Rome it self, having submitted quietly to them when they were first introduced; it is now notorious to all the world, and to none more than to the Inquisitors themselves, that it is altogether groundless; and especially in Spain and Portugal, where the Inquisition is not only established by law, but by a wonderful fascination is so fixed in the hearts and affections of the people, that one that should offer the least affront to another for having been an informer or witness in the Inquisition, would be torn in a thousand pieces: and did the prisoners that have been in the Inquisition but know certainly who the persons were that had informed and witnessed against them, they durst not for their lives speak one word against them, or shew them the less respect on that account.

Now for a Court to continue a custom so singularly unjust and cruel, and upon a pretence all the world knows to be altogether groundless, is a confidence not to be matched any where that I know of.

The prisoner being thus denied the knowledge of the things and persons, without which it is scarce possible for him, though never so innocent,

to make any defence, he is, notwithstanding that, graciously asked by the Inquisitors, whether he desires to have an Advocate and Proctor to help him to make it? If he saith he would, he is not to name them, but must take those the Inquisitors shall appoint, and who, before they have seen their client, must take the following oath:

I N. Doctor of both laws, do, in the presence of the Lords Inquisitors of this place against heretical pravity, having my hand on the Holy Gospel of God, promise and swear sincerely and faithfully to defend and maintain the cause of N. a prisoner in the prisons of this holy office, who stands accused and impeached for causes mentioned in it's acts, but so not as to use any trick or cavil, or to instruct my said client to conceal the truth in judgment. And I do further promise and swear, That if I shall by any way discover my said client to be guilty of the crime or crimes wherewith he stands charged, that I will thereupon immediately dismiss his cause: and if by having searched narrowly into his case I shall discover that he has had complices in his heresies, that I will inform against them to this holy office. All which I do promise upon pain of perjury, and of an excommunication, from which I cannot be absolved by any but by this holy office. So help me God and these Holy Gospels.

The same oath is taken by the prisoner's Proctor, as the Inquisitors call him; though in truth both he and the Advocate are the Inquisitors engines, made use of to fish what they can out of the prisoner against himself and his friends, rather than any thing else.

The prisoner being thus fitted with an Advocate and Proctor, and who are not suffered to know any thing more of his accusers and of the witnesses against him than he himself knows, he is asked by them whether he would have any questions put by the Inquisitors to those that have informed and witnessed against him, or would have them examined upon any points. And in case the prisoner furnisheth his Advocate with any such questions or points, they are put by him into form, and delivered to the Inquisitors.

The prisoner is asked also whether he has any witnesses of his orthodoxy; and if he names any, they are sent for and heard by the Inquisitors. And as these witnesses do go to the Inquisition with trembling hearts, so they are extremely cautious not to say any thing concerning the prisoner that shall imply their having lived in any intimacy with him, for fear of bringing themselves under a suspicion of heresy; and by the laws of the Inquisition no relation of the prisoner's within the fourth degree can be a witness for him. When the prisoner's Advocate and Proctor are dismissed, they take an oath that they have no copy of the defence the prisoner made for himself, and that they shall never speak of it to any person whatsoever; neither is the prisoner ever suffered to see the depositions of his own fearful witnesses, no more than the depositions of those that are against him.

Beside the fore-mentioned, there is another common process in the Inquisition, which is against those that have murdered themselves, or died a natural death in their prisons. The process against the first is short, his having murdered himself being judged such an evidence of his guilt as is sufficient to convict him of the heresies wherewith he was charged. The process against the second is carried on by the Advocate Fiscal in the same manner

CHAP.  
XI.

manner as it would have been had the prisoner been alive; and the prisoners relations and friends, or any other that have any thing to offer in defence of the deceased, are by a publick edict summoned to appear before the Inquisitors within forty days to give their evidence; and if upon this summons none do appear to offer any thing in vindication of the deceased, as I believe few are ever so hardy as to do, the deceased after the expiration of that term of days is acquitted or condemned in the same manner that he would have been had he been alive; and if he is condemned his whole estate is forfeited, and his body and effigies are burnt at the next act of the faith, as are the bodies and effigies of those that had murdered themselves.

But the power of the Inquisition extends not only to those that died in the prisons, but to the bodies, estates and good names of all that after their decease shall be convicted of having died hereticks: and though as to the estates of those that are convicted of having died hereticks they can go no farther than forty years, as to the taking their bones out of the grave, and burning them, and the depriving them of their good name, there is no limitation of time. When a competent number of prisoners are convicted of heresy, either by their own voluntary or extorted confession, or upon the evidence of certain witnesses, a day is fixed by the chief Inquisitor for a goal-delivery, which is called by them an Act of the Faith, and which is always upon a Sunday. In the morning of the day the prisoners are all brought into a great hall, where they have the habits put on they are to wear in the procession, which begins to come out of the Inquisition about nine of the clock in the morning.

Auto de  
Fé.

The first in the procession are the Dominican Friars, who carry the standard of the Inquisition, which on the one side hath their founder DOMINICK's picture, and on the other side a cross betwixt an olive-tree and a sword, with this motto, *Justitia & Misericordia*. Next after the Dominicans come the penitents, some with benitoes and some without, according to the nature of their crimes; they are all in black coats without sleeves, and bare-footed, with a wax candle in their hand. Next come the penitents who have narrowly escaped being burnt, who over their black coat have flames painted with their points turned downward, to signify their having been saved, but so as by fire; this habit is called by the Portuguese, *Fuego revolto*, or flames turned up-side-down. Next come the negative and relapsed that are to be burnt, with flames upon their habit pointing upwards: and next come those who profess doctrines contrary to the faith of the Roman church, and who besides flames on their habit pointing upward, have their picture, which is drawn two or three days before, upon their breasts, with dogs, serpents and devils all with open mouths painted about it.

PEGNA, a famous Spanish Inquisitor, calls this procession, *Horrendum ac tremendum spectaculum*; and so it is in truth, there being something in the looks of all the prisoners, besides those that are to be burnt, that is ghastly, and disconsolate beyond what can be imagined; and in the eyes and countenance of those that are to be burnt, there is something that looks fierce and eager.

The prisoners that are to be burnt alive, besides a Familiar, which all the rest have, have a Jesuit on each hand of them, who are continu-

ally preaching to them to abjure their heresies; but if they offer to speak any thing in defence of the doctrines they are going to suffer death for professing, they are immediately gagged, and not suffered to speak a word more.

This I saw done to a prisoner presently after he came out of the gates of the inquisition, upon his having looked up to the sun, which he had not seen before in several years, and cried out in a rapture, 'How is it possible for people that behold that glorious body, to worship any being but him that created it?' After the prisoners came a troop of Familiars on horseback; and after them the inquisitors and other officers of the Court upon mules; and last of all comes the Inquisitor-General upon a white horse led by two men, with a black hat and a green hat-band, and attended by all the nobles that are not employed as Familiars in the procession.

In the Terreiro de Paco, which may be as far from the Inquisition as White-Hall is from Temple-Bar, there is a scaffold erected, which may hold two or three thousand people; at the one end sit the Inquisitors, and at the other end the prisoners, and in the same order as they walked in the procession; those that are to be burnt being seated on the highest benches behind the rest, and which may be ten foot above the floor of the scaffold.

After some prayers and a sermon, which is made up of encomiums on the Inquisition, and invectives against hereticks, a secular Priest ascends a desk, which stands near the middle of the scaffold, and who having first taken all the abjurations of the penitents, who kneel before him one by one in the same order they walked in the procession, at last he recites the final sentence of the Inquisition upon those that are to be put to death, in the words following:

"We the Inquisitors of heretical pravity, having with the concurrence of the most illustrious N. Lord Archbishop of Lisbon, or of his deputy N. called on the name of the Lord JESUS CHRIST, and of his glorious mother the Virgin MARY, and sitting on our tribunal, and judging with the Holy Gospels lying before us, that so our judgments may be in the sight of God, and our eyes might behold what is just, in all matters between the magnifick Dr. N. Advocate-Fiscal, on the one part, and you N. now before us, on the other, we have ordained that in this place, and on this day you should receive your definitive sentence.

"We do therefore by this our sentence put in writing, define, pronounce, declare and sentence thee N. of the city of Lisbon, to be a convicted, confessing, affirmative and professed heretick, and to be delivered and left by us as such, to the secular arm; and we by this our sentence do cast thee out of the ecclesiastical court, as a convicted, confessing, affirmative and professed heretick, and we do leave and deliver thee to the secular arm, and to the power of the secular court; but at the same time do most earnestly beseech that court so to moderate its sentence, as not to touch thy blood or to put thy life in any danger."

Is there in all history an instance of so gross and confident a mockery of God and the world as this of the Inquisitors, earnestly beseeching the civil magistrates not to put the hereticks they

CHAP.  
XI.

have condemned and delivered to them to death? For were they in earnest when they make this solemn petition to the secular Magistrates, why do they bring their prisoners out of the Inquisition and deliver them to those Magistrates in coats painted over with flames? Why do they teach, that all hereticks, above all other malefactors, ought to be punished with death? And why do they never resent the Secular Magistrates having so little regard to their earnest and joint petition, as never to fail to burn all the Hereticks which are delivered to them by the Inquisition, within an hour or two after they have them in their hands? And why in Rome, where the supreme civil and ecclesiastical authority are lodged in the same person, is this petition of the Inquisition, which is made there as well as in other places, never granted? Certainly not to take any notice of the old canon, which forbids the Clergy to have any hand in the blood of any person whatsoever, would be a much less dishonour to the Inquisition, than to pretend to go on observing that canon, by making a petition, which is known to be so contrary to their principles and desires.

The prisoners are no sooner in the hands of the Civil Magistrate, than they are loaded with chains before the eyes of the Inquisitors, and being carried first to the secular goals, are within an hour or two brought from thence before the Lord Chief Justice, who without knowing any thing of their particular crimes, or of the evidence that was against them, asks them one by one in what religion they do intend to die; if they answer that they will die in the communion of the Roman Church, they are condemned by him to be carried forthwith to the place of execution, and there to be first strangled, and afterwards burnt to ashes: But if they say they will die in the Protestant, or in any other Faith that is contrary to the Roman, they are then sentenced by him to be carried forthwith to the place of execution, and there to be burnt alive.

At the place of execution, which at Lisbon is the Ribera, there are so many stakes set up as there are prisoners to be burnt with a good quantity of dry furz about them: The stakes of the professed, as the Inquisitors call them, may be about four yards high, and have a small board, whereon the prisoner is to be seated, within half a yard of the top; the negative and relapsed being first strangled and burnt, the professed go up a ladder between the two Jesuits that have attended them all day, and when they are come even with the forementioned board they turn about to the people, and the Jesuits spend near a quarter of an hour in exhorting the professed to be reconciled to the Church of Rome, which if the professed refuse to be, the Jesuits come down, and the executioner ascends, and having turned the professed off the ladder upon the seat, and chained their bodies close to the stake, he leaves them, and the Jesuits go up to them a second time, to renew their exhortation to them, and at parting tell them, 'That they leave them to the devil, who is standing at their elbow, to receive their souls, and carry them with him into the flames of hell-fire, so soon as they are out of their bodies.' Upon this a great shout is raised, and as soon as the Jesuits are off the ladders, the cry is, 'Let the dogs beards be made, let the dogs beards be made.' Which is done by thrusting flaming furzes fastened to

a long pole against their faces; and this inhumanity is commonly continued till their faces are burnt to a coal, and is always accompanied with such loud acclamations of joy, as are not to be heard upon any other occasion; a bull-feast or a farce, being dull entertainments to the using a professed heretick thus inhumanly.

The professed's beards having been thus made, as they call it in jollity, fire is set to the furz which are at the bottom of the stake, and above which the professed are chained so high, that the top of the flame seldom reacheth higher than the seat they sit upon; and if there happen to be a wind, and to which that place is much exposed, it seldom reaches so high as their knees: so that though there be a calm, the professed are commonly dead in about half an hour after the furz is set on fire; yet if the weather prove windy, they are not after that dead in an hour and a half, or two hours, and so are really roasted, and not burnt to death. But though out of hell there cannot be a more lamentable spectacle than this, being joined with the sufferers, so long as they are able to speak, crying out, *Misericordia por amor de Dios*, Mercy for the love of God; yet it is beheld by people of both sexes, and of all ages, with such transports of joy and satisfaction, as are not on any other occasion to be met with.

And that the reader may not think that this inhuman joy may be the effect of a natural cruelty, that is in those people's disposition, and not of the spirit of their religion, he may rest assured, that all publick malefactors besides hereticks, have their violent deaths no where more tenderly lamented than among the same people, and even when there is nothing in the manner of their deaths that appears inhuman or cruel.

Within a few days after the execution, the pictures of all that have been burnt, and which were taken off their breast when they were brought to the stake, are hung up in St. DOMINGO'S Church, whose west-end, tho' very high, is all covered over with these trophies of the Inquisition, hung up there in honour to DOMINIC, who to fulfil his mother's dream, was the first inventor of that court. DOMINIC'S mother, when she was ready to be brought to bed of him, having dreamed, that she was delivered, not of a human creature, but of a fierce dog, with a burning torch in his mouth. See Dr. GEDDES'S Miscellaneous Tracts, Vol. I. p. 391, to 413.

I proceed next to enumerate the several archbishopsricks and bishopsricks in Spain and Portugal, and enquire into their respective revenues.

The Archbishop of Toledo is styled Primate of Spain; he is great Chancellor of Castile, and Counsellor born of the Council of State. His archbishoprick contains 802 parishes, his revenue amounting one year with another to 300000 ducats, and that of the Primatical Church to 150000 ducats, out of which there ought to be deducted 66000 ducats which is paid annually to the King. The suffragans are, first, that of Segovia, comprehending 438 parishes, the revenue whereof is 24000 ducats per annum. 2. Valladolid, which comprehends 132 parishes, the revenue whereof is 12000 ducats per annum. 3. Osluna, which comprehends 450 parishes, the revenue whereof is 16000 ducats per annum. 4. Siguenza, which comprehends 516 parishes, the revenue whereof is 40000 ducats per annum: he is Lord Chief Justice of

the town of Sigüenza. 5. Cuença, which comprehends 384 parishes, the revenue whereof is 50000 ducats per annum. 6. Cartagena, which comprehends 89 parishes, the revenue whereof is 24000 ducats per annum. 7. Jaen, which comprehends 84 parishes, the revenue whereof is 20000 ducats per annum. 8. Cordoua, which comprehends 92 parishes, the revenue whereof is 40000 ducats per annum.

Abp. of  
Terra-  
gona.

The Archbishop of Terragona. His diocese contains 197 parishes, the revenue whereof is 20000 ducats per annum. The suffragans are, first, that of Barcelona, comprehending 206 parishes, the revenue whereof is 10000 ducats per annum. 2. Tortosa, which comprehends 160 parishes, the revenue whereof is 15000 ducats per annum. 3. Lerida, which comprehends 212 parishes, the revenue whereof is 12000 ducats per annum. 4. Vich, which comprehends 206 parishes, the revenue whereof is 6000 ducats per annum. 5. Urgel, which comprehends 420 parishes, the revenue whereof is 9000 ducats per annum. 6. Gironne, which comprehends 339 parishes, the revenue whereof is 3000 ducats per annum. 7. Elna, which comprehends 100 parishes, the revenue whereof is 4000 ducats per annum. 8. Solsona, which comprehends 15 parishes, the revenue whereof is 4000 ducats per annum.

Abp. of  
Seville.

The Archbishop of Seville. His archbishoprick contains 234 parishes, the revenue whereof is 100000 ducats per annum. The suffragans are, first, that of Cadiz, which comprehends 14 parishes, the revenue whereof is 12000 ducats per annum. 2. Guadix, which comprehends 37 parishes, the revenue whereof is 8000 ducats per annum. 3. Canaries, which comprehends 50 parishes, the revenue whereof is 10000 ducats per annum.

Abp. of St.  
James de  
Compo-  
stella.

The Archbishop of St. James de Compostella. His archbishoprick contains 1803 parishes, the revenue whereof is 60000 ducats, per annum, and that of the Archiepiscopal Church as much; out of which there ought to be deducted 18000 ducats which he annually pays to the King. The suffragans are, first, that of Astorga, which comprehends 913 parishes, the revenue whereof is 10000 ducats per annum. 2. Avila, which comprehends 437 parishes, the revenue whereof is 20000 ducats per annum. 3. Salamanca, which comprehends 240 parishes, the revenue whereof is 24000 ducats per annum. 4. Coria, which comprehends 317 parishes, the revenue whereof is 20000 ducats per annum. 5. Placentia, which comprehends parishes, the revenue whereof is 50000 ducats per annum. 6. Badajoz, which comprehends 53 parishes, the revenue whereof is 16000 ducats per annum. 7. Tuy, which comprehends 146 parishes, the revenue whereof is 10000 ducats per annum. 8. Mondonedo, which comprehends 356 parishes, the revenue whereof is 4000 ducats per annum. 9. Orensa, which comprehends 954 parishes, the revenue whereof is 10000 ducats per annum. 10. Ciudad-Rodrigo, which comprehends 63 parishes, the revenue whereof is 10000 ducats per annum. 11. Lugo, which comprehends 60 parishes, the revenue whereof is 10000 ducats per annum. 12. Zamora, which comprehends 256 parishes, the revenue whereof is 20000 ducats per annum.

Abp. of  
Saragossa.

The Archbishop of Saragossa. His archbishoprick comprehends 347 parishes, the revenue whereof is 50000 ducats per annum. The suf-

fragans are, first, that of Huesca, which comprehends 196 parishes, the revenue whereof is 13000 ducats per annum. 2. Tarazona, which comprehends 350 parishes, the revenue whereof is 20000 ducats per annum. 3. Albarazin, which comprehends 25 parishes, the revenue whereof is 6000 ducats per annum. 4. Jaca, which comprehends 199 parishes, the revenue whereof is 3000 ducats per annum. 5. Balbastro, which comprehends 170 parishes, the revenue whereof is 8000 ducats per annum. 6. Teruel, which comprehends 77 parishes, the revenue whereof is 12000 ducats per annum.

The Archbishop of Valencia. His archbishoprick contains 230 parishes, the revenue whereof is 40000 ducats per annum. The suffragans are, first, that of Segorba, which comprehends 120 parishes, the revenue whereof is 10000 ducats per annum. 2. Orihuela, which comprehends 60 parishes, the revenue whereof is 10000 ducats per annum.

The Archbishop of Grenada. His archbishoprick contains 194 parishes, the revenue whereof is 40000 ducats per annum. The suffragans are, 1. That of Almeria, which contains 60 parishes, the revenue whereof is 4000 ducats per annum. 2. Malaga, which comprehends 108 parishes, the revenue whereof is 2000 ducats per annum.

The Archbishop of Burgos. His archbishoprick contains 1756 parishes, the revenue whereof is 40000 ducats per annum. The suffragans are, 1. That of Pampeluna, which comprehends 1156 parishes, the revenue whereof is 25000 ducats per annum. 2. Calahorra, which comprehends 1013 parishes, the revenue whereof is 20000 ducats per annum. 3. Placentia, which comprehends 881 parishes, the revenue whereof is 24000 ducats per annum.

The bishopricks of Leon and Oviedo hold immediately of the Holy See. Leon contains 1020 parishes, the revenue whereof is 12000 ducats per annum. Oviedo contains 1048 parishes, the revenue whereof is 12000 ducats per annum.

The archbishoprick of Lisbon; the revenue whereof is 40000 crusadoes. The suffragans are, 1. Miranda, the revenue whereof is 10000 crusadoes per annum. 2. Portalegre, the revenue whereof is 500 l. per annum. But the late patriarchate established at Lisbon has made a great alteration in the ecclesiastical government of this archbishoprick.

The archbishoprick of Braga; the revenue whereof is 40000 crusadoes per annum. The suffragans are, 1. Coimbra, the revenue whereof is 40000 crusadoes per annum. 2. Lamego, the revenue whereof is 10000 crusadoes per annum. 3. Viseu, the revenue whereof is 16000 crusadoes per annum. 4. Porto, the revenue whereof is 15000 crusadoes per annum.

The archbishoprick of Evora; the revenue whereof is 60000 crusadoes per annum. The suffragans are, 1. Elvas, the revenue whereof is 10000 crusadoes per annum. 2. Leria, the revenue whereof is 18000 crusadoes per annum. 3. Faro, the revenue whereof is 5000 crusadoes per annum. And, 4. Tavira, the revenue whereof I have not met with.

There are also in Spain alone 2141 convents, in which it is computed there are about 45000 Monks and Nuns; and a proportionable number in Portugal.

There

## CHAP.

## XI.

Universi-  
ties of  
Spain and  
Portugal.

There are in Spain no less than 22 Universities, which have been mentioned already in the description of the several cities of that kingdom. I shall only observe here therefore, that those of Salamanca, Valladolid and Alcala are the chief: And tho' my French author is pleased to affirm, that they excel all the Universities in Christendom except that of Paris; it will be found, that those of Oxford and Cambridge are much superior to any of them in the number of learned men, in the elegance of their buildings, and in their revenues.

The University of Coimbra is much the most considerable in Portugal, said to consist of five thousand Students; but then they admit children before they can well read, so that our grammar-schools may be reckoned equal to many of their colleges.

Laws.

They do not apply themselves so much to philosophy, divinity, or physick in these Universities as to the civil and canon law, which prevails very much in these countries. And besides these every one studies the customs of his particular province, by which the Magistrates are often governed in their decisions.

Language.

The Spanish language is derived from the Latin, and said to come the nearest to it at this day of any language in Europe: The dialects however are very different in the several provinces, as in other countries; that of Castile is said to be the purest, and that of Portugal, which was lately a province of Spain, the worst. But in all of them we find a great many Arabick words and terminations, which they learnt from the Moors, who were long masters of the country. They observe particularly that all Spanish words which begin with the syllable Al, are of Arabick extraction, as Alguasil, a Bailiff or Jaylor, Algibe, a Cistern, &c.

Acade-  
mies.

I shall conclude with observing, that in Portugal as well as other European kingdoms, they have of late begun to establish separate Academies, for the propagating arts and sciences, as if they apprehended these were neglected in their Universities. The late King of Great Britain was more indulgent to Oxford and Cambridge, chusing rather to establish professors of modern history there with handsom stipends, than to set up distinct societies in opposition to those Universities.

## CHAP. XII.

*Treats of their foreign trade and navigation; and of their several sorts of coin.*

CHAP.  
XII.Foreign  
trade.

AS to the trade of this kingdom, their navigation and foreign commerce, these have already been treated of under other heads. I shall only here observe in general therefore, that the merchandize they export consists either in the produce of their soil, or of what they first import from their plantations and settlements in Asia, Africa, and America. The product of their soil is chiefly red and white port wines, oil, oranges, lemons, figs, chefnuts, almonds, raisins, salt, and sweetmeats. Their importations from Asia consist of silks, muslins, calicoes, tea, gold-dust, and such other goods as our English East-India-Company import hither. And from Africa they import chiefly gold, slaves, and elephants teeth. But the most extensive and the richest of all their settlements are those of Brazil in America, from whence in some years they import upwards of two millions sterling in gold and silver; besides vast quantities of sugar, tobacco, snuff,

brazil and other dying wood, hides, cotton, indigo, fustick, tallow, train-oil, parrots, rum, and many other lesser articles; and it is said the Portuguese do not transport less than five and twenty or thirty thousand slaves annually from the coast of Africa to Brazil, which may one with another be worth fifteen or sixteen pounds sterling a head in Brazil. They are employed chiefly in their sugar-works, tobacco plantations, or their mines; tho' a great many are taught some trade or mechanick arts, which make them most valuable to their masters, and many more serve the Portuguese as menial servants. These slaves are purchased generally of the African Princes, being prisoners taken in war or stolen from their friends. But I shall treat more particularly of this branch of their trade when I come to the description of Africa and America.

From England in return for their wines, fruits, and the produce of their plantations, they receive our woollen manufactures, lead and tin; part of which are used in Portugal, and part of them sent to Brazil; and some years Portugal takes off a great deal of our corn and flesh from Ireland. The Dutch also furnish them with linen and woollen cloth and stuffs, corn, copper, iron, and all manner of naval stores that are found in the northern kingdoms of Europe. The Portuguese trade pretty much with France; but the English have the greatest share of traffick with this country, as appears by the following account of the shipping that resorted to Lisbon in the year 1721, viz. 329 ships from Great-Britain and Ireland, 72 ships from Holland, 71 from France, 13 from Hamburg, 7 from Denmark, 2 from Sweden, 1 from Malta; besides 359 ships that arrived there belonging to the several ports of Portugal, and their Brazil fleet. The number of vessels outward-bound from Lisbon the same year were, 302 ships of Britain, 69 of Holland, 63 of France, 24 of Spain, 3 of Hamburg, 8 of Genoa, 6 of Denmark, 2 of Sweden, 1 of Malta, and 116 Portuguese, including their Brazil fleets and ships sent to India. And in all our accounts since, we find the English shipping in the port of Lisbon double or treble the number of any other nation. This is generally held to be the most advantageous trade we have next to that with our plantations; and yet even here I am informed the course of exchange is usually against us. Certain it is we receive a great deal of gold from Portugal, but I perceive it is clandestinely or by connivance of the government, for their laws punish the exportation of it with death, as appears by the condemnation of the two British merchants abovementioned for sending gold to England. And this brings me to give some account of the Portuguese coins.

The usual way of accounting in Portugal is by rees or crusado's; the first their smallest brass coin, 3000 whereof are equal to a pound sterling, and the other a silver coin of two shillings and eightpence value, or thereabouts. Of brass coins there are single rees, those of a rees and half, of five rees and ten rees. The silver coins are, a vintain of 20 rees, the half tostao of 50 rees, the whole tostao of 100 rees, the piece valued at 250 rees, the crusado valued at 400 rees, and another piece valued at 500 rees; besides which, they stamp the number 600 on the Spanish pieces of eight, to signify that they shall be taken for 600 rees. And their most usual gold coins are, the moidore, valued at 4000 rees, and the half moidore, quarter moidore, &c.

CHAP.  
XI.

Shipping.

Coins.

*The continuation of the History of Germany, which should have come in page 50.*

1726. **I**N December the Spaniards assembled their forces in Andalusia, and blocked up Gibraltar, and on the two and twentieth of February following, they began to besiege it in form, and the English merchants effects in Spain were all seized. However, a treaty of pacification being concluded between the Allies of Vienna and those of Hanover on the 31st of May, 1727, the siege of Gibraltar was raised, and the traffick of the Ostend Company for the East Indies was suspended; and on the other hand, his British Majesty agreed to order his Admirals to return with their squadrons from the West Indies and the coasts of Spain.

1728. **A**nd by another treaty concluded at Seville in 1728 between Great Britain and Spain, the Court of Great Britain agreed to assist the Spaniards to introduce six thousand of their forces into Italy, to secure the eventual succession of Don CARLOS to the Duchies of Tuscany and Parma, to which treaty both the French and Dutch acceded.

The Emperor was extremely incensed at this article for introducing Spanish forces into Italy, foreseeing, that if the Spaniards once got footing there again, they would never rest till they had driven him out of Naples, and the rest of his Italian territories; he opposed therefore the putting that treaty in execution with all his might, and would accept of no expedients that were offered him for a great while. But the British fleet (with land forces on board) under the command of Sir CHARLES WAGER, joining the fleet of Spain, in the summer of 1731, convoyed six thousand Spanish troops to Leghorn, and landed them there, in a manner forcing the Emperor to submit to that article. The grand motive which influenced the English to act in this manner, it is said, was the procuring the favour of the Queen of Spain, that they might be let into a share of the trade of that kingdom, from which they had been in a manner excluded ever since the year 1717, when Sir GEORGE BYNG destroyed the Spanish fleet upon the coast of Sicily. We had indeed patched up a peace with Spain afterwards; but they continued to act in a hostile manner against Britain, taking and plundering our ships, and insulting our people as often as they had opportunity; and though we put ourselves to so great an expence, to carry the Spanish forces into Italy, and disoblged the Emperor, our greatest and best ally, I do not perceive the Spaniards have altered their conduct towards the subjects of Britain, but continue their depredations to this day; and, as had been foreseen, made use of the first pretence that offered to expel the Emperor from his Italian dominions. His opposing the advancement of King STANISLAUS to the throne of Poland, was held to be a sufficient motive for their entering into a confederacy with the French and the King of Sardinia, against the Emperor; and accordingly, within a month or two after the election of AUGUSTUS III. to that throne, the French, Spaniards, and Savoyards, invaded the Milanese, and over-run the greatest part of that province, while another army of the French passed the Rhine, and took

fort Kehl; from whence the Emperor rightly judged, that they must have laid this scheme, and provided forces for these purposes, long before the death of the late King of Poland.

The Emperor being thus surprized and distressed by his enemies, both in Italy and Germany, applied himself to the English and Dutch, for their respective quota's of troops they had engaged to furnish him with, when they guaranteed to him the possession of his hereditary dominions; and observing their backwardness to assist him, his minister presented a memorial to the maritime powers on that subject, of the following tenor:

He put them in mind, that when the Emperor was engaged in the defence of Christendom against the Turk in the year 1717, Spain took hold of that opportunity to attack him. He was then in a good state of defence; and the union between the two branches of the house of Bourbon did not at that time seem so terrible as at present they manifestly appeared to be: a war would not then have been near so burthensome to him, as it was at this time; especially, considering that he was then supported by Great Britain in a manner which he can never forget: nevertheless, he yielded to the instances made to him, for re-establishing as soon as possible the peace of Europe: he renounced the right he had to the greatest and most considerable part of the Spanish monarchy: for the common good of Europe, he took upon himself the guarantee of the order of succession established in Great Britain, in France, and in Spain. And in fine, he consented that (by way of reward) for the unjust attack made upon him, the estates of Tuscany and Parma should be settled eventually upon a Prince of the house of Bourbon. This last article gave him more concern than all the rest; not that he had any design to unite these estates with those he had already possessed, but because he foresaw, that as soon as the two branches of the house of Bourbon should become united betwixt themselves, that addition of power would facilitate to them the means of disturbing the peace of Europe, and oppressing it's liberties, while, at the same time, it would be an obstacle to his Imperial Majesty's employing his forces in assisting to preserve either the one or the other. His Imperial Majesty then declared what he apprehended upon this head, and the many precautions expressed in the fifth article of the quadruple alliance, are so many authentick proofs of his foresight. But his well-grounded fears were appeased by the guarantees that were by the very same treaty promised him.

The Emperor most religiously fulfilled those engagements he had taken upon himself: he obtained the consent of the empire, for confirming what had been stipulated in favour of Don CARLOS.

The Emperor, on his part, fulfilled all the engagements he had entered into, confiding entirely in those guarantees, which were expressly contained, not only in the treaty, but in the declaration relating to the Spanish garisons. He suffered those very garisons to be introduced, and he evacuated Parma and Placentia before the accession of

the Lords the States General was signed at the Hague.—By such signal marks of sincerity and moderation, he flattered himself with having satisfied every desire which the Queen of Spain could at least for some time conceive: but it happened quite otherwise; they took care to start one difficulty after another; and the more his Britannick Majesty laboured in employing his good offices for ending all disputes, to the advantage of Don CARLOS, the more busy they were from thence, to take occasion to insinuate to the Imperial court, that the Emperor would find his account more in an union with the house of Bourbon, than in the guarantees of the two maritime powers: that without such an union they would keep his Italian territories in continual fears and alarms; and that they would take particular care to chuse the most convenient time for giving the blow, when it should not be in the power of his Imperial Majesty's allies to make good those engagements, upon which he so much depended.

While the court of Spain made use of these artifices without success, that of France pursued a method something different, but such as tended to the same end.—She let slip no opportunity to disunite and sow discord among those who ought always to join in defence of the liberties of Europe.—She moved heaven and earth against that order of succession which had been established in the august house of Austria. Long before the death of the late King AUGUSTUS, the duchy of Milan was offered to the King of Sardinia, the kingdoms of Naples and Sicily, to the Infante Don CARLOS, and the rest of the Emperor's kingdoms and hereditary countries, were parcelled out in several different ways, according as the ministers and emissaries of France found it proper for their purposes.

And when the French King found he could not accomplish his ends by these insidious offers, he turned his whole forces against his Imperial Majesty: the King of Sardinia attacked him in the most perfidious manner; and the court of Spain joined with the rest, in making war upon him with all possible vigour. The blow was in a great measure unforeseen by the Emperor; and yet, by a manifest sort of contradiction, they suppose him to have been inclined for war, while at the same time they reproach him for being no way prepared for it: and after having swallowed up so many provinces one after another, after having pursued the most rapid successes with the utmost vigour; after having moved heaven and earth, in order to deprive the Emperor of the assistance of his allies; after having solicited all the courts of Europe against him, and after having endeavoured as much as possibly they could, to stir up even the Turk against him, the enemies of this Prince cannot certainly, with any sort of countenance, pretend to set up for having an inclination for peace, when the contrary appears by so many incontestable proofs; at least, the Emperor cannot imagine that any one will allow himself to be so imposed on: it would be a misfortune greater than any has yet befallen him, if such professions, so inconsistent with their actions, should meet with the least credit.

Among those who have so often experienced, how dangerous it is to trust the professions of France, the Emperor would do injustice to the great penetration of his Britannick Majesty, and to the wisdom and foresight of my Lords the States General, if he should apprehend in the least, that

such artifices could make any impression on their minds. The views of France become more and more manifest: it is known to all Europe, that the troubles with which it has been agitated for so many years, are originally owing to the unbounded ambition of the Queen of Spain, and to her impetuous desire to aggrandize her posterity at any rate; and there is no one so unjust, as not to abhor the enormous and perfidious behaviour of the King of Sardinia towards the Emperor: in such circumstances, is it possible that his Imperial Majesty can fail of having the assistance of his allies? or that, for re-establishing the balance of power, they can desire him to make new sacrifices, which, upon the first occasion that offers, will be a fresh provocation for the insatiable appetites of his unjust and perfidious aggressors? This the Emperor can by no means believe, since it is not the method prescribed by treaties for remedying so great evils. By those treaties, indeed, it is said, that good offices may be employed before giving their assistance, which may be demanded in case of an attack by either of the contracting parties; but the interposition of their good offices is limited to the term of two months, and can have nothing else for their object, but the restitution of what has been unjustly taken away, and the reparation of the damages that have been suffered. Nothing would have been more agreeable to the Emperor, than such an interposition of the good offices of the two maritime powers. From thence he would have promised himself all the good effects which he could have desired; and in this sense he agrees, that they might have prevented the events of the war, from rendering it more difficult to bring about a friendly accommodation: but the same term is expired, many months having passed since the rupture made by the three powers before-mentioned.

The Emperor has, without ceasing, solicited again and again, for a performance of those guarantees which have been promised him; he knows too well the value of them ever to be capable of giving them up, or so much as inclined to desist from the demand. The obtaining of these guarantees was his only motive for consenting to the establishing a Prince of the house of Bourbon in Italy; for evacuating Parma and Placentia; for allowing Spanish garisons to be introduced into the fortified places of Tuscany; and for his rejecting all the offers of the court of Spain, founded upon the secret insinuations of that of France. It is in vain for people to flatter themselves with re-establishing the publick tranquillity, and rendering it more secure for the future by a new treaty, till the preceding treaties be made effectual. His Imperial Majesty neither desires, nor wishes any thing more than to see them fulfilled in all their articles; and after the efforts which he has made, for preserving the liberty of Europe, it cannot be denied, but that it may be very easy to warrant it against any attempts for a long time to come, provided only that he be effectually supported. As the Emperor is not in a condition to make always the same efforts, the two maritime powers can never have an opportunity, when it will cost them less to establish firmly and speedily, a lasting peace in Europe, and to secure the advantages of their commerce in such a manner, that they may be no longer subject to the caprices of the court of Spain.

If France, instead of turning her arms against the Emperor, had turned them against the two maritime powers, had swallowed up their provinces one after another, and in the midst of great protestations of her inclinations for peace, had pushed on the war with the utmost vigour, the Emperor would not certainly have given any credit to what they said; nor would he have imagined, that he could have sufficiently shewed his zeal for the publick good, or his friendship for the parties attacked, by offering, after many months, his mediation, instead of performing those guarantees in which he stands engaged. But the engagements which result from treaties are reciprocal; they are of equal force with respect to every one of the contracting parties, and that stable and solid system, by which only the tranquillity, the happiness, and the liberty of Europe can be secured, must vanish, as soon as people begin to depart from those measures which have been settled by an unanimous consent, and which have been judged to be necessary for so salutary an end. The Emperor's desire to see the publick tranquillity restored as soon as possible, cannot therefore be greater than it is, nor his love of peace more sincere: so many sacrifices which he has upon more than one occasion determined to make, and of which he now feels the fatal, though not the unforeseen, effects, are convincing proofs of it. We have only to consider what methods may be proper to be taken, for speedily and fully securing such a tranquillity as may be really desirable; that is to say, such a one, as may not any way prejudice the balance of power in Europe, which is already but too much weakened; and consequently such a tranquillity as may be expected to continue for some time.

These methods have no need of any farther examination or discussion; they are clearly expressed and ascertained by treaties. What security can the Emperor have with respect to future events, if he finds no security in the present conjuncture; which is perhaps the most critical and the least doubtful of any that can ever happen? It is upon these methods that his Imperial Majesty must insist; from them he cannot depart, without doing an injury to himself, to his dignity, and to his glory; without failing in that duty which he owes to his faithful subjects; and, in short, without neglecting the publick good of Europe.

Besides these motives, which are in themselves so pressing, the proper interest of the two maritime powers themselves, and the real friendship which his Imperial Majesty has for them, cannot permit him to pursue any other measure. The court of Spain have but too fully verified what they have more than once insinuated to the court of Vienna: by the troubles which they have from time to time found means to excite, they have prevented the Emperor's being ever in a condition to taste the fruits of a profound tranquillity; the continual perturbations of Europe have engaged him in excessive expences: by the number and power of his enemies, he found himself obliged to make efforts which it is not possible for him to repeat often: these efforts he made only to facilitate to the two maritime powers the means of putting affairs again upon a good footing, without putting themselves to any great charge, and without subjecting themselves to any risque.

If the efforts which he has made, are to be not only rendered useless, but made to serve for

procuring new advantages to the house of Bourbon, the two maritime powers must thereby render useless the best and most faithful ally they have; and France will obtain what she desires, which is, to be able to keep all his Imperial Majesty's territories in a continual alarm, without it's being possible for them to support the liberty of Europe, already in too tottering a condition. This is what lies most heavy upon his heart.

Unfortunately! the Emperor has never been deceived in what he has foreseen, or foretold, with respect to the consequences of the increase of power in the house of Bourbon: at present, he foresees consequences more fatal and less remote than any he has ever foreseen: he desires to prevent them, and he will endeavour it to the utmost of his power. He does not seek to aggrandize himself; all his views are bounded in being able to employ his forces for the preservation of his territories, for that of the empire, whose interests are so dear to him, and for the repose of others. The greatest part of the advantage arising from thence, will accrue to his allies, from whom he is, and always will be, inseparable. It sticks on them to break those bands, with which all Europe is threatned, by the house of Bourbon: the fulfilling those guarantees, which have been stipulated by treaties, is the only method for securing so great an advantage; and that is what the Emperor demands in the most friendly, and the most emphatical manner he can think of.

After the accomplishment of what is stipulated by those guarantees, the Emperor will be ready to join in the method of a friendly accommodation. Upon that occasion, as on every other, he will make it appear, that his desire of peace is as sincere, and as real, as that which France pretends to is deceitful, and belied by her own conduct. In taking matters upon this foot, it is to be feared, that the events of war may render it more difficult to bring about a friendly accommodation. On the contrary, they must conduce thereto, and then the Emperor will, with alacrity, and readiness, give ear to any propositions that may be consistent with his honour, with the quiet of his territories, with the preservation of the balance of power in Europe, and consequently, with the essential interests of the two maritime powers: so that by way of answer to the representations made by the ministers of his Britannick Majesty, and my Lords the States General of the United Provinces of the Low Countries, the Emperor is not against their taking the method of employing their good offices, if by that method they can religiously perform all that is required by treaties; and if, by that method, the execution of them be no longer retarded.

But at the same time, the Emperor believes, that at this time of day, to content themselves with employing only their good offices, will expose all Europe to a much greater danger; and that as affairs stand at present, it is in vain to flatter themselves, with being able, by any such method, to satisfy what he has a right to demand, by virtue of those engagements, which have been entered into by treaties; a full performance of which the Emperor with confidence expects from the two maritime powers, he being ready upon all occasions to give them signal marks of a most complete return, and of a friendship the most constant and sincere.

Notwithstanding

Notwithstanding this moving representation of the Emperor's, the English and Dutch could not be induced to take a part in the war, but continued to offer their mediation; which the Spaniards and their allies very little regarding, made an entire conquest of Naples and Sicily, and of all the rest of the Emperor's territories in Italy, except the town of Mantua. At the same time, the French army on the Rhine besieged and took that important fortress of Philipsburg\*; whereupon the English drew up the following plan of a future peace, which they prevailed on the Dutch to approve of, and afterwards communicated to the contending parties. This plan being of the following tenor.

1. That King STANISLAUS shall retain the titles of King of Poland, and great Duke of Lithuania, with all the honours and prerogatives annexed to those august titles and rank, to whatever place he shall retire.

2. That he shall have the free enjoyment of all his estates, and those of the Queen his consort.

3. That there shall be a general amnesty for all that is past in relation to the present troubles, for all persons of whatsoever rank or condition they be; particularly, that all the provinces, cities, or towns (especially Dantzick) where King STANISLAUS may have retired since his election, shall be restored to the same state and condition in which they were before the present troubles, with relation to their rights, liberties, privileges, honours, and dignities. That King STANISLAUS shall abdicate the throne of Poland, and the Poles except AUGUSTUS for their King. On the other hand, that the Emperor should resign to Don CARLOS, the Kingdoms of Naples and Sicily; and to the King of Sardinia, Tortona, and Novarra, with their respective districts, and the Vigevanasco in the duchy of Milan: provided that France, and her allies, shall, bona fide, restore whatever else they may have taken from the Emperor, or the empire, since the beginning of this war; and that the Infante Don CARLOS, on his part, shall yield up to the Emperor, all his right to Tuscany, and the duchies of Parma and Placentia, to be possessed by the Emperor, in full property; with a particular exception, however, to the city of Leghorn; which, for freedom of commerce, shall be a free city and port, and independent on any other Sovereign but their own magistrates: and, moreover, the Infante shall engage, as King of Naples and Sicily, that the trade of the subjects of the King of Great Britain, and their High Mightinesses, shall be forthwith put upon the same foot, as in the reign of CHARLES II. of Spain, of glorious memory: and as the Emperor cannot enter into the possession of Tuscany, nor have any of the revenues thereof during the life of the grand Duke, and the infante will be possessed of the kingdoms of Naples and Sicily; in the mean time, an equi-

valent in money, for the Emperor, shall be treated of in the ensuing negotiation: and, that France shall guarantee the pragmatic sanction, as other powers have done; extending it only to those countries the Emperor now possesses, or is to possess, by virtue of this plan. And, lastly, the mediating powers proposed a general armistice or cessation of arms, during the negotiation.

The Emperor did not absolutely agree to these articles, tho' he seemed inclined to come into them; but the French rejected them with the utmost contempt, as appears by the following answer of the French King to the British minister. "Nothing interests me in the present war so much as Poland; my honour is highly concerned in it: it is indifferent to England what Prince reigns there, having no interest therein: the conquests which my allies have made in Italy, is more immediately their concern than mine; as soon as they shall be satisfied about them I shall be content: but in the mean time, I will do my utmost endeavour in Germany to weaken my enemies. I have already declared, that I would not keep possession of any of the places that I should take. England may be assured of it from the promise I have made her: she would have given me infinite satisfaction in her mediation, if she had not at the same time armed herself; but I would have her know, that no power in Europe shall give law to me. And this you may communicate to your master." Whereupon, the British minister at the Hague, Mr. WALPOLE, proposed to the States General to augment their forces, as Great Britain had done, that they might be in a condition to compel the parties that refused to comply to hearken to their pacifick proposals: but the Dutch would not come into the measures of Great Britain: and the Emperor, apprehending that he might make as good terms for himself, as those the maritime powers had proposed in their plan; and both the Emperor and France being highly incensed at the conduct of Great Britain and Holland; the Emperor, on account of their refusing him the assistance they were obliged to give him by their treaties, and suffering Naples and Sicily to be torn from him, which they had confirmed to him, by guaranteeing the pragmatic sanction; and the French, being provoked with Britain for equipping a fleet, whereby she prevented their supporting STANISLAUS on the throne of Poland. The contending parties agreed to enter into a treaty, without regarding the mediation of the maritime powers, and to shew their repentment of their past conduct, by some articles in the ensuing treaty, which they concluded in the year 1736. The secret articles whereof will be kept a secret from us, probably, till we have the mortification to see them executed,

\* The duke of Berwick, JAMES FITZ JAMES, marshal of France, and grandee of Spain, commanded the French army at this siege. He was the natural son of King JAMES II. King of Great Britain, by Mrs. ARABELLA CHURCHILL, sister to the late duke of Marlborough. He was killed by a cannon ball in the trenches before Philipsburg, on the twelfth of June 1734, being then sixty three years of age and upwards, and left behind him three sons, viz. duke FITZ JAMES, the eldest, now duke of Berwick; the duke of LIXIA, in Spain, his second son; and the third is an ecclesiastic in the church of France.

A late writer observes, that the marshal duke of Berwick was a soldier of fortune, and as such made war his trade, which he studied with an unwearied application; and, as he never wanted courage, so none exceeded him in military knowledge. As he considered war as a science, he left little to chance, or even bravery, but depended more upon skill and discipline, which gained him the battle of Almanza. He was reserved, even to his general officers, rarely consulting them, nor so much as communicating the orders he had received, or the designs he projected, but as they had their own parts to execute in them. He was never a great favourite at the court of France, which is something to be wondered at, considering the use he was made of on every occasion; for, as a soldier of fortune, he had no obligations but for his appointments, and yet attached himself to France, preferable to any other nation. As the marshal took care to be obeyed by the officers and soldiers of the armies he commanded, so was he himself always obsequious to the orders of this court: as one instance thereof, he appeared in arms against Spain with alacrity, after he had received the highest honours from the Prince now reigning.

Those they have been pleased to publish, were of the following tenor.

1. That France restore to the empire all the places taken from it during the war. 2. That the Emperor keep the Mantuan, Parma and Placentia, and the Milanese; the King of Sardinia to have Vigevanasco, Rovaro, and its dependencies. 3. That the duchy of Tuscany, after the decease of the present Duke, be given to the Duke of Lorraine, and Lorraine annexed to the monarchy of France, but without any vote in the empire. 4. That King STANISLAUS should be acknowledged King of Poland by all Europe, and enjoy all the honours of a crowned head; after which, to resign that kingdom to King AUGUSTUS, who shall restore to him all the estates in Poland, which belong to him or his Queen. 5. That King STANISLAUS have, by way of equivalent for Poland, the immediate possession of the duchy of Barr, and of Lorraine, after the Duke of Tuscany's death. 6. Don CARLOS to be acknowledged King of Naples and Sicily, and to have Del Presidii, with the isle of Elbe; but Leghorn to be declared a free port. 7. That France guarantee the pragmattick sanction.

These were the preliminary articles: what articles have been since concluded are still a secret to us: however, we find the preliminaries have been carried into execution. King AUGUSTUS III. is left in the quiet possession of the throne of Poland: the countries and towns taken by France, and her Allies, from the Emperor, are restored to him, except the Kingdoms of Naples and Sicily, which are yielded to Don CARLOS; and a small part of the Milanese, which is transferred to the King of Sardinia: the Duke of Lorraine has taken possession of the duchies of Tuscany, Parma, and Placentia (the Grand Duke of Tuscany being dead) and King STANISLAUS is possessed of the duchy of Lorraine, which devolves on France at his death, and may, on many considerations, be deemed theirs during the life of that Prince. I proceed in the next place to give some account of the war the Emperor is since entered into with the Turks.

The Muscovites engaged in a war with the Infidels, in the year 1736, as has been intimated in the state of Russia; but the Emperor having then but just concluded a peace with France and her allies, did not think himself in a condition to take part in it, but offered his mediation to accommodate the differences between those two powers: however, the Porte imagining the Emperor not altogether impartial, and observing he was drawing his troops together on the frontiers of Hungary, refused to accept his Imperial Majesty's mediation. And the following year, 1737, declared war against the Emperor; who having by this time assembled a formidable army, commanded his General, count SECKENDORF, to advance into Servia, and lay siege to the city of Nissa, which the Turks not being able to relieve, surrendered to the Imperial General, who afterwards blockaded Widdin. In the mean time the Turks defeated several bodies of the Imperialists in Bosnia, and afterwards laid siege to Nissa, which was retaken by them the same campaign, the Imperial Generals making no attempt to relieve it; some imputing these misfortunes to the want of necessary supplies in the Imperial army, and others, to the ill conduct of the General. But however that was, General SECKENDORF was

apprehended by the Emperor's orders, the latter end of the campaign, and a very heavy charge exhibited against him; the governor of Nissa (General DOXAT) was tried before a council of war, for delivering up that fortress to the Turks, before there was a necessity for it, and condemned to be beheaded; which sentence was executed upon him, though he was universally acknowledged to be a brave and experienced officer, and had been in the Emperor's service upwards of forty years.

The Infidels, after the taking of Nissa, advanced to Meida and Orsova, making themselves masters of the former: and this campaign of 1738, attacked Orsova a second time, and carried it; but the Imperialists advancing towards them, and gaining some advantage, they thought fit to abandon Orsova again: however, the Turks being reinforced soon after, returned to the siege of Orsova a third time, and the Imperialists were obliged to retire before them in their turn. The Duke of Lorraine, the Imperial General, about the same time was taken ill of a fever, and returned to Vienna for the recovery of his health, from whence it was conjectured, there was little hopes of the Imperialists defeating the Turks; and indeed they have actually retaken Orsova, according to our last advices. The Emperor appears to be but ill supported in this war; neither the Princes of Germany, nor any other European powers, desire to see him aggrandized by conquests in Turkey. Should he be at the expence of any considerable siege, he would be obliged, probably, upon the conclusion of a peace, to restore it again. The Princes of the Empire, 'tis evident, are far from furnishing their respective quota's towards this war: they know that all the conquests which are made, will be the Emperor's sole property: they shall have no share in them, whatever they contribute towards them; and since the frontiers of Hungary are now so well secured by the late conquests of Belgrade and Temeswaer, they do not seem to be so much under the apprehensions of the ravages of the Turks, as they are of the Emperor's power.

The Emperor ascribing his ill success in this war chiefly to the bad conduct of his Generals, dismissed them from their posts, and ordered them to be arrested and brought to their trials; and soon after signified to Count WALLIS, that he had made choice of him to command the army against the Turks: to which the Count answered, That before he could accept the honour his Imperial Majesty intended him, he must insist upon the following conditions being promised him, viz. That no officer, from the highest to the lowest, should, under any pretence whatsoever, not even that of sickness excepted, absent himself from the army without his permission: that the hospitals and magazines should be supplied with all necessaries, and that every regiment should be provided with expert surgeons: from whence we may suppose, there was a deficiency in every one of these respects during the preceding campaigns; and to this probably the ill success of the campaigns was principally owing, though Count SECKENDORF was loaded with the whole blame of the first.

These conditions being promised, the General's commission, with most ample instructions, to make such marches as he should think proper, and to give battle when he should think fit, were made out; and upon the second of April he set out from Vienna for Hungary, to take upon him

The Imperial Generals displaced.

Count WALLIS made General. Conditions demanded by Count WALLIS.

He hangs some commissaries for cheating.

the command of the army. Upon his arrival at Belgrade, he went to visit the magazines, and in one magazine of corn, he found hardly one third part of the corn specified in the account delivered by the Commissaries General; and in another of powder, he found the greatest part of it was of a very bad quality; whereupon the Commissaries, who had the particular care of these two magazines, were seized, and not being able to justify themselves, they were both immediately hanged up, as an example to others to be more careful of what was committed to their charge.

Grand army takes the field.

As soon as the General arrived at Belgrade, he began to take measures for opening the campaign; and for this purpose, orders were sent to the troops to march to the several incampments appointed for them. The main body of the army, which consisted of thirteen battalions, sixteen companies of grenadiers, and thirteen regiments of cavalry, were ordered to assemble at a camp marked out for them between Segedin and Arradt; ten battalions and two companies of grenadiers had orders to repair to a camp marked out at Futack near Peterwaradin; and twelve battalions, and twenty three companies of grenadiers, were ordered to encamp at Semlin, and were to be joined by a large detachment, from the garrison of Belgrade, if occasion required. These troops began accordingly to encamp about the beginning of May, and by the beginning of June the whole army was encamped, consisting, as was computed, of 75,000 men, viz. 50,000 under the command of Count WALLIS in the camp near Peterwaradin, and 25,000 under the command of Count NEUPERG, in the camp between Segedin and Arradt; besides the army under the command of Prince LOBKOWITZ in Transilvania, which consisted of about 25,000 men.

It marches to Semlin.

From Peterwaradin the grand army marched to a new camp at Semlin, where Prince WALDECK, with the van of the army, arrived the 9th of June, and was followed by the rest a few days after. At the same time the body of troops under the command of Count NEUPERG began to approach towards the Danube, in order to be ready to pass that river, and join the grand army, if occasion required.

From thence to Mirava.

On the 27th and 28th of the same month the grand army passed the Save, and encamped within a league of Belgrade; when they had certain information that the Prime Visier with his army, consisting of 90,000 men, was incamped between Nissa and Jagodina. In this camp the army remained but a very few days, having marched the beginning of July, to a new camp marked out at Mirava. Whilst they were here, viz. July 7th, a Turkish Aga, escorted by fifty Spahis, arrived at the camp, with letters for Count WALLIS, which were supposed to contain some propositions for a suspension of arms; but those propositions were too high for being at that time approved of by the Imperial court; and on the 10th there happened a most violent storm of hail, some of the hailstones being of such a prodigious size, that several soldiers were wounded, and one sentinel killed by them; and during the shower the wind was so violent, that the bridges upon the Danube and Save were broken down, many of the tents overturned, and the whole camp put into confusion. Soon after the grand army arrived at this camp, Count NEUPERG, with the body of troops under his command, came and encamped at Czerlock, where Count WALLIS went to confer

with him; and on the 13th of July the army received orders to hold themselves in readiness to march, and the Commissaries at war visited all the regiments, and ordered the sick to be sent to Belgrade. On the 15th the Quarter-Master-General set out from the camp, to go and mark out a new camp on the other side of the Danube towards Semendria.

The Turks advancing as far as Crotzka, Count WALLIS determined to attack them before they should have fortified their camp, but was forced to clear his way through defiles, bushes and vineyards, to come at them; and the regiment of HOHENZOLLERN, which formed the van-guard, advancing too forward, was hemmed in by the Turks, and cut to pieces: the Turks, improving this advantage, fell upon the rest of the forces with incredible fury, and putting them into confusion, compelled them to retire; but Count NEUPERG joining the Imperial army with his body, consisting of 13,000 Men (who left their coats behind them, that they might make the more haste to the assistance of their friends) Marshal WALLIS made a stand and renewed the engagement, which continued with great obstinacy till night parted them, when the Imperialists retired under the cannon of Belgrade: in this engagement it is said Prince CHARLES of Lorraine gave great proofs of his bravery.

The battle of Crotzka.

The Imperialists defeated.

The Imperialists relate, that there were killed of the German infantry near four thousand, and almost as many wounded, and of the cavalry upwards of seventeen hundred were killed, and eight hundred wounded; and of the Infidels it is computed, there were almost as many killed and wounded, the battle lasting nineteen hours.

The killed and wounded.

While the armies were thus engaged on shoar, there was a battle between the Imperial and Turkish fleets on the Danube, in which the Germans are said to have had the advantage, but retired however to Belgrade, when they saw their army retreat into the lines before that city: the Imperial army on the 25th of July passed the Danube by the bridge of Belgrade, and encamped at Ponza, leaving 12 battalions in Belgrade; so that there were then 15 battalions in the place, all chosen troops; and as the communication was preserved between the town and the army, and the forts Ratfcha and Sabotsch upon the Save, the taking of Belgrade was rendered exceeding difficult.

The Grand Vizir however invested the place immediately after the battle of Crotzka, viz. on the 26th of July, on the south side between the Danube and Save, and that very day began to throw bombs into the town; and as the Turks are extremely prodigal of the lives of their soldiers, they assaulted the town the night following, before any breach was made; which succeeded, as might well be expected, in a repulse of the assailants with very great slaughter.

Belgrade invested.

During the siege Count WALLIS received advice, that thirty thousand of the enemy were encamped at Punsova. Whereupon resolving to engage them, he marched on the 27th at night to Jabuka, on the other side the Femes, and on the 30th he saw the Turks drawn up in order of battle, who crying out three times, Allah, Allah, MAHOMET, as usual, attacked the Imperial army with great fury; but were repulsed and obliged to retire to Viplanka. This inconsiderable victory, though very few were killed on either side, raised the spirits of the Imperialists, and might have been of great consequence, if there had been any

any troops to reinforce them; but they were so much outnumbered by the Infidels that there was no hopes of attacking the besiegers in their works before Belgrade with any probability of success. On the contrary, the Turks, being joined by fresh forces, and rendered much superior to the Imperialists, Count WALLIS thought fit to retire still further from Belgrade, and encamp between the Theffe and Femes, six leagues above that city: but to return to the siege, the Turks continued to batter the place, from the 26th of July to the 31st of August, with very little success, having made but one inconsiderable breach in all that time; and had they made an assault, it would have been of little service to them, because the besieged had made a coupure in the bastion, with mines ready to be blown up between that and the breach, which served only for a snare to draw on the assailants to their certain destruction. Notwithstanding which, the Grand Vizir, compelled by the clamours of the Janizaries, was preparing scaling ladders and every thing ready for a general assault, and would have made the experiment, if he had not been prevented by the truce, which was concluded at this instant between the Generals of both armies, by the mediation of the Marquis of Villeneuve, the French ambassador; the preliminaries were agreed on the 31st of August, the principal articles whereof were, that the city of Belgrade should be restored to the Ottoman empire, but the fortifications of the town and castle demolished; that the province of Servia should be also ceded to the Turks, and the rivers Save and Danube be the boundaries between the two empires; the Emperor also ceded to the Porte the Austrian Walachia, as also the fortrefs of Orsova.

A truce  
conclud-  
ed.

These preliminaries were ratified by the two powers concerned; but as it was not very honourable for the Emperor, he published an apology for making a truce.

The Imperial court will soon make known to the world what has happened relating to the preliminary articles of peace concluded with the Ottoman Porte. In the mean time, his Imperial and Catholick Majesty has already written to the Empress of Russia, and has not only declared to the Russian Envoy at this court, in a particular audience given him for that purpose, his displeasure at what has been done without his knowledge and contrary to his intention, but has likewise ordered all his Ministers at foreign courts to declare that Count NEUPERG went to the Turkish camp without his knowledge, much less by his order; that as well in what relates to Belgrade, as in all and every one of the other articles, and particularly in the yielding to the strange precipitate execution of them, the said Count has not only very much exceeded the limitations of the full powers entrusted to him, but even acted directly contrary to the orders therein contained; so that neither his Imperial and Catholick Majesty nor his Ministry are in any fault, having had no part therein; for they had not the least information of what was transacted in the Turkish camp, till after the thing was done, and after the precipitate execution; and consequently, it being become impossible to apply any remedy, his Imperial and Catholick Majesty does on the one hand highly disapprove the preliminary articles so concluded, and will not fail, at a proper time, to do what justice requires. And on the other hand, pursuant to the ratifications which have already passed,

he will sacredly fulfil and firmly observe and keep what is agreed upon with the Ottoman Porte.

He also wrote a letter to the Czarina, wherein he declared, that he was much less touched with the siege of Belgrade, than with the advice he had received concerning the shameful preliminary articles concluded by Count NEUPERG. That he was upon the point of preventing the fatal and too hasty execution of those preliminaries, when he heard they were already partly executed, even before the design had been communicated to him; but adds, We must keep faith however inviolably with Infidels, while they observe it on their part; and I do not doubt but the peace between your Majesty and the sublime Porte will be concluded at the same time with mine. It is what I have most at heart at present, as also to perpetuate the ties which so fortunately attach me to your Majesty, notwithstanding all the machinations of those who wish to see them dissolved. I am the first to own that the Counts WALLIS and NEUPERG (*the Imperial Generals who agreed to the preliminaries*) are highly guilty; but your Majesty will discover more and more the sincerity of my sentiments for you, in which I have never been deficient, or ever will, in the least, who am, &c.

His letter  
to the  
Czarina.

The Emperor also published a manifesto, which was sent to his Ministers in all the courts in Europe, wherein he charges his Generals, the Counts WALLIS and NEUPERG, with having exceeded their instructions, in agreeing to deliver up Belgrade, and the forts about it, to the Turks. But it appears, even from that manifesto, that those Generals had a discretionary power to conclude a peace, if they found the Emperor's affairs desperate, and the loss of Belgrade inevitable; but then the Emperor insists, that Belgrade could have held out a considerable time, according to the advice he received from General Suckow, the Governor; and that his affairs were not yet so desperate, as to justify the Generals WALLIS and NEUPERG in making the concessions they had done, by the preliminary treaty abovementioned; but what seems to be a kind of approbation of the conduct of Count NEUPERG, is, that he was employed afterwards by the Court of Vienna, as first Plenipotentiary, for negotiating the definitive treaty of peace, which was concluded and signed on the 18th of September 1739; whereby the preliminary articles were confirmed. And it was further agreed, that the Ottoman troops should not take possession of the citadel, till the fortifications were entirely demolished; and that the prisoners on both sides should be set at liberty, without ransom: that the Ottoman troops should entirely evacuate the Bannat of Temeswaer: that one of the banks of the rivers Danube and Save should belong to the Emperor, and the other to the Porte; and that the navigation and fisheries in those rivers should be enjoyed by the subjects of both Empires in common, provided that neither of their fishermen should advance beyond the middle of each river.

The defi-  
nitive  
treaty.

That all the boyars and other subjects of Walachia and Moldavia, who had adhered to the Emperor during the war should be at liberty to return home and enjoy their lands and goods; and that the subjects of Servia and the Bannat, who had withdrawn themselves from the obedience of their respective Sovereigns should likewise be at liberty to return home, and have their lands and goods restored them.

That

That the capitulations and edicts which former Ottoman Emperors had granted in favour of the Christian religion and of the Roman Catholick church, should be confirmed.

That both parties should take care their slaves were treated with humanity, until they should be ransomed.

That the merchants trading between the Emperor's dominions and Persia should not be molested, paying the usual tolls and customs in passing through Turkey.

That commissaries should be appointed to ascertain the limits of the two Empires, in pursuance of that treaty.

That all hostilities, ravages, and carrying of persons into slavery, should be restrained and severely punished, and what should happen to be taken, should be restored to the proper owners.

In case of a rupture, the subjects of either side which should be in the dominions of the other, should be permitted to retire on paying their debts.

No rebels or criminals of the one Empire should be harboured in the dominions of the other; and

That this truce should subsist twenty seven years.

Done at the congress near Belgrade in Servia, on the 18th of September 1739.

To this treaty was annexed a declaration of the Emperor's, that he did not intend it should affect the alliance between him and Russia; and though a peace was upon the point of being concluded between the Czarina and the Porte, the Emperor still reserved to himself the liberty of furnishing Russia with 30,000 men, in case the war should be continued between her and the Porte.

Neither the German soldiery or the people of Vienna were at all satisfied with this peace, and the French ambassador, to whose influence it was ascribed, was insulted by the populace; the Emperor also, to shew his dislike of it, confined the two Generals who negotiated it, promising to bring them to justice for not pursuing their orders, either in the conduct of the war, or at the treaty: in answer to which, the Generals published their apologies, ascribing their ill success the last campaign to their want of necessary supplies, and the superiority of the enemy; and suggesting that they had not exceeded their instructions in the treaty, they had concluded; that the concessions they had made were absolutely necessary in the situation they were in, since nothing less could have prevented the Turks penetrating into Hungary that campaign.

During these transactions, the Duke of Lorraine and his consort the Archduchess, with Prince CHARLES of Lorraine their brother, visited Tuscany, arriving at the capital city of Florence on the 20th of January, 1738-9, where they were complimented by the Regency and Magistrates; the city was illuminated, fire works played off, and other demonstrations of joy on their arrival for several days successively. Here the Duke established three councils or boards (viz.) the council of regency, another for military affairs, and the third for superintending his revenues. He also made several regulations in relation to trade, prohibited the importation of woollen manufactures, and took off the duties on wool, and the materials used in that manufacture. About the same time there arrived upwards of fifty families from Lorraine, who were sent to cultivate lands in

the province of Sienna, part whereof was at that time uninhabited; each family was allowed a certain number of acres, and a flock of cattle with utensils for their husbandry, and great numbers of Lorrainers were preparing to follow these, and transport themselves into his Italian dominions; when the French prevailed on the Swifs, through whose country these poor people were obliged to pass, to put a stop to these peregrinations, and send the Lorrainers back to their former dwellings, which the Swifs complied with, and they were obliged to remain under the tyranny of France. A war commencing at this time between Great Britain and Spain, the Grand Duke declared he would stand neuter; and being informed that some merchants of Leghorn were fitting out privateers to cruise on the British ships in the Mediterranean, he issued out an edict, prohibiting their committing any acts of hostility of this kind, on pain of banishment and confiscation of the offenders goods.

The Grand Duke having made such regulations as he saw fit in Tuscany, returned with the Grand Duchess and Prince CHARLES to Vienna on the 20th of May, having embarked on the river Inn at Inspruck, and sailed down that river and the Danube: the journey was performed most part of the way by water.

Great part of the last year the plague raged violently in Hungary, and the Imperial army was not free from it, which was one reason the Imperial Generals were in such haste to put an end to the war; but though upwards of fourscore thousand people dyed of the plague that year in Hungary, it never reached the adjoining province of Austria.

The Prince of Nassau Dillenburg dying on the 28th of August, the Prince of Orange succeeded to that Principality, as he will to that of Nassau Catzenelbogen, if Prince WILLIAM of Hyacinth dies without issue; and then the Prince of Orange will make a considerable figure among the German Princes.

On the 17th of June died the Duke of Holstein Gottorp, in the fortieth year of his age, being the only son of FREDERICK Duke of Holstein by the Princess HEDWIG SOPHIA his wife, who was the eldest sister of CHARLES XII, King of Sweden, and consequently ought to have succeeded to the crown of Sweden on the death of CHARLES XII.

The last Duke married ANNA PETROWNA, eldest daughter of PETER the Great by his second wife the Empress KATHERINE, by whom he had issue, CHARLES PETER ULRICK, successor to the throne of Russia, born in February 1728. The late Duke by his will, left the guardianship of his said son, and the regency of his dominions to the Duke of Holstein Eutin, Bishop of Lubeck, now acknowledged successor to the crown of Sweden.

During the war between the Emperor and Turkey, a dispute happened between the King of Great Britain, as Elector of Hanover, and the King of Denmark, about the little Principality of Steinhorst, which the Hanoverians insisted belonged to the Duchy of Lawenburgh, lately devolved on this Elector, who had been engaged in a law suit with the late Duke of Holstein about it; but the Duke at length ceded it to the Elector of Hanover. The King of Denmark however, under pretence that this territory had been ceded to him by a former proprietor (M. de WEDDERKOP)

The Duke of Lorraine &c. visits Tuscany.

KOP) sent a detachment of dragoons to take possession of Steinhorst, whereupon the Regency of Hanover commanded a detachment of 500 men, and two field pieces to drive out the Danes. The colonel who commanded the Hanoverians being arrived sent a lieutenant to the captain of the Danes, who had possessed himself of the castle, to acquaint him, that he had orders to take possession of it, and if he refused to evacuate the place, to turn him out by force. The Danish captain answered, he was commanded to repel force by force, and high words arising, the captain and Lieutenant drew their swords and fought a duel, in which the Captain was killed outright, and the Lieutenant mortally wounded; whereupon the Hanoverian Colonel attacked the castle, and after several soldiers were killed on both sides, made himself master of it: after which he proceeded to build redoubts about it, and fortify the avenues.

His Danish Majesty receiving advice of this enterprize of the Hanoverians, ordered all his forces in Denmark and Holstein to be in readiness to march, and ten thousand men to be brought from Norway. The Regency of Hanover on the other hand, ordered several regiments to march towards Steinhorst, to support the forces already there; and it was expected a war would soon commence between those two powers: but the Emperor, the King of Prussia, and the States General interposing, it was agreed to refer the difference to arbitration or the decision of the law, and the troops on both sides were withdrawn.

The year following (anno 1739) it was agreed that the King of Great Britain, as Elector of Hanover, should pay his Danish Majesty 70,000 crowns, in lieu of his pretensions to Steinhorst, and that the pay or preference of rank which the Duchy of Saxe Lawenburgh had assumed at the Diet of the Empire above that of Holstein Gluckstat, should be yielded to his Danish Majesty by the King of Great Britain, so that the deputy for Gluckstat should take place of the deputy of Lawenburgh for the future, in the Diet of the Empire, and thereupon the Regency of Hanover was confirmed in the possession of the Lordship of Steinhorst.

1740.  
The ac-  
cession of  
the King  
of Prussia.

On the 31st of May 1740, O. S. died FREDERICK WILLIAM King of Prussia, in the fifty-second year of his age, and was succeeded by FREDERICK CHARLES his eldest son, when it was expected he would have endeavoured to procure a divorce from his Queen ELIZABETH CHRISTIANA of Brunswick Bevern, for whom he had shewn great indifference, or rather an aversion, from the time he had been obliged to marry her; but the Queen coming with the Queen Dowager to wait on the King at Charlottenburgh, the Court were surprised to hear him address himself to the young Queen in this manner, viz.

You are sensible, Madam, that your becoming Princess Royal was contrary to my inclination, but having observed the amiableness of your character, and the regard you have manifested for my person; I find myself under a kind of necessity to make you equal returns of friendship; and now therefore, as I am King, I acknowledge you for my Queen consort, and my lawful wife; and in the evening went into her apartment, and lay in the same bed with her (but has never lain with her since.)

His Majesty gave great encouragement to learning and learned men in the beginning of his

reign, inviting several learned foreigners to Berlin, and among the rest Monsieur MAUPERTUIS, that celebrated mathematician of Paris, who accepted of his invitation, and had an apartment assigned him in the palace, and a pension settled upon him; but whether the King had not other motives for entertaining gentlemen of the French court and nation may very well be questioned, if we observe that intimacy which was contracted between the Courts of France and Prussia, and that strict alliance which succeeded. His visiting the frontiers of France also soon after his accession, and the honours paid him by the Governors of the great towns upon the Rhine, created a further suspicion of his adherence to France; and whether that numerous body of troops, kept in pay for many years by the court of Berlin were not maintained by France, to support her views in distressing the house of Austria when a favourable opportunity should offer itself, scarce remains a doubt at this day.

The first instance he gave of his enterprising genius, was an attempt he made on the territories of the Prince and Bishop of Liege, for visiting his Duchy of Cleves in the month of August 1740. He sent a commissary to Herstat to receive the homage of the inhabitants, and they refusing to admit the commissary, or take the oath of fidelity to the King of Prussia, as was demanded, justifying that they lived under the jurisdiction of the Bishop of Liege: He sent to that Prince demanding a categorical answer in two days, whether he was resolved to persist in his claim of sovereignty over Herstat, and would protect the inhabitants in their disobedience? to which the Bishop answered, That he and his predecessors had been in possession of that sovereignty for upwards of an hundred years, having been yielded to them by the Emperor CHARLES V. however he was ready to refer the difference to arbitration; but his Majesty immediately ordered his troops to invade the Bishoprick of Liege, and live there at discretion, till their Prince should consent to yield to his demands, or do him justice, as he expressed himself; and accordingly they took possession of the town of Maseyh in that Bishoprick, on the 14th of September.

The Bishop hereupon sent his complaints to the courts of Vienna and Paris, but to very little purpose; for the King of Prussia returned to Berlin, whither the Bishop was obliged to send deputies after him, and pay his Majesty 200,000 crowns for his pretensions on Herstat; whereupon the Prussian troops evacuated Maseyh.

The next great event in the history of Germany, is the death of the Emperor CHARLES VI. which happened on the 28th of October 1740. N. S. at two in the morning; and about six the same morning, the Archduchess MARIA THERESA his eldest daughter, consort to the Great Duke of Tuscany, was proclaimed Queen of Hungary and Bohemia, Archduchess of Austria, and sovereign Princess of all the provinces and hereditary countries of the late Emperor, according to the limitations of the Pragmatic Sanction. Some few days after her Majesty declared the Grand Duke, her husband, partner with her in the regency.

The Queen proceeded to notify the death of the Emperor, and her accession to the thrones of Hungary and Bohemia, to the several Princes and States in Europe, and her title was acknowledged by most of them, particularly by France and

Prussia, who declared they would inviolably observe their engagements with regard to the Pragmatic Sanction; the King of Prussia also offered her Majesty a body of troops, in case she should be attacked by any pretenders to the territories of the house of Austria.

The Elector of Bavaria, on the other hand, declared, that he was determined to dispute the succession with that Queen, and that he would not acknowledge her or receive any letters from her as Queen of Hungary or Bohemia; and the minister of Bavaria withdrawing from Vienna, left a protest of the following tenor.

His protest.

That indeed the Electress of Bavaria had, upon her marriage, renounced the rights derived to her as Archduchess of Austria, which renunciation was confirmed by himself (the Elector) but this could not affect the rights which the house of Bavaria had before acquired, of which there was no mention made at that Princess's marriage: he does therefore in the most solemn manner protest against the Archduchess MARIA THERESA taking possession of the kingdoms and dominions mentioned in the Pragmatic Sanction.

He further shews, that the Emperor FERDINAND, marrying his daughter the Archduchess ANNE to Duke ALBERT of Bavaria, a clause was inserted in the marriage contract, and confirmed by his will, that if the male descendants of the house of Austria should fail, the said Archduchess ANNE and her heirs, should inherit as well the kingdoms of Hungary and Bohemia, as the principalities and dominions of the house of Austria.

In answer to this, the Queen of Hungary published a manifesto, wherein she insists, that as long as there were any descendants of the Emperor FERDINAND's three sons (of which there were many now alive) the house of Bavaria could have no title to the hereditary dominions of the house of Austria, according to the tenor of the Emperor FERDINAND's will, which only says, that the heirs of the Princess ANNE shall succeed, when there are no lawful descendants living of her three brothers; and if the words in the copy of the will produced by the Elector of Bavaria directed, that his family should succeed on the failure of male heirs, they were forged.

To this the Elector replied, that it could not be imagined he was capable of establishing his right on a forged copy of the will acquired by bribery, as had been insinuated; and that such a copy as was exhibited by the agents of the Archduchess, did never exist, nor was ever presented to his court, and that all that had been published concerning it was a mere invention, as malicious as it was groundless.

The King  
of Prussia  
invades  
Silesia.

But while the Queen of Hungary and the Elector of Bavaria were disputing their right to the Austrian dominions by memorials and manifestos, the house of Brandenburg set up a claim to the duchy of Silesia, which had lain many years dormant, and as the Austrians gave out, had been relinquished for a valuable consideration: this the King of Prussia denied, and assembling an army of thirty thousand men, attended by a train of artillery, the latter end of November, he ordered them to march towards Silesia, and on the 16th of December published a declaration, importing that by causing his forces to enter Silesia, he had no ill design against the court of Vienna, or to disturb the peace of the Empire; but to vindicate the incontestible rights of his family to this duchy, founded upon ancient conventions between

the Electors of Brandenburg and the Princes of Silesia, and that the present circumstances of affairs, and the just apprehension he had of being defeated by those who formed pretensions to the late Emperor's succession, required his making dispatch in the undertaking and vigour in the execution of it; and though these reasons did not permit his Majesty to expostulate the matter previously with the Queen of Hungary and Bohemia, yet they should never divert him from strenuously espousing the interests of the house of Austria at all times, and from being the firmest prop and support of it upon all occasions; and a declaration of the like tenor he caused to be made by his ministers in every foreign court, and at Vienna his ministers declared,

1. That he was ready with all his forces to guarantee all the dominions of the house of Austria in Germany against all invaders.

2. He would enter into a strict alliance with the courts of Vienna, Russia, and the maritime powers for that end.

3. He would use all his interest to procure the Imperial dignity for the Duke of Lorraine, and to support his election against all opposers, and he believed he should succeed.

4. He would immediately furnish the court of Vienna with two millions of florins to put their territories in a state of defence; but to indemnify and reward him for all these services, he insisted on the entire and absolute cession of all Silesia.

He ordered his minister at Vienna also to assure the Grand Duke, that he proposed nothing more than his welfare and security; and that he might depend on the utmost assistance he could give, if the Queen would satisfy his just pretensions on Silesia; and though he had demanded the entire cession of that duchy, he might content himself with part of that country, provided the Queen would enter into such an alliance with him as was consistent with their mutual interests: that he would embrace every opportunity of assisting the Queen of Hungary to maintain the grandeur of her family, and make her amends for the loss she might sustain upon this occasion.

The Queen in answer to these representations, which were made by the Prussian ministers by word of mouth, says, she observes that his Prussian Majesty seems to justify his invasion of Silesia by the necessity of his defending the house of Austria against the designs of other powers that were ready to swallow her up, and upon the expediency of sacrificing part of her dominions to save the rest. But it was evident, the Queen's dominions enjoyed a perfect tranquility when his Prussian Majesty entered them in a hostile manner; and if this was the way to preserve the peace of the Empire and Europe, as was pretended, it was hard to discover what could destroy it.

That she was far from slighting the friendship of the King of Prussia, of which she knew the value, but could not help remarking, 1. That all the members of the Empire, by the Golden Bull, were obliged to assist any one attacked in his dominions, and that the Pragmatic Sanction also obliged the whole Empire to unite in her defence; and if such obligations were not binding, what security could the house of Austria expect?

That the alliances with Russia and the maritime powers were in being before the invasion of Silesia, and that the principal view of those alliances was, to preserve the Austrian dominions entire.

That

That she gratefully acknowledged the King's intentions, in regard to the election of an Emperor, but nothing could thwart it more than these disturbances in the heart of the empire.

That his Prussian Majesty had already taken from Silesia, under pretence of subsisting his troops, and by the ruin of the country, more than the two millions he offered.

That she could not consent to the dismembering her dominions, but thought herself bound in honour and conscience to maintain the Pragmatic Sanction, and should be glad to renew her friendship with his Prussian Majesty, if it might be done without the infraction of it, and his troops would immediately evacuate Silesia; that this was the only step that could conduce to the true glory of the King of Prussia; and she conjures him to take this method, by all the considerations that could possibly make an impression on the heart of a great Prince.

The King of Prussia in the mean time directed his Ministers in foreign Courts to apologise for his conduct in invading Silesia, and wrote a letter to each of them. In that to the Dutch he tells them, that the rights of his family to that Duchy are founded upon ancient pacts between his predecessors and the Dukes of Silesia, Lignits, Brieg, and Wohlau, and other uncontroversial titles, which could never be taken from them by conventions that might have been extorted from them: and it could not be expected he should submit his pretensions to a doubtful negotiation, when he had it in his power to do himself justice; and he hoped to convince the world, and the Archducal family in particular, that he had at heart the true interest of the empire, and that alone.

Their High Mightinesses answered, that for want of better information they knew not what judgment to pass, either upon his Majesty's proceedings, or pretensions; but feared the consequences would not answer his Majesty's views, viz. a perfect understanding with the Queen of Hungary, and the preservation of the peace of the empire, and were glad to hear his Majesty intended to explain himself, and would take care to prevent what might excite troubles, considering the engagements he knew certain powers were entered into.

No Prince assists the Queen of Hungary. But notwithstanding the remonstrances made by the Queen of Hungary to all the guarantees of the Pragmatic Sanction, and the Princes and States of the empire on the Prussian invasion, not one of them would arm in her defence, but that Prince advanced with his army, meeting with very little opposition; and there is no doubt but the Protestants of that duchy, who had long been insulted and persecuted by their Popish Governors and Magistrates, very much contributed to his success; and to ingratiate himself with them, he released the inhabitants from the rents and services they used to pay to the Popish clergy; he also plundered the monasteries of their provisions and stores, which he converted to the maintenance of his army, and furnished the Protestants with preachers from Brandenburg.

Jablunca and Glogau taken. The town and fortress of Jablunca, esteemed the key of Silesia, surrendered to the King of Prussia; the latter end of February and the beginning of the next Month the city of Glogau was taken by surprise in the night time, the Prussians passing the ditch by the favour of a very hard frost, and scaling the walls before they were perceived by the garrison. The Prussians made

a thousand prisoners, and amongst them General WALLIS, with the loss only of forty men, or thereabouts; there were found in this city 50 brass cannon, a vast quantity of gun-powder, and the military chest, in which were 32,000 florins.

In the mean time a conspiracy was discovered, or pretended to be discovered, in Silesia, to carry off his Prussian Majesty; the contrivance whereof was ascribed to the Duke of Lorraine by that Prince.

This charge against the Duke of Lorraine was refuted by the Court of Vienna to that degree, Battle of Molwitz. that their Generals were ordered to attack the Prussians at all hazards: accordingly Count NEUPERG marched towards the enemy, and gave them battle at Molwitz, near Nies, on the 10th of April in the morning. The fight was very obstinate, and continued till evening, when the Austrians retired, having lost four or five thousand men; nor was the loss of the Prussians much less; but it is evident they were victorious, by the progress of their arms immediately after, for the City of Nies surrendered to them on the 23d instant.

In the beginning of this year, viz. on the 2d of March, the Queen of Hungary was brought The Queen of Hungary brought to bed of a young Prince, baptised the same day by the Name of JOSEPH BENEDICT AUGUSTUS, son. &c. And on the first of July the Queen was crowned at Presbourg in Hungary, notwithstanding the protest of the Duke of Bavaria, against her advancement to that throne.

The French, in the mean time, were assembling numerous armies to march into the empire; at French hypocrisy. which the Court of Vienna, and other powers, being alarmed, Cardinal Fleury, the Prime Minister, assured them, that the King his Master persisted in a firm resolution to live in amity with the Queen of Hungary, and that the Preparations he was making for war need not give her the least umbrage.

His British Majesty and the States General, foreseeing, however, that the forces of France were intended to support the King of Prussia, the Elector of Bavaria, and other enemies of the house of Austria, endeavoured to draw off his Prussian Majesty from his engagements with France, representing that they should be obliged to assist the Queen of Hungary, if he persisted in distressing that Princess; to which the King gave an evasive answer, from whence it was evident he was not to be diverted from the views he had formed of reducing the whole duchy of Silesia under his dominion, by the assistance of France. In consideration whereof he engaged to promote the Elector of Bavaria to the Imperial throne. And now the French and Bavarians, having assembled their forces, in the beginning of August, began to explain their intentions.

The Bavarians surprised the important city of Passau upon the Danube, while the French drew together a body of forty thousand men upon the Rhine, and demanded a passage for another body of Forces through Suabia, to join the Bavarian army; the French King at the same time constituting the Elector Generalissimo of his forces in Germany. The Bavarians surprise Passau.

The Queen of Hungary, finding herself surrounded by such powerful enemies, assembled the States of that kingdom, and represented the desperate circumstances she was reduced to, in a speech of the following tenor (viz.)

"The perplexed situation which, by the permission of the Divine Providence, I find myself reduced to, is attended with such dangerous circumstances."

The Queen of Hungary's speech to her subjects.

"circumstances, that I cannot hope to extricate my self, without speedy and powerful succours: abandoned by my friends, persecuted by my enemies, attacked by my nearest relations; I have no other resource left, but to stay in this Kingdom, and commit my person, my children, my scepter and crown, to the care of my faithful subjects. I do not hesitate to trust them with all: their loyalty and bravery leave me no room to doubt of their exerting all their strength to defend me and themselves speedily and resolutely in this melancholy conjuncture."

The whole assembly answered, they would support the Queen, and devote their lives and fortunes to her service, and proceeded to pass an act of State, whereby they excluded the house of Bavaria from the crown of Hungary for ever. The Elector notwithstanding advanced with his army, and invading upper Austria, made himself master of Lints, the capital, which surrendered to him on the 9th of September; from whence he continued his march towards Vienna, having published a declaration of war, wherein he says, that he did not take up arms with a view of making conquests, but to recover his rights; that by the ample succours he had received from France, and the assistance he expected from the empire, he did not doubt of succeeding, and summoned the kingdoms and provinces subject to the house of Austria to submit to him as their lawful Sovereign, promising to maintain their rights and privileges, of which the Court of Vienna would deprive them.

The French also published a kind of manifesto, to apologise for their conduct, which wanted it pretty much, having on the death of the late Emperor acknowledged the Queen of Hungary's title to the hereditary dominions of the house of Austria, giving the following reasons for the alteration of their measures, viz. the treaties subsisting between the Court of France and the house of Bavaria, and the Electors applying to them for their assistance, and the obligation they were under of preserving a free election of an Emperor.

The French having now three armies in the empire, had such an influence on the several Electors, that they were compelled to promise their votes for Bavaria. Even Hanover, who was in a manner engaged to vote for the Duke of Lorraine, finding himself unable to resist the French army on his frontiers, promised to give a vote for Bavaria, on condition the French would enter into a treaty of neutrality. And it is said by some separate articles of the treaty between France and Bavaria, the King of France obliged himself to compel the other Electors to give their votes for the Elector of Bavaria; on the other hand, the Elector of Bavaria engaged not to attempt the recovering the Provinces and Towns of the empire, which France had conquered, after he should be elected Emperor. He also renounced the Barrier treaty, and consented the French might endeavour to reduce those towns which constituted the barrier.

As the French and Bavarians advanced nearer Vienna, and seemed to threaten that capital with a siege, the Queen of Hungary retired to Buda, having caused the fortifications of Vienna to be augmented, and a numerous garison left in the place. In the mean time, the French and Bavarians, instead of investing Vienna, as was conjectured, having concerted measures with the Prussians and Saxons, invaded the kingdom of

Bohemia, and marched directly towards Prague; which city not being provided for a siege, the Duke of Lorraine marched at the head of sixty thousand men, to prevent the Allies taking possession of it; but the French and Saxons were before-hand with him, surprised the town, and took it with very little resistance on the 26th of November N. S. and the Elector of Bavaria made his publick entry into that city on the 9th of December, and was that evening proclaimed King of Bohemia.

The King of Poland in the mean time published a manifesto with his reasons for joining the enemies of the Queen of Hungary; wherein he admits that he acknowledged the Queen of Hungary's title to the hereditary dominions of the house of Austria on the late Emperor's death, as he had obliged himself to do by the Pragmatic Sanction; but when he saw so many Princes making pretences to the territories of the house of Austria, and that the Pragmatic Sanction was held to be of no force by them, he could not be so much wanting to himself, as to neglect asserting his own title to the whole inheritance; he would indeed have waved his right in order to have preserved the peace of the empire; but since there was now no hopes of effecting that, he thought proper to revive his claim, and join the Allies.

And now the Electors proceeded to the choice of an Emperor at the city of Francfort, and unanimously gave their suffrages for the Elector of Bavaria on the 21st of January 1742.

In the mean time the Allies having left but an inconsiderable Force in the Upper Austria, Count Kvenhuller recovered the City of Lints and the rest of the places the Allies had possessed themselves of, and advancing into Bavaria, the Austrian Generals defeated the Elector's forces in several engagements, laying his whole country under contribution, and reducing the capital city of Munich. Her Hungarian Majesty also declared the election of the Duke of Bavaria void, as most of the Electors were manifestly under a force, and the vote of Bohemia disallowed.

While the Elector of Bavaria was rejoicing at Francfort, for his elevation to the empire, Marshal Broglio, who commanded the French and Bavarian forces in Bohemia, attacked the Austrians commanded by Prince Charles of Lorraine in their intrenchments at Budeis; and after three repulses, the Marshal was defeated, having lost three or four thousand men in the several attacks; but the King of Prussia was more successful, for he made himself master of Olmutz, the capital of Moravia, and of that whole province almost, which was obliged to pay him heavy contributions.

His Prussian Majesty, at the instance of the French, was pleased about this time to yield up his right to the succession of the duchies of Juliers and Bergues to the Prince of Sultzbach, for some equivalent offered him by France, which is supposed to be the guarantee of the duchy of Silesia, by France and the rest of the Allies.

Marshal Broglio having invested Egra, that the City surrendered on the 8th of April, and the King of Prussia took Glatz in Bohemia the month following, but was obliged to quit Olmutz and the Province of Moravia on the approach of Prince Charles of Lorraine, who followed him into Bohemia, and attacked his Prussian Majesty at Craßlaw. The Austrians bid fair for the victory at the beginning of the action, having broke the Prussian Horse; but falling upon the plunder, they

they lost the advantage they had obtained, and in the end were repulsed with great slaughter. Prince Charles however made his retreat in good order, the Prussians not being in a condition to pursue them, there having been five or six thousand men killed on each side.

A peace between the Queen of Hungary and the King of Prussia.

There were several other considerable actions between the Austrians and the Allies this campaign, but a treaty being set on foot between her Hungarian Majesty and the King of Prussia, by the mediation of Great Britain, the Queen agreed to yield to his Prussian Majesty all Silesia (except the Principality of Teschin and Tropa) together with the territory of Glatz in Bohemia, in consideration whereof, his Prussian Majesty engaged to observe an exact neutrality, and to withdraw his troops out of Bohemia; which treaty was concluded on the first of June 1742, whereby his Majesty also agreed to pay the sum due to the English merchants, on a mortgage of the Silesian silver mines, and his Britannick Majesty guaranteed this treaty, both as King of Great Britain and Elector of Hanover.

Saxony agrees to a neutrality.

The King of Poland also agreed to a neutrality for Saxony, on condition ('tis said) that his family should succeed to the Austrian dominions, on failure of the issue of the late Emperor CHARLES VI. and that some places in the north of Bohemia should be ceded to him.

Both his Polish and Prussian Majesty, it is said, were induced to come into this neutrality by some expresses which fell into their hands, whereby it appeared that the French had evidently a design to destroy the German Princes, by dividing them, and then to usurp the dominion of their country, or at least the direction of their affairs. The French being thus deserted by the Prussians and Saxons, and surrounded on every side by Prince CHARLES of Lorraine, and the rest of the Austrian Generals, offered to evacuate Prague and all Bohemia, if the Austrians would permit them to retire into the territories of France; but this the Austrians refused, insisting that the French in Prague should surrender prisoners of war; which the French refusing, were reduced to very great distress, insomuch that they lived chiefly upon horse flesh. The French having such a numerous body of troops in Prague, commanded by the Marshals BELLISLE and BROGLIO, made several brisk sallies, and sometimes nailed up the cannon of the Austrians, and in general behaved with great bravery and conduct; particularly on the 11th of September, they made a sally with ten thousand men, obliged the Austrians to abandon their works, and retire half a mile from the town; and two days after the Austrians received orders to raise the blockade, and join the grand army, under the command of the Duke of Lorraine: whereupon Marshal BROGLIO marched out of Prague with 12,000 men, in order to join M. MALLEBOIS, who was advanced to the frontiers of Bohemia, to facilitate their junction; and though BROGLIO was not able to effect it at this time, yet he furnished the garison of Prague with provisions, and found means to escape into Saxony himself.

But obliged to quit Bavaria.

M. Bellisle escapes with part of the garison of Prague.

In the mean time, the Bavarians being superior to the Austrians in that Electorate, obliged them to quit Munich, and the rest of the towns in that country, and retire to Passau; and on the seventh of December, Marshal BELLISLE marched out of Prague at the head of ten or twelve thousand men, and was so fortunate as to reach Egra in

VOL. II. CIII.

twelve days. In these marches and counter-marches of the French and Austrians in the depth of winter, many thousand men were lost by fatigue, famine, or the rigor of the season, but many more of the French than of the Germans, as the French were not enured to so cold a climate.

Soon after the arrival of Marshal BELLISLE at Egra, Prince LOBKOWITZ's summoned the remaining part of the garison of Prague to surrender, which they agreed to, on condition of being suffered to march away with their arms and baggage; and on the 17th of December, the French evacuated the town, and on the 20th the citadel, to the number of four thousand, leaving two thousand sick in the place, who were to remain prisoners of war by the capitulation. Marshal BELLISLE having joined part of the forces of Marshal BROGLIO near Egra, continued his march and passed the Rhine, after which his troops took up winter quarters in their own country; and thus ended this terrible winter's campaign, wherein many more had perished by the rigour of the season and forced marches, than by the sword.

The French surrender Prague.

During the remaining part of the winter, the Germans formed the blockade of Egra (esteemed the key of Bohemia) from whence the French frequently issued, and plundered the adjacent country; and the Austrians having evacuated Bavaria, the Emperor removed from Frankfort, and took up his residence in his capital city of Munich, having issued Letters requisitorial to the circle of the Upper Rhine, requiring them to furnish provisions for the French army under Marshal NOAILLES who was expected in Germany about this time.

Egra blockade.

On the 12th of May the Queen of Hungary was crowned Queen of Bohemia at the city of Prague, when she received advice, that her troops were returned into Bavaria, and that Prince CHARLES having defeated a great body of the Imperialists, the Emperor was obliged to retire from Munich again, for the security of his person.

Bavaria recovered by the Austrians again.

In the mean time, the King of Great Britain being determined to take the field, in defence of the Queen of Hungary, twenty thousand men were embarked in Great Britain for Flanders, where there arrived soon after sixteen thousand Hanoverians in British pay, and six thousand Hessians, to which were added, twelve thousand Austrians; but the Dutch refusing to join them, and it being too late in the year to enter upon action, this powerful army was of no other service to the Queen of Hungary in the year 1742, than to divert part of the French army that was intended for Germany, and encourage the Dutch to declare themselves, as they did not long after in favour of the Queen of Hungary, promising to join the British forces with twenty thousand of their own troops.

Early the next campaign (1743) the British forces, commanded by the Earl of STAIR, took the field, and with the Austrians, Hanoverians, and Hessians, began their march for Germany; and the Earl with the English and Austrians arrived at Frankfort upon the Maine the latter end of May. He proceeded to pass that river, but the French advancing with their whole army on the 31st, the Earl thought fit to repass that river again, and retire to his former camp near Hanau. On the 7th the Earl of STAIR marched towards Alschaffenburgh, where the King of Great Britain arrived about this time, and took up his quarters.

The King having received certain advice, that the Marshal NOAILLES intended to prevent our junction with the body of Lunenburgh and Hessian troops, commanded by Prince GEORGE of Hesse, sent orders to the said Prince to halt at Hanau, and determined to join him with the whole army. Accordingly on Wednesday the 26th, upon several motions which the French army made to the left, orders were given for the army to strike their tents at the beating of the tattoo, to remain under arms till break of day, and then to march from the right, in two columns, the troops in this march taking the places assigned them in the line of battle. But as his Majesty was persuaded, that if the enemy attempted any thing, it would be on our rear-guard, he ordered the three battalions of English guards, and the four of Lunenburgh, that covered the quarters, as also the Hanoverian cavalry, with some artillery, to bring up the rear; and his Majesty chose to be there in person, as the place of action.

The army began to march at break of day, the British cavalry in the front, followed by the Austrian; then the British foot, followed also by the Austrian. As soon as the French saw us in motion, they also began to march with great haste towards our right, and several of us that went down to the river side, reviewed their troops as they passed, and many of their officers conversed with ours. The French left their camp standing, which persuaded us, that Marshal De NOAILLES was to have executed his scheme that very morning.

His Majesty had certain advice, the day before, of their making two bridges upon the Mayn, a little below Seligenstadt, and Colonel MONTAGU, and Colonel GEE, who relieved him at Dettingen, had both sent word, that many of their squadrons had been seen on this side of the Mayn; so that we were under some apprehensions of their intending to cut off our communication with Hanau. We remained in the position we were in after the troops taking their posts, halting upon the long march, and expecting the King's orders, till eight of the clock, the front of our horse not more advanced than between Klein Ostein and Dettingen. About this time a battery of cannon, which the French had placed at a little chapel on the right of Hoechstadt, began to play upon the Hanover cavalry, and was soon answered by the British artillery left in the rear, which was well served, and did great execution. This they meant to draw our attention to that side.

Whilst this was passing in the rear, we began to perceive a line of the enemy's foot, and then a second, extending between the villages of Dettingen and Welsheim towards the mountain, and two columns of horse marching the same way; so that our front, upon the halt, being to the river, the enemy's army, at less than a mile's distance, was upon our right flank. The danger was visible and pressing, and his Majesty, arriving at that instant, ordered the Generals of the day to make our front immediately to the enemy, by extending the right towards the mountain, and the left to the river, and the two lines of horse were immediately formed. His Majesty ordered the foot that was coming up to the right into the wood, and some battalions posted to cover that flank; and as fast as they arrived, placed the infantry, British and Austrian, as also four battalions of Hanoverians, who all marched through the inter-

vals of the horse, from the mountain to the Mayn in two lines, which were supported also by the cavalry of the right wing, also in two lines. In making this disposition, which was a very fine one, and which, by reason of the slow motions of the foot, took up a good deal of time, the Earl of STAIR, the Duke d'AREMBERG, and the Marshal NEIPPERG, assisted with great capacity and activity.

The French had passed over a great body of troops during the night: their horse, the household at their head, passed at fords, or swam over: the foot which we saw marching without baggage along the river, passed over the bridges, and nothing could be better laid than this plan of Marshal NOAILLES's, if he had left the morass that he passed, in order to attack us, in his front; for then the village of Dettingen and the Mayn secured his right, the morass his front, and the mountains his left; but probably his persuasion of our surprize, and that the King could not in so little a time make a disposition to oppose him, made him come into ground where he was accessible by all his front.

During the whole disposition, which lasted from eight to twelve, the French batteries, posted on the rising grounds on the other side of the Mayn, did us a great deal of harm, flanking us from left to right within 200 paces.

About twelve, every thing being ready, and the French advancing, his Majesty ordered us to march to meet them: Lieutenant Generals CLAYTON and SOMERFELDT, and his Royal Highness the Duke of Cumberland, as Major General, were at the head of the first line of foot: the Earl of Dunmore, Lieutenant General, and the Earl of Rothes, Major General at the head of the second. General HONYWOOD, Lieutenant General CAMPBELL, LIGONIER, and Baron De COURRIERE, and Lord Albemarle, as Major General, were at the head of the first line of horse; Lieutenant Generals COPE and HAWLEY, at the head of the second. Our lines halted half way to the enemy, to give the soldiers time to breathe; and having given a general shout or huzza, marched on to the enemy with great alacrity. A large squadron of horse, that happened to be at the head of the French line of foot, upon the left of their center, having kept that post while we were advancing, provoked part of our front line to fire upon them; this occasioned all the line to fire too soon: however, this had no ill consequence, they loaded again in an instant, and advanced to the enemy, who was also moving towards us; the fire in a moment was general upon all the front, our line still advancing and gaining ground, Lieutenant General CLAYTON sent to desire some squadrons near the river, where he apprehended the enemy might flank him: the Lieutenant General of the day sent him Brigadier BLAND's dragoons, who in that post suffered extremely. The fire from all the batteries of the enemy, and particularly from those in our flanks, was prodigious, and our artillery answered very briskly, though much inferior in quality and number. About this time the Black Musketeers detached themselves from their line, passed between the two fires of the foot, and came full gallop to attack the first squadron on our right; they were received as such a rash action deserved, were all cut to pieces, and their standard taken.

In the mean time the British and Austrian cavalry, passing through the intervals of the foot,

went and attacked the household troops of France; they found them interlined with foot, and many of our regiments were repulsed. However, they soon rallied and returned to the charge, our lines of foot still advancing; and a brigade or detachment of grenadiers, posted in their front, behind a curtain, opposite to our right wing of horse, having given way, all their front began to do the same, till they put the morafs before them, and Dettingen still on the right, and then their whole army retired, with great precipitation, towards the wood and village of Weltheim. Lord STAIR ordered the Lieutenant Generals CAMPBELL and LIGONIER to pass the morafs, as well as they could; and march with the horse straight to Dettingen; which having done, and sent to reconnoitre the village, they found it abandoned; when they marched to Weltheim, where some squadrons still appeared on the skirts of the wood, who, at their approach, flung themselves into the woods, and behind the village; which, though barricaded all round, and loop-holes made through all the walls and tops of the houses, we found likewise abandoned. Lord STAIR not thinking it prudent to venture the horse into the wood, till the foot could come up, ordered the former to halt; but most of the enemy had, by this time, repassed the river, either over their bridges, or at fords, where, in their hurry, many were drowned.

Thus ended this day, wherein the bravery of our troops cannot be too much commended. Our infantry still gained ground from the beginning, till they remained masters of the field. Our cavalry supported, for eight or nine hours, the most severe cannonade that ever was known, and then attacked the household troops, who, to do them justice, supported the ancient reputation of their corps with great bravery. In this action LIGONIER's regiment of horse, and BLAND's dragoons, suffered most, and gained great reputation. It is reckoned the enemy lost above 8000 men, and our loss amounted to near 2500. The King continued the whole day at the head of the foot.

*List of French standards taken at the battle near Dettingen, on the 16th of June, O. S. 1743.*

1. A white standard finely embroidered with gold and silver, a thunder-bolt in the middle, upon a blue and white ground. Motto, *Sensere Gigantes*. Both sides the same.
2. A red standard, two hands with a sword, and with a laurel wreath and imperial crown at top. Motto, *Incorrupta Fides & avita Virtus*. On the other side the sun. Motto, *Nec pluribus impar*.
3. A yellow standard, embroidered with gold and silver, the sun in the middle. No motto.
4. A green ditto, in the same way.
5. The mast of another torn off, but appears to have been red.
6. A white standard, embroidered with gold and silver; in the middle, a bunch of nine arrows tied with a wreath, all stained with blood, the lance broke; the Cornet killed without falling, being buckled behind to his horse, and his standard buckled to him. Motto, *Alterius Jovis, altera Tela*. This standard belonged to the Mufquetaires Noirs, and was taken by a serjeant of Lieutenant General HAWLEY's of the right squadron of the whole line.

In a private letter concerning this battle, we were told, that Sir ROBERT RICH's regiment having lost their standard, a private man rode into a squadron of French horse, sword in hand, and retook it.

By the accounts from Paris, the French had the assurance to claim the victory, under pretence of their becoming masters of the field of battle the next day, upon the allies pursuing their march for Hanau, (which they call a retreat) and leaving their sick and wounded behind. Upon which, in an account printed at Francfort, and reprinted at the Hague, it is observed, as the allies continued their march, according to their original design, to Hanau, the French had an opportunity of regaining the next day not only the field of battle, but his Britannic Majesty's head quarters at Aschaffembourg, on which some people fancy they will raise doubts about the victory; but as they have only taken one piece of cannon, a very few colours, and scarce any prisoners, such a pretence would be ridiculous; neither does M. NOAILLES stand in need of any such artifices to raise his reputation, since every body agrees, that he did, on this occasion, all that could be expected from a brave man, or an experienced general.

The French, according to their usual modesty, also affect greatly to exaggerate the loss of the allies, and diminish their own; pretending, in one of their accounts, that their loss amounted to about 4000 men, and that of the allies to 6000. But it appears by a list taken of the killed and wounded, that on the side of the Austrians and their allies, there were 2351 killed and wounded, and no more. The French having left the Emperor and his dominions at the mercy of the Austrians, as has been intimated already, the Imperial General Count SECKENDORF was obliged thereby to agree to a suspension of arms, though the war still continued between the Austrians and the French, who had not yet totally evacuated either Bohemia or Bavaria, but kept possession of some of the strong towns.

His Britannick Majesty remaining still in his camp near Hanau, Prince CHARLES of Lorraine, Marshal KHEVENHULLER, and several more of the Austrian Generals, paid him a visit on the 15th of July, and continued there till the 18th, when it is supposed the future operations of the campaign were concerted; Prince CHARLES returning afterwards to his army on the Rhine, marched up that river as high as Brisac; whereupon the Duke of NOAILLES detached part of his army into the Upper Alsace, to join the French forces already there, and oppose Prince CHARLES, if he should attempt to pass the Rhine thereabouts; and at the same time the Duke retired with the remainder of the French army quite out of Germany into the Lower Alsace. Whereupon the French Ministers every where declared that the King had commanded his armies to retire out of Germany, and commit no hostilities there, unless they were attacked; but that he should regard, and even treat those as *direct* enemies, who should act in any manner against his armies, and not as allies to the Queen of Hungary; which was given out to deter the English and Dutch from approaching his frontiers: on the other hand, the Queen of Hungary published a manifesto, declaring, that as she had, by the blessing of God, and the assistance of her allies, delivered her dominions from her enemies that had invaded them, who had

Thomas Brown, of Kirkcaldy, Yorkshire.

had been obliged to repass the Rhine, she was resolved to improve the advantages she had obtained, and therefore had commanded her Generals to penetrate into the dominions of France which formerly belonged to the Empire, and assured the inhabitants of Alsace, Burgundy, Franche Comte, Lorrain and Bar, and of that part of the Duchy of Luxemburg which had been dismembered from it, that her armies were sent to deliver them from a situation which often exposed their countries to be the seat of war; and if they remained quiet in their dwellings, and did not take up arms against her, but punctually paid their contributions, and furnished the provisions and forage that was demanded, they might rely on the Queen's clemency, who had no other view than to secure the tranquility of the Empire, by confining France within her ancient bounds.

Prince Charles attempts to pass the Rhine.

The Austrian and French armies being now posted on the banks of the Upper Rhine, cannonaded each other; and though Prince CHARLES could not find an opportunity of passing that river in the face of so numerous an army as the French Generals commanded, the Hussars made frequent incursions into Alsace, where they met with a rich booty, and laid the country under contribution. In the mean time the British forces and their allies passed the Lower Rhine a little below Mentz, and on the 27th, N. S. began to march along the western bank of that river towards Alsace, in order to give the Duke of NOAILLES battle, or compel him to retire further from the Rhine, and facilitate Prince CHARLES's passing that river, which he attempted several times, but his troops were repulsed; and this was ascribed to the insignificant diversion the English and their allies made in the Lower Alsace: they advanced indeed through the Palatinate, but when the French retired into their own country, the allies were extremely cautious of attacking them; and as to the Dutch they always kept a considerable distance, in the rear of the army, that they might

The allies cautious of invading the French territories.

not give any umbrage to the French: for nothing seems more manifest than that the allied army never intended to pursue the French into their own country, and begin an offensive war with that nation: and as the French Generals very well understood this, they detached so many of their forces into the Upper Alsace to oppose the passage of Prince CHARLES, that he found it impracticable to attempt it any longer: and if there was any difference between his British Majesty and that Prince at their interview near Hanau, as the French insinuated, it probably proceeded from the King's aversion to invade the dominions of France, and make a diversion in the Lower Alsace, while Prince CHARLES passed the Rhine in Upper Alsace.

In the mean time the garison of Ingolstadt agreed to surrender on condition of being permitted to march out with all the honours of war; and on the 18th of September the Bavarians took the oaths to the Queen of Hungary, with some alteration at their request, wherein they promise fidelity and obedience to her Majesty, so long only as she shall be in possession of the Bavarian dominions.

The Bavarians take the oaths to the Q. of Hungary.

The garison of Egra also surrendered about the same time, and submitted to remain prisoners of war; and the town was evacuated on the 31st of August; so that the Queen of Hungary had then no enemies left to the eastward of the Rhine.

His British Majesty left the army at Hanau, and set out for Hanover on the 5th of October, and soon after the English and Hanoverians began their march back to Flanders, and the Dutch to their own territories: Prince CHARLES also finding the passing of the Rhine impracticable separated his army, and sent them into winter quarters; which he had no sooner done but the French passed the Rhine at Hunninghen with 20000 men to the German side, where they fortified themselves, and maintained their ground the following winter.

Prince Charles separates his army.

The French enter Germany again.
