SALTON, Thomas

J. Matthews

1878

## GEORGE R.

**G**EORGE the Second, by the Grace of God, King of *Great Britain, France, and Ireland*, Defender of the Faith, &c. To all to whom these Presents shall come, Greeting: Whereas our Trusty and Well-beloved *Thomas Longman, John Shuckburgh, Thomas Osborne, Charles Hitch, and Stephen Austen*, Citizens and Booksellers of *London*, have by their Petition humbly represented unto Us, that they have been at very great Expence and Labour in procuring and purchasing Books for the compiling and improving a Work, Entitled, *Modern History: Or, The Present State of all Nations*; describing their respective Situations, Persons, Habits, Buildings, Manners, Laws and Customs, Religion, Policy, Arts and Sciences, Trades, Manufactures and Husbandry, Plants, Animals, and Minerals, by *Thomas Salmon*: In which are comprehended not only such Voyages and Travels, as have been published already, but the Accounts and Observations of several judicious Travellers, who have lately visited the remotest Parts of the Globe, and had great Opportunities of informing themselves of the present State of the respective Nations they describe: The Third Edition, with considerable Additions and Improvements, and an Abstract of the antient History of most of the Countries described, brought down to the present Time. The whole adorned with Cuts of the various Inhabitants, and Maps of the several Countries, projected by *Herman Moll*, the most accurate and correct Geographer of this Age, in Three Volumes in Folio. Which Work, the Petitioners, with the utmost Submission, apprehend may be of great Service not only to the Publick in general, but to all Persons concerned in Trade and Navigation; and being desirous of reaping the Fruits of their very great Expence and Labour, and of enjoying the full Profit and Benefit that may arise from printing and vending the same, without any other Person interfering in their just Property, which they cannot prevent without Our Licence and Protection; they have therefore most humbly prayed Us to grant them Our Royal Licence and Protection for the sole Printing, Publishing, and Vending the said Work, in as ample Manner and Form as has been done in Cases of the like Nature. We taking the Premises into Our Princely Consideration, and being graciously inclined to give Encouragement to all Works that may be of publick Use and Benefit, are pleased to condescend to their Request; and do, by these Presents (as far as may be agreeable to the Statute in that Case made and provided) grant to the said *Thomas Longman, John Shuckburgh, Thomas Osborne, Charles Hitch, and Stephen Austen*, their Heirs, Executors, Administrators, and Assigns, Our Royal Privilege and Licence for the sole Printing, Publishing, and Vending the said Work, during the Term of Fourteen Years, to be computed from the Date hereof; strictly forbidding and prohibiting all Our Subjects, within Our Kingdoms and Dominions, to reprint or abridge the same, either in the like, or any other Volume or Volumes whatsoever, or to import, buy, vend, utter, or distribute, any Copies thereof reprinted beyond the Seas, during the aforesaid Term of Fourteen Years, without the Consent or Approbation of the said *Thomas Longman, John Shuckburgh, Thomas Osborne, Charles Hitch, and Stephen Austen*, their Heirs, Executors, Administrators, or Assigns, by Writing under their Hands and Seals first had and obtained, as they will answer the contrary at their Peril: Whereof the Commissioners, and other Officers of our Customs, the Master, Wardens, and Company of *Stationers of London*, and all other Officers and Ministers, whom it may concern, are to take Notice, that strict Obedience be given to Our Pleasure herein signified.

*Given at our Court at St James's the Thirteenth Day of December 1743, in the Seventeenth Year of Our Reign.*

*By His Majesty's Command,*

# THE PRESENT STATE

OF

## Bohemia, Silesia, and Moravia.

### CHAP. I.

*Treats of the situation, and extent, and of the air, mountains, and rivers, of Bohemia.*

CHAP.  
I.

**W**ITH Bohemia the provinces of Silesia and Moravia being incorporated, they will be described together; but as to Lusatia, which was also formerly reckoned a part of Bohemia, this having been transferred by the Emperor FERDINAND II, to the Elector of Saxony, will be treated of hereafter, as part of that Elector's dominions.

The  
name.

Bohemia is said to have taken it's name from the Bemi, or Boiemi, the antient inhabitants thereof; who, according to TACITUS, were descended from the Boii, a Gallick nation that retired into the Hyrcanian forest, which runs through this country, rather than submit to the Roman yoke.

The situa-  
tion and  
extent.

The modern Bohemia, including Silesia and Moravia, is bounded by Saxony and Lusatia, on the north; by Poland and Hungary towards the east; by Bavaria and Austria towards the south; and by the palatinate of Bavaria and electorate of Saxony towards the west. Extending from forty-eight degrees odd minutes, to fifty two degrees odd minutes, north latitude, and is near three hundred English miles from north to south, and two hundred and fifty from east to west. This being an inland country, remote from any sea, the cold is more severe than in some other places of the same latitude; and yet the air is not healthful, which may proceed in part from the woods and mountains which abound here, and check the winds in their course; and partly from their waters, which are very bad, and occasion many distempers. The country is mountainous towards the south and east, but lies more open on the north and west: and there are also great mountains between Moravia and Bohemia. The rivers Elbe and Muldaw have their source in Bohemia Proper, and running northward, meet below Prague; after which, the united stream is called the Elbe, and continues it's course north-west, thro' Saxony, and washing the walls of Hamburg, falls into the German ocean, little below Gluckstat. The Oder also has it's rise in the mountains on the south of the province of Silesia, and running northward, washes the shores of Poland, Brandenburg, and Pomerania, after which it falls into the Baltick. The Weisfel, or Vistula, has it's source in the same mountains, and running first to the eastward, passes by Cracow in Poland;

tains.

Rivers.

The Elbe.

The Oder.

Vistula.

then turning northward, washes the walls of Warsaw, and continuing it's course still north, falls into the Baltick near Dantzick. The river Moraw, rises in the mountains which divide Silesia from Moravia, and taking it's course to the southward, runs quite through the province of Moravia, after which it falls into the Danube near Presburgh. The river Teya, or Theyfa, runs from west to east through the south part of Moravia, and falls into the Moraw. The river Igla, also runs from west to east, and falls into the Moraw. There are many other small rivers in this country, which are described in the map of Bohemia.

CHAP.  
I.  
Moraw.

### CHAP. II.

*Contains a description of the provinces and chief towns of Bohemia.*

**T**HE three grand divisions of the kingdom of Bohemia are, 1. Bohemia Proper. 2. The Duchy of Silesia. And, 3. The Marquisate of Moravia.

Provinces.

Bohemia Proper is bounded by Lusatia on the north; by Silesia and Moravia towards the east; by Austria on the south; and by Misnia and Bavaria towards the west. A mountainous woody country, antiently reckoned part of the Hyrcanian forest, but has not much of the appearance of a forest at present, the woods many of them having been converted into towns and villages; of which travellers relate, there are an incredible number here. The capital of this province, and of the whole kingdom, is the city of Prague; situate on the river Muldaw, in fifty degrees north latitude; and fourteen degrees odd minutes to the eastward of London; about an hundred and forty miles north-west of Vienna, and seventy south of Dresden. It is an archbishoprick; and was the largest university in Europe, if our writers have not mistaken a figure, when they relate that it contained forty thousand students in the time of their apostle JOHN HUSS, who attempted a reformation of the errors of the church of Rome, almost an hundred years before Luther. The city is one of the largest in this part of the world; and composed of three towns, viz. Old Prague,

Bohemia  
Proper.

Prague  
city.

CHAP.  
II.

Prague, New Prague, and the Lesser Prague. The old town stands on the east side of the river Muldaw, in which is the university, being the most populous of the three. Here are also several monasteries, and a fine college of the Jesuits. The new town encompasses the former, and is divided from it only by a moat. This is fortified, and has a citadel; but is of too large an extent to sustain a siege, unless it was garrisoned by an army. The lesser town is divided from the other by the river Muldaw, over which there lies a beautiful stone bridge; part of it is pleasantly situated on a rising ground, where stands a magnificent castle and palace of the Emperor's, formerly the residence of the Bohemian Kings: here also stands the cathedral church dedicated to St Veit; and here are the houses of the nobility, among which that of Count WALLENSTEYN, afterwards Duke of Friedland, and General to the Emperor FERDINAND II, is most admired. It is a very stately structure, built upon the ruins of above an hundred houses, which were pulled down to make room for it, and furnish materials. The gardens are exceeding beautiful; and the aviary, the model whereof was taken from that of Prince DORIA at Genoa. In the stables, which are very large, stands a marble pillar between each horse, and to every standing there is a rack of steel, and a marble manger, and over it the picture of the horse which used it, as big as the life, with his name. Besides these three quarters, there is a suburb called the Jews town, where great numbers of that people inhabit, who traffick chiefly in jewels and precious stones, particularly topazes, and such other stones as are dug in the Bohemian mines.

Prague, according to Dr BROWN, is much larger, and more populous than Florence, the streets longer; and the windows being of fine glass, make a far better appearance than the ragged paper windows of Florence. The Muldaw also is a nobler river than the Arno at Florence, and the bridge over it exceeds all the four bridges on the Arno; but then the cathedral of Florence, built of black and white marble, the chapel of St LAWRENCE, and the great Duke's gallery and rarities, exceed any thing that is to be found at Prague. Upon the white hill, near Prague, was fought that memorable battle on the 8th of November, 1620, between the Emperor's forces, commanded by the Duke of Bavaria; and the Elector Palatine's troops, the head of the Protestant league, wherein the Elector's army being defeated, the Protestant interest in Germany suffered pretty much, and the Elector lost both the kingdom of Bohemia and the Palatinate. 2. Egra, a great town about fourscore miles to the westward of Prague; situate on the river Eger, taken notice of for a brackish fountain near it, which cures distempers of the eyes and ears by purging. 3. Koningratz, situate on the Elbe, fifty miles to the eastward of Prague: a Bishop's see in the Archbishoprick of Prague. 4. Glatz, situate at the foot of the hills which divide Bohemia from Silesia, the capital of a very rich district, and about a hundred miles to the eastward of Prague.

The province of Silesia is bounded by Brandenburg on the north: by Poland on the east: by the mountains called Rissenbergen, which separate it from Moravia, towards the south: and by Bohemia on the west. The chief Towns whereof are, 1. Breslaw, the capital of Silesia, and of a dutchy, to which it gives it's name; being situate on the river Oder, about an hundred and twenty miles to the

north-east of Prague, in fifty-one degrees odd minutes north latitude. It is an handsome large and well fortified city, a Bishop's see, and university; and governed by its own magistrates. 2. Crossen, the capital of a dutchy, situate upon the Oder, near the confines of Brandenburg; which was mortgaged several times, and at length absolutely transferred to the Elector of Brandenburg, who now remains sovereign of it. 3. Glogaw, the capital of a dutchy of the same name; situate on the Oder, forty miles to the south-east of Crossen. 4. Lignitz, the capital also of a dutchy, to which it gives it's name; situate about thirty-six miles to the westward of Breslaw. 5. Jagendorf, situate on the river Oppa, near the confines of Moravia: the capital of a dutchy of the same name.

The marquissate of Moravia is bounded by Silesia on the north and east: by Austria on the south: and by Bohemia on the west. The chief towns whereof are, 1. Olmutz, the capital of the province, situate on the river Moravia, in the latitude of forty-nine degrees forty minutes. A town of pretty good trade, and the only Bishop's see in the province. 2. Brin, a well fortified town; situate at the confluence of two small rivers, about fifty miles to the northward of Vienna. 3. Iglaw, situate on a river of the same name, about forty miles to the westward of Brin, near the mountains which separate Moravia from Silesia. A large strong town, and lies on the road from Bohemia to Hungary.

## CHAP. III.

*Contains an account of the persons and habits of the Bohemians; their genius and temper, buildings, way of travelling, nature of the soil, plants, animals, minerals, trade, and manufactures.*

THE persons of the Bohemians, like their neighbours the Germans, are rather of the largest: they are tall and corpulent, strong, and of a hale complexion; and given to imitate every foreign fashion, especially those of the French. This is the first country we come to from the eastward, where the people voluntarily quitted the Asiatick habit of vests and gowns, and clothed themselves in short coats, breeches, and stockings, as with us: the women too have left off their drawers and breeches, which the eastern ladies never go without; and conform themselves generally to the French dress, except some few who live on the confines of Poland, and continue to cloath themselves like that people. When I observed that the Bohemians were the first people on this side Asia, which conformed themselves to our dress, I might indeed have excepted the Russians; but as the Bohemians were the first that did it in point of time, and the Muscovites only submitted to the alteration, when they were compelled to it by the late Czar, and possibly may return to the Asiatick dress again, it may very well be said, that the Bohemians were the first who voluntarily changed the Asiatick habit for ours. But to proceed to the genius and temper of the Bohemians: their gentlemen, and those of quality, are said to be naturally brave, inclined to arms more than arts, and of an open easy conversation. Their boors, on the contrary, who are all in a state of vassalage to the great men, are a brutish kind of people; and pretty much giving to thieving and pilfering; and there are few writers but charge the whole nation with excess and intemperance in eating

III.

ing and drinking. Credulity also is another foible, which this people are remarkable for: you meet every where with stories of spectres and apparitions; there is not a mine in the country which is not haunted by one or more of these, if we may credit the inhabitants.

## Buildings.

The palaces of the grantees are many of them built after the Italian model; and the materials of them, as well as of their churches, and other public buildings, are usually of stone; but the rest of their houses, both in city and country, are built with wood, and make but a mean appearance. Their way of travelling is not different from ours; coaches are in use here, tho' their roads are none of the best. The lower grounds are deep in winter, and the mountainous part of the country is inconvenient for wheel-carriages, which make the people choose the water where they have an opportunity of navigable rivers in summer. In winter their rivers are frequently frozen, and they make use of the sledge or skates upon them, either for travelling or diversion.

## Soil.

The hills, which take up a great part of this country, are generally rocky and barren; but the valleys produce both corn and wine: not in so great quantities however, as to export either; on the contrary, they import wine and fruit from Hungary. The wines of Bohemia, tho' tolerably good, will not keep, but soon turn sour, as they do in all other countries which lie so far to the northward; to make amends for which, as the soil produces plenty of barley and hops, they make and export a great deal of strong beer. Their soil also is proper for flax; and they have a coarse sort of wool, and make both linen and woollen cloth; but transport part of their wool and flax unwrought to other countries. A good sort of saffron grows in great plenty here: and their forests abound with serviceable timber, as their gardens do with fruit-trees, herbs and roots: but their greatest riches is in their mines of silver, copper, lead, tin, and iron. In their mountains also are found precious stones, particularly topazes, carbuncles, amethysts, jasper, sapphires, &c. which are bought up by the Jews, and sent abroad. There are at Gottenburg, about twelve miles from Prague, thirty mines of silver, or copper, which have been wrought these seven or eight hundred years; but an hundred weight of silver ore does not produce above an ounce of silver; and an hundred weight of copper, eight or nine ounces. Their tin mines are of vast advantage to them, this mineral being met with in scarce any other country but England; and was first discovered in Bohemia by one of our country-men. Sulphur and saltpetre also are found here, but they have so little common salt, that they are forced to import it.

## Beer.

## Mines.

Cattle,  
fish, and  
fowl.

As they have a great deal of good meadow and pasture ground, they abound in oxen, sheep, and other cattle, especially in horses of a large size: they have also most other animals wild and tame which are found in Europe: particularly great numbers of deer and game in their forests; and the many rivers there are in this country supply them with fish and wild fowl.

Manufactures  
and  
trade.

The manufactures of the country are linen and woollen: in which they are arrived at no great perfection; but make very good glass: and their manufactures of copper, iron, and tin, are not contemptible; some of these they export, as they do their precious stones, wool, and strong beer; but their foreign trade does not seem to be very considerable.

## CHAP. IV.

*Contains an abstract of the antient and modern history of Bohemia; the succession of their princes, and constitution of the government.*

**B**OHEMIA is frequently looked upon as part of Germany; but as it is one of the Emperor's hereditary countries, and excluded from all those privileges which the other circles and electorates enjoy, (except that the imperial family, as Kings of Bohemia, have a voice in the election of a King of the Romans) I chose to treat of it as a distinct principality: and in this chapter proceed to give an account of the sovereigns of this country from the earliest times down to the present reign. There are also these further reasons for treating of Bohemia as distinct from the empire, namely, that neither the acts of the German dyet, or the laws of the empire, are of any force here; nor are the Bohemians obliged to raise forces, or pay taxes for the support and defence of the empire, as the other circles are, but are subject only to their own Princes of the house of Austria.

The Scythians, 'tis generally held, were the first inhabitants of Bohemia; but the Boiemi or Boii, a Gallick nation, according to TACITUS, retiring before the conquering Romans, afterwards fixed themselves here; communicating their name to the country. It was first divided into several principalities, governed by their respective Dukes, or Leaders, till ZECHUS the brother of LECHUS, who founded the monarchy of Poland about the sixth century, obtained a kind of sovereignty of the whole, but was still styled Duke, or Great Duke, and the other Dukes continued to govern their respective subjects, only acknowledging ZECHUS for their Chief, or Captain-General; for which 'tis said they had one great inducement, namely, that he and his brother LECHUS first taught them husbandry and architecture, the natives being generally shepherds before that time, and living in tents, or other movable tenements.

The next Duke we meet with in the catalogue of the Bohemian sovereigns, is CRACUS, said to be the same also who governed Poland, and built the city of Cracow; but this Prince did not begin his reign till the year 700, which is upwards of an hundred years after the reign of ZECHUS; so that there must have been several Princes of Bohemia during that space, of whom their historians have not been able to give us so much as their names. After the death of CRACUS, they relate, that his youngest daughter LIBUSSA succeeded in the government; but that the people not being satisfied with a female ruler, were about to depose her; whereupon she pretended that heaven had directed her to let a horse loose, and the man at whose door he stopped, should be her husband and partner in the government; and a horse being turned out accordingly, stopped at the house of PRIMISLAUS, a peasant, who being married to LIBUSSA, and succeeding her after her death, is reckoned the fourth of the Bohemian sovereigns: but there appearing to be so much of fable mixt with the history of their antient Princes, I shall content myself with giving their respective names, and the dates of their several reigns, till we arrive at times of greater certainty.

NIMISLAUS,

CHAP.  
IV.

Bohemia is not subject to the laws of the empire.

The antient history of Bohemia.

ZECHUS the founder of the Bohemian monarchy.

LIBUSSA.

PRIMISLAUS.

CHAP.  
IV.

NIMISLAUS, the son of PRIMISLAUS, succeeded his father, *anno* 676.

MNATHA, the son of NIMISLAUS, began his reign *anno* 715.

VOGENIUS, or VORITIUS, succeeded him, *anno* 735.

WENCESLAUS succeeded VOGNIUS, *anno* 763.

CZERZONISLAUS succeeded his brother WENCESLAUS, *anno* 785.

BELAM his son succeeded him, *anno* 803.

BORZIVOIUS the first Christian Prince.

BORZIVOIUS, the son of BELAM, succeeded his father, *anno* 856, being the first of the Bohemian Princes who embraced Christianity; converted, as 'tis said, by CYRILLUS and METHODIUS in the year 894, which occasioned an insurrection in his dominions that was near proving fatal to him; but he at length reduced his rebellious subjects, and before his death he saw the Christian religion prevail in most of the Bohemian provinces.

SPITIGNEUS, the son of BORZIVOIUS, succeeded him, *anno* 904.

ULADISLAUS I, succeeded his father SPITIGNEUS, *anno* 906.

BOLES LAUS having murdered his brother ULADISLAUS, *anno* 938, succeeded him; persecuted his Christian subjects, and introduced Paganism: whereupon the Emperor OTHO the Great, invaded his dominions; and after a war of fourteen years, compelled him to become tributary to the Emperor, to do publick penances for his apostacy, and restore Christianity in Bohemia.

BOLES LAUS II, succeeded his father BOLES LAUS, *anno* 967.

BOLES LAUS III, succeeded his father BOLES LAUS II, *anno* 999.

JAROMIR, the son of BOLES LAUS III, succeeded his father, *anno* 1012.

ULRIC, the brother of BOLES LAUS III, and uncle of JAROMIR, raised a rebellion against his nephew, put out his eyes, and usurped the throne, *anno* 1035.

BRETISLAUS, the son of ULRIC, succeeded his father, *anno* 1037.

SPITIGNEUS, the son of BRETISLAUS, succeeded him, *anno* 1055, he was the last of the Bohemian Dukes; for his brother ULADISLAUS, his successor, was by the Emperor HENRY IV, created King of Bohemia at Mentz.

#### Kings of BOHEMIA.

ULADISLAUS created King by the Emperor.

ULADISLAUS II, succeeded his brother Duke SPITIGNEUS II, *anno* 1061, and was created King of Bohemia, *anno* 1086.

CONRADE, the brother of ULADISLAUS, being appointed his successor, came to the crown, *anno* 1092.

BREZETISLAUS, son of ULADISLAUS II, succeeded him, *anno* 1099.

The Emperor appoints their King.

BORZIVOIUS, the brother of BREZETISLAUS, succeeded him *anno* 1100, by the appointment of the Emperor HENRY IV, but against the consent of the Bohemian Dukes, who twice dethroned him, and compelled him to retire into Germany.

SUATOLPLOOK, or SUTAPULCUS, nephew to BORZIVOIUS, usurped the throne, *anno* 1107; being assisted by the Bohemian Dukes, and with a sum of money purchased the confirmation, or investiture, of the Emperor.

OTHO succeeded SUATOLPLOOK, *anno* 1109; but was deposed for his incapacity to govern.

CHAP.  
IV.

ULADISLAUS II, brother to BORZIVOIUS, was elected in the room of OTHO, *anno* 1111.

SOBIESLAUS, the brother of ULADISLAUS, succeeded him, *anno* 1125.

ULADISLAUS III, succeeded SOBIESLAUS, about the year 1153, by the appointment of the Emperor FREDERICK Barbarossa, who made him vicegerent of the empire during his absence in Italy: he commanded also the Emperor's armies; and, as a reward of his merit, the Emperor gave him for his arms, azure, a lion argent, the present arms of Bohemia.

SOBIESLAUS II, son to SOBIESLAUS I, succeeded to the throne, *anno* 1174.

FREDERICK, the son of ULADISLAUS, succeeded SOBIESLAUS II, *anno* 1178, by the appointment of the Emperor.

CONRADE II, succeeded FREDERICK his cousin, *anno* 1190, by the appointment of the Emperor.

WENCESLAUS, brother to CONRADE, and son of SOBIESLAUS, came to the throne, *anno* 1192, by the Emperor's influence.

BRETISLAUS or HENRY, bishop of Prague, succeeded to the throne, *anno* 1193.

ULADISLAUS IV, son to ULADISLAUS III, succeeded to the crown, *anno* 1196; but resigned to his brother PRIMISLAUS, who ascended the throne the same year, 1196.

OTTOCARUS, to the prejudice of his elder brother WENCESLAUS, usurped the throne, *anno* 1231; but was killed in a battle with the Emperor RODOLPHUS.

WENCESLAUS II, succeeded his brother OTTOCARUS the usuper the same year 1231.

OTTOCARUS II, the son of WENCESLAUS, sometimes called PRIMISLAUS III, succeeded his father, *anno* 1253. He was continually engaged in wars with the Emperor RODOLPHUS, and sometimes with great success; insomuch that 'tis said, he was master of all the countries from the Adriatick to the Baltick; but was at length killed in a battle with the Emperor near Murkfeld.

WENCESLAUS III, succeeded his father OTTOCARUS *anno* 1278, and was afterwards elected King of Poland.

HENRY Duke of Carinthia, brother-in-law to WENCESLAUS III, was elected King by the Bohemian barons; but the Emperor deposed him, and set up his son RODOLPH, who began his reign *anno* 1306, after whose death the Emperor advanced his son JOHN of Luxemburgh to the throne of Bohemia, *anno* 1307.

CHARLES Emperor of Germany, and son of JOHN, succeeded to the Bohemian crown, *anno* 1346.

WENCESLAUS V, his son, succeeded him, *anno* 1378; and was afterwards elected Emperor.

SIGISMOND King of Hungary, afterwards Emperor of Germany, succeeded WENCESLAUS in the kingdom of Bohemia, *anno* 1418. It was in this reign that JOHN HUSS and JEROM of Prague, endeavoured a reformation in the church, and were burnt at the stake for it; of which I shall give a further account under the head of religion.

ALBERT Duke of Austria, (afterwards elected Emperor and King of Hungary) was appointed King of Bohemia by the Emperor SIGISMOND, *anno* 1436; in which he was opposed by the Hussites and the nobility of Bohemia, whom he reduced, and deprived of the privilege of electing their Kings, which they had in a great measure lost before.

ULADISLAUS

CHAP. IV. ULADISLAUS V, the son of ALBERT, succeeded his father in the kingdom of Bohemia, in 1439, being then an infant of five years of age; after whose death

GEORGE PODEBRACHE was elected King by the Bohemian Barons, anno 1471; but being a favourer of the Hussites, a party was formed against him, which occasioned him a very tumultuous reign: after whose death,

ULADISLAUS VI, was advanced to the throne, anno 1471; being succeeded by his son

LEWIS, who came to the crown, anno 1516, by the influence of the Emperor MAXIMILIAN, and was afterwards elected King of Hungary. He was killed in a battle with the Turks, after whose death,

FERDINAND I, Archduke of Austria, brother to the Emperor CHARLES V, was elected King of Bohemia, anno 1526; and afterwards Emperor of Germany, in the year 1556, on the resignation of CHARLES V, after whose death,

MAXIMILIAN King of the Romans, was elected King of Bohemia and Hungary, anno 1562; and Emperor of Germany, anno 1564. His tolerating the Protestants made him sometimes styled the Lutheran Emperor. He was succeeded by his son,

RODOLPH II, King of the Romans and of Hungary, elected King of Bohemia, anno 1575, and afterwards Emperor of Germany. In the year 1609, during the reign of RODOLPH, the Protestants of Germany formed a confederacy, called the Union, or Evangelical League, of which they chose FREDERICK IV, Elector Palatine for their head: with these the Protestants of Bohemia joined, under pretence of being oppressed by the Emperor, and called in his brother MATTHIAS to their assistance, obliging the Emperor RODOLPH to resign the crown of Bohemia to MATTHIAS; who was proclaimed and crowned King of Bohemia, anno 1611, and elected Emperor upon the death of RODOLPH, anno 1612.

The Emperor MATTHIAS, in the year 1616, declared his cousin FERDINAND King of Bohemia, and caused him to be crowned and recognized by the states of that kingdom, with this restriction, that he should not execute any regal act in the Emperor's life-time without his consent.

The Emperor MATTHIAS at this time kept his court at Vienna, and King FERDINAND at Gratz in Stiria, the administration of the government of Bohemia being left to the privy-council of that kingdom, who were generally Roman Catholics; and at the instigation of the Archbishop of Prague, 'tis said, very much discountenanced and oppressed the Bohemian Protestants: whereupon the nobility of that persuasion assembled at Prague, in order to procure a redress of their grievances, at the same time levying forces to support their pretensions. The government being apprehensive of an insurrection, deputed some of the imperial ministers to the Protestant nobility to endeavour to pacify them; but hot words arising in the assembly, the Protestants threw the Emperor's Chief Justice out of the castle-window two story high, and after him one of the Council of State, and a secretary of the Emperor's; but when they were cool, and began to reflect on the rashness of the action, they endeavoured to excuse the fact to the Emperor; continuing however to make levies of horse and foot,

to defend themselves in case of the worst; they proceeded also to expel the Jesuits out of the city of Prague by their own authority; at which the Emperor being further exasperated, both sides soon after took the field, towns were taken, and several skirmishes happened between the Imperial and Protestant troops, when the old Emperor MATTHIAS died; and

FERDINAND succeeded to the crown of Bohemia; being afterwards elected Emperor of Germany.

The Bohemian Barons, notwithstanding they had acknowledged FERDINAND for their King in the reign of the late Emperor, sent privately to offer the crown of that kingdom to FREDERICK V, Elector Palatine, the head of the Protestant league abovementioned, who had married the Princess ELIZABETH, daughter of JAMES I, King of England. This Prince, after several others had refused it, accepted the offer of the Bohemian Lords, and was crowned King on the fourth of November, 1619; whereupon he sent to his father-in-law, King JAMES, to excuse his accepting the crown of Bohemia without having consulted him, desiring his assistance, and acquainting him that the case would admit of no deliberation. King JAMES, it seems, was far from approving the action; and indeed very much disliked the precedent of a people's taking upon them to depose one King, and advance another to the throne by their own authority. The Emperor at the same time, to terrify the Palatine and his adherents, caused a proscription to be published against them; wherein he declares, That FREDERICK Count Palatine of the Rhine, having made himself the head of a perfidious and rebellious crew in the kingdom of Bohemia, was guilty of high-treason, and therefore requires all people to forsake him, discharges his subjects and vassals in the palatinate from their allegiance to him, and commanding them that they give him neither aid or assistance, under the severest penalties.

The Emperor's Generals also fell into the Palatinate, ravaging the country in a dreadful manner; whom the Princes of the Union, or Evangelical League, endeavoured to oppose; and King JAMES was prevailed upon to suffer a regiment of English volunteers, consisting all of gentlemen almost, to join them. But this was too slender a reinforcement to support the interest of his son-in-law, and the Emperor's Generals coming to an engagement with the Bohemian Protestants on the eighth day of November, 1620, entirely defeated them, and compelled the Prince Palatine, the new-elected King, with his Queen the Princess ELIZABETH, to fly into Silesia, and from thence afterwards into Holland, whereby he lost not only the kingdom of Bohemia, but the whole Palatinate. The Emperor, to reward the services of MAXIMILIAN Duke of Bavaria, who was his General in this war, called a dyet at Ratisbon, where he caused him to be advanced to the dignity of Elector Palatine of the Rhine, in the room of FREDERICK V. The upper Palatinate was also conferred upon him; and the Emperor having executed great numbers of the malecontents in Bohemia, resumed the government of that kingdom, of which he had been crowned King in the life-time of the late Emperor; and the imperial family have ever since claimed Bohemia as their hereditary dominion, without suffering the nobility to have any share in the choice of their Princes.

An insurrection of the Protestant Bohemian nobility.

They elect FREDERICK V, Elector Palatine for their King.

CHAP. IV. The Emperor FERDINAND III, succeeded FERDINAND II, his father, in the kingdom of Bohemia, anno 1637.

The Emperor LEOPOLD, son of FERDINAND III, succeeded to the crown of Bohemia, anno 1656.

The Emperor JOSEPH, the eldest son of LEOPOLD, succeeded to the crown of Bohemia, anno 1705.

The late Emperor CHARLES succeeded his brother JOSEPH in the kingdom of Bohemia, anno 1711.

These last Princes being Emperors of Germany as well as Sovereigns of Bohemia, I shall give a further account of their history when I come to treat of the state of Germany, and proceed at present to enquire into the antient and present constitution of the kingdom of Bohemia.

Antient and present constitution of the government.

The first inhabitants of Bohemia of whom history makes any mention, were shepherds, and either of Scythian extraction, or led a wandering life like them, moving from place to place under their respective leaders, as they could meet with water and pasture for their cattle. ZECHUS first instructed the Bohemians in building, agriculture, and planting, about the sixth century, and thereupon was chosen Chief of their tribes, a Judge of their differences in time of peace, and their Captain-General in war; but every Leader continued to govern his own people, after they had divided the country amongst themselves, and remained fixed in settled habitations. Some affirm that CRACUS, who lived above an hundred years after ZECHUS, was their first judge; that till then every head of a family governed his own tribe, having no general arbiter of their differences till they elected CRACUS for that end; and that with him they joined several Aldermen, or Seniors of families, without whose assistance CRACUS, or his successors, could determine nothing of consequence.

Thus were they governed by CRACUS and his son, and afterwards by his daughter LIBUSSA, till she married PRIMISLAUS, who assumed a more absolute command, and obtained the title of Duke, or Great Duke of Bohemia, keeping the other petty Sovereigns pretty much under his subjection. And thus were the Bohemians governed by the posterity and successors of PRIMISLAUS and LIBUSSA for four or five hundred years, till the Emperor of Germany, in the eleventh century, created Duke WRATISLAUS, or ULADISLAUS, King of Bohemia. And from that time the Emperors of Germany have insisted upon a right of investing the Kings of Bohemia in the government of that kingdom, and of rejecting those who have wanted that solemnity. Some of their Princes 'tis true have since been elected by the Bohemian Barons, or States as they are usually called, and have governed that people without the Emperor's investiture or confirmation: but then the Emperor has created such Princes a great deal of trouble, and frequently deposed them; and at other times has appointed that nation kings, without the concurrence of the Nobility or States; and for upwards of an hundred years past, the Austrian family have claimed the kingdom of Bohemia, with the incorporated provinces of Silesia and Moravia, as their hereditary dominions, governing them by no other laws, but pure will and pleasure.

As to Silesia, this has been subject alternately to the Empire and to Poland, as the one or

the other were able to maintain their title to it by the sword; but has at length by treaty most of it been confirmed to the house of Austria, and now constitutes part of the kingdom of Bohemia.

Moravia, though now divided into a marquisate, was antiently one of the most potent kingdoms of Europe; Poland, Bohemia, and Silesia, being all subject to it: but their King ZUANTAPOC, about the year 700, refusing to pay tribute to the Roman empire, after a war of some years continuance, was subdued, and Bohemia, Silesia, and Moravia, made provinces of the Empire; and Moravia is at this day immediately subject to the crown of Bohemia, except some small principalities which belong to Poland.

From this abstract of the history of Bohemia, and the succession of their Princes, it appears that every tribe was at first governed by its respective Leader or Sovereign; but that in order to prevent eternal strife, concerning their civil rights at home, and to unite their forces in order to defend themselves against invasions from abroad, they found it necessary to elect a Chief to be Supreme Judge of their controversies, and Commander of their armies. These Chiefs in time made their dominion hereditary, and assumed an arbitrary command over the rest of the Bohemian nobility for some hundreds of years; after which the Bohemian Barons found means of re-asserting their former right of electing their Princes, and being governed by their own laws; till the Austrian family again enslaved them, and rendered their crown hereditary, as it is at this day. But from this account of the crown of Bohemia being for several hundreds of years elective, we are not to understand that the common people had ever any share in the election of their Princes; no, this was a privilege that the nobility ever reserved to themselves, as they do still in Poland. Their husbandmen, tradesmen, and mechanicks, ever were, and still are, in a state of vassalage to their respective Lords, who have the entire disposal of them, and administer justice as they see fit in their several courts: nor does the government ever intermeddle in their decisions, but in some extraordinary cases, where the state may be affected, or the life of the subject wantonly taken away. So that every Lord is in effect a monarch in his own territories. The crown of Bohemia's being therefore elective, will be no precedent for our republicans, who assert that there can be no legal government, where the Prince or Supreme Magistrate is not elected by a majority of the people; for it is certain, that not one in ten of the people had any share in the election of a Sovereign, (any more here than in Poland) even while Bohemia was an elective kingdom.

Prague, the capital, Baron POLLNITZ observes, is one of the biggest towns in Europe, encompassed with ramparts, and as well fortified as a place of that extent can be; but commanded by several hills: That the situation is pleasant in the midst of fine fields and gardens, and adorned with noble buildings: that the convents of both sexes are a great ornament to it. The palace or castle, which joins to the cathedral, is a great building, composed of several main bodies, without symmetry or architecture. The apartments are but low and plain; but here is one of the most beautiful prospects in the world. The great hall,

in

CHAP. IV. in which the royal feast is kept on the day of the coronation of the kings, is the largest of the kind, next to the spacious hall of Westminster. The palace-gardens are large, but have nothing to recommend them besides their situation. The tribunals of the regency meet in the palace.

The bridge over the Muldaw, which joins Little Prague to the old town, is one of the longest and most substantial bridges in Europe.

If we except Rome, Paris, and London, there is no city where there are more gentry, or a gentry that is more wealthy: every body here lives grand; and in no part of the world do the nobility keep greater state, or take more pride in their substance. They are polite and civil to strangers, whom they know to be persons of quality. For my own part, says the baron, I like them prodigiously; and I can safely say it, I have hardly met with a foreigner, who has not the same notion of Prague that I have.

There are no people of quality in the world more addicted to an expensive way of living than those of Prague; which is the reason that for all their immense revenues, they are sometimes over head and ears in debt; but by good luck, they have a settlement, which prevents them from total ruin: for most part of their lands are entailed for ever on the eldest son of the family; so that he can neither alienate nor encumber them, without the consent of the whole family, and of the King himself; which is a thing very hard to be obtained.

Though the Bohemians are brave and good soldiers, yet they do not love the service; I mean the gentry. Most of them prefer the civil to military employments; and private life to posts in the army, or at court. They are so used to be absolute masters at their estates, where the peasants are their slaves, and to be homaged like petty sovereigns by the burghers at Prague, that they do not care to reside at Vienna; and to be obliged, like other subjects, to pay their court to the sovereign, and the ministers.

The Bohemian peasants are miserable to the last degree; their persons, and all that they have, are at the command of the Lord. The poor wretches have often not a bit of bread to eat, in a country which is one of the most plentiful in Europe for all sorts of provisions. They dare not go from one village to another to work, nor learn a handicraft trade, without their Lord's consent. So much subjection keeps the poor creatures always trembling and humble; so that if you do but speak to them, they are ready to lick the dust off your feet. The severity with which these people are used, is really terrible; but 'tis as true on the other hand, that gentle usage has no effect upon them; for they are excessively lazy and stubborn, and being moreover used to harsh treatment, from generation to generation, blows scarce terrify them, though 'tis the only way to make them good for any thing.

The Bohemians have a great genius for musick; so that there's no village, be it ever so small, but the mass is sung in concert; and they are very happy at winding the hunter's horn.

'Tis certain, that this kingdom is one of the best countries in the Emperor's possession, and next to Hungary brings him in the most money.

Bohemia is a country of states, whom the Emperor, as King of it, summons every year to the city of Prague. They consist of the clergy, nobility, gentry, and towns. The assembly is opened

by a commissioner of the Emperor's nomination, who lays before them his imperial Majesty's demands. The states, such is their submission and zeal, grant the full demand, which is commonly a very great sum; yet for all this, the Bohemians would not complain of taxes, if the Emperor resided among them; but they are very sorry to see their country exhausted to enrich the Austrians, to whom they have a natural aversion, and the Austrians as heartily hate the Bohemians.

The ladies here are very amiable. Gaming, which may be called the universal pleasure, is carried as high here as they please in the houses of the quality, where assemblies of both sexes are held every night, with good cheer, particularly pheasants and ortolans in plenty; and upon fish days there are trouts, salmon, and cray-fish; and, that there may be nothing wanting, Bohemia likewise furnishes good wine. At the estate of the young Count TSCHERNIN at Melneg, there is a red fort, not inferior to Burgundy. Of all these good things many partake together; and for my part, I own I am taken more with this pleasure than any other, because we make it last as long as we will, and then 'tis suited to all ages.

There is a tolerable Italian opera here. In winter they have races in stately sledges: there is great masquerading; and they dance till they are ready to drop to the ground; for this end there are publick balls, which are extraordinary splendid, and might be compared, if any can be compared, with the balls at the Hay-Market in London.

In the summer-time, when there is not so much company in town, these assemblies are thinner. The gentry meet at night in a garden belonging to the Prince DE SCHWARTZENBERG, where they game, chat, and walk up and down; after which they always go to some house or other to sup. When one has a mind to go to the country, we are sure of a good reception; and the longer one stays, the greater pleasure one gives to the master of the house. Here they pass their time in hunting of all sorts. Many of the nobility keep packs of hounds, and others hawks. The generality keep musicians in their service; so that let the weather be what it will, one may always be amused in this country. Besides, one enjoys all the freedom here that can be.

## CHAP. V.

*Treats of the language and religion of the Bohemians.*

THEIR language, like that of the Poles, is a Language. dialect of the antient Slavonian: a tongue so copious and sweet, that their antient laws required the true pronunciation and orthography of it to be strictly observed, which was exceeding difficult, having the use of no other letters but the Runick character, which had a very imperfect alphabet, and was not at all fit for the polishing a language: but afterwards when Germany came to have a more intimate correspondence with Bohemia, the Roman letters were introduced, and their language refined with more success. The modern Bohemians however, are very remiss in this particular; and their nobility look upon it as beneath them to speak their native tongue, choosing rather the High-Dutch, or a kind of gibberish, being a mixture of both these, and other foreign words.

The

CHAP.  
V.  
Religion  
of the Bo-  
hemians.

The Pagans, who antiently inhabited this country, adored chiefly their god PRON, the same with THOR among the Saxons, and JUPITER the Thunderer, among the Greeks; but their devotion was afterwards transferred to another idol, named SWANTO WIT, whose chief temple stood at Wollin in Pomerania, then one of the largest cities in Europe.

Christianity was first introduced here about the year 890, by METHODIUS, a Greek prelate, which was the reason that the Pope's supremacy was not acknowledged here till a considerable time after.

About the year 1403, some scholars that had attended King RICHARD'S Queen, who was a Bohemian, to England, and conversed with DR WICKLIFFE'S disciples, having made themselves masters of his doctrine, and returning to their own country, communicated WICKLIFFE'S works to the famous JOHN HUSS, a doctor of the university of Prague, who from these hints, began to reflect on the errors and superstitions of the church of Rome; and with JEROM, a master of arts of that university, afterwards stiled JEROM of Prague, began to endeavour a reformation, preaching publicly against the supremacy, and other tenets of that church, whereby they brought over great part of the Bohemian nation to their opinions. Dr HUSS and JEROM were hereupon summoned by the Pope to the council of Constance, in the year 1414, whither they refused to go however, till they had obtained the Emperor's passport for their protection. Here they endeavoured to defend their new doctrines before the council, but not to their satisfaction it seems; for the two reformers were convicted of teaching thirty articles, either heretical, seditious, or scandalous. They were condemned also as hereticks, and defenders of WICKLIFFE'S doctrines; and, after being degraded, were delivered over to the secular powers to be burnt, notwithstanding the Emperor's promised protection. HUSS, after pronouncing the sentence, appealed first to God, and afterwards addressing himself to the Emperor SIGISMUND, reproached him for his breach of faith; to which 'tis said, the Emperor gave no answer, being himself dissatisfied with the sentence, though obliged to humour the clergy in this particular. JEROM it seems retracted his pretended heresies, in order to save his life; but relapsing into the same opinions again, was also condemned, and afterwards burnt at the stake.

The deaths of these two reformers, so treacherously deprived of their lives, soon occasioned an insurrection among their Bohemian disciples, and upon their King WENCESLAUS'S publishing a proclamation, prohibiting the Hussites to assemble for divine service, the people rose, and having forced the town-house at Prague, threw the burgo-masters out of the windows, with all those who assisted at the proclamation, while the mob without received them on their pikes and halberts in the streets, whereby many of the citizens were killed or wounded. They proceeded afterwards to demolish many churches and monasteries, with which Bohemia abounded beyond any other nation, the King WENCESLAUS not being able to prevent it; whereupon he sent to his brother, the Emperor SIGISMUND, for a reinforcement of troops, and retired from Prague to a castle in the neighbourhood for his security: but the Emperor being at this time engaged in a war with

the Turks, neglected to send any succours into Bohemia.

The following year, anno 1419, King WENCESLAUS died, and his brother, the Emperor SIGISMUND, succeeded to the crown of Bohemia: but the war with the Turks still continuing, he contented himself with deputing some of his ministers to take possession of that kingdom, which increased the disaffection of the Bohemians, and made the party of the Hussites more formidable than ever. Their leader ZISCA, was a Bohemian nobleman, under whose conduct they performed many surprizing actions. He assembled an army of forty thousand men, and possessed himself of the city and castle of Prague, and many other fortresses, while the Emperor's ministers were glad to accept of a cessation of arms, being unable to make any considerable opposition. The Hussites exercised their greatest severities against the clergy, whom they abused and plundered most unmercifully, sparing neither their churches or altars.

These outrages obliged the Emperor to summon most of the princes of the empire to his assistance, and to march into Bohemia at the head of a prodigious army; where, after various success for some time, ZISCA compelled the Emperor to retire out of the country again, and leave it entirely at his devotion. But what makes this transaction the more remarkable is, that ZISCA, who was so named from having but one eye, had lost the other in an engagement with the Emperor's forces, and blind as he was, afterwards defeated his enemies in many considerable battles. But as something may be here ascribed to the name and presence of ZISCA in the army, a great deal of his success must however certainly be owing to the other generals, who had their eyes in their heads, for the sight is in no case so necessary as in a battle: but however that was, the continual victories of the Hussites inclined the Emperor at length to treat with them, and to offer ZISCA honourable terms; but as he was upon the way to the imperial court, in order to put a conclusion to the treaty, he died of the plague upon the road in the year 1427. Upon the death of ZISCA, the Emperor renewed the war with the Bohemians again, but with no better success than before. The Hussites defeated his forces from time to time, being always victorious, till about the year 1435, when they crumbled into so many sects and parties, that their divisions soon affected what it was not in the power of the whole Empire to compel them to. But the grand dispute was between the nobility and commonalty, the one refusing to be governed or directed by the other, their feuds arose to that height, that they came to a pitched battle, wherein the nobility obtained the victory; after which they sent to the Emperor, to invite him to come and take possession of the kingdom; and the Emperor so managed the matter upon the treaty, that he persuaded the Barons to be reconciled to the church of Rome; which point being gained, the common people were obliged either to renounce their principles, or fly their country; so that Popery, in a short time, became as firmly established as ever. Indeed the Bohemian nobility did obtain for the present, that they should receive the communion in both kinds; but the clergy were no sooner restored to the exercise of their functions, but either by persuasion or force, they compelled the Bohemians to give up this also. So that after a thirty years

CHAP.  
V.

CHAP. V. years war in defence of their religion, they relinquished all they had been contending for. Some of them, 'tis true, rather than comply with the church of Rome, retired to the woods and mountains in Moravia and Silesia, where they were afterwards joined by the Waldenses, and formed a considerable body. At the Reformation, the Bohemians in general embraced CALVIN'S doctrine, which made the Lutherans, as well as the Papists, their enemies; and the Bohemians having elected Prince FREDERICK V, Prince Palatine of the Rhine, for their King, in prejudice of the Emperor FERDINAND II, whom they had formerly recognized, as has been related already, they were fallen upon by the Emperor, and the Lutheran Princes of Germany at once. The Palatine's forces were defeated near Prague, anno 1620, Popery was again established in this kingdom, and no other denomination of Christians has been tolerated there ever since, except in the province of Silesia, where the victorious Swedes obtained for them the free exercise of their religion, and many other privileges, which have however been frequently infringed.

Dr NICHOLSON, speaking of the religion of Moravia, a province of Bohemia, seems to ascribe the misfortunes of the reformed churches on that side, chiefly to that unbounded toleration and liberty of conscience they were indulged in. As soon, says he, as the synod of St BRINN, which was assembled in the year 1608, to settle the affairs of religion, had made an edict, That every man should have liberty to regulate his faith according

to the measure of faith which God had given him; CHAP. V. each cobbler set up for a preacher of the word, and expounder of the scriptures. Whereupon, the church was immediately confounded and broken into an irreconcilable medley and hotchpotch of sects and schismaticks, viz. Hussites, Picards, Anabaptists, Arians, Flaccians, Trinitarians, Photinians, Lutherans, Calvinists, Dulcians, Lugentians, &c. So that fourteen several conventicles of different persuasions were assembled sometimes in one city, each of them asserting peculiar doctrines and tenets of their own, and denying all manner of communion in church-ordinances with the other thirteen. And what could be expected from this anarchy in the Reformation, but the re-establishment of Popery, which accordingly happened?

As to the rise of the Picards, one of the sects abovementioned, we have the following account of them; viz. That one PICARDUS, a Flemming, travelling into Bohemia, and pretending to the like state of Perfection as ADAM enjoyed, drew multitudes of people after him, who from the founder of their sect were called Picards. They pretended to have no regard to marriage, and lived in an island to which they gave the name of Paradise, perfectly naked, without a rag of clothing. But the famous ZISCA abovementioned, hearing of them, disturbed their tranquillity, and invading their island, put most of them to the sword; but their sect however met with encouragement in Germany, Bohemia, and other kingdoms many years after.

# THE PRESENT STATE OF HUNGARY.

## CHAP. I.

*Treats of the name, situation, and extent of this kingdom; and of the air, lakes, rivers, and mountains.*

CHAP.  
I.  
The name.

**H**UNGARY, part of the antient Pannonia, received it's modern name from the Huns, a Scythian nation, who planted themselves here about the III<sup>d</sup> Century; but Pannonia was of a larger extent than Hungary, comprehending besides part of the modern Hungary, the provinces of Servia, Bosnia, Sclavonia, part of Austria, Stiria, Carinthia, Croatia, and Carniola.

Situation  
and ex-  
tent.

The modern Hungary is bounded by the Crapack, or Carpathian mountains, which divide it from Poland on the north: by Transilvania and Wallachia towards the east: by the river Drave, which separates it from Sclavonia on the south: and by Stiria, Austria, and Moravia, towards the west: extending from forty-five degrees thirty minutes, to the forty-ninth degree of north latitude, and from the sixteenth to the twenty-second degree of longitude, reckoning from the meridian of London.

The air.

The air of Hungary is very unhealthful, especially to foreigners; which is thought to proceed in part from the sudden alteration of the weather; the days being excessive hot, and the nights intolerably cold in summer. It has been called *Cemiterium Germania*, from the great mortality which usually happens among the German forces when they take the field. The nauseous vapours which arise out of this boggy and sulphureous soil, are looked upon to be another great cause of this unhealthfulness: but these noxious exhalations are not so common towards the north of Hungary, and along the banks of the Teyffe, as they are in the south, and near the Danube.

Lakes.

This country, tho' it lies at some distance from the sea, is well watered by lakes and rivers. The most considerable lakes are, 1. The lake Balaton, or Platsee, about forty miles in length, lying on the west side of Hungary, between the Drave and the Danube. 2. The New Fidelfee, about twenty-eight miles long, lying a little to the south-west of the island of Schutz.

Rivers.

The principal Hungarian rivers are first, the Danube, which entering Hungary on the west side,

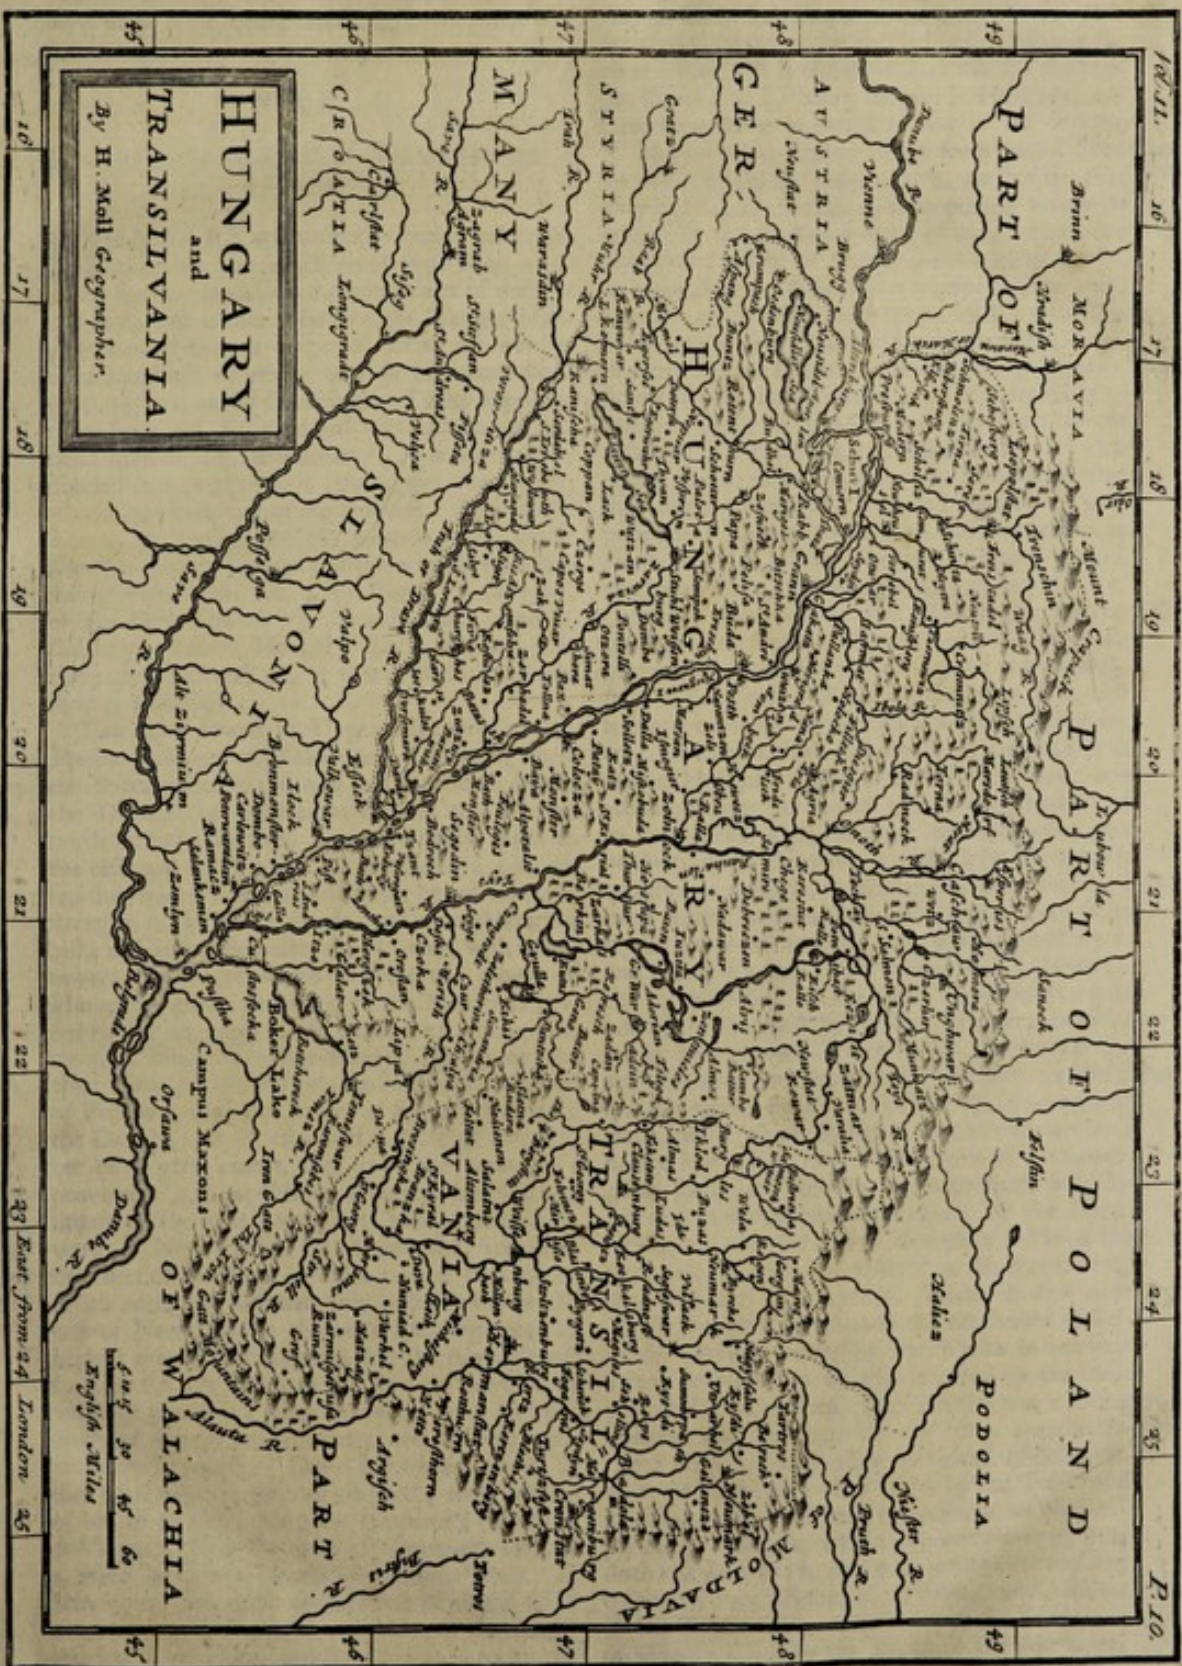

takes it's course to the south-east as far as Belgrade, running near three hundred miles through this country, and forming several considerable islands, the largest of which is Schutz, a little below Pressburg. 2. The Tibiscus, or Teyffe, which rising at the foot of the Carpathian mountains, takes it's course first to the westward, and having passed by Tockay, turns to the southward, and falls into the Danube, over-against Salankemen. 3. The Drave, which entering Hungary on the west, runs almost directly east, till it falls into the Danube, a little below the town of Esbeck. 4. The Raab, which rising in Stiria, enters the west side of Hungary; and taking it's course to the north-east, falls into the Danube near Komorra. 5. The river Gran, which rises in the Carpathian mountains; and running to the southward, falls into the Danube, near the city of Gran. 6. The Waag, which rises also in the north of Hungary, and discharges itself into the Danube, a little above Komorra.

These rivers are all of them well stocked with fish, especially the Teyffe, a thousand carps here having been bought for the value of a crown; and in some places fish are so plentiful, that they feed their hogs with them. This prolific quality in the Hungarian rivers is ascribed to the hot exhalations which arise every where out of that sulphureous soil. And now we are speaking of the Hungarian waters, the many salutary hot baths this country abounds with, must not be omitted; tho' I shall treat more particularly of them when I come to describe Buda, and other cities famous for their baths. But besides these, there are several fountains of wonderful qualities: among which, a spring of vitriol water near Schmolnitz, which in a short time turns plates of iron into copper. Other waters there are, which if an animal drink of them it is immediate death.

The Crapack, or Carpathian hills, are the most considerable mountains in this country, under which general name are comprehended all those hills which separate this kingdom from Poland, Moravia,

CHAP.  
I.

**CHAP. I.** Moravia, Silesia, and some part of Austria. The people who live near it give it different names, according to the countries, or towns it passes by, as Kalemberg, Dulsberg, Delmberg, &c. The country along the Danube from Presburg to Belgrade is almost one continued plain; being a tract of near three hundred miles; and there are besides many other large and fruitful plains in Hungary, very little of it being taken up with woods or mountains.

## CHAP. II.

*Treats of the provinces, chief towns, and mines of Hungary.*

**H**UNGARY was antiently divided into counties, but the exact number of them is not easily learnt, much less the boundaries of them at this day; nor is this to be thought strange, Hungary having been a perpetual scene of war for some hundreds of years; and the provinces changing masters, as the Christians or Turks happened to be successful, little regard was had to the antient division of the country. It is now usually divided into two parts, 1. the Upper, or Larger, which lies north-east of the Danube. And 2. the Lower, or Lesser, on the south-west side of the Danube. Upper Hungary is again subdivided into four governments, viz. 1. Presburg. 2. Bergstet, or the Berg Towns. 3. New-Hausel. And 4. Caschaw. Lower Hungary also is divided into three governments, viz. 1. that of Buda. 2. Raab. And 3. Canisia.

The chief towns in Upper Hungary are, 1. **Upper Hungary.** Presburg, the capital of the whole kingdom, where the states assemble; situate on the north side of the Danube, in forty-eight degrees odd minutes north latitude, between forty and fifty miles to the eastward of Vienna. It stands in a pleasant fruitful country, and is well built, but of no great strength. The castle stands upon a neighbouring hill, and is fortified after the old way, with round towers; in one of which is kept the crown of Hungary, which, according to tradition, was presented by an angel to St STEPHEN, their first christian king. 2. **New-Hausel.** situate on the river Nitrach, about thirty miles to the eastward of Presburg, and ten miles to the northward of the Danube. It is esteemed a place of strength, but of no great extent, tho' it be the capital of a province. 3. **Leopoldstat.** a regular fortification, situate on the river Vagus, forty miles to the northward of New-Hausel. 4. **Chremnitz,** reckoned the chief of the Berg, or mine towns, on account of it's antiquity, is situate fifty miles to the north-east of New-Hausel: the castle standing upon the highest ground in Hungary; but the town is most famous for it's gold mine, said to have been wrought in above a thousand years. It is an hundred and seventy fathoms deep, and the vein runs ten miles in length. There have been found in this mine pieces of pure virgin gold; some whereof are to be seen among the Emperor's curiosities at Vienna. Near the town of Chremnitz also, is a mine of vitriol fourscore fathoms deep. 6. **Schemnitz,** the most considerable of all the seven mine towns, is situate twenty miles to the southward of Chremnitz, and stands upon a rock, the buildings generally good, but the streets uneven. The air is very unhealthful, and the country barren, but the silver mines notwithstanding make it pretty much resorted to. The richest of these

mines are two called the Trinity, and a third called the Windschat. The ore is rich, and most of it contains some gold, which they separate by melting the silver, and afterwards grinding it, and dissolving it in aqua fortis, made of the vitriol which comes from Chremnitz, wherein the gold subsides. These mines also, afford crystals, amethysts, and vitriol naturally crystallized. 7. **Newfol.** or **Beftricia,** situate ten miles to the northward of Chremnitz, at the foot of a hill on the river Gran. It is chiefly remarkable for the copper mines near it, being the best in Hungary, and sometimes silver is extracted out of the copper. 8. **Hern Grunt,** situate about seven miles from Newfol, where the copper mines are so rich, that they yield from twenty to sixty pounds weight of copper in an hundred weight of ore. There are also several kinds of vitriol found in these mines, as white, green, blue, and a transparent red; and a green earth called berg grun, used in painting. Here are also two springs of vitriolate water, which in fourteen days turn iron into copper. 9. **Esperies,** situate on the river Tarkall, near the frontiers of Poland, about an hundred and fifty miles to the eastward of Presburg, remarkable for it's salt mines, in one of which, the veins are so large, that they dig out pieces of a thousand pound weight of pure salt. Near this place also, are two poisonous fountains, the waters whereof, kill any animal that tastes them, and are therefore walled up. 10. **Caschaw,** situate on the river Tarkall, or Taraza, twenty miles south of Esperies, a royal free town governed by the Emperor's deputy, which occasions a great resort of people of quality to it, and is become one of the best built towns in the country, notwithstanding the air is as unhealthful as any in Hungary. Their wine is also bad, and occasions many distempers; but being transported to Poland and other countries, in which great part of the trade of this place consists, loses it's noxious qualities. 11. **Agria,** or **Erlaw,** situate on the small river Agria, in the middle of Hungary, sixty miles to the north-east of Buda, is a well-fortified town, and a Bishop's see. The castle, which stands on the opposite side of the river, has been esteemed one of the strongest fortresses in Hungary, but was taken and retaken several times in the former wars between the Turks and Christians. 12. **Pest,** a large town, situate on the Danube, over-against Buda, with which it has a communication by a bridge half a mile long. It is built of a quadrangular form, and affords a fine prospect at a distance. After the taking of Buda by the Imperialists, in the year 1686, this place followed the same fate, and was surrendered to the Emperor by the Turks. 13. **Segedin,** situate on the river Teyffe, about sixty miles to the northward of Belgrade. It was taken by the Turks in the year 1552, and retaken by the Imperialists the same year Buda was retaken. 14. **Temefwaer,** a strong frontier town, situate on the river Temes, between forty and fifty miles north-east of Belgrade, taken and retaken several times by the Turks and Christians; but has been in possession of the Imperialists, with the whole country about it, ever since the year 1718, and since confirmed to them by treaty. 15. **Zolnock,** a strong town, situate on the Teyffe, about sixty miles to the northward of Segedin, taken by the Turks in the year 1552, and recovered by the Imperialists in the year 1685. 16. **Montgatz,** situate near the borders of Poland, about fifty miles south-east of Esperies. It was formerly accounted impregnable, being built upon a steep

CHAP. II.

a steep rock, and consisting of three castles, one above another, the uppermost commanding those beneath, each of them encompassed with a large ditch, and the whole surrounded by a morass. It was a great while obstinately defended by the Princess RAGOTSKY, wife of Count TERRY, against all the power of the Imperialists; but the enemy continuing the blockade for some years, she was at length forced to surrender in the year 1688, for want of provisions. 17. Ungvár, situated on the river Ungh, at the foot of the Carpathian mountains, near the frontiers of Poland, about forty miles to the eastward of Esperies, by some supposed to have communicated its name to the whole kingdom. 18. Tockay, situate in a plain, at the confluence of the Teyssé and Bodrack, thirty miles to the eastward of Agria, famous for its excellent wine, of which they transport great quantities to Poland.

Lower Hungary. Buda.

Baths.

In the Lower Hungary, the chief towns are, 1. Buda, formerly the capital of the kingdom, situate in 47 degrees 40 minutes north latitude, on the south side of the Danube, ninety miles south-east of Presburg. The city lies on the declivity of a hill, on the top whereof the castle stands, and is one of the strongest fortresses in Hungary, large and populous, and a place of good trade. The Imperialists took it by storm in the year 1686, after a siege of ten weeks. The Duke of Lorrain commanded the siege; and besides the German forces, was attended by many noble volunteers from most kingdoms in Europe, and particularly from England, some of whom have since proved the greatest generals in Europe. The natural baths of Buda, says Dr BROWN, who was there when the Turks were in possession of it, are the noblest in Europe; not only in respect of the large and hot springs, but in the magnificence of the buildings. Eight of these baths the doctor informs us he had an opportunity of viewing; the principal whereof are, 1. That called the bath of the green pillars, the water whereof is hot, but tolerable without the addition of cold water. It is impregnated with a petrifying juice, which discovers itself on the sides of the bath, upon the spout, and other places, and makes a grey stone. The exhalations of the bath reverberated by the cupola, form long stones like iceicles, which hang down from the capitals of the pillars and irons which extend from one column to another, as is observed in some other subterraneous grotto's. The bath is of a round form, set about with large pillars supporting a cupola, which hath openings to let out the steams of the bath, and yet the whole room continues to be a hot stove. 2. The bath of Velibey, the noblest in Buda, which hath a strong sulphureous smell, and a petrifying juice, and is so hot that it requires a mixture of cold water to make it tolerable. The antichamber is very large, the bathing-room capacious and high arched, and adorned with five cupola's; one a very fair one over the great round bath in the middle, and one less at each of the four corners, where are bathing rooms for private uses. Twelve pillars support the great cupola, between eight of which are fountains of hot water, and between the others are places to sit down, where the barbers and servants of the bath attend; and in each of these places are two cisterns of free stone, into which they let hot water and cold, to be mixed as every one likes. It is generally observed, that the Turks are in nothing more neat and curious than in their baths; but when these places fall into the hands of the

Christians they are pretty much neglected; so that it must not be expected that the bagnio's of Buda are kept in that exact order they were when Dr BROWN was there, and the place was in the possession of the Mahometans. On the other hand, the Christians much improve their houses and private buildings, which the Turks altogether neglect, suffering the cities and towns under their government to run to ruin. When we have seen their temples, their bagnio's, and caravansera's, there is very little else worth our notice in their greatest cities. 2. Gran, the ancient Strigonium, is situate on the south side of the Danube, over-against Barchan, sixty miles south-east of Presburg, and thirty north-west of Buda; the see of an archbishop, who is primate of the kingdom. The city is divided into two parts, viz. the upper and lower city; the upper being built on the side of a hill, and the other along the banks of the Danube. The most considerable public buildings are the cathedral dedicated to St STEPHEN, the archbishop's palace, and the castle. The town in general is well built and tolerably large, and is now in the possession of the Imperialists, as all the rest of the towns in Hungary are. 3. Komorra, situate at the east end of the island of Schutz, forty miles to the eastward of Presburg. It stands in a pleasant champaign country, almost surrounded by the rivers Danube and Waag, and has sustained many fruitless attacks by the Turks, when they were masters of the eastern part of Hungary. 4. Raab, a well fortified little city, and a bishop's see, situate on the southern branch of the Danube, that forms the island of Schutz. It stands about twenty miles south of Komorra, and has been in possession of the Imperialists ever since the year 1606. 5. Alba Regalis, or Stul Wieselberg, situate on the river Zavitz, in an inaccessible morass, about forty miles to the southward of Gran. Here the Hungarian Kings were crowned and buried, till it was taken by the Turks in 1543. It has been in the possession of the Imperialists ever since the year 1688. These are the principal cities of Hungary, the rest will be seen in the map of the country.

CHAP. II.

## CHAP. III.

*Treats of the genius and temper, persons and habits of the Hungarians; of their manner of travelling, and noble bridges.*

THE ancient Hungarians met with much the same character from those who were then esteemed the polite part of the world, as people generally do now on our first acquaintance with them. There is scarce an instance of one nation giving another a better title than that of barbarous, with whom they have had but little conversation. Thus the nations who had the good fortune to receive Christianity before the Huns, tell us, that they were a savage people, wholly strangers to commerce and conversation, and used to cut and disfigure the faces of their children to make them appear terrible; so that they had no more the features of men, than images carved on the publick buildings, which had suffered by the injuries of the weather. That they were bred up so hardily as not to stand in need of fire, and eat their meat without dressing. That they lived wild in the woods, having neither house, cottage, or hut to screen them from the weather; and their cloathing was of the skins of wild beasts. That they neither manured

The genius and temper of the Hungarians.

CHAP. III. or planted their fields, or continued long in any one place, but rambl'd from one side of the country to the other. That they had no sense of morality, or of the nature of good and evil; nor were ever observed to exercise one act of religion. This is the character some zealous Christians have given us of the Pagan Huns. They seem loth to allow that any people out of the pale of the church, can be endowed with any good qualities; intimating that the rest of the world are bears and wolves, and can only be reduced from their fierceness and barbarity by embracing Christianity; which may in some measure be true: but that ever there was such an abandoned race on the face of the earth, as they have made the antient Huns to be, I very much question.

The characters travellers give us of the modern Hungarians also is oddly compounded. They tell us, they are a brave warlike people, having stood as a barrier between Christendom and Turkey for upwards of two hundred years. That they are wise and politick, and zealous asserters of the Christian faith. On the other hand, they are charged with unfaithfulness, and breach of leagues, when they find it to their advantage, which other christian Kings and States are often guilty of. That they are an idle, slothful generation, which the abundant fruitfulness of the country inclines them to; as it does to excess in eating and drinking, even in the opinion of the Germans, who are not the most abstemious: but their most flagrant vice is said to be rebellion, while others look upon these frequent insurrections, as only noble struggles for their liberties.

Persons and habits.

The Hungarians are of a good stature and proportion, and have tolerable complexions, wearing fur caps on their heads, close-bodied coats girt about them with a sash, and over all they have their favourite cloak or mantle, which comes no lower than the hips, and is so contrived to be buckled under one arm, that the right-hand is always at liberty. The colours they most affect in their clothes are red, blue, or green. Young gentlemen have usually feathers in their caps, a piece of pride said to be taught them by the Turks. The women of fashion, as well as men, pretty much imitate the French mode; but neither the one or the other will leave off the short cloak or mantle. The women also throw a veil over their faces when they go abroad. The men shave their beards, but leave whiskers on the upper lip. Besides a broad sword, the usual arms of an Hungarian, are an iron mace, with a round head furrowed, and the balta made in the form of a hatchet.

Their way of travelling.

Hungary being plentifully watered with fine rivers, the usual way of travelling in summer is by water, and where they have not this convenience, an open chariot drawn by two, three, or four horses abreast, carries the traveller over this flat country with great expedition. They have also a very fleet breed of horses for riding, and never dock their tails, which are looked on as a great ornament. The Hussars, or Hungarian troopers, whose pay is small, are very troublesome to travellers, robbing all they meet, where they can do it with any security. Nor are those numbers of sturdy gypsies that swarm in this country less dangerous, though they live in towns, and generally profess some handicraft trade. The wolves are another great disturbance on the road in the night time, especially where it happens to lie through a wood. And the dogs, when you ap-

VOL. II. NUMB. LII.

CHAP. III. proach a town upon the frontiers in the evening, come ready to devour a passenger, being turned out, it is said, on purpose to alarm the garrison, and prevent a surprize in the night time.

And now I am upon the head of travelling, I cannot omit mentioning the noble bridges that are to be met with in this country, particularly the bridge of Esseck, built over the river Drave, and the marshy grounds beyond it, being five miles long, and railed in with towers at every quarter of a mile's distance. This has been a pass much contended for in the Turkish wars, and occasioned many smart engagements to gain the possession of it. There lies also a bridge of boats of half a mile long, between Buda and Pest; and a third over the Danube, between Gran and Barcan: but the bridge built over the Danube twenty Hungarian miles from Belgrade, far surpassed all the rest, some of the ruins being visible at this day. It consisted of twenty piles of square stone, an hundred feet in height, the basis whereof contained sixty feet on every side of the square. The distance between every one of these piles or pillars, was an hundred and seventy feet, and joined together by arches, with this inscription, PROVIDENTIA AUG. VERE PONTIFICIS VIRTUS ROMANA QUID NON DOMAT? SUB JUGUM ECCE! RAPITURET DANUBIUS. And to perpetuate the memory of this bridge, many silver coins were stamped with this inscription, DANUBIUS.

There is no river in Europe, Dr BROWN observes, that has so many large well-peopled islands as the Danube. One he mentions a little below Buda, forty miles long, and containing many villages. Another at the confluence of the Danube and the Drave; but the island of Schutz, which extends from Presburg to Komorra, and is surrounded by the Danube, is much the most considerable for the strength of the towns upon it, the fruitfulness of the soil, and the number of the inhabitants; which, as I remember, was given to the great Prince EUGENE by the Emperor, as a reward of his services upon his success against the Turks in the last war.

#### CHAP. IV.

*Treats of the nature and produce of the soil: of their husbandry, cattle, and other animals; and of their manufactures.*

NO soil can be more fruitful than that of Hungary, where it is free from woods and mountains, and there are not many of these. Their bread-corn is good, and yet so plentiful that it is six times cheaper than with us. Their grapes are large and luscious, and their wines, particularly those of Tockay, admired beyond any in Europe. The Hungarians improve their arable grounds by burning them, and instead of barns, in the war-time they made use of caves to lay their grain in, to conceal it as much as possible from the soldiers, and continue to lay it up in the same manner still in some places. But nothing better shews the fruitfulness of this country, than that it was able to subsist such vast armies as it did for many years together during the Turkish wars.

Nor have they less plenty of cattle than of corn and wine, selling incredible numbers of oxen every year into Germany, and other neighbouring countries; and such abundance of deer, game, and wild fowl, are to be met with in their fields and forests, that none are restrained from taking them, even

Soil and husbandry.

Cattle, Game, &c. Fowl and fish.

CHAP.  
IV.

the peasants eat them as their ordinary food. The shoals of the best fresh-water fish in the world that are to be found in their lakes and rivers, I have already mentioned, such as pikes, perch, carp, &c. which are so numerous, that some have imagined if their waters were divided into three parts, one third would be fish. Besides the cattle already mentioned, they have a good breed of buffaloes, which serve them in ploughing and husbandry. Their breed of horses are fleet but not large, and therefore more used for riding than drawing heavy carriages.

## Manufactures and trade.

As to manufactures, I can't find they have any other than those of copper, and other hard wares; consequently their foreign trade is not very considerable: the exportation of their wines and cattle seem to be the best branches of it. That their trade is no greater, may be ascribed to several causes; as first, their being an inland country at a distance from the sea. By the Danube indeed, a very profitable navigation might be carried on to the coasts of the Black Sea, and even to the Mediterranean; but as the Turks are masters of the mouth of that river, nothing of that kind can be attempted at present: should the Emperor extend his conquests a little further, and make himself master of Wallachia and Bulgaria, the situation of Hungary would not lie much amiss for carrying on a trade between Asia and the German Empire: but what is the greatest discouragement to trade, is, that Hungary is looked upon only as a province, and the imperial ministry, far from consulting the good of the country, only rack and impoverish the people, to increase their master's revenue, and fill their own pockets; while they stop the mouths of the most popular Hungarian Lords with pensions or places.

## CHAP. V.

*Contains an abstract of the succession of their princes; and of their ancient and modern history; and treats of the constitution of their government; and of the forces and revenues of the kingdom.*

Hungary, like other countries, I find, was at first divided into several little independent principalities, which united at length under one head, for their mutual defence. And the person they chose to be their leader was usually stiled their Duke: most of the Hungarian writers relate, that the country was governed by fourteen of these Dukes successively, before the nation embraced Christianity; and that they exercised a sovereign jurisdiction over the people, though they did not assume the title of Kings. The last of these Dukes was GEYSA, who being converted about the year of Christ 1000, was baptized by St ADELBERT at Prague; and being old and infirm, with the consent of his people, resigned his government to his son STEPHEN: and their historians beginning with this Prince, give us the following table of their Kings.

1. STEPHEN, the son of Duke GEYSA, came to the crown about the year 1000.

2. PETER, STEPHEN's sister's son, succeeded to the crown, anno 1038; but being deposed by his subjects, reigned only four years, and was succeeded by,

3. ABAN, or OVAN, elected in the year 1042; but the people being no better pleased with this than their former monarch, assassinate him; after whom,

4. ANDREW, the brother of King STEPHEN, CHAP. V. ascended the throne, anno 1066; who, in his lifetime, procured his son SOLOMON to be proclaimed his successor; but was succeeded by his brother,

5. BELA, who procured his brother ANDREW to be murdered, anno 1071.

6. SOLOMON succeeded to the crown upon his uncle BELA's death, anno 1073; but GEYSA and LADISLAUS, the two sons of BELA, were admitted to be independent Princes in their respective provinces; and not contented with that, commenced a war against SOLOMON, in which he lost his life: whereupon,

7. GEYSA, the eldest son of BELA, ascended the throne, anno 1074, and was succeeded by his brother,

8. LADISLAUS, anno 1077; who for his services to the church, is chronicled for a saint in the Hungarian calendar. Having two nephews, the sons of his brother GEYSA, viz. BELA and COLOMAN, he gave his crown by will to BELA the youngest, obliging COLOMAN to be no favourer of the Christians; but BELA voluntarily resigned to his eldest brother,

9. COLOMAN succeeded to the crown, anno 1095; but to secure his possession, put out his brother BELA's eyes, and threw him into prison; he was succeeded by his son,

10. STEPHEN II, who ascended the throne anno 1114; but being soon weary of it, and retreating into a monastery, was succeeded by,

11. BELA the blind, who came to the crown, anno 1132, and was succeeded by his eldest son,

12. GEYSA, anno 1141; after whose death, his third son,

13. STEPHEN III, ascended the throne, anno 1161; to whom succeeded,

14. LADISLAUS, the second son of BELA the blind, anno 1172; and after him,

15. STEPHEN IV, fourth son of BELA, came to the crown, anno 1172; but was deposed within five months, and,

16. BELA III, the second son of GEYSA, was advanced to the throne, anno 1173.

17. EMERICK, King BELA's son, succeeded him, anno 1195; and was succeeded by,

18. LADISLAUS II, his only son, anno 1204; to whom succeeded,

19. ANDREW, the brother of EMERICK, anno 1205; to whom succeeded,

20. BELA IV, ANDREW's second son, anno 1235; to whom succeeded,

21. STEPHEN his fourth son, anno 1260; who was succeeded by his son,

22. LADISLAUS, anno 1272; who being murdered,

23. ANDREW, King STEPHEN's son, came to the crown, anno 1290; after whom,

24. WENCESLAUS, son to the King of Bohemia, was elected King, anno 1292; but his father finding the Hungarians a rebellious people, and continually inciting insurrections against him, after a reign of about six years re-called him. Whereupon,

25. OTHO Duke of Bavaria, was crowned King, anno 1305, by one of the factions, who with a great deal of difficulty maintaining himself on the throne about four years, was expelled the kingdom, and succeeded by,

26. CHARLES ROBERT, grandson of King STEPHEN V, anno 1310; who was a prosperous Prince; and subjected Bulgaria, Servia, Croatia, Dalmatia,

CHAP. V. Dalmatia, and many other principalities under his dominion; and was succeeded by his son,

27. LODOWICK, or LEWIS, *anno* 1342; who was also crowned King of Hungary and Poland.

28. MARY, the daughter of LODOWICK, succeeded him, *anno* 1382; but being very young, the administration was left in the hands of her mother, whose conduct being disagreeable to the Hungarians, they elected,

29. CHARLES, King of Naples, brother to King LODOWICK, *anno* 1383; who was murdered by an assassin hired by the mother of the late Queen for that end; after whose death,

30. SIGISMUND, afterwards Emperor of Germany, who had married Queen MARY, was advanced to the throne of Hungary, *anno* 1387.

31. ALBERT, Archduke of Austria, marrying the only daughter of the Emperor SIGISMUND, succeeded his father-in-law, not only in the empire, but in the kingdoms of Hungary and Bohemia, *anno* 1438; who leaving no issue, but the Empress big with child.

32. ULADISLAUS, brother to the King of Poland, usurped the throne of Hungary, *anno* 1440; after whose death,

33. LADISLAUS, posthumous son of the Emperor SIGISMUND, succeeded to the throne, being an infant of five years of age, *anno* 1444; the administration during his minority being committed to the famous JOHN HUNNIAD, who performed such memorable actions against the Turks. Upon the death of LADISLAUS,

34. MATTHIAS CORVINUS, the son of HUNNIAD, was elected King, *anno* 1458, in gratitude for his father's great services. This Prince built the famous library at Buda; and died, 'tis said, in a fit of anger; after whose death,

35. ULADISLAUS, King of Bohemia, was advanced to the crown of Hungary by the favour of the late Queen, *anno* 1460; after whose death,

36. LODOWICK, his son, succeeded him both in the kingdoms of Hungary and Bohemia, *anno* 1516. He was a brave warlike Prince; but venturing to engage SOLIMAN, Emperor of the Turks, with unequal numbers, was defeated, and falling into a morass, with his horse loaded with armour, perished there, not being found till some weeks after the battle. To him succeeded,

37. JOHN, Waywode of Transilvania, crowned King of Hungary, *anno* 1526; but driven from the throne by FERDINAND, brother to the Emperor CHARLES V, who had married ANNE, the sister of King LODOWICK: however, SOLIMAN, the Turkish Emperor, restored him to the throne again; but his rival being supported by the Emperor CHARLES V,

38. FERDINAND, Archduke of Austria, was crowned King of Hungary, *anno* 1527; being afterwards elected Emperor of Germany.

39. MAXIMILIAN, eldest son to the Emperor FERDINAND, was crowned King of the Romans, Hungary, and Bohemia, *anno* 1564; during his father's life-time, and after his death advanced to the imperial throne.

40. RODOLPH, succeeded his father, the Emperor MAXIMILIAN in the kingdom of Hungary, *anno* 1576; but was wheedled, or frightened, out of the kingdom of Hungary by his brother,

41. MATTHIAS, who ascended the throne, *anno* 1612; and was afterwards elected Emperor. He was a severe persecutor of the Protestants, which occasioned that insurrection in Bohemia, already mentioned in treating of that kingdom.

42. FERDINAND, Archduke of Austria, and grandson to FERDINAND I, succeeded MATTHIAS in the kingdom of Hungary, as well as in his other dominions, *anno* 1618.

43. FERDINAND III, succeeded his father in the kingdom of Hungary, as well as in the empire, *anno* 1625; after whose death,

44. FERDINAND IV, his son, came to the crown, *anno* 1647; to whom,

45. LEOPOLD, the son of FERDINAND, succeeded, *anno* 1658.

46. JOSEPH, son to the Emperor LEOPOLD, was crowned King of Hungary, *anno* 1688, in his father's life-time; and the crown entailed by the states upon the heirs of his body.

47. CHARLES, the late Emperor, brother of the Emperor JOSEPH, succeeded to the kingdom of Hungary, and all his other hereditary dominions, on the 17th of April, 1711.

Upon perusing this table, and the history of the Hungarian Kings, it appears that this crown has been at some times hereditary, and at others elective. That sometimes their Princes have acted arbitrarily, and at others been limited and restrained by the states. That there have been innumerable struggles between the crown and the states; the crown contending to increase its power and prerogatives, and the states to enlarge their privileges, and put limitations on the prerogative. 'Tis surprising to find how many of their Kings have been deposed or murdered either by factious subjects, or ambitious rivals. And as no body will say that their Kings could by their constitution legally oppress their subjects and invade their properties; so neither will any one sure affirm, that king-killing is part of the constitution of this, or any other kingdom. If the people indeed are vested with the supreme power, and kings are but their officers, and accountable to them, they will have some pretence for resisting and dethroning them; when they apprehend they act contrary to the good of the community; and may, without the imputation of parricide, do justice upon them, in the language of our regicides, that the rest of the Kings of the earth may hear, and fear, and do no more so wickedly. But as our republicans go upon that mistake, that Kings can have no legal authority but what is conferred on them by the majority of the people, and therefore their Princes are always accountable to the majority of the people; and since there is scarce any instance in the world that the majority of the people (the multitude) were ever consulted in the election of a monarch or supreme magistrate, their fancied power over their monarchs must be a mere chimæra; at least in all those countries where the supreme magistrate is not elected by a majority of the people; for if he received his authority from another hand, how is he accountable to them? unless it be said, that all people in the world have, and ever had, *jure divino*, an unalienable, undefeasible right to call their sovereign to account, depose, condemn, and execute him whenever they in their wisdoms conceive he does not promote the publick good. For should it be admitted they have such an authority, does not every one know how incapable the inferior part of mankind are of judging of the conduct of their Princes: and notwithstanding the specious pretences of maintaining the people's rights and privileges by insurrections, and attempts upon the throne, does it not usually appear, that some ambitious prince or nobleman is at the bottom of these conspiracies, and only flatters the rabble

CHAP.  
V.

rabble with the notion of their undoubted right to make and unmake Kings, till by their assistance the conspirators have got into the saddle, and obtained their ends, and then these noble patriots commonly laugh at the many-headed-beast that has advanced them, leaving the people to labour under greater burthens than they did before; or perhaps loading them with insupportable taxes to maintain their own possession, pretending that their establishment, and the people's happiness, are inseparable? But surely no nation has ever suffered more in these struggles, for power between the crown and the states, than the Hungarians; for while one side called in the Emperor, the other called in the Turk, to their assistance, and made their country a scene of war and bloodshed for upwards of two hundred years together, till in the end, the German Emperor has driven the Turks entirely out of Hungary, and reduced it to the form of a province. They have contended with their Princes about their rights and privileges, till the imperial eagle has decided the controversy, by devouring both, and left them only the shadow of their antient constitution. Their states, or dyet, assemble like the parliaments of France, for form sake, or rather to record the arbitrary decrees of the Emperor, and by signifying their consent to them, take off the odium of every destructive scheme from the court, and derive it on themselves. By which means probably, their chains are now so firmly riveted, that their slavery will be everlasting; unless another family should be elected to the imperial crown, and then they may possibly have another struggle for their dying liberties.

The elec-  
tion and  
coronation  
of the  
Hunga-  
rian  
Kings.

At the coronation of the Hungarian Kings, the people antiently used to assemble in the plain called Rakes, near Pest, (from whence a general assembly of the states is at this day called Rackets.) Here the bishops, the nobility, and the representatives of the several counties and cities having unanimously approved of the person proposed for their King, who was usually the next in succession, he was conducted to Stuhl-Wieffemburg, or Alba-Regalis, where he was presented to the people by the Palatine, who demanded three times whether they approved of the new-elected King; and having expressed their consent, he delivered a naked sword in the King's hand, which he brandished east, west, north, and south: then he was attended to the great church, where the Archbishop of Gran holding the regal robes in his hand, again demanded of the people whether they were satisfied with the King elect, and were willing to become his subjects; and receiving an answer in the affirmative, he proceeded to perform the usual rites observed at the coronation of their Kings; after which the prelates and nobility carried the arms, and other reliques of King STEPHEN I, before the new King, in a splendid procession to the palace. The crown of STEPHEN, their first King, is still preserved at Presburgh, with great veneration, or rather superstition; and no Prince is allowed to be duly crowned with any other crown. The Hungarians in general, believe that the fate of their nation depends on the careful preservation of it, and in all their calamities, took care to convey that to a place of security: nor have the Turks been less solicitous to make themselves masters of it, than the natives to preserve it, believing that the Hungarians would make no scruple of paying their allegiance to the Grand

Seignior, if he could once procure King STEPHEN'S crown to be set upon his head. The reason of this profound veneration for King STEPHEN'S crown has been already intimated, but I have since met with a more particular account of it, viz. that King STEPHEN having begun to propagate the Christian religion in his dominions, sent ASTRICUS, Bishop of Colocza, to Pope BENEDICT VII, desiring his holiness to confirm him in his kingdom, and send him a crown and other regal ornaments. MYSCHA, Duke of Poland, having sent an embassy to Rome at this time on the same account, and a crown being provided for him, the day before it was to be sent away, an angel appeared to the Pope, and directed him to send the crown designed for the Poles, to STEPHEN, King of Hungary; which was done accordingly: and the Hungarians, who believe this tradition equally with any article of their faith, give this antique relic almost divine adoration.

CHAP.  
V.

The person of the greatest authority next to the King, was the Palatine, or guardian of the kingdom, who arrived at that dignity by the election of the states. This officer had the first voice in the election of the King, was guardian to the infant Princes of the blood, had authority to assemble the states during an *interregnum*, to hear all petitions brought to the King, to confer with ambassadors and foreign ministers, and report their business to his majesty; and during a vacancy of the throne, to take the administration of the government into his hands.

The Pala-  
tine's  
power.

The Archbishop of Gran is the next great officer, being Primate, Pope's legate, and Chancellor of the kingdom; and presides in the assembly of the states, which is composed of the Bishops, nobility, representatives of royal cities, &c.

Archbi-  
shop of  
Gran.

The common people are vassals to their respective Lords, whose lands they live upon, whether they belong to the crown, to the clergy, the nobility, or gentry, every Lord of a manor is proprietor of the lands in his manor, as it was formerly with us, and the people who use them are his subjects, and receive justice in his courts, paying such rents and services as their Lord is pleased to impose upon them. But these, though much the majority of the kingdom, never had any share in the government, or the election of their Princes. It was indifferent to them, whether the King or the nobility prevailed, they always were slaves, and still are like to be so, having no liberties or properties but what are at the disposal of their respective Lords.

Condition  
of the  
common  
people.

The forces that this kingdom could and did raise, when they were governed by their native Princes, were very considerable, as appears by the opposition they constantly gave the Turks, particularly when the famous HUNNIADIES had the command of their armies. The Emperor at present raises what forces he pleases; but the revenue of the kingdom being computed at no more than an hundred and twenty thousand pounds, which arises chiefly from the mines and duties laid on cattle, and which perhaps is half of it taken up in paying the governors and great officers of the respective towns and provinces, and repairing the fortifications of the many garrison towns upon the frontiers, the forces maintained out of the proper revenue of Hungary, are far from being sufficient to defend them against the Turks, but they will always stand in need of the assistance of the Emperor's other hereditary countries; so that Hungary

Forces  
and re-  
venues.

CHAP. V. Hungary probably does not bear it's own charges at present, notwithstanding the various methods made use of by the imperial ministers, to improve the revenue. And here we may observe once for all, that many kingdoms which made a considerable figure, while they were governed by their own Princes, after they have become provinces to a foreign power, have scarce been able to maintain the charges of the civil government, but been a burthen to the Prince who has gained the dominion of them. The reason whereof I take to be, that the eye of the Prince being far removed, and the province oppressed and exhausted by rapacious officers and tax-gatherers, who regard the making their own fortunes more than the improvement of the country; it fares as it does with a gentleman's estate which lies at a distance from him, whose stewards and agents usually roll in money, while the estate yields the owner little or nothing. Another great disadvantage is, that where the interest of any province comes in competition with that which is the seat of the government, and the residence of the sovereign, the distant province must be sure to suffer.

But to return to the Hungarian forces. Their horse are denominated Hussars, and their foot Heydukes. Several regiments of the former served in Flanders in the late wars. Their horses are fleet and well managed, but of the smallest for troopers. The Hussars ride short, and rise in their stirrups when they make a stroke with their scimitars, to give the blow the greater force. But these troops are by no means equal to the English or Danish horse, whose weight alone will bear them down.

The Heydukes are very far from being good foot, compared with regular troops; but take them as an undisciplined militia, and few nations perhaps can produce a better. They still retain the Pyrrhical dance, with naked swords in their hands, brandishing them, and putting themselves into an hundred terrible postures, advancing, retreating, turning and winding about with great activity, and singing all the while to their own measures.

## CHAP. VI.

*Treats of the language, learning, and religion of the Hungarians.*

Language.

THERE is scarce any resemblance between the Hungarian language, and that of any other people, except the Hebrew, which is governed by points and accents, as this is; the least variation of an accent or vowel alters the sense of a word. This independency on other languages, makes it learnt with difficulty; and few foreigners attempt it: the natives therefore for the sake of commerce, and conversing with their neighbours, especially those of Poland, are bred up to have a tolerable understanding of the Latin tongue. There is scarce a peasant or mechanic in some parts of Hungary, but will be able to maintain a conversation in this language; I suppose in the same barbarous manner that Latin is spoken by the Dutch, who seldom trouble themselves about mood, tense, or concord.

Learning.

Notwithstanding the Hungarians do not want parts, it is observed that this country has produced but few men of learning, and that there are no considerable schools or universities in the country; the reason whereof is said to be, that Hun-

gary has been almost a perpetual scene of war. St JEROME and St MARTIN indeed, were natives of this country, but had their education elsewhere, as all those have of late years, who have applied themselves to letters; they resort either to the universities of Vienna, Prague, or Breslaw, for their education.

The antient inhabitants of this country, it is said, had scarce any devotion but what they paid to their sword, which they looked upon as the great preserver of their country, and the terror of their enemies.

The Christian religion was introduced here about the year 1000, by King STEPHEN, as has been taken notice of already. The Hussites of Bohemia propagated their opinions here in the XVth century; and in the XVIth, LUTHER'S doctrine prevailed: but they were like their neighbours of Bohemia, divided into a multitude of sects, some of them not easily defensible; however, all of them under the name of Protestants, generally joined the other malecontents and the Turks against the Emperor of Germany, their sovereign, and maintained a war against him for many years. In the late wars between the confederates and the French, they pretty much embarrassed the affairs of the confederacy under the conduct of Prince RAGOTSKI and BEREZINI, the Emperor being obliged to withdraw part of his troops from the confederate army, to make head against them. RAGOTSKI, though he had been so long the defender of the Protestant interest in Hungary, as he pretended, was perverted to Popery by the Jesuits in his declining years, while he resided in Turkey. By the last treaty of peace between the Emperor and the Grand Signior, in the year 1718, nothing was stipulated in favour of the Protestants and other malecontents; but on the contrary, the Turks engaged that neither RAGOTSKI, BEREZINI, Count FORGATZ, or any of their leaders, should be permitted to approach the frontiers of Hungary: so that the poor Protestants of that kingdom are now left entirely to the mercy of the Emperor, and have nothing to depend on but the intercession of the Princes of their communion to his Imperial Majesty.

Hungary is now entirely rescued out of the hands of the Turks, and Christianity the only religion professed in any of it's provinces; and might have been so much sooner, if the Protestants of Hungary, who were very numerous, had not had reason to apprehend greater severities from the Imperialists than from the Grand Signior. For such is the usage of the Roman Catholics, wherever they prevail, that they will admit of no other denomination of Christians to live amongst them: whereas the Turk, like the Dutch, allows liberty of conscience to all, only requiring of his subjects that are not of the established religion, a trifling tax, which is scarce felt by them. Walachia and Moldavia also had long since thrown off the Mahometan yoke, if they could have expected better quarter from the Christian Princes of the west, than they meet with from the Grand Signior: for being all of the Greek communion, they know from a multitude of precedents, that the first step that will be taken, after there putting themselves under the protection of any Christian power, will be to make them renounce the Greek church, and conform to the Latin, as the Venetians were attempting to do in the Morea; which gave a general disgust to that people, and occasioned the sudden loss of that province in the late war.

The reason the Emperor's arms make no greater progress in Turkey.

Another

CHAP.  
VI.

Another thing which puts a great stop to the progress of the Emperor's arms in Turkey, is, that the Princes of Europe are jealous of the growing greatness of the Austrian family; and think themselves safer, while Romania, Greece, and other Turkish provinces in Europe, are under the dominion of the Grand Seignior, than if they were in the possession of the Emperor, who would then be in a capacity of giving law to the rest of the Princes of Europe: and being master of Constantinople, the Black-Sea, and the Archipelago, would be able to put what limitations he pleased on the Turkey trade; and indeed, to ingross the whole to himself. What could have hindered the Imperialists, after the taking of Belgrade, and Temeswar, in the late war, from marching to the very gates of Constantinople, if the English and Dutch had not interposed their mediation; and the English, by the virtue of the services they had done, and were doing for his imperial Majesty in Italy, and Sicily, prevailed with him to be content with the countries he had gained the possession of? The Turks thought themselves infinitely obliged to the English and Dutch, for the services they did them in this particular; for they looked upon their European dominions to be in a very desperate condition. But the truth is, we had no desire to see the Imperialists approach nearer to the shores of the Black-Sea, and the Mediterranean.

As to the advancement of the Christian religion, and destroying the Mahometan empire; this, the Princes of Europe do not much concern themselves about at present. They might if they pleased, in one campaign, drive the Turks over the Hellespont: or the Emperor would do it alone, if they would sit still, and not attack his dominions on this side. But what, say they, shall we get by this, but hazard the raising another universal monarch, who will at best treat us as his tributaries? whereas, the Turks is already so low, that we have little to apprehend from him: on the contrary, he may be of great use to us if any aspiring monarch in Christendom should at-

tempt to enslave the rest. And it has been frequently said of late, that in case of a religious war in Europe, the Turk may probably prove a good Protestant, or at least an ally to the Protestants: nay, the Emperor has already complained, that some Protestant powers have endeavoured to incite the Grand Seignior, the great enemy of the Christian name, to invade his dominions: in which, say some, there may be no great hurt neither; for did not the French do the same when they were engaged in a war with the confederates? But to proceed to the Hungarian antiquities.

The Romans having been a great while masters of Hungary, there are every day found here Roman coins, medals, and other monuments of antiquity. It seems the Emperors AURELIAN, PROBUS, and GRATIAN, were born in Pannonia: and a great number of Latin inscriptions are still to be seen in the country. CUSPINIAN observes, that a better account may be collected of eight Emperors and Kings, from the medals and inscriptions which are found in Hungary, than was ever given us by the best historians. And ZAMOSIUS affirms, there are coins to be met with here, that give us the true portraiture of LYSIMACHUS, ALEXANDER the Great, PHILIP of Macedon, DARIUS, and other antient heroes. Near the town of Deva, NATALIS COMES relates, that the peasants found a great quantity of these antient medals of gold, which were discovered by a sudden torrent; each of these, to the number of many thousands, weighed two or three crowns a-piece, and had on one side, the image of LYSIMACHUS, and on the reverse, VICTORIA. And with these medals, were found a golden serpent, it being a custom among the antients to bury a serpent with their hidden treasures, signifying thereby a faithful keeper.

The arms of ATTILA, the Hun, once sovereign of this country, are said to have been Gules, a Falcon displayed, Or, membered and crowned Argent. But the arms of the kingdom at this time, are barren of eight Gules and Argent.

THE

# THE PRESENT STATE OF TRANSILVANIA.

## CHAP. I.

*Treats of the name, situation, and extent of Transilvania; and of the air, springs, rivers, and mountains.*

### CHAP. I.

The name.

**T**RANSILVANIA, part of the antient Dacia, was so called by the Romans, from it's being situated beyond those forests which separate it from Hungary and Walachia. It is called also by the natives Erdely, or Ardeli, which in their language, signifies a wood, or forest; and by the Germans, Sieben Burgen, alluding to the seven fortresses, or strong places, which were erected in different parts of the country, by the antient Pannonians, to keep the inhabitants in subjection.

Bounds and extent.

It is bounded by the Crapack, or Carpathian mountains, which divide it from Poland towards the north; by Moldavia towards the east, from which it is also separated by a long ridge of hills; by Walachia and part of Hungary on the south, and by Hungary towards the west: extending from forty-five degrees odd minutes, to forty-eight degrees north latitude, and from the twenty-second to the twenty-fifth degree of longitude, reckoning from the meridian of London: being about forty leagues in length from north to south, and about as many from east to west.

The air.

The air is excessive hot in summer, the country being surrounded by woods and mountains; but not quite so unhealthful as in Hungary. Their springs are unwholsome, which is said to proceed from their passing through a sulphureous soil. The principal rivers are, 1. The Alt, or Atlanta, which rises in the Carpathian mountains, and falls into the Danube; being by the last peace made the boundary between the German and Ottoman empires on the north side of the Danube. 2. The Marosch, or Merish, which arises also in the Crapack mountains, and falls into the Teyffe. 3. The river Samos, which rising near Clausen-berg, takes it's course to the north-west, and having passed near Tockay in Hungary, falls into the Teyffe not many leagues below it. Besides the mountains already mentioned on the confines of this country, there are several other hills of less note, covered with woods in the middle of the country.

Springs, rivers, and mountains.

### CHAP. II.

### CHAP. II.

*Treats of the provinces and chief towns in Transilvania.*

**I**N this country inhabit four several people, very different in their original, as well as in their language, laws, and customs: but all united under one Prince. The first stile themselves Saxons; supposed to be a colony of the antient Transilvanians, or Dacians, who are possessed of the province called Sieben Burgen, or Seven Towns, containing near two thirds of the country. 2. The Siculi, the posterity of the Huns, who inhabit the north-east, near the Crapack mountains. 3. The Hungarians, who reside towards the confines of Hungary and Walachia. And, 4. The Cingars, or Gypsies, who pitch their tents all over the country; a sort of licensed thieves and pick-pockets, who having done some service to a Transilvanian Prince, obtained extraordinary privileges; and pretend some of them to be descended from the Transilvanian Waiwodes: But they have this to recommend them beyond our vagrants of the same kind, that they will often work hard, especially as smiths and tinkers, and procure a living that way when fortune-telling grows dull.

Provinces and chief towns, inhabited by four different nations.

That part of the country inhabited by the Saxons, is subdivided into five counties, viz. 1. Altland. 2. Landvordenwald. 3. Bruckland. 4. Veinland. And, 5. Nosnerland. But the particular bounds of these counties I don't find any where described, and therefore must content myself with enquiring into the situation of their chief towns. And, 1. Hermanstat, the capital of Transilvania, is situate in the middle of a large plain on the banks of the little river Cibin, in the latitude of forty-six degrees odd minutes, about fourscore miles north-east of Temeswaer. It was antiently the seat of their Princes, as it is now of the governor of the province; and is the see of a Bishop, suffragan to the Archbishop of Colocza in Hungary. The place is esteemed strong, and the houses well built; the streets broad enough to admit of canals in

Saxon part.

Hermanstat.

## CHAPTER II.

in the middle of them, which are filled by the neighbouring river. The courts of judicature for the Saxons are held here; and they have a pretty good trade in cloth and mead. The air is unhealthful; but the reigning distemper is the gout, from which few are free; said to proceed from a particular sort of wine made hereabouts. 2. Cronstat, or Corona, situate about fifty miles to the north-east of Hermanstat, is pleasantly situated in the midst of vineyards; and tolerably well fortified. The citizens are all Saxons, without the least mixture of Hungarians, or any other nation; so that here their language is spoken in the greatest purity. 3. Fogaras, a small city on the river Atlanta, twenty-five miles to the westward of Cronstat. 4. Segeswaer, or Schesberg, situate on the banks of the river Cockle, thirty miles to the northward of Hermanstat, usually compared to Buda; one part of it lying on the side of a hill, and the other on the banks of the river. 5. Megies, situate on the river Cockle, seventeen miles south-west of Segeswaer, in a plain full of vineyards, from whence the country is called Wine Land. 6. Nosenstat, or Bistricia, situate near the Crapack mountains, fourscore miles to the northward of Hermanstat; four miles from whence lie the gold mines of Rodna. 7. Clausenburg, *olim* Claudiopolis, situate on the river Samos, fifty miles north-west of Hermanstat; a large populous place where the states of Transilvania used to meet.

The division inhabited by the Hungarians, contains five counties, viz. 1. Alba Julia. 2. Huniad. 3. Thorda. 4. Dohoka. And, 5. Zatmar. The chief towns whereof are, 1. Alba Julia, called by the Germans Weissenburg, situate on the river Lompay, twenty-five miles west of Hermanstadt. It received its name from JULIA AUGUSTA, mother of MARCUS AURELIUS ANTONINUS PIUS: and was the capital city of the Kings of Dacia, and at that time, twenty miles in circumference. 2. Deva, situate twenty-eight miles south of Weissenburg; remarkable for its excellent wines, and for the pass near it through the iron gate mountains, formerly of great consequence, till the imperial frontier was extended beyond it by the last peace.

The Si-  
culi. The country of the Siculi is situated on the north-east part of Transilvania; and contains seven counties, viz. 1. Markozceck. 2. Girgio. 3. Utvarthel. 4. Chick. 5. Kifdi. 6. Orbay. 7. Schepfi. Their capital towns being of the same names; but do not seem worth a particular description.

### CHAP. III.

*Treats of the nature of the soil, corn, fruits, minerals, cattle, trade, and manufactures of the Transilvanians; and of their habits and customs.*

The soil. **T**HE soil of Transilvania is exceeding fruitful: the wheat esteemed the best in Europe; and so plentiful, that the peasants eat no other bread: barley does not suit their soil so well, and therefore they brew little beer; but that defect is supplied with plenty of good wine, inferior only to that of Hungary. In their meadows and pastures they feed vast herds of large oxen, which increase so upon them, that a fat ox may be purchased for the value of twenty shillings in the country, but driven to market into Austria, will yield twelve or fifteen pounds. They have also a good breed

Cattle.

of horses, very much esteemed by foreigners. Their woods afford plenty of bees and honey, with which they make a sort of mead, which is highly valued, mixing the honey with several other pleasant ingredients. Their forests abound with all kinds of venison, deer, wild boars, hares, &c. Their hares much larger than with us, and a more valuable fur. They have also wild horses of incredible swiftness, whose mains hang almost down to the ground. Some parts of the country are infested by wolves and bears, which run together in herds, and in hard weather; do great mischief among their cattle. But to conclude this head, says my author, the country is so well provided with all manner of necessaries and conveniences, that either the fields, woods, rivers, hills, or plains can afford, that there seems great reason for the antient draughts on TRAJAN's medals; whereon the goddess CERES was represented with a cornucopia in her right-hand, and in her left, a table with this inscription, *Abundantia Dacie*.

The Transilvanians have some mines of gold, and other metals in their mountains, but not so many as in Hungary. Their chief mines are either at Sculatti, or at Rimli Dominurditz, in the last of which there have been found large lumps of virgin gold, which has been coined without purifying; and gave occasion for striking the old Roman medal still to be met with, on which Dacia was represented by a goddess with a book open in her right-hand, wherein was written *Aur. pur.* or pure gold. Their best silver mines are near Offera and Radna, where are also several copper mines in which they sometimes meet with a vein of gold. There is plenty of steel at Cyck, and of iron at Thorosch and Huniad; and they frequently meet with brimstone and isinglass in their copper mines. They have also such quantities of rock salt in the county of Maromarus, that they export it to other countries.

The only manufacture besides those of copper, iron, and steel, is that of cloth, of which they do not export any great quantities. What they send abroad is chiefly fat cattle, wine, mead, rock salt, copper and iron wares; and a country so well stocked with all manner of provisions and necessaries, was it under the government of its own Prince, must make a tolerable figure in the world; but being a distant province belonging to the German Emperor, notwithstanding all these extraordinary advantages, Transilvania is scarce ever mentioned as part of Europe; and our people know less of it than of the remotest countries in the East or West-Indies.

The habits of the Saxons of Transylvania, are a waistcoat, over which they wear a short loose coat lined with fur: their breeches and stockings fit close to the leg and thigh, and are all of a piece; the heels of their shoes are made of a plate of iron; and on their heads they wear a kind of dragoon's cap lined with fur. By their drinking, says my author, one would think them related to the Saxons of Germany; for they never look upon themselves to be acquainted with a man till they have been drunk with him; and at a drinking match, while the musick plays, they keep time with their cups by striking them one against another.

They celebrate their funerals in much the same manner as the Irish do. Their women in a dismal howl, recite all the memorable passages in the life of the deceased; expressing by their tears, sighs, and groans the utmost despair and sorrow for their loss.

CHAP. III. As to the Hungarians who inhabit this country, I find nothing different in their manners, or habits, from those of Hungary: and the Siculi are chiefly taken notice of for their ridiculous pride, like the Welsh, they all pretend to be descended from some antient noble family: not a husbandman, or shepherd, but assumes a title of honour very unsuitable to the meanness of his fortune and employment. As to the Cingars, or Gypsies, who inhabit this country, these are a vagabond race, already described at large in treating of Egypt and other parts of Turkey.

## CHAP. IV.

*Contains an abstract of the antient and modern history of the Transilvanians, and the present state of religion there.*

History of Transilvania.

TRANSILVANIA, as has been observed, is only the western part of the antient Dacia, which comprehended Moldavia, and Walachia, (now tributary to the Turk, and described in Turkey) as well as Transilvania. LYSIMACHUS, one of ALEXANDER's generals, was the first who subdued this people, but has left us no account of their manners and customs, or form of government. The next time we hear of them, is from JULIUS CÆSAR, when they made frequent incursions into the Roman territories. CÆSAR repulsed their forces, and compelled them to become tributary to the Roman state during his administration; but in the reign of AUGUSTUS, they broke in upon the empire again; and LENTULUS being sent against them, fortified the southern banks of the Danube, as the best means to prevent their incursions for the future. The Emperor TRAJAN defeated their last King DECEBALUS, who threw himself upon his sword on the loss of the battle; and his country was reduced to the form of a province: but the Dacians afterwards making frequent insurrections, the Emperor AURELIAN transplanted the Roman colonies, and the civilized natives to the southern side of the Danube, about Bulgaria and Servia; from whence that country obtained the name of New Dacia. Old Dacia, of which Transilvania was part, being thus deserted by the Romans, the best part of the natives was subdued by the Goths, who kept possession of it till they were driven over the Danube by the Huns, who became lords of Transilvania, and Hungary, much about the same time. STEPHEN, the first King of Hungary, subdued Transilvania, and introduced Christianity there; after which, it was reputed a province of the kingdom of Hungary, and governed by an Hungarian viceroy, stiled in their language a Waiwode; and thus Transilvania was governed from about the year of our Lord 1000, to the year 1526; when LEWIS King of Hungary dying without issue male, JOHN, Waiwode of Transilvania, was by a faction elected King of Hungary, in opposition to FERDINAND, brother to the Emperor CHARLES V. JOHN, not finding himself a match for the Emperor, first fled into Poland, where having remained some time, SOLYMAN Emperor of the Turks, invited him to return to Transilvania, promising to support his interest: whereupon, JOHN assumed the title of Prince of Transilvania, independent of Hungary, agreeing at the same time to pay a small tribute to the Turk, by way of acknowledgment for his

JOHN, the first Prince of Transilvania.

protection. After the death of this Prince, his son JOHN succeeded him in the principality of Transilvania, and was also elected and crowned King of Hungary, which occasioned a bloody war between the Emperor, and the Turk, who supported JOHN; but a truce being concluded for eight years, Hungary was yielded to the Emperor, and Transilvania confirmed to Prince JOHN; who dying without issue, STEPHEN BATHORI succeeded him, and was afterwards elected King of Poland. When his brother CHRISTOPHER BATHORI succeeded him in the principality of Transilvania. After whose death, SIGISMOND his son succeeded to the principality; and throwing off his subjection to the Turk, entered into an alliance with the Emperor RODOLPH; by whom he was admitted to a vote in the dyet at Ratibon, and declared a Prince of the Empire, on condition that on failure of issue the principality of Transilvania should be re-annexed to the crown of Hungary; but SIGISMOND afterwards quarrelling with the Emperor, was driven out of his principality. After him SIGISMOND RAGOTSKI took upon him the title of Prince; but finding himself unable to contend with the Emperor, soon after resigned it. Whereupon, GABRIEL BATHORI assumed the government; and to secure his possession, put himself under the protection of the Turk. To him succeeded BETHLEM GABOR, who being supported by ACHMET the Turkish Emperor, he entered into a war with the Emperor FERDINAND II, in behalf of FREDERICK Count Palatine of the Rhine, elected King of Bohemia, and made himself master of a good part of the kingdom of Hungary and Moravia; and dying in the year 1629, the states complimented his widow with the principality; but she finding herself unqualified for the high office, resigned the principality to Prince GEORGE RAGOTSKI, who, under the protection of the Turk, engaged in a war with the Emperor. To whom succeeded GEORGE RAGOTSKI II, his son, but the Turks proclaimed ACHATIUS BARTCHAY Prince of Transilvania in his life-time; and afterwards beheading ACHATIUS, JOHN KIMEN was elected Prince by the states; but the Turks refusing to confirm him, he was cut in pieces by their faction: and MICHAEL ABIAFFI succeeded him, anno 1661; who, with the consent of the states of Transilvania, resigned this principality to the Emperor of Germany, as King of Hungary, for ever; as appears by an act of that Prince and the states, dated at Hermanstat, anno 1688: and the Imperialists immediately put garrisons into all the fortified towns. Upon the death of ABIAFFI, anno 1690, the Emperor appointed the Prince his son Waiwode of the country, in opposition to Count TECKELI, and the Ottoman Port. And the principality of Transilvania remains now incorporated with the crown of Hungary under the imperial protection; and by the treaty of Carlowitz and Passerowitz, this principality was confirmed to the Emperor by the Turks.

The established religion in Transilvania is the Roman Catholick, as in all the rest of the Emperor's hereditary dominions; but here are great numbers of Lutherans, Calvinists, and other Protestants of all denominations, who are great sufferers on account of their religion: the severity exercised towards them, has been one occasion of the many insurrections here, as well as in Hungary. But the mischief is, that when any of the

# THE PRESENT STATE OF THE

## Frontier Provinces of the Empire.

### CHAP. I.

*Treats of the province of Slavonia.*

CHAP.  
I.  
Slavonia  
and Rat-  
zia.

**U**NDER the head of Slavonia I include Ratzia, which is only the south-east part of this province, so denominated from one of the counties, or subdivisions, called Ratzen, and the people Ratzians, or rather Rascians, in the accounts we receive from those parts. The antient Slavonia contained many large countries; some extended it from the Adriatick, almost to the Euxine sea, but I don't find any two writers agreed as to it's dimensions; however, certain it is, the Slavonian language obtained, and is still spoken in many kingdoms of Europe.

Bounda-  
ries and  
extent.

The modern Slavonia is bounded by the rivers Drave and Danube, which separate it from Hungary, towards the north and east; by the river Save, which divides it from Servia and Bosnia on the south, and by Stiria on the west; and is computed to be upwards of two hundred miles in length, and between fifty and sixty miles in breadth. The air is good, the country for the most part level, and not too much incumbered with woods and mountains, but exceedingly well watered by those noble rivers abovementioned, namely, the Danube, the Drave, and the Save; besides many lesser streams, from whence we might conclude it to be a very fruitful country; but as it was for many years a frontier between Turkey and Christendom, it has not been cultivated and improved as it ought to have been.

Chief  
towns.

The bounds of the respective counties, or subdivisions of this province, having been so often altered in the wars between the Turks and Imperialists, I shall content myself with describing the situation of their chief towns, which are all now under the dominion of the Emperor: and, 1. Pofega, the capital of the province, and of a county

to which it gives name, is situate in the latitude of 45 degrees odd minutes, on the river Oriana, fifteen miles north of the river Save, and a hundred and twenty to the westward of Belgrade. It contains about a thousand houses, and is a place of good trade, having about four hundred villages under it's jurisdiction. 2. Walpo, situate on a river of the same name, thirty-five miles north-east of Pofega. 3. Esseck, famous for it's bridge near the confluence of the Drave and the Danube, which has been already described in treating of Hungary. 4. Walcowar, about twenty miles to the southward of Esseck. 5. Ilock, ten miles south-east of Walcowar. 6. Peterwaradin, situate on the Danube, between forty and fifty miles south-east of Esseck; a well fortified town, and the frontier of the Turks after the taking of Buda; but is now with the whole province under the dominion of the Emperor. 7. Salankamen, fifteen miles to the eastward of Peterwaradin, remarkable only for the victory obtained there over the Turks, by Prince Lewis of Baden, in the year 1691. 8. Carlo-witz, a little to the northward of Peterwaradin; not taken notice of till the peace concluded there between the Imperialists and the Turks, in the year 1699. 9. Semlin, in the mid-way between Salankamen and Belgrade. 10. Alt Sirmium, or Zirmium, the capital of a county to which it communicates it's name; formerly the metropolis of Pannonia inferior, and since the see of a Bishop; but is now reduced to a village, and is situate about sixty miles to the westward of Belgrade. 11. Zagrab, or Agram, situate near the river Save, about an hundred miles to the westward of Pofega; the capital of a county, and a Bishop's see. 12. Gradiska, a well fortified town, situate near the Save, about fifteen miles to the westward of Pofega.

CHAP. I.

Persons.  
Husbandry.

Trade.

Religion.

The natives of Sclavonia are of a good stature and hale constitutions, and fit for laborious employments. Their country very proper for tillage, and would produce plenty of corn and wine if they could enjoy a settled peace, and their fields were well cultivated. The navigable rivers which pass through Sclavonia, render it also exceeding proper to carry on a trade between the Empire and Turkey; but 'tis a misfortune that notwithstanding these frontier countries are blessed with all the advantages that nature can bestow upon them, great part of them are often a perfect desert, and only considerable for the strength of their towns, and the number of their garrisons, which are always pernicious to trade and husbandry; for none will attempt to establish manufactures, or improve their lands, where the soldiers probably will reap the fruits of their labours.

As the whole province is now under the dominion of the Emperor, the Roman Catholick is the established religion; but there were not long since, almost as many Grecian as Popish Christians. The Roman clergy will no doubt bring over the Greeks to their communion in time, by one means or other, as they do in all countries where they have the ascendant. Those who dissent from them, have much better quarter from the Turks, than from their Popish brethren of the West. As for the Mahometans, with which this province was not long since replenished, they are all retired out of it to a man, except some few who, upon secular accounts, embraced Christianity. There is no instance of a Mahometan (while he remains such) taking up his constant residence in a Christian country: on the contrary, much the greatest part of the Grand Signior's subjects in Europe, are Greek Christians, and tolerated in the free exercise of their religion there.

CHAP. II.

*Treats of the province of Servia.*

Servia.

I Have already just touched upon Servia in treating of Turkey in Europe; but as Belgrade, the capital city, and great part of the province has been lately subdued by the Imperialists, I deferred speaking particularly of it, till I should have occasion to describe the Emperor's dominions.

The boundaries and extent.

Servia, the antient Mæsia Superior, is bounded by the Danube, and the Save, which separate it from Hungary, and Sclavonia, towards the north; by Bulgaria, or Mæsia Inferior, on the east; by Albania and part of Macedon on the south; and by the province of Bosnia towards the west; extending two hundred and fifty miles in length, from east to west; and about an hundred and twenty in breadth, from north to south. It enjoys a healthful temperate air, and fruitful soil, being stiled by the Romans their granary for corn. It is pleasantly diversified with woods and champaign hills and plains, and well watered with rivers; and were it cultivated, would produce wine as well as corn in abundance: but the same misfortune attends this as the rest of the frontier provinces, that the husbandman does not care to sow or plant more of his grounds than is absolutely necessary for the support of his family, under an apprehension of having the fruits of his labours devoured by the Turkish, or Imperial forces, from whose depredations they are not entirely free, even in time of peace.

Air and soil.

The chief towns in Servia are, 1. Belgrade, called by the Germans, Greek Wiesienburg, situate on a hill at the confluence of the rivers Danube, and Save, forty-five degrees north latitude, and twenty degrees of longitude, reckoning from the meridian of London. The town is large, very advantageously situated for trade, and one of the strongest fortresses in Europe. It was taken from the Christians by SOLYMAN the Magnificent, in the year 1521, and retaken by the Imperialists in 1686, under the conduct of the Duke of Bavaria. The Turks laid siege to it again in the year 1688, and a magazine of the town being blown up by one of the enemies bombs, with part of the walls, the Turks entered it sword in hand, and put all the garrison to the sword, consisting of six thousand men, except the governor, and three hundred soldiers, who escaped out of one of the gates, while the enemy was busy in plundering the town. About the middle of June 1717, the Imperialists, under the command of Prince EUGENE, of Savoy, invested Belgrade again, and the place being of the last importance to the Turks, the Grand Vizier was commanded to relieve it at all hazards, which he attempted on the 16th of August 1717, and this brought on a general battle, wherein the Imperialists obtained a compleat victory. It is certain, says a gentleman, who was in the action, that since the siege of Vienna, there never was seen so great a number of Turks in the field, especially of Janizaries; and it must be owned they defended themselves well for some time. Very few officers ever saw a hotter or better-ordered fire of the Turks; and from the number of the Christians killed and wounded, particularly among the cavalry, it is evident they were not bad marksmen; but the resolution and good harmony between our horse and foot, who seconded each other admirably well in this battle, at last forced the enemy to give way.

We took from them above an hundred and fifty pieces of cannon, thirty or forty mortars, a proportionable quantity of ammunition, and their whole camp: and it is worth admiration, says this gentleman, that not one soldier entered the enemies camp to plunder, till the General gave permission, nor till the whole army was rallied and put in order.

The loss of this battle, was attended with the surrender of Belgrade, which capitulated two days afterwards; and the garrison began to evacuate the place on the 22d of August, but being followed by most of the inhabitants, it was the 24th before they were all marched out; it being computed that no less than sixty thousand Turks left the place, whereof, twenty thousand were soldiers. By an exact list of the artillery taken in the town, and in the battle, it appears that it consisted of four hundred and fifty-six brass cannon, two hundred and nine, of iron, and an hundred and three brass mortars: From all which, we may easily judge of the largeness, and importance of this city.

2. Semendria, situate at the confluence of the Danube, and Morava, about twenty miles to the eastward of Belgrade. It was antiently the capital of Servia, but is now an inconsiderable town. After the battle of Belgrade, Prince EUGENE took a view of it, in order to put the town into a posture of defence, and make it a frontier garrison against the Turks; but whether he did not think it would be capable to maintain a siege, or the charge was apprehended too great, that design was

History of  
Servia.

was not proceeded in, as I can learn. 3. Widdin, situate on the Danube, about an hundred and fifty miles to the eastward of Belgrade, and near the river Timock: by the late treaty, made the boundary of the two empires in Servia: it is by some writers, called a strong town, but I cannot learn there is one place between Belgrade, and Constantinople, capable of sustaining a long siege. 4. Nissa, situate about an hundred and twenty miles south-east of Belgrade; another town, to which some have given the name of a strong fortress; but I find it has been frequently taken and retaken, and sometimes without a formal siege. 5. Scopia, or Uscopia, a large trading city, situate on the borders of Macedon, about sixty miles to the southward of Nissa. It stands in a pleasant fruitful country; and has several fine mosques, besistins, and caravanferas, which are an ornament to it.

This country of Servia, with Bulgaria, or the Lower Mæsia, were brought under the dominion of the Romans, in the reign of AUGUSTUS CÆSAR, and made a Roman province; in which state it continued, till the fall of the eastern empire, when it was seized by the Sorabi, a Slavonian people, and a branch of the Sarmatians, whose name was afterwards contracted to Sorbi, and then changed to Servi, from whence the people were called Servians. When the Turkish arms begun to make a progress in Europe, the Despots, or Princes of Servia, put themselves under the protection of the Kings of Hungary, that they might be the better enabled to make head against the Infidels; and paid some small tribute to that crown, as an acknowledgment of their dependency; and from hence, the house of Austria, as Kings of Hungary, claim the dominion of this province: but the truth is, the Turks made an entire conquest of it, and the Despots of Servia, became tributary to them, so long ago as the year 1460; since which, they modelled it after the form of their other provinces; and made it subject to the Beglerbeg, or Viceroy, of Romania: so that the Emperor had little more than the title of sovereign of this country, till the battle of Belgrade, anno 1717; and the peace which ensued upon it, whereby great part of Servia was transferred to the Emperor. And here, I think, I have a fair opportunity of making out the boundaries of the German, and Ottoman empires, which none of our geographers have hitherto done, or continue to do very wrong, according to ancient treaties, notwithstanding the Emperor's territories are extended in many places, above a hundred and fifty miles beyond the former limits, by the late treaty of Passerowitz.

The limits  
of the two  
empires.

To begin then on the north-side the Danube: All places and countries situate on the west-side of the river Alauta, and particularly Temeswaer, are confirmed to the Emperor; and whatever lies to the east of that river, remains to the Ottoman Porte, the said river, separating the two empires from Transilvania, to the place where it falls into the Danube. On the other side the Danube, the limits of the said empires, are appointed to be from the place where the little river Timock falls into the Danube, up for ten leagues along the same; Isperechbania, and it's dependencies, remaining to the Turks, and Ressova to the Emperor. And the said limits are continued from thence, thro' the mountains towards Parakin, which remains to the Emperor, and Razna to the Porte, over the little Morava, between Scahack

and Belina, to Bedka, and from thence to the territory of Zokol, towards Belina, as far as the river Drin; so that Belgrade, Parakin, Istolaz, Scahack, Bedka, and Belina, with their antient territories, are yielded to the Emperor, and Zokol and Razna, with their antient territories, remain to the Porte: and the subjects of the two empires are equally to enjoy the navigation of the Timock.

3. From the Drin to the river Unna, all walled and open places on the banks of the Save, in possession of the Imperialists, shall remain to the Emperor, as shall the river Save, with both it's banks. 4. From the place where the Unna and the Save joined to the territory of the antient Novi, shall remain to the Emperor. 5. The territories of New Novi, on the west-side of the Unna, which, after the treaty of Carlowitz, were granted to the Porte, shall be restored to the Emperor, with all their dependencies. As to the rest, the limits of Croatia remain the same as they were on the treaty of Carlowitz, the river Unna, being the boundary between the two empires in this province.

CHAP.  
II.

## CHAP. III.

*Treats of the province of Croatia.*

THE province of Bosnia, which lies between Servia and Croatia, has already been described in treating of Turkey in Europe; and, is indeed, almost all of it left in the possession of the Turks, by the treaty of Passerowitz, except those towns and places which lie upon, or near the Save, and these were confirmed to the Emperor; the preliminary article, which was the foundation of that treaty, declaring that each party should keep what they were then possessed of. And this being all that is requisite to be said of the province of Bosnia in this place, I proceed westward, to that of Croatia.

Croatia, part of the antient Illyricum, is bounded by the river Save, which separates it from Slavonia, towards the north; by Bosnia, towards the east; by Morlachia, towards the south; and by Carniola on the west; and is about eighty miles in length, and as much in breadth. The chief towns whereof, are, 1. Carlsstat, the capital of the imperial Croatia, situate on the river Culp, twenty miles to the southward of the Save; and being a frontier town, is tolerably fortified. 2. Sissef, situate on the Save, thirty-five miles to the eastward of Carlsstat; esteemed a place of some strength. 3. Castanovitz, situate near the river Unna, about thirty miles to the westward of Gradisca. These are all subject to the Emperor. 4. Dubiez, on the east-side of the river Unna, subject to the Turk: it being agreed that the river Unna, shall be the boundary between the two empires. 5. Whitz, situate on the same river Unna, fifty miles to the southward of Carlsstat; this also is subject to the Turk.

The country of Croatia, is naturally fruitful, Soil. producing plenty of corn, wine, and oil, where it is cultivated; but as it is a frontier against the Turks, has not yielded much more than would supply the necessities of the inhabitants of late years.

The people are of a good stature, and make brave hardy soldiers; on which account, many of the German Princes have their horse-guards composed of Croatz, or Krabat, as they are called. Persons. Esteemed the best horse in Germany.

## CHAP.

III.

Mori-  
chia.

Morlachia, which lies between Croatia and the gulph of Venice, is sometimes reckoned a part of Croatia; but Morlachia being subject to the Venetians, and Croatia to the German and Turkish empires, they may very well be looked on as distinct provinces at this day: I choose therefore to defer speaking more particularly of Morlachia till I come to treat of the Venetian territories, as

also of Dalmatia, the sea-coast whereof belongs to the Venetians, and the inland part of the country to the Turks.

And thus having given a description of the frontier provinces of the German Empire, as well towards Poland as Turkey; I proceed to treat of the Empire in general.

Thename.

**T**HE Germans have been known by several names, as Teutones, Germans, Almans, &c. 1. Teutones, turned by the High-Dutch into Teutthen and Deutsch; and by the English into the word Dutch, the most probable derivation whereof is from Teut, the name of one of the antient Celtick deities, whose descendants, or rather votaries, the Germans pretended to be. 2. German, a word said to be derived from Wehr and Man; Wehr and War being of the same import in the antient Teutonic; so that Wehrman signified a Warrior, or gallant Man, as the Germans were generally esteemed; and nothing is so common as the turning the German W into G by the Latins, and thus they make German of Werman. 3. Alemanni, or Almans, as they are called by the French, Spaniards, and Italians, said to be derived from the words All and Man, as much as to say all manner of men, or a mixture of all people, as the vast numbers they brought into the field, inclined their enemies to think they were. As to the name of Celts, or Celtæ, this being common to them, with many other nations, I shall wave the entering into the etymology of it here.

Situation  
and ex-  
tent.

The bounds of antient Germany were very different from the modern, the Danube being looked upon as the southern, and the Rhine the western limits of it; but then they extended it so far north as to include Scandinavia. The bounds of modern Germany, if we include Bohemia and Silesia, (already described) are the Baltick-Sea, Denmark, and the German ocean towards the north: Poland and Hungary on the east: the gulph of

VIO L. II.

Venice and the Alps, which divide it from Italy towards the south; and France and the Low Countries towards the west: extending from forty-five degrees thirty minutes north latitude to fifty-four degrees thirty minutes, and from the sixth to the nineteenth degree of longitude, reckoning from the meridian of London; being about six hundred English miles from north to south, and five hundred from east to west. The air in the southern provinces is temperate and healthful, and the soil extremely fruitful; but towards the north the cold is very severe in winter; and the lands produce neither wine or oil, and but moderate crops of grain. The seas of Germany are the Baltick and the German ocean, and the gulph of Venice may now come into the number of the German seas, the Emperor being master of the port of Trieste and some other towns on that side, where he has lately attempted to establish a trade. The ocean washes but a very small part of the German shores at present, tho' Germany gives name to that sea: indeed, the seventeen provinces of the Low Countries were made part of the empire by CHARLES V, by the name of the circle of Burgundy, and then Germany might be said to have had a pretty large sea-coast; but these provinces are now esteemed no part of the empire.

The rivers of Germany have some of them been already touched upon, but the principal of them require a further description here: and, 1. The Danube, which claims the preference of any in Europe; whose name Danubius, or Danuvius, is but the Roman version of the Teutonic, or German

## CHAP.

## I.

word Danow, or Done, by most of the Roman historians derived from Duni, a branch of the ancient German nation who inhabited the banks of this river. The German writers on the contrary derive the name from Don-Aw, which in their language signifies a swift rushing stream, as this appears to be, especially about the cataracts in this river. Below Belgrade it has generally obtained the name of Isther; but the antient writers used the words Isther and Danubius promiscuously for the whole river.

Olim Isther.

The Source is near a small village in Swabia, from thence called Tone Eschingen, or Thonaw Eschingen, situate in the Hyrcinian forest, here called Schwartz Waldt, or the Black Forest: the hill at the foot whereof it rises, is not more than eight yards high, tho' some geographers have made it to issue out of a vast mountain. Not many furlongs from it's head it receives two rivulets named Brygen and Pregon, both larger than itself, and makes it look something like a river; afterwards it is mightily augmented by several navigable rivers, the chief whereof are, 1. The Iser, which having passed by Kempten, and several other considerable places in Swabia, discharges itself into the Danube near Ulm, the capital of the country.

The Iser, and other rivers which fall into it.

The Lech.

The Regen.

The Isar.

The Inn.

Ens.

Rab.

The Drave.

The Save.

Teyffe.

The Morava, the Alauta, the Pruth, &c.

The Danube never overflows.

2. The Lech, which having passed by Landtsburg, Augsburg, and several other great cities, falls into the Danube between Newburg and Donawert. 3. The Regen, which falls into this river at Ratibon, from thence called in High-Dutch, Regensburg. 4. The Isar, which having passed by Landtsbut, Mosburg, Mittenwald, &c. mingles it's waters with the Danube near Pletling. 5. The Inn, the finest river in Bavaria, which gives name to the city of Inspruck, and falls into the Danube at Passaw. 6. The Ens, which discharges itself into this river at the town of Ens, to which it communicates it's name. 7. The Rab, or Arabon, which joins it's waters with the Danube, near the strong fortress of Raab in Hungary. 8. The Drave, a large navigable river, which separates Hungary from Sclavonia, and falls into the Danube near Esseck. 9. The Save, which passing by most of the cities of Sclavonia and Servia, discharges itself into the Danube at Belgrade. 10. The Teyffe, or Tibiscus, already mentioned, which rises in the Carpathian mountains, and running southward thro' Hungary, falls into the Danube over-against Salankemen: and there are, besides these, several considerable rivers in the Turkish provinces, as the Morava, the Alauta, the Pruth, &c. between Belgrade and the Euxine-Sea, which fall into the Danube and increase the stream. The swiftness of the current, 'tis observed, renders the waters of the Danube muddy, and of a whitish colour; infomuch, that the clear streams of some other rivers which fall into it, are plainly discernible after a course of several miles. And notwithstanding the many large rivers which the Danube receives into it, it never is observed to rise higher than usual, tho' the banks of the lesser rivers which fall into it are often overflowed. The reason whereof is said to be, that in summer time the Danube has as great supplies of water from the melted snow on the mountains, as it can have in winter from the rains, so that the alteration can never be considerable. But, says my author, perhaps the vastness of the river may give people occasion to fancy it always of the same size, tho' it's increase in winter, if it were to be nicely examined, would possibly be found greater than in summer. This river has so deep and wide a

channel, that both the Imperialists and Turks have their fleets of men of war upon it, and many smart engagements have happened between these powers upon the water; particularly at the siege of Belgrade, and other great towns that stand upon it, and cannot be attacked with any hopes of success without a fleet. The whole course of this river from it's source to the Euxine-Sea, into which it discharges itself by six or seven mouths, is computed to be about fifteen hundred English miles. There are three cataracts in that part of the Danube which runs through Christendom, the first whereof is called Der-Saw Russel, or Swines-Snout, so named from a craggy rock of that shape, which hangs over the river near Lintz in Austria, under which there is a very dangerous whirlpool. 2. Der Strudel, so called from the prodigious noise which the water makes in it's fall: this cataract is near the town of Greinon in Austria. 3. Der Wurbel, or the Whirlpool, about a furlong distant from Strudel. But however terrible these mighty water-falls may have been represented of old, I do not find but the water-men find means to pass them at present without much hazard. There are some indeed in that part of the river which runs through Turkey that are said to be impassable, but this perhaps may proceed from the unskilfulness of the Turkish water-men.

CHAP. I. Fleets of men of war engaged upon it.

Cataracts in it.

2. The second great river is the Rhine, which rises from two springs in the Alps, the one near a small village called Tavetsch, out of the high mountain of Gottards Geburg, and the other near Reinwald in Rhætia, which two fountains are forty miles asunder, but unite their streams about eight miles from the city of Coire; and within less than a mile beyond this confluence the river dilates itself into that great lake called Der Bodensee, or the lake of Constance. There are reckoned nine cataracts in the Rhine, two whereof only are esteemed dangerous, one of them being a little below the city of Schaffhuysen in Switzerland, where the whole river falls from the top of a rock seventy-five foot high: the other is at Lauffenburg in Switzerland, which has it's name from the cataract, Lauffen in their language signifying a water-fall, and Burg a fortress. This river runs to the northward between Swabia and Alsace into the Palatinate, receiving the Neckar at Manheim, and the Main at Mentz, and continuing it's course to Coblenz is joined by the Moselle; afterwards it passes by Cologne, and through the dutchy of Cleve, being joined by the Roer and Lippe and other smaller rivers, and enters the Netherlands at Schenckenschans. I defer speaking of the further progress of it therefore till I come to the Low Countries.

The Rhine.

The Neckar. Main. Moselle. Roer. Lippe.

3. The Elbe, which rises near Hirschburg in Silesia from eleven several heads, which after they are united run northward between Misnia and Lusatia into Saxony, and being joined by the Muldau, Egra, and other rivers, passes by Magdeburgh, Lawenburgh, and Hamburg to Gluckstadt, below which it divides into two branches, and soon after discharges itself into the German ocean. There is scarce any European river that will bear ships of burthen to pass up so high as the Elbe does; for at Hamburg, upwards of seventy miles from the sea, it is an ordinary thing to see vessels of three or four hundred tons.

The Elbe.

Muldau. Egra.

4. The Weser, which rises in the mountains of Thuringia, and passing through Hefsen and Westphalia, falls into the German ocean a little below Bremen.

The Weser.

CHAP. I. Bremen. The rest of the German rivers, with the lakes, mineral-waters, baths, mountains, mines, and forests, will be described in the respective circles, or provinces, to which they belong.

## CHAP. II.

*Treats of the persons, genius, and temper of the Germans; of their vices and virtues; diet, lodging, and diversions.*

The persons of the Germans.

Intellectuals.

THE stature of the ancient Germans, as well as the present race, was observed to be of the largest, especially if compared with the French. Indeed there are Roman authors who inform us, that there was but little difference between the Germans and the Gauls, in their persons or manners; but this must be understood of those Gauls which lay near the Rhine, whose country is now reckoned part of Germany: for every country, I am satisfied, produces people of the same bulk, features, and complexions it did two thousand years ago; and whenever a new set of people take possession of a country, they become like those who inhabited it before in a very few generations. If a swarthy Scythian or Tartar, of a short squat make, flat nose, thick lips, and little black eyes set deep in his head, was to be transplanted into Germany (as many nations of the Scythians were formerly) his posterity, in an hundred or two of years, would infallibly be tall lusty fellows, of fair complexions, and regular features, as the present Germans are. And, on the contrary, if a German was to be transplanted into Tartary, his posterity would in time become deformed, and dwindle into the Tartar make. For notwithstanding we all sprung from one original, our features and complexion, our stature, and even tempers, vary according to the part of the world we happen to be planted in. There is something in the air, the soil, the diet, or manner of life, which makes the inhabitants of one country appear, as if they were cast in a different mould from those of another. But to proceed: whether the rest of the world were piqued to see the Germans excel them in stature, or for what other reason I cannot conceive, they have generally agreed to charge the whole German nation with stupidity, and want of sense; insinuating that it is not possible for the soul to animate so vast a bulk, with the same advantage it does one of an inferior size. The leaden temper of the Germans (say the French) wants to be mended, by mingling the French quick-silver with it. And true it is, almost every people have something in their tempers, as well as in their persons, to distinguish them by. The levity of the French, and the gravity of the Spaniard, are as much occasioned by the situation of their respective countries, as the different tastes of their wines are. Animals of such and such a frame of mind and body, are as natural to some certain soils, as the plants peculiar to the country are. But notwithstanding these different tempers and capacities that are to be met with in the world, the heaviest and most untractable part of mankind are capable of being wonderfully improved by their education and application to business. Nor is it the lad of the quickest parts that always makes the greatest man. If one whom nature has been bountiful to at first, makes swifter advances in his studies than usual, perhaps he wants the patience and diligence of others, who, by their unwearied application, at length may possibly surpass him. Again, if one person

wants a ready wit, it is frequently made up to him in a good judgment. And as it is with particular persons, so I apprehend it to be with nations. If they are defective in one respect, it is made up to them in another. Heaven has not given us all the same endowments, but has however distributed the gifts of nature so equally, that every one is satisfied with his particular portion; and perhaps, there are very few defects but may be surmounted by diligence and application: not a German, but if his genius was duly considered, and he was introduced into an employment suitable to it, might make a figure in the world; of which we shall be further convinced, when we come to speak of their learning, arts, and sciences.

The morals of the Germans also have been Vices; censured, drunkenness is said to be a vice proper to the country, *Germanorum vivere est bibere*, is become a proverb; but whether they are more addicted to drinking than their northern neighbours, or indeed than the English at present, is very much questioned. Certain it is, they cannot exceed the Russians in disorders of this kind. Nothing is more common, says my reverend author, than for the Germans to form drinking societies, which they call *Drink Brudder*, where they contract an intimacy by being drunk together. But I don't find there is much more in this, than in our common clubs, where people sometimes drink to excess. And these were as severely censured in England within these fifty years, as those in Germany can be. The Germans seem to be a little hard upon strangers indeed, in obliging them to take off a large bowl on their first entrance into their houses, which is called their Welcome. This, and some other such drunken customs, puts the French King, it is said, to some difficulty to find a minister capable of negotiating his affairs in this country; for the French are as remarkable for their sobriety, as the Germans for intemperance: and, according to PHILIP MELANCTHON, the Germans were guilty of eating, as well as drinking to excess, for he used to say, *We Germans eat ourselves sick: We eat ourselves into hell.* It is no extraordinary thing for them to sit from twelve at noon to five in the evening at dinner, and from seven at night till two or three in the morning: but I perceive the greatest part of this time is spent in drinking after the cloth is taken away: and then perhaps we may not fall much short of them ourselves. Their ordinary Food; food is beef, mutton, fowls, &c. as with us; but they have one dish which has been introduced in England very lately, and that is snails: from Michaelmas to Lady-Day these are eaten at the tables of the quality as a great rarity. There is scarce a nobleman's garden but has a snail-house in it, which furnishes his table with them. Their drink is beer and wine, as with us, but both the one and the other they have upon easier terms; for they have not only Rhenish and other wines of their own growth, but Hungary, France and Italy lie contiguous to them, where the best wines are produced.

There is no nation more in love with travelling Travel- than the Germans. We meet with them in all ling. the courts of Europe; and if it should be admitted that their natural parts were not equal to their neighbours, the experience they gain abroad makes an ample amends for what they are supposed to be naturally defective in. But the misfortune is, this passion for travelling frequently, ruins their estates,

lity.

Courage.

estates, and impoverishes their country; they carry out more money annually, 'tis said, than their silver mines produce; for a German nobleman will not be seen in a foreign court without an equipage suitable to his quality, and perhaps beyond it.

The Germans however, with all the vices and vanities ascribed to them, are allowed to be endowed with some very commendable virtues, particularly honesty and fairness in their dealings. To be Dutch-hearted is a phrase with them, which signifies an open-hearted honest man, who scorns flattery and dissimulation. And the French have a saying, That a German's word is as good as another man's bond.

Hospitality is another good quality, which the antient as well as the present Germans are allowed to have. JULIUS CÆSAR informs us, that in his days their houses were open to all men, who were welcome to such entertainment as they found. That they looked upon it as a piece of injustice to affront a traveller, and thought it a piece of religion to protect those who came under their roof. Nor are the present Germans degenerated from their ancestors; for, as has been observed already, the same countries will produce people of like dispositions and qualities to the end of the world, how often soever the inhabitants may be changed. According to a modern author, you may travel cheaper in Germany than in any other country; because, says he, you pay nothing, or very little for your meat or lodging; and you will meet with all imaginable security, murders and robberies being rarely heard of: the only inconvenience is, the being obliged to ride night and day in a post-waggon, as they call it, though it goes but a foot-pace; and if you happen to have the opportunity of resting two or three hours, in the middle of a winter's night, the only bedding you must expect is clean straw, where people of all ranks and degrees, noblemen and beggars lie promiscuously.

The courage and bravery of the antient or present Germans were never disputed; but probably, the knowledge they had that their own bulk and strength exceeded that of other nations, contributed, in a great measure, to raise in them that contempt of the rest of mankind, which obtained the name of courage: for whether at last, when a person's size and strength gives him an assurance of victory, this opinion of his own abilities can properly be denominated courage, I very much question; there being but little room for a man to shew his courage where there is little or no hazard to be run. On the contrary, where the hazard is so great that there is scarce any probability of success, or if the thing a person hazards his life for, be not worth so great a venture, I take the champion to be a fool. From which few observations it will follow, that not one tenth part of the actions which are looked upon as the effects of courage deserve so noble an epithet. But to proceed: it is generally said, if Germany be ever conquered, it must be by Germans; that is, either by the mercenary troops hired from thence, or by their own dissensions: for was Germany firmly united, they might bid defiance to all the world. I have had occasion to observe formerly, that where two armies are equally disciplined, and equal in their numbers and situation, that side which has the greatest weight of men and horses will infallibly carry their point; and there is no country which affords greater numbers, or larger bodies of men and horses than this

does. Had not the army of GUSTAVUS ADOLPHUS consisted of Germans, with which he was furnished by the Electors of Brandenburg and Saxony, as well as Swedes, he had never made that progress in Germany that he did. The French King also, in the late wars, owed much of his success to the Switzers: his foot would have made but a very inconsiderable figure in the field, without these and the Germans, which the Duke of Bavaria brought to his assistance.

Hunting the wild boar or deer is the sport most generally followed in Germany by the quality: but there seems to be but little riding in the case; for the beast being found by the huntsmen some time before, is surrounded by a large company, who with their guns, lances, spears, and dogs, dispatch the creature as soon as they can, without suffering him to run for his life: sometimes indeed a wild boar will break through the croud, and 'tis well if he do not wound either man or horse with his tusks. Another diversion in winter is, the riding thro' the streets on the snow in sledges, which are drawn by horses richly accoutered, and adorned with bells and feathers: But this is a diversion used by their northern neighbours also, and has been mentioned already. The game which they used chiefly to delight in, was chess; but since their officers associated with ours, and those of other nations in the last war, they cannot be ignorant of any modern games, and no doubt divert themselves with them as their countrymen used to do in the army.

In their houses we seldom see a fire, except in the kitchen; but their rooms are heated by a stove, or oven, to what degree they desire: and they have this particular to them in their winter-lodgings, that they lay one feather-bed over them, and another under them.

## CHAP. III.

*Treats of their language, learning, universities, arts and sciences.*

THE High-Dutch, which is the language of Germany, is much admired by some, as a noble copious language, but very difficult to be attained by the French or Italians, on account of the multitude of consonants in it. There are a thousand words in the High-Dutch, says my author, which can never possibly be pronounced by one who has been used to a soft and easy language: but there can be no greater argument of the antiquity of the High-Dutch tongue, than the many monosyllables which are found in it, because these cannot be supposed to be derived from any other language. SIMON STEVIN, a Dutchman, has collected above two thousand monosyllable primitives in this tongue, whereas he could not find more than an hundred and sixty-three in the Latin, and two hundred and sixty-five in the Greek. In the English tongue a whole speech might be composed of monosyllables, which were all of them originally High-Dutch, according to the right reverend author already mentioned. There are, he observes farther, in the German tongue, twenty-three principal terminations, which though they signify nothing in themselves, yet being added to another word, very much alter it's signification; of which our English tongue retains a great many; as *er* in buyer, seller, &c. *hood*, in manhood, priesthood, &c. *dom*, in kingdom, dukedom, &c. by the help of which the German tongue is made exceeding

Sports and

sions.

Lodging.

Language:

CHAP.  
III.

exceeding copious. It is held also to be the richest of any in its admirable compounds; for in this language we have not only words compounded of adjectives and substantives, and verbs or participles, with prepositions, which is usual in all languages, but also innumerable words which consist of two substantives or two adjectives. In the English tongue also we still retain this elegance of compounding substantives, as in house-wife, snow-ball, foot-ball, &c. But the greatest excellency in this kind of composition is, our author observes, in the altering the signification of the word by transposing of the substantives; as we say in English, horse-mill and mill-horse, &c. of which there are infinitely more examples in the High-Dutch than English language.

But the Germans have it seems much corrupted their language of late, by introducing a great number of Italian, French, and Latin words, which they have turned into Dutch by giving them a German termination. There are also numberless dialects of the High-Dutch in Germany, and some of them so different, that the natives of one province scarce understand those of another. A Brandenburgish will hardly understand a Misnian, or a Swabe either of them. The citizens of Leipzick observe three several dialects within the walls of their city. The old British, English, Danish, Swedish, Norwegian and Flemish languages are also all derived from the High-Dutch, and looked upon as branches of it. Upon the frontiers of Germany the people frequently speak the language of the nation which lies contiguous to them; as in Lorrain and the bishoprick of Triers, they speak French; in the Upper Tyrol, Italian; and in Bohemia and Moravia, the Sclavonian: but Latin and French are said to be the best travelling languages through Germany, the meanest servants in the inns being able to express themselves intelligibly in Latin, though they do not speak very correctly.

Learning.

The Germans could not boast of any great stock of learning till they became acquainted with the Romans. Some schools they had, where the priests who served at the altar were instructed in the principles of their religion, which they revealed to the laity only in dark fables, and mysterious riddles, and the actions of their great men they used to record in doggrel rhimes, but never committed them to writing. In the reign of the Emperor ADRIAN, several schools were erected in that part of Germany which lies next the Rhine, where their young nobility were taught Latin; but still the northern Germans wanted the opportunity of education, till the French got footing in Germany, whose princes founded schools amongst them, especially DAGOBERT and CHARLES the Great; but the great difficulty of the governours of these schools, was the reducing the High-Dutch tongue to writing, which till then had never been brought under any rules: and this was found so difficult an undertaking, that for many years all proceedings at law, and every thing else which was put in writing, was always drawn up in the Latin tongue. But the Germans having regulated their language by degrees, applied themselves to the study of the liberal arts and sciences with so much zeal, that in a short time were raised several universities of note. JUSTUS LIPSIVS relates, that in his days there were more universities in Germany than in all the rest of Christendom. There are at this day reckoned above thirty, and the German princes are mighty zealous in keeping up

Universi-  
ties.

the grandeur of them, being proud of nothing more than the number of scholars in their dominions.

CHAP.  
III.

There are no people more industrious in their several professions than the Germans, nor do their scholars come behind the mechanicks in their diligent application to their studies: the Hebrew is no where so generally learnt, or better understood than in Germany; and it is observed that no language is more spoken by the trading Jews than the High-Dutch.

Printing is here encouraged to a fault. Every man of letters is an author, and they multiply books without number, whether they have any thing new to entertain the world with or not. It were to be wished, says my reverend author, that a little more moderation were used in publishing those millions of suppositions and disputations which annually overstock the fairs at Frankfort and Leipzick. But it seems no man can be a graduate in their universities, who has not published one disputation at least.

The Germans are allowed by all to be excellent mechanicks and chymists. The inventions of gun-powder, guns, and printing, are generally ascribed to them; but this of gun-powder must be acknowledg'd to be discover'd by pure accident.

It is related, that BARTHOLO SCHWARTZ, a Franciscan friar of this nation, having made a great proficiency in chymistry, once happened to mingle sulphur and salt-petre with some other ingredients in an earthen crucible, and setting them on a hot fire, in order to make an experiment, the vessel was broke in a thousand pieces, with a wonderful noise and violence, which at first surpris'd him; but upon second thoughts repeating the experiment, he began to conceive mighty hopes of it, and first he procur'd a long iron pipe, not unlike the barrel of a gun, and having drilled a touch-hole, he rammed in the same ingredients he observed had such terrible effects in his crucible, putting some small stones upon them, and setting fire to the combustible matter, the stones were thrown out with greater force and noise than could be expected. And this was the original of guns; and tho' the powder was discovered by accident, yet the application of it to this purpose was purely owing to his own murdering genius, none that I have heard of having endeavour'd to deprive him of the honour of it. This occurrence happened about the year 1330; but the invention was concealed from the publick for some time, and only communicated to friends. The Venetians were the next people acquainted with this invention, which did them good service when they were besieged by the Genoese: they soon after took the cities of Padua, Verona, and others, from the Germans, by the help of their guns; so that in a little time the Germans saw their artificial thunder turned against them: and the German Jews, it is said, instructed the Turks in this art, out of their prejudice to Christianity; but if the Jews had not, the Christian renegadoes would soon have done it. The Venetians were the first that made use of guns at sea; and after them the merchants of the Baltick: the English took Calais with their great guns in 1347; and taught the French the use of them. The Spaniards about the same time found the advantage of them; which the Moors, they were engag'd with, could not but observe and endeavour to imitate. And thus these terrible engines in about the space of fifty or threescore years, were made use of by all the nations

nations in Europe. But when the Spaniards discovered America, it is evident the natives were perfect strangers to guns in that part of the world: for they looked upon the Spaniards to be gods, when after a flash of lightning they saw some of their countrymen fall down dead, and heard the thunder of the artillery; in so much, that they began to offer sacrifice to them, till the Spanish cruelties, it is said, gave them some reason to change the opinion they had conceived of these thunderers. Having taken a Spaniard therefore straggling from his company, it is reported that they threw him into a river, and held him under water till he was drowned, by way of experiment, to try if he was mortal. But to proceed; we have abundance of reason to believe that the Germans, notwithstanding all that has been said, were not the first who understood the force of nitre and sulphur mixed together; though I am ready to allow that they were the first who applied them to the use we now put them to. It is evident that our countryman ROGER BACON, a Franciscan friar, and fellow of Merton-college in Oxford, was acquainted with the experiment three or fourscore years before SCHWARTZ the German happened upon it: For in one of his letters inscribed *ad Parisiensem*, he observes, That out of salt-petre, sulphur, and coal-dust, he could make fire which should burn at what distance he pleased; that with the same matter he could cause thunder and lightning in the air, more terrible than that produced naturally. That a city or an army might be destroyed by this fire, and that it burst forth with an incredible noise. The Chinese also had the use of gun-powder long before we knew it in Europe, tho' they did not apply it to those destructive ends: and indeed it is not easy to believe that the world should for three or four thousand years remain perfectly ignorant of the force of nitre and sulphur mixed together; though it did not come to be much talked of, till we saw the dreadful effects of them when applied to guns and bombs, and the blowing up men and towns. And I cannot avoid here relating an observation of a physician for improving these murdering arts, namely, that poisons might be so compounded and fired from guns and mortars, that they should carry certain death to all that came within the smell of them, and especially on shipboard, where the mariners could not get out of their reach. Some have thought, that the reason Friar BACON did not communicate his knowledge of the force of gun-powder more generally, was the ill consequences that he apprehended from it; but others say, he was afraid of confirming the people in the notion they had of his being a conjurer, from some experiments he had made, which at that time were thought above the power of nature.

As to the art of printing, which the Germans challenge the invention of, I shall defer speaking of it till I come to Holland; the Dutch seeming to have a better pretence to the invention than the Germans; and it is very certain that the Chinese had it long before either: but thus much must be allowed the Europeans, that they have brought this art to much greater perfection than the Chinese, who know nothing of distributing the letters, and composing several sheets with the same types, to this day; but have as many forms, or rather boards, as sheets; so that the materials used in printing a small book, would fill an ordinary room. And from hence it is natural to believe, that the Europeans neither learnt the art of the Chinese,

nor the Chinese of them, their manner of printing being so very different. CHAP. III.

Whether clock-work was an invention of the Germans is much disputed; but it is certain they brought that art to very great perfection; and among other instances of it, it is related that the Emperor CHARLES V. had a watch in the jewel of his ring, and King JAMES I. of England another of the same kind, both made in Germany. The Germans also are excellent engravers and painters, and understand engineering perfectly well: but I must confess I have scarce faith to believe what is related of REGIOMONTANUS, namely, that he made a wooden eagle, which flew a quarter of a mile out of town to meet the Emperor MAXIMILIAN when he came to Noremburg, and returned back with him thither; and that the same artist made an iron fly, which he threw off his hand, and after it had flown round the room returned to him again. But however that were, our English mechanicks seem to be in the greatest reputation for clocks and watches, since the days of TOMPION; their work being seen in the palaces of the greatest Princes in the known world.

## CHAP. IV.

*Contains an abstract of the ancient and modern history of Germany, with the succession of its Emperors.*

AMONG the many nations whose origin hath been enquired into in the progress of this work, if there had been one of which it could with any certainty be said, by what people, or in what century it was first planted, I should not despair of discovering the original inhabitants of this. Indeed CLOVERIUS and Dr. HEYLIN, and after them an hundred more, pretend to shew precisely from which of the grand-sons of NOAH, and at what time every country of any consequence in Europe was first peopled: but what slender evidence do they rely upon? or rather, have they produced any but a pretended similitude of names? From GOMER the grand-son of NOAH, say they, descended the Cimbrians or Cimmerians, who peopled Germany; for there cannot be a more easy change than that of Gomerians into Cimmerians, and this is to pass for proof. Had they said no more than that all nations were peopled by the posterity of NOAH, as we learn from scripture, they would have had the concurrence of every man who is not an infidel; but to pretend to point out particularly which of them inhabited this country, and which of them that, and the precise time of their peregrinations, when there are no histories written within two thousand years of the times they pretended to be so well acquainted with, seems to me an unpardonable presumption; and may incline their readers to believe they have no better authority for many facts they recite of a later date.

It is from the Romans we first learn any thing of this people which can be depended on. The Germans had pass'd the banks of the Rhine it seems, and fallen upon the Gauls, who were then under the protection of the Romans: whereupon JULIUS CÆSAR attack'd a body of them commanded by ARIOVISTUS one of their kings, and drove them back over the Rhine again; after which he built a bridge over that river, and obtained some further victories over them: but DRAVUS, the adopted son

CHAP.

Germans.

CHAP. IV. of AUGUSTUS, had the greatest success in Germany of any of the Roman generals, from whence he obtained the title of GERMANICUS; for he subdued the whole country as far as the ocean, and reduced it into the form of a Roman province. QUINTILIUS VARUS, who succeeded DRUSUS, lost all that his predecessor had gained, and with it three entire Roman legions, which seems to have been more sensibly repented by AUGUSTUS than any misfortune in his reign: insomuch, that it is related, he would often cry out as in a fit of distraction, VARUS, restore me my legions. After which defeat this prince thought fit to make the Rhine and the Danube the boundaries of his empire on that side; and to defend it against the incursions of the Germans for the future, he quartered eight legions upon the banks of the Rhine, and four upon the Danube.

The state of ancient Germany, as to government.

During this war the Romans had an opportunity of informing themselves of the manners and customs of the Germans: and they observe in the first place, that they were divided into many nations and principalities, all of them speaking the same language. That some of these nations were governed by Kings with limited powers, and others were absolute in their dominions; some of their princes were elective, and others hereditary; and some aristocratical and democratical governments were also found amongst them. And that many of these states and kingdoms frequently united under one head, or general, both in their offensive and defensive wars. The patriarchal form of government seems first to have obtained here, as in other countries we have passed through; for we are told, that several families being frequently united by marriages or compacts for their common defence under one head or leader, they gave him the name of Hertzog or Duke, and submitted their controversies to his determination: and that sometimes the ambitious head of a powerful family subdued his weaker neighbours, and assumed the same absolute dominion over them as he claimed over his own tribe. Thus various constitutions were struck out, according to the circumstances the several people happened to be under. And I believe all the world will agree with me at this day, that neither monarchy, or aristocracy, a limited or absolute power in the state or sovereign, are any of them *jure divino*; but whatever kind of government is once establish'd in any country ought to be submitted to. Thus much however I can't help observing, that whatever were the forms of government the ancient Germans liv'd under, most of the princes of Germany at present are absolute in their respective dominions, as the Emperor himself is in his hereditary countries: nay, there is scarce that state or monarchy in being at this day, but the sovereigns of them are absolute. The common people subject to the Venetians, the States of the United Provinces, or any other republick in Europe, have as little share in the administration as those who live under a monarchy, and their governors are as arbitrary and uncontrollable. The only difference, as has long been observed, is, that under a monarchy we have usually one tyrant, and under a state some hundreds; and yet I don't know how it comes to pass, but the subjects of a monarchy are usually looked upon to be in a state of slavery, while those who live in a common-wealth are supposed to be in perfect freedom. But to return to Germany: We have a set of historians who are very positive that the ancient German Kings were elected and de-

Republicks as arbitrary as monarchs.

posed by their people whenever they saw fit: that this was an unalienable right in the multitude, which they could never part with; and as we are supposed to be of German extraction, this ought to be part of the English constitution. But they may remember too, that these same Germans, or Saxons, used to determine their controversies by combat, or going to loggerheads: and that their criminals were tried by fire and water ordeal, thrown into a river, or obliged to walk over nine or ten burning plough-shares blind-fold, to vindicate their innocence; and a hundred other extravagancies of the like nature, which are parts of that admired constitution, that few of the present generation will be fond of returning to. But further, what should we get by making the populace judges of their Prince's actions, so little as they understand of the state of the world, and the interest of their own nation? Would they not commit ten thousand errors in politicks? would they not be liable to be spirited up by every designing knave, to the destruction of the Prince and the community; and perhaps oftener use their electing and deposing powers to their own hurt than benefit? Some men are so fond of a democracy, that they will not give themselves leave to reflect that they are at present under a much happier constitution than ever the ancient Germans experienced. The art of government, as well as other arts, is capable of improvement; and why we should be always appealing to the first rude draughts, and inculcating to the mob that we ought to imitate only the first essays of this nature, that were made when there were no laws to ascertain the Prince's prerogative, or the people's rights, in which our great happiness consists, shews a more than ordinary perverseness, or a very great degree of ignorance in the history of the ancients.

Other customs of the ancient Germans.

I proceed now to take notice of some other customs of the ancient inhabitants of Germany, collected by CLUVERIUS from CÆSAR, TACITUS, and other Roman historians. The common people, they tell us, generally went naked 'till they grew old, when they hung the skin of some wild beast about their shoulders, fastening it with a thong; and men of the best quality only wore a little woollen mantle, or a coat without sleeves. Their usual bed was the ground, or a little straw; and people of distinction lay upon the skins of wolves or bears. That they dipped their new-born infants in cold water; and some say, threw them into rivers, that by their swimming or sinking their legitimacy might be determined. Their food was bread, flesh, butter and fruits, as now. Their drink, water, milk and beer, not knowing the use of wine. They had seldom more than one knife in a family, for they pulled their meat to pieces with their fingers, as they do still in the east; but then 'tis usually so over-done that it is ready to drop in pieces. They were usually very merry at their entertainments, sitting in a semicircle, the master of the family in the middle, and the rest on the right and left of him, according to their quality; but no women were admitted to their feasts, or a son under twenty years of age. They had the liberty of marrying or cohabiting with as many women as they pleased; but the common people usually contented themselves with one a piece, on account of the charge that attended the keeping more, as is supposed. The eldest son, or next heir of the family, always inherited the entire principality, or estate of his ancestor; and the younger children had certain villages, or lordships assigned them for their maintenance.

Few

CHAP.

IV.

The religion of the ancient Germans.

Few Pagan nations, 'tis said, liv'd up to the rules of morality so well as the Germans did. They express'd a more than ordinary regard for divine worship; chusing their priests out of their nobility, who were not altogether ignorant of moral philosophy and physicks, and were usually call'd to their councils of state. Women were also admitted to the priestly office; and both the one and the other had the profoundest respect paid them by the laity. The doctrine of transmigration prevailed amongst them, they believed that departed souls animated other creatures when they had left these bodies, and were happy or miserable, according as they behaved in this life. The sun they worshiped with that devotion, that CLUVERIUS is of opinion, they looked upon this planet as the only true God, dedicating the first day of the week to it. They also worshiped the God WODEN, or GODAN, after whom Wednesday, or the fourth day of the week is called. This word GODAN afterwards came to be contracted into God, and from the Germans we have it. They worshiped also the God TARANES, the same with the Danish THOR, the Thunderer, from whom our Thursday hath its name. The Goddess FREIA, or VENUS, was also worshiped by the Germans, from whom Friday was so called. The God THIES, or TIES, another of their deities answerable to MARS, gave name to Tuesday. CLUVERIUS also would have us believe, that they worshiped the Trinity: that they were acquainted with the history of the creation, the fall of angels, &c. but I don't see any foundation he hath for this. They performed their religious exercises, and sacrificed in groves, the one being usually made choice of for an altar: and instead of a temple, they erected an arbour made of oak and beechen boughs. They looked upon it, says CLUVERIUS, as impious to draw any picture, or representation of their gods; and yet we find the image of an armed man set on the top of a vault pillar, worshiped by the Saxons till the time of CHARLES the Great, who destroyed it; the memory of which occurrence is still kept up among the Germans in their tragedies; and some pieces of that mighty pillar are still preserved in the cathedral church of Harberstat.

The priests, as well as the sacrifice, were always crowned with wreaths of oak, or of some other sacred tree. They sacrificed not only beasts, but men, if we may believe the Roman writers; but when they offered human sacrifices, they were taken from among their slaves, or malefactors; though upon extraordinary occasions, it is said, they would offer their own children. The priests usually shot the sacrifice to death with arrows, if it was a beast, but the men were sometimes crucified. They inspected the entrails of the animal, and from thence prognosticated good or ill success in their wars and other undertakings; and when the rites were ended, the sacrifices, whether they consisted of men or animals, were eaten, and they were merry, as usual at festivals; the priests entertaining them with musick and dancing. But I must confess, that part of the account which mentions the eating of human flesh, makes me give the less credit to the rest, because I have yet never met with that people on the face of the earth which do allow themselves in eating their own species, and it is generally what even other animals abhor.

Funerals.

Their belief that their souls should animate other bodies after death, it is said, made them fear-

less of danger; and if a man happened to be under CHAP. IV. unfortunate circumstances, he made no scruple of dispatching himself to the other world. They burnt their dead bodies, and having gathered up the bones and ashes of the funeral pile, they buried them together. The wives, slaves, dogs, horses and armour of the deceased, it is said, were also thrown into the fire, in order to serve their lord in the other world. And at the funerals of the great, were tiltings and tournaments, and songs sung in memory of their heroick actions.

I have already shewn that the Germans defended their frontiers so well against the Romans, that they were contented to make the Rhine and the Danube the boundaries of their empire; and accordingly built fortresses, and planted garisons on the banks of both those rivers to prevent the incursions of the barbarous nations, as they called them: but notwithstanding these precautions, within less than an hundred years after CONSTANTINE the Great, the Franks, Burgundians, Almans, and other German nations, broke through those boundaries, passed the Rhine, and dispossessed the Romans of all Gaul, Rhetia and Noricum, which they shared amongst them; but the Franks prevailing over the rest, at length established their empire over all modern Germany, France, and Italy, under the conduct of CHARLES the Great.

The northern nations break in upon the Roman empire.

Germany was never under the dominion of one sovereign, as Dr. NICHOLSON observes, till the reign of this Prince, who was the son of PEPIN, King of France. He was born the 28th of January, 747, and upon the death of his father PEPIN, which happened in the year 768, he shared his dominions with his brother. After his brother's death, he assumed the government of the whole, notwithstanding his brother left a son behind him, with whom his mother fled to DESTIERIUS, King of Lombardy, for protection. Hither CHARLES pursued her, and having defeated King DESIDERIUS, made himself master of great part of Italy, and particularly of Rome. The Pope and clergy of that city having been forced to submit to the Kings of Lombardy, and lost much of the power they had formerly usurped, looked upon King CHARLES as their deliverer, and swore allegiance to him on St. PETER's tomb: he was also, by the decree of Pope ADRIAN, declared Patrician of Rome, which was then a title only inferior to that of Emperor, and gave him authority to confirm the election of the Popes, and grant the Italian bishops the investiture of their sees. King CHARLES, to shew his gratitude to the Pope, and to confirm him in his interest, gave him a power of constituting Exarchs, or lieutenants over the provinces of Ancona, Bologna, Mantua, Modena, Parma, Ferrara, &c. and conferred on him almost regal powers. This Prince afterwards conquered part of Spain, and reduced the Saxons in Germany to his obedience, planting the Christian religion wherever he carried his arms, and founding schools and universities throughout his whole empire. Pope ADRIAN dying in the year 795, Leo the third was chosen to succeed him, and his election confirmed by CHARLES the Great, as Patrician of Rome; but an insurrection being incited against this Pope by the nephews of Pope ADRIAN, who treated him barbarously, obliged him to fly into Germany to CHARLES the Great for protection, who thereupon marched again into Italy, and having condemned the offenders to death, their sentence was changed

Charles the Great first Emperor of Germany, &amp;c. anno 800.

CHAP.  
IV.

changed into that of banishment at the intercession of the Pope. It was at this time, viz. on Christmas-day, in the year of our Lord 800, that the Pope with the senate and people of Rome, agreed to confer the title of Roman Emperor on CHARLES the Great, and accordingly placed the imperial crown upon his head the moment he was at his devotions in St. PETER's church, and the people with loud acclamations saluted him Emperor of the Romans. The Pope also anointed him with the holy oils, acknowledging him to be his sovereign, and the Emperor's statue was afterwards set up in the publick places of Rome; but the Emperor chose to reside in Germany, leaving Italy in a great measure under the influence of the Pope, who knew how to make an advantage of his absence, as his predecessors had done on the removing the imperial seat from Rome to Constantinople. CHARLES the Great having enjoyed the title of Emperor fourteen years, died in the year 814, and was buried at Aix la Chapelle, where he had founded a church, designing to have made that city the capital of his Empire, and the residence of his successors. He was about seventy two years of age when he died, the epitaph on his tomb being no more than this, *Magni Caroli Regis Christianissimi Romanorum Imperatoris corpus hoc sepulchro conditum jacet.*

Lewis II. 814. LUDOWICK, or LEWIS, King of Aquitain, for his piety surnamed the Godly, succeeded his father CHARLES the Great, being crowned Emperor by Pope STEPHEN IV. at Rheims in France. This Prince ordered the bible to be translated into the Saxon tongue, and dispersed among the common people. He had three sons, viz. LOTHARIUS, LUDOWICK and PERIN, by his first wife, who all rebelled against their father, and shut him up in a monastery; but being rescued by his subjects from his confinement, he assembled an army, and was marching against his son LOTHARIUS, when he died. He left also a son named CHARLES, by a second venture.

Lotharius 840. LOTHARIUS, the eldest son of LEWIS, succeeded his father, anno 840, in the whole Empire, and having reigned fifteen years, retired into a monastery at Treves, where he lived some time. It was in this reign that JOHN VIII. filled the papal chair, generally reported to be a woman, and called Pope JOAN.

Lewis II. 855. LUDOWICK, or LEWIS II. succeeded LOTHARIUS his father, upon his resignation of the Empire, and retiring to a convent, anno 855. He conquered Sclavonia, and planted Christianity in that country. It was in this reign the court of Rome assumed the power of electing their Pope, without the concurrence of their sovereign: and ADRIAN II. was the first who was chosen without the Emperor's leave.

Charles II. 875. CHARLES the Bald, son of LEWIS I. succeeded his nephew anno 875. He is said to be a weak Prince, being persuaded by Pope JOHN IX. to solemnize his coronation at Rome, and there receive the imperial scepter at his hands.

Lewis III. 878. LUDOWICK, or LEWIS III. succeeded his father CHARLES, anno 878; and having reigned about a year, died, leaving his throne to his brother.

Charles III. 879. CHARLES the Gross, so named from his corpulency, who by the death of his two brothers became possessed of all Germany, France, and Italy. He was the first who added the year of our Lord to the year of his reign, in his grants and acts of state. He made a disadvantageous peace with the Normans, whereby he left them in possession

VOL. II.

of that part of France which is now called Normandy; and having done some other mean unpopular things, was deposed by his nobility, and died miserably in a poor village in Swabia.

ARNOLPH, natural son of the King of Bavaria, and Duke of Carinthia, was advanced to the throne by the same faction which deposed his predecessor, anno 888. He defeated GUIDO and BERENGARIUS, who opposed him in Italy, and took Rome by storm; but is said to have been soon after poisoned there by GUIDO's wife.

LUDOWICK, or LEWIS IV. the son of ARNOLPH, was advanced to the imperial throne, on the death of his father. He was in perpetual war with the Hungarians, in which he had very ill success, and great numbers of the German nobility lost their lives. The Pope also set up another LUDOWICK against him in Italy, which created him a great deal of disturbance.

The imperial crown after the death of LEWIS IV. was offered to OTTO, Duke of Saxony, by the German nobility, who being grown old, recommended to them CONRADE, Duke of Franconia, who was thereupon declared Emperor: but the very men who advanced him, not approving his conduct, attempted to dethrone him. CONRADE however secured his possession, and on his death appointed HENRY the son of OTTO, Duke of Saxony, to succeed him.

HENRY, surnamed AUCEPS, from the pleasure he took in hawking, succeeded to the empire by virtue of his predecessor CONRADE's will, anno 919. The Pope it seems offered to consecrate and anoint him Emperor; but he answered, that he did not think he stood in need of his confirmation. He was a brave Prince, defended the empire against the Hungarians and other foreign enemies, and composed the factions among his own people at home. He first fortified the great towns of Germany, and ordered every ninth peasant to remove into the cities, and that a third part of the corn and hay about every city should be assigned for the maintenance of the inhabitants. He also first instituted tilts and tournaments: and after a prosperous reign of seven years and a half, died of an apoplexy in Italy, much regretted by his German subjects.

OTHO, the son of HENRY, succeeded his father, anno 936, being from his piety and happy conduct siled the Great. He obliged HAROLD, King of Denmark, to acknowledge his dependance on the empire, and to introduce Christianity into his dominions. He also subdued BOLESLAUS, King of Bohemia, and planted Christianity in that country. On the other hand, he deposed Pope JOHN XII. and placed LEO VIII. in his room, decreeing, that for the future the Pope should be appointed only by the Emperor. In this reign the ceremony of christening the bells of churches was first introduced.

OTHO II. succeeded his father, and after a prosperous reign left the empire to his son,

OTHO III. an infant of ten years of age. He proved a very wise Prince, and was the first, according to some, who instituted the custom of choosing an Emperor by a majority of voices of seven electors. After a reign of eighteen years, he was poisoned in Italy with a pair of gloves by his concubine on account of his refusing to marry her, as he had promised.

HENRY, Duke of Bavaria, was chosen Emperor by the Electors, anno 1002, being crowned by the arch-bishop of Mentz. He was successful in

his wars against the Saracens in Italy, whom he drove out of Apulia and Calabria, and vanquished the Wendish forces, who had over-run great part of Germany. His piety procured him the title of the Holy, and his self-denial was so great, that upon his death-bed, after he had been married above twenty years, he returned his Empress CUNIGUNDA to her relations, assuring them she was a pure virgin, having by mutual consent, on the day of their marriage, agreed they would never come together. But history relates that he was once so jealous of this lady, that he made her walk bare-foot over a red-hot grate to manifest her innocence; and if we may credit the writers of those times, she never flinched at it, or expressed the least sense of pain.

Conrade  
1024.

CONRADE, a Prince descended from CHARLES the Great, succeeded to the empire anno 1024, being crowned at Aix la Chapelle, by the archbishop of Cologne. He was generally beloved by his subjects, and amongst his laws he enacted, that no prince should make war on any province of the empire on pain of death,

Henry III.  
1039.

HENRY, the son of CONRADE, surnamed the Black, succeeded his father. He was successful in his wars against the Bohemians and Hungarians; and in the year 1046, was called into Italy, to settle the peace of that country, which was disturbed by three Popes, set up by contrary factions. He did not approve any of them, it seems, but set up a fourth, viz. CLEMENT II. and revived the decree, That the Pope should be appointed by the Emperor.

Henry IV.  
1056.

HENRY IV. an infant of six years of age, succeeded his father. Pope HILDEBRAND, called GREGORY VII. refused to acknowledge this Emperor for his sovereign, and set up RODOLPH, Duke of Swabia, against him, who was content to accept the Imperial crown at the hands of the Pope: and though RODOLPH was defeated and killed in battle, the Pope so managed matters, that he procured HENRY to be deposed by his subjects, who elected his son in his stead, after he had reigned fifty years, and fought sixty-two general battles. And he was reduced to such straits before he died, that he begged a prebendary in the church of Spire, which he had founded himself, and was denied it by the bishop.

Henry V.  
1106.

HENRY V. the son of HENRY IV. succeeded his father in the empire, anno 1106; but was obliged to acknowledge the Pope's supremacy, and renounce all pretensions to the investiture of bishopricks, which his ancestors claimed. It is reported that at his coronation his sword was melted by lightning, and the scabbard remained untouched by the fire. This Prince dying without issue,

Lotharius  
1125.

LOTHARIUS, Duke of Saxony, was elected Emperor, and received his crown from the Pope. He revived the practice of the civil law in the empire.

Conrade  
1138.

CONRADE, Duke of Swabia, son of the late Emperor's sister, succeeded his uncle, but was opposed for some time by HENRY, Duke of Bavaria. In this reign a body of the cannon laws was compiled, and taught in the German universities.

Frederick  
1152.

FREDERICK, Duke of Swabia, was elected Emperor upon the death of CONRADE, being surnamed BARBAROSSA, from his red beard. He was crowned by Pope ADRIAN, but during the papacy of Pope ALEXANDER III. he was excommunicated for opposing some encroachments of that see, and so humbled, that he was content to

throw himself at the Pope's feet, and suffer him to tread on his neck. In the year 1187, this Emperor, RICHARD I. of England, and PHILIP II. of France, all went in person on an expedition to the Holy Land, where this unhappy Emperor was drowned in a river, as he was bathing himself, and was buried at Tyre.

CHAP.  
IV.

HENRY, the son of FREDERICK BARBAROSSA, succeeded his father. He died also in a voyage to the Holy Land, which the Pope had prevailed upon him to undertake.

PHILIP, the brother of HENRY, succeeded him; but refusing to acknowledge the Pope's supremacy, he was excommunicated, and OTHO, Duke of Brunswick, set up against him by the Pope and the Electors. The whole empire was engaged on the one side or the other by these competitors in a bloody war, till PHILIP was treacherously assassinated in his bed.

OTHO, the surviving competitor by the death of PHILIP became possessed of the whole Empire, anno 1208; but he had not reigned four years before he was deposed by the Pope and the Electors: and FREDERICK King of Sicily advanced to the imperial dignity by the same powers. OTHO being universally deserted, died at BRUNSWICK in the year 1218.

Otho  
1208.

FREDERICK II. much admired by historians for his learning and wisdom, and resolution, was five times excommunicated by three Popes; but prevailed against Pope GREGORY IX. so far as to depose him from the papal chair. These continual contests between him and the Popes gave rise to those two famous factions of GUELPHS and GIBELLINES; the former adhering to the Papal See, and the latter to the Emperors.

Frederick  
II.Guelphs  
and Gi-  
bellines.

FREDERICK having reigned eight and thirty years, died, or, as is insinuated by some, was poisoned in Italy; after which the Empire remained in great confusion for twenty years and upwards, there being no less than six competitors for the Imperial dignity, viz. (1.) HENRY Landgrave of Hesse, who was killed at the siege of Ulm. (2.)

An inter-  
regnum.

CONRADE IV. FREDERICK's second son, having been elected King of the Romans in the year 1254, who was poisoned by his physicians, after he had styled himself Emperor about three years. (3.) MANFRED. (4.) WILLIAM Earl of Holland, declared King of the Romans by the Pope in opposition to FREDERICK II. and was afterwards assassinated by the Frisians. (5.) ALPHONSUS King of Castile. And (6.) RICHARD Earl of Cornwall, brother to HENRY III. of England, who by his money is supposed to have gained the voices of some of the Electors; but he was at length deserted by those who set him up; and after six years contest was obliged to return to England.

RODOLPH Earl of Hapsburg, was at length advanced to the Imperial dignity, anno 1273, by the unanimous consent of all the Electors, and confirmed by the Pope. This Prince first raised the Austrian family, by creating his son ALBERT Archduke of Austria, who was afterwards Emperor.

Rodolph  
1273.Rise of the  
Austrian  
family.

ADOLPH Earl of Nassau, was declared Emperor on the death of RODOLPH, anno 1292; but serving with his troops as mercenaries in the army of EDWARD I. of England against France, he so disgusted the Electors of the empire, that they made choice of ALBERT the son of RODOLPH for their sovereign, who defeated ADOLPH in a pitched battle, and killed him with his own hand.

Adolph

ALBERT

*The North west Part of GERMANY; Containing the Dominions of the Arch and Elect of COLOGNE, WESTPHALIA, parts the Duke of Juliers, Cleves, &c. the Bishop of Munster, Ofenaburg, &c. the City of Emden, &c. the City of Holstein and Bremen, the Duke of HANNOVER with all the County of Lunenburg &c. Brunswick, &c. and the City of Lüneburg &c. &c. &c.* By A. Moll Geographer.

**CHAP. IV.** ALBERT the son of RODOLPH, was crowned Emperor anno 1298, and confirmed by the Pope: he made his son RODOLPH King of Bohemia, and attempted to reduce Hungary in vain; he was murdered by his nephew and three other assassins.

**Henry VII.** 1308. HENRY Earl of Luxemburg, was elected Emperor on the death of ALBERT, anno 1308. He is celebrated for his wisdom and valour, as well as for his temper and extraordinary devotion. Neither prosperity nor adversity could move him, it is said; and he is reported to be so devout, that he would spend whole nights in prayer before a crucifix, and receive the sacrament every day; but was poisoned at length by a Franciscan monk with the consecrated elements: which the Emperor soon perceiving, ordered the friar to get out of the way lest he should be apprehended; which the villain neglecting, was afterwards flea'd alive. After this Prince's murder there happened a terrible famine in Germany, which some pious people looked upon as a judgment on that country: and relate such incredible things of parents eating their children, and children their parents, as would shock a very forward believer.

**Ludowick** 1318. LUDOWICK Duke of Bavaria, after an interregnum of some years, was chosen Emperor by a majority of the Electors; but FREDERICK Duke of Austria, son of the late Emperor ALBERT, was set up by a contrary faction: FREDERICK's forces being defeated, LUDOWICK remained sole Emperor. He constantly opposed the Papal encroachments, deposed Pope JOHN XXII. and placed NICHOLAS V. in his room; despising the papal excommunications, which were from time to time thundred out against him.

**Charles IV.** 1346. CHARLES IV. son of JOHN King of Bohemia, was elected Emperor on the death of LUDOWICK, anno 1346. He procured a majority of voices, it is said, by his money: and there being three Princes who pretended to the Imperial dignity during his reign, he bought off their adherents, and prevented their appearing in arms against him. He was a learned prudent Prince; and the contriver of the *Aurea Bulla*, which contains a register of the rites and ceremonies to be observed at the election of an Emperor.

**Wenceslaus** 1378. WENCESLAUS the fourth son of CHARLES, at the desire of his father succeeded to the Empire; but being a dissolute cruel Prince, was deposed after he had reigned two and twenty years.

**Frederick.** FREDERICK Duke of Brunswick, being elected in the room of Wenceslaus, was assassinated by HENRY Count Waldeck, as he came from the place of election.

**Rupert** 1400. RUPERT, Elector Palatine of the Rhine, was immediately after elected Emperor anno 1400. He was esteemed a brave Prince, and having reigned about ten years, died in peace, and was buried at Spire.

**Jodocus** 1410. JODOCUS BARBATUS, Marquis of Moravia, and nephew to the Emperor CHARLES IV. succeeded RUPERT, and reigned nine months: after whom

**Sigismund** 1411. SIGISMOND King of Hungary and Bohemia, and brother to the Emperor WENCESLAUS, was unanimously chosen Emperor by the Electors; and is represented by the catholick historians, as a brave Prince, of uncommon piety and learning; but it was he that suffered JOHN HUSS, and JEROM of Prague, to be condemned as hereticks by the council of Constance, and afterwards burnt, notwithstanding he had granted them a passport, and was engaged in honour and conscience for

their safe return to their country; which so exasperated the Hussites of Bohemia, that they raised a formidable army; and under the conduct of their General Zisca, defeated his forces in fourteen general battles, and maintained the war against him with advantage till his death.

**FREDERICK IV.** Duke of Austria, and son-in-law to the Emperor SIGISMOND, was unanimously chosen Emperor upon the death of his father, and was crowned at Rome by Pope NICHOLAS V. He made it his business to procure peace in his dominions; and by his marriage with LEONORA the daughter of ALPHONSUS King of Portugal, the houses of Spain and Austria came to be united. He reigned fifty-three years, being longer than any of his predecessors sat on the imperial throne.

MAXIMILIAN succeeded his father FREDERICK, anno 1493, having been elected King of the Romans in the year 1486. He married MARY the daughter and heiress of CHARLES Duke of Burgundy; whereby all the territories belonging to that Duke were transferred to the house of Austria. He was engaged in perpetual wars; and for five years before his death had his coffin carried with him in all his expeditions, not so much to put him in mind of his mortality, as some have suggested, as to conceal some extraordinary treasure that was locked up in it.

CHARLES V. surnamed the Great, Archduke of Austria, son to PHILIP King of Spain, and grandson of MAXIMILIAN, was next elected Emperor, anno 1519; but FRANCIS the first, King of France, being his competitor, and spending a great deal of money among the Electors, delayed the choice, and caused an interregnum of six months. He was crowned at Aix la Chapelle, on the 21st of August 1520. He procured LUTHER's doctrine to be condemned, but did not meddle with his person: and it was in this reign that the disciples of LUTHER obtained the name of Protestants, from their protesting against a decree of the imperial diet, in favour of the Catholics. This prince is reported to have been victorious in seventy battles. He had the Pope and the French King his prisoners at the same time; and carried his arms into Africa, where he conquered the kingdom of Tunis: he subdued the Protestant princes who were engaged in the Smalcaldic league; taking the Elector of Saxony and the Prince of Hesse prisoners, and drove the Turk from the siege of Vienna. And after a prosperous reign of eight and thirty years, resigned his empire to his brother FERDINAND; retiring into a convent in Spain, where he declared he had more satisfaction in one day, than in all the triumphs of his preceding life; and in this retirement he died, about two years after his resignation.

FERDINAND I. was declared Emperor on the resignation of his brother, by the unanimous consent of the Electors; but Pope PIUS IV. refused to confirm him, because neither the resignation of CHARLES V. nor the election of FERDINAND were done with his concurrence. He was a peaceful prince; and used to assign one part of the day to hear the complaints of his meanest subjects; and was esteemed a great favourer of the Protestants.

MAXIMILIAN II. his son succeeded him, being at that time King of Bohemia, and afterwards King of Hungary. He was as indulgent to the Protestants as his father, which occasioned his being called by some the Lutheran Emperor.

RODOLPH succeeded his father MAXIMILIAN in the empire, being elected as usual. He applied himself

himself to the study of most arts and sciences, and especially the mathematicks, and entertained the famous TYCHO BRAHE in his court; but was esteemed a better scholar than a governor.

MATTHIAS, the brother of RODOLPH, King of Hungary and Bohemia, succeeded him, anno 1612. He was very severe upon the Protestants, which occasioned an insurrection in Bohemia; and at Prague two of his Ministers were thrown out of the castle-windows, as has been mentioned already in the description of Bohemia. He died without issue, having reigned seven years; and was succeeded by

FERDINAND of Gratz, Archduke of Austria, grandson to FERDINAND I. anno 1619. The Bohemians apprehending he would be as severe upon the Protestants as his predecessor, offered the crown of Bohemia to FREDERICK V. Count Palatine of the Rhine; though they had before acknowledged FERDINAND for their King; which so incensed the Emperor, that he determined the destruction of the Protestants: whereupon followed a bloody war in Germany, which lasted near thirty years; but was ended by the treaty of Westphalia, in the reign of his son; whereby the Protestants were secured in their religious and civil rights.

FERDINAND III. being elected King of the Romans the year before, succeeded his father, anno 1637. He carried on the war his father had begun, and obtained a great victory over the Protestants at Ratibon, and broke the power of the Swedes, who had been long victorious in Germany; but being afterwards deserted by most of the Princes of the Empire, was obliged to enter into a treaty with them, and allow them honourable terms. The ministers of the Catholick Princes residing at Munster during this treaty, and the Protestant ministers at Osnabrug, this is sometimes called the peace of Munster, and at others the peace of Osnabrug: it is also sometimes called the treaty of Westphalia, from it's being concluded in that circle. In the year 1653, the Emperor procured his eldest son FERDINAND to be elected King of the Romans, and crowned; but this Prince, dying within a year afterwards, his father survived him, and he never arrived at the imperial dignity.

LEOPOLD, the only surviving son of FERDINAND III. was elected Emperor on the eighth of July 1658, after an interregnum of eight months, and crowned at Francfort the twenty-second day of the same month. At the time of his election he signed and executed certain articles of agreement, made between his said Imperial Majesty and the Electors of the Empire, called the Capitulations of the Emperor LEOPOLD: whereby he obliged himself to protect Christendom, the see of Rome, and the Pope, to promote peace in the empire, and do justice without exception, according to the laws: and also to protect the Electors of Saxony, Brandenburg, Palatine, and all their subjects of the Protestant Religion, according to the treaty of Osnabrug and Munster. He obliged himself also to observe the Imperial constitutions, and acts of the diet; and declares he will not suffer any thing to be published against the peace of religion, concluded in the treaty of Westphalia. That he will protect the Electors, Princes, and States of the Empire in the enjoyment of their rights and privileges. That the ambassadors of the Electors shall take place of those sent from any Republick. That he will make no alliance with fo-

reign states, or engage in any war without the consent of the Electors, Princes, and States of the Empire; or alienate any thing which belongs to the Empire without the consent of the Electors. And it is thereby declared, That any state or subject of the Empire may engage in foreign wars, provided they are not against the Empire, or any of it's members. And the Emperor further declares, That he will not pretend to any hereditary right of succession to the Imperial dignity; but leave the Electors their full right of electing a King of the Romans, according to the golden bull, even during the Emperor's life, with or without his consent. And that he will employ none in his councils, or in any office in the Empire, but native Germans. But the most extraordinary article inserted in this Pacta Conventa, as it may be called, was, That he should afford Spain no assistance against France.

At the accession of the Emperor LEOPOLD, CHARLES GUSTAVUS, King of Sweden, was become very terrible to the German Princes, having in a manner conquered Poland, and made a great progress in the north of Germany; whereupon the new Emperor entered into a confederacy with Denmark, Brandenburg, and Poland, and carried on the war against Sweden with various fortune, till the peace of Oliva put an end to it in the year 1660. In the year 1663 he entered into a war with the Turk, in which he lost the city of Newhaufel. The Emperor's forces however having defeated several great bodies of the Turks afterwards, a truce was concluded between the two empires in the year 1664, for twenty years. The Hungarians still continued restless, and exercised the Emperor with continual conspiracies against his government; which they were induced to, 'tis said, on account of the invasion of their religious and civil rights; and in the year 1669, they made an offer to the Grand Seignior of their country, in order to obtain his protection against his Imperial Majesty: but the Turks being then engaged in the siege of Candia, neglected the proposal; and the Hungarians were left to defend themselves against their exasperated Prince as well as they could: and indeed they were grown so formidable, that the Emperor thought fit to send that great General, the Duke of Lorrain, against them, at the head of a powerful army, in the year 1671; who reduced many of the revolted cities, and made the most considerable leaders of the malecontents prisoners; amongst whom were the Count SERINI, FRANGAPANI, and NADASTI, who were all soon after beheaded: and the Emperor hoping to root the Protestant religion out of the kingdom at once, sent down the most bigotted Roman Catholick governors and judges amongst them, who exercised all manner of cruelties upon the miserable inhabitants; which made many of them fly into the Grand Seignior's dominions, and again implore his assistance. But the Emperor, being soon made sensible of the ill consequences of such severities, directed his ministers to proceed with more moderation.

In the year 1672 and 1673, the French having over-run good part of Holland and Flanders, and committed great ravages in the Palatinate on the frontiers of Germany, the Emperor entered into a confederacy with Spain and the States General against them, and sent an army of forty thousand men under the command of General MONTECUCULI to the assistance of the Dutch, who were in some danger of being conquered by France.

War with  
the Turks  
and Hun-  
garians,  
1663.War with  
France,  
1672.

CHAP. IV. France at this Time, if this seasonable relief had not in a great measure prevented it. The war however was carried on for some years with various success, till 1678, when a peace was concluded at Nimeguen, between the contending powers.

Peace of Nimeguen, 1678. The French assist the Hungarians.

The French having sent four thousand men to the assistance of the Hungarians the preceding year, who joined Count TECKELI, the malecontents carried all before them in that country; but the Emperor making them an offer to confirm them in all their religious and civil rights upon their returning to their duty, the Turk having engaged to make him Sovereign of Hungary.

Surprise of Straßburg, 1680.

The French King also being assured of the Grand Signior's design to break with the Emperor, surprized Straßburg, the most considerable town on the frontiers of Germany towards France, in the year 1680, and entered into an alliance with Count TECKELI, who having married the Princess RAGOTSKI, and thereby gotten possession of the places that depended on that family, raised an army of thirty or forty thousand men, with which he joined the Turks; and in the year 1683, the Port declared war against the Emperor. The Imperial court, apprehending the storm that was coming, sent embassies to the Princes of Christendom to desire their assistance against the common enemy: and most of them contributed something, but none of them so largely as Pope INNOCENT XI. and JOHN King of Poland. TECKELI in the mean time made himself master of several great towns in Hungary, and began to stile himself Sovereign of the country, coining money in his own name; against whom a great army was sent under the command of the Duke of Lorraine. But while the Imperial troops were endeavouring to reduce the revolted places in Hungary, the Grand Vizier, CARA MUSTAPHA, having joined Count TECKELI, on a sudden marched into Austria, and laid siege to Vienna; the Emperor having but just time to retire from the city with his court before it was invested.

Vienna besieged, 1683.

The Turks sat down before the town on the 14th of July, 1683, and carried on the siege with their usual fury for two months, when the garrison was so weakened and harassed by continual attacks, that Vienna was almost given over for lost; and the preservation of it is generally ascribed to the vigilance and conduct of the governor, Count STAREMBERG. But the Duke of Lorraine, the Imperial General, being at length joined by the Elector of Saxony with ten thousand men, and after him by JOHN SOBIESKI, King of Poland, with twenty-four thousand horse, came to a resolution to give the enemy battle. The right wing of the Imperialists was commanded by the King of Poland, the left by the Duke of Lorraine, and the center by the Electors of Bavaria and Saxony and Prince WALDECK; and in this order they marched to attack the Infidels, TECKELI with his troops being at this time absent upon some expedition, which made their work much the easier: and after about three hours obstinate resistance, they forced the Turkish camp, whereupon the enemy's horse fled, leaving their foot to the mercy of the victorious Christians, and the siege was happily raised on the twelfth day of September. The Christians afterwards pursued the flying enemy, drove the Turks out of the island of Schut,

The siege raised.

and retook the fortresses of Gran, and several other places from the Infidels.

CHAP. IV.

The Imperialists were successful both against the Turks and Hungarians the following years, 1684 and 1685, defeating Count TECKELI, and taking in several towns; but were forced to raise the siege of Buda, after they had lain before it some time. In the year 1686, the Christians besieged it with better success, taking the city by storm. This is one of the most famous sieges in our memory, at which many noble volunteers assisted from most of the kingdoms in Europe. The following year the Emperor reduced the greatest part of Hungary under his obedience; and caused his eldest son, the Arch-duke JOSEPH, to be crowned King at Presburg. He also procured the consent of the States, that this kingdom should be no more elective but hereditary. In the year 1688, the Imperialists, under the conduct of the Duke of Bavaria, took Belgrade, which put the Turks into the utmost consternation; there being no place of any considerable strength between that city and Constantinople. In the mean time the French continued to ravage the Palatinate, burning and plundering all the towns and villages between Heidelberg and Frankfort; whereupon a grand confederacy was formed against France, by the Emperor, Spain, England, Holland, Savoy, and several of the German Princes, wherein it was agreed, "That they would never make peace with LEWIS XIV. until he had made reparation to the holy see for all damages done to it; and till he had annulled and made void all his infamous proceedings against the holy father INNOCENT XI. Nor till he had restored to each party all he had taken from them since the peace of Munster. Nor till he had restored to the Protestants of France all their possessions and goods, and an entire liberty of conscience. Nor until he had restored the estates of the kingdom of France to their ancient liberties and privileges." Upon the conclusion of which alliance the war was carried on with all imaginable vigour, both upon the Rhine, and in Flanders.

Buda taken, 1686.

Hungary made an hereditary kingdom.

Belgrade taken, 1688.

Confederacy against France, An. 1690. Conditions of it.

Prince LEWIS of Baden, who commanded on the frontiers of Turkey, on the Duke of Lorraine's being sent to make head against the French upon the Rhine, was very successful in his first campaign, defeating the Turks in a general battle near Patochin, and afterwards made himself master of the cities of Nissa and Widdin. In the year 1690, the Emperor prevailed with the Electors to chuse his eldest son JOSEPH (who was already King of Hungary) to be King of the Romans.

War in Turkey.

King of the Romans chosen.

The year 1690 proved very unfortunate to the Imperialists; for they lost not only Widdin and Nissa, but Belgrade also was taken by storm, on blowing up a magazine, which threw down great part of the wall. Count TECKELI, being also made Prince of Transylvania by the Grand Signior, routed a body of the Imperialists, and took possession of that country; though he was forced to relinquish it before the year came about. The following year Prince LEWIS of Baden had the good fortune to defeat the Turks in a general battle, near Salankamen, wherein the Grand Vizier CUPERLI was killed; and afterwards took Peterwaradin: but laying siege to Belgrade, in the year 1693, the Turks made so gallant a defence, that they were forced to rise from before it. Transylvania was again invaded by the Turks, in the year 1695, where the Imperial General VETZ-RANI was defeated and taken prisoner; and afterwards

Belgrade taken by the Turks, 1690.

wards beheaded in cool blood by the barbarous Turk, contrary to all rules of war. There happened afterwards a considerable action between the Turks and Imperialists near Temeswaer, where both claimed the victory, but neither party had much reason to boast. The last great battle which was fought between the Imperialists and the Turks in this war, was in the year 1697, near Zenta in Hungary, in which Prince EUGENE of Savoy commanded the Christians, and obtained a compleat victory, the Turks losing thirty thousand men, among whom was the Grand Vizier, with their camp, cannon, and an incredible quantity of ammunition and provision. The same year the Elector of Saxony, who commanded the Imperialists at the battle of Temeswaer, was advanced to the crown of Poland, to the mortification of the French, who set up the Prince of Conti against him; and perhaps this might have some influence on the treaty of Ryswick, which was concluded at this time between the confederates and France: though surely no articles could be more different than these were from those the allies proposed to themselves at the beginning of the war; for there they engage that they will not make peace with France till the French Protestants are restored to their religious and civil rights, and in this peace those Protestants are not so much as mentioned; but on the contrary, Popery is established in the Palatinate, and the poor Protestants left to the mercy of their enemies. The substance of the other articles were, That France should restore to Spain, Barcelona, Roses, Gironne in Catalonia, and Luxemburg, Mons, and Charleroy, and all other towns that had been taken by the French in the Low-Countries, or in America: That the Elector Palatine should be restored to his territories, Dinant restored to Liege, and Fort Kiel, Friburg, Starfort, Old Brisac, and Philipsburg restored to the empire; but the important city of Strasbourg was resigned to France; the castles of Traerbach, Erenburgh, Kirnburgh, and the fortress of Montroyal to be demolished and restored to their respective owners; and Lorrain was to be restored to it's Duke. The following year, 1698, a treaty was set on foot between Germany and Turkey, in which the English and Dutch were admitted mediators; and a truce was concluded for twenty-five years between the two empires, at Carlowitz, on the twenty-sixth of January, 1698-9, whereby all Transilvania was confirmed to the Emperor, and the province of Temeswaer to the Grand Signior; and for the rest, each party was to keep what was in their respective possessions, and the Roman Catholics in the Turkish dominions were to have the free exercise of their religion.

About this time the English, French, and Hollander entered into a treaty for the partition of the Spanish dominions between the Arch-duke CHARLES and the Dauphin of France, in case CHARLES II. King of Spain should happen to die; and this they did without the consent of the Austrian family, who looked upon themselves to have an undoubted right to the whole Spanish monarchy; and the Emperor being desired to come into the said treaty, after it was concluded, rejected the proposal with some indignation.

Soon after the signing of the partition treaty, viz. on the first of November 1700, died CHARLES II. King of Spain; and by his will, (at least as the French King pretended) appointed the Duke of Anjou, second son to the Dauphin of France, to succeed him in all his dominions. And LEWIS XIV.

without any regard to the treaty of partition so lately made, immediately took possession of the Spanish territories in Spain, Italy, and the Low-Countries; and declared his grandson, the Duke of Anjou, King of Spain, and the dominions there-to belonging. And his title to the same was acknowledged even by England and Holland; nay, King WILLIAM and the States General wrote letters to the Duke of Anjou, congratulating his accession: and he was crowned at Madrid the 14th of April 1701. The Imperialists under the command of Prince EUGENE thereupon marched into Italy this summer with an army of forty thousand men, in order to make good his Imperial Majesty's pretensions to the Spanish territories there; and were very successful in their first attempts.

JAMES II. King of England, dying on the 6th of September 1701, at St. Germain in France, and the French King causing his son to be proclaimed King of England by the name of JAMES III. King WILLIAM entered into an alliance with the Emperor and the Dutch against France: whereby it was agreed, that satisfaction should be procured to the Emperor for his pretensions upon Spain; and that England and Holland should be secured in their dominions and commerce. And if this could not be obtained in a peaceable way within the space of two months from the date of the treaty (7th September 1701,) that then they should assist each other with all their forces to accomplish it. And in order to this, they should endeavour to conquer the Spanish Netherlands for a barrier for the Dutch: and the Dutchy of Milan, the Kingdoms of Naples and Sicily, and the Spanish places on the coast of Tuscany for the Emperor: And the English and Dutch were to possess such places as they should take from the Spaniards in the Indies. And it was further agreed, that none of the parties should make peace without the consent of the other: nor until they had obtained satisfaction for the Emperor, and a security for the dominions and trade of the English and Dutch, and procured, that the crowns of France and Spain should never be united under the same Prince, and the French excluded from the trade of the West-Indies.

The Imperialists in the mean time had made a considerable progress in Italy, and among other actions, Prince EUGENE on the first of February 1701, N. S. surprized the French General Marshal VILLEROY in his bed at Cremona, having discovered a way into the town by a subterraneous passage. While the allies were preparing to second the Emperor in his pretensions to the Spanish monarchy, King WILLIAM died on the 8th of March 1701. to the great mortification of the confederates: but his successor Queen ANNE, declaring that she would carry on the preparations against France, and support the allies, their hopes began to revive, and all things went on in the same channel as in the former reign.

Her British Majesty formally declared war against France on the fourth of May 1702; and having constituted the Earl of Marlborough General of her forces in the Low Countries, the Dutch also gave him the command of their troops; and in his first campaign he obliged the French to quit the Spanish Guelderland. The grand fleet also failed to Spain, with ten thousand land forces on board under the command of the Duke of Ormond, and made a descent near Cadiz, inviting the Spaniards to join them, and assert the title of the house of Austria: but some disorders the Eng-

lish had committed, with the natural aversion of the Spaniards for hereticks, rendered the attempt unsuccessful; and the British troops were obliged to re-imbarque without effecting any thing considerable. However they had the good fortune, in their return home, to meet with the Spanish galleons at Vigo, which made some amends for their disappointment at Cadiz.

Battle of  
Luzara.

A great battle was fought this summer near Luzara in Italy, between the French and Imperialists on the 15th of August N. S. and great was the slaughter on both sides; but it is a doubt at this day which side had the victory. The Imperialists however, had the good fortune to make themselves masters of Landau in Germany this campaign; and the Earl of Marlborough took Venloe, and afterwards Ruremond and Stevenswaert upon the Meuse: Marshal Boufflers also abandoning the city of Liege on the approach of the confederates, the Earl of Marlborough took possession of it, and on the 23d of October took the citadel by storm: whereupon the Chartreuse of Liege surrendered to the allies on the 29th of the same instant. And thus ended the campaign of 1702, when the Earl of Marlborough, as he was returning by water from the confederate army to Holland, was made prisoner by a French party from Guelder; but none of the party knowing him, and the Earl producing a French pass, after they had plundered the boat, he was dismissed, and suffered to proceed in his passage. At his return to England he was created Duke of Marlborough: and it was resolved by the parliament, that the English forces under his command in Flanders should be increased to fifty thousand men.

French,  
1703.

The following campaign, anno 1703, the Duke of Bavaria having declared for France, was joined by a body of French troops under the command of Marshal Villars; and made himself master of the city of Ratisbon, where the diet of the Empire was assembled. The Elector afterwards invaded Tyrol, in order to open a communication with the French in Italy; but the Imperialists invading Bavaria at the same time, he was obliged to retire to defend his own country; but afterwards made himself master of Augsburg. On the other side, the confederates in the Low Countries besieged Bonn, and took it, and afterwards Huy, Limburgh and Guelder. The French under the command of the Duke of Burgundy invested Old Brissac, and took it; after which Marshal Tallard set down before Landau, and the Prince of Hesse being detached from the Netherlands to endeavour the relief of that town, was surprized by Tallard and defeated, soon after which the place surrendered.

Archduke  
Charles  
declared  
King of  
Spain.

This year the King of Portugal came into the grand alliance; and the Emperor and the King of the Romans resigned their right in the dominions of Spain to the Archduke CHARLES; who was thereupon declared King of Spain by the name of CHARLES III. and on the 26th of December his Catholick Majesty arrived in England, and after having been magnificently entertained by the court

at Windsor, he continued his voyage to Portugal, under the convoy of an English squadron of men of war.

CHAP.  
IV.

The same year the Duke of Savoy coming into the grand alliance, the Duke of Vendosme, who commanded the French in Italy, having some intimation of his design, made six thousand of his troops prisoners; which his Royal Highness retaliated by taking the French ambassador into custody, and all the subjects of France in his dominions. About the same time the Marquis of Visconti joined the Duke of Savoy with fifteen hundred German horse, and afterwards General Staremberg with sixteen thousand Imperialists more, having marched two hundred miles, and skirmished every day with the French, who were superior to him in numbers; and it is to the conduct of this General, that the allies were in a great measure obliged for their future success on that side: for if the Duke of Savoy had not been supported in this critical juncture, all Italy had been lost. And thus ended the Year 1703.

Duke of  
Savoy  
comes into  
the alli-  
ance.

The Imperial Minister, Count Wratislaw, having represented to her Britannick Majesty the distress the Empire was reduced to by the French and Bavarians, and a fresh insurrection of the Hungarian malecontents, the Duke of Marlborough was detached from the Netherlands with a formidable army to assist the Imperialists on the Danube, whither he began his march the middle of May 1704; and having joined Prince Lewis of Baden, attacked the Bavarian intrenchments near Donawert on the 2d of July, and carried them after a sharp dispute, wherein many thousands were killed on both sides. The allies immediately after took possession of Donawert, and entering the Duke of Bavaria's country, he was obliged to retire under the cannon of Augsburg, where an accommodation was proposed to his Electoral Highness by the confederate Generals, and in a manner agreed to: but the Elector understanding that Marshal Tallard, with a strong body of French troops, had passed the Black Forest, and was ready to join him, broke off the treaty abruptly; which provoked the Duke of Marlborough to detach thirty squadrons of horse to burn and destroy the country of Bavaria to the very walls of his capital city of Munich. On the 13th of August N. S. Prince EUGENE and the Duke of Marlborough engaged the French and Bavarians at Hochstet, where they obtained a compleat victory, near twenty thousand of the enemy being killed, and thirteen thousand made prisoners, together with Marshal Tallard, General of the French: whereupon the city of Augsburg sent to desire the protection of the Duke of Marlborough; and the Emperor, in consideration of this important service made him a Prince of the Empire. The city of Ulm also surrendered to the Imperialists on the 11th of September; after which Prince LEWIS of Baden invested Landau, while the Duke of Marlborough covered the siege, and the place surrendered on the 24th of November N. S. In the mean time the Electors of Bavaria yielded up the whole Electorate to the Imperialists.

narchy, and his reasons for his appearing in arms against King PHILIP, whom he stiled a usurper. King PHILIP, on the other hand, declared war against the King of Portugal, King CHARLES, and all their allies; and soon after invading Portugal, took several towns on the frontiers of that kingdom. Duke Schomberg weary of his command in Portugal, where he found neither horses for mounting the confederate cavalry, or any other provisions of war they had agreed to furnish; and the Portuguese Generals insisting on their having the command of the English troops, he desired to be recalled, and the Earl of Galway was appointed to command the English troops in Portugal in his room.

In the beginning of the year 1704, Admiral ROOKE with a body of land-forces on board commanded by the Prince of Hesse, sailed to Barcelona, where he arrived the 18th of May; and the Prince of Hesse landed near the town with 2500 men, sending a summons to the governor to surrender, who did not think fit to obey it. This expedition was undertaken on an assurance that there would be an insurrection in the town in favour of King CHARLES, on the appearance of the confederate fleet; but nothing of this sort happening, the troops were re-embarked; and the fleet sailed to Gibraltar, and having made a descent the 21st of July, attacked the place with that fury, that it surrendered the 24th. Sir GEORGE ROOKE engaged the French fleet, commanded by the Count de Thoulouse, on the 24th of August following, and had gained a complete victory if his ammunition had not failed him, which was occasioned by the great fire which was made on the attack of Gibraltar, and the leaving a quantity of ammunition there to secure it. However, the French fleet was so shattered, that they declined renewing the engagement the next day, and never after disputed the dominion of the seas with the confederates during the war.

In Italy the confederates had not so good success this campaign as in some other parts of Europe: for here the French took Verceil and Suza, and the confederates were not in a condition to attempt the relief of either. On the other hand, the Hungarian malecontents were prevailed with to accept the mediation of England and Holland, which was some relief to the Emperor on that side.

Verue in Piedmont surrendered to the French the 8th of April 1705; and soon after Nice and Villa Franca; and on the 16th of August a battle was fought near Cassano in Italy between the French and Imperialists, wherein great numbers were killed on both sides, but neither of them had much reason to boast of the victory, though both sung Te Deum for it.

The Duke of Marlborough commanding on the Moselle this campaign, the French retook the town of Huy, and made themselves masters of Liege; but the confederate army returning to Flanders, the French were forced to relinquish those places again. The Duke afterwards entered the French lines near Tirlemont, and defeated a great body of the enemies troops; but as he was about to attack their grand army at Overysch, the deputies of the states opposed it, and refused to let the Dutch troops engage; which the Duke resented so highly, that it cost their High Mightinesses some pains to reconcile themselves to him again; but such ample amends and large promises were made him on this occasion, that they continued very dear ever afterwards.

LEOPOLD Emperor of Germany, after a long and prosperous reign, died at Vienna on the fifth of May N. S. in the year 1705. He was born the 9th of June 1640, and crowned King of Hungary on the 27th of June 1655, and of Bohemia the 14th of September 1656; and afterwards elected Emperor on the 18th of July 1658. He was three times married, but left children only by his last Empress MAGDALENA THERESA, daughter to Prince PHILIP WILLIAM of Newburg, by whom he had the late Emperor JOSEPH, and the present Emperor CHARLES, and three Archduchesses, viz, MARY ELIZABETH, MARY ANNE, and MARY MAGDALEN. This Prince is frequently stiled the Happy, from his escaping the many conspiracies formed against him, and his success against the Turks: and it is certain he was very happy in the choice of his ministers and generals, which ought not to be looked upon as purely the effect of chance, but something in this case may very well be ascribed to the judgment of the Prince.

JOSEPH King of the Romans succeeded his father LEOPOLD, who laid his dying commands on him to assist his brother CHARLES in the recovery of the Spanish monarchy. The late Emperor being embalmed, his heart was put into a silver box, and carried to the chapel of Loretto to be deposited behind the high altar there. His bowels were put into another silver box, and with a great deal of ceremony interred in the cathedral church of St. STEPHEN; and his body, after it had lain three days in state in the Imperial palace, was interred in the church of the Capuchins at Vienna, with all imaginable state.

The grand fleet, under the command of Sir CLOUDESLEY SHOVEL, with a body of land-forces on board commanded by the Earl of Peterborough, set sail from England on the 24th of May, this year 1705; and having touched at Lisbon, King CHARLES III. came on board them, after which the fleet sailed to Barcelona, arriving before that city on the 22d of August, N. S. The confederate forces having made a descent, attacked the fort of Montjuich, or Montjoy, and carried it on the 6th of September; but the Prince of Hesse was killed at the first attack. The city of Barcelona also surrendered on the 4th of October N. S. and the whole province of Catalonia, except Roses, immediately after declared for King CHARLES III. The following winter the Earl of Peterborough made a prodigious progress in Spain, considering the small force he had with him; for he took possession of the city of Valencia, and obliged that whole province to declare for the house of Austria. The Portuguese also were upon the offensive this year, and took some towns on the frontiers of Spain; but setting down before Badajoz were forced to raise the siege, and were afterwards handsomely banged by the French general, the Marshall Thesse. But the French and Spaniards being apprehensive of a general revolt in the kingdom of Spain, if the allies were suffered to remain in the quiet possession of Catalonia and Valencia, drew off most of their forces from the frontiers of Portugal, and on the third of April N. S. laid siege to the city of Barcelona, where King CHARLES III. commanded in person: King PHILIP also thought fit to command the French and Spanish troops which formed the siege in person: for on the fortune of this place it was generally thought at that time, the fate of the Spanish monarchy depended. There

was not more than seven or eight hundred regular troops in Barcelona, when King PHILIP sat down before it; but the Earl of Peterborough found means to throw in three or four thousand men afterwards, who defended the place till the 8th of May N. S. when the confederate fleet, consisting of fifty men of war, besides frigates and transports, with a body of land-forces on board, arrived in the road of Barcelona, the fleet being commanded by Sir JOHN LEAKE, and the land-forces by the Earl of Peterborough; which put the French and Spaniards into such a consternation, that they precipitately raised the siege, and drew off their troops on the 12th of May early in the morning, leaving their artillery and ammunition, provision, and wounded men behind them, and marched directly for France with King PHILIP at the head of them: and what is very remarkable, there happened at the same time at nine in the morning almost a total eclipse of the sun, being the French King's device, for six minutes; from whence many of the superstitious took leave to conjecture, that the French, as well as the Spanish monarchy, would soon decline and become a prey to their enemies.

The siege  
raised.The allies  
take pos-  
session of  
Madrid.

The siege of Barcelona was no sooner raised, but the Portuguese and English Generals on that side took a resolution of advancing directly to Madrid; whereupon the Queen and court of Spain thought fit to retire to the confines of France, and the Marquis das Minas and the Earl of Galway took possession of that capital on the 24th of June 1706; and on the 27th King CHARLES III. was proclaimed there: whereupon Toledo, and several other great towns made their submission. This success made the confederate generals at Madrid send express after express to King CHARLES III. to hasten his march to his capital city and join them with all the forces he could assemble; but the Kingdom of Arragon declaring for him at the same time, he marched to Saragossa, and trifled away so much time there in bull-fights and other amusements, that King PHILIP had time to draw together an army superior to that of the allies at Madrid, and obliged the confederates to quit that city; whereupon the towns of Toledo, Salamanca and other places in Castile, which had desired the protection of the allies, declared again for King PHILIP; and three or four days afterwards, when it was too late, King CHARLES joined the Portuguese at Guadalaxara with six or seven regiments. But the forces of the confederates, not being able to subsist in Castile for want of provisions, decamped about the ninth of September, and marched into Valencia, where they were joined by ten thousand men from England, who landed at Alicant, at least they were ten thousand when they embarked in England; but sickness and other accidents, destroyed above half of them before they entered upon action. On the eleventh of December this year died Don PEDRO King of Portugal, in the 58th year of his age, and was succeeded by his eldest son Don JUAN IV.

Battle of  
Ramillies.

Upon the Rhine there was very little action; and in Hungary a suspension of arms was agreed on this campaign between the Imperialists and the Malecontents: but in Flanders on the 12th of May O. S. that memorable battle was fought called the battle of Ramillies, between the Confederates under the command of the Duke of Marlborough, and the French and Bavarians commanded by the Elector of Bavaria and Marshal VILLEROY, where-

VOL. II.

in the Allies gained a compleat victory, taking great part of the enemy's artillery and baggage, with very little loss on the side of the allies. Whereupon the cities of Louvain, Brussels, Mechlin, Ghent, Oudenard, Bruges, Antwerp, and several other considerable cities in Flanders and Brabant, made their submission, and acknowledged King CHARLES III. for their sovereign. The Duke of Marlborough the same campaign besieged and made himself master of Ostend, Menin, Dendermond and Aeth.

In Italy also the confederates were very successful at the end of the campaign, though things had but a dark aspect on that side in the beginning of the year: for the Duke of Vendosme on the 19th of April defeated the Imperialists at Calcinato. On the 23d of May the French invested Turin, and pressed that city very hard; whereupon Prince EUGENE marched to the relief of it. On the 5th of August the French took the counterscarp of the citadel of Turin, and both town and castle were upon the point of being taken: but the Duke of Savoy and Prince EUGENE having joined their forces, attacked the French in their intrenchments before Turin on the 7th of September N. S. and having obtained a compleat victory, entered the city in triumph. Soon after the city of Milan and the greatest part of that duchy submitted to the Imperialists: and about the beginning of March following, a treaty was concluded between Prince EUGENE on the part of the Imperialists, and Prince VAUDEMONT on the part of France; whereby it was agreed, that the French should evacuate all they were possessed of in Italy, and be permitted to march home with the usual marks of honour. And thus ended the year 1706, the most glorious to the allies of any during the war, and which would infallibly have put an end to it, if there had been a good understanding between the English, Imperialists, and Portuguese in Spain; but while their Generals were disputing about command and precedence, most of the mighty advantages we had gained in that kingdom were lost, never to be retrieved again. We conquered great part of Spain indeed afterwards; but the indolent conduct of some who were principally concerned, had so disgusted the Spaniards, that they would never be reconciled to the allies afterwards.

Battle of  
Turin.The  
French e-  
vacuate I-  
taly.

The first considerable action which happened in the year 1707, was the battle of Almanza, where the French, under the command of the Duke of Berwick, entirely routed the army of the allies commanded by the Marquis Das Minas and the Earl of Galway. The Portuguese horse, it seems, abandoned the foot at the first charge, which occasioned most of the English and Dutch infantry to be cut in pieces: while the horse with their two generals made their retreat into Catalonia, leaving the kingdoms of Valencia and Arragon, which had so readily declared for the allies, to the mercy of their enraged King, who made them pay very largely for their revolt, and deprived them of their ancient privileges. Nor are the barbarities and insults which the miserable inhabitants suffered on this occasion from the conquerors to be expressed; particularly in the cities of Valencia, Saragossa, Requena, Xativa and Alcyra, which upon the loss of the battle of Almanza were obliged to submit to King PHILIP's forces: and on the 30th of September following the Duke of Orleans took the city of Lerida by storm. The principal occasion of all which misfortunes, if we may depend upon the resolutions of the Com-

mons of England, was, That of near thirty thousand English forces provided for the service of Spain and Portugal, there were but eight thousand and some odd hundreds there at the battle of Almanza. But what contributed further towards the misfortune of the allies in Spain, was a romantick project of the Duke of Savoy's, (in which revenge had a greater share than prudence) for the taking of Thoulon, in which expedition was employed the grand fleet of England, and upwards of forty thousand men by land, which attempt came to nothing, neither was there any probability it should; whereas, if half that force had been sent to Spain on the conclusion of the war in Italy, that kingdom had been secured to King CHARLES III.

In the mean time Count THAUN, with fifteen thousand Imperialists, entered the kingdom of Naples without opposition. The city of Naples submitted on the 6th of July to King CHARLES III. without striking a stroke: And on the 16th the castles of Naples surrendered. Count THAUN on the 29th of September following took Gaieta by storm, and in it the Duke de Escalona, Viceroy of Naples for King PHILIP, with all the nobility in that interest, whereby the kingdom of Naples was entirely reduced to the obedience of King CHARLES.

In Flanders there happened little or no action this campaign; and upon the Rhine the allies seemed to be asleep, while Marshal Villars, who commanded the French on that side, forced the lines of Buhl, possessed himself of Raftat, and afterwards laid under contribution the Circles of Suabia and Franconia, the Electorate of Mentz, the Landgravate of Darmstadt, the Palatinate of the Rhine, and several other German Principalities: and to finish the misfortunes of this fatal year 1707, Admiral SHOVEL on his return from the Mediterranean with the grand fleet, on the 22d of October split upon a rock near the land's end of England, and was lost with all his hands on board, to the number of near one thousand, two or three other men of war in the fleet running the same fate. And much about the same time four English men of war, and a rich fleet of merchant ships were taken off the Lizard by a French squadron from Brest. We begun this year, it is true, with a thanksgiving for the union of the two kingdoms of England and Scotland: but some people observe, that the allies had but very few real occasions of singing Te Deum afterwards, during the course of the war, besides the defeating the Pretender's design against Scotland, who in the beginning of March 1707-8, sailed from Dunkirk to the Frith of Edinburgh with a squadron of French men of war, and a body of land-forces on board; and was driven from thence on the 13th of the same month by the English fleet commanded by Sir GEORGE BYNG, who took the Salisbury, on board of which ship, it is said, the Pretender dined the same day.

1708.

The Imperial General Count STAREMBERG was sent into Spain in the beginning of the year 1708, to command the German forces in that kingdom; and soon after Major-General STANHOPE was dispatched to Barcelona to command the English there; and Sir JOHN LEAKE convoyed six or eight thousand men from Italy to Spain to re-inforce King CHARLES. The Admiral also brought over to Barcelona at the same time the Princess of Wolfenbuttle, the present Empress, who was contracted to King CHARLES; and in this city the marriage was consummated: and

whether, according to the Jewish law, his Majesty thought it improper to go into the wars the first year after his espousals, I shall not take upon me to resolve; but certain it is, this was a very unactive campaign in Catalonia. Admiral LEAKE indeed, after his setting the Queen of Spain on shore, failed to Cagliari, the capital of the island of Sardinia; and the inhabitants both of city and country declared for King CHARLES III. with very little persuasion. The island of Minorca, in which is the commodious harbour of Port Mahon, was also soon after reduced to the obedience of King CHARLES by the confederate fleet. The young King of Portugal being at the same time taken up with a marriage-treaty, and celebrating his nuptials with the Arch-Duchess MARY-ANNE of Austria, who was convoyed to Lisbon by Sir GEORGE BYNG, little was done this campaign on the side of Portugal.

The three colleges of the Empire determined to admit the Elector of Hanover to sit and vote in the electoral college on the 30th of June, 1708. which had been opposed for sixteen years: whereupon his Electoral Highness was prevailed upon to take upon him the command of the Imperial troops upon the Rhine; but it happened to be a campaign of very little action.

In Flanders the French surprized the cities of Ghent and Bruges about the beginning of July, and afterwards invested Oudenard; the Dukes of Burgundy and Berry, and the Chevalier St. George being in the field in person, they were attacked by the Duke of Marlborough and Prince EUGENE, while they lay before this town, and their troops being defeated, were forced to raise the siege, and retire to Ghent. The Duke of Marlborough afterwards levelled the French lines between Ipres and the Lys, putting Artois and Picardy under contribution. On the other hand, the French laid Dutch Flanders under contribution. And on the 13th of August, Prince EUGENE of Savoy laid siege to the city of Lille, the capital of French Flanders, while the Duke of Marlborough with the grand army covered the siege. This is one of the strongest fortresses in the world; and was defended by one and twenty battalions of foot, and several regiments of horse, commanded by the Marshal Boufflers. The allies attacked the counterescarp on the seventh of September, and carried it after an obstinate defence, wherein they lost two thousand men, and sixteen of their engineers. At another attack the allies lost a thousand men, and Prince EUGENE was wounded by a musket-ball, which grazed upon his skull; and being thereby confined to his tent, the Duke of Marlborough took upon him the command of the siege. The French, to distress the besiegers the more, cut off their communication with all their garisons, except Ostend: from whence General WEBB marching with a great convoy of provisions towards Lille, on the 28th of September, was attacked at Winnendale by twenty-four thousand French, commanded by General de la Mothe; but the French were defeated, and the convoy arrived safe at Lille: by which General WEBB obtained abundance of honour, the enemy being treble his number, and furnished with a train of artillery, whereas he had not a field-piece with him. The town of Lille surrendered on the 23d of October following, the garison retiring into the castle, except the horse, who were permitted to march away; and it was the 9th of December before the castle surrendered: in the siege whereof,

and of the town, the allies did not lose less than twelve or fourteen thousand men by the sword, besides what they lost by sickness or other accidents. While the allies were at the siege of the castle, the Duke of Bavaria attacked Brussels, but was forced to rise from before it on the approach of the Duke of Marlborough: who afterwards invested Ghent on the 18th of December, and the town surrendered the 30th. The next day the French quitted Bruges, and all the other towns they had taken in Spanish Flanders. And thus ended this long campaign of 1708, in a cold and rigorous season, in which great numbers of men and horses must have perished, if Ghent had not surrendered so suddenly, beyond all expectation, there being a garison of near twenty thousand men in that place.

1709.  
Offers of  
peace.Tournay  
taken.Battle of  
Malplaquet.

The year 1709 begun very pacifically, the French offering by way of preliminaries, to acknowledge King CHARLES III. King of Spain; and to yield up all the Spanish dominions to the house of Austria, to resign Strasburg, Brisac, &c. to the Emperor; to acknowledge the Queen of Great Britain, and demolish Dunkirk, and relinquish Lisle, and all other places the allies had taken in the Netherlands: but after all these things were agreed on, the French plenipotentiaries refused to sign the articles; whereupon the treaty broke off the latter end of May, and both sides prepared again for war. And the allies, having assembled their forces, invested Tournay the 27th of June; the town surrendering the 30th of July, and the citadel the 3d of September following. This place cost the confederates a world of men, being one of the finest fortifications in the Netherlands, and undermined in almost every part where it was to be approached. On the eleventh of September following was fought the battle of Malplaquet, or Blaregnies, near Mons, between the allies, commanded by Prince EUGENE of Savoy and the Duke of Marlborough on one side, and the French, under the command of the Marshals Villars and Boufflers on the other; each army consisting of an hundred thousand men and more, the finest troops in the world. The French had posted themselves very advantageously in the woods of Sart and Janfart, where they cut down trees, and rendered the attack exceeding difficult. In other places they were covered by a triple entrenchment, and all the intervals planted with artillery, which made it several hours before the confederates could make any impression upon them. At length the intrenchments were forced, after it had cost the allies near twenty thousand men: but the French retired in good order, the confederate forces being in no condition to pursue them far. The following winter the French being distressed by famine, as well as by the arms of the confederates, made fresh overtures of peace, wherein the French King agreed to all the preliminary articles above recited, but the assisting to dethrone his grandson with his own troops; and in lieu of it, offered to contribute a sum of money towards it, if he refused to submit to the abovesaid conditions: but the terms were rejected. The last place of treaty was at Gertrudenburg; where such was our confidence in our good friends the Dutch, that we intrusted them entirely with our interests, and had not a minister amongst them. The Dutch treated with the French plenipotentiaries, exclusive of the ministers of the other allies: and their High Mightinesses were so exceeding stiff, that this treaty too came to nothing.

On the side of Portugal the allies were unsuccessful this year; for the Marquis de Bay, who commanded King PHILIP's forces, obtained a victory over the allies on the banks of the river Caya, and made one entire brigade of English prisoners. On the other hand, the allies made themselves masters of Balaguer in Catalonia; but there happened no other considerable action in Spain.

The Pope having refused to acknowledge CHARLES III. King of Spain, or grant him the investiture of Naples, the Imperial Generals possessed themselves of Comachio, and several other places belonging to the see of Rome; but his Holiness having considered better of it, consented to acknowledge that Prince Sovereign of the Spanish dominions.

The King of Sweden having been some time engaged in a war with the King of Poland, and laid his Electorate of Saxony under contribution, and threatened other parts of the Empire, which occasioned some troops to be withdrawn from Flanders, the confederates entered into a treaty in the beginning of the year 1710, for preserving the peace of the Empire; whereby each of the contracting powers were to furnish a certain number of troops, and form an army to oppose those who should disturb the peace of the Empire for the future.

In Flanders the allies took several towns from the French this year, particularly Mortaign, Doway, Bethune, Aire, and St. Venant, before which places they lost abundance of men. The confederates had no sooner taken one fortress, but another rose up at a very small distance in the room of it; and at this rate the war might have lasted forty years, if the English would have found money to have supported it: it having been long since observed, that the attacking France on the side of Flanders, is like the taking a bull by the horns, or battering it where it is most impregnable; when at the same time the adding ten or fifteen thousand men to the army in Spain, would soon have reduced that kingdom, and put an end to the war at once; as will evidently appear by the swift progress the arms of the allies made in Spain this campaign, which they were forced to abandon as suddenly for want of being timely supported.

The confederates attacked King PHILIP, who commanded his army in person, near Almenara, in Catalonia, on the 27th of July, and put his cavalry to the rout; but it being late in the evening when the action began, his foot retired by the favour of the night under the cannon of Lerida; and from thence King PHILIP retreated to Saragossa, being closely pursued by the allies. On the twentieth of August following, the two rival Kings, CHARLES and PHILIP, came to a general battle, near the city of Saragossa; wherein King CHARLES obtained a complete victory, and King PHILIP retired into France by the way of Navarre. The city of Saragossa hereupon opened her gates to the conqueror, who made his triumphant entry into the town the same night; where having staid about a week to refresh his troops, the army continued its march to Madrid; of which capital King CHARLES took possession again on the 21st of September: but all the Grantees were retired from thence, that they might not be put under a necessity of declaring for either party, before they saw the success of the war. In this situation King CHARLES pressed the army of the allies on the side of Portugal to join him; but they could not be prevailed on to move that way; and King PHILIP having assembled a superior army

army to that of the confederates at Madrid, King CHARLES took a resolution of returning to Catalonia, which he did soon after with a thousand horse, leaving the army to follow him at leisure.

The English forces taken prisoners in Brihuega.

The army of the allies in their march from Castile, for the conveniency of subsisting their troops, or upon some misunderstanding between the Generals, was divided into two bodies; the Germans and Portuguese, commanded by Count STAREMBERG, took one road; and the English, under General STANHOPE, another. The English General thought fit to halt with his body, consisting of eight battalions and as many squadrons at the town of Brihuega; where he was surprized December the 9th by King PHILIP and his whole army, which surrounded the place: the English defended themselves here till the 10th in the morning; when all their ammunition being spent, they were obliged to surrender prisoners of war. General STAREMBERG receiving advice of the distress the English in Brihuega were reduced to, marched with all diligence to their relief; but was prevented by King PHILIP, who gave him battle at Villa Viciosa, about a league from Brihuega, within a few hours after General STANHOPE had surrendered. In this battle STAREMBERG gave great proof of his military skill by defeating the Spaniards, though he was not half their number; but understanding that the English in Brihuega had been made prisoners the morning before, he continued his march towards Arragon; and having withdrawn the confederate troops out of the garison towns in that Kingdom, he marched to join King CHARLES in Catalonia; who was not able to prevent the taking of Gironne by the French the same winter. And thus this unhappy year 1710, which begun with so much glory, ended with the utmost disgrace to the allies: which happened rather from a misunderstanding between their ministers and generals, and a fondness in some people to have the war prolonged, than through the want of forces or treasure, to have established what had been so well begun.

1711.

The Emperor Joseph dies.

The year 1711 was fatal to some of the greatest Princes of Europe; for on the 14th of April, N. S. died LEWIS, Dauphin of France, of the small-pox, in the fiftieth year of his age, being succeeded in that honour by his eldest son LEWIS, Duke of Burgundy. And on the 20th of the same month of April, died JOSEPH, late Emperor of Germany, of the same distemper. Upon this last great event the allies used their utmost efforts to have CHARLES III. King of Spain, the only surviving brother of the late Emperor, elected in his room; and by their consent Prince EUGENE detached fifty squadrons of horse and twelve battalions of foot from the grand army in Flanders, to reinforce the Imperialists on the Rhine, and frustrate the designs of the French, who were endeavouring to penetrate into Germany again; in order to influence the Electors, and prevent the advancement of King CHARLES to the Imperial throne. And on the 27th of September King CHARLES was convoyed by the confederate fleet to Vado in Italy, where he arrived the 7th of October; and from thence went to Milan, where while he resided he was chosen Emperor; namely, on the 12th of the same month of October. Here the new Emperor receiving advice that proposals of peace had been offered to the allies on the part of France, he wrote to the Princes of the Empire and to the Dutch, to dissuade them from accepting those proposals, or entering into any treaty with France,

King Charles elected Emperor.

without some further concessions; which he assured them he would not agree to himself, be the consequence what it would. Her British Majesty, on the contrary, notified to the allies, that she had pitched upon Utrecht for the place of treaty; and that the conferences would begin there on the first of January, O. S. and invited them to send their ministers thither. Whereupon Prince EUGENE was dispatched into England by the Emperor, to dissuade the Queen from treating with France. But her ministry represented to him, that the expences of Britain, which in the beginning of the war did not amount to four millions per ann. were now increased to near seven millions, by her being obliged to supply the annual deficiencies of the allies. That the States General were frequently deficient two thirds of the quota of shipping they had stipulated to provide; which not only increased the charge of the English, but was the occasion of great damages to the royal navy, and the ruin of the English merchants, whose ships were destroyed for want of convoys; the English men of war being employed in services which ought to have been performed by the States. That the Dutch also had been deficient in the Netherlands upwards of twenty thousand men of their quota of troops; and that the whole burthen of the war almost in Spain and Portugal had of late been thrown upon the English; the Dutch every year lessening the number of their troops in those countries: and the Emperor, who was most nearly concerned in the event of that war, had no troops at all in his pay there till the last year of the war, and then but one single regiment. On the contrary, Britain did not only maintain sixty thousand land-men in the Spanish war, but the charges of the shipping only employed in that service, amounted to eight millions sterling; and that Britain had expended in this war, above it's quota, at least nineteen millions of money. That the greater our success had been, the heavier had been the burthen on the part of Britain; and while new dominions were daily conquered for the allies, they continually abated their share of the expence. Nor could it be expected those allies should ever be weary of enlarging their territories at the charge of Britain, especially when even the revenues of the conquered countries were not applied to the carrying on the war. That though Britain had born as great a share in the war as all the confederates besides, she was to reap no advantage by it: on the contrary, the late acquisitions of the Dutch might prove destructive to our trade. The putting Newport, and other places in Flanders into their hands, rendered the British trade thither precarious; and the strength of that country, which Britain had contributed so largely to reduce, might hereafter be employed against Britain itself.

CHAP.  
IV.  
A treaty of peace proposed.

The first general conference on the subject of peace was held between the plenipotentiaries of Britain, France, and the States General at Utrecht, on the 29th of January, new stile, anno 1711-12; and the British ministry not being to be diverted from proceeding in it by any promises Prince EUGENE could make, that the Empire would for the future contribute more to the expences of the war than they had done, the Prince had his audience of leave of her Majesty; when to express the value she had for his personal merit, she presented him with a sword enriched with diamonds, of the value of five thousand pounds.

But

*Charles VI. the Present Emperor of Germany*

CHAP.  
IV.

But notwithstanding the Queen of Great Britain was not averse to a treaty of peace, she did not yet slacken the preparations for war: and the Duke of Marlborough, passing the French lines at Arleux and Bac-a-Bacheul, on the fifth of August new stile, invested the town of Bouchain the 12th, which surrendered to the allies the 13th of September following, the garison being made prisoners of war. On the Rhine there was little or no action this campaign, any more than in Spain. And in Hungary a treaty of pacification was concluded between the Imperial ministers and the malecontents; whereby the malecontents being pardoned, agreed to disband their forces, and deliver up the fortresses in their possession, after they had continued in a state of rebellion for nine years together.

1712.

The Duke of Ormond having the command of the British forces in Flanders, in the year 1712, declared to the allies, that there being a near prospect of peace, her Majesty had given him orders not to act offensively: however, at the pressing instances of the allies, she did afterwards consent to the besieging of Quesnoy, which surrendered the fourth of July; and on the seventh of the same month, the French King voluntarily surrendered Dunkirk to the British troops. About which time the British plenipotentiaries at Utrecht, and the Duke of Ormond, General of the British troops, proposed a cessation of arms to the allies, which was rejected by them: on the contrary, Prince EUGENE, the Imperial General, with the German and Dutch troops, separated from the Duke of Ormond, inviting the mercenaries in British pay to follow them, which most of them did. And the next day, being the 17th of July, Prince EUGENE laid siege to Landrecy. Hereupon the Duke of Ormond caused a cessation of arms between Great Britain and France to be proclaimed in his camp, as Marshal Villars did in the French camp the same day. After which the Duke of Ormond, with the British forces under his command, marching towards Dunkirk, was denied entrance into Bouchain and Doway by the Dutch garisons, notwithstanding the British hospital was in Doway: whereupon the Duke bent his march towards Ghent, of which city, as well as Bruges, he took possession the 23d of July, N. S. and detached six battalions to re-inforce the English garison in Dunkirk. On the twenty-fourth of the same month, the allies under Prince EUGENE met with a misfortune, which could not but make them sensible of the rashness in insulting the Duke of Ormond, and separating their forces from those of Britain: for the Earl of Albemarle, being encamped with thirteen battalions and thirty squadrons at Denain, to secure the communication of Prince EUGENE's army (which lay before Landrecy) with Marchiennes, where was the grand magazine of the confederates, was attacked by Marshal Villars, and defeated, and himself made prisoner; Count DRONA, Lieutenant-General and Governor of Mons, was drowned in the Scheld; Count NASSAU with three thousand officers and soldiers were killed and wounded, and as many made prisoners; and a vast quantity of ammunition and provisions, besides twelve pieces of cannon, were taken by the French: and about a week after, Marchiennes itself surrendered to them, the garison consisting of between four and five thousand men being made prisoners of war: in the place also was found three hundred thousand weight of powder, an hundred pieces of

A cessation of arms between Great Britain and France.

cannon, three hundred waggons, a vast quantity of bombs, granadoes, bullets, corn, meal, bacon, wine, brandy, and all kinds of provision and tools necessary for making two sieges, besides great numbers of horses. Upon which misfortune Prince EUGENE thought fit to raise the siege of Landrecy the second of August.

And now the French being in their turn masters of the field, invested Doway on the 14th of August, which surrendered the 8th of September following, the garison being made prisoners of war. The same day Quesnoy was invested by the French, and surrendered the 4th of October, the garison also being made prisoners of war; which, according to the French account, compleated the number of forty battalions of the allies they had destroyed or made prisoners, since the defeat at Denain. The Dutch still refusing to come into the cessation of arms, Marshal Villars sat down before Bouchain on the 10th of October, which place surrendered the 19th, the garison remaining prisoners at discretion. But I should have remembered that Portugal was before-hand with all the allies in treating secretly with France: and on the fifth of November a suspension of arms was signed for four months between France and Spain on the one side, and Portugal on the other. Brigadier PIERCE also, Commander of the British troops in Catalonia, having notified to Count STAREMBERG, that a cessation of arms had been agreed upon between Great Britain and France, declared that he must separate his forces from him; and on the 15th of November the British forces in Catalonia were embarked for Port Mahon, where the Duke of Argyle at that time commanded. His Grace upon their arrival caused the Emperor's colours to be taken down, and the English colours to be hoisted in the several castles and forts in the island of Minorca: and the Emperor's governor in the island refusing to take the oaths to her British Majesty, had leave to retire to Barcelona: but the rest of the magistrates there took an oath of fidelity to the Queen.

The States General, finding the allies in no condition to oppose the arms of France without the assistance of Great Britain, agreed to come into the plan of peace proposed to them by the Earl of Strafford on the part of Britain, and conclude, and sign the peace jointly, and at the same time with the British ministers. But before the conclusion of the general peace a new treaty of guaranty for the Protestant succession in Britain, and the Barrier of the States General, was signed on the 30th of January, 1712-13. By which treaty it was agreed, that the Dutch should put garisons in the towns and forts of Furnes, fort Knocque, Ipres, Menin, the town and citadel of Tournay, Mons, Charleroy, the town and castle of Namur, the castle of Ghent, the ports Le Perle, Philip and Damme, and the fort of St. Donat. The fortifications of all which places, with the garisons therein, to be maintained out of the revenues arising in the countries about them; so that the Dutch were to be at no expence in maintaining those garisons.

Barrier treaty.

And it was further agreed, that Britain, when required by the Dutch, should send ten thousand foot, and twenty men of war to their assistance, at the charge of Britain, to maintain the aforesaid Barrier: and on the other side, the Dutch should send six thousand foot and twenty men of war to the assistance of Britain when required, at the expence of the States, to support the Protestant suc-

CHAP.  
IV.Treaty  
for the  
evacua-  
tion of  
Catalonia.

cession: but if the danger on either side should be great and imminent, either party should assist the other with their whole force.

The Imperial and French ministers on the 14th of March following concluded a treaty for the evacuating Catalonia, Majorca and Ivica by the Imperialists, and for the neutrality of Italy. By the first article whereof it was agreed, that there should be a suspension of arms in Catalonia till the Empress and the Court then residing there, and other persons who were disposed to follow it, whether military or not, Spaniards or others, should with their effects, and the Imperial forces, be entirely departed from Spain and arrived in Italy, upon condition they delivered up the places possessed by them.

And by the eighth article it was agreed, that as soon as the said evacuation should be begun, there should be granted to all the subjects and inhabitants of Catalonia, and the said Islands, a general amnesty and perpetual oblivion for all that had been done by them during the war; and no trouble should be given on those accounts to the Catalans, or inhabitants of the said isles: but as to the enjoyment of their ancient privileges, this was referred to be discussed at the treaty for a general peace. And by the eleventh article it is agreed, that there shall be an entire suspension of arms throughout Italy, and the islands of the Mediterranean, respectively possessed by the parties engaged in war, as in all the territories of his Royal Highness the Duke of Savoy, situate as well on this side as on the other side the Alps.

In pursuance of the abovesaid convention for the evacuation of Catalonia, the Empress embarked at Barcelona about the beginning of March 1712-13, and was convoyed to Vado in Italy by the British fleet.

The year 1713 was more remarkable for negotiations of peace than warlike enterprizes; for on the 31st of March O. S. or the 11th of April N. S. the respective treaties of peace between Great Britain, Prussia, Portugal, the States General and Savoy on the one part; and the French King on the other, were executed at Utrecht: Count Zinzendorf the Imperial Minister protesting against it, declaring, that he conceived the Emperor and Empire had great injustice done them; for that the Emperor's Imperial dignity was not by the preliminary articles to be acknowledged till after the signing the peace. 2. Because that expression in them, that the Rhine shall serve as a boundary between France and the Empire, is very captious and ambiguous, there being many considerable places and countries belonging to the Empire on the French side the Rhine. 3. Because France insists on the restoration of the Elector of Bavaria, with some other demands of importance. For which reasons the Emperor and Empire determined to continue the war against France alone, till they could obtain better terms.

By the treaty of peace between Great Britain and France, it was stipulated, that the acts of settlement made by the British parliament, for the security of the Protestant succession, should be thereby confirmed and enforced: that the crowns of France and Spain should remain for ever separate, Dunkirk be demolished, the British plantations in America in possession of France be restored, and a just and reasonable satisfaction given to all the allies.

By the treaty with the States General, France consented to yield up the town and dutchy of

Luxemburg, the towns of Namur, Charleroy, CHAP.  
IV.  
Menin, Tournay, Furnes, Fort Knocque, Loo, Dixmude, Ipres, and some other places for a barrier to the States; and the Dutch on the other hand, agreed to yield up Lille, Aire, Bethune, and St. Venant.

By the treaty between France and Savoy, Sicily was yielded to the Duke of Savoy, a sufficient barrier was given him on the side of France; and the crown of Spain was limited to the said Duke on failure of issue of King PHILIP.

The war still continuing between the Empire and France, the French invested Landau on the 12th of June, which held out till the 20th of August, when the garison surrendered, and were made prisoners of war. On the 30th of September the French laid siege to Friburgh, which they made themselves masters of on the 1st of November, and on the 16th of the same month the castle surrendered: which successes induced the Imperialists the following winter to enter into a treaty with France, which was managed by Prince EUGENE of Savoy, on the one side, and Marshal Villars on the other, at the castle of Raftadt.

COUNT STAREMBERG having evacuated Catalonia with the Imperial troops on the 9th of July, according to the abovementioned convention, the Catalans immediately took possession of Barcelona, and declared war against King PHILIP, rejecting the indemnity the Queen of Great Britain had procured for them; and on the 13th of the same month of July, a treaty of peace was signed between Great Britain and Spain; whereby the Queen's title, and the Protestant succession in Britain were agreed to; Gibraltar, Minorca and Port Mahon yielded to Britain, with the benefit of the Assiento trade, or the furnishing the Spanish dominions in America with negroes; and by it the Catalans were not only indemnified for opposing King PHILIP, but their honours and estates, together with the privileges of the inhabitants of both Castiles were granted them, and the cession of Sicily was confirmed to the Duke of Savoy, with the title of King of that island.

The Catalans continuing deaf to all offers of accommodation, King PHILIP's forces plundered and ravaged their country in a terrible manner; whereupon the Catalans declared themselves a free independent State; granted commissions for raising soldiers in their own name; and took upon them to coin money with the arms of that province stamped upon it.

At the close of this year, viz. on the 6th of March N. S. 1713-14, a treaty of peace was concluded at Raftadt, between the Emperor and France: whereby it was agreed, that the treaties of Westphalia, Nimeguen. and Ryfwick, should be the basis and foundation of the present treaty; and particularly, that the French should restore to the Emperor the town and fortrefs of Old Brisack, the town and fortrefs of Friburgh, the forts of St. Peter, and of the Star; and all other forts in the Black Forest and Brisgau, with the fort of Kehl and it's dependancies; the fort of Pile, and others erected in the islands of the Rhine near Strasburgh, were to be demolished, the navigation and use of the said river to remain free and open to the subjects of either side, and no new tolls to be laid on goods passing along the said river by either party. The French King also agreed, that the fortifications over against Hunninghen, on the right side the Rhine, and the island therein should be demolished; and in general, all the forts, intrenchments,

trenchments, lines, and bridges specified in the treaty of Ryfwick, and such as have been erected since, either along the Rhine, or in the Rhine, or elsewhere in the Empire, and it's dependancies, which it should not be lawful to re-establish. The French King also agreed to evacuate the castles of Bitche and Homburgh, and to cause the fortifications thereof to be demolished. On the other hand, his Imperial Majesty agreed, that the city of Landau and it's dependancies should remain to the most Christian King : that the Electors of Bavaria and Cologne be restored to all their dominions, prerogatives, &c. And the French agreed, that the Emperor should enjoy the Spanish Netherlands, saving the barrier towns there granted to the States General : that the King of Prussia should keep all he was possessed of in the upper quarter of Guelderland, particularly the town of Guelder, &c. which was confirmed to that Prince in lieu of his pretensions to the principality of Orange in France.

1714.

Death of  
the Queen  
of Eng-  
land, &c.

The year 1714 was fatal to several great persons, as 1. to CHARLES Duke of Berry, youngest son of the late Dauphin of France, and grandson to LEWIS XIV. who died at Marli on the 4th of May, in the 28th year of his age. 2. The Princess SOPHIA, Electress and Dutchess dowager of Hanover, who died on the 8th of June N. S. in the 84th year of her age. And 3. ANNE, Queen of Great Britain, who died on the first of August, in the 50th year of her age ; being succeeded by GEORGE Elector of Brunswick-Lunenburgh, who arrived at London on the 20th of September, and was crowned the 20th of October following.

Barcelona  
taken.

The Duke of Berwick, with an army composed of French and Spanish troops, laid siege to Barcelona on the 12th of July, this year ; the citizens defending themselves with great obstinacy till the eleventh of September following, when they retired into the new city, and beat a parley ; and on the 12th they surrendered on condition their lives should be spared, and the city should not be plundered. As to the Emperor, who encouraged the poor Catalans to stand out to the last extremity, and not accept of any terms, promising to send them reinforcements from time to time, he neither sent them any assistance, or took any notice of them in the treaty of peace between the Emperor and France, or in the treaty between the Empire and France, which was concluded at Baden the 7th of September N. S. and contains nothing material but what was stipulated in the treaty of Rastadt.

Treaty  
between  
the Em-  
pire and  
France.

A treaty was also concluded on the sixth of February this year between Spain and Portugal ; so that all the nations of Europe were now in peace : but this calm lasted a very little while, for the Turks declared war against the republick of Venice on the 7th of December 1714.

1715.

The  
Turks  
conquer  
the Mo-  
reæ.

In the year 1715, the Turks made themselves entire masters of the Morea, meeting with very little opposition there : and this swift progress of the Ottoman arms obliged the Emperor to enter into a confederacy with the Venetians for their mutual defence. The peace of Great Britain was also disturbed this year by a civil war : the Earl of Marr retiring in disgust from court, assembled the friends of the Pretender in Scotland about the middle of August ; and proclaimed him King by the name of JAMES VIII. and Mr. FOSTER, who had accepted the post of General for the Pretender in England, assembled the malecontents in the north of England ; and caused the Pretender

to be proclaimed in Northumberland in October following : but being afterwards surrounded by King GEORGE's forces in Preston, General FOSTER and his adherents were most of them made prisoners of war. The same day the Earl of Marr attacked King GEORGE's troops near Dumblain ; but it was a kind of drawn battle, neither side having great reason to boast of their success. On the 25th of December the Pretender landed in Scotland near Aberdeen, with some few officers and gentlemen ; but it was now too late, the Dutch having before sent over five or six thousand men to the assistance of King GEORGE ; and the malecontents having no regular troops in their service, the Pretender and the Earl of Marr seeing no probability of success, dispersed their troops, and transported themselves into France. What disheartened the malecontents more than any thing, was the death of the French King LEWIS XIV. who died on the first of September N. S. and the Duke of Orleans being declared Regent of France, who betrayed all their counsels to the British court.

Hostilities having been begun between the German and Ottoman Empires in the beginning of the year 1716, Prince EUGENE on the fifth of August attacked the Turkish army, consisting of near two hundred thousand men, entrenched near Carlowitz : and though the Turks defended themselves well at the beginning of the action, they were at length routed, and a dreadful slaughter made of them ; the Imperialists making themselves masters of all their cannon, tents, baggage and ammunition, the military chest, with five millions of florins coined, and the Grand Vizier's pavillion, in which were found jewels and treasure to the value of three hundred thousand florins more ; two hundred of his women were also taken, from fourteen to twenty six years of age. After this victory Prince EUGENE marched to invest Temeswaer ; before which place the trenches were opened on the first of September, and the town surrendered on the 14th of October following, having been in the possession of the Turks for an hundred and sixty-four years.

1719.  
War be-  
tween the  
Empire  
and  
Turkey.

The Imperialists the following year invested the city of Belgrade on the 18th of June 1717 ; and the Turks coming to the relief of it on the 16th of August, Prince EUGENE of Savoy engaged them, and obtained a complete victory : whereupon the town surrendered two days afterwards ; but Prince EUGENE made no further advantage of his victory this year. PHILIP King of Spain having augmented his navy, as well as his land-forces this year, proposed to himself the making a conquest of Sardinia, Sicily, Naples, and the rest of the Spanish dominions in Italy, which had been dismembered from that crown by the last peace ; and accordingly the Marquis de Lede, the Spanish General, made a descent in the island of Sardinia, and reduced that country to the obedience of King PHILIP.

1717.  
Belgrade  
taken by  
the Impe-  
rialists.

In the beginning of July the year following, the Marquis de Lede landed in Sicily with sixteen or seventeen thousand men, and was well received by most of the towns in that island : who set open their gates and voluntarily offered to submit to King PHILIP. Whereupon a confederacy was entered into between the Emperor, Britain, and the King of Sicily against Spain ; and the Dutch afterwards coming into it, this treaty was called the Quadruple Alliance, the chief design whereof, was to confirm the partition of the Spanish monarchy. In pursuance whereof, Sir GEORGE

1718.  
A new  
war with  
Spain.

CHAP. IV. BYNG being sent into the Streights with a squadron of British men of war, fell upon the Spanish fleet near Syracuse in Sicily, and took and destroyed about sixteen of their ships of war. In the mean time the Emperor having signed a treaty of peace, or truce for twenty-four years with the Turks, was at leisure to attend the war with Spain in Sicily.

1719. The French also assembled an army in the beginning of the year 1719, and invaded Spain by land: on the 13th of April they took Port Pafage, where they burnt six Spanish men of war, which were almost finished, upon the stocks. The French Generals afterwards besieged Fontarabia, which surrendered the sixteenth of June, as did St. Sebastian the first of August following, the whole province of Guipuscoa submitting to the crown of France. On the 29th of August the Lord Cobham with six thousand British troops made a descent near Vigo in Spain, and took the town and castle, but quitted them again the 25th of October. In the mean time the Imperialists, by the assistance of the British fleet, transported an army into Sicily; and having taken the town of Messina, the castle surrendered to them the 19th of October. King PHILIP finding himself thus pressed by a potent confederacy, thought it time to hearken to proposals of accommodation. But I should have remembered, that Spain in order to make a diversion, and distract the allies this summer, sent the Earl of Seaforth with three hundred Spaniards to Scotland, who having joined four thousand Highlanders on the tenth of June, engaged General WIGHTMAN, but they were defeated, and most of the Spaniards made prisoners.

1720. On the sixth of May 1720, N. S. a convention for a suspension of arms, and for the evacuation of Sicily by the Spaniards, was signed by the Imperial and Spanish Generals, and on the next day a convention for the evacuation of Sardinia.

1721. And in the following year the renunciations of the Emperor and King of Spain, of such part of the Spanish Monarchy as each of them were to give up, were executed; by which Sicily was surrendered to the Emperor, and Sardinia to the Duke of Savoy, with the title of King of that island: and thus peace was once more restored to Europe; some few matters only being left to be decided in a congress at Cambray by the ministers of the respective powers concerned.

Peace concluded.

1722. The Emperor having no male issue, summoned a general diet of the states of the kingdom of Hungary to meet at Presburg on the 20th of June 1722, where he procured an act to pass for settling the succession of the crown of Hungary on the female line of the house of Austria: acknowledging for successors to that crown the Archduchesses, his Imperial Majesty's daughters, and all the females of the house of Austria, with their descendants, in failure of male issue, according to the order of primogeniture, in the manner established in all other kingdoms and territories belonging to his Imperial Majesty, and his most august house; determining to remain for ever indissolubly united with his Imperial Majesty's other dominions; so that the same may for ever hereafter be governed by one head. And it is said, the Protestants who were members of the states, contributed very much to the resolution that was taken for the settling the succession, having had great assurances given them that the affairs of religion should be settled to their satisfaction.

The crown of Hungary settled on the females of the house of Austria.

It was looked upon to be very ominous to the Imperial family, that on the 6th of August in the evening in the inward court of the palace of the Favorita, next to the Emperor's apartment, so great a number of grass-hoppers, or rather locusts, lodged themselves, that it was the work of a whole night and the next day to clear the court of them; but the two outer courts of the palace had none in them: I do not find however, that any great misfortune hath happened to the Emperor since, according to the wife prognostications of the superstitious, unless the want of male issue is to be accounted such.

CHAP. IV.

The beginning of the year 1723, was fatal to the famous town of Buda in Hungary, most part of the city being burnt to the ground, and part of the walls and fortifications destroyed by the blowing up the magazines on Easter Sunday.

1723.

The Emperor having erected a company of merchants at Offend to trade to the East-Indies, the West-Indies, and the coast of Africa by his grant, bearing date the day of December 1722, the Dutch presented memorial after memorial to the Imperial court, in hopes of getting the grant retracted; insisting that it was contrary to the treaty of Munster, and other treaties, that the inhabitants of the Aultrian, formerly the Spanish, Netherlands should trade to the East-Indies; and seemed to charge the Emperor with ingratitude, by encroaching on their trade when they had done him so many signal services in the late war, conquering whole kingdoms and provinces for him at a great expence of blood and treasure.

The Dutch memorial against the Offend company.

This year the Emperor published an edict in favour of the Hungarian Protestants, allowing them the free exercise of their religion, and their ancient privileges. On the 5th of September his Imperial Majesty was crowned King of Bohemia at Prague, and on the 8th the Empress was crowned Queen; it not being the custom of this country, it seems, for the King and Queen to be crowned the same day.

The famous congress of Cambray, which had been so long talked of, was opened the 26th of January 1723-4; where the first things agreed on, were, that the Emperor should grant the investiture of the dutchies of Tuscany, Parma and Placentia in Italy, to the Prince DON CARLOS Infante of Spain: and that the artillery taken away by the Spaniards, on their evacuating Sardinia, should be restored to the King of Sardinia.

Congress of Cambray.

The Empire remaining in perfect peace, the year 1724 affords very little worth relating. The congress of Cambray, indeed, continued their conferences; but seemed to spend their time more in ceremony, or private cabals between particular Ministers, than the business they were assembled about. The Emperor having determined to constitute the Archduchess ELIZABETH, his eldest sister, governor of the Aultrian Netherlands, Prince EUGENE of Savoy resigned that government, and was made Vicar-General of all the Aultrian dominions in Italy, the highest post the Emperor could confer upon him, since the Viceroy of Naples and Sicily, the Governor of the Milanese, and all other Imperial Officers and Generals in Italy receive their orders from him, and give obedience to them as to those of the Emperor himself.

1724.

While the Ministers of the several powers of Europe assembled at Cambray, were spending their time, to all appearance, in matters of ceremony, or diversion, the Emperor and Spain entered into

1725. Treaty of Viena.

CHAP. IV. a treaty without the knowledge of the other powers, which was concluded at Vienna the 30th of April 1725; by which the Emperor acknowledges King PHILIP King of all the Spanish dominions in his possession, confirms Sardinia to the Duke of Savoy, and the Dutchies of Tuscany, Parma and Placentia to Don CARLOS Prince of Spain, on the death of the present Duke of Tuscany, &c. and King PHILIP agrees to make over to Don CARLOS his son, the city of Porto Longone, with that part of the island of Elva in his possession: and declares, that neither he nor any of his successors to the crown of Spain shall ever have the guardianship of the Prince who shall possess any of those Dutchies; nor shall be in a capacity to acquire, retain, or possess the least thing in the said Dutchies, or in Italy, or introduce his own troops, or foreigners into the said Dutchies during the life of the present Princes: but the said Prince Don CARLOS may however take possession of the Dutchies as they devolve upon him. King PHILIP also renounces in favour of his Imperial Majesty, all rights and pretensions to the Spanish dominions in Italy, Sicily, Flanders, and elsewhere in the possession of his Imperial Majesty; but each party to stile himself King of Spain, &c. during his life: the publishing of which treaty put an end to the congress at Cambray.

A treaty of commerce also was signed between the Emperor and Spain on the first of May 1725, whereby Spain agrees, that the subjects of the Empire should have the same privileges in point of commerce as the English and Dutch, or the most favoured nations; and should have the liberty of vending their East-India merchandize brought over by the Ostend company in any part of Spain.

The Emperor also entered into an alliance offensive and defensive with Russia and Poland, and other powers were invited to accede to the Vienna treaty. At the same time the Imperial Court seemed very intent upon promoting commerce; and not only encouraged the Ostend company, but declared Trieste, on the gulph of Venice, a free port. On the other hand, Great Britain, France, and Prussia, concluded a treaty on the third of September 1725; wherein the said powers promise their mutual guaranty to protect and defend all their dominions, countries and cities, as well within as out of Europe, with all their rights and privileges, and particularly those of trade, which the said allies respectively enjoy; and if they cannot obtain justice by fair means, and any of the contracting powers shall be attacked, or molested in the said particulars, that then the abovesaid powers, within two months after demand, shall furnish the following succours, viz. his Britannick Majesty, three thousand foot, and four thousand horse. His most Christian Majesty eight thousand foot, and four thousand horse. His Prussian Majesty three thousand foot, and two thousand horse. But if the party attacked, or injured, chuses to be supplied with ships of war, or transports, or money, then the other parties shall furnish him with ships or money in proportion to the expence of the troops above stipulated. And if the abovesaid succours are not sufficient to redress the wrongs of the injured party, the contracting powers then agree to furnish more forces; and in case of necessity, all their forces, and even to declare war against the aggressor. The contracting powers also agree to maintain the treaties of Oliva and Westphalia; and to invite other powers, c-

VOL. II.

CHAP. IV. specially the States General, to accede to the present treaty. And the Kings of Great Britain and Prussia declare they will not furnish their contingents of troops to the Empire against France in case of an offensive war; and if either of them should be compelled to it, he should furnish as many forces to assist France. And on the eighth of February following the States General acceded to the said Hanover treaty.

Upon this treaty the Court of Vienna is said to have made some very severe reflections; particularly, that this treaty being made by two Electors and Princes of the Empire with a foreign power against his Imperial Majesty and the Empire, was contrary to those solemn oaths of fidelity, which the Kings of England and Prussia swore openly with a loud voice before the Imperial Throne, and in the presence of Almighty God to his Imperial Majesty, and to the Holy Roman Empire at their investiture. That it was an actual separation from the whole Empire, and an union with those who would probably be the declared enemies of it. That by this means the administration of justice, which is put into the hands of his Imperial Majesty according to the capitulation at his election, and the laws of the Empire, are of no force with these contracting parties, but wholly destroyed; and they have assumed a power of acting according to their own will and pleasure. The peace of the country also is at an end, by the bringing in of foreign troops, which is not allowed even to the Emperor himself. And the said contracting powers may at any time seize by force the rights they have, or pretend to have, and secure them by foreign nations against the Majesty of the Emperor, their supreme judge and lord, and against the other States of the Empire.

The Elector of Bavaria, MAXIMILIAN EMANUEL MARY, died this year on the 26th of February, in the sixty-fourth year of his age, leaving his dominions to his eldest son CHARLES ALBERT CAJETAN, the electoral Prince.

In the beginning of the year 1726, we find the British ministers complaining that an English courier was stopped at Belgrade in his return from Constantinople, and of a report which prevailed at this time in the court of Vienna, that his British Majesty had not only caused the treaty of Hanover to be communicated to the Ottoman Porte, but that he had also endeavoured to excite the Turks to enter into a war with the Emperor; intimating that the alliance lately formed against him, gave the Sultan a favourable opportunity of recovering Temeswaer and Belgrade. To which the Imperial ministers answered, That it was true, they had received repeated advices from Constantinople, that the British Ambassador at the Porte, at an audience of the Grand Vizier, had endeavoured to excite the Turks against his Imperial Majesty; and that all the foreign ministers at Constantinople, with one consent, had spoken of it as a matter both certain and publick; that such informations as these, necessarily obliged the Emperor to use some precaution: whereupon orders were sent on the 23d of January to all the Generals and commanding officers on the frontiers of Turkey, to let no body pass without giving notice thereof to the court. And an English courier, or messenger, afterwards arriving at Belgrade, under the character of a Merchant, the Duke of Wirtemberg, governour of Servia, could not avoid detaining him till further orders. The courier finding himself stopped, discovered the badge of an

10 G

English

CHAP.  
IV.

English messenger, and delivered a letter from the Imperial resident at the Porte, wherein he was so filed. They leave the world therefore to judge whether the detaining such a person as this in a frontier town, who was returning from such an errand, and who was nevertheless released out of regard to his Britannick Majesty, can afford any room to require satisfaction for a violation of the law of nations, as the British minister files it; and if, on the other hand, his Imperial Majesty had not reason to complain of these practices. What foundation the Imperialists had to charge his British Majesty with inciting the Turk against Christendom, I shall not determine; but certain it is, the Imperialists were under some apprehensions of being attacked by the Porte; and entered into an alliance with Muscovy by way of precaution, wherein it was stipulated, that in case his Imperial Majesty's dominions should be invaded by the Turks, Russia should bring forty thousand men into the field to his assistance: and if the Turks should invade Muscovy, the Emperor should declare war against the Turks, and make a diversion on the side of Hungary.

This year issued an Imperial edict, prohibiting the importation of English manufactures into the Imperial dominions, as well as the importation of all India goods, except those imported by the Ostend company. And now things seemed to tend to a rupture between the allies of Vienna and Hanover.

Power of  
the Empe-  
ror.

THE power of the German Emperors hath not been at all times the same. CHARLEMAGNE, who laid the foundation of this Empire, enjoyed great part of Germany, Hungary, France and Italy, of which he was absolute monarch; and took the liberty of disposing his dominions to his successor on his death, as many succeeding Emperors did afterwards. But two things much abridged the power of these Emperors, one whereof was the encroachments of the See of Rome, which did not only assume an independency for themselves and the several Princes and States in Italy from the Emperor's jurisdiction, but claimed a superiority over all the Kings and Princes of the earth, and particularly over the German Emperor, whom they did not look upon as legally advanced to the throne without their concurrence; and held that he might be deposed by the Pope, whenever the Holy Father should charge him with heresy, or male-administration. The Imperial power was also very much lessened, and almost lost by the many exorbitant grants made by succeeding Emperors to the governors of the several provinces, whom they invested with sovereign power, and made hereditary in their respective governments: whereupon these great officers soon assumed an independency, and even a power of electing their Sovereign; and while the Emperors had scarce any other dominions than those they were thus elected to, they made but an inconsiderable figure in Christendom; but now their hereditary dominions, in which they are absolute, are so much enlarged, the German Emperor may be reckoned one of the most potent Princes in Europe, especially

since the See of Rome hath lost much of that influence it had in the days of bigotry and superstition. The Emperor is neither crowned or confirmed in his Imperial dignity by the Pope at present: on the contrary, some late Emperors have ventured to seize upon the lands of the Church in Italy, and made the Holy Father sensible it was in their power to crush him, since they have obtained the possession of Milan, Naples and Sicily, which almost surround the territories of the Church.

The Emperors, like other Sovereigns, are the fountains of honour in their dominions, and do not only constitute Dukes, Marquisses, Counts, &c. but have frequently taken upon them to create Kings: They have not indeed the power of making peace or war, or of levying taxes, without the consent of the Electors, and other Princes of the Empire; neither can they make laws, or suspend them without the consent of the Diet, or assembly of the Estates: but their hereditary dominions are now so much enlarged, and they have such a number of profitable posts and honours at their disposal, that the Princes of the Empire seem very much devoted to them, and seldom oppose any thing which his Imperial Majesty proposes. Since the late acquisitions in Hungary, the Low Countries, and Italy, the Emperor has made a figure equal almost to his greatest ancestors; nor is there any power in Europe perhaps a match for him by land.

The next person to the Emperor is the King of the Romans, who has little authority but what he derives from the Emperor: in the Emperor's absence indeed he usually takes upon him the administration of the government; and after the Emperor's death, succeeds without any further election. The first occasion of electing a King of the Romans, proceeded from a contrivance of some Emperors to secure the Imperial crown to their own families; they made use of their authority while they were in possession of the throne, and easily influenced the Electors to chuse a son, a brother, or some other near relation to be King of the Romans, which is now grown so customary, that the Empire seems to be entailed on the males of the Austrian family, it being much the same thing to elect a King of the Romans, as to chuse an Emperor.

The principal members of the Empire after the King of the Romans, are the nine Electors, of whom the three first are ecclesiastical, viz. the Electors of Mentz, Triers, and Cologne (who are also Arch-Chancellors of the Empire,) the King of Bohemia, the Duke of Bavaria, the Duke of Saxony, the Marquis of Brandenburg, the Prince Palatine of the Rhine, and the Duke of Brunswick. The number of the Electors till the peace of Munster was only seven; but when the authority of chusing their Emperors became limited to so small a number, does not appear. After CHARLES the Great, the Empire was hereditary till the reign of HENRY IV. who being charged with male-administration, Pope GREGORY VII. excommunicated him, and declaring him unfit to reign, ordered him to be deposed, which his rebel subjects soon put in execution; and being absolved from their allegiance by his Holiness, they took upon them to elect RODOLPH, Duke of Suabia, for their Emperor, about the year 1106. They also declared that the right of succession should be for ever abolished, and the power of chusing Emperors be lodged in the people. The German

Electors.

to year 1106

histories

CHAP.  
V.

histories are full of the confusions that happened in the Empire on this revolution, and relate, that after some years, the lower rank of the people were deprived of their share in electing their Emperor, and the whole power of election usurped by some few of the great officers of the Imperial court. The right of election is annexed to their electoral principalities and estates, and as long as there is any male issue in any of the electoral families the power of electing the Emperor cannot be taken from them, but by the ban of the Empire, or a decree of Estates.

Every Elector is sovereign in his dominions; they make laws, establish courts of justice, coin money, levy taxes, and make alliances with other Princes of the Empire, or foreigners, raise fortifications, and make war or peace under some restrictions; but they cannot alter the value of money, or lay new tolls or customs in their respective territories without the consent of the Diet; neither can they enter into such confederacies as tend to the prejudice of the Empire, or are contrary to the fealty they have sworn to the Emperor; and if they do, the States of the Empire may proceed against and divest them of their inheritances and the privileges of Electors.

Election  
of an Em-  
peror.

Upon the death of the Emperor, (where there is no King of the Romans already elected) the Elector of Mentz, as High Chancellor of the Empire, and Dean of the electoral college, gives notice to the other Electors, that they appear at Francfort within the space of a month, to elect a new Emperor, who is generally agreed on before they come to the place of Election. A day being appointed however, rather to publish than make election, they come in the morning to the town-house in their ordinary dress, and without any ceremony; here they put on their electoral habits, the three ecclesiastical Electors wearing scarlet robes with caps lined with ermine; and the secular Electors robes of crimson velvet lined also with ermine. At the town-house they take horse and march to St. BARTHOLOMEW's church, but without observing any order, only they are each of them attended with their respective hereditary Marshals, carrying a sword in a scabbard before each of them; but the deputies of the absent Electors have not this honour paid them. When the Electors come to the church, they alight at the gate, and go to their respective seats in the choir, being followed by several Princes and Counts of the Empire, the several sword-bearers standing before the respective Electors with their swords drawn, and laid on their shoulders. Divine service beginning, at the singing the hymn of *Veni Creator*, the Protestant Electors withdraw till mass is over, after which they return and take the following oath with the rest at the altar, viz. That without regard to any solicitations, promises, or rewards, they will elect such a person for Emperor, as they believe in their consciences is fit to govern the world. The qualifications required in the Emperor to be elected are, that he be a Christian Prince of German extraction, not under twenty-eight years of age, and capable of sustaining the character of his Imperial Majesty. The hymn being sung once again, they go to the place appointed for the election, being a small vaulted gallery, which goes out of the choir, and the Emperor is chosen by a majority of voices, of which the person elected may be one: then they come out, and place the Emperor elect upon the altar, if he be present,

where the Archbishop of Mentz recommends to him the interests of the Empire, and presents him with the capitulation or conditions on which he is chosen, to sign; after which the election is published, and the new Emperor proclaimed.

CHAP.  
VI.Corona-  
tion.

At the Coronation the Electors, or their Ambassadors, attend the Emperor from his palace to the church in their robes in the following order; the Elector Palatine with the crown, the Elector of Bavaria with the globe, and the Elector of Brandenburg with the scepter, march first abreast; the Elector of Saxony carries the sword, and the Elector of Hanover the standard. (As to the other secular Elector, the King of Bohemia, he has been the person elected for several generations, being the eldest son of the deceased Emperor.) At the door of the church the Emperor is received by the three ecclesiastical Electors in their robes, who attend him to the altar; and the Archbishop who officiates, anoints his head, and between his shoulders, his neck, breast, and right arm; then he is brought to another altar and crowned, being clothed with the ancient Imperial robes, and afterwards conducted to the throne, where the Archbishop bids him receive and keep the pledge which was designed for him by providence. Then *Te Deum* is sung, and the trumpets and musick proclaim the general joy.

When a general Diet, or an assembly of the States of the Empire is to be held, the Emperor issues out his summons to the several Princes and other members of the Diet, acquainting them with the time and place of their sitting; and they are bound by their allegiance to appear at the day appointed, either in person or by proxy. More than half of the assembly usually consists of such substitutes as have no voices of their own, but come to vote for their masters; which is one of the principal occasions of the slow proceedings of their Diets: for it often happens, that the persons deputed have not full instructions, and are forced to send to their masters for new instructions before they will venture to give their voices. Sometimes the Emperor requires them by the summons to repair in person to the place appointed, on account of the importance of the matters to be debated: whereupon if they do not appear, they either send in no deputies at all, or make their Ambassadors plenipotentiaries, giving them authority to vote and act as if they themselves were actually present. Ratisbon is now become the usual place for the meeting of the Diet; but it has been held at Mentz, Augsburgh, and other cities; the Emperors seem only restrained not to hold it without the bounds of the Empire.

General  
Diet.

When any of the members of the assembly, or their Ambassadors, arrive at the place appointed, they first procure an audience of the Emperor, to whom they produce their summons, and thank his Imperial Majesty for calling the Diet, promising their utmost endeavours to promote the general good of the Empire at the following session; and the Ambassadors are obliged to give the reasons of their master's absence. After this they acquaint the marshal of the Empire with their arrival, who provides every man quarters suitable to his quality, and registers their names. They also give in their names at the Chancellor's office, who is the Archbishop of Mentz, to be recorded with their credentials.

The Emperor alone proposes what is to be debated in the Diet: the members can introduce nothing. His Imperial Majesty also can adjourn any

CHAP.  
V.

any debate from time to time. The point of precedence among the Electors has been long since settled by the Golden Bull: but the other Princes and representatives of cities have not agreed upon the matter to this day; insomuch that it occasions perpetual quarrels, and the Diet would sometimes break up in confusion, if some of them did not for peace-sake yield to the rest, entering a protest only that this single instance should not be made a precedent.

Amongst the Electors, the Elector of Mentz takes the post of honour, sitting in the middle, with the other two spiritual Electors, Cologne and Treves, on each side of him, who take the right hand by turns: next to them are the Dukes of Saxony, Bavaria, and Hanover on the left; and the King of Bohemia, the Electors Palatine and Brandenburg on the right. Below these sit the ecclesiastical Princes on the right, and the secular Princes on the left, and after them the Deputies of the towns.

On the spiritual bench anciently sat the Archduke of Austria and the Duke of Burgundy, though secular Princes, in regard to their eminence in the Empire. The Lutheran Prelates were formerly excluded this assembly; but by the Westphalian treaty they obtained seats in the Diet; not among the Roman Prelates or secular Princes, but between the one and the other. And since the archbishoprick of Magdeburg is turned into a dukedom, and the bishopricks of Lubec and Osnabrug into secular principalities, all the reformed Princes, except the Electors, sit on the secular bench which is appointed for the Princes, Counts, and Barons of the Empire, who have voices in the Diet.

The ecclesiastical and secular Princes of the Empire, and all Prelates who have princely dignities annexed to their functions, with the Master of the Teutonic order, have each of them single voices; but the rest who can claim no temporal principality, give their voices by companies, of which kind are the two benches of Suabia and the Rhine. Formerly the Counts and Barons of the Empire had but two voices, and were therefore divided into two benches, as the prelates are now. Afterwards, at a Diet held in the year 1641, the Counts of Franconia had a voice allowed them by themselves; and in the year 1654, a vote was given to the Counts of Saxony and Westphalia; so that at present there are four benches of Counts, viz. those of Suabia, Wetteraw, Franconia, and Westphalia, who have votes in the general Diet.

The representatives, or deputies of the Imperial cities, make the third and last rank of members in the Diet; but when they first obtained this privilege is very uncertain. Their deputies at present are divided into two benches; the one called the bench of the Rhine, and the other the Suabian bench. On the first sit the representatives of Lubec, the free cities upon the Rhine, in Wetteraw, Alsace, Saxony, and Thuringia; and on the other, the representatives of the free cities in Suabia and Franconia. The representatives of the city where the Diet is held sit at a table by themselves, and take an account of the voices of the other deputies, which are registered by the two registers of Ulm and Spire; one of them representing the cities in the circle of the Rhine, and the other the cities of the circle of Suabia.

It is generally said, that if we divide the time of any session of the Diet into four parts, one is

spent in disputes about precedency; a second and better in drinking-matches; a third in disputes about their privileges, with the Emperor; and scarce a fourth upon the business proposed to them from the throne, which usually relates to peace and war, the making or reviving laws, the regulating the coin, raising taxes, &c.

## CHAP. VI.

*Treats of the courts of justice, and laws of the Empire.*

ANTIENTLY, the Emperor assisted by the bishops and great officers of the crown decided all ecclesiastical causes in the Empire, but the secular Princes received justice only in the general Diets: but as law-suits multiplied, and it appeared impracticable for the Emperor to hear every cause, and the suiters underwent great hardships in following the court from one part of Germany to another, the Emperor MAXIMILIAN I. settled a court of judicature at Worms, which was removed to Francfort, and afterwards to Spire; from whence it cannot be removed but by the consent of all the States. The assessors appointed as judges of this court, were at first but sixteen, but have since been increased to fifty. The Emperor names the supreme judge, and four of the principal officers: every Elector names one assessor, and the rest are appointed by the several circles or benches in the Diet; and as those who appoint the assessors, are some of them of the church of Rome, and others of them Protestants; this court is composed of both, but the greater number of the assessors are of the Roman communion. There lies no appeal from this court; but the members of it, however, may be called to an account for any unjust proceedings. An appeal lies hither from all inferior and provincial courts; but this is seldom done, on account of the slowness of their proceedings, some causes being still depending here which were commenced many years ago.

There is another high court of justice in the Emperor's palace, wherever he resides, called *Der Reichs Hoffrat*, or the Dutch King's Bench; which I take to be the same with that generally called the Aulick Council. Here the Emperor himself is supreme judge, being assisted by certain assessors, both Popish and Protestant; but the Emperor's place is usually supplied by a president. Whether this or the court of Spire has the greater authority is a mighty dispute I perceive among some; but as they have each of them cognizance of the same kind of causes, and there is no appeal from one court to the other, they seem to be pretty much upon the level. As to the inferior and provincial courts, these will be taken notice of in the description of the respective provinces and great towns where they are held.

The Civil Law is generally observed in all courts of the Empire, and to this are added some decrees, to which they pay an equal regard: as first, the Golden Bull, a small parchment book, containing thirty chapters, and about twenty-four leaves, published by CHARLES IV. with the approbation of the greatest part of the Princes, Counts, Barons, and other States of the Empire; and contains all the fundamental laws relating to the time, place and persons requisite to the due election of the Emperor, the number and privileges of the Electors, the order they are to observe in all publick solemnities, and the appointing Vicars in

ica.

the time of an interregnum; the seal annexed to which decree being of gold, the instrument obtained the name of the Golden Bull, or Edict, which was held to be irrevocable. But notwithstanding it is appointed by this Bull, that the Electors should not exceed seven, we find they are now multiplied to nine. 2. The Capitulatio Cæsarea, being a collection of forty or fifty articles between the Electors and the Emperor at his coronation, to the observation whereof his Imperial Majesty obliges himself by his oath, is another considerable part of the municipal laws of the Empire: by this he promises to maintain the privileges of the Electors, Princes, and other subjects of the Empire: that he will not alienate or diminish the revenues of the crown, or bring foreign troops into the Empire without the consent of the Electors, &c. That no foreigner shall be admitted to any publick employment; but all places at court shall be filled with native Germans of some noble family. 3. The third kind of laws the Germans are governed by, are the acts of their general Diets, which seem to differ from our acts of parliament only in this, namely, that the concurrence of the citizens and burghesses is not necessary to the establishing an act, though they are allowed to give their opinions of the expediency of what is about to be enacted. 4. The Sanctio Pragmatica, which principally regards the preservation of the peace of the Empire: wherein it is decreed, That if any Prince, or other member of the Empire, shall endeavour by open hostility to disturb the publick peace of the whole body, he shall be cut off from the other members, and deemed an out-law. As to the laws of the particular provinces, these will be taken notice of, as we pass through them.

## CHAP. VII.

*Treats of the modern religion, and ecclesiastical government of Germany.*

CHAP.  
VII.Conver-  
sion of the  
Germans.

SOME German writers pretend, that Germany was converted to the Christian religion by the Apostles, but it is generally held that Christianity was not introduced here until the second century, and then only in those parts of it which were subjected to the Romans.

In the eighth century several missionaries were sent over from England, who converted that part of the country which lies between the Rhine and the Weser: afterwards CHARLES the Great, conquering the pagan Saxons, established the Christian religion amongst them; and the Bohemians and Moravians were not converted till some years after.

Reforma-  
tion.

Luther.

About the year 1517 happened a reformation of religion in this country, in which MARTIN LUTHER was most instrumental. For the Archbishop of Mentz not being able to pay the large sums the Pope expected from him, procured leave of his Holiness to sell his pardons and indulgencies in all the great towns of Germany; and deputed one Friar TEKEL, his agent, to publish every where a pardon for all manner of sins, past, present, and to come, to those who would purchase them. LUTHER hearing of this, protested against the proceeding; and disputed openly at Wittemberg and Leipsick, against those who asserted the Pope's power of granting pardons and indulgencies, notwithstanding he was threatened with excommunication, and being condemned for a heretick: but the Elector of Saxony approving of his doctrines, and support-

VOL. II.

CHAP.  
VII.

ing him, he was the more encouraged to propagate them in other parts of Germany, where the Dukes of Brunswick and Lunenburgh, Wirtemberg, Mecklenburgh, Pomerania, the Marquis of Brandenburg, the Landgrave of Hesse, and most of the Imperial cities became his disciples: and these drew up a protestation, containing the points wherein they differed from the church of Rome, and presented it to the Imperial chamber at Spire, anno 1529; whereupon they were called Protestants. The following year, they delivered in a confession at Augsborg, from thence called the Augsborg confession; and refusing to recede from the opinions they professed therein, the Emperor CHARLES V. endeavoured to reduce them by force. But after a long war, with various success, he was content to grant them a toleration at Passau, in the year 1552; which was afterwards confirmed to them at Augsborg, anno 1555. About two years after LUTHER had began the reformation in Germany, viz. in the year 1519, ZUINGLIUS, a canon of the church of Zurich in Switzerland, began also to oppose the church of Rome, declaring against the mass, images, the invocation of saints, &c. and made such numbers of disciples, that the mass was abolished in the year 1526, by the senate at Zurich, as it was two years after at Bern. But the differences between these two reformers, in relation to the sacrament of the LORD'S Supper (the Lutherans holding consubstantiation, and the Zuinglians denying the elements to be any more than bare signs of CHRIST'S body and blood) was a great hinderance to the progress of the reformation. LUTHER and ZUINGLIUS met to try if they could reconcile their doctrines; but to no purpose: the breach grew wider between them, and their respective disciples from thenceforward became mortal enemies to one another. The famous CALVIN suc-  
ceeded ZUINGLIUS at Zurich; adding several new opinions to the doctrines preached by his predecessor, such as predestination, free-will, and final perseverance, which made the two sects irreconcilable: and it was observed, that CALVIN'S doctrines spread further and faster than those of LUTHER; especially in France, Scotland, the Netherlands, and some parts of Germany: while the kingdoms of Denmark, Sweden, and other parts of Germany adhered to LUTHER'S doctrine. And the Lutherans, to show their insuperable aversion to the Calvinists, in the great church at Leipsick, have drawn the pictures of the Devil, IGNATIUS LOYOLA, and JOHN CALVIN, and hung them up in one frame, with this inscription, The three great enemies of CHRIST, and of the Christian religion. Nor are the Calvinists at all behind hand with them in reproachful and reviling expressions. At present it is computed, that the Calvinists get ground of the Lutherans in Germany, being supported by the Court of Prussia, which is zealously affected to CALVIN; and the States General encourage no other doctrines but CALVIN'S, though they tolerate all religions. In France indeed, neither the one or the other can be professed openly. But to return to Germany: much the greatest part of this Empire still adhere to the Popish religion. However, the doctrines of the reformers have produced this effect, that many bishopricks have been converted into secular principalities, and a new form of church-government set up in many places instead of the episcopal.

10 H

Those

CHAP.  
VII.

Ecclesiastical government.

Bishops.

Those bishops who are still of the Roman communion exercise a greater authority in their dioceses than any prelates in Europe. They are most of them temporal Princes, and have as absolute a dominion over their subjects, spiritual and temporal, as the secular Electors have of the laity in their territories. Besides the three ecclesiastical Electors, there were formerly five Archbishops, and thirty Bishops, who had voices in the Diet of the Empire: but the archbishopricks of Magdeburg, Bremen and Riga, with the bishopricks of Halberstadt, Minden, and Verden, have since the reformation been turned into secular principalities: Those of Metz, Toul, Verdun, Besançon, and Straßburgh, have been cut off from the Empire, and united to France or Lorraine: and those of Valais, Lothar, and Coire, have been abolished by the Switzers. So that except the ecclesiastical Electors, there is in the college of the Princes of the Empire only the Archbishop of Saltzburgh, and seventeen or eighteen Bishops, who have votes. The loss of these bishopricks, it is observed, is a great disadvantage to the younger brothers of great houses, who used to get a handsome maintenance by being preferred to them: whereas they enjoy now little more than the title of their elder brother, and are not allowed any part of the inheritance of their ancestors; the court or the army is their only refuge at present. The bishoprick of Lubec is still an ecclesiastical preferment, though it be in the hands of the Lutherans, and is in the gift of the Dukes of Sleswick and Holstein. The Archbishop of Saltzburgh is the first German Prelate, being born legate of the See of Rome, and gives place to none but the Electors in the publick Diets. The other Roman Bishops, who have still a voice in the Diets of the Empire, are Bamberg, Wirtzburg, Wormes, Spire, Eichstedt, Augsbourg, Constance, Hildesheim, Paderborn, Munster, Osnabrug, Passau, Frisingen, Liege, Trent, Brix, and Basil; of which Osnabrug belongs to the Lutheran Princes by turns, being lately possessed by his British Majesty's uncle, the Duke of York. The late Dukes of Hanover also possessed themselves of Hildesheim, but it was restored to the Elector of Cologne, to whom it belonged, by the treaty of Brunswick, anno 1653. Vienna is also a bishoprick, subject to the Archbishop of Saltzburgh.

The Emperor anciently had the election and investiture of all the Bishops in his dominions; but this afterwards became the subject of much contention between the Pope and his Imperial Majesty, till the council of Trent gave the sole power of conferring dignities and prelacies to the Pope, not only in Germany, but in all parts of Christendom; and HENRY V. was compelled to yield the investiture, &c. to the Pope, and divest himself of the right which his ancestors enjoyed.

There are other ecclesiastical Princes, besides Bishops, who have voices in the Diets of the Empire; the first of whom is the Great Master of the Teutonic order, the Abbots of Fulda, Hirshfeld, Murbach, Kempen, Corbray, Prum, Stabel, Ludors, the Grand Prior of Malta, the Provosts of Elvang, and Beresfolaguden; these sit below the Bishops. There are also three and twenty other Prelates, and fourteen Abbesses, who are placed below the secular Princes; but these have no voices in a full body any more than the Counts. The Abbesses send their representatives to the Diets of the Empire, being excused a personal appearance, upon account of their sex. The three and twenty inferior Prelates have either the title of Provost,

Abbots,  
&c.

Abbot, or Bailiff, of some particular place, and the revenues annexed to their dignities are frequently equal to those of Princes.

CHAP.  
VII.

Protestants.

The Protestants in the German Empire, whether Lutherans or Calvinists, acknowledge the supremacy of the Prince under whom they live, who is appealed to by unanimous consent, as supreme judge in spiritual as well as temporal causes; but the church-discipline of the Calvinists and Lutherans is very different: the Calvinists have neither bishops, or superintendants; whereas the Lutherans have their general and particular superintendants; the general superintendants answering to our archbishops, and the particular superintendants to bishops; and in the dominions of every Prince is held a consistory, which answers to our convocation. This assembly have the power of degrading and punishing offenders, and of making rules or canons, for the better government of the clergy. The superintendants visit their dioceses once a year, and make a strict enquiry into the doctrine and manners of all the clergy under their care. There are some Lutheran Princes that have the title of Bishops, who are as absolute in their dioceses as secular monarchs in their temporal dominions; and have an unlimited command over both clergy and laity. The countries in Germany where the Lutheran opinions chiefly prevail, are those of Saxony, Brandenburg, Brunswick, Lunenburgh, Holstein, Mecklenburgh, Wirtemburgh, Darmstat, Dourlach, Lawenburgh, and East-Friesland. But there are great numbers of Calvinists among them, which sect seems to gain ground of the Lutherans.

## CHAP. VIII.

*Treats of the several degrees of nobility and gentry in Germany; and of the Imperial cities and Hans towns.*

THE ancient Germans, according to Cæsar, had their Dukes, or leaders in time of war, by them called Heertzogen, who commanded as absolutely as our modern Generals, having the power of life and death. And thus we see it was in most of the countries we have passed through; Dux, or Captain, appears to have been the first title that sovereign Princes took upon them, especially in the north of Europe: but some writers seem very positive that these German leaders, or Heertzogen, constantly laid down their employments, and submitted to a private life so soon as the service they were chosen for was accomplished; for, say they, the Germans had scarce any standing magistracy in time of peace; but when any man had a controversy with his neighbour, they chose one out of the villages they lived in to decide the matter in dispute: and these temporary judges were called Graffen, or Graven Graffin, in the old Saxon language, signifying a Judge; and Die Graffen, a grey-headed Elder of the people, to whose age and experience they paid an uncommon regard.

CHAP.  
VIII.

The original of Dukes.

But the Germans were a very happy people, if they never pitched upon a General who was unwilling to return to his former private state, especially if he had been any time in his command. If some of them did submit to a private life, it is as much as can be expected; for men were surely capable of ambition, and fond of raising their families above the common level in those days, as well as these; and indeed, ever since the world began:

CHAP.  
VIII.

began : and consequently some of these Generals must have endeavoured to obtain the dominion of the people they commanded; either by their consent, or otherwise; and that in fact it was so, may very well be presumed from this, that the first Princes had the name of Dux or Captain conferred upon them; even in scripture we find the Prince stiled the Leader, or Captain of his people. Again, if the Germans had no other civil magistrates than those of their own chusing out of the old men of every village, and those but to serve a present turn; is it to be supposed, that any offender should voluntarily submit to the sentence passed upon him, especially where it extended to life or limb, where there was no power to enforce the execution of it? or, if there were no sanguinary punishments in those days, who would contentedly part with his lands or goods to make reparation for an injury, if he could avoid it? This must have been a golden age indeed, when either there were no injuries done, or there needed no compulsion to oblige an offender to make satisfaction. But these doctrines are advanced chiefly for the sake of a people who look upon all government to be unjust and tyrannical, which is not derived from the multitude, and may not be subverted by them at pleasure. But to return to Germany; whatever authority the ancient Dukes and Counts afterwards appointed by the Romans, when they had the possession of part of this country, were invested with a power not much inferior to that of sovereign Princes; but the Romans being masters of little to the eastward of the Rhine, these parts retained their ancient form of government until the Franks subdued them; who, in imitation of the Romans, reduced all Germany into provinces, over which they placed so many Dukes, whom they trusted both with the civil and military power. To these Dukes, according to Dr. NICHOLSON, they sometimes added assistants or deputies, who from their office were called Counts or *Comites*. The Duke was generally of some noble family; and upon his death, if there was no material objection against it, his son was appointed to succeed him; from whence these Dukes at length came to insist on a right of succeeding their ancestors, and refused to pay homage to the German Emperors, every Duke taking upon him to exercise regal power in his province; from whence there has sprung up so many independent Princes in this Empire.

Counts.

Of Counts there are at present various kinds, as, 1. The Schlecht Graven, or simple Count, so stiled from some small castle or territory, of which they are lords. 2. Counts Palatine, called Pfaltz Graven, or Palsgrave, are such as have a certain eminence in their dignity from the relation they bear to the Emperor's court or palace; for Palatinus signifies an officer of the household: and this title is either originally feudal, and annexed to the name of some territory with such *Jura Imperii & Majestatis*, as other Princes of the Empire want, as in the title of the Counts Palatine of the Rhine; or merely personal, without the addition of any particular territory appropriated to him that hath the dignity. Of the first kind, was that great officer in the kingdom of the Franks (long before it was converted into an Empire) called *Comes Palatii*, or Count Palatine, who was vicegerent to the King, as the *Præfetti Prætorio* were to the old Roman Emperors: and the reason the title of Palatine was conferred on the

governors of provinces remote from the court seems to be, that these governors were invested with all the royalties, and *Jura Imperii* in their respective provinces, as the Counts Palatine enjoyed at court; being so many viceroys in their particular territories. 3. Counts of the Empire, which were originally so made by patent, as the Lord ARUNDEL of Wardour was in the reign of Queen ELIZABETH by the Emperor RODOLPH II. in consideration of his services, whereby he obtained a seat in the Imperial Diets, the privileges of purchasing in the Empire, and to be exempt from all judicatures, but that of the Imperial chamber. 4. Margraves, or Marquisses, Counts of the frontiers; so stiled from the word *Marken*, or marshes, as we stile them in England, which signifies the utmost marks or limits of the Empire, or Kingdom. 5. Landtgraves, or Counts of provinces, who have the supreme government of some particular district. And, 6. Burgraves, or Counts of great towns or fortresses; Burg in the High-Dutch signifying a castle or fort.

The next degree of nobility to these Counts or Earls is that of Freyhern, or Barons. The word Freyhern signifies free Lords, such as are not tenants, or hold of any superior Lord: and though sometimes it signifies no more than Laird in Scotland, or Lord of a manor; yet usually this title is given only to such as hold considerable territories and jurisdictions of the Emperor; and some German lawyers and heralds maintain, that a Baron or Freyhern, differ only from a Grave or Count in name and title, but is the same thing in dignity and jurisdiction. BESOLDUS, a German writer, says, a Baron is equal to a Count, only the former is ceremoniously invested into his territories, and the other is not.

The only Knights of the Empire, besides those of the Teutonic Order, (of whom mention has been made already, and who are at this day of very little repute) are the dubbed Knights, whom the Emperor, like other Princes, creates by striking them lightly on the shoulders with a naked sword, and saying to each of them, *Esse Miles Dei & Sancti Stephani*. As for the title of *Armiger*, or Esquire, it is not known in the Empire. A Gentleman in Germany is called *Edel lute*, and signifies such as from the blood of their ancestors, the favour of their Prince, or their own merit are raised above the multitude. Some of these Gentlemen in Franconia, Suabia, and upon the Rhine, are free from taxes, and subject to no other courts but the Emperor's; and have the title of Free Gentlemen, or *Ordo Equestris*. I have now passed through all the degrees of nobility and honours in the Empire; and shall only observe further, that though none but the eldest son of a nobleman can inherit his estate and lands, yet all the children are entitled alike to his honour, which occasions a very neccessitous nobility.

As the Princes of the Empire took advantage of the necessities, or indulgence of the German Emperors, to erect the governments they held in the capacity of Viceroys, or Governors, into independent principalities; so did the cities now called Free and Imperial. The Emperors, frequently wanting supplies of money to carry on their wars, or for other occasions, borrowed large sums of the wealthy trading towns, and paid them again in munificent grants and privileges; making them Free States, and independent of the governors of the provinces where they stood. Accordingly, these cities exercise all kinds of sovereign power; they

CHAP.

Knights.

Gentle-  
men.Imperial  
cities.

CHAP.  
VIII.

they make laws, constitute courts of justice, coin money, raise forces, and enter into alliances and confederacies for their defence. They have also their seats in the Diet, as has been observed already, only acknowledging the Emperor for their supreme Lord, and contributing their share towards the common defence of their country. I shall not enumerate the Imperial cities here, because particular notice will be taken of them hereafter in the description of the several provinces, or circles of the Empire where they stand: but proceed now to enquire how those cities which have obtained the name of Hans Towns, came to be distinguished from the rest.

Hans  
Towns.

The most general opinion is, that the word *Hanse*, or *Anse*, for it is written both ways, is derived from the Dutch *Am-see*, which signifies near to, or situate on the sea shore, as the first Hans Towns were, lying along the southern coasts of the Baltick, from the gulf of Finland to Lubec, and from thence to the mouth of the Rhine; which towns, some time between the years twelve and thirteen hundred, entered into a strict alliance for the advancement of their trade and mutual defence; and for near two hundred years ingrossed most of the trade of Europe. These cities were about fifty in number, and divided into four circles, distinguished by the name of their principal cities; namely, Lubec, Collen, Brunswick and Dantzick. In each of these four cities was held an high-court of justice, to determine such causes as happened within its proper circle; Lubec was the capital of all the Hans Towns; on which account all the other cities make use of the seal of Lubec in all their publick instruments; and this city had an advocate at the Imperial Chamber of Spire to take care of the interest of the Hans Towns; and had a power of summoning all the members of the Hanseatick Body to meet there in cases which concerned their common interest: and these associated towns became at length so considerable, as to obtain great privileges from many Princes in Europe. The port-towns they chiefly resorted to abroad were London, Narva, Bruges, and Bergen in Norway. In London the place where their ware-houses stood was called the Steelyard, because that was the chief merchandize they dealt in. These merchants did not only apply themselves to trade, but when they became powerful, interested themselves in most of the controversies, which happened between the northern Powers, and became umpires of their differences, their fleet being superior to that of any Prince in that part of the world: and thus they continued to flourish for about two hundred years, till the rest of the nations of Europe applied themselves more to navigation, and to import and export merchandize in their own bottoms; and then this society began to decline, and is at present dissolved: but there are however several of the Hans Towns still considerable for their trade, such as Dantzick, Lubec, and Hamburgh, as may be observed in the description of those places.

## A U S T R I A.

## CHAP. IX.

*Contains a description of the circle of Austria, with the provinces included in it.*

CHAP.  
IX.  
Austria.  
Bounds  
and extent  
of Austria.

**W**ITHIN the circle of Austria are contained not only the archdukedom of Austria, but the duchies of Styria, Carin-

thia, Carniola; the counties of Goreitz, Cilley, and Tyrol; and the bishopricks of Brixen and Trent, which territories are bounded by Bohemia and Moravia on the north; by the kingdom of Hungary on the east; by the dominions of the republick of Venice towards the south; and by Bavaria towards the west; and are in length from east to west near three hundred miles, and about two hundred from north to south. It received the name of Austria, or Ostria, on account of its eastern situation, with regard to other parts of the Empire, and was anciently called Pannonia Superior. After the Romans quitted it, the Boiarii possessed themselves of the country, and it became part of the great dukedom of Bavaria. The Emperor ORTO first erected it into a separate marquisate; and the Emperor RODOLPH I. made his son ALBERT the first Arch-duke of Austria, a title which was never given to any other principality, as I can learn. From the time Austria was erected into an archduchy, it increased in grandeur every day; for not only the countries of Carinthia, Styria, Tyrol, and Alsatia were added to it, but by the marriage of MAXIMILIAN of Austria, with MARY of Burgundy, the seventeen provinces of the Low Countries, with the Franche Comte were added to his dominions: and by the marriage of PHILIP, son of the said MAXIMILIAN, with JANE of Spain, great part of Spain, with Naples, Sicily, and the Spanish dominions in America, devolved on the Austrian family.

Division.

Austria Proper is divided into the Upper and Lower Austria. The Lower Austria is so called from being situated lower down the Danube than the other, and is separated from the Higher by the river Ens, which falls into the Danube near a city of the same name.

Towns in  
Lower Austria.

The chief towns in Lower Austria, are, 1. Vienna, or Wien, the capital of the province, and the metropolis of the Empire, situate on the south side of the Danube, on a branch of that river, which here divides itself into many streams, forming several small islands. The river Wien, which gives its name to the place, flows on the east part of the city, falling into the Danube a little below it. Vienna lies in the latitude of forty-eight degrees twenty minutes, sixteen degrees odd minutes to the eastward of London. The city itself within the walls is not three English miles in circumference. It is divided by twelve bastions, ten whereof are towards the land, and two on the north-side towards the river, and has held out several sieges against the Turks; the last of which was in the year 1683, when the place was reduced to extremity, and relieved in a very critical hour by JOHN SOBIESKI, King of Poland. This town is fortified after the modern way; but there are many stronger in the Emperor's dominions, the brave defence it has several times made against the numerous forces of the Turks, may rather be ascribed to the number and goodness of the German troops in the town, and the vigilance of their Generals, both within and without, than to the fineness of the fortification; but probably it will not endure a siege these many years again, now the Germans have extended their frontiers so far beyond it, and have such towns as Buda and Belgrade between them and the enemy.

Vienna.

The streets of the town are rather narrow than wide, and the houses built of stone, usually five or six stories high, and flat roofed, and they have three or four cellars one under another. The principal publick buildings taken notice of by travellers are,

1

1. The

VIENNA

ALMA

CHAP.  
IX.  
Austria.

1. The Imperial palace, consisting of two magnificent courts, and a third which is less, being the lodgings of the pages, the whole very richly furnished. The churches and convents of the Carmelites, Franciscans, Benedictines, and the church of the Austin friars, are much admired, the model of the last being taken from that of the holy house at Loretto. The Jesuits colleges particularly are very fine here, as in all other popish countries; and before one of them stands a column of copper upon a pedestal of white stone, with the blessed Virgin on the top of it. On the pillar are several inscriptions, declaring that Austria is dedicated to her patronage by his Imperial Majesty. But among others, here is a convent of Scots, for hither it seems those of that nation used to resort in their pilgrimages to Jerusalem; and one of their saints being murdered in this country, obtained the honour of martyrdom. The church of St. Peter is much esteemed on account of its antiquity, but the Cathedral of St. Stephen is held to be the most beautiful and magnificent of any in the city, the steeple whereof is 465 foot in height. The church looks dark and gloomy, occasioned by the painted glass in the windows; but this some think makes it appear more venerable and proper to inspire devotion. In this church are several noble monuments of Princes and great men, and near one of the doors they shew a stone in the wall, which they relate is one of those with which St. STEPHEN was stoned to death, which is worn very smooth by the superstitious people's touching and stroaking it.

The university of this city is inferior to few, either on account of its antiquity, the number of its students, or their accommodations and privileges. ALBERTUS the third founded it about four hundred years ago, distinguishing the students into four divisions; 1. That of Austria; 2. that of the Rhine; 3. the class of Hungarians; and 4. the Saxons. And under one or other of these he comprehended all nations; particularly England, Scotland, and Ireland are said to belong to this of Saxony. And it is observed that there are at this day a very great variety of nations in this university, as there are among the inhabitants of the town, where you see Greeks, Transilvanians, Sclavonians, Turks, Tartars, Hungarians, Croats, Germans, Polanders, Spaniards, French and Italians in their respective habits: and surely to reside in a city which is in a manner the rendezvous of all people, must be no inconsiderable advantage to an inquisitive traveller, who desires to be acquainted with the state of the world.

The Imperial library at Vienna is in high esteem, which contains upwards of fourscore thousand volumes, it is said; and amongst the rest, their manuscripts in Hebrew, Syriack, Arabick, Turkish, Armenian, Coptick, and Chinese, are not to be paralleled in the world: particularly there is a fair Greek manuscript of the New Testament, written fifteen hundred years ago, in gold letters upon purple. Here are also many thousand of Greek, Roman and Gothick coins and medals; besides which, the Emperor has a collection of numberless curiosities in art and nature, the catalogue whereof makes a large folio, to which therefore I must refer my reader. The suburbs of Vienna, like those of London and other great towns, are larger than the city itself; particularly there is a large suburb called Leopoldstadt, divided from it by a little plain, and the river Danube, where stand the houses of the nobility and persons of

VOL. II.

quality magnificently built. When the city was founded is very uncertain, but the Romans had a fortress here, or very near the place where the city now stands, called Vindomina, or Vindobona; and that which inclines people to think Vienna stands on the same spot of ground, are the many Roman antiquities which are found hereabouts. The city did not make any figure till about the year 1192, when it was enlarged and surrounded with a wall by the Marquis of Austria, which it is said he was enabled to do by the money he received for the ransom of King RICHARD I. of England; whom he surprized, and made prisoner in his return from the Holy Land.

The country about Vienna is very fruitful, and the city is also well supplied by the Danube; wine of thirty sorts imported from Hungary and Italy, or of the growth of Germany, may be drank here; and they have besides, a good sort of beer: sheep and oxen they receive from Hungary and the frontiers of Turkey for the supply of the city; Austria itself is not very well stocked with cattle. They have not only salt enough for their own use, but the Emperor draws a good revenue from the salt-works of Halstadt in Austria. The flesh of wild boars is esteemed a delicious dish here, their fat being equal to that of our venison; and the hunting this animal is one of their chief recreations. They have also hares, partridges, pheasants, and other game in their fields and forests, some of which we are unacquainted with here. As to fish, the Danube furnishes them in great plenty with the best, such as carp, tench, trouts, jacks, eels, lampreys and crevisses, and there is a fish called Scheiden, preferred to Salmon. Their larger fish are called Haufons, being about twenty foot long, and not unlike a sturgeon in their taste, supposed to come up from the Black Sea. From Venice they are furnished with oysters, with salted and pickled fish and trouts, as well as with oranges, lemons, and other fruits.

The inhabitants of Vienna live luxuriously, and are pretty much addicted to feasting and carousing, dancing and fencing are their ordinary recreation within doors; and in the winter, when the several branches of the Danube are frozen over, and the ground covered with snow, the ladies take their recreation in sledges of different shapes, such as griffins, tygers, swans, scollop-shells, &c. Here the lady sits dressed in velvet lined with rich furs, and adorned with laces and jewels, having on her head a velvet cap; and the sledge is drawn by one horse, set off with plumes of feathers, ribbands, and bells: and as this diversion is taken chiefly in the night-time, foot-men ride before the sledge with torches, and a gentleman sitting on the sledge behind, guides the horse. The winters are much severer at Vienna than at London; though the latitude of London is three or four degrees further north; but then the weather is more constant and severe there: and they cloath themselves so well with furs and warm caps in the day-time, and cover themselves with feather-beds in the night, that they are not very sensible of the difference, especially having such plenty of good wine in their cellars. But it is time to take leave of Vienna; I shall only observe further, that there are magazines of naval stores, and ships of war fitted out frequently to serve upon the Danube against the Turks, which makes it sometimes have the face of a sea-port, though it lies at so great a distance from the ocean,

Austria.  
Baden.

2. Baden, a town in Lower Austria, so called from the natural baths which rise here, is situate in a plain about eighteen miles to the southward of Vienna; it is a neat little city surrounded by a wall, and much resorted to on account of its waters, which the German physicians are of opinion, will cure most distempers incident to the head, as head-aches, dimness of sight, deafness, &c. and it is recommended also as a remedy for the gout, if drank in time, as well as for the dropsy, and other chronical distempers.

Hayn-  
burg.

3. Haynburg, or Haimburg, situate on the utmost limits of Austria towards Hungary, south of the Danube, and about thirty miles to the eastward of Vienna, anciently the metropolis of Austria, and the seat of the Duke, when it had a flourishing trade; but by the removal of the court, and the incursions of the Hungarian malecontents, is now reduced to a declining condition; but still they have plenty of corn and wine, which they transport to other countries.

Tuln.

4. Tuln, an ancient town, about twenty miles to the westward of Vienna, situate on a little river of the same name, which falls into the Danube five miles below it. It is said to stand in a healthful plentiful country; but travellers relate that it is very ill accommodated with provision notwithstanding. 5. Krembs, *Cremesia*, situate on the river Krembs, on the north side of the Danube, forty miles west of Vienna, a large well built town, and has a good trade, particularly at the two annual fairs, which last fourteen days each, when their streets are crowded with merchants from all parts of Germany, Hungary, and Poland.

Krembs.

Towns in  
Upper  
Austria.  
Linz.

The chief towns in Upper Austria are, 1. Linz, or Lyncia, the capital of the province, lying on the south side of the Danube, an hundred miles east of Vienna, a place the most pleasantly situated in the Emperor's dominions. His Imperial Majesty hath a palace here, as have most of the Austrian nobility, on the north side of the river, which suburb is joined to the city by a bridge: here the nobility usually spend their summer, and hither the Emperor retired during the last siege of Vienna. The town is well built of stone, and has a spacious market-place. As to public buildings, the Emperor's palace, the church, and a monastery of Capuchins, are all that travellers take notice of; and of these they do not think it worth while to be particular.

Ens.

2. Ens, or Ensium, situate on a river of the same name, which falls into the Danube two miles below it, and is about fourscore miles to the westward of Vienna. It is supposed to be built in the place where Laureacum stood, some time the seat of the Roman Emperors; it was formerly governed by its own Count, till the Emperor RODOLPH I. purchased it, and annexed it to the duchy of Austria. There are several other great towns in Upper and Lower Austria, such as Stain, Everding, Freistadt, Steyr and Wells, whose situation will be found in the map annexed to this volume; and since travellers have not thought fit to give us any farther description of them, it may be sufficient to name them.

## STYRIA and CILLEY.

Styria, the  
bounds  
and extent.

THE duchy of Styria, or Steyrmarch, in which I include the county of Cilley, is bounded by Austria on the north; by

Hungary and Sclavonia on the east; by Carinthia and Carniola on the south; and by Salzburg on the west; extending in length an hundred miles from east to west; and in breadth in some places eighty, and in others not forty miles from north to south. Styria is divided into the Upper and Lower Styria, in regard to the course of the river Muer.

CHAP.  
IX.  
Styria and  
Cilley.

In the Lower Styria the chief towns are, 1. Gratz, the capital of the Dukedom, situate on the banks of the river Muer, in a pleasant fruitful country, fourscore miles south of Vienna. It is a well-built city, regularly fortified, and defended by a castle which stands on a high hill, and is the Arch-duke's palace. 2. Rakersburg, a strong fortress on the banks of the Muer, twenty-eight miles to the eastward of Gratz. 3. Pettaw, *Petovium*, situate on the river Drave, thirty miles south-east of Gratz. It was anciently a Roman city, and at present is a Bishop's See under the Archbishop of Salzburg, but very much upon the decline. 4. Marksburg, situate on the Drave, twenty miles west of Pettaw, formerly the capital of a country, till purchased by the Austrian family.

Rakers-  
burg.  
Pettaw.

Mark-  
sburg.

In the Earldom of Cilley, which lies south of the river Drave, extending to the banks of the Save, the chief town is Cilley, or Celia, an old town of tolerable strength, once the capital of a territory governed by its own Earls, but now under the dominion of the house of Austria, and united to Styria; it is situate on the river Soana, which a little below discharges itself into the Save. It is supposed to have been a place of some consideration formerly, on account of the Roman antiquities which are daily found there.

Cilley.

In the Upper Styria the chief towns are, 1. Judenburg, situate in a pleasant fruitful country, on the river Muer, fifty miles west of Gratz, a fair well-built town, in which is a palace belonging to the Dukes of Styria. 2. Isenartz, so called from its mines and forges of iron, said by a Styrian writer to afford steel enough for all Germany; but the mines are really very considerable, and were discovered in the year 712, having been wrought in ever since without any sensible decay. The town is situate on the little river Saltza, about twenty four miles to the north-east of Judenburg. The other towns mentioned in Upper Styria by Geographers, are Lewben, Rotenman, Bruck, Seckaw and Knittelfeld; but they do not seem to think them worth a particular description.

Juden-  
burg.

Isenartz.

In the Lower Styria there is plenty of corn, wine, fruits, fish and venison: the Upper Styria is more mountainous, where the natives feed large flocks of sheep, which afford good wool. Their valleys are rich, and stocked with herds of black cattle, and the air much more healthful than in the Lower Styria, where the Hungarian fever and pestilence are too common. There are no vineyards in this part of the country, but they import the little wine they use from abroad. Their usual drink is poor small beer, and at the tables of the quality they have a sharp thin wine brought out of the Lower Styria. The natives of this country are frequently troubled with a Struma, or swelling on their throats or chins to a monstrous degree. ORTELIVS relates, that as he travelled from Vienna to Venice, he met one who had such a swelling on his chin, that from his ears down to his breast was as broad as his shoulders; and their poor women are usually troubled with these excrescences

Produce of  
Styria.

CHAP.  
IX.  
Styria and  
Cilley.

crefences to that degree, that they are forced to throw them over their shoulders when they suckle their children. This epidemical distemper is supposed to proceed from the snow water they drink, which falls from the mountains; for the nobility and better sort of people, who drink wine and other strong liquors, are seldom troubled with it.

## CARINTHIA.

Extent  
and  
bounds of  
Carinthia.

THE dukedom of Carinthia is bounded by Styria and Saltsburg on the north, by Styria on the east, by Carniola on the south, and by Tyrol on the west; extending an hundred miles in length from east to west, and about thirty from north to south. The country is mountainous and barren, and the air cold, but plentifully watered with lakes and rivers; the river Drave particularly runs cross this province, receiving many other lesser streams into it. The chief towns are St. Veit, Villach, Clagenfurt, Gurck, Lavanmund, St. Andrews, and Freyfac.

Chief  
towns.

St. Veit.

St. Veit, the chief town, (so called from a Saint of that name, who is said to have preached the gospel here during the persecution of Dioclesian,) stands at the confluence of the two rivers, Wilitz and Glac, in a fruitful vale, eight miles south-west of Gratz, and as many south of Ens. It was anciently a Bishop's See, but now only venerable for its antiquity. Not far from it may be seen the ruins of the ancient city of Saal, destroyed by ATTILA the Hun. 2. Gurck, a Bishop's See, situate on a river of the same name, eight miles north of St. Veit. 3. Lavanmund, situate on the river Lavant, in a pleasant valley, ten miles east of Styria, is a small city, and a Bishop's See, subject to the Archbishop of Saltsburg. 4. Clagenfurt esteemed the prettiest town in Carinthia, being of a square form, and surrounded by a wall, adorned with a handsome piazza, and a fountain in the centre of it, and is distant about ten miles from St. Veit.

## CARNIOLA and WINDESMARCH.

Carniola,  
bounds  
and ex-  
tent.

THE dutchy of Carniola with Windes-march, or the marquise of Windes, is bounded on the north by Carinthia and Cilley, on the east by Croatia, and by a ridge of mountains which separate it from the territories of Venice on the south; extending an hundred and ten miles from east to west, and about forty from north to south.

Division.

Chief  
towns.

This province is divided into the Upper and Lower Carniola, the Windes-march, and the county of Goritia. The chief towns of Upper Carniola are Laubach, Crainburg and Bischoffslack. In the Lower are Oberlaubach and Zirknitz. In Windes-march the chief towns are Metling and Rudolphsworth. And the chief town of Goritia is of the same name.

Laubach.

1. Laubach, or Laybach, the capital of Carniola, is situate on the banks of a little river of the same name, which discharges itself into the Save ten miles lower, and lies thirty miles to the northward of Trieste. It is a Bishop's See, well built and populous, and defended by a castle. 2. Crainburg situate on the Save, twenty miles north-

Crain-  
burg.

west of Laubach. 3. Lack, or Bischoffslack, a well built town, ten miles south of Crainburg. 4. Zirknitz, a town in itself not considerable, but for the lake to which it communicates its name, from hence called the Zirknitzer-sea, or Lacus Circonienfis, which is about sixteen German miles in length, and eight in breadth, encompassed on all sides with mountains. In the month of June annually, this lake retires under ground, through a great many large holes at the bottom of it, and returns again in September with great violence, spouting and throwing up it's waters through the holes and cracks in the earth to the height of a pike, till it has covered the whole space it left. When the water retreats, the earth is suddenly covered with grass, yielding pasture for cattle and wild beasts, which feed on it, and return to the forest again when the water begins to rise. At the retiring of the waters there are found great quantities of fish, as carp, tench, eels, &c. which the country people take with their hands in the mud, and yet the lake is as well stocked with fish the succeeding year as it was before. The natives can give no account that this water ever failed to rise or fall annually as above related; neither do any of them pretend to give any account of the occasion or original of it. 5. Oberlaubach, a town about sixteen miles to the westward of Laubach, considerable for its trade in Italian goods, which from hence are dispersed all over Germany. 6. Metling, the chief town in Windes-march, situate on the frontiers of Croatia, thirty-five miles south-east of Cilley, and twenty-five east of the lake of Zirknitz, remarkable for nothing but it's having been plundered several times by the Turks. 7. Rudolphsworth, or Newstat, situate on the river Gurk, twelve miles north-west of Metling, an ancient town honoured with great privileges, and famous for the best wine in the country.

Goritia.

Goritz.

Goritia is a small district, part of Friuli, but subject to the Emperor, which occasions it's being introduced here, for the rest of Friuli is under the Venetians, and will be described in another place. The chief town of Goritia is Goritz, or Gortz, situate on the river Lizono, twenty miles from the gulph of Venice, and fifty westward of Laubach, conjectured to be the Roman Noricia. It was taken by the Venetians in 1608, and recovered by the Emperor the year after, in whose possession it now remains.

The Emperor also having made himself master of Trieste in the province of Karstia, or as some say, Friuli, this town also must be taken notice of here. Trieste lies at the bottom of a bay in the gulph of Venice, to which it gives name. It is a small town, but has the honour of being a Bishop's See, under the Patriarch of Aquileia. The Emperor is much set upon making it a free port, and turning the trade of the Levant that way, which would be a vast detriment to the Venetians; but he does not seem to have succeeded at all in these schemes yet. The harbour is large but very unsafe, and perhaps may cost a great deal of time and labour before it is fit to receive vessels of any burthen. The Emperor took this place from the Venetians in the year 1507, which he hath possessed ever since.

Trieste, a  
Sea-port.

I must here also take notice of St. Viet am Flaum, though it be situate in Istria, a province of the Venetians, and accounted part of Italy, because it is at present subject to the house of Austria, and united to their German dominions. St. Viet is situate at the mouth of the river Flaum, which

Innsbruck.

which discharges itself into the gulph of Venice, and stands thirty miles south-west of Metling. It is a place of some strength; being surrounded by a wall and a ditch, and defended by a castle: and this is another port whereby the Imperialists propose the establishing a trade with the countries in the Mediterranean.

The country of Carniola is mountainous, but agreeably diversified by a mixture of large pleasant valleys, affording plenty of corn and wine: it is well watered by abundance of good rivers, particularly the Save, the Layback, and the Gurck. The Save rises in the west, and runs the whole length of the province. The ancient inhabitants are held to be the Carni, a Scythian nation, who were subdued by the Romans under AUGUSTUS. The marquises of Bavaria afterwards became masters of this country, being stiled Margraves of Crainburg; and having passed through several other hands, it came to OTTAKER King of Bohemia, who being killed in a war against the Emperor RODOLPH I. the Emperor seized on his territories, and gave them to MAINHART Duke of Carinthia, and Count of Tyrol; upon the death of which Prince, the Emperor LUDOWICK the fourth, made Carniola a dukedom, and conferred it on the Dukes of Austria Hapsburg, from whom the present Emperor derives his right, and stiles himself Duke of Carniola.

The present inhabitants of Carniola are a mixture of Germans, Italians and Slavonians; they generally speak the High-dutch in towns, except Laubach, where the Italian prevails, but neither of them is spoken with any purity; and in the villages the peasants speak a kind of Slavonian, or Wendish; but their acts of state, law proceedings, and instruments, are all in the High-Dutch, or German tongue.

As for the country of Windefsmarch, it is mountainous and barren, inhabited by the descendants of the ancient Veneti, the most considerable branch of the Slavonian nation, who still speak pure Slavonian, without any mixture of the German Language.

## TYROL and BRIXEN.

**T**YROL, supposed to be the ancient Rhætia Superior, is bounded by Bavaria and part of Suabia to the north, by Carinthia and Friuli towards the east, by the Grisons and Trent towards the south, and by Switzerland on the west; extending about an hundred and twenty miles in length from east to west, and sixty from north to south. The chief rivers are the Eiseck, the Inn, and the Etsch or Adige, which last river rises in this province, and flows through the territories of Venice.

The county of Tyrol is usually subdivided into Tyrol Proper, the bishoprick of Brixen, and the districts of Meran, Pludentz, Bregentz, Feldkirk and Montfort. The chief towns in Tyrol Proper are, 1. Innsbruck, the metropolis and usual residence of the ancient Counts of Tyrol, and of the present governor; situated in a pleasant valley, on the banks of the river Inn, from whence it takes its name; being seventy miles north of Trent, and about eighty south-west of Salzburg; in forty-seven degrees odd minutes north latitude, and eleven degrees odd minutes of longitude, reckoning from the meridian of London. The town

is generally well built, especially the suburbs, which are separated from the city by a river. The cathedral is a magnificent fabrick of hewn stone, built by the Emperor FERDINAND I. on the top whereof stands a vast portraiture of this Emperor in alabaster, guarded by twenty-eight brazen statues of other great Heroes and Princesses, all of larger dimensions than the life, and make a majestic appearance. The palace is a beautiful structure, and the gardens adjoining admirably fine; and as it is the humour of the German Princes, more than any other nation, to make great collections of rarities both in art and nature, here a curious traveller may meet with a most agreeable entertainment. Among other things, here are a vast collection of agats, crystal, coral, jaspers, hyacinth, turcois stones, lumps of virgin gold and silver as dug out of the mines in Germany, ancient coins and medals, and the arms of the house of Austria exactly represented in a coat of diamonds and rubies, &c. About a mile from the town stands the strong pleasant fort of Ombras, built for the Archduke to retire to in the heat of summer, where there is another collection of rarities so large, that they are the subject of a bulky book.

Near the city of Innsbruck stands the famous monastery of Wiltheim, or Wilden, founded according to their legends by a gigantick Prince named HAYMON, twelve or thirteen foot high, who killed a mighty dragon that infested the country. A story of equal credit with a thousand others of the like nature. 2. Hall, called Im'thall, to distinguish it from Hall in Saxony, &c. has its name from the salt-works here, and is situate on the river Inn, ten miles north-east of Innsbruck. 3. Tyrol, an ancient castle, which gave name to the whole country, but is of no consequence at present.

Brixen, the chief town of the bishoprick of that name, is situate on the river Eysach, about thirty miles south-east of Innsbruck. The Bishop is a Count of the Empire, and invested with the temporal jurisdiction, but there lies an appeal from hence to the court of Tyrol. The city is small and not very populous, yet is pretty much resorted to on account of the mineral waters near it. The diocese of this bishop extends about forty miles in length, and thirty in breadth.

The little districts of Meran, Pludentz, Bregentz, Montfort and Feldkirk, have each of them a town, the head of the district of the same name; but travellers have not thought them worth a particular description.

## T R E N T.

**T**HE territory of Trent is sometimes esteemed part of Italy; but the Bishop being a Prince of the Empire, it is by the Germans accounted part of the circle of Austria. The country is situate among the Alps, having Tyrol on the north, the territories of the state of Venice on the east and south, and the country of the Grisons on the west, and extends seventy miles in length from east to west, and fifty from north to south, the river Adige running quite cross it, and receiving several other small rivers into it which fall from the mountains on each side. The chief towns are, 1. Trent, *Tridentum*, situate in a pleasant valley, on the banks of the

Trent.

the river Adige, but encompassed with high mountains on every side, and is supposed to have acquired the ancient name of Tridentum, (from whence the modern name of Trent is derived) from three sharp piqued hills which hang over the city. It stands about seventy miles south of Inspruck: and being thus surrounded with mountains, the town is excessive hot in summer by the reflection of the sun from the neighbouring rocks; and the cold in winter is said to be equally intolerable, though the town lies in the latitude of forty-six degrees. It is a small city, surrounded by a single wall, but pretty well built, of a kind of red and white marble, such as the rock is whereon it stands. The bridge over the Adige, and the Bishop's palace are much admired for their structure by the natives, but have nothing extraordinary in them. The cathedral church, dedicated to St. Vigel, is reckoned a good piece of architecture; and the Chapter who elect the Bishop consist of noblemen; the Bishop is suffragan to the Patriarch of Aquileia, and a Prince of the Empire, as has been observed already. But this city is most remarkable for the council held here with some intermissions from the year 1545, to the year 1563; where the Pope procured the doctrines taught by the Roman church to be established, and his usurpations, both over the clergy and laity, confirmed: but as for any reformation in the church, which was the pretence of assembling the council, little or nothing was done on this head. 2. The second town in the Bishoprick of Trent is Posen, or Bolzano, situate on the Adige, twenty-five miles north of Trent: a place of good trade, where the German and Italian merchants traffick and exchange their merchandize, especially at the four fairs which are held here every year, on account whereof great privileges have been granted to the place. 3. Noveredo, a little city, famous for it's trade in silk. As to the country of Trent in general, it produces good wine and oil, cattle and fruits. Their wine is well tasted and strong; but they have very little corn or grain of any kind.

Observa-  
tions on  
the circle  
of Austria.

Having taken a view of the sub-divisions of the circle of Austria, or of the several countries which are at this day deemed part of it, I shall conclude with some general observations in relation to this circle: and here we find, that though Austria be enumerated among the circles of the Empire, it is subject only to it's own Prince, and does not come within any of the rules and orders by which the other circles are governed. The general laws of the Empire, or acts of the Diet, do not affect Austria, neither is it obliged to contribute to any charge for the defence of the Empire: for the Emperors of this house foreseeing that their male line might fail, or at least another family might be elected to the Imperial dignity, were continually heaping new privileges and favours on this and their other hereditary countries, that if they should ever come to be separated from the Empire, they might be formed into a great body, and be able to subsist independently of any other power.

The Emperor CHARLES V. particularly by his grant, reciting, that all men naturally desired the prosperity of their own house, decreed that Austria should be a perpetual fee of his family, which no future Emperor should deprive them of: That the Duke of Austria for the time being, should be the first and most intimate counsellor to the Emperor, without whose knowledge no matters of state should be transacted in the Empire: That the dominions of Austria should be exempted

from all contributions to the Empire: That the Emperor nevertheless should assist Austria against it's enemies: That the Archduke should not be obliged to go out of the bounds of his dominions to receive the investiture of them, but it should be offered him in his own territories gratis: He should be at liberty to come to the Diet or not: And the Emperor should have no power to intermeddle in his dominions, or dispose of any fees there: Nor should the subjects of Austria be drawn from home to answer in the courts of the Empire. That from the sentence of the Archduke there should lie no appeal: and he might tax his subjects at pleasure. That he might create Earls, Barons and Gentlemen. And lastly, in case the male line of his house failed, his dominions should go to the females, according to their seniority; and if there should be no females, the last possessor might dispose of them by will. Succeeding Emperors have ordered that their hereditary dominions should never be dismembered or disunited, but should always be subject to one head, and descend as the dominions of Austria descend. Thus the hereditary countries belonging to the house of Austria will be a noble dominion of themselves, if another family should happen to be advanced to the Empire. On the contrary, it will be very difficult for any Prince who shall be elected Emperor, when the hereditary dominions are separated from the Empire, to maintain that grandeur and superiority over the rest of the Princes of Europe, and the German Princes in particular, which the Emperors have hitherto done. Insomuch that some apprehend if this should ever happen to be the case, the union that has hitherto subsisted amongst the Princes and States of Germany would be dissolved, and every power there would endeavour to render itself entirely independent.

Vienna, according to Baron POLNITZ, is situate in a fine fruitful country, on one of the branches of the river Danube, which here divides itself, and forms several islands. The city within the walls is not three miles in circumference, but has several large suburbs. The houses are built of stone five or six stories high, and the streets are narrow. The publick buildings are, first the imperial palace, which, baron POLNITZ informs us, is large, but has nothing else to boast of; for the apartments are low, dark, and without ornaments, and the furniture is very ancient, though scarce any Princes have a finer treasure in tapestry. The apartments of the Empress dowager were the only ones fit to lodge in; for that Princess took care to have them not only raised higher, but inlaid and wainscotted, which has given them a certain air of majesty they had not before. This Princess's apartment is hung with black velvet, it being the custom of the Imperial court for the Empress dowagers never to quit their mourning.

The palace of La Favourita, in the suburb of Vienna, where the Emperor spends the summer, is even inferior to that of the city. It is a very large house, built upon the highway, without any court before it, without symmetry or architecture, and which, as to the outside, looks more like a convent than a royal palace. The inside perfectly answers the outside. There is an ascent to the apartments by a great stair-case, all of timber, that leads to a guard chamber, which is a room of no great extent, and without any manner of ornaments; and from thence there's an entrance into other apartments, but half furnished, and very low,

CHAP.  
IX.  
Austria.

CHAP.  
IX.  
Austria.

low, which in short is the fault of all the apartments. The gardens of the palace are as inconsiderable as the building, they being full of large fruit-trees, but in very bad order; and I saw nothing there that can be called a fine prospect.

Mean time the court nobility are far from being so ill lodged as the Emperor; for they have all stately houses both in the city and suburbs. Prince EUGENE of Savoy's palace is the most magnificent building that one shall see; for whether you examine the outside, or the inside of it, the whole is of the best contrivance and the utmost magnificence. The hall, which forms the first piece of the grand apartment, is all wainscotted, and adorned with large pictures, representing the chief battles won by Prince EUGENE. From this hall we pass into a large antichamber, where we see a suit of tapestry hangings, made by the famous Devos of Brussels, where that skilful artist has represented the principal transactions of the war to as great perfection as possible: out of this antichamber we go into the bedchamber; I never saw any thing so rich as the furniture is there; the tapestry is rolled up in pilasters of green velvet embroidered with gold, with figures in needle work so finely drawn, that they seem to be miniatures. This piece is intirely furnished in all that taste. The closet next to the bedchamber is all over gilt, and every thing in general in this apartment is superb; the paintings, looking-glasses, marble tables, the very andirons being of most curious workmanship.

On the other side of the city is another suburb, which is very considerable, and the walks are fine. The Prat, for instance, is a place mightily frequented: it is a wood in an island formed by the Danube, where there is such a surprising concourse of people in fine weather, that it may well enough be called the Boulogne grove of Vienna.

The court of Vienna, says the baron, is in my opinion the plainest, and at the same time the most magnificent in Europe. To explain this seeming paradox, I must acquaint you, that as to the external appearance of the Emperor's household, nothing is so plain, nor indeed so dismal. His liveries are of black cloth, with a lace of yellow and white silk: the clothing of his guards is much the same; and besides, they are not many in number. The palace itself, as has been intimated, is very inconsiderable; yet taking the court all together, and considering the number of great and petty officers, the many rich noblemen that spend high, and the several Princes that are in the service of his Imperial Majesty, it must be confessed, that there is not a court in Europe so splendid as that of Vienna. At the time that I was there, the Emperor had in his service two brothers of a King, two Princes of royal blood, and a great number of Princes of sovereign or other honourable families: nor is there a court where there is a more sudden transition from the meanest to the most stately external appearance; and in this they commonly run to such an extreme, that they absolutely renounce elegance to incumber themselves with magnificence; for on solemn days, as those of births, marriages, &c. one sees nothing but gold, lace, and diamonds without number: and as soon as those holidays, which are called Gala, are expired, they all resume their former plainness.

Upon the days of Gala there are commonly operas and comedies: their Imperial Majesties sit

in the pit, the Emperor in the chief place, and the Empress on his left; and the archduchesses are in the same row. All those of the Imperial family have arm-chairs of the same size and height, with a stand behind, upon which is a wax candle. Their operas are magnificent as to the decorations and habits, and good judges have assured me that their musick is excellent.

Vienna is an archbishoprick, and the cathedral of St. STEPHEN a magnificent ancient building, but dark. The university in this city is inferior to few, either in point of antiquity, the number of students, or their accommodations and privileges; and the Imperial library is in high esteem, containing upwards of fourscore thousand volumes, it is said; and among the rest, the manuscripts in Hebrew, Syriac, Arabick, Turkish, Armenian, Coptick and Chinese, are not to be paralleled in the world; particularly there is a fair Greek manuscript of the New Testament, written fifteen hundred years ago, in gold letters upon purple. Here are also many thousand Greek, Roman, and Gothic coins and medals; besides which the Emperor has a collection of numberless curiosities in art and nature, the catalogue whereof makes a large folio.

Baron POLNITZ informs us, that the court of Vienna, when he was there, consisted of his Imperial Majesty CHARLES VI, his Empress ELIZABETH CHRISTINA, daughter of LEWIS RODOLPH duke of Brunswick Wolfenbuttle, and the three archduchesses, their daughters; the eldest of which is since married to the duke of Lorraine, and the third is dead.

The Emperor CHARLES VI. is of a middle stature, moderately fat, of a hale, swarthy complexion, has a brisk eye, and thick lips; the latter being the distinguishing mark of the Austrian family. It being expected he would have succeeded CHARLES II. King of Spain, he had a grave education suitable to the people he was to govern, which made him contract an air of seriousness, which to those who have not the honour of knowing him, has an appearance of severity; yet however, he is said to be affable, and very humane.

The Empress consort was very handsome when married to the Emperor; and notwithstanding the pimples in her face, and her present corpulency, she may still be reckoned in the number of beautiful Princesses. She was educated in the Lutheran religion, but abjured it on her marriage with the Emperor, then King of Spain.

There resided also in the Imperial court at that time, the Empress dowager of the late Emperor LEOPOLD, ELEONORA MAGDALENA THERESA of Newburgh, who had issue by that Emperor, JOSEPH JACOB the late Emperor, CHARLES VI. the present Emperor, and three archduchesses. The eldest is the archduchess MARY ELIZABETH, governess of the Austrian Netherlands. The second MARY ANNE, married to the King of Portugal. And the third, the archduchess MARY MAGDALENE.

The Empress dowager of the Emperor JOSEPH, WILHELMINA AMELIA, daughter to the duke of Hanover, uncle to the King of England, also resided there, who had two Princesses by the Emperor JOSEPH then living, viz. MARIA JOSEPHA, married to the electoral Prince of Saxony, now King of Poland; and MARY AMELIA, married to the electoral Prince, now Elector of Bavaria.

IX.  
Austria.

The German women, the baron observes, are rather handsome than pretty; they are tall and well-shaped; they walk well, but when they curt'ly, do it in such an awkward manner, that one would think their backs were in danger of breaking. In their dress they affect finery rather than a good fancy. Two or three excepted, there is none that lay on the red, much less the white, and patches are very little worn; in a word, they have nothing about them that denotes coquetry. As to their humour, they are reckoned frank, though not easily made familiar. They are naturally vain, and, like all our German women, pretty reserved, and not so fond of gallantry, as they are of gaming, luxury, and magnificence. Such is their indolence, that they concern themselves no more about their household affairs, than if they were strangers. They know no books but their prayer-books, are extremely credulous, and give into all the externals of religion: this makes their conversation sometimes insipid; and, unless now and then a love-story falls in, rain and fair weather are their general topics. They have at least as great a conceit of Vienna as the Parisians have of Paris; for out of Vienna they think there is no salvation. But all these little defects are repaired by an uncommon greatness of soul and generosity. They are hearty friends, and warm protectors of those whose interest they espouse. When they are in love, their passion is sincere; and instead of ruining their lovers, there are some who have made the fortunes of those to whom they have taken a fancy.

Ladies of the first rank at Vienna usually rise late. As soon as their eyes are open they call for chocolate, and send to their husbands to know who they have invited to dinner, and whether there is room for any more guests. If the lady does not like the company, she sends notice to some lady of her acquaintance, that she intends to dine with her; but if there be room at home, as a polite husband always takes care to leave some at the disposal of his wife, she sends an invitation to whom she pleases. After this she dresses, and goes to mass; for here the ladies are all so devout that there is none but what hears at least one mass in the day. There they read in five or six different prayer-books, kiss all the pictures that are at the head of the prayers, and very devoutly toss their beads. After the office is over, they commonly chat a quarter of an hour in the church; then they go abroad, and make some friendly visits, or else go home to receive them. At these visits they hear all the news in Vienna. During this they have all a little box of Indian lack upon their knees, in which they thread gold till dinner-time. When that is over they drink coffee, or play at quinze, till night, when they go to court. From the Empress's apartment they adjourn to the assembly, where they divert themselves at piquet or at quadrille; and then retire, undress themselves, go to supper, and thence to bed, well pleased to think with what indolence and idleness they have spent the day.

The women of the second class, in which I include the gentlewomen that have no titles of honour, viz. the wives of the assessors, referendaries, and agents of the court, discover such an air of plenty and prosperity, as is remarkably surprising. Their houses are richly furnished, and their tables well served. If a referendary has a mind to a nice bit, no body must offer to take it; and the best of every thing is what they are sure

to lay hands on. Belly-cheer is one of those things which the Austrians think of most: they require a great many dishes, and those well crammed. They are so very much accustomed to this profusion of eatables, that I have known some young people in Austria affirm, they do not know what good eating is in France, because they don't serve up a couple of loins of veal in one dish. Different sorts of wines are what they are also very much used to, which certainly is very expensive, because foreign wines pay considerable duties; yet nothing less will serve them than eight or ten sorts of wine; and I have been at houses where there have been no less than eighteen. They place a note upon every plate, expressing the several sorts of wine at the banquet.

The burghers, and common sort of people, mimic the nobility as far as their purses will afford; and it may be said, that no nation in the world is so extravagant as this.

The Austrians are naturally proud and haughty, and expect all mankind should stoop to them: as their Sovereign is the first in rank among the christian princes, so they think theirs to be the chief nation in the world. Nothing is more vain nor insupportable than a young Austrian, whose father is in any rank at court. They are intoxicated with pride and presumption; and as they know themselves to be rich, and their fathers to be great lords, they think they may despise all the world, and lay aside that courteous and polite behaviour, which would so well become their birth. Yet what I here observe to you, concerning the young people, is not so universally true as not to admit of great exceptions, which is the case of every thing asserted in the general.

The nobility of Austria, and of all the Emperor's hereditary dominions, are so fond of the title of count, that the gentlemen beg and solicit it as eagerly, as if it was a great estate. It is well for them, that the dispatch of their patents does not cost much; for the greatest privilege which this brings them is all a chimera. These counts may be said to hold the same rank among the ancient counts of the empire, as the King's secretaries in France do among the gentlemen of good families.

As for gentlemen, they are so common here, that there are scarce any others to be seen. All the agents of the court, and all the referendaries procure themselves a title; tho' I know not why, for neither they nor their wives dare to rank themselves among the prime nobility. This madness of theirs, to be ennobled, is so common, and so easy to be gratified, that I have known a man, who was formerly a messenger to the Emperor Joseph, purchase the title of baron, and his children begin to mix with the grand monde.

The Emperor shews all possible marks of gratitude to those Spaniards who adhered to him while he was at Barcelona. He has loaded them with wealth and honours; and, if it is possible for one's native country to be forgot, he has put them in a situation to forget theirs. This particular goodness of the Emperor extends to all that followed his fortunes in Spain, whom he distinguishes upon all occasions, and does them good, preferable to his other subjects.

The baron has given us a very lively instance of the drunken revels of the Germans, in an adventure of his own.

He

CHAP.  
IX.  
Austria.

CHAP.  
IX.  
Austria.

He had the honour, it seems, to dine at the table of the Elector Palatine, in his palace of Heidelberg, and was invited by that Prince, after dinner, to see the celebrated tun. He went with him thither in the company of the Princess of Sultzbach, his daughter, and several other ladies and gentlemen.

The trumpets led the way, says the baron, and the court followed in great ceremony. When we had mounted the platform, which is over the tun, the Elector did me the honour to drink to me out of the Willhom, which was a silver gilt cup of a large dimension. He took it off clean at one draught, and having caused it to be replenished, sent it to me by a page. Good manners, and the respect I owed to the Elector's commands, not permitting me to refuse the chalice, I begged heartily that he would suffer me to drink it off at several draughts, which was indulged me; and the Elector, talking in the mean time with the ladies, I took the opportunity of his absence, and made no scruple to deceive him; for I returned great part of the wine to the bottom of the tun, threw a part of it on the ground, and the rest, which was the least part of it, I drank. I thought myself well off, that he did not perceive in what manner I bubbled him; for I saw he was very well pleased with me. Then several other great glasses went round, and the very ladies wet their lips, which was the thing that effectually contributed to demolish us. I was one of the first that was over-powered. I perceived those convulsive motions that threatened me if I drank any more; therefore I sneaked off, and made the best of my way down from the platform. I was endeavouring to get out of the vault, but was stopped at the door by two life-guard men, who, with their carabines, crossing each other, cried, Stand, there's no coming this way. I conjured them to let me pass, and told them, that I had very important reasons for my departure; but I might as well have talked to the wind. I found myself in a terrible quandary. To get up again to the head of the tun was death: what would become of me, I could not tell: in short, I crept under the tun, and there hoped to hide myself; but it was a fruitless precaution. There is no avoiding a man's destiny. It was my fate to be carried out of the vault, and to know nothing of the matter. For the Elector perceived I was a deserter, and I heard him say, Where is he? What is become of him? Let him be looked after, and brought up to me, dead or alive. The guards at the door, being examined, said, that I came that way in order to get out, but that they sent me back again. All these inquiries, which I heard from my hole, made me burrow myself the more. I crept under the covert of a couple of boards I met with by chance, where nothing but a cat, devil, or page, could find me out. But a little page, who was indeed both devil and page too, ferretted me, and bawled out like one that was mad; Here he is! here he is! and then I was taken out of my covert. You may imagine what a silly figure I made. I was carried before my judge, who was the Elector himself; but I took the liberty to challenge both him and all the gentlemen in his retinue, as being parties in the cause. Alas, my little gentleman, said the Prince to me, you refuse us for your judges; I will appoint you others

then, and we shall see, whether you'll come off any better. He nominated the Princess, his daughter, and her ladies, to try me, and the Elector was my accuser. After pleading my own cause, they put it to the vote, and I was condemned unanimously to drink as long as I could swallow. The Elector said, that as he was the Sovereign, he would mitigate my sentence; that I should that day drink four pint glasses of wine, and that for a fortnight running, I should tip off the like glass to his health immediately after dinner. Every body admired the Elector's clemency, and whether I did, or not, I was fain to do as they did, and to return him thanks. Then I underwent the heaviest part of my sentence. I did not lose my life indeed; but for some hours I lost both my speech and my reason. I was carried to a bed, where when I came to myself, I was told that my accusers were in the same pickle as I was, and that none of them went out of the vault in the same manner as they entered it. Next day the Elector was so good as to mitigate the remaining part of my sentence, and excused me from the penance to which I was condemned, upon my promising him that I would make one at his table for a month to come.

The north parts of Germany, and especially those that border on the Baltick, according to the anonymous author of the present state of Germany, are rather colder, and have longer winters than the middle counties of England of the same northerly situation. At Hamburg, it is considerably colder in the winter, and hotter in the summer, than at Lincoln, though these two cities lie in a line; and the counties of Lincoln, Leicestershire, Huntingdon, Norfolk, Suffolk, Buckingham, Hertford, Essex, and Middlesex, though they lie as far north as the electorate of Hanover, yet are the winters longer and sharper there than in the English counties. In the middle and southern provinces of the empire, the climate is much the same with the parallel parts of France; only in that tract which runs along the foot of the Alps, there is more snow. In the parts about the Danube, the air is as mild as that of Italy about the Po. Though this country so much abounds with mines, hot baths, &c. yet is there not more thunder here than elsewhere, except what happens to the inhabitants of the Alps.

The weather is more constant, and the seasons more regular within land, than in those countries that border on the ocean. In the provinces near the sea, and which abound with lakes and rivers, there is plenty of rain. In other parts, where the surface of the earth is drier, there are sometimes considerable droughts. The north winds from the Baltick, and the bleak mountains of Sweden, bring frost and snow. The east blasts, coming over a vast continent of three or four thousand miles extent, bring dry and unwholesome weather. The south, in the summer, brings refreshing breezes from the Alps. So that the west-wind, as with us, is both the most frequent and wholesome that blows in Germany.

The face of the country is generally even; in some places hilly, but no where mountainous, except towards the south and south-west, where the Alps, and a few mountains in Alsace, serve as boundaries and bulwarks against Italy and France. Indeed, a considerable part of this country may more properly be said to be low, as Westphalia, and the two Saxones.

CHAP.  
IX.  
Austria.

CHAP. IX. Part of the great Hyrcinian forest, so famous among the ancient Romans, and other writers, is still remaining. It is, however, much diminished to what it was in Cæsar's time; who says, it was nine days journey in breadth, and sixty in length. It is now in several parts cut down. What remains is branched out into several forests, which have their distinct names, such as that called the Black Forest, &c.

Germany abounds with corn, cattle, sheep, wool, cloth, horses, &c. things of indispensable use in life.

The rivers and lakes abound in fish, in greater variety and perfection than any other country perhaps in the world.

The orchards are full of fruit trees, as apples, pears, cherries, nuts, and almonds. And in the southerly provinces, there is plenty of the more delicate fruits; as peaches, apricocks, figs, and olives, in good perfection.

The vines produce variety both of small and strong wines; and the Rhenish are not only equal to, but preferable to some of the wines in Italy.

Nay, the very mountains of the Alps, on the German side, in many places, are cultivated to the top, and the vallies abound in pastures and vines.

The wastes and forests, which seem to be of no significance or value, do yet afford many things, both for the sustenance of the poor, and the delight and luxury of the rich. They yield plenty of wood for fuel and building, and abound with great variety of wild fowl, and all sorts of good venison. They feed vast numbers of hogs, and some of them, as the forest of Ardenne, feed good mutton.

The bowels of the earth are replenished with rich mines of silver, lead, copper, salt, coal, vitriol, quicksilver, iron, bitumen, nitre, ocre, &c. Most of which things Germany has in greater plenty than any other country in Europe.

The poorest parts of the country have wood, venison, hogs, and fish.

To all which may be added the many wholsome medical springs, and baths, with which this country does abound, beyond all other countries in Europe.

The Emperor's countries abound with most necessities and delicacies for human life. Austria has enough of corn, wine, and salt, and the rivers afford plenty of fish: their black cattle they have from Hungary. The mountains of Upper Stiria feed such plenty of sheep, that the natives trade in them and their wool, and the vallies are covered with black cattle. In Lower Stiria they have store of corn, wine, fruit, fish, salt, and venison. Though the country of Carniola be mountainous, yet it has many vallies, which abound in wine, corn, fish, and excellent oil. Friuli is fruitful in corn, oil, and rich cordial wines. Carinthia has enough of corn. Kastria is noted for a breed of good horses, whence many princes and nobles of Italy furnish their stables. The bishopricks of Trent and Brixen, tho' very mountainous, have plenty of wine, oil, and fruit, in their fields and vineyards; the wine, which is strong, is exported to other countries. Bohemia has enough of black cattle and sheep for their own consumption, and their orchards and gardens yield plenty of fruit, saffron, liquorice, and hops, for export: their white and

VOL. II.

brown beer is also esteemed and sent into other countries, so that it may very well supply the want of wine; and their horses are remarkable for their courage and bulk. Moravia has a good breed of horses, oxen, sheep, and goats, and corn of all sorts for their own consumption, and export. Silesia has several good commodities, as madder, sweet-cane, but especially wool and flax, which they export. Hungary is one of the noblest kingdoms in Europe, exceeding fertile in rich wines, corn, and cattle: the two latter are exported in great quantities into the neighbouring provinces of Turkey.

The strong Hungarian wines have a great vent in the empire, and Poland, where the King, the nobility, and clergy, have their cellars well stocked with them. The circle of Swabia, of which about a fifth part belongs to the Emperor, is one of the most fertile in the empire; only it does not abound so much with mines as the Emperor's other countries; but in lieu of those, the inhabitants have better vent for their corn, cattle, wine, horses, &c. into Switzerland, a country that does not abound with native commodities.

## B A V A R I A.

### CHAP. X.

#### *Treats of the Circle of Bavaria.*

THE Circle of Bavaria does not only contain the proper dominions of the Duke of that name, but also the territories of the Archbishop of Saltzburg, and those of the Bishops of Passau, Ratisbon, Freisingen, and the lands of several abbeys and convents which have little or no dependance on him. This country, according to Dr. NICHOLSON, includes great part of the ancient Rætia, Vindelicia and Noricum, and acquired the name of Bavaria, or rather Boiaria, from the Boij, a Gallick Nation who settled themselves here, as has been mentioned already. The modern Bavaria is bounded by Franconia, Voithland and Bohemia on the north; by Bohemia and Austria towards the east; by Carinthia, Brixen and Tyrol towards the south; and by Suabia on the west; extending about two hundred miles from north to south, and an hundred and twenty from east to west.

The circle of Bavaria is usually divided into three parts, namely, 1. The Upper. 2. The Lower Bavaria. And 3. The Upper Palatinate. The Upper Bavaria lies between the country of Tyrol and the Danube, and is generally a mountainous barren soil, the chief towns whereof are Munich, Freising, Ingoldstat, Donawert, Rain, Landsperg, Oettingen, Tegernsee, Scheyren, Waffersburg, Hay, Muldorf, Burkhausen, Branaw and Scharding.

The Lower Bavaria stretches along the Danube to the confines of Austria, and is as fruitful a province as most in the Empire; the chief towns whereof are Ratisbon, Straubingen, Landshut, Passau, Mospurg and Abach.

The Upper Palatinate of Bavaria, or Nortgow, so called from its northern situation in respect of the Elector's other dominions, is bounded by Voithland on the north; by Bohemia and Austria towards the east; on the south by the Danube,

10 L

which

Bavaria.

which separates it from the dutchy of Bavaria; and on the west by Suabia and part of Franconia. This is generally a rocky uneven country, tho' in some places there are valleys which afford good corn and pasture. They have also a pretty good share of vineyards, but their wine has a sharp unpleasent taste. Their greatest riches lie in the bowels of the earth, in their mines of copper, silver and other metals, especially iron, of which they forge and vend a great deal. This Palatinate was taken from the Elector Palatine, together with his other territories, upon his assuming the title of King of Bohemia, in opposition to the Emperor, about the year 1620, and transferred to the Duke of Bavaria with the title of Elector; and though the rest of the Elector Palatine's dominions were restored to his posterity with an eighth Electorate by the treaty of Munster, yet this part called the Upper Palatinate, with the Electoral dignity, was confirmed to the Bavarian family, which they remain possessed of to this day. The chief towns in the Upper Palatinate of Bavaria, are Amberg, Sulzbach, Cham, Walsaffen, Castel, Newburg, Luchtenburg and Averbach, the most considerable whereof will be particularly described hereafter.

Munich  
city.

The chief rivers of Bavaria are, 1. The Danube. 2. The Lech. 3. The Inn. 4. The Amber. 5. The Iller. 6. The Saltz. 7. The Nab. And 8. the Isar; few countries being better watered with navigable rivers. The chief towns are 1. Munich, or Munchen, the capital of Bavaria, pleasantly situated on the river Isar, in the latitude of 48 degrees odd minutes, sixty miles north of Inspruck, and an hundred west of Lintz in Austria. The town is large and well built, and the streets so broad, that there are canals in many of them filled by the branches of the river Isar, which here divides it self into several channels. It is the opinion of some travellers, that this is the fairest, though not the largest city in Germany. The splendour and beauty of its buildings, both publick and private, says Mr. RAY, especially the Electoral palace, which may compare with any in Europe, and the magnificence of their churches and convents are such, that it surpasses any thing in Germany for its bigness. It is walled round and fortified after the modern way, but not capable of maintaining a long siege, for we find the Electress of Bavaria thought it prudence to surrender this capital in the late war, rather than hazard a siege. Nor is it a town of any considerable trade, but what is occasioned by their Princes residence amongst them. Misson observes, that the outside of the Electoral palace is not answerable to the internal beauty, tho' many of the apartments too are irregular; for this vast structure being built by several persons at different times, the fabrick differs according to the fancy of the persons who had the management of it. The great hall of the Emperor's apartment is an hundred and eighteen feet long, and fifty two broad. This, says my author, is a truly magnificent apartment, especially in respect of its curious pictures, which are all history-pieces, the sacred on one side, and the prophane on the other, every history having a Latin inscription in verse under it, the following distich being annexed to that of SUSANNAH, viz.

*Castia Susanna placet, Lucretia cede Susanne;*

*Tu post, illa mori maluit, ante scelus.*

In the little chapel belonging to the apartment of the Electress, you see nothing but gold, pearls

and jewels, and among the reliques there is a piece of gold mohair, which, as tradition informs us, was a piece of the Virgin MARY's gown. The parlour of perspectives, says the same traveller, is extremely fine; but the hall of antiquities exceeds all the rest, for we numbred an hundred and ninety-two busts, and four hundred other pieces, all esteemed for their exquisite workmanship and antiquity. The furniture of the palace is rich beyond imagination, and in the treasury there were whole services of gold plate, an incredible number of pearls, diamonds, rubies, and other precious stones; but the late Elector in his great necessities during the last war, was obliged to part with some of this treasure to support himself, and a great deal more was seized by the Imperialists when they were in possession of Munich; but these were stipulated to be restored by the last treaty, if such a thing was possible. The whole palace is lined or incrusted with marble, or a cement so like it that it is not to be distinguished from it: and Misson relates that there are subterraneous passages from the palace to most of the churches and convents in the city: but in this he was probably imposed upon, we may take it for granted he never saw them. 2. Ingoldstat, situate on the

CHAP.  
X.  
Bavaria.

Ingoldstat.

north shore of the Danube, in a plain fruitful country, forty miles to the northward of Munich, and thirty west from Ratisbon. It is esteemed a town of good strength, and well built, the streets broad and strait, but poor and ill inhabited. In the great church is an image of the Virgin MARY of beaten gold, which with the workmanship, jewels and other ornaments, is said to have cost fifty thousand crowns: before it kneels a French King of the same metal, but not so large, clothed in a long purple robe, enamelled with yellow flower de lices, and near to it stands another small image of gold, adorned with precious stones, and richly enamelled, representing St. MICHAEL with a pair of scales in his hand. In this city the famous Cardinal BELLARMINE, and PETRUS APPIANUS had their education.

3. Donawert, or Teonawert, twenty five miles west of Ingoldstat, and twenty-four north of Augsburg, which takes its name from the river Donaw, or Danube, whereon it stands, is of it self a place of no great strength; but the fortrefs of Schellenberg near it had like to have put a stop to the progress of the allies in the year 1704, when the Duke of Marlborough attacked it with the flower of the confederate army; but it was at length forced by the resolution of the troops, and superiority of their numbers, and the Elector of Bavaria obliged to retire under the cannon of Augsburg. Donawert is a great thorough-fare, both by land and water, and the entertainment of travellers seems to be the most beneficial employment of the inhabitants. It was once an Imperial city, and comprehended in the circle of Suabia; but upon declaring for the protestant Princes, was proscribed by the Emperor FERDINAND II. anno 1634, and brought under the dominion of the Elector of Bavaria, who was the Emperor's General in that war. 4. Amberg, the capital of the Upper, or Bavarian Palatinate, situate on the banks of the river Vils, thirty miles to the northward of Ratisbon, esteemed a place of considerable strength, and endowed with large privileges by the Emperor RODOLPH. It was anciently subject to the Dukes of Suabia, but by the last Prince of that race transferred to the house of Bavaria. The iron and other minerals which are dug

Amberg.

CHAP. X. dug out of the neighbouring mountains, employ the inhabitants in forging and converting it into utensils, which they vend in other parts of Germany. 5. Newmark, once an Imperial city, but now subject to the Duke of Bavaria, stands on the banks of the river Sultz, thirty miles north of Ingoldstat. The trade of the place consists chiefly in iron-work. The country about it is called the territory of Newmark. 6. Sultzbach, a small city, situate on a hill, five miles north-west of Amberg, where a Prince of the house of Newburg has a palace, and styles himself Duke of Newburg, Bavaria, &c. 7. Ratibon, or Regensburg, situate in forty nine degrees north latitude, at the confluence of the Danube and the Regen, about sixty miles to the northward of Munich, and as many west of Passau. It is the only free Imperial city within the limits of the Elector's dominions; large, populous, well built and pleasantly situated, fortified with a double wall; but yet seems to be a place of no great strength, or it would not so easily have submitted to the Elector of Bavaria as it did in the last war, when the Diet was assembled there, without striking a stroke. The place where the Diet meet is a large upper room hung with tapestry; the Imperial throne and seats richly covered with gold and silver tissues, velvet, &c. suitable to the dignity of the illustrious members. The cathedral is not admired for its beauty, or any other excellence; but the convent of St. EMERAM is said to be worth the viewing: and the stone bridge across the Danube is no mean structure, consisting of fifteen large arches supported by square pillars, and is one thousand and ninety-one feet in length, and three and twenty broad, having three handsome towers built upon it. This city is governed by it's own magistrates, and is not subject to the Duke of Bavaria. The Lutheran is the established religion, only the Bishop has the liberty of saying mass in the cathedral once a week. The town is plentifully supplied with provisions: wine is made in the neighbourhood, not inferior to Rhens: and their fields produce all kinds of corn and grain; nor do they want good pasture for their cattle. The advantage of their situation upon and near so many navigable rivers creates a brisk trade, and the concourse of people which the Diet occasions, is a great addition to it. 8. Passau, situated about sixty miles to the eastward of Ratibon, and ten to the westward of Austria, at the confluence of the three rivers, Danube, Inn and Ilts, which divide it into three parts, either of them a town by itself, but together form a noble large city: it is naturally strong, being surrounded on all sides either by rocks or rivers; but the fortifications are not answerable to the situation, or the Bishop of Passau, the sovereign of the place, had never yielded it up to the Elector of Bavaria the last war without attempting to defend it; nor would the Elector have parted with it again without force if he had deemed it tenable. The houses of the town are of wood, but the publick buildings of stone and very magnificent, especially the cathedral dedicated to St. STEPHEN, the Bishop's palace, and the castle which stands upon an adjoining hill. In this city it was that the peace was concluded between the Emperor CHARLES V. and the protestant Princes in the year 1552; by which the Lutherans were to enjoy the free exercise of their religion. It is observable that the river Inn, which gives name to that division of Passau cal-

led Inaflat, discharges itself into the Danube with that violence, that it preserves it's stream unmixed for a great way, being of a different colour from the waters of the Danube: and on the other side the Danube, the black muddy streams of the Ilts are discernable for several furlongs, that river running with a furious torrent from the Bohemian forests. The Bishop of Passau is sovereign of the country which lies between the Palatinate and Austria, for twenty miles to the northward of Passau and the Danube, in which district stand the castles of Obernberg and Eberlberg. 9. Landshut, the chief town the Elector hath in the Lower Bavaria, where his Lieutenant usually resides, stands on the river Ikar, thirty miles south of Ratibon, in a pleasant country almost in the middle of the Elector's dominions, on which account the ancient Dukes of Bavaria built a palace here, and beautified the city, which is still one of the handsomest in the country; and there is a church in Landshut, the tower whereof travellers take notice is the highest in Germany. 10. Newburg, *Novaburgum*, a pretty neat city, the capital of a country of the same name, subject to it's own Prince the Duke of Newburg, who is also Elector Palatine, stands on the south bank of the Danube, fifteen miles to the westward of Ingoldstat. The town has a good trade in wines; and the country belonging to it extends itself along the Danube near forty miles; but is exceeding narrow. Among other towns in this district is, 11. the town of Hochstet, about twelve miles to the westward of Donawert; rendered famous by the victory the Germans and their allies, the English and Dutch, gained over the French and Bavarians near this place in the year 1704. In which battle the confederates were commanded by Prince EUGENE of Savoy and the Duke of Marlborough, and the enemy by the Duke of Bavaria, and the Marshals TALLARD and MARSIN. The Emperor was at this time reduced to the greatest extremity by the French and Bavarian forces, who would probably have made themselves entire masters of Germany, if the English and Dutch had not sent a powerful re-inforcement to the Emperor's assistance. And what would have been the consequence to the allies if that body had been defeated, heaven only knows. On the contrary, the advantages the Emperor reaped by that successful battle were so numerous, and so important, that the Austrian family must always gratefully remember the English nation, who contributed so largely to that expedition. 12. Between the towns of Donawert and Hochstet, stands the little city of Lawingen upon the Danube, subject also to the Duke of Newburg. The bridge over the Danube, the castle, and the great church, are all that travellers mention here to be worth our notice; neither do they give any further description of it, than that the great church is covered with copper. 13. Nabburg, a pleasant city in the same district of Newburg, which stands upon a hill near the river Nab. And, 14. Aichstat; but of this more in Franconia, of which it is sometimes reckoned a part. 15. Freisingen, situate on the side of a hill, in a fruitful country near the river Ikar, seventeen or eighteen miles north of Munich. The Bishop is sovereign of the place, and of the adjacent country; and there is another small territory belonging to him on the confines of Bavaria and Tyrol, called Werdenfels from it's chief town, which lies near the river Ikar, about forty miles south of Munich.

Munich. And lastly, I come to describe the country subject to the Archbishop of Saltzburg, which is accounted part of the circle of Bavaria; being bounded by the duchy of Bavaria on the north, by Styria and the Upper Austria towards the east, by Carinthia and part of Tyrol on the south, and by Tyrol towards the west: the chief towns whereof are, 16. Saltzburg, the ancient *Juvavia*, situate on the river Saltza, sixty miles east of Munich, esteemed one of the finest cities of Germany. The cathedral is a modern building, erected in the year 1628, exceeding magnificent; the city having been burnt down a little before. The palace of the Archbishop is part of the castle of Mirabel, than which nothing can be more delightfully situated. The town is well built in general: and the publick inns, travellers relate, are the best in Germany. It has a very good trade, especially in salt, which the neighbouring pits produce. 17. Hallen, another town in this country, upon the banks of the river Saltza, about eight miles to the southward of Saltzburg, where the salt-pans continually employ great numbers of people. It is reported that in the year 1573, there was found in a salt-pit here, several hundred fathom deep, in the midst of a hard rock of salt, an entire human body, with it's limbs, hair and clothes found and uncorrupted, which by it's antique dress, was thought to have lain some ages in that condition.

The country of Saltzburg, of which the Archbishop is sovereign, extends seventy miles from east to west, and fifty from north to south: and besides the abundance of salt it affords, it has considerable mines of copper and iron, and some of silver. A little above the city of Saltzburg springs the Gastein bath, the waters whereof are very hot, and taste strong of several minerals; and are said to be a remedy for the stone, the pox, the colick, and other malignant distempers, by bathing in them only, without drinking the water. There are also many excellent quarries, out of which is dug a stone little inferior to jasper. Besides the towns already mentioned in the country of Saltzburg, are those of Lauffen, Titmoning, Radstat and Muldorf, of pretty good note; but I do not meet with any particular description of them.

Notwithstanding Bavaria in general is a rich plentiful country, and lies exceeding well for trade, the Danube and many other navigable rivers passing through it; yet the natives are generally poor, which is supposed to proceed from the Elector's monopolizing the most considerable branches of traffick: and first, that of salt, which he prohibits his subjects to import from Austria, the Bishoprick of Saltzburg, or any other Prince's dominions on the severest penalties, or to buy any that is imported, except of himself. The Elector's factors alone are allowed to furnish Suabia with salt, which they dig at the salt-pits of Drabestein and Obenhall, which being very coarse, they mix with a purer salt brought from Saltzburg. 2. A second monopoly is that of corn; the farmer is obliged to sell all his grain to the Elector's agents, who retail it out again to the people. 3. This Prince, like the Czar of Muscovy, is Brewer-General of his dominions: none may brew or sell strong beer but the Elector's factors. There is only a poor sort of small beer, which the peasants and citizens are allowed to brew and spend in their own houses. And the Bishop of Passau, whose territories lie within this circle, imitates the Elector in this piece of tyranny. The chief

subsistence of the peasants of this country is their herds of swine, which they feed in the woods; and the wild beasts and game they meet with there, such as deer, wild hogs, &c. which they make free with, though it be almost as penal for a rustick to meddle with the game in Bavaria as here: but they are compelled by necessity to take what they find; for corn, beer and salt are at such excessive rates, that a countryman is scarce able to purchase them. After what has been observed in relation to monopolies, it may be needless to shew that the Elector is absolute in his dominions; and that the legislative and executive power are both vested in him. There are some general laws of the Empire indeed, that all the Princes and States of the Empire ought to be governed by, but they take the liberty to disobey and break through them too often, when there is not a force to compel the observance of them. What the forces and revenues of the Elector of Bavaria are exactly, I do not find computed by any writer, only in general, that his revenues are very large, arising from the monopolies abovesaid; from tolls on the rivers, customs on merchandizes, and the rents of his own demesne lands. And as the country is very populous, there is nothing to restrain him from raising as many troops as he can pay: like the other German Princes, he is never without a good body of standing forces, even in time of peace. The Elector and the Archbishop of Saltzburg are co-directors of this circle. The Elector of Bavaria styles himself Duke of the Upper and Lower Bavaria, and of the Upper Palatinate, Duke and Count Palatine of the Rhine; Elector and Vicar of the Empire, and Grand Master of the household. His arms are lozengewise Argent and Azure of twenty-one pieces bendwise for Bavaria. One and four Sable a lion Or, crowned languid and armed Gules for the Palatinate, with an Imperial globe Or, as Elector and Grand Master of the household of the Empire.

The late Elector of Bavaria died on the 26th of Feb. 1725-6, in the 64th year of his age. He was a fine gentleman, and a good soldier, and had experienced great variety of fortune. In the beginning of his life he commanded the Emperor's forces in Hungary; obtained a glorious victory over the Turks, and took the strong town of Belgrade by storm. He was afterwards Viceroy of the Spanish Netherlands, and entered into the Grand Alliance against France in the year 1698; being Generalissimo of the confederate forces in Flanders in the absence of King WILLIAM III. In the last war he took the part of France, and having lost the memorable battle of Hochstet, was driven out of his country in the year 1704, put to the ban of the Empire, and forced to take refuge in France: but by the peace of Radstat, anno 1714, his dominions were restored to him, to the great satisfaction of his subjects, who were infinitely fond of their Prince, and ventured several insurrections in his favour while he was in banishment, and the Imperial forces possessed their country. He lived eleven years in peace after his return to his dominions, endeavouring to repair the damages his country had sustained by the ravages of the enemy, who were ten years in the possession of it. He was the third Elector of Bavaria; son to the Elector FERDINAND, and grand-son to MAXIMILIAN I. Elector of Bavaria, who was advanced to that dignity in the year 1623, by the Emperor FERDINAND II. in the room of FREDERICK Elector Palatine, who was

put to the ban of the Empire on the loss of the battle of Prague in the year 1620. He married MARIA ANTONIETTA daughter to the Emperor LEOPOLD in the year 1685; by whom he had three children, who are all dead; and the Electress their mother dying anno 1692, he married the Princess THERESA CUNIGUNDA, daughter to JOHN SOBIESKI, late King of Poland, in the year 1694, by whom he had issue CHARLES ALBERT CAJETAN, the present Elector, born August 1697; who married the Archduchess MARY AMELIA, daughter to the late Emperor JOSEPH. 2. FERDINAND MARY, second son of the late Elector, born August 1699, and married to ANNE CAROLINA of Newburg. 3. CLEMENT AUGUSTUS, the third son, Archbishop and Elector of Cologne, Bishop of Munster and Paderborn, born August 1700. And 4. THEODORE, the fourth son of the late Elector, and made Bishop of Ratisbon, born anno 1703.

CHARLES ALBERT (the present Emperor and Elector of Bavaria) hath issue MARIA ANNA WALPURGE, born the fifth of July 1724. 2. THERESA BEN MARY, born the twenty fourth of November 1725. 3. MAXIMILIAN JOSEPH, born in 1727.

His electoral Highness is great master of the empire. The Counts of Walpurg are his vassals. He is director of the circle of Bavaria jointly with the Archbishop of Saltzburg.

Upper and Lower Bavaria (except some tracts of land, and places which belong to some ecclesiasticks) is in length about 130, and in breadth about 100 miles.

The Elector of Bavaria is one of the richest Princes in the Empire. His country is so well peopled, that they reckon in Bavaria, including the Upper Palatinate, 35 great and little cities, 49 towns, above 1000 fiefs noble, and 11,704 villages and hamlets, which bring in a revenue of above half a million of our money: a modern German writer makes it amount to between 8 and 900,000 l. He adds, that the late Elector had some years above one million.

This Elector is known to be one of the powerfulst Princes in Germany. He has several towns well fortified, a noble arsenal, and commonly 12,000 men on foot. He can on an emergency march 30,000 men into the field.

The Elector resides in his capital city of Munich, a fine, wealthy, and populous city. His palace is very noble, and exceeding richly furnished. His other seats are Dachau, Schleisheim, Furstinriet, Starenberg, Oettingen, and above all, the magnificent palace of Nymphenberg, within two miles of the capital: it was built by the late Elector: the gardens are inferior to none but those of Versailles.

The Elector's titles are, CHARLES ALBERT, by the grace of God, Duke of Upper and Lower Bavaria, and of the Upper Palatinate, Duke and Count Palatine of the Rhine, Elector and grand master of the household to the Empire, &c.

This Prince and his subjects are generally Roman catholicks.

#### *The Elector of Saxony.*

Elector of Saxony.

V. The Elector of Saxony, FREDERICK AUGUSTUS III. born the 26th of September 1696, embraced the Roman catholick religion in 1717, and succeeded to the electorate in January 1733. He married in 1719, MARIA JOSEPH, eldest  
VOL. II.

daughter of the late Emperor JOSEPH. Their children, besides three that are dead, are, 1. FREDERICK CHRISTIAN LEOPOLD, electoral Prince, born the 23d of August 1722. 2. MARIA AMELIA, born in 1724, (married to the King of Naples.) 3. MARIA MARGARETTA, born in 1727. 4. MARIA ANNA SOPHIA, born in 1728. 5. AUGUSTUS LEWIS ALBERT, born in 1730. 6. CAROLINA, born in 1731. 7. CHARLES JOSEPH FRANCIS XAVIER, born in 1733. 8. N—— a daughter, born in 1736.

The Elector is great marshal of the empire; he is also vicar during an interregnum, and sole director of Upper Saxony. The Count of Papenheim is his hereditary vicar.

The Elector of Saxony is rich and powerful: his country is very fruitful and populous, and brings in a revenue of betwixt 7 and 800,000 l. per annum.

The Elector commonly has 20,000 regular troops, and 20,000 militia, without reckoning the ban, and the arriere ban, and the body of miners and hunters, who are obliged in time of war to bear arms.

Dresden is the capital of the electorate, and the usual seat of the Electors. It is large, populous, and well-built; the fortifications are modern, and very strong. The Elbe runs through the town, and divides it into old and new by a stately bridge of 17 arches.

His titles are, FREDERICK AUGUSTUS III. by the grace of God, great Marshal, and Prince Elector of the holy Roman empire, Duke of Saxony, Cleves, Juliers, &c.

## FRANCONIA.

### CHAP. XI.

#### *Treats of the circle of Franconia.*

THE circle or dukedom of Franconia received its name from its ancient inhabitants the Franks, who were so denominated, as some relate, from FRANCUS, a great commander of that people; but others hold that the Franks were not one particular people, but several German nations united together against the Romans, who took the name of Franken, which in their language signified a free people, and this country might be called so by way of eminence, as being the first or principal promoters of this confederacy.

The modern Franconia is bounded by Hesse and Thuringia towards the north, by the Palatinate of Bavaria on the east, by Suabia on the south, and by the Palatinate of the Rhine towards the west, and extends about 100 and 30 miles from east to west, and about 100 and 40 from north to south: the principal rivers whereof are the Maine, the Sala, which waters the country where the famous Salique law was made, which restrains the succession to the males; the Tauber, the Rednitz, the Altmutz and the Pegnitz. It is prettily diversified with hills and valleys, forests and champaign, and moderately fruitful in corn and wine; and comprehends, 1. The bishoprick of Wurtzburg, the chief towns whereof are Wurtzburg, Ochsenfurt, Konigshoven and Bifchoffsheim. 2. The bishoprick of Bamberg, the chief towns whereof are Bamberg, Cronach, Weismann and Forcheim. 3. The bishoprick of

The Marquises of Cullembach and Obnsbach, the chief towns whereof are Cullembach, Weisinstat, Bertrut, Obnsbach and Kreyling. 6. The districts of Coburg, Schwartzenburg, Cassel, Hennerburg, Erpach, Wertheim and Holach, or Hohenloe. 7. The Imperial, or free cities of Francfort, Nuremberg, Rotemburg, Schweinfurt, Weinsheim and Weissemburg.

Wurtzburg, or Heribopolis, the capital of Franconia, stands on the river Maine, sixty miles to the eastward of Francfort, in forty nine degrees forty five minutes north latitude. The Maine runs through the middle of the town, over which there lies a noble stone bridge, three hundred paces long. Other little rivulets run through the principal streets. The Bishop's palace stands upon a hill above the town, from whence there is a glorious prospect of the neighbouring country, being the richest part of the province. The Bishop has a great extent of country under his jurisdiction, in which it is computed there are not less than four hundred towns and villages besides Wurtzburg. He is as absolute in his dominions as the French King, and lives in all the state of a sovereign Prince.

Bamburg, the capital of the principality of the same name, stands forty miles north-east of Wurtzburg, of which the Bishop of Bamburg is sovereign, his territories extending sixty miles in length, and forty in breadth. He has also several more castles and royalties in Carinthia and other parts of Germany; for the lands and territories of the German Princes are so strangely intermixed, that it is difficult often to distinguish one from another. Nothing is more common than for a great Prince to hold part of his dominions of one much inferior to him; the King of Bohemia, the Electors of Bavaria and Brandenburg, for instance, hold several of their manors of this Bishop as lord paramount. The cathedral, the Bishop's palace, the Jesuits church, and the castle of Bamburg, are the only publick buildings that travellers mention in their way through it, and these do not seem to deserve a particular description.

Aichstat is the capital of another bishoprick, by some geographers placed in Bavaria, whose Bishop also is a temporal Prince. It stands about twelve miles north-west of Ingoldstat, the principality about it extending thirty miles in length, and from eight to sixteen in breadth. These three bishops are all Princes of the Empire, and have seats in the Diet.

Margentheim, or Mariendal, is a small city situate on the river Tauber, about two and twenty miles west of Wurtzburg, where the great Master of the Teutonic Order hath his residence, and is the capital of the small territory belonging to him, since the Order were driven out of Prussia. These Knights still possess eleven commanders in Germany, and have a right to chuse their great Master, who is always a Prince of the Empire, and hath one of the first seats in the Diet after the Electors. The Knights on their admission are obliged to prove their nobility for sixteen descents, both by father and mother.

The marquise of Cullembach receives its name from its capital city, which stands on the river Maine, twenty five miles north-east of Bamburg, and is subject to the two branches of the house of Brandenburg, called Cullembach, and Bareith, who are each of them Princes of the Empire; and the Marquis of Cullembach is joint director of

the Circle of Franconia with the Bishop of Bamburg. The extent of the country of Cullembach Proper, is about thirty four miles from east to west, and thirty from north to south. Bareith, the other subdivision of this country, has its name also from its capital Bareith, which stands fifteen miles south-east of Cullembach, the country under its jurisdiction being near forty miles in length, but not a fourth part so broad in many places.

The Marquise of Obnsbach, or Anspach, is subject to another Prince of the house of Brandenburg. Its capital city of the same name stands twenty five miles south-west of Nuremberg, and the country subject to it is about fifty miles long, and twenty broad.

The county of Holach, or Hohenloe, lies between the territory of Anspach and Hall, and is about twenty five miles long, and fifteen broad, and takes its name from an old castle, the seat of the Count, who is of a very ancient family.

The county of Cassel, or Castell, lies between the bishoprick of Wurtzburg and the county of Schwartzenburg, being about twenty five miles in length, and seven in breadth, the chief town whereof is Castell.

The county of Schwartzenburg lies between the Marquise of Anspach and the Bishoprick of Bamburg, being about twenty miles long, and fifteen broad; the chief town whereof is of the same name, and situate on the river Lee. The Count to whom it is subject is a Prince of the Empire.

The County of Wertheim lies west of Wurtzburg, being twenty six miles long, and twelve broad: the chief city is of the same name; and stands at the conflux of the rivers Tauber and Maine, in a healthful country, yielding plenty of corn, wine and cattle.

The county of Erpach lies between the Lower Palatinate and the Archbishoprick of Mentz; being about five and twenty miles in length, and twelve in breadth; the chief town, of the same name, stands on a small river, forty three miles west of Wurtzburg.

The county of Henneburg, so called from an ancient castle, or palace of the Counts, situate on the top of an hill near Meiningen; and is bounded on the north by the territories of the abby of Fulda, by Thuringia on the east, by the bishoprick of Bamburg on the south, and the diocese of Wurtzburg on the west: a populous, fruitful country; the chief towns whereof are, 1. Mei-

ningen, a beautiful little city, on the river Vera, 2. Shleusingen, situate on the river Shleus; remarkable for the assembling the electoral college there by FERDINAND II. 1623; when he deprived the Elector Palatine of his dignity and dominions, and transferred them to the Duke of Bavaria. 3. Coberg, the capital of a county of the same name; sometimes reckoned part of the Circle of Saxony, one of the most ancient cities in Germany; tolerably large and well built, and defended by a castle which stands on an adjoining hill. In this castle MARTIN LUTHER was imprisoned several times for speaking contemptibly of his superiors; and here, during his confinement, he composed several hymns, which are sung at this day with great devotion by his followers: in one of which he highly commends the happiness of imprisonment; and might have some reason for it, if he became more humble after it; for the great turn he had given to ecclesiastical affairs, had made him insufferably insolent.

Francfort.

The Imperial, or free cities in Franconia are, 1. Francfort, said to be so named from a ford over the Maine, where the Franks used to pass that river in their incursions against the Saxons; and afterwards built a fort to secure their passage. It lies in fifty degrees odd minutes north latitude, twenty miles to the eastward of Mentz; being built on each side the river, and joined by a handsome stone bridge. It is a large populous city, regularly fortified, but not of any great strength, being much more considerable for its trade, which is carried on by the Maine, the Rhine, and other rivers which fall into them. There are two fairs yearly, in March and September, of three weeks continuance each, when the town is crowded with people from all parts; but what they deal most in, I perceive, is books and horses. The streets of the town are broad, and the houses built either with a red stone, or of wood plastered over and painted. St. Bartholomew's church, where the Emperor is usually elected, is a stately fabrick. The other publick buildings travellers take notice of, are the Emperor's palace, the town-house, and the castle; and there are some houses of the nobility which have a grand appearance. In the town-house, or guild-hall, where the Electors assemble before they proceed to the choice of an Emperor, is preserved the original Golden Bull, which contains the rules and orders to be observed at an election. This city, with the district about it, is governed by its own magistrates; which consist of a Prætor, or Mayor, twelve Burgomasters, fourteen Aldermen, and forty-two Counsellors, in the choice of whom every company of tradesmen have their votes. They have also a senate, which is divided into three benches: on the first sit the Aldermen; on the second the Literati, or learned in their laws and customs; and on the third the tradesmen. The Roman catholicks in this city are possessed of the cathedral church, and there are two convents for men, and one of nuns; but the Papists are not allowed to make any publick processions through the town, for the magistrates and most of the inhabitants are Lutherans. There are also some Calvinists, who are not suffered to have a church in the town, but go to a village near three miles off to their publick worship. The Jews are pretty numerous here, as in other parts of Germany, and have a synagogue allowed them: they do not however live in that wealth and splendor as in England; but are frequently put to the vilest drudgeries, and particularly are employed to extinguish fires, when any happen in the city.

The territory subject to the city of Francfort, is bounded by the county of Weteraw on the north, by the county of Hanaw on the east, by the landgravate of Darmstadt on the south, and by the archbishoprick of Mentz on the west. There is little good arable or pasture ground in this district; the country being for the most part covered by woods or vineyards: the natives are a laborious people, whose employment is chiefly making of wine, which they transport to other countries, and drink little themselves: but this is probably to be understood of the lower rank of the people; people of fashion in Germany do not use to have their cellars empty.

To this city of Francfort several English Protestants retired during the persecution in Queen Mary's reign, and had a church assigned them; some of these were for retaining the liturgy and ceremonies established in the reign of King Edward VI. while Knox and others were for re-

ducing the church of England to the plan of Geneva: and not content with this, began to preach up rebellion and disobedience to governors, and particularly to the Emperor; whereupon the magistrates of Francfort compelled Knox and his disciples to quit the city, and retire to Geneva; and leave the English Protestants, who were for uniformity and the liturgy, and taught obedience to magistrates, in possession of the church which had been assigned them.

Nurenburg, or Nurnburg, *Noricorum Mons*, situate in forty-nine degrees thirty minutes north latitude, forty miles south of Bamberg, and as many north of Ingoldstat, in the very heart of Germany, is said to have obtained its name from the Norici, who built a fort on the hill where the castle of Nurenburg now stands, to defend themselves from the Huns, who had driven them out of Austria, their former country. This city is situate in a plain, being seven miles in circumference; and encompassed with a wall and towers, after the old way of fortification; and a castle standing upon an adjoining hill, but of no great strength at present. The streets are large and well paved; the houses generally built of hewn stone, five or six stories high. Their market-places and squares large and spacious, and adorned with fountains: the river Pegnitz runs through the middle of it, entering the city by twelve large arches under the wall, and issuing out on the other side of the town in the same manner, but is not navigable. It turns however a vast variety of mills in the town, for corn, paper, iron, &c. This city is extremely populous, and has the greatest trade of any in Europe, that does not stand near the sea or some navigable river. Their artificers in iron, steel, wood, ivory, alabaster, &c. are said to be inimitable, and afford their goods extremely cheap. It is from this part of Germany that those toys which we call Dutch are imported hither. And no place is more famous for clock-work: a coach was made for the King of Denmark in this city, that would go by springs without horses, and travel three miles an hour. Some private citizens here have as fine collections of rarities, pieces of antiquity and medals, as are to be found in the cabinets of Princes. And it is nothing but the genius and extraordinary diligence of this people, that procures them this flourishing trade and plenty; for they live in a barren country, which affords scarce any merchandize to traffick with, but what receives the greatest part of its value from their labour and ingenuity. Their publick buildings are the Stadt-house, or Guild-hall, said to be equal to that of Amsterdam; and the church of St. SEBALD is esteemed as stately a fabrick as any in the Empire. In this city are kept the regalia used at the Emperor's coronation; as the Imperial crown, with which CHARLEMAIN was crowned, his mantle, the golden globe, CHARLEMAIN's sword, the sceptre, the Imperial cloak, all richly adorned with precious stones, with the gloves and buskins covered with plates of gold. The established religion here is the Lutheran: the Roman catholicks are only allowed to perform divine service in a church of the Lutherans, when they have done with it. The Calvinists are not allowed any publick place of worship, but are forced to go to a church three miles out of town, and suffer the Lutherans to baptize their children.

The governors and principal magistrates of the city are elected out of the nobility and gentry. The common council consists of forty-two members,

CHAP.  
XI.  
Franco-  
nia.  
Nuren-  
burg.

CHAP.  
XI.  
Franco-  
nia.

bers, of whom thirteen are Burgomasters, and as many Aldermen, the rest are stiled only Elders, or Sages of the people. One Burgomaster has the military, and one Alderman the civil government of the city for a month, and are then succeeded by two more; so that there is a Burgomaster and an Alderman for every month of the year, in whom the executive power is vested by turns. The ordinary affairs of the government are debated in their common-council: the raising of forces, or levying taxes, are usually referred to a select number of the council, stiled by way of eminence, *The Eight*: and upon any extraordinary emergency, the principal burghers elected out of every trade and profession in the town are summoned, to the number of four hundred, who have also the power of electing the members of the other councils, and of the magistrates of the place, which are chosen annually.

Altorf, &c.

The Nuremburghers have a country of about twenty miles extent, and several towns and villages under their jurisdiction; the chief whereof are, 1. Altorf, a university about twelve miles from Nuremburg. 2. Burthan. And, 3. Hersprach; all which were formerly parts of the Upper Palatinate; and taken by the Nuremburghers in their wars with the Marquis ALBERT, in the year 1504.

Nurem-  
burg.

Nuremburg, according to another writer, is the richest and most powerful city in Germany next to Hamburg, and the best built. The houses are all very beautiful, lofty, and perfectly light-some, and most of them are painted on the outside like those of Ausbourg. The townhouse, in which the senate assembles, is a structure remarkably beautiful, is very large, and completely well built: the principal front is adorned by three great portico's with marble pillars; the inside is every whit answerable to the magnificence of the outside there being very fine rooms in it, adorned with noble paintings.

Nuremburg has seven other towns, and 480 villages in it's territories: the government resembles that of Venice: the established religion is the Lutheran; the catholicks have a small church in the house of the Teutonic order: the Calvinists go to church in the territory of Anspach, but the Jews are not tolerated; because, it is said, they formerly poisoned the wells. They live in a place not far from Nuremburg, but come to town every morning, paying something for their entrance; have an old woman set over them, who is commonly both their guard and their guide, and are permitted to trade and trick wherever they can till night, when they are obliged to retire.

In the church of the hospital is kept CHARLEMAGNE's crown, said to weigh fourteen pounds; the scepter and the globe; in short, all the ornaments of Empire, except CHARLEMAGNE's sword, said to have been brought from heaven by an angel.

Rotem-  
burg.

Rotenburg, another Imperial city in Franconia, situate on the river Tauber, thirty miles to the westward of Nuremburg, a pretty compact town, obtained it's freedom of the Emperor FREDERICK I. in the year 1163.

Schwein-  
furt.

4. Schweinfurt, situate on the Maine, twenty-six miles north-east of Wurtzburg; a small city, and not very populous; obtained the privilege of a free Imperial city in the year 1388.

Winf-  
cheim.

5. Wunscheim, a little Imperial city, which stands on the river Arsch, in the marquisate of

Anspach, sixteen miles to the northward of Rotenburg.

CHAP.  
XI.  
Franco-  
nia.  
Weiss-  
burg.

6. Weissenburg, situate in the bishoprick of Eichstat, twenty-eight miles south of Nuremburg. And these are all the free cities we meet with in Franconia. I proceed now to the circle of Saxony.

## SAXONY.

### CHAP. XII.

#### *Treats of Saxony in general.*

OF what extent the ancient Saxony was is very uncertain, but it is generally held to have taken up all the northern part of Germany, from Franconia and Bohemia to the Baltick Sea; and to have comprehended not only the Circles of Upper and Lower Saxony, but Westphalia, the two Friezlands, good part of Holland, Holstein, and even Jutland, which is at present part of the kingdom of Denmark.

CHAP.  
XII.  
Saxony.  
Of Saxo-  
ny in ge-  
neral.

Nor is the derivation of the name less contested than the bounds of the country. Mr. CAMDEN follows the opinion of those who derive it from the Saxe, a Scythian nation, who inhabited a country to the north of Persia and India, whose posterity he supposes the Saxons are. But as there is no probability that those eastern Scythians should ramble so far to the westward, nor no foundation in history to support this surmise; later writers have taken the liberty to dissent from Mr. CAMDEN, and to suggest that the Saxons more probably took their name from a short sword, or dagger they wore, peculiar to that nation, and called in their language Seax, or Saks. But however they obtained the name of Saxons, or whatever countries they inhabited, no people rendered themselves more terrible to the Romans and their allies, both by sea and land; and from their frequent maritime expeditions, I make no question of their possessing most of the sea-coast between Holland and Denmark. It is observed, that upon the coasts of Britain and France, as far as Spain, the Romans were obliged to maintain standing troops to oppose the incursions of this people, under certain great officers, who from their commands were stiled, *Comites litoris Saxonici per Britanniam Et Galliam*. The character SIBONIUS gave of a Saxon rover, was, That he was an enemy formidable beyond comparison, one whom frequent shipwrecks recreated rather than terrified, as being not only acquainted but grown familiar with the perils of the ocean: which is a character very suitable to the natives of Friezland, whose ancestors the Saxons possessed the same shores.

The  
name.

There is no doubt but many different nations were united under the general name of Saxons; all who joined them in hopes of plunder, or finding more agreeable seats than their own, went under this common appellation; the people they invaded at least made no distinction, but as they met with them in the Saxon armies, called them all Saxons, though there might be Jutes, Angles, and twenty other tribes mixed together.

According to our ancient historians, the Saxons first infested the British shores about the year 370; but did not obtain any settlement here, till they were invited hither by VORTIGERN, a British King, to defend him against the Picts, about the year

CHAP.  
XII.  
Saxony.

447. These Saxons, it is said, were commanded by HENGIST and Horsa, two brothers. But Dr. NICHOLSON, with good reason, questions whether there ever were two Saxon Generals named HENGIST and Horsa; because there never was any family of Saxons, who had these names amongst them, either before or since that time: and the occasion of the mistake the Doctor supposes to proceed from the Saxon armies having a horse in their colours and standards: for the word *Hengist* he observes, in the old Saxon dialect, signifies a Stallion; and that *Horsa* is a word of the same signification, he thinks is obvious enough to an English Reader. He looks upon it as highly probable therefore that the Saxon commanders should have the names of HENGIST and Horsa given them by the English, for the same reason that some writers enigmatically call the Emperor the Eagle, the King of France the Lilly, &c. from the arms they bear.

Modern  
Saxony,  
the  
bounds.

The modern Saxony, including both the Circles of Upper and Lower Saxony in their utmost extent, is bounded by the Baltick Sea, Denmark, and the German Ocean towards the north; by Poland and Silesia towards the east; by Bohemia and Franconia towards the south; and by the Circle of Westphalia towards the west; lying between the fiftieth and the fifty-fifth degrees of north latitude.

## UPPER SAXONY.

## CHAP. XIII.

*Treats of the Circle of Upper Saxony.*

CHAP.  
XIII.  
Upper  
Saxony.  
Division.

IN the Circle of Upper Saxony are included, 1. The duchy of Saxony. 2. The marquissate of Misnia and Voigtland. 3. The marquissate of Lusatia. 4. The duchies of Sax-Merzburg, Sax-Naumburg, and Sax-Altemburg. 5. The principality of Anhalt, and county of Barby. 6. The province of Thuringia; most of which provinces are subject to the Elector of Saxony. But besides these, there are included in the Circle of Upper Saxony, the marquissate and electorate of Brandenburg; the duchy of Magdeburg; the principality of Halberstat, and the duchy of Pomerania; most of which are under the dominion of the Elector of Brandenburg, the present King of Prussia. The chief rivers in the Upper Saxony, are the Elbe, the Sala, the Elster, the Unstruck, the Spree, the Havel, and the Neisse.

The  
duchy of  
Saxony.

1. The Duchy of Saxony, properly so called, which gives the Elector the title of Duke, is of no great extent; and bounded by the principality of Anhalt on the north; by Lusatia and part of Brandenburg towards the east; by Misnia on the south; and by the county of Mansfield, and the landgraviate of Thuringia towards the west. The air of this country is cold, but healthful; the soil yields wheat and some wine, though not in great plenty. Here are mines also of silver and other metals, but they want fuel to refine them. The chief towns of the duchy of Saxony are, first, Wittenburg, situate on the river Elbe, forty miles north of Leipzick. The town consists of but one long street, and has little observable in it besides the university. A merry fellow gives this character of the place, viz.

VOL. II.

Witten-  
burg city.

*At Wittenburg a man is sure to meet*

*Hogs, soldiers, whores, and scholars in the street.*

CHAP.  
XIII.  
Upper  
Saxony.  
Hall.

2. Hall, situate on the river Sala, forty miles south-west of Wittenburg, a neat town, standing on the side of a pleasant hill covered with vines; the inhabitants a polite people, and speak the High Dutch in the greatest purity. It is called *Hall Saxorum*, to distinguish it from other places of the same name in Germany. The salt-pits near it yield a good revenue to the sovereign, who is the Elector of Brandenburg. 3. Quedlinburg, a little city, thirty-five miles north-west of Hall, remarkable only for a nunnery there, whose Abbess is a Lutheran, and sovereign of the place, and has her deputy, or representative in the general Diet. She is always a Princess of the house of Saxony, and admits no nuns but of a noble descent into the convent. There are also in this duchy the towns of Sweinitz, Hertzburg, Torgau, Bitterfield, Weissenburg, &c. but I don't meet with any other description of them than their situation, which will be found in the map bound up with this volume.

Quedlin-  
burg.Torgau,  
&c.

2. The second division of the Circle of Upper Saxony, is the marquissate of Misnia, or Meissen, bounded by the duchy of Saxony on the north; by Lusatia on the east; by Bohemia on the south; and by Thuringia on the west; and extends about an hundred miles from north to south, and eighty from east to west; the district of Voigtland being the most southerly part of Misnia. The chief rivers in this province are the Elbe, the Mulda, the Pleiss, and the Black and White Elster. The Plains of Misnia yield plenty of all manner of grain, and their hills are rich in minerals. On the banks of the Elbe, near Dresden and Meissen, are large vineyards, which produce indifferent wine. The whole country is very well furnished with wood, and their forests afford plenty of game and venison. The natives of Misnia are distinguished for their hospitality and good breeding, their shape, make, and the neatness of their dress, beyond their neighbours; but then there is no province of Germany where they drink harder. The court it self is intolerably addicted to this vice; and how they do to preserve their chastity, which they are so much commended for, when they are scarce ever sober four and twenty hours, is a mystery to me. But by chastity I'm apt to think our travellers mean no more than their abstaining from adultery; for they relate at the same time, that this crime is punished with death by the Saxon law; and perhaps they are seldom so far intoxicated as to venture a halter for another man's wife, when there are females enough to be had without running that hazard.

Misnia  
marquissate.

Rivers.

The chief towns of Misnia are, 1. Dresden, the usual residence of the Elector of Saxony, a large populous city, situate on the river Elbe, in 51 degrees odd minutes north latitude, about forty miles south-east of Leipzick, and twenty north of the confines of Bohemia. It is one of the most considerable cities of Germany, fortified after the modern way, and the bastions faced with stone; and we have all the reason in the world to believe it very strong, because the late King of Sweden, when he was actually in possession of all the country for a year together and upwards, never attempted the siege of this place. The river Elbe divides the town into two parts, the one called the new, and the other the old city, which are

Dresden  
city.

CHAP.  
XIII.  
Upper  
Saxony.

joined together by a noble bridge of seventeen arches. The new town, where the Elector's palace stands, is best built, and very well worth a traveller's attention. The palace is large, and contains many beautiful apartments; the hall especially is admired for the many fine paintings in it, among which we see the people of most nations drawn in their respective habits: but what travellers are most taken with is the Kunst Kamer, or gallery of curiosities, containing several cabinets, in the first of which are all kind of mechanical instruments and tools, exquisitely wrought. In the other, many artificial works of coral, agate, &c. cups made of mother pearl, an ostrich made out of its own shell, with golden feathers, a purse of linnen incombustible, silver ore almost pure from the mines of Freiburg, several unpolished topazes ten inches in diameter, emeralds an inch in diameter as they grow in the rock. There is also a great variety of clock-work, as a horseman riding, a ship under sail, a centaur running and shooting, and a crab crawling on the table, &c. The stables also which are shewn to travellers are worth the seeing, the fabrick stately, and filled with the finest horses in the world; every one of which has an iron rack and a copper manger. Near the stables is a long arched walk, with the pictures of several favourite horses; and over it a gallery, where all the Dukes and Electors of Saxony are drawn both in their robes and military habits; and among them are shewn two pieces, said to be the pictures of those two Saxon Generals, HENGIST and Horsa, who first obtained a settlement in Britain, though, as Dr. NICHOLSON observes, it is probable that neither of these names were ever known to the ancient Saxons. In the arsenal there were within these few years no less than four hundred pieces of brass cannon, but the number may possibly be reduced at present, since the Swedes surprized and took so many of them in the last war. 2. Leipstick, one of the most populous and well built cities in Germany, situate in a pleasant fruitful plain, at the meeting of three small rivers, viz. the Elster, the Pleissa, and the Parde, about forty miles north-west of Dresden, a town of great trade, especially at the three annual fairs of Christmas, Easter, and Michaelmas, when their streets are crowded with foreign merchants. The town is said to be defended by a strong castle, but I find the present Elector, King AUGUSTUS, did not think it tenable in the year 1706, when the King of Sweden marched into Saxony, for he ordered the governor to surrender it without hazarding a siege. Besides the castle I don't find any publick buildings mentioned by travellers except the church of St. Nicholas, which is said to be the finest Lutheran church in Germany. There is also a celebrated university in this city, in which however they have but four colleges, and those inferior to many in Oxford; the reason of which may be, that in most foreign universities the students lodge in the town, and are not obliged to reside within the walls of a college, as with us. In this city, it is observed, the High Dutch, or German language, is spoke with greater purity than in any other in Germany. 3. Freiburg, which stands about twenty miles south-west of Dresden, near the river Mulda, being of a circular figure, and encompassed with good walls, the streets broad and handsome, and the market-place spacious. The publick buildings are the Elector's palace, said to be a noble structure, and the church of St. Peter, where are the monuments of the du-

Leipstick.

Freiburg.

cal family; among which that of MAURICE, CHAP. Duke and Elector of Saxony, is accounted the finest in Germany, the bust being of black marble, admirably wrought, with many statues of alabaster and white marble about it. The situation of this place is so exceeding pleasant, that it is a proverbial saying, Were I Lord of Leipstick, I would spend my fortune at Freiburg. And the riches which are found here more than equal the beauty of the town, which stands great part of it on a mine, over vast vaults and caverns, which have been some ages digging to come at the silver ore that is found here. At a little distance from the town there are several other mines, three of which the ingenious Dr. BROWN has given us some account of. One of them, which goes by the name of the High Hill, he relates, is more than two hundred English fathom, or twelve hundred feet deep, which exceeded the depth of any mine he saw in Hungary. The second is called the Prince of Heaven, which has at some times produced an ore so rich, that it has afforded sixty-five pounds weight of silver in the hundred weight, though it generally yields but an ounce and a half, and sometimes but half an ounce of silver in the pound; but it is a constant observation of the miners, that where the veins are richest and purest they are thinnest, and generally not above the breadth of two inches. This mine, since it was first opened, it is reported, has yielded above an hundred millions of silver sterling. However, thus much is certain, that the Elector's annual profit from these mines amounts to at least an hundred and thirty thousand pounds sterling, clear of all charges. The third mine which Dr. BROWN visited here, was called the Neck-breaker, about eighty fathoms deep, the ore it produced being either copper and silver, or silver and lead, and sometimes all three; but they work only for silver. There is also a rich sulphur ore, hard and stony, with red spots, which is esteemed the best, some of which yields three pounds of sulphur out of an hundred weight of ore; and some of this sulphur ore yields silver and copper, but in smaller quantities.

Among the several ways they have of discovering mines, they tell us of a divine rod which directs them to the ore. It is nothing more than a forked hazel stick, the two horns of which the miner holds in his hand, while he walks over the ground, muttering some unintelligible words to himself, by way of charm; whereupon the forked stick turns in his hand, and points to the ground where the veins of silver lie. This is related by two authors of the best credit who treat of these mines, namely Dr. BROWN and Dr. NICHOLSON, who seem to have been eye-witnesses of the experiment; after which perhaps it may be thought impertinent to doubt the virtue of this rod. But however the miners may ascribe this to a supernatural power or impulse, if the fact be really true, I shall be apt to impute it to some such cause as occasions the needle pointing to the load-stone, rather than to a charm, in which I confess I have no great faith. But to proceed; these deep mines are very dangerous to the workmen, who frequently meet with damps that prove mortal; and another inconvenience that attends their labour, is the dust which grates upon and frets their skins, lungs and stomachs, and brings them into irrecoverable consumptions; to secure themselves against which they frequently wear vizards with glass-eyes. The mines are cold as far as the air can penetrate, but afterwards warm enough. There

is a mint at Freiburg where six-dollars are coined, and other money, which is most commonly sterling, and looked upon to be the best cash in Germany; for the general coin of the Empire is a base mixed metal. 4. Meissen, heretofore the capital of Misnia, situate on the river Meissen from whence it takes its name, has little in it now worth a traveller's notice, unless a palace of the Elector's, venerable on account of its antiquity. 5. Plawen, the capital of Voigtland, situate on the river Elster, sixty miles south-west of Dresden. The other principal towns are Pirn, Mulberg, Chemnitz, Frawenstein, Koningstein, Marienburg, Annaburg, Zuickaw, Sneburg, Werda, Weisefels, Colditz, Leisneick, Lutzen, and Zeitz, of which I meet with nothing remarkable.

3. The third division of Upper Saxony is the marquisate of Lusatia, bounded on the north by Brandenburg; on the east by Silesia; on the south by Bohemia; and by the duchy of Saxony and Misnia towards the west; extending about ninety miles in length from north to south, and sixty from east to west, the principal rivers being the Spree and the Neisse. This country was a province of Bohemia until the year 1620, when being engaged in a rebellion against the Emperor with the rest of that kingdom, the Elector of Saxony was commissioned by the Emperor to reduce them to his obedience; which having effected, the Emperor transferred this province to the Elector and his successors, who still enjoy the same, except some few places which are subject to the Elector of Brandenburg.

Lusatia is part of it a sandy barren soil, and the remainder of it taken up with bogs and marshes, there being scarce corn enough growing in the province to subsist the inhabitants. Venison and fish however are extremely plentiful, and there is no want of wood. The inhabitants are supposed to be of Slavonian extraction from their language, which is a mixture of Slavonian and High-Dutch. They are observed to have quick natural parts, but more addicted to covetousness and a fordid way of living than the rest of Germany. The chief towns are, 1. Bautzen, or Budissina, situate on the river Spree, thirty miles north-east of Dresden. This city suffered much in the civil wars of the Empire, and was afterwards almost demolished by the Swedes; and is at present in no very flourishing condition. 2. Gorlitz, situate in a marsh, upon the river Neisse, about twenty-five miles to the eastward of Bautzen; in which are several handsome churches, and the private buildings are not despicable. The chief trade of the citizens lies in linen cloth, which they make and dye; and in beer brewed here and vended abroad. The other towns of any note in Lusatia, are Zittau, Leiba, Luben, Guben, Soraw, Cothus, Comitz, Friedland, Sprehenberg, Konignart, and Zobelitz, of which travellers entertain us with nothing remarkable.

4. The fourth division of Upper Saxony I am to describe, is the duchy of Sax-Merzburg, Sax-Naumburg, and Sax-Altenburg.

Sax-Merzburg was a Bishop's See till the reformation, when the Elector of Saxony seized upon the city and territory belonging to it; and now applies the revenues of it to the support of one of his younger sons, to whom it gives the title of Duke. The town stands about eighteen miles north-west of Leipzick; there is little worth observation in it, except the cathedral.

Sax-Naumburg also is the capital of a bishoprick, which the Elector of Saxony seized at the reforma-

tion; and now gives title to a Prince of Saxony of the Ernestine line, who is styled Administrator of the bishoprick. The town is situate on the river Sala, twenty-five miles south-west of Leipzick; having a territory belonging to it twenty-five miles in length, and fifteen in breadth.

Sax-Altenburg is bounded by Thuringia on the north; by Voigtland towards the east; and by Franconia on the south and west. The town of Altenburg, the capital of the territory, was an Imperial city, till FREDERICK, Marquis of Misnia, took it, in the year 1308, and united it to that province: it is now subject to the Duke of Sax-Gotha.

The fifth division of Upper Saxony is the principality of Anhalt, and the little county of Barby; bounded by the principality of Halberstat and Magdeburg on the north; by Thuringia on the south; and by Quedlinburg towards the west; extending ninety miles from east to west; but is not of a proportionable breadth, being mighty narrow. This territory is subject to the Prince of Anhalt, one of the most ancient families in Germany; from which sprung the houses of Saxony and Brandenburg. The chief towns of Anhalt are, 1. Zerbst, situate on the east side of the Elbe, about fifty miles north of Leipzick, where the Prince has a palace. 2. Brenburg, situate on the river Sala, where the Prince has another palace; but travellers have not thought either of them worth a description. 3. Dessau, situate in a pleasant fruitful country, at the confluence of the Elbe and the Mulda, eight miles to the southward of Zerbst, where the Prince also resides sometimes, the fortifications whereof are said to be very strong.

6. The sixth division of Upper Saxony is the landgravate of Thuringia, or Thuringen, in Latin authors *Thuringia*, and the county of Mansfeldt; bounded by the Hercynian forest towards the north; by the river Sala on the east; and by the woods of Franconia towards the south. The chief rivers are the Sala, the Werra, the Unstruck, the Jera, and the Leina. The country yields plenty of corn, and some wine, more palatable than that of Saxony or Brandenburg; and among that variety of plants and herbs, with which their fields abound, those peculiar to this province, are wild saffron, and woad used by the dyers in their best blues. They have also some good salt-pits; but their mines of silver and copper ore, mentioned by some travellers, do not turn to any great account. The natives are esteemed the most clownish and inhospitable people in Germany; naturally so stupid and brutish, that it is with difficulty they are brought acquainted with the common principles of humanity, or to understand their duty to their governors. The Thuringians are supposed to be descended from the Goths and Vandals; and were anciently governed by their own Kings, till they were subdued by the Franks in the reign of CHARLEMAIN, who established Christianity in this province: great part of it was made subject to the Archbishop of Mentz, who divided it into several governments, which afterwards grew up into distinct counties and baronies. Afterwards LOPWICK, Count of Schomburg, procured the title of Count of Thuringia to be conferred on him by the Emperor CONRAD II. and his posterity afterwards had the title of Landgraves of Thuringia given them by succeeding Emperors. In this line it continued till the death of HERMAN, Landgrave of Thuringia and Hesse, when Thuringia descended to HENRY Marquis of Misnia, from whom the present Elector of Saxony claims. The

Erfurt.

The chief towns whereof are, 1. Erfurt, or Erford, or rather Jeraford, from the river whereon it stands, the capital of the province, situate in a pleasant fruitful plain, on the banks of the river Gere, or Jera, sixty miles to the westward of Leipfick, in fifty-one degrees north latitude: it is a considerable city, usually compared to Cologne, for its beauty and dimensions, and the trade and wealth of the inhabitants. Here are several noble churches and abbeys, a magnificent castle, and a considerable university; a large territory also belongs to this city, in which are several baronies, and between three and four score villages, all which were subject to the Archbishop of Mentz till the reformation; when the citizens embracing the Lutheran religion, put themselves under the protection of the Elector of Saxony; which occasioned a war between the Archbishop of Mentz and the Elector; but by a treaty between them, it was at length agreed, That seventeen villages in this territory should be transferred to the Elector of Saxony; and the city with the rest of its dependencies should remain subject to the Archbishop of Mentz, as it is at this day. 2. Weimar, the capital of a duchy, which gives a title to a Prince of the family of Saxony; a large well-built city, situate between Erfurt and Jena, and has a great trade in wine. 3. Jena, seated in a pleasant valley, on the river Sala, three and twenty miles to the eastward of Erfurt; remarkable chiefly for its university, which has bred several learned men, particularly the famous J. LIPSIVS. 4. Gotha, the capital of a duchy, which gives a title to another branch of the house of Saxony; where the Duke has a castle and palace. The principal employment of the natives is the cultivating and preparing woad for the dyers, of which there are great quantities in the territory belonging to this city. This herb is said to be an excellent balsamick for curing wounds; and the roots enrich and improve the lands where they are planted.

Sax-  
Gotha  
Duke.

FREDERICK III. the present Duke of Sax-Gotha, was born in the year 1696. He married in 1729, a daughter of Sax-Meiningen. The Duke's father was,

FREDERICK II. knight of the order of the elephant, born in 1676, and died in 1732. He married in 1696. MAGDALENE-AUGUSTA, daughter to CHARLES-WILLIAM, Prince of Anhalt Zerbet. This Princess has borne sixteen children; those of them that are alive are,

1. The present Duke.
2. WILLIAM, colonel of a regiment of foot in the service of the Elector of Saxony, born in 1701.
3. JOHN-AUGUSTUS, a major-general in the Imperial army, born in 1704.
4. CHRISTIAN-WILLIAM, captain in the Emperor's service.
5. LOUIS-ERNEST, captain in the Emperor's service.
6. MAURICE, born in 1711.
7. FREDERICK, born the 4th of July 1715.
8. AUGUSTA, Princess of Wales, born the 17th of November 1721.
9. JOHN-ADOLPH, born in 1721.

Gotha, the capital city of the duchy, stands on the Leina, in a fine corn country, about two days journey south from Hanover. The town is large; its chief trade is in woad.

The Duke's castle, or palace, stands on a hill by itself; it was demolished by the Emperor Maximilian II. in 1567, but since rebuilt by

Duke ERNEST. From the apartments there is a vast prospect over a fine fertile plain. In one of these chambers is a collection of valuable rarities, and a noble library.

CHAP.  
XIII.  
Upper  
Saxony.

The country of Altenburg, of which the Duke of Sax-Gotha is also Sovereign, is very fruitful. The peasants here are said to be the richest in all Germany, so that they may almost vie for substance with those of Holland, who are the richest in the world; and, like the Dutch too, they do not care to spoil the breed, and scorn to match their daughters to any but the sons of wealthy farmers.

At Altenburg, the capital of the country, the Duke has a handsome palace, where the Dutchess dowager, with the Princesses her daughters, retired on the death of the late Duke.

As of all the Saxon princes of the Ernestine branch, the Duke of Sax-Gotha is the most powerful, so of all the courts of Saxony, next to that of Dresden, his is the most numerous and most magnificent, according to the author of the present state of Germany. The Duke has all the officers of state, that are common to sovereign princes. By the wise management and economy of the publick finances, his subjects are the least burdened with taxes of any state in Germany; yet the revenues of the late Duke were computed at a million of crowns, or two hundred thousand pounds a year, with which he kept on foot between two and three thousand regular troops. His guards were well clothed, his liveries rich, his tables served with more elegance than profusion. Moreover, the dominions both of Weimar and Eysenach are ready to fall very soon into his family; by reason, that the Duke of Sax-Eysenach who is become next heir to the dominions of the Duke of Weimar, upon the death of his son, the young prince, in 1732, has no children, and the Duke of Weimar himself is not like to have any more issue to succeed him, he having absolutely refused the repetition of matrimony, to which he hath been often solicited by his subjects. This double succession, when it falls, will rank the Duke of Sax-Gotha among the most considerable princes of the empire.

The other towns of any note in Thuringia, are Mulhausen, a small Imperial city; Orlamund or Erlamund, Tonnenburg, Eysenach the capital of a duchy, which gives a title to another Prince of the house of Saxony, and hath a considerable trade in iron. Marchfeld, the usual residence of the Dukes of Sax-Gotha. Sunderhausen, the capital of the territory of Schwartzburg, forty miles long, and five and twenty broad. Northausen, the capital of the territory of Hohenstein, about twenty-five miles in length, and ten in breadth. Stolburg, the capital of a territory of the same name, twenty miles long, and ten broad; the Counts whereof are sovereign Princes.

Eysenach,  
&c.

Sunder-  
hausen.  
Northau-  
sen.  
Stolburg.

The last territory I shall mention here, is the county of Mansfield, by some called one of the Hercynian counties, (the other three being Stolburg, Hohenstein and Regenstein) so denominated from their lying upon the Hercynian forest. Mansfield is bounded by the principality of Anhalt on the north; by the river Sala, which divides it from Merzburg, on the east; by Thuringia on the south; and by the territories of Schwartzburg and Stolburgh on the west: and about thirty miles in length, and fifteen in breadth. This country

Mansfield  
county.

CHAP.  
XIII.  
Upper  
Saxony.

is rich in minerals, among which there is a black glittering kind of slate, which being melted down, yields both copper and silver, of which a German writer gives the following account: "The Counts of Mansfield, says he, have in their territories several mines of Scheifferstein, the like whereof the whole world cannot pretend to; for out of this stone the inhabitants melt a copper, each hundred weight whereof contains between ten and twelve ounces of pure silver: and whatever part of the country you dig for this mineral, you are sure to succeed; I myself have been an eye-witness of an extravagant curiosity of nature in the composition of this stone: there is in the neighbourhood of Eisleben a lake several miles in length and breadth, abounding with several kinds of fish and other animals, as frogs, water-rats, &c. all which are lively represented in many of these Scheiffer-stones, by fair copper strokes through the very body of the slate."

Eysleben.

The Counts of Mansfield are Princes of the Empire, of a very ancient family; but at present branched out into four or five distinct houses, which renders them less considerable than they have been. They pay some homage or acknowledgment to the Elector of Saxony, but have no great dependence on him. The chief towns of the county of Mansfield are, 1. Eysleben, so named from the iron ore dug there, called by the natives Eysen. The famous MARTIN LUTHER was born in this city in the year 1483, and died in the same place anno 1564. Over the door of the house where he was born, the citizens set up his statue in stone, with this inscription, viz.

*Hæc erat pæpe, sociorum pestis & bujus  
Vox mea cum scriptis nil nisi Christus erit.*

But the Imperialists in the civil wars of Germany which followed, demolished the image and defaced the inscription. The town is but small, and stands about fifteen miles north-west of Hall: the principal trade whereof is in iron-work. 2. Mansfield, which gives name to the county, and a title to it's Count; stands above five miles north-west of Eysleben; an old ruinous town, remarkable for nothing but a castle, which stands near it on the top of a hill. The other towns of any note in this country are Wipra, Arustein and Querfurt, of which travellers afford us no description.

And thus I have gone through all that part of the Upper Saxony that is subject to, or any way dependant on the Elector of Saxony. I proceed now to give some account of the present Elector, the King of Poland, and his family, and of his forces, revenues, and interests.

The family of the present Elector.

The present Elector FREDERICK AUGUSTUS was the younger son of JOHN GEORGE III. born May the twelfth, 1670. In 1693, he married CHRISTINA EBERHARDINA, the daughter of CHRISTIAN ERNEST, Margrave of Brandenburg Bareith, and succeeded his brother JOHN GEORGE IV. the late Elector, anno 1694, and was elected King of Poland in the year 1697. He has issue by the Electress a son named FREDERICK AUGUSTUS, born October the 17th, 1696, married to the Archduchess MARY, daughter of the late Emperor JOSEPH, in the year 1719. I shall not here give a list of all the Princes of the house of Saxony, but leave that for the appendix, where the pedigree of the other German Princes will be inserted; only observe that the present electoral

Upper  
Saxony.

family derive their pedigree from WITTING, the last King of the Saxons, who being conquered by CHARLES the Great, about the year 785, was afterwards restored to his dominions by the same Emperor; and held them of him under the title of Duke. The Princes of this house were great encouragers of the reformation; on which account the Elector JOHN FREDERICK was a considerable sufferer, being taken prisoner, and condemned to death by the Emperor CHARLES V. but pardoned afterwards as to his life, on the intercession of some powerful friends, upon condition he should resign the electoral dignity and all his dominions to the Emperor: which when he had done, the Emperor restored him the castle of Gotha, and the town of Weimar, with the territories thereto belonging, which his posterity still enjoy. But the Emperor, with the general consent of the Electors, invested MAURICE, cousin-german to the deprived Duke, in the electoral dignity, and all the lands, honours, and estates, which formerly belonged to the late Duke, the signiorities of Gotha and Weimar excepted; and the posterity of Prince MAURICE have enjoyed the electoral dignity and it's dependencies ever since, the present Elector claiming under him.

Revenues and forces.

The revenue of this Prince is supposed to exceed that of any of the German powers, except the Emperor; and to amount to at least five hundred thousand pounds per ann. For he has a tenth of all the corn, fruit, wine, and other produce of the earth in his dominions; besides a general excise upon beer, and almost all other kinds of provision. There is also a particular tax laid on his subjects for the maintenance of a war against the Turk, at least it was levied at first with that design, but is now continued in time of peace, upon pretence of the necessity of being always in a posture to oppose the enemy. A precedent that the ministry in other countries frequently copy after: and indeed, it seems to be a standing rule among those gentlemen, that whatever tax you can once wheedle or frighten the people into, is never to be laid down or diminished, notwithstanding the occasion of the first levying it hath been long since removed. But to proceed, there is also a vast estate in demesne lands, which belong to the Elector; and particularly church and abbey lands, which these Princes seized at the reformation; and over and above all this, there is a considerable revenue arises from the silver mines in this country, which, together with the other articles, cannot amount to so little as half a million of money annually. The Elector of Saxony, like other German Princes, always keeps up a good body of troops both in peace and war; and particularly the present Elector, who had never obtained the crown of Poland, or preserved himself on that throne, but by the influence of his Saxon forces. Before he had this occasion for them, he let out his troops to the allies, or other Princes for hire, as his neighbours constantly do, whenever they have an opportunity. And these Princes seem to have two very substantial reasons for keeping up a standing army at all times; the one to support the arbitrary dominion they exercise over their subjects, and the other to increase their revenues; for the Prince has always a profit out of the mercenaries he furnishes any power with, over and above the pay they receive for their necessary subsistence.

Abstract of the actions of the present Elector.

The present Prince entered into the confederacy against France, and commanded a body of troops upon

CHAP.  
XIII.  
Upper  
Saxony.

upon the Rhine, soon after his accession to the electorate, in the year 1694. He had then the reputation of a gallant man, and was actually stronger in his hands than any foldier in the army, being able to twist a horse-shoe in two with his fingers. He was called from the Rhine in the year 1696; and made General of the Emperor's forces in Hungary, where he gained abundance of honour by a victory he obtained over the infidels near Temeswaer. About the same time he thought fit to quit the Lutheran doctrine, and reconcile himself to the church of Rome, in order to qualify himself to be elected King of Poland, in which he succeeded through the interest of the powers in alliance against France, and the influence of the Saxon forces he carried with him into Poland on this occasion; and as he obtained his election by surprize and force, he was sensible he could not maintain himself on the throne of Poland, but by the continuance of the Saxon troops in that kingdom, which was however contrary to the constitution of Poland, and to the *Pacta Conventa* he had sworn to on his accession; and the only expedient he could think of in this case to avoid sending back the Saxons, was to make an offer to the republick of employing them in the recovery of those provinces which had been taken from the republick by the Swedes a century before, and yielded to Sweden by former treaties, which the Poles did not seem very averse to, especially since they were not to be at the expence of reducing them to their obedience. For let a Prince or State yield up a part of their territories to an enemy by the most solemn treaties, they ever pretend there was a force put upon them in the matter, and whenever they have an opportunity, seldom fail to renew their pretensions to the dismembered country, let the distance of time they parted with it be ever so great. But to proceed: the King of Poland, before he began this war, thought it prudent to enter into an alliance with Russia and Denmark, who had both of them the same antiquated pretensions to some of the provinces in the possession of the Swede; and when he had thus secured himself, as he apprehended, from all possibility of a disaster, he fell upon the Swedish dominions in Livonia, without declaring war, or giving the least intimation of his hostile intentions, which was looked upon to be the more barbarous and dishonourable, because the King of Sweden was then a minor. I have already given an account of the progress of this war in the modern history of Poland, I shall therefore only remember here, that the King of Sweden, though he was but seventeen years of age, assembled his forces, and landing in Livonia, defeated both the Muscovites and Saxons, and never left the pursuit of his enemies till he had ravaged the electorate of Saxony itself, obliged King AUGUSTUS to renounce the crown of Poland, and to acknowledge and congratulate STANISLAUS, whom he had set up in his room, as sovereign of that kingdom. But the King of Sweden being afterwards defeated at Pultowa by the Russians, King AUGUSTUS took the opportunity of re-ascending the throne of Poland again, in the year 1709, where he has maintained himself to this time, but in perpetual contentions with his subjects, who always insisted on the Saxon troops evacuating Poland, and at some times actually fell upon them in their quarters, and cut them in pieces; which occasioned an intestine war in that kingdom for many years, the Saxons sur-

prizing the Poles, and the Poles the Saxons, as they had an opportunity. And that which alarmed the Poles the more, was a proposal of his present Majesty to make the crown hereditary, and settle it on his family; to which purpose the electoral Prince, his eldest son, after the pattern his father had set him, renounced the Protestant religion, and became a Papist; but the Poles notwithstanding seem determined that he shall not succeed the present King. I must not forget here to do that justice to the Electors of Saxony, consort to the present King of Poland, as to acknowledge, that though the King her husband, and the electoral Prince her son, both apostatized from their religion in expectation of a crown, she has always continued firm to her principles, choosing to remain Electress of Saxony, rather than alter her religion to obtain the title of Queen of Poland, and the honours which attend it; for the Poles it seems will not suffer any Princess to be crowned Queen, who is not of the communion of the church of Rome. And this brings me to mention the religion professed in this electorate, which is in general the Lutheran, except in those cities and territories which are subject to the Archbishop of Mentz, and other popish Princes. It is true, the present Elector the King of Poland, and the electoral Prince, with some other Princes of the electoral family, have of late years been reconciled to the church of Rome; but they have not yet used any other means than their own example and persuasion to bring over the people to that church. Lutheranism is still the established religion of the country, and when the Duke of Sax-Zeitz, who had been seduced to turn Papist, returned to the bosom of the Lutheran church four or five years since, I find they sung *Te Deum* for it, as if they were under no apprehensions of the frowns of the court on that occasion; and perhaps the danger they may apprehend to their religion from the apostacy of their Princes, may put them more upon their guard, and induce them to hold their opinions the faster: for I make no doubt but many of the subjects of England, who were very zealous for their religion in the reign of the late King JAMES, having since met with no opposition on that head, have become very indifferent to it, and scarce think any religion worth the contending for; whereas, had the danger continued, their zeal would probably have continued too.

The Elector of Saxony and the Elector of Bavaria are Vicars of the Empire, and have the administration of the government during an Interregnum, (but I think this point is scarce settled between the Elector Palatine, and the Elector of Bavaria.) The Elector of Saxony is also Great Marshal of the Empire, and by virtue of that office to have the guard of the city where the Diet assembles. The titles he assumes are Duke of Saxony, Juliers, Cleve, Berg, Engers and Westphalia; Arch-Master and Elector of the Empire; Landgrave of Thuringia; Margrave of Misnia, and of the Upper and Lower Lusatia; Count and Prince of Henneberg; Count of La Marck, Ravensburg and Barby; and Lord of Ravensstein.

The arms of the Elector of Saxony, are, Azure, a lion crowned faced Argent and Gules, for Thuringia. Faced Or and Sable with Vert through the whole for Saxony. Or, a lion Sable, for Misnia. Coupee Sable on Argent two Swords Gules, for the dignity of Elector and Arch-Marshal of the Empire. Argent, a beeve Gules, and

### CHAP. XIV.

*Treats of the north part of the circle of Upper Saxony, viz. the marquissate of Brandenburg, the dukedom of Magdeburg, the principality of Halberstat, the duchy of Pomerania, and the island of Rugen.*

CHAP. XIV. Brandenburg. **T**HE southern part of the circle of Upper Saxony, subject to the Elector, the present King of Poland, has been already described; I come now to the more northern countries comprehended in this circle, which are, the marquissate of Brandenburg, Magdeburg, Halberstat, and the dukedom of Pomerania, most of them subject to the King of Prussia, as Elector of Brandenburg.

North part of the circle of Upper Saxony. This part of the circle of Upper Saxony is bounded by the Baltick sea towards the north, by the kingdom of Poland on the east, by Silesia and the other part of the circle of Upper Saxony towards the south, and by the circle of Lower Saxony towards the west.

Brandenburg marquissate, why so called. And first of Brandenburg, stiled the Margravate, or Marquissate, by way of eminence, as having been the utmost bounds or marches of the German Empire towards the north; the Margraff, or as we call him, Marquis, being properly *Judex*, or *Comes Limitaneus*, Lieutenant of the marches, as this officer was stiled anciently in England, and vested with the civil, as well as the military power in his province.

Situation and extent. Brandenburg is bounded by Pomerania and Mecklenburg on the north, by Poland towards the east, by the other part of Upper Saxony on the south, and by Brunswick and Lunenburg towards the west; extending two hundred miles in length from east to west, but of very unequal breadth, in some places near an hundred, and in others not fifty miles broad. The chief rivers which water this country are the Elbe, the Oder, the Havel, the Spree and the Wart; besides several large lakes, of which the Ukersee is one of the chief. They have a communication also with the Baltick sea by the river Oder; and there is a canal cut from the Oder to the Elbe, by which they convey their merchandize and produce of the country to the German ocean, and thereby avoid the duties demanded in the Sound of such ships as go through the Baltick. The air of this country is cold, and their winters long, continuing seven or eight months. The soil is sandy and barren, and over-run with woods and forests: they have however corn enough for their use for the most part, and when they want are supplied on easy terms from Poland, which lies contiguous to them. They have large flocks of sheep, and store of deer and other venison in their forests, but do not abound in black cattle. The wine they make is sour, as it is in all countries which lie so far north, and bad even to a proverb. Salt here is none, but what is imported by their rivers, the Elbe, the Havel or Spree. Here are scarce any silver mines as in other provinces of

Rivers. Germany, which may be one reason their coin is of a much baser metal than their neighbours; and their mines of copper and iron yield but a very small quantity of either. The natives are a mixture of several German nations, as is evident from the several dialects spoken by them. They are generally a poor miserable people, inasmuch that Dr. NICHOLSON observes, that to lie on a bed of clean straw is a mark of distinction, and the lot only of a man of some fashion.

The air. At the reformation the Brandenburgishers and their Prince embraced the doctrines of LUTHER, in which they were unanimous, till GEORGE WILLIAM their Elector, about the year 1614, married a sister of FREDERICK Elector Palatine, the head of the Calvinist party, who brought him over to that sect, and prevailed upon him to publish an edict for suppressing the Lutheran doctrine, and establishing Calvinism throughout his dominions, in the year 1615; whereupon his subjects unanimously rebelled against their Elector, and had infallibly deposed him, if he had not suddenly revoked his edict, and established Lutheranism again by another act of state, declaring he would confine the Calvinist worship to his own private chapel. Succeeding Electors however have found means to advance the Calvinist interest, which now bears a great sway in Prussia and some other territories belonging to the Elector of Brandenburg: in the universities of Konigsberg and Francfort upon Oder particularly, the principles of CALVIN only are encouraged; but yet the greatest part of the people of Brandenburg still remain Lutherans.

Soil. The marquissate of Brandenburg is usually divided into three parts, viz. 1. The Alt Marck, or Old Marck. 2. The New Marck. And 3. the Middle Marck.

Corn. The Alt Marck is bounded on the north by Mecklenburg, by Middle Marck on the east, by the dukedom of Magdeburg on the south, and by Sax-Lawenburg and Lunenburg towards the west: the chief towns whereof are, 1. Stendal. 2. Soltwedel. 3. Gardeleben. 4. Angermund, or Tangermund. 5. Osterburg. Here are also the towns of Seehusen, Werben, Havelburg, and Perleburg, but of less note.

Cattle. 1. Stendal, the capital of Alt Marck, is situated in a pleasant plain, on the river Ucht, about five miles from the river Elbe, and as many from Angermund; formerly one of the Hans towns, and is still a place of some trade in corn and linen cloth.

Wine. 2. Soltwedel, or Soltquel, a great town on the banks of the river Jetze, in the midway between Lunenburg and Stendal, the trade whereof consists chiefly in beer, which they export to Lunenburg, and other provinces of Brandenburg. 3. Gardeleben, said to have obtained it's name from the many pleasant gardens about it. The beer brewed here is in great reputation in the rest of Germany as well as their hops, which are bought up by the Danes and other foreigners. 4. Angermund, situated at the confluence of the Anger and the Elbe, eight miles to the southward of Stendal; and has a great advantage by the navigation of the Elbe, upon which they transport their corn and other merchandize as far as Hamburg, and from thence to foreign countries.

Salt. 2. New Marck, which lies between the river Warta and Pomerania, separated from Middle Marck by the Oder: containing about an hundred miles in circumference; and belonged anciently to the Knights of the Teutonic Order. It is the most fruitful

fruitful part of the marquisate, having plenty of corn and pasture, and in some places vines, which yield indifferent wine. The only considerable town in this territory is Kustrin, situate on the river Oder, near the mouth of the Warta, fifty miles east of Berlin: a place of such strength, that GUSTAVUS ADOLPHUS having sat down before it, was forced to raise the siege. It is a neat well-built town, and has a spacious market-place. Towns of less note in this territory are Falkenburg, Dreyfen, Lansperg, Sunneberg and Sternberg.

Middle  
Mark.

Berlin city.

Francfort  
upon O-  
der.

Magde-  
burg.

3. Middle Mark, situate in the very heart of Brandenburg, extending in length about an hundred miles between the rivers Elbe and Oder; the chief towns whereof are, 1. Brandenburg. 2. Berlin. And 3. Francfort upon Oder. 1. Brandenburg, situate in the midst of a morass, on the river Hamel, which divides it into two parts, twenty-six miles west of Berlin, gives it's name to the whole marquisate, and was once the metropolis of it. In the great church are several monuments of their Princes and Bishops: but the inhabitants are in so wretched a condition at present, that was it not for a neighbouring lake which affords them plenty of fish, they would find it difficult to subsist. 2. Berlin, pleasantly situated in a fruitful country on the river Spree; having vineyards on one side, meadows on another, and a forest on the third, stocked with all manner of game; and lies in the latitude of fifty-two degrees thirty minutes, fourteen degrees to the eastward of London, and forty-five miles to the westward of Francfort upon Oder. It is the capital of the marquisate, and the usual residence of the Elector, now King of Prussia, divided into two parts by the river Spree, the larger towards the north is properly Berlin, the other south of the river is called Coln, where stands the Elector's palace, a magnificent structure built of free-stone: in which the armory, the chamber of curiosities, the paintings, the library, the gardens, water-works, and stables are much admired by travellers. The town is also generally well built, the streets wide, and the squares and publick places spacious, the whole encompassed with a wall, and regular fortifications after the modern way; and the canals cut from this city to the river Oder and Elbe, the one falling into the Baltick, and the other into the German Ocean, render it one of the best trading towns in Germany. The people of this place we have lately imitated in the fashion of our chariots, from hence called Berlins, after the name of the city. 3. Francfort upon Oder, usually so called to distinguish it from Francfort on the Maine, upwards of forty miles to the eastward of Berlin, formerly one of the Hans-Towns, and an Imperial city, but now subject to the Marquisses of Brandenburg, who have erected a university here for the propagation of Calvinism. The town is divided into two parts by the river Oder, and joined together by a wooden bridge. The streets are wide, and the houses well built: they have a tolerable good trade, especially at their annual fairs; but the town is not in that flourishing condition it has been. The other great towns in this marquisate, are Spandaw, Oranienburg, Rotenaw, Lebus, Havelburg, Newstat, Wistock, Dalmin, Rupin, Premislaw, Potsdam, Straßburg and Templin; but of these I find nothing remarkable, unless that the King of Prussia has a palace at Potsdam, where he sometimes resides.

The Duchy of Magdeburg is bounded by Meck-

lenburg and Brandenburg on the north; by the other part of Brandenburg and Upper Saxony towards the east; by the principality of Anhalt and Halberstat on the south; and by Brunswick towards the west; extending sixty miles in length from east to west, and is about thirty miles broad from north to south; the river Elbe running cross this territory, that part of it which lies to the eastward of the river consists chiefly of forests, and has very little corn-ground; but to the westward of the river they have plenty of grain, and as great a scarcity of wood. The chief city of this territory is Magdeburg, anciently called *Parthenopolis*, situate on the banks of the Elbe, in fifty-two degrees odd minutes, seventy miles to the westward of Berlin. It was not very considerable till EDITHA daughter of EDMUND an English Saxon King, and consort to the Emperor OTHO the Great, enlarged and beautified it: she also prevailed with the Pope to make it an Archbishoprick, and independent of any ecclesiastical jurisdiction but the See of Rome, whereupon the Archbishop was stiled Primate of all Germany; and in the cathedral church there still remains the bust of the Empress EDITHA, with the representation of eighteen casks of gold by her, which she found the cathedral and embellishing the city cost her, as tradition gives us to understand. The ancient city was of a very large circumference; but it is now scarce half built, having been destroyed by Count Tilly, the Imperial General, after a brave defence, in the year 1631; of forty thousand inhabitants, which this town then contained, Tilly caused them every one to be massacred, it is said, except four hundred, on account of their adhering to the Lutheran doctrine; nor did he leave a church or house standing, except the cathedral, and some few fishermen's cottages; but the Lutherans have since erected some very handsom churches, and the Jesuits have a very fine one. The cathedral is a magnificent structure, and had in the Popish times thirty-two, Dr. NICHOLSON says forty nine, noble altars: the high altar still remains, which is a table of jasper stone, eighteen foot long, about eight in breadth, and two in thickness, valued at two tons of gold: here are also statues representing the five wise virgins, with smiling countenances, and the five foolish equally disconsolate. They shew also several reliques, which in the days of Popery were in great veneration, but not much regarded by the present inhabitants; namely, a large stone said to be a piece of one of the water-pots in which our Saviour turned the water into wine; an old wooden slipper of the Virgin MARY's; a piece of wood on which the cock stood that crowed on PETER's denying our Saviour; the bason PILATE washed his hands in, &c.

This city embracing LUTHER's doctrine about the year 1566, JOACHIM FREDERICK, son of the then Elector of Brandenburg, was elected administrator of the revenues of the Archbishoprick: and by the treaty of Westphalia it was stipulated that the Archbishoprick of Magdeburg should be for ever annexed to the Electorate of Brandenburg, and converted into a duchy; accordingly one of the titles of the present Elector the King of Prussia is Duke of Magdeburg, of which city and territory he is absolute sovereign: the revenue of which is computed to amount to an hundred thousand pounds per annum. In this place LUTHER had his education, and they still shew the remains of his chamber among the ruins

CHAP. XIV. of the cloyster of the Austin friars, with his bedstead and table, and over the door are certain verses in High-Dutch, which a modern writer has put into English rhyme as follows:

LUTHER lodged within this little room  
When first he did into the cloyster come,  
In memory whereof we still do keep  
The bedstead upon which he us'd to sleep.

Tourna-  
ments first  
established  
here.

Another thing the city of Magdeburg was once famous for, was the tilts and tournaments first instituted here by the Emperor HENRY surnamed the FOWLER, about the year 638, to which none but the ancient nobility were to be admitted, or any usurper, oppressor of widows or orphans, heretics, murderers, cowards, bastards, or any who had given a real affront to a lady, and not above one of a family at a time: every Prince who entered the lists was to be attended by four squires; a Count or Baron by three, a Knight by two, and a Gentleman by one. Every one at his entering the lists appeared at the President's apartment, where his name and quality being registred in the presence of three Heralds, the Champion delivered in his helmet and sword, and after confession entered the barrier attended by his Esquires, where having engaged his antagonist at all manner of weapons, the judges gave sentence, and the conqueror received the prize from the hand of some fair lady, or from the Prince who gave it. But after these exercises had continued some ages, they were abolished on account of the destructive consequences; for such an emulation was raised between the nobility of some provinces, that at one tournament in the year 1473, there were seventeen gentlemen of Franconia killed on the spot, and nine of Hesse. 2. Borch, the most considerable place in the duchy next to Magdeburg; besides which there are twenty-seven other towns in this territory, but none of them particularly described by travellers.

Halberstat  
principality.

Halberstat  
city.

Gruningen.

The principality of Halberstat is bounded by the duchy of Brunswick and Magdeburg towards the north; by the duchy of Saxony on the east; by the principality of Anhalt on the south; and by the bishoprick of Hildesheim towards the west: extending about thirty-six miles in length from east to west, and twenty-five in breadth from north to south: the chief town, which gives name to the principality, is Halberstat, situate on the little river Hotheim, about thirty miles south-west of Magdeburg. It is a neat uniform town travellers tell us in general; but give no account of any particular buildings, except an inn, esteemed the largest, and to have the best accommodations of any in Europe. Lutheranism was established here about the year 1591. But their last Bishop LEOPOLD WILLIAM of Austria restored Popery, till the Swedes taking the town introduced the Lutheran religion again; and by the treaty of Westphalia it was made a secular principality, and conferred on the Elector of Brandenburg the present sovereign. 2. Gruningen, remarkable only for a fine chapel and organ, and a tun made in imitation of that of Heidelberg, which will contain near a thousand hogheads of wine: for as the Germans pay a more than ordinary respect to BACCHUS, they adorn and enlarge the vessels which contain the generous juice of the grape beyond any thing in their publick or private buildings. In many other German towns besides this, a traveller is carried to see these capacious tuns, in the gilding and carving of which no small labour is bestowed. The other towns mentioned by geo-

graphers in this principality are Oschersleben and Osterwick, of which they give no particular description. This territory is generally fruitful in corn, and excels any of the neighbouring countries in the pleasantness of its forests, and plenty of all kinds of Venison.

CHAP. XIV. Brandenburg.

The country in this principality are Oschersleben and Osterwick, of which they give no particular description. This territory is generally fruitful in corn, and excels any of the neighbouring countries in the pleasantness of its forests, and plenty of all kinds of Venison.

The ancient Pomerania, or Pomerland, was of much larger extent than the present Pomerania, taking in all Casubia and Pomerelia to the eastward, which now belong to Poland, and part of the marquisate of Brandenburg on the south; the Baltick sea also, it is said, has broken in and swallowed up great part of the ancient Pomerania on the north, together with some whole islands, and half of the isle of Rugen. The modern Pomerania is a long narrow tract of land, extending near two hundred miles in length from east to west, and fifty or sixty in breadth from north to south, but the breadth is very unequal. It is bounded by the Baltick sea on the north; by Polish Pomerelia towards the east; by the marquisate of Brandenburg on the south; and by Mecklenburg towards the west: and took the name of Pomeran, from its lying on the sea-coast; Pomer signifying as much both in the Sclavonian and German tongue. The Air is severer here than in any part of Germany, as may well be supposed from its northern situation. It is well watered by lakes and rivers; among the latter are the Oder, the Pen, the Rega, the Persant, the Wiper, the Stolp, the Rekenitz, and the Barte. The Rekenitz separates Pomerania from the dukedom of Mecklenburg, forming a large lake near Damgarten, and discharging it self into the Baltick at Dars. The Barte rises near Stralsund, and falls into the sea at Bardt. The Oder soon after its entering Pomerania divides it self into several branches, inclosing many large islands, whereof some are two miles over; and having passed by Stetin flows into the Damnish Lake, and then into Damantzke, and at last dilates it self into a vast fresh-water lake, or sea, called the great Frische Haff; extending sixteen miles in length, and as many in breadth; which lake falls into the Baltick sea, by three currents, viz. the Divenow, the Swyn, and the Penemund, through which ships pass to Stetin. Between the Pene and the Swyn lies the island of Usedom: and the territory of the city of Wollin lies enclosed by the Swyn and Divenow. Besides the rivers above mentioned there are many more in this province which fall into the Baltick. Pomeran also contains a vast number of standing lakes; the chief whereof are those of new Stetin, Lukow, Sukow, Verschem, Derfenten and Penkun. Here are scarce any mountains, but the country is covered with woods and forests, well stocked with game and wild beasts. Their lakes and rivers also furnish them with vast plenty of fish, particularly salmon and lampreys; and land and water-fowl no where abound more: but the soil is generally a barren sand, on which they do not attempt to raise vineyards, and have scarce corn enough for their own use. Mines there are none, except some few of iron in the Upper Pomeran.

The country is usually divided into the eastern and western Pomerania. The western, till very lately, was all of it subject to the King of Sweden, and subdivided into the districts of Stetin, Wolgast, Gatskow and Bardt, lying on the west side of the Oder, together with the islands of Rugen, Usedom and Wollin. The eastern Pomerania is subject to the Elector of Brandenburg, and situate

CHAP.  
XIV.  
Branden-  
burg.  
History of  
Pomerania.

situate on the east side of the Oder, being subdivided into the districts of Pomerania, Casuben, and Vendosin or Wenden. But before I enter into a more particular description of this country, it will be necessary to give an abstract of the history of it, from the year 1217. This dukedom was divided between BUGISLAUS and OTHO, two brothers, from whom descended the two houses of Wolgast and Stetin, which continued for two hundred years and upwards. The house of Stetin failing about the year 1464, by the death of OTHO III. that part of the dukedom which belonged to it was conferred on FREDERICK, the second Marquis of Brandenburg, by the Emperor FREDERICK III. whereupon the Duke of Pomeran Wolgast conceiving a great piece of injustice to have been done his family, entered into a war with the Elector of Brandenburg, which ended in a treaty of peace, whereby it was concluded, that they should both retain the title and arms of the Dukes of Pomeran, but the Duke of Wolgast should remain in possession of all the Pomeranian territories, and upon failure of issue male, they should descend entire to the house of Brandenburg. Accordingly in the year 1637, BUGISLAUS XIV. dying without issue, GEORGE WILLIAM, Elector of Brandenburg, laid claim to the whole dukedom; but the Swedes having been allies to the late BUGISLAUS, and called in by him and other German Princes to support them against the Emperor, and being now in possession of the best part of Pomeran, and pretending that the late Duke had by his will given the duchy of Pomeran to the Swede, insisted at the treaty of Munster, that all the western Pomeran, with the isles of Rugen and Wollin, and the town of Stetin, should from thenceforward be annexed to the crown of Sweden, and that part of the country to the eastward of the river Oder only should be subject to the Elector of Brandenburg, and that no longer than there should be male issue of the house of Brandenburg; upon failure whereof, it should be added to the Swedish dominions; and in the mean time both Princes should enjoy the title and arms of the Dukes of Pomeran, and that the Elector should have by way of equivalent for his parting with the western Pomerania, the bishopricks of Halberstat and Minden, and the reversion of the archbishoprick of Magdeburg, which he now enjoys. He is also allowed one voice in the Diets of the Empire for Pomeran, another for Magdeburg, and a third for Halberstat and Minden. Notwithstanding all which advantages, the Elector took the opportunity some years afterwards, when the Swede was engaged in a war with the Danes and other powers anno 1678, to seize on most part of Pomeran allotted to the King of Sweden by the treaty of Munster, but was forced to relinquish it again soon after by the treaty of St. Germain, and the Swedes remained in quiet possession of the western Pomerania till the late King of Sweden's defeat at Pultowa, when the King of Prussia taking advantage of his distress, seized Stetin, the islands of Wollin and Usedom; and the Danes, by the assistance of the Prussians, Poles and Muscovites, made themselves masters of Stralsund, Marstrand, the isle of Rugen, &c. But by the treaty of peace which ensued anno 1720, the Danes were obliged to restore to Sweden all they had taken during the war, particularly Stralsund, and that part of Pomeran which lies west of the river Pene, with the isle of Rugen, the fortrefs of Mar-

strand, and all the other islands in their possession: but Stetin, and the isles of Wollin and Usedom, and the countries contiguous to the Oder, were confirmed to the Elector of Brandenburg, the present King of Prussia, in whose possession they then were. So that now he hath a free communication with the Baltick sea, the thing he hath so long aimed at; whereas when the Swedes were possessed of Stetin, and the isles of Usedom and Wollin, no vessels could come down the Oder into the Baltick sea without their leave.

The chief towns of western Pomerania are, 1. Stetin. Stetin, formerly one of the Hans-Towns, and capital of Pomerania, pleasantly situated on a rising ground upon the river Oder, in fifty three degrees thirty minutes north latitude, forty miles south of the Baltick sea, and seventy north-east of Berlin. It is a large populous city, and had heretofore a very great trade, nor is it inconsiderable at present. The castle, formerly the palace of the Dukes of Pomeran, is said to be a noble piece of architecture, equal to any in Europe. The town is regularly fortified, and held out a long siege of near six months against the Elector of Brandenburg, in the year 1677, who made himself master of it at length, but was obliged to restore it to the Swedes by the subsequent treaty of peace at St. Germain. In the last war, about the year 1713, the King of Prussia persuaded the citizens to admit his forces into the town, under pretence of securing it against the Muscovite, and promised to hold it by way of sequestration till a peace should be concluded; but never thought fit to part with it again: and at the following treaty between Sweden and Brandenburg, procured a cession to be made him of this city by the Swede, with the territory thereto belonging; and the King of Prussia as Elector of Brandenburg now remains sovereign of it, which is of prodigious advantage to his country, procuring him a free communication with the Baltick, and will probably render the town as considerable for trade as ever, the river being navigable for small vessels many miles above the city, as it is for larger below it. 2. Stralsund, situate on the sea-coast over against the island of Rugen, from which it is about a mile distant, lying in fifty-four degrees thirty minutes north latitude, near eighty miles north-west of Stetin. The streets of this city are broad and uniform, and the houses generally built of stone. The place is naturally strong, being surrounded almost by the sea and inaccessible marshes: it is also regularly fortified, and has a good harbour for ships of 150 or 200 tons, and has a great trade in corn, which they export to foreign countries. In the civil wars of Germany it put itself under the protection of GUSTAVUS ADOLPHUS King of Sweden, and the Swedes have ever since remained masters of it, except some short intervals; as when the Elector of Brandenburg besieged and took it in the year 1678, and was obliged to resign it again by the peace of St. Germain anno 1679. This city was also taken by the Danes assisted by their allies the Russians, Saxons, &c. in November 1715, after a four months siege; but relinquished again to the Swedes by a treaty of peace in the year 1720, who now continue in the possession of it. 3. Gripf-wald, situate about thirty miles south-east of Stralsund, on a bay of the sea, which forms a harbour for small ships: the town is fortified, and has the advantage of an university in it. 4. Wolgast, which stands on that branch of the Oder called the

Bardt.

the Pön, about five miles from the Baltick sea, and fifteen to the eastward of Gripswald, the best harbour in the country except Stralsund, formerly the capital of a duchy till it came under the dominion of the Swedes. 5. Bardt, twelve miles to the westward of Stralsund, standing on a bay of the sea, but too shallow for a harbour. The other towns in Swedish Pomerania are Auclam, Demmin, Jatenitz, Ukermond, Passewalk, Kentzing, Gatzkow, Trebelis and Damgarten, of which I meet with nothing remarkable.

Rugen.

The island of Rugen, taken by the Danes and their confederates at the same time with Stralsund, was also yielded to the Swedes by the treaty of peace 1720, and they now remain in possession of it. This is one of the largest islands in the Baltick, and of great fame anciently for the valour of its inhabitants, and the impregnable fortresses upon it. The island was formerly of a much larger extent than it is at present, reaching to the south-east as far as Ruden, once a part of this island, though now far separated from it. This separation was occasioned by a great tempest in the fourteenth century, when the sea overflowing its banks drowned a great part of Rugen, and made so deep a channel, called by mariners the New Channel, that the greatest ships which sail on the Baltick may pass that way. At this day the island of Rugen is about thirty miles in length and as much in breadth; but so indented by creeks and bays, which run far into the island, that scarce any part of the land is two miles distant from the sea. The coast of Pomeran, and particularly the city of Stralsund, lie about a mile to the south-west of the island. The chief town of the isle of Rugen is Bergen, an open town, consisting of about four hundred houses, and not considerable for any thing that I can learn: the country about it however affords such plenty of corn, that it is called the granary of Stralsund. It is also well stocked with sheep, black cattle, and a good breed of horses, and their geese here are said to be the largest in Europe, and their seas and lakes abound in fish; but the natives have such a dependance on Stralsund, that they trade no where else. The inhabitants of this island were the last converted to Christianity of any of the northern nations. In the ninth century indeed some monks ventured to preach amongst them, and succeeded so well as to convert many of them, but they soon relapsed into idolatry, and instead of adoring the true God, paid divine honours to one of the missionaries sent amongst them, named St. Vite, whom they worshipped by the name of Swant, and after his death represented him by a monstrous image with four heads, building for him a magnificent temple. To this idol the Rugians repaired as to an oracle, for advice and assistance in all their undertakings: and here foreign merchants brought their offerings, and implored success in their voyages. Three hundred horses were constantly kept for the service of the god Swant, one whereof was a white one, and only rid by the high priest, who used to shew him to the people some mornings sweating and foaming, pretending Swant himself had been upon his back on an expedition against their enemies, which had put him into such a heat: and the Rugians have not forsaken these idolatrous practices, it is said, much above five hundred years. They were anciently governed by their own Princes, whose dominions extended a great way into the continent. History gives us a catalogue

Bergen.

of eleven of them, of whom the first was WITZLAUS, computed to have reigned about the time of the Emperor OTHO I. anno 938. They were conquered by the Danes in the thirteenth century, and by them, converted to Christianity, JARIMAR being the first Prince of Rugen who was baptized. WITZLAUS IV. the last Prince of Rugen, upon an insurrection of the inhabitants of Stralsund, who till then were subject to him, endeavouring to reduce them to their duty, was killed in the attempt, which put an end to that race of Princes, and the Stralsunders declared themselves a free people, which happened about the year of our Lord 1325. Afterwards the isle of Rugen, with the territories belonging to it on the continent, fell into the hands of the Dukes of Pomeran, upon the failure of which line, it was agreed that it should be annexed to the Marquisate of Brandenburg; but in consideration of the signal services the King of Sweden had done the Protestants of the Empire, in supporting their interest against the Emperor and the Roman catholic States, it was agreed by the Elector of Brandenburg and the other powers concerned at the treaty of Westphalia, that the Western Pomerania, with the isle of Rugen, should be possessed by the King of Sweden; and notwithstanding the Elector of Brandenburg confirmed this agreement by a subsequent treaty at St. Germain, and had received an ample equivalent for his pretensions, by having the duchy of Magdeburg, the principality of Halberstadt, &c. assigned to him, yet we find him as often as he has had an opportunity, reviving his pretensions to the Western Pomeran, and was not to be satisfied till he had possessed himself of Stetin, the isles of Usedom and Wollin, and that part of the country between the river Pene and the Oder. Which shews that some Princes never think themselves longer bound by their compacts than they have an opportunity of breaking them. But I must not forget here, that the Dane also by virtue of his ancient conquest above mentioned, sometimes puts in his claim to the isle of Rugen, and actually made himself master of it in the year 1678, but was forced to restore it again to the Swede by a treaty in the year 1679. I proceed now to that part of Pomeran which lies on the eastern side of the Oder, and has most of it been in the possession of the Elector of Brandenburg ever since the death of BUGISLAUS the last Duke of Pomeran.

The Eastern Pomerania is usually divided into three districts, viz. Pomerania Proper, Casubin and Vendosin: the chief towns whereof are, 1. Cammin, situate on the east branch of the Oder, called Diveno, five miles from the Baltick sea, and thirty-five north of Stetin; formerly a Bishop's See, but at the reformation the revenues were seized, and the bishoprick afterwards secularized, as our writers term it, by the treaty of Munster, and conferred on the Elector of Brandenburg, which was the case of Magdeburg, and many other Sees. 2. Colberg, situate at the mouth of the river Perfant, near the Baltick sea, about twenty miles north-east of Cammin; remarkable for the salt-pits near it, which yield the King of Prussia a good revenue. The other towns in Eastern Pomerania are Treptow, Collin, Stargard, Dam, Buttow, Bublitz, Griffenburg, Belgarden, Rugen, Stolpe and Regemord, of which we meet with nothing particular.

Having taken a survey of those Provinces of the Circle of Upper Saxony, which belong to the Elec-

Brandenburg.

torate of Brandenburg, it may be proper now to inquire a little into the history of the country, and the family of the Elector the present King of Prussia.

The first inhabitants of Brandenburg which history takes notice of, were the Suevi, and after them the Slaves. The Emperor HENRY I. having made a conquest of this country about the year 927, conferred the government of it on SIGEFRIDE Earl of Rengelsheim, on condition he should defend these marches, or utmost limits of the Empire, against the Slaves; from whence SIGEFRIDE acquired the title of Margrave or Marquis of Brandenburg. After SIGEFRIDE eight others enjoyed this marquisate successively, being appointed by the respective Emperors only during pleasure; of whom PRIMISLAUS, King of the Obotriti, the ancestor of the Dukes of Mecklenburg, was the last: after whose death the Emperor FREDERICK BARBAROSSA constituted ALBERT surnamed URUS, Prince of Anhalt, and Marquis of Soltwedel, the first hereditary Marquis of Brandenburg about the year 1162. In whose house it continued for sixteen descents, when SIGISMUND the last of this race, King of Hungary and Bohemia, succeeding to the Empire, sold the Marquisate of Brandenburg to JOSEPHUS Duke of Moravia, who mortgaged it to WILLIAM Marquis of Misnia, of whom the Emperor redeemed it, and conferred the Margravate upon FREDERICK Burgrave of Noremburg, at the council of Constance, anno 1417, in consideration of the sum of four hundred thousand crowns: from whom the present Elector of Brandenburg, the King of Prussia, derives his pedigree. FREDERICK II. who succeeded his father, was made Duke of Eastern Pomerania also by the Emperor FREDERICK III. but his brother and successor ALBERT relinquished the whole territory to the Duke of Western Pomerania, except the title and reversion upon failure of issue of the Duke of West Pomerania, as has been observed already. JOHN SIGISMUND the ninth Marquis of this house, married ANNE the daughter and heiress of ALBERT FREDERICK Duke of Prussia, by whom also he acquired a title to part of the duchies of Cleve, Juliers, and Bergen, with the county of Ravensburg. GEORGE WILLIAM son to JOHN SIGISMUND, claimed in his mother's right the three dukedoms aforesaid, with the barony of Ravensstein, in which he was opposed by the Duke of Newburg, who claimed by another sister; and they came to an agreement to have the joint dominion of those territories: but falling out afterwards, the Duke of Newburg, Count Palatine of the Rhine, called in the Spaniards to his assistance, as the Elector of Brandenburg did the Dutch; and a treaty ensuing, it was agreed, that Juliers and Berg, with the small territory of Ravensstein, should fall to the share of the Duke of Newburg; and that the Elector of Brandenburg and his heirs should enjoy the duchy of Cleve and the counties of Marck and Ravensburg, and so they remain at this day; but the King of Prussia however thinks fit to retain the titles to the whole. FREDERICK the last Elector of Brandenburg in the year 1700, caused himself to be proclaimed and crowned King of Prussia; and has since been acknowledged in that quality by most, if not all the powers in Europe. Upon the death of WILLIAM III. King of England in 1702, he claimed a right of succeeding to his paternal estate, as being descended from Rene of

Elector of Brandenburg assumes the title of King of Prussia.

Nassau Prince of Orange, in which he was opposed by the Prince of Nassau Friesland, whom King WILLIAM left his heir.

FREDERICK the last Elector of Brandenburg, and first King of Prussia, died on the 25th of February, 1712-13, in the fifty-sixth year of his age. He was born at Konigsburg the 11th of July 1657, and succeeded his father FREDERICK-WILLIAM in the year 1688; and in the year 1700, as has been said, took upon him the title of King of Prussia. He first married the Princess ELIZABETH HENRIETTA, daughter of the Landgrave of Hesse-Cassel, in the year 1679, who died in 1683, leaving only one daughter, since dead without issue. His second wife was SOPHIA CHARLOTTE, sister to the late King GEORGE I. of England, by whom he had issue FREDERICK-WILLIAM, the present King of Prussia, born the 4th of August, 1688; and this Princess dying in the year 1705, his late Prussian Majesty married a third wife in the year 1708, who died a little before him, leaving no issue.

The present King of Prussia, FREDERICK-WILLIAM II. only son of FREDERICK I. married SOPHIA-CHARLOTTE, daughter of the late King GEORGE I. on the 28th of November 1706, by whom he hath had several children, of which FREDERICA-AUGUSTA-SOPHIA, born in the year 1709, CHARLES-FREDERICK Prince of Prussia and Orange, born January 24, 1712, and LOUISA, born anno 1714, were lately alive.

By the treaty of peace concluded at Utrecht between France and Prussia the 11th of April 1713, it was stipulated, that the part of the Upper Guelderland, called the Spanish Guelderland, which the said King of Prussia then possessed, namely, the town of Guelder, and territory thereto belonging, the bailliage of Kriekenbeck and the country of Kessel, with all their rights, appurtenances and dependencies, should be yielded up to and possessed by the King of Prussia, his heirs and successors of either sex, in full sovereignty and propriety. France also acknowledged the King of Prussia sovereign Lord of the Principality of Neuchatel and Valengin, promising not to disturb the said King of Prussia, his heirs or successors in the enjoyment of them. On the other hand, the King of Prussia renounced for himself his heirs and successors in favour of France, all right to the Principality of Orange, and to the lordships and places of the succession of Chaalonis and Chastelbelin, situate in France and in the county of Burgundy, transferring the whole to his most Christian Majesty, his heirs and successors: and to render the said renunciation the more valid, the King of Prussia engaged and promised on the faith and word of a King, to satisfy the Prince of Nassau-Friesland as to his pretensions to the said Principality, and to the other Estates above-mentioned, by an equivalent; but the said King of Prussia is still allowed to retain the title of Prince of Orange.

In the preamble of the aforesaid treaty of peace his Prussian Majesty is stiled King of Prussia, Margrave of Brandenburg, Arch-chamberlain and Prince Elector of the holy Roman Empire; sovereign Prince of Orange, Neuchatel and Valengin; Duke of Magdeburg, Cleves, Juliers, Berg, Jettin, Pomerania, Cassubia, the Vandals, Mecklenburg in Silesia and Crossen; Burgrave of Nuremberg; Prince of Halberstat, Minden, Cammin, Swerin, Ratzemburg and Meurs; Count of Hohenzollern, Ruppin, Marck, Ravensburg, Hohenstein,

Arms of the King of Prussia.

The arms of his Prussian Majesty are, Argent, an Eagle spread Sable crowned with a Royal Crown, for Prussia. Gules 1, 4, faced Or 2, 3, with a Cornet Azure, the whole surmounted with an Escutcheon Chequer Or and Azure, for Orange. Azure a Sceptre Or, for the dignity of Elector. Argent an Eagle Gules for Brandenburg. Or, a Lion Sable for Juliers. Argent, a Lion Gules crowned Or, for Berg. Coupe Argent and Gules, for Magdeburg. Gules, an Escutcheon Argent in form of a heart with rays of a carbuncle knotted and flowered Or, illuminated with Vert, for Cleves. Or, a Lion Sable with a border Compone, Gules and Argent, for Nuremberg. Argent, a Griffin Gules for Pomerania.

The principal branches of this family are those of Bareith, Cullembach and Anspach, both descending from the Elector JOHN GEORGE, who died in 1598. As to the whole pedigree of the Margraves of Brandenburg, this is reserved for the appendix, and where will be found the pedigrees of the rest of the German Princes.

Present state of the King of Prussia's dominions.

The dominions of the King of Prussia are the largest of any of the German powers, except those of the house of Austria; and though they are not the most populous and fruitful, yet their late Princes have given such encouragement to foreign trade, set up so many profitable manufactures, and invited so many mechanicks and artists from all parts to settle in the country; that it seems now to be the most flourishing province in Germany. They already furnish the large Empire of Russia with woollen cloth, (which was formerly done by the English merchants) and with many other valuable commodities: and we may expect to see them ere long one of the most formidable naval powers of the Baltick, since they have so much enlarged their sea-coasts, and secured the navigation of the river Oder entirely to themselves.

Forces.

That vast body of troops, amounting to near eighty thousand regular forces, which the Kings of Prussia have of late years maintained in their dominions, has amazed all people who are not in the secret; for it is obvious to every one, that how much soever the country may be improved, it is far from being able to maintain so great a force. Some have suggested, that since Sweden hath so much declined, France makes the same use of Prussia she did formerly of the Swede, and pays part of the forces of this crown, in order to balance the power of the Emperor, if ever she should happen to have a quarrel with him; and that other powers having the same view, contribute also to the charge of the Prussian standing army. On the other hand, it is said, both the German and the Russian Emperors observing of what consequence it might be to have Prussia for their ally in case of a rupture, have offered very advantageous conditions to the present King, to bring him over to their interests. So that his Prussian Majesty's affairs seem to be in a very desirable situation, he is courted and presented on all hands; and hath it in his power in some measure to turn the balance, if ever the powers of Europe should be again engaged in a war: and 'tis no improbable surmise, that he will at length take that side which offers the best terms. Some people are under dismal apprehensions for the liberties of the King of Prussia's subjects, while he keeps

VOL. II.

such great armies on foot; but these have been long since lost. This Prince is already absolute in his dominions, and can lay what charges he pleases upon his people: but as he takes care to pay his troops at the expence of other powers, and seems to have set his heart on advancing trade and manufactures, and putting his territories into a flourishing condition; the people may enjoy as tolerable a share of happiness under his government, as they might under the dominion of any Monarch who has no other ends in view: but the mischief of it is, Princes are generally taught that they have something divine in their constitution; and that their subjects are made only to promote their glory or pleasure, to esteem the enlarging their dominions and making foreign conquests as the noblest pursuits; though these can only be done at the expence of the blood and treasure of their people; and in short, that it is more eligible to be Sovereign of a company of fawning indigent slaves, than to be King of a free wealthy people, who while he consults his own and their welfare, may command all that they are masters of, and will seldom meet with opposition but when he is hurried into schemes destructive to his country. It is not so much the form of government we live under, as the disposition of our governors which renders us happy or miserable: the best constituted government in the world may be perverted to the vilest purposes by artful men.

CHAP. XIV. Brandenburg.

FREDERICK WILLIAM II. the late Elector of Brandenburg and King of Prussia, died on the day of 1740, leaving issue by the Princess SOPHIA DOROTHY, daughter of GEORGE I. King of Great Britain.

Electors of Brandenburg.

1. FREDERICA SOPHIA WILHELMINA, born in 1709; married in 1731 to FREDERICK, hereditary Prince of Brandenburg Bareith, and now, on the death of his father in 1735, Duke of Brunswick Wolfenbüttele. They have two children, viz. 1. CHARLES WILLIAM FERDINAND, born in September 1735. 2. GEORGE FRANCIS, born in September 1736.

2. FREDERICK, Prince Royal, at present King of Prussia, born the 12th of January 1712, married at Saltzdaht in June 1733, ELIZABETH CHRISTIANA, sister to the Duke of Brunswick-Wolfenbüttele: she was born in 1715.

3. FREDERICK LOUISA, born in 1714; married in 1719 to CHARLES FREDERICK, Margrave of Brandenburg-Anspach. They have one son, born in 1736.

4. PHILIPPINA CHARLOTTA, born 1716, and married in 1734, to Prince CHARLES of Brunswick-Beveren.

5. SOPHIA DOROTHEA MARIA, born in 1719; married in 1734, to the Margrave of Brandenburg-Schwedt. They have one daughter, born in 1736.

6. SOPHIA ULRICA, born in 1720.

7. AUGUSTUS WILLIAM, born in 1722.

8. ANNA AMELIA, born in 1723.

9. FREDERICK HENRY LEWIS, born in 1726.

10. AUGUSTUS FERDINANDUS, born in 1730.

The Electors of Brandenburg are great chamberlains of the Empire. The Prince of Hohenzo-lern is the vicar. The Elector presides in the circle of Lower Saxony, jointly with the Duke of Bremen (now the Elector of Hanover;) and in the circle of Westphalia, he and the Elector Palatine are the two directors, as Dukes of Cleves and Juliers. At the diet he has seven votes; the

10 Q

first

CHAP.  
XIV.  
Branden-  
burg.

first as Elector, and the rest as Prince of Magdeburg, Cleves, Lower Pomerania, Halberstat, Minden, and Camin; to which an eighth is added, for the county of Maurs, lately erected into a principality.

These countries are become rich and powerful since FREDERICK WILLIAM the Great gave so kind a reception to the French protestants, who were obliged to leave their country in 1685, and the following years. Above 100,000 of that industrious and active people having been settled in the most considerable places of his large dominions, but particularly at Berlin, have made trade and manufactures to flourish there, where formerly there were none. By these wise methods, that Prince, and his successor, FREDERICK I. who trod in his steps, saw the revenues almost doubled to what they had been but a few years before; for in 1680 they were reckoned to amount to only betwixt 6 and 700,000 l. but in 1690, they were thought to exceed 1,000,000 l. per annum. His present Majesty, by almost every year inviting and settling new colonies of that people, has advanced his revenue to one million and a half of our money. There are some, who considering the many and great taxes that have been laid on all commodities, wearing apparel and victuals not excepted, have made the annual revenue of this Prince to amount to near two millions of pounds sterling.

The Prussian forces, now esteemed the best in Europe, and much the most numerous in proportion to the territories of the Prince they serve, are thus described by Baron POLNITZ, viz. These troops are new clothed every year; their pay is good and regular; the soldier is compelled to do his duty, but when he does it, enjoys more liberty than in the service of any other nation: so that were I to carry a musket, I fancy it would be in the service of Prussia, where such a strict discipline is observed, that the soldier is no swearer, and is not allowed to game; and where, in a word, he does not abandon himself to licentiousness. On Sundays and saints days, they are required to go twice a-day to hear a sermon. The catholics have the liberty of going to mass. In short, good manners are introduced and observed in those troops to such a nicety, that you would wonder at it.

All the infantry is clothed in blue. It depends on the colonel of every regiment to order what waistcoats and trimmings he pleases for the clothes. The horse and dragoons wear white; but the household troops blue, with campaign coats of gold lace. The Hussars clothing is red; but the garbs of the officers, both of foot and horse, are plain, and only differ from the apparel of the soldiers in the fineness of the cloth; though there are some regiments, whose waistcoats are bedaubed all over with gold or silver lace.

The colours, which are uniform in all the regiments, are white, with the King's device, representing an eagle flying towards the sun, with this motto, *Nec soli cedit*. There is such a uniformity observed in all things throughout the army, even in their guns, swords, bayonets, &c. that in every regiment they wear the very same, even to their shoe-buckles.

The same regularity is observed in the horse and dragoons, which ride both upon black horses; and, indeed, they are not permitted to have any others; the officers themselves being

not exempt from this rule, when they are at the head of their squadrons or companies. The housings and equipage of the latter are of the same pattern, and extremely rich. All the horse wear buff-coats, and underneath cuirasses. They perform their exercise on foot like the infantry, and with the same exactness. The kettle-drums and trumpets of all the horse are silver.

There is not a captain in all the Prussian army but has at least ten supernumerary men; so that these included, the King's forces amount to near 100,000, all picked men. You could not but admire, if you were to see how they behave: inasmuch, that whenever they take the field, it is pity but fortune should favour them.

The tall grenadiers exceed the common report, being the completest, the finest, and best disciplined body that can be imagined. The men are of all nations, there being scarce a Prince in Europe, but takes a pleasure in sending recruits to it. Some of these grenadiers have had fifteen hundred crowns list money; and several receive two florins per diem. Some of them are very rich; others there are who trade, and have good houses at Potsdam. The tallest and best man among them all was one called JONAS, (lately dead) who worked heretofore in the mines of Norway. The famous Huguetan, whom FREDERICK IV. King of Denmark created Count of Guldenstein, took him from the mines, and presented him to the King; he then stooped in the shoulders, and hobbled in walking; but by tricking him up, they gave him that good air which he wanted.

It is certain there are no troops in the world where the peasant sooner shakes off the clownish air, and more easily assumes the military one. This gigantic regiment has required great pains, and considerable sums, to establish it; and I am sure it has cost the King more than six other regiments.

The Princes of the royal family are not exempt from passing through the degrees of military service; and it is not here as in other places, where they have regiments and military governments as soon as they are born. The King will have them to know how to obey, before they come to command; and it is an encouragement to the officers, to find themselves so far honoured as to be on a par in the service with those who are born to be their Sovereigns.

There are academies of cadets in Berlin, Magdeburg, and other towns, where they are taught the rudiments of war; so that it is a nursery from whence the King makes a draught of good officers. His Majesty has moreover ordered his generals of foot, to take each a young gentleman, whose fortune does not happen to be equal to his birth, to keep them as pages, and to make them learn their exercises, and every thing that an officer ought to know.

The King's prime minister is the King himself, who is informed of every thing, and desires to know every thing. He gives great application to business, but does it with extraordinary ease; and nothing escapes his penetration, nor his memory, which is a very happy one. No body knows better than he where his government is strong, and where it is weak; and no Sovereign in the world is of more easy access, his subjects being actually permitted to write to him without any other formality than superscribing the

Brandenburg.

the letter, To the King. By writing underneath, To be delivered into his Majesty's own hands, one may be sure that the King receives and reads it, and that the next post he will answer it, either with his own hand, or by his secretary: these answers are short but peremptory, and they prevent a tedious painful attendance. The King, who is an enemy to vain pomp and pageantry, always goes abroad without any guards, with only a small retinue, and sometimes too walks on foot: he makes his greatness to consist in solid power; in the having his troops well disciplined, his places kept up in good order, his arsenals well provided, and his treasury full enough to enable him to oppose his enemy in case he be attacked. He never aims so much as to disturb his neighbours, much less to rob them. I heard him say one day, that he had no intention of attacking any body, nor of beginning a war; but if he was attacked, he would defend himself the best he could; a conduct which he has religiously observed ever since he has been placed upon the throne, even towards CHARLES XII. King of Sweden, notwithstanding what is said of him by a certain author, who has wrote that Prince's life. But I will not deviate from my subject.

There is no town in all the King of Prussia's dominions, except Neufchatel, where he has not been; no province which he does not know full well; not a noble family but he can tell their revenues, nor a court of justice but he is well acquainted with their chief members. His behaviour is plain; he knows no gallantry, and does not easily pardon it in his officers. He is so true to his consort the Queen, that he wishes all men would follow his example, and that every husband would live only with the woman whom God has allotted him. His diversion is hunting, and for this reason he resides commonly at Potsdam or Wusterhausen, which are pleasure-houses four miles from Berlin. Yet he generally goes on Saturdays into his capital, where he holds a council on Sunday, and returns on Monday. In the winter he makes a longer stay at Berlin; but let him be either here or there, he is on the parade every day at ten o'clock, when his soldiers mount the guard; after which he gives audience to his ministers, and holds a council, or goes abroad for the air. At noon the King appears in a great saloon, where are all the generals and officers, the foreign ministers, and all the court in general. There he converses a few moments, and then goes into another room, where he dines with the Queen, the Princes and Princesses of his family, and any other persons whom he has caused to be invited. His table is commonly spread for eighteen guests. After he has sat about an hour and an half at table, he retires to his closet till six at night, when he appears again in the room where he held his levee. There his Majesty gives orders to the marshal WARTENSLEBEN, governor of Berlin, and to the marshal NATZMER, commandant of the gendarmery. After this he talks a while with those that are present, and then passes into a room at some distance from his apartment, to which the Queen repairs sometimes with one or two ladies in company. There are ten or a dozen officers whom the King honours with his confidence, who play here at picquet, ombre, and back-gammon. Here they also smoke, and to this place the King sends for such as he has a mind to talk with about special affairs. I have been there twice upon such an account. Here

there is no manner of restraint, but every body sits down, the King dispensing with all the respect that is due to him; and at eleven o'clock he dismisses the company, and retires.

The King hunts when he is at Potsdam and Wusterhausen; but in other respects, he leads the same life there as he does at Berlin. At Potsdam he hunts the stag, having for that end caused a great forest to be paled in, where he has made noble roads.

Berlin, if we regard the largeness of the streets, the regular architecture of the houses, and the many works of magnificence and ornament, which, during the present, and the two preceding reigns, have been erected there, is the finest city of the empire. His present Majesty has been so intent, not only on fortifying, but likewise beautifying this capital, that he has made his courtiers, and other great men, build stately houses for themselves. The city is pleasantly seated on the banks of the Spree; which, with several canals to the Oder and Elbe, do, moreover, render it one of the best trading towns in Germany. The King's palace, which FREDERICK I. began in 1699, is a sumptuous and vast structure, and very richly furnished: it is not, however, quite finished.

The King's seats in the country are Potsdam, Oranienbourg, Frederickshof, Charlottenbourg, and Wusterhausen.

The King and his whole court are Calvinists; but the religion of the country is Lutheran. The Elector, GEORGE-WILLIAM, the present King's great grandfather, having married a Calvinist Lady of the Palatine family, daughter to FREDERICK V. King of Bohemia, turned Calvinist too. Since that time, those of that persuasion have increased in the country, to which they are encouraged by the court. There is free exercise of religion in the duchies of Cleves, Halberstadt, and Minden, for Roman catholics, Lutherans, and Calvinists.

There may be about three millions of souls in this Prince's German dominions, without reckoning those of Brandenburg-Prussia.

## LOWER SAXONY.

### CHAP. XV.

*Treats of the Circle of Lower Saxony; and therein of the Duchies of Mecklenburg, Lawenburg, Holstein, Hanover, Brunswick-Lunenbourg, Bremen and Verden.*

WITHIN the Circle of Lower Saxony are comprehended the duchies of Mecklenburg, Lawenburg, Holstein, Brunswick-Lunenbourg, Bremen, the principality of Verden and the bishoprick of Hildesheim. As to the duchy of Magdeburg and the principality of Halberstadt, which are usually reckoned part of the Lower-Saxony, I chose to describe them in treating of Upper Saxony, because they lie contiguous to, and are incorporated with the other dominions of the Elector of Brandenburg, which lie within that circle, and therefore shall not consider them here.

The circle of Lower Saxony then, is bounded by the German Ocean, Denmark and the Baltic sea towards the north; by Pomerania and the

the Marquifate of Brandenburg towards the east; by the territories of the Landgrave of Hesse on the south, and by the circle of Westphalia towards the west: extending in length from east to west two hundred miles, and about as far in breadth from north to south. The chief rivers which run through this country are the Elbe, the Weser, the Alter, the Hamma, the Hemon, the Leme, the Ocker and the Eldt. The winters here are long, and air exceeding cold; but the country however produces good corn in many places, and does not want rich pastures, as will appear in the description of the several countries it contains.

The duchy of Mecklenburg is bounded by the Baltick sea on the north; by Pomerania on the east; by Brandenburg on the south; and by the duchies of Lunenburg and Sax-Lawenburg towards the west. It is said to derive it's name from the High-dutch word Mecklen, which signifies a broker or dealer in merchandize, from the great resort of merchants to this country anciently, and particularly to a city of the same name situate on the coast; which was the occasion of adding *burg* to the word *Mecklen*, *burg* signifying a town, and *Mecklenburg* a town of merchants or brokers; and there is now a small village not far from Wismar, according to some German writers, which goes by the same name, and is supposed to be the remains of the once famous city of Mecklenburg. This country has the advantage of the Baltick sea for many miles, besides a great number of rivers and large lakes, which may be one reason that the air is unhealthful in summer, and it's northern situation renders it intolerably cold in the winter. It produces however great plenty of corn and fruits, particularly apples; and their lakes and rivers furnish them with fish and water-fowl in abundance.

Mecklenburg is usually divided by geographers into six parts, viz. 1. The dukedom of Mecklenburg, properly so called. 2. The dukedom of Vandalia. 3. The earldom of Swerin. 4. The barony of Rostock. 5. The barony of Stargard. And, 6. The bishoprick of Butzow. In the dukedom of Mecklenburg Proper are the cities and towns of Wismar, Tempin, Gades, Rhena, and Bucow. In the dukedom of Vandalia; Gustrow, Sterneburg, Malchin, Stavenhagen, Ivenack, New Calven, Warin, Peutzlin, Rebell, Wredenhagen, Malchau, Tetrou, Goltburg, Parchum, Plage, Lupfian, Grabou, Domitz, Newstat, Eldenau, and Goriosen. In the barony of Rostock; the cities and towns of Rostock, Ribnitz, Gnoiën. Tessen, Laga, Schwan, Salines, and Morlou. In the barony of Stargard; Brandenburg, Stargard, Furstenburg, Strelitz, Mirow, Fredland, and Wefenburg. And in the bishoprick of Butzow, the city of Butzow, the chief whereof I shall endeavour to describe.

1. Rostock, an Imperial city, and one of the Hans-Towns, under the protection of the Duke of Mecklenburg, situate in fifty-four degrees twenty minutes north latitude, on a bay of the sea at the mouth of the river Warna; is a tolerable harbour, forty miles to the eastward of Wismar, supposed to take it's name from Rotzstock, or a red pillar, anciently worshiped here by the pagan inhabitants. It is divided into three parts, viz. the old, the new, and the middle city, which united make a large town, containing many thousands of lofty well-built houses. Travellers observe, that here are seven large streets leading to a spacious market place, seven handsome gates towards the

land, seven bridges over the Warna, which runs through several parts of the towns, seven great doors to the cathedral church, seven towers on the town hall, and two or three other sevens still less worth our observation; and perhaps the reader will scarce forgive me for taking up his time with these. The university here is said to contain as many students as most in Germany; and was founded by JOHN and ALBERT, two contemporary Dukes of Mecklenburg and cousins, in the year 1419. Half the charges whereof being borne by the corporation and magistracy of the city, half the professors are chosen by the Duke of Mecklenburg, and the other half by the town; and the Rector is chosen alternately every half year, as in most other German universities. Amongst other learned men that have been educated here, are ALBERT CRANTZIUS, JOHN POSSELIUS, and NATHAN CHYTRÆUS, three celebrated historians.

The government of the city is in the hands of twenty-four Aldermen, elected out of the nobility, scholars, and principal merchants; of whom four are Burgomasters, two Chamberlains, two Stewards for the river, and two Judges of civil and criminal matters. These twenty-four may be stiled the upper house, and have in a manner the whole executive power lodged in them, with the power of coining money, and electing officers. There is also a common-council of an hundred inferior citizens, who are summoned to give their advice upon extraordinary emergencies relating to the whole community. 2. Warnemund, a small town situate on the sea, seven miles below Rostock, being the port-town to that city; for large vessels cannot come up so high as Rostock. 3. Wismar, which stands between thirty and forty miles to the westward of Rostock, and as many to the eastward of Lubeck, by some esteemed the capital of Mecklenburg, said to obtain it's name from the conveniency of it's situation, *Wismeer* signifying a secure harbour, as the town of Wismar is. It is said to have been built out of the ruins of the ancient town of Mecklenburg, about the year 1250. In the year 1266 it was enlarged and beautified, and from that time became extremely populous, and was reckoned one of the chief of the Hans-Towns, for this was the harbour where all the men of war belonging to that body were laid up. The Swedes having possessed themselves of this city, during the civil wars of Germany, insisted on it's being confirmed to them by the treaty of Munster, as it was; and the Swede has since stiled himself Lord of Wismar. It has however several times been taken by the Danes, and restored to the Swedes again by subsequent treaties; particularly in the last war it was taken by the Danes and their allies, the Hanoverians, Brandenburgers and Saxons, but restored to the Swedes by a treaty made in the year 1720; wherein it was stipulated however, that the walls and fortifications should be demolished, in which state it remains at present. 4. Swerin, situate upon the great lake called the Swerin-sea, to which it communicates it's name, about fifteen miles south of Wismar, and forty south-west of Rostock, formerly a Bishop's See; but by an article in the treaty of Munster, converted into a temporal principality, and conferred on ADOLPH FREDERICK, Duke of Mecklenburg. 5. Gustrow, a well-fortified town, formerly the seat of the Duke of Mecklenburg-Gustrow, whose line became extinct in the year 1688.

This country was anciently inhabited by the Vandals, and govern'd by their own Princes. ALBERT and JOHN, joint Dukes of Mecklenburg, were by the Emperor CHARLES IV. first admitted Princes of the Empire in the year 1349, upon condition of being subject to its laws. Lutheranism was established in this country about the year 1550, by Duke JOHN ALBERT, who demolished the abbeyes and religious places, and converted their revenues to other uses. In the civil wars of Germany this country was miserably harassed by the Imperial army, probably upon account of their deserting the Roman communion, and embracing Lutheranism. CHARLES LEOPOLD, the present Duke of Mecklenburg, was born the 6th of November, 1679; and married to SOPHIA EDWIGE of Nassau-Dietz, anno 1698. This Princess being wantonly disposed, the Duke began a process against her in the Imperial court, in order to obtain a divorce; where meeting with more than ordinarily delays, he ventured to marry the Duchess Dowager of Courland, niece to the late Czar, in the year 1716, before there was any decision of the cause; and it seems to be no extraordinary thing with the German Princes to divorce themselves, and take another woman to their bed in the life-time of the former.

This was but the beginning of troubles to the unhappy Duke of Mecklenburg, whose country was the following year almost ruined by the Muscovite forces, which were brought into the Empire to assist the Danes and Saxons against the Swedes; and at the same time the Duke laying heavy taxes upon his nobility, they applied to the Emperor for redress; setting forth that the Russian army having committed great ravages upon their estates, when they thought fit at last to leave their country, the Duke retained in his service a body of three thousand of them; which, together with his own troops, he was continually augmenting by new levies, he quartered on the nobility, and exacted extravagant contributions from them, under pretence of providing for the security of the country against foreign invasions; pretending that he was sole judge what was necessary for the defence of his subjects, who were to bear the expence. But the nobility denied this prerogative, alledging that a convention had been made with his predecessor in the year 1701, to pay annually the sum of an hundred and twenty thousand crowns, in lieu of all taxes and duties, ordinary or extraordinary; and thereupon the Duke renounced all further pretensions of laying any taxes upon them, except the usual land-taxes. II. They alledge, that the monthly contribution of sixty thousand crowns demanded of them, exceeded the produce of their estates, and was more than necessary to pay the troops. That at the same time all the peasants, who were not subjects of the nobility, were exempted from these contributions; which made it evident, that the Duke designed the ruin of the nobility, whose estates were seized and sequestered for not paying the sums demanded, and some of them compelled to fly their country, &c.

After this cause had depended before the Imperial tribunal for some years, it was decreed about the year 1722, That the Duke should pay to his nobility one million of crowns, for repairing the damages they had sustained; and on his not complying with this edict, a body of troops were ordered to quarter upon the Duke's demesne lands, and seize his revenues; which was executed accordingly,

VOL. II.

and the Duke thought fit to retire out of the country for some time; but is returning to his dominions again now the decree is satisfied, and the nobility begin to be reconciled to him.

From this instance it appears, that the Princes of the empire are subject to the general laws of the empire, and that their nobility and gentry, between whom there is little difference, can appeal for redress to the Imperial courts, when they are oppressed by their respective Sovereigns. But it is not so with the peasants or husbandmen, and other inferior people; these are subjects and vassals to their several Lords, and do not hold their farms by lease, as our farmers do, but at will; and are obliged to do such services, and pay such rents in kind or money, as their Lords require of them; and if they are ordered to arm and march into the field against an enemy, they dare not refuse it. Thus it was lately among the Clans in Scotland, where a Lord with his Clan would fall upon a neighbour in a hostile manner, and endeavour to do himself justice, if he apprehended himself injured, as if there were no civil courts of judicature in the kingdom; and as for controversies among the tenants themselves, these were determined in the courts of their respective Lords.

CHARLES LEOPOLD, Duke of Mecklenburg, born in 1679, and succeeded his brother FREDERICK WILLIAM in 1713. He has been twice married; first to SOPHIA HEDGWICK, aunt on the father's side to the Prince of Orange; but they were parted in 1710. His second wife was CATHERINE, daughter to the unfortunate IVAN ALEXIEWITZ, Czar of Russia, and sister to the reigning Empress of Russia, who died in 1733, leaving one only daughter, ELIZABETH CATHERINE, born in 1718, and educated at the court of Petersburg, having made publick profession of the Greek faith in 1733, in view of succeeding her aunt in the throne of Russia, in case she died without issue.

Duke CHARLES having formed a resolution of augmenting his forces, and of incorporating two regiments of Muscovites, of 1500 men each, which the Czar had made him a present of, among the troops of the country, began to raise unusual contributions on his subjects; and on their refusal quartered soldiers on his nobility, and confiscated the estates of those of them who had made the greatest opposition. He proceeded to augment his troops to the number of eleven thousand men; but the aukick council being applied to for redress of those grievances, by the estates and nobility, who had the laws of the country on their side, the Emperor, in 1718, caused a body of troops of the circle to march into the duchy; which being encountered by the Duke's forces, great disorders ensued, till at last, his Highness being defeated, retreated to Dantzick; and in 1728, the Emperor sent commissioners to Mecklenburg, who declared the Duke fallen from the government of the country, and put the administration into the hands of his brother. The degraded Prince shewed no regard to this Imperial decision, but appealed to the diet of Ratisbon, for redress. The Emperor, on his part, laid before the same sovereign tribunal, by the Prince of Furstenburg, his first commissary, a bill of grievances against the Duke, importing, that his Highness had made many changes and alterations tending to the destruction of the rights of the country, and the privileges of his vassals: that he had erected a sanguinary tribunal, or inquisition, and for

10 R

several

several years stopt the course of justice, to the great prejudice and ruin of many of his subjects: that he had spoken disrespectfully of the Imperial commission and rescript of the 11th of May 1728, and done many unjustifiable things to hinder the execution of them: that for these and other reasons, his Imperial Majesty had removed him from the government of the country, and placed his brother CHRISTIAN in his room, till he the Duke should submit himself to his Imperial Majesty, and return to a better mind.

In 1730, the Duke leaving Dantzick, returned to Swerin, his capital, and tried all manner of ways to disturb his brother's administration, and elude the Imperial decree, which was renewed in 1732, with this additional clause: "That the regent, for the further security of his person and government, might take into his service a certain number of troops of some neutral Prince, and then call the annual diet of the states, in order to restore the publick tranquillity." This Imperial mandate did moreover ordain, "That the degraded Prince should have a yearly salary of about ten thousand pounds, besides the revenues of Domitz and Swerin; and his brother, the regent, six thousand pounds." On the receipt of this writ, 400 horse of Hanover, and 200 foot of Wolfenbuttle, were taken into pay, and things continued pretty calm in the country: the unhappy Prince seemingly acquiescing in this new regulation. He hoped his sister-in-law, the Czarina, might be wrought upon to interpose in his favour. At last, finding he had nothing to expect from her, he went to Weimar; where committing some disorders in November 1735, the Magistrates began a prosecution against him, with intention to punish him for breaking the peace of their little territory. But he will probably be restored by the interposition of the Czarina, one time or other.

Lawen-  
burg  
duchy.

Lawen-  
burg city.

The duchy of Sax-Lawenburg is situate on both sides of the Elbe; being bounded by Holstein on the west and north; by Mecklenburg on the east; and the duchy of Lunenburg towards the south: the chief town whereof is Lawenburg, situate at the conflux of the Elbe and the Stegnitz, in the latitude of fifty-three degrees forty minutes, about thirty miles south of Lubeck, and near forty south-east of Hamburg. It is a small, but populous town, and has a pretty good trade. The other towns of any note in this duchy are Mollen, Wittenburg, and Ratzeburg; but of these I meet with nothing particular. The last Duke of Sax-Lawenburg was JULIUS-FRANCIS, who dying without male issue, in the year 1689, the Elector of Saxony, the Prince of Anhalt, and the Duke of Lunenburg-Zell all laid claim to it; but the Duke of Lunenburg taking possession of it, this duchy on his death devolved on the Elector of Hanover, with his other territories; the other pretenders relinquishing their claim in consideration of a sum of money, or some other equivalent given them by the Elector of Hanover.

Holstein  
duchy.

As to the province of Holstein, it hath already been described in treating of the King of Denmark's dominions, except the cities of Hamburg and Lubeck, which some reckon to be out of the bounds of Holstein; perhaps because they have freed themselves from the Danish yoke, tho' that Prince frequently revives his pretensions to those places, and exacts large sums from them; and were it not that they are under the Emperor's protection, and deemed free Imperial cities, the

Dane would no doubt long since have reduced them to his obedience again.

CHAP.  
XV.  
Lower  
Saxony.  
Hamb-  
burgh.

Hamburg, one of the most considerable of the Hans-Towns, is built partly on islands, and partly on the continent, on the north side of the river Elbe, in the latitude of fifty-three degrees fifty minutes, ten degrees to the eastward of London, forty miles south-west of Lubeck, and sixty north-east of Bremen; being about seventy-five miles distant from the sea. Its name is supposed to be derived from the forest of Ham, which stood near it, and gave title to the ancient Lords of Ham; who building a castle where the city now stands, called it *Hamburg*, or *Ham Castle*. It is generally held to be within the limits of Stormaria, a province of the duchy of Holstein: and however this is disputed by some, it is agreed, that the territories belonging to this city, and adjoining to it, lie in Stormaria. They contain but a small circuit, wherein are several large villages and noblemen's palaces. There are also several little islands in the Elbe under the government of the Hamburgers.

The city of Hamburg, says a late writer, consists of a great many little islands in the rivers Elbe and Alster, which, like Venice, have a communication with each other by bridges. The tide flows through the canals which separate the islands; and it lies so low, that in spring-tides houses have been carried away and damaged by inundations, as it happened in the year 1651. As the place appears to be naturally strong by this account, the inhabitants have added to it good walls, and regular fortifications after the modern way, especially towards the land. It is divided by a wall into two parts, called the Old and New Town. The streets are wide, but not straight; and the buildings generally of brick, very high, which make a grand appearance. The town is exceeding populous, occasioned by a flourishing foreign trade. Ships from all parts of Europe resort hither, and from hence their merchandize is distributed through the Empire. But the most considerable manufacture of the Hamburgers, if we may call it such, is their beer, in brewing of which great numbers of people are employed, and it is transported into all the neighbouring countries, being valued equally with wine. The peasants of Holstein, it is said, have such an opinion of its virtues, that they apprehend it impossible to live without it. They have also plenty of all provisions at Hamburg, which are either brought down their rivers from the inland parts of Germany, or imported from abroad; but their markets are with nothing better stored than with sea and river-fish and garden-stuff. Their gardens, which lie contiguous to the town-walls, do not only afford plenty of fruit, herbs, and roots, but being regularly planted, and extending a great way into the country, yield an inexpressible delight to the citizens, who have their country-seats in the middle of them. On the other side, ships of good burthen may come up to the very walls, to take in and discharge their lading; the largest indeed are forced to come to an anchor at New Mills, four miles below it, and unlade their merchandize into smaller vessels. The tide flows sixteen miles higher up the river than Hamburg, which is about ninety miles from the Ocean, and thought to be a longer course than the tide takes in any other European river.

The publick buildings in this city mentioned by travellers, are, the church of St. PETER, formerly a cathedral, while the town remained an arch-

CHAP.  
XV.  
Lower  
Saxony.

archbishoprick, and the residentiaries of this church still compose a chapter, who have cognizance of ecclesiastical causes, from whom there lies no appeal, but to the Imperial Chamber at Spire. The other most considerable churches are those of St. NICHOLAS, St. JACOB, St. CATHARINE, and St. MICHAEL, where registers of the poor of the respective parishes are kept, who have money weekly distributed amongst them, and a yearly allowance of clothes and fuel: nor is there any city can boast of more well-endowed hospitals and charitable foundations in proportion to it's bigness, for cripples, aged people, orphans, disabled seamen and their families, with free-schools for the education of the children of poor citizens, who are furnished with clothes as well as good instruction, till they are capable of being put out to trades, or sent to the university.

The city of Hamburg is a free Imperial city, independent of any other power except the Emperor, to whom they pay homage, and some other small acknowledgments for the protection they receive from the Empire, as other Imperial cities do, who have both the legislative and executive power lodged in them. The magistrates are four Burgomasters; twenty Schepins or Aldermen, chosen out of the most considerable merchants or tradesmen; twelve Common-Council Men or Senators, who constantly attend the service of the city, who upon extraordinary occasions assemble sixty more of the principal citizens, called *Burger Alten*, or Elders of the city; and if the case be of the utmost importance, the whole body of freemen are assembled, in whom seems to be the last resort. But this power has been frequently disputed of late years; the senate pretending that though they are called to advise with upon extraordinary occasions, their superiors only have the power of determining what ought to be done: and these controversies have sometimes risen to that height, that the Emperor has been obliged to take cognizance of them, and command the forces of the Circle to march into the city to keep the peace, as will appear hereafter. But before I proceed further, it may be convenient to enquire here the foundation of that claim the Dane frequently makes to the dominion of this city. And it seems WOLDEMAR, Duke of Sleswick, by the assistance of CANUTUS the VIth, King of Denmark, his brother, took this city from the Emperor OTHO IV. and WOLDEMAR being afterwards advanced to the Danish throne, transferred the sovereignty of Hamburg to ALBRECHT, Earl of Orlemund, who assigned his right to the citizens in consideration of fifteen hundred marks of silver; and thus this city became a free and independent State: and ADOLPH IV. Earl of Holstein, confirmed their rights and privileges, as his successors also did down to ADOLPH XIV. the last Earl of Holstein and Scawenburg of that family, who died anno 1459: upon whose death the province of Holstein put themselves under the protection of CHRISTIAN I. King of Denmark, whom they elected their Sovereign, under the title of Duke of Holstein; and the citizens of Hamburg entered into an alliance with the King of Denmark, engaging to maintain the same friendship and correspondence with him, they had done with the Earls of Holstein and Scawenburg his predecessors, if he would confirm their rights and privileges, which he did accordingly. His successors, however, were perpetually reviving their claim to the sovereignty of this city; and some of

CHAP.  
XV.  
Lower  
Saxony.

them compelled the citizens to pay large sums to purchase a confirmation of their liberties: but in all their treaties with that crown, they concluded, *Salvo jure Caesaris & Imperii, & salvo libertatibus civitatis ab Imperiali cubine obtentis*. And in a Diet, held at Augsburg anno 1510, the Emperor MAXIMILIAN I. with the States of the Empire, declared Hamburg a free Imperial city, and summoned the Duke of Holstein to appear before the Imperial Chamber at Spire, to make good or renounce his pretensions to the said city. But the Kings of Denmark, as Dukes of Holstein, have nevertheless several times since extorted large sums of money from this city; sometimes appearing before it with a numerous army, and at other times blocking up the mouth of the river Elbe, taking their ships, and obstructing their traffick; but the powers interested in preserving the liberties of this city, have hitherto interposed, and preserved them from being swallowed up by the Dane. The liberties of Hamburg have also been several times endangered by religious disputes with some of the neighbouring Princes, and by their own intestine divisions, as has been hinted already, particularly in the year 1708; when those disputes arose so high, that a body of troops was sent to take possession of the town, by the directors of the Circle of Lower Saxony, in order to preserve the peace of the city.

The established religion of Hamburg is Lutheranism; and so bigotted are they to their particular opinions in religion, that they will tolerate no other sect, whether popish or protestant, except in the chapels of foreign ministers: nor will they suffer any subject of Hamburg to resort even thither, inasmuch, that they prosecuted very severely some citizens who were seen at the Dutch chapel, notwithstanding the representations of the King of Prussia and the States-General in behalf of their brethren, the disciples of CALVIN, in the year 1719. And in answer to his Prussian Majesty's memorial on this subject, they acquainted him that the Calvinists in affairs relating to trade, enjoyed the same privileges as the Lutherans; but that at the time of the establishing the Lutheran religion in that city, neither the Calvinists, the Roman Catholick inhabitants, or the Jews were allowed the publick exercise of their worship, but were content with domestick service; and as for sermons and the administration of the sacraments, they were obliged to repair to neighbouring towns: which state of things was confirmed by the treaty of Westphalia, and their magistrates obliged by a very binding oath to observe that treaty. Notwithstanding which, both the Calvinists and Roman Catholicks were increased in their city of late years to an insufferable degree, and openly assumed to themselves an exercise of their worship, assembling in divers parts of the town, and particularly at the Dutch resident's house, to the number of some hundreds, with several coaches, and by preaching sermons, singing aloud, and administering the sacraments, gave reason to suspect they would in time claim a right to their publick worship; and that this, with the repeated encroachments and usurpations of the Roman Catholicks, had put the magistrates upon issuing an edict to prohibit such unlawful worship, and reduce the same within the bounds prescribed by the treaty of Westphalia.

The same year, 1719, I find the Roman Catholicks also complaining of their being insulted by the inhabitants of Hamburg on account of their religion.

CHAP.

Lower  
Saxony.

religion. The Imperial minister residing in this city, it seems, had caused a new chapel to be built, and the priests having laid the first stone with unusual ceremonies, and attempted openly to make profelytes to their religion, gave great offence to the Lutheran clergy, who incited both magistrates and people to oppose the finishing this popish temple; whereupon a mob was spirited up on Sunday the 15th of September, who first plundered the chapel of the plate and ornaments, and afterwards demolished it. They also proceeded to storm the house of Count Metseh the Imperial minister, stripping it of the furniture, and carrying off seven thousand crowns in money, abusing M. LEMBEKE, Imperial counsellor and secretary of the embassy; the tumult lasting from nine of the clock in the morning until midnight before it was suppressed: Of which the Imperial resident immediately sent an express to court. The Emperor was so exasperated at this outrageous riot against his ministers and those of his communion, that he threatened the city with military execution if they did not forthwith pay a fine of two hundred thousand crowns, rebuild the house and chapel at their own expence, and make good the loss of the furniture, ornaments, and all other damages sustained; and lastly, that two members of the senate and two of the common-council should come to Vienna, and beg his Imperial Majesty's pardon. With which the Hamburgers were obliged to comply, except that they got some part of the fine abated. But the Emperor has since taken them into his special protection, and espouses their cause heartily against the antiquated pretensions of the Dane: for in November, 1724, the magistrates published an Imperial mandate, importing, That whereas it had been represented to his Imperial Majesty, that the King of Denmark and his officers, especially the Count de Calenburg, High-Bailiff of the county of Pinneburg, had for some time past pretended to exercise an independent jurisdiction within the district of the Danish hotels (palaces) called the Schawenburg and Muhlen in the city of Hamburg, and to exempt the inhabitants thereof, and all the houses within that verge, though sworn Burghers of the city, from all civil power, allegiance, and obedience to the government, as also from all taxes and contributions; and had made use of threats to deter the said city from maintaining her rights, which they had possessed for many centuries; his Imperial Majesty annulled and vacated all the ordinances hitherto issued against the city by his Danish Majesty and his officers, especially by Count Calenburg, and the Danish Residents Hagendorn and Hohenmuhl, and all the inhabitants of the said districts were by the said mandate strictly enjoined not only to be faithful and obedient, like other Burghers, to the magistrates of Hamburg, according to the ancient constitution of the city, but likewise to pay without resistance the arrears of the taxes, and bear their share of all contributions, charges, and offices for the future, on pain of being punished corporally, and even with death, according to the nature of the crime.

The Ministers of Denmark on the contrary published an order of the King of Denmark's, requiring the inhabitants of the district of Schawenburg not to pay the least contribution or tax to the magistrates of Hamburg on pain of death, wherein his Danish Majesty also revives his claim to that his hereditary city, as he calls it; and threatens the citizens that one time or other they

should feel the effects of his resentment. In the year 1726, the King of Denmark proceeded to prohibit the currency of the Hamburg coin in his dominions, (as the Hamburgers had before the currency of the Danish coin in their territories.) He also required his subjects not to buy of the Hamburgers any goods of the growth or manufacture of England, France, Holland, Italy, Germany, or any other foreign country; and the Danish merchants were required to purchase them in the respective countries where they are produced or manufactured; which is a very great loss to the Hamburgers, who used to furnish the dominions of Denmark with most of their foreign goods. The English Hamburg merchants are said to be more favoured in this city than those of any other nation, on account of the extraordinary trade they occasion here; their factors and agents being exempted from the jurisdiction of the city courts, and all civil and criminal matters relating only to their people, determined by the English resident. They are also indulged in the publick exercise of their religious worship, a privilege said to be denied to most other nations who are not of the Lutheran persuasion; but I perceive the Dutch and other foreigners have now the same liberty, though the natives are not allowed to resort to their chapels.

Hamburg, (according to another writer) is one of the best towns in Germany, being situate on the Elbe, twenty-five leagues from the mouth of it: it has noble ramparts, and very strong outworks; and it also takes care to be well provided with artillery, and a good garrison. Moreover, it is always sure of the protection of the families of Brandenburg and Brunswick, it being so advantageously situated, that it is the interest of both, that no power whatsoever should take it.

Hamburg is also very considerable, on account of the wealth of its inhabitants, who are almost all merchants, and much of the temper of the Dutch merchants, very greedy of gain, and thrifty. Their greatest delight is to have gardens at the city gates, pretty much in the taste of those of Holland. The wives of the great merchants are as much confined at Hamburg, as the women of quality are at Venice; but I observed, they were only pent up from foreigners. A man may pass his time very well in this city, where there are several persons of quality to see, who make their visitors perfectly welcome. The walks, in and about this city, are charming, and especially that on the ramparts is a noble one; there being a double row of trees, which forms an agreeable covert, and from whence there is a prospect finely diversified by noble houses, gardens, woods, meadows, &c. in the midst of which one sees the rivers Elbe and Alster, which both together yield a charming view. The river of Alster comes into the town, and forms a basin very like a great pond, which has a fine key on the sides of it, planted with several rows of lime-trees, between which there is a very fine walk.

It depends solely upon its magistrates, who are chose by the Burghers themselves. Its liberty has been often contested by the Kings of Denmark; who, as Dukes of Holstein, pretend, that Hamburg is built upon their territory, and that therefore they ought to be sovereigns of it.

Most of the European Princes have residents here; for which reason, here are several chapels

CHAP.

CHAP. XV. of the Roman catholics, who, otherwise, would be obliged to go to the church at Altena, as the Calvinists are forced to do; the Lutheran being the religion that is uppermost at Hamburgh; but the Jews have their synagogues here.

Lubeck. Lubeck, the chief of the Hans-Towns, and an Imperial city, is situated in the province of Wagerland in the duchy of Holstein, though some have placed it in the duchy of Mecklenburg, from which indeed it is not far distant. It is said to have derived the name from its situation on a corner or point of land; the word *Lubeck*, or rather *Lobeck*, in High-Dutch, signifying as much. This city stands on the river Trave, ten miles from the Baltick sea, in fifty-four degrees odd minutes north latitude, upwards of forty miles north-east of Hamburgh, about as many to the westward of Wismar, and twenty-five miles north of Lawenburg. Travemund, at the mouth of the river Trave, is the port-town to Lubeck, and esteemed a very good harbour. There is not any city in the north of Germany, according to Dr. NICHOLSON, which exceeds Lubeck in the beauty and uniformity of its buildings, or the pleasantness of the groves and gardens about it. The streets are broad and strait, and the houses built of brick; and from a publick reservoir water is laid into every citizen's house, and several of the streets are planted with rows of trees. The churches are generally well built, adorned with high spire steeples, being about twenty in number; and the cathedral, dedicated to St. MARY, esteemed a fine piece of architecture. Lubeck was an inconsiderable borough till enlarged and beautified by ADOLPH, the second Earl of Holstein, anno 1140, from whom HENRY Duke of Saxony and Bavaria, surnamed the LION, took it. WOLDEMAR Duke of Sleswick, brother and heir to CANUTUS King of Denmark, afterwards made himself master of it; but the citizens being unkindly treated by the Danes, put themselves under the protection of the Emperor FREDERICK II. who confirmed their ancient privileges and immunities, and enlarged them; since which, Lubeck has continued a free Imperial city, and was the metropolis of the Hans-Towns, as has been intimated already. The bishoprick of this city has been enjoyed by Protestant Princes ever since the year 1561, when the Lutheran religion was introduced here, and devolves as an appennage, or inheritance, on the younger sons of the Duke of Holstein-Gottorp, who are stiled Dukes of Eutin, from a town where the palace of this prelate stands, about four miles from the city. This is the only Protestant bishoprick in Germany, it is said, which has not been stripped of the revenues and privileges belonging to it; the other Lutheran Bishops are rather superintendants, having little to distinguish them from the inferior clergy, but the point of precedence.

The present government is in the hands of twelve Burgomasters elected out of the nobility and civil lawyers, and the senate or council consists of sixteen members, half noblemen and lawyers, and the other half merchants. Two brothers, or father and son, cannot be admitted at the same time into the senate, nor any handicraft or mechanick is suffered to sit amongst them. Their territories are about sixty miles in circumference, and contain several small towns and villages. Happy were the northern Princes who could make Lubeck their friend, while she was capital of the Hans-Towns, for they are said to

have been able at some times to have fitted out upwards of two hundred ships of war, and to have had the power of turning the scale to which ever side they inclined in the wars among the northern powers: but the reader has already met with an account of the Hans-Towns, and therefore I forbear to say more of them here.

## LUNENBURG.

THE dukedom of Lunenburg, in which Zell is comprehended, is bounded by the river Elbe, which separates it from Lawenburg and Holstein on the north, by Brandenburg and Magdeburg on the east, by the Dukedom of Brunswick on the south, and by Bremen and part of Westphalia towards the west. The air of this country is cold, and a barren sandy desert takes up a great part of it: the rest is covered with woods and forests, and the people who inhabit them the most clownish, and unpolished of any in Germany: but their forests abounding in wild hog, deer and other venison, the neighbouring Princes and nobility annually assemble here to take the diversion of hunting. The principal rivers are the Elbe, the Illmenow or Awe, and the Jetze. The chief towns are, 1. Lunenburg, or Luneburg, said to derive its name from *Luna*, the moon, on account of that planet's being adored by the ancient Pagan inhabitants: but how the moon came to have a Latin name in this part of the world before the Romans arrived here, is a difficulty that is not easily got over. It stands on the river Illmenow, in the latitude of fifty-three degrees thirty minutes; about thirty miles south-east of Hamburgh, and near forty south of Lubeck, being of an oblong figure, and about two miles in circumference; the streets broad, and most of the houses tolerably well built. The publick buildings mentioned by travellers are, the town-hall or stadthouse, and the palace belonging to the late Duke of Zell, of which I do not meet with any thing remarkable; but the bridge over the river is said to be a very fine one. From the salt-springs near this town are made great quantities of salt, in which the trade of the inhabitants chiefly consists, and they afford a good revenue to the sovereign. 2. Zell, the usual residence of the late Dukes of Lunenburg, situate in a sandy plain at the confluence of the two little rivers Aller and Fuhse, about forty miles south of Lunenburg, and thirty north of Hanover. The Duke's palace is a square building, moated round, and encompassed with pleasant gardens; but I do not find the architecture of this palace much admired. The courts of justice for the duchy of Lunenburg are held in it. 3. Bardewick, five miles north of Lunenburg, anciently a considerable city, of which little remains at present but the cathedral church and a convent. 4. Ultzen, a compact uniform little town in the midway between Lunenburg and Zell, the inhabitants of which place have a tradition, that the first Saxons who settled in England came from hence. 5. Harburg, a strong little town upon the Elbe, thirty miles to the westward of Lunenburg, not very considerable at present, but capable, it is said, of being made equal to Hamburgh, standing on the opposite side of the Elbe, full as conveniently for a foreign trade as the other; and since the duchy of Lunenburg has at present the King of Great

CHAP.  
XV.  
Lunen-  
burg.

Britain for it's sovereign, it is expected that a trade will sooner or later be established between his British Majesty's English and German dominions, and that this town of Harburg will be the mart for the merchants of both countries to resort to, from it's convenient situation on the banks of the Elbe; but what England would get by discontinuing the trade to Hamburgh, and endeavouring to divert it into another channel, may deserve consideration. 6. Walfrode, situate in a pleasant valley, encompassed with hills and forests, near the confines of Verden; the trade whereof consists in wool, beer and wax.

The  
duchy of  
Lunen-  
burg de-  
scended to  
King  
George.

The dominions of Lunenburg and Zell on the death of GEORGE-WILLIAM the late Duke, anno 1705, devolved on the Elector of Brunswick, the late King of Great Britain, in right of the Electress his consort, who was the only daughter and heiress of the said Duke of Lunenburg, and are now descended to his present Majesty King GEORGE II. the eldest son of the said King and Princess.

The Prince  
arbitrary.

As to the constitution of the government, it is almost unnecessary to inform the reader that the Prince is as arbitrary as the King of France, in this, as well as the rest of the dominions of the house of Brunswick; except in some few Imperial cities which still retain their liberties.

Ecclesiastical go-  
vernment.

The church-government in the dominions of Brunswick is much the same as in other parts of Germany where Lutheranism is professed. In each dukedom there is a *Superintendens Generalissimus*, who has the supreme inspection of the church, and resembles an English Archbishop; to whom are subject the several Superintendants General, or Bishops, who preside over the Superintendants Special, who have much the same office as our Archdeacons. In some provinces they have no other distinction of Superintendants but General and Special, as where the province is not of so large extent as to require more than one single Bishop: and their ecclesiastical courts are as liable to the control of the Prince as the civil: neither the one or the other have any laws but what the Prince can repeal or alter at his pleasure; and we see the Electors of Brandenburg have actually altered the established religion in part of their dominions from Lutheranism to Calvinism: though I find where any German Prince attempts this, he is obliged to have a great deal of patience, and to do it by degrees, or he hazards an insurrection of his subjects.

## BRUNSWICK and HANOVER.

Brunswick and  
Hanover.

THE dukedom of Brunswick, properly so called, contains only the territories of Brunswick and Hanover or Calenberg: as for the principality of Grubenhagen, the counties of Blackenburg and Reinstein, though they are contiguous thereto, and subject to the same Princes, yet are no part of the dukedom of Brunswick; but as they are usually thrown together, I shall follow the method of those who have gone before me in describing the boundaries of the whole.

Bounds.

Brunswick then including the duchy of Hanover, Grubenhagen, Blackenburg and Reinstein, is bounded by Lunenburg on the north, by Magdeburg and Halberstat towards the east,

by Hesse Cassel on the south, and by the river Weser towards the west. This country was part of the great Hercynian forest, and is still pretty much over-run with woods, which yield more pine and fir-trees than any other sort of timber: part of it, especially the county of Blackenburg, is mountainous, cold and barren, their hills being covered with snow till midsummer; but even here are some fruitful valleys abounding in herds of cattle, and their mountains are richly furnished with mines of silver, copper, lead, vitriol, brimstone, quicksilver and copperas. The country is also generally healthful, and the people of as large a size as any in Germany, used to coarse fare and hard lodging, and naturally well fitted and prepared for the drudgeries they are put to. Dried hogs flesh and a black coarse sort of rye-bread fitter for horses than men, as the French traveller expressed himself, is their common food; the rest of the Germans, from their living so much on swines flesh, call them Bacon guts. The principal rivers are, the Weser, the Leina, the Innerste and the Ocker. Upon the top of every high hill almost are seen the ruins of old fortresses, supposed by some to have been erected by the Romans; but by others to have been built during the wars of the Saxons with CHARLES the Great. The present generation are allowed to be sincere and hospitable, as the generality of the Germans are; but a little rough and unpolished. The chief towns are,

1. Brunswick, *Brunopolis*, from it's founder BRUNO, one of the sons of LUDOLPH Duke of Saxony, situate in a plain on the river Ocker, in the latitude of fifty-two degrees twenty-five minutes, ten miles north of Wolfembutte, and between fifty and sixty south of Lunenburg. It was formerly a free Imperial city, and one of the Hans-Towns; but after many struggles for their liberties, they were forced to yield to the superior force of the Dukes of Brunswick, who keep a strong garison in the place, and have enlarged the fortifications; whereupon the merchants and trading men have forsaken it, and it is now in a declining condition, mum and butter being almost the only commodities they deal in. The town is of a square form, and about two miles in circumference, divided in the middle by the river Ocker. The private houses are tolerably well built, and the town-house and Prince's palace are said to be magnificent structures. The mum made here is of two sorts, the one thin and weak, the ordinary drink of the inhabitants; and the other called ship-mum, such as is imported into England and other parts of Europe. This Dr. NICHOLSON observes is scarce fit to drink till it has purged itself at sea, and is made of barley with a small mixture of wheat, well hopped. The town was formerly governed by it's own magistrates; but as the Dukes of Brunswick obtained it by conquest, they take the liberty of prescribing what laws and regimen they think properest for the city at present, and are at this day as absolute here as in the rest of their dominions.

2. Wolfembutte, which stands also on the river Ocker, ten miles to the southward of Brunswick, in a watery country, as the name signifies, and surrounded by marshes. It was the seat of the ancient Dukes of Brunswick; and strong both by art and nature, consisting of two parts, the one called *Arx Guelphica*, where the palace stands, having obtained it's name from the founder, who was of the Guelphian family; the other called *Henrickstat*,

CHAP. XV. *Henrickstat*, from Duke HENRY the younger, who laid the foundation of it. The publick buildings taken notice of by travellers, are the new church, an elegant building, where lie interred more than twenty Dukes and Duchesses of Brunswick; and the palace, the residence of the present Duke of Brunswick-Wolfenbüttele, with the library belonging to it, containing an hundred and twenty four thousand volumes, according to HANISIUS, one of the librarians; but Dr. NICHOLSON looks upon this as incredible, the books being contained in two small rooms, both of them not so large as a third part of the Bodleian library. It is, however, allowed to be one of the best collections of printed books in Germany. This library was founded by AUGUSTUS the famous Duke of Brunswick-Wolfenbüttele, a Prince, says Dr. NICHOLSON, who infinitely surpassed all his predecessors in learning and knowledge, who in four large volumes gave an account of the most considerable authors in his library, and composed many other excellent treatises; he died in the year 1666, leaving two sons, viz. RODOLPHUS AUGUSTUS, and ANTHONY ULRICK, who governed jointly the dominions of Wolfenbüttele, of whom I shall have occasion to speak further hereafter.

3. Hanover, the capital of the dukedom of Calenburg, situate on the river Leina, so named from a ferry on that river; Hanover in the old Saxon dialect signifying as much as *Have-over* in English, according to Dr. NICHOLSON. It stands between forty and fifty miles to the westward of Brunswick, and thirty south of Zell, and is said to be a handsome well-built city; but except some few houses of stone, I perceive timber and clay are the chief materials in their buildings. The Elector's palace is in the castle, which stands on one side of the town near the walls, being a large building of free stone, containing several square courts; but I do not meet with any traveller that has enlarged upon the beauties of it. The principal churches of the city are those dedicated to St. JAMES and the Holy Cross, which are built of stone, and have some good paintings in them. This town being the residence of the Electoral family, is tolerably populous, and well fortified. It was once a free Imperial city and a Hans-Town, when their trade was in a flourishing condition; but the only merchandize I can learn they export at present is a kind of sweet muddy beer, which goes by the name of Brühane, which the neighbouring villages take off their hands.

4. Helmstat, which stands twenty-four miles to the eastward of Wolfenbüttele, remarkable for its university founded and endowed with large privileges by JULIUS Duke of Brunswick-Wolfenbüttele anno 1576, the rector whereof has the title and dignity of a Count Palatine.

5. Hamelin, situate at the confluence of the rivers Wefer and Hamel, esteemed one of the strongest fortresses in the Duke of Brunswick's dominions; but more famous for a story related by Dr. NICHOLSON and other grave writers, and believed by the credulous people of this place, though nothing surely ever had more the air of a fable; I shall recite it in the doctor's words without any manner of alteration. 'The records of

this city, (says that reverend Gentleman) relate a notable accident which happened among the burghers on the 26th of June 1284, viz. The citizens being strangely infested by rats, and

having tried all imaginable expedients, but in vain, to rid themselves of those troublesome guests, at last met with a stranger who undertook for a certain reward to do the feat. The burghers agreed to his proposals, and the strange gentleman immediately with his tabret and pipe draws after him all the rats in the town, like so many morris-dancers, to the river, and there drowned them. Returning for his reward it was denied him, as being judged too great a recompence for so small a performance. However, lest he could not be persuaded to take, but left the town in a rage, threatening in a short time to be revenged. Accordingly about a year after he came again, and played the second part of the same tune, but with another train after him: for now he went attended with a great number of children, who followed him in at the mouth of a great cave on the top of a neighbouring hill, called by the burghers *Koppelberg*, and were never after heard of. In remembrance of this sad accident the citizens were wont for many years after, as appears by several old deeds and other records in that city, to date all their indentures and contracts, such a year *since the departure of our children*. The street through which they passed is to this day called *Bungelose Straß*, or Tabret Street; and on the top of the mountain near the cave's mouth, is still to be seen a monument of stone with an inscription giving an account of the loss of an hundred and thirty children in the manner above related.

I come now to give a more particular description of the principality of Grubenhagen, which in the High-Dutch signifies a grove or forest; this being part of the Hartz, or *Sylva Hercynia*, mentioned by JULIUS CÆSAR in his commentaries. The German word Hartz, out of which Dr. NICHOLSON supposes the Latins formed their *Hercynia*, signifying properly rosin or pitch, which is the liquor extracted from the pine and fir-trees the only timber with which this forest abounds; and though part of this forest hath since the times of the Romans been converted into towns and villages, and corn-fields, yet it is still easy to discern the traces of it quite cross the country.

Grubenhagen lies on the south-west part of the dukedom of Brunswick, and is most considerable for the mines of silver, copper and lead that are found here; besides a great many other minerals, as, 1. Grey vitriol, 2. Atramentstein, or ink-stone, out of which two beaten and boiled together the ordinary green vitriol is made. 3. Geden vitriol, which grows like icicles out of the rocks, and may be used without cleansing or purifying. 4. Blue vitriol, commonly made out of the copper ore. 5. White vitriol, made of lead-ore. 6. Misy, a mineral of the same colour and nature as the ordinary yellow brimstone. 7. Brimstone, made out of a peculiar sort of ore, from whence drop the *Flores Sulphuris*, which usually coagulate like icicles.

The chief mines of this country are, 1. Ram-melsburg, in an high mountain near the city of Gollen, discovered by a huntsman named RAMME (from whence it had its name) in the year 972. Another great vein of ore was discovered in the year 1045, where Wildman now stands; and a third at Zellerfeld in the year 1070. This last is the chief of all the mine-towns belonging to the Princes of Brunswick: here the overseer of the mines keeps his court every Saturday, and pays off the workmen. The capital city of Grubenhagen

benhagen is Eimbeck, so called from a number of small rivulets which unite their streams near this place; the word *Beck*, or *Backe*, in the old Saxon dialect signifying a rivulet. The other towns in this principality are Clonsthal, Altenan, Andreasburg, and Osterode, all inhabited by miners, who being bred up, says my author, in caves and the bowels of the earth, do not trouble themselves with erecting very fair structures above ground.

The little counties of Blankenburg and Rein-stein are usually considered together as one province, lying between the territories of Halberstadt and Anhalt. The castle of Blankenburg, which gives name to the province, is situated about forty miles to the southward of Wolfenbüttele. This country was anciently called Hartingow, or the Hercynian county. The Roman writers who describe it, say the inhabitants live in an intolerable sharp air, and have a continual winter, which modern authors observe may more justly be applied to this than any other territory in Germany, it being exposed to the north, and receiving the cold blasts from the top of Bruktas (one of the highest hills in Europe) and the neighbouring mountains, which are usually covered with snow till midsummer. The air however is so healthful, that the inhabitants frequently live to upwards of an hundred. The soil produces little corn, but the valleys are well stocked with cattle, and their mountains afford abundance of iron ore. Among the curiosities which travellers take notice of in this country, is an unfathomable cave, called Buman's hole, which seems to resemble the Peak of Derbyshire, of which they relate abundance of extravagant stories; as of a shepherd's losing himself, and wandering eight days about it, after which he returned, and gave a monstrous account of the subterranean inhabitants. The bones of men of an uncommon size, much beyond the present generation, also are said to have been found here. Near the monastery of Michaelstein are two large craggy rocks opposite to each other, which naturally represent two monks in their habits, as exactly as if they had been carved by the best artists. And all over this cold barren country are forts and castles, on the top of every craggy inaccessible rock, built by the ancients, as if they had something better worth the defending than such a desert as the Hercynian forest, the only one whereof that is thought habitable by the present generation is the palace of Blankenburg, where the Duke of Wolfenbüttele usually resides in the hunting season; the rest are only so many venerable remains of antiquity, as the old castle of Reinstein, so called from being hewn out of one entire rock or stone, Heimburg, Hartingow, Gerdsdorf, Lawenburg, Homburg, and many more. With this country of Blankenburg geographers usually describe the Imperial city of Goslar, though independent of the Dukes of Brunswick, because it is surrounded by their territories. It was built by the Emperor HENRY I. on the river Gose, from whence it takes its name. The citizens enjoy large privileges, and in all Imperial mandates and letters directed to them, are stiled *Nobile Membrum Imperii*. The inhabitants are all miners, and their employment is either in digging, cleansing, tempering, or vending of metals and minerals.

As to the pedigree of the Dukes of Brunswick, it will be found in the appendix to this work with those of the other German Princes; I shall go no higher here than their marrying into the

Palatine family, only observe that they are said to be descended from the family of the Guelphs or Whelps, who were anciently Dukes both of Bavaria and Saxony, of whose original the following relation is given us by Dr. NICHOLSON, and almost every other writer that has treated of Germany, as follows: "JERMINTRUDIS, Countess of Altorf in Suabia, having accused a poor woman of adultery, and caused her to be severely punished for having had twelve children at a birth, was not long after delivered of the same number her self, and all of them sons: her husband Count ISENERED being absent at that time, she commanded the nurse to kill eleven of them, fearing she might undergo the same scandal she had thrown on the poor woman above mentioned. But the nurse, as she was going out to execute the Lady's order, was met by the Count returning home, who enquiring what she carried in her apron, answered, Woelpen (Whelps), and the Count opening her apron to see them, she confessed the whole matter; whereupon he took them from her, and obliging the woman to be secret, put them all out to nurse. At the end of six years the Count invited his friends to an entertainment, when he took an opportunity of introducing his eleven sons to their mother, clothed all alike; who being conscious of what she had done, confessed her fault, and was restored to her husband's favour." And from the eldest of these Whelps, for so the Count ordered them to be named, in memory of the nurse's answer to him, descended HENRY GUELPH, Earl of Altorf, whom the Emperor CONRAD II. made Duke of Bavaria; and the dominions of this family were afterwards much enlarged by the accession of Lower Saxony. I do not, I must confess, give much credit to this account of the Countess of Altorf's being delivered of twelve children at a birth, but as it is in the mouth of every traveller who has visited this country, there was no avoiding the mentioning of it.

The present Elector of Brunswick, GEORGE II. King of Great Britain, is grandson of Duke ERNEST AUGUSTUS, who succeeded his brother JOHN FREDERICK, Bishop of Osnabrug, in this duchy anno 1679. By the Princess SOPHIA, daughter of FREDERICK V. Elector Palatine, and of the Princess ELIZABETH, daughter to JAMES I. King of Great Britain; Duke ERNEST had issue, GEORGE LEWIS, the late Elector and King of Great Britain, born anno 1660, who succeeded his father in the duchy of Brunswick anno 1698, and having married SOPHIA DOROTHY, the only daughter of his uncle GEORGE WILLIAM Duke of Lunenburg Zell, that duchy devolved upon him anno 1705.

In the year 1692, the Emperor LEOPOLD created Duke ERNEST, grandfather of his present British Majesty, the ninth Elector, and Arch-standard-bearer of the Empire; but the Duke of Wirtemberg laying claim to the office of Standard-bearer, the Emperor JOSEPH afterwards conferred the title of Arch-treasurer on the Elector of Brunswick. The college of Princes at first protested against the Duke of Brunswick's being made a ninth Elector, and it was the 30th of June 1708, before the Diet agreed to the establishment of this ninth electorate, in the person of GEORGE LEWIS late King of Great Britain, and son of Duke ERNEST, the first Elector of this house.

Three branches of the house of Brunswick, Zell, Hanover and Wolfenbüttele.

His late Majesty GEORGE Elector of Brunswick, died at Osnabrug, in the night of the 10th of June 1727, leaving issue only GEORGE AUGUSTUS, the present Elector and King of Great Britain, and SOPHIA DOROTHY, the present Queen of Prussia, whom he had by the Princess SOPHIA DOROTHY, daughter and heiress to the Duke of Zell, above mentioned. This marriage however, Monsieur PASCHOUD Chaplain to the Earl of Albemarle, in his Geographical Treatise, pag. 86, informs us, was disannulled by the consistory of Hanover, December 28, 1694; and the Electress afterwards resided at the castle of Alen, separate from his late Majesty, till her death. His present Majesty GEORGE AUGUSTUS was born October 30, 1683; and on September 2, 1705, was married to the present Queen CAROLINE, daughter of JOHN-FREDERICK, Margrave of Anspach. This Princess was born March 1, 1683, by whom his Majesty hath issue now living, 1. Prince FREDERICK-LEWIS, born the 19th of January, 1706. 2. The Princess ANNE, born 22 Octob. 1709. 3. The Princess AMELIA-SOPHIA ELEONORA, born the 30th of May, 1711. 4. The Princess CAROLINA-ELIZABETH, born the 30th of May, 1713. And, 5. Prince WILLIAM-AUGUSTUS, born at Leicester-House on the 15th of April, 1721. The Princess SOPHIA-DOROTHY, the present Queen of Prussia, was born the 16th of March, 1687, and married to FREDERICK II, King of Prussia, the 28th of November 1706, by whom she hath had issue, 1. The Princess FREDERICA-AUGUSTA-SOPHIA, born anno 1709. 2. CHARLES-FREDERICK, Prince of Prussia and Orange, born anno 1712. 3. The Princess LOUISA, born anno 1714. His late Majesty King GEORGE had also several brothers, most of whom died in the bed of honour in defence of the Empire; but ERNEST-AUGUSTUS, the present Duke of York, and Bishop of Osnabrug, born the 17th of September 1674, is still living.

The arms of the Duke of Brunswick are, Gules, two leopards, Or, languid, for Brunswick; Gules, a horse Argent, for Lower Saxony; Or, a lion rampant Azure, strewn with hearts Gules, for Lunenburg; Argent, a branch of deers horns, for Reinstein; and the like Sable, for Blankenburg; and for Bremen, the arms are in a field Gules, a key Argent, as shew, says my author, that they can open or shut the passage of the river Weser as they see fit.

The house of Brunswick was till lately divided into three branches, viz. those of Zell, Wolfenbüttele and Hanover; Zell and Hanover we have seen united in the person of his late Majesty King GEORGE, but that of Wolfenbüttele still remains separate and distinct, and is frequently of a different interest from that of Hanover; particularly at the breaking out of the war in the year 1702, we find the two Dukes of Wolfenbüttele, RODOLPHUS and ANTHONY ULRICK (being brothers, and governing that duchy jointly) to take the part of France against the confederates; whereupon the Dukes of Zell and Hanover marched against them, and excluded Duke ULRICK, who refused to abandon the French, from his share of the regency, and brought over Duke RODOLPH to the allies, leaving him in the sole possession of the territories of Wolfenbüttele. But RODOLPH dying two or three years after, Duke ANTHONY ULRICK was restored to the whole dominions of Wolfenbüttele; and in the year

VOL. II.

1709, he renounced the Protestant religion, and was reconciled to the church of Rome, though he was before esteemed the most steady to his principles of all the Lutheran Princes, and the most learned amongst them. It was by his influence also that his grand-daughter, the present Empress, daughter to Prince LEWIS of Wolfenbüttele, his second son, was prevailed on to turn Roman Catholic.

But as Duke ULRICK wanted neither sense, learning, or experience, and was exceedingly well versed in the controversial points between the Lutherans and the church of Rome, I am very far from thinking he was brought over to the Roman communion by the strength of their arguments. It is certain there were other very strong inducements to draw him to that side, namely, interest and ambition. He had formerly been deposed by a powerful relation, and seems to have been apprehensive of the like treatment again, which he could not take a more effectual way to prevent than by marrying his grand-daughter to the then King of Spain, brother and heir to the Emperor JOSEPH; he might expect also by this means, his posterity would one day succeed to the Imperial throne. The court of Wolfenbüttele have indeed this last year entered into an alliance with that of Britain, a pension of twenty-five thousand pounds per annum must have a mighty influence on a little German Prince; but can it be supposed however he will totally abandon the Emperor's interest, if things should be brought to an extremity? Britain has better friends surely than those she purchases, or it would be easy to foretel her fate.

#### *The Elector of Hanover, King of Great Britain.*

VIII. GEORGE-AUGUSTUS, born the 30th of October 1683, was created Prince of Wales in 1714. Elector of Hanover and King of Great-Britain, the 11th of June 1727. The 22d of August 1705, he married CAROLINA-WILHELMINA-DOROTHEA, born the first of March 1683, daughter to JOHN-FREDERICK, Margrave of Brandenburg-Anspach, and ERDMUTH-LOUISA, daughter to GEORGE, Duke of Sax-Eisenach, and of JANETT, Countess of Sayn. Their children are:

1. FREDERICK-LOUIS, born the 19th of January 1707, came to England in December 1728. On April the 27th 1736, he married Augusta, who was born the 17th of November 1719. She is sister to the reigning Duke of Sax-Gotha.

2. ANNE, born the 22d of October 1709, married the 14th of March 1734, WILLIAM-CHARLES-FRIZO, Prince of Nassau-Dietz, or Orange. December 7, 1736, she was delivered of a Princess who died in the birth.

AMELIA-SOPHIA-LEONORA, born the 30th of June 1711.

4. CAROLINE-ELIZABETH, born the 13th of May 1713.

5. A Prince born the 8th of November 1716. He died soon after.

6. GEORGE-WILLIAM, born the 2d of November 1717. He died the 5th of February the year following.

7. WILLIAM-AUGUSTUS, Duke of Cumberland, was born the 14th of April 1721.

8. MARY, born the 27th of February 1723.

9. LOUISA, born the 4th of December 1724.

Duke ULRICK of Wolfenbüttele turns Papist.

As does the present Empress his grand-daughter.

Elector of Hanover.

CHAP.  
XV.  
Brunswick and  
Hanover.

At the coronation of the Emperor, this Elector carries the standard: he is arch-treasurer of the empire, a tutelar honour. The electorate is attached to the duchies of Hanover and Zell, which, by the King's mother, are both united in his person.

His revenue may amount to about 400,000 l. per annum, a sum far exceeding the current charges of state; especially now that there is no court kept at Hanover.

In the year 1692, the King's grandfather had fourteen thousand regular troops on foot. Now, that the estates of the electorate are larger by more than one half, by the addition of Lunenburg and Bremen, his Majesty may raise here an army of betwixt thirty and forty thousand men, without greatly burdening the subject. In the year 1729, he passed in review a body of nineteen thousand eight hundred and ninety men, and in September 1735, that number was augmented to twenty-two thousand regular troops.

*The town of Hanover further described, by baron Pollnitz.*

Hanover.

Hanover is situated in 52 degrees 30 minutes north latitude, and 9 degrees 40 minutes east longitude. The river Leine divides it into the old and new towns, which are both encompassed with ramparts that scarce deserve the name. There is nothing very extraordinary in the palace, or castle, which is rather commodious than magnificent; and the town of Hanover, generally speaking, is but ill-built. The most remarkable structure in it is the Roman catholick church, which was granted to those of that communion by ERNEST-AUGUSTUS of Brunswick-Lunenburg-Hanover; that being one of the conditions, which the Emperor LEOPOLD demanded of him, when he honoured him with the electoral dignity. That Prince, moreover, engaged to admit of an apostolical vicar in his dominions, and to give him leave to reside at Hanover; as SPIGA, who lately died at Francfort, did for many years. Divine service is performed in this church as regularly as in a cathedral, and they who officiate in it are missionaries. The number of catholics is very considerable, but few persons of quality are of that communion, the nobility being all Lutherans.

When his Majesty King GEORGE II. sent for the Prince of Wales to England, he ordered the courtiers to continue their assemblies at the castle, and that his table should always be served in the same manner, as if he himself was at Hanover. His Majesty keeps up the same number of gentlemen, pages, domesticks, and guards, and the same of horses, grooms, &c. in his stables. There is a French comedy acted three times a week at the palace, to which all people are admitted gratis; and there are frequently concerts, balls and assemblies.

Though the sovereign is absent, yet here are not wanting amusements, there being many good families, and a number of amiable persons.

The lovely countess of Delitz, niece to the Duchess of Kendal, could not fail of adorers, even in the most barbarous countries; for the charms of her mind are not inferior to the beauty, sweetness, and gracefulness of her person.

No lady can have a better temper or behaviour than the baroness DE BULAU, daughter-

in-law to the marshal, and daughter to the late countess of Platen: her husband is a worthy gentleman, and keeps a very good house.

The count de Platen, hereditary post-master general, is one of the richest subjects in the electorate, and one that spends the most money.

The situation of Hanover is very agreeable, and in its neighbourhood are several pretty seats. Among these, Herenhausen (the house of the lord, or the master) is a castle, which was built by order of the Elector ERNEST-AUGUSTUS, the King's grandfather. This house, to which a strait walk leads, bears no proportion to the magnificence of its gardens, which are undeniably some of the finest in all Europe; being particularly adorned with water-works, that throw the water up much higher than the famous fountain at St. Cloud, which was always looked upon as the most considerable of the kind.

Between Hanover and Herenhausen there are two fine seats, of which one is called Fantasie, i. e. the Whim; and the other Monbrillant, or Mount-pleasant. They were built by two sisters-in-law, viz. madam DE KILMANSECK (who after her husband's death, was by King GEORGE I. created countess of Arlington) and the countess of Platen. These two houses are a proof of the good taste of those ladies, who were really an honour to Germany for their beauty, good sense, manners, and genius. They both died in their prime, a little time after one another; my lady Arlington in England, and the countess of Platen at Hanover, to which she was not only an ornament, but a lustre, according to the baron's notions.

## BREMEN and VERDEN.

THE duchy of Bremen is bounded by the river Elbe towards the north; by the territories of Lunenburg towards the east; by the river Weser on the south-west; and by the German Ocean towards the west; and is usually subdivided into, 1. Verden, situate on the confines of Lunenburg. 2. Bremen Proper, containing the territories of the city of Bremen. 3. Wurftland, situate on the sea-coast from the Weser to the mouth of the Elbe. 4. Hadelia, near the mouth of the Elbe, where stand the forts of Ritzenbottle and New Werck, subject to the city of Hamburg: another part of it, in which is the castle and town of Atterndorf, belongs to the duchy of Sax-Lawenburg. 5. Kedingerland, in which stands the town of Slade: and lastly, Altland or Oldland. The country of Bremen in general is either a barren sand, or a morass; though there are some fruitful meadows upon the banks of the Weser and the Elbe. It was anciently subject to the Archbishop of Bremen; but being conquered by the Swede in his German wars, was confirmed to him by the treaty of Westphalia anno 1648, and the archbishoprick converted into a dukedom. These territories the Danes acquired the possession of in the late war; and by a treaty between Denmark and Brunswick, transferred them to that Elector in consideration of a sum of money: they were afterwards confirmed to the house of Brunswick by Sweden in the year 1720. (as hath been already related in the history of Denmark) Sweden being then under the utmost consternation from the invasion and ravages of the Muscovites,

**Bremen and Verden.**  
 Muscovites, and could only be relieved by the British fleet, which induced them to consent to the dismembering this duchy from their other dominions. Whether they will ever revive their claim to Bremen, time must shew; but I am sorry to observe we are already obliged to purchase their friendship at a very high rate.

**Bremen city.**  
 The chief towns of this duchy are, 1. Bremen, situate in a plain on the river Weser, seventy miles north-west of Zell, and as many south-west of Hamburg, in the latitude of fifty-three degrees twenty minutes: it is strong by nature as well as art, the whole country round it being easily laid under water by cutting the banks of the Weser, which annually, like the Nile, it is said, overflows its banks, and enriches the sandy soil about it. The harbour is not fit to receive large vessels, the floods throwing up great banks of sand, which render the navigation to Bremen very dangerous; for which reason the city hath a custom-house six miles below it, where ships are unloaded, and the merchandize brought up in flat-bottomed vessels. Before the Swedes took possession of the country, Bremen was a free Imperial city, and one of the chief of the Hans-Towns, being very considerable for its trade; but the Swedes besieged it, and deprived them of many of their ancient privileges, which has probably occasioned their trade to decline. The citizens are generally Calvinists, but the Swedes reserved the cathedral church for the Lutheran worship when they were in possession of it. In its flourishing state it was governed by its own magistrates, viz. four Burgomasters, and twenty-four Rathera, or Senators, who were divided into four classes, one Burgomaster and six Rathera being appointed to govern each quarter of the city. And here was one of the most celebrated universities in Germany. The commodities exported from Bremen are timber, wool and minerals; they have also an excellent way of dressing leather and cloth, which are therefore sent from other countries to be manufactured here. The exporting fish caught in the sea and Weser, is another branch of their trade: within the very walls of the town, it is said, many thousands of salmon and lampreys are caught; and being smoke-dried or pickled, are exported abroad.

**Verden.**  
 2. Verden, formerly a Bishop's See, but secularized by the treaty of Westphalia, and made part of the new duchy of Bremen, stands about thirty miles to the eastward of Bremen, upon the river Aller, which falls into the Weser. It has had the misfortune to suffer pretty much in the German wars; and is not at present thought considerable enough by travellers to deserve a particular description, though it be the capital of a small territory which lies round about it. 3. Stade, anciently one of the Hans-Towns, situate on the river Zwinga near the Elbe, in a good air, about fifty miles north-east of Bremen, and twenty-four west of Hamburg: formerly reckoned a very strong place, but was notwithstanding taken by the Swedes in one day, anno 1645. It has a fort at the conjunction of the two rivers Zwinga and Elbe, which form a good harbour, and will admit of larger ships than that of Hamburg; and therefore, according to some, stands more convenient for the German trade; and since Britain and Bremen are under one sovereign, some projectors have proposed the establishing a trade between them, which would certainly be an advantage to his Majesty's German dominions, if it could be effected, whatever it may be to Britain.

But Harburg in Lunenburg, which stands close to the Elbe over against Hamburg, others have thought would make a more convenient mart: however, unless other nations could be brought into this project, it might be difficult to turn the current of trade from Hamburg; and the English would give an advantage to their rivals in commerce by attempting it, if they should not succeed. 4. Buxtehude, situate on the river Esse near the Elbe, fifteen miles west of Hamburg, and as many east from Stade, in one of the most pleasant and fruitful countries in Germany, supplying Hamburg with great part of its provisions. 5. Rottenburg, a little city on the river Wien, fifteen miles north of Verden; a place of some trade, and well inhabited. 6. Ottersburg, a little fortress, where the Archbishop had a palace, sixteen miles east of Bremen. 7. Rutzenbottle, a strong fortress at the mouth of the Elbe, belonging to the Hamburgers. And, 8. Bremerfurd, a walled town on the road from Bremen to Stade.

And thus I have taken a view of the circle of Lower Saxony, comprehending the duchies of Mecklenburg, Lawenburg, Holstein, Brunswick, Lunenburg, Bremen and Verden, (as to the bishoprick of Hildesheim, it is considered in another place) of which Lawenburg, the best part of Brunswick, with Lunenburg, Bremen and Verden, are now subject to his Majesty King GEORGE II. who has the absolute dominion of them. And as these countries are contiguous and have the advantage of lying upon the German Ocean, and of being washed by the rivers Elbe and Weser, the navigation of which they command; his German territories may be looked upon to be as considerable as those of any Prince in Germany, especially in point of trade, which the ministry on that side the water, it is presumed, will take care to improve to the best advantage, as the British do theirs: this must in time render his Majesty's German, as well as British subjects, a rich and flourishing people. We need only imitate our neighbours the Dutch in encouraging and supporting our merchants, and improving our fisheries, and we shall never want a brisk trade, or mariners to man the royal fleet. On the contrary, should we indolently lose all the advantages of our situation, and let our neighbours run away with every valuable branch of commerce; we shall soon become a contemptible people both in peace and war, and poverty overspread the face of the nation.

*Treats of the circle of Suabia, or Suevia; and therein of the duchy of Wirtemberg; the marquisate of Baden; the Imperial cities of Augsburg, Ulm, &c.*

**C H A P. XVI.**  
**Suabia circle.**  
**The situation and extent.**  
 SUABIA, Schwaben, or Suevia, is bounded by Franconia on the north, the duchy of Bavaria on the east, the county of Tyrol, and the mountains of Switzerland on the south, and by Alsatia on the west: being about an hundred and thirty miles from east to west, and an hundred and ten from north to south. But when the Romans were first acquainted with this part of the world, the bounds of Suevia, Dr. NICHOLSON

CHOLSON observes, were much larger; for it extended northward beyond the Baltick Sea to the utmost limits of Sweden, and westward to the German Ocean; comprehending, according to TACITUS, fifty-four different tribes of the Suevians, among which the chief were the Hermunduri, Narisci, Marcomanni, Quadi, Marisingi, Buri, Semnones, Lygii, Burgundiones, Gothones, Lemavii, or Heruli, Rugii, Carini, Longobardi, Deuringi, Cariones, Angli, Varini, Eudoses, Suardones, Nuithones, Osi, Gothini, and beyond the Baltick the Sitones and Suiones: from whence it is inferred, that Suevia and Germania were almost synonymous terms among the Romans to signify the same country; but afterwards the name of Suevi became appropriated to the Hermunduri, the most considerable of the Suevian nations, who fixed their seats in that part of Germany, now called Suabia or Schwabenland; and from a kingdom dwindled into a dukedom, after it was contracted into narrower bounds, and so continued for some ages. At present no Prince claims the whole, but it is shared among several petty sovereigns. The Dukes of Wirtemberg have a greater part than any other: the Austrian family also have considerable territories here, as well as the Elector of Bavaria, and the Marquisses of Baden, and the Imperial cities claim the remainder. And first, of the territories of the Dukes of Wirtemberg.

The duchy of Wirtemberg is bounded by the palatinate of the Rhine on the north, by the bishoprick of Augsborg on the east, by the principality of Furlenburg towards the south, and by Baden on the west, being about seventy miles in length, and about as much in breadth. The chief towns whereof are, 1. Stutgard, the capital of the duchy, and the Duke's usual residence, situate near the banks of the Neckar, forty miles east of Baden, and as many south of Heidelberg. The Duke's palace is said to be a noble structure, and the gardens about it exceeding fine; but the private houses of the citizens poor wooden buildings; the town is however much resorted to on account of its baths, famous for their healing qualities. 2. Tubingen, a well-built city, twenty miles to the southward of Stutgard, at present most remarkable for its university, but according to tradition, was once the seat of the Emperor CARACALLA, who here entertained the Germans with publick games. 3. Retling, or Retlingen, an Imperial city under the protection of the Duke of Wirtemberg, situate in a plain twelve miles south-east of Tubingen, of which I meet with no further description. 4. Hailbron; or the fountain of health, so called from the virtues of its medicinal waters: a free Imperial city, situate on the Neckar, in a pleasant fruitful country, twenty-eight miles north of Stutgard; besides which, it is said, there are in this dukedom sixty cities, an hundred and fifty great towns, six hundred and forty villages, and fourteen abbeyes; and the country in general, travellers relate, abounds in every thing that can afford profit or pleasure: vines flourish on their mountains, and their valleys are stocked with corn and cattle; the bowels of the earth are rich in mines, and their forests furnish variety of game. The title of this Prince is Duke of Wirtemberg and Teck, Count of Montbelliard, Lord of Heidenham, &c. His office in the Empire is to carry the Imperial standard, which is Or, a baton Sable pointed Argent, with a spread eagle Sable. He is also Great

Huntsman of the Empire, and joint director of the circle of Suabia, with the Bishop of Constance. The pedigree of this Prince will be found in the appendix, with those of the rest of the German Princes.

The Dukes of Wirtemberg have the privilege, it is said, that there lies no appeal from their courts to the Imperial chamber; but there is a supreme court at Tubingen, consisting of five Gentlemen, four Doctors of civil law, and four Burghers, who finally determine all controversies both civil and criminal: and a consistory of the clergy, who are Protestants, that with some lay-assessors learned in the ecclesiastical laws, determine all causes proper for their cognizance. The right of primogeniture is established in the family of Wirtemberg, as in the rest of the Empire: the younger sons having some small appennages, and the daughters portions in money. The family is divided into several branches, viz. Wirtemberg, Stutgard, Neustadt, Montbelliard, Oels, Bernstadt and Weilting, of which none have the privilege of sitting in the Imperial Diets, but the Dukes of Stutgard and Montbelliard, who are both Protestants.

The marquisate of Baden is bounded by the Palatinate of the Rhine on the north, by the Black Forest on the east, by Swisserland on the south, and by the Rhine, which divides it from Alsatia, on the west: being about ninety miles in length from north to south, but not above twenty in breadth in the widest part. The chief towns whereof are, 1. Baden, the capital of the marquisate, which takes its name from the multitude of hot baths about it, said to amount to near three hundred; situate in the latitude of forty-eight degrees, fifty minutes, about five miles from the eastern bank of the Rhine, twenty-five miles south of Heidelberg, and twenty north east of Strasburg, upon a mountainous rocky ground, which renders the streets very uneven. These baths are scalding hot, and issuing from rocks of salt alum and brimstone, taste strongly of those minerals. One of them, called the Kettle, boils and bubbles up as if it stood over a hot furnace. Among other distempers, they are famous for curing the cramp and gout, on which account there is a great resort of quality there annually from Germany during the whole summer. The only publick buildings here mentioned by travellers are, the Marquis's palace, and the castle built on an adjoining hill. 2. Durlach, situate at the foot of a mountain on the river Pfintz, twelve miles north of Baden, and twenty south of Heidelberg, and gives a title to the Marquis of Baden Durlach, whose palace far exceeds that at Baden, being admired for the magnificence of the building. The streets also are strait and regular, and the private houses stately and uniform. The library, and the coins and medals in the Marquis's cabinet are worth the viewing. 3. Stolhoffen, a little fortified town, naturally strong by its situation on a morass, lies five miles south-west of Baden, and half a league from the Rhine, famous for the lines thrown up here for the defence of the Empire. 4. Kheel, situate on the east side of the Rhine, over against Strasburg, taken by the French in the late war, but restored to the Empire by the peace of Utrecht. 5. Pfortzheim, a small city at the confluence of the rivers Ens and Neckar, twenty miles south of Durlach, called anciently *Porta Hircinia*, being the entrance of the Black Forest, part of the Hercynian wood. 6. Baden Weiller, twelve

Hockburg, Rotel, Spanheim, Sufenberg and Muhlburg, have also been places of note on account of their castles or palaces which gave titles to some ancient Princes of the Empire, and are therefore still recorded with the other titles of the Marquisses of Baden, but have nothing in them to deserve a particular description at this day: the castle of Raftat however, which stands a little to the northward of Baden, ought to be remembered on account of the peace concluded there in the year 1714.

Soil and produce of the Marquisate.

The Marquisate of Baden is a populous fruitful country, abounding in corn and wine, and venison and wild fowl are so plentiful in their forests, that it is the ordinary food of the peasants. The rivers Rhine, Ens, Wirmbz and Phintz, which water this country, also yield them plenty of fish; and they have woods of chefnuts where they feed excellent bacon-hogs. Here are also quarries of marble of all colours, and free stone, with which materials the natives build handfom houses at a small expence. They have also some agate; and export great quantities of hemp and flax, which their country produces.

Branches of the house of Baden.

The house of Baden is divided into two branches, viz. those of Baden-Baden and Baden-Dourlach. The territories of the Marquis of Baden-Baden are the upper marquisate of Baden, part of the county of Eberstein, half the county of Spanheim, the lordship of Usenburg, the earldom and castle of Guntzburg, and the fort of Khiel. The territories of the Marquis of Baden-Dourlach are the lower marquisate of Baden, the marquisate of Hochberg, the landgravate of Sufenberg, the lordships of Baden-Weiler, Rotelin, Lahr and Muhlberg. Each of their titles are the same, viz. Marquis of Baden and Hochberg, Landgrave of Sufenberg, Count of Spanheim and Eberstein, and Lord of Rotelin, Baden-Weiler, Lahr and Muhlberg. The Princes of Baden-Baden are Roman Catholics, and those of Baden-Dourlach Protestants. Their respective pedigrees and issue will be found in the appendix. I proceed next to the description of the Imperial cities and other places in the circle of Suabia which have not been treated of already.

Augsburg city.

1. Augsburg, a free Imperial city, named *Augusta Vindelicorum*, from AUGUSTUS CÆSAR, in whose reign the Romans planted a colony here amongst the Vindelini, is situate in the latitude of forty-eight degrees, twenty-four minutes, near the confines of Bavaria, at the conflux of the rivers Lech and Wardar, sixty miles south-west of Ratibon, and twenty-five south of Donawert. It is a large populous well-built city, esteemed the capital of Suabia, furnished with many noble fountains, adorned with brazen statues of ancient Heroes and Emperors, and some valuable monuments of antiquity. The cathedral, the town-hall, and the two arsenals, are magnificent buildings; and their hospitals much admired for their convenience and large endowments, particularly that built by the family of the FUGGERS, Lords of the adjacent country, which contains an hundred and six houses, making four cross streets, inhabited by poor people, who have annual pensions settled on them. The mechanicks, especially the goldsmiths of this city, are excellent artists, and their work vended in several parts of Europe. There are more Lutherans than Papists in this town, who live in a tolerable good understanding, their poor

being provided for in the same hospitals; and to avoid giving offence, it is said, the Lutherans stand with their hats off when the host passes by. There is no place where the citizens have such a variety of habits as here, which are so regulated by the magistrates that every person's quality and religion may be known by their dress. Here it was that the Protestant Princes presented their confession of faith to the Emperor CHARLES V. in the Diet held anno 1530, from thence called the Augsbuurg confession, which occasioned a civil war in the Empire that lasted some years; but it was at length agreed at a Diet held in this city in the year 1555, that the Protestants should enjoy the free exercise of their religion in the Empire. The magistracy of Augsbuurg have since been composed of about an equal number of Protestants and Papists, their senate consisting of twenty-three Roman Catholics, and twenty-two Lutherans; and their Common Council of an hundred and fifty of each; the executive power being in the Senate, and the legislative authority in both bodies. The fortifications of this town do not appear to be very strong, for the Duke of Bavaria took it in the year 1704, after a siege of thirteen days: and upon the loss of the battle of Hochstet the same year, he withdrew his garison out of the place, as not thinking it tenable, whereupon the citizens desired the confederates to take them into their protection.

The next most considerable city in Suabia, is 2. Ulm, an Imperial city also situate on the Danube, where it unites with the Iller, and first becomes navigable for considerable vessels, being about forty miles west of Augsbuurg. The town is large and populous, and regularly fortified; but what is most admired by travellers is the cathedral, not to be equalled in Germany, it is said, but by that of Strasburg. Here are abundance of exquisite mechanicks also, especially in clock-work, and the town has a brisk trade with Bavaria and Austria, from whence they receive corn, salt and iron by the Danube; exporting linen-cloth and cottons in return. The government of this city is lodged in one and forty Aldermen, chosen out of the nobility and the principal burghers; and out of the nobility they annually elect two bailiffs, who preside in their councils. The Reformation prevailed here about the year 1529, the magistrates at this day being all Lutherans, as are most of the inhabitants. The territories belonging to this city contain no less than forty bailiwicks and lordships, most of them purchased by the city of the necessitous nobility in their neighbourhood. Ulm was taken by the Duke of Bavaria in the year 1702, but he was obliged to quit it again soon after his defeat at Hochstet in the year 1704, whereby the city recovered its liberties again; but was miserably ransacked by that Duke while he was in possession of it. 3. Bibrach, another ancient Imperial city, which stands on the river Rufs, twenty miles south of Ulm, in a fruitful valley encompassed with pleasant fields and gardens; most remarkable for its hot bath, which brings a great concourse of people thither annually at the season. The magistrates are one half Protestants and the other Papists, and the inhabitants a mixture of both. 4. Bucaw, a little Imperial city, ten miles south-west of Bibrach; remarkable for its nunnery, if it may be called such, when all the nuns, except the Lady Abbess, have the liberty of marrying, and are all of noble families. This Abbess is one of those who is a Princess of the

Bibrach.

Bucaw.

CHAP. XVI. Suabia. Memminghen. Leutkirk. Kempten. Ifue. Lindaw. Bergentz. Ravenspurg. Altorf.

Empire, and has a vote in the Diet by her proxy. 5. Memminghen, a large city on the river Bach, seventeen miles south-east of Bibrach; the inhabitants a mixture of Lutherans and Papists, whose principal trade is in linen, cotton and paper, the last esteemed the best in Germany; but they come far short of the French and Hollanders in the paper manufacture. 6. Leutkirk, a little neat Imperial city, on a small river, twelve miles south-west of Memminghen, a great thoroughfare from Italy to Germany; the magistrates and people being a mixture of Lutherans and Papists. They have a tolerable good trade in linen-cloth, corn and flax; and the citizens have the privilege of digging the mines which lie about the place. 7. Kempten, one of the most ancient cities of Germany, formerly the residence of the Dukes of Suabia, made Imperial by HENRY IV. who granted them the privilege of sealing their instruments with the spread eagle of the Empire half Or, half Sable, crowned with the Imperial crown. It stands about fifteen miles south of Memminghen on the same road from Italy; and the inhabitants being generally weavers, have a good trade in linen-cloth, as they have also in salt, which is brought from Tyrol and Switzerland hither, and vended in Germany. 8. Ifue, or Eifna, situate on a little river of the same name, twelve miles to the southward of Kempten, formerly a Roman colony, as appears by an old marble inscription, purporting, that the highway between this city and Kempten was repaired by SEPTIMIUS SEVERUS and M. ANTONINUS. They have neither corn, wine or cattle in the neighbouring country, and seldom attempt to sow any thing but beans, oats, rape-seed and flax; all other necessaries are imported from Italy, or other parts of Germany. It is, however, said to be a flourishing town, and well built, having been burnt down in the last century. 9. Lindaw, an Imperial city, standing partly on the continent, and partly on an island in the lake of Constance, united by a stone bridge near three hundred paces long; remarkable for a nunnery governed by an Abbess who is a Princess of the Empire, and is Sovereign of the territories belonging to the nunnery. The nuns are all of noble families, and have the liberty of marrying. The city has a pleasant healthful situation, and by the lake and the Rhine, which runs through it, has an opportunity of importing and exporting merchandize at very easy rates. The magistrates and most of the natives are Lutherans. 10. Bergentz, or Bregentz, situate also on the lake of Constance, five miles south-east of Lindaw, formerly a great city, and still the capital of a county of the same name; but at present an inconsiderable town. 11. Ravenspurg, or Gravenpurg, twenty miles west of Leutkirk, and as much south of Bucaw; a well-built Imperial city, standing on a little river which falls into the lake of Constance. The town-hall, and some of their churches said to be handsom structures; and there is a watch-tower in the middle of the town with an inscription on it, importing, that the old tower being blown down by a whirl-wind, the watchman who stood at the top of it to give notice of the time of the day or night once in three or four hours by a trumpet, as is the custom in other German towns, received no hurt by the fall, though his wife and son were both killed. 12. Altorf, an ancient town two miles from Ravenspurg, belonging to the house of Austria at present; but formerly had an

CHAP. XVI. Suabia. Wangen. Constance. A Council held here. Three Popes at once. Wickliff, John Huss, &c. condemned by the council of Constance. Buchorn.

Earl of it's own, from whom descended the ancient Dukes of Bavaria, and the present Dukes of Brunswick; and here stood the ancient monastery and chapel of St. OSWALD, the burying place of the Guelphian family. Altorf is now the usual residence of the Emperor's Lieutenant, or High Commissioner for Suabia, who here holds a court of judicature, and receives appeals from the Imperial cities in this Circle. 13. Wangen, a small Imperial city, ten miles north-east of Lindaw, whose trade is chiefly in flax and paper. 14. Constance, or Costnitz, stiled by some the capital of the Imperial Suabia, situate on the south-west part of the lake of the same name, in the latitude of forty-seven degrees ten minutes, eight miles east of Uberlingen, and twelve west of Bucaw. The lake whereon it stands, now called Constance, or the Bodensee, was anciently named *Lacus Brigantinus*, from the city Bregentz, above mentioned, situate upon it. This is the largest lake in Germany, extending one and twenty miles in length, and eight or ten in breadth, the country bordering upon it is frequently called Hegow. The Rhine, which runs through this lake, has so strong a current, that it is said it does not mix with the waters in it. The town of Constance is well built, populous, and finely situated, but not very large: it has a brisk trade from the conveniency of water-carriage along the lake and the Rhine. It retains still some of the privileges of an Imperial city; but the Emperor took it at the reformation, and appointed them a governor, on account of their refusing, as the rest of the German cities did, to accept of the Interim, a scheme drawn up by himself, anno 1534, for reconciling the Roman Catholick and Lutheran principles. The Bishop of this place is a Prince of the Empire, and one of the directors of the Circle of Suabia, but suffragan to the Archbishop of Mentz. The Emperor SIGISMUND called a council, in the year 1414, for preventing a schism in the church, on account of three Popes pretending to the infallible chair at the same time, viz. JOHN, set up by the Italians; GREGORY, by the French; and BENEDICT, by the Spaniards; who were all summoned to attend the council: however, none but JOHN appeared; and finding an inclination in the council to make him a prisoner he fled from the city; but being apprehended at Friburg, and brought back, he was deposed, and committed to prison. The same sentence passed against the two absent pretenders; and MARTIN V. was afterwards elected Pope; in which choice the Emperor and all Christendom acquiesced. In the eighth session of this council Dr. JOHN WICKLIFF of Oxford, and his doctrines, were condemned as heretical, and his bones ordered to be dug up and burnt, forty years after his death. In the fifteenth session JOHN HUSS was condemned, and delivered over to the secular power to be burnt, though he had the Emperor's letters of safe-conduct. And the same sentence passed upon JEROME of Prague, who was likewise burnt in the same city; and the natives still shew the place to strangers who visit them. This council lasted four years, during which time it is observed, there were in this little city four Patriarchs, twenty-nine Cardinals, three hundred and forty-six Archbishops and Bishops, five hundred and sixty-four Abbots and Doctors, ten thousand secular Princes and Noblemen, four hundred and fifty common Whores, and three hundred and twenty Fiddlers. 15. Buchorn, situate on the same lake, twelve miles north-west of Lindaw, so called

from the woods of beeches near it, formerly sub-  
ject to it's own Earl, but now part of the Austrian  
dominions, and made dependent on the city of  
Uberlingen. It is a small city, but has a pretty  
good trade by means of the lake, their vessels con-  
tinually passing and repassing with merchandize  
between Suabia and Switzerland. 17. Uberlin-  
gen, a city on the Bodensea, or lake of Constance,  
twenty-seven miles north-west of Lindaw, situate  
on the top of a rock, and surrounded with vine-  
yards, whose situation seemed so pleasant to the  
ancient Dukes of Suabia, that they made it their  
usual residence. It has at present a pretty brisk  
trade, and is famous for it's mineral waters, which  
cure the stone and other distempers, and in twice  
or thrice washing take off all warts. The hospi-  
tal in this town is the best endowed of any in  
Suabia; and the people so rich, that they con-  
tribute, it is said, as much to the general charges  
of the Empire as many of the German Princes.  
18. Ratolfzell, or *Cella Ratolfi*, which communi-  
cates it's name to that part of the lake called the  
Cellar-Sea, on which it is situated, subject at this  
day to the house of Austria.

Besides the principalities and towns already men-  
tioned, I find the following are deemed part of the  
Circle of Suabia; 1. The marquissate of Burgaw,  
lying on the south side of the Danube, extending  
thirty miles in length, and as much in breadth,  
under the dominion of the house of Austria; the  
chief towns whereof are, 1. Burgaw, situate on  
the Mindel, twenty miles north-west of Augs-  
burg. 2. Gunzburg, a small city on the Danube,  
eight miles north-west of Burgaw, with a castle ad-  
joining to it, where the Imperial Governor resides.

2. The landgravate of Nellenburg, subject also  
to the Emperor, twenty-seven miles long and  
twelve broad, the chief town whereof is Nellen-  
burg, twelve miles north-west of Uberlingen.

3. The county of Hohenburg, situate between  
the duchy of Wirtemberg and the principality of  
Furstenburg, about twenty-four miles long and  
twenty broad; the chief towns whereof are Ho-  
henburg, Rotenburg, and Willengen, subject to  
the house of Austria; and three Imperial or free  
cities near the Rhine, viz. Offenburg or Offin-  
gen, Zell, and Gongenback.

4. The Brisgow, subject also to the house of  
Austria, and lies near the Rhine, between Hohen-  
burg and Furstenburg; the chief towns whereof  
are, 1. Friburg, situate on a hill near the river  
Treisem, at the entrance of the Black Forest,  
thirty miles south of Strasburg, esteemed a strong  
place, and very populous. The mechanicks here  
are expert in polishing precious stones, found in  
Lorrain and the neighbouring countries. This  
town has been more than once taken by the French  
in the late wars; but surrendered to the Impe-  
rialists again by subsequent treaties, and particu-  
larly by the treaty of Baden, anno 1714, and is  
now subject to the Emperor. 2. Brifac, usually  
called Old Brifac, to distinguish it from another  
town opposite to it on the western side of the  
Rhine, which the French built some few years  
since, giving it the name of New Brifac. The  
town of Old Brifac is situated on the top of a  
round hill, on the east side of the Rhine, thirty  
miles to the southward of Strasburg, and ten west  
of Friburg, reckoned a strong place, but taken by  
the French in the year 1703, after thirteen days  
open trenches; it was however restored to the  
Emperor by the treaty of Baden, anno 1714,  
and now remains in his possession.

The four forest towns in Suabia also belong to  
the house of Austria, and are, 1. Rheinfeild, a  
small city, having a bridge over the Rhine, twenty-  
eight miles south of Brifac, and eight to the east-  
ward of Balle in Switzerland. 2. Seckingen, in  
an island of the Rhine, eight miles east of Rhein-  
feild. 3. Laufenburg, divided into two parts by  
the Rhine, situate seven miles east of Seckingen.  
And, 4. Waldhuft, or Waldshut, situate on the  
conflux of the Schult and Rhine.

The principality of Furstenburg extends seventy  
miles in length, lying on both sides of the Danube,  
near it's source, but is very narrow; the chief  
town whereof is also named Furstenburg, situate  
on the south side of the river, twenty miles north  
of Schaffhausen in Switzerland, and thirty-five  
east of Brifac. The village of Tone Edingen,  
where the Danube rises, is situate in this county.  
The Prince of Furstenburg is a Count of the Em-  
pire, of a very ancient family.

The county of Sultz is situate on the confines  
of Zurich and Schaffhausen in Switzerland, the  
chief town whereof also is named Sultz, which  
gives the title of Count to the Prince of this  
county.

The county of Ems, which takes it's name  
from a castle near the Rhine, that gives title to a  
Count of the Empire, lies about ten miles to the  
southward of Bregentz, being about ten miles  
long, and five broad.

The county of Montfort, twelve miles long,  
and six broad, lies to the southward of Ems, on  
the confines of St. Gall and Appenzel, and gives  
the title of Count to the family of Montfort.

The county of Waldburg lies south of Raven-  
spurg, extending twenty miles in length, and  
eighteen in breadth, comprehending the lordships  
of Walfee, Wurtzback, Friedburg, Sheer, and the  
fine castle of Waldburg, which gives a title to the  
family who are Princes of it.

The county of Konigseck, which gives title to  
a Count of the ancient family of the Guelphs, lies  
to the north-west of Waldburg, the chief town  
whereof is of the same name, an open place, of  
which travellers give no further description.

The county of Kirkburg, of which the town  
of Kirkburg is the capital, gives title also to a  
Count, and lies southward of Ulm, being about  
eighteen miles long, and eight broad.

The principality of Mindelheim, situate in the  
Algow, between the bishoprick of Augsburg and  
the abbacy of Kempten, eighteen miles long, and  
ten or fifteen broad, for the breadth is various,  
now gives the title of Prince to the family of  
Marlbrough; with which the late Duke was ho-  
noured on the victory he obtained over the  
French at Hochstet, and the heir of that family  
is thereby entitled to a seat in the Imperial Diet.  
The capital of this principality, which gives it's  
name to it, is an open town, situate eighteen  
miles north of Memmingen, and twenty-five  
south of Augsburg.

The principality of Hohenzollern, which de-  
rives it's name from the castle of Zollern, is si-  
tuated between the principality of Furstenburg  
and the duchy of Wirtemberg, thirty miles in  
length, and eight or ten in breadth, governed by  
it's own Prince, who is Chamberlain of the Em-  
pire, and Vicar to the Elector of Brandenburg in  
that office. The chief places are Hechingen, Ha-  
gerlach, Sigmaringen, and the castle of Zollern;  
of which the chief is Hechingen, a small city,  
which lies between the Danube and the Neckar,  
eight miles south of Tubingen.

The principality of Oettingen lies between the marquissate of Anspach and the duchy of Newburg, and is near thirty miles long and eighteen broad, the chief places whereof are Oettingen, Allerheimb, Wallerstein, Nordlinghen, Dunkelpihel, and Gingen, the principal whereof are, 1. Oettingen, situate on the river Wernitz, fifteen miles north-west of Donawert. 2. Nordlingen, a small Imperial city, on the river Eyer, eight miles north of Blenheim, famous for two battles fought there in the years 1634 and 1646.

The county of Lowenstein lies near the river Neckar, whose Sovereign is a Count of the Palatine family.

The county of Gravenack lies between the duchy of Wirtemberg, and the principality of Hohenzollern, and gives a title to a Count of the Empire, who is Sovereign of it. The chief places in it are Eglingen, a small city near Nordlingen, and Gravenack, a large open town, defended by a castle, the usual residence of the Count.

## UPPER RHINE.

## CHAP. XVIII.

*Treats of the Circle of the Upper Rhine, comprehending the landgravates of Hesse, Wetteravia, Alsatia, and the duchy of Lorrain.*

Upper  
Rhine.Hesse  
landgra-  
vate.  
The situa-  
tion and  
extent.Air and  
soil.

Mines.

Religion.

THE Circle of the Upper Rhine is usually divided into three parts, viz. 1. The landgravates of Hesse and the Wetterau. 2. The landgravate of Alsatia. And, 3. The duchy of Lorrain.

1. Hassia, or Hesse, is bounded by Brunswick on the north; by Thuringia towards the east; by the river Maine and Franconia on the south; and by the bishopricks of Mentz and Treves, and the Palatinate of the Rhine on the west; extending about an hundred miles from east to west, and about as far from north to south.

The air of this country is cold, but healthful, and in some parts fruitful in corn and wine, especially near the rivers Rhine and Lech. In their plains also are numerous flocks of sheep, which yield the finest wool in Germany, which is bought up even by the English merchants, as equal if not preferable to their own; but great part of the country however is covered by woods and forests, especially towards the north, which are well stock'd with deer, and all manner of game: and in their mountains are found mines of copper and lead that yield a considerable profit. This country is held to be anciently the seat of the Catti, mentioned by Tacitus in the first book of his annals. The Christian religion was first planted here about the year 730, by WINEFRID, an English Saxon, who was afterwards advanced to the bishoprick of Mentz. PHILIP the Magnanimous, who succeeded to the landgravate of Hesse, anno 1509, established the reformation according to LUTHER's model; and in the year 1530, he formed a confederacy of the Protestant Princes at Smalcald, for the defence of their religion, against the Emperor CHARLES V. from the place of the treaty called the Smalcaldick league. But the Protestant Princes had but ill success in this war, the Duke of Saxony, as well as the Landgrave of Hesse, being made prisoners, and obliged to submit to such

terms as the Emperor thought fit to impose upon them. The Landgrave LEWIS, son of PHILLIP the Magnanimous, dying without issue, anno 1604, divided his territories between his two nephews MAURICE and LEWIS; and MAURICE having shewn an inclination to Calvinism, he provided by his will, that if he should endeavour any alteration of the established religion in his territories, he should be deprived of his share in them. MAURICE nevertheless, soon after his uncle's death, obliged his subjects to embrace Calvinism; whereupon LEWIS appealed to the Emperor, and procuring a decree against his brother, was put into possession of the whole landgravate; whereupon Lutheranism was again established, and continued so till AMELIA-ELIZABETH, mother and guardian to WILLIAM VI. having a great standing army, compelled the natives of Hesse to profess Calvinism again, about the year 1666, as the greatest part of this country do at present. High and Low Dutch are spoken indifferently in Hesse, occasioned by its situation between the Upper and Lower Saxony; for in the Upper Saxony High Dutch is spoken in the greatest purity, and Low Dutch generally in the other.

Hesse is divided into, 1. Hesse Proper. And, 2. Veteravia, or the Wetterau. In Hesse Proper are, 1. The landgravate of Hesse-Cassel. 2. The landgravate of Hesse-Darmstadt, and the territories belonging to the other branches of this family. 3. The county of Waldeck. 4. The territories of the abbies of Fuld and Hirschfeld. 5. The county of Solms. 6. The Imperial cities of Wetlar and Friedburg.

In Hesse Proper the chief towns are, 1. Cassel, the capital of Hassia, the seat of the Landgrave or Prince, to whom it gives title, situate on the river Fulda, in a pleasant fruitful plain, in the latitude of fifty-one degrees twenty minutes, forty miles south-east of Paderborn, and is supposed to stand in the place where DRUSUS built his *Castrum Cattorum*. It has at present four churches, the principal whereof is that of St. MARTIN, formerly the cathedral, in which are the monuments of the Landgraves, with their busts in copper and marble. The streets of this city are broad, and the market-places spacious, but most of the houses are timber buildings. The citizens have a good trade, especially of wool and woollen manufactures, and are very well supplied with provisions of all kinds. The palace, which is separated from the rest of the town, is strongly fortified, and may be called a citadel; it is admired for the many noble apartments within it, and the fine prospect it has of the adjoining country, there being no less than sixty large towns to be seen from its walls. 2. Marburg, pleasantly situated on the river Lohn, forty miles south-west of Cassel, and as many north-east of Frankfort upon the Maine, a fortified town, and defended also by a castle. Here is held the supreme court of justice for all the natives of Cassel, who may appeal from other jurisdictions to this, which consists of a President and six Assessors. Here is also a university, one of the best in Germany, founded about the year 1426. 3. Darmstadt, the capital of the landgravate of that name, and the usual residence of the Landgrave of Hesse-Darmstadt, situate on a small river, ten miles to the eastward of the Rhine, and fifteen south of Frankfort on the Main; a small, compact and well-built town, and the Landgrave's palace, a magnificent structure, surrounded with a most elegant garden; besides which, he

Prince of.

has two other country seats, about two miles distant each from Darmstadt, either of them fit to entertain a Prince. 4. The little town of Catzenellebogen, which communicates its name to a county on the banks of the Rhine, is situated ten miles east of Nassau, and twenty north-west of Mentz. The property of this town and county was long disputed between the Earls of Nassau and the Landgraves of Hesse; but it was at length surrendered by WILLIAM of Nassau to PHILIP Landgrave of Hesse, at the treaty of Passau, in consideration of sixty thousand crowns, though the family of Nassau still retain the title of Counts of Catzenellebogen. 5. Smalcald, situate on a rivulet of the same name, fifty miles south-east of Cassel, a well-built town, and considerable for the iron-mines in the neighbourhood of it, which employ vast numbers of smiths and artificers in this town, the iron ware made here being vended all over the Empire. But what has rendered this town most famous is, the congress of the Protestant Princes, held here between the years 1530 and 1538, to form a confederacy for their mutual defence against the Emperor; in which they had ill success at first, but at length procured the liberty of professing the Lutheran religion in their respective territories. 6. Schwalbach, ten miles north of Mentz, famous for its baths, which, according to the accounts of them, cure almost every distemper; at least they have obtained so great a reputation, as to draw great numbers of the German nobility and gentry hither annually at the season. From one of the springs, the streams of vitriol, sulphur, and other minerals rise with that force, that they will almost choak a person who holds his head over them; and though the waters seem to boil continually, they are so cold that the natives usually cool their wine in them in summer. At certain times it throws up its waters with that vehemency, that in a few minutes the fountain is emptied, and does not recover its usual quantity of water in some days after; which sudden evacuation is said to proceed from a violent eruption of subterraneous spirits, which sometimes burst out like a storm of wind. 7. Embs, another town famous for its baths, impregnated with vitriol, allum, iron, and sulphur, which cure the gout, shortness of breath, weaknesses in the limbs, and a multitude of other distempers. 8. Rotenburg, pleasantly situated on the river Fulda, thirty miles south-east of Cassel, considerable for its collegiate church, consisting of a Dean, and twenty Canons, richly endowed. 9. Homburg, twenty-five miles south of Cassel, and twenty to the eastward of Rotenburg. 10. Alsfeld, fifteen miles to the east of Marburg, one of the ancientest towns in Hesse; but taken notice of for little at present but its fine stadt-house.

The county of Waldeck, which geographers make a part of Hesse, is bounded on the north by the bishoprick of Paderborn; on the east and south by other provinces of Hesse; and on the west by the territories of Cologne; being about twenty-four miles in breadth, and as much in length. It is sufficiently fruitful in corn, and has wine enough for the use of the natives; some mines also they have, and plenty of sheep and venison. The chief town whereof is Waldeck, situate on the top of high hill, thirty miles to the northward of Marburg; other towns of any note in this county are Wildenburg, Corbach, and Eyenburg.

The house of Hesse is divided into two principal branches, viz. those of 1. The Landgrave of

Hesse Cassel; and 2. The Landgrave of Hesse Darmstadt.

The House of Hesse Cassel comprehends that of Hesse Rhinfield, as that of Darmstadt does that of Hesse Homburg.

The present Landgrave of Hesse Cassel, FREDERICK King of Sweden, was born the 16th of April 1676; knight of the order of the elephant and of the black eagle in 1705; made lieutenant general of the Dutch army in 1702; general of their horse 1707; generalissimo both by land and sea of the armies of the King of Sweden in 1717; Regent of the kingdom in his absence, and King of Sweden on the resignation of Queen ULRICA in 1720. He succeeded his father in the landgraviate of Hesse Cassel in 1730.

His first wife was LOUISA, daughter to the late King of Prussia, who died in 1705. His second wife was ULRICA LEONORA, Princess royal of Sweden, and sister and heiress to King CHARLES XII. of that kingdom, to whom she succeeded in 1718; but two years after she resigned the royal dignity to the Landgrave, to which the states of the kingdom agreed. They have no children; and the King has lately resigned the kingdom to the Queen again.

The Landgrave of Hesse Cassel's revenues are upwards of 120,000 l. per Annum. It is computed that he has between 40 and 50,000 men in his dominions able to bear arms. The 12,000 men we had in our pay for five years brought him in above a million of pounds.

The branches of Cassel and Homburg are Calvinists, Darmstadt Lutherans, and Rheinfelds professes the Roman catholic religion: the latter is not tolerated in the dominions of the other three Princes, except in the small principality of Hirschfeld.

The territories of the abbey of Fuld, sometimes Fuld called the country of Buchen, or Fagonia, lie to abbey and territory. the northward of Hanau, and are about thirty miles in length, esteemed a very rich country; the chief town whereof is Fuld, situate on a river of the same name, forty miles to the eastward of Marburg; here is one of the noblest monasteries in Europe, of the Benedictine Order, founded by St. BONIFACE, in the year 744, and endowed afterwards with large privileges by several Emperors. The Abbot is a Prince of the Empire, and takes place in all general Diets at the Emperor's feet; he is Lord both of the town and country about it, and Primate of all the Abbots in Germany, and depends immediately on the Pope. The great church dedicated to St. BONIFACE is esteemed a magnificent structure, and shews a great deal of the ancient architecture. They have among their antiquities three manuscripts, containing the New Testament compleat; the four Evangelists distinct, and a treatise of the Trinity, which, according to tradition, were all written by St. BONIFACE. Other towns of any note in the territory of Fulda are Hamelburg, Bruckennau and Hunfeld.

The town and monastery of Hirschfeld stand twenty miles north of Fuld upon the same river. This convent was held to be one of the noblest structures in the Empire. The territories belonging to it are about twelve miles long, and as many broad; but these, with the other revenues belonging to it, were at the reformation secularized, as it is called, and the Landgraves of Hesse enjoy them as administrators of Hirschfeld to this day: for it seems at the reformation, when any

temporal Prince seized on a bishoprick or abbey in Germany, he called himself Administrator of it: and all the Protestant Princes confederating together, procured these ecclesiastical estates to be confirmed to them by subsequent treaties with the Emperor, and the Catholick Princes of the Empire.

The county of Solms, situate on the south of Hesse Marburg, is subject to it's own Prince; the chief town whereof is of the same name, fifteen miles south-west of Marburg: the castle of Brunsfield, fifteen miles to the southward of Solms, being the usual residence of the Count. The Imperial city of Wetlar stands on the river Lohn, eighteen miles south-west of Marburg, and is remarkable for little, but the Imperial chamber's being removed hither after the French destroyed Spire; it is by some placed in Weteravia, as well as the Imperial city of Friedburg, which stands fifteen miles to the south of Wetlar, and twelve north of Francfort, at the foot of a ridge of hills, called De Hohe, a rich town of good trade; where some of the German Emperors have formerly resided. The other towns of most note in Hesse, are Ziegenheim, the capital of a little county of the same name; Hatzfeld, capital also of a county; Fritzlar, Frankenburg, Gießen, Grannenburg, Nidden, Geraw, St. Goar, Wied, Sayn, Hemburg, Runkel, Eschwege, Wilzenhausen, Suntra and Geymar.

I come next to that part of Hesse which goes under the name of Veteravia, or the Weterau, which some reckon a distinct country from Hesse, the Landgraves being Sovereigns but of very little of it. The name Weterau, is supposed to be derived from the river Wetter, which runs thro' part of the country, and it is bounded by Hesse Proper on the north; the county of Reineck on the east; by the river Maine on the south; and by the Rhine on the west: being about an hundred miles in length, and fifty in breadth. It yields both corn and wine, and is by some esteemed one of the most fruitful countries of Germany; the counties of Hanau and Nassau take up the greatest part of it. The county of Hanau is bounded on the north and east by the territories of the abbey of Fuld, and by the dominions of the house of Nassau towards the west, extending north-east from the river Maine about forty miles, and is about fifteen in breadth, and governed by it's own Earl: the chief town whereof is Hanau, pleasantly situated on the river Kuntz, ten miles to the eastward of Frankfort; the town is well-built and uniform, and has a very good trade, and the fortifications about it are after the modern way.

2. Budingen situate on the river Soam, five miles north of Hanau, a large city with a fine castle belonging to it, the capital of a county twenty miles long and eight broad, sometimes called the county of Upper Hemburg. 3. Gelnhausen, an Imperial city, twelve miles north-east of Hanau, a place of little trade at present, but before the civil wars in Germany of some reputation, being inhabited by many of the German nobility and gentry.

The county of Nassau, strictly taken, is but of small extent, but in the last age grew up into a considerable principality, by the accession of the counties of Weilburg, Idstein, Wilsbaden, Dillenburg, Beilstein, Gleiburg, Siegen, and Hadamar, which together are usually called the county of Nassau-Catzenellebogen. The several districts may be known, according to a late Writer, by their

different soils and productions. Dietz, says he, is rocky and mountainous, and yields corn, wine, and venison. The county of Westerwalt affords fat pastures, and a large breed of cattle. In Siegen and Dillenburg they have mines of iron, lead, copper, and other metals. And at Frenduburg they make the greatest part of the steel which furnishes the German Empire. The chief towns belonging to the dominions of Nassau, are, 1. Nassau-Nassovia, a little town and country, situate on the river Lohn, eight miles east of the Rhine, and twelve south-east of Coblenz, heretofore the seat of the first branch of the family of Nassau. 2. Dillenburg, which gives name to a county situate on the river Dilla, from whence it derives it's name, sixteen miles west of Marburg, defended by a castle which stands upon an adjoining hill, formerly the seat of the Counts of Dillenburg, a branch of the family of Nassau; it is a town of some trade, which consists in cattle and woollen manufactures. 3. Siegen, the capital also of a county, situate on a high rock, and regularly fortified, thirty miles north-east of Nassau, gives a title to another branch of this family; here is a university, and an academy for training up young gentlemen in martial exercises, and a little distance from the city is a very good iron-mine. 4. Herborn, two or three English miles below Dillenburg, on the same river, an university also, which has some few exhibitions for poor scholars settled on the dissolution of monasteries at the reformation: the citizens have a tolerable trade in woollen cloth, which is wrought here. 5. Beilstein, an old town, which gives name to a county, and was the inheritance of a younger branch of the family of Nassau, situate among rocks and mountains, about ten miles to the south of Herborn. 6. Dietz, pleasantly situated on the banks of the Lohn, ten miles east of Nassau, the capital also of a county. 7. Wilsbaden, the capital of a county, situate five miles north of Mentz, and twenty south-east of Nassau, not very large, but much frequented on account of it's baths. In these waters there may very sensibly be discerned by the taste four minerals, as sulphur, allom, salt, and salt-peter; the first of which is most predominant, and renders the waters as hot as any in Germany. 8. Hadamar, twenty miles north of Mentz, gives title to a Prince of the family of Nassau. The other towns mentioned by travellers in Nassau, are Idstein, Weilburg, and Hager, but of these I meet with nothing particular. Having taken a view of the towns in Hesse and Weteravia, it may be proper to enquire into the families of those Princes to whom most of them are subject, and these are the Princes of Hesse and the Princes of Nassau.

The Princes of Hesse anciently enjoyed no other title than that of Schelt-Graven, or the lowest degree of Counts; the country of Hesse being then part of the principality of Thuringia. LEWIS III. was first created Landgrave of Hesse: PHILIP the Magnanimous of this family formed the Smalcaldick league above mentioned about the year 1537, being a confederacy of all the Protestant Princes of the Empire against the Emperor CHARLES V. CHARLES, the late Landgrave of Hesse-Cassel was esteemed a very brave Prince; he was a general in the confederate army in the war between the allies and France, in the reign of WILLIAM III. between whom and the Landgrave, there seemed to be very great intimacy. This Prince was born anno 1654, and married MARY.

CHAP. XVIII. Upper Rhine. MARY-AMELIA, sister to CASIMIR late Duke of Courland, anno 1673; by whom he had issue FREDERICK, the present Landgrave of Hesse Cassel and King of Sweden, and born anno 1676, and married 1699, to SOPHIA-CHARLOTTE, daughter to the late Elector of Brandenburg; since whose death he married the Princess ULRICA ELEONORA, now Queen of Sweden, anno, 1715, and at her request was chosen King of Sweden, anno 1720, but has no issue either by his former consort or this: He is the eldest branch of the house of Hesse-Cassel, who, next to the Brandenburgers, have been the greatest patrons of Calvinism in the Empire; but upon his accession to the throne of Sweden, he was compelled by the States to renounce Calvinism, and swear to promote Lutheranism with equal zeal; and this I do not see many Princes of that persuasion scruple when there is a crown in view, tho' till interest open their eyes, they persecute the Lutherans with as much passion as they would a Papist or an infidel: the territories possessed by this Prince are the lower landgrate of Hesse, in which are Cassel Ziegenheim, and the lordship of Pless. 2. Marburg in the upper landgrate. 3. The principality of Hirschfeld. 4. Part of the county of Catzenellebogen. 5. The county of Scawenburg. 6. Smalcald in the county of Henneburg. And 7. the bailiwicks of Rottenburg and Sachsenhausen.

Hesse Darmstat. Another branch of the house of Hesse is that of the Landgrave of Hesse Darmstat, a little inferior in point of territories to that of Hesse Cassel, for the present Landgrave of Hesse Darmstat possesses, 1. the upper landgrate in which are Gießen, Butzbach, Aendorf, Battenburg, Gleunda, Blamkerstein, Frankenau, Gera, Grunburg, and Konigsburg. 2. The county of Nidda. 3. The lordship of Itter. 4. The upper part of the county of Catzenellebogen, in which lies Darmstat. And 5. the county of Dietz.

Hesse Rhinfield. A third branch of the house of Hesse is Rhinfield; this Prince possesses part of the lower county of Catzenellebogen, viz. Rhinfield, St. Goar and Gevernhausen, the bailiwicks of Rechenburg, Florstein and Braubach, with Rottenberg and it's district.

Hesse Homburg. The fourth branch of this house, is that of Hesse Homburg which possesses, 1. Homburg with it's territory. 2. Wevelingen and Helmstadt with it's dependencies. And 3. Bingham. There are still some other branches, which will be found in the pedigree of the family of Hesse in the appendix; I shall only take notice here, that the branch of Darmstat are Lutherans, and that of Rhinfield, Papists; that of Homburg, as I take it, are Lutherans; as for the eldest branch of Hesse Cassel it has been already observed, that they have been for many years zealous Calvinists till the present Prince thought fit to embrace Lutheranism, in order to mount the throne of Sweden.

Arms of Hesse. The arms of Hesse Cassel, and Hesse Darmstat are Azure a lion, part Argent part Gules, for Hesse. Or, a leopard, Gules armed and crowned, Azure for Catzenellebogen. Gules, two lions spotted like leopards languid and armed, Azure for Dietz.

The Family of Nassau. The family of Nassau is agreed to be very ancient, and some are so zealous for it's antiquity, that they relate that two brothers of this family attended Caesar in his conquest of Gaul; but however that be, credible historians give an account of one OTHO of Nassau made Earl of Guelderland in the year 1079. The late King WILLIAM

descended from another OTHO, whose son HENRY, about the year 1190, added Dillenburg, Wisbaden and Idstein, to the territories of his grandfather WALLERAN, which seems to be the ancient name of the family: Nassau was the name of the castle or palace only where the eldest branch resided. From WILLIAM WALLERAN of the branch of Dillenburg, says a late writer, came the second branch of Nassau Orange, which ended in WILLIAM III. King of England; and from him also proceeded JOHN of Nassau who established the protestant Religion in his territories, and died anno 1606, from whom descended the present Prince of Nassau Friesland, whom the late King WILLIAM left his heir; but I do not design here to give the entire pedigree of the Nassaus, which will be found amongst the rest of the German Princes in the appendix, only it may be proper just to mention the most considerable branches of it now being, which are those of Nassau Dietz, Nassau Dillenburg, Nassau Hadamar, Nassau Saarbruck, and Nassau Siegen, the last of which are Papists.

The arms of the princes of Nassau, are, 1. Azure sprinkled with billets, Or, a lion of the same languid for Nassau. 2. Or, a lion gules crowned, and languid Argent for Catzenellebogen. 3. Gules, two lions, or, leopard-wise for Dietz.

This house has formed three principal branches, those of

I. Orange, extinct in King WILLIAM III. of Great Britain.

II. Dillenburg, divided into the branches of, 1. Sigen, catholick and protestant. 2. Dillenburg. 3. Dietz, which is called Nassau Friesland, or Orange.

(4. Hadamar, extinct in 1711.)

III. Saarbruck, divided into the families of the counts of Idstein, Weilburg, Ottweiler, and Usingen.

The Prince of Nassau-Dietz, Friesland, or Orange.

WILLIAM-CHARLES-HENRY-FRISO, born the 21st of August 1711. He married ANNE, Princess Royal of Great Britain, on the 14th of March 1734. She was delivered after a long dangerous labour of a Princess, who died in the birth: the corps was presently laid on a bed of state, and ordered to rest there three days for the view of the people; it was afterwards carried to Delft, and there interred in the burying-place of the family.

The Prince's father was,

JOHN-WILLIAM-FRISO, born in 1687, Prince of Nassau-Dietz, Stadtholder of the two provinces of Friesland and Groningen, and one of the Dutch generals in the late war: he died in 1711. He married a daughter of the late Landgrave of Hesse-Cassel, by whom he had these two children.

1. CHARLOTTE-AMELIA, born the 2d of October 1710; in 1727, married to the hereditary Prince of Baden-Durlach. He died in 1732, leaving only one son.

2. The Prince of Orange.

I come next to describe the landgrate of Alsatia, another part of the circle of the Upper Rhine; as to the Palatinate, though part of it be deemed within this circle, yet as much the greater part is comprehended within the circle of the Lower Rhine, I choose to describe it all together when I come to that circle, rather than dismember

and ex-  
tent.

ber the territories belonging to the Palatinate. Alfatia, or Elfas, is supposed to derive its name from the river Ell, which runs through it, though SHERRINGHAM supposes this to be a part of the territories of the ancient Saxons, and to be called Edelfassen, as the richest and pleafantest country the Saxons were masters of; the fruitfulness of the soil giving some colour for this opinion. It is bounded by the county Palatine of the Rhine on the north, by the circle of Suabia, from which it is separated by the river Rhine on the east, by Swifferland on the south, and by the dutchy of Lorrain on the west; and has been contended for by the French and Germans for an age past with the utmost fury; but is now entirely under the dominion of the French. As I have described the bounds of the Brisgow, and some other territories on the east side of the Rhine, which were heretofore look'd upon as part of Alfatia; but as late treaties of peace have made the Rhine the boundary between France and the Empire, it seems much better to treat of the territories on each side of the Rhine as distinct provinces: the extent of this country from north to south is about an hundred miles, and the breadth at a medium about twenty five, tho' in some places it is less, and at others it is more than thirty.

Alfatia.

The soil is exceeding rich, producing plenty of corn and wine. Their hills are covered with chefnut groves, and afford also great quantities of copper, lead, and other minerals, and the meadows and pastures are scarcely to be equalled; add to which the agreeableness of the climate, and the temperature of the air, with the conveniency of the river Rhine, which runs the whole length of it, and it will not seem altogether unworthy of the blood and treasure which have been spent in the long wars between the Empire and France, the one to defend their possession, and the other to make a conquest of it. The whole country is usually divided into the Upper and Lower Alfatia. The chief towns in the Lower Alfatia are,

Straßburg,  
or Argen-  
toratum.

1. Straßburg, *olim Argentoratum*, pleasantly situated in the middle of a plain, at the conflux of the rivers Ill and Breusch, which a mile below fall into the Rhine, lying in the latitude of forty-eight degrees forty minutes, and near eight degrees of longitude to the eastward of London, a free Imperial city, till it was treacherously surprized by the French King in the year 1682. The trade of this place was great and flourishing, and the people enjoy'd the free exercise of their religion, which was generally Lutheran, till it fell into the hands of France; but with their liberties their trade is much declined; scarce any thing is improved of late but the fortifications, which the French have made as fine as possible, it being the most considerable frontier town they have on the side of the Empire. The town is of a large circumference, and so well built, that my author says the houses of the magistrates and merchants are fit to entertain Princes; and over the rivers which run through it are laid many handsome bridges. It is a Bishop's See, subject to the Archbishop of Mentz. Upon the reformation the Bishops and Canons were expelled, and the Roman Catholicks had only one little church left them: but when it fell into the hands of the French, Popery, with the Bishops and Canons, were restored, after they had been dispossess'd upwards of an hundred years, though, as I have been inform'd, the French do still tolerate the Protestant religion here. Travellers who pass through this city ad-

mire the contrivance of their publick granaries, store-houses, wine-cellars, stadt-house, arsenal and cathedral, the last of which is esteem'd one of the wonders of Germany, and described at large in a treatise on purpose, by Os. SCHADÆUS, anno 1617. The height of the tower is four hundred eighty-nine feet, and eight junctures of admirable workmanship, and has a pair of folding-gates of brass at the west-end; but what is most admired is the great clock, wherein is a celestial globe, with all the motions of the planets, fixed stars, &c. behind which there is a perpetual almanack, wherein the day of the month is pointed at by a statue standing by. The hours are crow'd by a cock, and afterwards struck on a bell by an Angel; not far from which stands another Angel with an hour-glass in his hand, which turns round as soon as the clock has done striking. The first quarter is struck by a child with an apple, the second by a young man with an arrow, the third by a full-aged man with a tip-staff, and the fourth by an old man with his cane. On the out-side of the church are shewn the increase and decrease of the moon, with the motion of the sun through all the signs of the zodiack, and a multitude of other curiosities, which may be seen at large in the treatise above-mention'd. An university was founded here by the Protestant magistrates about the year 1538, on which the Emperor FERDINAND II conferr'd many great privileges and immunities. A late writer observes, that the women of this place are exceeding handsome, but as remarkable for their odd fantastical dresses as for their beauty.

By the last treaty of peace at Rastat, concluded anno 1714, and by several former treaties, Straßburg is confirm'd to France by the Emperor; but then it is thereby provided that Fort Keihl, erected by the French on the other side of the Rhine, at the end of the bridge of Straßburg, shall be yielded up to the Empire; and as to the Fort of Pile, and others erected in the islands of the Rhine near Straßburg, that they should be entirely razed, and never be re-established by either party for the future, and that the navigation and use of the river Rhine should remain free and open for the subjects of either side. 2. Zabern, or Savern Elfas, so called to distinguish it from another Zabern in the Palatinate, fifteen miles north-west of Straßburg, of which I meet with no other description than that it is defended by a strong castle situate on the top of an adjoining rock, where the Bishops of Straßburg used to hold their courts. 3. Haguenau, a strong town, situate ten miles to the westward of the Rhine, and fourteen north of Straßburg, formerly a free Imperial city, but taken by the French, and since confirm'd to them by the peace of Westphalia and other subsequent treaties. 4. Fort Lewis, situate ten miles east of Haguenau, on an island in the Rhine, almost over against Baden, built by Lewis XIV, and confirm'd to him by treaties with the Emperor, particularly by the last treaty of Rastat anno 1714. 5. Weiffemburg, formerly an Imperial city, but now also subject to the French, situate on the river Lutra, ten miles west of the Rhine, and sixteen north of Haguenau. 6. Landau, situate on the Queich, ten miles north-east of Weiffemburg, on the confines of the Palatinate, and formerly reckon'd a part of it. The fortifications of this town are as fine as the nature of the ground will admit, and the consequence of possessing it esteem'd so considerable

both by France and the Empire, that it was taken and retaken five or six times during the last war, with a vast expence of blood and treasure. The French last made themselves masters of it on the 20th of August N. S. anno 1713, after about two months open trenches, the Germans being in no condition to relieve it after they had separated from their allies; and the place was confirmed to the French by the ensuing treaty of peace at Rastat. Tho' I don't doubt, if ever there should happen a rupture between France and Germany again, or the Germans should meet with a favourable conjuncture, they would endeavour the recovery not only of Landau, but of Strasburg, and all the other strong towns in Alsace; for when Princes are forced by the necessity of their affairs, as they term it, to give up and dismember part of their territories, they seem to think however that their rights can never be extinguished by such forced cessions, and make no manner of scruple of repossessing them again, whenever an opportunity offers. 7. Drusenheim, situate near the Rhine, about eight miles south-east of Haguenau, remarkable for little but the ruins of an old fort, which it is supposed Drusus built here to prevent the incursions of the Germans. The other towns of any note in Lower Alsace are, Moltzheim, Rosenheim, Benfeld and Schelstat, of which I meet with nothing particular.

Drusen-  
heim.

Colmar.

The towns in the Upper Alsace, so styled from it's lying higher up the Rhine than the other, are, 1. Colmar, once a flourishing Imperial city, but almost ruined in the wars between France and Germany, and yielded to the French by the treaty of Munster. It stands about eight miles west of Brisac, and thirty south of Strasburg; and here the French established their sovereign council for Alsace. It is supposed to have been built out of the ruins of the ancient *Argentuaris*, conquered by the Emperor GRATIAN anno 378, and afterwards destroyed by ATTILA the Hun. 2. New Brisac, a fortress erected by LEWIS XIV. on the west side of the Rhine, over against Old Brisac. 3. Murback, remarkable for it's fine abbey, at the foot of the mountains which separate Alsace from Lorraine, fourteen miles south-west of Colmar. 4. Mulhausen, an Imperial city, fifteen miles south of Colmar. 5. Hunningen, a strong fortress, built by LEWIS XIV. on the Rhine, half a league below Basil. 6. Pfird, or Ferett, a small city, the capital of the district of Suntgow, thirty miles south of Colmar, and ten west of Basil, confirmed to the French by the treaty of Westphalia. Other towns of any note in the Upper Alsace are, Keiserburg, Turchein, Munster, Eufisheim and Befort, or Betfort.

Lorrain  
Duchy.

Situation  
and extent

The duchy of Lorraine, the remaining part of the circle of the Upper Rhine, is bounded by the duchy of Luxemburg towards the north; by Alsacia, the duchy of Deuxponts, and the Palatinate on the east; by Franche Compte on the south; and by Champagne on the west; extending from forty-eight to forty-nine degrees, fifty minutes north latitude, and is upwards of an hundred miles in length, and about as much in breadth. The air of Lorraine is healthful and temperate, but the country is pretty much incumbered with mountains and forests, particularly by the mountains of Vauge, which separate it from Alsace and Burgundy, and the famous forest of Ardenne. The soil in other parts is rich and fruitful, affording plenty of corn, wine and good pasture, in their hills also are found mines of silver, copper, lead

and iron, but most iron; and their salt-springs are so numerous, that it is said the Duke draws a revenue of two hundred thousand crowns per annum from them. The principal rivers are, 1. The Maes, or Meuse. 2. The Moselle. 3. The Sar. 4. The Meurte. 5. The Soame. 6. The Selle. 7. The Voloy. And, 8. The Maidon.

Lorrain is usually divided into three parts, viz. 1. Lorrain Proper. 2. The duchy of Bar, or Bar-le-Duc. And, 3. French Lorrain and Bar, which consists chiefly in the bishopricks of Metz, Toul and Verdun.

The name of Lorrain is said to be derived from LOTHARIUS, second son of the Emperor LOTHARIUS, and formerly King of this country, from thence called *Lot-reich* by the Dutch, and *Lot-reigne* by the French, by an easy transition converted into Lorrain. It was anciently reckoned a part of Belgium, and the first inhabitants we have any account of were the *Medionatrici*, since when it has been alternately subject to France and the Empire, being sometimes reckoned a province of the one, and sometimes a province of the other; but as the Duke of Lorrain is a Prince of the Empire, and the duchy usually esteemed part of the circle of the Upper Rhine, I chuse to describe it with the rest of Germany, especially since the French have been obliged by the treaty of Ryfwick, anno 1697, to restore the greatest part of it to it's proper Sovereign.

The natives, as they lie in the neighbourhood of France, imitate the fashions of that country, and scarce speak any other language. They are naturally brave, of robust constitutions, and esteemed to have good natural parts, but more addicted to drinking than their neighbours the French, tho' not so much as some other provinces of Germany.

Lorrain Proper is subdivided into the bailiwicks of, 1. Nancy. 2. Vauge. 3. Vander-Vange. And 4. The re-united countries in the bailiwick of Nancy, the chief towns are, 1. Nancy, the capital of the whole duchy, situate in a large plain near the river Meurte, in forty-eight degrees forty-five minutes north latitude; six degrees to the eastward of London, thirty miles south of Metz and sixty to the westward of Strasburg, divided into the Old or Upper Town, and the New or Lower Town. In the Old Town is the Duke's palace, the entrance whereof is very magnificent, and leads into a noble court, surrounded with a piazza, and adorned with statues; and the gardens about it are exceeding fine. The New Town is much larger than the Old and better built: it has a handfom square, in which three large streets center, and in this part of the town are the stadthouse, the courts of justice, several good churches and monasteries, and a fine college of the Jesuits. The town was admirably well fortified after the modern way while the French were masters of it, but upon their relinquishing it at the treaty of Ryfwick, the fortifications were agreed to be demolished. It was taken by the French King, LEWIS XIII. in the year 1633, and with the rest of the duchy remained in the possession of France most part of the last century; when they made it the seat of one of their parliaments, and established a chamber of accounts, and a seneschal's court here; as in their other conquered provinces. 2. St. Nicholas, a large open town, situate on the river Meurte, six miles south-east of Nancy, whither vast crowds of pilgrims resort to pay their devotions to NICHOLAS the Saint of

the place, who according to tradition was Bishop of Myra in Lycia, and a great opposer of the Arian heresy at the council of Nice. 3. Rosiers, on the Meurte, twelve miles south-east of Nancy, considerable for the salt springs about it. 4. Chateau Salins, situate on the Selle, considerable also for its salt springs. 5. Luneville, a pleasant town, seven miles south-east of Rosiers. 6. Nomeny, on the Selle, honoured with the title of a marquise. 7. Vaudemont, an open town, the capital of a principality of the same name, usually given as an appennage to a younger son of the house of Lorraine. The other towns of most note in the bailiwick of Nancy, are, Blamont, capital of a county of the same name, Moyenneville on the river Selle, and Vezelize.

In the bailiwick of Vauge the chief towns are, 1. Mirecourt, situate on the Maïdon, not far from the foot of Mount Vauge, twenty miles and upwards south-west of Nancy. 2. Neufchâtel, situate on the Maes near the confines of Champagne. 3. Remiremont, situate on the Moselle, at the foot of Mount Vauge, between forty and fifty miles south-east of Nancy, remarkable for an abbey of ladies who have the liberty of quitting their convent and marrying, except the Lady abbess, who is vested with the temporal as well as spiritual jurisdiction of the town and country about it. All the Ladies on their admission are required to prove their nobility for four descents. The other towns of any note in the bailiwick of Vauge are, Charms, Espinal, St. Diey, Roan and Fontenay.

In the bailiwick of Vander-Vange the chief towns are, 1. Vandervange, situate on the Sar, thirty miles north-east of Metz. 2. Bitch a little town on the frontiers of Alsatia, the capital of a county of the same name.

The chief towns in the re-united country are, 1. Saverden, situate on the frontiers of Alsace, and gives a title to a county, situate between forty and fifty miles north-east of Nancy. 2. Homburg, a city and castle the capital of the county of Sarbruck, sixty miles north-east of Nancy, formerly possessed by a branch of the family of Nassau, to which it gave a title.

Ever since the year 1473, the duchy of Bar has been united to that of Lorraine, and is divided into four bailiwicks, viz. 1. Bar. 2. Baligne. 3. St. Michael, and 4. Clermont. The chief towns in the bailiwick of Bar are, 1. Bar-le-duc, the capital of the country, situate on a rising ground on the banks of the river Ornain, about forty miles west of Nancy, a handsome well-built city, with a collegiate church and seminary for students, and had a seneschal's court and chamber of accounts erected here while it was subject to the French. 2. Ligny, eight miles south-east of Bar-le-duc. 3. Commercy, situate on the Maes, the capital of a principality subject to the Prince of Lillibone of the family of Lorraine, twenty-five miles west of Nancy. 4. Damiris on the Seaux, five miles south-west of Ligny.

In the bailiwick of Bassignie the chief towns are, 1. Mothe, built upon a rock, thirty-three miles south of Nancy. And, 2. Gondrecourt, situate on the river Ornain.

In the bailiwick of St. Michael the chief towns are, 1. St. Michael, situate on the Maes, twenty-seven miles west of Nancy, remarkable for a fine monastery of the order of St. BENNET. 2. Pont-a-mousson, the capital of a marquise of the same name, situate on the Moselle, twelve miles north-

west of Nancy, an open handsome town, and has the advantage of a university, and professors in all sciences, with two considerable abbeys, and several magnificent churches. 3. Hatton le Chatel, fifteen miles north-west of Pontamousson, the capital of a small territory which has the title of a marquise.

In the bailiwick of Clermont the chief towns are, 1. Clermont, situate on the river Ayr, the capital of a county. And, 2. Varenne, situate on the same river.

In French Lorraine, which comprehends the three bishopricks of Metz, Toul and Verdun, the chief towns are, 1. Metz, the capital of French Lorraine, situate at the conflux of the Moselle and Selle, twenty-five miles north of Nancy, formerly an Imperial city, but reduced to the obedience of France anno 1552, and confirmed to the French King by the treaty of Munster anno 1648. It is a large wealthy city, and fortified after the modern way; the See of a Bishop, suffragan to the Archbishop of Triers. The cathedral is an ancient venerable pile of building, in which they have a font of porphyry one entire stone ten feet long: the town consists of sixteen parishes, seven nunneries, and several other monasteries, being about nine miles in circumference. The Protestants also had their churches formerly here, and a share in the government; but the Roman Catholic is now the established religion of the place, and the Protestants barely tolerated. There are several arches and other Roman antiquities still remaining about this city.

2. Saar-Lewis, situate twenty-five miles north-east of Metz, a strong fortress erected by Lewis XIV, anno 1680, and confirmed to him afterwards by the treaty of Ryswick.

The chief town in the bishoprick of Toul is of the same name, situate ten miles to the westward of Nancy, the Bishop whereof is suffragan to the Archbishop of Triers, and bears the title of Count. It is a large place, but has no other fortifications than a single wall. 2. Vaucouleurs, a small city on the Maes, near which stands the village of Arque, where the famous Joan of Arque, or maid of Orleans was born, who revived the drooping courage of the French when the English had almost made a conquest of their country.

Verdun, the capital of the bishoprick of the same name, is situate on the Maes, thirty miles west of Metz, whose Bishop has also the title of Count of Verdun, and Prince of the Empire. The place is tolerably well fortified.

In that part of Bar which is subject to the French the chief towns are, 1. Stenay, capital of the country, situate on the Maes, sixteen miles north-west of Verdun, the fortifications whereof have been put into a good condition since the French made themselves masters of it. And, 2. Jamets, a little fortified town situate on the frontiers of Luxembourg, between Stenay and Damvilliers.

The titles of the Duke of Lorraine are, Duke of Lorraine and Mercoeur, Duke of Calabria, Bar and Guelderland; Marquis of Pont-a-mousson and Nomeny; Count of Provence, Vaudemont, Blamont, Zutphen, Saar Werden, and Salm. His dominions are, 1. The duchy of Lorraine. 2. The duchy of Bar. 3. The marquise of Pont-a-mousson. 4. The counties of Blackburnburg, Falkenstein, Donnerberg, Clermont and Bielftein. The provostship of Kummelsberg and of Hattonsbuig, and the county of Salm.

CHAP.  
XVII.  
Upper  
Rhine

Younger  
branches  
of this fa-  
mily.  
Arms.  
The eldest  
branch of  
the fami-  
ly.

The younger branches of this family are, the Prince of Vaudemont, the Prince of Elbœuf, and the counts of Harcourt.

The arms of Lorrain are, Or a bend Gules charged with three larks Argent: but according to others, with three allierions, which are, in blazon, small birds without feet.

The last Duke of Lorrain was CHARLES LEOPOLD, born in the year 1643, who being kept out of his dominions by the French, as his brother and predecessor had been, was made General of the Emperor's forces against France and Turkey. He had such success in the Turkish war, that he raised the siege of Vienna, and recovered a vast extent of country from the infidels. He married ELEONORA-MARIA, sister to the late Emperor LEOPOLD, and widow of MICHAEL WIESNOWSKI, King of Poland; and died the 18th of April, 1690, leaving three sons, the eldest of whom, LEOPOLD-JOSEPH-CHARLES, the present Duke, had his dominions restored to him at the treaty of Ryswick, anno 1697, except what is denominated the French Lorrain and Bar above described; and the French King before he relinquished the rest, caused the fortifications of Nancy, and every other strong place belonging to the Duke to be demolished. He reserved also to himself a liberty of marching his troops thro' Lorrain to Alsace whenever he saw fit. So that the present Duke, though his country be restored him, lies entirely at the mercy of the French, and was obliged to stand neuter in the last war, whatever inclination he might have to the cause of the allies. The Duke is absolute in his dominions, unless the French think fit to control him; and tho' he be a Prince of the Empire, I do not find his country is liable to contribute to the general charges of the Empire, or that it is subject to its laws, any more than the electorates of Brandenburg and Saxony are. The religion established in this duchy is the Roman Catholick. The rest of the pedigree of the Dukes of Lorrain will be found in the appendix, with those of the other German Princes. The present Duke seems to be much caressed at the court of Vienna, and it is said one of the present Emperor's daughters is intended for him, which will entitle him to the hereditary dominions of the house of Austria, and give him a fair opportunity of standing candidate for the Imperial throne, if the Emperor should die without male issue.

## LOWER RHINE.

## CHAP. XVIII.

*Treats of the circle of the Lower Rhine, in which is comprehended the Palatinate of the Rhine, and the arch-bishopricks of Mentz, Triers and Cologne.*

CHAP.  
XVIII.  
Lower  
Rhine.

The Pala-  
tinate of  
the Rhine.  
Its situa-  
tion and ex-  
tent.

THE Palatinate of the Rhine, in which I include the bishopricks of Spire and Worms, and the duchy of Zweibruggen or Deuxponts, is bounded by the archbishopricks of Mentz and Triers on the north; by Franconia and Suabia on the east; and by Alsatia and Lorrain towards the south and west: being upwards of an hundred miles in length from the south-east to the north-west, and from fifty to seventy in breadth; stiled the Lower Palatinate, to distinguish it from the Upper and Bavarian Pa-

latinate already described. The air, the soil, and noble rivers which water this country, all contribute to render it one of the richest and pleasantest provinces of the Empire; only unhappy in being so desirable as to incite the ambition of the neighbouring powers to become masters of it; which has in the last age frequently rendered it a scene of blood and misery; most of its fine towns have been demolished, and the distressed natives driven out of the country to make room for the hungry French, or other necessitous adventurers. The hills in the Palatinate, says a late Writer, are covered with vines, which yield that rich liquor known in other parts of Europe by the name of Rhenish wine. Their valleys afford plenty of all manner of grain and fruits, and deer and other game abound in their forests. The rivers Rhine and Neckar yield them fish in abundance, and their hills want neither metals or other minerals; and they have the convenience of water-carriage, and of transporting their merchandize every way by means of their navigable rivers. The religion of the Palatinate, says Dr. NICHOLSON, has been exceedingly changed and varied since the first introducing of Lutheranism by Count FREDERICK II; for FREDERICK III set up the doctrine and discipline of JOHN CALVIN. LOUDOWICK V expelled Calvinism, and restored the doctrine of LUTHER. His son FREDERICK IV brought the Calvinists once more into play, to oblige his avaritious ministers chiefly, who proposed to raise their fortunes by sacrilegiously seizing on the tythes and glebe, and other poor remainders of the church's patrimony; by which means, Dr. HEYLIN observes, the clergy being reduced to miserable short stipends, under the name of a competency, became so contemptible and neglected by all sorts of men, that at last the church of the Palatinate was reduced to the same condition as the church of Israel was under JEROBOAM, when the priests were made out of the meanest of the people: and as a church brought into these straits was not like to be very durable, we find the Papists every day gained ground upon them till the idolatry and superstition of the church of Rome was again established, and the nobility and gentry who had seized on the lands of the church were forced to resign their ill-acquired possessions to Popish Priests and Jesuits. The Protestant religion is now scarce tolerated in the Palatinate, though the generality of the natives are of this persuasion; and what is most to be lamented is, that in every peace, that has been made the last forty years, the Protestants have given up their unhappy persecuted brethren, and consented to confirm and establish Popery in this and many other countries, where the Protestant religion was not long before triumphant.

The chief towns in the Palatinate are, 1. Heidelberg, or Eidelburga, situate in a fruitful plain on the river Neckar, at the foot of a mountain, forty miles south of Frankfort, and twelve north-east of Spire, in the latitude of forty-nine degrees twenty minutes. The name is said to be derived from a shrub resembling myrtle, called by the Germans *Heidelbeeren*, which grows on the hills about the city. It is encompassed with mountains on every side, except towards the west, which way it has a good prospect over a large pleasant plain. The town is neither large nor very populous, consisting chiefly of one handsome street, and a spacious uniform market-place. The Elector's palace, which stands on the ascent of the hill

hill Konigstul, and overlooks the town, is a magnificent fabrick; and not far from it is a fortified tower, hardly to be parallel'd for it's height in the Empire. It was formerly called *Trutzkayser*, or a defiance to the Emperor; but since the restauration of the Elector Palatine, it has obtained the name of the Star-Fort, from some new works round it in form of a star. Another curiosity which all travellers who visit this country are full of, is a monstrous wine-fat, generally called the Tun of Heidelberg, which stands in an out-house near the palace, and was built by the Elector CHARLES-LODOWICK, anno 1664, and contains two hundred tuns of English measure. Instead of hoops, it is encompassed with large trees of knee-timber, like the ribs of a ship, which have several inscriptions painted and carved upon them, and are supported by carved pedestals. On one side of the vessel there is a handsom stair-case, leading to the top, into a gallery set round with ballisters, three and forty steps from the ground. Nor is this the only town in Germany, as has been observed already, where we meet with tuns, or wine-fats, of an uncommon size, carved and gilded, which seem to be built more for ornament than use; which I take to proceed, not only from the veneration the Germans have for the generous juice these vessels contain, but to shew that this is one of the most profitable branches of their trade in the provinces near the Rhine and Danube. The university of this city was founded by Count RUPERT, about the year 1387, and has produced many valuable men. The Elector's library which was kept in the great church dedicated to the Holy Ghost, was esteemed one of the best in Europe, both for the choice and number of books, great part of it having been composed of the libraries of the monastery of Sponheim and other religious houses, plundered at the reformation; among which were many valuable manuscripts in the Hebrew, Greek, Latin, Chaldean, Arabic, Indian, Russian, Tartarian, Italian, French, German and Bohemian languages: but as many other places had been robbed to make this glorious collection, so the Spanish and Bavarian forces at the taking of Heidelberg in the year 1622, after the unfortunate Palatine, stiled King of Bohemia, was defeated, trod under foot, and destroyed some part of them, and the rest were conveyed over the Alps to the Vatican, or to the Imperial library at Vienna. This unhappy city was also taken and plundered by the French in the year 1683, and again in the year 1692, when they almost entirely demolished it, committing the most unheard of barbarities on the miserable inhabitants; and those who survived were driven from their dwellings with their families to starve in the open fields. What could induce the French to be guilty of these cruelties I can't conceive, unless they hoped to force the Elector to abandon his allies, or to express their implacable malice to the natives, on account of their religion, most of them being Protestants.

Manheim. 2. Manheim, situate near the confluence of the Rhine and Neckar, twelve miles north-west of Heidelberg, formerly esteemed a strong town until burnt by the French in 1688, and the fortifications demolished; here the Elector lately erected a magnificent palace, and made it his usual residence. 3. Frankendal, twenty miles west of Heidelberg, once a flourishing city, but taken and burnt also by the French in the year 1689. 4. Altsheim, anciently the residence of the Elector, twenty five miles north-west of Frankendal.

5. Creutznach, a good town, situate on a hill near the river Nahe, eighteen miles north-west of Altsheim, under the joint dominion of the Elector, the Marquis of Baden, and the Prince of Simmerin. 6. Keisar Lautern, situate on the river Lautern, thirty miles south of Creutznach, a small city formerly Imperial, but now subject to the Elector. 7. Sintheim, a small city twelve miles south-east of Heidelberg, where Marshal TURENNE obtained a signal victory over the Imperialists, anno 1674. 8. Oppenheim, situate on a hill on the banks of the Rhine, formerly an Imperial town, but now subject to the Elector, about ten miles south of Mentz, destroyed also by the French in the year 1693. 9. Traerbach, a strong fortress on the Moselle, taken by the French in the year 1702, but restored to the Elector by the last peace. Other towns of any note in the Palatinate are Newstadt, Bacharach, and Eberinburg.

The bishoprick of Spire lies on both sides the Rhine, surrounded by the territories of the Elector Palatine, extending about forty miles in length from east to west, and about fifteen in breadth from north to south; the chief town whereof is Spire, an Imperial city, standing in a plain on the west side of the Rhine, where the small river Spierbach falls into it, about twelve miles south-east of Heidelberg, and eight miles north of Philipsburg; the See of a Bishop, suffragan to the Archbishop of Mentz; 'tis a large populous town, but not strong enough to sustain a siege. The French burnt it down to the ground, with a great many other places in the neighbourhood in the year 1689. Here the sovereign court of justice for the Empire, called the Imperial chamber, was held 'till removed to Wetzlar on the destruction of this place. To this court there lies an appeal from any Prince's court in the Empire, and the Electors themselves in some cases may be summoned to appear there. 2. Philipsburg, or Udenheim, a little strong town situate in a morass on the east side of the Rhine at the mouth of the river Salta, ten miles to the southward of Spire, a place frequently taken and retaken during the late wars; relinquished by the French, with the other places in the Palatinate, by the peace of Rastat. Other towns of any note in this bishoprick are Spirebach, Bruxal, Weibstat and Altrip.

The bishoprick of Worms lies also on both sides the Rhine, to the northwards of the bishoprick of Spire, being of a very small extent, viz. about eight miles in length and two in breadth, considerably lessened at the reformation, by the Elector Palatine's seizing part of the territories which belonged to it; the chief town whereof is Worms, an Imperial city on the west bank of the Rhine, twenty five miles north of Spire, a large flourishing town, 'till the French almost destroyed it in the year 1693. It is since great part of it rebuilt, but there are still, as formerly, large void spaces within the walls planted with vines, which yield two or three thousand hogheads of excellent wine annually. The inhabitants are a mixture of Papists and Lutherans, but the Papists are possessors of the cathedral and most of the churches. 2. Ladenburg, a small pleasant city, under the joint dominion of the Elector Palatine and the Bishop of Worms.

The duchy of Zweibruggen, or Deuxponts, is surrounded by other parts of the Palatinate on the east, north, and south, and bounded by Lorrain on the west, being forty miles in length from the

north-east to the south-west, and in breadth twenty five in some places, and in other places nine or ten; the chief town whereof is Deuxponts, forty miles south-west of Worms; a little well-built city, so named from the bridges over two little rivers whereon it stands. The crown of Sweden enjoyed this duchy until the death of the late King CHARLES XII; on whose death without issue, it devolved on a Prince of the Palatine family. The duchy of Deuxponts contains the five following bailiwicks, viz. 1. Zweibruggen. 2. Meizenteim. 3. Lichtemburg. 4. Newcastle. 5. Landsperg, with part of Guttenburg and Bischweiler.

Religion  
in Deux-  
ponts.

Calvinism was generally professed in the duchy of Deuxponts, 'till the Swedes became possessed of it, and then Lutheranism began to flourish; the King of Sweden giving some of the best livings and preferments to the Lutheran clergy, which created great animosities between the disciples of both persuasions: but the late King of Sweden dying without issue, and that duchy devolving upon a Roman Catholick Prince, his Protestant subjects thought fit to unite and drop their party-quarrels, lest they should give an opportunity to their common enemies the Papists, to make an advantage by them; and I find there has been several projects set on foot by the King of Prussia, the Landgrave of Hesse, and other Protestant Princes of the Empire, for a comprehension or union of the Protestants of all persuasions, that they may be a match for the Roman Catholics; but the Lutheran clergy are apprehensive that these Princes design at bottom only to establish Calvinism throughout Germany, which they look upon with almost as much detestation as they do Popery.

Simmeren  
duchy and  
town.

The duchy of Simmeren in the Palatinate was heretofore governed by it's own Prince, but is now subject to the Elector Palatine; the chief town whereof is of the same name, situate thirty miles to the westward of Mentz in the lower county of Spanheim.

Birken-  
field town  
and duchy

Birkenfield, with the territory about it, also enjoys the title of a duchy, and is situate in the upper county of Spanheim, twenty eight miles to the eastward of Triers.

Lauterach.  
Leningen,

The other towns of any note in the Palatinate are Lauterach, situate on the river Lauter, forty miles west of Worms; Leningen, capital of the county of Linage, twenty miles north-west of Spire; Rhingravestein, thirty miles north-west of Worms; Veldentz, capital of a county of the same name, twenty miles west of Simmeren; and Reipoltzkirk, the capital also of a small county thirty miles west of Worms.

Titles and  
territories  
of the  
Elector  
Palatine.

The countries which belong to the Elector Palatine, are the greatest part of the Lower Palatinate, the bailiwick of Boechelheim, the duchies of Juliers and Berg, the city of Duffeldrop, and the lordship of Ravenstein: his titles are Count Palatine of the Rhine, Arch-Steward and Elector of the holy Roman Empire, Duke of Bavaria, Juliers, Cleves and Berg, Count of Veldentz, Spanheim, Marck, Ravensperg and Meurs, Lord of Ravenstein, &c.

His Arms.

His arms for the Palatinate are, a Lion Or, drawn armed langued and crowned Or, a Lion Sable for Juliers. Gules, an Escutcheon Argent with rays of a carbuncle knotted, Or, for Cleves. Argent, a Lion Gules, armed and crowned Azure for Berg.

The Pala-  
tine fa-  
mily.

I shall here go no higher in the pedigree of the Palatine family than FREDERICK III. who

VOL. II.

succeeded to the electorate on the death of OTHO without issue, anno 1559. This FREDERICK Duke of Simmeren was descended from STEPHEN Palatine of Deuxponts or Zweibruggen; he first introduced Calvinism into the Palatinate, and dying, anno 1576, was succeeded by his son LEWIS V. who was as much devoted to Lutheranism as his father to Calvinism. FREDERICK the 4th son of LEWIS V. succeeded his father anno 1583, and dying in the year 1610, left his dominions to FREDERICK V. who married the Princess ELIZABETH, daughter of JAMES I. King of Great-Britain, who accepting the crown of Bohemia, to which the Emperor FERDINAND was before elected, he was attacked both by the Emperor and Spain; and being defeated at the battle of Prague, anno 1620, he lost not only the Bohemian crown, but was proscribed by the Emperor and the Electoral College, and deprived of all his own hereditary territories and dignities, and forced to fly for refuge with his consort the Princess ELIZABETH into Holland. The Lower Palatinate was conquered by the King of Spain, and assigned over to him; and the Upper Palatinate, with the Electoral dignity, conferred on the Duke of Bavaria, General of the Imperial forces in this war. This unfortunate Prince died at Mentz the 29th of November 1632, having been for some years subsisted with his family by the court of England. His son CHARLES-LODOWICK had the Lower Palatinate restored to him by the treaty of Westphalia; but the Upper Palatinate, with the dignity of Elector, was confirmed to the Duke of Bavaria: the Palatine, however, was made an eighth Elector, and dying the 28th of August 1680, was succeeded by his son CHARLES-LEWIS, who dying without issue, in him ended the male line of FREDERICK III. PHILIP-WILLIAM Duke of Newburg succeeded to the Lower Palatinate and the eighth Electorate, anno 1688: he descended from LEWIS the Black, brother of FREDERICK III. Duke of Simmeren, both sons of STEPHEN the younger son of RUPERT III. Emperor of Germany: he was of the Roman Catholick communion, and exceeding zealous that way, which gave his subjects of the Palatinate, who were most of them Protestants, a very gloomy prospect. He married ELIZABETH daughter of GEORGE Landgrave of Hesse, by whom he had issue the Princess ELEONORA-MAGDALENA THERESA, who was married to the Emperor LEOPOLD, anno 1676. The Palatinate being invaded by LEWIS XIV. in the year 1688, the old Prince resigned the government to his son JOSEPH, as better able to defend his territories; but the French notwithstanding the next year, anno 1689, burnt to the ground Heidelberg, Worms, Spire, Oppenheim, and Mannheim, with all the towns, villages and castles in this fine country, not sparing any thing sacred or profane, which could be demolished by fire or gunpowder, and then were forced to abandon it.

The last Elector JOHN-WILLIAM-JOSEPH-IGNATIUS, was born the 19th of April 1658, and succeeded his father the second of September 1690. In the year 1678, he married MARY-ANNE-JOSEPH, daughter to the Emperor FERDINAND III. who dying some years after, he married anno 1686, ANNE-MARY-LOUISE, daughter to COSMUS III. Great Duke of Tuscany, and left no issue by either of them; but had no less than seventeen brothers and sisters, of whom the following survived him, viz. 1. The late Em-

CHAP.  
XVIII.  
Lower  
Rhine.

CHAP.  
XVIII.  
Lower  
Rhine.

press mother. 2. Prince CHARLES-PHILIP of Newburg, the present Elector born the fourth of November 1661. 3. FRANCIS-SIGISMUND Bishop of Augsburg, born anno 1663. FRANCIS-LEWIS, Great Master of the Teutonic Order, and Elector of Triers, born anno 1664. 5. The Queen Dowager of Spain, reliet of CHARLES II. born anno 1667. 6. The Duchess of Parma, born in 1670; and, 7. The Princess AMELIA married to Prince JAMES SOBIESKI, son to JOHN King of Poland. The late Elector was generally acknowledged to be a good Prince, but too much bigotted to the Roman communion, of which he was a member; suffering his Protestant subjects to be insulted and ill used by the Roman zealots: but no Prince was more firm to the confederacy against France, or a greater sufferer on that account; and to make him some amends upon the proscription of the Duke of Bavaria, the Upper Palatinate was conferred upon him, but by the peace of Rastat, he was obliged to relinquish it again to Bavaria, being promised an equivalent for it; but I don't find any has been yet made to him or his brother and successor the present Elector CHARLES-PHILIP, who succeeded to the electorate on the 8th of June 1716, and has had three wives, viz. LOUISA-CHARLOTTE daughter of BOGISLAUS Prince of Radzevil, and widow of LEWIS Margrave of Brandenburg. 2. THERESA-CATHERINA, daughter of JOSEPH Prince of Lubomirski. 3. BENEDICTA-ERNESTA-MARIA d'ESTE, daughter of the Duke of Modena; by none of whom has he any issue living, except one daughter married to her cousin the Prince of Sultzbach; and the electoral dignity will, on the death of the present Elector, devolve on his brother the Bishop of Augsburg; but as he is an ecclesiastical person, and incapable of marrying without a dispensation, it will go next to his other brother the Archbishop and Elector of Triers; who having also taken the vow of celibacy, the Prince of Sultzbach is not unlikely to succeed to the Palatinate, being next in blood: but as this Prince has yet no issue, I find the Protestants in great hopes that the Palatinate with the electoral dignity, will devolve on the Prince of Birkenfeld, a zealous Protestant, who is next in succession to the house of Sultzbach. The court of Rome, 'tis said, is so apprehensive of this, that they have tried all imaginable ways to persuade the Elector to marry again, and not having met with success here, are endeavouring to prevail with his brothers, though ecclesiasticks, to enter into the state of matrimony: for should the Palatinate descend to a Protestant, the whole Palatinate would be in some danger of renouncing the Roman communion. Notwithstanding the present Elector is a Papist, and charged with persecuting and oppressing his Protestant subjects, it is computed that there are still five parts in seven of them of that persuasion: which leads me to give a further account of the present state of religion in the Palatinate, and of the late differences between this Prince and his subjects on that head.

The state  
of religion  
in the Pa-  
latinate.

The great church of the Holy Ghost at Heidelberg, had for many years been divided between the Papists and Calvinists; the Papists celebrated Mass in the choir, and the Calvinists heard divine service in the nave, or body of the church; but the Elector alledging that this city being the place of his residence, divine service ought to be performed in the principal church, according to the rites of that religion only, of which he was a

member; prohibited the Protestants to celebrate divine service in the church of the Holy Ghost, and actually put the Roman Catholics in the possession of the whole. Whereupon the Reformed applied themselves to the Protestant Powers to procure a redress of this grievance; at which the Elector was so exasperated, that he published a placart, requiring the magistracy to seize on and suppress the Heidelberg catechism, wherein he observed there were some questions and answers injurious to his Highness, and contrary to the decrees of the Empire, especially where the Elector's religion is represented as superstitious and idolatrous.

The Protestant Powers hereupon unanimously agreed to demand satisfaction for this infringement of the treaty of Westphalia, which established the Protestant religion in places where it was professed; and the courts of Great Britain, Prussia, the States-General, &c. each of them sent a minister to the Palatine court, to represent the injustice of this proceeding. To whom his Electoral Highness answered, that he allowed his Reformed subjects to enjoy his protection, and was far from disturbing them in their liberty of conscience, but that the 80th question and answer of the Heidelberg catechism, reflecting on the superstition and idolatry of those of his communion, could not be looked upon as a symbol or principle of religion; that it was added to that catechism in 1684, and that the rejection of that question was founded on the constitutions of the Empire, which prohibited all reflections and provocations of this nature; that the taking of the church of the Holy Ghost from the Reformed was of absolute necessity, because those of his communion had not room to celebrate mass in the choir; and that his Electoral Highness was building the Reformed another church more commodious for them; that in these two points he had done nothing contrary to the constitutions of the Empire, or the treaty of Westphalia, which his Electoral Highness would religiously observe; that he should justify himself before the Emperor and Empire, who were the only judges in things of this nature; and that he would order the other grievances of his Reformed subjects to be inquired into, and redressed in such a manner, as they should no longer have any just cause of complaint.

To this the ministers of the Protestant Powers replied, that they could not believe their reiterated representations in the name of their masters had been reported with due weight to his Electoral Highness, or his commissaries would not have treated on so weighty an affair in so trifling a manner: they agreed with them, that the Emperor and Empire are the only judges of the laws they have made; but when foreign Powers are concerned in a treaty, they also claim a right of interpreting them; that they looked upon the prohibition of the Heidelberg catechism, the seizing the church of the Holy Ghost, and several other things which had passed of late years in the Palatinate, as manifest infractions of the treaties they were obliged to maintain.

While the Protestant Princes were soliciting a redress of the grievances of the Reformed, some accidents happened which alarmed them afresh, and occasioned their being still more importunate on that head; the coach of the Dutch Minister standing before the door of the Resident of Hesse, as the Host was carrying by to a sick person, the guards which attended the Host obliged the coachman to come down and kneel; at the same time

CHAP.

Rhine.

CHAP.  
XVIII.  
Lower  
Rhine.

military execution was ordered against the shoemakers, who refused to contribute to the masses of St. CRISPIN, and the Reformed in general were forbid working on popish holidays, even in harvest-time, under great penalties; some ecclesiasticks also were turned out of their churches and possessions, on pretence of their having been built and founded by Roman Catholics, which would have served for a pretence to turn out all the rest.

The Protestants further complained, that in marriages between Protestants and Papists great hardships were put upon them; for though by the Elector's declaration, parents were permitted to educate their children in that religion, which was stipulated by contract before or after marriage, yet the Roman Catholick magistrates pretended, that they were impowered to direct the education of children as they thought fit; the popish priests (who alone seem authorized in the Palatinate to solemnize matrimony, where one of the parties is a Roman Catholick) also scrupled to marry a man of their religion, unless the Protestant bride would declare herself of their communion; and Roman Catholick husbands were severely fined, if they did not educate their daughters in the popish religion, in violation of prior contracts with their wives, sworn before publick notaries, by which they stipulated, that their wives should have the liberty to bring up their daughters in their own religion. That though by the Elector's declaration, where no matrimonial compacts are made, the children are to conform to the head of the family; children are frequently taken by force from their Protestant parents, and bred up in Roman Catholick seminaries: that Protestant burghers have been confined and imprisoned, for having their children baptized by Protestant ministers where the wife was a Papist: that other Protestants have been prosecuted for educating their children in Protestant schools, where the wife was a Papist. That notwithstanding by the Elector's declaration it is provided, that children when they come to years of discretion should have full liberty of conscience to embrace which religion they saw fit, the government never came to a determination, what should be accounted years of discretion; and parents have been treated with great severities, who have suffered their children to declare themselves Protestants at fifteen or sixteen years of age, and troopers have been sent to quarter on them at discretion, for this pretended offence, till the people have been ruined: and although the surviving father or mother are by the said declaration allowed to breed up their children in their own religion, the Protestant widow and minister have both been fined for baptizing a child in the Protestant way, and the woman afterwards obliged to carry her child to a Jesuit to be baptized with popish ceremonies. And lastly, notwithstanding most of the subjects of this country are of the Reformed religion, and endeavour to bring up their children in the liberal arts and sciences, as many of them are, in order to render them capable of preferment, and by the edict of Hall, are assured, that they shall not be excluded from preferments on account of their religion; yet the most inconsiderable places are refused them, until they will turn Roman Catholics, or marry wives of that religion, and engage to have their children bred Papists. And here, for the reader's satisfaction, I shall recite the question and answer in the Heidelberg catechism, which occasioned it's

being prohibited by the Elector, as an unmannerly reflection on his Highness, and all others of the Roman communion, viz.

“Quest. 80. What difference is there between the Lord's Supper, and the Mass of the Papists?”

“Ans. The Lord's Supper is a testimony to us, that we have full remission of all our sins, by the only sacrifice of Jesus Christ, which he himself has once fulfilled upon the cross, and that we are incorporated by the Holy Ghost in Jesus Christ, who with his real body is now in heaven, at the right hand of God the Father, and requires our worship. But the Mass of the Papists teaches, that neither the living nor the dead obtain remission of their sins by the death of Jesus Christ, unless he be again offered up daily for them by the hands of the priests. It teaches also that Jesus Christ is corporeally under the species of bread and wine, and by consequence ought to be adored. So that the Mass is at the bottom nothing less than blaspheming the only sacrifice of Jesus Christ, and a cursed idolatry.”

The Protestant Powers finding that his Electoral Highness was not to be moved to redress the grievances of his Protestant subjects, by any other means than retaliating on the Papists in their dominions, the like usage their brethren underwent in the Palatinate; the King of Prussia seized on some ecclesiastical estates in his territories, declaring with the Dutch, that they would sequester the revenues of all the Roman Catholics in their dominions, if justice was not done to the Reformed. This proceeding had so good an effect upon the Elector, that he relinquished the body of the church of the Holy Ghost, and restored the catechisms, declaring also that no person should be molested in the streets, for not kneeling when the Host passed by. But then to shew his resentment against the Heidelbergers, who had in a manner extorted these orders from him, he declared his intention of abandoning that city, and removing to Mannheim, with all the courts of justice; and accordingly laid the foundation of a new palace there, which is since finished, and become the place of his usual residence, which has very much impoverished the city of Heidelberg.

The Elector also, it seems, had ordered the bibles in the hands of the reformed to be seized, as well as the catechism, but I don't find them mentioned in the order for restoring the catechisms.

The condition of the rest of the Protestants in Germany, where the Sovereign is of the Romish communion, is much the same with those in the Palatinate; but it is said, the French allow the towns in Alsace, inhabited by Protestants, better terms than any of the Popish Princes of Germany, though they are so severe upon their Hugonots at home.

VII. CHARLES PHILIP, the late Elector, born Electoral Palatine. Octob. 24, 1661. He was at first an ecclesiastick; but afterwards took to the sword, and was made general velt-marshal of the empire, and governor of Tyrol, and succeeded his brother JOHN WILLIAM in the electorate, in 1716. He has been twice married; first to CHARLOTTE, widow of LEWIS margrave of Brandenburg, and daughter to BOGISLAUS of Radzevil, a Polish Prince. She died in 1695. Secondly, to THERESA, daughter to LUBOMIRSKY, another Polish nobleman. She died in 1712. By his first wife he has had four children, three of which died

CHAP.

Lower  
Rhine.

CHAP.  
XVIII.  
Lower  
Rhine.

died in nonage; and the fourth, to the unexpressible grief of the Elector, her father, died in 1728. having been married to the hereditary Prince of Sultzbach, who died in 1729. By his second wife he has had two children, but both died in the cradle.

The Elector Palatine formerly enjoyed the office of great master of the empire, and the fifth place in the bank of Electors; but they were deprived of those dignities, which were given to the house of Bavaria in 1623. when the Elector Palatine, King of Bohemia, was by the Emperor stript both of his crown and patrimonial estates. By the treaty of Westphalia, his son CHARLES LEWIS was restored to his estates, and the electoral dignity, and the office of great treasurer of the empire was erected in his favour. Things continued in this situation till the year 1708. when the Elector of Bavaria, having been put to the ban of the empire, the office of great master was given to the Elector Palatine; who, in exchange, yielded that of great treasurer to the new Elector of Brunswick-Lunenbourg, or Hanover: but in 1714, the Elector of Bavaria, having reconciled himself to the Emperor by the treaty of Baden, the Elector Palatine was obliged to restore to him the title of great master. This is the ground of dispute that subsists between the two electoral houses of Palatine and Hanover, for the titular office of great treasurer of Germany.

The Elector Palatine is director of three circles; of the Lower Rhine, jointly with the Elector of Mentz; of the Upper Rhine, as Prince of Simmeren, with the bishop of Worms; and of Westphalia, as Duke of Juliers, alternately with the King of Prussia, who is Duke of Cleves.

In the diets of the empire this Elector has five votes; one in the assembly of Electors, and four in those of the Princes.

The revenues of this Prince arise chiefly from the toll on the vessels that pass up and down the Danube and the Rhine; from imposts on wine, corn, &c. The countries of Juliers and Berg yield above a third; the Palatinate about one other third, and his ancient patrimonial estate of Newburg, about a fourth part of the Elector's revenue: the whole has been esteemed at about three hundred thousand pounds a year.

In time of peace, the Elector has, of standing forces, about six or seven thousand men; but during the last long war with France, he had twelve thousand regular troops on foot; which, however, could not hinder the country from being laid waste, the fortresses demolished, &c. In the duchy of Juliers there are two fortified places, viz. Juliers and Duren, and in that of Berg, Dusseldorp; and some years since, the Elector has put the fortifications of Manheim in a very good condition.

Manheim. Manheim, the present residence of the Elector Palatine, is situated in 49 degrees and 30 minutes north latitude, and eight degrees 20 minutes east longitude, between the Rhine and the Necker, in a marshy country.

It is strongly fortified, and has three fine gates, of which that of the Necker is the most magnificent, and the best adorned; in which one sees beautiful basso-relievo's, after a plan very happily executed. This gate opens towards a long and spacious street, at the end of which stands the Elector's palace, one of the largest and most substantial buildings in Europe. The situ-

ation of this palace is indeed very fine, at the end of the city, and of a very noble large street, which, like all the rest, runs in a strait line. The palace, which has a great square before it, consists of a large number of lodging rooms, with a great high pavilion in the middle, and two advanced wings, with ample pavilions at the ends; where two other very extensive wings rise on both sides, that are likewise terminated by pavilions, behind which there are other lodging rooms. The inside of the palace is formed by two great courts, which are separated by an open gallery or terrace. The apartments are adorned with fine noble floors and ceilings, and have the finest prospect in the world to Spire, Frankendahl, Worms, and all the country in general, as far as the mountains of Alsace, which consists wholly in towns and villages. All this fine fruitful country is watered by the Rhine, which passes behind the palace of Manheim, and washes its fortifications. Upon this beautiful canal are the gardens of the palace, for which there are intended two curtains and a bastion. The whole town is laid out in a most regular and charming manner; and it is, without dispute, one of the prettiest towns in Europe. It is pity the houses are not higher: the reason they alledge for it is, that Manheim is a fortified town, and that by consequence the houses ought to be low. I know not what authority there is for this, since Straßbourg, Metz, Luxembourg, and Lisle, are places of much more importance than Manheim, and yet the houses are as high there as they are in other towns.

This Prince's titles are, By the grace of God, Elector Palatine of the Rhine, great treasurer and Elector of the holy Roman empire, Duke of Bavaria, Juliers, Cleves, &c.

The remaining part of the circle of the Lower Rhine consists of the three spiritual electorates, or archbishopricks of Mentz, Triers and Cologne. These Electors have the precedence of the other six secular Electors; and of these the Elector of Mentz, Dean of the electoral college, is the chief; who by virtue of his office, appoints the time and place for a new election, on a vacancy of the Imperial throne. He is also Arch-chancellor of Germany, Guardian of the archives and matriculation, Visiter of the aulick council at Vienna, and of the chamber, or sovereign court of Spire, to whom all foreign Princes and States address themselves, who have any propositions to make to the Empire; and to him the Princes and States apply for a redress of their grievances. He is elected to the archbishoprick by twenty-four capitulary Canons of the church of Mentz, of noble extraction.

The archbishoprick of Mentz lies on the banks of the river Maine, being bounded by Veteravia, or the Weterau, on the north; by Franconia on the east; by the Palatinate on the south; and by the electorate of Triers on the west; extending in length about fifty miles from the north-west to the south-east, and about twenty in breadth; besides which tract of land, there are other territories belonging to this archbishoprick in Hesse, Thuringia, the counties of Waldeck and Veteravia, in the Palatinate, &c. The chief towns belonging to the archbishoprick of Mentz are, 1. Mentz, or Mayence, the *Moguntiacum* of the Latins, situate near the confluence of the Rhine and Maine, twenty miles west of Francfort on the Maine, fifty miles north of Spire, and twenty-

ty-five north of Worms, a very ancient city; but those who make it to be built thirteen hundred years before our Saviour, seem to have but a slender authority for their opinion: others, who look upon DRUSUS as the founder, are thought to have much more probability of their side, it being very certain that he built several fortresses on the Rhine; and a better situation could not well have been pitched upon than this, where the Maine falls into the Rhine; and here are still the ruins of a trophy erected to the memory of DRUSUS. It is a fortified town, of no great strength, but large and populous, and the publick buildings, as their churches, monasteries, and palace of the Elector, make a good appearance; the streets are generally narrow, and the private houses mean. In the cathedral are several magnificent tombs of the Electors; and the habits and ornaments in which the Elector says mass, are admired for their richness. The canopy, under which they carry the host at publick processions, is in a manner covered with pearl. Protestants are permitted to live and trade in this city, but are not allowed the publick profession of their religion. It was an Imperial city, till ADOLPHUS of Nassau, Archbishop of the place, deprived them of their privileges, about the year 1462, and his successors have ever since been absolute masters of it, as they are of the whole archbishoprick; the temporal as well as ecclesiastical jurisdiction being vested in them. Their university, founded by CHARLEMAIN about the year 800, is not in any great reputation at present. It is pretended that gun-powder was first invented here by BARTHOLDUS SCHWARTZ, a Franciscan Friar, but it has been shewn already that Friar BACON of Oxford was long before acquainted with it. They also claim the invention of printing, which I shall enquire farther into when I come to Holland, where it is also said to be first invented. 2. Bingen, pleasantly situated on the Rhine and Nahe, which here unite their streams, sixteen miles to the westward of Mentz, mentioned by TACITUS as a Roman fortress, since an Imperial city, but now subject to the Dean and Chapter of Mentz. Travellers who visit this place are full of a story of an Archbishop of this diocese, eaten up by rats, in a tower he built to defend himself against them in an island of the Rhine over-against Bingen, which they look upon as a judgment upon him for his covetousness and cruelty to the poor: but it seems to me to have too much the air of a fable to be recited at length.

Bingen.

The Elec-  
tor of  
Mentz.

1. The Elector of Mentz, PHILIP CHARLES D'ELTZ, born the 14th of October, 1665. canon of Mentz and Treves in 1677. provost of the church of Moxstadt in 1710. chosen Elector and archbishop of Mentz in 1732.

The present Elector is son of the late JAMES D'ELTZ, major in the Emperor's service, and counsellor of state to the Elector of Treves.

As the Electors of Mentz, Treves, and Cologn are ecclesiasticks, they never marry.

The brothers and sisters of the Elector of Mentz are, 1. CHARLES, chamberlain to the Elector his brother; 2. DAMIAN, canon of Treves; 3. PHILIP, knight of the Teutonic order; 4, 5, 6. JOHN, ANNE, and MARY.

He is the second person in the empire next to the Emperor, as he is high chancellor. He is moreover president of the electoral college, visitor of the aulic council, of the chamber of Spies, and all the other courts of the empire, and guardian

VOL. II.

of the archives and matricula. He crowns the Emperor. All foreign princes and states direct to him what propositions they make to the empire; and to him the princes and states of Germany make their complaints, in order to the redress of grievances. He is director of the posts of the empire.

A considerable part of this Elector's revenues arises from the toll on the rivers Rhine and Maine, as also from the tax on the excellent wines which his country produces. The Jews, who are rich here, pay an extraordinary tax. These, with other things, bring in a sum of about 100,000 l. per annum to the Prince.

The Elector of Mentz in time of war has had in arms 8000 foot and 800 horse. He is able at all times to maintain 5 or 6000 men.

He resides at Mentz, an ancient and trading town: 'twas very much embellished by the last Elector but one, and its fortifications put into so good a condition, that it may now be reckoned one of the strongest bulwarks of the empire.

His titles are, PHILIP CHARLES, by the grace of God, Archbishop of the holy see of Mentz, great chancellor in Germany, and Elector of the holy Roman empire.

There are many protestants in this Roman catholic electorate: at Mentz they are allowed to live, but have not the free exercise of their religion. Both the city of Erfurt and the university are mostly protestants.

In the Rhingau, a narrow tract of land, extending about twenty miles in length, along the banks of the Rhine, are a great many fine towns; as, 3. Elfeld, a town of some strength on the north side of the Rhine, fifteen miles west of Mentz. 4. Erbach, remarkable for its magnificent monastery, where are the tombs of the old Counts of Nassau, and some of the Archbishops of Mentz. 5. Rodesheim, famous for the growth of the best vines; and indeed the whole country of Rhingau abounds in the choicest vines, and seems but one intire city, interspersed with gardens and vineyards within its walls.

11. Ommenburg, or Amelburg, situate on the river Ohm, near Marburg in Hesse. 12. Aschaffenburg, situate on the Maine, where it is joined by the river Aschaff, forty miles east of Mentz, esteemed the strongest fortress in the Elector's dominions; here the Elector has a palace, where he frequently resides. 13. Hochst, situate on the Maine, having the privilege of taking toll of the vessels which pass up and down that river, for the use of the Elector. 14. Konigstein, a little fortified town, which gives title to a county, nineteen miles north-east of Mentz. 15. Reinech in Franconia; Steinheim, Epstein, and some other places in the same circle; Erford in Thuringia; the Bergrafs in the Lower Palatinate; the county of Lohr on the banks of the Maine; the city of Urb in Spessart, considerable for its salt-springs, and several other towns and places of less note belong

to the Electorate of Mentz. The present Elector, **LOTHARIUS-FRANCIS**, Archbishop of the holy See of Mentz, and Bishop of Bamberg, is of the house of Schonborn, born the fourth of October, 1665, and succeeded **ANSELM-FRANCIS** of Ingelheim, anno 1695. His revenues are computed to amount to an hundred thousand pounds per annum.

Triers e-  
lectorate.

The soil.

Triers ci-  
ty.

The electorate of Triers is bounded by the diocese of Cologne and the duchy of Burg towards the north; by Veteravia on the east; by Lorrain, the Palatinate, and part of Hesse towards the south; and by the Austrian Netherlands on the west, extending in length from the south-east to the north-west above fourscore miles, but of a very unequal breadth, being in some places fifty, and in others not five and twenty miles over. The face of the country, and the nature of the soil, is very different in one part from what it is in another. The south and western parts of the country are mountainous and barren, incumbered with woods and forests, the air cold, and but few towns or people to be met with, or indeed any thing but wild beasts, deer, and other game, which usually abound in such desert places. On the contrary, near the Rhine and the Moselle the country is exceeding pleasant, abounds in corn and wine, and is crowded with people. The chief towns in this electorate are, 1. Triers, or Treves, the capital city, the *Augusta Trevirorum* of the Latins, pleasantly situated on the river Moselle, in the latitude of forty-nine degrees, fifty minutes, six degrees to the eastward of London, sixty miles to the southward of Cologne, and about the same distance to the westward of Mentz. The city is of a square figure, but neither large or populous, having but four collegiate and five parish-churches, two great abbeys, and some other religious houses, with an university, which, till the late wars, was esteemed equal to most in Germany. It is encompassed with a wall and other fortifications, but not sufficient to sustain a siege. The French and the allies were alternately masters of it in the late war, as they happened to be masters of the field on this side. In the years 1704 and 1705, the allies threw up lines for the defence of the place, and erected vast magazines here, designing to have carried on the war against France through this country, where there are not so many fortified towns as in Flanders, and would probably have soon brought the war to an end, if they had kept steady to this resolution; but old **LEWIS XIV.**, apprized of the consequence of being attacked from hence, made his utmost efforts, and brought a prodigious force into the Low Countries, while the Duke of Marlborough and the grand army of the Allies were upon the Moselle, which put the Dutch into such a panick fear, that they compelled the Duke to return on a sudden to defend their frontiers, who leaving his magazines behind him, and General **D'AUBACH** with seven or eight thousand men, to defend the lines before Triers, the next intelligence he received was, that the body of troops left at Triers had abandoned the place, on the approach of the French, destroyed his magazines, and left the country to the mercy of the enemy, whereupon the French immediately took possession of Triers again; which put an end to all the schemes that had been laid for attacking France on the side of the Moselle, where their frontiers are weakest; and the Confederates carried back the war again into Flanders, where they yearly threw away thousands of brave fellows against stone-walls

to very little purpose; and the campaign of 1705 concluded with little action. This city having been frequently plundered and pillaged by the French in the late war, occasioned the removal of the principal inhabitants, and consequently a great decay of their trade. The private houses also were lately in a ruinous condition. The churches, monasteries, and the Elector's palace are esteemed magnificent buildings, though these have not altogether escaped the fury of the war. As Triers is one of the most ancient, so it was in the time of the Romans one of the most considerable cities in Europe; for here several of the Roman Emperors kept their courts, inasmuch that it acquired the name of *Roma altera*, and in the ruins of the old city are still daily found Roman coins, medals, and other antiquities; it was afterwards an Imperial city, till reduced by their Archbishop, who was formerly Metropolitan of Mentz, Cologne, Liege, Utrecht, Straßburg, Worms, and Spire; but Pope **ZACHARY** exempting these cities from his jurisdiction, he is now the least Metropolitan in Germany, having no other suffragans than the Bishops of Metz, Toul, and Verdun, which are under the dominion of the French. He is however the second Elector in the Empire, and Arch-chancellor of the Empire in France. He gives the first voice in all elections and general assemblies, and his seat is in the middle of the hall, over-against the Emperor. As the Elector of Mentz always takes the votes of the rest of the Electors, he has the privilege of voting last, of which those prelates have frequently made great advantages. 2. The second city in the electorate of Triers is Coblenz, or *Confluentia*, in a wonderful pleasant situation, at the conflux of the Rhine and the Moselle, and surrounded with vineyards, being fifty miles north-east of Triers, and about forty south-east of Cologne, of a triangular form, two of its sides being washed by the said rivers, and the third inclosed with a wall and fortifications after the modern way. The convenience of its situation has rendered it a town of good trade, especially in corn, wine, wood, and iron. The houses are well-built, and the streets uniform. The publick buildings of any note mentioned by travellers, are two great churches, some monasteries, and the palace of the Elector, who sometimes resides here. There is also a stone-bridge over the Moselle, and a bridge of boats over the Rhine at this place; and on the opposite side of the Rhine a castle on a hill, which commands the town and the passage of both rivers, and at the bottom of the same hill stands the Elector's palace, the front whereof and two large wings look towards the river: this, in the time of the Romans, it is supposed, was the station of the first legion. 3. Meyn, situate on the river Nette, fifteen miles west of Coblenz, a walled town with a castle, and gives name to a large territory about it, in which stands the little town of Munster-Meynfeld, so called to distinguish it from Munster in Westphalia. 4. Cochem, a fortified town on the Moselle, three miles north-east of Triers. 5. Saffich, the capital of a county of the same name, about a league distant from the Rhine. 6. Boppard, a town and castle situate on the Rhine, ten miles to the southward of Coblenz, formerly Imperial, but granted by the Emperor **HENRY VII** to **BALDWIN**, Archbishop of Triers, held to be one of the forts anciently erected by **DRUSUS** on the Rhine. Here the vessels which pass this river pay a toll to the Elector. 8. Engers, a handsome town upon the Rhine, seven miles north of Coblenz,

lentz, and gives name to the territory of Engers-  
faw. 9. Berncastle, a town of good trade, where  
they make great quantity of wine, pleasantly si-  
tuated on the Moselle. 10. Oberwefel, a fortified  
town, situate on the west side of the Rhine, twenty  
miles west of Coblentz. 11. Cell, or Zell, situate  
on the Moselle, thirty miles north-east of Triers, a  
town that has a good trade in wines, the product  
of the neighbouring country. 12. St. Vendel, a  
little fortified town on the confines of the Palati-  
nate. 13. Sarburg, a small fortress on the river  
Sar, eight miles south of Triers. 14. Limburg,  
situate on the Lohn, the territories whereof, great  
part of them, belong to the Langrave of Hesse.  
15. Montroyal, situate on a peninsula made by  
the Rhine, twenty miles north-east of Triers, es-  
teemed a strong place, but taken by the French  
in the war between the Confederates and France,  
and restored to the Elector again by the peace of Ryf-  
wick. Other towns of any note mentioned by geo-  
graphers, are Ulmen, eight miles north-west of Co-  
chem, St. Maximin, Phaltz, Wittlich, and Prum.

The revenues of the Elector of Triers, in time  
of peace, when his country is not liable to the  
depredations of an enemy, as it was for many years  
together before the last peace, are computed to a-  
mount to near an hundred thousand pounds per  
annum. This Elector, and other German Princes  
who lie upon the frontiers of France, and have  
neither strong towns, or forces sufficient to resist that  
formidable power, are under very dismal circum-  
stances, whenever a rupture happens between the  
Empire and that kingdom, their territories are  
sure to be made a scene of blood and rapine. It  
seems strange therefore, that these Princes have  
not already yielded up their countries to the French,  
who can better protect them, rather than remain  
subject to the Empire, whose armies are always  
so slow in their motions, and so ill provided, that  
the frontier provinces are sure to be destroyed be-  
fore their forces enter upon action, or attempt to  
oppose the enemy. But then it is to be considered  
on the other hand, that the Elector of Triers,  
and the other Electors on the frontiers, while they  
remain a part of the Empire, are Sovereign Princes,  
and have the privilege of electing the Emperor;  
besides many other great advantages, which would  
be entirely lost, if they should come under the do-  
minion of France. That crown would use them as  
she does her own nobility, and they would in a little  
time have nothing that they could call their own,  
which is the worst that can befall them, let the  
event of the war be what it will; whatever they  
may suffer during the fury of war, they have found  
by long experience is usually restored to them by a  
subsequent peace; and as the Empire is now more  
powerful than it has been for some ages past, by  
the acquisition of such large territories on the side  
of Turkey, by the addition of the Austrian Ne-  
therlands, the Milaneze, Naples and Sicily, possi-  
bly they may for the future be better secured from  
the insults of the French than they have been.  
But to return to Triers: The present Elector is  
FRANCIS-LEWIS, brother to the Elector Pala-  
tine, born the 24th of July, 1664, and elected  
into this See, anno 1716: His title is FRAN-  
CIS-LEWIS, by the grace of God Archbishop of  
Triers, Archchancellor of the Empire in France,  
(for France the reader will observe was once part  
of the Empire) Prince and Elector of the Holy  
Roman Empire, Count Palatine of the Rhine,  
Great Master of the Teutonic Order, Bishop of  
Breslaw and Worms, Administrator of the abbacy

The pre-  
sent Elec-  
tor of  
Triers, his  
title.

of Praym, Judge of the Imperial chamber of  
Wetzlar, or rather Spire, &c. The chapter of  
Triers consists of sixteen capitular Canons, who  
have the election of their Archbishop, and of  
twenty-four Domiciled; and none are admitted in-  
to the chapter, who cannot prove their nobility  
for four descents, both by father and mother.

II. FRANCIS GEORGE, count of Schoen-  
born-Puckheim, born the 4th of June 1682. ca-  
non of Cologne, Munster, and Treves, provost  
of the church of St. MAURICE in Augsburg, and  
provost of the cathedral church of Treves, was  
chosen Archbishop and Elector of Treves in 1729  
(upon the resignation of the late Elector of Mentz):  
he was also elected provost of the church of El-  
wangen, and bishop of Worms, in 1732.

This Elector is son to M. FREDERICK count  
of Schoenborn-Puckheim, counsellor of state to  
the Emperor and the Elector of Mentz; he died  
in 1717.

The electorate of Treves is comprized in the  
circle of the Lower Rhine; having the countries  
of Luxemburg on the west; Juliers and Cologne  
on the north; Lorrain and the Palatinate on the  
south; and the principality of Nassau on the east.  
It is, one part with another, about 70 miles in  
length, and 30 in breadth. On the south and  
west it is somewhat barren, woody, and hilly, a-  
bounding however with all sorts of venison; but  
on the banks of the Rhine and Moselle there grows  
good corn; also some wine, which is sharp, and  
not very rich.

The toll on the Moselle and Rhine, his own  
domain, which is considerable, and the taxes  
which he imposes upon his subjects, bring him  
in a revenue of near 70,000 l. per annum.

Tho' the city of Treves is a very ancient and  
noble city, yet the Elector has his ordinary resi-  
dence at Wittlich, in the castle of Ottenstein.  
Sometimes he resides at the castle of Hermanstein  
on the Rhine, over-against Coblentz, on account  
of it's noble prospects.

His titles are FRANCIS GEORGE, by the grace  
of God, Archbishop of Treves, great chancellor  
in Gaul, Elector of the holy Roman empire, bi-  
shop of Worms, &c. and count of Schoenborn.

As Archbishop, he has a cross, &c. On each  
side of the electoral hat appears the crozier, and  
the sword, to represent the spiritual and temporal  
power of the Prince.

The subjects of this electorate are Roman ca-  
tholicks.

The Archbishoprick and electorate of Cologne, Archbi-  
shoprick and elec-  
torate of  
Cologne.  
the ancient seat of the Ubii, lies on the western  
side of the Rhine, being bounded by the duchy  
of Cleves on the north; by the duchy of Berg,  
from which it is separated by the Rhine, on the  
east; by the electorate of Triers on the south;  
and by the duchy of Juliers and the Netherlands  
on the west; extending about forty miles in length,  
but not above seven or eight in breadth, a plea-  
sant fruitful country, bounding in corn and wine,  
and all other necessaries of life. The Archbishop  
also has several other large territories in West-  
phalia, and other parts of the Empire appropriated  
to his See, being esteemed more rich and powerful  
than either of the other two spiritual Electors,  
though he yields them the precedence. In the  
diocese of Cologne, strictly so called, the chief  
towns are, 1. Cologne, or Colen, the capital of  
the electorate, the Colonia Agrippina of the Ro-  
mans, taking it's name from AGRIPPINA, daugh-  
ter of GERMANICUS, wife of CLAUDIUS, and  
mother

mother of NERO, who was born here. It was the metropolis of *Germania Secunda*, and seems to have obtained the name of *Colonia*, by way of eminence, as being the most considerable Roman colony in these parts. This town is built in form of a crescent, and pleasantly situated in a plain near the western bank of the Rhine, in the latitude of fifty degrees, fifty five minutes, six degrees and a half to the eastward of London, forty miles north-west of Coblenz, and twenty south-east of Dusseldorp. The fortifications are so inconsiderable, that whoever is master of the field may be master of the place without a formal siege. The city itself is one of the largest, most beautiful and populous in the Empire; and yet the walls enclose large spaces of ground, which are not built upon; and particularly three hundred acres planted with vines. Here it was King CHARLES II of England spent the two last years of his exile. Some travellers number four and twenty gates in the walls, thirteen to the landward, and eleven on the Rhine. The streets are large and well paved in the middle of the town; and there are two spacious market-places. Among the publick buildings there are eleven collegiate churches, nineteen parish-churches, besides the cathedral, thirty chapels, twelve monasteries, twenty-two nunneries, and four large hospitals; besides which, the Lutherans have a church allowed them. The cathedral, dedicated to St. PETER, is a magnificent structure, wherein they shew three tombs, and as many skulls richly enshrined, which, according to the tradition of the place, belonged to the three wise men, who came from the east to worship our Saviour, from hence called the three Kings of Colen; and the superstitious pretend the very touch of them has cured many diseases. They were, as the story goes, first brought to Constantinople by HELEN, the mother of CONSTANTINE the Great, from thence removed to Milan; and upon the taking of that city by the Emperor FREDERICK BARBAROSSA, in the year 1164, removed again to Colen by REYNOLD, Archbishop of this See. In the church of St. GERON they also expose to view the heads of a thousand saints, who are said to have suffered martyrdom under the Emperor MAXIMIN, adored by the common people as most sacred reliques. In the church of St. URSULA also is shewn the tomb of that saint, and some of her associates, who, if their records may be credited, came over from the island of Britain with eleven thousand virgins, her companions, to convert the infidels of this country, and all suffered martyrdom by the Huns. Upon many of these tombs are old crosses and lamps, but upon that of St. URSULA there is an inscription, importing, that it was discovered by St. COLUMBA, a native of North Britain. From the multitude of reliques of saints and martyrs, churches and religious houses in this city, it has obtained, for several years past, the name of *The Holy City*; and notwithstanding it is a great town of trade, we meet almost as many ecclesiasticks as laymen in the streets. The rich endowments of their cathedral and collegiate churches induces many Noblemen, and even Princes of the Empire, to become Prebends and Canons here, who have generally magnificent houses, or rather palaces, with large vineyards and gardens contiguous to them.

The Elector also has two palaces in the city, but resides generally at Bon. It is contrary to the constitution of their government to suffer him to reside long here: this people being apprehen-

sive his presence might endanger their liberties. For the same reason some other free cities of the Empire look upon it as a breach of their privileges, whenever their Dioecesan comes to reside amongst them for any time, and make loud complaints on this head. The convent of the Carmelites is a noble commodious building, where was held a congress of Ambassadors Plenipotentiaries from most of the Powers of Europe to treat of peace, in the year 1673. Those from Britain being Sir LEOLINE JENKINS and Sir JOSEPH WILLIAMSON; and from France the Prince of Furstemburg, who set all Europe in a flame, and was one occasion of the ensuing war. He was it seems originally a Count of the Empire, but afterwards educated in a French monastery, of which he became Abbot. His zeal for the Grand Monarch LEWIS XIV, induced him afterwards to lay aside his religious habit, and accept of a post in the army, where he gained the esteem of the French King to that degree, that he made him his Plenipotentiary in this important negotiation at Cologne, where he had the address to defeat all the measures of the Confederate Princes for the obtaining peace on the terms they proposed; which so exasperated the Emperor, whose subject he was born, that he caused him to be seized in the streets of Cologne, and hurried to Vienna, where he was made a close prisoner; and it was expected he would have been executed as a traitor to his country; but this was thought too dangerous a step by the Imperial court, lest the French King should take a severer revenge on the Princes of the Empire who lay most exposed. This accident however broke off the treaty for the present; and Furstemburg remained a prisoner till the peace of Nimeguen, when LEWIS XIV advanced him to the bishoprick of Strasburg, and afterwards procured him a Cardinal's cap. And it may be observed of that Prince in general, that those who served him zealously never failed of his protection and a suitable reward; which may be one reason his ministers and officers were so entirely devoted to his service, during the whole course of his long reign, that we have scarce an instance of his councils being betrayed, or a town surrendered while there was a possibility of defending it: while his enemies suffered more from the treachery of their Ministers and Generals, than from all the forces of this Grand Monarch. But to return to Cologne, which still remains a free Imperial city, under some limitations, settled by the Emperor MAXIMILIAN I. on a dispute between the Archbishop and the Burghers, it was decreed, that the magistracy of the city should have the determination of all civil causes; but in criminal, none should be executed or pardoned but with the Archbishop's concurrence.

The government of the city consists of six Burgomasters, seven Aldermen, and an hundred and fifty Common-council men, who all continue for life, only two of the Burgomasters are Regents annually by turns; the Aldermen are appointed by the Archbishop, and the Common-council men elected by the trading companies of the city, fifty of the Common-council only acting in one year, taking it by turns; if a Burgomaster dies, the Common-council elect another. The inhabitants of Cologne are for the most part Roman Catholics, but many of the principal merchants and tradesmen are Protestants, of whom the Lutherans have a church in the city, as has been intimated already, but the Calvinists are obliged to go as far

as Mulheim, two miles on the other side of the Rhine, to their publick worship. This city was anciently one of the principal Hans-Towns, and capital of their fourth province. This is what I could meet with most material concerning the city of Cologne; there is an idle story indeed mentioned by most writers, of a Lady's being buried with a ring of value on her finger, in a church at Cologne, who upon the sexton's coming to steal it, revived at the opening of the coffin, frightened the fellow, and went home to her house, where she lived seven years after; but it is related with so many other foolish and incredible circumstances, that it will not bear a recital at large.

2. The second city in the Archbishoprick of Cologne is Bonn, a small but strong town, pleasantly situated on the Rhine, ten miles to the southward of Cologne, supposed to be the *Castra Bonensia*, where the Roman forces sometimes had their winter quarters, near which place JULIUS CÆSAR built a bridge cross the Rhine. Here the Elector has a palace suitable to his dignity, where he usually resides. It stands at the end of that long ridge of mountains which shuts in both sides of the Rhine from hence as far as Bingen. The vineyards in the neighbourhood afford plenty of good Rhenish wine, and the forests variety of game. It is supposed from its happy situation, to have obtained the Latin name of *Bona*, and was an Imperial city, but is at present under the dominion of the Elector. The town was taken and retaken several times during the late wars, but the confederates remained in possession of this and the whole archbishoprick at the end of the war; the late Elector and his brother of Bavaria being forced to take refuge in France, (with which kingdom they sided) till their dominions were restored to them by the peace of Rastat. Besides the Elector's palace, the gardens and water-works whereof are much admired as well as the building, the stadthouse is said to be a magnificent structure, and adorned with the finest paintings. In the collegiate church they shew some ancient tombs, where, according to tradition, PIUS-CASSIUS, FLORENTIUS, MALUSIUS, and several others of the Theban legion were buried, who suffered martyrdom under the Emperor MAXIMUS. 3. Andernach, eight miles to the northward of Coblenz, at the limits of the two electorates of Trier and Cologne, where the Elector of Cologne has a custom-house. 4. Broel, in the midway between Cologne and Bonn, where the Elector has a hunting seat. 5. Lintz, an ancient city on the east-side of the Rhine, eighteen miles to the northward of Coblenz. 6. Nuys, the *Novesium* of the Latins mentioned by TACITUS, four and twenty miles to the northward of Cologne, seated on the river Erp, where the Romans built a fort to secure the boundaries of their Empire, now a large fortified town, several times taken and retaken in the late wars. 7. Zous, seven miles to the southward of Nuys, situate on the Rhine, in a country which produces plenty of corn, with which they supply the neighbouring cities, who seem to want it pretty much. 8. Rhinberg, situate on a hill near the Rhine, forty miles to the northward of Cologne, and separated from the Elector's other dominions; it is a fortified town, the capital of a county which affords plenty of wine. 9. Meurs, ten miles south of Rhinberg, and thirty north-west of Cologne, a neat little city, which belonged to the Prince of Orange, and claimed by the King of Prussia, as heir to King WILLIAM III. 10.

VOL. II.

Keyserwaert, a small but strong town, on the east side of the Rhine, five miles north of Duffeldorp, and twenty north-west of Cologne, endured a siege of two months in the year 1702, before it surrendered to the Imperialists. 11. Kempen, or Kerpen, a fortified town and castle on the confines of Guelderland and Juliers, situate on the river Erp, thirty-four miles north-west of Cologne. On the east side of the Rhine, between the bishoprick of Munster and county of Marek, lies a narrow tract of land, which is a peculiar subject to the Archbishop of Cologne, containing several large manors and lordships; the chief towns whereof are, 12. Recklinghausen, a fortified town, the capital of a county twenty miles long, and ten broad, wherein there is a nunnery, the Abbess whereof is vested with sovereign power in the town and country about it, and she only makes a perpetual vow of virginity; the other nuns being allowed to marry after a certain term of years. And 13. Dorsten, a strong place, situate on the Lippe. The Elector of Cologne is also Bishop and Prince of the diocese and territory of Hildesheim, being near fifty miles in length, surrounded by the dominions of the Elector of Brunswick, the inhabitants whereof are most of them Lutherans, tho' subject to a Popish Bishop; the chief town whereof is Hildesheim, situate on the river Innerste, fifteen miles south-east of Hanover, and twenty-five south-west of Brunswick, a neat old town, but the buildings are not so considerable, as to deserve a particular description. It is an Imperial city, anciently one of the Hans-Towns, and has still a pretty good trade in corn. 2. Peina, another small city on the river Euse, twelve miles west of Brunswick, the castle whereof is said to be the strongest fortress in the bishoprick. Other places mentioned by Geographers in this territory are the towns of Marienburg, Popenburg, Dassel, Bokenem, Woldenburg, Eltz, Sarstedde, and the abbey of Gonderheim.

The archbishoprick and electorate of Cologne, has been possessed for three generations, by a younger son of the house of Bavaria, as appears by the following account of the late Elector's death, viz. On the twelfth of November 1723, died JOSEPH CLEMENT, brother to the Elector of Bavaria, in the fifty-second year of his age. He was chosen Bishop of Ratibon in the year 1685, which bishoprick he resigned to his nephew CLEMENT-AUGUSTUS of Bavaria anno 1716, (who resigned it also in favour of JOHN THEODORE of Bavaria, his youngest brother.) He was elected Archbishop and Elector of Cologne on the tenth of July 1688, seven days after the death of his cousin MAXIMILIAN of Bavaria, whom he succeeded not only in the electorate, but also in the principality and provostship of Berchtolsghaden. He was chosen Coadjutor to the Bishop of Hildesheim anno 1694, whom he succeeded in that See on the 13th of August 1702, and was elected Bishop of Liege on the 20th of April 1694. This Elector, with his brother of Bavaria, taking the part of France in the late war, was expelled from his electorate and other territories till the peace of Baden, as has been intimated already; and did not receive the investiture of the temporalities of the archbishoprick of Cologne, the bishoprick of Hildesheim, or of the provostship of Berchtolsghaden, until the 12th of April 1717. The present Elector of Cologne, CLEMENT AUGUSTUS, (sent Elector's younger brother to the present Elector of Bavaria, succeeded his uncle JOSEPH CLEMENT in the archbishoprick

archbishoprick of Cologne on the 12th of November 1723, having been elected Coadjutor to him on the 9th of May 1722, and is the third son of MAXIMILIAN-EMANUEL-MARY, late Elector of Bavaria, who died on the 26th of February 1725-6. He was born in the month of August 1700, elected Bishop of Munster on the 26th, and Bishop of Paderborn the 27th of March 1719. Notwithstanding he succeeded his uncle JOSEPH CLEMENT in the electorship and archbishoprick of Cologne, he could not prevail with the chapter of Liege to elect him their bishop; these Gentlemen being determined to chuse one of their own number, who should reside amongst them; but he was afterwards chosen Bishop of Hildesheim.

His titles.

The present Elector's titles are, CLEMENT AUGUSTUS by the grace of God Archbishop of Cologne, Arch-chancellor of the Empire in Italy, Prince Elector of the holy Roman Empire; Bishop of Hildesheim, of Munster and Paderborn; Administrator of Berchtolsfaden, Duke of Engern and Westphalia, Duke of the Upper and Lower Bavaria, &c. His great chapter consists of sixty Canons, who are all Princes and Counts; but the Archbishop is elected by the four and twenty Seniors. He crowns the Emperor by virtue of his office, unless the coronation be performed in the diocese of the Elector of Mentz, or in the diocese of the Elector of Triers. The directors of this circle are the Archbishop of Mentz and the Elector Palatine.

Elector of  
Cologne.

III. CLEMENS AUGUSTUS, Prince of Bavaria, born the 5th of August 1700, was bishop of Munster and Paderborn in 1719, coadjutor to the late Archbishop of Cologne, Prince JOSEPH of Bavaria, in 1722, to whom he succeeded the first of November 1723. He was afterwards elected bishop of Hildesheim in 1724; bishop of Osnabrug in 1728, on the death of ERNESTUS, brother to King GEORGE I. of Great Britain; and in 1732, he was made provost of Liege, and great master of the Teutonic order. He is brother to the present Elector of Bavaria.

This Elector crowns the Emperor if the ceremony be performed in his diocese; and, if elsewhere, he and the Elector of Mentz have that honour by turns. His subjects cannot appeal to the tribunals of the empire but for great sums.

His estates are very considerable; they consist of, 1. The Archbishoprick, which extends about 100 miles along the west-side of the Rhine, but in most places it is not above seven or eight miles broad. It belongs to the circle of the Lower Rhine, having Cleves on the north, Bergues on the east, Treves on the south, and Juliers on the west; and is very fruitful in corn and wine, particularly that sort of wine called Blecker and Rheinish.

This Prince is more rich and powerful than either of the other two ecclesiastical Electors; for he generally holds several wealthy bishopricks, whereof that of Liege is one in commendam. The electoral revenue amounts to about 130,000 l. but the other five great benefices, which the present Elector is actually possessed of, augment that sum to betwixt 2 and 300,000 l. a year.

In time of war he has, besides garisons, guards of horse, grenadiers, partizans, and carabineers, three regiments of horse, three of foot, and one of dragoons, consisting of between 1500 and 2000 men each.

His Electoral Highness resides at Bonn, a well-built trading town on the Rhine. The palace is very

grand; it was erected by the late Archbishop, but not quite finished. His seats of pleasure are Beuil and Arensburg. The first lies about eight miles from the capital; it was built by the present Elector, who spends most of his time at it.

CHAP.  
XVIII.  
Lower  
Rhine.

His titles are, CLEMENT AUGUSTUS, by the grace of God, Archbishop of Cologne, great chancellor in Italy, (this office is now quite obsolete) Elector of the holy Roman empire, &c.

The cross is the chief thing that presents in his coat of arms for the archbishoprick; the ensigns armorial, are the mitre with the crozier and sword, &c.

The established religion here is the Roman catholic; but there are protestants in the electorate, particularly in Cologne, where the Lutherans have a church; but the Calvinists are obliged to go two miles out of town to their place of worship.

## WESTPHALIA.

### CHAP. XIX.

*Treats of the city of Westphalia: comprehending the duchy of Westphalia, the bishopricks of Liege, Munster, Paderborn and Osnabrug; the duchies of Juliers, Cleves and Berg; the principality of Minden; the Counties of Marck, Ravensburg, Lippe, Schawenburg, Hoya, Diepholt, Oldenburg, Delmenhorst, Embden, Bentheim, Tecklenburg, Pyrmont, Lingen and Steinfort, Corbey Abbey; and the Imperial towns of Aix la Chapelle, Dortmund, &c.*

THE circle of Westphalia is bounded by the German Ocean on the north; by the circle of Lower Saxony on the east; by Hesse on the south; and by the Netherlands towards the west. Extending in length about two hundred miles from north to south, and an hundred and fifty, and in some places two hundred miles from east to west.

CHAP.  
XIX.  
Westphalia.

Situation  
and extent.

The air of this country towards the north is very cold, and the soil almost one continued morass or barren sand: but here, however, they feed the best bacon in Europe, with the chestnuts and other fruits which their forests produce. The southern part of this circle has a warmer air, and a much better soil, as will appear in the description of the particular provinces.

The air  
and soil.

The principal rivers are the Weser, the Ems, the Lippe, the Roer, the Aa, and the Hunt. Travellers who visit this country complain much of their coarse bread, bad beer, hard lodging, and long dirty miles, as well as of their way of travelling in post-waggon, as they are called, which move no faster than a snail: but the reader will be better able to judge of the country from a description of the particular provinces.

The name of Westphalia is, by some German writers, derived from *Weissenpholen*, which signifies a white Horse: for Westphalia, as well as the circle of Lower Saxony, going anciently under the general name of Saxony; as the Duke of Lower Saxony, whose territories lay to the eastward of the Weser, carried a black horse in his standard; so the Duke of that part of Saxony, now called Westphalia, which lay to the westward of the Weser, had a *Weissenpholen*, or white Horse, painted on his standard, from whence his territories

terrics

CHAP.  
XIX.  
Westphalia.

tories were called *Westphalen*, which was easily changed afterwards into Westphalia. Others affirm, that the country to the eastward of the *Weser* was called *Eastfeld*, or Eastfield; and that to the westward of the river *Westfeld*, or Westfield, which with a Latin termination was easily converted into Westphalia. I must confess, that both of these accounts have so fair a shew of probability, that I cannot tell which to incline to, and therefore leave the reader to his own judgment, and proceed now to a particular description of the provinces of this great circle. And first I shall endeavour to describe Westphalia Proper, or the duchy of Westphalia, because great part of it is subject to the Elector of Cologne, whose other territories were last treated of; for notwithstanding Westphalia is the general name of the whole circle, it is however restrained, and especially applied to this particular province.

Westphalia duchy.  
Situation and extent.

Soil.

Rivers.

Mines.

Arnsburg.

Werle.

Geseck.

Brilon.

Liege bishoprick.

The duchy of Westphalia is bounded by the bishopricks of Munster and Paderborn on the north, by the landgravate of Hesse on the east, by Veteravia on the south, and by the county of Mark and duchy of Berg towards the west: being about fifty miles in length from the south-west to the north-east, and about forty broad. This country is for the most part mountainous and woody, except towards Lipstat, where the soil is tolerably fruitful, nor does there want good corn or pasturage in the valleys among the hills, at least enough to supply the inhabitants, who are not very numerous. Their rivers run from the mountains with an impetuous torrent, the chief whereof is the *Roer*, which falls into the *Rhine* near *Duyfburg*: and though they have mines of silver, copper and lead in many places, they can make but little advantage of them, they are so subject to be flooded by the rivulets which fall from every side of their mountains. This dukedom was taken from *HENRY THE LION*, Duke of Saxony, and conferred on the Archbishops of Cologne by the Emperor *FREDERICK-BARBAROSSA* about the year 1170, by way of punishment, for Duke *HENRY*'s having confederated with the Pope against that Emperor.

The chief towns of this duchy are, 1. *Arnsburg*, a pretty town pleasantly situated on the river *Roer*, about fifty miles north-east of Cologne, adjoining to which is a fine castle, where the Elector frequently resides in the hunting season. It was anciently subject to its own Count, by whom it was sold to the Archbishops of Cologne, with *Hovestart*, *Geseck*, and other towns in the neighbourhood. Near this town stands the fine monastery of *Wedinghausen*. 2. *Werle*, a pleasant town between the *Roer* and the *Lippe*; where the supreme court of justice is held for the duchy of Westphalia, which occasions it sometimes to be called the capital of the duchy. 3. *Geseck*, a fortified town, situate at the bottom of a hill near the banks of the *Lippe*, in a fruitful country, about five and twenty miles north-east of *Arnsburg*; where the head of *St. CYRIACUS*, a Saint of this country, is preserved as a very precious relique. His body also was long kept here in a golden coffin, till the Count de *Oberstein* robbed them of it. And, 4. *Brilon*, near the head of the river *Moens*.

The bishoprick of *Liege*, or *Luyick*, the ancient *Leodium*, or *Legia*, is supposed to derive its name from a little rivulet called *Liege*, which runs thro' this country and falls into the *Maes*. The diocese of *Liege* is bounded by *Flanders* and *Brabant* to-

wards the north and west, by the duchy of *Limburg* on the east, and by *Luxemburg* and part of *France* on the south: being near seventy miles in length from north to south, and five and twenty in breadth from east to west, and in some places twice as broad. It is in general a pleasant fruitful country, having large corn fields, and a great deal of rich meadow and pasture ground. They have also some mines of lead and iron, and quarries of marble; but what it is most particularly remarkable for, is the great quantities of *brimstone* and *vitriol* which are made in this country. The chief towns in the bishoprick are, 1. *Liege*, the capital, *Liege* situate in the latitude of fifty degrees. forty minutes, twelve miles south of *Maestricht*; a large populous city, of a triangular figure. There are several hills and valleys within the walls, and some islands made by the river *Maes*, two branches whereof run through the town. The streets are neither clean nor regular, and most of the private houses built of wood; but there are some however which make a handsom appearance, a clear stream generally runs through the middle of the streets, besides which, many of the best houses have fountains in their courts and gardens. In the city and suburbs are upwards of an hundred churches: the Bishop's palace and the cathedral are magnificent structures, the last built with red stone, and dedicated to *St. LAMBERT*: according to some travellers, no city in Germany or France can equal it in fine churches, convents, and other religious foundations. The country about it also is so extremely agreeable, that it has obtained the name of *The Paradise of Ecclesiastics*. The English Jesuits have a college here, proudly situated on the top of a hill, with a most delightful garden, in which is seen variety of dialling; not far from it is a convent of English Nuns. In the monastery of *St. WILLIAM*, without the walls of the city, lie the remains of that famous English traveller *Sir JOHN MANDEVILLE*, who having taken a view of most of the great cities in the world, preferred *Liege* to any of them; and accordingly spent the latter part of his life here, after he had finished his travels. Near his tomb are placed his saddle, spurs and knife; and the following inscription, viz. *Vos ki passeis for mi pour l'amour Deix proies por mi*; i. e. You who pass over me, for the love of God pray for me. The university of this place was once so considerable, that it is said, there were at one time in it, nine King's sons, four and twenty sons of Dukes, and nine and twenty Counts. *MEIBONIUS* relates, that in the year 1131, there were one and twenty King's sons resident in this university: the rest of the town also was so populous, that the Duke of Burgundy, when he took it by storm, according to *Dr. NICHOLSON*, put an hundred thousand of the inhabitants to the sword. At present the fortifications of the city are but mean, and being commanded by the hills which surround them, are not capable of resisting a royal army; but the citadel, which is situate on a hill, is a place of some strength. The late Elector of Cologne, who was also bishop of *Liege*, delivered it up to the French in the beginning of the last war; but the Duke of *Marlborough* took it in the year 1702. It was again besieged by the French in the year 1705, and upon the point of being taken, when the grand army of the confederates returning suddenly from the *Moselle*, the French thought fit to retire. *Liege* is stiled an Imperial city, under the protection of its Bishop: but this Prelate is really Sovereign

Sovereign of the city and diocese; and the citizens for disputing his authority, have more than once suffered very severely; though Mr. RAY affirms, that he can lay no taxes on the people without the consent of the Clergy, Gentry and Commons, whom he calls the three estates. The chapter of Liege consists of sixty major Canons, who are most of them of noble extraction, and have the power of electing their Bishop. There are twelve other Canons, called *Canonici Mediores*, and twelve more *Canonici Minores*, who have no share in this election. The present Prince and Bishop of Liege is GEORGE LEWIS Count de Berghes, elected on the 7th of February N. S. anno 1723-4, who was then sixty five years of age, and lived in a mean house, with only one man servant, and an old maid. He was the last of the family of JOHN III. Duke of Brabant, and had been a Lieutenant-Colonel of horse in his youth. He is the third of this family, who have been advanced to this See, and was preferred before three other powerful candidates, viz. the Elector of Cologne, the Cardinal of Saxzeits, and the Prince of Auvergne Archbishop of Vienna in Dauphiné, by a majority of the Electors, who entered into an engagement to give their votes to one of their own members who would reside amongst them; being morally sure none of the other candidates would. Before this last choice the Electors of Cologne were generally chosen to this See: and it was a fine addition to the power and revenues of that Elector; for the Bishop of Liege is one of the most considerable ecclesiastical Princes in Germany, having, as is computed, within his diocese, or rather principality, fifty-two baronies, eighteen walled towns, and four hundred villages, very well peopled, which yield him an annual revenue of three hundred thousand ducats. The second city in the diocese of Liege is, 2. Tongres, or Tongren, *olim Tungrorum oppidum*, situate on the little river Jecker, ten miles north-west of Liege; a very considerable town in the time of the Romans, when there was a road pitched with stone, reaching from hence to Paris, near two hundred miles in length, some parts of which are still to be seen: there are also still remaining here the ruins of some of their temples and other monuments of antiquity; particularly in the great church they shew an image supposed by some to be the statue of Minerva, but by others the image of Hercules, who was anciently worshipped here by the Pagan inhabitants. It was very early made a Bishop's See, and had an hundred churches in it when destroyed by ATTILA the Hun; but the bishoprick was removed from hence to Maestricht, and afterwards to Liege; and the town has now very little remaining of it's former grandeur. It is generally held that the old castle and the wall on Bishop MATERNUS's chapel were standing before the time of our Saviour. The great church is a handsom Gothick structure, and has a Dean and two and twenty Canons belonging to it. The French took this town by surprize in the year 1703, but abandoned it again in 1705, on the approach of the confederate army, without venturing a siege; from whence it is evident the town is a place of no great strength at present. 3. Huy, or Huy, situate on the east side of the Maes, twelve miles south-west of Liege, and sixteen north-east of Namur. The iron mines in the neighbourhood find employment for most part of the inhabitants. The town and castle are for-

tified after the modern way; but were taken by the French in the year 1693, and retaken by the allies in 1703. It was formerly governed by Counts of it's own, the last of whom transferred it to the Bishops of Liege, who are now Sovereigns of it. 4. Bullion, or Bullion, situate on the river Sarmay, thirty miles south of Dinant, and forty west of Luxemburg; the capital of a small duchy, which gives the title of Duke to the Bishop of Liege; and was formerly the inheritance of the famous GODFREY of Bullion, who sold it to the Bishops of this See, anno 1096, in order to enable him to raise forces to carry on the war against the infidels in the Holy Land: in which expedition he met with such success, that within the space of three years he made himself master of Jerusalem and the greatest part of Palestine; and was thereupon crowned the first Christian King of that city and territory. Historians who have written of these transactions generally relate, that this Prince was so extremely modest he could hardly be prevailed on to accept the regal dignity, alledging that he thought it a presumption to wear a crown of gold, where our Saviour wore a crown of thorns. 5. Dinant, a fortified town, situate thirty-five miles south-west of Liege, and twelve south of the city of Namur. It is an ancient town, and a place of some trade, particularly in the manufactures of brass and iron. 6. Franchemont, fifteen miles from Liege, anciently a large populous city, and still the capital of a marquissate, whereof the Bishop of Liege is Sovereign; but is no more than an open village at this day, and considerable only for the lead-mines near it. 7. The Spaw, or Spa, situate in a bottom inclosed with hills, and to the north with craggy mountains, fourteen miles south-east of Liege, and seven south-west of Limburg; famous for it's mineral waters now, as it was anciently. The account PLINY gave of them was, that they tasted of iron, and were purgative; that they cured tertian agues and the stone, and when boiled grew turbid, and at last of a reddish colour. Modern travellers relate, that there are four mineral fountains much in esteem in and near this place: the first called Geronster, is in the middle of a thick wood two miles south of Spa, being the best kept, and built up with stone, with a pavilion over it supported by four stone pillars, and near it stands a little house for the patients to warm themselves in. This spring hath a strong sulphureous smell, and causes vomiting in some, but works chiefly by urine, as do all the rest. The second spring, called Saviniere, lies as far to the east of the Spaw, whose waters are not so strong as the former. The third is called Tonnelet, and rises in a meadow near the Spaw, which contains more nitre than the rest, but is very cold in the mouth and stomach. The fourth of these fountains, called Pohunt, in the middle of the village, (for the Spaw is but a village) which supplies most of the water that is sent into foreign parts, and is beautified with a fine stone building, over which there is an inscription, importing that these waters remove obstructions, dissolve hard swellings, dry up a superfluity of moisture, and strengthen weakened limbs, if drank according to the advice of the learned. There are vast quantities of these waters sent abroad to all countries in Europe. The season for filling bottles with it is either in the heat of summer when it is very dry, or in the hardest frosts in winter, then the water is observed to be the strongest, brisk and sparkling.

sparkling. It is observed that they weigh two grains in three ounces more than Tunbridge, and four grains more than the Islington waters, and yet less than the common water by several grains. Other towns of any note mentioned by Geographers in the bishoprick of Liege, are, 1. Borchloen, or Loots, twelve miles north of Liege, which formerly gave title to a Count, and was the capital of the territory of Loots. 2. St. Tron, or Truden, five miles west of Borchloen. 3. Bilsen, taken notice of for a nunnery of Ladies of quality there, who have the liberty of leaving their convent and marrying if they please. 4. Hasselt, where the Bishop has a palace. 5. Mayefick, eighteen miles north of Maestricht, considerable for being a pass over the Maes. 6. Horn, capital of a county of the same name. 7. Couvin. And 8. Verviers.

The bishoprick of Munster lies on both sides the river Ems; being bounded by the counties of Bentheim and Steinfurt on the north; by the bishoprick of Osnabrug and Paderborn towards the east; by the county of Marck on the south; and by the duchy of Cleve, and some part of Zutphen towards the west: extending an hundred miles in length, and in breadth in some places sixty, in others forty, and in others scarce twenty miles. Munster is a barren country, but no part of Westphalia produces better bacon, which they export all over Europe; so much admired, that it bears double the price of any other. The name of Munster is said to be derived from *Monasterium*, there having been a noble monastery erected in the place where the capital city now stands; which was converted into a bishoprick by CHARLES the Great about the year 785. The Bishop of this diocese is a Count of the Empire, and absolute Sovereign of the territories belonging to it: the present Bishop is the Elector of Cologne, brother to the Elector of Bavaria, of whose election to this See an account has been already given in treating of the electorate of Cologne. The chief towns in this bishoprick are, 1. Munster, *Monasterium*, the metropolis of Westphalia, situate on the river Aa, in a pleasant fruitful plain, in the latitude of fifty two degrees, seventy miles to the northward of Cologne, and twenty-five south-west of Osnabrug. The town is generally well built of free stone. The cathedral and Jesuits college are noble structures; besides which, there are four other collegiate churches. The Dean and Chapter of the cathedral church have the election of the Bishop, whose revenue is computed to amount to near an hundred and fifty thousand pounds per annum. Munster was an Imperial city, and preserved it's liberties till the year 1661, when their Bishop reduced them under his power. The Roman Catholick is the established religion, though the Protestants were very numerous here after the reformation, till some Enthusiasts and bigotted people brought a disgrace on this persuasion by their extravagant behaviour and insurrection against the government. Of which transaction DR. NICHOLSON gives the following account: The first captain of these bigotted zealots, says he, was BERNARD ROTHMAN, a Lutheran Minister, who had the cure of St. MAURICE's church in the suburbs, who by his railing at the superstitious follies and innovations of the church of Rome in the year 1533, rendered himself exceeding popular. To this gentleman JOHN BUCKHOLT a taylor born at Leyden in Holland, associated himself; he had

VOL. II. NUMB. LIX.

been bred an Anabaptist, and thoroughly instructed in their doctrines, being withal naturally bold and ambitious, and a man of bright parts. By a cunning use and improvement of these qualifications he became in time a man of so much credit as to win over ROTHMAN, who before had only maintained LUTHER's tenets, to his opinion, and with him all the Protestants of the place immediately professed themselves Anabaptists. Their faction afterwards increased to such a degree as to alarm the government, and the senate endeavoured in vain to apprehend the ringleaders: their numbers became so formidable that they compelled the magistrates to grant them a toleration. Hereupon JOHN of Leyden's inferior agents began to pretend to divine inspiration; and getting a croud about them in the streets, declared they had an immediate command from heaven to call men to repent, and to be rebaptized; and most part of the city coming over to them, they seized on the town-hall and the magazines, and invited the people of the neighbouring towns and villages to join them: and having thus filled the city with Anabaptists, they deposed the Popish magistrates, and all others who refused to come into their schemes, supplying their places with those of their own faction. Whereupon the Bishop raised a body of forces and laid siege to the city in the year 1534, but was obliged to rise from before it; which so flushed their great leader JOHN of Leyden, that he caused himself to be proclaimed King, and made one of his concubines Queen, tho' upon her disapproving some of his extravagant projects he afterwards cut off her head. The year following, anno 1535, the Bishop being re-inforced by the troops of the Elector of Cologne and the Langrave of Hesse, surprized the city by a stratagem, and took the anabaptist King prisoner, who having been carried in derision to most of the courts of the German Princes, he was the year following torn in pieces with red-hot pincers, and his bones hung in an iron cage on the top of a steeple *in terrorem*.

At Munster also was concluded that treaty in the year 1648, which established the Protestant religion in those parts of the Empire where it was professed, and put an end to a war of thirty years standing, viz. from the year 1618, to that time, between the Protestant Princes of Germany and the Swede on one side, and the Emperor and the Popish Princes of the other, and has been made the basis and foundation of almost every subsequent treaty, especially as to the religion of the Empire. This is sometimes called the treaty of Westphalia, having been negotiated in that circle; and at others the treaty of Osnabrug, because the Protestant Plenipotentiaries held their conferences at Osnabrug, as the Popish Princes did theirs at this city of Munster. The Swedes had been engaged in the German war eighteen years, and had possessed themselves of an hundred strong towns in the Empire; and by this treaty procured the duchies of Bremen and Verden, Western Pomeran, the isle of Rugen, and the city of Wismar to be confirmed to them; and might have had better terms, it is said, if they had not preferred the interest of the Protestant Princes of Germany to their own. 2. Meppen, a fortified town on the frontiers of Friesland, forty three miles north of Munster. 3. Haselunen, another fortress on the Hase, ten miles east of Meppen. 4. Vecht, the capital of a county, situate thirteen miles south-east of Kloppenburg. Other towns mentioned by geographers in this bishoprick are, Kloppenburg, sixteen miles north-

Paderborn  
bifhoprick

north-eaft of Hafelunen, Warenburg on the Ems, Stromberg, Coesfelt, Ahufen, fifteen miles north-west of Meppen, capital of a large barony, Tilligt on the Ems, and Rheyne a small city on the river Ems, eighteen miles north of Munfter.

The next divifion of this circle is the bifhoprick of Paderborn, bounded by the county of Lippe towards the north, by the duchy of Brunfwick on the eaft, by the county of Waldeck on the fouth, and by the duchy of Weftphalia on the weft; being about forty miles in length and twenty in breadth, containing in it twenty caftles, twenty-four market-towns, fifty-four other parifhes, and sixteen monafteries, fubject both in fpirituals and temporals to it's Sovereign, the prefent Elector of Cologne, who was chofen Bifhop of this See anno 1723. This country is remarkable for the variety of falt-fprings and other fountains in it. In the tranfactions of the Royal Society, published in December 1665, there is an account of a fpring in this territory, which lofes itfelf twice in twenty-four hours, returning with a great noife, and fuch force, as to turn three mills not far from it's fource, and is called by the inhabitants *Bolder Born*, or the Boifterous Spring. And in the tranfactions of January following, there is an account of another remarkable fountain in this diocefe called Metborn, which is a treble fpring, two fprings whereof, not a foot and a half diftant from each other, have very different qualities, the one limpid, bluiſh, lukewarm, bubbling, and containing fal-armoniac, ochra, iron, vitriol, alum, fulphur, nitre, and orpiment: the other cold as ice, turbid and whitifh, much ftronger in taſte, and heavier than the other, containing much orpiment, falt, nitre, iron, and ſome fal-armoniac, allum and vitriol; of which water all fowls that drink of it die ſoon after in convulſion-fits, but giving them ſome common falt immediately they die not ſo ſoon, and vinegar will recover them. Thoſe that have been opened after drinking this water, their lungs have been found quite ſhrivelled up, and yet it is a perfect cure for people troubled with worms. The third fpring or ſtream which iſſues from this fountain, and is about twenty paces diftant from the others, is of a greeniſh colour, very clear, and taſtes both ſour and ſweet, pleaſant enough, and from it's weight is ſuppoſed to be a mixture of the other two. This bifhoprick was founded by CHARLES the Great, about the year 777, to which he was incited by a miracle, according to the tradition of the place; for being about to encamp on that ſpot of ground where the city of Paderborn now ſtands, and in ſome diſtreſs for water for his army, on the knocking down the firſt tent-pin of his pavilion, there iſſued, it is ſaid, a plentiful fpring, upon which fountain the Emperor cauſed the cathedral church to be built. But fprings being ſo common in this country, it is obſerved there was little occaſion for the expence of a miracle, tho' it is generally allowed that CHARLES the Great was the founder of this See. This territory being generally barren, they have little to boaſt of beſides their hogs-ſleſh, deer and other veniſon. The

Paderborn  
city.

chief towns of this diocefe are, 1. Paderborn, the capital city, ſo named from the head or fountain of the river Pader, which ſprings in a torrent near the cathedral of this city, and falls into the Lippe near Neinhuf. At this fountain, according to the Magdeburg chronicle, moſt of the inhabitants of Saxony and Weftphalia were baptized about the year 780, by the order of

CHARLES the Great, the natives being Pagans before he conquered this country. The city of Paderborn ſtands on the river Pader, thirty-two miles north-weſt of Caſſel, and fifty-fourth-eaſt of Munſter, a large populous and well-built town, regularly fortified, formerly a free Imperial city, but ſubject to the Biſhop, the prefent Elector of Cologne, at this day, as it has been to the Biſhops his predeceſſors ever ſince the year 1604. The citizens many of them embraced the doctrine of LUTHER at the reformation; but HERMAN, Elector of Cologne, being chofen their Biſhop, executed ſixteen of the principal burghers who had turned Proteſtants, and compelling the reſt to abjure their principles, the Roman catholic religion prevailed, and ſtill remains eſtabliſhed here. 2. Lippeſpring, or Lippeſburg, five miles north of Paderborn, ſo called from the head of the river Lippe, which ariſes here in a large ſtream, fix or eight paces in breadth, turning three or four mills before it leaves the town. Here the Dean and Chapter of Paderborn have a fine caſtle, or rather palace. 3. Warburg ſituate on the Dymel, eighteen miles ſouth-eaſt of Paderborn, in a fruitful country, conſiderable for the iron and lead mines about it, and a ſtrong palatable beer which they brew and vend to their neighbours. 4. Lude, or Ludge, twenty-five miles north-eaſt of Paderborn, (uſually reckoned part of the county of Pymont, but ſubject to the Biſhop of this See;) and twenty-seven miles north-eaſt of Paderborn, remarkable for it's holy well, ſaid to be a remedy for moſt diſtempers, and in the days of ſuperſtition, held to have effected miraculous cures. The remaining towns of any note in this bifhoprick are, Peckleſheim, Boreatrick, Buren, Soltkot, Herfel and Welſburg.

The bifhoprick and principality of Oſnabrug has the county of Diepholt on the north, the counties of Minden and Ravensberg on the eaſt, and Munſter, Steinfort and Bentheim, on the ſouth and weſt, extending about forty miles in length, and thirty in breadth where broadest, eſteemed one of the moſt fruitful parts of Weftphalia, and ſubject to it's Biſhop, who is a Count of the Empire. This was the firſt bifhoprick founded by CHARLES the Great, who dedicated the cathedral to St. PETER, and the two martyrs CRISPIN and CRISPIANUS, and granted extraordinary privileges to this See, exempting them from all manner of ſervice and homage, even to the Emperor himſelf. Lutheraniſm prevailing here at the reformation, it was at length agreed by the treaty concluded anno 1648, (frequently ſtiled the Munſter and Weftphalian treaty; and at others the treaty of Oſnabrug, from the Proteſtant Plenipotentiaries reſiding here,) that this bifhoprick, with the territories and revenues belonging to it, ſhould be enjoyed alternately by a Proteſtant and Papiſt, and that the Proteſtant Biſhop ſhould always be a Prince of the houſe of Brunfwick, in conſideration that the principality of Halberſtat had been taken from this houſe, and conferred on the Elector of Brandenburg. When they have a Popiſh Biſhop he is ſuffragan to the Archbiſhop of Cologne, but the Proteſtant Biſhop is indeed a temporal Prince, and has little to denominate him an eccleſiaſtick but the title. The prefent Biſhop is ERNEST-AUGUSTUS, Duke of York, his Britiſh Maſeſty's Uncle. The chief towns are, 1. The city of Oſnabrug, or Oſenbruck, the capital, ſo named from a bridge over the river Oſe at this place, ſituate in a fine plain, and beautified

beautified with several noble publick buildings. They are said to have the best bread and beer here which is to be met with in Westphalia, and they have a tolerable trade in bacon and linen. The cathedral is in the hands of the Roman Catholics, with the church and monastery of the Dominicans in the old city, and the collegiate church of St. JOHN in the new, (for the city is divided into the old and new town by the river Ose.) The Protestants are masters of the great parochial church of St. MARY in the old city, and both Protestants and Papists have a voice in the election of their magistrates; but of the five and twenty Canons which belong to the cathedral, eighteen are Papists, and the revenues of four more are enjoyed by the Jesuits for the support of their college; so that there are but three Protestant Canons, who have no voice in the election of the Popish Bishop, that succeeds every other turn, as the Popish Canons have. The Bishop's palace is fortified like a castle. Here it was that his late

Here King  
GEORGE  
was born,  
and died.

British Majesty King GEORGE the First was born on the 28th of May 1660, his father ERNEST-AUGUSTUS being then Bishop and Prince of the place: and here the same King GEORGE died in the night of the tenth of June 1727, and some relate in the very room where he was born. 2. Iburg, situate ten miles south of Osnabrug, in the castle whereof the Bishop formerly resided. 3. Quakenburg, on the river Ose, twenty-five miles to the northward of Osnabrug. Other towns mentioned by geographers are, Vorde, Forstenaw, Mello, &c. Whitlag, and Mello; but these are not thought worth a description.

Iburg.

Quaken-

Mello, &c.

The  
duchies of  
Juliens,  
Cleves and  
Berg.

Until the year 1609, the duchies of Juliens, Cleves and Berg were subject to the same Sovereign; but upon the death of JOHN-WILLIAM, the last Duke, without issue male, the Emperor RODOLPH II granted these dukedoms, together with the counties of Marck and Ravensberg, and the Barony of Ravenstein, dependant upon them, to the house of Saxony, with a proviso however for saving the rights of all other claimants. And in the reign of CHARLES V, the Elector of Brandenburg, the Duke of Newburg, the Duke of Deuxponts, and the Marquis of Burgow, having all married sisters, or daughters of the sisters of the last Duke WILLIAM, claimed their shares in the said territories; but the Elector of Brandenburg and the Duke of Newburg obtaining the possession of these countries by their arms, the other powers desisted from their pretensions, and it was at length agreed that Juliens and Berg, with the territory of Ravenstein, should be enjoyed by the Duke of Newburg, and that the Elector of Brandenburg should have for his share the duchy of Cleve, with the counties of Marck and Ravensberg; and these Princes still remain possessed of the territories respectively allotted to them, retaining each of them the titles to the whole, as do the posterity of the other pretenders.

The  
duchy of  
Juliens.

The duchy of Juliens is situate between the Maes and the Rhine, and bounded by Guelderland on the north; by the duchy of Berg, and part of the electorate of Cologne towards the east; by Limburg on the south; and the Netherlands on the west; extending sixty miles in length, and thirty in breadth, a plentiful country, abounding in corn, cattle, and rich pastures, and plentifully supplied with wood; but what it is most remarkable for is, a fine breed of horses, and woad for dying, which is gathered here in large quantities.

Juliens ci-  
ty.

The chief towns are, 1. Juliens, or Gulick, call-

ed by the Romans *Juliacum*, and said to be so named from JULIUS CÆSAR, its supposed founder, situate on the river Roer, twenty-five miles east of Maestricht, and as many west of Cologne. It is a small fortified town, neatly built with brick, the citadel large and strong, wherein is the palace of the ancient Dukes. 2. Aken, or *Aquis Granum*, usually called Aix la Chapelle, a large Imperial city, fifteen miles south-west of Juliens, and twenty south-east of Maestricht, supposed to have taken its ancient name from SÆRENUS GRANUS, Lieutenant-General of *Gallia Belgica*, in the reign of the Emperor ADRIAN, who having discovered the hot springs here about the year 53, first built and beautified them after the manner of the Roman baths, and then erected himself a palace in the place; in confirmation whereof, the natives still shew a piece of ancient architecture, which they call *Turris Grani*, and relate that it is a part of the ruins of that General's palace. This town is called by the French, *Aix la Chapelle*, from a chapel in the great church much resorted to by pilgrims, containing a multitude of reliques in high veneration among the Roman Catholics. The town is situated in a fruitful valley, encompassed with mountains and woods, and yet the air is esteemed exceeding wholesom. It may be divided into the inward and outward city: the inward city is surrounded by a wall about three quarters of a league in circumference, having ten gates; and the outward wall about a league and a half in circumference, in which there are eleven gates. Some rivulets run thro' the town, which keep it very clean, and turn several mills; besides which there are twenty publick fountains, and many private ones: and as the stone quarries in the neighbourhood furnish them with excellent materials, their buildings are suitably magnificent, of which the Senate-house, or the Stadthouse, and the cathedral are the chief; besides which there are thirty other parochial or collegiate churches. The Stadthouse is a stately fabrick, built in the year 1533, adorned with the statues of all the Emperors since CHARLES the Great, and consists of three stories, the two first divided by several partitions, but the upper story is one entire room, of an hundred and sixty-two feet in length, and sixty in breadth, where the new-elected Emperor used to entertain the Electors and all the Princes of the Empire at their coronation; for here the Emperor formerly received his first crown of iron, as he did a second of silver at Milan, and a third of gold at Rome. In this hall are several fine pieces of painting, particularly one of the resurrection, and another of CHARLES the Great, giving the charter to the city of Aken. In the middle of the market-place before the Stadthouse is a noble fountain, admired for the largeness of its dimensions and curious workmanship, being supplied by four springs, which fall into a copper basin, thirty foot diameter, from whence it is conveyed quite through the city, and on the top of the fountain is a large brass statue of CHARLEMAGNE in armour gilt, with his face towards Germany. On the edges of the brass cistern is an inscription importing that GRANUS a Roman Prince, first discovered and built the hot baths in this city. The cathedral is of Gothick architecture, having a high steeple at the west-end, adorned with pyramids, and covered with a cupola in the middle. On the inside are a vast number of pillars of brass and marble, gilded statues, brazen doors, and a great

phalia.

great deal of Mosaic work. Over the place where CHARLES the Great was first interred, hangs a very large crown, made of silver and brass gilt, the gift of the Emperor FREDERICK I, surrounded with forty-eight statues a foot high, and thirty-two lesser statues, all of silver. The same Emperor FREDERICK removed the body of CHARLEMAGNE, and buried part of it under the altar in the choir in a silver coffin, and the other part near the wall of the old building, and covered it with the same tombstone of white marble, which it had before, with the bust of PROSERPINA upon it, supposed to have covered JULIUS CÆSAR's tomb. The principal reliques which pilgrims resort hither to adore, are, 1. The Virgin MARY's gown, in which she was dressed at the incarnation of our Saviour, made of wool, says Dr. NICHOLSON, not unlike that which grows on the coco-tree; but this description is altogether unintelligible to me, who could never discover any thing like wool on a coco-tree; but certain it is the gown must be of very durable materials to last so long, or it must have been preserved by a miracle as great as any that are ascribed to it. 2. The cloth girt about our Saviour when he suffered, being of very coarse linen. 3. A piece of the cord with which he was bound when he was delivered to PILATE. 4. Some of the blood of the first martyr St. STEPHEN, enshased in gold and precious stones, on which the Emperors are sworn at their inauguration. 5. The picture of the Virgin MARY with our Saviour in her arms, embossed upon a jasper two inches in breadth, found in the Emperor CHARLES the Great's tomb, and said to be the work of St. LUKE. 6. A manuscript of the Gospels found in the same tomb, which with a great many other reliques, it is said, were procured by CHARLES the Great of AARON King of Persia, and of the Patriarchs of Jerusalem and Constantinople. At the east end of the cathedral is a throne, upon which our Saviour is represented sitting majestically in a long robe, and round the throne a representation of the four animals mentioned in EZEKIEL's vision. Over his head is a circle of golden stars, and underneath them the symbol of the cross, said to have appeared in the air to the Emperor CONSTANTINE, when he conquered MAXENTIUS. Here is also a representation of the four and twenty elders rising from their seats, laying down their crowns, and prostrating themselves before the throne. In this church also is a pulpit covered with plates of gold, as is the altar in the choir, whereon is represented our Saviour's passion. In the upper part of the church over against the Prince's altar, is a throne of white marble, where the Emperors used to sit, and is supposed to be the same which CHARLES the Great placed there nine hundred years ago.

This city is governed by a Mayor, two Burgomasters, fourteen Aldermen, and a hundred and twenty Common-council-men. The Mayor presides among the Aldermen, and is constituted by the Duke of Juliers; the Burgomasters, Aldermen and Council, are chosen by the companies of the city, of which there are fourteen or fifteen; and the territories of this city are so large, as to comprehend two hundred villages.

The hot baths of Aken occasion it to be much resorted to, whereof three are within the inner wall. 1. The Emperor's bath. 2. The little bath. And, 3. The bath of St. QUIRINUS. The first of these is in the same place, and supplied

by the same springs as that was which CHARLES the Great so much delighted in; and used to invite his nobility and great officers to bathe with him in it; for it was the custom anciently to bathe an hundred together, though now the bath is divided by several partitions. These baths rise so hot that they let them cool twelve hours before they are used; but those which rise without the inner wall of the town are not so hot. The smell of the latter is offensive, and the water in the cisterns not transparent. Here is also a fountain of warm water, which is drunk in summer mornings for many chonical distempers. Less than a quarter of a mile from the south gate of the city, stands the village of Porcetum, so called from the droves of wild hogs which formerly frequented the woods near it, where is a nunnery, the Abbess of which is a Princess of the Empire. The village in general is well built, and has four handsome churches in it. The hot springs here lie on each side a small cool rivulet, which runs through the town, and are by pipes conveyed into fourteen houses, forming eight and twenty baths. The water of these springs is clear and pleasant, without any offensive smell, but much hotter than that of Aken; being usually cooled eighteen hours before it can be endured. There are several mines of lead, coal, vitriol, calmey or lapis calaminaris, near this place. With the calmey they make brass, by mixing eight and twenty pounds of the best Swedish copper, with an hundred pounds of this mineral, to which they add some broken pieces of brass, and a good quantity of dross of both the simples above mentioned. These they melt in crucibles over a hot furnace twelve hours, then putting eight of these crucibles into one, they let the drossy parts boil over, the purer subsiding at bottom; then they pour the liquid metal into a frame of stone bound with hoops of iron, and thus run it into large brass plates, which are afterwards cut in pieces with a kind of scissors or shears.

Those who have described the virtues of the baths of Aken, and particularly Dr. BLONDEL, relate that they are good against all affections of the nerves; such as convulsions, palsies, numbness, tremblings, gout, sciaticas, contractions, swellings, distempers of the bowels, stomach, spleen, inveterate head-aches, vertigo's, nephritical distempers, cold affections of the womb, stoppage or flux of the menses, barrenness, abortion, and scabs of all sorts. The waters of the city and those of Porcet, may both of them be drank, and thus taken are said to be good against, 1. Hot distempers of the liver, spleen, reins and bowels. 2. Against obstructions of the mesentery, pancreas, liver, spleen and reins. 3. The yellow jaundice, cachexy and dropsy proceeding from thence. 4. Inveterate and stubborn fevers, new tertians and quartans. 5. The whites in women. 6. Bleeding at the nose and flux of the menses. 7. Against worms, which they kill of all sorts. 8. They help conception, and dry over-moist parts. 9. They purge the urinary vessels of all impurities. 10. They cure stoppage of water and stranguries. 11. They cure the gout, scurvy, rheumatism, cholick, scrophulous distempers, imposthumes of the mesentery, &c.

The city of Aken professed the Protestant religion soon after the reformation, on which account the people were miserably harassed by the Imperialists during the civil wars of Germany, till at length Popery was again established, and is now the

The hot  
baths at  
Aken.

CHAP. XIX. Westphalia. the only religion publicly professed by the natives : but Protestants are permitted to reside here, and to go to a church in the neighbourhood under the dominion of the States General, when they celebrate divine service.

The Emperors were usually crowned in this city for five hundred years after CHARLEMAIN, and by the Golden Bull made in the time of CHARLES IV. the Emperor was to receive his first crown here ; but that custom of crowning him with three crowns hath been long since disused ; and at every coronation the magistrates who have the custody of CHARLEMAIN'S sword, shoulder-belt, and the gospel in golden letters, which are used at that ceremony, deliver them to the Elector of Mentz, and the Emperor declares that his being crowned elsewhere shall not prejudice the privileges of the city of Aken.

Duren. 3. Duren, situate on the river Rore, ten miles south of Juliers, a little uniform well-built city, with rivulets running through the streets. This place pretends to great antiquity, and in the church of St. MARTIN, the finest building in the town, they shew the head of St. ANNE, mother to the Virgin MARY, which admired relique formerly brought crowds of Pilgrims hither. It was an Imperial city, but is now subject to the Duke of Neuburg, Elector Palatine. Other towns in the duchy of Juliers, mentioned by Geographers, are, Munster-Eifel, Bedbur, Enskirchen, Nideck, Boisslar, Linnich, Dalen, Wafenberg, Sittard, Tudder and Safteren ; but it seems they do not merit a particular description.

Berg duchy. The duchy of Berg, having been allotted to the Duke of Neuburg Elector Palatine, and now subject to this Prince, as well as the duchy of Juliers, naturally comes to be described next. Berg, or *Montium Ducatus*, as the Latins called it, from it's being a mountainous country, is bounded by the county of Marck on the north, by the duchy of Westphalia towards the east, by Cologne on the south, and by the Rhine which divides it from the duchy of Juliers on the west : extending near fifty miles in length upon the banks of the Rhine, and about twenty miles in breadth where broadest. The country being for the most part rocky and mountainous, affords very little arable or pasture, and is consequently thinly peopled. The chief towns are first Dusseldorp the capital of the duchy, a large fortified town, pleasantly situated near the eastern bank of the Rhine ; twenty-five miles to the northward of Cologne, and six to the southward of Keyfarwaert. The town receives it's name from the little river Dussel, which here unites it's streams with the Rhine. It is generally well-built, and the publick buildings make a handsom appearance from the river, among which are the Duke or Elector's palace, who frequently resides here : the collegiate church of St. MARTIN is a handsom structure, where are the tombs of the ancient Dukes of Juliers and Berg ; and the Jesuits college is esteemed a very fine building. It was anciently an Imperial city, but now subject to the Elector Palatine ; the principal trade of the place consists in corn, which they import from the Low Countries and transport to Cologne, and other towns in Germany. 2. Essen, fifteen miles north-east of Dusseldorp, where stands a noble nunnery, to which the best part of the town, with several adjoining manors belong. Only ladies of noble descent are admitted here, who are at liberty to leave the convent and marry if they think fit. The natives of Essen are re-

Essen.

CHAP. XIX. Westphalia. koned excellent artificers in iron, and particularly in fire-arms. Other cities of any note in the county of Berg, are Bensburg, Solingen and Wipperford.

The remaining part of the territories allotted to the Duke of Neuburg in the dispute between him and the Elector of Brandenburg is the lordship of Ravenstein, a small barony between Guelderland and Brabant, receiving it's name from the castle of Ravenstein, a fort on the Maes four or five miles below Grave.

JOHN WILLIAM, the last Duke of Cleves, Juliers, &c. dying without issue, in 1609, left behind him four sisters, who were married to the Elector of Brandenburg, the Duke of Neuburg (ancestor to the present Elector Palatine,) the Duke of Deuxponts, and the Marquis of Burgow. The first, for having married the eldest sister, claimed the whole succession : the second formed the same pretensions, because the eldest sister died before her brother, and his wife was the eldest of the surviving sisters : the other two insisted on an equal partition to be divided among the four sisters. Besides those Princes, the Elector of Saxony set on foot an old pretension ; and the Duke of Nevers did the same. And, last of all, the Emperor pretended, that those countries should be sequestered in his hands, and disposed of as he judged proper. But there was no regard had to the Emperor's pretensions ; and his son, Archduke LEOPOLD, whom he sent to take possession in his name, was drove out by the Elector of Brandenburg, and the Duke of Neuburg.

These two Princes only maintained their claim by arms ; the former being assisted by the Dutch, and the latter by the Spaniards, who were then in possession of the Netherlands. The Dutch army was commanded by Prince MAURICE of Nassau, and the Spanish by the marquis of Spinola. So that (a thing which never before happened) the States and the Spaniards made war upon one another, in the name of their allies, though the truce that had been lately made, still continued betwixt themselves. There was not so much as one blow given on either side. The two armies industriously avoided meeting one another. The campaigns were spent in taking towns ; so that the most diligent of those two great Generals was he who made the greatest progress. Upon one's getting first to a place, the other did nothing to hinder it's being taken, but bent his march full speed to another place, and seized it, which he kept by virtue of his being the first comer.

During these things, a congress was held at Zanten, in order to an amicable accommodation betwixt the chief claimants, at which the ambassadors of France, Great Britain, Spain, and the States General, assisted ; but this came to nothing. At last Brandenburg and Neuburg made an agreement, and divided these dominions betwixt themselves. The first had the duchy of Cleves, and the counties of Mark and Ravenburg ; and the latter the duchy of Juliers and Berg, with the small territory of Ravenstein.

Under this agreement the two Electors of Brandenburg and Palatine have lived quietly ever since. But the present Elector Palatine being the last direct male descendant of the house of Neuburg, has nominated for his successor the Prince of Sultzbach, the nearest of kin to him by a collateral branch of the Neuburg family ; which, however, proceeds not from the lady, by whom

CHAP.  
XIX.  
West-  
phalia.

the Palatine family possesses Juliers and Berg.— Indeed this young Prince, strictly speaking, is not related to his Electoral Highness.

The King of Prussia forms his pretensions of succeeding in right of his maternal ancestor, on failure of heirs of the Elector Palatine. These pretensions were settled by a family-treaty (betwixt the houses of Brandenburg and Neuburg) of mutual succession to the whole dominions of the last Duke of Cleves, on the failure of either of their male issue; and this treaty was renewed in 1670.

To this his Electoral Highness replies, That his predecessors could not make such a treaty; and that he has as good a right to annul it as they had to make it. But the particular reason which is whispered at the Palatine court, why this family-bargain, or treaty, ought not to take place, will hardly pass, viz. because it was made over their cups. If this reason was good, there are very few contracts, it is to be feared, made, whether in this country, or in any other, but what would be liable to a new discussion.

To disappoint his Prussian Majesty as far as possible, and to procure to the Prince of Sultzbach the entire dominions now united in the Palatine house, his Electoral Highness omits nothing that can be done; and the young heir being under age, has named for his administrator (and perhaps for his successor, in case he dies before his majority) Duke FERDINAND of Bavaria, whose house, and that of Neuburg, are already knit together by ties of blood: it is not therefore to be doubted, but the Bavarian house will interpose in this succession.

The duchies of Juliers and Berg (the countries in dispute) lying in the neighbourhood of France and the United Provinces, those two powers are nearly interested in the person who shall succeed to them. So that the issue of this grand affair does not concern the Germanick body alone; tho' we may be sure, that there is not one member thereof, that is not uneasy at the thoughts of an unequal distribution of power among them. This being the case, according to the present state of Europe, notwithstanding the justness of his pretensions, his Prussian Majesty must rest contented with what shall be given him. Happy if he shall be able to obtain any thing, in the way of negotiation; for, unless unforeseen opportunities should offer, it is in vain for him to try to do himself justice by arms; not but those countries are worth fighting for, as they bring in near 200,000 l. per annum to the Elector. But the King of Prussia has neither ally, nor well-wisher in the present affair; but on the contrary, he is surrounded with neighbours, who are far from being desirous of contributing to the augmentation of a power, which already they look upon with a jealous eye, and think too formidable.

The gentleman who drew up this state of the case, observes, that it would greatly contribute to the advancement of the protestant interest, and the strengthening the barrier against France, were those countries to be possessed by the King of Prussia. On the other hand, it might not only be of ill consequence to the protestant religion, but dangerous to the liberties of Europe, if the succeeding Sovereign should be under French influence.

The territories allotted to the Elector of Brandenburg, as has been observed already, were the duchy of Cleve, with the counties of Marck and Ravensberg. The duchy of Cleve or Cleef, lies

on both sides the Rhine, and is bounded by part of the United Provinces towards the north, by Munster on the east, by the duchy of Juliers on the south, and by Guelderland and Brabant towards the west: extending upwards of forty miles from north to south, and about five and twenty from east to west. The chief rivers are,

1. The Rhine which passes through the middle of it to Schencken Schans, a fort belonging to the United Provinces, where it divides itself into two branches, whereof that which runs by Arnheim retains the old name, but the other which passes on to Nimeguen, is called Wale. 2. The Roer, which rises in the county of Marck, and falls into the Rhine between Duifburg and Roerort. 3. The Lippe, which rises in Westphalia, and unites its waters with the Rhine near Wesel. And 4. The Nierse, which rises in the dukedom of Juliers, and joins the Maes near Gennep. The country is generally mountainous and woody; but is not destitute however of corn and cattle. The chief towns are, 1. Cleve, or Cleef,

the *Clivia* of the Latins, said to be so named from its situation on the declivity of a hill between the Rhine and the Maes, and surrounded by cliffs and craggy rocks, about twelve miles south-east of Nimeguen, and sixty north-west of Cologne. It is supposed by some to be the old *Colonia Ulpia Trajana*, and by the ruins about it appears to have been of much larger extent than it is at present. There is an inscription also here on the south gate under the monument of EUMENIUS RHETOR, who is said to have taught oratory in this city, importing, that he resided here in the time of JULIUS CÆSAR, who founded the castle; of AUGUSTUS CÆSAR, who had a garison in it; of ULPUS TRAJANUS, who made it a colony; and of ÆLIUS ADRIANUS, who enlarged it and reduced it into the form of a city: but whether this inscription be not of a later date than it pretends, I find is very much disputed. The city is at present small, but very well peopled: neither the town nor castle of any great strength. On the west side of the town lies the park of Prince MAURICE of Nassau, admired for the fine water-works, canals and grotto's in it; and above these is a high hill called the Sternberg, from whence it is said Utrecht may be discerned at fifty miles distance, with forty more cities and great towns, twelve whereof are seen through so many vists, at the end of each of which appears a fine city. The private houses in Cleve are but mean; and the only publick buildings mentioned by travellers are, 1. The great church, a monastery of Capuchins, and another of Franciscans. As the Elector of Brandenburg, the present King of Prussia, is Sovereign of the country, the religion countenanced by the government is Calvinism; but most of the churches are possessed by the Papists in this city as well as in the rest of the duchy, by virtue of the agreement abovementioned with the Elector Palatine on the division of the country, who in consideration thereof promised not to disturb the Protestants in that part of the country allotted to him. 2. Embrick, situate on

the eastern side of the Rhine to the northward of Cleve, taken by the French in the year 1672, when they invaded the Netherlands; but restored again in 1674. 3. Gennep, situate at the con-

duchy.

CHAP. XIX. Westphalia. by the French in 1674, on their restoring it; and lying exposed in every war to the ravages of the armies on both sides, has entirely lost its trade, and is little better than a village. 4. Wesel, situate in a plain on the eastern bank of the Rhine near the mouth of the river Lippe, twenty five miles south-east of Cleve, a fortified town, esteemed the largest and best-peopled of any in the duchy, and well situated for trade, but miserably harassed by the French in the late wars. The only public building here mentioned by travellers is a fine hospital richly endowed. 5. Rees, a large fortified town twelve miles north-west of Wesel, taken by the French in 1672, and restored in the year 1704. 6. Roerort, a little fortified town at the mouth of the river Roer. 7. Duisburg, supposed to be the ancient *Teutoburgum*, situate on the confines of Cleve and Berg, fifteen miles north-west of Dusseldorp; once an Imperial city, but now subject to the King of Prussia as Duke of Cleve. It had formerly a great trade, since removed from this, as from several other German cities, to Francfort. An university was founded here by the Elector of Brandenburg, anno 1655. The public buildings of any consideration are the churches of St. SALVADOR and St. MARY, with the monasteries and nunneries, of which there are several in the place. The remaining towns mentioned by geographers in the duchy of Cleve, are Griet, Goch, Calcar, Santen, Burick, Alphen, Orsoy, and Dinflaken.

Mark county. Another of the counties allotted to the Elector of Brandenburg, on composing the differences between him and the Duke of Neuburg, was Marck, the largest county in Westphalia; so named, as is supposed, from having been the ancient boundary of Germany towards *Gallia Belgica*, and is situate between the rivers Lippe and Roer, upwards of forty miles in length, and about the same in breadth; containing fifteen bailiwicks or lordships, which derive their names from as many towns; the chief whereof are, 1. Hamm, twenty-five miles south of Munster, situate in one of the most fruitful parts of Westphalia, which produces plenty of corn and flax. It was anciently a Hans-Town, but the principal business of the natives at present is the entertainment of travellers, who usually lie here in their passage from the duchy of Cleve and the Netherlands to Brandenburg and Brunswick. 2. Unna, situate in a large plain, ten miles south of Hamm, formerly also a Hans-Town, and a place of trade; but suffered so much in the wars between the houses of Brandenburg and Neuburg, that it has not yet recovered itself. 3. Altena, which anciently gave a title to the Counts of Hamm, and was then a large city, but does not merit a description at present. 4. Werden, situate on the Roer, ten miles north-east of Dusseldorp, where vast quantities of Westphalia bacon is cured and transported into foreign countries. 5. Soest, a fine Imperial city on the river Arse, fifteen miles east of Hamm, the largest town in Westphalia next to Munster, consisting of ten parishes, with many more churches and chapels, among which the collegiate church of St. PATROCLOUS is under the jurisdiction of the Archbishop of Cologne.

Ravensberg county and castle. The county of Ravensberg, the remaining part of the territories allotted to the Elector of Brandenburg, is bounded by the bishoprick of Osnabrug on the north; by the county of Lippe on the east and south; and by the bishoprick of Munster on the west; taking its name from a fortress,

CHAP. XIX. Westphalia. situate on a high hill, sixteen miles south of Osnabrug: and here Dr. NICHOLSON observes, that most of the ancient seats of the German Princes and Nobility are thus situated upon high hills, which is the reason that so many countries and lordships in Germany terminate in *berg*, which, in the language of the country, signifies a hill; and we may further observe, that the reason so many towns in Germany end in *burg* is, that *burg*, or *borch* as the natives pronounce it, is High Dutch for a city or town. Ravensberg is a rocky mountainous country; the chief towns whereof are, 1. Bielevelt, a fortified town, seven miles south-east of Ravensberg, situate at the bottom of a high hill, which commands it. 2. Hervorden, or Herfurt, pleasantly situated at the conflux of the Aa and Wehre seven miles north-east of Bielevelt, in which is a noble nunnery, the Abbess whereof is a Princess of the Empire, and has a vote by her Deputy in the Diet. One of the Abbesses since the reformation was the Princess ELIZABETH, sister to the famous Prince RUPERT and the late Princess SOPHIA, niece of CHARLES I, King of England. The miracle of her sex, says Dr. NICHOLSON, as is evident from the letters which passed between her and DESCARTES, published in that great man's works. The nuns of this convent, according to the same author, soon after the reformation embraced the Protestant religion; and since the Elector of Brandenburg became their Sovereign have professed the doctrines of CALVIN. On the top of the hill, a little without the city, stands another convent of religious ladies, which is only a nursery to the former, to the Abbess and nuns whereof it owes its foundation. They have here all sorts of offices in our collegiate churches, as Deane's, Treasure's, &c. all which are in the disposal of the Abbess of Herfurt, as supreme Governess of the place. Of the first foundation of the church here take the following story, says my author, as I had it from one of the Vicars in the choir. The nuns at Herfurt having resolved to build a church, were informed by a poor shepherd, that the Virgin MARY, their Patroness, had appeared to him in the likeness of a dove, sitting on the stump of a tree, and commanded him to declare, that she had a mind it should be built upon this hill. The holy sisters, not giving credit to his words at first, wished that (to attest the truth of what he reported) he should first hold a red-hot iron in his bare hand, and afterwards go bare-foot over some glowing plough-shares; both which ordeals he having performed without harm, the miracle was confirmed, and the church built as it now stands. Near the altar they shew you the formentioned stump guarded with bars of iron: and they have yearly a great fair on this hill, which, in remembrance of this miracle, they call vision-market.

3. Engern, the ancient *Angrivaria*, where King WITEKIND kept his court, and lies interred; formerly a considerable city, but now reduced to a village. The Elector of Cologne however still styles himself Duke of Engern. And, 4. Vlotowe, situate on the Weser, fifteen miles east of Herfurt, said to be well situated for trade, because the river is deep enough here for ships of burthen; which I am apt to believe a mistake, because the river Weser is unnavigable much lower for large vessels.

The duchy of Minden also belongs to the King of Prussia, being given with Halberstadt and some other territories by the treaty of Munster, anno 1648, in lieu of that part of Pomerania then yielded to the Swedes. This country lies between the county of Hoya on the north, and the county of Lippe on the south, extending about five and twenty miles in length, and twenty in breadth; and towards the south yields plenty of corn, of which they export great quantities; but on the north it is pretty much incumbered with woods and mountains. The chief towns are, 1. Minden, the capital, situate on the west bank of the Weser, thirty-five miles east of Osnabrug; a large city, and a Bishop's See at the reformation, but secularized by the treaty of Munster, and the revenues of the bishoprick assigned to the Elector of Brandenburg, who still enjoys it under the title of a dukedom. The cathedral, according to tradition, takes up the place where King WITTEKIND's palace stood, which, it is said, he desired might be converted into a church on his being baptized. 2. Petershagen, situate on the same river, about three miles below Minden, where the Bishops of this See formerly had a palace.

The little county of Lippe lies between the duchy of Westphalia and the county of Ravensberg, being somewhat more than thirty miles in length, and ten in breadth, governed by its proper Counts, an ancient family, who pretend to derive their pedigree from MANLIUS, who defended the Roman Capitol against the Gauls; but however that be, it is generally agreed they are of Roman extraction, and are at present divided into the branches of Diethmold, Brackel, and Buchenburg. The chief towns in their territories are, 1. Diethmold, or Dietmelle, where the eldest branch of this house have their residence, twelve miles north-east of Paderborn supposed to derive its name from TEAT, or DITH, a pagan deity, worshipped here before the conquest of the Saxons by CHARLES the Great, from whence CLUVERIUS concludes this to have been the ancient *Teutoburgum*, a word of the same import as Diethmold. It is at present but a small place, and has little other trade than what is occasioned by the residence of the court. 2. Lippe, or Lippestat, called *Lippia* by the Latins, and takes its name from the river Lippe, on which it is situated, twenty miles west of Paderborn; the chief trade of the inhabitants being in timber and planks, for the building ships and barges on the Rhine. 3. Lemgow, a free city, situate on the river Pega, fifteen miles north of Paderborn, in a plentiful country, abounding with corn, the natives an ingenious industrious people, and generally Lutherans. 4. Horn, not far from Diethmold, supposed to be the place where the Roman General QUINTILIUS VARUS was defeated by the Germans, and the legions under his command cut in pieces; anciently subject to its own Counts, till annexed to the territories of Lippe, about the year 1567. 5. Uffen, or Saltz Uffen, situate between Lemgow and Herfurt, considerable for its salt-springs and a manufacture of cloth.

The county of Pyrmont was also annexed to the territories of Lippe, upon the death of the last Count of Pyrmont and Spiegelburg without male issue, who was killed at the battle of St. Quintin, about the year 1557, the chief town whereof is of the same name, and situated sixteen miles to the eastward of Lemgow. It is famous at present for its mineral waters, which occasions

a great resort of the German nobility hither, these being preferred even to the waters of the Spaw, and exported to the most distant countries in Europe.

The county of Ritberg also had a Count of its own till the year 1562, when the family became extinct; and it is now under the dominion of the Counts of Lippe. The chief town is Ritberg, situate near the head of the river Ems, ten miles north-west of Lippe, of which I meet with no particular description.

The county of Schawenberg is bounded by the dominions of Brunswick on the north, east and south; and by the county of Lippe and principality of Minden on the west; now also subject, part of it to the Counts of Lippe, and the other to the Prince of Hesse, being about thirty miles in length, and sixteen in breadth, a country affording plenty of good corn and pasture, and well watered with rivers; particularly the Weser, the Hammel, the Awe, the Caspaw, and the Exter. Here is also a great lake which goes by the name of the Steinhuddersee, five miles in length and two in breadth, which yields them plenty of fish, especially perch. Their principal commodities are salt, timber, coals, allom, chalk, and venison; and the free-stone in their quarries is so good, that it is daily exported to Holland, Flanders, Lubeck, &c. They had also formerly some copper-mines, which yielded gold and silver, but they are either exhausted or lost at this day. The chief places in this county are, 1. The old fortress of Schawenberg, situate on the top of a high hill on the east-side of the river Weser, sixteen miles east of Minden, the ancient seat of their Counts. 2. Buckenburg, twelve miles south of Schawenberg, considerable at present only for being the residence of the second branch of the house of Lippe. Other places of any consequence in this county are, Statshagen, seventeen miles west of Hanover; Oldendorf, five miles south-east of Scawenberg; and Saxenhagen, sixteen miles north-west of Hanover.

The county of Hoya is bounded by Bremen on the north, by Lunenburg on the east, by Minden on the south, and by Diepholt on the west. It was governed by its own Counts till the death of OTHO, the last Count, anno 1582; upon whose decease the greatest part of this county devolved on the houses of Brunswick and Lunenburg, and is now the inheritance of his British Majesty. The house of Hesse enjoyed another small part of this county, wherein the towns of Ucht and Frenndenburg are situated, but transferred their interest in it to the Counts of Bentheim. The chief towns are, 1. Hoya, situate on the east side of the Weser, thirty miles north of Minden, a small fortified town, with a strong castle adjoining to it. 2. Nyenburg, situate on the east side of the Weser, a fortified town, ten miles east of Hoya. The rest of the towns and places of any consequence in this county, are Stoltzenow, Erenburg, Sierk, Steigerberg, Sidenburg, Depenaw, Burenburg, Lavenhaw, and Bruckhausen, all which are situated in that part of Hoya which belongs to his British Majesty.

The small county of Diepholt is bounded by Delmenhorst on the north, by the county of Hoya on the east, and by Munster on the west, extending thirty miles in length, and about fifteen in breadth, subject to his British Majesty as Duke of Lunenburg. The chief town whereof is Diepholt, situate on the Dummer-Lake, twenty-five miles west of Hoya.

county.

Embsen  
city.

Norden.

Aurich.

The county of Delmenhorst lies on the south-west of Bremen, being about sixteen miles in length and eight in breadth, now subject to Denmark, as was intimated in the description of that kingdom, but formerly governed by its own Counts; the chief town whereof is Delmenhorst, a small place situate on the river Delm, ten miles west of the city of Bremen.

The county of Oldenburg is bounded by the German Ocean on the north, the duchy of Bremen on the east, and by the county of Embden on the west, being about fifty miles in length, and five and twenty in breadth, a barren country, consisting chiefly of vast marshes, where are bred a small sort of cattle, less than those of Wales or North Britain. The inhabitants are a poor miserable people, and their dwellings of clay and turf, suitable to their condition. The King of Denmark has been their Sovereign ever since the death of their last Duke ANTHONY GUNTER, anno 1656. The chief town is Oldenburg, situate on the river Hund, about sixteen miles west of Delmenhorst, a fortified town of some trade.

The county of Embden, or Emmerland, sometimes called East-Friesland, is bounded by the German ocean on the north, by the county of Oldenburg on the east, and by the province of Groningen on the west, extending about fifty miles in length and thirty in breadth, part of the kingdom of the ancient Frizons, and made a province of Germany by CHARLES the Great: ULRICH the Governor was made the first Count of it by the Emperor FREDERICK IV, in the year 1453, whose posterity still continue in possession of great part of it. The people are said to be of the Belgick race as well as the Hollanders, but they are at present a slothful generation, and want very much of the industry of a true Dutchman. The soil is generally marshy, much of the same nature as the adjoining county of Oldenburg, and the natives as remarkable for their rusticity. The chief towns are, 1. Embden, or *Amasia*, the capital, situate near the mouth of the river Ems, on the Dollaert Bay, in the latitude of fifty-three degrees twenty minutes, sixty miles to the westward of Bremen, and twenty-five to the eastward of Groningen, a large populous city, and a place of trade, having a very good harbour. From hence they have a fine prospect of the ocean and the adjacent country. The houses are high and well-built, and the town-hall a magnificent structure. They are at present a free state, under the protection of the Dutch; but were subject to their Count till the year 1595, when, taking an advantage of his absence, they published an act of Common-council, That he should no longer have his residence in the city, and decreed themselves to be a free state, independent of this Prince. This revolt was occasioned by the Count's professing Lutheranism, the inhabitants being generally zealous Calvinists. Here the English had a mart for cloth, till upon some disgust taken it was removed to Hamburg, since which Embden has been upon the decline. 2. Norden, a well-built town, pleasantly situated on the sea, ten miles north of Embden, formerly a good harbour, but not capable of receiving ships of burthen at present.

3. Aurich, ten miles north-east of Embden, which gives name to the territory called Auricherland, considerable for seven great fairs of cattle which are annually kept here, and a castle, the usual residence of a branch of the house of

VOL. II.

Embsen, where is also held the supreme court of judicature for the county, consisting of a President, who is a nobleman, a Stadtholder, or Chancellor, who is a Doctor of law, and nine Assessors, three of whom are noblemen, and the other six civilians. In a vacancy of their sessions the President follows the Count's court, and determines all controversies within the verge of the palace.

4. Jever, or Jevern, a handsome trading town, thirty miles north-east of Embden, the capital of a barony, forty miles in circumference, containing several fine seats of the nobility and gentry. The Barons anciently pretended to an independency, but were brought under the dominion of the Counts of Oldenburg, and consequently are now subject to Denmark. 5. Esens, the capital of the district called Harlingerland, situate on a river of the same name, twenty-four miles north-east of Embden, formerly an independent principality, but annexed to the territories of the Counts of Embden by marriage, about the year 1581. 6. Wittmund, the capital of a barony, five miles to the eastward of Esens. 7. Leer, or Lera, a fine market-town, situate on the Ems; and, 8. Fredeburg, about thirty miles north-east of Embden.

The counties of Bentheim and Steinfurt were anciently subject to different Lords, but are both at present under the dominion of the Count of Bentheim. The county of Bentheim is bounded by the United Provinces on the north and west, and by Steinfurt on the south; being about forty miles in length, and ten in breadth; both counties, like the rest of Westphalia, are covered with forests, but have very few hills, except near the towns of Bentheim and Neirhus. The only town of any consequence is Bentheim, the ancient seat of their Counts, which stands in the middle of a forest, thirty miles north-west of Munster.

The county of Steinfurt lies to the southward of Bentheim, about twelve miles long and six broad; the chief town whereof is Borchsteden, situate on the river Aa, fifteen miles north-west of Munster.

The county of Lingen, subject to the Bishop of Munster, has Osnabrug on the east, and Bentheim on the west, extending about fifteen miles in length, and ten in breadth; the chief town whereof is Lingen, subject to the late Princes of Orange, and claimed by the King of Prussia, as heir to that family; tho' the Bishop of Munster is Sovereign of the country about it. The town of Lingen is situate on the river Ems forty miles north of Munster, the inhabitants generally Calvinists.

The county of Tecklenburg lies on the west of Osnabrug, extending about sixteen miles in length, and eight in breadth, and is subject to the Counts of Bentheim. The capital of the same name is a large open town, ten miles to the westward of Osnabrug, said to be the ancient *Teselia*, the city of the *Angriveri*, but not very considerable at present.

Dortmond, said to be an Imperial city, under the protection of the King of Prussia, is sometimes styled the capital of the county of March, but being omitted there, I take the opportunity of mentioning it in this place. It is a small, but populous city on the river Empster, thirty-five miles to the southward of Munster, and about as much to the northward of Cologne; and however it may pretend to be a free Imperial city, the King of Prussia claims the sovereignty of it, and is in effect master of the place.

pire.

With the abbacy of Corbey I shall conclude this tedious, but necessary description of the German territories, which lie between the bishoprick of Paderborn on the west, and the river Weser on the east, extending about sixteen miles in length, and eight in breadth. The town of Corbey, in which the abbey is situated, stands on the river Weser, twenty five miles to the eastward of Paderborn, and, with the whole territory, is subject to the Abbot, who is a Prince of the Empire. The town of Hoxter, or Huxer, situate on the banks of the Weser, five miles to the southward of Corbey, is subject also to this abbey, a handsome city, and a place of some trade.

THE Circle of Burgundy, which made the tenth Circle of the Empire, consisting of the seventeen provinces of the Netherlands and the Franche Comte, being now subject to other Princes, and independent of the Empire, I shall describe hereafter in it's present state: in the mean time I shall add some things in relation to Germany, which have been but lightly touched upon, and may need some particular description. And first the matriculation-book so often mentioned, which is a register kept by the Chancellor of the Empire, the Elector of Mentz; containing the names of all the Princes and States who are members of the Empire, with the time of their investiture, the forces and treasure every one is obliged to contribute for the defence or support of it. Here also are entered the admission of all persons to honours or offices in the Empire, which is called a matriculation, and gives them the possession of their estates and dignities.

By this matricula every Circle was at first obliged to contribute the following forces, or a sum of money in lieu of them, viz.

	Horse	Foot or Florins.
The Circle of Austria	174	907 5714
Circle of Bavaria	231	1060 6934
Circle of Franconia	249	1219 8100
Circle of Upper Saxony	278	1167 7972

Circle of Suabia	341	2100 12623
Circle of the Upper Rhine	433	1950 12280
Circle of the Lower Rhine	190	885 5828
Circle of Westphalia	309	2019 8964
Circle of Burgundy.	180	831 5484

Total 2707 13192 82891

N. B. Every German florin is forty pence, which is double the French florin or livre.

There is another tax the States of the Empire are obliged to pay towards the charges of the Imperial chamber or sovereign courts of Spire and Vienna, amounting to 48925 florins.

The first  
division of  
the Em-  
pire into  
Circles.

The Empire was at first divided into six Circles only, by the Emperor MAXIMILIAN I. anno 1500, namely, into the Circles of Franconia, Bavaria, Suabia, the Upper Rhine, Westphalia, and Lower Saxony; and twelve years afterwards he added the Circles of Austria, Upper Saxony, the Lower Rhine, and Burgundy. This last division of the Empire was confirmed by CHARLES V. at the Diet of Nuremberg, anno 1522; and by the matricula above-mentioned, he appointed what each Circle, and every Prince and Member of each Circle, should contribute towards the defence and support of the Empire: and those who

did not send in their quota of troops, instead thereof, for each horseman were to pay twelve florins, and for a foot-soldier four florins: afterwards it was enacted, that sixty florins should be advanced in lieu of every trooper wanting, and twelve for every foot-man: and these payments obtained the name of Roman months, on account that the forces or money above-mentioned, was at first applied towards the raising a body of horse and foot, to guard the Emperor in his progresses to Rome, and probably was raised monthly. This tax the States of the Empire at this day augment or alter as they see occasion. There are, as hath been intimated, in every Circle one or two directors, who summon the States of their Circle, and have the command of the above-mentioned militia, regulating their march, quarters, &c. and putting the decrees of the Empire in execution, where any Prince or Member refuses to comply with their resolutions. The States of each Circle, besides a General, (who is usually their Director) elect five Lieutenants to assist him, or supply his place in his absence. They choose also a Treasurer, a Receiver, and a Secretary, for the service of each Circle. When all the Circles meet it is called a general assembly; but usually the Circles which lie nearest together meet every year, from whence they are called the corresponding Circles; of which there are three classes, viz. 1. The Upper Rhine, Lower Rhine, and Westphalia. 2. The Upper and Lower Saxony. And, 3. Franconia, Suabia, and Austria. That of Upper Saxony assembles usually at Leipzick; that of Franconia at Nuremberg; and that of Suabia at Ulm. They treat of the regulation of their coin, the publick peace, their treasure, magazines, fortifications, and commerce, rectifying the matricula, putting the decrees of the Empire in execution, and appointing Judges of the Imperial chamber of Wetzlar or Spire, and of the Aulick council at Vienna, and have a power of enacting laws which are not inconsistent with the constitutions of the Empire.

As to the forces, which the several Princes of the Empire are able to maintain and pay, the author of the Atlas Historique seems to have made a very moderate calculation. Beginning with the ecclesiastical Princes, he supposes, that

	Men
The Elector of Mentz may maintain	6000
The Elector of Trier	6000
The Elector of Cologne	6000
The Bishop of Munster	8000
The Bishop of Liege	8000

	Total	453500

If we reflect on the vast addition which has

been made to the Emperor's hereditary dominions since this computation, on the frontiers of Turkey, in the Netherlands, Italy, and Sicily, we may very well throw in 50,000 men more to his share; and then the forces of the Empire will amount to 500,000 men and upwards, two thirds whereof are usually kept in pay, though they are in a profound peace. A body of troops sufficient to give laws to the rest of the world, if they were united under one head; but a country divided among so many petty Princes, of different religions and interests, can never be formidable to the neighbouring Powers, or endanger the liberties of Europe; they may sometimes be unanimous in opposing foreign invasions, but will scarce ever unite in an offensive war.

## THE PRESENT STATE OF THE NETHERLANDS.

### CHAP. I.

*Treats of the Netherlands in general, and shews how the seven United Provinces came to be separated from the other Ten, and form a distinct State.*

CHAP. I. FROM Germany, travelling westward, we meet with the seventeen Provinces of the Netherlands, or Low Countries; so denominated from their low situation, at the mouths of several great rivers; the maritime provinces whereof were almost one continued morass, till drained of late years by the industry of the numerous people, who retired hither for shelter, from the persecutions and oppressions of their respective Princes.

These provinces are bounded by the German Ocean on the north, by the circle of Westphalia, the bishopricks of Triers and Liège, and the duchies of Juliers and Cleve on the east, by France and Lorraine towards the south, and by the British seas, and other provinces of France, on the west: and are situated between the fiftieth and fifty-third degrees, thirty minutes north latitude; extending three hundred miles in length, viz. from the confines of Picardy to the mouth of the river Ems, in East-Friesland; and two hundred miles in breadth, viz. from Gravelin to Triers, but in many places they are not of half that breadth. The ancient name of this country was *Belgia*, so called from the *Bellovaci*; whom it is supposed were the most considerable people

here when Cæsar wrote, and probably might have the rest of the provinces under their dominion: These provinces were anciently divided between Gaul and Germany, as they were situated south-west or north-east of the Rhine; those of them which were situated south-west of the Rhine, were with the rest of Gaul reduced under the obedience of the Roman Empire by JULIUS CÆSAR: afterwards the *Batavi*, the *Hollanders*, and *Zealanders* submitted also to the Romans, but were looked upon rather as allies than subjects. When the Franks of Germany established a new kingdom in Gaul, these provinces were at first united to it; but when Germany was afterwards separated from France, most of them fell to Germany. The northern nations (says a celebrated writer) having broken in upon the Roman Empire, and extended themselves beyond the Rhine; by their marches and counter-marches, so wasted and harassed that tract of land now called the Low Countries, as they passed by them to greater conquests, that the inhabitants grew thin: and being secure of nothing, fell to seek the support of their lives, rather by hunting or violence, than by labour and industry: whereby the grounds came to be uncultivated, and in course of years

**CHAP. I.** either turned to forests or marshes. Flanders, under which name was comprehended most of the provinces which belonged to Gaul, was for many years before the reign of CHARLEMAIN one great forest. And Holland, an island made by the branches of the Rhine, (then called *Batavia*) was only a great marsh or fenn, and esteemed rather a part of Germany than Gaul, in regard of it's being planted by the Catti, an ancient people of Germany: this island, says the same writer, probably changed it's inhabitants, and customs, upon the irruptions of the northern nations; but chiefly of the Normans and Danes, from whose countries and language the names of Holland and Zealand seem to be derived.

The Forester of Flanders had most of these provinces under his jurisdiction.

The Franks, having made an entire conquest of Gaul, distributed most part of the lands among their Generals and Officers; to one of whom great part of the Low Countries were given, under the title of Forester of Flanders, which officer continued for several descents, who having suppressed the robbers and banditti who infested the country, and in some measure civilized the inhabitants, CHARLEMAIN, or rather CHARLES the Bald, made Flanders a county, and changed the title of Forester into that of Count, or Earl, without interrupting the succession. But what the extent of this country was, or how far the jurisdiction of the Forester reached, my author says is very uncertain: it is generally agreed, however, that it bordered upon or included part of that famous forest of Ardenne, which in the time of CHARLEMAIN extended beyond the city of Aix-la-Chapelle in Germany.

The ancient Foresters (in imitation of their northern ancestors) subdivided the country, and parcelled it out among their creatures and dependants; reserving certain services from the Grantees, obliging them to bring into the field a certain number of troops when required, or to defend their castles and fortresses against the invasions of enemies, or by some such military tenure. Another constitution which the northern people established, it is observed, where-ever they came, was the erecting three estates or orders; consisting of the nobility, clergy, and people, under the limited sovereignty of one person, styled King, Prince, Duke, or Count: which kind of government had prevailed for time immemorial in the Low Countries, before the Spaniards endeavoured to subvert it. Several other privileges were granted to the cities and inferior districts of this country by their Princes, such as the choice of their magistrates, civil judicature, and exclusion of all foreigners from places of trust and profit, and an exemption from all taxes and impositions but what were consented to by the States. Their Princes also agreed, never to introduce foreign troops among them.

The 17 provinces, governed by as many Princes anciently.

The provinces which enjoyed these great privileges and immunities were seventeen in number, and were long governed separately by distinct Princes under various titles: the provinces of Brabant, Limburg, Luxemburg, and Guelderland, had each of them a Duke for their Sovereign; Flanders, Artois, Hainault, Holland, Zealand, Namure, and Zutphen, were Earldoms; Friesland, Mechlin, Utrecht, Overysse, and Groningen, had the title of Lordships; and Antwerp, that of a Marquisate of the Holy Roman Empire. These in a long series of time, by inheritance, marriages, or contracts, became united under one head, and first in the house of Burgundy: PHILIP the Good, about the year 1430, enjoyed the

**CHAP. I.** titles of Duke and Earl of Burgundy, Duke of Brabant, Limburg, and Luxemburg; Marquis of the Holy Roman Empire; Earl of Flanders, Hainault, Holland, Zealand, Artois, and Namur. CHARLES the Warlike, his son, succeeded him anno 1467, on whom devolved the duchy of Guelderland and Zutphen: who being killed in a battle against the Switzers anno 1475, left issue only one daughter, MARY, who married MAXIMILIAN of Austria, son to the Emperor FREDERICK III, to whom he succeeded anno 1482: PHILIP, the son of the Emperor MAXIMILIAN and MARY, married JOAN the daughter and Heir of FERDINAND and ISABEL King and Queen of Spain, the first Monarchs of that whole kingdom: CHARLES their son, afterwards elected Emperor, by the name of CHARLES V, succeeded to the duchy of Burgundy, of which the Low Countries were part, in the right of his father, anno 1506, to which he added Overysse and Utrecht; and succeeded to the kingdom of Spain, in the right of his mother anno 1516; and to the Empire (as has been mentioned already) anno 1519: constituting the countries above-mentioned one of the circles of the Empire, by the name of the Circle of Burgundy.

They are united again in the house of Burgundy.

Possessed afterwards by the house of Austria.

Made part of the circle of Burgundy. The trade of Europe centered here.

These provinces being extremely well situated for trade, and the natives living under a mild and gentle government, extended their commerce far and near, Bruges, Ghent, and Antwerp were the great marts of Europe; when CHARLES the Warlike or Hardy, as he was called, being engaged in the war against France, and the Switzers demanding larger taxes and contributions of his subjects than they had been used to pay, gave some interruption to their prosperity, and occasioned discontents amongst them. In the reign of the Emperor MAXIMILIAN their privileges were again invaded by the bringing German troops into the Low Countries on pretence of defending them against France: and in the time of CHARLES V, greater forces, consisting of Spaniards and Italians, as well as Germans, were introduced into Flanders on the like occasion, which was a thing scarce ever practised in preceding times; but the Emperor CHARLES V, being a fortunate Prince, and beloved by the people for his generous actions; and having the advantage of being born amongst them, and versed in their customs and language, and conferring on them many posts of honour and profit throughout his large dominions; there was scarce any murmuring either at the numbers of foreign troops kept up in the Low Countries, or at the taxes levied to maintain them, in his reign. And upon the resignation of his dominions he left the Low Countries to his son PHILIP II, in as peaceable and settled a condition as could be wished; but PHILIP determining to retire into Spain, and leave the Low Countries under the government of a Viceroy, which had till CHARLES the Fifth's time been the constant residence of their Princes, being also a Spaniard born, and partaking of the severity and gravity of his nation, which the Flemings denominated pride and reservedness; and taking only Spaniards into his councils even in Flanders, continuing also the Spanish and Italian forces on foot, and insisting on supplies to maintain them even after the peace with France was concluded, he soon ceased to be beloved, says my author, and became dreaded by his Flemish subjects: while he thinking it beneath him to attend to the grievances and discontents of so inconsiderable

CHAP. I. was the residence of the Princes at that time.

These were the revolutions in the Netherlands.

June 1671. Jan 1672.

CHAP. I. siderable a people, or to be limited by their ancient forms of government, created in them such a disgust to his person and administration as rendered that people ripe for a revolt. Nor did WILLIAM Prince of Orange, a crafty and ambitious man, (according to PUFFENDORF) a little contribute to foment their discontents. For when King PHILIP had resolved to go into Spain, and to commit the administration of the Netherlands to a governor; the Prince of Orange proposed the making CHRISTINA Duchess of Lorrain Regent, hoping to marry her daughter, and to have the direction of all affairs of state; but miscarrying in both his designs by King PHILIP's constituting his natural sister the Duchess of Parma Regent of the Netherlands, and refusing his consent to the match with the Duke of Lorrain's daughter, the Prince of Orange became a malecontent, and only waited for an opportunity of being revenged. The Counts of Egmont and Hoorn, and many others of the nobility, were extremely dissatisfied also on account of the Spaniards being preferred to the most beneficial employments, and influencing all their councils. Nor were the clergy less offended with the King for taking away the revenues of the abbeys, and endowing several new bishopricks which he had erected, with their revenues. For before this time it seems there were but three bishopricks in all the Low Countries, to which King PHILIP added fourteen more, making the number of Sees equal to the number of provinces. But what contributed more than any thing to inflame this people, was the great change of religion which happened about this time: many of the Flemings had forsaken the Popish communion, some professing the Lutheran doctrine, some that of Calvin, and others the errors of the Anabaptists, &c. which CHARLES V. had endeavoured to check by severe proclamations, that served only to exasperate the minds of the people; and his son PHILIP determined by still more violent methods to root out these heresies, as they were called. In order to which he revived his father's proclamations, and was about setting up a court of justice, resembling that of the Spanish inquisition; the very mention whereof created the utmost horror in the minds of the Flemings; for in this court they understood the lives, estates and reputation of every subject were to be put into the hands of unmerciful Priests, who gloried in the inhumanity and rigour of their proceedings, and might punish any man on suspicion without producing his accuser, or acquainting him with the charge against him. While they were under these dismal apprehensions a religious war breaking out in France, compelled great numbers of Calvinists to fly that kingdom and retire to the Netherlands, as great numbers of Lutherans had already done from Germany, and English from Britain on account of the persecution there in Queen MARY's reign. These accidents filling the Netherlands with swarms of Protestants; the admiration of their zeal, compassion for their sufferings, or the humour of the age, gained them many proselytes daily among the nobility, as well as the meaner sort of people, but principally in the cities, where trade and riches were much increased by these new inhabitants, who brought their fortunes with them. This gave frequent opportunity to the judges of the inquisition to exert their authority, and inflict the severest punishments on the unhappy Protestants; with which proceedings the Flemings were the more terrified, because in this

VOL. II.

court none of their privileges, the indulgences of the King, or intercessions of the Grandees could avail them, and they were conscious they had given a great deal of liberty to their tongues, and thereby rendered themselves obnoxious to their enemies. The Spaniards, it is said, were not ill satisfied to find the Flemings oppose these violent proceedings, whereby they were furnished with a handle to reduce them under their absolute dominion, and by suppressing their liberties and privileges proposed to make them subservient to their designs against England and France, which King PHILIP had determined to invade. Whereupon Queen ELIZABETH of England, who had discovered his intentions, it is said, fomented the divisions of the Low Countries, in order to find the Spaniard employment, and divert him from his intended descent upon England: for Spain was at this time arrived to that height of power as to become terrible to all her neighbours; and universal monarchy, as generally dreaded from this quarter, as it was afterwards in the reign of LEWIS XIV from the side of France.

Thus, says Mons. PUFFENDORF, were the seeds of civil discord sown among the Flemings, when PHILIP II went into Spain, having left the 1559: government in the hands of the Regent and council of State, whereof the Prince of Orange, the Earl of Egmont, and others were members; but Cardinal GRANVILLE, a Burgundian, a subtle Statesman, was most relied on by the King: and the Regent had positive orders to govern solely by his advice, which the rest of the Lords of the council observing, opposed the Cardinal in whatever he moved, especially when he pressed the putting in execution the King's orders concerning the establishing the new bishopricks, and extirpating the Protestant religion; the Flemish Lords ever advising a toleration, and that the people might be treated in a milder manner: and so universal was the hatred of the people against the Cardinal, that the Earls of Egmont and Hoorn wrote to the King, that unless he was removed it was impossible to preserve the peace of that country.

Whereupon his Majesty so far complied with them as to remove the Cardinal, but at the same time directed the Regent to be guided by the president of the council VIGILIUS and the Earl of Barlemont, who in every respect pursued the Cardinal's rules: inasmuch, that it was commonly said, tho' the body of the Cardinal was removed, his spirit still remained in the council; and proclamations and acts of state still continued to be published against the new religion, which the people opposed, and would not suffer them to be put in execution; the Earl of Egmont thereupon was sent into Spain by the Regent and the Senate, to represent the state of affairs to his Majesty: but the King would remit nothing of the severities he had directed to be used in relation to religion; and it was given out in the Low Countries, that he had agreed with CHARLES IX of France to extirpate all hereticks (Protestants) out of their dominions, which put the Flemings in the utmost consternation, and occasioned their coming to a resolution to oppose the Spanish court with all their might.

Several of the nobility entered into an association, which they styled a compromise, whereby they engaged to suppress the inquisition, and stand by each other in the defence of their religion: protesting however at the same time, that they had no other end in view but the glory of God, the grandeur

11 F

CHAP.  
I.

grandeur of the King, and the peace of their native country. This association was subscribed by four hundred persons of quality, among whom the chief were the Lords HENRY BREDERODE, LEWIS Earl of Nassau, brother to the Prince of Orange, the Earls of Cuylenburg and Berg, &c. who met at Brussels, and delivered a petition to the Regent, desiring that the proclamations concerning religion might be recalled. She answered them in courteous and general terms; but promised no more than that she would know the King's pleasure in the matter; and it was commonly reported that the Earl of Barlemont, who stood near the Regent, acquainted her that they were a parcel of beggars, and that she had nothing to fear from them; which rendered the name of *Geusen*, or beggars, very famous afterwards, the malecontents taking for their arms a beggar's pouch.

In the mean time several pamphlets were published on the subject, which still more exasperated the people, who finding the King inexorable in the point of religion, assembled in a tumultuous manner, plundered the churches, and broke down the images they found there; and tho' the Prince of Orange and the Earl of Egmont did their utmost to appease the tumult, King PHILIP could never be persuaded but that they were at the bottom of it, who finding themselves suspected, held several consultations for their own safety, but came to no resolution. The Regent in the mean while having raised some troops either by threats or fair words, prevailed with most of the malecontents to submit and reconcile themselves to the King, others fled into foreign nations, and some few were exemplarily punished, whereby the country was restored to its former tranquillity, and the Prince of Orange retired into Germany.

The Regent hereupon advised his Catholick Majesty to come into the Netherlands in person without many forces, and endeavour to reconcile his Flemish subjects to him: but his Majesty being influenced by the Duke of Alva, determined to take this opportunity of reducing the Netherlands entirely under his power, and accordingly sent D'Alva with a body of Veteran troops from Italy into the Netherlands, where he was no sooner arrived but he took the Earls of Egmont and Hoorn into custody, whom he charged with being the authors of the late insurrection, declaring all that had been concerned in the late association, and the demolishing of images, to be guilty of high treason.

He proceeded also to erect a court of judicature, consisting of twelve judges, for the trial of these matters, from the severity of whose proceedings this court obtained the name of *The Bloody Council*. Before this tribunal the Prince of Orange, and some other Lords who had fled, were summoned, and on their not appearing were declared traitors, and their estates confiscated; nor were the common people treated with less severity, which so terrified the inhabitants, that they quit their dwellings in crowds, and fled to foreign countries; while Duke D'Alva erected citadels in several great cities, the better to awe the people and prevent any future insurrection.

The Prince of Orange in the mean time assembled a considerable force in Germany, with part of which he detached his brother LEWIS to fall into Friesland, where he defeated Count Artemberg the Governor of the province; but Duke D'Alva having caused the Earls of Egmont and

Hoorn to be beheaded, marched against him in person, and having routed his troops, fell upon the Prince of Orange, who had invaded Brabant, and entirely dispersed his forces. Upon which success D'Alva erected a magnificent statue of himself at Antwerp, in memory of his victories, where he was represented trampling on the States of the Netherlands; and having formed a design of subduing this people with their own money, he levied a tax upon them of the hundredth penny of their whole estates, the twentieth penny of their immoveables, and the tenth of all moveables, as often as they were sold, which provoked the Netherlanders to the last degree; and while he was busy in raising these taxes by force on the inhabitants of Brussels, who refused to pay them, he received advice that the exiled Flemings, denominated the *Sea Geusen*, being turned privateers, had with twenty-four ships under the command of the Earl of March, surprised the city of Briel in Holland, and that many other towns in Holland had revolted from the Spaniards; and it is looked upon to be one of the greatest errors in the Duke of Alva's conduct, that he did not in four years of his regency make any provision for the security of the sea-coasts.

But to return, the revolted towns having chosen the Prince of Orange for their General, and sworn allegiance to him as the King's Stadtholder, were joined by many privateers from England and France; insomuch, that in the space of four months they increased to a fleet of an hundred and fifty sail, who had their rendezvous at Flushing in Zealand, and distressed the Spaniards more than all the forces of the malecontents by land.

About the same time the Earl of Berg took several places in Guelderland, Friesland, and Overijssel; and LEWIS of Nassau, with the assistance of the French, surprised the city of Mons, which the Duke D'Alva soon after retook, notwithstanding the utmost efforts of the Prince of Orange to relieve it, who found himself obliged to retire into Holland. D'Alva afterwards repossessed himself of Mechlin, which city had declared for the Prince. He also retook Zutphen, and having made himself master of Naerden and Haerlem, treated the citizens with the utmost barbarity; and if D'Alva be not misrepresented, he used to boast that besides the numbers he had destroyed by the sword during his six years administration, he had caused eighteen thousand of the natives to be executed by the hangman; but the Spanish court finding that the Netherlands were never like to be reduced by these violent methods, thought fit to recall D'Alva in the year 1573, and to appoint LEWIS REQUESENES a man of a milder temper, to succeed him.

REQUESENES at his entry on the government of the Netherlands, finding the city of Middelburgh besieged by the Prince of Orange, sent a fleet to its relief; but had the misfortune of seeing it destroyed, and the town soon after surrendered to the Prince. On the other hand the Princes LEWIS and HENRY of Nassau, brothers to the Prince of Orange, bringing a reinforcement of troops to the confederates from Germany, were attacked and defeated by the Spaniards near Grave, and both of them killed in the field of battle. The Spaniards afterwards sat down before Leyden, and reduced the place to great extremities; but the besieged cutting their dykes, overflowed the country, and obliged the Spaniards

1573.

CHAP. I. Spaniards to rise from before it. About the same time the Spanish troops mutinied for want of pay, and lived upon free quarters at Antwerp and other places, which still more incensed the Netherlanders against the government; and the following year 1576, REQUESENES dying, the council of state took the administration into their hands, when the outrages of the Spanish soldiers continuing, they were declared enemies, and the Flemings were permitted to take up arms against them, which however could not prevent Maastricht and Antwerp's being plundered by them.

These distractions induced the council to enter into a treaty of pacification with the Prince of Orange at Ghent, wherein it was agreed, that peace should be restored, and the proclamation issued during the regency of the Duke of Alva revoked, and the Spanish troops be withdrawn out of the country; which treaty was ratified by the King, and he soon after constituted his natural brother Don JOHN Governor of the Netherlands; of whose administration the Prince of Orange was extremely jealous, and cautioned the Netherlanders against admitting him amongst them; but upon his subscribing the treaty of pacification made at Ghent, and engaging to dismiss the Spanish soldiers, he was received as their Viceroy by a great majority.

The Prince of Orange hereupon retired with his friends into Holland and Zealand, and Don JOHN soon discovered that their fears were not altogether groundless, by his surprising the castle of Namur. The Flemings endeavoured to retake the city, and sent for the Prince of Orange to command their forces, constituting him Grand Bailiff of Brabant, which created the Prince some envy among his confederates, and particularly the Duke of Arschot seemed to be highly offended at the conferring on him this mark of distinction; whereupon they invited MATTHIAS, Archduke of Austria, to be their General, who was received as well by the party of the Prince of Orange as the rest of the confederates, as their Governor, upon condition that the Prince should be his Lieutenant, and that the Archduke should not transact any thing of moment without the consent of the States.

In the mean time ALEXANDER, Duke of Parma, being sent into the Low Countries to the assistance of Don JOHN, defeated the army of the confederates near Gemblours, and afterwards took the cities of Louvain, Limburgh, Philipville, and several other places, whereby the allies were reduced to great extremities; and finding themselves an unequal match for the veteran troops lately arrived from Spain and Italy, they offered to put themselves under the protection of HENRY III. King of France; who refusing to be concerned with them, they next offered to submit to the Duke of Alençon his brother, who thereupon immediately repaired to the Netherlands, and took upon him the government of the confederated States, but found such divisions and misunderstandings among the chiefs of the party, who seemed to be unwilling to be under any command, that he could effect nothing of moment. There appeared also an irreconcilable enmity between the Protestants and Papists at this time, the one being for allowing liberty of conscience to all persuasions, and the other opposing it; particularly the provinces of Artois and Hainault, and some other cities, appeared so very

zealous for establishing the Roman Catholic religion, that they set up a new faction, which obtained the name of the Malecontents, about which time Don JOHN of Austria died, leaving the regency to the Duke of Parma, who was confirmed therein by the King of Spain.

The Duke began his regency very successfully, with the taking of Maastricht, and by treaty prevailed with the provinces of Artois, Hainault and the Walloon Flanders to submit to the King of Spain. Whereupon the Prince of Orange finding from the difference of religion, and the factions among the heads of the party, that it was not practicable to unite all the provinces of the Netherlands in one confederacy, applied himself chiefly to the provinces of Holland, Friesland, Zealand, Guelderland and Utrecht, over whom he had the greatest influence; and having procured an Assembly of their deputies, or representatives at Utrecht in the year 1579, formed an alliance or confederacy amongst them, which afterwards obtained the name of *The Union of Utrecht*, and was the foundation of that state which is at present known by the name of *The United Provinces*; and in this union were afterwards included the provinces of Overijssel and Groningen.

The principal terms of which confederacy were, that these seven provinces should unite themselves, as if they were but one province, never to be divided by testament, donation, exchange, sale, or agreement; reserving however to every particular province, all their respective rights, liberties and customs; in determining whereof, or any other differences which should arise in any of the provinces, the rest should not intermeddle further than by their intercession for an agreement. They also mutually bound themselves to assist each other with their lives and fortunes against all attacks made upon them on pretence of sovereignty, religion, &c. And it was agreed, that all frontier towns belonging to the union should be fortified at the charges of the Province where situated, but where new fortresses should be erected, the generality should bear the charge. That all duties and customs should be farmed out to the best bidder, and the royal revenues employed in their common defence. That all the inhabitants of the provinces from eighteen to sixty should be mustered and disciplined; and neither peace or war be concluded, or taxes levied without the consent of all the provinces; and all differences that should arise thereon should be submitted to the Stadtholder. As to religion, the respective provinces might regulate it as they saw fit, provided a free toleration were allowed, and no person examined or called in question for his persuasion in that point. The States, it was agreed, should be assembled as heretofore; and if any differences should arise in the interpretation of these articles, they should be determined by the States, and in case they could not agree, by the Stadtholder.

These Confederated Provinces were reduced to that distress at this time, that on a medal, which was struck on occasion of their union, they represented their new state as a ship without sails or rudder, left to the mercy of the waves, with this inscription, *Incertum quo fata ferant*. In the mean time a general peace was treating of at Cologne by the mediation of the Emperor, which the Prince of Orange endeavoured by all means possible to obstruct, being assured that if it took place, the Spaniards would sooner or later revenge themselves upon

The first terms of their union.

Distress of the United Provinces.

CHAP.

I.

upon him and his party. As his fortune therefore wholly depended on establishing the abovesaid union, his first endeavour was to render a reconciliation with their Sovereign, the King of Spain, impracticable; whereupon he prevailed with the Provinces to renounce all allegiance to his Catholic Majesty, who he put them in mind had violated their privileges which he had sworn to observe, and put them upon making choice of the Duke of Alençon for their Sovereign, with whom it is said he had made a secret treaty to share the Netherlands between them. And the judicious PUFFENDORF assures us, that the States of Holland, Zealand and Utrecht were at this time for making the Prince of Orange their Sovereign, and would certainly have effected it afterwards, if his unexpected death had not prevented it.

In the mean time the Spaniards continued very successful in the Netherlands, taking the cities of Bois-le-Duc, Breda, Tournay, Valenciennes, Mechlin, &c. which induced several great men among the malecontents to go over to their party; but the Duke of Alençon having the sovereignty thus conferred upon him, was so fortunate as to raise the siege of Cambray, which was besieged by the Spaniards, and caused himself the next year to be proclaimed Duke of Brabant at Antwerp, and Earl of Flanders in Ghent; but his power being limited within very narrow bounds by the States, he was advised by his friends to endeavour to render himself absolute: whereupon he took a resolution of surprising Antwerp, and some other cities of the Confederates; but notwithstanding several thousands of his French troops had privately gotten into Antwerp, they were driven out again by the Burghers with considerable loss. The like attempts were made by the French the same day on several other towns, but they had not the fortune to succeed any where except at Dunkirk, Dendermonde and Dixmude: but by this ill-concerted attempt, the French having lost all their credit in the Netherlands, the Duke of Alençon, in the utmost confusion at his disappointment, returned to France, where he died not long after, and the Duke of Parma retook the towns of Dunkirk, Newport, Winoxbergen, Menin, Alost, and the rest of the places in Flanders which had declared for the Confederates, and Ypres and Bruges submitted to him without striking a stroke.

The  
Prince of  
Orange  
assassinated.

1584.

The same year (anno 1584) the United Provinces received a fatal blow by the death of the Prince of Orange, who was assassinated by BALTHAZAR GERHARD, a Burgundian, in his palace at Delft; whereupon the States of Holland made his younger son, Prince MAURICE, their Stadtholder, who being then but seventeen years of age, the Earl of Hohenloe was constituted his Lieutenant. But such was their distress, that they offered the sovereignty of their provinces again to the King of France, who being involved in a civil war, could not assist them; and the Duke of Parma taking advantage of their confusion, reduced Antwerp, Dendermond, Ghent, Brussels, Mechlin and Nimeguen to the obedience of King PHILIP, which so terrified the Confederate States, that they implored the protection of Queen ELIZABETH in the most abject terms.

An alliance  
between  
England  
and the  
United  
Provinces.

The Queen, notwithstanding she did not think fit to accept the sovereignty of the Netherlands, which was offered her, entered into a treaty with the Confederate States, whereby she stipulated to assist them with five thousand foot and a thousand horse, which together with the forces of the States were

to be commanded by an English General: that the English forces should be paid by the Queen during the war, but the charges she should be at should be repaid upon a peace in manner following, viz. In the first year of the peace should be repaid the expences of the first year of the war, and the rest within four years afterwards, and that in the mean time, Flushing, the island of Briel, with the city and two forts upon it, with the castle of Ramekins in Walcheren, should be delivered up to the Queen as cautionary towns. That the said places, after the money repaid, should be restored again to the States, and not delivered to the Spaniards, or any other enemy of their state. That the English General and two others of the same nation should be admitted into the council of the Confederate Provinces; and that the States should not enter into any league with any other power without the concurrence of her Majesty; nor the Queen, on the other hand, enter into any treaty without their approbation. That ships for their common defence should be fitted out by both nations in equal numbers, to be commanded by the Admiral of England; and that the ports of both countries should be open to either party, with some other less material articles. In memory of which treaty the Zealanders in a transport of joy coined money stamped with a Lion (their arms) rising out of the waves with this inscription, *Luctor & emergo*, and on the reverse were the arms of the several cities of Zealand with this motto, *Autore Deo, favente Regina*.

The Queen at the same time published a declaration to justify her conduct in assisting the Netherlanders, wherein she says, that notwithstanding sovereign Princes are only accountable to God for their actions, she chose to acquaint the world, especially her friends and allies, with the justice of her proceedings in relieving the natives of the Low Countries, who had been long oppressed by wars and persecutions, and were now in danger of being brought into perpetual servitude by the Spaniards.

The  
Queen's  
declaration  
on there-  
upon.

She sets forth, that for time immemorial, England and the Low Countries had constantly traded together and entered into alliances for their mutual advantage, even when the country was governed by distinct Sovereigns, and every province had its peculiar Lord: That when they became united in the house of Burgundy, treaties of perpetual amity and for mutual commerce were entered into between the Kings of England and the Dukes of Burgundy, and the subjects of either side had ever entertained the greatest kindness and friendship for each other, and trafficked together to their mutual advantage, and the enriching of their respective states, till the Spaniards and other foreigners being introduced into the country, contrary to the constitution of the government, had in a tyrannous manner, without any colour of law or justice, banished, murdered or destroyed the nobility and principal inhabitants; and though the beginning of these persecutions proceeded, as was pretended, from a zeal for the Romish religion, yet they spared not the catholicks or even ecclesiasticks; particularly they had executed Count EGOMONT, a gentleman well affected to the popish religion, and the glory of his country, who had been often victorious in the service of the King of Spain, and deserved another kind of treatment at his hands. That the Spaniards and other foreign troops had rendered the country de-

CHAP. I. folate, and destroyed those wealthy trading towns, which in the time of CHARLES V. were held to have yielded him as great a treasure as his Indies.

That the French King observing the oppressions of this people, had promised them his protection; and when he was diverted from it by the succeeding civil wars, had recommended them to the care of her Majesty. That she had frequently represented to the King of Spain the ill consequences of treating his subjects in that barbarous manner, which must unavoidably compel them to look out for another Sovereign to protect them; which they might be justified in by the laws and constitutions of the country, that absolved the inhabitants of the Netherlands from their allegiance in cases of such general injustice and notorious breach of their privileges.

That the Queen was obliged in point of policy to prevent the Spaniards making a conquest of the Netherlands, which must very much endanger her own kingdoms; especially since his Catholick Majesty had already thought fit to foment and encourage the rebels of Ireland, and joined them with his own troops, which was alone sufficient to justify her conduct in assisting the Dutch upon their continual and lamentable requests for succour to defend them against the rage and cruelties of the Spaniards and other foreigners.

The first troops sent to their assistance.

Sir JOHN NORRIS commanded the first troops which were sent over to the Low Countries; but the Earl of Leicester, then the great favourite in the English court, soon procured that command to be conferred upon himself, with the title of General of the Queen of England's auxiliary forces. The Dutch received him with joyful acclamations, erected trophies to his honour, and pretended to esteem him their deliverer, constituting him Supreme Governor of the Confederate Provinces, and Generalissimo of their armies, and swore obedience to him. They also gave him the title of his Excellency, an honour till then never bestowed upon a subject of England. LEICESTER looking upon the Dutch to be sincere in their professions, and that they really intended he should have the sole government of their state, assumed a suitable authority, but soon found the great titles they had given him to be little more than compliment, being, in all matters of moment, controlled and opposed by a deputation of the States; which when he resented, they applied themselves to the Queen of England, insinuating that he designed to render himself absolute, and usurp the dominion of their country.

The Earl of Leicester made governor of the Netherlands.

Thus while the English General drew one way, and the chiefs of the Dutch another, it was not to be expected that their affairs should be managed to any great advantage, which gave frequent occasion for complaints on both sides; but this good effect however, the sending the English auxiliaries into Holland had, that their People were now no longer under apprehensions of being subdued by the Spaniards, and were at leisure to improve their foreign trade. The Squadrons the Queen sent to the West-Indies, also diverted the Spaniards from sending their fleets to the coasts of Holland, and gave the Dutch great opportunities of encreasing their shipping and extending their commerce.

Complaints against LEICESTER coming over daily from Holland, her Majesty thought fit to reprehend him for attempting a power she never intended him; and excommunicated him with the Dutch, for that without her knowledge, they had conferred the absolute government of the Confederate Pro-

vinces upon LEICESTER her subject, which she had refused herself; and by her manifesto declared, that she intended no more than to relieve her neighbours in distress, and not to take the sovereignty upon her. But however she might pretend to be angry both with the one and the other, LEICESTER was soon restored to her favour, and the States were effectually supplied from time to time both with money and troops, to oppose the Spaniards; who having discovered their intentions of invading England, she apprehended the Dutch might be of great use to her in opposing a descent; as they afterwards really were in the year 1588, by sending their ships to join her fleet, when the Invincible Armada, as it was called, was upon the English coast. As to LEICESTER, finding that he had only an appearance of an authority, and that in effect he must be subject to a clownish people, whom he infinitely contemned, he chose to resign his command, and return to England.

Upon LEICESTER's laying down his commission, 1588. the States thought fit to create Prince MAURICE, Prince of Orange, their Generalissimo; who being a good soldier, and supplied from England with money and recruits, and entirely confided in by the Dutch, began to act with great advantage against the Spaniards: Breda he took by stratagem, anno 1590, and in the following year he reduced Zutphen, Deventer-Hallst, and Nimeguen, under the power of the States. In the year 1592 died that fortunate General the Duke of Parma; whereupon the Spanish troops grew mutinous, and the Dutch advanced their conquests, almost without opposition, taking Stenwick, Coeverden, and Gertruydenburg; and in 1592 Groningen was reduced, which made the United Provinces intire and secure.

In the year 1596, ALBERT, Arch-duke of Austria, was made Governor of the Spanish Netherlands; and in the year 1598, King PHILIP gave his daughter ISABELLA-CLARA-EUGENIA to him in marriage, and with her, as a dowry, Burgundy and the Low-Countries; in hopes that the Netherlands, being thus, in appearance at least, freed from a foreign subjection by having a Prince of their own, Holland and the other Confederate Provinces, would be the easier induced to return to their allegiance. But the Hollanders, who had now tasted the sweets of sovereignty, and from the condition of distressed subjects were become a High and Mighty State, were not to be wrought upon by any artifice, but remained immoveably determined to maintain the dominion they had acquired; to which they were the more encouraged, from the vast successes they met with in their attacks of the Spanish and Portuguese settlements in the Indies at this time, where they found so immense a treasure, that their State grew incredibly rich, even while they were engaged in a war with the most potent Monarch of Europe.

The losses the Spaniards sustained at sea, and the apprehension of further mischief to their plantations in the east and west, made them at this time very desirous of peace, to which the Confederate Provinces seemed no less averse; nor would they enter into a treaty with Spain, or the Arch-duke, till he declared he would acknowledge them as free independent States, and condescended so far as to send his Plenipotentiaries to the Hague, where they were received by the States with much coldness and arrogance. The success of their arms by land for thirty years, the vast increase of their trade and naval power, made their people in general

## CHAP. I.

neral averſe to peace: they could never expect to meet with greater advantages by a treaty, than they reaped from their prizes and daily acquiſitions in the eaſt; by which many of the natives had made their fortunes, and many more were in expectation of raiſing them, if the war continued.

There were ſome conſiderations however, which prevailed with the wiſeſt among them at length to entertain more pacific thoughts: one whereof was the growing greatneſs of the French King, who, if he ſhould make a conqueſt of the Spaniſh Netherlands, was likely to become an uneaſy neighbour to them; and the Spaniard was in no condition to prevent it, while he was engaged in a war with Holland. Another was a jealousy that Prince MAURICE, who had the chief command of their armies, and was become exceeding popular, as well by his own perſonal merit, as the memory of his father, who was aſſaſſinated for his ſervices to the States, ſhould aſpire to make himſelf Sovereign of the country; which he would not want an opportunity of effecting, if he remained at the head of ſo conſiderable an army of veterans devoted to his ſervice.

Such conſiderations as theſe, even in the miſt of their victories, prevailed with this cautious people to liſten to terms of accommodation: and in the year 1609 a truce was concluded between Spain and the Confederate Provinces for twelve years, by which the latter were to be treated as free States, and each party to remain in poſſeſſion of what they had taken.

Thus much ſeemed neceſſary to preface, before I entered upon the deſcription of the United Provinces, to ſhew the original of this mighty ſtate; which aroſe to that grandeur in the ſpace of fifty years, as to rival the moſt formidable Powers in Europe; to diſpute the dominion of the ſea even with Britain, which raiſed them from obſcurity to engroſs almoſt every valuable branch of trade.

A full account of theſe provinces will, 'tis preſumed, afford an agreeable entertainment to the Britiſh reader, and in ſome meaſure make him amend for the tedious deſcription of the petty principalities and ſtates of Germany that preceded it; which could not however be avoided in a work of this nature, the deſign whereof was to give the modern hiſtory of all nations, and people on the face of the globe, and eſpecially thoſe of Europe.

## CHAP. II.

*Treats of the ſituation and extent of the United Provinces of the Netherlands; of their ſea, harbours, lakes, rivers, dikes, and canals; and of the air, winds, ſeaſons, and diſeaſes.*

## CHAP. II.

THE ſeven United Provinces, conſiſting of Holland, Zealand, Frieſland, Groningen, Overyſſel, Guelderland with Zutphen, and Utrecht, are bounded by the German Ocean on the north and weſt, by the Circle of Weſtphalia on the eaſt, and by Flanders, Brabant, and the duchy of Cleve towards the ſouth; extending from 51 degrees 35 minutes, to 53 degrees 40 minutes, N. E. and from 3 degrees 20 minutes, to 6 degrees 30 minutes in longitude, reckoning from the meridian of London; being about an hundred and fifty miles in length, and as many in breadth: but then the Zuiderſee, which ſeparates North Holland from Frieſland and Overyſſel, takes up a great part of this ſpace; and perhaps if all their ſea and lakes within the limits above-deſcribed were

excluded, the whole country could not appear to be above an hundred miles over either way. Indeed thoſe parts of Flanders and Brabant, which they have made themſelves maſters of, and lie contiguous to theſe provinces, are a conſiderable enlargement of their dominion; but theſe will be treated of in another place.

Theſe countries, according to ſome writers, have great part of them been gained out of the ſea, by caſting up banks and draining them. Others are of opinion that there has been a great deal of them loſt by inundations of the ſea and tempeſtuous ſeaſons, and both of them are certainly in the right; for their ſea and rivers appear to be in many places above the land at high-water, and are only kept out by prodigious banks of earth; and there have been inundations even in the memory of man, that have laid great tracts of land under water. The tops of ſteeples, or other high buildings, where towns and villages formerly ſtood, have been ſeen upon their coaſt at low-water; and the Zuiderſee, as Sir WILLIAM TEMPLE judiciously obſerves, never having been mentioned by any Roman writer, makes it reaſonable to believe that it was formed by ſome great inundation, breaking in between the Texel and other iſlands which lie near together in a line, and look like the ſhattered remainders of a continued coaſt; and this is rendered the more probable, he further obſerves, from the ſhallowneſs of that ſea, and flatneſs of the ſand upon the whole extent of it. Other changes, he ſuppoſes, have happened in the face of theſe countries ſince the time of the Romans, by the ſands which have gathered at the mouths of their three great rivers, viz. the Rhine, the Maes, and the Scheld; for the ancient Rhine divided itſelf into two branches where the fort of Skenk, or Skenkenſcans, now ſtands, whereof one preſerved the name of the Rhine, and running by Leyden, diſcharged itſelf into the ocean at Catwick, where may ſtill be ſeen at low-water the ruins of an ancient Roman caſtle, which commanded the mouth of that river; but this branch is now choaked up, a great canal where the river once ran, only preſerving the name of the Old Rhine at preſent. The Maes ſeems to have kept it's ancient courſe, which, running by Dort and Rotterdam, diſcharges itſelf into the ocean near the Briel, as it did anciently, with a mighty torrent of water; but the ſands thrown up for three or four leagues upon this coaſt, make the harbour too dangerous to be entered without a pilot, and my author thinks it probable, that theſe ſands obſtructing the courſe of that river, have ſometimes occaſioned or increaſed thoſe inundations, by which ſo many iſlands have been formed in this part of the country. The Scheld the ſame writer thinks formerly fell into the ſea near Walcheren in Zealand, which was an iſland in the mouth of that river, till the waters of the Maes and Scheld were united together by ſome inundations of the ſea, by which the whole country was laid under water, and formed that inland ſea, which waſhes the coaſts of Holland, Zealand, Flanders, and Brabant, and ſerves for a paſſage between them. It is obſerved alſo, that the ſea for ſome leagues from Zealand lies upon ſuch banks of ſand as are found at the mouth of the Maes, but divided by deeper channels.

The occaſion of ſtopping up or obſtructing the paſſages of theſe rivers is held to proceed from the weſterly winds, which generally fit upon theſe ſhores; for one year with another it is obſerved, they

CHAP. II. they blow westerly here three parts of the year, and are much more violent than the east winds, which usually bring calm fair weather, and settled frosts. But to return to their rivers; that of the Rhine has been described already in the state of Germany as far as Skenkenschans, where it enters this country, and divides itself into two branches, one whereof retains the name of the Rhine, and continues its course to Arnheim, and so to Duyster de Wyck, where it mixes with.

The Leck. 2. The Leck, which afterwards continues its course to Schonhoven, and unites its waters with

The Waal the Maes a little above Rotterdam. 3. The Waal, the other branch of the Rhine, which begins at Skenkenschans, runs by Nimeguen and Brommel to Gorcum; and having joined the Meruwe, or New Maes, passes by Dort, and uniting with the Leck and the smaller Iffel, runs on to Rotterdam, where it is called, 4. The Maes, from a river with which it joins there, whose source is in Burgundy, from whence it runs to Namur, where it receives the Sambre; and then passing by Liege, Maastricht, Venlo, and Grave to Worcum, joins with the Waal, and runs in an united stream to Dort, where they divide again and form an island, but meet afterwards at Vlardigen, and discharge themselves into the ocean near the Briel. 5. The Iffel, which rising in Westphalia passes by Doesburg, where it is vastly augmented by a canal cut from the Rhine by the order of Drusus Nero, as 'tis said, from whence it runs by Deventer, separating the provinces of Guelderland and Overijssel, and falls into the Zuidersee near Campen. There is,

The lesser Iffel. 6. Another small river called the Iffel, which is rather a branch of the Leck, dividing from it near Vianen, and running towards Rotterdam, falls into the Maes. 7. The Scheld, which rising in Picardy, runs by Cambray, Valenciennes, and Oudenard to Ghent, where it joins the Lis, and passes on to Dendermond and Antwerp, which was once a good harbour, and one of the greatest marts in the Netherlands. A little below Antwerp it divides itself into two branches, one

The Hont whereof is called the Westerscheld, or the Hont, which divides Flanders from Zealand, and discharges itself into the sea at Flushing. The other called the Osterscheld, dividing from the Westerscheld at Santvliet, runs by Bergenopzoom, and afterwards between Tolen and South Bevelandt falls into the sea with a violent torrent.

Seas. The seas which border on the seven provinces are either the German or the British ocean, which wash the northern and western shores; the Zuidersee, enclosed almost on every side, having the islands of Schelling, Ameland, &c. on the north, the provinces of Friesland and Guelderland on the east, Utrecht and part of Holland on the south, with another part of Holland and the islands of the Texel and Flie upon the west; being about seventy miles in length, and half as much in breadth, exceeding shallow and full of sands, as has been intimated already; so that the entrance of it at the Texel, and the passage over it, according to a late writer, is more dangerous than a voyage to Spain. And such is the violence and rage of the sea, when the wind blows a storm at north-west, if it happens to be a spring-tide, that their strongest dikes sometimes give way, and threaten the destruction of all the maritime provinces; for the land lies so exceeding low and flat, that the flood often appears above it; and were it not for the islands of the Flie, the Texel and Schelling, and some sand-hills, which break the

force of the sea, inundations would be much more frequent than they are. Their dikes to keep out the sea are generally seventeen ells thick at bottom, and seven ells high, made as strong to the landward as wood and stone can make them; and towards the water they cover them with mats, rushes, and sea-weed, and sometimes with sail-cloth; but the raging waves often force their way through all. In the year 1530, the sea broke in and overflowed great part of Zealand; and in 1568, it rose to that height, that it covered some of the islands of Zealand, drowned great part of the coast of Holland, and almost all Friesland, swallowing up seventy-two villages, and destroying twenty thousand people in Friesland only; but many people however were saved by getting up trees, the tops of houses, or rising grounds, who were afterwards brought off in boats. Another inundation happened in 1655, and a much greater in 1665; when the sea broke in with such violence between the Texel and the Helder, that it carried away part of the village of Huysdunen, laid all the country under water between Wiring and Zyp, broke the dike of Horn in pieces at two places, and came up to the gates of Medenblich, drowning many villages, and turning a large tract of land into a continued sea, whereby numbers of people and cattle were destroyed. The dike of Muydenberg was also broken down, and all the country round Naerden, Myden, and Wesop, as far as Loren in Goyland, and Balecorn in the province of Utrecht, were laid under water. The gates and fortifications of Naerden were ruined, and that strong rampart of stone called the Asses Back driven away in a moment, and a hole left where it stood thirty-six feet deep. In Amsterdam the Newen-dike, with the street upon it, and the adjoining market-place was overflowed. The dike betwixt Amsterdam and Haerlem broke in the middle thirty or forty rods, so that there was thirty-three foot of water in those parts, and a great part of Waterland was entirely swallowed up. Other inundations happened in the years 1682 and 1717, which 'tis said did as much mischief as any of those mentioned already. The banks of their rivers are also broken down, sometimes by shoals of ice and land-floods, as it happened in 1638, when the Iffel-dike near Utrecht giving way, most part of Holland was laid under water; but the dike was speedily repaired, and the country drained by their wind-mills, of which they have great numbers on purpose for carrying off the winter's rain and melted snow, which in the spring overflows the country, and makes it appear like a sea, the towns and villages built upon the rising grounds looking like so many islands: and indeed after the greatest inundations from the sea, when part of the coast seems to be irrecoverably lost, they will by their mills throw out the water, and repair their dikes, and in a few months the country recovers much the same face as it had before.

Notwithstanding this country is so famous for its trade and multitude of shipping, there is scarce a good harbour upon the coast; the best are said to be Flushing, Helvoetsluys, and Rotterdam. As for Amsterdam, which has in a manner engrossed the trade of the world, there cannot be a more incommodious haven, being seated in so shallow a water, that ordinary ships cannot come near it, unless at high-water, nor vessels of burthen without unloading.

After the seas already mentioned, their lakes may deserve to be remembred, which are only lesser seas furrounded by the land, of which there are a great many in the United Provinces; the chief whereof is Haerlem-Meer, extending almost from Amsterdam to Leyden, being sixteen or eighteen miles long, and about half as broad, but grows larger every day, encroaching on the lands contiguous to it, which has occasioned some to project the draining of it, as other lakes have been, and proved to be a very good soil, when laid dry; particularly one of two leagues broad Sir WILLIAM TEMPLE mentions in North Holland, which has been made firm land; being that part of the country called the Bemster, now the richest soil in the province, lying upon a level divided by canals, and the ways through it planted with rows of trees, which make a most agreeable summer's landscape. Indeed the whole country is cut through with canals, which lead to every town and village, and even to every farm-house almost; and we see such an infinite number of sails, says my author, steering every way through the land, that one would be tempted to think there were as many people live upon the water as on shore; which he observes is a great advantage to their trade, and not to be imitated by any other country, where there is not the same level and softness of earth, which makes the cutting of canals so easy as to be attempted by almost every private man.

Their seas, rivers, and canals afford them plenty of fish; but there are some kinds which they are obliged chiefly to the coast of Britain for, particularly herrings, oysters, and many other kinds of shell-fish: but I design to treat particularly of their fisheries hereafter, and therefore content my self with the bare mention of them here, and proceed next to enquire into the air and seasons.

The air of this country, says Sir WILLIAM TEMPLE, would be all fog and mist, if it was not purified by the sharpness of their frosts, which never fail to visit them with every east wind for about four months in the year, and are much feverer than with us, though there be scarce any difference in the latitude, because this wind comes to them over a long tract of frozen continent; but is moistened by the vapours, or softened by the warmth of the sea's motion before it reaches us. This, says the same writer, is the greatest disadvantage of trade occasioned by their situation, tho' it be extremely necessary for their health; for their harbours are frequently shut up two or three months together in winter by the ice, when ours are open, especially those in the Zuidersee. The spring is much shorter and less agreeable in the United Provinces than in England. The winter colder, and some parts of the summer much hotter; nor is it uncommon for the violence of the one to give way to that of the other, without any intermediate temperate season. The moistness of the air, the same ingenious writer is of opinion, was originally the occasion of that great neatness observed in their houses, and the cleanness of their streets, for without this their country would scarce be habitable, the air would corrupt upon every hot season, and expose the natives to infectious distempers; which they seldom escape three summers together as it is, especially at Leyden, where the waters stagnate more than in any other part of the country; and this is supposed to be the reason why Leyden is one of the cleanest towns in Holland. This moisture of the air also causes metals to rust, and wood to mould sooner than in o-

ther places, which occasions their perpetual rubbing and scouring; and this is the reason of that brightness and cleanness which seems affected in their houses. DE WITT their countryman observes, that the winters in Holland are sharp and long, and consequently that they have more occasion for light, firing, clothing, and food than in warmer countries: That their cattle are forced to be housed and fed with dry meat great part of the winter; when in other countries in the same latitude they remain all winter in the field. The seasons also are so short, that they must be punctually observed, if they expect their arable lands should yield them any profit. And the neighbourhood of the sea does not only occasion unwholesome weather in spring and autumn, but cold winds blast most of the fruit; and in autumn great part of their unripe fruit is blown down by furious storms of wind.

The diseases of the country are chiefly the gout and the scurvy, but in hot and dry summers they are visited with malignant fevers, especially at Amsterdam and Leyden. These distempers lie most in the head, and frequently occasion sudden death. If the patient recovers he continues a great while in a languishing condition. The plague is seldom known here, or at least all talk of it is suppressed, and no distinction made, as with us, what distemper every one dies of. Nor do they take much care of their sick; which my author ascribes to their firm belief in predestination, or to their preferring trade and business even to life itself. Foreigners, it is observed, are frequently subject to the spleen in this country, which the natives seldom are, being too busy a people, it is supposed, to be affected by this distemper; this seeming to be the disease of the idle, or of those who think themselves ill entertained, who are never out of humour or discomposed, but they attribute it to a formal disease: whereas such dull fits frequently happen from the changes of the wind or weather, which affect the finer spirits of the brain before they grow sensible in other parts, and are apt to alter the shapes and colours of whatever is represented to us by our imaginations, while we are so affected. Yet this effect is not so strong, but business or intention of thought will either resist or divert it, in the opinion of my author, who observes further, that this is a disease too refined for this heavy people, who are well when they are not ill, and pleased when they are not troubled; content because they think little of it, and seek their happiness in the common satisfactions and conveniences of life, or the increase of riches, not amusing themselves with more speculative entertainments, or refinements of pleasure. But to return: Long life is a blessing seldom known in this country, both men and women begin to decay very early, especially at Amsterdam; and Sir WILLIAM TEMPLE seems to remark it as an uncommon thing, that he had seen at the Hague (the best air in Holland) two men above seventy; which may possibly proceed from their diet, and want of exercise, as well as from the badness of the air; for dried and salted flesh and fish are their usual food, and brandy and geneva very commonly drank. They scarce know what rural sports mean; neither do they ride on horseback, or walk from one town to another about their business, but are drawn along by a horse in a covered boat upon a smooth canal, scarce sensible of any motion; which too I take to be the occasion that they are generally corpulent and full of gross humours.

Vol. II. THE STADTHOUSE OF AMSTERDAM. P. 145

## CHAP. III.

*Contains a description of the particular provinces, and of their chief towns, with their publick and private buildings and furniture.*

## CHAP. III.

Holland province, the situation and extent.

Divided into South and North Holland.

Chief towns of South Holland.

Islands.

Amsterdam, the capital city.

THE most considerable of the seven provinces is that of Holland, in many respects equal to the other six; bounded by the Zuidersee on the north; by the same sea and the province of Utrecht and Betawe on the east; by Brabant and Zealand on the south; and by the British Ocean on the west; extending in length from north to south about eighty miles, and in breadth from east to west forty miles in some places, but in others not above twenty; and is usually divided into South and North Holland. South Holland contains all that country between Zealand and Brabant, and that arm of the sea which usually goes by the name of the river Y or Ty; and North Holland reaches from the same river Y to the ocean.

The principal towns in South Holland are Amsterdam, Haerlem, Rotterdam, Dort, Delft, Leyden, Goude, Gorcum, Scheidam, Schoonhoven, Gravesand, Gertrudenburg, Huesden, Worum, Vianen, Woerden, Oudewater, Yfelsein, Asperen, Hockelem, Leerdam, Naerden, Wesep, Muyden, Klundert, Williamstad, the Hague, Catwyckopzee, and Nortwick. The islands belonging to South Holland, are those of Voorn, Goree, Overstaikee, Putten, Beverland, Korndyck, and Helmond; the chief whereof I shall endeavour to describe.

1. Amsterdam, the capital of Holland, and of the seven provinces, is situate on the little river Amstel, which runs through it, and falls into that arm of the sea called the Y, that lies on the north side of the town, and forms a large harbour. It is in the latitude of fifty-two degrees twenty minutes, four degrees and a half to the eastward of London, twelve miles east of Haerlem, and about thirty N. E. of Rotterdam. This city is almost in the form of a crescent, the foundations laid upon vast piles of timber, drove into the earth at a prodigious expence, the place where it stands being a perfect morass or bog. The first mention of this place in history is about the year 1300, when it was a poor fisher-town; in 1342 the buildings were pretty much increased on the east side of the Amstel; and in 1400 some buildings were added on the west side of the river. In 1482, their Princess MARY of Burgundy encompassed it with a strong brick-wall of extraordinary workmanship, as appears by two gates still remaining. In 1585 we find it still farther enlarged, and become the chief town of trade in these provinces. In 1656 a large space of ground was taken in and built upon, and the whole surrounded with a new wall of brick and gates of stone, which gave it the present form of a crescent, and it's circumference is now computed to be about half as much as London and Westminster: others assure us that it stands upon two thousand acres of ground. A great addition was made to the fortifications in the year 1672, when LEWIS XIV. invaded their country, which occasioned the destruction of several fine gardens: but the town was thereby made as strong as it was capable of being by art. Three parts of it are defended by a strong wall, bastions, and outworks, and a large graff or ditch, and the fourth secured by that arm of the sea already mentioned, called the Y or Ty. The houses

are generally well-built with brick and stone, the streets broad and neatly paved, with canals in the middle of many of them, planted with rows of trees, and handfom stone-bridges over their canals.

Their finest streets are the Heer-graff, the Keysergraff, and the Prince's-graff, where many of the houses are of free-stone, and adorned with columns of the Corinthian Order. The street of Haerlem also is admired for it's length and breadth, and three stone-bridges laid across the canal. The harbour always contains an infinite number of ships, especially in the spring, when may be seen fifteen or sixteen hundred vessels setting sail for the Baltick only. There are not however in this great city more than thirteen churches for those of the established religion, which is that of JOHN CALVIN, or the Presbyterian, with two French, one High Dutch, and one English church, all Presbyterians; these only are allowed bells, and their preachers maintained by the government. Those of this sect are computed to make one third of the inhabitants of the city. The Papists, who have upwards of fourscore chapels or private meeting-houses, are supposed to make another third. These have a square in the town inhabited by nuns, who are at liberty however to leave their cloyster, and marry if they please. The Roman Catholics are least in favour with the government of any of the inhabitants, and their chapels are sometimes shut up by the Scout or Sheriff, and opened again upon application made to the magistrates. The Lutherans, Arminians, Jews, English Independents, Anabaptists, and Quakers take up another third part of the town; and all these, except the disciples of CALVIN, are restrained from celebrating their marriages according to their respective rites, till the parties have been first married before a magistrate, nor are any admitted to offices or places of trust but Presbyterians.

Their churches are generally handfom structures, that of St. CATHERINE'S is esteemed the finest, having been burnt down in the year 1645, and since magnificently built; in the paintings of the windows is represented the Emperor MAXIMILIAN giving them an Imperial crown, as a crest to their arms. The pulpit is said to be a master-piece of it's kind, adorned with the most exquisite carvings; and the organ the largest and best in Europe, at least at the time it was set up, and is supported by marble pillars. The partition which separates the church from the chancel is of polished brass, kept as bright as possible; but to say the truth, we must not expect to find the churches of the Dutch Presbyterians comparable to those in Roman Catholick countries, either for the elegancy of the building, paintings, carvings, ornaments, or the richness of the materials, and therefore I shall not tire the reader with a further description of this or the rest, but proceed to the Stadt-houfe or Guild-hall, on which building alone the Dutch seem to have laid out much more money than on all the churches in this great city.

The Stadt-houfe is a handfom oblong square building of free-stone; the front, which is the length of it, extending two hundred and eighty-two feet, the breadth two hundred and thirty-two feet, and the height of the roof one hundred and sixteen feet. The pillars are of the Corinthian Order; and it is founded upon above thirteen thousand vast piles of wood, driven into the earth with incredible labour. In the middle of

CHAP.  
III.

the front, over the cornice, is a noble piece of carving in marble, eighty-two feet in length, and eighteen in height; where the city of Amsterdam is represented by a woman, with Neptune on her right hand, and two sea-nymphs offering her the fruits of the earth, and on her left are two Naiades, presenting her with laurels and palms; and before her are two Tritons, dancing and founding their horns; over these is a statue of brass representing Peace, with Justice on one side, and Providence on the other; each figure twelve foot in height. On the back part of the building is a piece of carved work, answerable to that in the front; in the middle whereof sits a woman with the wings of a Mercury and a hat on her head; behind her are seen the masts, sails, yards, and tackling of ships, with all kind of mathematical instruments used in navigation; round about her and at her feet lies that arm of the sea called the Y, and the river Amstel; and on each side the inhabitants of the four quarters of the world offering her fruits; over these also are placed three images of brass, of the same dimensions with those in the front; one whereof is an ATLAS, bearing a large globe of copper ten feet diameter, having on the right a statue representing Temperance, and another personating Justice on the left. Over the four corners of the building stand four eagles of brass finely gilt, supporting an Imperial crown; and in the middle of the building is a handsome round tower, which rises fifty foot above the roof, supported by pillars, and adorned with statues, and in it is a fine chime of bells, on which are played all manner of tunes on their festivals and rejoicing days: but the bells in the Low Countries are never rung out as they are in England. The portico, which is not answerable to the magnificence of the building, is entered by seven little arched doors; within the portico are two large gates or doors, which lead into the house. At the entrance on the right-hand is a noble hall, where a tribunal is held for the trial of criminals, adorned with marble statues, whose dejected looks seem to express a concern, say some, for the unhappy wretches that are brought before this court; or, as others, that they represent the prisoners themselves full of that confusion, which is natural to persons in their circumstances, expecting their doom. The cornices and cielings of most of the rooms are finely carved, painted, and gilded, and the floors laid with marble. Below stairs is the office of the bank, and the prisons both for debtors and criminals, with a guard-chamber, where the citizens have their main guard, and where the keys of the city are locked up every night. From hence a handsome broad pair of stairs, but something dark, leads into the Burghers hall, which is an hundred and twenty foot long, fifty-seven broad, and ninety-eight foot in height; the marble-floor whereof is so laid as to represent, without any other lines than the veins of the stone, the celestial and terrestrial globes, the constellations in the heavens, and the situation of every country upon earth. Each of these marble-maps, as they are stiled, being two and twenty feet diameter. At the end of this hall is the Schepens or Aldermens's chamber, where civil causes are tried: and in the galleries, which surround two square courts, are several other chambers and offices belonging to the government; as the chamber of their senate or council, the Burgomasters chamber, the treasury, the chamber of accounts, &c. Over these chambers in the second story is a large magazine

of arms; and on the top of the building are eight large cisterns of water, which are conveyed to any room in the house by pipes in cases of fire, and the very chimneys, by way of prevention, are lined with copper. On a pedestal of black marble, whereon is placed a statue of the blessed Virgin, is a Latin inscription, importing that the first stone of this noble structure was laid on the 28th of October, 1648; when the war, which the States had maintained in almost every part of the world above fourscore years, in defence of their religion and liberties, against the three PHILIPS of Spain, was happily concluded. Their magistrates first assembled in it in the year 1655, but it is not yet entirely finished; which some conjecture proceeds from an old prophecy, that from the time their Stadthouse is finished, their state shall begin to decline.

Other publick buildings in Amsterdam which travellers take notice of, are the admiralty-office, the East-India-house, the arsenal, the hospitals for widows and orphans, from which bastards are not excluded, for madmen, sick and aged, the house of correction, spin-house, or work-house, the publick schools, where lectures are read on several faculties, and the Exchange. In their hospitals of all kinds, it is said, there are not less than twenty thousand souls maintained: and it is observed of them, as of those in England, that they resemble Princes palaces rather than the habitations of poor people. There are houses also where a person may have his diet and lodging for life on the advancement of a small sum of money, which are called the Proveniers-houses: and at every house almost in the city there hangs a poor's box by a chain, in which people put money as they are disposed, especially on a sale of goods, or any considerable bargain; and the deacons go once a quarter round the city, and take the money out of these boxes: there are also twice a week men that belong to the hospitals who go round the city with a bell, and ask relief at every house, and are seldom dismissed without some pence. They have several other ways of raising money for their poor, as by the play-houses, that pay half their gains to this use: every rope-dancer, puppet-player, and person pretending to divert the people at fairs by any means whatever, also pays a third part of his gains to the poor. Every person who passes through a gate after candle-light pays a penny to the use of the poor: and what these, and some other little taxes fall short of maintaining their hospitals, is supplied out of the publick revenue. As to the government of this city, I shall have occasion to enlarge upon it hereafter under another head, and proceed next to describe some other considerable towns in this province.

2. Haerlem, a large populous city, twelve miles to the westward of Amsterdam, and four to the eastward of the ocean, surrounded with a wall, and other fortifications, but of no great strength. The buildings are of brick, the streets wide and strait, and canals in the middle of several of them, as at Amsterdam. It was made a Bishop's See in the year 1559, but lost that honour soon after, on the States throwing off their allegiance to the Spaniard, and embracing Calvinism. The cathedral church, now called the great church, is esteemed the largest and most beautiful in Holland. Their manufactures consist chiefly in silks, velvet and linens: the linen they make here is esteemed the finest and whitest in the province. They have also a considerable trade for thread and tapes.

CHAP.  
III.

tapes. Here the famous LAWRENCE COSTER dwelt, to whom the Dutch ascribe the invention of printing, anno 1440; which is disputed with them by the citizens of Mentz in Germany. This town is famous also for the brave defence it made against the Spaniards in the year 1573, when the women formed themselves into regiments and companies to assist the burghers; but being obliged to surrender after ten months gallant defence, the Spaniards exercised great cruelties on the inhabitants, destroying many of them in cold blood. To the southward of the town lies the lake called Haerlem-meer, which extends eastward almost as far as Amsterdam, and southward to Leyden, a shallow, but dangerous water for the passage-boats, which was probably the occasion of cutting canals from this city to Amsterdam and Leyden, on which people travel with all the safety and ease imaginable.

Rotter-  
dam.

3. Rotterdam, esteemed the chief town in Holland next to Amsterdam, situate on the north side of the Maes, about thirty miles to the southward of Amsterdam, and fifteen to the eastward of the Briel, is a large city of a triangular figure, and very populous, lying mighty convenient for trade, the canals, which run thro' the town, bringing up their shipping to their doors. Another great advantage they have, is, that the Maes is open, and the passage free from ice much sooner in the spring than in the Y and Zuidersee that lead to Amsterdam, which is the reason that the British merchants frequent this port much more than that; inasmuch, that after a frost, when the sea was open, there hath been seen three hundred sail of British vessels steering out of this harbour at once. The town is handsomely built of brick, the streets wide and well paved; and there are four churches besides that of the English (where the service is performed according to the rites of the church of England) and a kirk for the Scots. Here are constantly residing great numbers of the subjects of Britain, who live in much the same manner as on this side the water, not being confined to Dutch diet, as in some other towns. The publick buildings taken notice of by travellers are, the great church of St. LAWRENCE, the Stadt-house, the Exchange, the Admiralty-office, and the East-India-house, which are handsom structures, but not thought worth a particular description: upon the great bridge in the market-place is a noble brass statue of ERASMUS, in a furred gown and a round cap, with a book in his hand. The situation of this place is pleasant, and from the top of the great church may be seen the Hague, Delft, Leyden, Dort, and most of the towns of South-Holland. But the canals in Rotterdam having little or no current in summer, the stagnated water proves very offensive as well as unhealthful.

Leyden.

4. Leyden, or *Leyda*, the *Lugdunum Batavorum* of the Latins, four miles to the eastward of the Ocean, and eighteen miles south of Amsterdam, stands on the old channel of the Rhine, the mouth whereof being now choaked up, occasions the waters to stagnate, which renders the air unhealthful. It is however esteemed one of the neatest and pleasantest towns in the Low Countries, and the largest in Holland next to Rotterdam: the buildings beautiful and magnificent, the streets broad and exceeding clean, with canals in the middle of them planted with rows of trees. This city is surrounded with a wall, and regularly fortified, and endured a siege of five months in the year 1574, when finding them-

selves in danger of being taken by the Spaniards, they laid the country round about it under water, and compelled the enemy to rise from before it. In the middle of the town is a round stone tower, six hundred and ten feet in circumference, ascended by fifty steps, and according to the tradition of the place, was built by the Romans, but of no great strength at present. Those who give a particular description of the place observe, that it hath eight gates, that there are twenty-three wards in the city subdivided into ninety lesser parts; that there are thirty islands, twenty-four canals, an hundred and eighty streets, ninety-five bridges, and forty towers on the walls. The principal churches are those of St. PETER, St. PANCRAE, and the New Church, the last of which is of a circular form. These hospitals are many and large, that of the orphans only maintaining nine hundred children. A university was founded here by the States General in the year 1575. The schools consist of a large pile of brick buildings three stories high, in the uppermost whereof the famous ELZEVIJ had his printing room. The students of this university are computed to be about two thousand; but there are only two endowed colleges, most of the lads boarding in the town. Adjoining to the schools is a physick garden, where the Professor in botany reads his lectures. The Professors never wear gowns but at lectures, and when they preside in publick disputations. Nor are the Students at all distinguished by their habit. The Rector, who is chosen out of three presented to the States, is elected annually; there are besides three Curators, and twelve Professors, three in each faculty. The Rector with the four Burgomasters, his Assessors, and some of the Aldermen, determine all causes civil and criminal. Their library is in great esteem for it's manuscripts; and the anatomy theatre is said to exceed that of Padua, or the Surgeons hall in London, having a vast number of skeletons of all kinds and sizes, several mummies, and particularly one of an Egyptian Prince eighteen hundred years old, with Pagan idols and reliicks, and habits of people of the most distant countries. The principal manufacture in Leyden is woollen cloth and camblets; and their gardens yield them a considerable profit, their garden stuff being so much valued as to be carried as far as Amsterdam. These gardens are said to have four or five crops in one year, and an acre of garden ground to be worth two hundred and fifty, or three hundred pounds, an acre of arable two hundred, and an acre of meadow an hundred and forty pounds. In the Rhineland-house the Dikegrave, one of the most considerable officers in this country, and his associates, meet in consultation about the repair of the dikes, banks and canals in the district of Rhineland, of which Leyden is the capital. In the church of St. MARY's is a monument of JOSEPH SCALIGER, and another of CLUSIUS the herbalist, with a Latin inscription, importing, that he was called hither to adorn the academy, where he lived sixteen years, and died anno 1609, in the eighty-fourth year of his age, under which is this distich;

*Non potuit plures hic querere CLUSIUS herbas,  
Ergo novas Campis querit in Elysiis.*

Englified thus by a late writer;

*Since no more herbs the earth to CLUSIUS yields,  
He's gone a simpling to th' Elysian fields.*

5. The Hague, or *Gravenhage*, i. e. the Earl's-grove, esteemed a village, because it has no walls, but the most considerable of the kind in Europe, situate nine miles south-west of Leyden, fourteen north-west of Rotterdam, and two miles to the eastward of the Ocean, encompassed with fine meadows and pleasant groves, in the midst whereof is a pleasure-house belonging to the Princes of Orange. The place is governed by its own magistrates, and enjoys all the privileges of a city of Holland, but the sending its representatives to the States. In this village also the States-General and the council of State always assemble. Here are held the supreme courts of judicature. Foreign ministers are admitted to their audience, and reside here; and all publick affairs are transacted, which draws a multitude of people hither, and occasions its being a very flourishing town. The palace is a handsome brick building, making two angles of a square, in the middle whereof is a large hall, equal to that of Guildhall in London. In this palace was an apartment for the late Princes of Orange; the chambers of the States-General and Provincial, and of the council of State. And adjoining to it is a noble stone building, called the palace of Prince MAURICE of Nassau, who built it. On the north side is a large square pond called the *Vijver*, and on the west the palace opens to a large plain surrounded with magnificent houses, and regularly planted with trees, which have made some compare it, not improperly, to St. JAMES's-park: and every city of the United Provinces has a house here for their respective deputies. Notwithstanding it is evident from what hath been already observed, that the place must be large and extremely populous, yet are there but two churches in it; one of them called the Old Church is a handsome fabrick of the usual form. The other a new building of a round figure without a pillar, which seems to be a kind of building that the modern Dutch affect, for there are other temples lately built in Holland of the same form. On the north side of the Hague is a walk paved with bricks, and shaded with lime-trees for two miles, extending as far as Scheveling, a village on the sea-shore, where King CHARLES II. took shipping for England at his restoration. Scheveling was once a considerable town, but lying upon a tempestuous sea, has been extremely lessened by the waves beating on its shores. About ten miles south-west of the Hague lies Honslaerdyke, a magnificent palace of the late Prince of Orange, having noble gardens adorned with fountains and statues, some of which it is said were taken from a palace on this side the water, as well as the furniture within doors. Here are two galleries full of beautiful paintings, and the closet of the late Prince is wainscotted with Japan-work. Within two miles of the Hague lies the village of Ryswick, where the Prince had another palace. The treaty of peace between the confederates and the French was concluded here in the year 1697. This palace also is admired for its stately front of free-stone, its marble staircase, marble floors, exquisite paintings, &c. Another village called Loosduyne, about six miles north-west of the Hague cannot be omitted mentioning in this place, since every traveller is full of the monstrous birth said to have happened here: the account we have of this occurrence is, That MARGARET Countess of Henneberg, daughter of FLORIS Count of Holland and Zealand, and sister to WILLIAM King of the Romans, having

reproached a poor woman as guilty of adultery on account of her having twins, insinuating that she could not have two children by one man at a time, the woman provoked at this usage, wished that the Countess might have as many children as there were days in the year, which it is said happened accordingly in the year 1276, in the fortieth year of the Lady's age, when she was delivered of three hundred and sixty-five children, equally divided as to sex, only the odd one was a boy. They were afterwards christened in the parish church in two brass basons (which they pretend still to shew to travellers) the boys by the name of JOHN, and the girls by the name of ELIZABETH; and in the church wall there is a stone with an inscription, giving the abovesaid relation: but it is observed by travellers to be a modern writing, and different from the inscription given us by historians an hundred and fifty years ago, which was much shorter than the present. The ceremony of baptism was performed, according to tradition, by GUTO, suffragan to the Bishop of Utrecht.

6. Delft, called by the Latins *Delphium* and *Delphi*, six miles south-east of the Hague, and eight north-west of Rotterdam, pleasantly situated among the meadows, the streets spacious, with canals running through them, planted with trees. It is about two miles in circumference, and surrounded by an old wall and ditch. The earthen ware of this place is esteemed the best next to China-ware; and they had formerly a good trade in cloth and beer, but it is more considerable for being a quiet town, the retreat of wealthy merchants who have left off their business, than for its trade at present. The publick buildings taken notice of are, the Stadt-house and the arsenal of the States, the magazine of powder belonging to which accidentally blew up and destroyed great part of the town in the year 1654, but it has been since rebuilt to great advantage. There are but two churches in the place, the Old and the New; in the latter whereof is the tomb of WILLIAM first Prince of Orange, who was assassinated in this city: his statue in marble is upon the tomb, and another in brass armed *cap-a-pe* standing by it, and a Fame sounding over him with this motto, *Te vindice tuta Libertas*. At his feet lies a dog, which, according to tradition, died of grief on the murder of his master. There are also many other brass and marble statues about the tomb, which serve to adorn it. Delphi-Haven, which belongs to this city, lies within two miles of Rotterdam, and has a communication both with Delft and Rotterdam by a canal. It is strongly fortified, and has three dams to defend it against inundations.

7. Dort, or *Dordrecht*, an ancient city, the first in dignity of those which compose the States of Holland, and the capital of a small country called the Bailiwick of Dort, is situate on the river Meruwe, forty miles south of Amsterdam, and fourteen south-east of Rotterdam. This city, with the district about it, became an island by an inundation which happened in the year 1421, throwing down the banks of the Maes and Meruwe, and laying a large tract of land under water between Dort and Brabant, destroying near fourscore villages, and twenty or thirty thousand people. Its situation between the Maes and Meruwe makes it naturally strong; and the natives pretend that it was never yet taken: but the waters are its greatest security; for besides the rivers abovementioned,

CHAP. III. mentioned, which are of a very great breadth near this city, a large lake called the Biesbos enclaves it on the south and east. The place is large and populous, the streets broad and well paved, and the houses high and built of brick. Here was held a synod in the year 1619, for examining the opinions of the Armenians and Calvinists, and it is easy to imagine which side had the best of it, when the magistracy was in the hands of the disciples of CALVIN. The room where this Synod was held is still shewn to travellers as a curiosity, though it does not seem to deserve a particular description. The British merchants have two churches in this city, and particular privileges, it being the staple for their cloth, as well as for Rhenish-wines, corn, wood, and other commodities, brought down the Rhine and the Maes.

Gertrudenberg. 8. Gertrudenberg, so named from St. GERTRUDE, situate in the district of Dort, on the south side of the lake called Biesbos, twelve miles south-east of Dort, and ten north of Breda, and belongs to the house of Orange. It is strong by nature as well as art, having a marsh on one side, and the river Meruwe on the other, which in this place looks like a sea.

Goude. 9. Goude, or *Tergow*, the sixth city in dignity of those which compose the States of Holland, situate on the rivers Gow and Issel, twelve miles north-east of Rotterdam, and twenty-four south of Amsterdam, a handsome large city, and a place of strength, especially on account of its low situation, the country about it being liable to be overflowed by their sluices whenever they apprehend any danger.

Naerden. 10. Naerden, a small, but strong town, situate in a morass near the Zuider-sea, twelve miles to the eastward of Amsterdam, and fifteen north of Utrecht. It was taken by the Spaniards in 1572, when the enemy, in revenge for their having submitted to the Prince of Orange, summoned all the inhabitants to the market-place, and there cut them to pieces in cold blood; which did the Spaniards no service, for the Hollanders thereupon became desperate and irreconcilable; and it is to such acts of cruelty as these that the loss of the Seven Provinces is generally attributed.

Williamstadt. 11. Williamstadt, a little fortified town belonging to the house of Orange, having been built by WILLIAM I. anno 1583, from whom it received its name. It is situated on the water called the Roo Vaert, which separates the island of Voorn from the continent, and secures the communication between Holland and Zealand. The islands above mentioned to belong to South Holland, lie at the mouth of the Maes, the principal whereof is Voorn, or the land of Voorn, as it is called, on which stands,

The Briel. 12. The city of the Briel, a fortified town, twelve miles to the westward of Rotterdam. The buildings are old, but regular; the streets broad, and the walls planted with trees. It has a pretty good harbour, and a tolerable trade, but not comparable to Rotterdam or Dort, which lie higher up the river. This was the first town on the coast of Holland which the Geuses, or Malecontents, took from the Spaniards, and occasioned the revolt of the rest; and this was one of the cautionary towns which the States delivered into the hands of Queen ELIZABETH, for repaying the expences she was at in defending them against the King of Spain, and was afterwards restored to them, with the rest, by King JAMES in his necessities, for a very small part of the money that

VOL. II.

remained due to England. The island whereon it stands is about twenty miles in length, and six in breadth, and is generally fruitful in corn.

13. Helvoetsluice, on the same island of Voorn, stands about four miles to the southward of the Briel, and is esteemed the safest harbour in the country. Here are usually some of the States largest men of war, which come up to the middle of the town; and hither the English packet-boat comes and takes in the mail; and though it be one of the most convenient places to embark at, yet has the place but little trade, merchant-men choosing to go higher up the river before they unlade. To the southward of the land of Voorn lies the island of Overlacke, about fifteen miles long and five broad, on which are several towns and villages, the chief whereof is,

14. Summerdyke, situate on the north side of the island, formerly a town of some trade, but upon the decline at present. To the westwaert of Overlacke lies the little island of Goree, the chief town whereof is of the same name, but not considerable for its trade or any thing else at this day. This is usually the first land we make on the coast of Holland in a voyage from England to Helvoetsluice. Between the land of Voorn and Rotterdam lies the island of Islemond, or Overmaes, about ten miles in length and four in breadth, the chief town of the same name standing almost over against Rotterdam. As for Putten and Byerland, I comprehend them under the title of the land of Voorn, from whence they are separated but by a small stream.

I come next to North Holland, being that part of the province which lies north of that little arm of the sea called the Y, or Ty, the towns whereof are Hoorn, Enckhuysen, Alckmaer, Edam, Munickedam, Medenblick, Purmerend, Beverwick, Wormer, Schermer, Beemster, Egmont, Petten, Schagen and Ninckel: and the islands belonging to North Holland are, the Texel, Eyerlandt, Flielandt or Vlielandt, Schilling, Grind, Vieringen, Ureck, Ens. The chief of which towns and islands I am now to describe, and,

1. Hoorn, twenty miles north of Amsterdam, a large wealthy city, pleasantly situated on the Zuider-sea, almost surrounded by gardens and pasture grounds, and secured against the fury of the sea by a vast dam. The produce of the country about it is chiefly butter and cheese, which they export to several parts of Europe.

2. Enckhuysen, situate also on the Zuider-sea, ten miles north-east of Hoorn, and as many south-east of Medenblick, a large handsome city with a capacious port, from whence great numbers of ships yearly set sail for the Baltick and herring-fishery, by which, and ship-building, the town is grown very rich.

3. Medenblick, an ancient city, once the capital of North Holland, now but a little town situate on the Zuider-sea, ten miles north of Hoorn, is still a commodious harbour, and defended by an old castle. Here are the strongest dams and banks of the country to defend it from the fury of the waves, which beat violently on these shores when the wind blows a storm from the northwards. The country about this place is taken notice of for its rich pastures.

4. Alckmaer, twenty miles to the northwards of Haarlem, an ancient town, but one of the best built in this part of the country, and pleasantly situate in the midst of gardens, groves, and pasture

CHAP.  
III.

ture grounds, which last produce vast quantities of cheese and butter, which enriches the natives.

Sardam. 5. Saenredam, or Sardam, situate on the Y, or Ty, seven miles north-west of Amsterdam, and almost opposite to it, very considerable on account of the numbers of ships which are annually built here, though it be but an open town.

Edam. 6. Edam, situate on the Zuider-sea, ten miles south of Hoorn, a small town, but considerable also upon account of the ships that are built here.

Purmer. 7. Purmer, a neat fortified town, five miles west of Edam; the country about this place and Edam was formerly a lake, which having been drained, makes a pleasant fruitful country, that goes by the name of Purmerend, and to the southward of this lies the Beemster, already mentioned, which was formerly a lake, but now a fine country, containing seven or eight thousand acres of ground. Of the like kind are the Wormer, which lies still further southward; the Schermer and the Huygen Waert to the westward of the Beemster; as also the Zype, the most northerly part of this province, the sea being kept out by a vast mole formed by beams of timber driven into the ground, and the spaces filled up with huge stones and cement.

Between the ocean and the Zuider-sea lie the islands above mentioned to belong to North Holland; and first, the Texel, a fruitful island, about six miles long, and five broad, lying a little to the northward of the continent of Holland, between which and this island is one of the principal passages out of the Zuider-sea into the Ocean: the chief town is Burch, situate on the east side of the island, strongly fortified and garrisoned; the natives apply themselves pretty much to the herring fishery. To the northward of the Texel lies the Vlie, or Flie island, nine miles long, and two broad; and north-east of this the island of Schelling, in which was a village containing about a thousand houses, burnt by Sir ROBERT HOLMES, who commanded an English squadron in the Dutch war, with near an hundred sail of merchant ships. These islands, and some banks of sand that lie at the entrance of the Zuider-sea, a little break the fury of the Ocean when the wind sits north-west, or the whole province of Holland would be very much in danger of being laid under water every storm that happens from that quarter. The Wierings are several small islands which lie in the Zuider-sea within the Texel; to the eastward of which lies the island of Vieringen or Wieringen. The island of Eyerland lies between the islands of the Texel and the Flie, but of these I meet with nothing particular. I shall only add that there is a tolerable harbour in the Texel, and another in the Flie, in the first of which the ships bound to the southward usually rendezvous, and in the latter those bound to the north; and when the homeward bound vessels can recover either of these ports, they look upon themselves to be secure from the enemy.

Zealand Province. Zealand, the second of the seven provinces I proposed to describe, consists of several islands, and is held to have obtained the name Zealand, or rather Sealand, from the Danes when they over-run this part of the world, as resembling some islands of their own country surrounded in like manner by the sea, and carrying the name of Zealand. The islands which compose this province are eight in number, four whereof are said to belong to the

western branch of the Scheld, and four to the eastern branch of the Scheld. Those of the western Scheld, are Walcheren, South Bevelandt, North Bevelandt, and Wolferdyke: and those of the eastern Scheld, Schowen, Duveland, Tolen and Orefand. The whole province comprehending the seas and channels which divide the several islands, is bounded by the Ocean, and the islands of Holland on the north, by Brabant on the east, by Flanders on the south, and by the ocean towards the west; and extends thirty miles in length, reckoning from Tolen to the most westerly part of Walcheren, and twenty miles in breadth, viz. from the southern shore of South Bevelandt to the northern shore of Schowen. The principal of these islands is that of Walcheren, lying at the mouth of the Scheld, about nine miles in length, and eight in breadth, almost of an oval figure. The chief town of the island of Walcheren is, 1. Middleburg, the capital of the whole province; so named, it is said, from its situation in the middle of the island. It lies in the latitude of fifty-one degrees forty minutes, forty miles south-west of Rotterdam, and as many of Breda, and twenty-five north-east of Bruges. The city is large and populous, and abounds in wealthy merchants: a canal has been cut from an arm of the sea to the city, whereby they bring merchant ships into the middle of the town. The streets are broad and well-paved; the publick buildings magnificent, particularly the stadthouse and churches, of which last there are no less than twenty; that called the New Church, admired for its beauty, is of an octagonal figure, and has a noble cupola over it; the whole town is surrounded with a wall, a moat, and other fortifications. King PHILIP II. made it a Bishop's See in the fifteenth century: but the Dutch malecontents soon after gaining the possession of it, converted the palace to secular uses, and sequestered the revenues, as they did in other parts of the United Provinces where bishopricks were established. 2. Rammekins, or Ze-Rammekins, a fortress, situate at the mouth of the harbour of Middleburg, and three miles south-east of it, once a considerable town, and one of those cautionary places delivered up to Queen ELIZABETH; at present an inconsiderable village. 3. Flushing, or Vlissingen, situate in the most southerly part of the island, five miles south of Middleburg, a considerable city, and a place of great trade, having a good harbour, and fortifications for its defence. This was another of the cautionary towns delivered to Queen ELIZABETH by the Dutch as a pledge of their fidelity, and a security for the money she had advanced them to resist the Spaniard. 4. Ter Vere, three miles north of Middleburg, a fortified town, and a good harbour; but lies pretty much exposed to inundations. 5. Armuyden, situate at the mouth of the river which comes from Middleburg, and two miles east of it. It had once a good harbour, and was a place of trade, but the harbour being choked up, it is but an inconsiderable town at present. The island of South Bevelandt lies to the eastward of Walcheren, and is the largest of the Zealand islands; being about fifteen miles long, and seven or eight broad, and was much larger till part of it, in the year 1532, was laid under water by an inundation. The only town of any consequence in it is, 4. Ter Goes, on the north part of the island, twelve miles east of Middleburg, and fifteen west of Bergen op Zoom. There are besides above thirty villages, and several

islands.

*The City of Utrecht*

CHAP. III. **III.** **Wolferdyke Island.** The island of Wolferdyke lies between North and South Bevelandt; and is about five miles in length, and one in breadth; having at present only three or four villages upon it, great part of it has been laid under water by inundations. To the northward of Wolferdyke lies North Bevelandt; about five miles in length, and two in breadth, great part whereof also has had the misfortune to be swallowed up by the sea, before which the country was so pleasant, that it was called the garden of Zealand. There is no town of any note upon it at present. To the northward of North Bevelandt lies the island of Schowen, the largest of those on the side of the Eastern Scheld; being fifteen miles in length, and six in breadth, and was much larger till worn away by inundations; the chief town whereof is, Zirickzee. 5. Zirickzee, said to be the most ancient in Zealand, situate on the channel which divides Schowen from Duvelt, and fifteen miles north-east of Middleburg. It has a tolerable harbour, and is a place of some trade. 6. Browershaven, situate on the north side of the island, five miles north of Zirickzee; the natives whereof subsist chiefly by fishing and husbandry. 7. Bommenee, two miles to the eastward of Browershaven, over-against Goree, esteemed a strong fortress. To the eastward of Schowen lies Duvelt, separated from it by a very narrow stream; there are several villages upon it, the chief whereof is of the same name with the island, but not one considerable town. The island of Tolen is separated from Brabant by a very narrow channel, called *Het Slaek*; being about six miles in length, and five in breadth: the chief town whereof is Tolen, esteemed a strong fortress, situate four miles north-west of Bergen op Zoom, and twelve miles south-east of Zirickzee. The small island of Orefand lies between Schowen, and North Bevelandt, and has some villages upon it, but no town of any note. These islands of Zealand were anciently subject to the Earls of Holland, and afterwards to the houses of Burgundy and Austria; but enjoyed very ample privileges all that time till PHILIP II. invaded their rights, which occasioned the civil war above-mentioned, and Flushing was the next town to the Briel which was seized by the Sea-Geuses, or malecontents upon the coast. The land, as has been intimated already, is very low in all these islands, and subject to inundations, which puts the inhabitants to vast expences in repairing their banks. Their low situation and the neighbourhood of the sea occasions also an unwholesome air; but on the other hand, the country is generally fruitful, abounding in good corn and pasture grounds, and the natives many of them being employed in the fisheries, and other branches of foreign trade, are a wealthy and flourishing people, though they have scarce any manufactures among them.

**Friesland province.** The third of the United Provinces I propose to treat of is Friesland: bounded by the Ocean on the north, by the province of Groningen on the east, by the province of Overijssel, and part of the Zuider-sea towards the south, and by other part of the Zuider-sea towards the west. This was the country of the ancient Frizons, and formerly, 'tis said, lay contiguous to North Holland, (sometimes called West Friesland) from which it is now separated by the Zuider-sea, formed not many years since by an extraordinary inundation. Groningen with East Friesland, or the county of Embden, was also part of the county of the an-

cient Frizons; and some affirm that it was still of a larger extent, but the present bounds of this province are as above described: extending about forty miles in length from north to south, and twenty-five in breadth from east to west, and is usually subdivided into Westergo, Oostergo, and Seven Wolden. In Westergo, or the western part of it, are the towns of Franeker, Harlingen, Bolswaert, Sneek, Worcum and Staveren. In Oostergo, or the north-east part of it, are the towns of Leuwarden and Dockum, and in Seven Wolden, the south-east part of the country, a barren soil, and meanly inhabited, is only the town of Sloop, besides villages.

1. Franeker, *Franquera*, situate in fifty-three degrees ten minutes north latitude, four miles to the eastward of the Zuider-sea, and eight to the westward of Leuwarden, a little handsome city, and a place of some trade. Here a university was founded by the States in the year 1585, and well endowed out of the abby-lands which were sequestered about that time.

2. Harlingen, situate on the Zuider-sea, five miles west of Franeker, it has a pretty good harbour for small vessels, and carries on a trade to Norway. The place is fortified, and naturally strong, the country about it being easily laid under water in cases of necessity.

3. Leuwarden, a fortified town, eight miles to the eastward of Franeker, the best city of the province in all respects, and the residence of the Stadtholder and sovereign council. It is a place of trade, and admired for its fine buildings, its handsome streets and bridges, and the pleasant gardens about it.

4. Doocum, situate ten miles north-east of Leuwarden, in a fruitful country, a place of some strength, and tolerably well built; most taken notice of for a fine bridge, under which vessels may pass with their masts up.

5. Sloop, or Sloten, situate upon a navigable canal; a league from the Zuider-sea, nine miles north-east of Staveren. It has but one church, and no other building of any note, but the Stadthouse.

6. Bolswaert, formerly one of the Hans-Towns, about seven miles south of Franeker. Its harbour at present is choked up, but carries on a trade however in small vessels along their canals.

7. Staveren, situate on the Zuider-sea on the south-west point of Friesland, four leagues north-east of Medenblick in North Holland. It had formerly a good harbour, and a brisk trade, and was the third of the Hans-Towns, more anciently the capital city, and residence of the Kings of the Frizons; but the harbour being choked up, it is fallen to decay, and but an inconsiderable town at present.

The islands of Ameland and Schiermonnikoog lie in the Ocean to the north of Friesland, and both belong to this province; but here are only seven or eight villages which do not seem to merit a description.

The air of Friesland is cold, but more healthful than the southern provinces, and though the land lies under water great part of the winter, inasmuch, that they are forced to go from town to town by banks and causeways, it is all driven out either by art or the hot weather which succeeds, and there appears to be a great deal of good arable and pasture in the summer season. Their best, and almost only firing is turf, which burns as white, and gives as good a heat as wood: these

turf

CHAP.  
III.

turf meadows being mixed with a bituminous matter, have, as history relates, taken fire at certain times, and burnt up the country for several leagues, till a stop has been put to the conflagration by some lakes or rivers which happened to interpose and extinguish it. The natives of this province, it is observed, are martially inclined and choose to follow the camp rather than apply themselves to trade. Their nobility and gentry avoid matching into the families of merchants, or mechanicks, and delight in rich clothes and equipages much more than their southern neighbours. In their fashions they follow the mode of France, and in drinking the Germans, good fellowship prevails.

Gronin-

Winfcho-  
ten.Overysfel  
province.

The fourth province I shall describe, is that of Groningen and the Omlands; which is bounded by the Ocean on the north; by the rivers Ems and the Dollart Bay, which separates it from Embden, or East Friesland, in Germany, on the east; by the province of Overysfel on the south; and by Dutch or West Friesland, the province last described, towards the west: extending upwards of thirty miles in length from east to west, and twenty miles in breadth from north to south, and is usually divided into Groningen Proper and the Omlands. In the former of which the chief towns are Groningen and Winschoten; and in the Omlands, Dam.

Groningen, formerly one of the Hans-Towns, situate on the confluence of the two rivers Aha and Hunefus, in the latitude of fifty-three degrees odd minutes, thirty miles to the eastward of Leuwarden, and twenty south-west of Embden; a fortified town, about two miles in circumference; and besides the rivers above-mentioned, it is watered with several artificial canals, by which it has a communication with the river Ems, the Ocean, and the neighbouring countries, by means whereof they carry on a brisk trade to Germany, &c. They have two or three spacious market-places, and about seven and twenty handfom streets; and formerly there were twelve churches in the place, but the Dutch have converted nine of them to secular purposes. All the ground within the walls is not built upon, but there are several large gardens and orchards belonging to the principal citizens, which with the canals render it a pleasant town in summer.

2. Dam, the capital of the Omlands, twelve miles north-east of Groningen, situate on the canal called the Dampster Diep, three miles west of the river Ems; a large well-built town, but without walls, the States of Groningen being jealous of the Omlanders, who sometimes dispute their authority, and pretend to an independency. 3. Winschoten, a fortress, situate between the Dollart Bay and an impassable morass, which commands one of the passes out of East Friesland into the United Provinces; is seventeen miles east of Groningen, and twelve south of Dam: there are also the Billingworder Schans, and the Bourtangier Fort, with several others which lie upon the frontiers, and secure the United Provinces against any attacks on the side of Germany: and indeed the Dutch are in a manner masters of Emben in East-Friesland, that city having put it self under their protection, and admitted a garison of the States troops. The soil of this province is generally barren, and the air sharp, but more healthful than that of the southern provinces.

The fifth province of the United Netherlands which I am to describe, is, that of Overysfel, so named from it's situation beyond the river Yssel:

this province is bounded by Groningen and Friesland towards the north; by the bishoprick of Munster in Germany on the east; by Guelderland and Zutphen on the south; and by the Zuider-sea on the west: extending near sixty miles in length from north to south, and forty in breadth from east to west; and is usually divided into three parts, viz. Iselandt or Sallandt, Twente, and Drent. Of which, 1. Iselandt, lies about the river Yssel; on.

the chief towns whereof are Deventer, Swoll, Campen and Hasselt. 2. Twente, which lies to the eastward of Sallandt, on the confines of Munster; the chief towns whereof are Oldenzael, Omerfan and Enscheden. 3. Drent, the most northerly part of Overysfel; the chief towns whereof are Coverden, Meppel, Vollenhoven, Steenwick, Swarte Sluice and Blockzyl.

1. Deventer, or Daventer, situate on the river Yssel, seven miles north of Zutphen, and thirty to the eastward of Amersfort, a large populous city, elegantly built, and well fortified, formerly an Imperial city, and one of the Hans-Towns, and still a place of good trade. The inhabitants are many of them noblemen and persons of distinction. There were in it formerly ten or twelve churches, which the States since their being masters of it have reduced to three: PHILIP II. also made it a Bishop's See in the year 1559; but the Dutch abolished the bishoprick and sequestred the revenues in 1580. The most remarkable structure here is the tower of Noremberg of a round figure, built with brick and stone, the walls seventeen feet thick, and of such large dimensions, it is said, as to require a garison of several thousand men to defend it.

2. Swoll, or Zwoil, situate between the two rivers Yssel and Vecht, eighteen miles north of Daventer. Another river runs through the town, by which the tide brings up vessels from the Zuider-sea, and makes it a place of tolerable trade. The fortifications which surround the town are well planted with trees, the streets regular, and the buildings good, all which contribute to make it a very desirable place.

3. Campen, pleasantly situated near the Zuider-sea on the south side of the river Yssel, eighteen miles west of Swoll, a large well built city, in which the publick buildings, such as the Stadthouse, the churches, and the custom house, are said to have an air of magnificence; but the trade of the town is much diminished since the mouth of the river Yssel has been choaked up with sand. 3. Coverden, the capital of the district of Drente, situate on the confines of Bentheim in Germany, thirty miles to the eastward of Swoll, a fortress strong by nature as well as art, situate in an unpassable morass, and as it commands a pass out of Munster in Germany into Groningen and Friesland, is a place of great importance.

The next province we come to is that of Guelderland, formerly divided into Dutch Guelderland and Spanish Guelderland; but by the late treaty of peace a partition was made of the Spanish Guelderland between the Emperor, the Dutch, and the King of Prussia, of which I shall give a particular relation after I have described that part of the province formerly called Dutch Guelderland.

Dutch Guelderland, of which the country of Zutphen is deemed a part, is bounded by the Zuider-sea and the province of Overysfel on the north, by the bishoprick of Munster on the east, by Brabant and the duchy of Cleve towards the south, and by the provinces of Holland and Utrecht

trecht towards the west, extending about fifty miles in length from north to south, and is not much less in breadth from east to west, being usually subdivided into three lesser parts or districts, viz. the Veluwe, the Betuwe or Betawe, anciently Batavia, and the county of Zutphen.

1. The Veluwe is the northern part of this province, and situate between the Zuider-sea, the Yssel, and the Rhine, in which the principal towns are Arnheim, Wageningen, Harderwick, Hattem, and Elberg. 2. The Betuwe is almost encompassed by the rivers Rhine, Leek, Maes, and Meruwe, in which district the principal towns are Nimeguen, Tiel, Schenckenschans, Bommel, Buren, and Cuylenburg. 3. The county of Zutphen, bounded by the province of Overijssel on the north; by the river Yssel, which separates it from the Veluwe, towards the west; by the duchy of Cleve on the south; and by the bishoprick of Munster on the east; extends about thirty miles in length from east to west, and twenty four in breadth from north to south, in which the principal towns are Zutphen, Doesburg, Groll, and Brevort.

1. Arnheim, pleasantly situated on the banks of the Rhine, about thirty miles south of the Zuider-sea, and ten to the northward of Nimeguen; a large fortified town, anciently the residence of the Dukes of Guelder. The air is more healthful here than in most of the provinces we have passed through; for here they begin to get out of that moorish soil, which is too common in the maritime provinces, and ascend the hills, especially on the side of the Veluwe, which occasions it to be inhabited by people of the best quality. The buildings also are neat and elegant, which makes it in every respect a very desirable place. The church of St. EUSEBIUS is taken notice of by travellers as a handsome structure; but there were many more churches as well as monasteries in this city, while it remained under the dominion of the Spaniard, which are now run to ruin, or converted to secular uses. However, it must be acknowledged, that the Dutch have in this, and most of their cities, erected several fine hospitals in the room of them. Ten miles north-east of Arnheim stands the palace of Dieren, belonging to the late King WILLIAM; and about seven miles further northward, the palace of Loo, situate in the middle of the Veluwe, in a healthful air, the country about it abounding with all manner of game: this therefore was the favourite place of that Prince, and his usual residence when affairs of state would permit him to retire. The gardens are much admired for their fine walks, grotto's, fountains and cascades, and whatever may render such a retreat desirable.

2. Harderwick, situate on the coasts of the Zuider-sea, thirty miles north of Arnheim, a well-built town, and a university erected in the year 1648, by the states of this province. The Rector, who is the chief magistrate of the place, is chosen annually by six Curators. The great church of St. MARY'S is said to be a magnificent structure, but I don't find any other publick buildings taken notice of. The French half ruined the place when they invaded the United Provinces anno 1672, and the Zuider-sea daily encroaches upon it, so that it is now in a very declining condition. 3. Nimeguen, pleasantly situated on the river Waal, (a branch of the Rhine) ten miles south of Arnheim; eight north of Grave; and twelve to the westward of Schenckenschans; a large populous

city, built in form of a crescent on five small hills, by the river side. The streets are wide, the houses neatly built, and there are still ten churches remaining in it, of which that of St. STEPHEN'S is esteemed a very handsome structure. Here are two hospitals also for the maintenance and education of poor orphans, two others for ancient people, one for lepers, two for other infirm people, and one for lunatics. The Stadthouse is a magnificent pile, adorned with the statues of several Emperors. The castle called Valckhoff, or Waalhoff, signifying a palace upon the Waal, was anciently esteemed a palace of great strength, from whence there is one of the finest prospects of the neighbouring country that can be imagined. In the year 1608, a navigable canal of ten miles in length was dug from hence to Arnheim, at the joint charge of those cities. Upon the French invasion, anno 1672, this city surrendered to them after a siege of six days, and the garison were made prisoners of war; but the French abandoned it again in 1674. And here afterwards was that famous treaty of peace negotiated between France and the confederates in the years 1678 and 1679, called the treaty of Nimeguen. 4. Schenckenschans, or Schenck-  
fence, so named from the Engineer Schenck, who projected this important fortress, which stands on that point of the Betuwe where the Rhine divides itself into two branches, one whereof takes the name of the Waal, and the other retains it's ancient name: thus situated, the fort commands both those rivers, and is one of the principal passes between Germany and the United Netherlands. 5. Tiel, situate on the south side of the Waal, twelve miles west of Nimeguen, is a marshy soil, which renders it very unhealthy; but the place is reasonably strong, and the capital of a district called the Tielers Waert. 6. Bommel, situate on the south side of the Waal, ten miles to the westward of Tiel, a pleasant well-built city, surrounded with good fortifications and the capital of a country called the Bommel Waert, which is an island formed by the Waal and the Maes, about twelve miles long and four broad. On the west point of this island stands the castle of Lovestein, and on the east the two strong fortresses of Fort St. ANDREW, and Fort Voorn or Nassau, which command the rivers Maes and Waal. These are the chief towns of the Betuwe, or Batavia, the seat of the ancient *Batavi*, so often mentioned in Roman history, who according to TACITUS, descended from the tribe or nation of the *Catti*. The extent of ancient Batavia is supposed to have been from Rhinburg in the duchy of Cleve to Catwick near Leyden on the coast of Holland, which town is thought to have derived it's name from the *Catti*. The present Batavia, or Betuwe, extends from Schenckenschans in the east, to Worcum in the the west, being a tract of about forty miles in length; but the greatest breadth from Arnheim on the Rhine to Grave on the Maes, is not much above sixteen miles.

In the county of Zutphen, the third subdivision of Guelderland, the chief towns are, 7. Zutphen, or South Fen; supposed to have obtained this name from it's situation, when the Frizons were masters of the whole country, viz. of Friesland, Groningen, &c. as well as of the provinces to the southward of them. This city lies on the river Yssel, fifteen miles north-east of Arnheim, and twenty four miles almost north of Nimeguen. The river Berkel runs through the middle of the

town and divides it into two parts, called the old and new town, and then falls into the Yssel, over which there is a handsome bridge, besides two others which join the old and new town together. The city is generally well built, and being in a good air, is inhabited by people of condition. The admired Sir WILLIAM SIDNEY was mortally wounded in an engagement with the Spaniards near this place, in the year 1586. It was taken by the French in 1672, but quitted again two years after; which was the fortune of most of the towns of this province. The great church dedicated to St. PETER is a noble building, and the brazen font in it much admired for the curious workmanship. Here is also a handsome old monument of Count OTHO the Third, who by some is supposed to have founded this church. There is still the ruins of a palace, which, according to the tradition of the place, belonged to the ancient Counts of Zutphen, and near it a high brick tower of a pyramidal form, one of the greatest ornaments to the city. The monasteries and religious houses which were formerly here, are part of them demolished, and the rest converted into hospitals or other secular uses.

8. Doesburg, on the Yssel, eight miles south of Zutphen, strongly situated by nature, having the river on one side and a morass on the other, and only to be approached by a narrow neck of land, and yet was surrendered to the French anno 1672, in three days, who demolished the fortifications when they quitted it the next year. This town is supposed to have been built by DRUSUS, lying near the place where he cut the channel to bring the Rhine to the Yssel. 9. Groll, about sixteen miles to the eastward of Doesburg, another considerable pass from Germany to the Low Countries, taken by the Bishop of Munster in the year 1672, but yielded to the States again not long after. The air of Dutch Guelderland, as hath been intimated already, is much better than that of the maritime provinces, great part of the country being a gravelly soil and heath ground, and rising gradually into hills, especially the Veluwe. Zutphen however has good meadow and pasture ground, where great herds of lean black cattle, brought from Denmark and the north of Germany, are fatted for the market; and other parts of the province yields good corn. I proceed next to the description of that part of the country till lately denominated Spanish Guelderland.

land.

This district lies at a little distance from the Dutch Guelderland, the western part of the duchy of Cleve interposing, and is bounded by the said duchy of Cleve towards the north, by part of the same duchy and the electorate of Cologne on the east, by the duchy of Juliers on the south, and by the bishoprick of Liege towards the west; extending upwards of thirty miles in length from north to south, and twenty miles in breadth where broadest, but in most places much less: the chief towns whereof are Guelder, Ruremond, Venlo, Wachtendonck, Stralen and Stevenswaert: which, with the respective countries dependent on them, were thus parcelled out by the last treaty of peace, anno 1714; viz. 1. His Imperial Majesty surrendered to the King of Prussia all that part of the upper quarter of Guelderland which he was then possessed of, namely, the town of Guelder, the prefecture, bailiwick and lower bailiwick of Guelder, with all that belongs to it and depends upon it; as also the towns, bailiwicks, and lordships of Stralen, Wachtendonck, Midelaer, Walbeck, Aertsen, Afferden

and Wiel, together with Racy and Kieyn, Kevelhar, with their appurtenances; the ammanie of Kriekenbeck, and it's appurtenances, and the county of Kessel and it's appurtenances and dependencies, except only Erkelin with it's appurtenances and dependencies; to be enjoyed by his Prussian Majesty, his heirs and successors, in the same manner as the house of Austria, and particularly the late King of Spain possessed them. 2. His Imperial Majesty surrendered to their High Mightinesses the States General, for ever in full sovereignty and propriety, the town of Venlo in the upper quarter of Guelderland, with it's precincts and jurisdiction, and the fort of St. MICHAEL: also the fort of Stevenswaert, with it's territory and jurisdiction, and as much land as was necessary to augment the fortifications on this side the Maes: and his Imperial Majesty promised never to permit any fortifications to be built within the distance of half a league from the old fortrefs. His Imperial Majesty also yielded up to their High Mightinesses the ammanie of Montfort, consisting of the little towns of Nieustadt and Echt, with the villages of Oke and Lack, Roostern, Bracht, Bessel, Belseln, Vlodorp, Postert, Berg, Lin and Montfort, to be possessed by the said States-General in the same manner they were enjoyed by CHARLES II. of Spain; provided always that this surrender be made with this express clause, that the statutes, ancient customs and privileges, civil and ecclesiastical, as well with respect to magistrates, as private persons; the churches, convents, monasteries, seminaries, hospitals, and other publick places, with their appurtenances and dependencies; as also the diocesan rights of the Bishop of Ruremond, and generally all that concerns the rights, liberties, immunities, functions, usages, ceremonies, and the exercise of religion, shall be preserved and subsist without any change or innovation, directly or indirectly, in all places given up as aforesaid, in the same manner as in the time of King CHARLES II. And the offices of magistracy, or policy, shall be given to none but such as are of the Roman catholic religion. The right of collation to benefices, which has been hitherto in the Sovereign, shall hereafter belong to the Bishop of Ruremond, on condition they be not given to persons obnoxious to the States. And it was further agreed, that the duties of import and export levied along the Maes should not be encreased or abated but by common consent; of which duties his Imperial Majesty should receive those paid at Ruremond and Navaigne, and the States those to be paid at Venlo. [A like clause as to the religion, liberties, and privileges of the natives of those countries, made over to the King of Prussia in Guelderland, is inserted in the surrender of them by his Imperial Majesty.] As to the city of Ruremond, and all the rest of the country lately called the Spanish Guelderland, this was left to his Imperial Majesty to possess, in the same manner it was enjoyed by the late King of Spain, CHARLES II. It remains now that I give some description of the principal towns already mentioned, and, 1. of Ruremond, or Roermond, situate on the confluence of the Roer and the Maes, about thirty miles north-east of Maestricht, and twelve to the southward of Venlo; a large populous city, well fortified and elegantly built, and the See of a Bishop, being one of those erected by PHILIP II. of Spain, a little before the revolt of the United Provinces. The cathedral

dral is dedicated to the Holy Ghost, but I do not find the building so much admired as the fine Carthusian monastery here, a noble fabrick, and richly endowed. This city was seized with the rest of the Spanish Guelderland by the French, on the death of the late King CHARLES of Spain, but taken from them by the allies in the year 1702, and is now in the possession of the Emperor. 2. Venlo, situate on the Maes, twelve miles north of Ruremond, a populous trading city, and well fortified, taken from the French by the confederates in the year 1702; and by the last peace surrendered to the States General by the Emperor, who are now Sovereigns of it. 3. Guelder, a small city, ten miles north-east of Venlo, situate in the middle of a morass, and by consequence naturally strong, but was surrendered to the confederates in the year 1703; and on the ensuing peace, anno 1714, was yielded by the Emperor to the King of Prussia, who is now Sovereign of it. 4. Wachtendonck, situate on the river Niers, in a marshy soil, esteemed one of the strongest towns in the province, yielded by the Emperor also to the King of Prussia on the last peace. 5. Stevenswaert, a strong fortress, situate on the Maes, about eight miles to the southward of Ruremond, taken from the French by the confederates in the year 1702, and yielded by the Emperor to the Dutch, who are now Sovereigns of it.

The last of the Seven United Provinces I am to describe, is that of Utrecht, bounded by the Zuider-sea and part of Holland on the north, by Guelderland on the east, by other parts of Guelderland towards the south, and by Holland on the west; extending about twenty-five miles in length, and near as much in breadth; the chief towns whereof are, 1. Utrecht, the ancient *Antonina*, supposed to have been a Roman colony, pleasantly situated on the channel of the Old Rhine, twenty five miles south-east of Amsterdam, and about as many north-east of Rotterdam, a large, populous, and well-built city, with canals in the principal streets; and as it stands in a healthful air, is much resorted to by persons of distinction, who have fine houses in the place. The two principal canals which run the whole length of the city, are the Vaert, and the New Gracht, over which there are no less than thirty-five bridges; the buildings on the banks of the New Gracht being very magnificent. The market-place is large, and several handsome streets centre in it; and without the town are beautiful walks of trees, to which the English have given the name of the Mall, as resembling that in St. JAMES's park: the fortifications are not strong, upon which account, or as some insinuate a much worse, the Magistrates surrendered the city to the French without striking a stroke, in the year 1672. They kept possession of it a year and half, during which time the French King had prepared materials to build a citadel, but being obliged to withdraw his troops, that design was laid aside; but he extorted two hundred thousand pounds first from the inhabitants, notwithstanding their ready submission. The great church, formerly the Cathedral, is dedicated to St. MARTIN, and has a tower of four hundred and sixty steps, from whence there is a noble prospect of the adjacent country, no less than fifty walled towns appearing at once in view. Their University, at first a publick school only, founded by DAVID of Burgundy, Bishop of Utrecht, was in the year 1636 converted into a University by

the States, and is now in a very flourishing condition, abundance of foreigners, and among the rest some English, resorting hither for education and degrees, the latter being more easily obtained here than at home; but a Dutch degree does not seem to be in any great repute at present. This University is entirely subject to the magistrates of the city, and has very few privileges to boast of. The students wear their ordinary habits, and board in the town, there being scarce any endowed colleges in Holland where they live in societies, and common together, as in Oxford and Cambridge. 2. Amersfort, pleasantly situated on the river Ems, fifteen miles north-east of Utrecht, and seven south of the Zuider-sea, about three miles in circumference. It stands in a fruitful country, abounding in corn and pasture grounds, husbandry being the principal employment of the inhabitants. The town is large and populous, and surrounded by a wall, but the fortifications are not considerable; the private buildings are regular and handsome, and their churches and hospitals no mean structures. To the southward of Amersfort stands Soesdyke, a hunting seat of the late King WILLIAM's, in a country abounding with game, the forest where the palace stands being near ten miles in length, and five in breadth. 3. Wyck de Duesterde, the *Durostadium Batavorum* of the Romans, situate at the confluence of the Leek and the middle channel of the Rhine, twelve miles south of Amersfort; a little town, pleasantly situated and well built, and surrounded with a wall, but retains little of its ancient grandeur. 4. Rhenen, another ancient walled town, situate on the Rhine, fifteen miles to the south of Amersfort, which has scarce any thing in it that merits a particular description at this day. 5. Montfort, a little well-built town, eight miles to the westward of Utrecht, capital of a small territory in which it stands, and defended by a wall and other fortifications, but of no great strength.

The province of Utrecht is one of the most pleasant and healthful of the United Netherlands, for here they may be said to tread upon firm ground, whereas the maritime provinces are almost all quagmire and bog, made habitable by incredible labour and expence. This province was entirely under the dominion of the French, in the years 1672 and 1673. LEWIS XIV. keeping his court in the capital city; but the Germans coming to the assistance of the Dutch, he was obliged to withdraw his garisons from most of the towns he had taken, and retire to defend his own frontiers.

As to the buildings in the United Provinces, they are for the most part of brick, and differ but little from those in Britain; only 'tis observed that the ground-floor is usually of the largest dimensions, and every story, in proportion to its height, grows less and less; the reason whereof may be, that their foundations standing often upon a marshy soil, will not bear a very weighty roof. It is observed also, that their kitchens, and most ordinary rooms, are frequently lined or wainscotted, if I may use the phrase, with white Dutch tiles, which make them look exceeding neat. Their other rooms they choose rather to adorn with pictures than hangings, and their paintings are not bad. Stoves are used in many houses instead of chimneys, where a man may be as hot as in a bagnio in the coldest weather without seeing a fire. Their ordinary lodging is in many places very different from ours, for instead of beds they have

little cabins or cupboards on the sides of the room, placed so high that they are not easily mounted without a ladder or steps; and there are often six of these cabins close together, especially in their inns, where a gentleman's quality must be something extraordinary, if he be permitted the favour of having a room to himself: but I must confess there are some houses where the lodging and furniture are much the same as with us. They do of late begin to imitate their politer neighbours in these particulars as well as in their dress. Their kitchen-utensils, whether pewter, brass, or iron, are as bright as possible, and many of them muffled up in woollen to preserve them from rust; and the china, and other fine earthen ware, is marshalled in the exactest order in their houses. Their table-linen and sheets are always clean and fine, a man does not meet with a foul napkin in the country. Their children's cradles are slung with four ropes to a beam in the middle of the room, and hung above a yard from the ground, and their children consequently rocked with a very easy motion, without noise or giving any disturbance to the family.

## CHAP. IV.

*Treats of the persons and habits, the genius and temper of the Dutch; of their vices and virtues, and of their diet, entertainments, diversions, roads, carriages, and way of travelling.*

CHAP.  
IV.Persons  
and habits  
of the  
Dutch.

THE Dutch are generally tall strong-built men, but both men and women have the grossest shapes that are to be met with any where, or rather no shape at all. Nor is their motion less disagreeable than their shape; they move heavily and awkwardly, inasmuch that it is not difficult to distinguish a Hollander from a native of England or France, almost the length of a street by his mien. Their features or complexion are not to be found fault with, except among the boors and sea-faring men, who are very numerous; but the badness of their complexions is to be ascribed rather to their being exposed to the weather than any thing else. Their garb is exceeding plain among all sorts of people, except the officers of the army, and some few others, which affect to follow the French modes, otherwise they change their fashions as rarely as in Spain. I did not observe any thing very particular in the dress of the men, unless it were that their coats had neither shape nor pleats, and their long pockets were set as high as their ribs; but that of the women appeared something odd to us, their coats coming no lower than the middle of their legs. As to head-dresses they have little or none, many of them content themselves with tying up their hair, and wearing three black knots upon their heads, one on each side, and the other on the hinder part of the head, and perhaps a hood over all when they go out; though I must confess I have seen several of them of late in a French dress, which in time will be probably followed there as much as in England; and it seems strange that they have continued their old fashions so long, when there is such a multitude of foreigners in the country, especially of the French nation. The ladies of pleasure, who frequent their musick-houses, are generally dressed in a coat and jacket, pretty much resembling the riding habits, which are worn at present by the women of England, which is not the most becoming dress to a Dutch shape.

As to the genius and temper of the Dutch, I know my readers will have a great regard to the opinion of Sir WILLIAM TEMPLE in this particular, and therefore I shall give them the substance of his observations on this head; but shall take liberty, where I see occasion, to make some reflections on the character he gives them, and add some things which he may have omitted. This gentleman divides the nation into five classes, consisting, 1. of boors or husbandmen. 2. Seamen and watermen. 3. Merchants and tradesmen. 4. Renteners, or men who live in their chief cities on the rents or interest of their estates acquired by their ancestors. And, 5. The gentlemen and officers of the army.

The first are a people industrious enough, but flow of understanding; not to be dealt with by hasty words, but easily managed by soft and fair, and yielding to plain reason, if you give them time to understand it. At a distance from great towns they appear plain and honest, and entirely content with what they have; and if you should give one of them a shilling, for what is usually sold for a groat, and bid him take it, he would however give you the change, and perhaps ask if you were not a fool. They have no further views than the supplying themselves with what nature requires, and the making some small addition to their flocks. Their food is chiefly roots, herbs, or milk, which my author supposes is the reason that their strength and vigour is not answerable to the bulk of their bodies.

The seamen are a plain, but a much rougher people, surly and ill-mannered, which is usually mistaken for pride, but supposed by our author to proceed chiefly from their conversing with winds and waves, that are not to be wrought upon by language. They seldom use more words than are necessary about their business: and as for their valour, it is rather passive than active, not being a very enterprising people at present.

As to the trading people in great towns, whether merchants or mechanicks, their wits are something sharper than those of the former classes, improved by their conversation with foreigners who resort thither; but even these are much better at imitation than invention; and indeed sometimes they exceed the original by their unwearied industry, and constant application to the business they undertake. They make use of all their skill to take advantages of the folly and ignorance of those they deal with; and are great extortioners where there is no law to restrain them; but where they deal with men of skill, and apprehend themselves within the reach of the laws, there indeed they are the plainest and best dealers in the world.

Those who live on their patrimonial estates in great cities, resemble the merchants and tradesmen in the modesty of their dress, and their parsimonious way of living, but there is a wide difference in their education and manners; for after they come from school, they go to the universities of Leyden or Utrecht, where they go through the common studies of those places, but apply themselves chiefly to the civil law, which is the law of the country, at least they are in a great measure governed by it. When young gentlemen have finished their studies at home, if their relations are wealthy, they are sent abroad to England or France; not often to Italy, and less to Spain and the northern countries, the whole design of their education being to fit them for the magistracy in their towns and provinces; and of these men are the

CHAP.  
IV.

the civil officers of the State generally composed; namely, of men descended of families who have constantly been in the magistracy of their native towns for many generations, and not of mean or mechanick tradesmen, as is sometimes suggested; though, 'tis true, there are sometimes merchants and wholesale tradesmen admitted into the magistracy, and made Deputies of the States. And the members of the States will sometimes employ their money in carrying on a beneficial trade, by servants and houses maintained for that purpose; but the generality of the States and Magistrates are of the other kind, whose estates consist in the pensions of their offices, the rents of their lands, the interest of their money, stocks in the East-India Company, or in shares upon the adventures of great merchants; and it is seldom that these families, though they are continually in the magistracy, get great estates; the salaries of their offices being mean, interest but low, and the innumerable taxes charged upon their lands, making the neat produce of them much lower, seldom exceeding the profit of two in the hundred. They are contented with the honour of being useful to the publick, and in the esteem of their country; and with the ease of their fortunes, which they seldom fail of by their frugal management, at first necessary, and since esteemed honourable among them. The men of mighty wealth are their merchants and tradesmen, who apply themselves wholly that way, and are content with a small share in the government, provided they may have security in what they possess: they know no cares but those of their private fortunes, and the management of their trades, and the rest of their time is spent in their recreations and diversions. Yet these, when they have acquired great estates, choose to qualify their sons for some employments in the State, and marry their daughters in the families of the ministers and great officers, and thereby introduce their posterity to a share in the government, and honours of their country, which consists not in titles but in publick employments.

Their merchants wealthy, but not many of them magistrates.

Their gentry and military officers follow the French modes.

Their gentry or nobility are not numerous (in Holland especially) many of these families having been extinguished in the wars with Spain: those that remain are usually employed in the military service, and sometimes in civil charges in their respective provinces; and having lived much abroad, affect rather the garb of the neighbouring courts, than the popular air of their own country; and value themselves more upon their nobility, than men do in other countries where it is more common. They look upon it dishonourable to marry beneath their rank, and will scarce do it to make up a broken fortune. They imitate the French in their dress, their mien, their talk, their diet, and in their gallantry or debauchery, but mimic them very awkwardly. They are however an honest good-humoured gentleman-like sort of men, and usually acquit themselves with honour in the service of their country. The officers of the army follow the fashions and customs of their gentry, as do many of the rich merchants sons, who returning from their travels scarce ever apply themselves to the service of their country, but seem intent upon their pleasure and making a grand appearance, in imitation of what they have seen abroad; and sometimes perhaps they will accept a commission in the army. But there are some customs and dispositions, my author observes, which seem to run through every class of men, namely, a great frugality and order in their ex-

VOL. II. NUMB. LXI.

pences. Their riches consisting in always having more than they spend, or rather in every man's spending less than he has coming in, be that what it will, it is a constant maxim with them not to let the course of their expences equal their revenue; and if this ever happens, they think they have lived that year to no purpose, and their reputation is in some measure affected by it, as if they had been guilty of some great extravagance. Which frugality enables them to bear the excessive taxes laid upon them, and makes the people less sensible of the burthen; and from hence proceeds the beauty and strength of their towns, and the commodiousness of travelling in their country by canals, bridges, causeys, and pleasant walks of trees, and the noble grasses or canals in and near all their cities, and even the beauty, convenience, and magnificence of their publick works, to which every man contributes as willingly, and takes as much pleasure and vanity in them, as people do in other countries in building and planting on their private estates. What they can spare from their domestick expences, and the publick payment, and the common course of still increasing their stock, is laid out in the fabrick, ornament, and furniture of their houses, rather than in keeping great tables, fine clothes, or equipages, which end wholly in a man's self, and the gratifying his personal humour, whereas the other is for the advantage of his posterity, and contributes much to the beauty and honour of his country. The order in casting up their expences is so just, that no one undertakes any thing he is not prepared for, and master of the design before he begins; and it is very rare to hear of a publick or private building which was not finished in the time it was intended; and so it is in their canals, causeys, and bridges; to which the Stadthoufe at Amsterdam perhaps may be an exception: but this seems to be designedly left to time without limitation, either of that, or the expence, that the genius and industry of their succeeding magistrates might be employed in the collection of all things that might add to the beauty or magnificence of it; and perhaps, says my author, upon a current prediction, that the trade of Amsterdam should begin to decline the same year the Stadthoufe should be finished, as it did at Antwerp.

CHAP.  
IV.

All degrees of men frugal and exact in their accounts.

They keep neither tables nor equipages.

Their charity national.

Their charity is rather national, and regulated by the orders of the State, than moved by the common objects of compassion; which is seen in the admirable provision that is made for all kind of people that can want, and ought to be relieved by any government. But among the many and various kinds of hospitals we meet with in the Low Countries, our author admired none more than that at Enchuyfen for aged seamen, which is so contrived, he says, as if it was intended, that those who had passed their lives in the hardships and inconveniences of the sea, should find a retreat, stored with all the satisfactions and conveniences that old age was capable of enjoying.

Our author is of opinion, that all appetites and passions run lower and cooler here than in any other country, avarice excepted; quarrels are very rare, revenge seldom heard of, and jealousy scarce ever known. Their tempers are not airy enough for joy, nor any unusual strains of pleasant humour, nor warm enough for love. This is indeed something talked of among young fellows as a thing they have heard of, but never felt, and as a discourse that becomes them rather than affects them. It is very rare for any of them to be

Covetous, but not subject to passion of any kind.

really in love, nor do the women seem to care whether they are or no; which our author accounts for in the following manner: either, he says, the men are such lovers of liberty as not to bear the servitude of a mistress, or the dulness of the air renders them less susceptible of more refined passions, or they are diverted from it by the intention every man has to his proper business; and the same causes may have had the same effects among their married women, who have the whole care and management of their domestick affairs, and live generally in good fame; a certain sort of chastity being hereditary and habitual to them. The same dulness of air, this gentleman thinks, may dispose them to that uncommon assiduity, and constant application of their minds, with that perpetual study and labour upon every thing they undertake; one man particularly he instances in, who employed four and twenty years in making and perfecting a globe, and another thirty about the inlaying of a table. Nor is it to be conceived how much may have been contributed towards the great things achieved among them by this one humour, of never giving over what they imagine may be brought to pass; nor leaving one scent to follow another they meet with, the fault of lighter and more ingenious people. The same quality of the air may incline them, he thinks, to the custom of drinking, so much laid to their charge; which probably may not only be necessary to their health, as they generally believe it, but to the vigour and improvement of their understandings in a thick foggy air, and such a coldness of temper and complexion; for though the use or excess of drinking may destroy men's abilities who live in better climates, and are of warmer constitutions; it may improve their parts who are of cold complexions, and live in a dull air, and perhaps be necessary to thaw and move the frozen or unactive spirits of the brain. Yet in Holland, he observes, that few of their magistrates or ministers of state are given to this vice; or if they drink much it is only at feasts or great entertainments, and then rather to comply with the company than out of choice: and as for the merchants and tradesmen, with whom it is customary, they never do it in a morning, or till they come from the Exchange, where the business of the day is commonly dispatched; they scarce think it lawful to drink before that time, and will not so much as offer a stranger liquor at their houses in a morning, but excuse themselves on account of the time of day. The afternoon, or at least the evening, they give up to whatever may divert them; which this gentleman is of opinion is no more than is necessary, where the former part of the day has been spent in cares and business: thus far my honourable author Sir WILLIAM TEMPLE. I shall now proceed to make some observations on that part of these remarks, which relates to the government of their passions, especially that of love, in which they are represented as perfect Stoicks: but perhaps were the same liberties allowed by publick authority to the youth of any other nation, as are to those of Holland, they might be guilty of as few extravagancies in love and gallantry as the Dutch. For here are musick-houses, which pay a tax to the States for a license to entertain as many wenches as they please, and the girls pay each of them another tax every time they are admitted into these venereal schools, whether the people resort to them openly without fear or shame; the scandal is as little in being found at one of these houses, as at a play-house with us.

When a sufficient company is met, an entertainment consisting of several nice dishes, and the best of wines are set before them; where after they have eat and drank plentifully in a publick room, the dishes are removed, and a ball or entertainment of musick and dancing succeeds. When they have raised their desires sufficiently by these incentives, any gentleman that pleases takes his nymph, and retires into a little closet furnished with a bed and all conveniences, of which there are many on all sides of the room; where having recreated himself as long as he sees fit, he returns to the company again with his mistress, and no more notice taken of it, than if he had gone out to speak with a friend: and the entertainment concludes with dancing or drinking, as the company are disposed. Of these houses there are of all degrees, some for the better sort, and some for the vulgar, who resort to the one or the other, as they are able to bear the expence: and one related to me, that he saw a Dutch sailor in one of these houses, who had not patience to retire out of the publick room to close quarters, but laid his mistress down before them all, and gratified his lust, while numbers of people were looking on, and went out again without saying a word. And indeed the States give that as one reason for encouraging these houses, That considering the numbers of sailors that resort to their principal cities, who have been long kept on board their ships without women, and fed with salt-meats, if they should not indulge them in this particular, they could never keep their wives or daughters to themselves; and of two evils therefore they choose the least. Now thus far I will agree with Sir WILLIAM TEMPLE, that the Dutch are not a people that deal much in speculative love, or dwell much upon the virtues or accomplishments of their mistresses; any girl the man thinks that may ease his brutal passion, and make a good drudge in the family, is a wife fit for him, he is not very nice in other respects; and if his mistress should prove unkind, he would go to one of the musick-houses above-described, and think no more of her. On the other hand, the women, whom some cry up so much for their hereditary chastity, if a gallant attacks them that they like, and they intend him for their husband, they make no manner of scruple of granting him the last favours before marriage. It is the commonest thing in the world for a woman of any quality to be married in Holland with a great belly; so that if a gentleman does succeed in his addresses, there is no manner of reason to run mad for love; and if he does not, a musick-house is his remedy. And the indulging young fellows in these entertainments is thought to be one of the most effectual remedies to prevent their sons making disadvantageous matches. As for the religion of the matter, in tolerating or establishing whoredom by a law, this objection has been long laughed out of the Low-Countries, where they have no other religion but what is political, as will be shewn hereafter under another head.

I shall here add a word or two more out of Sir WILLIAM TEMPLE, which shews the extraordinary neatness of the Dutch in their houses, and the ascendant the women have over the men on that side the water; notwithstanding he has suggested in a former volume, that there is very little love between them. He relates, that being at the house of one of the chief Burgomasters of Amsterdam, while he was Ambassador in Holland, and having a great cold, he observed that

CHAP.  
IV.

CHAP.  
IV.

every time he spit, a clever handfom wench, who stood in the room with a clean cloth in her hand, presently wiped it up and rubbed the board clean; and Sir WILLIAM expressing some uneasiness at the trouble he gave, the master of the house told him, if his wife had been at home indeed he would not have escaped so well, for she would probably have turned him out of doors for daubing her house, notwithstanding he was an Ambassador; adding, that he had two rooms which he durst never come into, and believed that they were never open but twice a year to be cleaned. My author observing thereupon, that the wives of Amsterdam generally governed their husbands, and that this seemed part of their constitution; the Burgomaster replied, it was true, and that all a man could hope for there was an easy governess. This occasioning many stories to be told concerning the extravagant neatness of these Holland ladies in their houses; the Secretary of Holland, who was in the company, pointed to a house over the way, where he said one of their magistrates going to pay a visit to the mistress of it, a strapping North-Holland lass happening to open the door, as he was about to enter, the wench observing his shoes were not very clean, took him by both arms, threw him on her back, and carrying him cross two rooms, set him down at the bottom of the stairs, and putting him on a pair of slippers, without speaking a word to him before them, told him he might walk up to her mistress, who was in her chamber.

Their diet

The diet of the Dutch boors or husbandmen, as has been intimated already, is but mean; roots, herbs, sour milk and pulse, are a great part of their food. In towns the people have something better diet. About November every year they purchase an ox, or more, according to the largeness of the family, and salt up or smoke-dry it to eat with bread and butter and fallet. On Sunday a piece of salt-meat is usually taken out of the powdering-tub, which comes every day to table all the week long, with some other little dishes of garden-stuff, sour milk, &c. which the peasants feed on in the country: pickled herrings, Bologna sausages, and other savoury dishes, are much admired; when they have fresh fish, they generally eat them with oiled butter upon choice, and I have heard some of our countrymen say, when they have been used to this kind of sauce a good while, they have really liked it better than well-melted butter. They have several other ways of dressing their fish, which a little use may reconcile an English palate to; but seldom use anchovies, or any savoury ingredients, though they admire salted flesh so much. Their butter and cheese is extremely good, and the common people seldom take a journey without a butter-box in their pockets. This box is made in the shape of a churn, and holds half a pound or a quarter of a pound, being shut down close with a wooden lid, the butter never works out. As they travel upon their canals in drawn boats, a man with a roll and his butter-box will make a very comfortable meal; and so extravagantly fond of butter are this people, that I have seen some of them take it up and eat it by handfuls, without knife or spoon. But the Dutch do not live now on that plain simple diet they did formerly, they have introduced the luxury of every neighbouring nation: English and French dishes may be had here with as much ease as with us. They ingross our oysters every year at Feverham, and carry them off in fleets, scarce

leaving the natives of that part of Kent enough for their own use. Puddings, which before King WILLIAM's reign they were strangers to, they make as rich and as good as we do in England. And as for drinking, they had always the advantage of us; for they have not only very good beer, but wine and brandy in great plenty, almost as cheap as beer. Their geneva also is very good and cheap; I have seen an ordinary fellow make a delicious breakfast of half a pint of gin and a roll. Sir WILLIAM TEMPLE observes, that it is necessary these people should tittle to improve their understandings, as well as for the preservation of their healths; and by way of excuse for the drunkenness of the Dutch, intimates, that strong liquor has different effects on them to what it has upon other people, preserving their healths, and brightning their parts to a very great degree.

Diversions

The diversions of the Hollanders are bowls, billiards, chess, and tennis, as with us; but they do not seem so much addicted to the games of chance, unless that of *Verbeeven*, or track-track reversed: shooting wild-geese and ducks in winter, and angling in summer, make another part of their pastimes. In the most rigorous season of the year sledges and skates are a great diversion. It is incredible how swift some of them move in their skates, no running-horse can keep pace with them; and the women as well as men use them to carry their goods to market, as well as for their pleasure. The sledge is drawn by a horse, or pushed along by a man in skates. When the snow is upon the ground and the streets frozen, young gentlemen and ladies appear abroad in the most magnificent sledges. The person drives his horse himself, which is covered with a rich skin or caparison, and a fine tuft of feathers, and the gentleman or lady wrapt up in furs, or a fine Indian quilt. The sledges are of various shapes, finely painted, gilt, and varnished, and the horse's harness rich and glittering: numbers of these being seen in the streets together, especially at Amsterdam, make one of the most beautiful shews we meet with any where. But of these entertainments I have already had occasion to speak more largely in the description of the more northern countries, who excel in these diversions; I shall only observe further here, that there are little machines of this kind, in which they put their children, pushed along by their fathers, as people of fashion are by their men or maid-servants in skates. Bandy is another play much used when the earth is covered with ice and snow, at which they are very dextrous: they seldom play for any thing but drink, and the tavern where they spend their winnings always concludes the diversion of the day. Hans never cares to go to bed without his dose. In summer we see multitudes of people walking out of town on the banks of fine canals, well planted with trees, or by the sea-shore, or perhaps in the publick gardens; but the end of every walk is the tavern, where they do not fail to meet with a thousand little amusements and agreeable entertainments: as cool summer-houses and grotto's, excellent wines and other liquors, fruit, cakes, and relishing meats; and here you meet with musick of all kinds, vocal and instrumental. Nor are these pleasures dear here; ordinary workmen indulge themselves in this manner, while in other countries, it is observed, people of this class generally want bread to eat. Nor are there those distinctions kept up between wealthy traders and the mechanicks in Holland as in other countries:

CHAP.

IV.

tries: they converse pretty much upon the level, and it is not easy to know the man from the master, or the maid from her mistress; such liberties do they allow their servants, who may not be struck or corrected by them, but the dispute must be left to the magistrate, where any arises between master and servant; it not being fit they say that any one should be judge in his own case. They sometimes take a boat and their whole family with them, and go a considerable distance from home, to eat river fish at some publick house in the country. And it must not be forgotten, that the drinking of tea has long been universal here among all sorts of people, and esteemed none of the worst of their entertainments.

Way of travelling

Their usual way of travelling is in *Trechtsbutes*, or covered boats, drawn by a horse at the rate of three miles an hour, for which the fare does not amount to a penny a mile, and you have the convenience of carrying a portmanteau, or provisions, so that you need not be at any manner of expences at a publick-house by the way. You are not in the least exposed to the weather in these vessels, and can scarce feel any motion; so that a man may read or divert himself upon his journey, as he sees fit; and there is scarce a town but one may go to this way every day; and if it be a considerable place almost every hour, at the ringing of a bell; but they will not stay a minute afterwards for a passenger, though they see him coming. The greatest inconvenience I found was the getting out of one boat into another at every great town; and paying a tax at every gate I passed through with my portmanteau, which was wheeled along from one boat to another, in a machine pretty like a wheelbarrow. And as one often passes through many of these towns in a day, this must be allowed to be some trouble and expence; but I think the conveniences of this way of travelling out-balance the inconveniences. That of an open waggon instead of a coach, when we travel by land, I must confess is not so agreeable; and skating, which the country people are dextrous at, is not soon learnt by foreigners.

Their inns

As to the inns and publick-houses on the road, I have already said we are sure to meet with clean linen and soft beds; but their bedsteads, or rather cabins in the sides of the wall, are placed so high, that a man must infallibly lame himself if he happens to fall out of them; and we must be content to lie with half a dozen people or more in the same room, and be disturbed all night long by one or other, if the churl of a landlord pleases to have it so. Sir ROGER L'ESTRANGE, travelling into this country, and having made choice of a room in an inn, it seems was so unreasonable to look upon it as his sole property, while he staid there, and would admit no chamber-fellows to be imposed upon him, but the governor of the castle, to speak in Don QUIXOT's phrase, soon gave him to understand his error, broke open the door and introduced half a dozen strangers into his apartment; whereupon Sir ROGER drawing his sword, they knocked him down, threw him down stairs, and dragged him about the street 'till they left him for dead, tho' he had the good fortune to recover afterwards: and indeed there is no disputing with a Dutch innkeeper, either about the reckoning or any other particular, for he will enhance his bill if you find fault with it, and procure a magistrate to levy his demands by force if they are not paid readily. I observed also that a man pays for his passage always before

he has well begun his journey; for as soon as the passengers are set down in the boat, a fellow comes round with a hat and collects the money, so that if any accident should happen that he cannot carry you to your journey's end, yet still he is sure of his hire, and leaves you to procure another convenience. I shall conclude this head with observing that the canals, highways, causeys and bridges, are always kept in excellent repair, which deserves our imitation; for the cheapness of carriage it is, which, in a great measure, renders all commodities cheap, and enables the Dutch to carry on a trade from one part of the country to another, as well as with Germany, France, and other adjoining countries, at a very easy expence. And whoever can afford their merchandizes upon the most reasonable terms, will infallibly have the greatest demand for them. But the article of trade is to be the subject of another chapter, and therefore I forbear enlarging upon it here.

## CHAP. V.

Treats of the government of the United Provinces.

JOHN DE WITT in his introduction to the government of the United Provinces endeavours to shew, that that is the best government where the well or ill-being of the governors necessarily depends on the well or ill-being of the subjects; and not where the well or ill-being of the subjects depends on the virtues or vices of the governors: for self, he observes, is ever preferred in all societies or assemblies of men; and all sovereigns or supreme powers will, in the first place, endeavour to advance their own interests; or else, abandoning themselves entirely to ease and pleasure, suffer their government to fall into the hands of favourites and courtiers, who finding themselves vested with sovereign power, do for the most part rule for the benefit of themselves, and to the prejudice not only of such voluptuous and unwary Princes, but also of their subjects: and infers, that a republican State is infinitely to be preferred to Monarchy; because the governors of a commonwealth in promoting the welfare of the subject promote their own advantage, and while they study their particular interests must of necessity advance the people's, especially in a country which depends upon trade and manufactures, where the governors reap a proportionable advantage with the subject: whereas a Monarch usually is solicitous to promote his own grandeur or pleasures, and finds it necessary frequently to oppress and impoverish his subjects on a prospect of false glory or some selfish designs. But when we have enquired into the constitution of the several republicks in the United Provinces, we shall be better able to judge of the justness of these inferences.

The United Provinces are a confederacy of many independent States; for not only every province is sovereign and independent of any other power, but there are in each province several republicks independent of each other, and which are not bound by the decrees or acts of the States of the province until such acts are ratified by each particular city or republick, which sends deputies or representatives to the provincial assembly.

As the States General can neither make war or peace, enter into new alliances or raise money without the consent of every province; so neither can the States Provincial determine these things without the consent of every city or republick,

CHAP.

Observations as to government in general.

The government of the United Provinces.

CHAP.  
V.

publick, which by the constitution of the province hath a voice in the assembly. In some civil cases indeed there lies an appeal from the courts of justice in cities to the provincial court of justice; but in criminal matters there lies no appeal. Nor can the States of the province exercise any jurisdiction, punish an offender, pardon and offence, or execute any general law within any of the cities or republicks of the province, but by the courts and officers of the place where it is to be put in execution.

The form of government in most of the provinces and cities being pretty near the same, I shall only give an account of two or three of the chief of them, from whence the reader will be able to make a tolerable judgment of the rest; and first of the province of Holland, which in point of trade, riches, forces and great towns, may be esteemed equal to all the rest.

The government  
of the  
province  
of Holland

The States of Holland are composed of the deputies or representatives of the nobility, and of eighteen cities or great towns, making in all nineteen voices, of which the nobility or gentry have only the first. The cities which had voices were at first but six, viz. Dort, Haerlem, Delft, Leyden, Amsterdam and Tergow; to which Prince WILLIAM of Nassau, their first Stadtholder, added twelve more, namely, Rotterdam, Gorcum, Scheidam, Schonehoven, Briel, Alkmaar, Horne, Enchusen, Edam, Moninckdam, Medenblick and Permeren. This is observed to be by no means equal, because the little town of Permeren has an equal voice in the assembly of the States of Holland with the potent and wealthy city of Amsterdam, which contributes as much to the publick expences as all the rest of the cities of the province.

The nobility  
of Holland  
have  
one voice.

The nobility, who are not numerous in Holland, are represented in the States Provincial by eight or nine of their own number; and when one of them dies, they elect another to succeed him; but these have all together but one voice equal to the smallest of the above-mentioned towns. They are however very considerable in the government, possessing many of the best posts both civil and military, and having the direction of all the ecclesiastical revenues which were confiscated by the state upon the alteration of religion for the use of the publick. As the nobility vote first in these assemblies, they influence in a great measure the cities which give their voices afterwards. The Pensioner of Holland, who sits with them, delivers their vote and assists in all their deliberations previous to the general assembly. He is always a person of great credit, and seldom removed, tho' by their constitution he ought to continue in that post but five years. His place is behind all the deputies or representatives, being, in reality, but the servant of the province, tho' he has frequently the good fortune to lead, or at least influence his masters; for he proposes all matters to be debated by the States, collects their opinions, and digests their resolutions, like the Speaker of an English House of Commons, and assumes a power sometimes of delaying and postponing the most important affairs, notwithstanding a majority of the assembly are for the question, pretending it will be of ill consequence to the province: and he is always constituted one of their deputies or representatives to the States General.

The towns  
of Holland  
eighteen  
voices.

The representatives of the cities are elected out of the magistracy and senate of each town, and their number more or less according to the pleasure

VOL. II.

of those they represent, tho' they have all but one voice, and have a salary from the places which send them. One of the burgomasters and the pensioner are usually of the number. The States of Holland generally assemble at the Hague four times a year, viz. in the months of February, June, September and November. In their three first sessions they consider the filling up of vacant offices, renewing the farms of the several taxes, and other matters relating to the general good of the province, or particular differences between the towns: and in November they meet on purpose to consider of the charge, forces, &c. which have been allotted by the States General as the proportion of this province for the ensuing year.

The States of Holland upon extraordinary occasions are summoned by the *Ge committee rede*, or council of state of the province, consisting of several deputies or representatives, viz. one from the nobility, one from each of the chief towns, and one from three of the smaller towns; each of these chusing a representative by turns. This council sits constantly at the Hague, and proposes to the States of the province at their extraordinary assemblies the matters proper for their deliberation, and executes their resolutions. One negative voice in the assembly of the States of the province hinders their coming to a resolution; but they are so united by their common interest, or a view to the publick good, that after things have been fully debated, it is observed, they are generally unanimous, the smaller party seldom contesting it long or violently with the majority. When they are all agreed, they send some of their number to the respective towns they represent, to obtain their consent; and if it be a matter of any intricacy, and may take up time in debating in the several cities, the States usually adjourn for such a time as they have reason to think the deputies will return.

Council of  
State of  
Holland.

There is also a chamber of accounts which manages the revenues of the province, and hath the absolute disposal of the demesne lands, or the lands belonging to the States of the province, which anciently, I presume, were the inheritance of the Earl.

Chamber  
of accounts  
of Holland

The revenue which these bring in is seldom applied to the use of the publick but upon urgent necessity, the States having disposed of it to magistrates and officers grown old in their service, whose prudence and integrity they have long experienced; and by this means these gentlemen meet with a plentiful and honourable retreat after they have spent the best part of their lives in the service of their country.

The provinces of Holland and Zealand have two courts of judicature common to both provinces. The one constituted of twelve counsellors or judges, namely, nine of Holland and three of Zealand. This court judges finally in all criminal cases, but in civil there is an appeal to the other court, which is called the high council, from whence there lies no appeal but by petition, to the States of the province for a revision; whereupon if the States think proper they grant a commission to some Sindiques (recorders) of towns, who being added to the judges of the two former courts, revise and finally determine the matter.

Holland  
and Zealand  
the same  
supreme  
courts of  
justice.

The government of the province of Friesland is very different from that of Holland, being composed of four members, viz. The quarter of Oistergo, the quarter of Westergo, that of Seven-Wolden; and lastly, that of the towns of the province. The quarter

The government  
of the  
province  
of Friesland.

CHAP.  
V.

of Oftergo confifts of eleven baillages, the quarter of Weftergo of nine, and the quarter of Seven-Wolden of ten, each baillage comprehending twelve or fifteen villages, or thereabouts; and the towns of the province which fend deputies are eleven in number. Thefe four members elect their refpective representatives, viz, two out of every baillage, and two out of every town, which compofe the afsembly of the States Provincial, who deliberate and conclude all matters relating to the government of the province, without having recourfe to thofe who elected them, or requiring their confent to any affair how important foever, nor receive any inftructions from thofe who fend them, as the States of Holland do, but feem to be velted with the like powers as the members or representatives of the commons are in England.

And, whereas in Holland the nobility or cities choofe the representatives who compofe the States, in Friesland every bailly, or greetman, fummons all perfons who are poffeffed of a certain parcel of lands (who may be compared to our freeholders) within his baillage; and a majority of thefe men chufe the two representatives or deputies of the baillage to be fend to the afsembly of the States of the province: the bailly alfo and his affeffors compofe a court of juftice for civil matters, from whence there lies an appeal to the court of juftice of the province.

The States of Friesland thus conftituted, as aforefaid, difpofe of all vacant offices, elect the nine members, who compofe the council of ftate, and twelve judges, three for every quarter, who compofe the court of juftice of the province, and determine all civil caufes which come before them by way of appeal, and all criminal caufes at the firft inftance, there being no other criminal jurifdiction but this in the province; whereas in Holland there is no town but has the determination of criminal matters within itfelf, and feveral Lords of manors, and even villages, have both the high and low juftice belonging to them.

In the province of Groningen the deputies or representatives elected to ferve in their afsembly of the States of the province are chofen as in Friesland by freeholders, or perfons poffeffed of a certain portion of land. And in Overyffel all the nobility and gentry who have manors, or feignerial lands, are qualified to be members of the States of that province.

The conftitution of the government in the provinces of Guelderland, Zealand and Utrecht, pretty much refembles that of Holland, the States of each province being compofed of the deputies or representatives of the nobility and cities; but there are fome fmall differences, as in Guelderland, where all the nobility and gentry who are feized of fuch certain lordfhips have a feat, and vote in the afsembly of the States of the province, and thefe compofe one half of the States, as the representatives of the towns do the other half; and though fome certain perfons of their number are deputed to the States General, yet any of the nobility of Guelderland have a feat there if they will attend at their own charges.

The nobility of Zealand having been almoft extinguifhed in the wars with Spain, and the Prince of Orange being proprietor of the marquisfates of Flufhing and Terveer, this Prince alone represents that part of the States of the province, under the title of firft or fole Noble of Zealand; and by virtue thereof his deputy has the firft place and voice in the afsembly of the States of Zea-

land, and in their council of State and chamber of accounts. As Sovereign of Flufhing and Terveer he alfo conftitutes the magiftrates, and confequently difpofes of the votes of thofe two towns, as well as the votes of the nobility; and there are but fix towns which fend deputies to the afsembly of the province of Zealand.

In the province of Utrecht eight delegates from the clergy had feflion in the afsembly of the States with the deputies of the nobility and towns, making a third eftate. And thefe are ftill elected out of the four chapters in the town, the preferments and revenues whereof, though ecclefiaftical till the alteration of religion, are now poffeffed by laymen, who are moft of them gentlemen of the province.

This is the beft account which hath been given us of the government of the refpective provinces; I proceed now to enquire further into the conftitution of the States General, which is compofed of the representatives of the feven feveral Provinces abovementioned, and ufed at firft to be convened on extraordinary occafions by the council of ftate, though this was but feldom, in regard this afsembly ufually confifted of eight hundred perfons, which occafioned their debates to be long and confufed, and their refolutions too flow: in their abfence the council of State acted in their ftand, and executed their refolutions, and fummoned a new afsembly of the States when they judged proper. And thus it was till the Earl of Leicefter refigned the government of thefe provinces, when they refolved that the provincial States by their conftant refpective representatives fhould continue their afsemblies under the name of States General, and all the members of the confederate States have never been afsembled above once fince that time. This representative of the Seven Provinces, called the States General, fits now conftantly at the Hague, gives audience to Ambaffadors, and exercifes other acts of fovereignty, the afsembly of all the States being now wholly difufed.

Subordinate to this representative of the States, now ftiled the States General, are the council of State, the Admiralty and the Treafury, all which very nearly refemble the feveral councils eftablifhed when thefe provinces were fubject to their feveral Princes, or united under the houfes of Burgundy or Auftria.

The members of thefe feveral councils are nominated or changed by the faid provinces, according to their refpective cuftoms. Every one fends their representatives in what number they pleafe, fome ten, others twelve, and fome but two; but this makes little difference, becaufe all the deputies of one province, how few or many foever, have but one fingle vote: the cuftoms of the provinces differ alfo in the time for the continuance of their refpective deputies in the faid councils, fome deputing them for a year, two, three, or more; and others for life. The province of Holland fends to the States General one of their nobility who is perpetual, two deputies chofen by the eight chief towns, one chofen by North Holland, two out of their provincial council of State, and their Penfioner.

No Stadtholder, Governor, or military Officer, can fit or vote in the States General, and each province takes it's turn to appoint a Prefident of the afsembly, who is changed once a week. He fits in an armed chair at the middle of a long table which will hold thirty perfons, this being a-

CHAP.  
V.

bout the number of Members of which this supreme council is composed. The Greffier, or Secretary, sits at one end of the table, and Ambassadors at their audience are seated at the middle of the table over-against the President, who proposes all matters in the assembly, puts the question, collects the votes, and forms the conclusion; and in all ordinary cases things are carried by a majority: but if the subject be peace or war, foreign alliances, levying or coining money, or concerning the privilege of any province; in these cases every province must concur, and a plurality of votes is of no weight; for this council is not really sovereign, but represents the sovereignty: and therefore on all these important points the States of every province are consulted, and their consent obtained before any thing is absolutely determined. And in other matters decided by a majority, they frequently consult the council of state; though Sir WILLIAM TEMPLE relates, that during his embassy in Holland he had the good fortune to prevail with the States General to conclude three treaties within the space of five days without passing the essential forms of their government, by having recourse to the provinces, who must likewise have had the consent of the several cities, &c. And he assures us, that in concluding these alliances without commission from their principals, the deputies of the States General might have lost their heads if the treaties had not been approved by their principals; but the necessity of using this expedition being apparent, and of the utmost importance to their country, they were so far from being animadverted upon, that they gained an universal applause.

Council  
of State.

The council of State also consists of representatives of the several provinces, whereof the province of Holland sends three, the provinces of Guelderland, Zealand and Utrecht, two a-piece, and the provinces of Friesland, Groningen and Overijssel, each of them one; nor is it in the power of any province to send more or less to this council than the numbers above expressed, so that the council of state for the whole United Provinces always consists of twelve members. Nor do they vote here by provinces, as in the assembly of the States General, but by personal voices, and every deputy presides by turns; and in this council the Stadtholder, or Governor of the United Provinces, when there is one, hath a decisive voice. The Treasurer-general has a seat here, and may give his opinion, but has no vote, though his place be for life, as is that of the deputy sent by the nobility of Holland, and the deputies of the province of Zealand; the other deputies are but for two, three, or four years. This council of State executes the resolutions of the States General, proposes the number of troops requisite for the ensuing year, the methods of raising them, and of levying money for the exigences of the government. They also superintend the militia, fortifications and contributions levied on the enemy in time of war; the revenues and government of the conquered places acquired since the union, which being conquered by the common arms of the State, depend on the States General, and not on any particular province.

The council of State at the end of every year, present to the States General a state of the expences which they apprehend to be necessary for the ensuing year, desiring them to demand of the States Provincial their respective proportions,

which are as follow, viz. in every 100l. sterling, each province raises the following sums,

CHAP.  
V.

	l.	s.	d.
Guelderland,	7	00	00
Holland,	42	00	00
Zealand,	13	00	00
Utrecht,	8	00	00
Friesland,	17	00	00
Overijssel,	5	00	00
Groningen and the Omlands,	8	00	00
	100	00	00

And this is but a continuance of the practice in the time of their ancient Sovereigns: indeed when they were under the dominion of their respective Counts or Dukes, this was only upon extraordinary occasions; but in the times of the houses of Burgundy and Austria, it became a thing of course, and annual, as it is still in the Spanish provinces.

Every province raises such sums, and by such ways and means as are most suitable to it, and sends it's quota, or share of the general charge to the Receiver-General, converting the remainder to the use of their particular province.

The chamber of accounts was erected within these hundred years, to take off part of the trouble from the council of State; and their business is to examine and state all accounts of the several receivers, to control and register the orders of the council of state, which disposes of the revenue: and this chamber is composed of two deputies sent from each province, who are changed every three years.

The  
chamber  
of ac-  
counts.

The next great office is the court of admiralty, which after the States General, by the advice of the council of State, have concluded on the number and force of the fleet to be set out, have the absolute disposal of all marine affairs, as well in the choice and equipment of the several ships, as in issuing the money allotted for that service.

The court  
of admiral-  
ty.

This office is subdivided into five lesser courts, three whereof are in Holland, viz. one at Amsterdam, a second at Rotterdam, and the third at Horn; the fourth at Middleburg in Zealand, and the fifth at Harlingen in Friesland, and each of these composed of seven deputies, viz. four of that province where the court is, and three named by the other provinces. The Admiral, and in his absence the Vice-Admiral, has a seat in all these courts, and presides there when he is upon the place. They have the cognizance of all crimes committed at sea, whether piracies or others, and of all frauds and neglects in the payment or collection of the customs, which are always applied to the use of the admiralty, and to no other purpose; and as this fund is not sufficient in time of war, the States grant a farther supply out of other taxes. In time of peace there being however a considerable overplus, this is applied to the building of great ships of war, and purchasing stores for their arsenals and magazines, in which they have always materials sufficient to fit out more ships than can be wanted in the course of a long war.

Subdivi-  
ed.

When the number and magnitude of the ships appointed for any expedition are agreed on by the States General, and orders issued for their equipment by the council of State, every particular college, or court of admiralty, furnishes it's stated proportion. The Captains and superior Officers of each Squadron are appointed by the respective courts

CHAP.  
V.

courts or colleges which set them out; and the Captain who has the care of manning and victualling his own ships, uses his utmost diligence to procure his compliment of the best men, and in getting the best provisions, surgeons and medicines for the men under his command, being allowed by the admiralty a certain rate for every man; and according as he performs this great trust, he gains or loses his credit with the admiralty, on whose opinion the fortune of all sea-officers depends; and consequently in all their expeditions there appears an emulation among the Captains, who shall treat the seamen under their command best, and apply the money appointed for their victualling, &c. to the best advantage, and not by little knavish practices endeavour to fill their own pockets by starving their men, or laying in unwholesom provisions. The salaries of all the great officers of this State are very mean, and particularly that of their Vice-Admiral, which does not amount to above five hundred pounds a year.

The government  
of the ci-  
ties.

Having enquired into the constitution of the government of the respective provinces, and of that grand court which is a representative of the States General, with the council of State, chamber of accounts, and courts of admiralty; I now proceed to describe the administration of the government of their principal cities and great towns, and first, that of Amsterdam.

Of Am-  
sterdam.  
The Se-  
nate.

The sovereign power of this city is lodged in six and thirty Senators, who continue members of this assembly for life, and when one or more of them dies, the remaining Senators elect others in their room, the people having no share in the nomination or choice; so that, as Sir W. TEMPLE observes, this is far from being a popular government at this day, though it might be so esteemed an hundred and fifty years ago, when the Senators were chosen by a majority of the principal Burghers, who were about that time wheedled to transfer their right of election to the Senate, and their example was followed by the rest of the towns of the province, who differ in little else but the number of their Senators.

Burgomasters,  
or May-  
ors.

The Senate elects the deputies to be sent to the States of Holland, and appoints the chief Magistrates of the city, namely, the Burgomasters and Eschevins, who are said to resemble the Lord Mayor and Aldermen of London. The Burgomasters are four in number, of which three are chosen annually, one of them always remaining in office two years, but the three last chosen are styled the reigning Burgomasters for the year, and preside by turns after the first three months; for so long after a new election the Burgomaster of the preceding year presides, in which time the new ones have an opportunity of being instructed in the forms and duties of their office. It is by a majority of such persons in the Senate as have been Burgomasters or Eschevins that the new Burgomasters are chosen, and these represent the government of the city on all occasions, and dispose of all inferior offices that fall during their administration: they issue all money also out of the treasury for the publick service, and may properly be looked upon to have the executive power, (as the whole senate have the legislative.) They have the inspection also of all the publick buildings and fortifications about the city, and direct them to be repaired or improved as they see occasion. But though these Gentlemen are vested with so great power, there is but very little profit attends it,

only they stand fair for more profitable places after they have executed these with reputation, the salary of a Burgomaster not being above five hundred guilders, or fifty pounds a year, though there are offices in their gift worth an hundred pounds a year; but then their employments put them to no manner of expence in their habits, equipage, or way of living, being attended on all solemn occasions by officers who have a stated salary on that account; and whatever entertainments are made for foreign Princes or Ministers are at the expence of the publick, and at other times they appear with the garb and modesty of private citizens. When the Burgomaster's office expires, and they have well discharged that great employment, some of the most profitable places in the city are of course conferred upon them, of which there are a great many esteemed very profitable there, but much inferior to those of the British Magistrates and Officers.

CHAP.  
V.

The Eschevins, or Aldermen, constitute a court of justice in every town. There are nine in the city of Amsterdam, of whom seven are chosen annually, two of the preceding year remaining in office: a double number of candidates being nominated by the Senate, the Burgomasters have the choice of those that shall serve; and they are sole judges in all criminal cases, but in civil there lies an appeal to the court of Justice of the province, if the thing in dispute be of a considerable value. And they never pronounce sentence of death without first communicating the matter to the Burgomasters; but when they have complied with this form, they proceed to give judgment themselves, and are not obliged to be determined by the Burgomasters opinion.

Esche-  
vins, or  
Alder-  
men, con-  
stitute a  
court of  
justice.

The Officers subordinate to these supreme Magistrates, are, 1. The Treasurer, who receives and issues all money arising from the revenues of the city. The Scout, or Sheriff, who is conservator of the peace, apprehends criminals, and sees the sentences of the courts of Justice put in execution. 2. The Pensioner, who is a person well versed in the civil law and the customs of the city, whom the magistracy advise with in cases of intricacy, and rely upon to defend their rights and privileges in disputes with other cities and powers. He delivers messages also from the Burgomasters and Senate, and makes speeches and replies on all solemn occasions, and is therefore said to resemble the Recorder of an English corporation.

The Treas-  
urer.  
The Scout, or  
Sheriff.  
The Pen-  
sioner, or  
Recorder.

The revenues of Amsterdam arise from an excise on almost all sorts of commodities bought and sold within the city, or the district belonging to it; out of the city rents, or the duties imposed on every house for charitable uses, for the repairs of the fortifications and publick buildings. Or else by extraordinary taxes imposed by the Senate for furnishing their part of the publick expences agreed to by the States of the province. Or by the deputies of Holland in the States General for the support of the union. And all these payments are made into one common treasury for the city, and not in the respective parishes or divisions of the place. And 'tis said, that the payments of all kinds made by the city of Amsterdam, to the States General, to the States of the province, and to the uses of the city, amount to above sixteen hundred thousand pounds a year.

Revenues  
of Am-  
sterdam.

The Princes of Orange have, from the commencement of the union of the Seven Provinces, born a great share in the government of the whole,

The  
Stadthol-  
der.

CHAP.  
V.

whole, as well as in particular cities and sovereignties, of which this State is composed. These Princes, says Sir WILLIAM TEMPLE, had a most essential part in the first frame of the government, and in all the fortunes thereof, during the whole growth and progress of the State. Prince WILLIAM I, of Nassau, was Governor of Holland and Zealand in the time of CHARLES V and his son PHILIP II; and by his wisdom and goodness acquired a mighty esteem with the other provinces as well as these, who readily constituted him their Governor and Stadtholder. Nor hath this nation, according to the same author, ever been without a head under some title or other, though it was a head always subordinate to their laws and customs, and to the sovereign power. Upon their revolt from Spain, all the power and rights of Prince WILLIAM of Orange, as Governor of the provinces, were carefully reserved to him; but those which were inherent in the Sovereign devolved on the assembly of the States General; namely, the power of making peace and war, foreign alliances, and the coinage of money. The Prince had the command of all their forces by sea and land, as Admiral and Captain-General, and thereby the disposal of all military commands: as also the power of pardoning crimes, and choosing magistrates upon the nomination of certain candidates in the towns, who presented three to the Prince, and he elected one of them: and thus it continued till the death of the late King WILLIAM's father, when the province of Holland influenced the rest so far as entirely to suppress this office of Stadtholder, sharing the authority of the Prince among the several magistrates of the State. The cities particularly assumed the power of appointing their own magistrates; the States Provincial the disposal of all military commands in the troops they paid; and the States General the command of the armies by Generals of their own appointing, whom they removed and changed at pleasure. No power was left of pardoning one condemned by rigour of law, nor any single person to represent the State or receive Ambassadors. This form of government was supported for near twenty years by the great authority and riches of the province of Holland, which drew a kind of dependance from the other six, and by the great abilities of their chief minister DE WITT; till the late Prince of Orange, afterwards King of England, notwithstanding both himself and the very office of Stadtholder had been abjured, was restored to his authority, and equalled, if not exceeded his ancestors in his authority and influence over this State; upon which occurrence I shall enlarge further, when I come to give the modern history of this State. Upon the death of the late King WILLIAM the office of Stadtholder was again suspended in five of the provinces: as for Friesland and Groningen, Prince CASIMIR of Nassau was hereditary Stadtholder of those provinces, to whom since succeeded his eldest son the young Prince of Orange-Nassau, whom the late King WILLIAM by his will constituted his universal heir. And in the year 1723 the province of Guelderland also elected the said Prince of Orange-Nassau for their Stadtholder, which the province of Holland opposed with all their might, presenting a formal memorial on that head, an abstract whereof, with the answer of Guelderland, and the limitations put on the Prince on his admission to the Stadtholdership of Guelderland, will

Representation of Holland against the province of Guelderland's choosing a Stadtholder.

VOL. II.

give us some further light into the present state of the United Provinces. In their memorial the States of Holland declare,

CHAP.  
V.

That they could not conceal their surprize when they were informed Guelderland had determined to make so very great a change in the nature of their government, as to choose a Stadtholder, and divide their power and authority with another: they could not forbear judging that a revolution of this nature must produce some great and fatal factions in the provinces. That on the one hand, various means would be used to excite and foment a change of the same nature in the other provinces: while some, on the other hand, would be endeavouring to preserve their government in the order it had been established; and these two parties would be continually nourishing distrusts and suspicions of each other, and perpetually loosening the bands of their union. That if they reflected never so little on the power which it pleased God to confer upon the union of their ancestors, they could not without trembling think on the fatal effects which discord might produce. And as they dreaded these misfortunes for the States of the United Provinces in general, of which Holland made so considerable a part, they could not forbear pushing these reflections a little further, and representing to their High Mightinesses, that they must expect their share of the calamities consequent on their precipitate resolution.

That above twenty years experience had given them all the insight into this matter they could desire; they had seen times of war and peace and dangerous dissensions, which had at length been amicably adjusted without the interposition of a Stadtholder: their publick revenues were administered and settled so very happily, that all the other provinces took example by Guelderland: that there were indeed faults in every kind of government, but it ought to be duly weighed, whether those faults would be redressed sooner under the government of a Stadtholder, than under that of a State. They need only call to mind the times they had spent under the government of a Stadtholder, and compare them with the present, to set them right in this matter. And if their High Mightinesses would please before they proceeded further, to name some Lords to confer with them, they would undertake to answer every argument which could be made use of as a specious pretence for this change of government. That for their parts they could not comprehend any advantage it would be to them, equal to the inconvenience of dividing their power with another: and it was still further beyond their comprehension, what should induce them to this change in the present juncture, when their province enjoyed a profound peace and tranquillity, and their publick revenues were in a flourishing condition. And for this reason also they could not imagine what danger there could be in provisionally deferring this affair; for Guelderland and Zutphen were countries of that importance, that they would never want a Prince to accept the government of them.

The States of Guelderland and Zutphen having on the second of November 1723, chosen the Prince of Orange for their Stadtholder, did on the fourth of the same month send an answer to the States of Holland, to this effect: That in the choice of their Stadtholder they had used all possible circumspection, without any other view than

The answer of the States of Guelderland.

11 N

the

CHAP.  
V.

the good of the State in general, and of their own province in particular; and could not conceive why their High Mightinesses should be disquieted at this election, or in what manner it could be prejudicial to them.

That the question, whether it were more advantageous to the States of the Seven United Provinces, both in general and particular, to have some illustrious chief, usually stiled a Stadtholder, under whose authority, but that a limited one, the affairs of their common alliance might be administered, as well in war as peace: or whether it were better to transact these affairs without such a chief, had so often been debated in the several provinces, and so much had been written on both sides, that they did not think it necessary at present to say much on that subject. But if they were pleased to take a review of the ancient government of the Netherlands before the union, and before they came under the dominion of Spain, they would find that the Seven Provinces were always governed by their respective Dukes, Earls, Bishops or other Lords, in conjunction with the States of each province. That these Seven Provinces were more closely united in a firm alliance in the year 1579, for the preservation of their liberties and religion; and WILLIAM I, Prince of Orange, had, as their High Mightinesses themselves had formerly observed, been the man who with the immediate aid and blessing of God laid the first foundations of this republick, notwithstanding the threats and powerful opposition of the then potent King of Spain PHILIP II. That Prince MAURICE of Nassau, Prince of Orange, raised this edifice still higher upon the foundations which had been already laid; and that with a conduct and courage truly heroical. That Prince FREDERICK HENRY on the same foundation and the same walls, finished the edifice of this State. And in the time of Prince WILLIAM II, anno 1648, a peace was concluded at Munster between Spain and the United Provinces, whereby their independence and sovereignty were generally acknowledged; but this Prince dying in 1650, and leaving his Princess with child of WILLIAM III, most of the provinces remained without a Stadtholder till the year 1672.

They said, they would not put the States of Holland in mind of the many dissensions which happened during that interval, nor the fatal consequences which attended them, by which the total ruin of the State was almost effected; but they could not forbear remembering, that by the blessing of GOD, under the conduct of WILLIAM III, Prince of Orange, chosen Stadtholder of these provinces, this republick, of which three whole provinces were fallen under the dominion of the French, and the rest ready to become a prey to them, was restored to the present happy condition. And though they were fully persuaded that their High Mightinesses had not forgot such extraordinary events, yet could they not avoid the mentioning them, to shew that the election of a Stadtholder is no innovation in the government of this State; but that on the other hand, it was under Stadtholders the State attained to it's greatest splendor. That as their High Mightinesses observed there always would be faults in every kind of government, and consequently there must be some under that of a Stadtholder, and therefore they did not expect by choosing one to have a government free from all defects; but having se-

riously weighed all events which had happened to the State in general, and to the province of Guelderland in particular, as well during the time it was governed by Stadtholders as whilst it was not, they concluded, that the election of the Prince of Orange for Stadtholder and Captain-General of that Province, was mightily conducive to their true interest: for this Prince was without dispute the only native of the United Provinces who could justly have this noble dignity conferred upon him, and was before constituted Stadtholder of two of the Seven Provinces, and his illustrious ancestors and relations had both in war and peace done the most important services that could be performed for the good and preservation of their country. That it was true, in the time of peace a Stadtholder, Captain-General and Admiral, might not at first view seem essential to their constitution: but if their High Mightinesses would reflect on the usual inconstancy and vicissitude of human affairs, they would conclude, that a time of peace could never be better employed than in taking such measures as might secure them from danger in case a war should break out, at least as far as human reason could insure it.

That when they considered the present situation of the whole state, their common country, the low ebb of their publick revenues and credit, which were sunk to a very great degree, even since the conclusion of the peace, the decline of their militia and maritime power, the low esteem they were fallen into with their neighbours, and the little probability of remedying these things, they concluded, that it was not without just grounds that their High Mightinesses and the Council of State represented in writing at several times to the United Provinces, "That such was the unhappy state of the union, it was impossible it should long subsist;" and it was much to be feared, that some revolution would cause it's total ruin: and yet these repeated remonstrances had not had the least effect, or any means been used hitherto to remedy these disorders.

This as the republick was composed of seven particular provinces, and each province a sovereign one of itself, where private, and even directly opposite interests frequently occasioned divisions, and the common interest to be neglected, and the means which should be taken for the safety of the State entirely forgot; it could not be disputed but that it must be very advantageous for their dear country to have the union cemented closer and stronger for the common good, and to make these Seven Arrows indissoluble, by binding them close together in the bands of friendship and concord, formed by an illustrious chief, who should govern them all with a limited authority. Of great advantage must it be on any emergency to have their affairs conducted by such a head, with the speed and activity requisite on such occasions.

And as they found themselves unanimously disposed to put themselves under this form of government, they could not any longer defer the election, after having drawn up the necessary instructions for their Stadtholder the Prince of Orange, which they took the liberty of transmitting to their High Mightinesses for their perusal, wherein they would not discover one article which could be prejudicial to the State in general, or to their province of Holland in particular. Nor could this election create any differences or jealousies among the members of their own province, since

CHAP.  
V.

CHAP. V. it had been unanimously agreed on. It was not imaginable therefore what foundation their High Mightinesses could have to surmise, that this election would occasion a change of government, or that they would endeavour to excite factions and differences among the United Provinces, of which they had never given the least reason to suspect them, protesting that they should contribute all that was in their power towards the maintaining a good understanding amongst them. They should have rejoiced at an opportunity of entering into a conference with their High Mightinesses, but that they understood by their letter that they only desired a conference to divert them from the choice of a Stadtholder, on which they had already determined; but their High Mightinesses might assure themselves that they should always be ready for the future to confer with their High Mightinesses, and to take such measures with them as should be judged necessary for the service of the State.

*Instructions drawn up by the States of Gueldres and Zutphen, by which the Prince of Orange and Nassau, their Stadtholder, Captain-General, and High Admiral, is to regulate himself in the administration of his offices, after having attained his eighteenth year.*

Limitations put upon the Stadtholder of Guelderland.

1. THE Stadtholder shall be of the reformed Christian religion, (a Calvinist or Presbyterian) which he shall publicly profess, and be obliged to aid and defend as much as in his power lies, the doctrines thereof being the same as were confirmed in the national Synod anno 1618, and 1619.

2. The sovereign authority shall still be vested in the nobility and cities of the dutchy of Gueldres and county of Zutphen, as it formerly was, and still is, nor shall the Stadtholder assume any part of it to himself.

3. The said province shall still consist of three separate and distinct divisions, viz. of Nimeguen, Zutphen, and Veluwe. The Stadtholder shall not dispose of any commission, either within or without the province: he shall not take cognizance of the reception of any member into the order of the nobility or magistracy in the cities of this province; nor shall he make any change amongst them.

4. The Stadtholder shall be obliged to observe and keep the union concluded between the allies at Utrecht anno 1579; as also all the conventions and agreements of this province. He shall maintain and defend all the rights and privileges, immunities, orders and customs which the nobility and cities, either in general or particular, at present enjoy. He shall also endeavour to maintain the sovereignty of this province; and defend it against all those who shall attempt to destroy or prejudice it.

5. The Stadtholder being at Arnheim, or any other place where the provincial court shall be assembled, shall take his seat and preside in it, where he shall collect the voices, and conclude their sittings. And when he shall be full eighteen years of age, all acts of State, letters and dispatches shall be made in the name of the Stadtholder and counsellors, as was practised heretofore.

6. If any unforeseen differences shall arise between the three divisions of this province, or between the body of the nobility or cities in the respective divisions, the Stadtholder shall endeavour

amicably to reconcile them: which if he cannot accomplish, he shall hear the complaints of the several parties, and decide their differences according to reason and equity.

7. The Stadtholder and Captain-General shall not do any thing against the orders established by all the confederates in the year 1651, concerning patents, the keeping the keys and giving the watch-word in all those cities whose magistrates have a voice in the assembly of the States. Nor shall he change the garisons in the cities of this province; but the power of granting patents and changing the garisons shall remain in the disposal of the particular divisions, or of the Lords their usual deputies; and the keeping of the keys and giving the watch-word, shall still be in the magistrates of the cities who have a seat in the assembly of the States, as it is at present.

8. The Stadtholder and Captain-General shall not dispose of the offices of Commanders, Governors and Majors of cities and fortresses in this dutchy or county.

9. The Stadtholder and Captain-General shall not dispose of any military post of the forces quartered in this province, except in time of war, and when he is personally in the field; and then he shall have the disposal of such military offices as shall become vacant during the campaign, but not otherwise.

10. There shall be given to the Stadtholder and Captain-General one regiment of foot, which he himself shall choose amongst the several regiments of this province, which shall be called the Stadtholder's regiment. The Colonel however shall retain his pay during his life-time, but immediately after his death the Stadtholder shall have it: as also the disposal of the commissions which shall become vacant in such regiment, provided he prefer natives to foreigners; and that before his disposal of any such commission he be full fourteen years of age, and the said military commissions be signed by the Secretary of the division, according to the present practice.

11. The Stadtholder shall have an annual pension of 5900 florins, to issue out of the revenues of this province. And he shall further have in the quality of Stadtholder of this province, his share of all fines of Fiefs, and of their dispatches.

12. The Stadtholder and Captain-General shall never endeavour any alteration to be made in these instructions, whether in the whole or part; nor shall he apply himself to the province in general, or to any member in particular, for that end: and as soon therefore as he shall attain the age of eighteen years, he shall be obliged to sign these instructions before his installation, and to swear in the assembly that he will observe them.

From what hath been collected on this head, we may be able to form a tolerable idea of the government of the United Provinces, which seems not to have been well understood by some, who would persuade us, that the sovereignty of the provinces and cities, of which this State is composed, is lodged in the diffusive body of the people, and that they are, in all cases the *Dominant Power*. Whereas the people seem to have much less to do in the government here than they have in England, and as little as in any monarchy on the face of the earth. In the cities of Holland, which are equivalent to all the rest, we find the legislative power lodged in the senate, composed of twenty or thirty persons, or thereabouts, who continue

CHAP. V.

Reflections on the nature of the Dutch republics

CHAP.  
V.

continue in that capacity for life, and when one of them dies, the rest make choice of another to succeed him; the people have no share in the nomination or choice. That this senate elect some of their own number to represent them in the assembly of the States of the province; and the Provincial States elect also some from among themselves to represent them in the assembly of the States General; so that the people have nothing to do, either in the administration of the government, the enacting laws, or in the choice of those persons who have the legislative or executive power lodged in them, but are as despotically governed by the Magistrates and Senate of their respective cities and districts, as the subjects of France or Turkey are by their several Monarchs. All the difference is, that in France and Turkey there is one absolute Sovereign, and in Holland every city hath twenty or thirty tyrants, from whom there lies no appeal, and who may govern their people, if they please, without laws; or, which is much the same thing, by such laws and rules as they are pleased to prescribe, and may repeal, suspend or alter as they see fit. They don't suffer the subject here to talk of original contracts, birthrights, or unalienable powers of calling their Sovereigns to account; this is a doctrine reserved for the meridian of Britain, and would meet with little countenance in Holland, or in any State in Europe: and yet this republick, by ignorant pretenders, is made a pattern of popular government, and recommended to our imitation, as the only model fit to be admitted, especially among a trading people.

An enquiry whether a Monarchy or a Republican government ought to be preferred.

Now whether the limited Monarchy of Britain, where the people elect one body of the legislature, and the Prince can impose nothing on them without their consents, be preferable to the despotick government of the States of Holland, will, I believe, scarce be made a question by any man that understands the constitutions of both: I shall only therefore here enquire, whether the sovereignty of one or of twenty be most eligible; or, which is the same thing, under which of these forms the people in general are like to enjoy the greatest ease and security; and could we be sure to meet always with a wise and good Prince, I shall make no difficulty in affirming that the government of one was better than that of many; for on this subject there are two principal points to be considered, namely, 1. The defending the people from foreign enemies; and, 2. From domestick oppressions. Now in war, secrecy, unanimity in councils, and a speedy execution of our resolutions, are considerable advantages, which we may expect to find oftner under a Monarchy than an Aristocracy, and the interest of the Prince and people are generally the same in cases of invasion; he can scarce be suspected of having a different interest from that of his country: whereas when the sovereignty is in many, it is not impossible but some of them may have different views, and sacrifice their country to their private piques or advantages. And as to domestick oppressions, if the Prince be a wise man, he cannot but understand that his own grandeur is promoted by the flourishing state of his subjects, that both his power and revenues increase in proportion to his encouragement of their trade and manufactures, and the security they enjoy in their possessions.

If it be said on the other hand, that in a multitude of counsellors there is wisdom; and that

therefore where the supreme power is lodged in twenty or thirty, affairs are like to be better managed than by one: To this it is answered, That all Princes have their councils, supposed to consist of the ablest heads in their dominions; and therefore in that respect they are upon the level with a republick: and as none can know what resolution the Prince will take, after he has heard their debates, he has certainly a vast advantage in the speedy execution of his designs, and preventing their disappointment, and in over-ruling any perverse or designing member, who may have views to his own interest: whereas when the power is in many, they are long frequently in resolving, longer in executing, and perhaps the scheme, tho' never so well laid, shall be discovered or opposed by the contrary faction underhand, if not openly; and in the mean time the estate remain defenceless and exposed to their enemies, as was the very case of the United Provinces, when LEWIS XIV invaded them in the year 1672, and they were saved almost by a miracle.

Should the subject under an absolute monarchy happen to be governed by a weak, ambitious, or voluptuous Prince, here indeed a settled Aristocracy seems preferable to it; but it is certain that States, as well as Kings, do often go very great lengths in oppressing and tyrannizing over the people. Is there a Monarchy in Europe where the taxes are more burthenfom than in the United Provinces? or where is there a Prince so jealous of his authority as the States are, who will suffer no petitions or remonstrances from their subjects, let their grievances be never so great? And indeed where the people are oppressed, there is much less reason to hope for redress from a republick than a monarch; because a body of men can never be supposed to be moved by pity or compassion as a single man may, neither are they so apprehensive of a revolt or insurrection. It is a common observation, that should the Burgundian or Austrian family, formerly Sovereigns of these countries, have imposed half the taxes they groan under at present, the people would never have born it; but now their Governors consisting of the principal men in every great town and province, have such an influence over the whole, that it is next to an impossibility for the common people to form themselves into a body, so as to endanger the State. Their Sovereigns are always upon the spot, and so intermixed with them, that they would nip any insurrection in the bud; and should the mob prevail in one city or province, unless they met with the like success in the rest, they must expect soon to be reduced to their duty: so that I take a rebellion, or what some denominate a noble struggle for their liberties, to be utterly impracticable by the subjects of Holland; let their oppressions be never so great, they have no remedy but patience. Holland happens indeed to be a country which depends entirely upon trade, navigation and manufactures, in all which their Governors are some way or other interested, and therefore must be supposed to promote these to the utmost of their power; consequently that part of their subjects which are concerned in these, which it must be admitted are much the greatest number, are sure to meet with all manner of encouragement. If the magistrates are not all of them merchants, there are few of them, who are not nearly related to those that are, or who have not some shares in their great companies stocks, or other branches of business. And this gives the Dutch a prodigious advantage

CHAP.  
V.

CHAP. V. advantage of the English in point of traffick; for while our ministry are indolent and careless in affairs of trade, as receiving little benefit by it, the States of Holland, whose private fortunes as well as the publick good require their utmost application to these things, let slip no opportunities of advancing their traffick. And thus far DE WITT is certainly in the right, That it is happy for a people, when the well-being of the Governors apparently depends on the well-being of the subject, for then the subject may rest assured his welfare will not be neglected. To instance first, in the case of convoys in time of war; how many more British ships were there taken in the last war than Dutch in proportion? The reason was, the English admiralty had seldom any share in the merchant-ships which went abroad, whereas there was scarce a fleet of Hollanders, but the States were deeply interested in. Again, if we look back a little, and observe how we have in every part of the world been supplanted in our trade by the Dutch; first in India, where we suffered them to possess themselves of all the spices of the east, (though some of the principal islands where they grew were actually under the dominion of Britain, by the surrender of the natives, and which are not restored to this day :) afterwards how we were tricked out of the Russia trade, the whale fishery, and even the herring fishery upon our own coast; we must acknowledge that it is some disadvantage to a trading people, that their Governors have but little dependence upon trade. Had the greatest part of our Ministers fortunes depended on the success of the British trade, as that of the States did on the Dutch trade, we should not have parted with the most valuable branches of it so easily. Three ways the Dutch have taken, in DE WITT's phrase, to beat us out of our foreign trade. 1. By their arms, or openly disputing the empire of the seas with us, in which they have prospered but little. 2. By sowing divisions amongst us, and joining our malecontents against the government, which diverted us from calling them to an account in time. And, 3. By bribing our ministry in some former reigns, in which they have met with all the success that they could wish. It is not to be supposed we should have put up all those affronts and encroachments on our trade, if the gentlemen who sat at the helm had not been made easy. And though it might not be difficult to shew that the crown, the nobility, and gentry of England, would all be great gainers by their encouragement of trade; that the publick revenues would not only be increased by an increase of the customs, and consequently the lands less burthened, but that the value of the lands themselves would advance, in proportion as trade flourishes: yet, as these are remote prospects, and seem to concern posterity more than the present generation, it is not expected such considerations should be of much weight. The Dutch legislature and ministry find an immediate profit by their promoting traffick, and leave therefore no means unattempted to advance it: and as they are a powerful body, and masters of such immense wealth, if they see any project setting on foot in any foreign kingdom, which may be a detriment to their trade, they will at any rate purchase the ministry of that kingdom, and thereby baffle the best-laid schemes. By this means they have indeed beaten all other nations out of their foreign trade; or, which is the same thing, rendered it of very little advantage

to them. If it be said, why don't other nations apply themselves in the same irresistible manner to the Dutch ministry, and buy them out of some considerable branch of trade? It may be answered, that the Dutch ministry subsist chiefly by trade, and therefore are not to be purchased. They would lose more than they could gain by a bribe. There are so many wealthy merchants concerned, that there is not a nation in Europe that can, or at least will raise money sufficient to influence so considerable a body, and in this they have an indisputable advantage of all other people. But notwithstanding the United Provinces have these great advantages in relation to trade, I look upon the constitution of their government at this day to be in a very weak and languishing condition; should they be attacked by any formidable power, as they were in the year 1672, they would probably be reduced to as great straits as they were then; for they have now no common Stadtholder, or head, to preside in their councils, or command their armies; and it must be next to a miracle if so many independent sovereignties, as there are in these provinces, should on an instant unite and enter on the properest measures for their defence. The provinces of Friesland, Groningen, and Guelderland are indeed agreed upon a Stadtholder, and invite the other provinces to join with them in their choice, representing the danger of being attacked by a foreign enemy, while they remain thus disunited: but Holland, the most powerful of the provinces, and the wealthy city of Amsterdam especially, protest against the government of a Stadtholder; being more apprehensive of the loss of their liberties, and oppression from such an officer, than of a foreign invasion, as they pretend. But the true reason of their rejecting a Stadtholder is probably the same now as it was formerly, namely, because the Hollanders and the city of Amsterdam would lose much of that influence they have over the other provinces under the government of a Stadtholder. At present the other States seem to have a dependence upon this, and which-ever way the province of Holland inclines, the rest are swayed and biased by it; all applications are therefore made by foreigners in the first place to them, and their Pensioner is addressed to as Prime Minister of the States General: whereas, if there was a Stadtholder they would be less considered, and lose much of the power and influence they have at present. There has therefore, from the very infancy of this State, been constant struggles between the Stadtholder and the province of Holland for dominion. Old BARNEVELT was sacrificed to the Orange faction, and so was DE WITT, both Pensioners of Amsterdam; but then DE WITT had the pleasure of suppressing the stadtholdership for twenty years before he perished; and had maintained his ground at last, had not such a conjuncture happened, as could not easily have been foreseen, namely, the kingdoms of England and France both invading their territories at once, which compelled them to advance the Prince of Orange to the stadtholdership to unite and command their scattered forces, and to ingratiate themselves with England, whereby they made a friend of a powerful enemy, and by that means principally saved their sinking state. The Lovestein faction then, of which DE WITT was the head, dreaded much more the falling under the government of a Stadtholder than a foreign invasion, as the present leading members of the States of Holland seem to do. In the first case, say they, from the condi-

CHAP.  
V.

tion of Sovereigns of the United Provinces, as we are in effect from the influence our mighty wealth and power procure us, we shall be reduced to the condition of subjects. And as to a foreign enemy we have very little to fear, it is so much the interest of every power in Europe to prevent our State being conquered, or added to any of the neighbouring kingdoms, that we may depend on the interposition of more powers than one, if we should be attacked; as we found by experience, when the French fell upon us in 1672. And why, say they, might we not agree upon a General to command our troops in such an exigency, as in the last war, for the time it continues; but must elect a Stadtholder, Captain-General, and Admiral in one person for life; who will probably draw such a dependence on him from all the provinces, as may endanger our liberties, and end perhaps at last in a monarchy: a form of government of all others to be dreaded by a people, whose sole dependence is upon traffick? But I proceed next to give the Modern History of these provinces, from the time of the truce concluded with the Spaniards in the year 1609, by which the constitution of their government will be still better understood.

## CHAP. VI.

*Contains the Modern History of the United Provinces from the year 1609, when a truce was concluded with Spain, to the present time; with a brief account of the Princes of Orange their Stadtholders.*

CHAP.  
VI.

FROM the first foundation of the Dutch State, there hath ever been observed two factions amongst them; the one inclined to monarchy, and the other as fond of a republican form of government. WILLIAM Prince of Orange, the first Stadtholder and Captain-General of the United Provinces, who contributed so much towards the rescuing them from the Spanish tyranny, is charged however with designs against their liberties: and, 'tis said, had formed a considerable party in the State, who were ready to compliment him with the sovereignty of these provinces, if he had not in that instant been taken off by an assassin, as has been related already. OLDENBARNEVELT, Pensioner of Amsterdam, one of the most intimate friends of the deceased Prince, by the great interest he had in the States, influenced them to choose his second son Prince MAURICE, their Stadtholder in his room; his eldest son PHILIP-WILLIAM being rejected on account of his education in the Roman Catholick religion, and his adherence to the Spanish interest. For several years Prince MAURICE was governed by the councils of that wise Minister BARNEVELT; but the Prince's creatures inspiring him afterwards with ambitious views, and representing BARNEVELT as a person the most likely to defeat his designs upon the sovereignty, he ever after looked upon him as an enemy: and as the power of the Stadtholder is much greater in time of war than peace, Prince MAURICE endeavoured to render the last treaty with Spain void, which BARNEVELT had taken the utmost pains to bring to a conclusion, and this still increased their mutual animosity. About the same time religious disputes ran very high in Holland, which were first begun in the year 1608, by JACOB ARMINIUS and FRANCIS GOMAR, Professors of divinity at Leyden: AR-

CHAP.  
VI.

MINIUS asserting the doctrine of free-will, as GOMAR did that of predestination, and both of them maintaining their opinions with much zeal, scarce any other subjects were treated of, either in the schools or churches of the United Provinces. Whereupon the States appointed a conference to be held between ARMINIUS and GOMAR at the Hague, where after a long dispute, they parted without coming to any conclusion. However, it appeared on this occasion, that the Magistrates and principal Burghers generally sided with ARMINIUS; and the clergy, the common people, and soldiery, who were in the interest of Prince MAURICE, took the part of GOMAR. ARMINIUS happening to die in the year 1609, his disciples drew up an account of their tenets, and presented it to the States General, wherein they stile themselves *Remonstrants*, which name they went by for some time afterwards; as their adversaries did by that of *Contra Remonstrants*. BARNEVELT, being in the interest of the Remonstrants, prevailed with the Curators of the University of Leyden to elect VORSTIUS, a disciple of ARMINIUS, Professor of divinity, in the room of ARMINIUS; but he was no sooner advanced to this dignity, than he was charged not only with Arminianism, but Socinianism, from a treatise he had before published, *of God*; but having been heard before the States, as to this charge, he was honourably acquitted: whereupon he printed his apology, dedicating it to the States of Holland; which happening to fall into the hands of JAMES I, King of Great Britain, he commanded his Ambassador at the Hague, Sir RALPH WINWOOD, to protest in a full assembly of the States against the doctrines contained therein, and all those who should protect such heresies; and ordered the book to be burnt in St. PAUL's Church-yard in London, and in the Universities of Oxford and Cambridge. The English Ambassador having presented a memorial on this subject to the States, they returned his British Majesty an answer in writing; wherein they seemed to justify VORSTIUS, and used several expressions very much to his honour; assuring his Majesty at the same time, that if he could be convicted of any of the points he was charged with, they would not suffer him to enjoy the professorship. To which the King replied, That he would advise them with all possible speed to rid themselves of so dangerous and pestilent a fellow, whose doctrines contained the most execrable blasphemies; with many other severe expressions against the tenets of the Arminians or Remonstrants: and the States of Holland finding his British Majesty inflexible, commanded VORSTIUS to leave the city of Leyden, rather than incur his displeasure. In the mean time the parties were so enraged against each other, that scarce any thing but opprobrious language was to be heard even in their churches, one minister inveighing in the afternoon against what another had taught in the morning; and calling each other Atheists, Hereticks, Schismatics, &c. which created such animosities among their auditors, that tumults and riots frequently ensued as they went from church. Prince MAURICE, the Stadtholder, did not at first, it seems, publicly declare himself for either party; but observing his great adversary BARNEVELT and the Republicans to take the side of the Arminians, in opposition to them, he at length espoused the cause of the Gomarists; charging BARNEVELT with being in the Spanish interest, and endeavouring to intro-

CHAP. VI. duce popery and slavery again; and papers were daily printed and published to that effect, which obliged BARNEVELT to publish answers to them, in vindication of his reputation; and the States of Holland hereupon prohibited the clergy to treat of the doctrine of predestination in their sermons, which gave great offence to Prince MAURICE.

About this time the Dutch sent an embassy to King JAMES, offering him part of the money due to the crown of England for the auxiliary troops lent the States in the reign of Queen ELIZABETH; desiring he would evacuate the cautionary towns, which remained in the possession of the English, as a security for that money; and BARNEVELT, the chief person in the embassy, managed the matter so dextrously, according to the Dutch writers, that the King was surprized into a promise of delivering them up. But the truth is, the King was in ill terms with his parliament, and could raise money no other way, which occasioned his consenting to that destructive bargain, by the conclusion whereof, the United Provinces were rendered independent of Britain, and made great rejoicings for it. But however this matter was brought about, it drew a lasting odium on the English ministry, who transacted it: and the Dutch tell us, that the King would never forgive BARNEVELT for over-reaching him, and that this was the principal reason of his combining with Prince MAURICE to ruin that great Minister.

The Arminians being supported by the magistracy in the towns of Holland, and the Gomarists by Prince MAURICE, no day scarce passed without some bickerings between them; but the mob being generally on the side of the Gomarists, these in most tumults had the advantage; and proceeded so far as to attack a merchant's house at Amsterdam, where their adversaries the Arminians were assembled for divine worship, and having dispersed the congregation, plundered the house of all the moveables to a very great value. And now the Gomarist Preachers in their sermons began to call in question the power of the Magistrates to intermeddle in religious matters: which obliged the States of Holland to publish a declaration, asserting their authority. The Gomarists hereupon exasperated to the highest degree, accused BARNEVELT with having procured this act of State in favour of the Arminians, by his crafty insinuations, to which eight Deputies of the cities only had consented; and by the powerful influence of Prince MAURICE, procured a judgment against this act of the States of Holland in an assembly of the States General. This being looked upon as a novelty, and directly contrary to their constitution; that the Representatives of the States General should take upon them to controul the acts of a Sovereign Province, which acknowledged no superior, the States of Holland declared the said judgment of the States General to be void; requiring the Magistrates of Amsterdam, and the rest of the cities of Holland, to pay no manner of regard to it: they also strengthened themselves by levying new forces, who should take an oath only to the States of their province. The same precautions were taken by several cities in the provinces of Utrecht and Overysse, where the Magistrates were Arminians. The Gomarists of Amsterdam, and several other places, on the other hand, preferred petitions to the Magistrates against BARNEVELT; desiring they would assert the authority of Prince MAURICE, which was invaded and

violated by these new levies; and their example was followed by others. They were afterwards incited by their Preachers to desire a national synod, to settle all disputes concerning religion. In which, it seems, they were seconded by DUDLEY CARLETON, the English Ambassador at the Hague, who made a florid speech in the assembly of the States General, to induce them to call a national synod: to which the Arminians published an answer, but it was suppressed by the States. About this time the mob rose at Leyden, and fell upon the new-raised troops, for not carrying the Prince's arms in their colours; and had driven them out of the city, if the Magistrates had not interposed; in which skirmish some hundreds were killed or wounded. On the other side, at Rotterdam, and some other cities, where the Arminians were most numerous, they forced the Gomarist Preachers to abandon their churches. And as to a national synod, GROTIUS and the Arminian Doctors insisted, that as every province was an independent sovereignty, the controverted points in religion ought to be determined by their respective provincial synods, convened by each particular State, and not by a national synod.

Things being come to extremes, Prince MAURICE at the head of a great body of veteran troops, and attended by the Deputies of the States General, in the year 1618, marched through the provinces, dispersing the new-raised forces, banishing the Arminian Preachers, and displacing the Magistrates of that persuasion; in whose stead he introduced his own creatures. In this manner he proceeded in the cities of Nimeguen and Zutphen, which had declared for the Arminians; and from thence he marched into the province of Overysse, where the city of Campen expressing a great zeal for the Arminians, he dragooned them into better manners, and restored the disciples of JOHN CALVIN to their pulpits. The same he did at Arnhem soon after; which city pretending at first to stand upon its defence, was betrayed into his hands by some of the Presbyterian zealots within the walls; whereupon he deposed and banished such of their Magistrates as were of a contrary persuasion. From hence he continued his march towards the city of Utrecht, which also stood upon its defence; but his eldest brother PHILIP-WILLIAM Prince of Orange, dying at this critical juncture, the citizens of Utrecht were delivered from their fears at this time; for Prince MAURICE was obliged to return to the Hague to take order about the affairs of the deceased, who dying without issue, had left him the principality of Orange and the rest of his large possessions.

BARNEVELT, in the mean time, finding himself chiefly struck at by the Gomarists, in all their libels, published an apology, which he addressed to the States of Holland; in which he took the liberty of representing the signal services he had done the republic, in the several great stations he had been employed for many years, in a stile so natural and free from all foreign insinuations, that it was evident they owed as much to his counsels and conduct, as to the Prince of Orange's sword, for their preservation; which had so powerful an influence on the States of Holland, that they openly took him into their protection. The Prince however having modelled the States General to his mind, by placing and displacing whom he saw fit, proceeded in his project of changing the magistrates and garisons in every town, which was not of his party; and particularly in the city of

Briel

CHAP.  
VI.

Briel in the province of Holland; at which the States of that province were greatly alarmed, and sent to the Magistrates of all their cities for full powers to oppose the execution of the commission granted by the States General to the Prince of Orange, for removing their magistrates and garisons, and entered into a confederacy with the other provinces for their mutual defence; a copy of which instructions were dispatched to Utrecht, and several other cities: but while Utrecht was deliberating on the affair, the Prince of Orange took advantage of some divisions amongst them, and advanced to their very gates, not giving them leisure to prepare for their defence. And notwithstanding Roodmold Hoogerbets, Pensionary of Leyden, and Grotius, Pensionary of Rotterdam, who had been before dispatched thither with Moetsberg and Secretary Ledenberg, and other Gentlemen of the province, did all that was in their power to animate the citizens and garison, they were so terrified by the approach of the Prince of Orange, that they thought fit to open their gates to him: whereupon he disbanded the garison, deposed the Arminian Magistrates, imprisoning some, and banishing others.

The next thing the Prince of Orange resolved upon was to seize such persons as had been most active in opposing his desired Sovereignty; accordingly he procured a warrant from eight persons, whom he had assembled for that purpose, and whom he was pleased to denominate *The States-General*, to imprison BARNEVELT, HOGERBETS, GROTIUS, and LEDENBERG; and at the same time published a manifesto, justifying the conduct of the pretended States, in taking these great men into custody, wherein he insisted chiefly on their inciting the commotions at Utrecht, and entering into other secret conspiracies against the States General. Their enemies the Gomarists also took this opportunity of reviving the clamour of their being popishly affected. But surely nothing could be more contrary to the fundamental constitution and articles of union of the Seven Provinces, in the year 1579, wherein it appears, that the States General have no manner of jurisdiction over the subjects of any particular province, much less over the Members of the States themselves, as these gentlemen were.

The King of France on this occasion sent to the Hague the Sieur DE BOISSISE, Counsellor of State, who had signalized himself in many embassies, to endeavour in conjunction with Monsieur MAURIER, his ordinary Ambassador there, to procure a reconciliation of these differences; but the Prince of Orange found means to render this application of no effect, and proceeded without opposition to displace the Magistrates of the rest of the towns in Holland, which were not of his party. In Rotterdam, where the Arminians were most powerful, he left a garison of twelve hundred men, and took from them one of their three churches in that city, and gave it to the Gomarists. This was followed by the banishment of VORSTIUS, PETER BERTIUS, and others, the most considerable Arminian Preachers; and amongst the rest of JOHN WYTENBOGART, a person highly esteemed for his exemplary life and moderation, as well as for his moving eloquence; which could not however exempt him from this fate, on his adhering to a party opposite to that of the Prince, by whom he was highly carested till then.

The States of Holland hereupon published a manifesto, demanding the release of BARNEVELT,

HOGERBETS, and GROTIUS, but to no purpose; and LEDENBERG of Utrecht expecting no quarter, (the States of his province having already submitted to the Prince) laid violent hands upon himself in prison, and thereby prevented a publick execution. The French King being much concerned at these violent proceedings, especially against BARNEVELT, renewed his instances in the prisoners behalf; but the King of England joining with Prince MAURICE against them, rendered all efforts to save them abortive. And now most of those who had opposed the calling of a national synod being imprisoned or banished, a day was appointed for assembling a convocation of the clergy of the United Provinces at Dort; and that it might have the face of a general council, they invited the Divines of all the Reformed churches in Europe to send their Deputies thither; ordering provincial synods to be held in each province in the mean time, to agree upon points to be proposed in the national synod, and to appoint Deputies to represent them there. The Arminian party observing what unfair practices were used in the provincial synods to exclude them from the national synod, so that there were like to be ten to one against them in that council, they protested against the same, and every thing that should be transacted there, as illegal and void in itself; which so exasperated the Gomarists, that by the influence of the Prince of Orange, they procured the banishment of many more Arminian Preachers, under pretence of Immorality or Socinianism. And the States-General having dispatched their letters to the King of Great Britain, the French Hugonots, the Electors Palatine and Brandenburg, the Prince of Hesse, and several other German Princes, as also to the Swiss Cantons, Geneva, &c. to invite their respective Deputies to the national synod; they repaired thither from all these places, except the Brandenburgers and French Hugonots: the latter by the articles of pacification granted them by King HENRY IV. being obliged not to send their Ministers to assist at any foreign synod, the Dutch Ambassador could not obtain permission of the French King for their repairing to Dort; but the chief reason is supposed to be, because the French court had espoused the cause of BARNEVELT and the Arminians.

This famous synod being opened on the 13th of November, 1618, in the name of the States-General; after two sermons preached, one in Dutch, and another in French, the Deputies of the foreign Divines were introduced into the assembly, and placed according to their rank, viz. first the English, next those of the Palatinate, Hesse, the Swiss Cantons, Geneva, Bremen, and Embden, the rest being not arrived. After which LYDIUS made a Latin speech, and implored the assistance of the Holy Spirit in a long prayer. And MARTIN GREGORY, one of the council of the Duchy of Gueldres, and one of the Deputies of the States-General, began the first session in the name of his masters, by a speech suitable to the occasion. After which LYDIUS read the commission of the States General, by virtue whereof eighteen Deputies of the States were appointed to assist at the synod; who chose for their Secretary the celebrated DANIEL HEINSIUS, Professor of history, and Library-keeper of the University of Leyden. At the second session, the Deputies of the respective provincial synods of the United Provinces presenting their credentials, it

The synod  
of Dort.

appeared

CHAP.  
VI.

appeared that there were not more than three Arminians among all the Deputies; such effectual care had been taken to prevent their being elected in every province: and those they excluded from their synod, summoning them, and several others of the same party, before them; whom they gave to understand, that they must not expect to be treated with by way of conference, but as such as were summoned to appear before their Judges; and that therefore after they had proposed their reasons in defence of their tenets, they must withdraw. Whereupon the Arminians delivered in a long memorial, shewing, That they could not acknowledge this synod to be a legal assembly, as being composed of persons who were both Parties and Judges, and entered a protest against all their proceedings. But an act of State was soon after procured from the States-General for their proceeding, notwithstanding this protest; with an order, that the Arminians should immediately enter upon their defence in writing, and should be no more allowed to appear personally before that body. Thus they got rid of their Arminian brethren. But there happened afterwards very obstinate disputes between the Gomarists and the English and other foreign Divines, about the merits and sufferings of Christ; in which the foreigners were treated with that rudeness by the Dutch Clergy, that they left the synod, and were about to return home, if a deputation of the States had not come and promised them satisfaction, and prevailed with them to return to the assembly.

This synod having at length settled their canons, which related to the doctrines of predestination, election and reprobation, free-will, grace, perseverance, &c. and condemned the errors of the Arminians, as they called them; their resolutions were made a rule of faith in all the Calvinist churches in Europe; for though the Representatives of the French Hugonots, or of the electorate of Brandenburg, did not appear, yet the Elector promised their canons should be signed by the Clergy under his jurisdiction; and PETER DU MOULIN, the chief of the Hugonot Ministers in France, engaged that he and his brethren would do the like. And now the fathers of the Gomarists began to debate what judgment they should pass upon the persons of the Arminians; but the English, and the rest of the foreign Divines, except those of Geneva and Embden, desired this might be waved, alledging, that they had no jurisdiction over the subjects of the United Provinces. The Dutch Clergy still insisting, that they should, at least, be adjudged enemies to their country, and disturbers of the public peace; it was answered, that this did not belong to the ecclesiastical, but the civil jurisdiction: which produced some alteration in the intended sentence. The Deputies of England, Hesse, and Bremen, refused however to intermeddle in any thing relating to the persons of the Arminians; judgment was therefore given without their concurrence, in the name of the synod and deputies of the States General; whereby all persons were obliged publicly to renounce the Arminian tenets; and such of the Arminian Preachers, as had been guilty of raising and fomenting these divisions in the church, especially those who refused to conform to their decrees, should be deposed from their ministerial functions, and declared incapable of any ecclesiastical benefices or academical preferments; which sentence was afterwards ratified by the States General: and the synod having thus finished the busi-

VOL. II. NUMB. LXII.

ness they were convened upon, were dismissed, after they had sat about six months. The States General soon after published a proclamation, to put the decrees and sentence of the synod of Dort in execution; after which they proceeded to banish some of the Arminian Preachers, and imprisoned others, confiscating their estates. The party of the Arminians being thus depressed, the Prince of Orange proceeded next to finish the destruction of BARNEVELT, and the other prisoners of state, who, according to the constitution of the United Provinces, could only have been tried in their proper province; but the Prince, by his interest, procured twenty-six Judges to be appointed by the States General, all persons devoted to his service; who passed sentence of death on BARNEVELT, for having, as it was alledged, advised a toleration of the Arminians, and occasioned many disturbances in the church; by asserting, that, according to the laws, each province had a right to judge and regulate points of religion in their respective jurisdictions, without the interposition of any or all the other provinces. The French Ambassador having notice of the sentence, desired instantly an audience of the States, who excusing their refusal on pretence of the unreasonableness of the time, he sent them a letter, conjuring them in the name of his Master the French King, not to shorten the days of so ancient a Minister, who had spent his life in their service; but the influence of the Prince of Orange prevailing, BARNEVELT was beheaded the next day in the court of the Hague, over-against the Prince's apartment, who came to be the spectator of a tragedy, of which he had been the principal contriver; for which he was severely censured, even by his friends. BARNEVELT said little more at his execution, but "that he did not die as a traitor, but as a true patriot, for having asserted the rights and liberties of his native country." And the people expressing a more than ordinary concern for this noble sufferer, the Prince of Orange did not think fit to proceed with the same severity against HOOGEZERT and GROTIUS, who were only condemned to perpetual imprisonment; and the sentence of MOERBERG, Counsellor of Utrecht, was still milder, being only confined to his country-house. GROTIUS afterwards made his escape out of the castle where he was confined, by the assistance of his wife. It seems he had obtained leave for a great trunk of books to be brought to him, which he sent backwards and forwards several times for near a twelvemonth; it was at first very diligently searched by the guards, but finding nothing but books or linen, they did not afterwards trouble themselves to look into it as it passed; whereupon his wife persuaded him to let her lock him into the trunk, and endeavour to make his escape; and he was accordingly carried off without any suspicion to Gorcum, from whence he got to Antwerp, and afterwards to Paris; where he was highly caressed by the French King, and allowed a pension of a thousand crowns per ann. His lady, who was left behind in his apartment, lay upon the bed in her husband's night-gown and cap, pretending he was ill, whereby she prevented any enquiry after him for several days, for which she was in some danger of being condemned to perpetual imprisonment; but was at length by a majority of her Judges honourably discharged, and followed her husband into France, where many other Arminians met with a kind reception, and were allowed liberty of conscience.

them-  
selves in  
Brazil.

As to the conquests of the Dutch in the East-Indies, and their monopolizing the spices of the east, by dispossessing the Spaniards, Portuguese, and English, of their dominions and settlements in that part of the world, between the years 1600 and 1640, these transactions have been treated of at large in the former volume of this history, when the state of India was treated of.

But it is necessary here to enquire into the original and progress of their West-India company, which we find as well as the former was projected by that great statesman BARNEVELT, though their first patent did not bear date, however, 'till two years after his death, in the year 1621, when they were empowered by the States to plant colonies, erect forts, make alliances, and appoint governors and officers on the continent and islands of America, within the limits prescribed them. And a stock of seven millions two hundred thousand livres was raised towards their establishment. In pursuance of their design they fitted out two squadrons, one to drive the Portuguese out of Brazil, and the other to attack the Spanish settlements in Peru, and took so many prizes in their first expedition, that they were enabled to make a dividend of five and twenty per cent. on their first expedition, anno 1623. In the year 1624, the Dutch Admiral HERMITE defeated a fleet of Spaniards on the coast of Peru, and took several rich prizes; and his countryman Admiral WILKINS made himself master of the city of St. SALVADOR the same year, bringing home the Viceroy, the Bishop, and several grandees of Portugal prisoners to Holland, and left JOHN VAN DORT governor of St. SALVADOR, and the territories belonging to it, for the Dutch West-India company; but the Portuguese retook the city the year following and cleared the country of Hollanders. The Dutch Admiral PETER ADRIAN, however, in the year 1628, engaged another Spanish squadron, near the island of Cuba; and having forced most of them on shore, took out all the plate and merchandize, and set fire to the ships, returning laden with the spoils of the enemy to Holland. The Spanish plate-fleet also fell into the hands of PETER HEYN, another of the Dutch Admirals, and were all taken by him, the cargo amounting to seven millions two hundred thousand livres in silver, and three millions six hundred thousand livres in merchandize, and the shipping and artillery were valued at four millions more. On this flow of success the company divided no less than fifty per cent. which was at that time looked upon to be very imprudent by some, considering they were not then masters of any considerable settlement in America, and were engaged in a chargeable war with Spain. In the year 1630, the Dutch equipped a large fleet for Brazil, and made themselves masters of the province of Fernambouque, with the capital city of Olinda. They afterwards extended their conquests over the neighbouring provinces of Tamarica, Pareiba and Rio Grande; and in expectation of conquering the other eight provinces still in possession of the Portuguese, they conferred the dignity of General of Brazil, and the south coast of America, on JOHN MAURICE of Nassau, nearly related to the Prince of Orange, with the same powers as are exercised by the General of the East Indies at Batavia. Count MAURICE arrived at Brazil on the 23d of January, 1637, with a fleet of thirty two ships and a body of land-forces; and advancing further into the Portuguese settlements, took the fortress of Pavaccaon; and having intel-

ligence that the Portuguese forts on the coast of Africk were but in a weak condition, he detached part of the fleet thither, who made themselves masters of the town and castle of St. GEORGE de la Mina, and many other places. The Portuguese having shaken off the Spanish yoke, and advanced the Duke of Braganza, the heir of their ancient Kings, to the throne in the year 1640; a truce was the following year concluded between the Dutch and Portuguese, whereby a liberty of trade was allowed to both parties; and each possessed what they were masters of in Brazil and Africk: and for two or three years the truce was tolerably well observed; but Count MAURICE, the Dutch General, returning from Brazil into Holland in the year 1644, the Portuguese, who were settled in the Dutch Brazil, entered into a conspiracy with their countrymen in the provinces still subject to the Portuguese, to extirpate all the Dutch out of Brazil, to which they were provoked by the hostilities committed by the Hollanders in Brazil after the truce, and by their East-India company's falling upon their settlements in India. And tho' the conspiracy was timely discovered, yet it occasioned the war to break out afresh between the two nations in Brazil and Africk, as well as in the East-Indies, which ended in the entire expulsion of the Dutch from Brazil, and was fatal to their West-India company; but the acquisitions of the Hollanders in the East-Indies, and on the coast of Africk, made them ample amends for their losses in America, they also made a discovery of a vast tract of land to the southward of the Equinoctial in the East-Indies, extending from the tenth to the thirty-third degree of south latitude, to which they gave the name of New Holland; but what the country produces, and whether peopled or not, they have kept in a great measure concealed to this day; some random accounts we have received indeed of a barbarous people that have been seen on those coasts; but the country is generally represented by the Dutch, as yielding scarce any thing worth their notice: the true reason whereof probably is, lest other nations should be tempted to settle there, who might interrupt their spice trade, and perhaps come in for a share of it. And the reason the Hollanders do not send any colonies thither, or endeavour to make settlements on that continent themselves, is certainly because they are already possessed of a greater extent of country in India, than they know how to govern or preserve; but it is surprizing to all mankind that the English do not send ships to make discoveries on that side, and endeavour to find out other places where cloves and nutmegs may be planted and cultivated, if they do not think fit to endeavour the recovery of those rich islands of Banda and the Moluccoes, which the Dutch treacherously and barbarously deprived them of, and still detain, notwithstanding several solemn treaties wherein they stipulated to deliver them up. I have already given an account of the attempts of the Dutch as well as the English to find out a north-east and north-west passage to the Indies, in which they met with no manner of success, and return therefore now to a continuation of the history of the Hollanders nearer home, from the time of the truce with Spain.

The Dutch had no sooner concluded a truce with Spain, but they began to make some other Princes of Europe sensible of their power; they perfectly bullied the English and Danes out of the whale-fishery, compelled the Danes to lower the duties Spain.

duties for passing the Sound, took the part of the Elector of Brandenburg against the Duke of Newburg in their contest concerning the succession of the duchy of Juliers, &c. and took several towns from the Duke, though assisted by Spain; interesting themselves in the quarrels of several other Princes: and about the year 1619, the Protestants of Bohemia and the Catholics of that kingdom taking arms against each other, the Dutch encouraged the Protestant party to form themselves into a commonwealth; but the Bohemians making choice of the Elector Palatine for their King, the Prince of Orange sent a body of troops into the Palatinate to his assistance, looking upon the establishment of his kinsman the Elector on the throne of Bohemia, as a considerable step towards the attaining the sovereignty of the Netherlands he had so long aimed at; but the Emperor FERDINAND obtaining a victory over the Elector Palatine at Prague, and thereby recovering the crown of Bohemia; the Palatine was driven also out of his own hereditary dominions in Germany, and forced to retire into Holland. And from this time, it is said, the Prince of Orange began to despair of obtaining the dominion of the United Provinces; an event, it seems, which was not to be compassed without foreign assistance, notwithstanding his being possessed of the affections of the people, and having an army of Veterans under his command. The Dutch seemed very averse towards the making this alteration in their constitution, when the Prince of Orange began to discover his intention of rendring himself absolute; insomuch, that when he came into any of their cities, he was not received with the usual ceremonies and acclamations of the people, as formerly; and particularly as he went through the marketplace of Gorcum, where crouds of people were assembled, not so much as one person moved his hat to him, which some imagine he took to heart, and observe that he was ever pensive and melancholly afterwards to his dying day.

A plot against the Prince.

The truce with Spain expiring, the war between the United Provinces and the Spanish Netherlands was revived and carried on with various success, during which a plot was discovered against the life of MAURICE Prince of Orange, which was managed chiefly by WILLIAM of Olden Barnevelt, youngest son of the famous Pensioner BARNEVELT above-mentioned, formerly governor of Bergenopzoom, a man of a resolute temper, who was determined to revenge his father's death upon the Prince of Orange; and drew several persons into the conspiracy, especially Arminians, under pretence of recovering their ancient liberties by this means, which he suggested had been notoriously invaded of late years in the execution of his father, and the heads of their party, and imprisoning and banishing others without any colour of law. MONS. GROENVELD, the eldest son of Pensioner BARNEVELT, was also earnestly solicited by his brother to be concerned in the plot; but he refused, and dissuaded him from it, which could not however prevent GROENVELD's ruin. The design, it seems, was to have assassinated the Prince on the road between the Hague and Ryswick, whither he often used to go in the company of a very few persons; and several people were lodged at inns who were to be actors in this tragedy, but without arms, to avoid suspicion; and a small chest of arms was ordered to be carried to a certain place, where they were to take them at the time of the intended

CHAP.  
VI.

assassination: but one of the conspirators having imprudently offered a piece of gold to a porter to carry the chest to the place designed, raised a suspicion in the fellow; and four seamen about the same time discovering to the Prince of Orange that they understood there was a design against his life, though they could not give any particular account of the scheme that was laid to take him off, the Prince returned immediately to the Hague, and the news of the plot coming to be buzzed about, the porter who had the chest imagining it contained something extraordinary, carried it to a magistrate, who upon the opening of it found several pair of pistols, poniards, &c. and four persons being also found at an inn where the chest was to have been delivered, who could give no satisfactory account of themselves, being strictly examined confessed the whole matter, and discovered their accomplices: whereupon the conspirators were soon after apprehended, tried and executed, and amongst them GROENVELD the eldest son of the Pensioner BARNEVELT, and several others for not discovering the plot, tho' it appeared GROENVELD dissuaded the conspirators from the attempt. And as most of the criminals were Arminians, this gave occasion to their enemies to throw the plot upon the whole party, and raised a fresh persecution against them, especially against their Ministers, those of them who remained in the country being either imprisoned or banished: whereupon several able pens were drawn in defence of the Arminian cause, and among the rest, that of the celebrated GROTIUS, who endeavoured to expose the practices of the Synod of Dort, and the illegal sentence of the judges who condemned OLDEN BARNEVELT to death; which treatise was censured by the States, and a great sum of money offered to any one who would bring the head of GROTIUS alive or dead; but he being under the protection of LEWIS XIII, despised their menaces. These severe proceedings, however, occasioned great murmurings in Holland, especially at Rotterdam, and other towns, where the States found themselves obliged to keep strong garisons to prevent insurrections. At the same time the State was engaged in a desperate war with the Spaniards and Imperialists, and had they not been supported both by the French and English with forces and treasure, their country would have been in great danger of falling under the power of the Spaniard again. The year 1625 was fatal both to their ally King JAMES I, and their Stadtholder MAURICE Prince of Orange; the first of them died on the 27th of March, and the latter on the 23d of April, in the 58th year of his age, and was buried at Delf, near his father Prince WILLIAM. He is generally esteemed a great soldier, and the best engineer of his age; but this excellency lay in managing a defensive rather than an offensive war. He does not seem to me to be of a very enterprising genius. The great successes the Dutch met with during his Stadtholdership were at sea, and in the East-Indies, to which they are much more indebted to the administration of OLDEN BARNEVELT, and to their Admirals, than to him.

The death of Prince Maurice.

Upon the death of Prince MAURICE the five provinces of Gueldres, Holland, Zealand, Utrecht, and Overijssel, chose his brother FREDERICK-HENRY their Stadtholder, Captain-General and Admiral, and each of them also declared him their particular Governor; but the province of Groningen chose Count ERNEST CASIMIR of Nassau,

Succeeded by his brother Frederick-Henry.

CHAP. VI. Nassau, (who was before Stadtholder of Friesland, and Lieutenant to Prince MAURICE in Groningen) their Stadtholder.

Prince FREDERICK-HENRY I, who became Prince of Orange on the death of his brother; by which title I shall therefore generally speak of him for the future; hoping to signalize himself at the entrance of his government, made an attempt to relieve Breda, at that time besieged by the Spaniards, but did not succeed, and was forced to be a witness of the surrender of that important place in June following.

The Arminians, who had been long oppressed by the opposite faction, found some ease under the administration of the new Prince of Orange, who upon several occasions gave evident proofs of his inclinations towards them; however, lest he should disoblige the States General, he did not think fit to do any thing further for them at this juncture, than to put a stop to the persecution of them, and declare himself favourably in respect of GROTIUS, then at Paris. But the Kings of Sweden and Denmark, it seems, about this time invited the Arminians to settle in their respective dominions. Those who went to Sweden generally fixed themselves at Gottenburg near the Sound, as those who were invited to Denmark did at Glückstadt near the mouth of the Elbe; but none gave them greater encouragement than FREDERICK Duke of Holstein, who some years before assigned them a large tract of land on the banks of the river Eyder, where they founded a city, to which they gave the name of Frederickstadt, in memory of their great benefactor; and the Duke conferred on them the privilege of choosing their own Magistrates, and many other immunities.

In the year 1627, the Prince of Orange took the city of Groll, situate on the confines of Zutphen and the bishoprick of Munster, from whence the Spaniards used to levy large contributions out of the provinces of Overijssel, Groningen and Gueldres; but the conquest of this place rendered the Dutch secure on that side.

The intestine divisions between the Gomarists and Arminians were not yet entirely quieted, for the common people of Amsterdam raised an insurrection against the Magistrates under pretence of their being Arminians, notwithstanding they conformed outwardly with their established Presbyterian church; but the Prince of Orange prevailed with the States General to send a body of forces to suppress the tumult, and make an act of State, that the people should pay obedience to their Magistrates without regard to their opinions in religious matters. In the year 1629 the Prince of Orange, with the assistance of the French and English, besieged and took Hertogenbosch or *Boisleduc*, one of the most remarkable cities on the confines of Brabant, notwithstanding the utmost efforts of the Spaniards and Imperialists for its preservation. This success of the Prince of Orange had such an influence on the States, that in the year 1631 they declared his Son WILLIAM, then about five years of age, successor to him in all his offices and dignities; and the same year the States entered into an alliance with the famous GUSTAVUS ADOLPHUS, King of Sweden, against the house of Austria, and the Roman catholic party in Germany. In the year 1632, the Prince of Orange took Venlo and Ruremond in Guelderland, from the Spaniards; in the siege of which last place, Count ERNEST CASIMIR,

Stadtholder of Friesland, was killed by a musket-ball; and the States General, in gratitude for the services done by his father, declared his son HENRY-ERNEST hereditary Stadtholder of the provinces of Friesland and Groningen. The same year the Prince of Orange took the large and strong city of Maastricht, situate on the Maes, in the bishoprick of Liege, but belonging to Brabant, after an obstinate siege of two months and upwards, during which time the Spaniards and Imperialists often attempted to relieve it: and the loss of this place was followed by that of Limburg and Orfroy before the end of the campaign. The next year, 1633, he reduced the fortress of Rhineberg, situate on the Rhine between Wesel and Orfroy; and soon after Fort Philip near Sas van Ghent in Flanders: but the Spaniards making great preparations for the retaking these places, the Dutch entered into an offensive alliance with the French in the year 1634, wherein they made a partition of the Spanish Netherlands (when they should be conquered,) and it was agreed, that the provinces of Luxembourg, Namur, Hainault, Cambray, and most part of Artois, should belong to the French; and the residue of the Spanish Netherlands to the Dutch. The French King soon after commanded the Marshal CHATILLON, brother-in-law to Cardinal RICHELIEU, to join the Prince of Orange in Brabant with twenty thousand foot and seven thousand horse; and the Spaniards marching to prevent this conjunction, were defeated by the French near the village of Avein in Luxembourg. CHATILLON afterwards continuing his march towards Maastricht, there joined the army of the States, forming together a body of fifty thousand men, of whom the Prince of Orange was Generalissimo by the treaty; but the Dutch on second thoughts being jealous that if the French should once become their next neighbours, by being possessed of that part of the Spanish Netherlands above-mentioned, their state would be in a more dangerous condition from them than it was at present from the Spaniard; and the Prince of Orange at the same time entertaining a particular pique against Cardinal RICHELIEU, the prime Minister at the court of France, on account of his endeavouring to surprize the city of Orange; this alliance with France came to nothing: for the Prince of Orange declined entering upon any considerable action this campaign, and by marches and countermarches, and want of necessary provisions, so harassed and distressed the French troops, that of a gallant army of near thirty thousand men which came out of France into the Netherlands, scarce four thousand returned, though there had not been any considerable enterprize undertaken. Notwithstanding which, Cardinal RICHELIEU finding himself surrounded with abundance of domestick enemies, and standing in need of the alliance of the States General, was obliged to stifle his resentments, and enter into a new treaty with the Dutch, whereby he stipulated to pay them two millions of livres per annum, and fifteen hundred thousand more towards the charges of the next campaign; and in order to regain the good opinion of the Prince of Orange, he ordered the French Ambassador at the Hague to give him the title of his Highness whenever he addressed himself to him, which the Prince and his posterity ever after retained, having before no other title than that of his Excellency. And thus a good harmony being established between the Cardinal and the Prince,

preparations were made for a vigorous campaign, anno 1637, in which the Prince of Orange retook the city of Breda; but on the other hand the Spaniards made themselves masters of Venlo and Ruremond again. The year 1638 proved disadvantageous to the Dutch, who had the worst of it in several engagements, but there happened no decisive battle. In the following year 1639, their successes against the Spanish Armada, which they destroyed upon the coast of England, is almost incredible. The Spaniards, it seems, at the instance of the Emperor FERDINAND III, had agreed to fit out a powerful fleet of men of war, to join the Danes against the Swedes, whereby they hoped to make a considerable diversion, and thereby compel the Swedes to withdraw their forces out of the Empire, which they had long harassed; but first the Spaniards proposed to touch on the coast of Zealand, to give some countenance to their forces in the Netherlands. Accordingly the Spanish Admiral DON ANTONIO DE OQUENDO failed from the Groine with sixty-seven men of war, and twenty thousand men, in the month of July, and was to be joined by fourteen sail more from Dunkirk; of which the Dutch having received intelligence, and imagining by the extraordinary preparations that were making at Dunkirk, that the chief design of the Spaniards was against their coasts, they ordered Vice-Admiral TROMP to observe their motions, who fell in with one of their squadrons separated from the rest near Dunkirk, on the sixteenth of September at night, which he engaged with that fury that he entirely dispersed them; but the Spanish Admiral bearing down to their assistance the next morning, boarded the Dutch Admiral, where he was so warmly received, that he was glad to quit him again, and being pursued by TROMP, was sunk with a thousand men on board, after which the fleets were parted by a fog: but the Dutch being joined by eleven men of war the same evening, fell upon the Spaniards again at midnight, and compelled them to fly to the Downs on the English coast, where then lay thirty English men of war, who took the Spanish fleet into their protection, there being at that time an alliance between the Kings of Great Britain and Spain, of which TROMP complained to the British court; whereupon King CHARLES I, who was at this time engaged in a war with his Scottish subjects, who had broke out into rebellion, and having reason to expect an insurrection in England, determined not to break with the States, but ordered his Admiral to forbear all hostilities against the Dutch.

TROMP afterwards receiving a powerful reinforcement, resolved to attack the Spaniards again, and even the English, it is said, if they persisted in protecting the enemy in the Downs. The Spaniards therefore finding they were to expect no assistance from the English fleet, took the opportunity of a thick fog in order to return home; but TROMP had intelligence of it, and overtook them with near an hundred men of war, whereupon there happened a smart engagement between the two fleets, and most of the Spanish ships were burnt, sunk or taken; a great Portuguese galleon particularly, of fourteen hundred tons and eighty guns was destroyed, with eight hundred men on board, most of them gentlemen, and about twenty ships more run on shore in the Downs; and of the whole Spanish fleet not more than eight escaped into Dunkirk. The common people in

VOL. II.

England it seems had a notion, that this Armada was designed against their own country, and were not displeased therefore to see it destroyed: and perhaps King CHARLES found it would alarm his subjects, already sufficiently discontented, if he should permit the English fleet to take their part; or surely he would never have suffered the Dutch to have fallen upon them in our roads. an indignity that ought never to have been borne but in such circumstances as his Majesty was at this time. The Dutch lost but two ships and about fourscore men in the engagement, which plainly shews that they were better seamen even at that time than the Spaniards, for the Spanish fleet was deemed at least equal to theirs in force and number of guns; but however that be, certain it is, TROMP gained immortal honour by the victory, and the Spaniards have never since made any figure at sea.

The French and Dutch acting in separate bodies, anno 1640, as had been agreed, the Prince of Orange sat down before Damme, a city five miles from Bruges; but meeting with greater difficulties than he expected, was compelled to raise the siege. The French had better success before Arras, the capital of Artois, which they took this campaign after a siege of two months. Count HENRY-ERNEST of Nassau, Governor of Friesland, being killed in an engagement with the Spaniards, was succeeded in that province by his brother WILLIAM-FREDERICK; but the Prince of Orange, Stadtholder of the other provinces, was chosen Governor of Groningen and the Omlands; and the following year, 1641, the Prince of Orange married his son WILLIAM, being then fifteen years of age, to the Princess MARY, daughter to CHARLES I, King of Great Britain, and the young Prince going over into England, the marriage was consummated there on the second of May. The same year the Dutch had the good fortune to take the strong fortress of Gennep, situate on the river Niers: as the French did the cities of Aire, Lens and Bapaume, in the province of Artois; but Aire was re-taken not long after by the Spaniards.

In the year 1642 died the famous Cardinal RICHLIEU, who had long supported the Dutch against Spain, and assisted them in humbling the house of Austria. And the following year his Master LEWIS XIII died, which did not however make any alteration in the measures of the French ministry, who entered into a stricter alliance with the United Provinces than ever; wherein the French agreed to give the States the title of High and Mighty, to furnish them with twelve hundred thousand livres, and to attack some considerable places on the coast of Flanders. In consideration whereof, the States engaged to have forty men of war on that coast to support their land forces; and not to make peace with Spain without the concurrence of France.

In pursuance of which treaty the French laid siege to Graveling, while Admiral TROMP blocked it up by sea, and the place surrendered about two months after. On the other hand, the Prince of Orange made himself master of the strong fortress of Sas van Ghent the same campaign. And thus the French and Dutch went on, enlarging their respective frontiers at the expence of the miserable Spaniard: but the French made the most considerable advances, for in the campaign of 1645, the French took Mardick, Bourg,

The Prince of Orange in the year 1646 renewed his design against Antwerp; and being joined by six thousand French, was marching to invest it, when he was seized with an apoplexy, which disordered his understanding; and the Hollanders apprehending if this city were taken and made part of their State, the ancient trade might be revived there to the disadvantage of Amsterdam, marched back again without attempting any thing against that city.

Dunkirk  
taken by  
the  
French.

In the mean time the French besieged and took Dunkirk, by the assistance of the Dutch fleet, which blocked up the harbour; of which they have since had sufficient reason to repent, it having been made a nest of privateers, from whence they have been infested in all their wars with France.

Prince of  
Orange  
dies.

William  
II. suc-  
ceeds.

In the spring following, viz. on the 14th of March 1646-7, the Prince of Orange died, in the 67th year of his age, and was succeeded by his son WILLIAM the second, in the Stadtholdership of the six provinces which his father held; upon whose accession the States addressed themselves to him, intreating that he would contribute his utmost towards the conclusion of the peace of Munster, which was now negotiating, and not adhere too strictly to the interest of France, of whom they began to be very jealous since the conquests they had made in Flanders, and the rest of the Spanish provinces: and notwithstanding their engagements with that crown, they concluded a separate peace with Spain at Munster, in the year 1648; the principal conditions whereof were,

*An Abstract of the Treaty of Munster.*

THAT the King of Spain should acknowledge the Lords the States General of the United Provinces with their provinces, towns, lands, and appurtenances, sovereign States, provinces and countries: upon which he or his successors would not for the future make any claim or pretence. That each party should keep and enjoy the countries, towns, places and lordships in their respective possessions, with their dependencies and appurtenances. Whereby the Dutch were to enjoy Boisseluduc, with the lordships, towns and villages thereto belonging; the town and marquise of Bergen op Zoom; the town and barony of Breda, the town of Maestricht, and the district thereto belonging; the county of Groenhoft, the town of Grave; the country of Luickhulst, and bailiwick of Hulst and Hulster Ambacht; and all the forts the States were possessed of in the country of Waes, with their dependencies and appurtenances: as also all such other places as the States then held in Brabant or Flanders, with all right of sovereignty, in the same manner as they held the United Provinces. The States were also to retain all they possessed in the East and West-Indies, Asia, Africa, or America. And the Spaniards were to continue their navigation to the East-Indies in the same manner they then did; but not to extend themselves on that side: and each party, both in the East and West-Indies, were to abstain from the navigation and trade of such places and countries as belonged to the other. That

CHAP.  
VI.

the river Scheld, and the channels of the Sas and Swyn, and other entrances into the Sea thereabouts, should remain in the possession of the States, who might lay what duties they saw fit on vessels passing that way, and on goods going in and out of the harbours in Flanders. And the Dutch also were to have the customs of all goods passing through their country by the Rhine or Maes. It was also agreed, that no new Forts should be erected in the Low Countries on either side, and that on the part of the King of Spain should be demolished near Sluice, the Forts of St. JOE, St. DONAT, the Star Fort, the Fort TERESE, St. FREDERICK, St. ISABELLA, and St. PAUL; and on the side of the States, the two Forts in the island of Leefant, called ORANGE and FREDERICK; the two forts De Pas on the east side the river Scheld, and the Fort of Kieldrecht called Spinola.

The United Provinces now enjoying a profound peace, proposed to make a reduction of their forces, which met with great opposition from those of the Prince of Orange's party, apprehending it would tend to the lessening his authority and influence; which was indeed the very reason that the other side were zealous for it, remembering the attempts that his uncle Prince MAURICE had made to obtain the sovereignty: an act of State therefore being drawn up for disbanding part of the army, the Prince laboured with all his might to get the matter debated in another assembly; but the deputies who were for it following the advice of CORNELIUS BICKER, Burghomaster of Amsterdam, left the Hague abruptly, and thereby defeated all his stratagems. Hereupon it was proposed by some of the Deputies of his party who remained at the Hague, that he should visit the cities of Holland in person, who were most averse to it, in order to obtain their consent for keeping up the army; but the province of Holland protested against this expedient as an encroachment on their liberties, and the city of Amsterdam in particular desired him to forbear coming thither; at which he was so exasperated, that he exhibited a complaint to the States General against that city, demanding satisfaction for the affront put upon him; in answer to which they published a Manifesto justifying their conduct: but the Prince determining to be revenged on that proud city, sent orders for a great body of troops to assemble and invest it. He also imprisoned JOHN DE WITT the Pensionary, and five others of the province of Holland, whom he apprehended most averse to his designs, in the castle of Loevestein, from whence they were called the Loevestein Faction. The Prince's orders were executed with that secrecy, that the Amsterdamers had not any intimation of the march of the army to attack them, till the Hamburg post-boy brought them notice there was a body of horse advancing towards them, the very morning the town was to have been invested; and had it not been for the rains and the darkness of the night, whereby some of the forces lost their way, and did not come in time to the appointed rendezvous, the city had been surrounded before they had received the least intelligence of his intentions; but having had time to put themselves in a posture of defence, they sent to the Prince to know the reason of his approaching in that hostile manner; and he insisting that the Burghomaster BICKER should be delivered up and punished, they took

took the opportunity while the conferences about it continued, to open their sluices and drown their country, so that it was now become impracticable for his army to attack the place. The citizens, however, being desirous to remove so formidable a force from their gates, and to procure the liberty of DE WITT, and the rest of their friends, whom the Prince had imprisoned in the castle of Loevestein, agreed at length to displace Burghomaster BIEKER, and his Highness, on the other hand, consented to release the prisoners and withdraw his troops, but could not help however discovering his concern for the disappointment; and while he was meditating which way to repair the disgrace, was taken ill of the small-pox at the Hague, on the 29th of October 1650, and died on the 6th of November following, contrary to the opinion of his physicians, who declared him to be out of danger; from whence it was afterwards surmized that he was poisoned with a draught of Limonade: but however that matter was, certain it is he was become very terrible to the republick; and the late hostile attempt upon Amsterdam rendered his death the less regretted; some of the Clergy in their pulpits went so far as to ascribe it to the just judgment of God, and some medals were struck reflecting on his memory, among which one represented the precipitate fall of PHAETON, with those words in Ovid, *Magnis tamen excidit ausis*. About a week after the death of WILLIAM II, his son WILLIAM III. was born, afterwards Stadtholder of the United Provinces, and King of Great Britain, which gave great joy to the Princess and the family of Orange, who were before overwhelmed with grief for the loss of the late Prince, their great support, in the flower of his age. Two days after the Betawe and Velawe, and Utrecht, were good part of them overflowed by the breaking of the dikes of the Yssel, &c. The sea also broke in upon North Holland with a terrible inundation, and destroyed incredible quantities of merchandize, even in Amsterdam itself; so that however they might rejoice at the death of the Prince of Orange, they had reason to mourn for the calamities which soon after befel them.

The office of Stadtholder abolished.

The conduct of the States in relation to King Charles II, and the Royal family.

Upon the death of the Prince of Orange the province of Groningen chose the hereditary Prince of Friesland, WILLIAM-FREDERICK of Nassau, their Governor; but the other five provinces elected no particular Governor: and the States General resolved to have no Stadtholder, Captain-General, or Admiral, for the future; and entered into a new union, whereby they settled the sovereignty of the particular provinces, declaring against the innovations of Prince MAURICE and his successors, who had endeavoured to make every province subject to the States General, or rather to themselves. Then they published a general toleration of all religions, excluding however from publick employments all who did not make a publick profession of Calvinism. The five Gentlemen imprisoned by the late Prince of Orange in the castle of Loevestein, were set at liberty, and with Burghomaster BIEKER restored to their offices and dignities, and the proceedings against them declared illegal and void. They also changed the magistrates in many places, supplying their rooms with such as were not well-affected to the house of Orange, and disbanded good part of the army.

England, after the murder of King CHARLES I. anno 1648, was under the dominion of a Com-

monwealth in appearance, but really subject to CROMWEL, who had usurped the supreme authority, and driven King CHARLES II, and his brother the Duke of York into Holland, where they were well received by their brother and sister, the Prince and Princess of Orange, at the Hague: the States, in the mean time, gave frequent intimations that their residing in Holland would be very inconvenient in their present circumstances; and it was with some difficulty the Prince of Orange prevented their sending them a message to remove out of their territories. About the same time Dr. DORISLAUS, one of the English regicides, coming as Envoy to the Hague, to propose an alliance between the two republicks, while he was at supper in his house with some company, six or seven Gentlemen of North-Britain entered the room with their swords drawn, and WHITFORD, one of them, dragging DORISLAUS from the table, stabbed him to the heart, saying, *Thus dies one of the regicides*; then the Gentlemen putting up their swords, walked quietly out of the room, leaving the rest of the company in the utmost consternation. This accident made the Dutch still more uneasy, lest CROMWEL should demand satisfaction, and occasion the removal of King CHARLES from the Hague soon after; and the death of the Prince of Orange, which happened about the same time, gave but small encouragement to hope for his Majesty's restoration from that quarter. The year following, anno 1651, the Commonwealth of England, as they were called, sent over their Chief Justice Sr. JOHN and Mr. WALTER STRICKLAND as their Ambassadors to the States, attended by two hundred Gentlemen and a magnificent equipage, to propose an offensive and defensive alliance between the two Commonwealths; who were received with all imaginable respect by the States, but were however frequently affronted and assaulted by the mob, who, notwithstanding a strong guard constantly attended them, often broke their windows and pelted their servants with dirt and stones, crying out, *Long live King CHARLES, and the Prince of Orange*. ST. JOHN also meeting the then Duke of York in the walks of the Voorhout at the Hague, and refusing to give him the way, or salute him, the Duke pulled off his hat and told him, he ought to be taught to pay more respect to the King's brother: to which the Ambassador answering, that he knew no other Sovereign than the parliament of England, and reflecting grossly on the royal family, the Duke's attendants attacked the Ambassador and his servants sword in hand, and being supported by most of the Gentlemen then in the walks, the Ambassador was obliged to retire with his people into his house. The States who pretended to remain neutrals between the King and Parliament of England, desired the Duke to retire from the Hague to a country-seat of his sister's, the Princess dowager of Orange, at Honflaerdike: after which they sent a deputation to the English Ambassadors, to express their concern for what had happened, and to assure them, that if any of their subjects had affronted them they should be punished with the utmost rigour: but ST. JOHN it seems was not to be appeased, and represented matters in such a manner to his masters, that they were soon after recalled. At their return it was proposed in the parliament to endeavour to prevent the mighty growth of the Dutch trade and advance their own by all possible means; the first attempt

attempt towards which, was by drawing up an act, since called the Act of Navigation, whereby foreigners were prohibited importing any merchandize into England which was not of their own growth; which affected Holland more than any other country, because the produce of that country is exceeding small, and one of their greatest advantages at that time consisted in their being the common carriers of Europe; and under colour of this law also the English frequently took an opportunity of searching the Dutch ships and making prize of them. The States hereupon sent over four Ambassadors to England, to expostulate with that remnant of a parliament, who were answered with the following demands: 1. That they should pay the arrears of tribute due for fishing on the English coast. 2. That they should restore the Spice-islands they had taken in the East-Indies. 3. That those who had assisted in the murder of the English at Amboyna and Banda, should be brought to justice. 4. That satisfaction should be given for the murder of *DORISLAUS* the English Envoy. And, 5. Reparation made for the damages sustained by the English in Russia, Greenland, &c. by the Dutch encroachments, to an immense sum. From these demands the States concluding that nothing less than a war was intended, gave orders for fitting out a great fleet of men of war: the English Parliament, on the other hand, never imagining that the Dutch durst enter into a war with them, fitted out only the usual squadron for the guard of the coast, giving their Admiral no particular instructions in case of a rupture. The admiralty of Holland, in the mean time, had ordered *VAN TROMP* with a fleet of forty two men of war to sail over to the English coast, and not to strike sail to that nation as he used to do. This Admiral accordingly in the month of May 1652, coming into Dover road, met with Admiral *BLAKE*, and a squadron of twenty-six men of war there under his command, who perceiving the Dutch did not strike sail as usual, gave them three guns; whereupon *TROMP* hung out a red flag, and bore down directly to the English Admiral, giving him a broad-side, which being returned, an obstinate fight began, that lasted till night parted them. On the Dutch side was one ship taken and another sunk: the English had a great many men killed and wounded, but lost no ship or officer of note, though the Hollanders pretended there were two English ships sunk and six taken; however, certain it is, *BLAKE* did not think fit to renew the fight the day following on so great odds, but retired in order to refit and reinforce his squadron.

War between the English and Dutch.

The first sea-fight.

The States soon after sent an embassy to England, to assure the Parliament that the late engagement between the two fleets was without their knowledge, and contrary to their intentions, and begged of them, as they professed the same religion and love of liberty, they would enter into a treaty, in order to heal this bleeding wound, and avoid the further effusion of blood. To which the Parliament answered, That the extraordinary preparations the Dutch had made of a fleet of an hundred and fifty sail without any apparent necessity, and the instructions they had given to their sea-officers, gave too much cause to believe they designed to usurp from the English the dominion of the sea; they thought themselves obliged therefore to endeavour, by God's assistance, to obtain reparation for the injuries and damages

they had received: and having returned this answer, immediately ordered *BLAKE* to sail northward and attack their fishing-busses, guarded by twelve sail of men of war, most of which he took and brought home as good prize. And Sir *GEORGE ASCOUGH* being sent with another squadron to the southward, meeting with a fleet of Dutch merchant-men between Dover and Calais, took or destroyed most of them; and afterwards standing westward, fell in with a fleet of sixty of the enemy's men of war, and thirty merchant-men near Plymouth, with whom he maintained a fight till night parted them, though he had but thirty sail of men of war with him; but being damaged in his rigging, he could not come up with them the next day. However, these attempts struck such a terror into the Dutch, that for the future they chose generally to sail north about, rather than to run the hazard of being taken in the English channel; and notwithstanding all their precaution they lost six East-India ships, valued at four millions of livres, thirty-five more of their Portugal fleet, and many other vessels. King *CHARLES II* being now at Paris, and finding the English and Dutch republicks were come to an open rupture, made an offer to the Dutch Ambassador to join his interest with theirs, and go in person on board their fleet; but the Dutch resolving to clap up a peace with England, and apprehending the King's appearing among them might prove an impediment to it, refused the generous proposal. *VAN TROMP* about this time resigning the command of the Dutch fleet upon some disgust, *DE WITT* succeeded him, who with *DE RUYTER* appearing at the head of the Dutch grand fleet on the coast of Kent, were attacked by *BLAKE* on the 28th of October; in which engagement the Rear-Admiral of the States was boarded and taken, two more of their men of war sunk, and a fourth blown up; whereupon the Dutch thought fit to retire, and were pursued to their own coasts. In the mean time a squadron of English men of war in the Mediterranean, consisting of five or six sail, were attacked by sixteen Dutch, under the command of *VAN GALEN*, and forced to retire into the port of Leghorn for protection, having lost the *Phoenix*, one of their number; on which occasion the Hollanders triumphed as for a signal victory.

CHAP.  
VI.

King Charles II. offers to go on board the Dutch fleet.

Another engagement.

In this war the Swedes declared for the English, and the Danes for the United Provinces; and the Danes engaged to send twenty men of war to the assistance of their allies, in case *VAN TROMP* was restored to his command; which being readily complied with by the States, that Admiral put to sea with eighty men of war and two fire-ships, and meeting *BLAKE* in the Downs, with between forty and fifty sail, a terrible engagement ensued on the 29th of November 1652; but the English being overpowered, were at length compelled to retire, with the loss of two ships taken, three sunk, and one burnt; and of the Dutch only one of their flag-ships was blown up. After which *TROMP*, in contempt of the naval power of England, rode with a broom at his top-mast head, shewing that he could sweep the channel of them. But this triumph was short-lived, for on the 18th of February following, the English grand fleet, commanded by *BLAKE*, *DEAN* and *MONK*, consisting of eighty sail, lying extended cross the channel over-against Portland, to wait for *TROMP*, who was convoying home

CHAP.  
VI.A fourth  
sea-fight.

home three hundred sail of merchant-ships with seventy-six men of war; the English Scouts discovered the Dutch fleet on the 18th of February by break of day, whereupon another bloody battle was fought, which lasted three days: VAN TROMP on the third interposing between the English fleet and his merchant-ships, maintained a running fight till he recovered the coast of Holland; having lost in the engagement eleven men of war and thirty merchants: there being but one ship lost on the English side. On the 2d of June 1653, there happened another engagement between Dover and Calais, when the English fleet, consisting of an hundred sail, was commanded by MONK and DEAN, who were both on board one ship: the Dutch fleet consisting of upwards of an hundred sail, and were commanded by TROMP, DE WITT, DE RUYTER, and the two EVERTSONS. It was about noon when the engagement began, and at the first broad-side Admiral DEAN was shot into by a cannon-ball as he stood by MONK, who without being discouraged covered the body with his cloak, and then maintained the fight with great bravery, and before evening the Dutch bore away before the wind. The next morning, there being but little wind, the English could not come up with the Hollanders before noon, when the fight began afresh, and the Dutch were put into the utmost confusion; TROMP sent his boat aboard some ships, and fired at others, to oblige them to come into the line; but all to no purpose; he found himself obliged to retreat to their own flats, where there was no following them. In this engagement eleven Dutch ships were taken, six sunk, and two blown up; with very little loss on the English side.

Sixth sea-  
fight.

The Dutch, notwithstanding this defeat, fitted out a fleet of an hundred and five and twenty men of war within a little more than a month, commanded by TROMP, who meeting the English fleet upon the coast of Holland commanded by MONK, another famous engagement ensued, on the 29th of July, wherein MONK ordered his Captains neither to give nor take quarter, which made this battle more bloody than any of the former: the famous VAN TROMP, the glory of the Dutch nation, as he is styled by some writers, was shot with a musket-bullet as he stood on the quarter-deck with his sword drawn, encouraging his men; and seven and twenty Dutch men of war were sunk and burnt, but none taken, which was occasioned by MONK's orders to give no quarter. DE WITT taking upon him the command after the death of TROMP, and having maintained the fight till evening, the Dutch retired into their harbours. The English had a-bundance of men killed and wounded in the engagement; but lost only one ship, and had two or three more disabled.

The Dutch  
desire  
peace of  
the Eng-  
lish.

The Dutch, discouraged by the defeat of their fleet, and the loss of their Admiral, but more by the losses they suffered in their foreign trade, for it seems the English had taken in this short war no less than seven hundred sail of ships; sent orders to their Plenipotentiaries, who were already treating with CROMWEL at London, to hasten the conclusion of the peace almost upon any terms; to which they were moved also by frequent insurrections at home, and the suggestions of the Orange party, who perpetually insinuated that these misfortunes were occasioned by their not having a Stadtholder. CROMWEL, though he had for-

merly vowed the destruction of this State, began now to hearken to the proposals made him, in hopes the States might be assistant to him in maintaining his usurped sovereignty; for he had dispersed the remains of the long parliament, and taken upon him perfectly to new-model the constitution. Both parties therefore having their particular views in promoting a peace, the treaty of it was brought to a conclusion in April 1654, by which the Dutch renounced King CHARLES's interest, engaged to strike to the English at sea, and to bring such of their subjects to justice as had been concerned in the barbarities at Amboyna, if there were any of them living, and to make reparation for all the damages the English had sustained by their means in their foreign trade for thirty years past. CROMWEL also demanded that the States should exclude the Prince of Orange, grandson of King CHARLES I, and all his posterity, from being Stadtholders, or Governors of any particular provinces, city or fort; as also from being Admirals, Vice-Admirals, or even Captains of men of war; which the States at length agreed to, under this limitation only, that this exclusion should extend only to such of the Prince of Orange's posterity, as should be lineally descended from the daughter of the late King CHARLES I; and that this should be a private article, and not inserted in the general treaty. About this time JOHN DE WITT, son of DE WITT the Burghomaster of Dort (who had been imprisoned in the castle of Locvestein by the late Prince of Orange) and his brother CORNELIUS DE WITT, began to grow very popular, and the one being Pensionary of Holland, and the other High Bailiff of Putten, they had the chief direction of this State during the minority of the Prince of Orange WILLIAM III. These gentlemen were so very cautious of retaining any office in the commonwealth that might have the least resemblance to that of Captain-General, that they suppressed even that of Field-Marshal, and kept no other General Officers in their pay but Count MAURICE of Nassau in quality of Lieutenant-General, and the Rhinegrave as Major-General of the horse; and if a body of troops was assembled on any occasion, they were usually commanded by the eldest Colonel.

The States  
governed  
by the De-  
Witts.

CROMWEL, encouraged by the condescensions the States had already made, proposed to them an union between the two commonwealths under one form of government; but the cautious Hollander foreseeing that CROMWEL would have the direction of the whole, and probably in the end assume the dominion of both countries, rejected the proposal. He then offered to enter into a league offensive and defensive with them against the church of Rome; to which they answered, their business was traffick, and they must endeavour to live peaceably with all the world if possible: whereupon CROMWEL upbraided them with preferring their temporal interest before the advancement of the Protestant religion, and the destruction of Popery. But after all, few will believe that CROMWEL's religion put him upon making this proposal; how much soever he might pretend to an excess of piety, he had some temporal interest in view. If he had seen himself at the head of a Protestant league, there is no doubt but under the colour of advancing the kingdom of Christ, he would have advanced his own dominion over most of the kingdoms of Europe; and this that subtle people could not but

be sensible of; the sham pretences of religion to cover a roguish project they were sufficiently instructed in, and were not to be caught in the same snare they had so often laid for others.

The war was no sooner ended between England and Holland, but the Dutch being jealous of the growing power of the Swedes in the Baltick, incited the King of Denmark to enter into a new war with them: they also took upon them the protection of Dantzick, then insulted by the Swedes, with which city they carried on a vast trade, and sending a fleet of men of war thither with land-forces on board, compelled the Swede to accept of such terms as they were pleased to prescribe. After which a new war breaking out between the Danes and Swedes, and the Danes proving unsuccessful, the Dutch sent another fleet to their assistance, with which they defeated the Swedes at sea, and relieved Copenhagen, the capital of Denmark, which was then closely besieged; in which engagement, however, the Dutch lost two of their Admirals. The reason the Dutch gave for interposing in this war was, lest the Swedes should make themselves masters of both shores of the Sound, and thereby render their trade to the Baltick precarious.

In the mean time, a kind of civil war broke out in the United Provinces. At Tergoes in Zealand there happened an insurrection of the populace, and in Groningen another: and in the province of Overijssel the cities of Campen and Zwoll declared war against Deventer and Haffelt; but by the interposition of the States General these commotions were at length composed.

In the year 1658, the French and English laid siege to Dunkirk and took it; and according to the treaty between them, the place was left in the possession of the English, to the great mortification of the Dutch, who were not well pleased to see their rivals in trade masters of both sides the channel, as they were in effect by the acquisition of Dunkirk. But the same year died CROMWEL the Usurper, or Protector, as he styled himself, on the 3d of September, leaving Britain in such confusion, that the Hollanders had little to apprehend from that side for the present; there was a fleet indeed sent to the Baltick by RICHARD CROMWEL, to assist the Swede against their ally the Dane, but the distractions which soon after followed in England prevented their entering upon action.

Things being come to a crisis in England, the people heartily weary of the many changes they had lately experienced in the government, were generally inclined to attempt the restoration of their natural Sovereign King CHARLES II; which the Dutch observing, and not apprehending it in their power to prevent, though they had entered into a confederacy with CROMWEL against the STUART family; his Majesty was no sooner arrived at Breda, but they sent a deputation of the States to compliment him on his arrival in their dominions, and to desire he would take up his residence at the Hague till he should embark for England, which the King readily accepted, arriving there on the 16th of May 1660; where he was not only magnificently entertained at the charge of the States, with all his dependants, but presents made him, amounting in the whole to the value of an hundred thousand pounds. And here all the Ambassadors and publick Ministers of such Princes as were at the Hague attended the

King, congratulating his approaching restoration on their masters behalf, by whom but a very little before he had been intolerably slighted and ill used: and from the speech made by the deputies of the States at his Majesty's embarkation, none could believe that these were the very men who had a little before entered into a treaty with CROMWEL, his mortal enemy, to prevent his restoration, and even to exclude all of his blood from the Stadtholdership of the United provinces: Your Majesty, say they, may observe in the looks of all our people the joy they have in their hearts to see a Prince cherished by God, a Prince wholly miraculous, and who will probably contribute in a great measure to their quiet and felicity: our joy, say they, is common to us with that of our subjects, but as we know better than they the inestimable value of the treasure we possess, so are we more sensible of this sad separation; and it would, Sir, (continued they) be insupportable to us if we did not reflect, that it was the thing in the world we most desired, and the greatest advantage also that we could wish to your Majesty. We therefore acquiesce, because we know that this removal is no less necessary for us, than glorious for your Majesty; and that it is in your kingdom we must find the accomplishment of the prayers we have made and still make for you and us. We pray God, Sir, that your return may be quiet and happy; and that as he hath disposed the hearts and affections of your subjects to acknowledge their lawful Sovereign, he will be pleased also to command the winds and the seas to expedite your voyage. And after you have received on your own coasts the vows that we shall reiterate, you may enjoy in your Royal Person, and in your never-ceasing posterity, all the felicity that can be wished.

The King having taken leave of the States, after ten days stay at the Hague, embarked for England at Scheveling, where a squadron of men of war attended him under the command of Admiral MONTAGUE, the shores being thronged with multitudes of spectators, who wished him all imaginable happiness. Nor is the sincerity of the common people to be suspected, who are ever infinitely joyful when they see right take place, and an injured Prince long banished from his inheritance peaceably restored to his dominions; but as for States and Courts, these are seldom governed by any other motives than such as seem conducing to their interest.

The Bishop of Munster having obtained a commission from the Emperor in the year 1663, to take possession of some lands in East-Friesland, in Westphalia, and amongst the rest of the castle of Eydeler on the river Ems; the Dutch under pretence that the Bishop might prove a dangerous neighbour to them, dispossessed him of that castle by force: and though the Bishop was not then in a condition to shew his resentment, he soon after entered into an alliance with the King of England, and became a terrible thorn in their sides; which brings me to enquire into the grounds of that war which happened afterwards in the year 1665, between England and the United Provinces.

The account the Dutch give us of the occasion of this war, is a very confused one. They say, that in the year 1664, a squadron of men of war was sent by the Court of England to the coast of Africa under the command of Captain HOLMES, who took several forts and settlements from them

near Cape Verde, and on the coast of Guinea; and that thereupon they sent DE RUYTER thither, and retook those places; whereupon the English afterwards seized upon several Dutch ships in Europe, and make prize of them. That they had no mind to enter into a war with the English, but were ready to make them any reasonable satisfaction, and to refer the matters in difference between the two nations to any indifferent umpire; but the English court were all for war.

The English on the other hand give a very different relation of this matter: for, in the month of April 1664, as appears by the journals of Parliament, the Lords and Commons of England resolved, That the wrongs, dishonours and indignities done to his Majesty by the subjects of the United Provinces, by invading his rights in India, Africa, and elsewhere; and the damages, affronts, and injuries done by them to our merchants, were the great obstructions of our foreign trade: and that his Majesty be humbly moved to take some speedy and effectual course for redress thereof, and for prevention of the like for the future. And in prosecution thereof, they declare, that they will with their lives and fortunes assist his Majesty against all opposition whatsoever. To which his Majesty answered, That he would examine the particular complaints which had been made to the Parliament; and thereupon appoint his Minister at the Hague to demand speedy justice and reparation from the States General. And in November following his Majesty sent a narrative to the two houses, containing a state of the differences between the two nations, signed with his own hand, which still remains among the records of the house of Lords.

A narrative of the wrongs done the English by the Dutch.

His Majesty acquainted them in this narrative, that he had required his Minister at the Hague, to press the States to make him immediate satisfaction for the wrongs and oppressions his subjects underwent, which he had indeed solicited them to do for a year past, and would now bear no longer delay. That the States having deferred returning any answer to his Majesty for some months, with great passion and noise sent orders to their several admiralties to equip great numbers of ships of war, and to work night and day upon them, Sundays as well as other days of the week; and gave orders also for raising a great body of land-forces with all expedition. That in August last, 1664, they pretended to have received news that captain HOLMES, who with one of his Majesty's ships had convoyed some merchants of the Royal African company to the coast of Guinea, had assaulted and taken possession of a Fort near Cape Verde, belonging to their West-India Company: whereupon the States peremptorily required that his Majesty would forthwith give orders for the re-delivery of that Fort to them. The King thereupon assured the Dutch Ambassador that he had given no commission or order to Captain HOLMES for that purpose: that he expected him shortly home, when he would strictly examine his proceedings, and cause exemplary justice to be done, as well in redelivering the Fort, as in punishing the person, if his conduct deserved it. But this answer did not satisfy them; new orders were given for equipping out more ships, and for raising men and money; and they published in their prints, that what HOLMES had done was by his Majesty's warrant and authority.

That his Majesty, notwithstanding these repeated provocations, did not lay aside all hopes of

CHAP.  
VI.

bringing the States General to a better temper, but put them in mind how readily he had redressed every complaint they had made to him since his restoration; while instead of any return of this kind from them, though his Minister at the Hague had importuned them for eighteen months to release twenty ships taken by them upon the coast of Guinea, and to give satisfaction for other affronts and damages in the East-Indies; and that tho' he had received no answer to these demands, he had nevertheless forborn to do himself justice. He put them in mind also of the declarations published by their commanders in the East and West-Indies, interdicting all trade and commerce with all other nations to the natives of those countries, whom they called their subjects, thereby endeavouring to exclude the rest of Europe from all commerce with the Indies.

They had indeed, his Majesty observes, by their industry, and by acts of horrible injustice and cruelty, planted themselves in stronger forts and factories than any Prince in Europe had done, especially in the East-Indies, where their naval power was very great. And when they found the natives inclined to traffick with other nations, as they generally desire to do, being in truth universally weary of the oppressions of the Dutch; some of their ships are sent to lie before those ports, and to declare they are at war with this or that Prince, or city, and thereupon prohibit all other nations to have any traffick with them; and thus did they restrain the English ships under the command of the Earl of Marlborough two years since from going to—and taking in a great cargo provided for him there by the East-India company, forcing his Majesty's ships to return empty home. That in some places they had compelled the English factories to remove, and in others incited the natives to rise and cut them in pieces, and assisted them in such attempts with their shipping, of which his Majesty had undeniable evidence.

The Lord Chancellor Clarendon in a speech to both houses of Parliament, in the year 1665, also takes an opportunity of remembering some of the inducements which prevailed with the English to enter into this war. He takes notice, that every day brought fresh accounts of the depredations of the Dutch on our merchants in all parts. That instead of delivering up the island of Poloroon (one of the spice-islands in the East-Indies) which they were obliged to have done by treaty, they hindered our ships from taking in their lading of such merchandize as our factors had provided; upon pretence that the ports, where the merchandize was ready to be embarked, were in the dominions of some Princes whom they had declared to be their enemies, and therefore they would not suffer any traffick to be maintained with them. That they published the like declaration, and challenged the same sovereignty in Africa; and by virtue thereof would not suffer our ships to trade upon that coast, where we had a trade long before the Dutch. That when the King had equipped a fleet to send to Africa, in order to procure justice to our merchants, and the Dutch desired they might remain in harbour, as theirs should, till matters could be amicably adjusted; at that very moment they sent to their Admiral DE RUYTER in the Straights, to make war upon the English in Guinea. "And in truth, says his Lordship, this stratagem of pretending one thing, and intending another; of promising

The grounds of the Dutch war related by Clarendon.

"with

CHAP.  
VI.

"with all solemnity, and never designing to perform; of swearing this day not to do a thing, when they had already served their turn, and actually done it the day before clandestinely; is the highest pitch of their wisdom of state, by which they govern their affairs, and delude their neighbours."

That notwithstanding his Majesty had seized on some of the Hollanders ships in Europe, upon intelligence of DE RUYTER's being sent to Africa to make war upon his subjects there; neither the ships or merchandizes were confiscated, till he had received certain information that DE RUYTER had put his orders in execution, by taking and seizing the English settlements and shipping upon that coast.

The reasons of the Dutch war summed up.

From the whole it appears, that the English had three very substantial reasons to come to a rupture with the Dutch, besides the business of the flag, and dominion of the sea, which the States at this time disputed. 1. They detained the island of Poloroon in the East-Indies, contrary to several solemn treaties and engagements to deliver it up; whereby we were entirely deprived of the spice-trade, at least of nutmegs and mace, the most valuable part of it. 2. They had seized several English ships and merchandizes, and kept the men prisoners in loathsome dungeons, where many of them perished, though his Majesty's ministers had solicited their release from year to year. 3. They kept guard-ships upon the coasts of India and Africa, to prevent the English and all other European nations dealing with the natives. Either they pretended the country was in alliance with them, and had agreed to trade with them alone; or they were at war with the Dutch, and then that was a sufficient reason for blocking up their ports, and seizing such boats and vessels as would come on board the English and other Europeans: so that in fact, they had actually monopolized all the valuable branches of trade in India and Africa; which was the real occasion that the merchants of England, and of London in particular, applied themselves to the Parliament for a redress of these grievances, apprehending their foreign trade to be expiring, unless the Dutch were obliged to do them justice. And I find the Speaker of the house of Commons, in a speech to his Majesty, declaring, that they had examined the reasons of the decay of trade, and that they found the English merchants undermined by fraud and practice, and sometimes beaten out of the East and West-Indies, in Turkey and Africa, by our neighbours the Dutch; who, besides the insufferable indignities offered to his Majesty and the crown of England, had in a few years spoiled his subjects to the value of seven or eight hundred thousand pounds. And his Majesty in a letter to the States, just before the breaking out of the war, declares his great desire to maintain peace with them; but he saw with regret they went not about to give any satisfaction to the English for their losses; concluding with a protestation before GOD and man, That the States would be guilty of all the inconveniences and fatal consequences, if a speedy reparation was not made.

I have been the more diligent in searching the journals of Parliament, and examining the histories of these times, because there is a party in England so fond of the Dutch, that they are ever endeavouring to blind our eyes, and to cover the treachery and barbarity of their high and mighty friends; and lay the whole blame of our entering into this war

on the English court, when we had, according to them, no real occasion for a rupture: but if the facts above recited are true, as I can aver they are from undeniable evidence, the nation must have been the merest bubbles in nature to have borne such injuries and insults any longer: nay, we must have been content to have lived under the dominion of the Hollander, at least at sea, and given up every branch of our foreign trade; and as it is, we suffer them to retain and monopolize the spices of India, which are of more value than all the rest of the trade to India and Africa put together.

Having enquired into the reasons and grounds of this war, I proceed to give an abstract of the progress and success of it. In November, 1664, the grand fleet of England rendezvous'd at Spithead, being commanded by the Duke of York, Lord High Admiral; and the Dutch keeping close in their ports, the English intercepted their merchant-ships as they came home, to the number of one hundred and thirty, and condemned them as lawful prize, (in retaliation for DE RUYTER's taking the English forts and ships on the coast of Africk) without any previous declaration of war: for as the Dutch made no scruple of falling upon the English in that part of the world without proclaiming war, they could have no manner of reason to complain of the like usage in Europe, tho' their friends are to this day very loud upon the injustice of such a proceeding. The citizens of London were then so filled with resentment against the Dutch, for their usurpations upon their navigation and commerce, that towards the speedy equipment of the grand fleet, they advanced his Majesty an hundred thousand pounds, and after that another hundred thousand at his Majesty's request; for which the Parliament returned them thanks at their next meeting, and voted his Majesty five and twenty hundred thousand pounds, to be raised in three years, towards carrying on the war: and on the fourth of March 1664-5, the war was formally proclaimed at London, the declaration bearing date the second of February before. The States now finding the English in earnest, applied themselves to the French King, desiring his mediation, or rather assistance, against the English, as appeared afterwards; for upon his British Majesty's refusing to submit to such terms as France was pleased to prescribe, they declared for the Dutch. In the mean time the grand fleet of England being assembled, to the number of an hundred and eight men of war and fourteen fire-ships, was divided into three squadrons: the Red, commanded by the Duke of York in person, assisted by the Admirals PENN and LAWSON; the White, by Prince RUPERT, assisted by MINNS and SANSON; and the Blue, by the Earl of Sandwich, under whom was CUTTINS and ASCOUGH; stood over to the coasts of Holland, to prevent the joining of the Amsterdam squadron with that of Zealand: but the Dutch not appearing (after taking many rich merchant-ships, as they were entering into their harbours) the English fleet returned to their own coasts; which gave the Dutch an opportunity of uniting their squadrons, amounting in the whole to an hundred and three men of war, and eleven fire-ships; commanded by Admiral OPDAM, and under him by EGBERT CORTENAER, Vice-Admiral of the Maes; old EVERTSON, Vice-Admiral of Zealand; and CORNELIUS VAN TROMP (son of the famous VAN TROMP) Vice-Admiral of Amsterdam. On the first of

June

CHAP.  
VI.The first  
sea-fight  
between  
the Eng-  
lish and  
Dutch af-  
ter the re-  
formation.

June the Dutch fleet stood over to the coast of England, and on the second these two great naval powers faced each other; but the Dutch, 'tis said, avoided fighting that day, as being ominous to them, having been beaten that day twelve years by General Monk. The next day, the third of June 1665, about four o'clock in the morning, the battle begun between the squadron commanded by the Duke of York, and that commanded by Admiral OPDAM; wherein the Duke plied OPDAM so warmly and so close, that, according to the English account, he beat his own fire upon him, which taking the powder-room, that great ship, with all the men, were blown up into the air. The Dutch say, this accident is to be imputed to the treachery of an English gunner on board the Dutch Admiral. But it is very probable, that neither one nor the other can give any certain account of the matter, any farther than that Admiral OPDAM, after an obstinate dispute with the English Admiral, was blown up by his own powder; soon after which, victory declared on the side of the English: for at the same time three Dutch ships which seconded their Admiral, being fallen foul of one another, and entangled with their masts and rigging, were all burnt at once by an English fire-ship. After the death of OPDAM, Vice-Admiral CORTENAER hoisted the Admiral's flag, being then closely engaged with Prince RUPERT; but this gentleman being killed, and his son soon after, the Lieutenant, despairing of success, fled with all the sail he could make, with the Admiral's flag at the top-mast head, which the Dutch say was the occasion of their defeat, the rest of the fleet steering after him. The Vice-Admiral of Zealand also made the best of his way, leaving his squadron to shift as they could: and only young TROMP with twelve men of war retired with any order to the Texel. And had not the English shortened sail, it is said, scarce any of the Dutch fleet had escaped: which is attributed to one BRUNKARD, of the Duke's bed-chamber, who, 'tis said, carried those orders to Sir JOHN HARMAN, Captain of the Admiral, when his Highness was laid down to sleep, without his knowledge; for which he was afterwards called to an account in the House of Commons. Of the Dutch eighteen capital men of war were taken, and fourteen sunk or burnt; and eighteen thousand of their men killed or taken prisoners. The English lost one ship and about a thousand men, besides some persons of distinction; particularly the Earl of Falmouth, the Earl of Marlborough, the Earl of Portland, the Lord Muskerry, and the Honourable Mr. BOYLE, with Rear-Admiral SANSON and Sir JOHN LAWSON.

The people in Holland began to be very mutinous upon this defeat, and particularly the clergy, representing it as an effect of the divine vengeance. But the States, after their usual manner, soon silenced their preachers, and executed two or three of their Captains for cowardice, as an example to the rest, who were most of them very defective in their duty.

On the fifth of July following the grand fleet of England put to sea again, and visited the coast of Holland, but returned without meeting the enemy; and a detachment from the fleet about the same time attacked a fleet of India-men, and other merchant-ships under a strong convoy of Dutch men of war, in the port of Berghen in Norway; but had not the success they proposed,

VOL. II.

the Dutch being protected by the Danish Governor. However in their way home they had the good fortune to take eight Dutch men of war, two India-men valued at a million sterling, and twenty other merchant-ships. And a few days after the English fleet fell in with eighteen sail more of Hollanders, of whom they took the greatest part, and amongst them four men of war.

In the mean time the Bishop of Munster, being supported by the King of England, fell upon the Dutch by land, and entering the province of Overysse, reduced great part of it, making himself master of most of the towns on the river Yssel. Whereupon the Dutch applied themselves again to the French King for assistance, who sent them a good body of troops, which repulsed the Bishop, and obliged him to retire out of the Dutch territories; and not long after compelled him to make a separate peace, without the concurrence of his ally, the King of Great Britain, who had supplied him with large sums of money. And now the French as well as the Danes, having made themselves parties in the war, sent considerable reinforcements to support the Hollanders against England, which was at the same time in a manner depopulated by the most terrible plague that has been known in this part of the world. The English Sectaries also threatened a rebellion, and kept a correspondence with the Dutch, and some of them actually went into their service: but under all these calamities the English bravely resolved to continue the war.

The grand fleet of England being commanded in the year 1666 by Prince RUPERT and General Monk, who, in order to prevent a conjunction between the French and Hollanders, had divided their forces, Prince RUPERT sailing westward, toward the French coast, while Monk attended the motions of the Dutch. On Friday the first of June 1666, the Dutch fleet, amounting to ninety sail and upwards, were discovered lying at an anchor near Newport: MONK, who had then but fifty sail under his command, bore down upon them however, and there followed a most obstinate battle, which lasted three days; and had not Prince RUPERT with his squadron then come in to MONK's assistance, great part of the English fleet had been lost; for the old General seem determined not to retire as long as his ship would swim, notwithstanding the inequality of numbers. Upon the Prince's joining MONK, the fight was renewed the fourth day, when the Dutch thought fit to retire to their coasts, and the English returned to their harbours, being in no condition to pursue them. Both sides, however, made rejoicings for the victory, though both had sufficient occasion to mourn, for the Dutch lost fifteen men of war, and the English ten, and most of the ships in both fleets were miserably shattered.

Before the end of July the English and Dutch fleets met again to contest the empire of the ocean, as my author expresses himself, being about an hundred sail of a side; when the English obtained an uncontested victory, destroying twenty sail of Dutch men of war, and pursuing them to their coast; where Sir ROBERT HOLMES burnt an hundred and fifty sail of merchant ships in their harbours, with the town of Brandaris in the isle of Schelling. The Dutch, however, to keep up the spirits of their people, who upon this ill success grew very mutinous, put to sea again the

11 S

latter

cond sea-  
fight.The third  
sea-fight.

CHAP.  
VI.

latter end of August, and endeavoured to join the French squadron; but Prince RUPERT, who commanded the English, discovering them in Bologne road, they were forced to hawl their ships close to the shore to avoid another engagement; however, if a sudden storm had not happened, which obliged the Prince to stand off to sea, they had most of them been burnt or sunk, but by this lucky accident they escaped to their own coasts. The French making some attempts in the mean time to join them, had a ship of a thousand tons taken by the English; whereupon their Admirals also thought fit to retire to their harbours. The common people in the United Provinces, upon this ill success, were ready to break out into rebellion, and five of the seven provinces cried out for peace, declaring they could no longer contribute to the charges of the war; and what increased these distractions were the feuds between their Admirals DE RUYTER and VAN TROMP, who charged their ill success on each other. VAN TROMP's commission hereupon was taken away by the interest of the Pensioner DE WITT, who espoused DE RUYTER's quarrel; and several of the Sea-Captains were executed or imprisoned on a pretence of cowardice, or breach of orders, to pacify the people. But to the great consolation of the Dutch and their allies, the latter end of this year, on the fatal second of September, a day highly celebrated by their friends in England, the greatest part of the city of London was burnt to the ground. Under which calamity, with the plague that preceded, and that formidable confederacy of the Dutch, French, and Dane, against Britain, with a rebellion of the Scots, and perpetual conspiracies of the English Puritans against the government; it is amazing how the nation was able so bravely and successfully to defend itself.

The fire of London happened during this war.

The Dutch desire peace.

During the treaty they attack part of the royal navy laid up at Chatham.

The Dutch finding little to be got by the war but blows, and thinking that under such a load of calamities the English would not be averse to peace, sent over to propose an accommodation; and by the mediation of Sweden a treaty was agreed on to be held between the contending Powers at Breda, which was opened in the beginning of May 1667: and the preliminaries being settled, whereby it was agreed, that each party should keep what they had possessed themselves of, either before or during the war; the English looked upon the war to be at an end, and neglected to equip out their grand fleet, as they had done the preceding years; which neglect, or piece of good husbandry, as some styled it, who were, as they pretended, for saving the publick treasure, brought a lasting disgrace upon the nation: for the Dutch taking advantage of this conduct, sailed with a fleet of seventy men of war into the mouth of the Thames; and being piloted by some English Puritans, made themselves masters of the fort of Sheerness. They afterwards detached a squadron, which sailed up the Medway as high as Chatham, and burnt three or four first and second rate men of war, which lay there unrigged, and brought off the hull of the Royal Charles; all which they performed with the loss only of two or three of their men of war which were run on ground, and set fire to by themselves; after which they fell down the river. This bold attempt put the city of London in the utmost consternation, expecting a visit of the like nature; whereupon fourteen or fifteen ships were sunk in the river, and several batteries raised upon the banks to pre-

vent their sailing up: but the Dutch thinking they had ventured far enough, contented themselves with the success they had met with, and soon after stood out to sea again, sailing to Portsmouth, Plymouth, and other ports, in hopes of destroying more of the royal navy; but these places having been taken better care of than Chatham, they were prevented doing further mischief: whereupon they returned to the Thames mouth, where Sir EDWARD SPRAGO with a squadron of English men of war disputing their passage, they put to sea a second time, and insulted the English coast, till they could no longer dissemble their knowledge of the peace being concluded at Breda, and then retired to their own coast. By this treaty, according to the preliminaries, each party was to remain in the possession of what they had acquired, and the Dutch were to acknowledge the right of the Flag to belong to the English. The French by a subsequent treaty agreed to deliver up to the English their share of St. Christopher's, and such other islands in the West-Indies, as they had made themselves masters of during the war.

CHAP.  
VI.

Articles of peace.

Conquests of the French in the Spanish Netherlands.

While these treaties were negotiating at Breda, the French King had made a surprising progress in the conquest of the Spanish provinces of the Low-countries, which indeed hastened the conclusion of them; for neither the Dutch or English desired to see him in possession of these provinces; but the Dutch were most nearly concerned, seeing him advance so near their frontiers: having therefore first ordered a considerable addition to be made to their forces, in order to join the Spaniards if more peaceable measures could not prevail, they offered their mediation in conjunction with England to compose the differences between the two crowns; which the French King having accepted, a treaty was set on foot at Aix la Chapelle, and brought to a conclusion on the second of May, 1668; wherein it was agreed, that France should retain the possession of all such towns and places as she had taken during this war, viz. of Bruch, Aeth, Fort Scarpe, Doway, Tournay, Oudenard, Lisle, Armentiers, Courtray, Bergues, and Furnes, with their territories, domains, seigniories, appurtenances, and dependencies.

The insolence and vanity of the Dutch on the procuring of this peace and the former, is not to be imagined, for which they not many years after paid very dear; they caused medals to be struck containing vile reflections on the most potent Kings in Europe; in one of which they represented Holland resting upon trophies, with an inscription, purporting, "That they had assisted, defended, and reconciled Kings, restored the free navigation of the seas, and peace and tranquillity to Europe, by the force of their arms." Some differences arising afterwards between the commissioners of France and Spain on settling the limits of the new conquests in Flanders; and the French court declaring, that unless they had speedy satisfaction given them on that head, they would do themselves justice; the Dutch, notwithstanding their late vain boasts and insolent behaviour, began to be in some consternation; and for the security of their frontiers applied themselves to England, desiring to enter into a still stricter alliance with that kingdom; which being agreed to, and Sweden also coming into it, this treaty was afterwards denominated, *The triple Alliance*; whereby each of these powers was to furnish fifteen thousand

The triple alliance.

CHAP.  
VI.The occa-  
sion of the  
second  
Dutch war.

land land-men for the defence of the Spanish Netherlands, besides a considerable fleet with forces on board; but the French King soon found means to render this alliance abortive. In the mean time the States of Holland, by the influence of the Pensionary DE WITT, passed a perpetual and unalterable edict, as it was called, for the support of the liberty and preservation of the union and tranquillity of the province of Holland; wherein it was provided that the dignity of Stadtholder should cease and never more be revived; which was sworn to by all who had any places or employment in the government, and even by the Prince of Orange himself, not without some compulsion we may suppose; which the King of England, whose nephew he was, and who had in a manner taken him into his protection, could not but resent. Thus the Dutch wantonly and unnecessarily, by their brutal behaviour, drew upon them the indignation of two mighty Kings, who weary of their repeated insolence, if we are to credit our writers of secret history, had agreed to divide the United Netherlands between them, reserving only the province of Holland for the Prince of Orange, of which they proposed to make him Sovereign; but this is a piece of history which has but a very slender foundation to support it. I make no manner of question however, but that both Kings had a design to humble this proud State, and not without reason; for it is not conceivable with what contempt they treated them, and all other sovereign Princes in the East-Indies, Africa, and elsewhere; representing themselves as Lords of the ocean, and superior to all the Powers in Europe, and as such they actually opposed and hindered the subjects of Britain, France, Portugal, and all other nations, from carrying on a free trade in those parts of the world: and not content with these injuries and indignities at a distance from home, they made the infirmities and misfortunes of sovereign Princes their sport and entertainment in Holland, every day producing some ludicrous medal or picture to expose them. So self-sufficient they seemed to be, as to despise and laugh at the rest of the Powers of Europe; which surely from an upstart commonwealth, composed of the most boorish and clownish part of mankind, was never to be born. Whatever colour their own historians, or their brethren of England, who seem much more in the interest of the Dutch than of their native country, may put upon these practices, the Lord Clarendon, whose ingenuity and veracity is applauded by most of our own writers, speaking of the Dutch to the Parliament of England, has these expressions, viz. "They load us with such reproaches, as the civility of no other language will admit the relation of; they have a dialect of rudeness so peculiar to their language and their people, that it is high time for all Kings and Princes to oblige them to some reformation, if they intend to hold any correspondence or commerce with them."

The first effects the Dutch felt of the French King's indignation was on the side of Munster, which Prelate the States having sufficiently provoked, was easily induced, on an assurance of being supported by France, to arm against the Hollanders. His next step was to dissolve the alliance between England and Holland, which he found but little difficulty to bring about; the Dutch having in several instances broke the treaty of Breda, and continued to disturb and obstruct the

trade of the English in India, and other parts of the world. Should it be admitted that the French King had no reason to fall upon the United Provinces, besides the vindication of his honour; certain it is, if the English had suffered those encroachments on their foreign trade they complained of, to pass without any resentment, they would in a short time have had very little left; and as it was, such has been the management of their friends in England, from that day to this, that they have supplanted us in almost every valuable branch of it.

But the friends of the Dutch observe, that tho' the war with that State should be admitted to be just on the part of the English, yet it was not honourably begun; for that we fell upon their Smyrna fleet in the channel in the beginning of March 1671-2, before the war was proclaimed: but if we are to give as much credit to facts related in the English Gazette, as to Dutch surmises, this was pure accident, and altogether owing to the obstinacy and insolence of the Dutch, in refusing to strike to us, as they had agreed to do at the treaty of Breda. The account given of this occurrence in the English Gazette is as follows:

"Whitehall, Wednesday, March 13. Five of his Majesty's frigates cruising by the isle of Wight, met with the Dutch fleet of Smyrna men, and others of about fifty sail, convoyed by six men of war; and of their merchant-men twenty at least carried between twenty and forty guns a-piece. When our frigates came near them, we shot to make them strike and lower their top-sails; which the Dutch refusing to do, our frigates shot through and through them; and though they then lowered their top-sails, yet they refused to strike, upon which the fight began. This happened about three of the clock that afternoon, and continued until night, at which time three more of our frigates came in. Thursday, the next morning the fight began again, and continued all that day. In the evening were taken five of their richest merchant-men; and Captain JOHN HOLMES in the Gloucester boarded their Rear-Admiral and took her; but she was so shattered and torn, that she sunk within a few hours in his possession. This Squadron was commanded by Sir ROBERT HOLMES in the St. Michael; the Earl of Ossory, Vice-Admiral, in the Resolution; and Sir FRETCHVILLE HOLLIS, Rear-Admiral, in the Cambridge; Captain LEGG commanded the Fairfax, Captain ELLIOT the York, Captain FOWLIS the Diamond, and Captain WATSON the Success, who all behaved themselves with great gallantry." This in a late writer's words, must have been the most impudent assertion that ever had the sanction of public authority, if it was false, for the thing might have been disproved by a thousand witnesses in a week's time; so many gentlemen of quality are here named, who commanded the several ships engaged, that the government could not have been rendered more contemptible than it must have been on their return to London, if the relation was not true. What could it avail the government to have procured Sir ROBERT HOLMES to have affirmed the truth of this story, when the Earl of Ossory, and so many persons of honour were upon the spot, and could have contradicted him? And there is this further reason to believe there was no premeditated design of falling upon this

CHAP.  
VI.

this fleet, and making prize of it, namely, that Sir ROBERT HOLMES had but five frigates with him, who would no doubt have had a much stronger squadron, if such a thing had been intended; and indeed the Dutch, to give an air of probability to the story, affirm that the English squadron consisted of thirty or forty sail; but we cannot depend on their veracity in giving a relation of this or any other engagement between them and the English, who usually fute the story to their circumstances.

An alliance between France and England against the Dutch. War declared. The swift progress of the French arms in the United Provinces, an. 1672.

The Kings of France and England having entered into an alliance against the Dutch, the Duke of Monmouth in pursuance of that treaty, embarked with six thousand British troops in the beginning of April 1672, to join the French army in the Low Countries, war having been declared in both kingdoms the seventeenth of March preceding. In the beginning of May the French King divided his army, consisting of an hundred and twenty thousand men, into three bodies, with which he attacked the United Provinces in three different parts, while the Bishops of Munster and Cologne attacked them in a fourth; and such was the weakness and consternation of the Dutch, notwithstanding all their boasts and vain inscriptions, which they had stamped on their medals but a very little before, that they made no manner of defence: inso much, that the French King within the space of two months over-run three of the seven provinces, viz. Guelderland, Overysse, and Utrecht, and made himself master of most of their great towns, some of which had been deemed impregnable, with very little opposition; the French King keeping his court at Utrecht this summer.

The first sea-fight in the second Dutch war.

In the mean time DE RUYTER, the Dutch Admiral, having assembled a fleet of men of war, consisting of an hundred sail and upwards; and having the advantage of the wind, attacked the united fleets of England and France in Solebay, upon the coast of Suffolk: but was so warmly received, that after a terrible slaughter he was obliged to retire, being pursued by the Duke of York, Admiral of the English, to the coast of Holland. This train of misfortunes put the Dutch in the utmost confusion; the people grew head-strong, and publicly arraign'd the conduct of their magistrates, and threatened their destruction, unless the Prince of Orange was declared Stadtholder; which the DE WITTS, who had so long governed the State, were not able to prevent: and the perpetual edict, which excluded the Prince from any share in the government, was immediately repealed. Their next step was to lay the province of Holland under water, whereby they effectually stopped the progress of the French King's arms, till they could form their alliances, and join the Germans, who were marching to their assistance; for all the Prince of Orange could do with the little army he had assembled (notwithstanding he was restored to his ancient honours and command) was to cover such parts of the country, as were most liable to be invaded.

John De Witt the Pensioner and his brother torn in pieces.

The advancement of the Prince of Orange proved the destruction of CORNELIUS and JOHN DE WITT, who had ever opposed him, and procured the perpetual edict for excluding him from the government; and such was the rage of the people against these two Ministers, whom they charged with betraying their country to the enemy, and with all the calamities that had befallen them, that one of the brothers was stabbed in the

street, but not mortally, for which fact indeed CORNELIUS DE WITT, being afterwards charged with a conspiracy against the life of the Prince of Orange, of which his Judges neither acquitted or convicted him, but sentenced him to be banished, probably to give him an opportunity to escape; his brother DE WITT the Pensionary went in his coach, and a greater equipage than ordinary, to fetch him out of prison: whereupon the mob rose, knocked down both the Pensionary and the Prisoner, as they were coming down the stairs of the prison, and afterwards tore them in pieces; nor did their fury stop there, but they cut their hearts in pieces, and distributed the flesh among their friends to be broiled and eaten; a strain of brutality not to be paralleled in history, and yet were not any of the offenders brought to justice for it.

CHAP.  
VI.

The Hollanders still finding their affairs desperate, sent three of their Deputies into England to implore peace, whereupon King CHARLES sent a solemn embassy to his ally the French King at Utrecht, to see how he stood inclined, and to assure the States by the way, that he never intended their destruction, but to bring them to reasonable terms. The war however was still carried on by sea and land, and three battles more were fought between the English and Dutch at sea the following summer, viz. the 28th of May, the 4th of June, and 11th of August, in all which the English had the advantage, and obliged the Dutch to retire into their harbours; but the French squadron not doing their duty, their victories were not so compleat as might have been expected. The Dutch keeping close and not venturing to sea afterwards, the English had projected a descent upon their coast, but were prevented putting it in execution by a furious storm, which arose at the instant they were about to land; tho' there are some superstitious writers which impute that disappointment to a miraculous alteration of the tides, contrary to the course of nature. In the first naval fight the Earl of Sandwich was blown up in the Royal James, with a thousand men; and in the last, Admiral SPRAGG. The Dutch also lost Admiral VAN GHENT, and some other officers of note: and in the West-Indies the English took the island of Tobago from them.

The Dutch desire peace.

Three Sea-fights between the English and Dutch in one summer.

The latter end of the year 1673, the United Provinces having entered into an alliance with Spain and the Emperor, and the English being ready to clap up a peace with them, the French King found he should not be able to maintain the conquests he had made; and therefore having extorted large sums from all the towns he had possessed himself of, he retreated with his army out of the Dutch territories, retaining scarce any place of note except Maestricht: whereupon the three provinces which had for some time been dismembered from the rest, were upon their earnest application united to the body, and their deputies admitted again into the assembly of the States General. About the same time the dignity of Stadtholder and Captain-General was confirmed to the Prince of Orange, and settled upon his heirs male.

The French abandon the Dutch territories.

A treaty of peace was concluded about the same time between England and the United Provinces; whereby the right of the flag was again acknowledged by the Dutch, and it was agreed that all places that had been taken by either party should be restored, and that the States should pay his British Majesty eight hundred thousand patacoons.

A treaty of peace between the English and Dutch.

CHAP.  
VI.

200,000l. paid by the Dutch, towards the charges of the war.

patacoons, amounting to near two hundred thousand pounds; which is a demonstration to me of the success of this war, notwithstanding our historians in general make it a very unfortunate undertaking. Nor had the English any reason to put an end to it at this time, if the growing power of France had not made them apprehensive of the Grand Monarch's designs against the liberties of Europe. The Dutch may magnify the courage and conduct of their young hero the Prince of Orange as much as they please, but if the English had not changed hands at this time, their State must have been inevitably ruined; and perhaps they were not less obliged to the English for their preservation now, than they were to Queen ELIZABETH for their first establishment.

Still the war continued between the Dutch, the Germans, Danes, and Spaniards, on the one side; and France and Sweden on the other: and the French King in the campaign of 1674, made himself master of the duchy of Burgundy, or Franche Comte; but the Confederates having assembled an army of sixty thousand men, endeavoured to put a stop to the further progress of the enemy, which occasioned the memorable battle of Senef, where both sides claimed the victory, but neither had any great occasion to rejoice, the slaughter being great on both sides, and very little advantage gained by either.

Upon the peace with England, the Dutch had proposed to carry on the war against the French by sea as well as land, and accordingly fitted out a strong squadron under DE RUYTER, to attack Martinico, and other French settlements in the West-Indies; while VAN TROMP was ordered to harrahs the coasts of France, and make a descent in Normandy, where some malecontents had promised to join them; but they were unsuccessful in both these attempts, and returned home without effecting any thing: The Dutch had the good fortune however to make themselves masters of the town of Grave, while their allies the Germans were beaten in two engagements on the Rhine. About this time the province of Guelders offered the Prince of Orange to make him their sovereign under certain limitations; but the Prince finding the rest of the provinces alarmed at the proposal, thought it most prudent to discountenance the offer.

The sovereignty of Guelderland offered to the Prince of Orange.

Liege, Dinant, and Huy taken by the French.

Limburg taken.

In the campaign of 1675, the French took the towns of Liege, Dinant, and Huy, before the Confederates marched out of their winter quarters, which the Dutch excuse on account of the Prince of Orange's being taken ill of the small-pox at that time; but when the Prince was recovered, and had assembled an army of forty thousand men, he was nevertheless forced to be witness of the taking of Limburg by the French soon after. The allies of the States, the Danes and Brandenburgians, had much better success against the Swedes, who were upon the point of being driven out of Germany. The Imperialists also obliged the French to retire over the Rhine; and upon the Moselle, the Duke of Lorraine having laid siege to Triers, and the French General, Marshal CREQUI, marching to its relief, was entirely defeated; but found means however, with some of his troops, to throw himself into the place, which he defended bravely for a month; after which, expecting no relief, he was obliged, with his garrison, to surrender prisoners of war. The Prince of Orange about the same time having laid siege to Binch, a little town between Mons and Charleroy, took

CHAP. VI.

it, and demolished the fortifications; and the campaign of the northern Confederates concluded with the taking of Wismar, a considerable seaport on the Baltick, from the Swedes; but the Dutch suffered very much the latter end of this year by storms and inundations.

All parties seeming now desirous of peace, the King of Great Britain offer'd his mediation, which was readily accepted, and Nimeguen appointed for the place of congress: The French however made great efforts, and raised a prodigious army against the next campaign, especially in Flanders, where the French King commanded an army of fifty thousand men in person, the Duke of Luxemburg another great army upon the Rhine, and the Duke of Noailles a third in Rouffillon. The French having ravag'd and plunder'd the Spanish Flanders to the very gates of Hult and Sas Van Ghent, laid siege to Conde, which the Prince of Orange attempted in vain to relieve, the place being taken by storm on the 26th of April, 1676; and those within the town put to the sword, except 1200 men who capitulated for their lives.

The treaty of Nimeguen begun.

Conde taken by the French.

And Bouchain.

The French King immediately after laid siege to Bouchain, which the Prince of Orange also not finding himself in a condition to relieve, the place surrendered in less than a week; after which his most Christian Majesty returned to Versailles, and the armies went into quarters of refreshment. The Prince of Orange however reassembling his forces about the beginning of July, and being joined by some reinforcements from the German Princes, laid siege to Maastricht, one of the strongest towns on the frontiers of the United Provinces, and then in possession of France. Here were many brave actions performed on both sides, the bastions and out-works being taken and retaken several times; in which service, 'tis said, the English troops, who composed part of the Prince of Orange's army, signalized themselves; but the Confederates being much weakened by the siege or sickness, and the French advancing with a superior force to the relief of the town, the Prince was forced to raise the siege after he had lain before the place near two months; which ill success made the States very desirous of peace, while their allies the Imperialists having taken Philippsburg this campaign, were no less zealous for continuing the war.

Philippsburg taken by the Imperialists.

Part of Sicily revolts from Spain.

III success of the Dutch fleet in the Levant.

De Ruyter kill'd.

Success of the Dutch squadron in the Baltick.

Messina and some other cities of Sicily having a little before this time revolted from the Spaniards to the French, the States sent a strong squadron of men of war into the Mediterranean, under the command of Admiral DE RUYTER, to the assistance of Spain, which arrived in the road of Milazzo in September 1675. They had several smart engagements with the French fleet near Sicily; but were defeated in every one of them, the French, as the Dutch relate, being double their number; but the greatest loss they sustained, was in their brave Admiral DE RUYTER, whose left foot was shot off, and great part of his right thigh by a cannon-ball, of which he died soon after, in the seventieth year of his age, of which he had serv'd his country fifty years with remarkable success.

The States sent another squadron into the Baltick under the command of Admiral TROMP (much about the same time that DE RUYTER sail'd to the Mediterranean) to the assistance of their allies the King of Denmark against Sweden; in which expedition the Dutch met with better success than in the former, for having join'd the Danish fleet, they attack'd the Swedes on the eleventh

CHAP.  
VI.

eleventh of June 1666, and gave them a total defeat, destroying nine of their men of war. Of which success the Danes taking the advantage, made a descent upon Schonen, and took the towns of Ellingsburg, Landskroon, and Christianstadt, but were soon after beaten out of them again by the Swedes.

Religious  
disputes in  
Holland.

While the States were thus engaged abroad in a very extensive war, religious feuds began to grow very high at home. In their Universities were many learned men who espoused the Arminian doctrine, and not a few among their clergy and magistrates, whereby the ancient animosities were revived, which so distracted these provinces about the time of the Synod of Dort. In Zealand the Prince of Orange deposed the ministers and magistrates who were supposed to be of that persuasion (for all of them are obliged publicly to profess Calvinism, or they cannot be admitted to any preferment in Church or State). The city of Amsterdam however, were not for these severe proceedings, and took a quite different method to allay these heats and animosities among their people; namely, by declaring in their consistories, That there was no essential or real difference between the opinions of the contending parties.

Valenciennes, Cambray, and St Omer's, taken by the French.

The French, as usual, were very early in the field the next campaign; and on the first of March 1676-7, laid siege to Valenciennes, and by the seventeenth the garrison consisting of three thousand men surrendered prisoners of war. On the twenty-second of the same month the French King in person sat down before Cambray, which surrendered also the fifth of April; and the Duke of Orleans laying siege to St Omer's at the same time, the prince of Orange march'd to it's relief, but was defeated near Cassel; whereupon the castle of Cambray and St Omer's immediately surrendered.

The Prince of Orange married to the Princess Mary.

Upon the conclusion of the campaign in the year 1677, the Prince of Orange came over into England to make his court to the Princess MARY, eldest daughter to the Duke of York. In which it is reasonable to suppose his Highness had more views than one. As, 1. The uniting the interests of England with those of the United Provinces. 2. The rendering his own authority in those provinces more considerable. And, 3. as the Duke of York had no son at that time, he could not but entertain some hopes that the Princess he married might probably one day succeed to the crown of England; but surely he was not then sanguine enough to expect that she should exclude herself to set him on the throne, as in fact she did at the Revolution. He had abundant reason no doubt to make her a very compliant husband, but as to affection I don't perceive there was a great deal more on his part than is usual in political matches; tho' certain it is, she was a fine woman, and wanted neither sense or good-humour; and if any thing, had more of the latter than was consistent with her true interest, being through an easiness of temper surprized sometimes into schemes very disadvantageous to herself and family by those about her. But to leave these reflections, and proceed to the match. The King having given his consent to it, possibly with a view of advancing both their interests, the one being his sister's son, and the other his brother's daughter; the Duke, who never flatly contradicted the King in any thing he insisted on, thought fit to resign himself wholly to his Majesty's pleasure on this occasion, though he was not without some apprehensions of the consequences that

might attend it. And on the fourth of November, the Prince's birth-day, in the evening, the marriage-ceremony was performed at St JAMES'S palace by the Bishop of London.

CHAP.  
VI.

The Prince having thus happily finished this great affair, represented to his Majesty the weak condition of the Spanish Netherlands, and the probability of their falling into the hands of France, if England did not interpose to prevent it: whereupon, 'tis said, that the King agreed, that unless France would restore to the Emperor, the Duke of Lorraine, and the States, all that had been taken from them during the war; and to the Spaniard the towns of Aeth, Charleroy, Oudenard, Courtray, Tournay, Conde, and Valenciennes; he would join the Confederates with a considerable army, and compel France to come into these terms by force. And upon the refusal of the French King to submit to this demand, his British Majesty did accordingly raise an army, and join the Confederates in the Low Countries; but the Dutch running precipitately into a separate peace, the terms afterwards agreed on were less advantageous to their allies than they would otherwise have been; but this is a transaction which belongs to the succeeding year: We must first attend the Prince and Princess into Holland, who arrived there the latter end of November 1677, and observe the events of the following campaign in the Netherlands, which began exceeding early, for before the end of February 1677-8, the French King marched at the head of a great army into the Low Countries, and having made a feint, as if he intended to lay siege to Mons or Namur, and drawn the Confederate forces that way, he on a sudden bent his march towards Ghent and Ypres, of both which towns he made himself master before the end of the month. Hereupon his British Majesty, as has been intimated already, raised an army of twenty thousand men, as fine troops as any in Europe, and embark'd them for Flanders with incredible expedition, which actually did, when nothing else could, prevent the remainder of the Spanish Netherlands falling under the power of France; and would the Dutch now have resolved to continue the war, they and all their allies might have had ample satisfaction for their losses; but they had made their own terms advantageously, and had not honour enough to consider their allies of the Empire, who came into the war in their greatest distress, purely to prevent their being swallow'd up by France: Tho' it must be said to the honour of the Prince of Orange, that he laboured with all his might to defeat this separate treaty, which was carried on between France and Holland at Ghent, while the Ambassadors of France, and of all the Confederates, were negotiating a general peace at Nimeguen, where this treaty being at first begun, and with some intermissions concluded, afterwards obtain'd the name of the Peace of Nimeguen; before the conclusion whereof, however, his British Majesty obliged the French to abandon all their conquests in Sicily, and resign the whole island into the hands of the Spaniards again; that being of too great consequence to the trade of England in the Levant to be left under the dominion of France.

Ghent and Ypres taken by the French. England becomes a party in the war.

But notwithstanding the States and the French had agreed upon all other matters, his most Christian Majesty refusing to evacuate the towns in Flanders which were to be restored to Spain, 'till the places taken from the Swedes in Germany were restored to that crown; the negotiations were

were upon the point of breaking off, and more vigorous preparations made for war than ever: Marshal Luxemburg block'd up Mons, and the Prince of Orange being joined by the English auxiliaries, was marching to the relief of it; but the French Ministers, on the last day given them to declare whether they would evacuate the towns in Flanders or continue the war, consented to the immediate surrender of the places agreed on, and the peace was sign'd that very night. In the mean time the Prince of Orange, either not knowing, or dissembling his knowledge of the peace, attack'd the Duke of Luxemburg in his camp at the abbey of St DENNIS near Mons, on the 14th of August 1678, and obtained a signal victory, though with great slaughter on both sides. The next morning the Prince sent a letter to Marshal Luxemburg, to acquaint him that the peace was concluded; and this seems to be almost the only action in which the Prince of Orange met with success during the whole series of the war, which his friends ascribe to the slowness of their German allies, and the poverty and indolence of the Spaniards, their forces being seldom in a condition to take the field till the French King had taken two or three of the strongest frontier towns. But to proceed; the Spaniards thought fit to accept the conditions the Dutch had procured for them, and their plenipotentiaries sign'd the peace accordingly about the latter end of September, tho' their German allies still stood out in expectation of better terms.

I should have taken notice, that while the French were wavering and starting difficulties about the execution of the treaty between them and the Dutch, England entered into a defensive alliance with the United Provinces, wherein it was agreed, that the Kings of France and Spain should be obliged to conclude a peace upon the following terms, viz. That the towns of Aeth, Charleroy, Oudenard, Courtray, Tournay, Conde, Valenciennes, and St Gislain, with the duchy of Limburg and town of Binch, should be restored to his Catholick Majesty, with all the towns and places the French had possessed themselves of in Sicily; but that the duchy of Burgundy, or Franche Compte, should remain in the hands of France. And as to France and the United Provinces, all places should be restored which had been taken on either side; whereby the Dutch recovered that important city of Maestricht and its dependencies. As to the Emperor and Empire, France was to restore all that had been taken from the Emperor, or the Princes of the Empire, during the war; and the duchy of Lorraine was to be restored to the Duke of that name; but we find several alterations made in this scheme afterwards, occasioned by the too great eagerness of the Dutch to conclude the peace; for the Spaniards were not only obliged to renounce their interest in the duchy of Burgundy, or Franche Compte, comprizing the city of Besançon and its district; but the towns of Valenciennes, Bouchain, Conde, Cambray, Aire, St Omer, Ypres, Warwick, Warneton, Poperinghen, Pailleul, Cassel, Bavay, and Maubeuge, with their appurtenances and dependencies, were also yielded to France, which had been taken from the Spaniard in this war, together with the town of Dinant, which the King of Spain engaged, that the Bishop of Liege, the Sovereign of it, should transfer to France.

By the treaty between the Emperor and France, which was concluded at Nimeguen, the third of February 1678-9; it was agreed, That the peace concluded at Munster anno 1648, should be the foundation of this treaty and remain in force, where it was not altered by the present treaty. And the city of Philipsburg, which had been taken by the Emperor during the war, should be confirmed to him by his most Christian Majesty, as the city of Friburg, which had been taken by the arms of France, should be confirmed to that crown.

His most Christian Majesty agreed also to yield up to the Duke of Lorraine all that duchy (except the capital city of Nancy and its dependencies, which were by this treaty transferred to France) and the Duke of Lorraine was obliged to lay out a road half a league broad through his country, from the confines of France to Alsace, for facilitating the march of the French troops, which were to have a passage through his country at pleasure, and all the villages and lands included in those roads were to be the property of his most Christian Majesty. But his said Majesty, in consideration of the town of Nancy, did transfer to the Duke of Lorraine the city of Toul; and if the revenue of Toul did not equal that of Nancy, the French King was to pay what was deficient. And by this treaty the Emperor agreed to restore the famous Prince WILLIAM EGOON of Furstemburg to his liberty; the occasion of whose confinement has been already related in the modern History of Germany.

Soon after the peace of Nimeguen, the States General sending a solemn embassy to the French court, and insinuating that their Ambassadors should be received with the same marks of honour as those were who came from crowned heads, were for some time refused audience by the French King: but the Dutch tell us, that having shewn that these honours were granted them by HENRY IV, and LEWIS XIII, and even by his Majesty himself in the year 1660; and that Ambassadors from the Venetians, the Duke of Savoy, and the Swiss Cantons, were not denied this piece of respect; his most Christian Majesty at length complied with their demands, and they were admitted to their audience. But probably the principal inducement to this piece of complaisance was the hopes of prevailing with their High Mightinesses to stand neuter, while the grand Monarch made himself master of the rest of the Spanish Netherlands and Alsace. The next year, anno 1680, the French proposed that the States should enter into a defensive alliance with that crown, at which the British court taking the alarm, their Minister at the Hague declared, that his Majesty could not look upon this proposal otherwise than as intended against him, and used very moving arguments to dissuade the States from entering into an alliance with France, which had the desired effect. The French however did not lay aside their design upon Flanders and Alsace, but sometimes under pretence that the Spanish commissioners would not fairly adjust the limits with them in Flanders; and at the others, that his Catholick Majesty retained the title of Duke of Burgundy, though that province was surrendered to France, threatened a sudden rupture with the Spaniards. Upon the Rhine also the French erected courts or chambers of re-union, as they called them, by virtue whereof they extended their

dominion over several places and countries in the possession of the Imperialists and German Princes, under pretence that they belonged to some cities or fortresses yielded to them by the late treaty of Niméguen, or some former treaties; and not content with this, they proceeded to surprize and seize the Imperial city of Strasbourg, the capital of Alsace, in the year 1681; at that time a town of as good trade, and as populous as most in Germany, but the fortifications miserably neglected, after the custom of the Germans: they have since been mightily improved by the French, while the trade is no less decayed under their tyrannical government; garrisons and citadels ever proving the bane of traffick. The French, about the same time, took possession of almost the whole province of Luxemburg in the Netherlands, blocking up the capital city thereof with their troops. Whereupon, the Dutch looking upon a rupture on that side to be inevitable, entered into an alliance with Sweden, and proposed the same to the court of Britain, which his British Majesty declined, but assured the States, that if the French possessed themselves of any considerable place in Flanders, he would declare war against them. The Emperor also finding no end of the encroachments of the French upon the Rhine, under colour of re-unions, came into the alliance with the States and Sweden for the defence of the German frontiers, as did several other Princes of Germany; at which the French King was so exasperated, that he seized on the principality of Orange in France; nor would he be prevailed on to restore it, notwithstanding the British Court espoused the interest of that Prince, and joined with the Dutch in representing the injustice of this proceeding.

But while the Dutch were soliciting the assistance of the English in Europe, it seems they were dispossessing them of their settlements and factories in India. Bantam in Java, the most commodious situation in the east, for carrying on a trade with the Indian islands, was now to be ravished from us by our good friends the Dutch, even in a time of full peace, and when they were begging our protection against their enemies in this part of the world. By the account the Dutch themselves give of this transaction, it is of a piece with the rest of their behaviour towards the English in India. They represent Bantam as a powerful and populous kingdom, where trade flourished extremely by the resort of European nations thither, especially the English; and pretend that the King of this place had made several attempts upon their darling settlement of Jacatra, or Batavia, a town about forty miles to the eastward of Bantam; that they were apprehensive the neighbourhood of this Prince would sooner or later be fatal to them, unless he was subdued: adding, that a favourable opportunity happened in the year 1681, when the old King of Bantam having resigned the government to his youngest son, (the eldest having devoted himself to religion) the people dissatisfied with the young gentleman's administration, deposed him, and taking his brother out of the cloister, placed him on his throne; whereupon the old King resumed the government again, or rather marched to the assistance of his younger son, while the eldest having made himself master of the castle of Bantam, implored the assistance of the Dutch. Our good allies hereupon immediately sent him very considerable reinforcements both by sea and land, and having defeated

the father, and afterwards deposed the son their allies, they usurped the government of the place, seized upon the goods and effects of the English, and other European merchants, and expelled them the island, keeping possession of the English settlement, the most considerable they had in India, without making any satisfaction for the merchandizes they seized, or restoring the factory from that day to this; which is represented by their friends in England as a trifling injury, not worth our demanding satisfaction for, of our good friends the Dutch. But if we consider the situation of the place upon the straits of Sunda, by which the seas of China and India have a communication, and that whoever is master of these straits, and those of Malacca, (as the Dutch now are) have it in their power to restrain all nations from entering the Chinesian seas, or having any intercourse with the Molucca's and Banda islands, of more value for their spices than all the other Indian trade, must acknowledge that a more irreparable damage could not have been done to Britain: though had this been the only stratagem of this kind practised on that side of the world, we might possibly have imputed this enterprize to their fears of the King of Bantam, as is pretended. But it has been the constant practice of the Dutch, to force the Princes and Governors in the Indian islands, either to enter into contracts with them not to sell the product or manufacture of their respective countries to any but themselves; or if they refuse, then to make war upon them, burn and destroy their countries, and massacre the inhabitants. At other times we find them blocking up their ports, and denying entrance to any ships but their own, assuming to themselves the empire of the Indian seas, and all the islands and countries, that lie dispersed in them; and the only reason they suffer us yet to trade to China and some parts of India is, because very little advantage can accrue to Britain from the trade they have left us: and should they deprive us of the whole, they might awaken the most drowsy and indolent amongst us to demand satisfaction of them in Europe. But it must certainly render us despicable in the eyes of all the world, that we suffer that treacherous and encroaching people to deprive us entirely of the spices of the East, without so much as attempting the recovery of them; for it is these alone that render the trade of the Indies valuable. These the Dutch exchange for other merchandizes all over Asia and Europe, and have occasion to lay out little treasure in purchasing the product of other countries. They have this inconceivable advantage by monopolizing the whole, that they set what price they please upon them, which they could not do while the English had a share in the spices; this induced them to enter upon those scenes of cruelty and treachery at Amboyna and Banda, mentioned in the former volume, and afterwards upon this villainous transaction at Bantam, lest we should one day attempt the recovery of what they formerly took from us, or discover some other country where these spices grow; either of which would bring down the price, and put us upon the level with them. If it be alledged, as it often is, that we must not quarrel with the Dutch on any account whatever, I must say we are in a very happy situation: Do we indeed stand in as much need of the Dutch as they formerly did of us, and can no longer subsist without their protection? I should be ashamed to hear any Englishman affirm this;

CHAP.  
VI.

CHAP.  
VI.CHAP.  
VI.

this; not that I am for falling out with them or with any nation whatever, but upon the last necessity. At the same time, I cannot for my life apprehend, why we are not entitled to be fairly dealt with by the Dutch. Where two nations enter into an alliance or confederacy, it is presumed to be for their mutual advantage, and not to give the one an opportunity, under a colour of friendship, of plundering the other of all they have. In partnership, where one shall lay violent hands on what belongs to the other, and then represent the ill consequences of quarrelling with him, would not the world look upon the injured party as a very despicable animal, not to assert his right? Shall a man be esteemed litigious, because he refuses to part with his own and his family's subsistence? Or, will that people be thought unreasonable who insist upon restitution from a faithless ally, who has dispossessed them of part of their territories and traffick in a time of full peace, and this in an hundred instances. The English East-India company upon this last instance of Dutch treachery, applied themselves to his Britannick Majesty for redress, who ordered his Minister at the Hague to demand satisfaction and restitution of the factory at Bantam; which the Dutch indeed promised from time to time, without any intention of performing; at least never any thing was done in it from that day to this, for which it is not very difficult to account.

Courtray  
and Lux-  
emburg  
taken by  
the  
French.

The French continuing their encroachments in the Spanish Netherlands on one pretence or other, the Spaniards, in hopes of being supported by the Germans and the Dutch, declared war against them in the year 1683; but being unprovided of men and money, they lost Courtray and Dixmude in one campaign, and Luxemburg the next, when the Dutch marching to their assistance, the French King was content to grant them a truce for twenty years, which was signed the 15th of August 1684, at Ratisbon; but their High Mightinesses could not procure any satisfaction to be made to the Prince of Orange for his principality, which the Grand Monarch had taken possession of, as is above related.

Duke of  
Mon-  
mouth's  
expedi-  
tion to  
England.

Some English Malecontents, who had been engaged in conspiracies against King CHARLES II, of whom the Duke of Monmouth, natural son to that Prince, and the Earl of Argyle, a Scot, were the chief; being fled into the Low Countries, and hearing of the death of his Majesty, concerted measures with their friends in Britain, soon after King JAMES's accession to the crown, to raise an insurrection; the one in the west of England, and the other in Scotland, and bought up great quantities of arms and ammunition in Holland, to be employed in that service; of which the King, who succeeded his brother in the throne on the sixth of February 1684-5, having intelligence, required the States to deliver them up: whereupon the Duke of Monmouth retired to Brussels; but the Marquis de Grana, Governor of the Spanish Netherlands, receiving a letter from King JAMES, intimating that the Duke was fomenting a rebellion against him, his Grace was obliged to leave the Spanish territories; and returning into Holland again, he prepared, with the Earl of Argyle, for their intended expedition against Britain. Dr BURNET acquaints us, that Argyle having met with a rich widow at Amsterdam, zealous for the cause, she furnished him with ten thousand pounds, with which he bought arms and ammunition for the enterprize, and

that the Duke of Monmouth would have embarked for Scotland with him, but that Argyle did not offer him the command, and on the contrary, advised his making a diversion in England; which the Lord GREY, FERGOUSON, and the Lady HARRIOT WENTWORTH, who constantly attended the Duke, were very zealous for. He adds, that in point of conscience, the Duke and this Lady looked upon their cohabitation to be very innocent, his Grace having been married to the Duchess before he was capable of making a choice, (though he was above the age of consent the law requires) and therefore they held the marriage with the Duchess was void. That the Lady HARRIOT had so possessed him with her enthusiastical conceits, that they fancied their living together was approved by God. The Duke pawned his jewels to buy arms for the intended expedition, which were pretended to be shipped for Spain: but the Earl of Argyle being first ready, embarked the second of May 1685, and setting sail the same day with three ships, arrived on the fifth of the same month at the isles of Orkney, in the north of Scotland, where sending his Secretary and Surgeon on shore, they were both seized by the inhabitants, and sent to Edinburgh. The Earl therefore meeting with such discouragements here, set sail again for the west Highlands, and on the 20th landed near Dunstaffnage, a ruinous castle of his own, where he left a garrison, and marched afterwards through the counties of Argyle and Lorn, inciting the inhabitants to join him: but all the men he could raise did not amount to above four or five thousand, with whom he marched to the isle of Boot, and encamped; but being pursued by the King's troops, they fled from one island to another, leaving their spare arms and ammunition in the castle of Ellengreg, with an hundred and fifty men to defend it; but two or three small frigates coming before the castle the same day, the garrison fled, and the King's forces took possession of the place, where they found five thousand small arms, five hundred barrels of gun-powder, and the rest of the rebels ammunition. Argyle in the mean time, marched through his own country of Argyleshire towards Glasgow, being closely pursued by the King's forces; and the rebels not finding themselves in a condition to make head against them, soon after dispersed; and Argyle himself running into a bog up to the neck, was knocked down and taken prisoner the 17th of June, and beheaded the 30th of the same month at Edinburgh, standing outlawed for high-treason on a former conspiracy against the government. With him was taken RUMBOLD the maltster, who proposed the assassinating the late King CHARLES II, as he came by his house, called the Rye-house, in Hertfordshire, who was also hanged at Edinburgh; and thus ended this ill-concerted insurrection in Scotland.

Argyle's  
expedi-  
tion to  
Scotland.

The Duke of Monmouth having hired a man of war of thirty-two guns, and three small vessels in Holland, embarked arms for five thousand men upon them; of which the English Envoy at the Hague having notice, pressed the States to stop them in their ports: and one of the small vessels was actually seized, but the Duke used such diligence, that he escaped out of the Texel with the rest on the 24th of May. The States, as well as the Prince of Orange, were very averse to this expedition of the Duke's, for they were conscious if it succeeded, the Prince must never expect to

The  
Duke of  
Mon-  
mouth  
embarks.

mount the throne of England; therefore King JAMES no sooner made application to them to send over the six British regiments in their service, but they complied with him, and readily offered to enter into any other measures to defeat the Duke's designs. His Grace has been blamed by some of his friends for entering so precipitately on this enterprize, but as Argyle was at this time making a diversion in his favour in Scotland, and himself and his friends were in danger of being seized in Holland, he was really under a necessity of embarking as he did, and could not defer it. The Duke meeting with cross winds, and a tempestuous passage, was longer at sea than he expected, it being the 11th of June when he appeared before the port of Lyme in Dorsetshire. He went on shore with his small body, which did not amount to an hundred men, the same afternoon; and having in a short prayer implored the blessing of heaven on his undertaking, he set up his standard in the market-place of Lyme, and ordered a long declaration, containing the reasons of this expedition, to be read to the people; in which he charges King JAMES (the Duke of York, as he there styles him) with usurpation and tyranny; with assassinating the Earl of Essex, and even poisoning his brother, the late King CHARLES; declaring that he will pursue the said Duke of York as a mortal and bloody enemy, and endeavour as well with his own hand as the assistance of his friends, to have justice executed upon him: and so exceeding popular was the Duke of Monmouth at this time, that multitudes of the common people came over to him. On the other hand, King JAMES having acquainted the houses of Parliament with the Duke's being landed at Lyme, they attended his Majesty with an address, promising to stand by him with their lives and fortunes, and immediately passed a bill of attainder of high-treason against the Duke, desiring his Majesty would set a reward of five thousand pounds upon his head. From Lyme the Duke marched to Taunton-Dean in Somersetshire, having increased his army to five or six thousand men; and here he took upon him the title of King, and was solemnly proclaimed. On the 21st of June, he advanced to Bridgewater, the militia constantly retiring before him, and some of them deserting over to him, which made their officers cautious of engaging, finding them more inclined to the Duke than to the King; but his Majesty sending down a body of regular troops against the rebels, under the command of the Earl of FEVERSHAM and the Lord CHURCHILL, this soon altered the case, and the Duke of Monmouth received a total defeat at Sedgmore, near Bridgewater, on the sixth of July 1685; the Lord GRAY, who commanded his horse, being taken prisoner the next day, and on the eighth, the Duke himself was found in a ditch covered with fern, in a very abject condition, and being brought prisoner to London, was beheaded on the fifteenth of the same month. But to return to Holland.

Steps towards the Prince of Orange's expedition to England.

The English Envoy at the Hague presented memorial after memorial to the States upon the affair of Bantam to very little purpose, he demanded also, that Dr BURNET, and some others, who had been convicted of a conspiracy against his Majesty might be delivered up; but as the Dutch were now concerting measures to incite an insurrection in Britain themselves, and the Doctor was made use of by them as an instrument to effect it,

their compliance was not to be expected in this particular, any more than the sending back the six British regiments in the service of the States, which that Minister also demanded; for this had been to defeat their grand design. And it must be confessed, that the measures King JAMES had taken ever since the defeat of Monmouth to render his subjects malecontents, had given the Dutch but too much cause to promise themselves success upon an invasion of Britain: for he had introduced Popish officers into civil and military employments in all the three kingdoms, and claimed and actually exercised a power of dispensing with the laws. He set up an ecclesiastical commission, prosecuting the clergy and universities in an unprecedented manner, displaced many Protestant officers in the army, and supplied their rooms with Irish Papists; and according to some, was entirely governed by Jesuitical councils: but I take the Jesuits to be a more subtle generation than to have put the King upon such measures as must infallibly ruin both themselves and him. There is much more reason to believe, that he was put upon doing many things by false friends in his councils, on purpose to render him odious to his people; for it may be demonstrated at this day, that some who had the greatest influence on his councils, kept a constant correspondence with his enemies, and his bigotry for his religion so blinded him, that he did not sufficiently animadvert on their conduct, though he had repeated intimations of their treacherous practices: even the birth of the Prince of Wales, which the King's friends looked upon to be of vast advantage to his cause, by the reports which were industriously spread of his being spurious, was made instrumental to his ruin. The Prince of Orange indeed sent over a Minister to compliment the King on his birth, and ordered the same prayers to be used in his chapel at the Hague for the Prince of Wales as were used in the churches in England; but still it was suggested by the friends of the Prince of Orange, that this was a cheat put upon him by the Jesuits, in order to exclude the Princess Royal his consort from the throne. The common people of England, who were terrified with the apprehensions of Popery and Slavery breaking in upon them, made no difficulty in crediting the story of the Prince's illegitimacy, and the Dutch had more reasons than one to promote the belief of it. While King JAMES remained upon the throne, they had sufficient reason to believe he would insist upon a share in the Indian trade, and a restoration of the islands and factories they had taken from us: that both the English and French would endeavour to reduce their naval force, and restrain that insolent State within due bounds. Whereas if they could give a King to Britain, and, according to their own expression, take us out of the hands of France, they had reason to believe the English would be made subservient to all their designs; that they should hear no more of their encroachments on the British trade: on the contrary, when the Prince of Orange should be at the head of the English forces, they might rest assured he would defend their frontiers against France, and perhaps enlarge them at the expence of other nations. And there appeared to be but little hazard or difficulty in bringing about a Revolution in Britain; for the ministry there had put King JAMES upon doing so many illegal and unpopular things, with an intention of ruining him; that his subjects were in general become male-

Male-administration of King JAMES.

The States reasons for assisting the Prince of Orange in his expedition.

CHAP.  
VI.

malecontents, and even the soldiers and seamen in his pay ready to desert on the first appearance of a competitor: the very Prime Minister and others of the council, many of the Bishops, the Nobility and Gentry, the Generals and Admirals had joined in an invitation of the Prince of Orange, to secure them against Popery and Slavery; inasmuch, that if the Prince had the least spark of ambition in him, which his friends say he did not want, so favourable an opportunity of placing himself at the head of the Protestant interest, and of a much more extensive confederacy, was not to be resisted. For the Emperor, and most of the German Princes, Sweden, Denmark, Spain, and even the Pope himself, were ready to support him in his intended enterprize, under an apprehension that if England should unite its forces with France, the rest of the powers of Europe would soon lie at the mercy of Lewis XIV. The Prince of Orange therefore, and the States having all imaginable encouragement to attempt a Revolution in England, ordered a fleet of fifty sail of men of war, and five hundred transports, to be prepared with all expedition, selecting fourteen or fifteen thousand of their best troops to be embarked on board the fleet, whose places were supplied by others from Sweden, lest the French King should attack the Netherlands in their absence. Of these preparations King JAMES received intelligence from Mr SKELTON, his Minister at the Hague, and from the French King, assuring him that this armament was intended against England; but the Ministers in the English Court, who had the greatest influence over that Prince, and actually maintained a correspondence with his enemies, lulled him asleep, and made him neglect the proper means for his defence, till every thing was ready for the descent. The French King, apprehending of what consequence the deposing of his ally, the King of England, might be to his ambitious designs, proposed the sending over twenty or thirty thousand men to his assistance; which King JAMES's treacherous ministers had the address to prevail with him to refuse. Then his most Christian Majesty threatened the Dutch, that if any attempt was made upon his ally the King of England, he would look upon it as done to himself, and immediately invade their frontiers; but the confederacy against him was so great, and the bringing Britain into it of that importance, that his threats were slighted, and only served to make his enemies more industrious in their preparations.

King JAMES being at length convinced of his mistake, and finding he had been betrayed and flattered into measures the most opposite to his interest, hoped to retrieve the affections and esteem of his subjects, by undoing all that he had done for two or three years past. Accordingly he endeavoured to reconcile himself to the Bishops and Universities, by restoring to them their authority and privileges. He restored also the charters of London, and other corporations which had been taken from them, displaced many of the Popish officers and magistrates he had introduced, and disgraced the minister, by whose advice he had been principally governed and precipitated into those fatal measures.

The  
Prince of  
Orange  
embarks  
his forces.

In the mean time the Prince of Orange proceeded to embark his forces, and published a declaration, dated the tenth of October 1688, N. S. wherein he charges King JAMES with male-administration in all the instances above-cited, and

with imposing a pretended Prince upon the nation: Assuring them, that this expedition was intended only to procure a free Parliament, to whom he should refer the enquiry into the legitimacy of the pretended Prince of Wales; to restore the constitution of the government to its ancient legal state, and secure the people against Popery and arbitrary power.

The States also published their reasons for assisting the Prince of Orange with a fleet and army; wherein having taken notice of the invitation given him by the nobility, clergy, and gentry of the kingdom, they declare the apprehensions they had of the French King, if King JAMES should render himself absolute, and join his forces with his most Christian Majesty; suggesting that nothing less than the absolute ruin of their state would probably be the consequence of it: for both Kings, either for reasons of state, or out of an aversion to their religion, would probably endeavour to subdue their country; which this expedition therefore was intended to defeat. From whence, and what has been already observed on this head, it is evident, that it was their own preservation and interest which put them upon this invasion, more than any regard to their good friends on this side the water; though for some years after the Revolution, it was thought impossible ever to pay that immense debt of gratitude we owed to these our high and mighty deliverers. But to proceed; the Prince having assembled a fleet of fifty men of war of the line, twenty-five frigates, as many fire-ships, and between four and five hundred transports, on which he embarked ten thousand foot and four thousand horse, set sail from the Briel the nineteenth of October; being accompanied by the Earl of SHREWSBURY, the Earl of MACCLESFIELD, the Lord Viscount MORDANT, the Earl of ARGYLE, the Lord WILTSHIRE, the Lord PAWLET, the Lord ELAN, son to the Marquis of Halifax, the Lord DUNBLAIN, son of the Earl of Danby, Admiral HERBERT, Colonel SIDNEY, Mr RUSSEL, Sir ROWLAND GWYN, the infamous FERGUSON, and Dr BURNET. The Prince himself was on board a frigate of thirty guns, with some few officers and intimate friends of the Dutch nation, and took his station in the centre of the fleet during the voyage. The flag he carried at the top-mast-head had the arms of the Prince and Princess wrought in it with these words, viz. *The Protestant Religion and Liberties of England*. The fleet had not been many hours at sea before there arose a terrible storm, which drove them back to Helvoetsluys, but without any considerable loss.

On the first of November the Dutch fleet put to sea again, and stood to the northward, the original design, 'tis said, being to have landed in Yorkshire; but the wind coming about easterly, it was afterwards determined to sail for the channel, and on the third of the same month they past by the mouth of the river Thames, where the Earl of Dartmouth lay at anchor with the English fleet. The fourth, the Prince was driven by a strong gale beyond Torbay, the place where he designed to have landed; but the wind shifting to the west on a sudden, they were soon after brought into the bay; and the next day, the fifth of November, 1688, they landed most of their troops.

But it is very natural to enquire here, what was become of that gallant army and fleet which King JAMES had raised and fitted out to prevent a descent,

CHAP.  
VI.

The  
Dutch  
land in  
Torbay.

CHAP.  
VI.

a descent, that the Prince of Orange met with no opposition at sea, or at his landing? It has been intimated already, that the military men were not less disgusted than other people, by breaking many Protestant officers, and supplying their rooms with English or Irish Papists; which disgust JOHNSON, and some other pamphleteers, had heightened, by exposing the administration. A declaration also was published by the Prince of Orange, wherein he addresses himself to the army, and tells them, he was come to rescue them from Popery and Slavery, and hopes they would not be made instruments of enslaving the nation, and ruining the Protestant religion; for when that was done, they must expect to be cashiered, as the English officers and soldiers in Ireland had been, and many Protestant officers in England, for adhering to the constitution and religion established: That they must not flatter themselves to be better used in the end, and therefore invites them to join his forces, promising rewards to those who should come over to him.

A letter from Admiral HERBERT also was printed and dispersed in the English fleet; wherein he represents the ruin that attended them and their families, if they delayed to join the Prince of Orange; and how infamous they would appear to posterity, if by their means the Protestant religion, and the liberties of their country should be destroyed. That he was well assured the best part of the army, as well as the nation, were in the Prince's interest, and exhorts them to be beforehand with the army, in assisting an enterprize which was undertaken to secure all that was valuable to them.

King  
JAMES's  
prepara-  
tions a-  
gainst the  
Dutch.

King JAMES was not backward in his naval preparations to defeat the designs of the Dutch; for we find him in June 1688, dispatching his cruisers to observe the motions of their fleet; and not long after a squadron of men of war, under the command of Sir ROGER STRICKLAND, put to sea to intercept their passage, if they should come out, or at least to follow them and prevent their disembarking any troops, whether they bent their course northward, westward, or into the Thames mouth; for the King had no manner of intelligence for what part of England they were designed; and it seems probable their own Commanders were not determined what course to steer, till they found how the winds would favour them. The King seems most apprehensive of their landing in the north, by his marching a body of his troops that way, and leaving the west in a manner destitute of Forces. The first of October following, the English fleet being increased to three-score sail, of which thirty-eight were of the line of battle, the Lord Dartmouth was appointed Admiral. The King, in his written instructions to that Lord, acquaints him, that he had undoubted advice, that a great and sudden invasion from Holland was intended, and that therefore he should hasten the equipping out such ships as were not come to the appointed rendezvous, and endeavour to prevent the approach of the Dutch fleet to the English coasts, and their making a descent. The English fleet being at the Gunfleet (in the mouth of the river Thames) at this time, a council of war was held, and by a great majority, it was resolved to continue there; though some were of opinion it was more advisable to proceed to the coast of Holland, and there attend the coming out of the Dutch fleet: which last proposal, says my author, Secretary BURCHET,

certainly carried great weight, *Had there been a real design of obstructing the Prince of Orange in his passage to England.* But instead of that, matters were so concerted and agreed among the flag-officers and commanders, who had frequently private meetings, that had the Admiral come fairly up with the Dutch, it would not have been in his power to have done much against them: while they were busied in these cabals, the Dutch fleet passed by the Gunfleet in sight of them. And since the Commanders were thus affected, it is no great matter whether the storm which Mr BURCHET mentions, or their own inclinations, prevented their weighing anchor, and sailing in pursuit of the Dutch; they would have left their anchors behind them, 'tis presumed, if they had been very zealous for the service. There is little heed to be given to what some officers alledge as an excuse for deserting their Prince, that the winds upon all occasions favoured the Dutch, and were contrary to the English. Nor does there seem to be any thing very miraculous in the case, notwithstanding Dr BURNET's opinion of the matter, that people who were resolved not to fight, should seldom meet, and if they did, should part without striking a stroke; but heaven is ever dragged in to favour what we desire should succeed; this having been found one of the most effectual stratagems to wheedle the vulgar in all ages. But to proceed in Mr BURCHET's account of this transaction: So soon, says he, as the English fleet could purchase their anchors, they put to sea, and bent their course westward; and coming in a few days off of Torbay, the Dutch ships were there discovered. We had not viewed them long, e'er a storm arose, and forced us out of the channel; but returning in a little time, we gave the Dutch an opportunity of seeing what our strength might have enabled us to do, *Had our inclinations been to treat them as enemies.* (From whence it is evident, it was want of inclination, and not the want of favourable winds, that prevented their falling upon the Dutch at this time; as it is extremely probable therefore it was before, when they pretended they could not get up their anchors at the Gunfleet.) But the Prince being landed, says Mr BURCHET, and all things favouring his designs, the Admiral sailed with his fleet to the Downs; where several officers known, or at least suspected, to be Roman Catholics, being dismissed from their employments, an humble address was presented from the rest to his Highness the Prince. After considering which account, I believe few people at this day will be of opinion, that heaven need have been at the expence of a miracle, to prevent the English fleet's falling upon the Dutch.

The Prince of Orange being landed, proceeded no less prosperously on shore than he had done at sea; for he advanced on the eighth of November to Exeter without opposition, and made his entry into that city in a triumphant manner; but the people did not seem at first very forward in coming in to him, having been terrified not long before with the executions that followed the Duke of Monmouth's rebellion. Here therefore the Prince thought fit to make a halt, till he was better informed how the country stood affected; and he was in such suspense at this time, that it was once debated, whether he should not re-embark his troops, and return to Holland. But a few days mightily altered the face of his affairs; for on the fifteenth of November great numbers of

gentry

CHAP.  
VI.

gentry of the neighbouring counties came in, and offered their assistance to the Prince; among whom were Sir EDWARD SEYMOUR, Sir WILLIAM PORTMAN, Sir FRANCIS WAR, &c. who proposed the entering into an association for their mutual defence, and an instrument was drawn up accordingly; wherein they promise to the Prince, and to each other, to maintain the cause they were engaged in, and never to separate, till their religion and liberties were secured to them in a free Parliament. And if their enemies should attempt any thing against the life of the Prince, they solemnly engage to pursue them, and all they found in arms against them, with the utmost severity of a just revenge; which being signed by all the nobility and gentry about the Prince, was sent to Oxford and other parts of England, where it was signed by many more. In the mean time several others of the nobility and gentry joined the Prince at Exeter, particularly the Lord COLCHESTER, son to the Earl Rivers, an officer of the life-guards, and some private troopers of that body, the Earl of ABINGDON, Mr RUSSEL, and others; and soon after the Lord CORNBURY, son to the Earl of Clarendon, a Colonel of dragoons lying at Salisbury, who pretending orders from the King to dislodge the enemy from an advanced post, brought over his own regiment, and great part of the regiments of horse of Berwick, St Albans, and Fenwick, and at the same time there were insurrections in the Prince's favour in all parts of the kingdom.

King JAMES, observing how the Prince's troops every day increased by the defection of his own, which he apprehended could only be prevented by his appearing at the head of them, and entering upon immediate action, went down to Salisbury; but to his great surprize, some of the principal officers of the army desired the Earl of Feversham, their General, to acquaint his Majesty, that though they were ready to spill the last drop of their blood for him on any other occasion, they could not in conscience serve against the Prince, who was come over with no other design than to procure the calling of a free parliament, for the security of their religion and liberties. And the next day the Lord CHURCHILL, who commanded a brigade, and was the King's principal favourite, and consequently the last man whose fidelity he could have suspected, went over to the Prince, accompanied by the Duke of GRAFTON, and many of his officers and soldiers which served under him. And now the King being entirely convinced there was no confiding in his troops, thought fit to return towards London, being deferred on the way thither by Prince GEORGE of Denmark, the Duke of ORMOND, and others of the first quality, who left him at Andover: and arriving at Whitehall the twenty-sixth of November, he found the Princess ANNE of Denmark also had privately retired from thence the night before; which so affected him, 'tis said, that in the anguish of his soul, he cried out on entering his apartment, *God help me, my own children have forsaken me!*

In this distress his Majesty summoned the Lords spiritual and temporal, which were about town to attend him, and give him their advice; who unanimously agreed, That considering the present state of the kingdom, it would be advisable for his Majesty to grant a general pardon to all who had joined the Prince before or since his landing; and that he would depute some Lords to treat

CHAP.  
VI.

with the Prince concerning a suspension of arms, and bringing matters to an accommodation: and lastly, to quiet his people's fears, would immediately turn all Roman Catholick Officers and Magistrates out of their employments. And accordingly a proclamation was issued the 30th of November, for the Parliament to assemble the 15th of January following, and the Marquis of Halifax, the Earl of Rochester, and the Lord Godolphin, were appointed Commissioners to treat with the Prince of Orange. As to the turning out the Roman Catholicks, his Majesty declared he would leave that also to the Parliament. The Commissioners set out from London to attend the Prince the second of December, the Earl of Clarendon having deserted his Majesty the day before. On the sixth of December the King received an express from the Commissioners, acquainting him that they were to meet the Prince that night at Amesbury; but the next day there arrived a second express, to acquaint him that the Prince would meet them at Hungerford, and had sent the Earls of Clarendon and Oxford to them to desire their proposals in writing: which answer was not only looked upon as dilatory and evasive, but to express a contempt of his Majesty; and the rather, because the Earl of Clarendon, the professed enemy of the Marquis of Halifax, the King's principal commissioner, was sent with it. But however that was, the Commissioners on the eighth of December delivered to the Prince their proposals in writing; wherein they observed, that as all the causes of complaint enumerated by the Prince seemed to be referred to a free Parliament, the King had actually issued a proclamation for their meeting, and they were come to adjust all matters necessary to the freedom of elections, and the security of their sitting.

In answer to this, the Prince required, 1. That all Papists, and unqualified persons, should be disarmed and removed from all employments. 2. That all proclamations against him and his adherents should be recalled. 3. That the Tower of London and Tilbury-Fort be put into the hands of the city. 4. That if his Majesty remained at London during the sitting of Parliament, his Highness might be there also with an equal number of troops; or whatever distance the King thought fit to be, his Highness might be at the same distance. 5. That the armies be thirty miles from London, and no other forces admitted into the kingdom: and for prevention of the French landing, that Portsmouth be put into such hands as should be agreed between his Majesty and the Prince. And lastly, that part of the publick revenue be assigned for the subsistence of the Prince's troops.

With these conditions his Majesty did not at first seem to be dissatisfied; but the Popish party about him, 'tis said, dreading nothing more than the meeting of the Parliament, concluding that their religion at least must be given up, and some of them sacrificed to atone for past miscarriages; and the King himself apprehending that such limitations would be put upon the prerogative, and his power so restrained, that he should be little more than a cypher in the government; but chiefly relying on the assistance of the French King to restore him to his dominions, he determined to retire into France, and wait for a favourable opportunity, when he might return again with honour. And it was supposed, that the Prince also had some good Protestants about his Majesty, who encouraged

CHAP.  
VI.King  
JAMES  
leaves  
White-  
hall, and  
attempts  
to go be-  
yond sea.

encouraged him in these sentiments, and terrified him with imaginary plots against his life, believing they should be best able to accomplish the scheme they had laid in his absence. But whatever were the motives, in the night between the ninth and tenth of December, the King sent away his Queen and son, an infant of six months old, who landed safely at Calais the next day; and the following night the King took water at Whitehall, in order to embark for that kingdom, leaving a letter directed to his General, the Earl of Feversham; wherein he tells him, that if he could have relied on his troops, he would have had one blow for it, but though there were many brave men amongst them, he had been advised by the General himself, and several other officers, that it was no way advisable to adventure himself at their head, or fight the Prince of Orange with them; therefore he could only now thank those who had been loyal and faithful to him, and hoped they would still retain their fidelity, though he did not expect they should expose themselves at this juncture, but hoped they would keep themselves free from associations, and such pernicious snares. Before his Majesty took water, 'tis said, he ordered the writs which were issued for calling a parliament to be recalled, and in his passage cross the Thames, threw the broad seal into the river; which his adversaries afterwards made an evidence of his abdicating the government.

Upon the King's withdrawing himself, the officers of the army who were about town met at Whitehall, and sent an express to the Prince of Orange to acquaint him with it; assuring his Highness, that they would assist the Lord-Mayor in keeping the city quiet till his arrival there. At the same time the Lords spiritual and temporal, to the number of thirty, which were about the city, assembled at Guildhall, among whom was the Archbishop of Canterbury; and having sent for the Lord-Mayor and Aldermen, drew up a declaration; wherein reciting that his Majesty had withdrawn himself, as they apprehended, in order to depart the kingdom, they unanimously resolved to apply themselves to the Prince of Orange, and to assist his Highness in the obtaining a free Parliament, wherein their laws, liberties, and properties, might be secured; and that in the mean time they would endeavour to preserve the peace and security of those great cities of London and Westminster, by disarming all Papists about the same; which declaration being signed by all the Lords present, the Earl of Pembroke, the Lord Viscount Weymouth, the Bishop of Ely, and the Lord COLEPEPER, were appointed to attend his Highness with it; and to acquaint him that they had taken the keys from Colonel SKELTON, Lieutenant of the Tower, and given the command of it to the Lord LUCAS, which the Prince approved.

The city of London also addressed the Prince, desiring his protection, and that he would repair thither: and another address of the same purport was presented him by the lieutenancy. And notwithstanding the militia were under arms, the mob rose and demolished the mass-houses, plundering the houses of some persons of quality of the Popish religion, particularly those of the Spanish and Florentine Ambassadors, where many wealthy Roman Catholics had lodged their best effects, and where the consecrated plate and utensils belonging to the royal chapels were deposited, as in places of security, and what the mob could not carry away they burnt; neither were they much

interrupted in these riotous practices, either by the militia or civil magistrates, who were most of them secretly pleased to see them exercise their fury against the Papists, from whom they were apprehensive of a treatment of the like nature but a little before. The Lord Chancellor JEFFERIES also fell into the hands of the mob, and was in danger of being pulled to pieces, but was secured by the militia, and carried to the Tower at his own request, as a place where he might be most secure from the insults of the people, who were sufficiently enraged against him, as one of the principal instruments in their late oppressions.

The Earl of Feversham in the mean time having received his Majesty's letter at Uxbridge, (where he lay with part of the army, in expectation of his Majesty's coming down thither) having drawn out the troops, read the letter at the head of them, and afterwards disbanded the army, which contributed to the distractions of the times; the soldiers being destitute of all means of subsistence, and forced to commit some irregularities. The next day happened that universal alarm over the whole kingdom, which obtained the name of *the Irish Fright*; when it was given out that the Papists and Irish regiments were burning and destroying the whole country. And as this report was spread in all parts of the kingdom at the same instant, it is supposed to have been a stratagem of the Prince's Generals, to create in the minds of the people the greater abhorrence of the late administration; as was a former account of the Papists preparing saws, spits, grid-irons, and other instruments of cruelty, in order to begin a persecution against the Protestants, that should equal any of those in the primitive times. Those fictions, how incredible soever, wrought wonderfully upon the common people, and even among those who would be esteemed something above the vulgar, and served to establish the Prince's interest, and to beget in the people the utmost detestation of the late King and his Ministers.

In the mean time his Majesty, by contrary winds, or some other cross accident, was detained upon the coast of Kent near Feversham, when the seamen and fishermen thereabouts taking the liberty to search all vessels that passed that way for Popish priests, as they pretended, pillaged the passengers of what they had; and happening to seize the vessel the King was in, used him a little roughly before they knew him, taking from him four hundred guineas, with some valuable seals and jewels: but a constable of the place at length discovering it was his Majesty, fell upon his knees, and begged his pardon for the rudeness of the mob, commanding them to return what they had taken; but the King distributed the gold amongst them, and kept only the seals and jewels. From hence his Majesty was carried to an inn in the town, and sending for the Earl of Winchelsea, who was at his seat in the neighbourhood, he prevailed upon the King not to leave the nation, but to return to London; and the Privy-Council also hearing where he was, sent some of their number to attend him, and invite him to Whitehall. His Majesty thereupon set out from Feversham on the sixteenth of December, and arrived at London the same night, with his guards and usual splendour, being welcomed thither by the loud acclamations of the people, who made bonfires, rung their bells, and illuminated the streets, as if his Majesty had returned from some glorious expedition; which appeared to be no small mortification to

to the Prince of Orange, who did not expect to have seen any thing of this kind, after the intelligence he had received of his Majesty's being embarked for France: and it is evident this occurrence did a little ruffle the hero's temper, and induce him to forget the respect due to so near a relation and a crowned head; for the King sending the Earl of Feversham to the Prince, kindly to invite him to come to St James's palace, that they might personally confer together of the means for redressing the publick grievances, his Highness, instead of returning any answer, made the Earl of Feversham prisoner, and signed a kind of an order, requiring King JAMES to remove out of his palace of Whitehall the seventeenth instant, to a house of the Dutchess of Lauderdale's at Ham, and commanded the Dutch guards to take possession of the posts about Whitehall that night by force, if the King's guards did not quit them voluntarily. King JAMES hereupon sent for Count SOLMES, who commanded that detachment of the Dutch troops, who were ordered to take possession of Whitehall, and earnestly desired him to let him have his own guards that night; but the Count answering he had positive orders to take the posts at that time, the King bid him do as he was commanded, and the English guards thereupon retired. The Dutch having thus taken possession of Whitehall, three English Lords from the Prince intruded into the King's apartment a little after midnight, when he was in bed, and shewed him the Prince's order above-mentioned for his leaving his palace, and removing to Ham, desiring he would be gone early in the morning, that he might not meet the Prince in his way to London, whither he was to come that day: with which his Majesty answered he would comply, but desired he might rather go to Rochester than Ham, to which the Prince consented; but would not suffer him to have his own guards or coaches to carry him by land, but compelled him, tho' the King urged the rigour of the season and his ill state of health, to go by water to Gravesend. And now, says one of our reverend English historians, the Prince having a clear stage, took this favourable opportunity of making his first appearance in London, (the same day the King was driven from his palace) where he received the congratulations of the nobility and gentry, and of the city of London, who but two days before had expressed no less joy at the arrival of his competitor King JAMES. The mob also, while their betters were complimenting the Prince, and offering him the administration, plundered the houses of the Papists, not sparing those of the nobility and foreign ministers.

The King  
goes over  
to France

The King having been used in that imperious manner by the Prince and his adherents at his return to London, and finding by their refusing to treat with him, that he was no more to be considered as a sovereign Prince, was apprehensive that the next step would be imprisonment at least, which his present condition seemed to border upon, being put under a guard of foreigners; he took the opportunity therefore of a dark night, and went on board a ship provided for him in the river, on the twenty-third of December, early in the morning, and was soon after landed in France, to the unspeakable joy of the Prince's party, as well as his own.

The Prince of Orange in the mean time having assembled about sixty Lords, who sat in their own house, and about an hundred and fifty Com-

moners, who were members in the reign of King CHARLES II, with the Aldermen of London, and part of the Common-Council, who sat in the Lower-House; he desired their advice in the present conjuncture, and particularly as to the calling of a Parliament: whereupon they advised his Highness to send his letters to the Lords Spiritual and Temporal, and to the several counties, universities, cities, boroughs, and cinque-ports of the kingdom. The letters for the counties to be directed to the Coroners of the respective counties, and in default of the Coroners to the respective Clerks of the peace; the letters for the universities to be directed to the Vice-chancellors; and the letters to the corporations to be directed to the chief magistrate in each; containing directions for chusing members to represent them in parliament: notice of which elections to be published in the churches, and the said Parliament to meet at Westminster on the twenty-second of January 1688-9.

The Prince of Orange also having assembled as many of the Scotch nobility and gentry as were about London, made a speech to them much of the same purport with that he made to the English Lords and Gentlemen, viz. That the only reason that induced him to undergo so great an undertaking was, that he saw the laws and liberties of these kingdoms over-turned, and the Protestant religion in imminent danger, and desired their advice in this conjuncture. Whereupon the assembly, having chosen Duke HAMILTON their President, addressed his Highness, thanking him for this generous undertaking to preserve their religion, laws, and liberties, and desired he would take upon him the administration of the government, and the disposal of the publick revenue, and call a Parliament to meet at Edinburgh the fourteenth of March. But the Presbyterians in Scotland had been before-hand with the Lords, and taking the government into their hands, if it may be called a government, which consisted chiefly in plundering all that differed from them in opinion, not only Papists, but the Bishops, Clergy, and people of the then established Church.

King JAMES, apprehending from the steps that were taken in England, that there was a design to depose him, wrote letters to the Lords and others of his privy-council; wherein he desires them to observe, that he had taken away all causes, and even pretences of discontent, and redressed all those grievances that were set forth as the occasion of the invasion: That the Prince notwithstanding had laid a restraint upon his person, and rendered it impossible to have a free Parliament by confining him; for as it was absurd to call that a free Parliament, where a force was put upon either of the Houses, it was much more so where the Sovereign, by whose authority they meet and sit, and from whose assent all their acts receive their life and sanction, is under actual confinement: That the sense of the indignities he had suffered, and the apprehension of further attempts from those who had already endeavoured to murder his reputation, by suggesting he had imposed a Prince of Wales upon the kingdom; and the consideration of his royal father's maxim, *That there was little distance between the prisons and the graves of Princes*; had induced him to free himself from that unjust confinement, as well for the security of his person, as to put himself in a capacity of contributing to the peace and settlement of his kingdoms; and that no provocation

CHAP.  
VI.

of his subjects, or any other consideration should prevail with him to make the least step contrary to the true interest of the nation; which he required the Privy-Council to make known to the Lords, the city of London, and the rest of his subjects, and that he desired nothing more than a free Parliament, wherein their religion, liberties, and properties, might be secured. He desired their advice therefore concerning his return to his people for the accomplishment of these ends. This letter was printed and dispersed about London, but no notice being taken of it by the Privy-Council, upon the assembling of the Convention-Parliament, King JAMES wrote another directed to the Lords and Commons: wherein he acquaints them, That nothing should be wanting on his part for the redressing of former errors, or securing the Protestant religion, or the property of the subject; desiring to refer the whole to a Parliament legally called, freely elected, and held without restraint: That he should extend his mercy even to those who betrayed him, some few excepted, resolving by an act of oblivion to cover all past faults. This letter was presented to the Speaker of the House of Lords the Marquis of Halifax by the Lord Preston, and a copy of it was also given to the Speaker of the Commons; but neither the one or the other was opened, and very little notice taken of them.

Various  
opinions  
on the ab-  
dication.

In the convention, though it was generally agreed to provide against the return of King JAMES, and his being admitted any more to the administration of the government; yet various were the opinions on whom the government should devolve at this conjuncture. One set of men insisted, That King JAMES having deserted the kingdom, and appointed no person to administer the government in his absence, this amounted in law to a demise, and the next heir ought to succeed as if he was dead. Another party were of opinion, That King JAMES having broken the original contract between King and People, by violating the fundamental laws, and abdicating the government, the throne was thereby become vacant, the government dissolved, and the people were empowered by the law of nature to fill the throne, or to set up any other form of government they saw fit. A third sort held, That King JAMES having embraced a false religion, which obliged him to destroy those subjects he ought to protect, the case was the same as if the King was under any natural incapacity, as phrenzy or doating old age; and that then the next in blood, according to the English constitution, ought to assume the administration of the government in the room of the disabled Prince (but in his name) during his life, or so long as such incapacity remained.

The Lords upon the question resolved, that the throne was not vacant, because by the laws of England the throne is always full; that on a demise of the former King, the throne is immediately filled by the Successor.

The Commons insisted there could be no demise while the King was living, but that the King by his male-administration had forfeited the crown for himself and his posterity; and therefore, *That the throne was vacant*, and the people empowered to make a new election.

I shall not pretend to say here, which of these opinions had most law or reason to support it; but after a long debate on this subject between the two houses, they were given to understand,

that the Prince of Orange was determined to have the administration of the government lodged solely in himself, exclusive of his Princess, or he would return to Holland again, and leave the people to shift for themselves: which put the two Houses into such a consternation, that on the 13th of February 1688-9, they declared the Prince and Princess of Orange to be King and Queen of England during their lives, and the life of the longer liver of them; but, *That the sole exercise of the Regal Power be only in and executed by the said Prince of Orange*, in the names of the said Prince and Princess during their joint lives, remainder after their decease to the heirs of the Princess, and for default of such issue to the Princess ANNE of Denmark, and the heirs of her body, and for default of such issue to the heirs of the body of the said Prince of Orange. And the Prince, in pursuance of this declaration, took upon him the regal titles and authority. But the following Bishops, notwithstanding they had agreed in committing the administration of the government to the Prince of Orange, on King JAMES's withdrawing himself, thought fit to refuse taking the oaths to King WILLIAM, viz. the Archbishop of Canterbury, and the Bishops of Gloucester, Ely, Norwich, Bath and Wells, and Peterborough. And about the middle of March, the royal Scots regiment of horse quartered at Abingdon, and great part of DUNBARTON's regiment declared for King JAMES, and marched towards Scotland: but a detachment of Dutch troops being sent after them, they were brought back prisoners to London.

The Dissenters having wheedled themselves into the good graces of King WILLIAM about this time, he proposed to the Convention, that they might be admitted into places of trust and profit, and the oaths altered for their satisfaction; but the two Houses did not think fit to comply with the motion. On the eleventh of April, King WILLIAM and Queen MARY were crowned at Westminster by the Bishop of London, Dr BURNET preaching the coronation-sermon; and the same day they were proclaimed King and Queen at Edinburgh, the convention there having before declared the throne vacant, according to the precedent England had set them. But it was some months before King WILLIAM was so universally acknowledged in Scotland as in England: for the Duke of Gordon having possessed himself of Edinburgh-castle, did not surrender it till the thirteenth of June; and on the sixteenth of July a battle was fought between the Lord DUNDEE, General for King JAMES in Scotland, and General MACKAY, wherein MACKAY was routed; but DUNDEE happening to be killed in the action, the interest of King JAMES declined in that kingdom, and his friends never appeared in a considerable body afterwards. On the twenty-second of the same month an act passed in Scotland for abolishing episcopacy there.

On the other hand, Ireland being generally in the interest of King JAMES, he was convoyed thither by a squadron of French men of war, and landed there with five thousand troops of that nation: soon after which he caused Londonderry to be invested, and assembled the Parliament of that kingdom, which met on the twenty-ninth of April 1689, and attainted the Duke of Ormond, the Archbishops, seven Bishops, and many of the nobility and gentry of Ireland. But King WILLIAM having found means to relieve Londonderry by sea, King JAMES's forces were obliged

Queen.

CHAP.  
VI.

to raise the siege. On the twelfth of July, Duke SCHOMBERG was detached from England with a body of ten thousand forces to support King WILLIAM's interest in Ireland; but the bloody-flux reigning in the English army this campaign, they did not enter upon any considerable action.

The year following, *anno* 1690, King WILLIAM transported an army of between thirty and forty thousand men into Ireland, commanded by himself in person, and fought King JAMES, his father-in-law, on the banks of the Boyne, on the first of July, obtaining a compleat victory over the old King. For the greatest part of his army consisting of new-raised Irish regiments, not half armed, they were soon forced to give way to the veteran bodies of Germans, Dutch, and English, of which King WILLIAM's army was composed. The French and Swiss however in King JAMES's army, made a regular retreat, and the King finding it impossible to maintain his ground after this defeat, retired into France; whereupon his son advanced to Dublin, making a kind of triumphant entry into that city on the third of July. In the mean time, the French fleet had defeated the English and Dutch, commanded by the Lord Torrington (formerly Admiral HERBERT) off of Beachy-head, and the French rode triumphant on our coasts, making a descent with some few forces they had on board, and burning Tinnmouth, put the kingdom into a very great consternation. King WILLIAM however went on successfully in Ireland, and made himself master of Waterford, and other places; but sitting down before Limerick, was forced to raise the siege, his heavy cannon being rendred useless as they were coming to Limerick by a detachment of the enemy, commanded by Sarsfield, who defeated their convoy, and destroyed the carriages and ammunition: whereupon King WILLIAM returned to England. The following year, *anno* 1691, his Generals gave the enemy another defeat at Aghrim; after which Limerick was taken, and the whole kingdom reduced under his power.

Having seen King WILLIAM in the peaceable possession of England, Scotland, and Ireland, it is time to return to Holland, and observe the face of affairs on that side the water. The French King had threatened the Dutch, as has been observed already, to attack their frontiers, if they made any attempt against England; he was exasperated also against them for taking part with Prince CLEMENT of Bavaria, who stood candidate for the bishoprick of Cologne against his creature, Cardinal FURSTENBURG; it was expected therefore, that he would have fallen upon the Dutch with the greatest part of his forces, to have diverted the Prince of Orange from his British expedition: but instead of this, the Dauphin marched with the flower of the French army into Germany, and made himself master of Philippsburg, Worms, Spiers, Mayence, and other places on that side. As to the Dutch, they contented themselves with barely declaring war against them, on the 26th of November 1688, N. S. but marched no troops towards their frontiers; though the Prince of Orange was at that time actually landed in England. In the year 1689, the French made dreadful ravages in the Palatinate, destroying the cities of Heidelberg, Mannheim, Frankendal, and all the places which had escaped them the preceding year. The Imperialists, on the other hand, took from them the cities of Mayence, Keyserwaert, Rhineberg, and Bon. Upon the

VOL. II.

advancement of the Prince of Orange to the throne of Great Britain, the States sent a solemn embassy to compliment him upon the occasion, and to concert measures with him to oppose the French; against whom war had been proclaimed at London on the seventh of May 1689, by the English; as it was between the French and Spaniards, much about the same time. And on the 15th of August 1689, happened a smart engagement near Walcourt in Flanders, between the confederates commanded by Prince Waldeck, and the French commanded by the Marshal D'HUMIERES; but it proved a drawn battle. In the same month the English Parliament passed an act for the payment of six hundred thousand pounds to the States, for the charges of King WILLIAM's expedition to England.

The French made their greatest effort in Flanders in the year 1690, and gained a victory over the confederates in the plains of Fleury, on the first of July, taking six thousand prisoners, and all their cannon. The same year the Duke of Savoy came into the confederacy, and a grand congress being held at the Hague between all the Ministers of the allies in January 1690-91, King WILLIAM went over thither to assist at it. Wherein they came to these resolutions, and solemnly engaged, 1. That they would never make peace with LEWIS XIV, until he had made reparation to the Holy See for all injuries and encroachments upon it: nor till he had annulled and made void all his infamous proceedings against the present Pope INNOCENT XI. 2. Nor till he had restored to every one of the allies all he had taken from them since the peace of Munster. 3. Nor till he had restored to the Protestants of France all their possessions and goods, and granted them an entire liberty of conscience. Nor till the Estates of France were established in their antient rights; so that the clergy, the nobility, and third estate, might enjoy their lawful privileges. Nor till the King of France should consent to call together his said three Estates whenever any supply was to be raised, without whose consent he should not levy money upon any pretence whatsoever. Nor till he should consent to restore to the parliaments of that kingdom, and the rest of his subjects, all their just rights. And, in conclusion, the subjects of France were invited to join the confederates in this undertaking, for restoring them to their rights and liberties; and ruin and devastation was threatened to all that opposed them.

At this famous congress, there were present many sovereign Princes besides King WILLIAM; as the Elector of Bavaria, the Elector of Brandenburg, the Duke of Lunenburg-Zell, the Duke of Brunswick-Wolfenbüttele, the Landgrave of Hesse-Cassel, the Prince of Wirtemberg, the two Princes of Anspach, the Duke of Cologne, the Duke of Holstein, the Rhinegrave, and a multitude of other German Princes; with the Ministers of the Emperor, Savoy, Denmark, Sweden, Spain, Saxony, Bavaria, Brandenburg, Treves, Mentz, Cologne, Munster, Lunenburg, Hesse-Cassel, Brunswick-Wolfenbüttele, Hanover, the Elector Palatine, Poland, Holstein-Gottorp, Liege, and Ham-  
burgh.

Notwithstanding this numerous confederacy, the French were masters of the field in Flanders almost every campaign during the war. They sat down before Mons in the beginning of the year 1691, and compelled that strong fortress to sur-  
render

render on the first of April, O.S. King WILLIAM indeed put himself at the head of the confederate army, giving out that he would relieve the place; but finding it impracticable, returned to the Hague. The same campaign the French took Halle, and falling upon the rear of the confederate army afterwards, as they were decamping from Lens, put them into some confusion at first; but the confederates made good their retreat, with the loss only of a thousand men.

Namur  
taken, *anno*  
1692.The victory  
of the  
confederate  
fleet  
at La  
Hogue.

The French opened the campaign of 1692 with the siege of Namur, which King WILLIAM not finding himself in a condition to relieve, the town surrendered on the fifth of June, after a siege of three weeks, and the castle, on the 20th of July following, being one of the strongest fortresses in the Low Countries. On the other hand, the English and Dutch fleets under the command of the Admirals RUSSEL and ALLEMOND, gained a signal victory over the French, near La Hogue, on the 19th of May, this year, burning and destroying one and twenty capital men of war, and among the rest the French Admiral, the *Rifling Sun*, which was run on shore and burnt on the French coast, in sight of the French army, that was intended to have made a descent in England, if their fleet had met with success at sea. How the French came to bear down so boldly on the English fleet, as they did, when their own consisted but of sixty sail, and the confederates of eighty at least, still remains a mystery; though some, who would not be thought ignorant of the motives of any action, relate, that the French King apprehending the English and Dutch fleets could not be joined so soon, gave Admiral TOURVILLE express orders to fight as soon as he discovered the enemy. Others are of opinion, that they had an assurance of Admiral CARTER's Squadron coming over to them; but the Admiral behaved himself with that gallantry as perfectly cleared him from any suspicion, and lost his life in the action.

Battle of  
Steinkirk.

Still the French were victorious in Flanders; for King WILLIAM attacking Marshal LUXEMBURG in his camp near Steinkirk, was forced to retreat with the loss of many thousands of brave officers and soldiers; which disgrace was ascribed to Count SOLMES, the Dutch General, who did not in time support the English in their first attack. Towards the latter end of the campaign, a reinforcement of fourteen thousand English for the confederate army landed at Ostend and Newport, and possessed themselves of Furnes and Dixmude. The following campaign of 1693, was opened by the siege of Huy, which surrendered to the French on the eighth of July, after a siege of five days; which King WILLIAM expecting should have lasted much longer, had detached the Duke of Wirtemberg, with part of the confederate army, to raise contributions within the French lines; when the Duke of LUXEMBURG, taking advantage of the separation of the confederate army, fell upon King WILLIAM on the 19th of July, near Landen, and obtained a compleat victory: after which he laid siege to Charleroy, and took it on the first of October. The same unfortunate campaign, Marshal CATINAT defeated the confederate army under the command of the Duke of Savoy, near Turin, where Duke SCHOMBERG, who commanded the English forces, was mortally wounded and taken prisoner. This was the first battle where the foot charged with bayonets at the end of their loaded Muskets, to which strata-

Battle of  
Landen.Battle of  
Turin.

gem the success of the French in this battle is generally ascribed.

CHAP.  
VI.

The French continuing superior to the confederates in Flanders, the Commons of England resolved to increase their land-forces to eighty thousand men, and granted an aid of four shillings in the pound, as they had done the preceding year, that being the first that ever was raised in England. The campaign of 1694 proved unfortunate to the Spaniards, who were defeated by the French in Catalonia, on the 27th of May, and the city of Palamos taken by storm on the 8th of June following. The last day of the same month Gironne in Catalonia surrendered to the French; but Admiral RUSSEL, with part of the confederate fleet, being commanded to protect the Spanish coasts in the Mediterranean, prevented the further progress of the enemy, and saved Barcelona at this time. Another part of the confederate fleet, with a great body of land-forces on board, under the command of General TALMASH, were ordered to make a descent on the French coasts near Brest, which they attempted the eighth of June; when the General landing with the first six hundred men, found such batteries and intrenchments, and other preparations made to receive them, that he found himself obliged to retire to his ships; but the tide ebbing, the flat-bottomed boats stuck upon the ouse, and many of them were not able to get off. Most of them that landed were killed or wounded, and amongst the rest General TALMASH himself was mortally wounded, and died on his return to Portsmouth. The confederate fleet however afterwards bombarded Diep, Havre de Grace, Dunkirk, and Calais; but the powder and shot spent against them, amounted, 'tis said, to as much as the damage the French sustained. The grand armies in Flanders being pretty near equal this campaign, they seemed cautious of entering upon action, and there happened nothing considerable on that side, except the siege of Huy, which surrendered to the confederates on the 17th of September, after a week's open trenches. In the mean time religious disputes began to revive in Holland, between the Calvinists and Arminians, inasmuch that the States found themselves obliged to interpose, and command a general silence concerning the things in dispute, which put a stop to them for the present. The winter following, Queen MARY, King WILLIAM's consort, died of the small-pox on the 28th of December, at Kensington. This did not however hinder the Hero from taking the field in Flanders the next campaign, *anno* 1695, where he found Marshal VILLEROY at the head of the enemy's troops, that successful General LUXEMBURG dying the winter before. On the third of July, King WILLIAM invested the city of Namur, which surrendered the fourth of August, and the castle the second of September following. This was the most memorable siege that happened during the war, for the town and castle are of themselves exceeding strong, and had a garrison of fourteen thousand men in them, commanded by BOUFFLERS, a Marshal of France, who defended themselves so well, that the confederates lost twelve or fifteen thousand men before the place. While they were busy at this siege, Marshal VILLEROY had very near surprized Prince VAUDEMONT, who commanded a separate army of the confederates in Flanders, of thirty thousand men; but the Prince made a fine retreat to Ghent, without any

any considerable loss, upon which his military skill was much applauded, the enemy being twice his number. But the French met with better success against Dixmude and Deynse, which they took the latter end of July, and made the garrisons, consisting of six thousand men, prisoners of war, whom the French refused to exchange, till Marshal Boufflers was arrested on his marching out of Namur, and obliged to give his parole of honour for their release. Before the castle of Namur surrendered, Marshal Villeroy also took the opportunity of bombarding Brussels, which was begun the thirteenth of August, and continued for eight and forty hours with the utmost fury, with bombs and red-hot bullets, whereby five and twenty hundred houses in the heart of that fine city were entirely destroyed, besides churches and publick buildings, whose very foundations were blown up, and converted into heaps of rubbish: and this the French did (though it was contrary to the Cartel to bombard any capital city) by way of retaliation for the towns the confederates had bombarded upon the French coasts, without any view of taking them, which was looked upon as a barbarous way of making war among Christians. About this time, there happened a dangerous insurrection at Amsterdam, on account of some alterations that were introduced into their burial-service, which lasted several days, the houses of many wealthy citizens being plundered, and their persons abused, till at length the militia being assembled under arms, fired upon the rioters, as they were ravaging the quarter of the Jews, and dispersed them; and some of their leaders being executed for a terror to the rest, the city was reduced to its former tranquillity. The following winter, the French had concerted with King JAMES the making of a descent upon England, and King JAMES, with a great body of forces, was actually marched to the coast of France, with an intent to embark, waiting only to hear his friends in England were ready to receive him; for it seems there was a conspiracy in England to have fallen upon King WILLIAM's guards, and to have made him prisoner; and they were charged also with a design to assassinate him, which occasioned this conspiracy to obtain the name of the *Assassination-Plot*: but 'tis certain the conspirators denied this last part of the plot at their deaths, though they made no scruple of acknowledging their design of joining King JAMES if he had landed. However, the plot being discovered, and some of the principal conspirators apprehended, and a good body of troops brought over to England from Flanders, to oppose the intended invasion, the French King marched his troops back again from the coasts, and King JAMES returned to St Germain.

The following year 1696, passed without any action in Flanders, and in Italy the Duke of Savoy having advantageous offers made him by the French King, made a separate peace; whereupon the confederates concluded a treaty with France, for the neutrality of Italy; and the following winter a treaty was agreed to be set on foot between France and all the Confederates. The King of Sweden being accepted for mediator; the conferences between the respective Plenipotentiaries for treating of a general peace, were opened at Ryf-  
wick near the Hague, on the 29th of April O. S. 1697. The French however, sensible what a mighty influence the successes in the field have upon negotiations of this nature, made their utmost

efforts on all sides this campaign. In Flanders they laid siege to the strong fortrefs of Aeth the 6th of May, and made themselves masters of it the 26th of the same month. In the Spanish West-Indies Admiral PONTY stormed Cartagena, and plundered it, bringing home to France twelve millions of crowns, according to the Spanish account. And into Catalonia the French marched a powerful army, and laid siege to Barcelona, which was obliged to surrender on the 5th of August, though well defended by the Prince of Hesse-Darmstadt, with a numerous garrison, which induced the Spaniards very unwillingly to sign the peace with the English and Dutch on the 10th of September O. S. The Imperialists were still more averse to the signing the peace, and not without reason; for the terms the English and Dutch had procured for them, were extremely disadvantageous to the Empire; Strasburgh, with its dependencies, and all Alsace, being yielded to the French by this treaty. But the English and Dutch having gained their main point, in getting King WILLIAM acknowledged King of Great Britain, were not very solicitous for their allies. The Dutch especially were glad to make an end of the war when they found the English Parliament began to insist on their bearing their share of the expence. And the English had no reason to be fond of continuing it, when they were every year obliged to make good the deficiencies of their allies. The Germans also not finding themselves in a condition to maintain the war alone, agreed first to a cessation of arms, and on the 30th of October, O. S. their Minister signed the treaty.

By the treaty between France and Savoy, the Duke obliged himself to abandon his confederates and procure a neutrality for Italy, or if that was refused by the allies, to enter into a league offensive and defensive with his most Christian Majesty against the Confederates. The French King, on the other hand, agreed to surrender to his Royal Highness the city and citadel of Pignerol, with their dependencies, the fortifications being first demolished; but his Royal Highness was allowed to inclose the said city with a single wall not terraced. His most Christian Majesty also stipulated to restore to his Royal Highness the rest of the towns and countries he had conquered and taken from him, amongst which were Montmelian, Nice, Villa Franca, and Suza; and it was further agreed, that the Duke of Burgundy, the Dauphin's eldest son, should marry Madame the Princess, his Royal Highness's daughter: That the Ambassadors of Savoy in the court of France, should receive the same honours as those of crowned heads: That those who inhabit the Vallies of Lucerne by the name of Vaudois, should have no communication with the subjects of France; nor should any Protestant Preacher come from thence into his Majesty's dominions: And as his Royal Highness should not suffer the exercise of the pretended reformed religion in any of the territories or places relinquished by his Majesty, so neither would his Majesty suffer it in his kingdom.

By the treaty between England and France, concluded at Ryf-  
wick the 10th of September O. S. 1697, the French King promised not to disturb King WILLIAM in the possession of the British Dominions, or to give any assistance to his enemies: And that he would restore to England all countries and places taken during the war. In like manner, the said King of England agreed to restore all that had been taken from France.

The peace  
of Ryf-  
wick, an.  
1697.The treaty  
between  
France  
and Sa-  
voy.Between  
England  
and  
France.

France: The French King also agreed to restore to the King of England the principality of Orange, and the rest of the territories belonging to him in France. And by a separate article it was agreed, that the Emperor should have time till the first day of November to accept the terms offered him by his Most Christian Majesty.

Between  
France  
and the  
States  
General.

By the treaty between the French King and the States General it was agreed, That all countries, towns, and places which had been taken during the war, should be restored on either side; and the late treaty between the most Christian King and the Duke of Savoy was thereby confirmed: the rest of the treaty contained nothing but matters of course.

Between  
France  
and Spain.

By the treaty between France and Spain, Gironne, Roses, Barcelona, and all other places taken by the French in Spain, were restored to his Catholick Majesty: and in the Low Countries, the city, province, and dutchy of Luxemburg, and county of Chinay, the fortrefs of Charleroy, the city of Mons, the town of Courtray, and all other towns and places, which his most Christian Majesty had taken during the war, were restored to Spain. The town and castle of Dinant also were restored by his most Christian Majesty to the Bishop and Prince of Liege.

ror and  
France.

By the treaty between the Emperor and Empire on the one part, and France on the other, concluded the 30th of October 1697, it was agreed, That the treaties of Westphalia and Nimeguen should be the foundation of this treaty, where it was not otherwise expressly agreed to the contrary; and that restitution should be made to his Imperial Majesty and the Empire, and to the States and Members thereof, by the most Christian King, of whatever had been taken during the war; but yet so as that the Roman Catholick religion should continue in the state it then was, in the places to be restored. But as it was thought proper to make an exchange of some places, his Imperial Majesty yielded to his most Christian Majesty the city of Strafsburg and its dependencies, on the west side of the Rhine, to be incorporated with the Kingdom of France. On the other hand, his most Christian Majesty yielded to the Emperor the Fort of Kehl, the city and castle of Friburg, the Fort of St Peter, and the Star Fort; the town of Brisac, and fortrefs of Philipsburg, with all their dependencies: and the Duke of Lorraine was restored to the possession of his capital city of Nancy, and the rest of the dutchy of Lorraine; the fortifications of Nancy only to be demolished, and the fort of Saar-Lewis, with some other small places, to be reserved to his most Christian Majesty; and his forces were to have liberty to march through the dutchy to and from their frontier towns. It was stipulated also, that Cardinal FURSTENBURG, Bishop of Strafsburg, should be restored to the possession of his territories and rights in the Empire.

As to the remainder of the Modern History of the United Provinces from the peace of Ryf-  
wick to this time, the reader will meet with it in the former part of this Volume, blended with the history of Germany; wherein all the actions of the confederates and the French during the last war are described. I proceed therefore in the next place to enquire into the nature of the soil, and the produce of the United Provinces.

*Contains an account of the nature of the soil, and produce of the country, viz. their plants and animals.*

AS to the maritime provinces, it has been already intimated that they lie upon a perfect flat, cut through with numberless canals; except that on the western part of Holland, from the Maese to the Texel, containing the space of fourscore or an hundred miles, there lies one continued ridge of sand-hills, which serve to break the fury of the Ocean, the soil whereof produces only herbage enough to feed the rabbits, which are very plentiful all along that coast. The strand between the sand-hills and the sea is exceeding pleasant, whether multitudes of people resort on summer evenings, and are entertained with the prospect of ships and vessels under sail, going to and returning from all parts of the world; nor is it easy to say whether a smooth calm water, or a tempestuous sea, where the mariner is forced to use his utmost skill to preserve a leaky bark, affords the most exquisite delight. That part of the country which is not a barren sand consists either of arable, rich pasture, or a spongy marshy soil, out of which they dig turf, the general firing of the country. Their arable is tolerably fruitful, but does not produce corn enough however for half the numerous inhabitants. Their meadow or pasture, which is most of it under water in the winter, on the return of the summer, either by the sun, or the help of wind-mills, is drained or dried up, and the waters leaving a fat slime behind, become exceeding fruitful; on which they either feed such lean cattle as come from Denmark and the North, or milch kine, with which they make vast quantities of as good butter and cheese, as are to be met with in Europe. They have also large plantations of flax and hemp, but much the greatest part of what they work comes from Germany, or the Baltick. The turf which they dig in their bogs, or *Veens*, as they call them, are an excellent firing, which burn as clear and sweet as the best wood; and this earth, 'tis said, after cutting, swells and grows up again in the space of a few years, and may be cut for the same use again. As for timber, there is very little in the country, except some groves and plantations on the sides of their canals, intended more for pleasure than profit. As to the inland provinces of Utrecht and Guelderland, here indeed the country begins to rise into hills, and there is much the same variety of high and low lands, woods and champaign, as we meet with in England, and the country produces a tolerable quantity of grain. They seem to take pleasure also in fine gardens and orchards, and are arrived to a great perfection in flowers. Minerals they have none, nor do they dig below the surface of the earth upon any account, unless it be for turf or clay. The province of Overysfel consists chiefly of heaths and marshes, and is the worst inhabited of any of the seven. The grain which is produced in the United Provinces, is either the common wheat, or buck-wheat, rye, barley, peas and beans. They have also some plantations of hops and rape-seed, out of the last of which they draw oil. Their fruit is much the same with ours, and frequently blasted in the spring, or blown down in autumn by the tempestuous

The na-  
ture of the  
soil.

Grain.

Fruit.

CHAP.  
VII.  
Cattle

pestuous winds on their coasts, before it comes to maturity. Their milch cattle are very large, and give incredible quantities of milk; and those which they buy from the northern countries, and fat in their pastures, grow to a very great bulk. Their common breed of horses are large and heavy; but, 'tis said, care has been taken of late years to mend it. Their sheep are very good, especially in Zealand, where they feed on the salt-marshes. Their hogs-flesh is but indifferent. In the up-lands there are plenty of hares, rabbits and squirrels, but scarce any deer. Their wild beasts, which are found chiefly in the provinces bordering on Germany, are wolves and wild hogs. Here are all manner of tame fowls as in England; and of the wild, the stork, about the bigness of a heron, is the most remarkable, which builds on the tops of their chimnies in most of the towns and villages; and, by virtue of a national superstition in their favour, are never destroyed. They take their flight with their young brood about the beginning of August, and, as some conjecture, retire into Africa, or some other warm country, returning again in February. There are prodigious numbers of wild geese, ducks, and other water-fowl also, which visit the Low-Countries from the North every winter; nor do they want partridges, snipes, quails, or pigeons.

Fowls.

Fish.

The fish in their rivers are salmon, perch, trout, jacks, and eels; and their sea-fish, haddock, halibut, sturgeon, soles, mackerel, smelts, crabs, and some other sorts of shell-fish; but there are scarce any oysters or herrings upon the coast. The game is generally the right of the nobility and gentry, inferior people being excluded these recreations, as in England; and the fisheries in some places are appropriated also to them, but in others are open to every man who likes these kind of amusements. I proceed next to give some account of their grand fisheries, especially that of herrings.

## CHAP. VIII.

*Treats of their great fisheries.*

The great fisheries.

The Herring-fishery.

THE three great fisheries, which by all that treat of the United Provinces are looked upon to be of such vast advantage to their state, are, the herring-fishery, the whale-fishery, and the cod-fishery. In these fisheries the provinces of Holland and Zealand are principally concerned; and that of Holland alone, according to Pensionary DE WITT in his time, annually set out no less than a thousand sail, from twenty-four to thirty tun, to be employed in the herring-fishery, which are since increased in bigness from thirty to fifty tuns. These busses, with the vessels that attend them, and those which are employed in carrying and dispersing them all over Europe, amount to many thousand sail, and at a moderate computation, in all the maritime provinces, occasion the employing of fourscore thousand hands, which makes it a noble nursery for seamen. The busses are sent out three times every year, and begin to fish the first season on midsummer-day, near the islands of Schetland (belonging to the British crown) and on the north of Scotland; and this season lasts till September, when the busses having discharged their lading in Holland, fish near Yarmouth, and at the mouth of the Humber, on the coast of England; and hither they make two trips every year, the season not being over till the latter end of November. According to Sir WALTER RALEIGH's computa-

VOL. II. NUMB. LXIV.

tion in the reign of King JAMES I, the Dutch fished on the British coast, with no less than three thousand ships, and fifty thousand men; and employed and set to sea, to transport and sell the fish so taken, and to make returns thereof, nine thousand ships, and one hundred and fifty thousand men more; adding, that every twenty busses maintained eight thousand people at sea or on shore. These calculations I find some writers think to be of the largest; but I believe very few that have succeeded Sir WALTER are better qualified to make a computation of these matters than he was; and as the scheme was laid before King JAMES, with whom this gentleman was not on very good terms, it is to be presumed he took care to have proof of what he advanced.

However, if it should be admitted that the Dutch employ only one thousand busses in the herring fishery, and that these busses at a medium may be reckoned forty tuns each, and that they make three trips every year; then every buss may be supposed to take an hundred and twenty tun, and consequently the whole fleet an hundred and twenty thousand tun of herrings. Again, if every tun is supposed to be worth twenty pounds, then do they by the herring-fishery alone, make annually two millions four hundred thousand pounds; out of which, if we allow a third part for charges, there remains clear sixteen hundred thousand pounds; to which if we add the profits they make by the goods they take in return for them and export again, two millions sterling is the least they can be supposed to make annually, clear of all expences; and the multitude of hands that are employed in the making of nets and casks, shipping and tackle occasioned by this fishery, and in the salting, curing, and packing of them, makes it an inconceivable advantage to Holland. If it

be demanded why the subjects of Britain, on whose coasts alone these fish are caught, reap so very little profit by this fishery, and their neighbours so much, it is generally answered, 1. That we do not understand the right method of curing them, which is the reason they will not go off at foreign markets as long as the Dutch have any to sell. 2. That though we have timber for building vessels of our own growth, yet the Dutch can import timber from Germany much cheaper than ours is at home; and that by their saw-mills, and other engines, they save such a number of hands, that the building of ships and other vessels is performed for half the expence it is here. 3. That the shipping sent to the Baltick with herrings, loads back with corn, timber, and other heavy goods, which the English having little occasion for, must return empty, and thereby lose their freight homeward bound. 4. That the rivers Rhine and Maese running through a vast tract of a well-peopled country, and discharging themselves into the sea through the United Provinces, the Dutch have an opportunity of furnishing the people which lie near the banks of those rivers with herrings, and of taking their merchandize in return, which the subjects of Britain by their situation are perfectly excluded from. To the first of these objections against the subjects of Britain applying themselves to the herring-fishery, I find it replied, that there is very little mystery in the curing and pickling of herrings, and that the true reason the Dutch herrings are better than ours, is because we want proper vessels to cure and salt them in: that the Scots particularly fish in open boats, and let their herrings lie exposed to the weather till they come on shore, before they

Why the herring-fishery is not so advantageous to the English as to the Dutch.

CHAP.  
VIII.

falt them; while the Dutch buffes are covered, and the fish salted in them before they are well dead. But this might certainly be done by the English as well as the Dutch, and would be so if the fishery was under any regulation, and made a government concern. It cannot be expected, indeed, that foreigners should take off our herrings on the same terms they do those of Holland, till we cure them as well, and then we need not doubt their custom: but methinks we have this advantage of the Dutch, that our coasts are so near the fishery, that we may put our herrings on shore, and prepare them for the market much sooner than the Dutch can: for though the first salting be performed in the buffes, they are all taken out and prepared in a different manner, and put into other casks when they come on shore, in order to be sent to foreign markets. And admit there be an art in the pickling them that we are yet unacquainted with, surely we are not so dull, but by sending over half a dozen clever fellows thither to observe their method, or inviting some of them over hither by good rewards, we might soon come into it: and indeed till we do make them as good and as merchantable as the Dutch, it is in vain for our superiors to concern themselves in the matter, and beg foreigners custom, as we did lately at Hamburg; for we must ever expect the same answer that city gave us on this occasion, viz. That if our fish were equally good, they would with all their hearts deal with us as soon as with the Dutch. It is however to be remembered in favour of the natives of this island, that though our pickled herrings are not so good as those of Holland, our red herrings are the best in Europe, and are a manufacture almost peculiar to Britain, which is one great encouragement to the entering on this fishery.

2. As to that objection, That timber for building vessels and naval stores are dearer here than in Holland, this seems generally admitted at present; but the case would be wonderfully altered, if due encouragement were given for importing them from the British plantations, where there is more timber stands neglected, and more pitch and tar, flax and hemp, might be produced at an easy expence, and brought us in return for the native commodities and manufactures we export, than are sufficient to supply all the shipping of Europe. This would produce such a variety of benefits, of such importance to Britain, and of such a lasting duration, that, 'tis presumed, the government will not long overlook them. We want, in short, nothing to make us the greatest and wealthiest people upon earth, but to improve the advantages we have in our hands. The very traffick we might maintain between our own people of the old and new world, would soon give us a vast superiority over the rest of the nations of Europe. As it is, this trade does not employ less than a thousand sail of ships from an hundred to five hundred tons; whereas a little more than an hundred years ago we had little or no traffick with that part of the world. But I forbear to enlarge on this subject here, and proceed to consider the second part of this article; namely, That the Dutch can build their buffes for the herring-fishery cheaper, because they have more expeditious ways of working their timber by saw-mills, &c. by which means one man will do the business of ten: nor is this to be denied; for it seems we are afraid to introduce these machines, lest our people should want employment. Now

did we consider the irreparable injury we bring upon our country by neglecting to introduce such engines, as might enable us to work as cheap as our neighbours, not a man of us would make this trifling objection against them; especially against such as promote our navigation and manufactures. The cheaper we can build ships, and work our manufactures, the cheaper we can send them abroad, and afford the better pennyworths to all we deal with: and this is one of those important secrets, by which the Dutch have ever undermined and worked us out of our foreign trade. As for their living more frugally, and working their vessels with fewer hands, I look upon these articles to be trifles: for what mighty difference can it make in the voyage, where fifteen or twenty hands are employed in navigating a ship of three or four hundred tons, where the Dutch shall spend four shillings and the English five shillings a head per week; what great difference, I say, can this make in a cargo of three or four hundred tons, even where it is of the meanest value? And perhaps if it be considered, as we employ more hands, consequently we breed up more mariners, and our ships are liable to fewer hazards, I question whether in the main they have any advantage of us in these respects. But further it is to be observed, That we should in this case be so far from having our poor multiply upon us, and of having too many idle hands, that we should have much fewer than we have at present. If we could build our vessels cheaper than we do now, and work our manufactures with less charge, consequently there would be a great deal more of them taken off our hands; and as our foreign trade flourishes, so does the home trade of course. A multitude of rich merchants will always find employment for a multitude of inferior people; which is not a meer notion, but we actually find it thus in Holland, where there is not an idle hand in the country; nay, the trader, among that croud of people, finds it difficult to procure servants and labouring men for his money, so little are they in danger of being over-run with poor in those countries where they employ all manner of machines to enable them to work with a few hands. As there is no spot of ground of the same dimensions on the face of the globe where there are so many rich merchants, so there is no place where labouring men are better paid, and live more comfortably.

As to the third objection against promoting the herring-fishery in Britain, namely, That our ships which carry them to the Baltick would for the most part return empty, because we do not import corn, timber, and other cumbersome goods from thence, in such large proportions as the Dutch do; I answer, If we could once prepare our fish as well as the Dutch do, and consequently could find as quick a market for them, I do not doubt but our merchants would find something to import from thence which might turn to a tolerable account: and as I propose in the foregoing articles, that our trade, if not neglected, will suddenly be improved and extended in other parts of the world, possibly we may find it as advantageous to carry our herrings to some other places, as the Dutch do in carrying them to the Baltick. And this also may serve as an answer to the fourth objection, as to our situation, whereby we are excluded from the trade of the Rhine and the Maese, in which rivers the Dutch dispose of great quantities of herrings.

CHAP.  
VIII.

CHAP.  
VIII.

An enquiry into our right to exclude other nations from the herring-fishery.

As to our right to the herring-fishery exclusive of the Dutch and all other nations, this fishery lying all along close to our own shores and no where else, this has been made sufficiently evident by Mr SEILDEN, and many other writers: And for my life I can't see why foreigners have not as much right to the oysters upon the British coast as the herrings. Should it be admitted that seas and defarts are generally free for all mankind to travel in, and wild animals the property of every one that can take them; yet surely there are some instances, wherein seas and defarts may be, and are, appropriated, as well as their wild inhabitants. And as to the Dutch, who have actually appropriated the seas about the Molucca's, Amboyna, and Banda, where the fine spices grow, and would, if they had power, also exclude all other nations from the rest of the Indian seas, under pretence that they are Lords of the ocean, the very title they give themselves in that part of the world; against these people surely our claim will be allowed to have it's full weight, for we may with as much right appropriate to ourselves the seas on our own coasts, as they do the seas about the spice-islands, which they so unjustly and treacherously possessed themselves of, and which lie ten thousand miles from the shores of Holland. Should a British ship offer to sail within sight of the coasts of Amboyna and Banda, the Dutch would make no scruple of taking or destroying her; why then should they be permitted to come close to the British shores, drive away our fishermen, and disperse the shoals of herrings after their own vessels are laden, as they continue to do to this day. These practices, I believe, the subtlest sophister amongst them will be troubled to find a tolerable excuse for. But supposing they had a natural right to do all this, and we had no natural or acquired right to come into those seas which border upon the spice-islands; yet if we can show that the Dutch have, for time immemorial, till the reign of King CHARLES I, solicited the British Princes for licences to fish on their coast, and have actually paid thirty thousand pounds per annum for the liberty of fishing there, surely this puts the matter beyond all dispute: people may part with and deprive themselves of many natural rights, and the Dutch have actually done so here by repeated solemn compacts with this nation. Even OLIVER CROMWELL, their brother Saint, had infallibly compelled them to have performed this contract, if he had not afterwards found them necessary to support his usurpation, and accepted of their guarantee for his tyranny in lieu of that invaluable fishery: for were we to insist upon our right, and exclude all other nations from the herring-fishery, as the Dutch do from the fine spices, we might set our own price upon them; and if the Dutch make two millions per annum neat profit of our herrings, we might by that means make five millions, or indeed what we pleased, and should save an immense treasure annually from going out of the nation: for with these we might purchase the merchandize of the Baltick, Germany, and other countries, as with ready money. Neither need we be over-nice in the curing of them, for if they were to be had no where else, there is no doubt but the worst would go off. But if it should not be thought expedient wholly to exclude the Dutch, or any other nation, from the herring-fishery on our coast; yet surely no Briton can think it unreasonable that we limit the number of busses, or oblige them to pay an acknowledgment in proportion to the quantity of

fish they take. This may be expedient, even in regard to the Hollanders themselves; for if all nations be permitted to come and fish upon our coasts without restraint, why not the French, Flemings, and Spaniards, and even the Hamburgers, and the Powers of the Baltick; and if this were allowed, of what advantage would the herring-fishery be, either to England or Holland? Those very people who now take them off our hands, would take them themselves out of the sea, and consequently the trade would be entirely lost to both nations, which would then perhaps incline the Dutch themselves to wish we had insisted more strenuously upon our right. And as the Dutch are allowed to have their eyes in their heads, and to penetrate as far into future events as other people, I will venture to make them one proposal, which if a little present profit does not bias their understandings, they will certainly close with. The Dutch, as well as the English, can't but observe, that many powerful nations at this day, are endeavouring to improve their foreign trade and navigation, and will probably in a short time fall into some branches of commerce which the Hollander at present monopolizes, and reaps great advantage by. We may see them, as I have already hinted, attempt the herring-fishery, and to discover some countries where the fine spices grow, which are not under the power of the Dutch; or they may possibly wrest some of the spice-islands from them which they are possessed of, as they wrested them from us, and so share these two valuable branches of trade with them: And if this ever should happen to be the case, the Dutch will then be deprived of their greatest strength, and these giants in trade become like other men. I beg leave therefore, even for the sake of the Hollanders themselves, to propose a most intimate union in commerce between them and Britain; and in order to this I do insist, that they submit to share the trade of the world with us: this, if any thing, will perpetuate their grandeur; for our interest must be mutual, if we expect to remain long united. I know no bands so indissoluble between Princes and States as those of interest: let them, upon our admitting them into a share of the herring-fishery, and excluding all other nations from it, admit us into a share of the spice-trade, (originally our own) and then we will unite our maritime force with theirs, by which means we may put what conditions we please upon the rest of the trading world. On the other hand, if they refuse to let us share the trade of the world with them, and pretend to stand upon their own bottom, it is not difficult to foretel, that other nations will soon encroach upon their foreign trade, and they may possibly by their parsimony lose the whole. In the mean while, Britain has such a noble prospect opening to her view by the increase of her plantation-trade, that I don't doubt in a few years to see her able to manage the commerce of the world alone, without the Dutch, or any other foreign assistance. Therefore let that High and Mighty State in time consider and cultivate a strict friendship with Britain before it be too late, and she see herself with regret stripped of the most darling branches of her navigation and traffick.

I proceed now to treat of the second great fishery, that of Greenland, where whales are taken; and this too they have in a manner monopolized; for the Dutch send annually to Greenland between two and three hundred

The whale fishery.

CHAP.  
VIII.

dred sail of ships, from two to four hundred tuns burthen, and all the rest of the nations of Europe together scarce fit out fifty. That part of Greenland where they usually fish for whales is situated between seventy-six and eighty degrees of North latitude. The English were the first who practised the taking of whales in these seas; and apprehending of what consequence the securing this trade to the nation might be, our people went on shore, set up the arms of Britain, and formally took possession of the country for King JAMES I. And as there were at that time no inhabitants there, or any foreign nation that could have any manner of claim to it, this was then thought to vest a sufficient right in the Kings of Great Britain to fish on these coasts, exclusive of all others; but that pacific Prince, King JAMES, rather than hazard a war, suffered the Dutch to break in upon that part of our navigation, and even to seize our ships and merchandize in those seas in time of full peace, 'till in the end our merchants were wearied out, and obliged to abandon that branch of business; which indeed there has been many attempts to revive, but none of them have succeeded 'till the South-Sea company undertook it; and they may if they please no doubt make it as advantageous to this nation as it is to the Hollander: but they don't however at present set out a tenth part of the ships the Dutch do for this service; for, as has been observed, the Dutch employ between two and three hundred ships annually, manned with forty men each, and the South-Sea company do not employ more than three or four and twenty ships in it: and indeed the judicious DE WITT, and most writers who have treated of trade, are of opinion, that companies and monopolizing grants tend to the destruction of commerce and navigation. The largest whales it is computed yield seven or eight tuns of oil, which is esteemed the best in the world for dressing several kinds of leather and skins. The price of it rises or falls according as the voyage succeeds; for some years they meet with whales, and in others with more than they can manage. If every ship takes a whale, they look upon it to be no bad voyage. Besides oil, each whale affords six or eight hundred lengths of that bone which is become so necessary in cloathing our females; these are found in the mouth of the animal under and on each side the tongue, which lies in the midst of them, as in a bed. As to the season and manner of taking them and extracting their oil, these have been treated of in the first volume, and therefore I forbear to say more of them here.

The cod-fishery.

The third great Dutch fishery is that for cod, which they meet with chiefly on the Dogger bank, a sand between the British coast and their own, in which they employ about three hundred vessels called Doggers, (from the bank they fish upon) being between forty and sixty tuns burthen; and tho' this fishery be of great advantage to them, the English are supposed to have as good a share of it as the Dutch, especially if we take in our fisheries at Newfoundland and Nova Scotia to the northward of New England, where there appears to be the greatest plenty of this kind of fish that are to be found in any part of the world.

The inland fishery.

The fourth and least, is their inland fishery in their lakes and rivers, which is not however inconsiderable, consisting of almost all kinds of fresh-water fish. Of these, what are not spent at home, they salt up also and export with their herrings and codfish to other countries. Sir WALTER

RALEIGH computed in his time, that of all kinds of pickled and salted fish the Dutch did not export less annually than three hundred thousand tuns, which exportation M. DE WITT supposed to be increased one third when he was Pensioner; and as they are exchanged for foreign merchandize, may (as well as their spices) be looked upon as so much treasure, and probably together are of greater advantage to the Hollander than the mines of Potosi are to the Spaniard.

## CHAP. IX.

*Treats of the Dutch manufactures.*

THERE is not a nation under the sun where the people apply themselves with more diligence to all manner of mechanick arts than the inhabitants of the United Provinces. Those manufactures which an hundred and fifty years ago were appropriated to this or that particular country, have been of late years introduced amongst them, and brought to as great perfection almost as in the places they were formerly peculiar to. Nor is this much to be admired, if we consider, that when the mechanicks of the neighbouring countries of France, Flanders, and England, were driven from thence by their bigotted Princes, they retired hither, and set up the same employments as they carried on in their respective countries. It is not therefore to the ingenuity of the Dutch that we are to ascribe their proficiency in this great variety of manufactures; but to the necessity they were under of making their country the refuge or asylum of all distressed people, in order to strengthen their hands, and enable them to resist the then formidable power of Spain. It was this that occasioned their proclaiming an universal liberty of conscience, and making that one of the fundamental articles of their union. In imitation of ancient Rome, this distressed people invited all others in the like distress to join them; and out of a variety of nations who brought their several arts along with them, first formed their little republick: consequently such mechanick arts as were practised by the several people, of whom this commonwealth was composed, must be in some perfection here, especially if we consider that the country was small, and the people so numerous that they could not be subsisted out of the product of it. They were in a manner forced to work for their lives, and by the fruits of their labour purchase the corn and produce of other countries to feed the multitudes that retreated thither. Thus the diligence and parsimony they are so famed for, were founded in necessity rather than choice; and when they were once become habitual, practised without reluctance. They saw what great things their frugality and application had effected, and as these became the subjects of universal applause amongst them, every one pressed forward to excel his neighbour in these arts, 'till they arrived at such a degree of covetousness, as to stick at nothing to advance their fortunes; even their governors became guilty of all manner of injustice, cruelty and treachery towards their allies to promote their foreign trade, and private men scrupled no frauds that did not bring them under the penalty of the laws, or affect their credit. Like their brethren here, they excluded only expensive and unprofitable vices, whatever had a prospect of gain, with them was godliness. But to be a little more particular as to their manufactures,

CHAP.  
IX.

How manufactures were introduced into Holland.

Every

CHAP.  
IX.Harlem  
famous for  
fine linnen  
and silks.

Every province and every town almost in the United Provinces have some particular manufacture which they value themselves upon; not that these trades are carried on in no other places, but there are particular towns and districts where the respective mechanick arts are brought to a greater perfection than in others. In Harlem, for example, they make the finest linnen, and give it so pure a white, that they bring it from all the rest of the provinces, and even from Germany, and other foreign countries, to be bleached here: And Harlem lying in the province of Holland, this kind of linnen is generally called by that name, tho' one third part of it is not wove in Holland. Harlem is also distinguished for its manufactures of fine silks and gauzes, coarse flowered velvets, and gold and silver brocades, and other rich stuffs.

Leyden  
for wool-  
len manu-  
factures.

Their woollen manufactures flourish most at Leyden: Here they make the finest broad and narrow cloths, serges, and camlets; but still inferior to those of Britain, or they would not purchase such vast quantities of our woollen manufacture as they do to export to other nations. Their wool they have from Spain, Germany, Turkey; and some from England, Scotland, and Ireland, clandestinely; and tho' their want of British wool is the occasion that this manufacture is no better, yet they have of late years much lessened their demand for our English cloth, being able to supply their own people and other nations with such cloth as serves their turn, tho' not altogether so good as ours. Nor are the silk manufactures of Holland so good as those of France or Italy; but the difference in the price, being twenty per cent. cheaper, makes them go off better.

Delft for  
earthen  
ware.

In Delft is made that fine earthen ware which takes its name from this city: And the brewing trade, which flourishes here, is reckoned among their manufactures.

Sardam  
for ship-  
building.

Sardam, three miles from Amsterdam, hath prodigious magazines of timber of all kinds, and the inhabitants build more ships and vessels here than any town of the known world; which makes it highly reasonable to include ship-building among their manufactures.

Enchuy-  
sen for  
herrings.  
Horne for  
cheese.

Enchuyfen is remarkable for its herrings. Horne for the best cheese in North Holland, and for its refineries of salt, &c.

In Am-  
sterdam  
all kinds  
of manu-  
factures.

In Amsterdam all these manufactures, and more, are carried on, except that of Delft-ware: Here they weave broad-cloth, woollen and hair-stuffs, silks, gold and silver stuffs, and ribbons of all kinds. Here they make gilt-leather, morocco, shammy, and many other sorts. Nor is dying one of the least of their manufactures. Here are also refineries for sugar, salt, sulphur, yellow wax, &c. mills for sawing timber, for polishing marble, for drawing oil from several seeds, powder-mills and fulling-mills; and here all kinds of tapestry are wrought. Their linnen manufacture also is brought to great perfection, particularly that of sail-cloth, in which the English fall extremely short of them; as they do also in printing, and the manufacture of paper: but why we do so, is not easily accounted for; surely there is nothing so very difficult in these manufactures but an English genius might imitate.

Printing  
and Paper.

Sail cloth.

As to sail cloth, our sea-commanders in general complain, that what they buy in England is so slight, it frequently rends from top to bottom in a storm, and sometimes occasions the loss of their ships; whereas that of Holland wears like a board, and will bear the most furious tempest. Now the

VOL. II.

defect of ours must be either in the materials or the weaving, either of which 'tis presumed might be remedied, if those who had the care of fitting out our fleets gave due encouragement to the manufacturer. The materials we have from the Baltick as well as the Dutch, and surely we might spin and weave them as strong as the Dutch do, if it was made a government concern; and if we considered what vast sums are sent annually to Holland, to purchase this manufacture for our shipping, it would be thought worth enquiring into.

As to printing and paper, there may be some reason why we do not come up to the Dutch, if what our printers say be true; namely, that their founders and paper-makers in Holland have greater encouragement than those of Britain: tho' how this can be, when we pay much dearer for paper and print in England than in Holland, is not easy to discover. As to paper indeed, the manufacture is but lately set up amongst us, and therefore it cannot be expected yet to be brought to that perfection it is in Holland: Besides, there are such taxes laid upon this manufacture, as are enough to discourage those that deal in it. Another disadvantage our paper-makers tell me they lie under, is, that tho' we use the greatest quantities of fine linnen of any people in the world, yet the rags are so tinged with the coal-smoke and dirt, especially in London, that they can never bring them to be of a pure white. As to the types made in our founderies, it is something strange they are no better, because in all other iron-work and hardware there is no nation which excels us: Why then are we obliged to fetch all our types from Holland or France when we expect to have a work beautifully printed, in the booksellers phrase? I would advise our workmen to try again if they cannot outdo the Dutch in this, as well as in all other iron manufactures; and do not doubt but they will meet with the like encouragement as other mechanicks do: for though it be true, that there is a slight kind of hardware which foreigners afford exceeding cheap, yet those same foreigners are willing to give double or treble the price for our London-ware, it is so substantially and exquisitely wrought. The reader will pardon me that I dwell so long upon these things, but they are indeed no trivial matters; I would have my country-men excel all others in mechanick, as they do in liberal arts, and draw over the trade of the whole world to them by their merit; or at least, prevent foreigners drawing over so much of our treasure to them for manufactures which might be made as well here, and the money for them circulate among our selves.

## CHAP. X.

*Treats of the foreign trade of the United Provinces.*

IF we regard the number of ships the Dutch employ in their voyages to the Baltick, and the northern crowns, and the various kinds of merchandize absolutely necessary to their very being, which they import from thence; this may be looked upon as far the most considerable of any trade they carry on in Europe. For from Norway they import vast quantities of fir-timber, masts and yards for their shipping, pitch, tar, stockfish, furs, skins, pot-ashes, and dried fish, and, as some say, copper and iron; but this must be in very small quantities, for there are few mines wrought in this country. In return for these commodities they supply the Norwegians

The Baltick and Northern trade of great advantage to the Dutch.

CHAP.  
X.

with wine, brandy, vinegar, tobacco, spices, salt, cheese, drapery, both linnen and wollen, and haberdashery wares; but their exports not being near equal to their imports from hence, they are forced to pay the difference in dollars, and other specie. This trade is however of vast advantage to the Dutch, though the exchange be against them; because they export again the fir-timber and other merchandizes of Norway to the southern countries of Europe for a considerable profit, and employ annually two or three hundred ships of four or five hundred tons burthen in their Norway navigation. They have this further benefit also by it, that they man great part of their fleet with Norwegian sailors, as hardy a race of mariners as are to be met with in the world, and have in a manner incorporated them with their own people.

Their  
Russia  
trade.

Their trade with Russia was antiently carried on through Livonia by the ports of Riga, Revel, and Narva: but upon the discovery of the north passage into the White Sea by the English, the trade removed to Archangel at the bottom of that sea. In the late Czar's time it was by him drawn to Petersburg, and the ports of Livonia; but after his death the Russian government thought fit to open the trade with Archangel again; and now it is carried on at all the ports above-mentioned. As the English first discovered the way to Archangel, the only Russian port by which they had then a communication directly with the rest of the kingdoms of Europe, they had large privileges granted them by the Russian Princes, and were in possession of that trade, exclusive of all other nations, for some time; but the Dutch, by bribing the Russian ministry, and the false and scandalous representations they made of our nation at the Russian court, soon worked us out of that trade, and sent thither ten ships to our one.

From Russia the Dutch import flax, hemp, pitch and tar, linseed, honey, wax, furs, skins, Russia leather, fir-timber, tallow, pot-ashes, caviar (the spawn of sturgeon), and linnen: for which they exchange, spices, pickled-herrings, tobacco, drugs for dyeing, and physical drugs, wines, brandy, oil, vinegar, fruit, sugar, and woollen manufactures, gold and silver stuffs, silks, ribbons, haberdashery, hard-ware, toys, hats, soap, and paper; but the silks and hard-ware they used to carry thither are like to become a drug, if they are not so already; for the Muscovites have now a more intimate communication with Persia, India, and China, than they had formerly, and can purchase silks there at a better hand than in Europe: nay, the Russians talk of furnishing the rest of Europe from thence with silks and other merchandize of the East. And for iron-ware, which they used to receive from Holland and other southern countries, the late Czar established founderies and forges for all manner of iron-ware in his own dominions; particularly for great guns, bombs, swords, small arms, &c. inasmuch, that it is said, they will be able to supply the southern countries of Europe, in a few years, with these things, on easier terms than they can make them at home. From Livonia also, now subject to Russia, as soon as the country has recovered itself, they will no doubt import as large quantities of corn as they did heretofore. Notwithstanding that prodigious quantity of spices and herrings, which the Dutch dispose of in the Russian dominions, the balance of trade is against them here also, and consequently they are obliged to pay the difference in specie;

but then as they manufacture most of the commodities they receive from thence, and export them afterwards to other European nations, this trade is in the main of exceeding advantage to them.

CHAP.  
X.

Denmark affords very little merchandize, except lean cattle, which the Dutch buy up and fat in their rich pastures: but from Sweden they import a great deal of iron, steel, and copper, and some manufactures of these metals, with fir-timber, pitch and tar, but not such quantities as from Norway and Russia: in exchange for which the Dutch carry them spices, drugs, salt, fruit, sugar, wine, brandy, silks, linnen and wollen cloth, and stuffs; but not so many herrings as to Russia: for the Russians being of the Greek communion, have twice the number of fasts that the Roman Catholics have, and consequently are prohibited flesh the better part of the year; and these fasts they observe so religiously, that they will rather die than eat a morsel of meat while they last. The Swedes also having of late fallen into the woollen manufacture, work up most of that cloth which the common people wear, and suffer as little as may be to be imported from abroad. Their late acts of navigation also, whereby they prohibit other nations importing several kinds of merchandizes, which are not of their own growth or manufacture, are no small prejudice to the Dutch commerce, which consists chiefly in transporting the produce of one nation to another.

Their  
trade with  
Denmark  
and  
Sweden.

From Pomerania and Mecklenburg the Dutch import all kinds of grain, coarse wool, timber, Silesia linnen, skins and leather, honey, wax, and flax. From the ports of Royal and Ducal Prussia, that is, from Dantzick, Königsburg, and Memel, where the merchandizes of Poland and Livonia are frequently shipped, the Dutch bring vast quantities of corn, leather, furs, timber, pipe-staves, pot-ashes, wax, hemp, and flax, amber, quick-silver, salt-petre, sulphur, pitch, and tar. And from Courland, the principal port whereof is Libaw, the Dutch import grain, timber, and linseed: in exchange for which, they carry to the southern coasts of the Baltick, spices, herrings, tobacco, sugar, fruits, salt, paper, haberdashery and hard ware, wine, brandy, and, till lately, linnen and woollen manufactures; but the Prussians have now set up woollen manufactures, with which they do not only clothe their own people, but supply good part of the great empire of Russia. Others of the Northern and German Princes have also erected manufactures of linnen and woollen, which has very much abated the demand for those goods. In this trade to the Baltick and the north, the Dutch do not employ less than twelve hundred sail of stout ships, and I question if Britain sends two hundred thither; but then the Dutch are freighted homeward chiefly with corn, timber, and other cumbersome goods, which the English do not stand in so much need of: nor do the Dutch want half the corn they import from thence; but if there happens a scarcity in any of the southern kingdoms of Europe, they seldom fail of selling the grain they import at double the price they give for it. Huetius observes, that the monopolizing the trade to the Baltick and the North, is of that importance to the Dutch, that it is a fundamental maxim of their government, to hinder as much as in them lies, the northern nations from trading to the southern and western parts of Europe, and the southern nations from trading to the north. Accordingly, I find a cer-

Their  
trade with  
the southern  
coast  
of the Baltick.

tain

CHAP. X. tain modern writer declaring, that the Dutch will not suffer the Spaniards to import the merchandize of the Baltick in their own ships. He spends a great deal of time indeed a little before, in endeavouring to shew, that the Spaniards, by treaty with the Dutch, have excluded themselves from the India trade, but does not attempt to prove, that the Hollander has any right to exclude them from the trade of the Baltick; only says that the Dutch *will* do it; and seems to intimate, that because it is their *pleasure*, therefore they *ought* to do it, and that there is no injury done the Spaniards, if they should oppose their trading thither by force. I don't doubt but the same author, though he pretends to be of British extraction, could, if he pleased to undertake the task, justify the Dutch in excluding the subjects of Britain from the spice-trade and the herring-fishery; for he seems to be one of those who are ready to justify all their encroachments, only by saying, *They will have it so*, and *they must not be provoked*; for poor distressed Britain cannot subsist without their high and mighty protection; we must support them in all their injustice, in order to our own preservation. But sure these poor-spirited animals deserve no other notice than our contempt; I proceed therefore to enquire into the other branches of the Dutch trade.

Their trade to Germany. The trade of the United Provinces to Germany is carried on chiefly by the rivers Rhine, Maese, Elbe, Weser, and Ems. The river Rhine is navigable from Switzerland to the Low Countries, containing the space of three hundred leagues, and running through several rich and populous provinces, and being joined by several other considerable streams in its course (among which are the Moselle and the Mayn) furnishes Holland with incredible quantities of merchandize; particularly with wine, timber and oak-planks; iron-guns, bullets, cutlers-ware, copper, linnen-thread and flax. By the Maese they receive bullets, bombs, grenadoes, small arms, braziers ware, wrought steel and iron, lead and pit-coal: in return for which, the Dutch carry them vast quantities of their herrings and spices, silk and woollen stuffs, drugs, sugar, fruit, and cheese. By the Elbe, and especially from the city of Hamburg, situate on the eastern bank of it, the Dutch import vast quantities of corn, tin-plates, or white iron, (as 'tis usually called) brass-wire, and timber. By the river Weser also they receive excellent timber, wool, grain, several sorts of metals, beer, and Brunswick mum; for which they exchange herrings, spices, silk and woollen stuffs, and other goods, the product or manufacture of their own country or plantations. But instead of carrying treasure to Germany, they bring a great deal from thence, the balance being very much on their side.

Their trade with the Austrian Netherlands. The trade the Dutch formerly had with the Austrian Netherlands was very advantageous to them, and carried on with great ease by the rivers and canals which water these countries. From thence the Dutch imported fine Brussels and Mechlin laces, cambricks, lawns, damask, diaper, and other fine linnens, fine thread-tapestry or arras, ferges, and sheeps-leather nicely dressed; for which the Hollanders exchanged their spices, and all manner of Indian goods, as also the silk and woollen manufactures of their own country. But since the erecting of the Ostend Company, the Flemings take off no more Indian merchandize; and the Emperor having prohibited the importa-

tion of Dutch goods into his hereditary countries, there seems to be a perfect stagnation of trade on this side at present. Neither have the Dutch only lost their trade with Flanders, as to the point of India goods; but with several other countries contiguous to Flanders, which have been of late supplied by the Ostend Company, on which I shall enlarge when I come to treat of the trade of the Austrian Netherlands.

The trade of the United Provinces with France was much more considerable in the year 1660 than it is at present; for the French since that time having laid high duties upon the merchandize of Holland, and set up several manufactures, the Dutch, by way of retaliation, encouraged the making the manufactures of France in their own country, which very much lessened their importations from thence. It appears, that about the year 1660, the Dutch imported from France to the value of four millions sterling of French goods; consisting of velvets, fattins, gold and silver tissues and taffaties, ribbons, silk and thread-laces, hats, watches, looking-glasses, gilt frames, and toys; gloves, paper, pins, needles, small iron and steel-ware; linnen, sail-cloth, beds, quilts, and other upholsterers goods; wines of various sorts; brandies, and vinegar; salt, saffron, soap, almonds, capers, olives, prunes, and other fruit.

The merchandizes imported at this day by the Dutch from France, are wines, brandy, vinegar, and salt; sail-cloth, small iron and steel-ware, pins and needles; ivory, ebony, and box-combs; watches, looking-glasses, gilt frames, plumes, and a great variety of toys; saffron, almonds, olives, capers, prunes, and some other fruits: for which the Dutch send them in return, spices, tin-plates usually called white iron, timber and naval stores, herrings and other dried and salted fish; butter, cheese, tallow, Russia leather, arms, gun-powder, wood and drugs for dying and other uses; linnen, steel, and copper. And notwithstanding they have struck off so many considerable articles in their importations from France, still the balance is against them, and they pay the difference in treasure. The French trade however is held to be of great advantage to them, in as much as they export most of the goods they receive from thence again, with which they purchase the merchandize of other countries.

From Spain the Dutch import wine, brandy, raisins, oranges, lemons, oil, salt, wool, figs, olives, almonds, sonde or kalt, (an herb which being burnt, turns to an hard substance, and is used in making of soap) iron, steel, chefnuts, anchovies, and anniseeds, which are the produce of old Spain. The merchandize of America, which the Dutch import also from Cadiz, are pearls, emeralds, quinquina, cochineal, indigo, cocoa, and vanelloes (used in making chocolate) Campechy-wood bark, balsam of peru, tobacco, and leather; but above all, those precious metals of gold and silver, of which 'tis computed the Dutch receive no less than five hundred thousand pounds sterling annually, for goods sent to America. For it seems the Spanish merchants not having cargoes sufficient to freight their ships, for that country, take goods of the Italians, English, and Dutch, which they send thither, and having exchanged them for the merchandize and treasures of Peru and Mexico, deliver the produce to the foreign merchants who intrusted them; so that the Spaniards are in reality but factors to those nations for great part of the goods sent by the flota and flotilla to that part of the world,

CHAP. X.

Their trade with France.

Their trade with Spain and the Spanish West-Indies.

CHAP.

X.

world, and the Spaniards they employ have ever proved very faithful in this trust, as the profit they reap by such commissions encourages them to be. 'Tis true, if the whole cargo the Spaniard sent to America were their own, the profit would be much greater; but since they make all the advantage they can desire of their proper goods, and have a further advantage by dealing for the merchants of other nations, it is not to be wondered at that they undertake the charge; neither is it to be supposed that the government would ever put a stop to this practice, because the larger the returns are, the larger are the duties and indulgences payable to the crown. And there may be this farther political reason for the Spanish government's winking at this underhand traffick, namely, that the neighbouring powers having already all the advantages within a trifle they can expect by a *direct* trade with the Spanish dominions in America, will not be so sollicitous to attempt a trade thither, or endeavour to encroach on their western plantations and settlements, as they might otherwise be. Of all the nations that traffick thus to the new world through the hands of the Spaniards, the trade of the Italians is much the most considerable; for the western people seem to love to make a figure and shine in silk, which manufacture the Italians seem to be arrived at the greatest perfection in of any nation in Europe. The trade of the English and Dutch also is very considerable to New Spain; and I take it for a rule, that the less the English trade is here, the more the Dutch have of it; for which reason the Hollander cannot but rejoice to find us at variance with the Spaniard: nor will he ever desire to see us in the quiet possession of Gibraltar, a port in the neighbourhood of Cadiz, from whence the flota annually sets out for New Spain, lest we should have too great an influence on the navigation to that part of the world. But I forbear to make any further reflections on this head here, and proceed to enumerate the several species of merchandize the Dutch export to Spain; and these are spices, herrings, cod, and all manner of salted and dried fish; butter, cheese, and, in scarce years, corn; timber, masts, pipe-staves for casks, planks, and all manner of naval stores; linnen and woollen manufactures, as hollands, cambricks, lawns, muslins, callicoes, table-linnen and tapes; broad and narrow woollen cloths, serges, camblets, plain silks, brocades, gold and silver stuffs, lace, hats, ribbons, small wares, paper, cards, Russia leather, white and yellow wax, medicinal drugs, and those for dying. But besides the trade the Dutch carry on with the Spanish settlements in America by the way of Old Spain, they trade clandestinely also with the Spaniards in that part of the world from the island of Curaçoa, which lies not far from Cartagena; the merchants of which port, and of the other towns along the coast of Terra Firma, have a very good understanding with the Dutch, as *Huetius* relates: and this is almost the only advantage which the Dutch have of their American settlements, for I do not know any island or place they are masters of in the West-Indies, that produces any thing worth the taking notice of. But I had almost forgot one branch of the Dutch trade with America, and that is the furnishing the Spaniards there with Negro-slaves from Africa, which is chiefly transacted at Curaçoa; this is not the least beneficial part of their traffick, and the English endeavour to rival them in it: but this dealing in our own species in the manner it is usu-

ally managed, is so barbarous a practice, that I must confess I cannot wish my country-men success in it: this part of commerce is only fit for Dutchmen, who can divest themselves of all humanity, where there is a gain to be expected.

The merchandizes the Dutch import of the growth of Portugal, are wine, oil, olives, lemons, oranges, anniseeds, raisins, figs, dry sweet-meats, and salt. And those of their plantations and settlements in America, are sugar, tobacco, brazil-wood, and other woods for dying, hides, ginger, indigo, ambergrease, pearls, and diamonds, for which the Dutch exchange their silk, linnen and woollen manufactures; hard-ware, haberdashery, leather, and in a scarce year corn. And here the balance is on the side of the Dutch, which they receive in moidores, or other gold coin.

Their trade with Portugal.

The Dutch Turkey trade is so considerable, as to become the particular care of the government, who have established a council stiled the Chamber of Direction, consisting of six Deputies and a Register, who have been Burgomasters of Amsterdam, to take care of it. This council regulates the convoys, and sees the orders of the States observed concerning their navigation and commerce. The ships employed in this service are usually vessels of good force on account of the rovers of Barbary, who are seldom long at peace with the Dutch, and were lately so troublesome, that the Hollanders were obliged to intercede with their allies, the English, to procure a peace for them; which that good-natured nation brought about, though much to the disadvantage of their own trade: for while the Dutch were at War with the towns on the Barbary coast, the English enjoyed the Levant trade almost without a competitor; for the convoys the Dutch sent into those seas, could not protect their merchant-men. Their ships bound for Turkey usually touch at Cadiz and Leghorn, as well to take in Spanish pieces of eight, as for fresh provisions. And there are other ships which touch at the ports of Spain and Italy with merchandize, which they dispose of there, and take in other goods for Turkey, either on their own account, or for the French, Italians, and other nations; and in returning also, they frequently sell the merchandize of Turkey in the ports of Italy, or Spain, and ship other goods for Holland, either on their own account, or for others.

Their Turkey trade.

The principal port the Dutch use in Turkey is Smyrna, from whence, and other ports, they bring raw and spun silk, goat's and camel's hair, cotton and several kinds of Turkey leather; camlets, wax, allum, galls, wool, coffee, currants, medicinal and dyers drugs, particularly rhubarb, which comes through Turkey from the eastern Tartary; scammony, galbanum, tutia, frankincense, fenna, cassia, aloes, sal armoniac, tamarinds, and mastick. To purchase which, the Dutch carry to the Levant their spices, woollen-cloth, tin, lead, iron, and steel; Russia-leather, cochineal and indigo, and a pretty deal of treasure, consisting of pieces of eight or Spanish dollars.

The Dutch have also a considerable trade with Italy and Sicily, the principal ports whereof are Genoa, Leghorn, Venice, Naples, and Messina, from whence they import raw, twisted, and wrought silks of various sorts, as sattins, damasks, tabbies, gold and silver brocades, the most beautiful of their kind in Europe, gold-thread drawn and twisted, velvets, oil, fruits, confections, allum, sulphur, Venetian steel, manna, amber, turpentine, cream of tartar, lacca, glasses, white marble

Their trade to Italy.

CHAP. X. marble in squares and tables, paper, soap, essences, perfumed gloves, snuff, rice, and anniseeds. In exchange for which the Dutch send thither their spices, China-ware, salted and dried fish, iron, Swedish copper, English tin, and lead, whalebone, masts, planks, and naval stores; woollen-cloth, ferges, camlets, Flanders thread, cavear, and grain in scarce years; except that at Venice they will suffer no iron, copper, or cloth, to be imported, because they have very good of their own.

Their trade with Britain.

The trade of the United Provinces with the British isles is very great. From England they import broad-cloth and other woollen manufactures in large quantities; for whether it proceeds from want of skill, or of materials, certain it is the English still excel all other people in making of fine cloth. Tin and lead is another great article in their importations from Britain, as well as tobacco and sugar. Malt and grain is another, when it bears a moderate price in England; and the exportation of coals from Newcastle and Scotland increases every day. From Scotland also the Dutch import some coarse woollen manufactures, lead, salted salmon, hides, and tallow. From Ireland they receive salt beef and butter, tallow, hides, and wax; and these several kinds of merchandize are exported generally in British ships and vessels, to the city of Rotterdam, the centre of the British trade in the United Provinces. In exchange for which, the Dutch export to the British isles, spices, fine linnen, sail-cloth, Rhenish wine, and brandy, geneva, and other spirits; deal and wainscot-boards, with some of the merchandize of the Austrian Netherlands, such as tapestry, lace, cambricks, lawns, and pictures. And a late writer assures us, that from an inspection of the entries of imports and exports at London, and the best information he could procure, this traffick has been extremely to the advantage of the subjects of Britain for the last seven years. But (admitting this to be true, which I have some reason to question) how much more considerable would the balance be on the side of Britain, if we were not wanting to ourselves: what necessity have we of importing that prodigious quantity of fine linnen from Holland that is used here? Is there not a linnen manufacture in Ireland brought to a very great perfection? and ought we not in justice, and even compassion, to that people, to encourage their linnen manufacture, when we have suppressed that of woollen? and in the end, would not the greatest advantage result to our selves by this conduct? As the seat of government is in England, thither would the wealth of Ireland as naturally flow, as rivers fall into the ocean. The same may be said of Scotland: Were that people encouraged to establish a herring-fishery, they too in time would become rich, and we should in some measure make them amends for the loss of their Court and Parliament. How much soever it may be thought our interest to strengthen the Dutch, sure it is much more so to strengthen and advance the wealth of our own kingdoms and provinces, which might by these means be brought to bear a great share in the charges of the government. Let me recommend to my countrymen also, the introducing all manner of machines that may enable us to work with as few hands as the Dutch do, and we shall soon find our importations from Holland considerably lessened. Let us also encourage by rewards, every man that shall bring any branch of our manufactures to perfection, and

V O L. II.

teach us to finish them as well as our neighbours do. For example: Let that Irishman who can produce a piece of linnen equal to that of Holland, have such a reward as shall encourage others to imitate him. Let a proportionable sum be given to our manufacturers of paper, and founders of types for printing, and we shall not fail to see them in a few years equal the French and Dutch in those particulars. Let the Scotch mariner, who can produce a cargo of pickled herrings equal to those of Holland, receive a reward suitable to those advantages the nation may reap by his industry and ingenuity. Let the man that can discover how to transplant cinnamon, nutmegs, or cloves, to settlements under the British dominion, have all the encouragement my native country can give him. And let the like be done in every other beneficial branch of business, and we shall soon see a new face of things. 'Tis true, in some former reigns, when attempts have been made towards advancing our manufactures or traffick, we have miscarried by the covetousness of our own ministers, who have accepted bribes to betray the interest of their country to foreigners; but this is not to be suspected from gentlemen so perfectly free from corruption as the present, and who have no other views than the prosperity of their country.

As to the navigation of the Dutch, it is frequently said, that they have more vessels and mariners than all the rest of Europe put together; but then we must bring into this account all the vessels, seamen, and watermen, that are employed in their fisheries, and upon their rivers and canals: for it is evident, that the English have as many large ships, and vessels of burthen, as the Dutch, except in their Baltick and Northern trades, where they may possibly employ a thousand ships more than the English do (but this is balanced by the number of ships the English send to their plantations in America, where the Hollander has little or no trade). In every other country almost, whither the English and Dutch trade to, we also find more of the English shipping than of the Dutch. But this article will be farther considered when we come to treat of their forces by sea and land. The reader may expect here that I should enlarge on the Hollanders trade to the East and West-Indies and Africa, but he may be pleased to remember, that these branches of trade have been treated of in the former volume; and I would not weary him by repeating what has been already said on those heads: besides, I shall have further occasion to treat of their East-India trade, when I come to enquire into their naval force.

Navigation.

## CHAP. XI.

*Treats of their revenues, taxes, ordinary and extraordinary, and of their forces by sea and land; as also of their coin, weights, and measures.*

THE subjects of the United Provinces are liable to a great variety of charges and impositions. The council of state every winter draw up an estimate of the expences of the ensuing year, and present it to the States General, who signify to the respective provinces their several shares and proportions of it, the whole usually amounting to between two and three millions sterling in time of peace. The States of every province demand of the several cities and districts within their limits, their respective shares; which when brought in, each province sends its quota to the treasury of the States General;

Their revenues and forces.

out of which are paid their land-forces, consisting of twenty five thousand men, composed of Switzers, Scots, and other foreigners, as well as national troops. And there are seldom less than fifty men of war in commission, either employed in convoys to protect their merchants and fisheries, or which lie ready equipped in their harbours, for any service the state may have occasion to make use of them in; and there are seldom less than fifty or sixty sail more unrigged, which are from time to time repaired out of the publick money. The residue is employed in paying the salaries of the officers of state, ambassadors and publick ministers, in entertaining foreign Princes, or their ministers, or other accidental charges of the state.

The forces  
of the bar-  
rier.

To the standing forces of the United Provinces, we may now very well add the troops they are obliged to keep in the barrier towns of the Austrian Netherlands, by a treaty concluded between his Imperial Majesty and the States General, on the 15th of November, 1715. By the third article of this treaty it is stipulated, That his Imperial Majesty and the States General shall constantly maintain in the said Netherlands, a body of thirty or twenty-five thousand men, whereof his Imperial Majesty to have three fifths, and the Dutch two: And when there is any appearance of war, the said body is to be augmented to forty thousand men, according to the said proportion: And in case of actual war, such a further force as shall be thought necessary by both parties. By the fourth article of the said treaty his Imperial Majesty agrees, That the States General shall have private or separate garrisons of their own troops, in the towns and castles of Namur and Tournay, and in the towns of Menin, Furnes, Warneton, Ypres, and Fort Knocque; but the States General engage not to garrison the said places with troops belonging to any Prince or nation at war with, or suspected to be in engagements contrary to the interests of, his Imperial Majesty. In the town of Dendermond it was agreed there should be a garrison composed of an equal number of Germans and Dutch, under an Imperial Governor, who is, however, as well as the inferior officers, to take an oath to the States General, not to do or suffer any thing that may be prejudicial to their service, with respect to the preservation of the said town and garrison, and the Governor to be obliged by the same oath, to give free passage to the States troops as often as shall be desired. And it was further stipulated, That in the places to be garrisoned by the States, they might place such governors, commanders, and officers, as they saw fit, provided they were not chargeable to his Imperial Majesty, or the country, unless for lodging, which governors and officers should be dependent only on the orders and jurisdiction of the States General, for what concerns the guard or security of such places; but are however to take an oath to his Imperial Majesty, to guard the said places faithfully for the house of Austria, and not to intermeddle in civil affairs. It was agreed also, that the States might change their garrisons as often as they should see proper, and should have free passage for their troops through any of the towns of Brabant and Flanders, as well going as returning, and through all the open country; with liberty of making bridges on the canal between Ghent and Bruges, and upon all the rivers in their road, upon request first made to the Governor of the Netherlands, with whom the rout of such troops should be settled. By the 13th article it is

agreed, That the States should be at liberty to augment the fortifications of any of the said towns at their own expence, advising first with the Governor of the said Netherlands. And because it was found necessary in the last war to leave a considerable body of troops in the towns of the States General, to prevent their being surprized (whereby their army was much weakened) a second barrier is granted them within the former upon their own frontiers; for his Imperial Majesty, by the 17th article of this treaty, consented to let the States post their troops on the Demer between the Scheld and the Maese; and to give up to the States General such forts and territories of the Austrian Flanders bordering upon their frontiers as lie between Dendermond and the sea, for the better covering of those parts where they cannot make inundations upon the lands already belonging to the States General, in case of a rupture with France: and in consideration of the expences, the States will necessarily be at in maintaining the troops in the said barrier towns, and repairing their fortifications; his Imperial Majesty agreed by the 19th article, That the States should have and receive out of the revenues of the Austrian Netherlands the sum of five hundred thousand crowns per annum. And by the 27th article it was agreed, That the fortifications of the citadel of Liege, and the castle of Huy, should be demolished. Of which treaty his British Majesty became Guarantee.

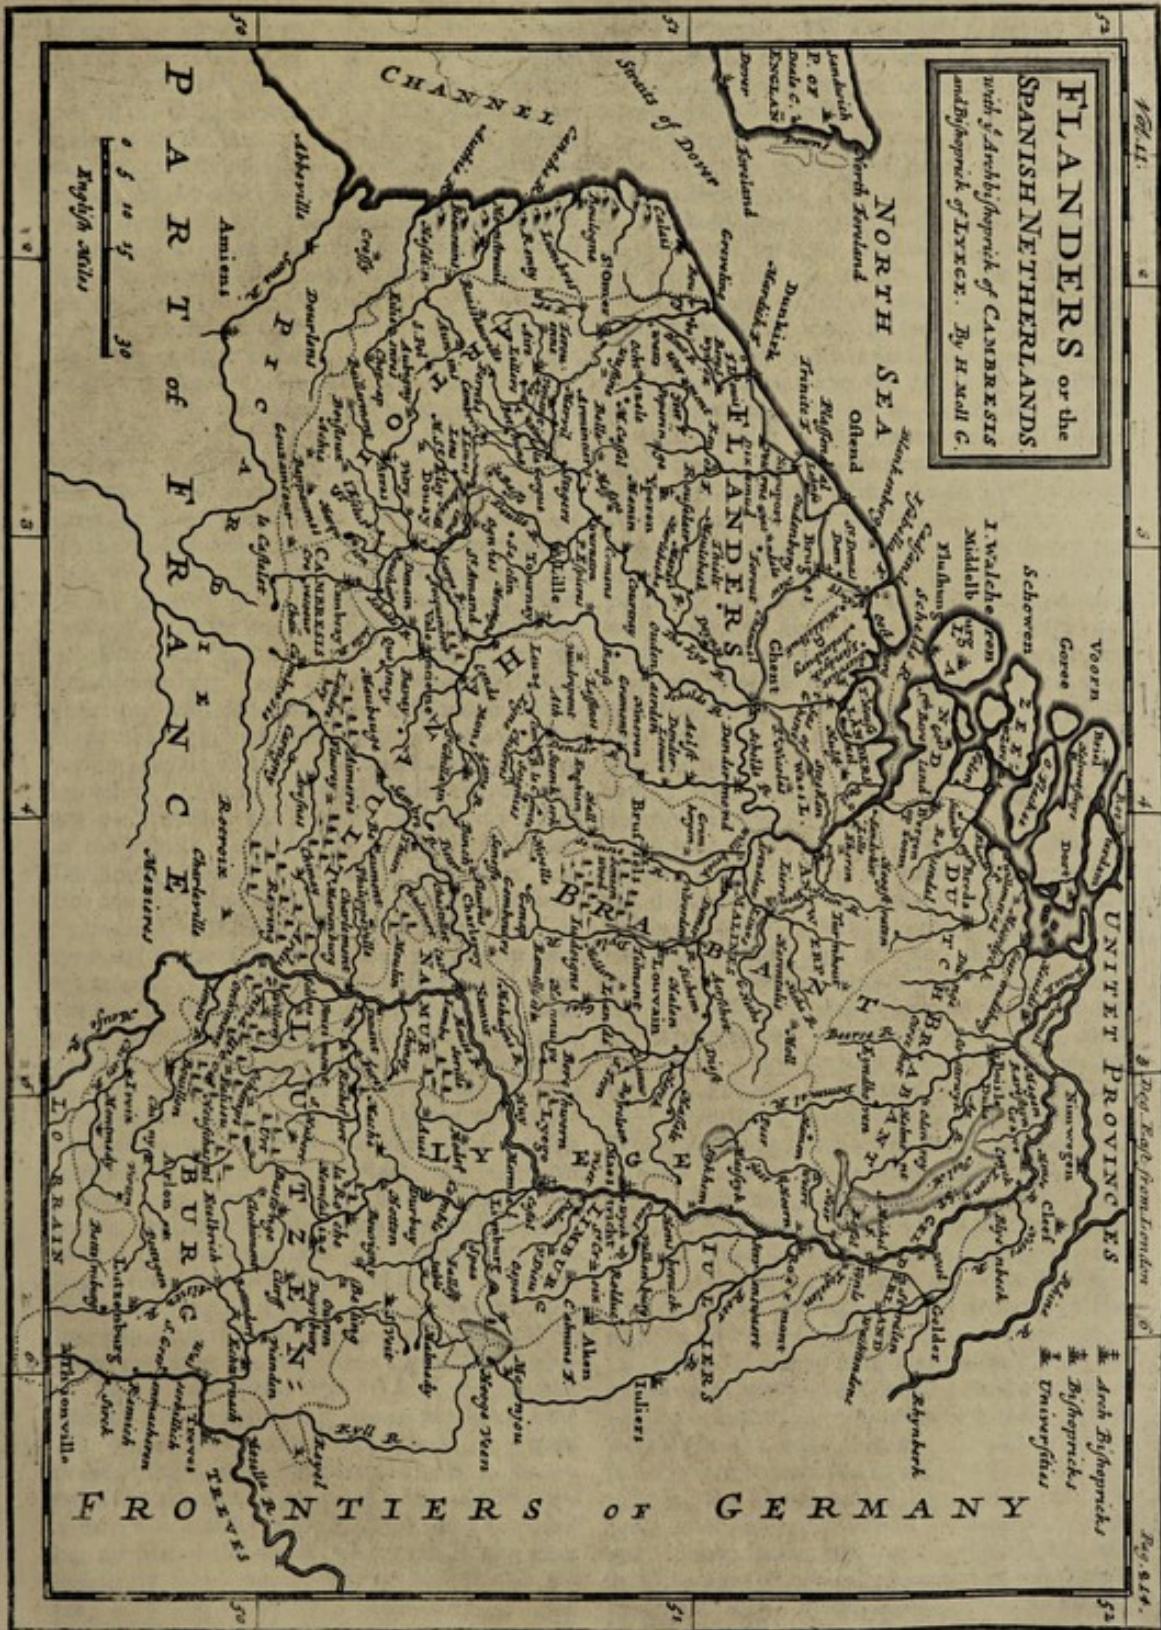

The forces thus maintained in the barrier towns, the reader observes, are not any charge to the States; so that though their standing forces be now increased to forty thousand men, their charge is not at all augmented. The rest of the troops are for the most part quartered in the conquered places and countries of Brabant, Flanders, Juliers, &c. and not in the Seven Provinces, who have besides the forces abovementioned, their respective militia's; the town of Amsterdam alone hath a body of two or three thousand men in their pay, to whom the guard of their city is committed. Nor can the soldiers of the States General regularly quarter in any of their cities without the consent of their respective Magistrates; which was one occasion of the loss of so many of their towns so suddenly on the French invasion in 1672; for while they were deliberating whether they should admit the troops of the States General or not, the French took advantage of their dissensions, and made themselves masters of many considerable places without the trouble of a formal siege; from whence it appears, that the several towns and provinces are put to some additional charges in maintaining their respective militia's, as well as ministers and officers, besides their quota of two or three millions, which they pay to the States General: and over and above these there is an everlasting enemy, namely, the water, which costs the maritime provinces incredible sums to defend themselves against: tho' the frontier provinces against France and Germany, before the barrier was settled, used to complain no less of the charge they were at in maintaining the fortifications of their towns; for every province or city repairs it's own fortifications, though those of the conquered countries are kept up at the charge of the States General.

I come next to inquire into the several kinds of taxes, whereby the respective provinces and towns raise their quota, towards the expence required of them by the States General, and the charges requisite

requisite to support their respective States Provincial as well as cities. And these are in short, by an almost general excise, and their customs; but because it may be a satisfaction to my readers to be a little more particular, I shall here specify some of the chief of them. Their taxes are divided into ordinary and extraordinary; their ordinary or constant taxes, which are levied as well in time of peace as war, are, 1. A duty upon salt, called *Sout-geldt*, which is very moderate: one of the Magistrates of the place takes an account of all the souls in each family, and guessing at the quantity of salt they may spend, levies on them annually a proportionable sum. 2. A duty upon beer, for which every private man pays about twenty pence a barrel; only such small beer as is not worth half a crown a barrel, which the poorest people drink, pays nothing. 3. Another duty amounting to twelve pence per barrel is paid by every publick brewer; and English, German, or other foreign beer imported, pays a much higher duty. 4. The victuallers, or retailers of beer, pay also a further duty of twenty pence per barrel. 5. Every hoghead of vinegar pays nine shillings the barrel. 6. French wine pays six pence the stoop, or gallon; Spanish wines twelve pence the stoop; and brandies ten pence. 7. Butter six shillings the barrel, containing three hundred and twenty pound. 8. For a pipe of eating-oil, eight shillings; and for a pipe of fish-oil, four shillings. 9. Wax and tallow-candles, eight pence the hundred weight. 10. Turf for firing, three half-pence per tun, and coals from England and Scotland, thirty shillings per tun. 11. Five pence per hundred for lead. 12. Wood, an eighth part of the value. 13. Silver and gold stuffs, twelve pence per yard or ell. 14. English cloth, a third part of the value. 15. Tapestry hangings, and other household goods, a ninth part of the value. 16. For a last of wheat which is ground in Holland, six pounds six shillings; half as much for a last of rye; and five and thirty shillings per last for barley or oats. 17. For all cattle, sheep and hogs that are killed, a seventh part of the price. 18. For every horned beast above three years old, three pence per month; and for every horse, two pence. 19. Herrings and salt-fish sold to private citizens, twenty pence the pannier. 20. Every retail fishmonger pays a ninth part of the value for salmon and sturgeon. 21. Tobacco, ten pence per pound; soap, eleven shillings the barrel, and pitch sixteen pence the barrel; every cart or little boat twenty pence a year, and every coach ten shillings a year. 22. All farms and lands, one pound in sixteen. 23. All lands sown or planted, pay four pence half-penny an acre per month, till the grain or plants are cut. 24. Every house pays an eighth part of the rent. 25. Every servant-man or maid pays twenty pence per head. 26. All immovables, under which title they comprehend ships, as well as estates in land and houses, pay a fortieth part of the price when sold or alienated, which arises to a very great sum, there being no part of the world where estates are more frequently sold. 27. A duty or stamp upon paper, according to what is written thereon. And indeed, there is not that thing scarce in the whole country but some duty or other is laid upon it: and every province and city varies their taxes as they see fit; so they raise the quota required of them, nether the Provincial Estates, or the States General interpose in the matter. And where any province refuses it's proportion of taxes, I don't

find that the States General ever proceed against them for it by military execution; but by persuasion and argument, and shewing the ill consequences of breaking the fundamental articles of their union.

Their extraordinary taxes in time of war are either, 1. Poll-money, which is usually twenty pence per head; 2. Chimney-money, twenty pence every hearth: or, 3. The land-tax, as it is called, or two hundredth penny, being ten shillings on every hundred pounds a year; which though their country be but small, arises to a considerable sum, there being so many great towns with houses of good value in them.

I proceed next to observe the constant charges or taxes laid upon them to defend their country against the seas and floods; and the famous *DE WITT* assures us, that every rod of sea-dyke costs them six hundred gilders, or sixty pounds sterling, to make; that against the rivers also the charge of maintaining the banks is very great; but the greatest charge of all, is the draining the country when it is over-flowed, and their dykes broke through, as they frequently are. In Rhineland, a part of the country which has very little communication with the sea, or with any running water, only with standing lakes, every acre pays two shillings a-ledge money, and fifteen pence per acre more towards draining the snow and rain-water off their lands every spring, and another shilling per acre towards highways, canals, and foot-paths, besides great fines and charges they are put to by their Dyke-Graves, (officers who have the inspection and care of repairing their dykes) and by their Bayliffs and Heemraden, who are governors and judges in the country villages.

Before I leave this head of their forces and revenues, it may not be improper to inquire into the strength and forces of the Dutch in the East-Indies; because I find it said by many writers, and some of them men of figure, That the Dutch can fit out a fleet of forty sail of men of war of the line at Batavia, and muster an army of thirty or forty thousand men there; and I don't doubt the Dutch would be very glad to have this believed in Europe; and that their fleet and army there are as good in all respects as an equal number of their ships and forces are allowed to be on this side the world, that other nations may be deterred from making any attempts on their settlements in the Indies. But whatever the number of their men of war, or land-forces be on that side, I will take upon me to say, that twelve or fifteen fourth-rate men of war fitted out in Europe, would drive their whole naval force out of the Indian seas, and joined with a very small detachment of land-soldiers, would take the best town they have in the Indies, even Batavia their capital; for neither the ships that are built and fitted out in India are comparable to those of Europe; neither are the Dutch troops or seamen there an equal match for ours. Those in Batavia, and other Indian settlements, who are of Dutch extraction, are become as effeminate as the former inhabitants were of the Portuguese, whom the Hollanders dispossessed of these very countries, and may as easily be dispossessed of them in their turns. 'Tis true, the Dutch are at present the most formidable naval power in the Indian seas; because the Princes of the East, the Mogul, and the Emperor of China, have not yet applied themselves to navigation; neither has any Euro-

pean Prince or State yet attempted to drive the Dutch from those coasts, as they did the Portuguese and English. But I would have my countrymen well apprized, that the thing is not impracticable, and the usage we have received from the Dutch in that part of the world, may one day possibly occasion it's being attempted, if they do not behave themselves in a more friendly manner than they have done.

One observation more I shall take leave to make in relation to the Dutch trade in India, which I omitted in the former chapter, where it ought properly to have come in; and that is, concerning their managing that trade by a Company. It is no secret at this day, that the company's servants, their Governors and inferior Officers, run away with most of the profit of this trade, and the company itself does not thrive in proportion to the advantages they might be expected to reap by a monopoly of the fine spices. Which is occasioned by the members of the States of Holland being also members of the East-India company, who advancing their relations and friends to all important posts in that part of the world, and in the fleets that are sent thither, give them ample opportunity of making their fortunes and families; and, 'tis said, frequently share with these gentlemen they send abroad in the plunder of the company. One of these Indian Governors for the Dutch having been a little too open and scandalous in this practice, was, I remember within these few years, fined an hundred thousand pounds, and yet was thought to come off with a great deal more: and these delinquents having such powerful supporters, it is not one time in an hundred that they are called to account at all. When these gentlemen have amassed prodigious estates in the Indies, they usually return and spend the remainder of their lives in their own country; which, considering the many hundreds of gainful employments the company has to dispose of in India, may well be supposed to fill Holland with more wealthy overgrown merchants than are to be met with in other places. Two ways especially the Indian Governors and Officers have of making their fortunes: one is by selling spices under-hand in the Indies to the English and other foreigners, and the other is by trading in the country for themselves and those that employ them; the first of which the Company have taken all imaginable care to prevent, by placing three or four Officers in every considerable port to be checks upon each other; but nothing it seems is more common than for all of them to agree together to defraud their masters, and make their own fortunes. As for little villains indeed, they are very severe upon them: we are informed that a native of Ceylon happening to furnish an English mariner with a small quantity of cinnamon, was upon the discovery instantly hanged up without mercy; and thus, no doubt they would have served any of their own common people who had offended in the like nature: but when this is done by a brother officer, who may wink in his turn, the case is otherwise, especially if the roguery is capable of being concealed from vulgar eyes. But I wave any further reflections on this head at present, and proceed to inquire further into the state of the forces and public revenues of the Dutch in Europe.

A further enquiry into the Dutch forces and revenues.

Since the States General apprehended a rupture with the Emperor, they have increased their standing forces to near fifty-four thousand men, con-

sisting of 4612 horse, 2400 dragoons, and 46914 foot, which, joined with the militia of their towns, constitute a very formidable land-army; and they have also ordered their fleet to be considerably augmented, and published a proclamation, prohibiting their sea-men to enter into any foreign service on pain of death.

To say what forces the Dutch are able to maintain, might be looked upon as a piece of presumption in me; but I have some reason to believe that there are not many kingdoms in Europe able to equip out larger fleets, or more numerous armies than the States. The friends of the Dutch indeed tell us, that their naval force is much lessened, and that they run themselves very much in debt by maintaining their quota of troops the last war: the design of which suggestions is no doubt to induce their good allies, the English, to take the whole charge of defending them on themselves; and whether the confederates of Hanover have a quarrel with the powers of the Baltick, Spain, or the Austrian Netherlands, the English alone may if they please be at the expence of a fleet to assert their common rights; nay, to defend all the extravagant pretensions of the Dutch to monopolize the trade of the world to themselves. But if the Dutch have really fewer men of war in commission than the English, who have of late years employed theirs in many expensive and hazardous voyages, in some of which by sickness alone, without striking a stroke, they have lost their compliment of men and officers twice over, and suffered their ships to be eaten up with worms; these circumstances to me are very far from proving that the British fleet is at present in a better condition than that of the Dutch. There are no people in Europe who take more care in laying up their men of war, and keeping them in repair, than that nation does; and supposing there have been some of their fleet suffered to decay, there are few nations who can sooner supply their rooms than the Hollanders can. If we may believe eye-witnesses, there is not such a magazine of ship-timber, and other naval stores in the world, as is to be met with at Sardam, a league from Amsterdam; and their shipwrights and artificers there, some writers tell us, are so numerous, that they are able to build a ship of five hundred tons every day in the year: add to this, that there is no kingdom where there are always such numbers of mariners ready to man the largest fleets; insomuch, that in the fiercest contests between the English and Dutch for the Empire of the sea, in the times of CROMWELL and King CHARLES II, they never had occasion to press a man into the service. Let any Gentlemen, I say, but lay all these circumstances together, and conclude, if he can, that the Dutch are not able to fit out a fleet equal to that of any of their neighbours.

As to their remaining still in arrear, and not able to discharge their debts they contracted the last war, I look upon this to be all grimace; they might soon be out of debt if they pleased, but this serves them for a good pretence to beg with. By pleading poverty they prevail with their allies to take the burthen of their defence upon them; besides, they pay little or no interest for the sums they owe; and their credit is so good, that people crowd in with their money when there is the least intimation that the government will do them the favour to accept it; and the proprietors, in the phrase of a writer of figure, ever receive it back

back again with tears; they value a security from the State much beyond ready money: but admitting their government were deeply in debt, and did not know which way to turn themselves: what is the reason of it? Why, to say the truth, their excises and taxes lie chiefly upon the poorest, or the middling sort of people, and those of the greatest fortunes pay but a trifle towards the public expences in comparison of the estates they enjoy.

An old hunk, who has two or three hundred thousand pounds in trade, in the bank or lombard-house (a publick office for pawns) and keeps but two or three servants, pays no more towards the support of the government than an ordinary shop-keeper, the excises affect him little more, and the customs upon import and export being so extremely low. Now, was the government reduced to any great distress, it lies in their power to tax these gentlemen who have personal estates, equal to the real estates of our noblemen in proportion to their fortunes; and should the Dutch ever exert themselves in this manner, I do not doubt but their publick revenues would at least equal those of Britain: for there is no place in the world so well planted with overgrown merchants as Holland, which will readily be acknowledged, if we consider the advantages they have in trade beyond the rest of the world.

1. They have in the first place the monopoly of the fine spices, on which they set what price they please: with these, as hath been observed, they purchase the merchandize of every other country.
2. They have the benefit of nine parts in ten of the herring and whale-fisheries. And, 3. They employ above a thousand sail of ships in transporting the merchandize of the Baltick and the northern kingdoms, to the southern countries of Europe, and the product of the southern countries to the north. And, 4. They have much the greatest trade of any nation in the world upon the coast of Africa. Let any person but well consider the riches that are to be gained from these four articles, in which the rest of the nations of Europe scarce interfere with them, and they will not vary much from my opinion, that there are more rich merchants in the seven United Provinces than in all the kingdoms of Europe; and consequently, that this nation is able to raise very large supplies; nor can any thing easily ruin them, unless their assuming too much; and by their haughty and insolent behaviour inciting a confederacy of the most potent nations of Europe against them, as they did in the year 1672. If it be demanded why the States do not lay their taxes more equally, and comprehend the wealthy as well as the meaner sort of people in their levies; it may with a great deal of truth be affirmed, That it is, because the legislative power in every province and city almost is lodged in the hands of the wealthiest inhabitants, or their relations. And, 2. That if they should lay higher customs upon merchandize, it might discourage their importations and exportations, which are one great support of the state.

There remain two things still to be considered, in order to give us a just idea of the present strength and security of this mighty state, namely, the alliances they have lately entered into, and the strong towns of the Austrian Netherlands they are possessed of, which makes the situation of their affairs much more desirable than in any preceding times: they have not only an army

of between fifty and sixty thousand men in their own pay, but by the treaty of Hanover, Great Britain and France are engaged to assist them with the forces of their respective nations, if there happens a rupture with the Emperor; and there are not at present any other powers in Christendom the Dutch can be under any apprehensions of. The barrier towns they are masters of, are some of them the strongest fortresses in the known world, particularly Namur and Tournay, as appears from the notable resistance they made in the late wars, and the time they held out against armies consisting of an hundred thousand men, commanded by the greatest Generals in Europe; and such is their situation, that should a war happen between the Imperialists and the Dutch, the latter would probably be able to make an entire conquest of the Austrian Netherlands, and unite it to their state, if their allies the French and English, in their wisdoms, should think fit to contribute towards such a union. 'Tis true, the Dutch frontiers lie a little open to the Imperialists on the side of Guelderland and Over-Yssel, but as they are now actually fortifying all the passes on this quarter, by which they can be attacked, and with their confederates will be able to form an army equal, if not superior, to what the Emperor can bring into the field, they have little to fear from any attempt on the side of Germany. On the contrary, should there happen a misunderstanding between the French and the Hollander, the latter have now so strong, and continued a barrier from the sea-shore near Furnes to Namur, and so along the river Maese as far as Maestricht in their own territories, that the French would find it much more difficult to approach their frontiers in case of another war than they did in the last; especially if they were supported by Britain and the Emperor, as they will infallibly be, if it is not their own fault. I look upon the Dutch state therefore to be in a manner impregnable on the land-side; and if they keep a good correspondence with Britain, as it is certainly very much their interest to do, they have nothing to fear from the sea. But if they should again encroach upon our trade, and insult our Princes, and imagine themselves to be self-sufficient, and to stand in need of no foreign assistance, as in the days of DE WITT, who in his history of Holland plainly asserts, they were a match for all the powers of Europe; I say, if they should become as vain again as they were then, and wantonly and unnecessarily provoke the neighbouring powers to attack them with their united forces, they must expect to be reduced to the like distress, notwithstanding all the advantages they at present enjoy.

I proceed next to give some account of the coin which passes in the United Provinces, of which there is a great variety; as gold ducats, gold ducatoons, silver ducatoons, and half ducatoons, rix-dollars, half and quarter rix-dollars, florins, schillings, four-penny, two-penny, and penny pieces, deuts, and pennings, whereof sixteen pennings make one stiver, or penny; and three deuts, or doits, make one stiver; six stivers, or pence, make one schilling; twenty stivers make one florin (or gilder); fifty stivers make a rix-dollar; sixty-three stivers make a ducatoon; fifteen florins or gilders make a gold ducatoon; and five florins five stivers a gold ducat. The coin of England, France, and Germany, also pass here for their intrinsic value: the French Lewis-d'Or goes for about

CHAP.  
XI.

about nine gilders, or an hundred and eighty stivers, and a French crown for fifty stivers; but the reader is to observe, that the Dutch stiver is something more in value than the English penny, and therefore I find most people, who treat of the Dutch coins, make a gilder, or twenty stivers, equal to two shillings English: so that when foreigners reckon by livres, florins, or stivers, we have nothing more to do, than to divide by ten, and this reduces the sum to pounds sterling. The coin called a schilling, and which goes for six stivers, is always a base metal, and not a third part of the value it goes at; and whoever travels from one province to another, will take care therefore not to carry too much of this coin with him, for it is never taken for so much in a foreign province as in the place where it is coined. And here, give me leave to add a word or two concerning the bank of Amsterdam, where is supposed to be lodged more treasure than in all the banks of Europe; one reason whereof may be the great security those who lodge their money there apprehend it to be in; for it seems the whole city is obliged to make good the treasure deposited there, and it is observable, that a bank-note is of more value here than current money, the reason whereof is, that they take no coin but at the intrinsic worth: for example, a ducatoon of silver, which in current payment passes for sixty-three stivers, or pence, is received in the bank but for sixty stivers; so that there is in reality, five per cent, difference between bank-money and current-money, and this surplus is called the *Agio*, which is not always the same, but is subject to rise and fall as our stocks are, but usually it is from four and a half to five per cent. The Directors of this bank, it seems, are not known to trade with this money, or make any use of it; but I find it is very much suspected that they do underhand, and particularly, that they go shares with the publick lombard-house, or pawn-office, when jewels, or things of great value are lodged there by neighbouring Princes, as they frequently are; nor do they in this case at all hazard the treasure intrusted with them; for the directors of the lombard-office do not lend above two thirds of the value upon any pawn; nor do they ever suffer the interest to run, but if it be not regularly paid, immediately give notice of a sale, as they did in the case of the late Elector of Bavaria's jewels.

There are several cities in the United Provinces which still retain the privilege of coining money, as Arnheim in Guelderland, and Dort in Holland; and the States or Magistracy of North-Holland (usually called West-Friesland, and in some respects a distinct province) have a mint within their own jurisdiction, sometimes at Hoorn, and sometimes at Enchuyfen. The province of Zealand also have a mint at Middleburgh; and the city of Utrecht still enjoys it's antient privilege of coining money. In Friesland the city of Leuwarden hath the same privilege; as have the cities of Deventer, Campen, and Swoll in Over-Yssel, without any regard to the States of the province, claiming it as free cities of the Empire, as they were formerly; and the city of Groningen makes the like pretence. But as by the union of Utrecht there was to be a certain standard of all money current through the whole state; the States General appoint officers to inspect the several mints, and to take care that no counterfeit money be coined in their dominions.

Their  
bank.

Their weights are, the pound, an hundred whereof make the Dutch quintal, that is an hundred and eleven pounds English (or, according to some an hundred and eight pounds) which is equal to an hundred and seven pounds of Antwerp, an hundred and seventeen pounds of Flanders, and ninety-eight of Paris.

Their most usual measure is the ell, an hundred and thirty-four whereof make an hundred yards English: and their corn is sold by the last, which contains an hundred and three of their shepels, or ten quarters English. The shepel I may denominate the Dutch bushel, an hundred and eight shepels making fourscore of our bushels.

## CHAP. XII.

*Treats of their Language, Learning, Universities, and of their liberal and mechanicks Arts.*

THE language of the United Provinces is a dialect of the German or High-Dutch, but more corrupted and clownish than that of Higher Germany; of which the reader will find an account in the former part of this volume. There are few of the better sort but understand French, which is indeed become the common language of the courts of Europe.

As to the state of learning here, says a modern writer, the mechanick arts are preferred to the liberal ones: for how can it be expected that people who are so bent upon trade, should trouble themselves much with speculation or nice distinctions. This country hath however produced some very great men in the commonwealth of learning: and they have two Universities, which some of our countrymen seem to prefer to our own, by sending their sons and relations thither; though perhaps the cheapness of the place, and the little trouble they have in acquiring degrees, may be the principal inducements for entring their friends here; for our people don't generally admire a Dutch education. But to proceed;

The University of Leyden was founded in the year 1674, by the States: the schools are one pile of brick building three stories high, containing two rooms on a floor, the uppermost having been ELZIVIER's printing-office. There is here, as in some other foreign Universities, a *Series Lectiionum* printed annually, and affixed to the school-gates, whereby people are apprized what hour every Professor reads. The number of scholars in this University is computed to be about two thousand. They have a physick-garden contiguous to the school-yard, consisting of an acre of ground well stocked with plants. On the left of it is a long gallery, in which the Botanick Professor reads his lectures, and in which are a great variety of rarities. There are but two colleges in the University, the Students living in private lodgings in the town. The Professors alone wear gowns, and that only when they read lectures, or preside at disputations, others performing their exercise in cloaks; and the auditors sit covered at lectures and disputations. They confer degrees without any regard to their standing: and for exercise, he that intends to commence, prints a state of the question he designs to maintain, which he is obliged to defend against all opponents. Each Professor, besides the profits which arise to him from his auditors, who are in the nature of pupils, hath two or three hundred pounds a year allowed him by the States. *Liberalium artium Ma-*

*gister* and *Doctor* in each faculty, are the only degrees conferred. Those who are matriculated in the register of the University enjoy large privileges, and Students above the age of twenty are exempted from paying of excise for a considerable quantity of wine and beer. The Rector, who used to be chosen by the Stadtholder, and now by the States, enters annually on his office on the day of the dedication of the University, viz. on the 8th of February N. S. and he enjoys the title of *Magnificus*. There are also three Curators, assisted by the four city Consuls as their colleagues, who have the Syndick or Recorder for their counsel. The senate of the University consists of twelve Professors, namely three of each faculty; but they may be augmented by the Curators, under certain limitations. All causes among the Scholars, both civil and criminal, are decided ultimately by the Rector and his four Assessors, to whom are joined the consuls and some of the Schepins of the city. The library of the University is only considerable for its manuscripts, which are esteemed of great value two hundred and twenty one whereof were brought out of the East by J. GOLIVS. There are skeletons innumerable of all sorts and sizes in the Anatomy-Theatre; mummies, heathen idols and reliques; a variety of minerals, and habits of several countries. They shew here a man's bladder containing two gallons of water; and the mummy of an Egyptian Prince reputed to be eighteen hundred years old. Many learned Professors this University is said to have produced, 1. In Divinity, LAMBERTUS DANÆUS, FRANCISCUS GOMARUS, and FRIDERICUS SPANHEMIUS. 2. In Law, HUGO DONELLUS, BERNARDUS SCHOTANUS, and JACOBUS MESTERTIUS. 3. In History, JUSTUS LIPSIUS, PAULUS MERULA, PETRUS CUNÆUS, JOHANNES VOSSIUS, and DANIEL HEINSIUS, ADRIANUS HEREBORD, JOSEPH SCALIGER, and CLAUDIUS SALMASIUS; the two last being natives of France, and invited hither by the States of Holland, who allowed them considerable salaries. And, 4. In Physick, FRANCISCUS DE LA BOE SYLVIUS. The reader may meet with a fuller account of this University in MEURSIUS's *Athenæ Batavæ*.

As to the original of the University of Utrecht, the Dutch historians inform us, that DAVID of Burgundy, Bishop and Prince of the Province, erected a publick school in this city about the year 1459. That in the year 1636, the magistrates of the place erected it into an University. The power of the academical Governor and Officers is exceedingly limited; both the Professors and Students, being subject to the ordinary magistrates of the town, who inflict punishments on all offenders. The hour and subject of their lectures, are printed every half year by their Professors; among whom ISBRANDUS DIEMERBROECK is in great reputation for his *Anatomie Corporis Humani*, published here anno 1672. This library has more printed books than that of Leyden, but not near so many manuscripts.

As to their mechanick arts, the reader will find many of them taken notice of already in the chapter of their manufactures, to which I shall therefore refer him; and only add, that their skill in painting, graving, and carving is much admired, and their musical instrument-makers are esteemed excellent artists: but it is generally observed of them, that they are much better at imitation than invention.

*Treats of the religion of the inhabitants of the United Provinces, and of their marriages and funerals.*

UPON the first struggles for their religion and liberties, the Protestants of the Low Countries agreed, that the publick profession should be Lutheranism, with liberty of conscience however for those of different opinions. But by the union of Utrecht, concluded in the year 1579, each of the provinces was empowered to establish such a religion in their respective limits, as was thought most conducing to the welfare of their Province, with a proviso still, that none should be forced in matters of conscience. But in the year 1583, it was agreed by the States General, that Calvinism should be the established religion of the United Provinces; for these reasons, says Sir WILLIAM TEMPLE, among others, 1. Because their chief supporters in England, France, and Germany, were of that persuasion. 2. Because those of that persuasion seemed most violent against the Spaniards. 3. Because by this profession all the rights and jurisdiction of the clergy being suppressed, there was no ecclesiastical authority left to disturb or fetter the civil power; and all the goods and possessions of churches and abbies were seized into the hands of the State, which occasioned a great increase of their publick revenues, a thing the most necessary for the support of their infant government. The same honourable writer observes further, That since this establishment, it hath been the great care of the State to favour no particular or curious inquisition into the faith or religious principles of any peaceable man, who came to live under the protection of their laws, and to suffer no violence or oppression to be used towards any man, whose opinions broke not out into expressions or actions of ill consequence to the State. The Roman Catholick religion only was excepted from the common protection of the laws, on account of their acknowledging a foreign and superior jurisdiction. But though this is not provided for by the constitution of their government, it is in a manner tolerated by the connivance of their officers, who upon certain constant payments from every family, suffer the exercise of the Roman Catholick religion in their respective jurisdictions, as freely, tho' not so cheap and so avowedly, as the rest. But as to what this honourable writer says further, I cannot agree with him, namely, That no disputes are ever heard of here, on account of religion, and that the civil government hath never been disturbed by religious feuds for a long course of years; when all the world knows, that there is no country in Europe has been more endangered and disturbed by religious disputes than this, and that even from the very foundation of the State to this day, as is evident from the repeated contests between the Gomarists and Arminians in this very country; so that however it may be true, that a general liberty of conscience is the readiest way to promote peace in any government, the Hollanders are but a very unlucky instance of it. And Sir WILLIAM, in working up a panegyrick of this people and their government, seems to have forgot a great many particulars he could not but be acquainted with: nor are the Dutch at last to be altogether acquitted of persecution, for they have frequently dispossessed the Gomarists and others,

The religion of the United Provinces.

others, of their estates and preferments, who would not subscribe to the doctrine of Calvinism: nay, they have imprisoned and banished Nonconformists, and even condemned them to death. And as to the Papists, do they not make them constantly pay for a liberty to profess themselves of that communion? And do not the Scouts, or civil Officers, frequently shut up their private chapels, in order to extort sums of money from them? And after all this will the Dutch wipe their mouths, and say they are not guilty of persecution! But further, do they not exclude all people who are not Calvinists from all places of profit and trust in the government, which their brethren on this side the water look upon as no small degree of persecution, telling us of their birth-rights and natural privileges, from which, according to them, no subject can be justly excluded? And as to the friendship and unity among the subjects of the United Provinces, which are so much applauded, some late writers assure us, that one sect or party will scarce deal with another, but if a tradesman comes to settle any where, who is not of the same communion with the people of the place, they will starve him: and surely the man who is thus treated must resent the usage, and then what good neighbourhood is to be expected amongst them, more than we meet with in other countries? Authors of undeniable credit also assure us, that such have been the disputes between the Gomarists and Arminians, that they frequently came to blows in many of their cities, even while they were coming home together from church, and sometimes actually beat out one another's brains; till the Gomarists called in the civil power to their assistance, and imprisoned and banished the most considerable of their enemies. And though the mob are generally Calvinists, the better sort of people I find are Arminians in their hearts, and do not stick to discover their opinions upon some occasions. But it is remarkable, that the Calvinists here, contrary to those of Scotland and other Presbyterian countries, are great advocates for a monarchical form of government; while the Arminians, who approach pretty near to the church of England, are altogether of commonwealth principles.

And as the Dutch are in many instances as guilty of persecution as their neighbours whom they charge with it, so are they, in some particulars, intolerably remiss and negligent; there is no sect, how scandalous and blasphemous soever, that they will not entertain, if they bring but wealth along with them, and may contribute to enrich their country; inasmuch that there are above thirty several sects in Amsterdam, even Brownists, Familists, and such extravagant opinions as no other establishment will bear, and such as have long been suppressed in all other civilized countries. But the Dutch perhaps (according to the opinion of some of their friends on this side of the water) are in the right in tolerating what the rest of mankind abhor.

But to proceed: The bulk of the people are Calvinists at present, and have the power in their hands, though whether the Roman Catholics do not equal their numbers in many of the villages, I perceive is made a question of late years. The Deputies of the general Synod we find complained to the States General in the year 1725, that the number of Roman Catholics was increased in the United Provinces since 1650, at least three hundred and fifty thousand. The Arminians also, now

they are without a Stadtholder, begin to lift up their heads; and as there are many of them among the magistracy, may possibly, e'er long, give a turn to ecclesiastical affairs in this country. Some of their greatest men have conjectured, That the struggles for power between the Calvinists and Arminians, will one day endanger the destruction of their State; and yet this is the country where Sir WILLIAM TEMPLE, and, after him, some modern writers, without examination, affirm that there are no heats or contests occasioned by different opinions in Religion. The Anabaptists also are very numerous in this State, especially in North Holland, where I think they reckon up no less than six divisions or sects of them. The Jews have two synagogues at Amsterdam, and two others at Rotterdam and the Hague; among which one of those at Amsterdam is esteemed one of the greatest ornaments of that city, by this people sometimes called their New Jerusalem.

The Calvinists, who are the established sect, or Church, as they call themselves, are governed by a presbytery, among whom there is almost a perfect equality, except that the seniors, or those made choice of to preside amongst them, have some preference in their assemblies. Particular congregations are under the direction of the Ministers, Elders, and Deacons; but all censures and degradations, and what concerns religion in general, is determined in their synods, which are either provincial or general. These assemble twice a year, having first given notice to the States of the time of their meeting; whereupon the States appoint a member of their own body to preside in the synod, who is stiled the *Commissarius Politicus*. The General synod send a deputation to the States General once in three years, to represent the state of religion, and to petition for a reformation of such abuses as their own authority does not extend to. The ministers receive their stipends, which are usually about an hundred and fifty pounds a year, from the magistrates of the city, or place where their cure lies; and I do not find that any of them are allowed a plurality of livings. As to tythes and church-lands, it has been already observed, that the States took possession of these on the first constitution of their government, and have retained them ever since, so that the Dutch clergy depend entirely on the magistracy; and if their discourses offend them, 'tis said, they send the preacher a pair of shoes and a staff, by which he understands 'tis their pleasure that he march out of their territories, and he dares not be so impertinent as to offer at a defence.

The Dutch churches are seldom without organs, especially in their cities and great towns, and no part of their worship delights them like psalm-singing; accordingly we find scarce any other books in their churches but psalters, bound up with their catechism; and the psalm to be sung is usually marked on slates, hung up in several parts of the church. Collections for the poor are made in sermon-time, a purse and a bell being fastened at the end of a staff, and carried about by the Deacon, (who is a kind of overseer for the poor) for that purpose. They are very far from observing the Lord's day with that strictness the Presbyterians do on this side the water, making no scruple of travelling by boat or waggon, or of buying or selling small matters; nay, there is not any diversion they refrain from on these days: and yet what a work did our Presbyterians make in the last age, about a permission to the common

CHAP.  
XIII.

common people to follow their recreations on a Sunday, after divine service in the evening? even this alone was thought cause sufficient to justify a rebellion against the government by some, and to murder an Archbishop in cold blood; so various are Presbyterian principles in one country from what they are in another!

Their  
marriages.

Before the celebration of any marriage, there is a solemn contract made between the parties in the presence of their friends, whereby their choice is so far determined, that there is no receding from it; which to me seems to be the marriage itself, and to be so looked upon by the parties espoused; for they make very little scruple of living together as man and wife afterwards, and the woman is frequently pregnant before the marriage is solemnized in a church, or blessed, according to the French phrase. There are in some towns commissaries for causes matrimonial, chosen out of the principal citizens; these take the names of the persons to be married, and see that they have the consent of their parents or guardians; after which they deliver the names of those who are to be married (if they approve of it) to the minister of the place, who publishes the banns three times in the church before or after sermon, according to the custom of the place. As to those who are not of the established church, it is the custom in many cities to publish the banns before the stadt-house, or town-hall, in which the ceremony is celebrated afterwards, according to their respective forms, in the presence of two Senators; though this is sometimes dispensed with, and their marriages are suffered to be solemnized after banns published in their respective chapels, or places of divine worship. Though the Dutch women in their bloom are handsome enough, yet after marriage, applying themselves to all manner of drudgery, and drinking pretty freely with their husbands, their beauty is gone usually before they are five and twenty. If the husband be a tradesman, the wife manages every thing in the shop, as well as in the house, and her man, as she calls her husband, has very little to do within doors, and indeed can scarce be called master of his family; the very children, especially his wife's favourites,

insult him, and his servants shew him but little respect; nor dare he correct any of them, they are so very much upon a level in this country.

At the burials of the Calvinists I cannot learn there is any funeral-service read at the grave, or any bell rung to give notice of the time of their death or interment; but a certain person, whose office it is, gives notice to the neighbourhood to attend the corps to the grave, three or four days after his decease; and there is in many places a penalty inflicted on those who neglect to perform this last office to their deceased friends. In some places both men and women attend their friends to the grave, and in others the women are prohibited. They follow the corps as with us, being usually clothed in long black cloaks, and having seen their friend put into the ground, return to the house, where they meet with an entertainment, or at least a glass of wine; and in some places it is the custom to be very merry, in the room where but a little before they wept and lamented their loss: but people of distinction, 'tis said, order a sum of money to be spent on the bearers and company at some tavern or publick house, and retire decently to their chambers to lament their misfortune. There is a certain set time of day appointed both for marriages and funerals, in some places in the morning, and in others in an afternoon; and if the corps is not brought out at the appointed time, those who have the direction of the funeral forfeit a certain sum for every hour they exceed the limited time, to the use of the poor, which people of figure frequently choose to do, for the state of the matter, and to shew their charity. The time of mourning for a parent, for a husband, or wife, is a year and six weeks.

The Papists and Lutherans seem to lay a great stress upon ringing a bell at the death and interment of their deceased friends, and having them buried in churches, or consecrated ground, which the government makes them pay very dear for; and indeed there are no rites, how superstitious soever they are esteemed, but the Dutch will tolerate if they are paid for it.

CHAP.  
XIII.Their fu-  
nerals.

# THE PRESENT STATE OF THE Austrian and French Netherlands.

## CHAP. I.

*Treats of the situation and extent of the Austrian and French Netherlands, containing those ten provinces, the remainder of the seventeen, which were not included in the union of Utrecht; describing their seas, harbours, rivers, canals, air, and climate.*

### CHAP. I.

The ten  
Austrian  
and  
French  
provinces.

**T**HE ten provinces of the Netherlands, which were not comprehended in the union of Utrecht, and which are now subject to the house of Austria and France, (except some small part of Brabant and Flanders, which the Dutch have made themselves masters of) are, 1. The duchy of Brabant. 2. The county of Flanders. 3. The county of Artois. 4. The county of Hainault. 5. The County of Cambresis. 6. The county of Namur. 7. The duchy of Luxemburg. 8. The duchy of Limburg. 9. The marquise of the Holy Empire, or Antwerp. And, 10. The lordship of Malines or Mechlin. These ten provinces are bounded by the Ocean and the United Netherlands towards the north, by Germany on the east, by Lorraine and part of France on the south, and by another part of France and the British ocean towards the west; being about an hundred miles in length from east to west, and about fourscore in breadth from north to south.

Their seas  
and har-  
bours.

The north-west part of these provinces only is washed by the ocean, and is a very unsafe coast, on account of the numberless shelves and sands which lie upon it. The only ports are those of Graveling, Dunkirk, Newport, Ostend, and Sluys, and these will scarce admit ships of any great burthen; the best of them are Ostend and Sluys. The harbour of Dunkirk was destroyed, in pursuance of the treaty of Utrecht: but of these I shall give a more particular account when I come to describe the towns to which they belong.

Their  
chief  
rivers.

The  
Maese,  
the Scheld  
and Lys.  
The Lieue.  
The Aa.

The  
Sambre.

The chief rivers that have their course through these ten provinces, are, the Maese, the Scheld, the Lys, the Lieue, the Aa, the Sambre, the Dele or Dyle, the Demer, the Scarpe, and the Dendre. The three first of which, namely, the Maese, the Scheld, and the Lys, have been described already in treating of the United Provinces. The Lieue rises near Middleburg in Flanders, and falls into the Scheld at Ghent. The Aa has its source in Artois near Terouen, and passing by St Omer's, divides itself into two branches, which are re-united near Graveling, where it falls into the sea. The Sambre, called by CÆSAR *Sabis*, rises in Hainault, and passing by Landrecy and Maubeuge,

is united with the Maese at Namur. The spring of the Dyle is in Brabant, and takes its course by Louvain; and afterwards receiving the Demer, runs on to Mechlin, a league from whence it acquires the name of Rupel, communicating, its name to the town of Rupelmond. The Demer arises from two springs in the county of Liege, about a league from Tongres, which uniting below Bilsen, pass on to Hasselt, Diest and Arschor, uniting with the Dyle a little below Boteslaer. The Scarpe hath its source from two springs in the province of Artois, which being united near Arras, flow on to Doway and Marchiennes, and a little below St Amand fall into the Scheld. The Dendre hath its source in Hainault, not far from Conde, and running by Aeth, Ninove, and Aloft, falls into the Scheld at Dendermond. Besides these rivers there are as fine canals here as in Holland, though not so many of them: the chief whereof are those of Brussels, Ghent, and Middleburg.

### CHAP. I.

The  
Rupel.  
The  
Demer.

The  
Scarpe.

The  
Dendre.

Canals.

It is observable that in the flat country, and especially that part of it which borders on the sea, there are no springs, though there are several in the hilly part of these provinces at a distance from the sea; which, as Dr NICHOLSON intimates, is a confirmation of the modern opinion, that the source of fountains is not from the sea, but from great quantities of waters otherwise, and chiefly by rain, collected in subterraneous receptacles; and this is farther evinced from a well in one of the maritime provinces, not far from the sea, of a very great depth, but with little or no water in it.

No springs  
in the flat  
country  
near the  
sea.

The air of this country is for the most part healthful, at least much more so than the air of the United Provinces, except that part of Flanders which lies near the sea, as about Dunkirk, Ostend, and some few other maritime places. But of this and the soil I shall speak more particularly, when I come to describe the several provinces.

The air.

This country was antiently famous for its fine woods and forests, of which there are still some remains, though far the greatest part of them are now converted into populous towns and villages, and

Forests.

CHAP. I.  
Of Arden-  
ne. and fruitful fields of arable land and pasture. The chief of these forests is that of Ardenne, in CÆSAR's time the largest of all Gaul; for beginning near the Rhine, and extending itself through the middle of the country of Triers, it reached on one side as far as the territories of the city of Tournay, and on the other as far as Rheims in Champagne, being five hundred miles in length. The thickest part of it at present is between Thionville on the east borders of Luxemburg, and the city of Liege, which is about thirty leagues; in which limits also there are many villages and plowed fields; the principal whereof is the town of St Hubert, situate on the middle of it.

Mormant. 2. The forest of Mormant in Hainault, which begins near Quefnoy, and reaches several leagues towards Vermand, containing however some towns and villages: and here are made great quantities of charcoal, from whence some suppose it to be part of that ancient forest, called by the French, *La Cberboniere*.

St Amand. 3. The pleasant wood of St Amand, situate also in Hainault, beginning from the limits of French Flanders near the town of St Amand, and extending to Valenciennes. But this, as I remember, the late French King ordered to be cut down.

Faigne. 4. The forest of Faigne, being near Avesnes in Hainault, and extending as far as Mézières in Champagne, being about sixteen leagues.

Soigny. 5. The forest of Soigny, adjoining almost to the city of Brussels, is above one and twenty miles in compass, and contains fourscore thousand acres; one hundred of which being cut down every year, yields the Emperor a revenue of fifty thousand florins per annum, according to Mr PEERS, which makes 5000 *l.* per ann. when reduced to pounds sterling. But this reverend Gentleman (or his author) must certainly mean a thousand acres, as well from the price he rates it at, as because he says it is all cut down once in eighty years; and then supposing it to be worth five pounds an acre, it must yield five thousand pounds per annum. But I am apt to think they cut four thousand acres a year; because 'tis usual in most other places to cut underwoods at twenty years growth; and in this case it will be a revenue worth the mentioning, namely twenty thousand pounds sterling per annum. If it be meant indeed, that a hundred acres of timber are cut every year, which are worth fifty pounds an acre, then Mr PEERS's calculation of fifty thousand florins, or five thousand pounds per annum is right: but then the timber must not be cut above once in four hundred years, which can hardly be supposed.

Meerdale, &c. 6. Meerdale, near Louvain; Zaventervloo, between Louvain, Brussels, and Vilvord; and Grootenhout, near Tournhout in Brabant.

Marlaigne. 7. Marlaigne, beginning near the castle of Namur, and extending along the banks of the Maese, reaches almost to Philipville.

Niepe. 8. Niepe, which begins on the confines of Artois, extends as far as the river Lys, and is the principal forest in Flanders. There is also a forest called Nonna, contiguous to Ypres, which extends itself to the northward.

Poodfberg. 9. Poodfberg, on the confines of Flanders and Hainault, between Grammont and Lessines, a large forest of a round form, which with Niepe and Nonnen were formerly part of the forest of Ardenne.

William's Wood. 10. Le Bois Guillaume, or William's Wood, in Artois near Renty.

CHAP. II.  
Mountains. In Luxemburg and Namur, and some parts of Hainault, there are some hills which may deserve the name of mountains; and part of Brabant is hilly, but the rest of the country is upon a flat.

## CHAP. II.

*Contains a description of the particular provinces, and of their chief towns.*

THE duchy of Brabant, being the first province of the Austrian Netherlands which lies in my way westward from the country last described, I chuse to inquire into the present state of this in the first place.

Brabant, in which I comprehend Antwerp, or the marquissate of the Holy Empire, is bounded by Holland towards the north; by the duchy of Guelderland, and the bishoprick of Liege towards the east; by the counties of Hainault and Namur towards the south; and by Flanders on the west: extending near seventy miles in length from north to south, and sixty miles in breadth from east to west, in the broadest part. The air is temperate and healthful, and the country generally fruitful, except the northern part, called *Kempenland*, which is a sandy barren soil, affording only pasture for sheep. The face of the country is generally plain and open, but in some parts it rises into little hills, and is clothed with wood; but what is remarkable in the inhabitants both of Brabant and Flanders, is, that they have found means to improve most of their barren lands, and make them more valuable than the richest grounds. Of the soil and husbandry of which provinces I meet with the following account, viz. That though the soil of Brabant be for the most part good, that of Flanders is much better; that the richest land in Flanders lies between Dunkirk and Bruges, extending about forty English miles in length, consisting of rich meadows, and fields of as good wheat and barley as are to be met with in Europe. But that between Bruges and Ghent, which lie about twenty-four miles asunder, the soil begins to alter for the worse, and between Ghent and Antwerp we find a gravelly or sandy soil, resembling the most barren part of Surrey, producing scarce any thing but heath or broom, if it remain uncultivated. Nor does the soil much alter for the better till we come within two miles of Antwerp, from which Ghent is five or six and twenty miles distant. That part of Brabant which lies between Antwerp and Holland, is no less barren than that which lies between Antwerp and Ghent; but this soil, which is so remarkably bad for grain and grass, happening to be the most proper for flax, by the industry of the husbandman, is become so far preferable to that called the richest, that one acre of their flax-ground is now worth four of the other. After the flax is pulled, the same ground produces a crop of turneps; and in April following, they sow the same land with oats, harrowing in clover-grass seed upon it with bushes, which grass appears after the oats are mowed, and is good pasture till Christmas. The year following they have three crops of clover; the first about the beginning of June, the second at the end of the same month, and the last before the end of August. Other part of their heath-grounds they plant with hops, fruit-trees, and other trees, which they have found means even upon this barren soil to bring to great perfection.

## CHAP.

## II.

Division  
of Brabant.  
Louvain  
quarter.  
Chief  
towns.

Louvain  
city.

Brabant is usually divided into four quarters, distinguished by the names of the four principal cities, viz. Louvain, Antwerp, Brussels, and Bois-leduc. The chief towns in the quarter of Louvain are, 1. Louvain, the capital city. 2. Tienen, or Tirlemont; 3. St Truyen, or St Tron. 4. Leue. 5. Dieft. 6. Gemblours. 7. Halen. 8. Sichen. 9. Judoigne. 10. Hannue. 11. Landen. And, 12. Ramelies: the chief whereof I shall endeavour to describe.

The city of Louvain is pleasantly situated on the river Dyle, in the latitude of fifty degrees, fifty minutes, fifteen miles north-east of Brussels, and twelve south-east of Mechlin: the walls are six or seven miles in circumference, but include several fields and vineyards, scarce one third of the ground inclosed being built upon. It is a town of no great strength, as appears by its surrendering to the allies after the battle of Ramelies, on the twenty-fifth of May 1706, without making any defence. The castle stands on the top of a hill surrounded with vineyards and fine gardens, and has an unbounded prospect over a very pleasant country, and the air is esteemed the best in the Netherlands; which occasioned its being the residence of their antient Earls, and afterwards of CHARLES V, in his minority. This place was formerly very considerable for its manufactures, it being computed, that there was no less than four thousand master-weavers in it at once, and still they have a trade in fine linnen, but not comparable to what it was. The university is now its only glory; and this, 'tis said, resembles those of England more than any foreign university, and was founded about the year 926, but first endowed by JOHN IV, Duke of Brabant, with the concurrence of Pope MARTIN V, anno 1425. Though the situation and buildings of this university be much admired, as well as its noble endowments, Mr PEERS assures us, it is inferior to Oxford in all these respects. The students in divinity here constantly wear gowns and caps, but the rest only at publick exercises. There are forty-three colleges in this university; of which there are not more than four for the education of youth, where strict discipline is observed: the others are for those of riper years, who come and go when they please. In every one of the four colleges above-mentioned, is taught philosophy by two Professors, each of whom read two hours in a day, the young students writing after them, who when they are matriculated, make oath that they believe all the articles of the Church of Rome. The Professors of these four colleges chuse annually forty-eight scholars of two years standing; and out of that number, after publick examination, twelve are chosen to exhibitions. The degrees taken here are those of Master, Licentiate, and Doctor; the Licentiate seems to be a kind of middle graduate between Bachelor and Doctor, and may answer to our Master of arts. He is upon his going out conducted from the schools with drums and trumpets, treats all the Doctors and his opponents, and gives gloves: at his lodging a bell is rung four and twenty hours together, and he is at liberty to chuse a coat of arms, and immediately accounted a gentleman. The Governor of the university is stiled Rector, and is chosen every half year by the *Senatus Academicus*, to whom the chief magistrate of the city gives place. He has plenary jurisdiction over the scholars, and is on holidays, and solemn processions, attended by eight beadles, who go before

him with silver maces. There is another officer, called the Promoter, who, by the authority of the Rector, inflicts punishments on offenders, and sometimes gives judgment of death; but generally crimes are expiated by pecuniary mulcts.

If a citizen be plaintiff against a student in a civil cause, the Rector determines it; but if a student sue a citizen, the Conservator of the university takes cognizance of the cause. This Conservator is an ecclesiastical person, who with his Assessor, being a person learned in the law, proceeds in cases of contumacy to excommunication, and the offender if obstinate is delivered to the secular power. They have also a Chancellor, whose only business is to confer degrees, and who in all publick assemblies takes place next to the Rector. Degrees are taken here in five faculties, viz. divinity, canon-law, civil-law, physick, and arts: and of the superior graduates in these faculties does their academical senate consist.

The town-house of Louvain is a magnificent building of great antiquity, the outside being adorned by abundance of curious sculpture: the Jesuits church also is a handsome structure, and their liberty is said to be the best in the Austrian Netherlands, in regard of the great number of valuable manuscripts it contains. In the church of the Cordeliers lies buried JUSTUS LIPSIUS, an eminent Professor in this university, and of great esteem in the learned world.

About two miles from this city stands the Duke of Arschot's palace of Heverly; the walks leading to it being much admired by travellers, consisting of tall lime-trees, which afford a delightful shade, but the palace itself, an antique building, is in a ruinous condition at present. In the chapel here they shew a piece of money, said to be one of the thirty for which JUDAS betrayed our Saviour: it has indeed great marks of antiquity, and weighs about an English shilling; having the head of TIBERIUS on one side, and a flower resembling a lily on the other. 2. Tienen, or Tirlemont, formerly a large walled town, but now in a ruinous condition; lying about eight miles south-east of Louvain, still about a league in circumference, and has the same privileges as the four capital cities of the province above-mentioned have. 3. St Truyen, or St Tron, between St Tron, Tirlemont and Tongren; the walls whereof were demolished by the French, together with those of Tirlemont. It takes its name from an abbey of Benedictines here, the Abbot whereof is lord of half the town, and puts in the magistrates. 4. Leue, or Levia, five miles east of Tirlemont; a little fortified town, remarkable for the great priory of St AUSTIN's, whose Prior is one of the chief nobility of the province. 5. Dieft situate on the river Demer, ten miles north-east of Louvain, a pretty town, with a large territory belonging to it: has the title of a barony, and belongs to the Princes of Orange; the French demolished the fortifications in the late war. 6. Gemblours, nineteen miles to the southward of Louvain, and eleven north-west of Namur, stands on a steep hill, encompassed on all sides by precipices, except towards the east, on which side a hill hangs over it, considerable at present only for a monastery dedicated to St BENEDICT, the Abbot whereof is lord of the place, and takes the first place among the lay-nobility in the States Provincial. In this monastery the late King WILLIAM took up his quarters for a considerable time during

## CHAP.

## II.

Tirle-  
mont.

Leue.

Dieft.

Gem-  
blours.

during the late war. 7. Landen, situate five miles south of Leue, remarkable only for a victory obtained near it by the French over the allies in the year 1693. 8. Ramelies, eleven miles north of Namur, a village famous only for a victory obtained over the French near it, by the allies in the year 1706.

The second quarter of Brabant is that of Brussels: the chief towns whereof are, 1. Brussels. 2. Nivelles. 3. Senef. And, 4. Vilvorden.

Brussels, the capital of Brabant, and of the Austrian Netherlands, stands on the declivity of a hill on the little river Sinne, or Saine, in the latitude of fifty degrees, fifty minutes; twenty-five miles south of Antwerp, and thirty south-east of Ghent; in a pleasant fruitful country, being about six miles in circumference, and surrounded with a wall, and other fortifications, but not capable of sustaining a long siege, as appears by its surrendering to the allies, after the battle of Ramelies, in the year 1706, without making any resistance. And indeed the fortifications are so extensive, that it would require an army to defend them. In the year 1696, it was bombarded by Marshal VILLEROY, who came before it with an hundred thousand men, while King WILLIAM was at the siege of Namur; and though Prince VAUDEMONT, who lay within the walls with an army of thirty thousand men, prevented its being surprized, there were above two thousand houses demolished in the middle of the town, together with the Stadthouse, and several churches, whose foundations were blown up by the bombs; and the city lying on the side of a hill, and exposed thereby to the enemy's artillery, they fired red-hot bullets into the heart of the place for eight and forty hours, whereby the town became a heap of rubbish, though it was soon after rebuilt with great advantage. It was again vigorously attacked by the Duke of Bavaria in the year 1708, while the confederates were employed in the siege of Lille; but the Duke of Marlborough marching with great expedition to its assistance, the enemy withdrew precipitately from before it.

There are abundance of noble abbeys and monasteries in the town; the country about it is well planted with fruit and timber-trees, and watered with fountains, canals, and rivulets: The river Sinne runs through the city; and is united to the Ruppel, which falls into the Scheld, by a fine navigable canal, near twenty miles in length, whereby this city hath a communication with Antwerp and other cities. This was performed by CHARLES V. and PHILIP II, Kings of Spain, and was a work of incredible labour and expence, the engineers being obliged to level a mountain to effect it, and to erect sluices, whereby vessels are raised perpendicularly to a surprising height upon this canal. Brussels is a populous city, containing large handsome streets, spacious market-places, and uniform elegant buildings both publick and private, especially since the bombardment above-mentioned in the year 1696. It is the usual residence of the Regent of the Austrian Netherlands, and of the nobility and people of distinction. Here also is held the court of chancery for Brabant, and the assemblies of the States of all the provinces. The place is situate in the highest part of the town, a large antient structure, which escaped the fury of the French bombs, being too far from their batteries, which were erected on the lower-side of the town: Marshal VILLEROY, indeed, sent a compliment to

the Electress of Bavaria, to acquaint her that he would spare that part of the town which she resided in, if she would let him know it; to which she returned no other answer, but that he might execute his Majesty's orders (the Duke of Bavaria was then Viceroy of the Netherlands). The church of St GUDULA is esteemed the most magnificent in this city: in which are kept three consecrated hosts, from which, 'tis said, blood issued on their being stabbed by certain Jews in contempt of our Blessed Saviour. Among their religious houses, there is one for penitent whores. Their hospitals are kept exceeding neat, and well endowed, and there are some for the entertainment of strangers, who are supplied with all necessaries for three days. There is another erected for foundling children, who are not suffered to perish through the cruelty or poverty of their parents. Adjoining to the palace is a large circuit of ground inclosed with a wall, containing in it whatever can contribute to the diversion of the court, among which are a park and aviary, grotto's, canals, water-works, and flower-gardens, in which last the natives of Brussels in general are very curious. The Stadthouse, which is a noble building, has over it a brazen statue of St MICHAEL, the Guardian Angel of the city, being fifteen foot in height. Here are also a great many fine paintings done by the best hands; and what renders the houses of the citizens exceeding pleasant, is their fountains and gardens, which few of them want, the meanest of the people being extravagantly fond of flowers.

The magistracy of this city consists of two Consuls, (Burghermasters) and seven Schepins, or Aldermen, chosen annually by the Prince out of seven antient and noble families, and six common-council elected out of the principal tradesmen, of whom there are two and fifty colleges or companies.

2. Nivelles, situate fifteen miles south of Brussels, near the head of the river Sinne, one of the

pleasanteest towns in the Netherlands, but has no other fortifications than a single wall. It is remarkable for a nunnery of noble ladies, who enjoy all manner of innocent freedoms, and are not confined to their cloyster, as in other places. Their governess, called Madame de Nivelles, is chosen by themselves, with the consent of the Prince and the Pope. This town has large privileges, and is considerable for the great quantities of fine linnen made here, equal to that of Cambray.

3. Senef, a village five miles to the southward of Nivelles, memorable for a battle fought near it in the year 1674, between the French and Dutch.

4. Vilvorden, situate on the river Sinne, between Mechlin and Brussels, two leagues distant from each; in the old castle whereof formerly were confined prisoners of quality who had offended against the state, and here also were kept the records of the province of Brabant.

The third quarter of Brabant is that of Antwerp, or the marquissate of the Empire; the chief towns whereof are, 1. Antwerp. 2. Breda. 3. Lillo. 4. Lire. 5. Herentals. And 6. Hoogstraten.

Antwerp is situate on the east bank of the Scheld, in the latitude of fifty-one degrees, sixteen minutes, twenty-five miles north of Brussels, and thirty north-west of Louvain. It is built in the form of a crescent, and lies in a low fenny ground; the Scheld being twenty foot deep here, and the tide rising twelve foot more, ships of burthen may

unlade at the keys; there are also eight canals cut from the Scheld for the convenience of carrying vessels into the town, some of which will contain an hundred sail, which made it one of the safest and most commodious harbours in Europe, until the Dutch cut off their communication with the sea by their forts toward the mouth of the Scheld, and diverted the trade to their own ports; an injury which the Austrian Netherlands will endeavour to redress, if ever it be in their power. This city is about seven miles in circumference, and surrounded with a beautiful wall, and bastions faced with stone; the top of the wall is not less than an hundred foot broad, and well planted with trees. There are thirteen noble gates, eight of which stand towards the water, and have their several keys near them, where vessels are laden and unladen: The citadel is a pentagon of five royal bastions, and stands on the south side of the city, on the banks of the Scheld, commanding the city, the river, and the neighbouring country, the building whereof by PHILIP II, King of Spain, was the first check to the trade and greatness of this port. The citadel is about a mile in compass, and there is a good space of ground between it and the city. Here are large repositories for ammunition and provision, and conveniences for quartering above three thousand soldiers. In the middle of the fort stood the Duke of Alva's statue, trampling upon the conquered States of the Netherlands. The streets of Antwerp are broad and regular, and the buildings magnificent; the whole so beautiful and uniform, that it is usually compared to Florence, which some modern travellers say it excels. The church of St MARY, now the cathedral, is a handsome structure, wherein are sixty-six chapels and altars, adorned with pictures and statues which deserve admiration; and the steeple is esteemed a most exquisite piece of architecture, from whence may be seen the cities of Ghent, Mechlin, and Louvain; and on the other side, the islands of Zealand in a clear day. Among the publick buildings belonging to the religious orders, the Jesuits church is admired for it's large dimensions, curious workmanship, and variety of paintings drawn by RUBENS and other famous hands. The inside of the church is lined with the finest marble, and supported by marble pillars. The stadthouse is a magnificent structure, but the Dutch observe, that from the time it was finished their trade began to decay. The trade of the English was once so considerable here, that they had an exchange to themselves. There is another common to all nations, which was the model of that at London, but hath the advantage of being supported by three and forty pillars of white marble, and standing in the center of four large streets. There is a building also erected by the tapestry merchants, admired for it's dimensions and architecture; and the Printing-house is said to be the best in Europe, having been furnished with an hundred different sorts or funds of letters, whereof two were Syriac, ten Hebrew, nine Greek, and forty-seven Roman.

The trade of this city was at the height about the year 1568 when it was supposed to contain two hundred thousand inhabitants; but the Dutch forming their state soon after, and making themselves masters of the islands Zealand, which lie at the mouth of the Scheld, turned the current of trade to Amsterdam and other great cities of Holland. Nor did the oppressions of the King of Spain and the civil wars they were involved in

contribute a little to the removal of the merchants from thence, to which we may add QUEEN ELIZABETH's being at war with Spain, and setting up the Dutch to oppose that Monarch; and consequently withdrawing her subjects from Antwerp, who had the greatest share in the trade of that place.

Antwerp was made a Bishop's See by Pope PAUL IV, at the request of PHILIP II, King of Spain, who assigned to it seven towns, and an hundred and forty four villages, for the verge of it's See. When it was erected into a marquisate, or how far the limits extended, is very uncertain; but it was afterwards an Imperial city, and the Princes of Nassau Burgraves or Governors of it. As to the constitution of the present government, nine persons taken out of the nobility, and as many nominated by the prefects or masters of the streets, to whom are added eighteen more of the principal citizens, in all thirty-six, are presented to the Prince, who appoints one half of them to be a standing senate, by whom are afterwards chosen two Burghermasters, or Consuls, one of whom represents the city at the convention of estates, and the other administers justice at home, having, with the senate above-mentioned, the cognizance of all causes civil and criminal. The city hath also a Schout, or Sheriff, for the apprehending and executing malefactors; and a Solicitor-General to prosecute offenders on the behalf of the city. The Senate appoint all inferior officers, and elect another council of twelve from among the deans or masters of the several trades or companies.

2. Breda, situate in a flat country on the banks of the river Merck, in the latitude of fifty-one degrees forty minutes, thirty miles north-east of Antwerp, and as many to the southward of Rotterdam, a large populous well-built city, regularly fortified after the modern way, and one of the strongest fortresses on the Dutch frontiers, and hath usually a numerous garrison of the States troops. It hath the title of a barony, which comprehends seventeen villages; the inheritance of the Princes of Orange. The Dutch have been masters of it ever since the year 1637, when it was taken from the Spaniards by FREDERICK Prince of Orange. The great church is said to be a magnificent structure, in which is the tomb of Prince HENRY I. But I do not find any other publick buildings taken notice of by travellers.

3. Lillo, a little strong fortress on the river Scheld, eight miles north-west of Antwerp, and built by that city to render the navigation of the river more secure; but happening to fall into the hands of the Dutch, they do by this and some other forts, obstruct the trade to Antwerp as often as they see fit.

4. Lire, or Lie, situate on the river Nethe, ten miles south-east of Antwerp, and twenty north of Brussels; a pleasant well-built town, remarkable for a spacious market-place, and the elegant buildings which surround it; formerly esteemed a place of great strength, but was surrendered to the allies three days after the battle of Ramelies, without making any defence. It is now subject to the Emperor; and, on account of the agreeableness of the situation, generally inhabited by people of fashion, and merchants who have left off their business. The collegiate church dedicated to St GUMMIANUS, is said to be a handsome building; besides which, there are several convents and religious houses in the place.

5. Herentals,

## CHAP.

## II.

Herentals.

5. Herentals, situate also on the river Nethe, eight miles north-east of Lire, and subject to the Emperor, formerly reckoned a strong place, but not capable of sustaining a siege at present.

Hoogstraten.

6. Hoogstraten, a large open town, fifteen miles north-east of Antwerp, which hath the title of an earldom, comprehending several villages within it's jurisdiction.

Eckeren.

7. Eckeren, a small town, three miles to the northward of Antwerp, rendered famous by a desperate battle fought near it, between the French and the Confederates, in the year 1703, where the Dutch General OPDAM, being cut off from his army, ran away, and gave out that the Allies were defeated, who notwithstanding maintained their ground, to the everlasting disgrace of that gentleman.

I proceed next to the description of Bergen-op-zoom, Steen-Bergen, and Santvliet, with some neighbouring fortifications, which geographers place in Dutch Brabant, but do not reduce to any particular quarter.

1. Bergen-op-zoom, sometimes called simply Bergen, situate on an eminence in the middle of a morass, half a league from the eastern branch of the Scheld, with which it hath a communication by a navigable canal. It is about eighteen miles north of Antwerp, and as many to the westward of Breda. It stands advantageously on the confines of Brabant, Flanders, Holland, and Zealand, and is strong by nature as well as art, being so secured by the morasses about it, that this, if any place, may be looked upon as impregnable. It does not only secure the communication between Holland and Zealand, but opens the Dutch a way into Brabant whenever they please, and from whence they have formerly made excursions into the heart of the country. The town is well built, and the market-places spacious; the church of St LAMBERT, and the Marquis's palace are the only publick buildings taken notice of by travellers, for this town was erected into a Marquisate by CHARLES V, and the neighbouring country made subject to it; but whoever has the possession of the Marquisate, the town is subject to the States General.

Steenbergen.

2. Steenbergen, a small town near the sea, about five miles to the northward of Bergen-op-zoom, with which it hath a communication by a canal, and is strongly fortified, in order to defend the approaches to that city.

Santvliet.

3. Santvliet, eight miles south of Bergen-op-zoom, erected by the Spaniards with some other forts, in order to attack Lillo. There is also a fort between Santvliet and Lillo, called Henry-Frederick, upon the Scheld, which the Dutch are in possession of, and contributes to secure the navigation of that river to them.

Bois le Duc quarter.

The fourth division of Brabant is that called the quarter of Bois le Duc, the chief places whereof are, 1. Bois le Duc. 2. Helmont. 3. Eindhoven. 4. Megen. 5. Ravenstein. 6. Grave. 7. Maestricht. 8. Crevecœur. 9. Bostel.

Bois le Duc.

Bois le Duc, Sylva Ducis, called by the Dutch, Hertogenbosch, and frequently the Bosch, which had it's name from a neighbouring wood, is situate on the banks of the Dromele, which here receives the Aa and Diefse, and five miles to the northward falls into the Maese at Crevecœur. The town stands on a rising ground, in the middle of a large marsh, and for great part of the year can only be approached by causeways, on which are built forts and redoubts for it's defence. The town is

about four or five miles in circumference, and regularly fortified after the modern way, which with the advantage of it's situation, renders it one of the strongest towns upon the Dutch frontiers. It lies about twenty miles to the eastward of Breda, and as many to the westward of Grave. Several fine navigable canals run through the town, over which lie fifty stone bridges; and ten of the principal streets center in a spacious market-place, surrounded with good buildings, but generally of timber. The publick buildings taken notice of by travellers are, the Stadthouse, built after the model of that at Amsterdam, and the church of St JOHN, formerly the cathedral, when King PHILIP II made this city a Bishop's See, in the choir of which are the arms of the knights of the Golden Fleece, and over their stalls, an inscription giving an account of their institution by PHILIP the Good, Duke of Burgundy, Lorraine, and Brabant.

The linnen and woollen manufactures flourish here, and their cutlery ware and needles are in good esteem. The magistrates are two Prætors, or Burghermasters, usually of noble families; who take cognizance of civil and criminal causes, there are also seven Schepins, or Aldermen, who administer justice, and a common-council, or senate, as in other cities of Holland; but there is a tribunal at the Hague, to which there lies an appeal from this and all other cities of Brabant subject to the Dutch, consisting of seven Senators, a Grefier, a Treasurer, and an Attorney-General. Within the jurisdiction of Boisleduc, are Campin, Peeland, Maesland, the district of Osterwick, and the towns of Helmont, Eindhoven, Megen, Ravenstein, and Grave. Helmont lies on the river Aa, fifteen miles south-east of Boisleduc, a walled town, capital of the district of Peeland. Eindhoven is a little walled town, situate on the Dromele, twelve miles south-west of Helmont, and is the capital of the district of Campinland. Megen lies on the Maese, about ten miles north-east of Boisleduc, and gives title to an Earl, the adjacent country being under it's jurisdiction. Ravenstein is also situate on the Maese five miles south-east of Megen, defended by a castle, and the neighbouring country is subject to it.

Grave is a small but strong fortress, situate on the Maese, in a flat marshy country, five miles east of Ravenstein, and sixteen north-east of Boisleduc, of great importance to the Dutch, who are sovereigns of it, as it commands a considerable pass on their frontiers. 'Tis a neat pleasant town, and capital of the little earldom of Cuyck, about four miles in length and one in breadth, belonging to the family of Orange. The Magistrates are two Consuls, or Burghermasters, and seven Aldermen, appointed by the Prince, and a common-council, consisting of eight persons, who are only assembled on extraordinary occasions. The town enjoys large privileges, and an exemption from many taxes which the neighbouring places are liable to.

Maestricht is situate on the west side of the river Maese, having a suburb strongly fortified, called the Wyck, on the east-side, and is about twelve miles to the northward of Liege, and thirty to the eastward of Louvain. It takes it's name from a ferry, formerly over the Maese at this place, Trecht signifying a boat in the Dutch language. Both parts are now united by a stone bridge of nine arches: The town is generally reckoned to be in the Province of Brabant, but the Wyck in the diocese

## CHAP.

Helmont.

Eindhoven.

Megen.

Ravenstein.

Grave.

Maestricht.

diocese of Liege, whose Bishop hath the civil government thereof, though the whole is under the dominion of the Dutch. The town is about four miles in circumference, and strongly fortified after the modern way, but it is not very populous, there being several void spaces within the walls. The streets are large, the old buildings of wood and the new of brick: The Stadthouse is built after the model of Amsterdam. There are three Dutch churches, and several more belonging to the Roman Catholics, of which communion the greatest part of the natives are, and have a convent of monks, and another of nuns in the place. The government resembles that of the other towns of the United Provinces, to whom it is subject. It revolted from Spain about the year 1570, but was reduced to the obedience of the Spaniard again in 1579, under whose dominion it remained till the year 1632, when it was taken by the Dutch who held it till the year 1673, when it was taken by the French King in person, but restored to the Dutch by the peace of Nimeguen, Anno 1679, in whose possession it has ever since remained.

Creve-  
cœur.

Crevecoeur is situate on the Maese, five miles north of Boisleduc, a fortress of great importance on the Dutch frontiers.

Boxtel.

Boxtel lies about five miles to the southward of Boisleduc, and is considerable on account of it's commanding the sluices, whereby the country may be overflowed or drained.

Mechlin  
province.

The little province or lordship of Mechlin being entirely surrounded by that of Brabant, comes naturally to be described next. The whole extent of it is scarce ten miles from east to west, and the breadth of it from north to south is about five. It was erected into a separate jurisdiction by PHILIP the Good, Duke of Burgundy, and hath several considerable villages within it's limits, but the only town of any consequence is the city of Mechlin.

Mechlin  
city.

Mechlin, or Malines, is situate on the river Dyle, between the cities of Antwerp, Brussels, and Louvain, from each of which it is about twelve miles distant. It is a large well-built city, the streets spacious and extremely neat, and divided into several islands by the branches of the Dyle, or artificial canals which run through it, over which lie a great number of bridges. As to the strength of the fortifications which several writers magnify, they must certainly be under a mistake, for in all the late wars it never endured a siege, and particularly after the battle of Ramelies, it surrendered to the Allies, without attempting to make any defence. The town is divided into seven parishes, each of which hath a beautiful church. The cathedral, dedicated to St RUMBALD, is a magnificent old building; and among their religious houses, the monastery of the Franciscans and the nunnery of St CLARA are most admired. Pope PAUL IV erected it into an archbishoprick in the year 1559, giving this Prelate the title of Primate of the Low Countries. The States of this lordship, or province, consist of a certain number of the magistracy, and the representatives of the common people; and here is held a great council, instituted by CHARLES the Bold, Duke of Burgundy, anno 1473, consisting of a President and sixteen Senators; to which high court all appeals were brought from the rest of the provinces formerly, and still are from those which remain under the dominion of the house of Austria.

The tanners and weavers trades flourished much in this city formerly, and are very considerable at present: they are famous also for casting of bells

and great guns; but what has been most admired of late years is their lace, being the finest that is made in the Low Countries; and when the English troops were quartered here, their beer was in great esteem amongst the officers, being equal to the best October in England.

In this province I shall include the little town of Arschot, erected into a duchy by CHARLES V. This city stands on the river Demer, twelve miles to the eastward of Mechlin, and hath a small territory belonging to it, being the inheritance of the ancient family of the CROYS, who came originally out of France.

The province or earldom of Flanders is bounded by the ocean, and that branch of the Scheld called the Hout, which separates it from Zealand, towards the north: By Brabant and part of Hainault towards the east. By another part of Hainault and Artois towards the south; and by the ocean and part of Artois towards the west: extending in length from east to west upwards of seventy miles, in breadth from north to south about sixty. This province is generally flat and level, and the most fruitful spot of earth that is to be met with in Europe; nor is the air any where unhealthy at a distance from the sea and the mouth of the Scheld: And what renders this country extremely pleasant, is, their fine canals, their regular plantations of trees, and the many beautiful cloysters, towns, and villages, which stand so thick, that we no sooner part from one, but we find our selves at another. But notwithstanding the country abounds in good arable and pasture, and there are some grapes, the climate is too cold to produce good wine; for their winters are much colder, and their frosts of a longer duration than ours; the north-east winds coming to them over a long extent of frozen continent, which are rendered much milder by the sea before they can reach us. They have a noble large breed of cattle, especially of horses for draught, which we frequently see in the coaches of our nobility: nor do they want any animals, wild or domestick, which are to be met with in Britain; and to me the inhabitants appear a politer and more hospitable people than those of Holland: and however some may magnify the freedom and pleasure they enjoy in the United Provinces, foreigners, who visit Flanders, as well as the natives, seem to enjoy much more freedom and satisfaction than is to be met with in the territories of the Dutch. I presume the reader will naturally understand me to speak of the Austrian Flanders; for the eastern part, under the power of the Dutch, and the western side, in the possession of the French, very much resemble the respective nations to which they belong, and speak their language. What part belongs to one, and what to the other, will appear from the description of the several great towns, and the territories belonging to them. And in my way westward, I first meet with those under the dominion of the Dutch, viz. Sluys, Ardenburg, Middleburg, Sas van Ghent, Hulst, Axel, Liefkens, Ternhuys, Philippin, Bier-Vlier, Isendick, Osburg, and Cadstrand fort and island; the chief whereof I shall endeavour to describe.

1. Sluys, one of the five ports of Flanders, and the most commodious of them, is situate about ten miles to the north-east of Bruges, which city can have no communication with the sea, by the way of the Scheld, when the Dutch, who are in possession of Sluys, are pleased to obstruct it; (for which reason a navigable canal for ships of burthen

The pro-  
vince of  
Flanders.Dutch

the chief  
towns.

CHAP.  
II.CHAP.  
II.

burthen hath been cut from Bruges to Ostend by the Spaniard, since the Dutch have been masters of Sluys.) It is a fortress of great strength and consequence, as it is situate over against the island of Cadfandt, in possession also of the Dutch; but the whole town is not above a mile in circumference, and of very little trade at present, tho' it was once as considerable a mart as any in Flanders, and hath been in the hands of the Dutch ever since the year 1604.

2. Ardenburg, a league to the south-east of Sluys, and formerly capital of the maritime parts of Flanders, but of little consideration at present.

3. Middleburg, another little town about five miles to the southward of Sluys.

4. Sas van Ghent, or the Port to Ghent, about twelve miles to the northward of that city; a small but strong fortress, situate in a morass, by the possession whereof the Dutch may cut off all communication between Ghent and the sea whenever they think fit, and have been masters of it ever since the year 1644.

5. Hulst, situate ten miles to the eastward of Sas van Ghent, in the country of Waes; a strong town taken by the Dutch in the year 1645, and confirmed to them by the treaty of Westphalia.

6. Axel, a small fortress, a league to the westward of Hulst.

7. Liefkens, a fort on the Scheld, built over against Lillo by the Dutch, to command the passage of that river.

8. Ternhuys, another small fort on the banks of the Scheld, two leagues to the northward of Axel.

9. Fort Philip, a league north-west of Sas van Ghent.

10. Bier-Vliet a small island in the mouth of the Scheld, on which stands a town of the same name, a league north-west of Fort Philip, which commands the passage over to Zealand.

11. IJendick, a little fortified town on the other side of the channel, two miles to the westward of Bier-Vliet.

12. Osburg, a little fortified town on the channel which separates the isle of Cadfandt from the continent.

13. Cadfandt, an island situated at the mouth of the Scheld, over against the island of Walke- ren, about nine miles in length and four in breadth, on which is a Fort of the same name; by which the Dutch secure their communication between the islands of Zealand and Flanders. And these are all the places the Dutch are possessed of in Flanders, except what relates to their barrier.

The chief towns belonging to the Austrian Flanders, are Ghent, the capital of the whole province; Bruges, Damme, Ostend, Plassendal, Newport, Deynse, Dendermond, Rupplemond, Aloft, Ninhove, Audenard, Harlebeck, Courtray, Menin, Comines, Warwick, and Warneton, Tournay, Ypres, Fort Knocque, Dixmuyde, and Furnes.

1. Ghent, Gaunt, or Gand, the capital of Flanders, is situate on four navigable Rivers, viz. the Scheld, the Lys, the Liene, and the Mour- water; thirty miles north-west of Brussels, de- fended by a castle, and surrounded by a wall, and other fortifications; ten or twelve miles in cir- cumference, and consequently requires an army to defend it; besides, there is so great a variety of ground in so large an extent, that 'tis impos- sible a town of these dimensions can be very strong. The town is large, but not one half of

VO L. II.

the ground within the walls built upon, the rest consisting of fields and gardens. The streets are wide and well paved, the market-places spacious, and the houses well built of brick. The town is divided into six and twenty islands, by the rivers and canals which pass through it, over which are laid near an hundred bridges. It is reckoned to be situate in an healthful air, tho' there are many hundreds, if not thousands of English soldiers who lie buried on St Peter's Hill, and other places within the walls of this city, who all died nat- ural deaths; for 'tis observable that our forces when transported into any foreign country, die great part of them the first year, either by the flux, or some other contagious distemper; I pre- sume from living in a different, or more irregular manner, than they used to do at home; so that we ought not to conclude Ghent, or any other city, the more unhealthful on account of it's be- ing fatal to our troops, especially when we ob- serve our seasoned men to have their healths very well here. In the late war, this town was gen- erally the winter quarters of the English foot, when there were sometimes four and twenty re- giments in the town at a time, and yet the place did not seem to be crowded with them. They had a large building assigned them for divine wor- ship, and the Chaplains of the several regiments officiated by turns; nor was there ever any mis- understandings between our people and the inha- bitants, on account of religion, but a friendly in- tercourse was maintained between them; and I believe the natives were glad of our company on account of the money that was spent in the place, for the soldiers generally lay in barracks, and were not burthensome to the inhabitants, as they usually are in England. The publick build- ings worth our observation here, are the Stadt- house, and the Cathedral, both handsome struc- tures; and I took particular notice of an image of white marble in the latter, with one head and three faces, looking three different ways, which stood at the east end of the church, by which gross figure, we apprehend they designed to re- present the Trinity. There are besides this, seven parish churches, and fifty-five monasteries and nunneries, among which there is one English nun- nery. In the largest square of the town is a statue of CHARLES V, who was born in the castle; and here also the famous JOHN Duke of Lan- caster first saw the light, from thence called JOHN of GAUNT, son of EDWARD III, King of Eng- land. On the bridge called Dogebrack, are two brazen statues, representing a son beheading his father; for it is related, that both of them being condemned to die, a pardon was offered to him that would be the other's executioner; and the fa- ther having prevailed on the son to take the office upon him, as he was ready to strike, the blade of the sword broke in his hand, which being looked upon as miraculous, they were both pardoned. The silk and woollen manufactures flourish in this place as well as the linnen, and they have a great trade in corn. It is a Bishop's See under the Archbishop of Mechlin, and the Provincial Court is held here, from which however there is an appeal to that of Mechlin. The French possessed themselves of it, with the rest of the towns in Flanders, on the death of CHARLES II, King of Spain; but it surrendered to the allies on the defeat of the French at Ramelies anno 1706. And in the year 1708, the French surprized the city again, and threw an army into the place to defend

CHAP.  
II.

defend it; but the Confederates having taken the cattle of Lisse, invested Ghent in a very advanced season near Christmas, and the enemy were obliged to surrender it, after a few days open trenches. The winter was so severe at this time, that the horses' hoofs froze to the ground in the night-time, and had not the French been so complaisant as to quit the place before things were come to an extremity, the confederate army must have suffered very much. The government of the city is lodged in the Burgomaster and Schepins, that is, in the Mayor and Aldermen, as in most of the cities of the Low Countries; besides which, there is a great Council, or Senate, which assembles upon extraordinary occasions.

Bruges.

2. Bruges, situate four and twenty English miles to the north-west of Ghent, on the grand canal which runs between those two cities, being about ten miles to the eastward of Ostend, and as many south-west of Sluys, said to be so named from the great number of bridges over the canals and rivulets, which run through the town. The place is about four or five miles in circumference, surrounded by a wall and other fortifications, but not able to sustain a regular siege carried on by our modern engineers. It is a populous city, well built, and hath a spacious marketplace, in which six of the principal streets center: there are in it seven parish churches, besides the cathedral, sixty monasteries and nunneries, among which, one for English Nuns, and a college of Jesuits. It was erected into a Bishop's See by PHILIP II, King of Spain, about the year 1559, and is subject to the Archbishop of Mechlin, or Malines. Before the revolt of the seven Provinces, or rather before Antwerp arrived to it's grandeur, it was the greatest town of trade in Europe; all countries who had any concern in commerce, having their factories and agents here, particularly the English, who made it their staple for wool. As it hath a communication with the sea, by means of the new canal to Ostend, it is still a place of good trade. Their manufactures are chiefly those of woollen cloth, and stuffs, linnen and tapestry, and will probably flourish or decline as the navigation of the Ostenders succeeds.

Damme.

Fort St  
Donat.  
Fort  
Isabel.  
Blanken-  
burg.

3. Damme, a small but a strong fortress belonging to the Emperor, four miles to the northward of Bruges, situate on the old canal between Bruges and Sluys; four miles to the northward whereof lies Fort St DONAT, yielded to the Dutch to strengthen their barrier; and two miles further north, Fort ISABEL; and six miles west of Fort ISABEL, lies Fort Blankenburg on the sea-coast, between which and Heyft the second barrier of the States begins, and is carried on from thence to the Scheld. They are also to possess all the posts upon the Demer from the Scheld to the Maese, in case of a rupture with France. The towns assigned them from the other barrier, are Furnes, Fort Knocque, Ypres, Warneton, Menin, Tournay, and Namur.

Ostend.

4. Ostend, the capital of the territory called Vryland, or Freeland, ten miles to the westward of Bruges, is situate in a morass, almost surrounded by wide trenches, filled with the sea-water, having the best harbour in Flanders next to that of Sluys: It is fortified after the modern way, which with it's hoggy situation, renders it one of the strongest towns in Flanders: The place is not large, but the houses are generally well built, the streets regular and well paved; and as the Emperor seems determined to promote it's trade and

navigation, will probably e'er long be in a flourishing condition; but I shall enlarge further on this subject when I come to consider the trade of the Austrian Netherlands. It is not long since Ostend was a small village, it first became famous in the year 1601, when it was defended by the English and Dutch against all the power of Spain, till the latter end of the year 1604. In which time the Spaniards lost seventy thousand men before the place, nor did the besieged lose fewer than thirty thousand; not that the garrison ever consisted of half that number at one time, but the sea being open to the allies, they supplied the town from time to time with fresh forces and provisions, till, according to the phrase of that time, the enemy perfectly dug them out, and made the town a heap of rubbish. It fell under the dominion of the French on the death of CHARLES II, King of Spain, and was taken from them by the Confederates after the battle of Ramelies in the year 1706, being now subject to the house of Austria.

CHAP.  
II.

5. Plassendal, situate three miles to the eastward of Ostend, where the canal of Newport falls into that leading from Ostend to Bruges, and consequently commands them both. It is a strong fort, and defends an important sluice, through which the shipping passes backwards and forwards; and being seized by the French, together with Bruges and Ghent, while the Confederates were employed in the siege of Lisse anno 1708, put the Confederates to very great difficulties; but fell into the hands of the allies again the same year, upon the surrender of Ghent and Bruges to them.

Plassendal.

6. Newport, another of the five ports of Flanders, lies near the sea-shore, eight miles south-west of Ostend, and fifteen west of Bruges, at the mouth of a small river, which renders it a secure harbour for vessels of small burthen. The town is fortified, but cannot be much commended for it's buildings or trade, the houses being low and built of wood, and the inhabitants subsisting chiefly by fishing.

Newport.

7. Deynse, a little town situate on the river Lys, Deynse ten miles south-west of Ghent, and twelve almost north of Oudenard.

8. Dendermond, situate at the confluence of the Dender and the Scheld, twelve miles to the eastward of Ghent; a strong fortress, surrounded by meadows, and is not to be approached but by causeways, when the citizens are pleased to lay the country about them under water. This is one of the barrier towns, wherein the garrison are one half Imperialists and the other Dutch. It surrendered to the allies upon the victory at Ramelies, in the year 1706, after a short siege.

Dender-  
mond.

9. Rupplemond, a small town, situate in the county of Waes, at the confluence of the Rupple and the Scheld, five miles south of Antwerp, and eighteen to the eastward of Ghent.

Rupple-  
mond.

10. Aloft, situate on the river Dender, six miles south of Dendermond, and fifteen south-east of Ghent, the capital of a territory, formerly called Imperial Flanders, on account of it's being a fee of the Empire. It is a pretty town, and a place of some trade, but neither large, or well fortified.

Aloft.

11. Ninove and Grammont, two little towns, the first seven miles south of Aloft, and the other five miles further south, both of them situate on the river Dender. At Grammont there is a noble abbey, standing on an eminence, which gives

Ninove,  
Gram-  
mont.

CHAP. II. us a delightful prospect of the neighbouring country.

Oudenard, or Audenard, situate on the Scheld, fourteen miles south of Ghent, a large well-fortified town, divided by the river into two parts, and almost surrounded by meadows, except that there is a hill which commands it on the south-side. The buildings are good, and the streets wide and handsome, and there are several fine churches and monasteries in the place: it hath also a flourishing trade in fine linnen and tapestry, and is the capital of a chatellany, which contains three and thirty villages. The French laid siege to it anno 1708, which occasioned an obstinate battle, wherein the allies obtained a compleat victory, and saved the place.

Courtray. 13. Courtray, on the river Lys, twenty-six miles south-west of Ghent, and twelve miles north-east of Lisle, strong by art and nature, and defended also by a good citadel. It is a populous place, and both the woollen and linnen manufactures flourish here.

Harlebeck. 14. Harlebeck, on the river Lys, a little open town, two miles to the northward of Courtray, capital of a small territory.

Menin. 15. Menin, a little well fortified town, situate on the river Lys, five miles to the southward of Courtray, taken by the allies in the year 1706, and is now one of the towns of the Dutch barrier against France.

Warreton, Comines, and Warwick. 16. Warreton, Comines, and Warwick, three little towns, situate on the southward of Menin, in the way to Lisle, of which Warreton is one of the barrier towns.

Tournay. 17. Tournay, or Dornick, situate on the river Scheld, which runs through it, surrounded by pleasant fruitful meadows, being thirty miles south of Ghent, and as many north of Cambray, and eleven to the eastward of Lisle. It is a large populous well-built city, and a place of good trade; and having been for a considerable time in the hands of the French before the last war, it's fortifications were brought to as great perfection as any in the Low Countries: but what added most to the strength of the place, as the allies found by dear-bought experience, when they besieged it in the year 1709, was the mines, which blew up hundreds, if not thousands of the besiegers at a blast. When they had with the utmost hazard and difficulty made themselves masters of the strongest works that ever were contrived, and the French could maintain them no longer, then did they set fire to the mines, and blow up whole regiments of brave fellows at a time, who fell, as a certain writer has it, in a shower of shattered limbs and mangled carcases. These mines, says a British gentleman who view'd them, consist of vast subterraneous vaults, so well contrived, that they may rather pass for terrass-walks than mines. In the center of the citadel there is a well, the surface of whose waters is fifty foot from the mouth, just above which water are balconies, that lead to those beautiful destructive caverns above-mentioned. This city is divided into ten parishes, to which belong as many elegant churches, besides great numbers of fine convents and cloysters. The cathedral, dedicated to St MARY, is a magnificent structure, adorned with brass and marble monuments, erected to the memory of it's Bishops, with many admirable paintings. The church of the Croisiers is esteemed the finest building next to the cathedral, whose marble pillars and altar-piece

make it much admired. Here we see the crowning of our Saviour, done by the celebrated RUBENS, a piece of inestimable value; with another picture of the nativity, done by the same hand. There is in the market-place an old building, said to be of Roman architecture, and frequently called JULIUS CÆSAR'S palace: but the town is certainly very antient. King HENRY the eighth of England besieged and took it in the year 1513, and built the old citadel; but it was delivered up to the French again upon a treaty of marriage between the Dauphin and the Princess MARY. The Spaniards made themselves masters of it in the year 1581, and the French surprized it again in the year 1667; but it was taken from them by the allies, after an obstinate siege, in the year 1709, and is now one of the towns of the Dutch barrier. The principal manufacture of the place at present, is linnen, and it was antiently as famous for woollen. It is the capital of a small territory, called the Tournesis, and a Bishop's See, subject to the Archbishop of Cambray, while in the hands of the French; but the government, both spiritual and temporal, has received some alterations since it came under the dominion of the Imperialists.

18. Ypres, or Ipres, situate in a flat country on the river Ypre, about ten miles to the westward of Menin, and eighteen to the northward of Lisle; a large town regularly fortified, and by it's sluices can lay the neighbouring country under water; the streets broad, and the market-place said to be the most spacious of any in Flanders, and surrounded with a piazza, but the houses are generally of timber. The cathedral is dedicated to St MARTIN; and there are several monasteries, in one of which, belonging to the Jesuits, is our Saviour's resurrection, admirably painted on the altar-piece of the chapel; and in the cloyster are the pictures of all the Jesuits who have suffered in England, represented as so many martyrs. The town has still a good trade in the silk and woollen manufactures, and was erected into a Bishop's See in the year 1559: this Prelate is suffragan to the Archbishop of Mechlin. Ypres is the capital of a large fruitful chatellany, comprehending Mont-Cassel, Belle or Baillieu, and Rouffelaer; as also Poperingen, Warreton, Comines and Warwick, and hath the title of a viscounty. It was taken by the French in the year 1678, and remained in their hands till the latter end of the last war, when it was taken by the allies, and by the treaty of Utrecht confirmed to the house of Austria, together with the chatellany, comprehending all the places above mentioned, and this city is now part of the Dutch barrier.

19. Fort Knocque, situate on the river Iser, about fifteen miles to the northward of Ypres, makes another part of the Dutch barrier.

20. Dixmude, situate on the Ypre, about ten miles north of Ypres city, taken by the allies in the late war, and confirmed to the house of Austria by the treaty of Utrecht. It is a small town, and not very considerable, either for it's trade or fortifications.

21. Furnes, or Vuerne, situate on the river Colm, in a fruitful country, about six miles from the sea, ten to the eastward of Dunkirk, and five to the westward of Newport. It is a little fortified town, capital of an Ambacht, or territory, and part of the Dutch barrier against France.

CHAP.

II.

Mont-Cassel.  
Baillieu.  
Rouffelaer.  
Poperingen.

In French Flanders the chief towns are Lille, Dunkirk, Mardyke, Graveling, Berg St Winock, Doway, Orchies, Armentiers, La Basse, L'Ecluse, St Amand, Launoy, and Bourbourg.

1. Lille, or Lyffel, called the island antiently, on account of it's being situated in a morass, surrounded with waters, (which are now drained off) stands on the river Deule, twenty-five miles north of Arras, and twelve west of Tournay, a large populous well-built city, defended by a citadel, and so strongly fortified, that it cost the allies more men to take it in the late war, than any town in Flanders, and was very near baffling their united forces. It is the capital of the French Flanders, and from the elegancy of it's buildings and it's flourishing trade, usually stiled *Petit Paris*. The Stadthouse and the Church of St PETER are noble structures, and the citadel a master-piece in fortification. The silk and linnen manufactures are in great perfection here, and they are famous for their camblets. It was taken by the French in the year 1667, who built the citadel, and enlarged the city as well as it's fortifications, making it the centre of the Flemish trade. It was taken by the allies on the 22d of October 1708, after a siege of two months, and the citadel the eleventh of December following; but yielded to the French again by the treaty of Utrecht, in consideration of their demolishing the fortifications and harbour of Dunkirk, from whence they used to infest the English seas with their privateers and men of war.

2. Dunkirk, situate on the sea-shore, at the mouth of the river Colm, twenty miles north-east of Calais, twenty-four south-west of Ostend, and fifty almost east of Dover. The harbour and fortifications of this place had cost LEWIS XIV incredible sums of money, in which however he found his account; for here he always kept his pyratial squadrons, which brought him in prizes from time to time, during the late long war, almost sufficient to maintain his fleet; which occasioned the English and Dutch to insist on the razing the fortifications at the treaty of Utrecht, and both the harbour and walls of the city were accordingly entirely demolished. The town is only remarkable at present for being the capital of a fine fruitful territory, though formerly it was one of the five ports of Flanders, and a place of good trade. It is said to have taken it's name from the sand-hills on the shore, by the Flemings called *Duynen*, or Downs, on which a church being erected that was a sea-mark for mariners, it obtained the name of *Duynen-Kirk*, or Dunkirk. This place must have been of great advantage to Britain, if we had kept the possession of it instead of demolishing it, as it would have made us masters of both sides the channel; but the Dutch, who were no less apprehensive of the English, their rival in trade, than of the French, had the address to procure the demolition of it, that it might no more be a terror to them, either in the hands of the one or the other.

3. Mardyke, a little town upon the coast about a league south-west of Dunkirk, which the French were about to fortify on the demolition of the fortifications of that city; but upon the representations and menaces of the English Court, the design was laid aside, though the French had made a considerable progress in the work.

4. Graveling, situate at the mouth of the river Aa, ten miles south-west of Dunkirk; a little

fortified town, and one of the five ports of Flanders, but is not capable of receiving large vessels.

5. Winoxberg, or Berg St Wynox, which takes it's name from a monastery erected on a hill to the memory of St WYNOX an Englishman, stands about two leagues to the southward of Dunkirk, and is the capital of a large fruitful territory or chatellany.

6. Doway, situate on the river Scarpe, twenty miles south of Lille, a large populous town, and strongly fortified. It cost the allies eight thousand men at least when they took it from the French, in the year 1710, and was retaken by the arms of France in the year 1712, after the separation of the British troops from the rest of the allies, who refused to accept a peace on the terms proposed by Britain. The principal manufacture of the place is worsted camblets; and here is a considerable seminary of English Roman Catholics, founded by PHILIP II, of Spain, about the year 1569.

7. Orchies, an antient little town, about twelve miles south-east of Lille, taken by the allies in the last war, but yielded to France by the treaty of Utrecht.

8. Armentiers, situate on the river Lys; a fortified town, and a place of some trade, eight miles to the westward of Lille.

9. La Basse, a little fortified town, situate on the Deule, twelve miles south-west of Lille.

10. St Amand, situate on the Scarpe, in a pleasant fruitful country, ten miles south-east of Tournay; remarkable for a noble abbey dedicated to St AMAND; the Abbot whereof is a temporal Prince.

11. Bourbourg, a pleasant little town on the top of a hill, twenty miles west of Ypres, and three to the southward of Graveling; capital of a fruitful chatellany, one of the most antient in Flanders, yielded by the Spaniards to the French at the Pyrenean treaty.

The Province of Artois, or Arras, is bounded by part of Flanders on the north; by another part of Flanders, and by Hainault, and the Cambrisis on the east; and by Picardy, a French province, on the south and west: being about sixty miles in length, and five and twenty in breadth; the chief rivers whereof are the Lys, the Scarpe, and the Aa. The inhabitants enjoy an excellent air, and an exceeding fruitful soil; and having been for many years under the dominion of the French, they cannot easily be distinguished by their manners, habits, or language, from the rest of the subjects of that kingdom. The whole province having been conquered by France, was confirmed to that monarchy by the Spaniards at the Pyrenean treaty anno 1659.

The chief towns are Arras, St Omer, Aire, Bethune, St Venant, Bapaume, Hesdin, Teroouen, Lens, Avesne le Comte, St Paul Mont, St Eloy.

1. Arras, the capital of the province, antiently called *Atrebatum*, being the chief town of the Atrebatians in the days of CÆSAR; is situate on the river Scarpe, twenty-five miles south-west of Lille, and twelve south-west of Doway. It is a large place, divided into two parts, whereof one is called the city, and the other the town, both surrounded with a wall, and fortified after the modern way: it is a Bishop's See, and the cathedral a magnificent structure dedicated to the blessed Virgin MARY; the diocesan being suffragan

CHAP.  
II.

to the Archbishop of Cambray. In a certain chapel here the Priests shew a wax taper burning, which they pretend does not consume, and that it was sent them from heaven; they have a pot of manna also, which they pretend came to them the same way; and this is exposed in a dry season, when prayers are put up for rain. The town is generally well-built, the streets broad, and the market-places spacious; and it is famous for the tapestry manufacture, from thence frequently called Arras. It was taken by the French in the year 1640, who have been masters of it ever since. The Abbey of St VEDASTUS in this city is a noble foundation, having a revenue of twenty thousand crowns a year.

St Omer.

2. St Omer, situate on the river Aa, twenty miles south of Dunkirk, and fifteen south-east of Calais; which takes its name from St OMER, Bishop of Terouen, who founded a monastery here anno 660. The reputed sanctity of this Prelate occasioned a great resort of people hither, and the building of a considerable town here not many years after. It was made a Bishop's See anno 1559, whose Bishop is suffragan to the Archbishop of Cambray. This place is famous for an English seminary of Jesuits, whereof TITUS OATES procured himself to be admitted a member, in order to qualify himself to be an evidence of the Popish plot. The town is rich, large, and populous, strong both by art and nature, and taken from the Spaniards by the French in the year 1677, being confirmed to them by the ensuing treaty of peace at Nimeguen. What contributes much to the trade of the place, is a navigable canal cut from thence to Graveling, by which it hath a communication with the sea.

Aire.

3. Aire, situate on the Lys in a morass, twenty-five miles north-west of Arras, and as many south of Dunkirk, a little strong town and castle, of which the French took possession in the year 1676, and held it till the late war anno 1710, when it was taken from them by the allies, but yielded to the French again by the treaty of Utrecht anno 1712.

St Venant.

4. St Venant, another little fortress, situate on the Lys, about five miles to the eastward of Aire, and besieged at the same time, taken by the allies a month before it, but yielded also to the French by the treaty of Utrecht.

Bethune.

5. Bethune, situate on the river Biette, twelve miles south-east of Aire, a strong place, taken by the allies after a siege of six weeks, in the year 1710, but yielded to the French by the treaty of Utrecht; a pretty neat town, and hath a flourishing trade; but is most remarkable for the excellent cheese made in the neighbourhood.

Bapaume.

6. Bapaume, a little strong town on the confines of Picardy, twelve miles south-east of Arras, and the capital of a large territory.

Hesdin.

7. Hesdin, a strong town, situate on the river Canche, twenty miles to the southward of Aire, taken from the Spaniards by the French about the year 1639.

Terouen.

8. Terouen, five or six miles to the westward of Aire, antiently the capital city of the Morini, and since a Bishop's See, but is now in a ruinous condition.

Lens.

9. Lens a little town, ten miles north of Arras, considerable only as it is the capital of a large territory.

St Paul.

Agin-  
court.

10. St Paul, a little town, fifteen miles west of Arras, the capital of a county; not far from whence is the village of Agincourt, famous for  
V O L. II.

the victory obtained near it by the English over the French anno 1415.

CHAP.  
II.Cambray  
province.

The province or archbishoprick of Cambray, usually called the Cambresis, is bounded by the province of Hainault on the north and east; by the province of Picardy in France on the south; and by Artois on the west, extending in length from east to west about five and twenty miles, but the breadth is very unequal, being in some places ten miles, and in others not more than five. The natives enjoy a good air, and a fruitful country; and being now united to France, are scarce to be distinguished from the French by their manners or language. The chief towns are, 1. Cambray. And, 2. Chateau-Cambresis.

Cambray  
city.

1. Cambray, is a large well-built city, on the river Scheld, not far from its source, almost surrounded by gardens and fruitful meadows, being sixteen miles south-east of Arras, and about as many south-west of Valenciennes. It is defended by two citadels, and regularly fortified: and as the neighbouring country may be laid under water, is esteemed one of the strongest places in the Low Countries. The town contains nine parish churches, three abbeys, and several other religious houses and hospitals. The publick buildings taken notice of are the Stadt-house, standing in a spacious market-place, where most of the streets center: the great church of the blessed Virgin, well furnished with fine tombs and statues, among which the statues of St MICHAEL and St SEBASTIAN are most admired: the brazen partition between the nave of the church and the choir, also is esteemed a piece of excellent workmanship. The principal manufacture of the place is that of fine linnen, from hence called Cambrick. This city was an Episcopal See, subject to the Archbishop of Rheims till the year 1559, when PHILIP II, King of Spain, procured it to be erected into an Archbishoprick by Pope PAUL IV. It was also for some time a free Imperial city, under the protection of the Count of Alost; but the Emperor CHARLES I, deprived them of their antient privileges, having erected two citadels which command the town: it afterwards fell into the hands of the Spaniards, who remained masters of it till the year 1677, when it was taken by the French, and confirmed to them the following year by the treaty of Nimeguen.

2. Chateau-Cambresis, situate on the river Selle, about twelve miles south-east of Cambray, once a considerable town, but at present in a ruinous condition. And, 3. Crevecoeur, another walled town, six miles to the southward of Cambray, but not considerable enough to merit a particular description.

Chateau-  
Cambresis.Creve-  
coeur.

The province or county of Hainault, which receives its name from the river Haine, is bounded by Flanders and part of Brabant towards the north; by another part of Brabant and the county of Namur towards the east; by the Cambresis, Picardy, and Champagne, towards the south; and by the province of Artois, from which it is separated by the river Scheld, towards the west: extending in length from the north-east to the south-west about five and fifty miles, and in breadth about forty miles; and hath a pleasant healthful air, and a fruitful soil. The chief rivers are the Scheld, the Sambre, the Dender, and the Haine; besides which, it is well watered with lakes and springs, and in the bowels of the earth are some mines of lead and iron, and several quarries of marble. The States Provincial are composed of,

Hainault  
county.

## CHAP.

## II.

1. The twelve Peers. 2. The Prelates and ecclesiastical Colleges. 3. The Gentry. 4. The Great Officers. And, 5. The Magistrates of the chief cities.

## Chief towns.

The chief towns are, 1. Valenciennes. 2. Bouchain. 3. Conde. 4. Bavay. 5. Maubeuge. 6. Le Quesnoy. 7. Avesnes. 8. Landrecy. 9. Philipville. 10. Marienburg. 11. Mons. 12. Aeth. 13. Braine le comte. 14. St Ghillian. 15. Enghien. 16. Binche. 17. Halle. 18. Lefines. 19. Roches. 20. Soignies. 21. Beaumont. The first ten of which are in the possession of the French and the rest in the hands of the Emperor.

## Valenciennes.

1. Valenciennes, the capital of the French Hainault, situate on the Scheld and the little river Rouelle, which surround it, and pass through the principal streets by several canals. It is said to have derived its name from the Emperor VALENTINIAN, who built it, being pleased with the delightful situation. It lies about fifteen miles north of Cambray, sixteen south-west of Mons, and as many south-east of Tournay; and is a large well-built town, strongly fortified, and defended by a citadel; and as it stands in a flat country abounding with rivulets, the ground about it may be overflowed, and the approaches rendered exceeding difficult in case of a siege. The late French King caused a noble causeway to be thrown up from this place to Lisle, and so on to Ypres, extending near fifty miles in length. The great Church, dedicated to the Virgin MARY, is a magnificent old building, the pillars and architraves consisting of marble; but the private buildings are many of them of wood. Their chief manufactures at present are those of silk and linnen, and they had formerly a good trade in cloth and French wines. The French took it in the year 1677, and it was afterwards confirmed to them by the treaty of Nimeguen.

## Bouchain.

2. Bouchain, a small but strong town, situate on the river Scheld, ten miles south-west of Valenciennes, taken from the Spaniards by the French in the year 1676, and confirmed to them by the following treaty of Nimeguen, which they remained in possession of till the year 1711, when it was taken by the allies; but retaken by the French anno 1712, after the British troops were separated from the allies.

## Conde.

3. Conde, situate at the conflux of the rivers Scheld and Haine, six miles north-east of Valenciennes, and ten to the westward of Mons; a little fortified town, often taken and retaken by the French and Spaniards, but yielded to France by the treaty of Nimeguen, and gives a title to a Prince of the House of Bourbon.

## Bavay.

4. Bavay, an old town of no strength, (supposed by some to have been the ancient *Belgium*) ten miles south-east of Valenciennes, whither the French retreated after the battle of Malplaquet, in the year 1709, leaving 1500 of their wounded men there, who were made prisoners by the allies.

## Maubeuge.

5. Maubeuge, situate on the Sambre, seven miles north-east of Bavay, yielded to the French by the treaty of Nimeguen.

## Landrecy.

6. Landrecy, situate on the Sambre, fifteen miles north-west of Maubeuge, and sixteen south-east of Cambray, yielded to the French by the Pyrenean treaty.

## Avesnes.

7. Avesnes, a fortified town, situate on the frontiers of France, nine miles to the eastward of Landrecy.

## Philipville.

8. Philipville, twenty miles south-west of Na-

mur, and twenty-four south-east of Mons, a well-fortified town, yielded to the French by the Pyrenean treaty.

## CHAP.

## II.

9. Marienburg, situate on the confines of the bishoprick of Liege, thirty miles to the eastward of Landrecy, yielded also to the French by the treaty of the Pyrenees.

## Marienburg.

10. Quesnoy, a little fortified town, situate on the river Rouelle, six miles north-east of Valenciennes, and twelve to the westward of Mons, taken by the allies in the year 1712, but retaken by the French the same year, after the British troops were separated from the Confederates.

## Quesnoy.

11. Mons, in Dutch *Bergben*, so named from its situation on a hill near the banks of the Trouille, which a little below falls into the Haine, twenty-six miles south-west of Brussels, and twenty-nine west of Namur; a large strong town, the capital of Spanish Hainault. The streets are broad, the market-places spacious, and the buildings magnificent; and among the rest a college of Canonesses, who may leave the house and marry when they please, founded by a Princess of Lorraine, by whose appointment none but the descendants of noble families can be admitted into the society. This city is a Bishop's See, and here the Provincial Council or Parliament assembles, and receives appeals from the rest of the towns of Brabant under the Emperor's dominion. It was taken by the French in the year 1691, but restored to the Spaniards by the treaty of Ryfswick. The French possessed themselves of it again on the death of CHARLES II, King of Spain; but the allies retook it in the year 1709, after the memorable battle of Malplaquet, and it was afterwards confirmed to the Emperor by the treaty of Utrecht.

## Mons.

12. Aeth, situate on the Dendre, twelve miles north-west of Mons, capital of the district of Burbant, a little town, consisting but of one parish, but extremely well fortified, being perfectly covered by the fortifications and the trees on the ramparts, insomuch that nothing can be discerned from without but the top of the steeple; and it has more than once endured a long siege against an army of an hundred thousand men. It was taken however by the French in the year 1667, and being restored to the Spaniards by the ensuing treaty of Nimeguen, was again taken by the French in the year 1697; but yielded to the Spaniards a second time by the treaty of Ryfswick, and is now in possession of the Emperor, to whom it was confirmed by the treaty of Utrecht.

## Aeth.

13. Braine le comte, a little town near the confines of Brabant, thirteen miles to the southward of Brussels.

## Braine le Comte.

14. St Ghillian, about eight miles to the westward of Mons, a town of no consequence.

## St Ghillian.

15. Enghien, eight miles also from Mons, which gives title to a Duke of the house of Bourbon.

## Enghien.

16. Binche, situate on a branch of the Haine, eight miles south-east of Mons, formerly a populous place, but ruined in the wars of the Low Countries, and the fortifications demolished.

## Binche.

17. Halle, situate on the utmost confines of this province, eight miles south of Brussels, and twenty to the northward of Mons, situate in a very pleasant country, and watered by the Saine or Sinne; a walled town, but of no great strength, most remarkable for a chapel dedicated to the blessed

## Halle.

**CHAP. II.** blessed Virgin, whose image about two foot in length is enshrined in gold, and hath a crown of the same metal on it's head, holding an image of our Saviour in one hand, and in the other a gilded Rose. On the first of September annually, multitudes of her votaries resort hither, and presents are sent from the neighbouring towns and cities.

**Leffines.** 18. Leffines, a little walled town, situate on the Dendre, about four miles to the northward of Aeth.

**Rocles.** 19. Rocles, or Reux, another little walled town, four miles to the southward of Soignies.

**Soignies.** 20. Soignies, situate on the Sinne, nine miles north-east of Mons.

**Beaumont.** 21. Beaumont, ten miles to the eastward of Maubeuge, and fifteen south-east of Mons, situate on a pleasant hill, from whence it derives it's name.

**Chimay.** And lastly, Chimay, about fourteen miles to the southward of it, both which places have been yielded to the French.

**Namur county.** The province or county of Namur is bounded by the province of Brabant on the north, by the bishoprick of Leige, and part of Luxemburg, towards the east; and by Hainault on the south and west; extending about thirty miles in length from east to west, and twenty in breadth from north to south. The county of Namur enjoys a good air and a fruitful soil, and hath some good mines of lead, iron, and coals, with veins of tolerable marble, and great store of fossile nitre. They have also plenty of wood for their iron-works.

**Chief towns.** The chief towns are, 1. Namur. 2. Bouvines. 3. Walcourt, or Valencourt. And, 4. Charleroy.

**Namur.** 1. The city of Namur is of a circular figure, and situate at the conflux of the Sambre and the Maese, in the latitude of fifty degrees thirty minutes, thirty miles to the eastward of Mons, and as many south-east of Brussels. It lies in a bottom, between two hills, the greatest part of the town standing on the north side of the Sambre, on the other side whereof is a steep mountain, on which the castle is situated, being a magnificent structure, and esteemed the strongest fortrefs in Europe; for the rock on which it stands is not only very steep, but the approaches to it fortified with the greatest art, and on the top of the rock are several good springs of water. The town was erected into a bishoprick, suffragan to the Archbishop of Cambray, anno 1559, and the church of St ALBAN converted into a cathedral. There are besides nine or ten handsome churches, of which the Jesuits church is said to exceed that of Antwerp, in the magnitude, structure, and beauty of the stone, being supported by wreathed columns of red marble of the Dorick order, finely veined, and near a yard and a half diameter, with bafes and cornices exquisitely wrought. It was taken by the French in the year 1692, and retaken by the allies in the year 1695, and is at present part of the Dutch barrier. The States of the province assemble here, from whence however there lies an appeal to the supreme court at Mechlin.

**Bouvines.** 2. Bouvines, situate on the Maese, ten miles south-west of Namur, and two below Dinant. 'Tis a pass between Namur and Luxemburg, but has little else to recommend it a present.

**Walcourt.** 3. Walcourt, or Valencourt, a little town twenty miles south-west of Namur, near which a battle was fought between the Confederates and the French in the year 1689.

**CHAP. II.** 4. Charleroy, situate on a hill near the Sambre, fifteen miles west of Namur, and twenty-five south of Brussels; a strong fortrefs, erected by the Spaniards in the year 1666, to prevent the incursions of the French. It has been taken and retaken several times, but is now in the possession of the Imperialists. To the north-east of Charleroy stands the abbey of Flerus, or Fleury; near which a memorable battle was fought between the French and the Allies in the year 1690, wherein the Allies were defeated, but made a good retreat with their foot.

**Charlemont.** 5. Charlemont, a strong fortrefs, sometimes placed in Hainault, situate on the top of a high hill, under which runs the river Maese, about twenty miles to the southward of Namur, fortified by the Emperor CHARLES V, anno 1555, to whom it was granted by the then Bishop of Liege.

The province or duchy of Luxemburg is bounded by the duchy of Limburg and bishoprick of Liege towards the north; by the river Moselle, which divides it from the archbishoprick of Triers, towards the east; by the duchy of Lorraine on the south; and by the river Maese, which separates it from the county of Namur and Champagne, towards the west; extending seventy miles in length, and about sixty in breadth, and is usually divided into two parts, viz. Famenne and Arduenne. Famenne, the northern part, is a fruitful soil, yielding plenty of corn, and some wine; but the other, which lies towards France, called Arduenne, is a more barren soil, and in many places covered with wood; in the mountains whereof are however some mines of iron, which make amends for the sterility of the surface, and their woods abound in game. The principal rivers which water this province are the Moselle, the Else, the Semay, the Ourte, and the Maese; and the air is generally healthful and temperate. It is divided into seven earldoms, many baronies and inferior lordships; and the common people are in a state of vassalage here, as in Germany. The States consist of the Prelates, the Nobility, Gentry, and Representatives or Deputies of the chief towns. The French and Dutch languages are both spoken in this province; but the people in their manners resemble the French most, being contiguous to France, and having been some time under the dominion of that crown, till Luxemburg was yielded to the Emperor by the treaty of Utrecht, anno 1713.

**Chief towns.** The chief towns of the duchy of Luxemburg are, 1. Luxemburg. 2. Thionville. 3. Montmedy. 4. Damvillers. 5. Yvoix. 6. La Ferte. 7. Aftenay. 8. Morville. 9. Rode Macheren. 10. Konings Macheren. 11. Sirick. 12. Mafieres. 13. Durby. 14. La Roche. 15. St Vite. 16. Viande. 17. Eichternach. 18. Bastoigne. 19. Neufchatel. And, 20. Virton; the most considerable whereof I shall endeavour to describe.

**Luxemburg.** 1. Luxemburg, the capital of the province, said to be built in honour of the sun, and called *Lucisburgum*, situate in the latitude of forty-nine degrees, forty minutes; twenty miles south-west of Triers, and an hundred south-east of Brussels, forty-five miles to the eastward of the river Maese, and twelve to the westward of the Moselle, and stands on the river Else or Alsat, partly on a plain, and partly on the declivity of a rocky hill. The town is strong both by art and nature, but not very large or well-built, though there are some handsome

CHAP.  
II.

handsome stone buildings in it. There is a monastery of Franciscans here, who pretend their house was founded in the life-time of St FRANCIS. In the great church are the tombs of JOHN of Luxemburg, King of Bohemia, and of Count MANSFIELD, Governor of the Spanish Netherlands; but the publick buildings don't seem to merit the description of any modern writer.

Thionville. 2. Thionville, or Diedenhoven, situate on the Moselle, fourteen miles to the southward of Luxemburg. It is a well-built town, and strongly fortified, but hath however been frequently taken and retaken.

Montmedy. 3. Montmedy, situate on a high hill near the river Chier, twenty-five miles south-west of Luxemburg, esteemed a place of some strength.

Damvillers. 4. Damvillers, once a strong fortress, twelve miles to the southward of Montmedy, but the fortifications were agreed to be razed by the treaty of Aix la Chapelle.

Arlon. 5. Arlon, situate on the river Semoy, twelve miles north-west of Luxemburg, heretofore a pretty town, but hath suffered much by the wars.

Chiny. 6. Chiny, ten miles south-west of Arlon, capital of a county of the same name, formerly subject to it's own Princes, but united to the duchy of Luxemburg about the year 1400. It still however retains an independent jurisdiction. The rest of the towns do not require a particular description, and their situation will be described in the maps bound up with this volume.

Limburg province. The province or duchy of Limburg is bounded by the duchy of Juliers on the north and east; by Luxemburg on the south; and by the bishoprick of Liege towards the west; extending in length about thirty miles from north to south, and in breadth twenty-five from east to west. Here is a great deal of good arable and pasture-ground, plenty of wood, and some of the best iron-mines in the Low-Countries, but no wine made in the province.

Chief towns. The chief towns are, 1. Limburg. 2. Dalem. 3. Rolduc. And, 4. Valkenburg, or Fauquemont.

Limburg. 1. Limburg, situate on a steep rock near the river Vese, fifteen miles south-east of Liege, and twelve to the southward of Aix la Chapelle. It is a small town, consisting chiefly of one broad street, not very elegantly built, but the situation renders it very strong, there being but one passage to it, and that almost inaccessible. This is the only town of note in the province which belongs to the Imperialists, the other three are in the possession of the Dutch.

Dalem. 2. Dalem, situate on a rivulet, which discharges itself into the Maese, seven miles south-east of Maestricht. The town is small, and the fortifications both of that and the castle were demolished by the French, who restored it to the Dutch at the treaty of Nimeguen.

Rolduc. 3. Rolduc, on the east side of the province, five miles to the northward of Aix la Chapelle, is a small town capital of a county, and hath an old castle belonging to it.

Fauquemont. 4. Fauquemont, or Falkenburg, situate on the Guel, eight miles north-east of Maestricht, a large handsome town, formerly well fortified, but the works were demolished by the French on their being obliged to restore it to the Dutch by the treaty of Nimeguen.

*Treats of the manufactures, trade, and navigation of the Austrian Netherlands.*

FROM the description of the respective provinces, the reader is no doubt pretty well acquainted with the trade and manufactures of those countries; but it may not be amiss however to make some general observations on the whole. Before the revolt of the seven provinces, their woollen manufactures were in great esteem; hither the English sent all their wool to be made into cloth: but, happily for us, their Princes being possessed with more superstition than good policy, drove many of their mechanicks over hither, who taught us to manufacture our own wool. Whereupon the soil of the Low Countries being extremely proper for flax, they sowed vast quantities of it, and being an ingenious people, soon became as good proficient in the linnen and lace manufactures, as they had been in the woollen, and at this day excel all the nations in Europe in making fine linnen and lace: witness their cambrick and their Brussels and Mechlin lace, of which Britain alone takes off prodigious quantities, and makes most of her returns in treasure; for except tin and lead, sugar and tobacco, there are very few things produced, either in England or our plantations, which they stand in need of from us. The product of India indeed formerly might be exchanged for their cambrick and lace, before they fell into the India trade themselves; but this traffick is at full stop at present, and with most of the merchandize of India they might always have been supplied from their neighbours the Dutch, as without all question they were: and therefore the Flemings applying themselves to that trade, or indeed to any other foreign trade, must be of infinite disadvantage to the Dutch. Should they encourage a whale or herring-fishery, or attempt to carry on a trade to the Baltick, or the Levant, any of these undertakings would equally wound the Dutch commerce. but still I can't apprehend what right the Dutch can have to exclude this people from the fisheries, or from trading with any Prince or State upon earth independent of them. What have the Dutch to do to prescribe what nations the King of Persia, the Great Mogul, or the Emperor of China, shall deal with? Are not their ports open to all the world in friendship with them? or, what pretence can the Dutch have to monopolize the trade to the Baltick? That people indeed tell us, they will not suffer the subjects of Spain or the Empire to trade thither in their own bottoms, but what right they have to exclude them I can't learn; and what is most surprizing is, that the Hollanders should expect Britain to defend them in all their extravagant pretences, while they stand by idle spectators of the contest, and continue to trade with all the nations at variance.

'Tis true, it is not for the advantage of the Dutch, that the Flemings should become a trading people again. When Bruges and Antwerp flourished, the ports of Holland were scarce mentioned; and indeed had not the Dutch by their forts blocked up the mouth of the Scheld, it is not to be conceived how the Flemings could so suddenly lose their foreign trade; for the harbours of Flanders, though not the best in the world, are

Of their  
trade, &c.

CHAP.  
III.

are any of them as commodious however as that of Amsterdam; and the product, as well as manufactures of the country, were then much beyond those of the United Provinces. They have plenty of corn, and good pasture, and their plantations of flax still exceed those of Holland; and their manufactures of linnen and lace are much beyond any thing we meet with in Holland; and should they encourage their fisheries, their navigation and foreign commerce, the Dutch must lower their top-sails. But notwithstanding the Dutch would be very nearly affected by such attempts, England could receive but little prejudice by it; for if they don't take our herrings, the Dutch will; and it must be indifferent to us, which of these nations become the common carriers of Europe. If the Flemings do not bring the merchandize of the Baltick to the southern kingdoms of Europe, but leave this branch of commerce to the Dutch, what advantage or disadvantage is it to us, that we should be spirited up to prevent the Flemings entering upon a foreign trade? If it be said, that the Imperialists by this means may become too formidable, and destroy the balance of power in Europe; this I believe must appear to be a chimæra to all that consider the present growing power of France: that kingdom will always find the Empire employment enough to divert their thoughts from attacking Britain; and should LEWIS XV appear as enterprising a Prince as LEWIS XIV, I don't see why he should not bid as far for universal monarchy, notwithstanding he is so much courted by some Powers at present; it may possibly cost us as much hereafter to undo what we are doing, as it did to resume Flanders out of their hands by the last thirty years war. And why at last are we so exceeding jealous of the poor Flemings breaking in upon our commerce, and have no manner of apprehensions of the potent French? a nation, who at this very day, while they are at peace with us, are spiriting up and assisting the natives of America to fall upon and distress our settlements on that side, and are in a fair way of supplanting us in our sugar trade; an article at present perhaps as important as that of the fine spices was formerly.

In one thing indeed I am for lessening the trade of Flanders, as I was in the former part of this volume for abating the pride of Holland; and that is in prohibiting the importation of their lace and linnen. If to promote our home manufactures, it was thought necessary to prohibit the wearing of India silks and calicoes, why is it not equally expedient to prohibit the linnen and lace of Holland and Flanders? Will any man pretend it is necessary to his being, or well-being, in the phrase of a late writer, to wear hollands and cambricks, and Flanders laces, when the linnen of Ireland or Scotland is very little inferior to that of Holland; and probably would be soon equal to it, if those nations met with suitable encouragement? But while nothing but what is foreign will go down, either with ladies or gentlemen, or even with inferior tradesmen and apprentices, what are we to expect but to see our nation beggared, even in our silk manufacture, in which we equal, and perhaps excel any nation in the world? The Merchant at this day can sell nothing unless he swears it is of foreign make; so depraved is the sickly taste of our people at present! But surely if reason and argument has at present lost it's force, and can make no impression on this whimsical generation,

VOL. II. NUMB. LXVI.

CHAP.  
III.

in cases which so nearly concern us; authority will one day interpose and prevent our destruction. What an immense treasure every year issues out of the kingdom to purchase hollands, cambricks, lace, and (clandestinely) foreign wrought silks? What multitudes of people lie unemployed and starving in the three kingdoms for want of encouraging these manufactures; while there is not a nation in Europe scarce but prohibits our woollen manufacture, and compels their people to wear their own coarse home-made cloth, between which and the English there is no manner of comparison. If we are so fond of imitating foreigners therefore, let us imitate them in this, namely, in encouraging our own manufactures, though they should be something inferior to theirs.

There are two objections indeed made to this reform, which a native of Britain may be ashamed to mention. One is, that by prohibiting the Dutch linnens, &c. we should lessen the duties of the crown: and the other, that by this means we should disoblige our best allie. But as to the duties arising by the importation of linnen, I may say without offence, that our present Court would be far from founding it's grandure on the ruin of the subject. We are happy indeed in a numerous royal progeny, but if they were still more numerous, they may be supported without the destruction of the British trade. If the customs should fall short, other ways and means may be thought of to supply their room, without diminishing the lustre of the royal house. And as to the disobliging an allie; will any nation give themselves those airs, and be so impertinent, as to call the promoting our own trade and manufactures a breach of friendship? No, the more they see you apply yourselves to put the kingdom into a wealthy and flourishing condition, the more will they and other nations court your friendship, and in proportion to your indolence in this particular will be their neglect and contempt of you. Besides, as their loss is our gain, and riches would flow in upon us by the encouragement of our manufactures, we should stand in less need of foreign powers to defend our interests. The more independent we are, the greater is our security. Every one would court the alliance of a powerful wealthy neighbour, few care to associate themselves with beggars.

There is a third reason given, why our trade and manufactures do not flourish, as might be expected, under the many advantages we have of other nations, and that is our mercenary temper. A bribe well applied by a subtle foreigner shall blast the most promising undertaking. I am credibly informed, that in the reign of King CHARLES II, a commission being obtained to drive the Dutch from some of our settlements they had surprized in the East-Indies; and the English East-India Company having fitted out a strong squadron of ships accordingly, when their commanders came to open their commissions at the Cape of Good Hope, they found themselves empowered to make war upon the Indians, but not one word of acting against the Dutch; so that the whole design was defeated, and the treasure it had cost the company in fitting out this squadron was thrown away. And this the Dutch brought about by clapping a round sum into the Duche's of Portsmouth's hands, who thereupon procured the instructions given to the East-India Captains to be altered. And one provoking circumstance in this enterprize was, That the thing

12 H

was

was all the while pretended to be so very great a secret, that the officers who were to be entrusted with the execution of it, were not to be acquainted with the extent of their commission, till they had sailed half their voyage, and passed the Cape of Good Hope, when the Dutch were in the secret from the very beginning. So destructive are the influence of he or she-favourites: the wealth they heap upon themselves and their creatures is a trifle, if compared with the mischiefs they do in betraying the most important interest of their country.

But this nation, one would think, had taken such precautions, that it could not lie in the power of any designing foreigner, or treacherous courtier, to stifle any well-weighed proposal for the advancement of the British commerce. For here are commissioners of trade, with noble salaries allowed them, who are, or ought to be, the guardians of our foreign trade, and upon a due application to the throne might baffle all the attempts of designing men to destroy our commerce. The government no doubt takes care to put none into this important commission, of whose skill and fidelity they are not very well assured; and these gentlemen will certainly be ashamed to receive such large sums of their country's money, without doing something annually for the advancement of her interests. But to return from this digression: Flanders an hundred and fifty years ago had all the trade of Europe; her ports were crowded with the ships of all nations, and she had some ships of her own; but upon the oppressions of her own Princes, and the revolt of the United Provinces, both merchants and mechanicks left the country, and their commerce in an instant dwindled to nothing; since when they have scarce had a ship at sea, or dealt in any thing but the productions of their own soil, till the peace of Utrecht, when falling into the hands of the Imperialists, a variety of projects were set on foot for reviving their antient commerce. The first that took effect was that of the India trade, which alarming their neighbours the Dutch, they soon drew the English into the quarrel, and by their influence have in a manner put a stop to their navigation thither. The next thing the Flemings proposed, was to establish a fishery; and this they are labouring at now, but whether the Dutch will not be as sensibly affected by this attempt as by the other project may be a question; and whether we are not to be hauled in by neck and shoulders to oppose this design also, must be left to time to discover; though, as I have observed already, it must be perfectly indifferent to us whether the Dutch, the French, or the Flemings, take the fish upon our coast, since they are not thought worth our own care. If it be objected, that it is dangerous to suffer the Flemings to increase their shipping; have we not much more reason, as hath been intimated already, to be apprehensive of the increase of the French shipping; and may not this people, as the Hollander did the last war, assist us in breaking that power, which in a very few years will probably become as formidable as ever? But these are remote prospects, and I believe the Dutch will take such care to keep the naval power of Flanders under, that we need have no apprehensions of them. I see very little prospect at present of their prejudicing our foreign trade, or contending with us for the sovereignty of the sea, as both the Hollander and France have done.

*Treats of the religion, government, forces, and revenues of the Austrian Netherlands.*

THE religion of the Austrian Netherlands being Roman Catholick, needs no particular description here; only we may observe, that the administration of their ecclesiastical government, is much milder here than in many other Popish countries: we have scarce an instance of late years of the Inquisition exerting it's authority in these provinces as in Spain or Portugal; every one who visits these countries, knows that Protestants live with all imaginable freedom amongst them.

The Emperor, by the consent of all the Princes and States concerned in the last war, was, after the peace of Utrecht, acknowledged Sovereign of these provinces; and in him, or his Viceroy, and the Convention of the States of the respective provinces, is the legislative power in each lodged. Here new laws are enacted, and by their assent alone is money levied, and the whole assembly must be unanimous in the passing of an act. The Assembly or Parliament of each province, consists, 1. Of the Bishops, Abbots, and dignified Clergy. 2. The Nobility and Gentry. And, 3. The Deputies or Representatives of their chief towns. These meet at Brussels, except those of Luxemburg and Gueldres, who by their antient privileges cannot be summoned out of their respective provinces, any more than the States of Brabant: neither do the States of the several provinces which meet at Brussels assemble in one house, but each of them apart, and make distinct laws for their respective countries.

The present Regent of the Austrian Netherlands is the Arch-duchess, MARY-ELIZABETH, &c. daughter of the late Emperor LEOPOLD, who is assisted by three councils. The first styled the Council of State, where war and peace and foreign alliances are considered; and from them ambassadors receive their instructions and dispatches. 2. The Privy-Council, the members whereof are appointed by the Sovereign or the Regent, the President whereof is keeper of the great seal. In this court are determined the boundaries of provinces, their jurisdiction, &c. And, 3. The Council of Finances, which superintends the publick revenue.

Besides the Regent, or Governor-General, every province hath it's particular Governor, subject to the Regent; and in every province are courts of justice established for the trial of civil causes. The civil and canon law are in force here, where they do not interfere with the particular laws of the country; and from the civil courts of every province, there lies an appeal to the grand council at Mechlin, already mentioned. As to criminal matters, there is an officer called the Provost in every province, who with his associate hath the determination of them, but accountable however to the Grand Provost, or Chief Justice, who resides in Brussels, the capital of the Austrian Netherlands.

The forces stipulated to be maintained in the Netherlands by the barrier-treaty, made between the Emperor and the Dutch, anno 1715, I have already observed are thirty thousand men, and upon an appearance of war are to be forty thousand; of which his Imperial Majesty's quota is three

CHAP. three fifths, and that of the Dutch two. I have  
IV. also in the description of the United Provinces  
specified the barrier towns, in which the States are  
to have separate garrisons, to which I refer the  
reader, to avoid repetition.

The Walloon troops are generally good, and  
by the antient constitution of this country, no o-  
thers ought to be introduced; but as the Span-  
iards had done for many years, so the Impe-  
rialists now introduce what forces they please, and  
chuse to rely on their German troops rather than  
on the natives.

Revenues. The revenues of the Netherlands, when under  
the dominion of the Spaniards, were not sufficient  
to defray the charges of the civil government, and  
maintain their garrisons. (I mean since the re-  
volt of the seven provinces, and the decay of their  
commerce; for in their flourishing state, when  
Antwerp was the centre of trade, there was not  
a kingdom in Europe which yielded a larger re-  
venue to its Princes.) But their finances having  
been better regulated by the Imperialists, and their  
trade something revived by the vast demand of  
late for their fine linnen and lace, they are not  
so great a burthen to the Emperor as they were  
to Spain: however, it is still a question whether  
the publick revenues will maintain the charges of  
the government, even in time of peace. The or-  
dinary revenues of the government are either those  
arising from the demesne lands, or from the cus-  
toms. If there be an extraordinary tax to be  
raised, it is demanded of the States of the respec-  
tive provinces, with whom the court usually main-  
tains so good a correspondence, as not to meet  
with frequent denials: but the supplies must be  
much more precarious there than with us, because  
the consent of every single member is requisite to  
complement the grant.

The Emperor, though he be not much richer  
by the acquisition of the Spanish Netherlands, is  
however much stronger than he was. The forces  
maintained by the Imperialists and the Dutch in  
this country, and the many strong fortresses they  
are possessed of, will enable them always to give  
France a considerable diversion on this side: and  
the putting the Emperor and the Dutch into the  
possession of them, will in all probability keep the  
French within due bounds: but should we foolishly  
and impolitickly join with France to wrest this  
country out of the hands of the Imperialists, we  
shall soon be in the same condition we were on  
the death of CHARLES II, King of Spain; and  
it may occasion as expensive and bloody a war to  
recover them as the last. But I hope we shall  
not ever be changing hands, and throwing away  
our blood and treasure for we know not what.  
This may indeed be the wish and interest of the  
foldiery; but can never be to the general advan-  
tage of the British nation.

Nobility,  
&c.

The nobility and gentry of the Austrian Ne-  
therlands are much more numerous than in the  
United Provinces, especially in Luxemburg. They  
have most of them their palaces in and about the  
capital city; and their country-seats are so many  
castles, walled and moated round, from thence  
denominated *Chateaux*. The principal order of  
knighthood here is that of the Golden Fleece, of  
which there are fifty Knights, usually men of the  
first quality. As to the modern history of this  
country, the reader will find it blended with that  
of Germany and the United Provinces. I proceed  
therefore in the next place to Baron POLNITZ's  
description of the United Provinces.

The liberty so much boasted of in Holland, ac-  
cording to baron POLNITZ, is no more than what  
the good people of other countries enjoy; never-  
theless I must except religion, which every one here  
may adapt to his own fancy. The liberty there-  
fore consists only in the equality of conditions: but  
for a boor to presume to be saucy to a burgher,  
to despise the nobility, to censure his masters with  
impunity, and to treat all Kings as tyrants, seems  
to me to be a liberty which favours very much of  
libertinism. The Germans and the French, who  
are not used to such licentiousness in their own  
country, easily fall into it here; and 'tis really a  
wonder to hear them in a coffee-house, talking of  
sovereigns, especially when inspired with a holy  
zeal, plead for religion, which, say they, is eve-  
ry where oppressed, except in the dominions of  
the Calvinists. They think every government  
tyrannical, which does not allow entire liberty  
of conscience. 'Tis true, that in this country  
every one believes as he pleases: and here are  
religions of every kind, which nevertheless tend  
to one and the same centre, viz. the acquiring  
of riches, and the tormenting both of body and  
soul, to get an estate, not to enjoy it, but to  
have the pleasure of dying rich. Money, the  
darling, and the idol of the whole world, is so a-  
dored in this country, that it stands in the stead of  
birth, wit, and merit. A man who has but a  
small share of the favours of fortune, is neglected  
almost every where, but here he is despised.

Next to those of the prevailing religion, the  
Catholicks, among whom I include the Janse-  
nists, are the most numerous; I have been told they  
are above 20,000. They have fourteen churches,  
served by different orders of friars, who, as they  
die, the States have declared, shall be succeeded  
hereafter by none but the secular priests, who are  
natives of the country.

Amsterdam is not a place for a man to live in  
that is not concerned in trade; and a foreigner,  
especially, knows not how to bestow himself.  
He can find no where to go, but to some sorry  
coffee-house, or melancholy walk. In the one,  
he is sure to be incensed with tobacco, and stun-  
ned with wretched commentaries upon news pa-  
pers, or the price of pepper and ginger; in the  
other he is as solitary as a hermit. Their come-  
dies are but a poor relief to such as do not un-  
derstand Dutch; which, besides, is a language that  
I think is not very fit for the stage any more  
than ours. I thought the actors pitiful, and the  
habits trifling; but the decorations are fine, and  
the theatre spacious and magnificent. I cannot  
imagine why the magistrates will not let French  
comedies be acted in their city, where, I think  
they would do more good than harm; for they  
would help to polish the youth, and would un-  
doubtedly keep them from that temptation to de-  
bauchery, to which idleness, and the difficulty of  
knowing where to spend the evenings, naturally  
incline them. I heard M. D'ARGENSON, the late  
keeper of the seals, say, he had observed, while  
he was lieutenant of the police at Paris, that there  
were more disorders and debaucheries committed  
in that city, during the fortnight at Easter, when  
the theatres were shut up, than were commit-  
ted in four months, when all shews were kept  
open. I doubt not but it would be the same at  
Amsterdam, where there is a numerous youth,  
for whom the parents are blindly complaisant,  
and ready to kill the fatted calf; so that being  
left to their own devices, and having in general  
but

tion of the  
United  
Provinces.

but few maxims of education, they run with the stream of their passions into all extravagancies. These young fellows, who prefer the exercise of driving a chaise before all others, set up in the mean time for fine gentlemen; but how well they perform their part, I leave you to think.

The assemblies, or societies, as they are here called, have nothing that is engaging. You see very fine faces there, but not a tongue moves, at least to a foreigner; the very sight of whom seems to frighten them. Here they drink tea, or play a game at ombre, or quadrille, and afterwards go in quest of a supper.

Those societies, or clubs, where there are no ladies, are still worse. In these they smoke and drink in abundance; talk of trade or politics; and at such times, woe be to those powers that have forbid the importation of Dutch toys into their dominions. The only remedy against chagrin, is reading, of which a man may have his heart full; for Amsterdam is not only the centre of the bookselling trade, but here are booksellers that are very ready to lend books to such, who, like myself, cannot be at the charge of a library. I divide my time between reading, the coffee-house, and taking the air; the latter of which I use very moderately; one being obliged to go so far for it, that I think of it at least four times before I set out. The canals, such as the Heers-Gracht, and the Keizers-Gracht, are pleasant walks in the town, because they are planted with trees; but they are indifferently paved. Upon these two canals live persons of the greatest distinction, or rather those of the greatest wealth, in the city.

One of the finest walks in it is the bridge, which joins the rampart from one side of the Amstel to the other. 'Tis six hundred and sixty feet in length, and seventy in breadth; and here one enjoys an admirable prospect, which is the only one, perhaps, that can be compared with the view from Pont-Royal at Paris. The admiralty, with its precinct, forms a little town. 'Tis one of the arsenals of the Dutch navy. Here one actually sees seventy men of war, and materials for building a much greater number. With the leave of the Venetians, their arsenal, so much boasted of, is by no means comparable with this, with regard to naval stores.

The admiralty office is so near the India-company's warehouse, that I am tempted to give you some account of a house which contains such a treasure. 'Tis a very great structure of several stories, distributed into divers chambers or rooms, where there is a prodigious quantity of all manner of spices, of which the most common sorts lie in heaps, as corn does in all our granaries. There are also a great many other things of value; and, in a word, every thing, be it ever so precious, that comes from the Indies. After I had walked about an hour in this warehouse, I was, as it were, embalmed with the odour of the different spices, which made my head ache exceedingly, or else I should have thought myself metamorphosed into a mummy; but jesting apart, I fancy, that were a carcass to be deposited in this house, it would be free from corruption. The India-company is properly a republick within the republick itself: it arms, disarms, raises and disbands officers and soldiers, without being accountable to the states. It maintains a governor in the Indies, who lives there with more pomp and grandeur than his masters do here.

The suburbs of this great city, in which it is

said there are above five hundred thousand souls, as many as are in Naples, are extremely populous. There are above eight hundred windmills continually at work in grinding corn, or sawing of timber. On the other side of the harbour there are several villages, of which Sardam is the most considerable, not only for its size, in which it surpasses many towns, but for the wealth of its inhabitants, who are called peasants, and pretend to be nothing else, though I cannot imagine why; for they trade, and make a figure here upon the exchange, like the most substantial merchants, and do not apply themselves to agriculture. I have been told, that there is above a thousand windmills at Sardam, always employed in sawing of timber, which would have been a rare field for Don Quixote to have displayed his valour. That neatness of which the Dutch are so fond, is cultivated to the greatest nicety in this village; and the Amsterdammers themselves cannot but own and admire it.

The peasants of Sardam dress more like the citizens of Amsterdam than those of the other villages in those parts do, whose apparel is of a very extraordinary fashion. They wear monstrous large trowsers, wide enough to make any body a whole suit. Under this trowser there is another pair of breeches, and perhaps a third, or else a pair of drawers; and to the two pair of breeches which are in sight, they have solid plate buttons bigger than a crown piece. They also wear three or four waistcoats, one over the other, which are set so thick with silver buttons, that they perfectly touch one another. Over all this clothing, they have a dark-coloured surcoat, or doublet, which keeps them extremely tight downwards, and therefore all their waistcoats ride up so, that they seem to have breasts like woman. Their shoes are sea-men like, or, with reverence be it spoken, such as are now worn by the French *petit maitres*. They have also silver buckles, but so large, that they are fitter for the harness of horses than for shoes. I assure you, that if the Romans had been dressed like these peasants, the Carthaginians would have taken a richer booty in silver buttons, than they did at the battle of Cannæ, when they took that heap of Roman rings. The women also wear a small equipage of gold and silver. They have gold ear-pendants; a bodkin of the same which fastens their caps; chains about their necks in form of pearl necklaces; great rings; and in all this there is no expence grudged.

The Sardammers are so very much wedded to their antient habit, that a father once refused to own his son, because, having been for some years in France, he came to wait on him upon the exchange of Amsterdam, in a suit of clothes bedawbed with gold lace.

I cannot say that I have had any other satisfaction in my tour to North-Holland, than the gratification of sight; for company does not seem to be the taste of the country. I never stirred out, but every body took me for a very odd kind of a man: yet I am no *petit maitre*, nor is there any thing uncommon in my make. The fair sex in this out-of-the-way country, is very handsome; and here are country lasses, who have a delicate complexion, not inferior to the finest ladies. These sylvan beauties are generally fair, and have such a languishing look, that I guess they would not prove unkind to any young faun that courted them.

CHAP.  
IV.

The history of the United Provinces was brought down to the year 1728, in the former edition of MODERN HISTORY, when we find the Dutch extremely incensed against the Emperor, for supporting the Ostend company, in their trade to the East-Indies, and shewing but little inclination to give up that branch of traffick. The Dutch, thereupon, gave orders to their commanders in India, to seize and sink all Ostend ships they met with in those seas; and, unhappily, prevailed on the English company to give the same barbarous orders to their captains, which were shamefully put in execution; and one ship, if not more, belonging to Ostend, was sunk in the river Ganges, by ships belonging to the English and Dutch East-India companies; an outrage that the Emperor will never forget: and in this, our unhappy countrymen were made tools to the Dutch; for we could reap but little advantage by excluding the Emperor's subjects of Flanders from the East-Indies: we had none of the fine spices to lose; the Dutch had long since ravished these from us; and the other branches of the East-India trade are scarce worth the contending for: and the cunning Hollander, at last, over-reached himself in getting the Ostend company suppressed; for other nations immediately took the hint, and imagining there must be something extremely valuable in that trade, to which there was made such a violent opposition by the maritime powers, immediately formed East-India companies, or enlarged their navigation that way; and will now, probably, one day dispute the possession of the spice islands with the Dutch, which the English so tamely abandoned, and, perhaps, would never have attempted to recover. The Dutch, indeed, would have drawn the English in to assist them, in excluding other nations from the Indian seas; but, I presume, we are grown wiser than to burn our fingers in their quarrel any more; we have made too many nations our enemies by coming into their schemes, and what returns they have made us for such favours, are too notorious: we are frequently drawn into quarrels, and then left to get out of them as we can; our crafty allies, in the mean time, running away with our trade; whether they are at peace or war with any power, they continue to trade with them, and double their gains, by getting their allies excluded from it, while they lay the burthen of the war upon their good-natured confederates.

In the year 1730, great numbers of people were put to death in the United Provinces, under pretence of sodomitical practices, against which crime the States published a very severe placart; wherein they observe, that their laws had hitherto assigned no particular punishment for this offence, and direct the judges to condemn those who were convicted of it to what kind of death they thought fit: but the prisoners being tried privately, and none admitted to converse with them after sentence, some have suggested, that they were arbitrarily put to death on suspicion of their disaffection to the state, of which they could produce no clear proof.

A treaty being concluded at Vienna in the year 1731, between the Emperor and the King of Great Britain, wherein the principal articles on the part of the Emperor, were, that six thousand Spaniards should be admitted into Tuscany, to secure the eventual succession of Don

VOL. II.

CHAP.  
IV.

CARLOS, and that the Ostend company should be abolished; Britain agreed, on her part, to guarantee the Pragmatick Sanction, and the States were pleased to accede to this treaty in February 1731-2. Whereupon the Emperor prohibited the Ostenders, and all his subjects of the Netherlands, to carry on any trade to the East-Indies, to the great satisfaction of the Dutch. This grievance was no sooner redressed, but the Dutch were afflicted with a plague of worms, a calamity that they had never before experienced; these insects eat into the wooden piles which supported their dikes, and had not the frosty weather come on, and destroyed them, the banks that keep out the sea would probably have been demolished, and great part of their country laid under water; and it seems, the Dutch looked upon their deliverance to be so extraordinary an event, that they kept a fast and thanksgiving in one day, on the occasion, which are always blended together here.

The same year, the dispute between the King of Prussia and the Prince of Orange, in relation to the estate of the late King WILLIAM III, was adjusted; but, I perceive, the Prince of Orange was obliged to accept something less than his share; the States, who were executors of the will, having more complaisance for the King of Prussia than the Prince. The province of Zealand also kept him out of the possession of Flushing and Terveer, which were part of his inheritance: however, the court of England had such an opinion of this Prince, thus stripped of great part of his possessions, that a marriage-contract was signed between him and the Princess Royal, in the year 1733; and on the fourteenth of March 1733-4, the marriage was solemnized at St James's with great splendor.

When the King notified the marriage of his daughter with the Prince to the States General, they returned him abundance of compliments on the occasion; but gave him to understand, that they should endeavour to preserve their constitution; and he must not expect they would alter it again in favour of a stadtholder, though they could not but discern, that this was his Majesty's principal view in this match; and, indeed, they seem in all their conduct to depress the Prince of Orange as much as they can, lest he should one day grow so popular, that the province of Holland, as well as the rest, should be compelled by the people to appoint him their stadtholder, which was the very case of WILLIAM III, late King of England.

And when his present Majesty, the King of Great Britain, represented to the States the hardship and injustice of keeping the Prince, his son-in-law, out of possession of the lordships which belong to him in the island of Zealand, they would not intermeddle in it, but contented themselves with letting his Majesty know, that Zealand was an independent province, and might do as they saw fit; which his Majesty very well knew before: though he was satisfied, at the same time, if the States General would interpose, the province of Zealand would have been influenced by them: they were afraid, if the Prince was restored to the lordships of Terveer and Flushing, he would have such an interest in Zealand, that he might induce that province to elect him their stadtholder; and, as this is the most powerful province next to Holland itself, this would be a great

12 I

great

great step towards his being appointed Stadtholder-general; and for that reason, unless the Prince meets with some such favourable juncture, as happened when WILLIAM III. was made stadtholder of Holland, he will scarce ever arrive at that dignity, but must expect to be treated by them, in the mean time, as a Prince they are jealous may one day be their rival in power.

The next thing that deserves our notice in the history of the United Provinces, is their conduct on the King of Poland's death, when they saw France in a confederacy with Spain and Sardinia, against the Emperor: then did these honest gentlemen sign an act of neutrality for the Austrian Netherlands without consulting either the Emperor or Great Britain, which gave France and her allies such a superiority on the Rhine, and in Italy, as perfectly ruined the Emperor's affairs; especially as their entering into this neutrality, and refusing to send the Emperor those troops they were obliged by treaty to furnish him with, probably induced Great Britain to observe much the same conduct. It is not to be wondered, if the Emperor, thus left alone, to oppose so powerful a confederacy, was in a manner driven out of Italy, and brought to the brink of ruin; which when Great Britain saw too late, she augmented her forces by sea and land, and invited the Dutch to do the same, to retrieve the false step they had made, and give a check to the conquests of the confederates; but we find, the Dutch refused to put themselves to the least expence in arming themselves; they left Great Britain the honour of disobliging both parties, that they might make the better terms, I presume, with the Kings of Spain and Naples, in point of trade: but here again, possibly, this crafty state have over-reached themselves; for both the French and the Emperor have been so much disoblighed by their High Mightinesses, in several instances, that they will probably unite to express their resentment against a state, that has had so little regard to both, and played such a double game: for by an article from Antwerp, we learn, that the Emperor has declared, he intends to make his subjects, of the Austrian Netherlands, ample satisfaction for their loss in the abolition of the Ostend company, by a new tariff: and the French seem determined, at the same time, to put the Hollanders under very great difficulties in point of trade; having, in a manner, prohibited the importation of their merchandize in France: but what will affect them most sensibly, is a project, said to be formed between the Emperor and France, for weakening their barrier, and laying them open to the attacks of their enemies.

1739.

Great Britain entering into a war with Spain, and it being expected that the French would join the Spaniard, the honourable HORATIO WALPOLE, was sent over to Holland in the year 1739, to discover what assistance the Dutch were inclined to give the English, in case of a rupture with France; but it does not appear that any thing more than compliments passed between the Ambassador and that cautious State. On the contrary, they concluded a new treaty of commerce with France, in which they were pretty much favoured by the French court, in order to prevent their entering into too strict an alliance with Great Britain. In the mean time their conduct in relation to the Prince of Orange, gave

some uneasiness to the British Court, for they still refused to restore that Prince to his rights in Zealand; jealous, that he might one day aspire to succeed his ancestors, in the office of Stadtholder; whereupon his Highness declared, that he would be content with receiving the revenues of his lordships in the province of Zealand, and wave his right to appoint magistrates, and elect deputies to represent that Province in the States General; but this reasonable proposition being rejected, he ordered his minister Mr BURMANN, to break off the conferences, and to declare, that he would no more make them any propositions on his part, or hearken to any on theirs, but should endeavour to preserve his right to his marquisates of Terveer, Flushing, &c. in it's full extent, in order to recover the same when time and opportunity should serve. And the King of Prussia being guarantee of the Prince of Orange's succession to the said Marquisates, and having some pretensions to them himself, in case the Prince should die without issue; demanded of the States, that they should be restored to the Prince, but it does not appear that they have hitherto had any regard to the representations of the one, or the other.

The King of Prussia espouses the Pr. of Orange's cause.

The King of Denmark having prohibited all people, whether natives or foreigners, (except the Danish Greenland company) to fish upon the coast of West Greenland, or Iceland, or within fifteen leagues of those coasts. The Dutch, notwithstanding, continued to fish there as formerly; whereupon the Danes seized several Dutch ships, but were obliged to release them again, on the States threatening to make reprisals; for whatever right any nation may pretend to the fisheries on their coasts, or to a monopoly in the trade of any distant country, if their neighbours happen to have a superior force at sea, they make no scruple of invading such rights; insisting, that the sea is free for all men, and that all nations are at liberty to trade with what people they please, if the inhabitants of the countries they trade to desire it.

The Dutch encroach on the Danes fisheries.

But surely, the Dutch with a very ill grace, insist that the sea is open to all men, and that it is lawful to visit any country where the natives consent to traffick with foreigners; when the Hollanders themselves have monopolized the traffick of all those countries in the East, where the fine spices grow, and will not suffer any people to traffick with the natives in that part of the world.

But however the Dutch thought fit to insult the Danes, and fish upon their coasts in Greenland and Iceland, notwithstanding the prohibition abovementioned, they seemed determined to observe an exact neutrality, in the war between Great Britain and Spain: The taking of their ships in Europe, or America, by the Spaniards, could not move them to express their resentment, any otherwise than by memorials and representations to the court of Spain, in order to obtain redress, though they had not always justice done them. They apprehended, possibly, that if they gave Spain any provocation, they should draw the resentment of the French upon them, and endanger their being engaged in a war with those two powers, which of all things in the world they dreaded most, as it would obstruct that profitable traffick they carry on, while their neighbours are engaged in war, and might bring upon them an expence, of which they could see no

end, if they engaged as principals in the quarrel. However, to render their State considerable, and give weight to their negotiations, they thought fit to augment their land forces, and fit out a squadron of men of war.

There was such an extraordinary fog in Holland on the 22d of November this year, that it grew dark before sun-set, and above fifty people lost their way, and fell into the canals: but to proceed in their Modern History.

The Dutch being under some apprehension of an invasion by the King of Prussia, who is supposed to have been incited by France, to alarm the States on that side, and threaten their territories in case they entered into a confederacy with Great Britain. They thought fit to make a second augmentation of their forces: the first pretence the King of Prussia made for invading the territories of Holland, was their erecting a sluice in Guelderland, which he apprehended would occasion some damage to his subjects in that province; he afterwards caused a memorial to be presented to the States, laying claim to the cities of Nimeguen and Zutphen, but he was pleased to wave his pretensions for the present, being engaged in a war with the Queen of Hungary.

The French Ambassador at the Hague, the Marquis of Fenelon, presented a memorial to the States General about the same time, complaining, that in their News Papers was contained an abstract of a pretended treaty between the French King, and the Duke of Bavaria, by which several places in Germany, and the Netherlands, were to be yielded to France, in case the Duke of Bavaria was advanced to the Imperial Throne, and the arms of the French met with success; he assured their High Mightinesses, that the pretended treaty was a mere forgery, and desired they would suppress the paper which contained the calumny.

The States answered, that it was published entirely without their knowledge, and they really looked upon the pretended treaty as a forgery.

About the same time, the Dutch published the following account of a conspiracy, and insurrection of the Chinese, against their colony at Batavia, in the island of Java; said to be received from one of their officers residing at Batavia, which was of the following tenor (viz).

I cannot but impart to you, the dismal misfortune we have lately met with, (viz) a conspiracy among the Chinese dwelling in and about this city (who were upwards of 90,000) to massacre every one of us Europeans, and make themselves masters of the island of Java.

Having with this intent, in bodies of 5 or 6000 men, for some time infested the Highlands, and committed great massacres, rapines, and devastations, by fire, sword, &c. the cause of which we were not able to learn, the Javans, and those they had forced to assist them, were sometimes taken thirty or forty together, and four or five hundred of them examined at once; whereupon two hundred, who could give no account how they subsisted, were sent to the island of Ceylon, and the rest that could get their bread discharged: but this salutary precaution did not avail, the riots increased every day in the Highlands, till at last the government judged it expedient to send a detachment thither, for which purpose Mess. VAN IMHOFF and VAN AARDEN, were sent out with eight hundred men, who having been

some days in the Highlands gave them battle, routed and dispersed them.

In the mean time the Chinese dwelling in and about Batavia, had made all manner of preparations, providing themselves with a sufficient number of wooden cannons, and other warlike stores, and digging of mines under ground which they charged with powder; the treachery being now upon the point of execution, it pleased God to discover the whole affair to us, and that too by five Chinese, who of their own accord came and acquainted the government with the scene of blood which their countrymen were preparing; whereupon all our guards and posts were doubled, and all the clerks, and even first and second supercargoes without exception, were obliged to mount guard completely armed in the castle, though the government did not apprehend the danger to be so great as it afterwards proved.

Matters remaining in this situation for two days; we had intelligence, on Saturday the 8th of October, that one of our advanced posts near the island Onrust, called Quale, had been surprized by the Chinese, all the Europeans murdered, and every thing destroyed by fire; whereupon the government met, and ordered that no Chinese should open his door, appear in the streets, nor burn a light in the night-time, and that the contraveners should immediately be shot to death; strong guards were also presently posted in all the streets and bye-places.

Whilst the government was yet assembled, in the evening about seven o'clock, the Chinese set fire to the suburbs, near the gate of Utrecht, expecting we should come with all hands to extinguish it, in which case, those within would have sallied from their habitations, and have made an end of us all together; but they were mistaken, the gates being kept close and well guarded.

Towards eight, the members of the government took, two by two, the guard of the gates upon themselves, in order to execute in person, what commands and orders might be given.

At nine o'clock, the Chinese to the number of forty or fifty thousand, advanced with a terrible noise of drums, trumpets, bassoons, and hideous shouts, in order to give their comrades in the city, a signal for the attack; but those within seeing our good regulation and order, and that they were deprived of every opportunity to join their brethren kept the selves very quiet, being seized with fear, and indeed had they ventured upon the matter, in combination with the rest, we had all been destroyed, being little more than three thousand fighting men.

Mean while the Chinese that were about the city, continued their havock with fire and sword, they surprized a guard of fifteen blacks without the gate of Utrecht, and likewise another without the Dies gate, all whom they murdered and destroyed: they also fell upon a guard of sixty men near the new gate, but these defended themselves so gallantly, that many Chinese were killed, and the gate remained in our hands, it being within reach of our cannon, which plied them with good success all that night; moreover we made a sally with 160 men, both horse and foot to relieve this post, and other Christians inhabiting the out-parts; we could not make a stronger sally, having our sworn enemies both within and without. Thus we spent the night with great courage, though not without danger, finding ourselves in the midst of our foes.

CHAP.  
IV.

In the morning the Chinese quitted the suburbs; whereupon the government met, and an order was issued to kill all the Chinese except the women and children, there being no other remedy to secure us within, and to defend ourselves against the multitude of enemies without. Accordingly the doors and houses of the Chinese were forced open with axes and engines, and all the men hauled out and massacred, their wives and children were all conveyed to the Chinese hospital, mean time the streets, rivulets, and moats, were soon filled with dead bodies, and in some places one might have been over the ankles in blood, so great was the slaughter. In the interim, some large guns were planted on the opposite side of the Roemolake, to play upon the Chinese captain's house, where there were upwards of eight hundred Chinese: When we had stormed it, about thirty women came from thence, on our promising to do them no hurt, the Chinese captain being amongst them, and hoping to escape in women's apparel, but being too well known, he was apprehended and sent to the castle.

In the afternoon Mess. VAN IMHOFF and VAN AARDEN, returned with their men from the Highlands into the city. At the same time (being Sunday at two in the afternoon) the whole city was in flames, for the Chinese, being in the utmost terror, set fire to their houses and perished in the flames, and those that came out of their doors were slain by our people.

This conflagration caused inexpressible confusion, especially amongst the women, who fled in crowds to the castle, that part of the city where the Chinese dwelt, being by this time almost reduced to ashes; and there being upwards of six hundred Chinese men confined in prisons, they were all put to death by the order of the government. During this confusion, the money and goods of the Chinese were plundered, and many greatly enriched by these robberies and murders, some of the seamen got nine or ten thousand rix-dollars (crowns) each man.

The Chinese that escaped the slaughter fled to the mountains, where they destroyed every thing with fire and sword, but were many of them killed by our people; in all this havoc (says the writer) we have not lost much above an hundred men. At present, there is a general pardon published for such Chinese as will submit within a month, which several hundreds have already done; however, this pardon does not extend to their two chiefs, but, on the contrary, a reward is promised of 1000 dollars, to those that bring them dead, and 5000 for taking them alive; for the inferior sort, 200 dead, and 500 alive: this pardon expires the 22d of this month of November, so that all those that do not surrender by that time, are to be outlawed.

By subsequent accounts, the Dutch pretended they had learnt, that the chief of this conspiracy was a bastard son of the late Emperor of China, who had been forced to fly that country several years before, for attempting to stir up a rebellion, but that he pretended to be the lineal descendant and heir of the antient Imperial family of China, before it was conquered by the Tartars, by which pretence he engaged the Chinese of Java to unite under him, and was still in the mountains, at the head of a great number of men.

It was added, that the Chinese quarter in Ba-

tavia, continued burning several days, and many of the miserable inhabitants were found alive among the ruins, but put to death without mercy by the Dutch, as were all those in the prisons, and hospitals; and that the riches that nation was found possessed of, is not to be expressed, many chests filled with gold, silver, and other treasures, having been dug up, and all sorts of merchandize found in caves and pits, dug on purpose to conceal them.

We have since received a more circumstantial account of the slaughter of the Chinese at Batavia, which sets that action in a very different light, (viz.)

The Chinese in Java are a colony which transported themselves thither, rather than submit to the Tartars, who conquered China about an hundred years ago, and required the natives to cut off their hair, and alter their habits to the Tartar mode.

The Chinese have multiplied prodigiously since their arrival in Java, they were computed to amount to one hundred thousand at least, at the time of the late massacre; on whom the Dutch (who were masters of that part of Java where the Chinese resided) levied a poll-tax annually, in consideration of their wearing their hair, which the Tartars would not suffer them to do in China, and which was one principal reason of their removing from thence, and chusing to remain in exile.

The Dutch also, by other taxes and impositions on the Chinese, added very considerably to the revenues of their government at Batavia, for this colony still carried on a great trade with their mother country, as well as with the continent of India and the Oriental islands, and were become immensely rich, which the Dutch government of Batavia beheld with avaritious eyes, and at length found, or rather made, a pretence for murdering these unhappy people, and seizing their treasure; whether the Chinese were provoked by the oppression of the Dutch, to murmur and endeavour to get their grievances redressed, or whether the plot was a mere invention of the State, does not appear: that the general or governor of Batavia sent for Baron IMHOFF who commanded the soldiers of that garrison, and acquainted him, the Chinese were conspiring against the government, and that their numbers were so formidable, that it was not practicable to proceed against them in the ordinary courts of justice, but a general massacre was become absolutely necessary, to prevent the total destruction of Batavia, the capital of the Dutch Empire in Asia, and consequently, of that invaluable commerce they carried on in this part of the world; and thereupon, commanded the Baron to see his orders executed, and totally extirpate that dangerous colony of the Chinese.

The Baron, however, before he would enter on this bloody scene, desired to see the information and evidence of the conspiracy on which the governor proceeded, but was told, there was no room to doubt of it, and he had nothing to do but to obey his orders; whereupon the Baron represented, that tho' some of the Chinese might be in a plot, it could not be imagined the whole nation was concerned, and it would be barbarous to put the innocent to death with the guilty; and the governor still refusing to communicate the proofs of the conspiracy to him, the Baron absolutely refused to obey his orders, and retired; whereupon the governor

CHAP.  
IV.

governor assembled the council, and made such a representation of the Baron's disobedience, that they concurred with him in an order, to apprehend Baron IMHOFF, and send him prisoner to Europe: after which the drums were ordered to beat to arms, and proclamation made through the Chinese quarter, that none of that nation should stir out of their houses, which the Chinese obeyed.

The next day, the drums were ordered to beat again, and the Chinese commanded to deliver up their arms, which they submitted to; and the night following, the Dutch garrison was ordered to massacre all the Chinese in the place; which was no sooner began, than it occasioned the most dreadful shrieks and out-cries: and whether the soldiery tortured the Chinese, and put them to cruel deaths, to make them discover their treasure; or from what other motive it proceeded, the Chinese so dreaded the cruel butchery of the Dutch, that many of them strangled themselves, or cut their own and their childrens throats, fired their own houses and perished in the flames; and either by their own, or the hands of their enemies, twenty or thirty thousand of the Chinese men, women, and children, lost their lives in one night.

The Chinese in other parts of the island, hearing of the distress of their brethren at Batavia, assembled and advanced to the gates of the town, to the number of five thousand; but either they came too late, or found it impracticable to get into the place; however, this was deemed a manifest evidence of a plot of the Chinese against the government, though if the strength of the fortifications, the numerous garrison of Europeans and Asiatics, the ships of war always in the harbour, and the defenceless condition of the Chinese, are considered, it must appear impossible for them to have made themselves masters of Batavia. They had neither cannon, mortars, or ammunition to enable them to reduce a fortress of that strength: but however that was, the Dutch governor was so well satisfied that he should be able to justify his conduct to his masters, that he determined to return to Europe, at the expiration of his government; and accordingly collected most of the treasure he had acquired, by the plunder of the Chinese, or otherwise, and sent it on board some Dutch ships to Holland, where it was all cast away on his native shore, in sight of his countrymen.

Soon after the governor had sent away his treasure from Batavia to Holland, he embarked for Europe himself, and arrived at the Dutch settlement, at the Cape of Good-hope, in Africa; where the governor of that fortress resigned the command to him, as is usual in all the Dutch garrisons in Asia, and Africk, when the General of Batavia arrives, who is vested with sovereign power, wherever he resides in that part of the world, the commissions of all other governors and generals being suspended. In the mean time, advice of this horrid massacre arriving in Europe, and seeming to be detested and severely reflected on by every other nation; the Dutch, in order to remove the odium of it from themselves as a nation, imputed it to the barbarous disposition of that particular man, who was then General of Batavia; and sent an order to the governor of the Cape of Good-hope, to apprehend him if he came home that way, and send him back prisoner to Batavia, to be tried for the fact.

This order coming to the Cape, at the time  
V O L. II.

CHAP.  
IV.

the General of Batavia was there, and while he had the command of the place, was delivered into his own hand, and had he opened it himself, might have been suppressed, but his evil genius seems to have had the ascendant at this time, he did not care to be disturbed as he lay indolently lolling on his couch, but put the packet, and with it the sentence of his own death, into the hands of the governor of the Cape, desiring him to withdraw and peruse the contents: who finding an order in it to make the General prisoner, sent immediately for a guard, and took him into custody: it is easy to imagine the consternation the wretch was in, on this turn of fortune; before this, and before he received advice of the loss of his treasure on the coast of Holland, he was confident he had it in his power to bribe his judges in Europe to acquit him; especially as he was able to have made so specious a defence, and shew he had the concurrence of a majority of the council of Batavia, in perpetrating the horrid fact; and could prove, there was an insurrection of the Chinese, in the open country, at the very time of the massacre: but now all his confidence in his immense riches, and in the tricks and evasions he had prepared to amuse the world, forsook him; he was sent back bound to Batavia, where that very Baron IMHOFF, he had sent prisoner to Europe, for refusing to execute his bloody commands, was constituted General, and ordered to see justice done upon his predecessor.

But to return to Europe; we find the States of the United Provinces much divided, when a third augmentation of their troops was moved, those who were against the motion, represented that by this augmentation, their national troops would amount to fourscore thousand men, a number so greatly superior to what it was the interest of the Republick to maintain, that they believed no good patriot could be insensible of the danger arising from it; for how could they be sure after consenting to such a motion, it would be in their power to make a reduction, without risking a change in the form of their government.

Indeed were the augmentation the effect of immediate danger, or necessity, there would be no room left for dispute; the common safety would then unite all suffrages in it's favour. But it was plain the Republick had no enemies, but such imaginary ones as were raised to terrify the populace into this measure. To do this, the most chimerical apprehensions were raised; sometimes the Queen of Hungary was said to be reconciled to the King of Prussia, to induce them to arm in support of that alliance; when this failed, that King was represented as a dangerous enemy, who being secretly instigated by France, was meditating projects prejudicial to her repose, though at the same time it was apparent to the world, that his Prussian Majesty had not in all his territories, from Minden to the Maese, above five battalions, the garrisons of Wesel and Gelders included; and of these, during the present alarm, he had withdrawn two regiments: with respect to France, they were so far from having any cause of suspicion, that they had rejected her propositions for securing their barrier, and disregarded the assurances she seemed willing to give them as to her designs.

Notwithstanding this, the popular fermentation was still artfully kept up, by letters industriously spread, relating to the vast preparations of France through all her provinces: whereas that crown

The States divided on the proposing a third augmentation of their troops.

was so far from acting like a power inclined to disturb it's neighbours, that though she had sent two armies into the Empire, *with views known to to all the world*; yet she had made no addition to her cavalry: and this she would certainly do, had she the sinister intentions imputed to her, for her squadrons were at present too thin to support a war: her dragoons were also but half mounted, and of those she had sent into Germany, the half had been left in the frontier towns for want of horses: such deficiencies proved at least her designs not deep; so that should they at last make the augmentation so much desired, it might be imputed to their indiscretion, and want of confidence.

And could it be believed, they should easily reduce their troops, after so considerable an augmentation, without the hazard of a popular disturbance; the party that was so zealous for the one, would probably be as violent against the other: designing men, who by popular influence had carried one point, would use the same means to extend their power; the favourers of the augmentation would keep up their credit and reputation with the people and the army, by preserving the establishment they had made; in altering which, the Republick might feel greater agitations than she now did in making it: In that case, the attempting a change would probably throw the State into great convulsions; it was time the province of Zealand did make a reduction of her troops, but this was no precedent for them; the situation of that province, surrounded by the sea, made her less need a land force; but the situation of Holland was different; the members of this province, who espoused the augmentation, would be equally against a reduction; for those who gain the ascendancy over others, keep it by all possible artifices, of which the present case was a proof, to which might be added another.

How often had they been the dupes of England, who had made her advantages of the credulity of this State? It was evident some provinces had a particular view and interest, in the success of this measure, and would have the same hereafter, in keeping up the army, at it's highest complement.

They ought never to forget, what happened after the peace of Munster, when the Republick came to disband an army, necessary during a long war, the views of those interested in it's support drove things to fatal extremities; the worthy patriots of the province of Holland, who generally promoted a reduction, were seized by violence, and imprisoned in the castle of Louvesteyn; arbitrary power forced even patriots in the supreme councils of the Republick; Amsterdam was on the brink of a surprize, and the State was rescued from impending slavery, only by the sudden death of a young Prince, who employed the army entrusted to him by the Republick, to subvert it's freedom, and imprison it's defenders.

It is to little purpose, to alledge that the case then was quite different, and that what happened then was the effect of heat or ambition in a young Prince: whereas the Republick having now no Stadtholder, runs no hazard: it was true there was no danger from a *reigning Stadtholder*, but was there none from a *meditated one*? civil commotions were never more to be dreaded, than when the humour of the populace, and the incli-

nation of the army, united to give it's sovereign power, where it was most dangerous it should be placed.

In answer to this representation, those that were for the augmentation of their forces observed, that the present condition of their State was more dangerous, than it had been at any time since the peace of Utrecht; that it nearly concerned the Republick to be upon it's guard, while all it's neighbours were in arms, and that their High Mightinesses were answerable to God, and their posterity, if they delayed the augmentation of their forces any longer, while such numerous bodies of foreign troops, were assembling on their frontiers: the present augmentation would indeed increase their forces, much beyond the numbers necessary when Europe was in tranquillity, and no person would appear in behalf of such a measure, but on account of it's absolute necessity.

France had sent two armies into the Empire, with views (as had been observed) *known to all the world*, (*viz.*) *the election of an Emperor, and the ruin of the house of Austria*; the first of these designs she had accomplished, and was now intent on the execution of the other: the increase she had made in her forces, left no room to suspect, she had still undiscovered schemes in view, which required extraordinary support, for it was frivolous to ascribe such preparations to their declining the neutrality she offered: an impartial observer must conclude, her conduct on this occasion furnished just matter for distrust; why should France insist on their sitting still, unless she was afraid they would be in a posture of defence, to defeat her designs, either against themselves, or against those countries, whose safety and independency was necessary to their own; namely, that barrier which had cost them so much blood and treasure: an impartial observer must see, that all the secret artifices, and open menaces, employed by that intriguing court, were only put in practice to amuse them, till her blow was struck, which would enslave Europe, and leave them the poor consolation of being the last conquest. Every step taken by France to retard the augmentation, was a new motive to bring it to a speedy conclusion.

The majority of the members of the Republick, were thoroughly convinced of the necessity, and importance, of the augmentation proposed, and to decry it, because it was a popular thing; as if whatever was popular, was extravagant or foolish, was very absurd: for the voice of the people in all well regulated states had been esteemed sacred; amongst despotick Princes, those who have been the most popular, have been the best, or least exceptionable: It is only tyrants who throw off all regard for their subjects, witness the *oderint dum metuant* of a NERO; the more prevailing an opinion is among the people, the more it merits the attention of every well wisher to the publick, and especially in such a form of government as theirs: nothing should be so popular in Holland, as the detestation of slavery and persecution, and consequently a dread of all measures that had a tendency to introduce them; to watch over the publick safety, and by such a vigilance to deserve the confidence reposed in them, was the duty of the supreme magistrates: their people to a man, were ready to contribute a part of what they had, to preserve their property in the rest; and warned by the example of their neighbours, they thought it necessary to be upon their guard, when they found

CHAP. IV. found it too common with Princes to regulate their conduct in the observation or violation of treaties, only by their interest and convenience. It was easy to answer the representation, with regard to the two points chiefly insisted on therein; as to the first, it is plain the Republick in the beginning of this century (1700) greatly increased her forces, without any hazard to her liberty; as to the second, at the peace of Utrecht, a reduction was made of those troops, and in 1736 a further reduction was made, without the least opposition or inconvenience, which was sufficient to silence the chimerical objections of the other party: the imprisonment of the members at Louvesteyn in 1650, is taken notice of in the representation indeed, but the writer is perfectly silent, as to the desperate condition of the Republick, on a later occasion (1672) for want of forces to defend herself.

The instance of a young ambitious Prince indeed is formidable, but the hazard of a sudden invasion is much more so.

What must they expect would be the consequence of a mean dispirited inactivity, in compliance with those, who advised them to continue disarmed, in the present embroiled state of Europe.

What could be the intention of those, who having no enemy but what was weaker than themselves, still continued to augment their troops, while, like good friends, they advised the United Provinces to neglect the preservation of their liberties, and to continue in a defenceless state, upon bare assurances conceived in dubious terms; the explication of which, as experience shewed, was left to themselves.

The party for a third augmentation appearing to be a great majority, the French offered (tis said) to cause the barrier towns to be annexed to the United Provinces for ever, and guarantee'd by the Emperor, Spain, and Prussia, provided the States would consent to a neutrality; but the Dutch appeared too honest, or too sagacious, at this, time to listen to the proposal; on the contrary, they commanded thirty battalions, and fifty squadrons, to march out of their quarters and encamp on the 8th of July 1742; and the year following, they suffered twenty thousand of their troops to march into Germany, but they did not join their allies till after the battle of Dettingen.

The reason some of the provinces opposed these measures, was, because the Prince of Orange was refused the post of General, which they apprehended him intitled to, the refusal whereof seems to have been deeply repented by the Prince himself, as appears by the following letter.

High and Mighty Lords,

I Am informed that your High Mightinesses in your last promotion made not long ago, have named me a Lieutenant-General, after having deliberated often on this subject, tho' to no purpose, within these few years, your resolutions being deferred, or suspended at least, for reasons well enough known to all the world, and which consequently could not be hid from me, even if I had no direct information from the deputies of more than one province, which compose your High Mightinesses assembly.

After mature deliberation, I am determined not to accept the post your High Mightinesses now offer me, because in 1727 it was judged inferior to the dignity of Captain-General of three Provinces, with which I have the honour to be already invested.

All the world knows in what light my ancestors, and the princes of my family stood, who enjoyed the post of Captain-General of the Provinces. The history of these Provinces, and the register of your High Mightinesses, attest this, and your High Mightinesses cannot therefore be ignorant, that by excluding me from the rank of General, you have made it impossible for me to serve in the combined armies of the States, out of the territories of those provinces of which I have the honour to be Captain-General, without manifestly exposing that dignity to contempt, which I hope, with the divine assistance, to raise in time to all its rights, in spite of the endeavours of such as, from personal views, are inclined to sacrifice the majesty and prerogatives of their provinces, by degrading a character to the pre-eminence and lustre of which they are bound in duty to contribute.

I shall not enter into a detail of the other motives which have led me to that resolution, with which I have now the honour to acquaint your High Mightinesses.

The long deliberations of your High Mightinesses on this promotion, are sufficient to convince any man who judges without partiality, and who is apprised of the true cause of such delays; that at least, the reasons alledged by such as were for my election, appear to be such as merited the most serious attention.

I have been compelled by force, to lose a part of my estate, and to suffer the taking away from me a very considerable part of the inheritance of my ancestors, notwithstanding an age and half's uninterrupted possession. The usage I met with in the business of Terveer and Flushing, the interdicting the ordinary methods of justice, contrary to the antient privileges of the provinces, and against the fundamental principles of the Union, ought to have prepared me for all that has happened since; but though I could not defend my estates, it still depends upon me, and my instructions make it my duty, to preserve the honour and lustre of my charges, wherein the pre-eminence and liberties of those provinces principally consist, in whose name I have the honour to execute these offices.

The great number of generals, of a rank superior to that which your High Mightinesses have assigned me, as well as the clause for completing the number, even from strangers, in case one or more of those by you appointed should refuse to serve, make your firm resolution to postpone my advancement sufficiently known, and leave me very little reason to hope, that your High Mightinesses continuing in these sentiments will either make use of my services, or put it in my power to be more useful to you hereafter than I can be at present, and this it is that gives me the most pain.

I most sincerely wish, that the foreign officers your High Mightinesses shall take into your service, as they will undoubtedly surpass me in capacity, may equal me also in my love and zeal for the State, for which I am always ready, according

of the ar-  
my.

To return to the Dutch forces, which marched into Germany in the campaign of 1743; after the battle of Dettingen, they followed the British and Austrian forces at some distance, during the remainder of the campaign; the French seem to have been well assured they had little to fear from them, or they durst not have detached so many of their troops from the Palatinate, to oppose the passage of Prince CHARLES’s army over the Rhine into Alsace: and indeed it seems pretty evident, that even the British forces had no intention of attacking the French, after they retired out of the Palatinate, into their own territories beyond the Quiech, and consequently the French were left at liberty

with their whole force, almost to oppose the passage of Prince CHARLES over the Rhine: but surely the British or rather Hanoverian Generals were a little too squeamish, when they scrupled falling upon the French in their own territories, after they had been so furiously attacked by the French at Dettingen; it is generally held, to have been an unpardonable neglect, that they did not follow their blow, when the French retreated, and that they did not afterwards keep Marshal NOAILLES in play, till Prince CHARLES had penetrated into Lorraine, or Alsace at least; but some of our Admirals have not had less complaisance for the French than our Generals, such opportunities have been lost, of destroying the naval forces of the French and Spaniards, as are not to be expected every day; nor is the matter likely to be much mended, if the Dutch should join the British fleet with a squadron of men of war, their Admirals instructions will probably be clogged with such limitations and reserves, as will render the best concerted enterprises abortive.

CHAP.  
IV.

THE

# THE PRESENT STATE OF THE SWITZERLAND.

## CHAP. I.

*Treats of the situation and extent of Switzerland, of the air and climate; and of it's mountains, rivers, lakes, springs, and woods.*

### CHAP. I.

The situation and extent of Switzerland.

**S**WITZERLAND, filed by the Romans *Helvetia*, as it is still by the Italians, if we include the country of the Grisons and their other allies, is bounded by that part of Alface called the Suntgaw, the Black Forest, and part of the circle of Suabia, towards the north; by the county of Tyrol on the east; by the duchies of Savoy and Milan, and the provinces of Bergamo and Brescia in Italy, towards the south; and by the county of Burgundy or Franche Compté in France towards the west: extending in length from east to west about two hundred and sixty miles, and in breadth from north to south upwards of an hundred miles, there being some parts of Italy and Gaul annexed to it, which were not included in the antient Helvetia.

The air and climate.

This country lying between the latitude of forty-five degrees, forty-five minutes, and forty-seven degrees thirty minutes, might reasonably be expected to be moderately warm; but their mountains being the highest in Europe, and great part of the year covered with snow, occasions a sharper air than is found in much colder latitudes: however, the honourable Mr STANYAN, who resided several years in this country with a publick character, assures us, he met with some summers so warm, that the heat was very inconvenient; but then the weather is subject to frequent changes, and passes from hot to cold in a day's time. The Alps, he adds, were the occasion of frequent rains; and as rain in the flat country is usually snow upon the mountains, the air becomes exceeding cold whenever they have a lasting shower. But tho' the air be moist, it is notwithstanding healthful, and the people live to a good old age; malignant distempers, which in other parts of the world depopulate whole cities, being seldom known in this country: what they are most afflicted with, are wens or swelled throats, which disfigure them extremely, and are supposed to proceed from their drinking snow-water.

The face of the country. Their mountains.

As Switzerland is separated from every other country by prodigious mountains, so is every Canton almost divided from another by a ridge of hills; from Italy it is divided by a long chain of hills, called the Alps, which, tho' exceeding high,

and during the winter covered with snow, are not naked and barren, but in the summer afford good pasture to the very tops; and in some places are seen fields of corn, on a precipice where one would imagine it impossible for a plough to go. The rest of the country, says the same honourable writer, is rather hilly than mountainous, and in some places we meet with a plain champain country: two thirds of the Canton of Bern particularly, is a plain fruitful country, abounding in good corn. The Cantons of Zurich, Soleure, and Friburg, with Bazil and Schaffhausen, also are pretty much upon a level, and produce good grain, though it be for the most part a rocky soil, which requires a deal of good husbandry to produce a crop.

### CHAP. I.

The source of many great rivers are found in or near this country, from whence it is generally concluded to be the highest land in Europe; particularly the Rhine, the Rhone, the Danube, the Adda, the Ticino, the Linz, the Aar, the Rufs, the Inn, and innumerable other lesser streams, not a valley but is watered by a rivolet. There are also a great number of noble lakes; my author says, he reckoned up above thirty, whereof some might deserve the name of seas, particularly those of Constance and Geneva, being near sixty miles in length, and twelve in breadth; and those of Neuschattel, Zurich, and Lucerne, almost of equal magnitude; and besides the lakes in the vallies, there is one on the top of every mountain almost; in short, there is not an inland country in Europe so well supplied with water, and particularly with springs, the best and purest in the kind that can be tasted, by which means the husbandman may flow his grounds as often as he pleases.

Their rivers, lakes, and springs.

There are also all over the country, as well on the hills as in the vallies, abundance of fine woods; here you may see whole forests of pine and fir-trees, which if they lay nearer the sea, would be inestimable. There are also some groves of oaks and elms, but deal is most generally used both for building and firing, there being no great plenty of the other.

Woods.

*Treats of the nature and produce of the soil, and of their plants and animals.*

The nature and produce of the soil.

THE mountains of Switzerland are not barren, as has been observed already, but afford good pasture, on which they feed great herds of cattle: there is also on the mountains some arable land, but more in the vallies, which seem to be a hard strong soil, much worse than the hills, and require all the husbandman's care and skill to raise a crop. My author observes, that if the Switzers were not the best husbandmen in Europe, many of their vallies would scarce bear any thing; and as it is, the cold tempestuous seasons about harvest frequently destroy all the fruits of their labour. In the Cantons of Lucerne, Ury, Switz, Underwald, Zug, Glaris, and Appenzel, they have not corn enough for the subsistence of the natives, and in some of them none at all: And tho' the surplus which the other Cantons produce might supply them if it came to maturity; yet the mountains which surround them, says my author, are such magazines of hail, rain, and tempests, that the fruits of the earth are frequently blasted by storms, or killed by cold rains, and sometimes they lose their harvest entirely: for which reason the Switzers in plentiful years lay up their corn in magazines, to prevent a famine among the common people in times of dearth.

Animals.

Switzerland also produces wine of several sorts, of which two are preferred above the rest: the first is white, produced in the Pais de Vaud, upon the banks of the lake of Geneva; and the second, which is red, grows in the county of Neuchâtel: the white is good table-wine, and the red has something of the relish of Burgundy, but is inferior to it. The wine also which is made in the Cantons of Zurich, Schaffhausen, and some other places, is admired by the natives, but not very agreeable to foreigners, being almost as sour as vinegar: the same misfortune frequently happens to their vines as to their corn-fields, the vintage being often spoiled by unseasonable weather. The timber which grows in this country, as has been intimated already, is chiefly fir and pine, with some oak and elm; travellers do not mention any other. The Switzers abound in good cattle of all kinds; they have not only sufficient for their own use, but drive a great trade with them in the neighbouring countries, especially with their horses. Venison they have in abundance, and are well furnished also with all manner of fowl, both wild and tame: their wild-fowl, well as their venison, is observed to have a more delicious taste than in countries of a lower situation. Besides deer, they have wild hogs, and goats of various kinds, particularly bouquets and chamois, which they reckon among their venison; and it is of the skin of the chamois that the shammy-leather is made.

Minerals.

Their lakes also abound in excellent fish, particularly trouts of an extraordinary size; it is not uncommon to take them of sixty pounds weight, and the larger they are, the sweeter and firmer is their flesh; they have such plenty of these and other fish, that they sell great quantities of them.

It is said there are some veins of silver, lead, iron, and copper in their mountains; but I don't find any of them are wrought, or that they receive any benefit from them. They have also

plenty of black marble with white veins and spots in it; and great quantities of crystal on the tops of the mountains and sides of the rocks, being of two kinds, the one clear and transparent, and the other pale and cloudy: and in the Valais they meet with a kind of bituminous coal.

*Treats of the respective Provinces, or Cantons; and of their chief towns and buildings publick and private.*

SWITZERLAND may be divided into three parts, viz. 1. Switzerland Proper, or the thirteen cantons. 2. The subjects of Switzerland, or the conquered countries. And, 3. the allies of Switzerland. The thirteen Cantons, according to their precedency are, 1. Zurich. 2. Bern. 3. Lucerne. 4. Ury. 5. Switz. 6. Underwald. 7. Zug. 8. Glaris. 9. Basil, or Basle. 10. Friburg. 11. Solothurn. 12. Schaffhausen. And, 13. Appenzel. Of which the Protestant Cantons are Zurich, Bern, Basil, and Schaffhausen, with above two thirds of the Canton of Glaris, and more than half of Appenzel; the rest are all Roman Catholics.

Provinces.

1. The Canton of Zurich, is bounded by Schaffhausen on the north; by the Canton of Appenzel towards the east; by the Cantons of Zug and Switz on the south; and by Bern and Lucerne towards the west: extending about fifty miles in length from north to south, and forty miles in breadth from east to west: and is of a round, or rather oval form; and tho' it be not half so large as that of Bern, is looked upon as richer in proportion to it's territory: for here the people apply themselves more to trade, and have established several beneficial manufactures. Zurich is divided into twenty-four bailliages, thirteen whereof are so inconsiderable, that the Bailiffs or chief officers usually reside in the capital city of Zurich, where they dispatch the business of their respective districts in their own houses. Two others of these bailliages, named Stein and Winterthur, have such large privileges, that they are almost independent of the Canton; the people being governed by their peculiar laws and magistrates, and the government only sends an officer every year to receive the revenues payable to the State. The remaining nine bailliages are of a large extent, and so considerable as to require the constant residence of their Bailiffs, whose offices afford them handsome perquisites. The chief towns in the Canton of Zurich, are, 1. Zurich, the capital city. 2. Kiburg. 3. Gruningen. 4. Lauffen. 5. Ruffy. 6. Wadischweil. 7. Andelfinger. 8. Griffeuree. 9. Ktingenew. 10. Eglisow. 11. Regensburg. And, 12. Stafen.

Zurich Canton.

Chief towns.

1. Zurich, situate at the north end of the lake of that name, in forty-seven degrees, thirty minutes north latitude, about sixteen miles south of the frontiers of Germany. It is divided into two unequal parts by the river Limagus, having a communication by three bridges. The town is small, but populous, and surrounded with a wall, and other modern fortifications. Their publick buildings, especially their churches, make a tolerable figure, and their private houses are some of them lofty structures, tho' the materials are generally clay and timber, and their streets but narrow. It is a very antient city, supposed to have been the capital of the *Figurini*, one of the four Helvetian

CHAP. III. Helvetian people, and was enlarged and beautified by CHARLEMAGNE, who built the great church, where his statue is still preserved. The library and the arsenal are taken notice of by travellers, as worth the viewing. The adjacent country produces corn and grapes, but their wine is not good. ZWINGLIUS, who was Canon of the great church, introduced the Reformation here. The adjoining lake is four and twenty miles long, and three broad, the water of it green, but not brackish, the colour supposed to be occasioned by the melted snow which falls from the mountains, and contains a nitrous salt. The principal manufacture of the place is crape, and the people generally apply themselves to trade, having the convenience of exporting and importing merchandize on the lake, which hath a communication with the Rhine. The rest of the towns of this Canton do not require a particular description.

Bern Canton.

2. The Canton of Bern is bounded by that of Basil and Solothurn towards the north; by Lucerne, Unterwald, and Soleure, on the east; by the lake of Geneva towards the south; and by Neuchâtel and Burgundy or Franche Compté towards the west: extending an hundred and twenty miles in length, and sixty in breadth, and some give it much larger dimensions; however, it is generally agreed to make near a third part of Switzerland, and to be the most fruitful of any of the Cantons, as well as the most powerful. It is usually divided into two parts: the one called the German country, and the other the Roman, or French, distinguished by the different languages they use. The French part is named the *Pays de Vaud*, the pleasantest, but not the most fruitful, taken from the Duke of Savoy in the year 1536. The whole Canton is divided into seventy-two bailliages, governed by as many Bailiffs, who are members of the council of two hundred at Bern, and changed every six years. There are in this Canton many considerable cities and towns, whereas in most of the small Cantons there is no town at all, and in the rest scarce more than one of any consequence.

Chief towns.

The chief towns of the Canton of Bern are, 1. Bern, the capital. 2. Lausanne. 3. Thun. 4. Arberg. 5. Vangen. 6. Lansburg. 7. Erlach. 8. La Serre. 9. Bruck. 10. Nion. 11. Sana. 12. Aubone. 13. Brienz. 14. Walen. and, 15. Yverdon.

Bern city.

Bern stands in a peninsula, being encompassed on three sides by the river Aar; in forty-seven degrees of north latitude, forty miles south of Basil, and about as much west of Lucerne. It stands on a rising ground, most of the houses are of free-stone, and it is a mile in length, consisting chiefly of three broad streets, through which run as many clear rivulets, and most of the houses have a piazza before them. The great church, the town-house, and the arsenal, are said to be noble structures; and the whole is defended by a wall and fortifications after the modern way.

Lausanne.

2. Lausanne, the capital of the *Pays Roman*, or the country of Vaud, is situate on three hills, near the north side of the lake of Geneva, forty miles south-west of Bern, and thirty north-east of Geneva, which is frequently therefore called the lake of Lausanne. The town was formerly an Imperial city, but has been subject to the Canton of Bern since the year 1536. It was also a Bishop's See, suffragan to the Archbishop of Besançon; but upon falling into the hands of the Protestants, the See was removed to Friburg.

Of the other towns of this Canton I meet with no particular description.

CHAP. III.

Lucerne Canton.

3. The Canton of Lucerne is bounded by Soleure on the north; by Zurich, Zug, and Unterwald, towards the east; and by the Canton of Bern on the south and west; being about fifty miles in length from north to south, and thirty in breadth from east to west. This is one of the chief of the Roman Catholick Cantons; the chief towns whereof are, 1. Lucerne. 2. Sempach. 3. Sursee. 4. Rot. 5. Sualhufen. 6. Wiken. 7. Willisow. 8. Hotburg.

The city of Lucerne is situate on a lake of the same name, at the mouth of the river Ruis, about twenty miles south-west of Zurich, and forty to the eastward of Bern. It lies in a plain, and is encompassed with mountains on two sides; a neat elegant town, with a spacious marketplace, and surrounded by a wall and other fortifications. The town-house and Jesuits college are magnificent structures; and here the Pope's Nuncio and the Spanish Ambassador usually chuse to make their residence. The neighbouring lake is about twenty miles in length, and seven or eight broad, and it hath a communication with the Rhine by the river Ruis. The other towns of this Canton don't seem to merit a description.

Lucerne city.

4. The Canton of Uri is bounded by Switz on the north; by Glaris and the country of the Grisons on the east; by Unterwald towards the south; and by the Canton of Bern on the west. This Canton consists but of one valley, extending from Altorf to the foot of mount St Goddard, through which the river Ruis takes it's course, and frequently overflows great part of it. The country produces no wine, and but little corn: the neighbouring mountains however furnish them with pasture for great numbers of Cattle, by the sale whereof they are able to purchase both corn and wine. There is but one bailliage belongs to this country, and that a poor one; but being a great thorough-fare for merchandize between Switzerland and Italy, they raise money by the duties on goods which pass through their country. There is not one walled town in this Canton; the most considerable village is Altorf, near the river Ruis and the lake Lucerne, where the courts of justice for the Canton are held.

Uri Canton.

5. The Canton of Switz is bounded by Zurich and Zug on the north; by the Canton of Glaris on the east and south; and by Lucerne and Unterwald towards the west; extending about five and thirty miles in length from east to west, and five and twenty in breadth from north to south. It is very mountainous, having only three narrow vallies, which yield little corn, and no wine; and there are only three poor bailliages belonging to it: It does however give name to the whole country, being the first Canton, it is said, that took arms to defend their liberties. They have no walled towns, their principal village Switz lies on the banks of the river Meuse, near the lake of Lucerne.

Switz Canton.

6. The Canton of Unterwald is bounded by Switz and Lucerne on the north; by Uri on the east; and by another part of Lucerne on the south and west; extending about five and twenty miles in length from east to west, and as far in breadth from north to south. This Canton is very mountainous, and the soil no better than that of Switz: There is not one bailliage in it, and but eight good villages.

Unterwald.

7. The Canton of Zug is about eighteen miles long

Zug.

CHAP.  
III.

long and seven broad, and surrounded by those of Lucerne, Zurich, and Switz. This is much more fruitful than the Cantons last described, yielding corn and wine sufficient for the inhabitants, and contains six bailliages, though none of the richest. The village of Zug, the most desirable place in the little Cantons, stands on a hill, on the east side of the lake of Zug, which is about seven miles long.

Glaris.

8. The Canton of Glaris is bounded by the valley of Lintz on the north; by the country of the Grisons on the east and south; and the Cantons of Ury and Switz towards the west; extending about twenty miles in length from north to south, and is near as much in breadth from east to west. It consists of one large valley, which yields them a sufficient quantity of corn, as their mountains do of pasture for their cattle: but as to other necessities, the inhabitants are forced to purchase them of their neighbours. There is one good bailliage in it, and by a treaty of comburgership, it is coarbitrator, in conjunction with the Canton of Switz, of all differences which arise between the Abbot of St GALL, and his subjects of Tockenburg.

Bazil.

9. The Canton of Bazil is bounded by the circle of Suabia in Germany on the north and east; by the Canton of Soluthurn on the south, and by part of Allatia on the west, being twenty miles in length and eighteen in breadth, and contains five bailliages. This Canton having so small extent of territory, the natives have applied themselves wholly to trade, by which they are grown rich. They were formerly subject to their Bishop, who upon the Reformation was driven from Bazil, and deprived of his authority in great part of the Canton, but still retains his sovereignty in some places, and is a Prince of the Empire. He usually resides with his Chapter at Porentru, from whence the Protestants call him the Bishop of Porentru; the Catholics, however, still stile him Bishop of Bazil. The country he remains possessed of lies to the southward of Alsace, between Franche Compté and the Canton of Soleure; the inhabitants whereof are vested with such privileges, that he hath little more than the name of Sovereign, and the liberty of collecting his revenues; for they are not only governed by their own laws and magistrates, but claim a right of contracting alliances with other powers for their protection; in pursuance whereof his Protestant subjects are in a confederacy with the Canton of Bern, and under it's immediate protection; of which my author says he saw an instance in the year 1706, when the Bishop endeavoured to introduce some innovations, in order to enlarge his authority: for the people of Munster complaining thereof to the Canton of Bern, procured a body of four thousand of their troops to march to their assistance, who reinstated them in their former rights, in opposition to the Bishop, and then returned home. And this is very common, he observes, as well as necessary in Switzerland; for if the Protestant subjects of the Roman Catholick Princes or Bishops were left to their discretion, they must not expect long to enjoy either their religion or liberties.

The chief towns of this Canton are, 1. Bazil, or Basle. 2. Valtenberg, or Waltenberg. And, 3. Homburg.

Bazil city.

Bazil, or Basle, the most beautiful city of Switzerland, is situate on the river Rhine, near sixty miles to the southward of Strasburg, and three

miles south of the fortress of Hunningen, in the latitude of forty-seven degrees, forty minutes. It is divided by the Rhine into two parts, joined by a noble stone bridge of fourteen arches. The town is large, the streets wide and clean, and their squares spacious, adorned with no less than three hundred fountains; their publick and private buildings magnificent, and generally built of stone. The church of St MARY, which was the cathedral when the Roman Catholics were in possession of it, is a stately pile; and the town-hall and arsenal admired by travellers. Here is also a flourishing university, wherein are seventeen Professors, viz. in Divinity, Law, and Physick, three of each; and in Philosophy and other sciences, eight more. ERASMUS spent the latter part of his life here, dying in the year 1536, in the seventy-first year of his age, having founded a college for twenty students in divinity. He was interred in the great church of St MARY's, where he hath a marble monument on the north side of the communion-table, and his library is kept in this church. They claim the invention of making paper, and assure us that printing was introduced among them in the year 1478. Trade flourishes here as much as in most cities in Switzerland, and there are several wealthy merchants in the place, it lying near the frontiers of Germany and France, and having the conveniency of the Rhine to facilitate their importations and exportations.

CHAP.  
III.

10. The Canton of Friburg is almost surrounded by that of Bern, and is about twenty-five miles in length and twenty in breadth, containing fifteen bailliages. This Canton produces corn enough, but no wine. The chief towns are Friburg, Estavaye, and Gryers or Gruyeres.

Friburg  
Canton.

The city of Friburg is situate on a hill, almost surrounded by the river Sana, in a pleasant country, sixteen miles south-west of Bern. The place is surrounded by a wall and other fortifications; and besides the cathedral, travellers take particular notice of a fine piazza, and a noble publick fountain. The Bishop of Laufanne hath his residence here.

Friburg  
city.

11. The Canton of Soluthurn, or Soleure, is bounded by that of Bazil, and part of Alsace towards the north; by the Canton of Bern on the east and south; and by the bishoprick of Bazil on the west; being about twelve miles in length, and ten in breadth. This Canton affords plenty of bread-corn, but no wine, and contains ten bailliages. The chief towns are Soluthurn or Soleure, Olten, and Golgen.

Soluthurn  
Canton.

Soluthurn, or Soleure, is pleasantly situated in a fruitful valley, upon the river Aar, about twenty miles to the northward of Bern. It is defended by a wall and other fortifications, and is tolerably well built. Here the French Ambassador usually resides.

Soluthurn  
city.

12. The Canton of Schaffhausen is bounded by Suabia in Germany on the north, east, and west; and by the Canton of Zurich on the south; being about twenty miles in length, and twelve in breadth, and is well supplied with the necessities of life, especially fish, of which they have greater plenty than most of their neighbours; the chief towns whereof are Schaffhausen, Herblingen, Newkilch, and Halaw.

Schaffhausen.

The city of Schaffhausen is esteemed the finest town in Switzerland next to Bazil, it is situate on the Rhine, about twenty-five miles north of Zurich, and as many to the westward of Constantance.

Schaffhausen  
city.

CHAP. III. stance. The streets are broad, and the houses built of stone, generally painted on the outside, as in many other towns of Switzerland. All vessels being obliged to unload here, on occasion of the neighbouring cataracts of the Rhine, it is become a place of good trade.

Appenzel. 13. The last Canton, says my author, both in rank and goodness, is that of Appenzel, consisting of one large barren valley: it is bounded by the country of St Gall towards the north, by the Rhintal on the east; by the country of Grisons on the south; and by Togenberg on the west; being about twenty miles over either way. The inhabitants live chiefly upon milk and cheese, and are esteemed the most clownish people of Switzerland; they enjoy so small a share of the comforts of life at home, that the better sort endeavour to get into some foreign service. It is said to have obtained its name from an Abbot's cell, built where Appenzel now stands, being called in Latin, *Abbatis Cella*. The chief place is Appenzel, which is rather an open village than a town, about thirty miles to the southward of Constance.

#### *The Subjects of Switzerland.*

The subjects of Switzerland.

THE subjects of Switzerland are such countries, towns, and bailliages, as belong to them all, or to several of them in common, having been conquered by their united arms. The common bailliages are nine, viz. the county of Baden, the Free Villages, the counties of Turgovy, Sargantz, and Rhintal, and the four Italian bailliages of Lugano, Locarno, Mendrisio, and Valmadia, to which we must add the three cities without territory, viz. Bremgarten, Mellingen, and Rapperswil.

Baden county.

The county of Baden hath the Rhine on the north and west, and the Canton of Zurich on the south, being as large as some of the little Cantons, and of a much more fruitful soil; and formerly belonged to the house of Austria, but the seven old Cantons made a conquest of it in the year 1415.

Baden city.

Baden, the capital city, so named from its baths, lies on the river Limath, about fourteen miles north-west of Zurich, and six to the southward of the Rhine. It is one of the antientest towns in Switzerland, and the place of their general Diets, and usually called Upper Baden, to distinguish it from Lower Baden in Germany.

The free villages.

The Free Ambter, or Free Villages, is a small district, which formerly went under the name of the county of Roer, and was conquered by the seven old Cantons at the same time that Baden was conquered. There is no great town in this district, the principal place is Mayenburg near the river Rufs. They were denominated free on account of the liberty given them to chuse their own magistrates. The natives are all of them Roman Catholics.

The Turgow.

The county of Turgovy, or Turgow, is bounded by the Rhine and the lake of Constance on the north and east; by the country of the Grisons towards the south; and by the Canton of Zurich on the west; being about forty miles long, and thirty broad, and contains fifty parishes. It was taken from the house of Austria by the seven old Cantons at the same time as Baden was conquered by them. The inhabitants are most of them Protestants. The chief towns are, 1. Frawenfield. 2. Weil. 3. Bishop's Cell. 4. Arbor Felix. And, 5. Dissenhove.

VOL. II. NUMB. LXVII.

CHAP. III. 1. Frawenfield, the capital, is situate on the river Marck, about ten miles south-west of Constance. 2. Weil, a small city, with a beautiful castle, the residence of the Abbot of St Gall, situate about ten miles north-west of St Gall. Altho' the seven old Cantons, or, as some say, ten Cantons, have the supreme jurisdiction in the Turgow, yet the clergy and nobility have inferior jurisdictions in many places. The Bishop and Chapter of Constance also have a jurisdiction in several parts of the country, as the Abbot of St Gall hath in other parts of it; and there are eight monasteries, to which some others are subject, but all however under the protection of the Swissers.

Sargantz.

The county of Sargantz is situate on the frontiers of the Grisons, of no great extent or revenue. The chief towns are, 1. Sargantz. 2. Wallenstat. 3. Rugatz. and, 4. Pfevers. The county was purchased by the seven old Cantons of the last Count, anno 1483.

The town of Sargantz, which takes its name from the river Sar, on which it stands, is a small town and castle, where the governor resides, about sixteen miles to the southward of Appenzel. The inhabitants of this, and all other places in this district are Roman Catholics, except one community.

Rhintal.

The county of Rhintal extends itself along the Rhine before it falls into the lake of Constance, and is a very narrow district. This was also taken from the house of Austria by the seven old Cantons, when Baden was conquered; but Appenzel having some pretensions to it, was admitted into a share of the sovereignty. Two thirds of the inhabitants are Protestants. The chief town is Reineck, situate on the Rhine, at its entrance into the lake of Constance.

Rapperswil.

2. Rapperswil, situate on the lake of Zurich, sixteen miles south-east of the city of Zurich, taken from the house of Austria by the Cantons of Uri, Switz, Unterwald, and Glaris, in the year 1458, remarkable for its wooden bridge a mile and a half in length.

The two cities of Mellingen and Bremgarten, are situate within the county of Baden, and are governed by their own laws and magistrates, but subject to the old Cantons.

Lugano, &c.

The four bailliages of Lugano, Locarno, Mendrisio, and Valmadia, are situated on the Italian side of the Alps, and were formerly part of the duchy of Milan, but dismembered from it by Duke MAXIMILIAN SFORZA, and given to the Swissers in the year 1513, for the service they had done him in his wars. They belong to twelve of the Cantons, Appenzel having no share in them, being not then received into the alliance as a Canton. These four bailliages extend several leagues in the warm climate of Italy, but the country is mountainous. The chief towns are, 1. Lugano. 2. Locarno. 3. Scona. And, 4. Brifago.

The city of Lugano is situate on the north side of a lake of the same name, about eight miles from the frontiers of Milan, the governor whereof hath the command of the other bailliages.

Locarno

Locarno is situated on the west side of the lake Mayor, ten miles north-west of Lugano, formerly a considerable place, but now in a ruinous condition.

The natives of all these four bailliages are Roman Catholics; and so bigotted, that when a Protestant Canton sends a governor in its turn

CHAP.

berg.

Gasteren.

Morat,  
Granfon,  
Echelens,  
Swart-  
zenburg.

of that persuasion, he is not allowed the exercise of his religion in his own house. There are still three other bailliages in Italy, viz. Bellinzona, Valbruna, and Riviera, subject in common to the three Cantons of Ury, Switz, and Underwald, taken by them in their wars with the Dukes of Milan, and the sovereignty yielded to them anno 1516.

The little Barvug of Alfax belongs to the Canton of Zurich, and the county of Werdenberg to that of Glaris, both of them situate on the banks of the Rhine before it enters the lake of Constance. And another bailliage, called Gasteren, belongs to Switz and Glaris, and lies between the lakes of Zurich and Wallenstat, on the banks of the river Limath.

Four considerable bailliages also in the Pais de Vaud, belong jointly to Bern and Friburg, being taken by their united arms at the time that all this country was won from the Duke of Savoy, viz. Morat, Granfon, Echelens, and Swartzenburg, to which governments each Canton sends it's Bailiffs alternately.

And, according to my author, the war in 1712, between the Cantons of Bern and Zurich on the one part, and Lucern, Ury, Switz, Underwald, and Zug, on the other, hath made great alterations in the property of the common bailliages; for by the ensuing treaty of peace the whole county of Baden, half the free billiages, including particularly the cities of Bremgarten and Rappertswil, were yielded to the two Protestant Cantons of Zurich and Bern, reserving to Glaris it's share in the sovereignty, because that Canton had not concerned itself in the war. The Canton of Bern also was admitted to a share in the sovereignty of Turgovy, Sargantz, Rhintal, and the other half of the three bailliages, of which it had no part before that war. These common bailliages are governed by their respective Bailiffs, elected out of the several Cantons, who are co-sovereigns; every Canton appointing the Bailiff by turns, who is changed in some bailliages every five, and in others every six years; and these Bailiffs are not accountable to the particular Canton which elected them, but to the Cantons in general that are co-sovereigns.

## CHAP. IV.

*Treats of the persons, habits, genius, and temper of the Switzers.*

Persons  
and ha-  
bits.

THE Switzers are generally good bodies of men, tall, and well made, and living in a cold mountainous country, where hunting over the rocks and precipices is their principal diversion, are a very hardy race; but as they are frequently exposed to tempestuous stormy weather, their complexions are not the best; most of them wear their hair, and in some places long beards are still in fashion, but few of them care to part with their darling whiskers.

Their women are handsome, and well shaped; and, according to my author, want no charms in their persons or conversation: but all fine clothes with silver or gold, jewels or lace, are prohibited both sexes. In the town of Bazil, though situate on the frontiers of France, and some other parts of the country, they still retain their ruffs, and old Swiss dress: but generally those who border upon France follow the French in their dress, as well as language; and those who lie on the

confines of Germany, the modes of that country, as far as their sumptuary laws will admit. Those who travel, easily conform themselves to the manners of the people where they reside; inasmuch, that it may be discerned by the air and dress of a Swiss officer in what country he serves. Those who reside in France wear gay clothes, are forward in their behaviour, and full of words in conversation: while those who serve in Holland affect a plain dress, and are reserved in discourse.

The same judicious author, already cited, divides the Swiss into three classes; namely, 1. The peasants. 2. The gentry and vassals. And, 3. The citizens. The first he looks upon to be an honest, robust, and laborious people, whom necessity has taught to be excellent husbandmen, and to make the most of a bad soil, who by their industry often grow rich; and though they are affectionate to their Sovereigns, yet having been always used to live in a state of liberty, and little acquainted with taxes, would not easily bear new impositions; but this is to be understood chiefly of the peasants in the German country, for the natives of the Pais de Vaud, or the French country, are accused both of laziness and theft. By the gentry and vassals, are intended such of the better sort as are not citizens of the capital of any Canton, and consequently are excluded from all beneficial employments in their own country. These our author looks upon as the most unhappy among the natives of Switzerland; for although they have lands and lordships, which they enjoy in great security, and pay scarce any taxes to their Sovereigns, yet being disabled to hold any places of profit or trust, and living in a country where there is no trade or profession they can get any thing by, it is as much as they can do to support their families suitable to their rank. And indeed the rich yeomanry in most countries seem to have the better of the poor gentry. 3. The citizens, which in those Cantons where the government is aristocratical, our author subdivides into three classes: 1. The merchants and tradesmen. 2. The pen-men. And, 3. The military men. The tradesmen are generally proud and lazy, which proceeds from their privileges of being chosen into the magistracy by virtue of their burghership, and of excluding all but themselves from exercising any trade in their cities; from whence it proceeds that their goods are bad, and yet very dear.

2. Their pen-men are those that have never been in any military service abroad, nor have exercised any trade at home; these have no hopes of raising their fortunes in the Cantons, where there is little trade, except by their bailliages, and therefore all their thoughts are turned towards getting into the great council, after which they are sure of a bailliage sooner or later; and in the mean time they either live upon their rents, or the profits they gain in the inferior magistracies of the city, in which they are usually employed.

3. The military men are those who have served in the troops of some foreign Prince or State; who are in most esteem, not only because they are usually the most polite, but chiefly because the trade of arms is deemed the most honourable employment. These usually remain in foreign services till they are very old, unless they are of the great council, and then after they have gained a tolerable fortune they return home, and endeavour to procure a bailliage. And 'tis observed, that

that the greatest fortunes which have been made in Switzerland, have been raised by military service.

And now we are treating of the military men, it may be proper to inquire into the valour of the Switzers, for which they are so much famed. This is a quality, says my author, universally allowed them; even in former ages, wherever the Helvetians are mentioned, their courage is applauded. Nor are they less remarkable for their fidelity than for their courage, into whatsoever service they enter. But as I have formerly intimated, possibly we are as much obliged to our education, as to our natural temper for this good quality. There are many more instances of an acquired than a native courage. Nay, there is scarce an instance where troops have served an apprenticeship to the trade of war, and are become veteran foldiers, but they may be depended on, let them come from what country they will. Where troops are equally disciplined, it is nothing else but the size of the men and horses that gives them the superiority. Now the Switzers, it appears, are of as large a bulk as any people of Europe; they have the advantage also of a very rough education, being enured to hardships, and taught the use of arms from their cradles. They follow their game over mountains and precipices, till dangers are become familiar to them. And, lastly, their troops being continually in foreign service, they can never want good officers and foldiers; they must of necessity therefore be fitter for military service, than the troops of any other nation who have not had the like advantages, though their native courage should not exceed that of their neighbours.

But as my author observes, the Switzers are generally charged with that barbarous custom of letting out their troops for hire to serve any cause; nay, to furnish nations that are enemies with separate bodies; whereby it comes to pass, that the nearest relations, father and son, brother and brother, are frequently engaged against each other, and beat out one another's brains as it were in sport, when they have no manner of concern in the quarrel. But this, the same gentleman assures us, is a very groundless charge; for, 1. They never grant their troops to any Prince or State, but by virtue of some preceding alliance. 2. They grant troops only for the defence of the nation they are given to, and not to act offensively; so that the Swiss troops in the French service are never suffered to invade the Empire, or Holland; nor, on the contrary, the Swiss who are in the service of those two powers, to invade France. And, 3. The sovereign never receives any subsidy or perquisite from the Prince or State to whom their troops are granted, contenting themselves with procuring a beneficial service to their subjects, without reserving any profit to themselves. But then he admits that what he offers on this subject ought to be restrained chiefly to the Protestant Cantons; for he acknowledges that the conduct of the Catholick Cantons, and especially those called the petty ones, have too often given occasion for drawing reproaches on the whole nation, from those who do not distinguish between one and the other: so that it seems the charge is true in part, though not universally.

And indeed, whoever has been in the service in the Low Countries, either in the first war in the reign of King WILLIAM, or the latter in the reign of Queen ANNE, must have found Switzers

engaged on both sides. Whether they were hired to act defensively only, or otherwise, I cannot tell; but certain it is, they were frequently upon the offensive, and drawn up against each other. And we find the Dutch do not only employ them in offensive wars in their own service, but sometimes let them out again to other Princes, as they have done more than once to the King of Great Britain, and they have served here accordingly. So that notwithstanding what our author hath advanced in their favour, it seems evident to me, that the Swiss are not altogether innocent in this particular; and it may still be difficult entirely to wipe off that aspersions of sacrificing their people for any cause, and letting their troops to any power that will pay them.

The Switzers also have been long aspersed as a dull heavy generation, especially by the French; but those who have resided among them, and know them best, give us quite another character of them; they assure us, that there is no where to be found men of clearer judgments, or greater dexterity in the management of affairs, or of a more lively conversation, with true wit and genuine humour, than are to be met with here among those who have had a good education improved by travel. Indeed among the peasants upon the mountains, who converse chiefly with their cattle, it is no wonder if we meet with some as stupid as the shepherds and husbandmen of other countries; but no considering man will take an estimate of a people from this class. There are not many of the Switzers, 'tis true apply themselves to learning; the poverty of the country, and the straitsness of their fortunes, oblige them to turn their thoughts another way. There are few of them, my author observes, that are free enough from domestick cares to employ their time in speculation. There are however many learned men amongst them in the two great professions of divinity and law, especially in the universities of Bern, Basil, Zurich, and Laufanne.

As to the honesty and simplicity of the Switzers, for which they have been so generally applauded heretofore, late writers assure us, they very little deserve any such character at this day; even their courts of justice and magistracy are not free from corruption, but the best purse usually carries the cause. On the other hand, though they are generally charged with the vice of drunkenness, I do not find they are more addicted to it than their neighbours. The Swiss peasants indeed are many of them given to tipping, as the lower rank of people are in most places; but among people of condition the practice is very rare. They have their publick feasts, wherein some excesses are committed, but their ordinary way of life is very sober; inasmuch that our author affirms of the Switzers in general, that they are the least given to drinking of any people sprung from the German stock; and at last sums up their character in these words:

'The Switzers are a people equally brave in arms, and faithful to their engagements; who have more esteem for the military virtues than the civil ones; yet are desirous to live in perpetual peace themselves, and to make war for others. They are perfectly able, when united, to defend themselves against any invader; but not in a condition to make conquests on their neighbours. Their country is crowded with people, which generally makes the riches of other nations, but for want of trade increases the

CHAP.  
IV.

CHAP.  
IV.

the poverty of this. It produces none of the superfluities of life, and not enough of the necessities; yet by the advantage of their situation, both are supplied them by their neighbours at reasonable rates. It happens to be placed almost in the center of Europe, without being thoroughly known: and they are courted for their valour by some of their neighbours, who scarce allow them any other good quality. But one may say of these republicks as of private men, viz. that they are placed in a certain mediocrity of fortune, which puts them below envy, and above contempt. One finds among them none of the gaudy pleasures of courts, but a great deal of the satisfaction which proceeds from a quiet easy life. In short, they have more wit, and perhaps less sincerity, than the world allows them; and seem to conceal some of the subtleties of the Italian under the frankness of the German. Their virtues are natural to them, and their vices chiefly owing to the temptations which men struggling with difficulties are apt to fall under.

## CHAP. V.

*Contains an abstract of the antient and modern history of Switzerland.*

The history of Switzerland.

**JULIUS CÆSAR** first mentions the Helvetians as a nation, and relates, that this people having made an incursion into Burgundy during his government of Gaul, with a design to transplant themselves into that desirable country, to take away from their people all thoughts of returning to their antient seats, set fire to their dwellings, burning no less than twelve great cities, and four hundred villages. They then began their march with their families, amounting to near four hundred thousand souls, whereof about a fourth of them were able to bear arms. Their first design was to have penetrated into Savoy; but not daring to pass the Rhone in the face of his army, they altered their march, and entered Franche Compté, where CÆSAR having cut off many of them in several engagements, compelled the rest to return home; and having reduced them under the Roman power, annexed this country to that part of his government called *Gallia Celtica*.

The Helvetians remained subject to the Romans till the destruction of that empire by the northern nations, when new kingdoms and states being erected out of its ruins, Switzerland was comprehended in that of Burgundy, about the beginning of the fifth century. This kingdom not lasting above an hundred years, Switzerland upon the fall of it was united to the crown of France, to whose Kings it remained subject till the beginning of the ninth century. About the year 870, two new kingdoms of Burgundy were erected, called *Burgundia Cisjurana*, and *Burgundia Transjurana*; but the former was united to the latter about the year 926, and of this kingdom of *Burgundia Transjurana*, Switzerland continued a part till 1032, when **RODOLPH** the third and last King of Burgundy, dying without issue, transferred his kingdom to the Emperor **CONRAD II**, called the Salick, whose successors enjoyed it near two hundred years; when this kingdom being neglected by the Emperors, several petty sovereignties were formed out of it. In the thirteenth century the Counts of Hapsburg, from whom the

house of Austria is descended, to whom several fiefs in this country had been granted by the Emperor **BARBAROSSA**, begun to take the government of this people upon them, and particularly of their cities, on their voluntary submission to him; for it seems their nobility used them in so barbarous and tyrannical a manner, that they found themselves under a necessity of imploring the protection of some potent neighbouring Prince. They agreed therefore that **RODOLPH** should send Bailiffs or Governors amongst them, with power of administering the *Haute Justice*, or judging in criminal causes; but with an express reservation (if my author be not mistaken) of their rights and liberties, which were very extensive. But **RODOLPH** was so engaged in other places, that he could not afford these cities the protection they expected from him; whereupon not being able any longer to endure the tyranny and insults of the nobility, they had recourse to arms; demolished the castles of the lords, and after a twelve years war, compelled many of them to leave the country.

**RODOLPH** being now advanced to the Imperial dignity, the nobility applied themselves to the Emperor, charging the commons of Switzerland with rebellion; but the Emperor having heard the contending parties, declared himself in favour of the people; and governed them with great mildness and goodness while he lived, confirming their antient privileges, and granting them several new ones. But upon the death of this Emperor, his son, the Emperor **ALBERT**, entered into very opposite measures, determined to make himself absolute in this country, which he endeavoured to accomplish first by caresses and persuasions only; but when he found those arts would not avail him, he appointed other governors with positive orders to reduce them to his obedience, either by corrupting their leading men, or, if that failed, by force of arms; and accordingly, when the first method was found ineffectual, they openly invaded their privileges. Whereupon the people sent a deputation to the Emperor, to complain of the violation of their rights and liberties; but instead of a redress, they met with only threats of the utmost vengeance if they refused an absolute submission to his pleasure. And at their return home, they found their governors still exercising the most notorious acts of tyranny, by oppressing, imprisoning, and impoverishing the subject. They deprived the people of their estates, says my author, by arbitrary sentences, imposed extravagant fines for trivial offences, and tortured others on a pretence of conspiracies against the government; till the exasperated people at length entered into a real conspiracy, which proved fatal to their Sovereign. The three principal men who first formed the design, were **ARNOLD MELCHDAL** of Underwald, **WERNER STOUFFACHER** of Switz, and **WALTER FURST** of Ury, who were rather substantial yeomen than gentlemen. These having been alike ill-treated by their respective governors, had entered into a very strict friendship, and were contriving to free themselves and their country from the oppressions they laboured under. Each of them afterwards engaged three of their friends to assist them with their advice; and these twelve became the principal managers of the plot, who meeting at Grutli in the canton of Ury, laid a scheme for promoting a general insurrection, binding themselves by the most solemn oaths not to discover the

CHAP.  
V.

CHAP.  
V.

the design: And the first of January 1308, being fixed for their rising, an accident happened in the mean time, which gave them fresh provocation, and had like to have occasioned an insurrection sooner than was intended. For it seems, among other pieces of arbitrary and whimsical tyranny, GRIESLER, Governor of the Canton of Ury, had ordered his cap to be set upon a post in the market-place of Altorf, the capital of Ury, requiring every person who passed by to pull off his hat to it on pain of death; which most people complied with, till WILLIAM TELL, a bold resolute fellow, and one of the conspirators, took an opportunity of frequently passing by without shewing any manner of respect to the cap; whereupon he was apprehended by the guards that were placed to see the order put in execution, and brought before the Governor; who, by way of punishment, commanded him to set an apple upon his son's head, and shoot at it with an arrow, declaring that if he missed it he should be hanged. The father rather than run the hazard of being accessory to his son's death, desired they would take away his own life without further ceremony; but the Governor would not indulge him so far, declaring that if he refused to shoot at the apple immediately, he would hang up his son before his face, and himself afterwards. Whereupon old TELL promised to make the attempt in the market-place in the presence of the Governor, imagining probably that his fellow-conspirators would have taken this opportunity of assembling, and rescued him before he had made the experiment; but nothing of this happening, the old man took two arrows out of his quiver, and drawing his bow with all the anguish that can be imagined in so tender a case, providentially struck the apple off his son's head without giving him the least wound; upon which the people gave a general shout, to the great mortification of the Governor; who proceeding to inquire of TELL, what he meant by taking two arrows out of his quiver, assuring him he would forgive him, whatever his design was; TELL boldly answered, that the second arrow was designed for the Governor, in case he had been so unhappy as to have killed his son. Whereupon the Governor answered, though he would spare his life according to his promise, yet he looked upon him to be so dangerous a man, that he ought however to be shut up in some dark prison: and accordingly ordered him to be put in irons, and carried on board a vessel to be transported to the castle of Cassenach on the lake Lucerne: and to prevent his escaping, went on board the vessel himself to see his sentence put in execution. When they came about the middle of the lake, as the story goes, there arose so violent a storm, that they were in the utmost danger of sinking; when the Governor's servants knowing TELL the prisoner to be an excellent pilot, proposed the taking off his chains, and letting him manage the helm, as the only expedient for saving all their lives; which being consented to, TELL with a great deal of difficulty steered the boat into smooth water under the shore, when he jumped out upon a piece of a rock, and made his escape; and the Governor, despairing of overtaking him, sailed on to the next town, called Brunen, from whence he proposed to go to the castle of Cassenach by land. TELL having notice of the day he was to go, concealed himself in a wood on the side of a hollow way, by which he knew the Governor must pass, and meeting with a favourable

VOL. II.

opportunity, shot him through the heart with an arrow, and made off, while the company remained in the utmost confusion. In memory of which exploits, a chapel was built on the spot of ground where the Governor lost his life; and another upon the rock from whence TELL made his escape, which are still to be seen. But though this relation may be true in the main, I find the circumstances frequently varied according to the genius or humour of the person who relates it.

On new-year's-day, 1308, the time prefixed by the conspirators for a general insurrection, some of the most resolute of them resorted to the castles, where the Governor and Commanders of the Imperial troops resided, under pretence of carrying the usual presents; and having concealed arms under their cloathes, fell upon the guards as they entered the gates, and had the good fortune to reduce every fortress they attempted. The Governor LANDENBURG and his forces were in such consternation, that they fled without making any manner of resistance, but were surrounded afterwards, and made prisoners by the country people, who only required an oath from them, that they would never return into the country again, and then give them their liberty to retire wherever they saw fit.

Thus, says the honourable writer above-cited, was the foundation of the Helvetic liberty laid by three plain countrymen, without the advantages of birth or riches, which are usually thought necessary towards the execution of such popular enterprizes; and in honour of their memories a festival is annually held, where the company are entertained with songs, containing the history of their deliverance from Austrian tyranny.

The Emperor ALBERT hearing of this defection, was about assembling an army to have reduced them to obedience; but being killed soon after as he passed the river Rufs, these Cantons had a favourable opportunity of establishing themselves, while the Empire remained in confusion. About seven years after, Archduke LEOPOLD, the son of ALBERT, marched into the Canton of Switz with twenty thousand men, threatening utter destruction to the confederated provinces. The Switzers made little resistance, till the Austrian army was advanced into a narrow valley, between two mountains, near Morgarten, where rolling great stones from the tops of the hills, they put the Austrian calvary in confusion; and at the same time attacking them in front with fifteen hundred men, they obtained a complete victory, which they pursued with such diligence, that they drove the enemy entirely out of the country.

Upon the victory of Morgarten, the three Cantons entered into a perpetual league, which was at first made for ten years only, and took an oath for the due observation of it, from whence they were called *Eydgnossen*, a German word, signifying parties to the same oath; and the battle being fought in the Canton of Switz, which first gave them any credit in the world, the name of this little province was afterwards communicated to the rest, as they entered into the league, and even to their allies.

The house of Austria made several attempts afterwards to reduce the Cantons of Switz, Unterwald, and Ury, to their obedience; but were so far from effecting it, that they lost several more of their provinces, which from time to time en-

tered into the league with them; of which the first was the Canton of Lucerne, who came into the confederacy of the three Cantons in the year 1332, although this province was the proper dominion of the Austrian family. The Canton of Zurich was the next which entered into the confederacy, in the year 1351, and, upon account of its extent, was allowed the first place in their general assemblies, though it was the fifth which came into the alliance. This was a free Imperial city, and no part of the dominion of the house of Austria; however, their confederating with the revolted provinces occasioned a new war between the allies and the house of Austria; in which the Switzers made themselves masters of the Canton of Glaris, which the same year, 1351, was received into their alliance. In the following year, 1352, they took the province of Zug from the enemy, and added it to the number of the Cantons: and in the latter end of the same year, the Imperial city of Bern came into the alliance, and constituted the eighth Canton. And as these eight Cantons continued in alliance upwards of an hundred and twenty years without increasing their number, they obtained the name of the eight old Cantons, upon the addition of the rest.

In the year 1481, Friburg, part of the demesnes of the house of Austria, and purchased by them of the Counts of Kybourg, was received into the number of the Cantons; as was Soleure, an Imperial city, the same year. In 1501, Bazil and Schaffhausen, two other Imperial cities, came into the alliance; and the country of Appenzel was added to them in the year 1513, having purchased their liberty of the Abbot of St Gall, their then Sovereign, and this completed the number of the thirteen Cantons. But the house of Austria, far from relinquishing their pretensions to these countries, still exercised them with perpetual wars, by whom they were not more distressed than by their own nobility, who constantly joined with the house of Austria, in all its attempts upon the confederated Cantons; but the nobility being at length driven out of the country, or reduced to acknowledge the sovereignty of the Cantons, the Switzers were declared a free people, independent of the Empire and the house of Austria, by the treaty of Munster, anno 1648, at the same time, as my author rightly observes, as the United Provinces were declared independent by Spain.

Since the peace of Munster they have not engaged much in foreign wars, but several warm disputes have happened among themselves on account of religion; and particularly in the year 1712, when a war broke out between the two Protestant Cantons of Zurich and Bern, and the five Catholick Cantons of Lucerne, Ury, Switz, Zug, and Underwald, wherein the former defeated the five Roman Catholick Cantons in two general battles, and took from them the country of Baden, and many other large territories. But the breach was at length made up by the mediation of the French Ambassador at Arraw, on the following terms; viz. That the country of Baden, with the town, and those of Keyserthal, Klingnau, Bremgarten, and Mellingen, should remain in full propriety to Bern and Zurich, provided that the Roman Catholicks in those towns, and their dependencies, should have the free exercise of their religion. That the Catholick Cantons should admit the Canton of Bern into the government of the common bailiwicks of Turgow, Rhintal, and Sargantz; and should yield for ever to the

two Cantons aforesaid, the town of Rapperfweil, the bridge on the lake of Zurich, and the village of Harden, with its appurtenances and dependencies; of which the neutral Cantons became guaranties. But the five Popish Cantons aforesaid have never had a good understanding with the Cantons of Zurich and Bern, since their yielding up these territories. On the contrary, they seem ready to call in the French, or any other power, to assist them, to be revenged of their enemies, without regarding what the consequences may be to their country.

## CHAP. VI.

*Treats of the government of the Switzers.*

THE general Dyet, which represents the Helvetick Body, consists of two Deputies from each Canton; besides which, the Abbot of St Gall, and the cities of St Gall, and of Bienne, send Deputies as allies; and a General Dyet is usually held at Baden, on the feast of St JOHN BAPTIST annually, which seldom lasts longer than a month. The first Deputy of the Canton of Zurich presides at these Dyets, proposing the matters to be debated, and collecting the votes, and performing all other acts proper for the President of an assembly. The Canton of Zurich also hath the privilege of convoking the Dyets by circular letters, wherein the reasons for assembling them are contained: And the Deputies of this Canton from the Abscheid, or result of their deliberations at the conclusion of the Dyet, which are sent to every Canton; and these gentlemen are always the speakers when the Deputies of the Cantons are sent to compliment or treat with a foreign minister.

The matters considered of at a General Dyet are either the accounts of the Governors of their common bailliages, or appeals from the sentences of such Governors in civil and criminal cases, the redressing the grievances of their common subjects, or composing the differences which may have arisen between the Cantons, and every thing else which may contribute to their mutual interest. And to this Dyet the ministers of foreign Princes usually apply themselves, either by way of audience or memorial. The French Ambassador particularly never fails to attend the Dyet, though he hath nothing more than compliment to offer. But besides this Midsummer Dyet, which meets of course, any one Canton may summon a Dyet upon an extraordinary occasion; as may the minister of a foreign Prince, if he apprehends his master's affairs require it, and he will defray the charges of the Deputies; and there is seldom a year passes without one extraordinary Dyet or more.

Besides these General Dyets, their differences in religion have since the Reformation occasioned particular Dyets. The mutual confidence between the Cantons seems in some measure lost through the zeal of each party for their particular opinions. This enters more or less into all their publick actions; and though their General Dyets are still continued to regulate the affairs of their common bailliages, all other matters of importance are treated of at particular Dyets of the respective religions; that of the Protestants being held at Arraw, and that of the Roman Catholicks at Lucerne; which being the most potent Catholick Canton, acts as their head; as that of Zurich does

CHAP.

VI.

as the head of the Protestants. These Dyets are summoned whenever either of the parties please; and our author rightly observes, that the thirteen Cantons do not make one commonwealth, but are so many independent States, united together by strict alliances for their mutual defence.

The first  
alliance of  
the Swit-  
zers re-  
duced to  
writing.

The first league amongst them reduced to writing was made between the three Cantons of Switz, Ury, and Underwald, after the victory of Morgarten abovementioned, in the year 1351, by which each party stipulated to assist each other with all their force, against every power that should attack them; that none of them should enter into any treaty or alliance without the consent of the other; and that if any difference should arise between two of them, the third should decide it.

Second al-  
liance.

About the year 1481, the eight old Cantons entered into another alliance, to assist each other in defensive, but not in offensive wars; and it was agreed, that the auxiliary troops should be maintained by the respective Cantons which sent them; but if a siege was undertaken for the service of a particular Canton, such Canton should defray the particular charge of it: That no auxiliary Canton should be obliged to send their troops beyond the limits of Switzerland: That upon a difference between two Cantons, they should each of them chuse two arbitrators, who might elect an umpire to decide the matter, if they could not agree, and his sentence should be executed by all the Cantons. The five first Cantons also obliged themselves not to enter into any alliance without the consent of all five; but the three others reserved to themselves the liberty of entering into separate treaties, provided they were not prejudicial to the former alliance. Afterwards the eight old Cantons obliged themselves to assist each other in the support of their respective forms of government, and agreed upon a body of military laws to be observed by the whole nation; since which there has been no new alliance formed between them, though there are five other Cantons added to the old ones. Nor is there any act or instrument, according to the above-cited honourable author, whereby they are all incorporated into one body; no common civil judicature, which hath a right of obliging all the Cantons by its decisions; no common coin or treasure; but every Canton have these things distinct: each hath now a right of making particular treaties with foreign powers, and of sending and receiving publick ministers, and of doing all other acts of sovereignty separately from the other. And when the thirteen Cantons send Ambassadors to a foreign State, they never chuse one or two to represent them all, but each Canton sends its particular ministers, to shew its right of sovereignty. I proceed now to inquire into the several forms of government in the respective Cantons.

Forms of  
govern-  
ment in  
the parti-  
cular Can-  
tons.

And first my author observes, that the government in some of the Cantons is aristocratical, and in others democratical. The seven aristocratical Cantons are those of Zurich, Bern, Lucerne, Basil, Friburg, Soleure, and Schaffhausen; the other six are democratical. And this difference in their respective forms of government he conjectures to be the effect of the state each of them happened to be in, when they were erected into Cantons; for as each of the first kind consisted of one city, with very little territory belonging to it, the government naturally came to be lodged in the citizens only, and afterwards continued so, notwithstanding a large acquisition of country to their

respective dominions: whereas the six democratical Cantons having no cities, but being divided into little communities, which had equal pretence to the sovereign power, they could scarce avoid falling into a popular frame. There is this farther distinction to be made among the Cantons, which he denominates aristocratical, (though they are all equally so in relation to their subjects) namely, that the capital cities of some of the Cantons have the form of a democracy, as Zurich, Basil, and Schaffhausen, where the ordinary tradesmen, who are divided into tribes, have their share in the government, and may be elected by their tribes into the Sovereign Council; whereas in the cities of Bern, Lucerne, Friburg, and Soleure, the Lesser Council, consisting of twenty-seven, joined with a smaller number of the Greater Council, have the sole right of filling up vacancies in the Sovereign Council; and these always chusing their friends and relations to fill these vacancies, the ordinary citizens have no share in the government.

In the Canton of Bern, which is much the most considerable, the legislative authority is lodged in the Great Council, consisting of two hundred and ninety-nine persons, when compleat; but as about ninety odd are usually absent on their respective governments, or other avocations, it is generally stiled the Council of two hundred. Out of the members of this Council is elected another called the Senate, or Lesser Council, consisting of twenty-seven Members, with their two Avoyers, who preside in both Councils annually by turns; and the two youngest of this assembly have also the title of Secret Counsellors; who, according to my author, resemble the Tribunes of the people in the Roman commonwealth, and summon the Great Council, whenever they apprehend any thing designed, which may be prejudicial to the liberties of the people, or upon any other emergency.

Form of  
govern-  
ment in  
the Canton  
of Bern.

This Senate has the executive power, and meets every day of the week, except Sundays. The Great Council assemble but twice a week, unless upon extraordinary occasions. Peace and war, alliances, the publick treasure, and all civil employments of importance, are in the disposal of the Great Council; and all ecclesiastical employments, and some inferior civil offices, are in the gift of the Senate. When the Great Council assemble, the Senate constitute a part of it, or rather is lost in the Great Council, having no existence while that is assembled.

The vacancies in the Great Council are filled up by the Senate, and sixteen Members of the Great Council, called Seizeniers from their number, who are chosen out of the old Bailiffs, that is, such as have enjoyed a government or Bailliage the whole term of six years. But for the better understanding of this office of Seizenier, it is necessary to premise, that in the city of Bern there are twelve companies, or abbies, as they are called, viz. four greater, and eight less; and in one of these companies, every citizen, whether gentleman or tradesman, is obliged to enroll himself, that he may be qualified to be a member of the Council of two hundred, or to enjoy any other place of trust in the government; and the head or chief of any of these companies is called the Seizenier; the great companies having each of them two, and the lesser one, which makes the number sixteen. When a new Seizenier is to be elected, all the old Bailiffs, who are out of office, meet

CHAP.  
VI.

meet in their respective abbeys, and the matter is determined by lot; for as many balls are put into a bag as there are candidates for the office, one of them of gold, and the rest of silver, and he that happens upon the golden ball is the Seizenier. And these Seizeniers are usually chosen a little before the vacancies in the Great Council are filled up, and continue in their office till another promotion is made, which is seldom above once in nine or ten years. These Seizeniers take care of the affairs of their respective companies, and see that nothing be transacted to their prejudice. They represent the grievances of the citizens to the Council, propose the making or repealing of laws, and in conjunction with the four Banderets, or Standard-bearers, (of whom hereafter) are empowered for three days before Easter annually, when all other employments in the State are suspended, to inquire into the behaviour of every minister and officer in the government, and to deprive him of his employment or place in the Great or Lesser Council. But in case of an expulsion of any member from the Great Council, the sentence must be confirmed by that Council, though they may expel a member of the Senate or Lesser Council absolutely, there being no appeal in that case. Having thus explained the office of a Seizenier, my author continues to relate the manner of filling up the vacancies in the Great Council, which is seldom done till there are fourscore or an hundred vacant places; the reasons of which delay is said to be, that they may have an opportunity at the same time of satisfying a great number of persons; but indeed that the remaining members of the Great Council may have the fewer competitors for bailliages and places of trust, for which none but the members of that Council are qualified. Those who are entitled to chuse members of the Great Council, as hath been observed already, being the Senate, or Lesser Council, and the sixteen Seizeniers, every one of whom has the privilege of naming a member, and the two Avoyers, or Presidents, two a-piece; great court is made to them by the candidates. The Chancellor and Greffier also are allowed each of them to name one: and the Commissary-General, and some other great officers, claim a right of being elected, as they usually are; so that there are always about fifty who have some assurance of being elected. The rest of the candidates are chosen by a plurality of voices; and the only qualification required is, that he be a member of one of the aforesaid companies, and entered into the thirty-third year of his age.

Nothing is more common than for an Elector to name his eldest son, if he be qualified; and if he be not, he has an opportunity of marrying his daughter well, by giving his vote for her lover, which is sometimes her only portion, and not a bad one, as it entitles the son-in-law to a bailliage. It is very merry upon this occasion, as my author observes, to see numbers of passionate lovers starting up in three or four days time, and pretending all the devotion imaginable for their mistresses, whom they have scarce ever seen; for there is not three days difference between the choice of the Seizeniers, and the election of the members of the Great Council; and till the Seizeniers are appointed, they can't tell to whom to apply to. The first visits therefore which a Seizenier receives after his election, are from persons who pretend to be passionately smitten with his fair daughter, if he have no son, and the match is almost as soon con-

cluded as proposed, when the father meets with a man to his mind, which he seldom misses of: for as it is necessary towards the making a man's fortune in this republick, that he be a member of the Great Council, those of the wealthiest and best families frequently attempt to come into it this way, when others fail. Thus 'tis evident, that the vacancies in the Great Council are constantly filled up with the relations and friends of the remaining members; and consequently the government is lodged in some few great families, the ordinary citizens being excluded from any share in it, unless they have the good fortune to be chosen by a majority, after the relations and dependants of the Great Council are provided for, which is but a remote prospect. And as they are excluded from this assembly, so are they by consequence from all places of profit and trust in the government; these being reserved only for the members of this great body, as hath been intimated already.

The members of the Senate, or Lesser Council, are upon a vacancy elected by the Great Council out of their own body, with this restriction, that neither the father and son, nor two brothers, can be of the Senate at the same time: and these vacancies in the Senate, are filled up as soon as the deceased Senator is buried; but in the great one, as hath been observed, they wait till there be fourscore or an hundred vacancies, which is usually nine or ten years.

The great officers of state in this republick are, 1. The two Avoyers, as the French stile them, or Schultheissen, as the Germans call them, whose employments are for life, but they exercise them by turns annually. The person in office, who is called the Reigning Avoyer, presides both in the greater and lesser Council, proposes the matters to be debated there, and keeps the seals which are put to all acts of state, and to him all persons apply, who have any business to transact in either Council; and the Avoyer out of office only takes place as first Senator till the year is expired, when he takes the seals and resumes his authority in his turn: and though these are very honourable posts, and they have a great influence on all affairs of State, the profits of them are but small, not amounting to three hundred pounds a year. The next great officers are the Banderets, or Standard-Bearers of the city, which being divided into four wards, the citizens rendezvous under their colours in their respective precincts; and their places are for life, but the profits do not yield each of them more than an hundred pounds per annum. Their authority was formerly much greater, when with the Seizeniers they had the election of the members of the Great Council, but this privilege they are now deprived of. The next great officers are the two treasurers; one called the Treasurer of the German country, and the other of the Pais de Vaud or Roman, who receive the revenues of their respective districts, and continue in their office for six years; these are the most profitable employments in the State, and, as my author observes, those who have the management of the publick money, will always find means to enrich themselves in spite of the best regulations. The next great officer is the Superintendent of the publick buildings: and these nine are always given to Senators, as a reward of their faithful services to the publick. The other offices of any importance, such as Chancellor, Greffier, Commissary, &c. are enjoyed by members of the Great Council, and

Great  
officers of  
State.

CHAP. VI. and some inferior employments by the ordinary citizens; but it is very seldom that a citizen, who is not of the Great Council, comes into a place of considerable profit.

And thus having treated of the government and magistracy in the city of Bern, our author proceeds to those of the country; where he observes, that the whole Canton is divided into seventy-two baillages, governed by as many Bailiffs, who are members of the Great Council, and changed every six years. These Bailiffs are invested with the civil as well as the military power in their respective districts; being generals of the militia, and supreme magistrates in civil and criminal causes, and though they have their associates in the courts of justice, the bailiff only has the authority of pronouncing sentence. In civil causes indeed, where the thing in dispute is of consequence, there lies an appeal to the courts of appeal at Bern, where one is established for the German country, and the other for the Pais de Vaud, and in capital cases the sentence must be ratified by the Great Council. And from the court of appeals for the German country there still lies an appeal to the Great Council; but those of the Pais de Vaud, 'tis said, are deprived of this privilege, as being naturally so litigious, that there would be no end of their contentions, if they were indulged in it.

These baillages are so profitable, that the Bailiff may make a tolerable figure during his six years government, and in some of them lay up five or six thousand pounds, which in a country where all superfluities in equipage and clothing are retrenched, and every thing husbanded to the greatest advantage, is a considerable sum, as my author observes; and as these are the principal employments by which they hope to make their fortunes, all their views are turned that way; and while the election to them was determined by open votes, all manner of corruption and servile compliances were practised in order to obtain them; which being found to have an ill effect on the publick affairs, the way of balloting for them was introduced, till they found a way of discovering, who voted for them and who against them, notwithstanding this caution; and consequently the same dependance on the leading men, and the same enmities among themselves were observed as before: whereupon it was agreed in the year 1710, that all employments should be disposed of by lot; and accordingly as many balls are put into a bag as there are competitors, one of which being gilt, he that draws it hath the baillage. But the posts of Avoyer, Bandaret, Treasurer, and Senator, are still disposed of by ballot; it being ridiculous, as my author observes, to leave the appointment of the chief officers in the State to mere chance. No bachelor can be a candidate for any baillage or place of profit, nor can a man's own relations, or his wife's to the degree of second cousins inclusive, give a suffrage for him in any case. The members of the Great Council and Senate, as well as the two Avoyers and four Bandarets, have their places for life, as has been intimated already; unless they have been guilty of some notorious crime, or committed an act of bankruptcy; in which cases they may be degraded. The rest of the publick employments are held for six years, except those of Secretaries to the Council, and some other posts, where long experience is required, which the possessors seldom leave but for some good baillage; and the Chancellor's employment is of late limited to twelve years, but in lieu of it he

hath the choice of any baillage. Formerly when a person had enjoyed a good baillage for his term of six years, he would immediately lay in for another, by which means some few of the leading men engrossed all the valuable baillages in their families; whereof in the new regulation for disposing of them by lot, it was provided, that the baillages should be divided into five classes, according to their reputed value; and any person, who hath enjoyed a baillage, is disabled standing for another baillage, but in the two lowest classes, and that there should be an interval of seven years between his quitting one baillage and his being promoted to another; and even then he must waive his pretensions, if any of the Great Council, who have never had one, pretend to it. There is very little profit arises to the members of the Great Council, some small allowances of corn and wood only for the use of their families, but it is coveted however as the only road to preferment. The salary of a senator is about three hundred crowns per ann. including his perquisites; and yet they serve the publick with that diligence and fidelity, that their whole time is taken up in the discharge of their offices.

Altho' the executive power be in a great measure lodged in the Senate, there are however councils appointed for several branches of business, who are all members of the Great Council; the most considerable of which, is that of the Secret Council, consisting of the Avoyer out of office, who is President, the four Bandarets, the two Treasurers, and the two Secret Counsellors; to whom all matters of state which require secrecy are referred, and they are empowered to act in many cases for the publick good without communicating the affair to the Great Council, tho' when the danger is over their determinations must be ratified by it.

The Chamber of Bandarets is the next council, where the accounts of the bailiffs and all other officers of state are examined, and consists only of the four Bandarets, and the two treasurers, who preside by turns. Besides these there is a consistory, consisting of more of the laity than of the clergy; for the laity are supreme here, as in many other states, in causes ecclesiastical. This court takes cognizance of matrimonial contracts, adultery, fornication, and other offences against good manners; but as the adulterer was formerly punished with death for the first fact, it must now be the third before they proceed capitally against him; and for the first and second he is only punished by fine and imprisonment, and made incapable of any publick employment.

Another chamber or council is appointed to see the sumptuary laws put in execution, in which they are very severe; not only because it is of great consequence to the state to have these laws duly observed, but because the fines come into the judges pockets, as my author observes. And there is a court of justice in the city of Bern, where both civil and criminal causes are tryed in the first instance, besides the two courts of appeals already mentioned; an officer is President of this ordinary court, called by the Germans the *Gross Weibel* and by the French the *Gros Santier*, to whom the preservation of the publick peace is committed, and who is empowered to punish all offences against it. These are the standing councils in Bern, the members of all which are members of the Great Council, except the clergy of the consistory: And besides these, upon any great emergency, a particular council or committee is appointed

CHAP.  
VI.Form of  
government in  
Lucerne,  
Friburg, and So-  
leure.

pointed to enquire into the matter, which is dissolved as soon as the business referred to them is at an end.

The form of government in the Cantons of Lucerne, Friburg, and Soleure, differs little from that of Bern, only the Great Council at Lucerne consists but of an hundred members, and the Senate of thirty-five. As to the three cities of Zurich, Basil, and Schaffhausen, the capitals of the three Cantons, to which they communicate their names; the citizens of each are divided into twelve or more tribes, and each of these tribes hath it's quota of members both in the Great Council and in the Senate: In Zurich particularly each tribe hath twelve members in the Great Council, and four in the Senate, or Lesser Council, which numbers are always compleat, the vacancies being immediately filled up when there are any; not by a new choice of the tribe the deceased member was of, but by the remaining fifteen representatives of that tribe; by which means the body of the people have now very little share in chusing their representatives either in the Great Council or the Senate; but this is said to be an encroachment on their privileges. There is still another difference between the form of government in these three Cantons, and that of Bern, namely, that the Senate in each of these cities consists of fifty persons, besides the two *Avoyers*, or *Burghermasters*, whereas that of Bern has but twenty-five members besides the two *Avoyers*; though but half of these, 'tis true, are in office at one time, for each of them govern their six months by turns, unless in cases of judicature, when all the fifty are assembled. Here our author takes an opportunity of considering some of those maxims which are most in vogue in Switzerland, and other popular governments: As, a well regulated militia, in opposition to a standing army of mercenary troops: Equal agrarian laws, that one or a few families may not so far exceed the other in riches and power, as to endanger the publick liberty: and lastly, an equal rotation of magistracy, that each may have his share of the power and profits of the government in his turn; which are all observed in the seven Cantons already mentioned. But of the first, the militia, I shall speak in another place. As to the second, an equal agrarian law, it appears that all their children, both male and female, by their constitution, inherit an equal part of their ancestor's substance, only the father hath a power of disposing by his will, of one third part of his estate to which of his sons he pleases; so that the greatest estates are soon split into small parcels, and thereby an equality of power, in some measure, preserved among the people. And there cannot be a more equal rotation among the magistrates, who are most of them changed every six years: from whence my author infers, that the Sovereigns of these Cantons have little reason to apprehend any intestine division among themselves. But then, as the supreme councils have gradually deprived their fellow-citizens of many privileges, and the principal families still endeavour to engross the government to themselves; they are in danger of insurrections from the people, and have felt them more than once in some of their cities; nor is there any way to satisfy the body of the citizens, as the same gentleman apprehends, but by taking a greater number of them into the administration. In relation to their subjects, it is observed, that the government of these seven Cantons is very un-

qual, for the sovereign power is lodged only in the citizens of the capital city of each Canton, out of whom the members of the Great Council are chosen, and these only are qualified for places of profit or trust, so that the rest of the Canton are excluded from all possibility of sharing in the government; and this was not unreasonable at the first establishment of these commonwealths, who had then little or no territory beyond the walls of their cities: but now their dominions are so far extended, and comprehend many good towns and villages, if the inhabitants of these are not indulged with some share in the administration, it is apprehended they may one day endeavour to set up for themselves, or transfer their allegiance to some neighbouring Prince or State. This inequality is most visible in the Canton of Bern, which makes above a third part of Switzerland, where about fourscore families have engrossed the whole government to themselves. I have seen, says the same honourable writer, within the space of eight years, civil commotions in Geneva, Lucerne, and Zurich, occasioned by the discontents of the citizens with their governors, for retrenching their privileges and engrossing the power to themselves, which have generally ended in a redress of their grievances. And it is observed of late years, that the citizens of these cities generally gain ground of the government, and compel them to re-instate them in such privileges as they have taken from them: and if these discontents arise in the capitals of these little states, where the subject does not lie under such incapacities and disadvantages as in the countries under their dominion; our author infers, they may more justly be apprehended in the country, where the inequality of the government is still greater, as the extent of the territory is so. But in this I must take the liberty to differ from him; for people who have never enjoyed any share in the government, are not so liable to mutiny at being kept out of the administration, as those who have been deprived of their part in it: nor are they so capable of fomenting an insurrection in the country where they lie dispersed, as in cities, where a multitude of malecontents may assemble in a moment, and get to a head before the government can be prepared to suppress them; especially in places where there is no standing army, and the mob are as good soldiers as the militia; or rather, where the militia are formed out of the mob. But what is looked upon as a great security to the government of the Cantons is, that they impose very moderate taxes on their subjects, which are frequently the source of popular discontents. And a further security to them is, that all the Cantons are mutually obliged to assist each other in the support of their respective forms of government. But our author inclines to think, that neither of these securities can be much relied on: For, first he observed, that the subjects thought no mildness of the government could make them amends for being excluded any share in it: And as to mutual assistance, it is not only a dangerous experiment to call in strangers to pacify domestic commotions, but it happens in this case, that the Protestants and Papists have so little affection for each other, that they would do but very little for the preservation of those of a different persuasion in religion: And they are in general so jealous of the overgrown power of the Canton of Bern, that they would be glad to see it weakened.

I pro-

CHAP.  
VI.Form of  
government in  
the lesser  
Cantons.

I proceed now to inquire into the form of government in those six Cantons, where there are no great cities, viz Switz, Underwald, Ury, Zug, Glaris, and Appenzel; and these, it seems, are all of them democratical: for each of these Cantons being divided into districts, according to their extent, some twelve, others six, and others four; each district, or community, in some respects, appears to be an independent sovereignty; for in these they have both civil and criminal judicatories, in which the rest of the Canton cannot interpose, and from whence there lies no appeal. But in the management of the publick affairs, every district having chosen a deputy or representative, they assemble at some certain place, and form a standing council of the Canton; and where the matter to be debated is of great importance, they send each of them two or three representatives, but still they have but a limited authority; for, according to my author, the supreme legislative power remains in the diffusive body of the people; every male in the country upwards of sixteen years of age, and every servant as well as his master, having an equal share in the sovereignty. But these assemblies do not usually meet more than once or twice a year to chuse their magistrates, and their representatives to be sent to the general dyets; tho' they may be convoked at other times, as there is occasion to give their consents to such acts as require their concurrence. The first officer in these Cantons is called Land-Aman, and is chosen in a full assembly of the people, who always express their consent by holding up their hands. His office resembles that of an Avoyer, or Burgher-master; but is changed in some of these Cantons every year, and in others every two years. He is President both of their standing Council and General Assemblies, and hath the chief direction of all publick affairs, with the advice of the council. So soon as the Land-Aman is chosen, the people elect him a deputy, who is called Stat-Halter, and acts in the absence of the other. They proceed also to chuse Treasurers, Secretaries, and other officers of state, in the same manner, who continue in their posts a longer or shorter time, according to the customs of the respective Cantons; but though every member of the Canton seems to have an equal share in the government of it, it appears they are generally governed in their determinations by the gentry, to whom they pay a particular regard. On the other hand, if they apprehend they have been led into schemes that are destructive to their country by designing men, they never fail to punish the authors of such advice with the utmost severity.

I shall conclude this head with some of Mr ADDISON's remarks on the government of the Switzers. He observes, that their constitution is extremely well adapted to the poverty and barrenness of their climate: That the misery of being subject to a despotic Prince, in a country composed of rocks and mountains, is sufficiently evident from the governments in their neighbourhood, where, notwithstanding their lands are much better than those of the Swiss, the people are in greater want of the necessaries and conveniences of life. A Prince's court, he remarks, eats too far into the income of a poor state, and introduces various kinds of luxury, which are not consistent with a narrow fortune. If the vanity of dress, balls, and entertainments were as common in the Cantons as they are in France, their mili-

tary roughness would soon be lost, their tempers grow too soft for their climate, and their expences out-run their revenues; and as the materials for their luxury must be imported from abroad, their country, which has few commodities to export against them, and but very little treasure to answer the balance, would infallibly be ruined. (What follows is as applicable to a mixed government as to a republick: I could wish the words were written with a sun-beam, and never out of my countrymen's view, who seem to be plunging themselves into the greatest excesses of all kinds that ever any people were guilty of, and which must naturally draw on them inevitable destruction, if not suddenly remedied.) The words are these: 'Luxury wounds a republick in it's very vitals, as it's natural consequences are rapine, avarice, and injustice; for the more money a man spends, the more must he endeavour to augment his stock; which at last sets the liberty and votes of a commonwealth to sale, if they find any foreign power (or ambitious native) that is able to pay the price of them.' ADDISON'S Travels, p. 384. It is no wonder therefore he adds, that the poor commonwealths of Switzerland endeavour to suppress every thing that may introduce vanity and luxury; that they prohibit gaming, balls, and all extravagancies of dress; and that their magistrates in their publick assemblies appear in the plainest garb imaginable, to set an example to the rest. Persons of different qualities indeed are distinguished by their ornaments, but they are such as may be purchased at a very moderate price: a great officer, for example, is known by the depth of his hat-crown; and their holiday-cloaths, which have an appearance of finery, go from father to son, being seldom worn out in two or three generations. 'Tis an ordinary thing to see a man of substance wear the breeches and doublet of his great-grandfather; and their peasants are clothed in a coarse kind of canvass, the manufacture of the country.

## CHAP. VII.

*Treats of their revenues and forces.*

AS neither the product or trade of Switzerland are considerable, the publick revenues are not large, if compared with those of other kingdoms and states: but if we compare their income with their expences, as my author observes, some of these republicks cannot be esteemed poor; for tho' their annual revenue be small, the charges of the government is less, and they lay up something every year, which in a long tract of time furnishes them with a considerable treasure: and it is observed to be one advantage that the commonwealth has of a monarchy, that the former are generally better husbands of their treasure, not throwing it away upon their pleasures or passions as Princes usually do, and saving the expences of courts and guards, and other glittering fopperies, stiled by some the embroidered part of the government. The little popular Cantons indeed have scarce any publick revenues, but tax themselves voluntarily, according to the exigency of their affairs; and if they happen at any time to have a thousand pounds in their treasure, they will agree to divide it among the several communities the Canton is composed of, if the publick has no present occasion for it: though at the same time they protest against the practice for the future.

CHAP.  
VI.

Revenues.

future. But the commonwealths in Switzerland which may be esteemed rich, are those which have cities for their capitals, and among these the revenues of the Protestant Cantons exceed those of the Catholick republicks, being possessed of the church-lands, which they seized at the Reformation, the profits whereof are appropriated to the service of the government, except a small part of them which are reserved for the maintenance of the clergy. The revenues of the Catholick Cantons with cities, viz. of Lucerne, Soleure, and Friburg, are so inconsiderable, that after the annual expences of the government are defrayed, there remains but a very small sum to be laid up in the publick treasury; even the little Cantons of Bazil and Schaffhausen, though of a much smaller extent, are richer than these three Catholick Cantons, and always have a considerable sum in their treasury. But the two wealthiest Cantons are those of Zurich and Bern, the former of which, by the advantage of its trade, is the richer, in proportion to the extent of its territories; but Bern is so much larger, that the revenues of this Canton are supposed to amount to as much more as the former.

The several branches of the publick revenue in the Canton of Bern, are, 1. The profits of the demefin lands which belong to the State. 2. The tenths of the produce of all the lands in the country. 3. A certain tax upon lands which are not the property of the gentry, called in French, *Cenfes Foncières*. 4. Customs and duties on merchandize. And, 5. the revenue arising from the sale of salt. From the first of these branches arise great quantities of corn and wine, which the State lays up in magazines in the several bailiages, and sells to the people in times of scarcity. From the second, consisting of the tenths of the fruits of the earth, they raise considerable sums in so large an extent of country as this Canton contains, none being exempted, except some few seigneuries of the gentry. From the third, which is a tax on such lands as are not in the possession of the gentry, they levy about twenty pence an acre. From the fourth branch, consisting of duties on merchandize, they raise but little, the duties being very moderate, and their trade but inconsiderable: but from the fifth branch, arising by the sale of salt, they raise great sums, for the States alone retail it to the subject, and impose what price they please. There is another casual tax arising from the sale of all estates, the Sovereign being entitled to a sixth part of the value upon every alienation. What may be the just amount of all these taxes my author does not attempt to determine; only observes, that as their revenues consist chiefly in the sale of corn and wine, these are more or less, according to the price such things bear; and as the State sells none in plentiful seasons, it may happen that several years together little or no money is laid up in the treasury: and on the other hand, they may lay up in one year the increase of many. Our author relates, that when he resided amongst them, namely, about the year 1712, the Canton of Bern, had three hundred thousand pounds out at interest, which, he was credibly informed, did not amount to a sixth part of what then remained in their treasury. That those who pretended to guess at the annual revenues of Bern and Zurich, lay the first at three hundred thousand crowns per annum, and the other at an hundred and fifty, whereof they compute about two

thirds are expended in the ordinary and extraordinary charges of the government, by which computation Bern lays up an hundred thousand crowns a year, and Zurich fifty: but this he observes is meer conjecture, and chuses therefore to leave the amount of their revenues undetermined. As to the three Catholick Cantons with cities, namely, those of Lucerne, Soleure, and Friburg, though their revenues will do little more than discharge the necessary expences of the government, yet that little overplus it seems puts them in a condition of maintaining a small number of troops every year for three or four months: but the two small Cantons of Bazil and Schaffhausen are better provided with treasure than any of the three Catholick Cantons. And it is very necessary that these republicks should always have some money in bank, for they have no extraordinary ways and means of raising money upon an emergency, as other States have: the imposing new taxes on the breaking out of a war, are impracticable here, the greater part of the subjects on whom they should be levied, being employed in their militia. And though the people might be willing to contribute what is in their power for their necessary defence, they would not be able to maintain a war of any long continuance; and especially the little Cantons, who have no treasure in bank when the war breaks out, cannot expect that their militia should long remain together at their own expence.

Standing forces have ever been thought inconsistent with the welfare of these republicks since their first institution; but there is no where in Europe a better-regulated militia: with these they have from time to time maintained their liberty against all the attempts of the house of Austria and France; and during the long wars they had with those powers, were esteemed excellent soldiers, though they never kept the field the year round, but when the campaign was ended used to return to their respective dwellings. The Cantons having continued now upwards of two hundred years in peace with all their neighbours, and having had no wars but among themselves on account of religion, which have not been very frequent, their troops are not esteemed equal to what they were formerly. Almost the only religious disputes which have occasioned a rupture amongst them, are those in 1531, in 1656, and in 1712. In the two former of which the Catholick Cantons gained great advantages of the Protestants; but in the third, which lasted but four months, the Protestants broke the power of the Catholick Cantons, and would have made an entire conquest of them, if the Catholick Princes in their neighbourhood had not threatened to interpose in the quarrel. My author is of opinion, that the present Switzers are not at all degenerated from their ancestors in point of bravery, the troops of that nation in foreign service having behaved to the satisfaction of every power that employed them in the late war; and that the charge of their being degenerated amounts to no more than this, That the forces which are newly raised amongst them, and have not been exercised with constant war, as their ancestors were, require some time to discipline them before they can be a match for veteran troops. The reasons usually given by these people against maintaining a body of standing forces, are, 1. That it would endanger their liberties. 2. That very few of the Cantons are able to maintain such a

CHAP. VII. body of troops as would secure them against an invasion. And, 3. That a standing army maintained by any of the Cantons in time of peace, would create a jealousy in the rest, and induce the neighbouring Princes to interpose, and oblige them to disband such forces. Therefore to maintain their civil governments in perfect freedom and independence, and to avoid giving jealousy to their neighbours, and that they may be provided with a bank of money in case a war should break out; they think it conducive to their prosperity to be without a standing army, and depend upon their militia, who are regulated in the following manner:

Every male from sixteen to sixty is enrolled, and about one third of them regimented under the titles of Fuzileers and Electionaries; and out of the other two thirds these are from time to time recruited. The Fuzileers are all unmarried men of a good size, and in the flower of their age, always ready to march at an hour's warning. The Electionaries are married men, but of an age and size fit for service. Every regiment of Fuzileers consists of ten companies, and every regiment of Electionaries of twelve, besides Staff-officers; there being in each company of Fuzileers an hundred and ten men, and in a company of Electionaries two hundred and eighteen, including officers of all kinds. Every soldier provides his own arms, but all are of one make, and of the newest fashion, there being an officer called the Commissioner of arms, who inspects their arms and mounting, and punishes those who are not conformable to the standard. They have also of late introduced an uniformity of cloathing, being all grey cloth, with facings of different colours to distinguish the regiments: and having found that horse are of little use in this mountainous country, they have converted all their horse into dragoons, except that in the Canton of Bern they have one regiment of Cuirassiers, which their vassals maintain at their own expence. There are ten troops in every regiment of dragoons of sixty men each, and the horses as well as arms are of the soldiers providing, none being admitted into the dragoons but substantial farmers, who are always furnished with horses for their husbandry. And tho' neither horse nor foot receive pay while they remain at home, yet as soon as they take the field, their pay is settled after the following manner, double pay being allowed to the officers the first month, to enable them to provide their equipage.

The pay of the Field and Staff-Officers per month.

	French Livres.
A Colonel per month	240
A Lieutenant-Colonel	180
Major	165
Aid Major	75
Adjutant	48

Each under officer.	12	
Each Corporal	8	
Each Drum and Fife	7	
Each Appointee	7	
Each Soldier	6	

There is only this difference between the pay of the Fuzileers, Electionaries, and Dragoons, namely that the Dragoon-Officers are supplied with forage *gratis*, and the Foot-Officers pay for it; and the private dragoon has six-pence a day and ammunition-bread, while the foot-soldier hath two-pence a day deducted out of the six-pence for his ammunition-bread. Every Field-Officer in both hath two servants paid by the State on the foot of common soldiers, and the Staff-Officers one. The State also provides tents, kettles, and hatchets for their soldiers, five men being allotted to one tent; and these things are laid up in the arsenal when the service is over.

In the magazine of Bern there is always an entire new set of arms for all the militia of the Canton, besides those that are in common use; and there is a third set for the militia of every bailliage, kept in the castle where the Bailiff or Governor resides; where there is also laid up a sum amounting to three months pay for the whole militia of the bailliage, which money was raised upon the several communities for this purpose many years since, and is still reserved for any pressing occasion, not having being touched by the State during the last war, nor cannot be disposed of without the consent of the several communities, since the chief of each has a key of this little treasury, and the Bailiff another.

The Canton of Bern have also a very fine train of artillery in their capital, ready to march upon the shortest warning; besides a great number of cannon in the castles where their Bailiffs reside; and for the service of their artillery they have three companies of cannoneers, and one of bombardeers, consisting of an hundred men each, with proper officers, who are in constant pay, and commanded by the Waggon-Master-General. Every community is taxed to furnish the necessary horses and waggons for the use of the train and army, and know the proportion which they are to send, getting them ready upon the least notice. There belongs also to the train an hundred and twenty men of several trades, as carpenters, smiths, wheelwrights, &c. and to these is added a company of guides, actually listed, with their Captain, Lieutenant, and other officers, who have a perfect knowledge of the country.

They have no General or Commander in chief in time of peace; the principal military officer in the Canton of Bern is the President of the council of war. Nor do they fill up the posts of Secretary of war, Commissioners of victualling, Treasurer, Quarter-masters, Grand Prevot, and others, till the army is ready to take the field. And whenever a General is appointed for any expedition, there are several deputies of the Statesmen of the greatest rank and experience appointed to accompany him, and be a check upon him, who can undertake nothing of consequence without their consent; but the General, with these deputies, disposes of all military employments

CHAP.  
VII.

in the field, which in time of peace are in the gift of the Great Council.

For the better disciplining of these troops in the Canton of Bern, which is divided into eight districts, there is an officer called the Grand Major in every one of them, who takes care that all the militia, as well those that are regimented as others, be in a constant readiness to march; and that their arms, ammunition, and cloathing, be in a good condition: for which end he often takes his rounds, visiting both officers and soldiers, and drawing them out at least once a year for a general review. He hath also an officer under him in every bailliage, who rides from one community to another, and exercises the soldiers every Sunday and Holiday after divine service, and sees that their arms and accoutrements be in order, and punishes the neglect of them. There are also butts erected in every community, where on certain days of the year they meet to shoot at a mark; and the cannoneers do the same with their great guns and mortars.

And for the readier assembling of their militia, there are signals in the most conspicuous places of every bailliage, which consists of wood and straw, with which they make fires in the night-time, or a smoke in the day; and at every one of these signals is a Corporal, with a constant guard of six men, who set fire to the combustible matters on the approach of an enemy, or whenever they observe any other signals lighted, whereupon the whole body of the militia run to their arms, and march to the appointed rendezvous. And what renders them much better disciplined than the militia of other nations, is, the custom of the young fellows to serve three or four years in the Swiss troops abroad, after which their officers are obliged to permit them to return home; so that a good part of their militia have actually been in some foreign service, and may therefore well be looked upon as regular troops, who being intermixed with the rest, soon make them as expert as themselves. What number of forces these republicks can raise, my author does not determine; but observes, that in the late war between the Protestant and the Popish Cantons, the Canton of Bern had forty thousand men in the field, and the Canton of Zurich twenty thousand, though only the regimented troops were raised; and these, as hath been intimated already, make but a third part of their militia. The same establishment which is observed in the Canton of Bern, is generally practised in all the other Protestant Cantons; but those of the Catholics are not always in a condition to furnish their magazines with corn and other necessities proper for an army when it takes the field.

## CHAP. VIII.

*Treats of their trade and manufactures.*

Trade.

THE Swissers export scarce any merchandize to foreign countries, except horses, black cattle, butter, and cheese. The French take off great numbers of their horses in time of war for remounting their cavalry, insomuch, that my author assures us, he has known ten thousand horses bought in this country, by the French in the space of a year for the use of their army. And the King of Sardinia in the late wars had Swiss horses for his dragoons and artillery, but those of Ger-

many for remounting his cavalry. Great numbers are also sold into the Milanese, and other parts of Lombardy, for their coaches. They dispose of great numbers of their black cattle in Italy, and their cheeses in most countries of Europe. These commodities are common to all the Cantons; but the towns where manufactures may be said to flourish, if compared with the rest, are those of Zurich, Basil, Schaffhausen, and St Gall. Zurich is considerable for a manufacture of crape, which they have brought to some perfection, and export in great quantities. The town of St Gall is as famous for its linnen, which, though much inferior to that of Holland, is afforded cheaper, and worn by the gentry as well as common people. Basil and Schaffhausen are not distinguished for any particular kind of manufacture, but lie mighty convenient for a foreign trade, as they are situated upon the frontiers of the Empire; for here they have the opportunity of exchanging the merchandizes of France, Italy, and Germany, which brings no small profit to the inhabitants, many of whom are considerable merchants. The rest of the towns of Switzerland enjoy only a little retail trade.

As to their importations, having neither corn or wine sufficient of their own growth, to supply their necessities, they are forced to be obliged to their neighbours for them, and are supplied chiefly from Suabia and the Milanese. Their salt is imported from Tyrol, Franche Compté, and Bavaria, with which countries the Sovereigns of each Canton enter into treaties to be supplied at a certain price, and make great advantages by retailing it out again to their subjects. A salt-pit indeed has lately been discovered in the Canton of Bern, but it does not yet afford any thing considerable. And as there are scarce any manufactures of silk, wool, or hair, in Switzerland, all their clothing of these kinds is also imported from abroad, except a very coarse sort of woollen stuffs, which their peasants wear. Their mechanicks also are such bunglers, that the better sort of people usually send for their common utensils from other countries. From all which it is evident, that their importations much exceed their exportations, and their country consequently grows poorer every day. According to my author, the species of gold and silver are scarce seen in publick commerce, which proceeds in some measure, as he observes, from the coin being hoarded up by those Cantons who have publick treasuries, which for want of circulation is lost to the country, and for want of securities to place their money out at interest upon, which obliges them to send it to foreign banks, when they have any, whereby the country is deprived of the use of it. The balance of trade therefore being much against the Swissers, their governors, to prevent the consumption of foreign goods as much as possible, have endeavoured to retrench all superfluities in clothing and furniture by sumptuary laws, which prohibit the wearing of gold, silver, jewels, silks, and thread-lace, and whatever else is more chargeable than useful in dress; only the women are a little indulged in the wearing silks at weddings and on festivals, and on some other solemn occasions: but although this hinders the mischief from increasing, it is by no means a compleat remedy. Nothing, as my author observes, can prevent the exportation of their coin, but the establishing manufactures in their country, which may serve

CHAP.  
VIII.

CHAP.  
VIII.

at least for their own consumption; and though they have no good wool or silk of their own growth, they may however be supplied with these on moderate terms by their neighbours. When the French Refugees left their country upon the revocation of the edict of Nantz, it seems many of them retired into Switzerland, and endeavoured to establish several manufactures there; but not being encouraged or protected by the government, and persecuted by the natives, who would not suffer a foreigner to exercise any trade in their cities, the French Protestants found themselves under a necessity of removing into other countries; whereby, as my author observes, the Protestant Cantons lost the best opportunity they are ever like to have of erecting profitable manufactures in their country: as long as their citizens have the privilege of hindering foreigners from exercising trades amongst them, and are such indifferent artists themselves, there is very little hopes of seeing manufactures flourish among them, or a foreign trade carried on to any advantage.

## CHAP. IX.

*Treats of the religion of the Switzers.*

## Religion.

THE Swiss Cantons, as hath been observed already, are divided into Popish and Protestant, both of them exceeding zealous in their way: the clergy, according to my author, taking more pains to raise the aversion and horror of the people against the religion of their adversaries than in countries where there is but one religion professed. The Protestant Cantons are rigid Calvinists, and the rest had followed their example at the Reformation, says the same gentleman, if the Catholics, not trusting their cause to the force of argument, had not had recourse to arms, and made war upon such as embraced the new opinions: in which the Protestants were defeated at the battle of Cappel, anno 1531, whereby the progress of the Reformation, received some check in this country, many were reduced by force to the Romish persuasion who had deserted it, and others confirmed in it that were wavering. Other battles were afterwards fought, in one of which ZUINGLIUS, one of the fathers of the Reformation, was killed; but at length a treaty of pacification was proposed between the contending parties anno 1531, whereby it was agreed, That each Canton should regulate religious matters in their respective territories, and not molest their neighbours on those accounts; which restored peace to the Cantons at that time: and though there have since been some skirmishes amongst them on account of religion, they have not been of any long continuance. In the year 1566, a Synod of the Protestant clergy of Switzerland was assembled, where the articles of their faith were drawn up, and entitled, *The Helvetic Confession*: in which they adhere to the doctrines of CALVIN, as to grace, free-will, election, and predestination, condemning the tenets of ARMINIUS; inasmuch that they oblige all their clergy, on their admission into Holy Orders, to swear that they will defend and maintain the Reformed Religion as it is contained in the Helvetic Confession, and oppose Arminianism, and all other doctrines contrary to the said confession, to the utmost of their power. And notwithstanding both Popery and Calvinism are tolerated in their common bailiages, or governments, there is no toleration in

CHAP.  
IX.

the Cantons themselves, every one who does not profess the religion established, is banished the country; even Lutherans, and every other denomination of Protestants: but the disciples of CALVIN are liable to the same pains and disabilities as the Papists are in the Protestant Cantons, who look upon themselves as extremely moderate, that they only banish their brethren of a different sect, and permit them to sell their estates.

By these wholesome severities the Swiss Calvinists glory, that they have maintained almost a constant uniformity in their worship ever since the Reformation, though they have not been totally free from sectaries; for in the Canton of Bern two sects arose, the one called Pietists, and the other Anabaptists. The first did not advance any particular doctrines which were not professed by the established Church; but pretended to a greater sanctity of life, and purity of manners than their neighbours, and distinguished themselves by absenting from the publick worship, either on pretence of their unworthiness to approach the house of God, or that they could not edify by the discourses of worldly-minded men, whose lives were a contradiction to their doctrines. They make a covenant with all their senses not to indulge them in any pleasure, even to shun the smell of a rose or violet, and to turn away their eyes from every beautiful object: to avoid as much as possible what the world calls innocent pleasures, lest their affections should be tainted by any sensuality, and diverted from the love of him, who is the only hope and comfort of their beings. But their enemies, it seems, charged them with spiritual pride, fraud, and insincerity in their dealings; and that they made use of the mask of religion, only to surprize and impose on credulous people; and if any of them were found endeavouring to propagate their opinions, and make disciples, they were banished by the government. As to the Anabaptists, their opinions were propagated in the Canton of Bern but very lately. These, 'tis observed, scruple to acknowledge the power of the magistrate, or to take oaths of allegiance to the government they live under; but that which rendered them most obnoxious in Switzerland, is their holding it unlawful to bear arms, even in defence of their country; for here being no standing forces kept on foot, but the sovereign relying entirely upon the militia, if this opinion of the unlawfulness of bearing arms, should prevail, they must necessarily become a prey to the first invader. The government therefore observing, that their peasants who were enrolled in the militia, began to excuse themselves when they were commanded into the service, on scruples of conscience; thought it high time to punish the followers of this sect, with the utmost severity; fining and imprisoning some, and banishing others, and their banished teachers who returned into the country they hanged. At length they came to a resolution of banishing all Anabaptists in general; and above three hundred of them became refugees in Holland only, about the year 1710. But the same reasons the Swiss Presbyterians assign for persecuting their brethren that differ from them, for aught I see, may be urged by any other Protestant government: for instance, they urge, 1. That should they tolerate sectaries, these would infallibly join with their Roman Catholick neighbours against the established Church. 2. That no controversies are managed with more heat and unchristian malice,

CHAP.  
IX.

malice, than those which concern religion. And, 3. That these disputes ever have an influence on the state, and frequently endanger the subversion of the government; but if these be of any weight in Switzerland, and can justify persecution there, I cannot see why they would not excuse any other government in requiring uniformity in religion. But to proceed: The Swiss Clergy in some of their cities have a great influence, and take the liberty of teaching politics instead of divinity in their pulpits, endeavouring to work up the passions of their auditors to their own pitch: but in the Canton of Bern the government confines them to religious subjects, and keeps them in an entire dependance on the state.

Chief  
towns of  
the league  
of the  
house of  
God.  
Coire, &c.

THE allies of the Switzers are, 1. The Grisons. 2. The town and county of Neuchâtel. 3. The Abbot and City of St Gall. 4. The Valtelians. 5. The republick of Geneva. And, 6. The towns of Malhausen and Bienne. The most considerable of whom are the Grisons. The country of the Grisons, antiently part of the Roman *Rætia*, consists of three provinces, united for their common defence. The first is stiled, the Grison, or Grey League, and communicates it's name to the whole country. The second is called, The league of the house of God, from the Bishop of Coire's residing in it. And the third, The league of the ten jurisdictions, as it comprehended that number of communities.

These three leagues, including the countries they have acquired by grant or conquest, viz. the Valteline, Chiavenna, and Bormio, are bounded by the circle of Suabia on the north; by the county of Tyrol on the east; by the states of Milan and Venice towards the south; and by the Cantons of Ury, Glaris, and Appenzel towards the west; being about an hundred miles in length, and sixty in breadth. In the Grison league are twenty-seven communities, in that of the House of God twenty-two, and in that of the Ten Jurisdictions fourteen.

The chief towns in the Grison league, are Ilantz, Disentis, Flintz, and Splagen. Ilantz is a little town, situate on the Rhine, about fifteen miles south-west of Chur, or Coire, where the assemblies of the three leagues meet.

The chief towns in the league of the House of God (which is stiled sometimes Caddee, and by the Germans, Gotthuspant) are Chur, or Coire, the capital of the three leagues, Cassaccia, Vespurn, and Bergon. Coire, the most considerable town of the Grison country, is situated at the foot of two mountains, on the banks of the river Plesur, little more than a mile from the Rhine, and about sixty to the southward of Constance, and was a free Imperial city till the year 1498, when it entered into the Grison league. The Bishop of Coire had some kind of jurisdiction in this city till the Reformation, and hath still a palace here, a cathedral, and some houses for the Cantons about it; but his revenues are at this day very mean, though he be a Prince of the Empire. The buildings are tolerable, considering the country, and the town is encompassed with a wall and fortifications, most of the inhabitants being Protestants.

The only town mentioned in the league of the Ten Jurisdictions, is that of Davas, or Tafas, situate among the mountains, two leagues to the eastward of Coire, of which I meet with nothing remarkable.

The manners and customs of the Grisons differ but little from those of the Switzers, any more than their soil and climate, and therefore do not need a particular description. They were formerly subject to a variety of Princes; some of them to petty Sovereigns, others to the Bishop of Coire, and more of them to the house of Austria. Those subject to the first, purchased their liberty, or became free by the extinction of the families of their lords. The Bishops of Coire were deprived of their power at the Reformation, and have now no share or influence in the government of that city, or the territories belonging to it. And the house of Austria have at several times fold all their dominions in this country, except the little lordship of Retzuns, of which the Grisons are the immediate sovereigns. And thus by degrees the Grisons becoming an independent and free people, erected themselves into a commonwealth, the sovereign power whereof is vested in the people; for every male of sixteen years of age and upwards, has a vote in matters of state, as in the petty Cantons of Switzerland. But then they have a better method of collecting their votes; for the people of every community first elect one to represent them in a Council or Dyet, and then the persons so elected, amounting to the number sixty-three, that is, one for every community, meet and debate of their affairs; and in these assemblies all resolutions are determined by a majority, as their elections are by a majority of each community, every one of which are governed by their particular laws and customs, chuse their own magistrates, and are indeed so many petty states. The several communities of each league also have their particular Dyets, where they are represented by their deputies, and chuse their chief and other officers annually. There are four other kinds of Dyets, composed of the representatives of the three leagues: the first is called the general Dyet, consisting of a deputy from every community, besides the three chiefs, which is held once a year in each of the three leagues by turns, the chief of the league where the Dyet is held being President. These meet the latter end of August, and having considered extraordinary affairs, proceed to settle the publick accounts, and determine controversies between the communities, which usually takes up about three weeks. The second Dyet consists of half the number of deputies, (two communities sending one by turns) these have no fixed times of meeting, but are convoked whenever their affairs require it. The third Dyet, denominated a congress, consists only of three deputies from each league, besides the three chiefs, and meets annually in the beginning of March at Coire, being held for the ordinary affairs of the government. The fourth is a meeting of the three chiefs only, who assemble a little before the general Dyet, to prepare matters for them. And every one of these assemblies may be summoned as often as the affairs of the government require it, or any foreign minister hath business to propose to them: but in all of them the deputies are so limited by their instructions, that they cannot take a final resolution on any matter in debate, but must resort to

the communities that sent them, to have it confirmed.

The subjects of the three leagues are a mixture of Protestants and Papists; but the Protestants making two thirds of the people, and all things being determined by a plurality of voices, my author looks upon this republic as a Protestant state; especially as they are allied only to the two Protestant Cantons of Zurich and Bern. There are only the two baillies of Meyenfeld and Malants within the three leagues, the Governors whereof are removed every two years: but they have eight or nine governments more in the Valteline, and the counties of Bormio and Chiavenna, which three provinces were formerly part of the duchy of Milan, and yielded to the Grisons by the Sforza's, Dukes of Milan, in consideration of their services in the wars. And notwithstanding these provinces are subject to the Grisons, the Roman Catholick religion only is tolerated here; for in all the treaties between the Sovereigns of Milan and the Grisons, it is stipulated, that no Protestant shall remain there more than six weeks in one year, during which time he shall not exercise his religion; nor are their Protestant Governors allowed to keep a Chaplain in their houses.

The Valteline.

The Valteline consists of one large valley, about ten leagues in length, abounding in corn, wine, and oil, and the most delicious fruits. The two other counties of Chiavenna and Bormio, are very fruitful, but not in so great a degree as the Valteline, which is as valuable for being a pass between Germany and Italy, as for its fertility; I shall therefore be a little more particular in describing the situation of this country: and I find that the Valteline is bounded by the country of the Grisons on the north; by Tyrol towards the east; by the territories of Venice on the south; and by the duchy of Milan towards the west; the chief towns whereof are Tirano, Sondrio, and Morbegno. Tirano, the capital of the province, is situated on the banks of the river Adda, about six miles to the northwards of the territories of Venice, and fifty south-west of Coire. Sondrio stands upon the Adda, forty miles south of Coire, and is a place of the greatest strength in the Valteline, and the residence of the Governor.

The situation and extent.

Chief towns. Tirano.

Sondrio.

Chiavenna, the situation.

Chiavenna town.

Pleury town.

Bormio county.

Bormio city.

The county of Chiavenna is of a small extent, and bounded by the country of the Grisons on the north and west; by the Valteline on the east; and by the four governments of Italy on the south; the chief towns whereof are Chiavenna and Pleury.

Chiavenna is a little town pleasantly situated at the foot of the mountains, upon the river Maira, which near this place falls into the lake of Como. It was antiently a large place, but had the misfortune, great part of it, to be buried by a mountain which hung over the town. And the like accident happened to the town of Pleury on the 25th of August 1618.

The county of Bormio is bounded by the country of the Grisons on the north; by the bishoprick of Trent on the east; by the Valteline towards the west; and by the Venetian territories on the south; being surrounded by inaccessible mountains: the chief town whereof is Bormio, situate on the Adda, three miles from its source.

The baillies in the Valteline, as well as those in Chiavenna and Bormio, are disposed of by each community of the Grisons by turns, and sold

VOL. II. NUMB. LXVIII.

to the best bidder, who is always made Bailiff or Governor, and must be guilty of great exactions on the poor people under his power, before he can reimburse himself. The stated publick revenues of the Grison leagues are very inconsiderable; and therefore upon a war breaking out, or any other emergency, they tax themselves in proportion to their abilities, and the necessity of the service. The duties arising from goods carried through the country, constitute the principal part of the publick revenues, if we except the pensions paid them by foreign Princes, which are divided among the common people as well as the magistrates: though it may be difficult to distinguish one from the other, when they are not in the execution of their offices; for their Senators do not think it beneath them to keep inns for the entertainment of travellers, or to exercise other mean employments; and, in short, the Grisons may well be reckoned the refuse of Switzerland. What renders them most considerable is, the passes through their country between Germany and Italy, of which there are four only by which their country is accessible; and even these may be defended by a very small force. The first by the lake of Como, which preserves their communication with Italy. The second by the valley of Comonica, which gives them an entrance into the territories of Venice. The third by the value of the Inn, which lets them into Tyrol. And the fourth, by a bridge over the Rhine near Coire, they have a communication with Suabia and the Cantons of Switzerland.

The counties of Neuchâtel and Vallengin also are allies of the Switzers: they are subject to the same Prince, and form together a little sovereignty, bounded by the bishoprick of Basil and the territory of Biel towards the north; by the lake of Neuchâtel towards the east; by the Canton of Bern on the south, and by Franche Compté or Burgundy on the west; being about twelve leagues in length from north to south, and six in breadth from east to west. The air of this country near the lake is temperate; but very sharp in the mountainous parts of it. The soil is stony, but produces the best wine in Switzerland, by the sale whereof to foreigners the natives make great advantages. Their language is French, and they resemble that nation more in their manners and customs than the Germans, having more vivacity than the rest of the Switzers, with a good share of vanity.

They are in a manner a free independent people, notwithstanding they have always had a Prince for their head; for nothing is determined but by the three estates. They have also the privilege of chusing their own magistrates and standard-bearer, and are subject to no taxes but what they lay upon themselves; and the whole country is of the Reformed Religion, except the two villages of Cresier and Landeron, the inhabitants whereof are Roman Catholicks. Upon the death of the dukes of Nemours, the last Countess of Neuchâtel, as heiress of the house of Longueville, the States of the country were inclined to submit themselves to the late King of Prussia, as heir by his mother to the house of Orange, which derived its title to Neuchâtel from the marriage of one of its Princes with the heiress of the house of Chalons, the direct Sovereign of those two counties. Several competitors also arose at the same time, who claimed as heirs in blood to the house of Longueville; but the States rejected their claim, and adjudged it to the heirs of the house

Chief  
towns.  
Neufcha-  
tel.

of Chalons; and the King of Prussia accordingly took possession of it. The chief towns in the county of Neufchatel, are, 1. Neufchatel, the capital; and, 2. Landeron.

1. Neufchatel, called by the Germans, *New-burg*, is situated at the north-east end of the lake to which it communicates its name; about twenty miles north-west of Bern, and fifteen north-west of Friburg. The town is well built, and adorned with several handsome fountains. It is governed by a Council of sixty Burghers, and enjoys large privileges; among which the most considerable is, that they are comburghers or fellow-citizens with the Canton of Bern, which is not only their protector, but umpire of all the differences between them and their Sovereign; and this Canton supported them in their religious and civil rights, while they were under the dominion of Popish Princes. The Counts of Neufchatel were formerly allied to the Cantons of Bern, Lucerne, Soleure, and Friburg; but since the investiture of the King of Prussia, the Popish States do not seem fond of renewing the alliance, and they may be looked upon now as allied only to Bern.

Landeron. 2. Landeron, situate near the lake of Biel, remarkable for the strength of its situation, and a noble castle, the residence of the Prince.

Vallengin county. The county of Vallengin lies about a league to the northward of Neufchatel, the chief town whereof is of the same name. It is situated near the foot of Mount Jura, which separates it from Burgundy, and is divided into five vallies, which contain about forty villages, the inhabitants whereof are generally Calvinists.

St Gall, Abbot, his territories. The Abbot and city of St Gall are also allies of the Switzers. The Abbot is Sovereign of a country called the Patrimony of St Gall, lying between the Canton of Zurich and the lake of Constance, as also of the county of Tockenbourg contiguous to it; extending about thirty-six miles in length, and twelve in breadth. He assumes the title of a Prince of the Empire, which is merely titular, having neither vote or session in it. He was also formerly Sovereign of the city of St Gall, and of good part of the Canton of Appenzel; but they have both of them purchased their liberty, and have now no dependance on him.

St Gall city. The city of St Gall is situated in the Turgow, about five miles south-west of the lake of Constance, and ten north-west of Appenzel, and forms a little commonwealth at present, without any territory belonging to it. The government consists of a Great and Little Council, as in other cities of Switzerland, and is of the aristocratical kind. Both the Abbot and town of St Gall have the privilege of sending Deputies to the General Dyets of the Swiss Cantons, who have session, but no votes there. It is one of the best towns of trade in the country, and particularly remarkable for its linnen manufacture, which employs the inhabitants of all ages and conditions. The whole country about them furnishes them with vast quantities of flax, out of which 'tis computed they make annually forty thousand pieces of linnen, of two hundred ells to the piece, which they send into Italy, Germany, and the adjacent countries, in packs carried by mules; by which traffick the natives are so enriched, that there is no place where there are found more wealthy Burghers in proportion to the extent of it; or where there are so few poor people. In the town of St Gall 'tis computed there are about ten thousand souls; the

government resembling that of the other cities of Switzerland. The abbey and the town are mortal enemies to each other, and every little offence on either side works them up into a flame. It is not long since, that a Monk, in one of their processions, carrying his cross erected through the town, with three or four thousand peasants attending him, occasioned a tumult among the citizens, who looked upon it as an unpardonable insult on their religion, and running to their arms, drew down four pieces of cannon to the gates of the abbey, vowing to be revenged for the affront; but the Catholics who attended the procession, being let out of the convent by a back way which led into the Abbot's territories, escaped their fury. The Abbot however was so exasperated that he raised an army, and blocked up that side of the town which faces his dominions, prohibiting his subjects to furnish the citizens with any manner of provisions: when they were just upon the point of entering into a war, the Cantons, their protectors, compromised the matter; ordering, that the townsmen, who had been too rash in taking up arms, should pay a fine of two thousand crowns; and on the other hand, that no priest should carry his cross through their town erected for the future, but let it hang about his neck, without touching it with either hand till he came within the precincts of the abbey. Neither the publick buildings of the town, the abbey, or the abbey-church, are very magnificent; but a collection of the inscriptions on the walls of this and other Popish churches, Mr ADDISON is of opinion, would give us a good idea of the Roman Catholick religion, and sufficiently expose the pride, vanity, and self-interestedness of the convents, the abuse of indulgencies, and, in a word, the superstition, credulity, and childishness of that religion. The town and abbey of St Gall have a Bear for their arms; and the Catholics, according to Mr ADDISON, have an uncommon veneration for the memory of that bear which was the occasion of it; of which one of the Monks of this abbey gave him the following relation, with tears of affection in his eyes. He related, that St GALL, whom they stile the great Apostle of Germany, found this country little better than a vast desert, occasioned, I presume, by its being over-run with bears and other beasts of prey; meeting therefore with a bear in his way on a very cold day, he commanded the brute to bring him a bundle of wood and make a fire, which the beast having performed, he commanded him to retire into the centre of the wood, and there continue the remainder of his life, which the bear readily obeyed, and neither he nor his relations ever molested mankind for the future: from whence their disciples are taught to believe, that their saints can restrain the rage of the fiercest animals, and alter their very natures.

The privileges claimed by the inhabitants of the county of Tockenbourg, having not long since been the occasion of a bloody war between the Protestant and Popish Cantons of Switzerland, the honourable writer above-mentioned, gives us the following account of the differences between the Abbot and that people. He relates, that the last Count of Tockenbourg having no children, granted such privileges to his subjects before he died, that he made them in a manner a free people: for he indulged them in making their own laws, and in choosing their own magistrates, and of entering into an alliance or comburghership with the Canton of Glaris, for supporting their rights; where-

CHAP.

bourg con-  
test.

CHAP.  
X.

by the power of the Sovereign was so lessened, that the successor found little more left him than the right of collecting his revenues: all which was however ratified by Count RAREN, who succeeded as heir to this principality; who having enjoyed it about thirty years, sold it to the Abbot of St Gall, with an express reservation of the rights and privileges of the inhabitants; to which the Abbot also consented, and ratified them afresh, though he afterwards endeavoured to abolish their new privileges, and particularly the com-burghership with Glaris, which was their great support; which at length he found means to do, by insinuating himself so far into the good opinion of the magistrates of Glaris, that they withdrew their protection from the Tockenburghers, and suffered their Abbot to tyrannize over them at pleasure. Whereupon they had afterwards recourse to the two Protestant Cantons of Zurich and Bern, who, for reasons of state, as well as religion, espoused their cause, and sent a solemn deputation to the Abbot, requiring him to permit them to enjoy their religious and civil rights; which he refusing, the Deputies of the two Cantons went into the county of Tockenbourg, and saw them reinstalled in their antient privileges. But religion being concerned in the dispute, the Catholick Cantons of Lucerne, Ury, Switz, Underwald, and Zug, took part with the Abbot; as the Protestant Cantons of Bern and Zurich did with the Tockenburghers; and after several attempts to accommodate matters by treaty in vain, a war broke out in the year 1712, wherein the Protestants defeated the forces of the Popish Cantons in two pitched battles, taking from them the county of Baden, and several other territories: and the Popish Cantons being no longer able to keep the field against their victorious enemies, a treaty was again set on foot by the mediation of the French Ambassador, and a peace concluded at Arraw, on the terms above-recited in the chapter containing the modern history of this country. But still the Cantons of Zurich and Bern, kept possession of the abbey of St Gall, and other places, which they had taken from that Abbot, he refusing to restore the Tockenburghers to their privileges: for the Abbot styling himself a Prince of the Empire, though he hath neither vote or session in the Dyets of the Empire, appealed to the Emperor as his Sovereign, alledging that Tockenbourg was a fief of the Empire, and if there was any dispute between him and his subjects, it ought to be determined in the Empire, and not by the neighbouring Cantons: and this was a doctrine so extremely pleasing to the Emperor, that he gave the Abbot some hopes of assisting him against the Protestant Cantons, if they refused to abide by his determination of the matter, at the same time offered his mediation to compose their differences. But the Cantons of Bern and Zurich, refused to accept it; alledging, that they were a free people, and had no dependance on the Empire; and if they should submit their disputes to the Emperor, this would give him a handle to renew his pretensions to their whole country. And in this state, things remained till the year 1718, when the old Abbot being dead, and another of a more pacifick temper succeeding him, the Protestant Cantons, to avoid the intermeddling of any foreign powers in their affairs, agreed to restore all the territories that had been taken from the Abbot, and to acquiesce in more moderate terms for their allies the Tockenburghers, than

they had at first insisted on: particularly, it was agreed, that the Tockenburghers should acknowledge the Abbot for their Sovereign, and do him homage accordingly. That the Council of Regency should consist of sixty persons, chosen out of the several districts of the country by the Commons, whereof one half should be Calvinists, and the other Catholicks, and no member be changed as long as he was capable of serving, and behaved well. That this council should elect the President, his Vicar, and a Treasurer. That the Vicar du Banderet and his officers should be alternately of the religions above mentioned. That the Secretaries, Commissaries, and Sautiers, should be as many of the one religion as of the other. That this Council should assemble once a year at least. That the judiciary of the county, should consist of a President and twenty-four Judges; the President always to be the Bailiff of Tockenbourg, who with the Judges, should be appointed by the Abbot, and consist of an equal number of each religion. This court to take cognizance of all criminal causes, and all fines and confiscations to belong to the Abbot. The court of appeals to be composed of an equal number of each religion, one half to be appointed by the Abbot, and the other by the Council of Regency. That there should be only the two religions above-mentioned tolerated in the county; and the ministers of the Reformed should be allowed to exercise discipline, and not be subject to the visitation of those of another religion. That if any dispute should arise for the future, between the Abbot and his subjects, each party should chuse three persons out of the Cantons, who should determine the matters in difference.

The republick of Valais is another allie of the Switzers, which takes its name from a valley, inhabited by the subjects of this little commonwealth; which extends from the lake of Geneva to the mountain called La Fourche, where the Rhone hath its source, and is divided into two parts by that river, which runs through the middle of it, and frequently overflows great part of the country. This county is called by the Germans *Wallisserand* and *Valinza*; and is bounded by Switzerland on the north and east; by the Milanese and the duchy of Aoust on the south; and by Savoy on the west; and is about eighty miles in length, and from ten to twenty in breadth. It is separated from the Canton of Bern and Savoy by mountains of a prodigious height, which are always covered with snow; and is usually divided into the Upper and Lower Valais: the Upper Valais is again subdivided into seven independent communities, resembling those of the Grisons, and the Lower into six. Their mountains afford pasture for numerous herds of cattle in the summer, and the valley produces corn and wine; and a great variety of delicious fruits; but it is to the industry of the inhabitants, that this fertility of the low lands is in a great measure to be ascribed, who with incredible labour, convey the water from the rocks and mountains, by wooden troughs, or channels, for two miles together in some places, being obliged to cut a passage through the rocks to lay them in. The harvest continues in this country from May to October, being sooner or later, according to the situation of the place. In the compass of one day's travelling we find a variety of seasons, winter on one side a mountain, and summer on the other; while the spring appears in all its beauty in a third place. 'Tis said, there are

Maurice.Geneva,  
situation,  
&c.

mines of silver, copper, iron, and lead in some of their hills; but, I presume, scarce worth the working, or the poor Swis, would have been masters of more treasure than we find they are. The chief towns are Syon the capital, Martinach, and St Maurice.

Syon, the *Sedunum* of the antients, a town of *Gallia Narbonensis*, called by the Germans *Sitte*, stands upon the river Sitte, which a little below falls into the Rhone, being about fifty miles to the southward of Bern, and sixty to the eastward of Geneva. It is the seat of the Bishop, who is a Prince of the Empire, and was formerly Sovereign of great part of the country; but his power is much diminished of late, and the government changed into a republick, though the Bishop still presides in their councils as their head, and hath a considerable influence on their affairs. The seven communities of the Upper Valais (to which the Lower is subject) send Deputies to their Dyets in the same manner as the Grisons do, and their commonwealth is governed in the same manner. The Valesians were antiently allied to the Canton of Bern, but are now much more nearly allied to the Catholick Cantons, both by interest and inclination, as they are themselves of the Catholick religion.

The next allie of the Switzers I shall mention is the city of Geneva, which stands at the south-west end of the lake Lemman, or Geneva, in the latitude of forty-six degrees, twenty-five minutes, thirty miles south-west of Lausanne, and seventy south-west of Bern, being divided in two parts by the river Rhone, the south part of which is much the larger, and stands upon a hill; the other, which belongs to the country of Gex, is called Gervais, and stands upon a flat. There is a communication between them, by three wooden bridges; travellers take particular notice of two handsome streets, the one extending along the banks of the river and lake, and the other ascending the hill. The houses lately built, are generally of hewn stone, but the rest make no extraordinary figure; the most remarkable of their publick buildings are. 1. The Church of St PETER, formerly the cathedral, a handsome pile, wherein is the tomb of HENRY II, Duke of Rohan. 2. The town-house. And, 3. The publick library; but these don't seem to merit a particular description. In short, the town is not to be admired so much for it's beauty, as for the water, the fine walks and prospects about it, which render it a pleasant abode. The walls are upwards of two miles in circumference, and the fortifications sufficient to prevent a sudden surprize, but would not be able to endure a long siege. It's greatest security consists in the protection of it's allies, the Cantons of Bern and Zurich, and in it's being the interest of France, to prevent Savoy's taking possession of it, and of Savoy, that it should not fall into the hands of France. Otherwise, either of these powers, whose territories are almost contiguous to the walls of their city, might soon reduce the place. The inhabitants, 'tis computed, amount to about thirty thousand men, of whom, five thousand may be able to bear arms; though in their arsenal, which is kept in admirable order, there are arms for twelve thousand men; and here they still preserve the scaling-ladders and arms they took from the Savoyards, when they attempted to surprize the city. The lower rank of people are a clownish generation, conversing with their cattle all the summer, whom they drive up the mountains about the middle of

May, living in huts, and managing the business of the dairy till the winter returns, and then they come back to their dwellings in the town. The people of condition are esteemed polite, many French and Italians of the Calvinistical strain, residing amongst them, and several other nations making it their road to Italy. This town was antiently under the dominion of the Romans, and afterwards of the Burgundians. It was once also an Imperial town, and the Dukes of Savoy have had the sovereignty of it. The Counts and Bishops of Geneva, seem for some time to have had a mixed jurisdiction in the place; but at the Reformation their Bishop was their Sovereign in temporals as well as spirituals. In the year 1533, the people expelled their Bishop, and erected a form of government, resembling that of the neighbouring cities of Switzerland; for they have a Great Council of two hundred, in whom the legislative power is lodged, and another chosen out of it, consisting of five and twenty members, who have the executive power: these, however, advise with a third Council, called the Council of State, consisting of sixty members, taken out of the Great Council. Sixteen of the members of the Great Council, are always of the degree of Burghermasters, or Syndicks, four of whom are in office every year; the first presiding in matters of State: the second hath the direction of the hospitals: the third has the care of the militia: and the fourth is called the Burghermaster of the Reformation, who sees all orders and acts of their Synod and State put in execution. They have also their Treasurer, and other officers of State, as in other Swis republicks. Causes are heard in the first instance, before five members of the Lesser Council, and others associated with them. The government is of the aristocratical kind; but of late years the common people have proved mutinous, and compelled their superiors to part with something of their power; alledging that they had formerly a greater share in the administration, and have been unjustly deprived of their rights and privileges by the leading men. Their Church is true Presbyterian, having been formed by JOHN CALVIN in person, about the year 1535. It is now governed by their city clergy, who are fifteen in number, and the Burghermaster for Reformation, with six others elected out of the Great Council, and this assembly is called the Consistory; but their decrees are of no force, till they are ratified by the Great Council. Their people in the neighbouring country, make thirteen congregations, whose pastors at certain times of the year assemble with the city clergy, and form a synod, making acts for the government of the Church within their little territory, which are also ratified by the Great Council. They take care to keep their clergy humble in this State, by allowing them moderate salaries, of fifty or three-score pounds a year a-piece, though as every thing is cheap, this will preserve them from extreme want. The Presbyterians here are in some instances, as rigid as their brethren in this part of the world. They will allow of neither cards, drinking, or dancing; but then they are not near so strict in keeping the sabbath, as the English and Scotch Presbyterians, for they allow and even authorize all manly exercises on Sundays, after divine service; the gravest of them go to bowls, and their militia are then exercised by an act of State.

The ground about Geneva is not unfruitful, consisting of gardens, vineyards, meadows, and rich pastures

CHAP.  
X.

CHAP.  
X.

tures on the neighbouring hills; but their territories are very small, being hemmed in by the dominions of France or Savoy, and the lake on three sides, and on the fourth, their lands scarce extend four miles in length. The lake, it hath been observed already, is about sixty miles in length, and twelve in breadth; and produces a great variety of good fish, especially trouts, which weigh forty and fifty pounds a fish; and 'tis said, in some places, not to be less than four or five hundred fathoms deep. The town has a good trade, which would be much better, if the Rhone was navigable from hence into France; but about ten miles below the city, there is such a cataract, or water-fall, that no vessels can pass it, after which the river takes it's course under ground, rising again at Seyffel; from whence it is navigable to the mouth. Their principal manufactures are those of gold and silver lace, silks, and shammy leather. And there is an university here, but no salaries settled on the Professors, whose gain arises chiefly from their pupils and disciples. The language of the common people, is the Savoyard, or a very bad dialect of the French tongue, but people of condition speak it in greater purity. This republick was antiently allied to the Catholick, as well as Protestant Cantons, but since they have adhered to the doctrine of CALVIN, the Catholicks seem to have dropped their alliance with this city.

Mr ADDISON gives an elegant description of the city and lake of Geneva, and the neighbouring country, though his description of the town is but partial. The greatest part of the city, he observes, stands upon a hill, having it's views bounded on all sides by several ranges of mountains, at a considerable distance, which leave open a wonderful variety of beautiful prospects. These mountains cover it from all winds, except the south and north, to the last of which, the natives of Geneva ascribe the healthfulness of the air: for as the Alps surround them on all sides, they form a vast basin, where there would be a constant stagnation of vapours in this watery country, did not the north wind put them in motion, and scatter them from time to time. Another effect the Alps have on Geneva is, that the sun rises later here, and sets sooner, than it does in other places of the same latitude, the sun gilding the tops of the neighbouring mountains, half an hour after it is down with them. These mountains also add much to the summer-heats, and form an horizon that hath something in it very singular and agreeable. On one side lie a long tract of hills, that go under the name of Mount Jura, covered with vineyards and pasturage; on the other, huge precipices of naked rocks, rising up in a thousand odd figures, and cleft in some places, so as to discover high mountains of snow, which lie several leagues behind them. Towards the south, the hills rise more insensibly, and leave the eye a vast uninterrupted prospect of many miles: but the most beautiful view is the lake, and the borders of it, which lie north of the town. This lake resembles a sea, in the colour of it's waters, and the storms that are raised in it, and in summer hath something like an ebb and flow, which arises from the melted snow that falls into it more plentifully at noon, than at other times of the day. It is encompassed by the dominions of five different powers, namely, those of France, Savoy, Bern, the bishoprick of Sion, or the Valais, and the republick of Geneva. The right side of the lake going from Geneva belongs to the Duke of Savoy, and is extremely well cultivated:

VOL. II.

CHAP.  
X.

here the traveller is entertained with a variety of prospects, consisting of woods, vineyards, meadows, and corn-fields, which lie on the borders of it, and run up the sides of the Alps. The nearer we approach the east end of the lake, the mountains on both sides grow thicker and higher, till at length they almost meet, and we often see on the tops of the mountains several sharp rocks, which stand above the rest; for the soil, which originally covered these mountains, and rendered them much higher than they are at present, having been washed away by the rains, has left the veins of stone bare, which supported them. The natural histories of Switzerland contain various accounts of the fall of such rocks, and the mischief they have done, when their foundations have mouldered away with age, or been rent by an earthquake. Those vast receptacles of snow, which are found on the mountain tops, and in the hollows of the Alps, the ingenious Mr ADDISON is of opinion, are the occasion of those periodical fountains that are found in Switzerland, and flow only at certain hours of the day; for as these mountains cast their shadows upon one another, they hinder the sun's shining on several places at certain times, and consequently prevent the sun's melting the snow that covers them some hours every day. Whenever it happens therefore, that a fountain takes it's rise from these reservoirs of snow, it will naturally begin to flow on such hours of the day, as the snow begins to melt; but as soon as the sun leaves it again to freeze and harden, the fountain dries up, and receives no more supplies, till about the same time the next day, when the heat of the sun again sets the snows a running, that fall into the same little conduits and canals, and consequently break out, and discover themselves always in the same place. But to return to the lake of Geneva: at the east end the river Rhone falls into it, bringing with it a prodigious quantity of water in the summer; for the snows melting at this season, both lakes and rivers are then much higher than in the winter: but the Rhone does not preserve it's water unmixed with those of the lake, as some writers have reported; there is indeed a stream discernable for about a quarter of a mile from it's entrance, but it is afterwards wholly mixed and lost with the waters of the lake; nor is there any manner of current to be perceived till we come within a quarter of a mile of Geneva. The greatest town on the lake next to Geneva, is Lausanne, which sometimes communicates it's name to it; but the town of Morges, between this place and Geneva, is looked upon as the best port, and has some appearance of trade. There is a noble prospect of Geneva from the lake, which as we approach the town grows narrower gradually, till at length it changes it's name into the Rhone, turning a great number of mills in it's passage through the town, and is extremely rapid, though it's waters are very deep.

Geneva is much the politest town in Switzerland, according to Mr ADDISON, and may be looked upon as the court of the Alps. Hither the Protestant Cantons frequently send their children for education: but notwithstanding some think that the Genevois have been of late refined by the conversation of the French Protestants, who make up one third of it's inhabitants; others are of opinion, they are rather corrupted than polished, having forgot the advice given them in their Great Council by Father CALVIN, who there recommended to them above all things, an exemplary modesty

12 R

modesty and humility, and as great a simplicity in their manners as in their religion; and their endeavouring to make a more splendid figure at this day, 'tis thought, will not turn much to their advantage. 'Tis well, says my author, if the great riches they are proud of being thought masters of, do not one day tempt the French King to reduce this wealthy town; for they are pleased to boast that some of their merchants are worth four hundred thousand pounds a man, who do not however spend five hundred pounds a year. But there is one thing very commendable in this, as well as in other Swiss republicks, and that is their laying up corn in their publick granaries in plentiful years, and retailing it out to the common people at a moderate price when it is scarce. At Geneva three of the little Council are deputed for this office, who are obliged to store up grain sufficient to serve the people at least two years in case of a famine; but none of these three directors are allowed to furnish the granaries from their own stock, that they may have no temptation to impose on the publick, either in the price or goodness of the commodity; nor may they buy any corn, within twelve miles of Geneva. All publick-houses are obliged to buy their corn of the State; so that it is changed every two years, and is not in danger of spoiling by being kept too long. And this is one of the most considerable branches of the publick revenue, such corn being sold out much dearer than it is bought.

Bienne.

The little town of Bienne, or Biel, allied to the Canton of Bern, is situated at the head of the lake of Bienne, ten miles south-west of Soleure, and fifteen north-east of Neufchatel; the Bishop of Bazil, or Porentru, hath some kind of sovereignty of it, but so limited, that they are generally esteemed a free people, for they elect their own magistrates, and are governed by their own laws, only they are obliged to serve him in his wars, where the Canton of Bern are not parties; for they are comburghers and fellow-citizens with that Canton, which protects them in their religious and civil rights, being of the same persuasion in religious matters.

Mulhausen.

The last allie of the Switzers I meet with, is the city of Mulhausen, situate near Bazil, upon the river Ill in the Upper Alsatia, which is indeed, beyond the limits of Switzerland. It is a petty republick, of a very small extent, which embraced the Reformation, at the same time the city of Bazil did, on which account these two cities concluded a treaty of comburghership; by which means Mulhausen became a member of the Helvetic body, but most strictly allied to the Protestant Cantons: for whatever alliances may have been made between the Protestant and Catholick States of Switzerland, little benefit is to be expected from them; each member infallibly adheres to those of the same religion, let the controversy be what it will.

## CHAP. XI.

*Treats of the interest of Switzerland.*

The interest of the Switzers.

THE Switzers we find situated in the heart of Europe: Their country surrounded by inaccessible mountains, a hardy race of people, able to defend themselves against all the world, if they were united, but much more formidable before religion divided them into parties and factions, than they are at present. The Protestants are

much the stronger indeed, if no foreigner was to interpose in their quarrels; but as they are encompassed by Catholick Princes and States, who are always ready to assist their brethren against hereticks, the Protestant Cantons have no reason to look upon themselves to be in a state of perfect security. They were successful indeed in the war 1712, and still retain what they conquered of the Popish Cantons, but seem to have irritated them to that degree, that it is a question now, whether the restoration of those territories would reconcile them; for those of the Popish communion frequently threaten the Protestants to call in some foreign power, and even to submit themselves to a strange dominion, rather than not be compleatly revenged of their enemies. It is true, it cannot be the interest of the Germans, to stand by and see the French possessed of Switzerland; and yet, if France should espouse the cause of the Popish Cantons, it would be very dangerous for the Protestants to fly to the Emperor's protection, who to this day pretends a title to their country. They would in these circumstances be reduced to a very hard Dilemma, namely, whether they would take the French or Germans to be their masters; for nothing is more evident than that if the French, or German, was to join either party, the other would not be able to stand its ground without foreign assistance. On the other hand, if the Swiss were united, they need not fear all the forces of their neighbours. On the contrary, they would be courted by the nations that surround them; for they are exceeding populous, and most of their able men enrolled in their militia, which, for the reasons abovementioned, are very near as good as veteran troops; and consequently in any contests between France and the Empire, they would be able to turn the scale to which-ever side they inclined. There is no doubt therefore, that it is abundantly the interest of this people more than any other to be unanimous, which they can't but be sensible of; and yet such are their misunderstandings, or rather implacable malice against each other, that it does not require the gift of prophecy to foretel, that they will never be united again. Religious feuds which happen between people of the same country, where their passions are perpetually whetted by opposition, are seldom appeased but by the utter ruin of the one or the other party. The weaker side will rather run the hazard of being conquered and enslaved by foreigners, than be tyrannized over by a domestick faction of a different communion. The neighbouring powers indeed condemn their folly, and do not court their alliance as formerly: Instead of paying every Canton a pension to purchase their friendship, they have nothing to do at present, but to play the one against the other, and offer their protection to the weaker side, which will as surely engage them in their interest as a stipend used to do. This is the case of the Popish Cantons, who will in a few years possibly become a province of France; whose Prince they already look upon as their protector. There is no nation courts them more, or takes off more of their troops, which is esteemed the greatest favour that can be done to a Swiss republick; because it is a provision for many of their leading men, who are at the same time trained up in the art of war, on which account they are at their return more respected than any class of men in their country.

The reason the French employ more of the Swiss than any other nation does, is, because their own

CHAP.  
XI.CHAP.  
XI.

own foot are not of a size able to stand the shock of the German and Dutch infantry (and it would be the same with their horse and dragoons, if they were not all of them pick'd men). The Confederates in the late wars, 'tis true, had some Swiss among their troops, but the bulk of their mercenaries came from Germany and Denmark, whose troops are very little, if at all inferior to those of the Swiss. These the French could not have, because in a different interest, and therefore were under a necessity of entertaining greater numbers of Swiss than the Allies did. And I believe the Dutch value the Swiss more than any other troops, because they raise them in the Protestant Cantons, who are of the same sect, and can rely on their fidelity, more than on the troops of any neighbouring Prince or State, whose Sovereigns are more likely to be in an opposite interest: Nay, it seems the Dutch retain several Swiss regiments in their service, in time of peace, though their pay is higher than that of their own soldiers, and at the same time disband their national troops. And here I can't avoid making one observation on the disciples of CALVIN, or the reformed churches in general, which is, That let them be never so far distant from each other, and separated by seas or inaccessible mountains, still they maintain a constant correspondence, and promote their common interest with all their might. The King of Prussia and the Hollander, whenever they have the least intimation that those of their communion are in danger of being oppressed, leave no stone unturned to relieve them; and particularly, interest themselves in the affairs of their Swiss brethren, whenever they find them threatened by any neighbouring power. And perhaps the Protestant Cantons, relying upon the mediation of such mighty supporters, are the less solicitous of cultivating a friendship with the Cantons of a different persuasion, imagining that by the countenance of such powerful allies, they shall be able to maintain their ground against their enemies of the Popish religion, both at home and abroad; not considering that if the Cantons of the Roman communion should unite their arms either with France or the Emperor, they might be dispossessed of their country before any of their distant friends could be apprized of their distress. And though they are sure to have the Emperor for them whenever they are attacked by France, and on the contrary, the French for them if they are attacked by the Emperor; yet it is highly probable, that which side soever remains conqueror, their privileges would be at least retrenched, if they were not made a province to the one or the other. There is scarce an instance where different factions have called in foreigners to their assistance, but the constitution of that kingdom has undergone very great alterations, if it has not been entirely destroyed. In every view therefore, it must be of the last importance to the Swiss to remain united, they can never otherwise make the figure in the world they have done, or indeed hope long to remain a nation.

'Tis true, the disciples of each communion, where they happen to be intermingled, as in some of the lesser Cantons, and in many of their common bailliages, can scarce avoid giving daily provocations to each other: the very rites and ceremonies of one religion are offensive to the people of the other, and every solemn procession proves a fresh occasion of a quarrel; while the Priests of each religion, out of an indiscreet zeal, march

as it were in triumph upon these occasions, and cannot forbear insulting their opponents. The many arts that are used in making proselytes, administer also fuel to the flame, and a private conversation sometimes arms the whole country. The Protestants relate, that a Popish Priest having applied himself to one of their disciples, in order to reconcile him to the Romish Church, and finding no other arguments would prevail, threatened that the devil would fetch him on a certain day, if he remained obstinate to the offers of grace. The fellow being apprehensive that some trick would be played him, procured two of his comrades to keep him company at the time appointed; and while he was thrashing in his barn, a figure appeared to him in so monstrous a shape, that his companions imagined Satan was come for him in good earnest, and immediately took to their heels; but whether the countryman had more courage than his friends, or was frightened to that degree he could not tell what he did, does not appear: however, certain it is, he fell upon the pretended phantom with his flail, and finding it to be composed of flesh and bones, did not leave off thrashing till he had beat his brains out; and coming to examine him more narrowly, found that this was the very Priest who had threatened him with this apparition, which he did not scruple proclaiming in the neighbourhood. Whereupon the Catholics immediately assembled, and drew up a charge against the husbandman for murdering one of the fathers of their church: and such was the fury of both parties, that nothing could appease them till they had recourse to arms, and had engaged almost the whole country of Switzerland in the quarrel, which lasted a great while before it was made up. Every little trespass also is ready to throw them into a state of war: some young Students of Geneva, it seems, going out a shooting, and having just passed the territories of the republick, happened to shoot a fowl which belonged to the Duke of Savoy's subjects: this occasioned an insurrection of the mob in each country, and some on both sides were killed in the fray: nor did it end here, but the Duke of Savoy demanded an hundred thousand crowns of the city of Geneva, for every fowl that was killed, and that the offenders should be delivered up to his mercy: nor could the republick pacify him till it had cost them considerable sums.

Another occasion of frequent misunderstandings I find is, an agreement that both the Switzers and Grisons entered into with the State of Milan, and other Catholick powers, above an hundred years since, for the security of the Catholick religion in the countries granted to them; wherein it was particularly stipulated, That no Protestant should be suffered to settle there: which article not being much attended to at first, there happens to be several Protestant families in those countries which have continued there these hundred years. Of this the Popish Powers now complain, requiring that they may be banished the country, in pursuance of the above-mentioned treaties. The Protestants, on the other hand, thinking it unreasonable that their brethren should be driven from their dwellings after so long a settlement, refuse to comply with the demand. Nor are these differences like to be composed in haste, especially in the Valteline, the Emperor refusing to renew his alliance with the Grisons, unless all the Protestants are expelled the country. From these instances

CHAP.  
XI.

stances it appears, how unhappy it is to have two different religions established in one country, the disciples of each perpetually struggling for dominion, or to be revenged on their opponents for every injury or affront they conceive to be offered to them by the votaries of a different communion. Much happier are the Dutch republicks, who, notwithstanding they tolerate all opinions in religion, suffer only the disciples of one to have any share in the government: nor will they bear an occasional conformist amongst them; but if a magistrate goes to a conventicle or place of divine worship which is only tolerated, and whose rites are not conformable to those of the national church, he is ever after rendered incapable of any place of profit or trust in the state: though, 'tis true, there are other kingdoms and states whose governors countenance every faction, and dread nothing more than an union among their subjects, lest they should come to consider their common interests, which are too often opposite to those of their respective courts.

Mr ADDI-  
SON'S Re-  
marks on  
part of  
Switzer-  
land.  
Lausanne.

I shall conclude the description of Switzerland with some of Mr ADDISON'S observations in his travels through this country. At Lausanne, the largest town on the Lemman lake next to that of Geneva, this gentleman took a view of the wall of the cathedral church, which was opened by an earthquake, and closed again some years after by another: the crack indeed was but just discernable when he saw it, but there were several people in the town then living, who had formerly passed through the breach. The country between Lausanne and Geneva, he observes, is the most fruitful and best cultivated of any among the Alps. 'Twas formerly under the dominion of the Duke of Savoy, but taken from him by the Canton of Bern, and confirmed to that Canton by the treaty of St Julian. About five miles from Nyon, they still shew the ruins of CÆSAR'S wall, which extended eighteen miles in length, viz. from Mount Jura, to the banks of the lake of Geneva, as CÆSAR has described it in the first book of his Commentaries.

The coun-  
try of  
Vaud.Cæsar's  
wall.

Friburg.

From Lausanne my author travelled to Friburg, the capital of one of the largest Popish Cantons, the situation whereof is so irregular among rocks and precipices, that they are forced to climb up to several parts of it by stair-cases of a prodigious ascent. The college of Jesuits here is said to be the finest in Switzerland, from whence there are several beautiful prospects: and they have a collection of pictures, representing most of the fathers of their order, among whom are some natives of England, by us stiled Rebels, and by them Martyrs. The inscription under HENRY GARNET relates, that when the Heretics could not prevail on him, either by force or promises to change his religion, they hanged and quartered him. Two leagues from Friburg there is a little hermitage, esteemed one of the greatest curiosities in Switzerland. It lies in the prettiest solitude imaginable, among woods and rocks, which at first view incline one to be serious. The hermit had lived here five and twenty years, and with his own hands wrought out of the rock a pretty chapel, a sacristy, a chamber, kitchen, cellar, and other conveniences. His chimney

A remark-  
able her-  
mitage.

is carried up through the whole rock, notwithstanding the rooms lie very deep; and he has cut the side of the rock into a level for a garden, to which he brings the earth he finds in the neighbouring parts, and has made such a spot of ground of it, as furnishes out a kind of luxury for a hermit; and as he observed the drops of water distilling from several parts of the rock, by following the veins of them he has made himself two or three fountains in the bowels of the mountain, which serve his table, and water his little garden.

CHAP.  
XI.

The ways from Friburg to Bern are very bad, High-ways. great part of them through woods of fir-trees, of which they have such great quantities, that they mend their high-ways in this country with wood instead of stone. The publick walks by the great church at Bern are worth the viewing: they are raised extremely high, and that their weight might not break the walls and pilasters which surround them, they are built upon arches and vaults. These walks afford the noblest summer's prospect in the world, for here you have the full view of a huge range of mountains that lie in the country of the Grisons, and are covered with snow. They are about fourscore miles distance from Bern, but their height and colour make them seem much nearer. The cathedral stands on one side of these walks, and is esteemed the most magnificent Protestant church in Europe, out of England. The town of Bern is well supplied with water, there being a great variety of beautiful fountains at equal distances, from one end of their streets to the other.

Bern,

Soleure, or Solothurn, our author looks upon as Soleure. the politest town in this country. The French King, LEWIS XIV, advanced large sums towards the building of the Jesuits Church here, which is esteemed the finest modern building in Switzerland; and the whole fortifications round the town are faced with marble.

Here, and in all other parts of Switzerland, the wine that grows in the Pais de Vaud on the banks of the lake of Geneva, is very cheap, notwithstanding the great distance between the vineyards and the places where the wine is sold; for their navigable rivers lie so commodiously, that after half a day's land-carriage from the lake, they are embarked on those rivers, and carried down the stream to Bern, Soleure, and all the richest parts of Switzerland.

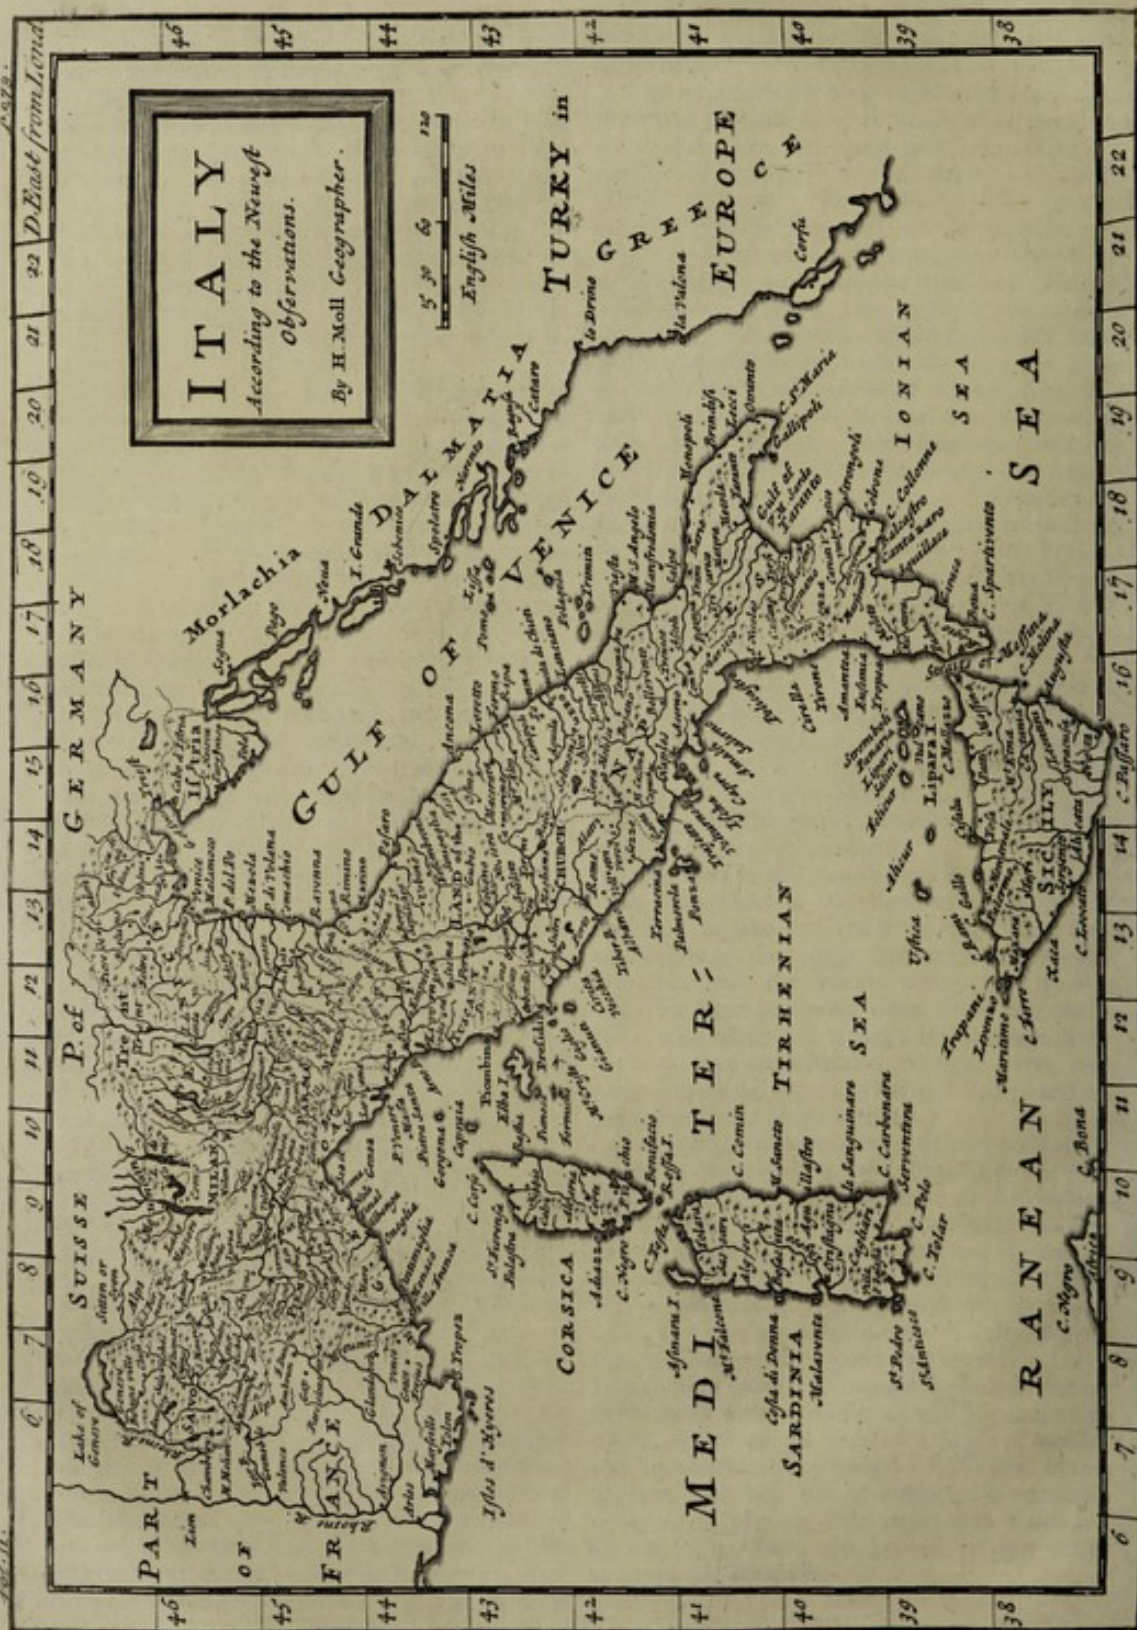

Conveni-  
ence of  
water-car-  
riage.

Our author travelled from Soleure to Zurich, Zurich. which he observes is prettily situated on the lake of the same name, and is one of the handsomest towns in the country. The town-house is a fine pile of building, and has in the frontispiece pillars of a beautiful black marble streaked with white, which is dug in the neighbouring mountains, and the whole building is so well designed, that it would make a good figure even in Italy; though they have in a manner spoiled the beauty of the walls with abundance of childish Latin sentences, which consist often of a jingle of words: and 'tis observable, by several inscriptions, of this country, that their men of learning are extremely delighted in playing little tricks with words and figures. The Swiss wits are not yet got out of anagram and acrostick.

# THE PRESENT STATE OF ITALY.

## CHAP. I.

*Treats of the situation and extent of Italy. Of the air, seas, lakes, rivers, springs, mountains, and woods; and contains some general remarks on the modern inhabitants.*

### CHAP. I.

Name of Italy.

Shape, situation, and extent.

Boundaries.

The air.

**A**S to the name of this celebrated country, I meet with nothing certain, or even probable, in those writers who have pretended to shew us the reason of it's being called Italy; and therefore chuse to omit all random guesses of this nature. Nor was it antiently comprehended under any one common name; but as it was cantoned out into several little sovereignties, each of them had a name appropriated to it, as will appear in the description of the respective provinces or divisions.

Italy, according to the common observation, resembles a boot, or leg with part of the thigh, and extends in length from the north-west to the south-east, that is, from the foot of Mount St Bernard (a mountain of the Alps) to the city of Otranto, six hundred miles in a direct line; or if allowances are made for the winding of the roads, and the several ascents and descents of the Apennine mountains, we may reckon it seven hundred miles in length; if we turn aside to the right, and travel to Reggio, the most southern part of it, which lies upon the straits between Italy and Sicily, we shall find the whole extent to be eight hundred miles. The breadth is very unequal, for if we measure the boot-top under the Alps, it is at least four hundred English miles; in the calf of the leg about an hundred and twenty; and towards the instep about eighty in breadth; extending from thirty-eight degrees twenty minutes, to forty-six degrees northern latitude; and from the seventh to the nineteenth degree of longitude, reckoning from the meridian of London; and is bounded by the Alps, which separate it from France, Switzerland, and Germany, towards the north and north-west; by the gulph of Venice or the Adriatick Sea and the county of Trent towards the east; by the Ionian Sea and streight of Messina towards the south; and by the Tuscan or Tyrrhenian Sea towards the west.

The air of Italy is very different according to the situation of the respective places: upon the Apennine mountains it is exceeding cold; on

the south-side of them the heats are troublesome, and from June to September in the Campania about Rome very unhealthful; tho' hither it was the great men of antient Rome used to retire in summer for the benefit of the air; whereas the modern Romans fly the country at this season, and chuse the city as much more healthful: the reason of which difference it is supposed proceeds from the country's being in a manner unpeopled and uncultivated, and the waters suffered to stagnate, which their ancestors used to drain off; for no countries are more unhealthful than those that are both hot and moist. The north side of the Apennine is more healthful as well as cooler, than the provinces on the south; but here also are some unhealthful spots, as will appear when we come to give a particular description of the respective states.

The seas which encompass Italy on three sides, are, the Adriatick sea, or gulph of Venice; the Ionian; and the Tuscan, or Tyrrhenian sea; as hath been intimated already. There are also abundance of fine lakes, of which the principal are, the lakes Major, Lugano, Como, Iseo, and Garda, in the duchy of Milan; the lakes of Trasimene or Perugia, Vulsin, and Bracciano, in Tuscany; and those of Fucin, Fundi, Castello-Gandolpho and Calano in the Campania of Rome.

Their chief rivers are, 1. The Po, which rises in the Alps, between Dauphiné and the marquise of Salusses, called antiently *Eridanus*, and celebrated by the poets for the fall of *Phaeton* into it. The Po having crossed Piedmont, the Montferat, Milanese, and Mantuan, and in it's passage visited Turin, Casal, Plaisance, and Cremona, enters the duchy of Ferrara, and having been much enlarged by the Adda, the Tesin, and several other rivers which fall into it, discharges itself by several mouths into the sea at Venice. 2. The Tesin, which rises in Mount Adala, one of the mountains of the Alps, having traversed the lake of Major, passes by Pavia and

tains.

falls into the Po. 3. The Adda, which having crossed the lake of Como, discharges itself into the Po at Cremonia. 4. The Oglio, which issuing out of the lake Isco, joins the Po near Mantua. 5. The Mincio, which running through the lake Garda, passes by Mantua, and afterwards falls into the Po. 6. Tanaro, which rises in Piedmont, and falls into the Po at Bassignano. 7. The Adige, which having its source in the mountains of Tyrol, runs by Trent and Verona, and falls into the Adriatick to the southward of Venice. 8. The Arno, which rising in the Apennine mountains, passes by Florence and Pisa, and afterwards falls into the Tuscan sea. And lastly, The Tiber, which having its source also in the Apennine mountains, runs through Romania and Florence, and having passed by Rome, falls into the Tuscan sea at Ostia. Besides which, there are a multitude of lesser streams, which having their source in the Apennines, fall either into the Tuscan or Adriatick seas: but their waters are generally foul and bad, scarce fit to drink; which is supposed to proceed from their impetuous course; for the Apennine, where they rise, being a very high mountain, they rush down the sides of it, carrying abundance of soil and filth along with them, and running but a very little way before they discharge themselves into the sea, continue muddy all along. The antient Romans therefore, as well as some publick-spirited Popes of late years, have taken the aqueducts under their particular care, and it is with a vast expence and labour they have collected the little springs which rise in the mountains forty or fifty miles from Rome, and conveyed through aqueducts of brick or stone to that capital.

The chief mountains of Italy are, the Alps, the Apennine, and Mount Vesuvius. The Alps are the northern boundary of it, of which I have treated already. The Apennine are a chain of hills which run the whole length of the country, and divide the north-east from the south-west provinces. Vesuvius is about six miles to the eastward of Naples, and famous for its volcano's and eruptions, which will be particularly taken notice of in the description of that kingdom. The Apennine mountains are generally well covered with woods and pleasant groves, as appears from a passage in LUCAN, of which Mr ADDISON has given us the following translation:

In pomp the shady Apennines arise,  
And lift th' aspiring nation to the skies.  
No land like Italy erects the sight  
By such a vast ascent, or swells to such a height.  
Her numerous states the tow'ring hills divide,  
And see the billows rise on every side.  
At Pisa here the range of mountains ends,  
And here to high Ancona's shores extends.  
In their dark womb a thousand rivers lie,  
That with continu'd streams the double sea supply.

And SILIUS ITALICUS, in his relation of HANNIBAL's march over the Apennine, gives the following description of it, which the same writer esteems very just, viz.

From steep to steep the troops advanc'd with pain,  
In hopes at last the topmost cliff to gain:  
But still by new ascents the mountain grew,  
And a fresh toil presented to their view.

I shall conclude this chapter with some general remarks on the customs and manners of the Italians, and cannot but observe, that most travellers who set out from hence, seem prejudiced against them on account of religion. The Italians, says a judicious writer, excel in a complaisant obliging behaviour, observing a medium between the lightness of the French, and the starch'd gravity of the Spaniard, and are by far the soberest people that are to be found in the Christian world, though they abound in plenty of the choicest wines; nor is there any thing like luxury to be seen at the tables of the great. They are generally men of wit, and have a genius for arts and sciences; nor do they want application. Musick, poetry, painting, sculpture, and architecture, are their favourite studies; there are no people on the face of the earth that have brought them to greater perfection. Their enemies indeed charge them with being too much addicted to pleasure and idleness, and affirm that they are generally insincere and perfidious; such masters in the art of dissimulation, that they can conceal their resentments till they meet with a favourable opportunity to revenge themselves, and then they never fail to strike home. But we may be assured that there are as many men of honour and probity in Italy, in proportion to the extent of the country, as in any other part of the world; and must not believe that murders and assassinations are so frequent here as some authors pretend. 'Tis true, they are of an amorous disposition, and too jealous of the fair sex; and some have pushed their resentment beyond the ordinary bounds, when they have imagined themselves abused; but these instances are not common. Travellers perhaps expect the same freedom with their women they are used to in cooler climates; but they should consider every nation is governed by its peculiar customs; that our notions of honour are given us in our education, from which we very difficultly recede: and we ought no more to expect that the conduct of the Italians should be conformable to ours, than that their air and climate should be the same. If there be some things which we cannot admire in them, there seems to be a great many more which deserve our imitation. But to proceed in their character: The nobility and gentry are in nothing so profuse as in their buildings and furniture, and in making collections of pictures, statues, hangings, and other ornaments: they are fond also of splendid equipages, and great trains of servants, and make a figure at least equal to their fortunes. They apprehend it derogates from their dignity to be born in the country, and therefore usually send their wives to some considerable city to lie-in, if they happen to be out of town. The marrying with plebeians, or the lower rank of people also debases their quality to that degree, that they are rendered incapable of some posts of honour and profit by it: those therefore who have not fortunes equal to their quality, rather than marry an heiress to a wealthy merchant or tradesman, will chuse to go into a convent. There are academies, or societies of virtuosi, in every town almost, who spend their time in improving the language of their country, which they admire above all others, and at their publick meetings entertain each other with rhetorical, moral, or philosophical discourses, for which the clemency of the air, and their temperance, abundantly qualify them. They are sententious in their writings, and much delighted with

## CHAP.

natives.

CHAP. I. with thoughts and expressions out of the common road. The lowest of the people are strangely taken with sounding words and lofty phrases, even above their capacity.

As to their persons, they are of an agreeable stature, well proportioned, and their features very engaging. Their complexions are not the best, but it is become a proverbial saying among the women, that if Heaven has given them a good shape and features, they will take care to make themselves good complexions. Their hair is generally black, and those that have light hair, travellers tell us, take a great deal of pains to turn it yellow in some places, especially at Genoa. The Spanish or French mode prevails in their dress, as they happen to be affected to the one or the other nation; and black seems to be more worn than any other colour.

## CHAP. II.

*Shows the several divisions and subdivisions of Italy, and treats particularly of Savoy.*

Grand division of Italy. I SHALL consider Italy under three grand divisions: I. Upper Italy, the most northern part of it, containing, 1. The principality of Piedmont (to which I shall add Savoy, tho' it be on this side of the Alps). 2. The duchy of Montferat. 3. The territories of Genoa. 4. The duchy of Milan. 5. The duchy of Parma. 6. The duchy of Modena. 7. The duchy of Mantua. And, 8. The territories of Venice.

Middle Italy. II. Middle Italy, containing the dominions of the Pope, and of the Great duke of Tuscany, in which I comprehend the territories of Luca.

Lower Italy. III. The Lower or southern part of Italy, consisting of the kingdom of Naples.

## S A V O Y.

I SHALL first enter upon the description of Savoy and Piedmont, and the rest of the King of Sardinia's dominions in Upper Italy, which extend in length from the lake of Geneva to the port of Nice in the Mediterranean, about an hundred and fourscore miles: the breadth being very unequal, in some places an hundred miles over, and in others scarce forty.

Situation and extent. Savoy is bounded by the lake and territories of Geneva towards the north; by Piedmont, from which it is separated by the Alps, towards the east and south; and by Dauphiné and Lionois in France, towards the west. This province lying on the French side of the Alps, is usually reckoned to be out of Italy, but being contiguous to Piedmont, and the rest of the King of Sardinia's dominions in Italy, it may not be amiss to describe it here.

Provinces. Savoy is divided into seven provinces; 1. The duchy of Savoy, properly so called. 2. The county of Geneva. 3. The duchy of Chablais. 4. The barony of Fossigny. 5. The county of Tarantaise. 6. The county of Maurienne. And, 7. The duchy of Aoste, or Aosta.

Savoy Proper. 1. The duchy of Savoy, properly so called, is bounded by the county of Geneva towards the north, by the Tarantaise and Maurienne on the east; by Dauphiné towards the south; and by Bugey and the river Rhone towards the west: the chief towns whereof are, 1. Chamberry.

2. Montmelian. 3. Bourget. 4. Aix. 5. Hautecombe. 6. Yenne. 7. Les Echelle. 8. Mions. And, 9. Conflans.

1. Chamberry, the capital, is situated on a plain, at the confluence of the two little rivers Laiffe and Albans, about fifty miles south of Geneva, and twelve to the northward of Montmelian, antiently the residence of the Dukes of Savoy, and here the Parliament of the province still assembles; but it has lost much of its antient grandeur. 2. Montmelian, a little town, situate on the river Isere, twelve miles south-east of Chamberry, strongly fortified, and defended by a citadel built upon a rock, which made it looked upon formerly as impregnable, but it was taken more than once in the late wars. The other towns do not require a particular description.

2. The county of Geneva, bounded by Gex and Chablais on the north; by Fossigny on the east; by Savoy Proper on the south; and by La Bresse on the west. The chief towns are, 1. Annecy. 2. Alby. And, 3. La Roche.

Annecy, the capital of the county, is situated at the north end of a lake of the same name, thirty miles north of Chamberry. It is a large neat town, and the residence of the Bishop of Geneva, since his expulsion from that city by the Protestants.

3. The duchy of Chablais, bounded by the lake of Geneva on the north; by the Valais on the east; and by the territories of Geneva towards the west; the chief towns whereof are, 1. Thonon. 2. Ripaille. And, 3. Evian.

Thonon is situated at the mouth of the river Drame, where it falls into the lake of Geneva, about eighteen miles to the northward of the city of Geneva; a pleasant well-built town, and inhabited by people of condition.

Ripaille is a little distance from Thonon, and, according to Mr ADDISON, deserves to be taken notice of for its convent of Carthusians, who have a large forest cut out into walks that are extremely thick and gloomy, and very suitable to the genius of the inhabitants. The vistas are of great length, and terminate upon the lake of Geneva: On one side of the walks there is a near prospect of the Alps, which are broken into so many steps and precipices, that they fill the mind with an agreeable kind of horror, and form one of the most irregular mis-shapen scenes in the world. The convent belonged formerly to the Hermits of St MAURICE, and is famous for the retreat of the Antipope who stiled himself FÆLIX the fifth. He had been Duke of Savoy, and after a glorious reign took upon him the habit of an hermit, and retired to this solitary spot of his dominions, where he had not been above half a year, when he was chosen Pope by the council of Basil. But his election being contested, he chose for the peace of the Church, to retire again to his hermitage, and leave his competitor in the quiet possession of the keys. But some say, he chose, this charming solitude that he might spend his time in ease and luxury; from whence the Italians to this day use the proverb, *Andare a Ripaglia*; and the French, *Faire Ripaille*, to express a delightful kind of life.

4. The barony of Fossigny is bounded by Chablais on the north; by the Valais and the duchy of Aoste on the east; by the Tarantaise on the south; and by the county of Geneva on the west: The chief towns whereof are, 1. Bonneville. 2. Cluse. 3. Salanches. 4. Paffy. And, 5. Toninga.

Moun-  
tains.

Bonneville is situate on a rising ground near the river Arve, about twenty miles south-east of Geneva; but I don't meet with any thing in this, or the other four towns, that require a particular description.

5. The country of Tarentaise is bounded by Fossigny on the north; by Aouste on the east; by the county of Maurienne on the south and west: The chief towns whereof are, 1. Montfrier. 2. Brianconnet. And, 3. St Maurice.

Montfrier is situated in a valley on the river Here, forty miles south-east of Chambery, and is the See of an Archbishop, whose palace is the only publick building mentioned by travellers as worth the seeing.

6. The county of Maurienne is bounded by the Tarentaise on the north, and Dauphiné on the south, lying between the Alps and the river Here, and consisting of one valley near fifty miles in length: the chief towns are, 1. St John de Maurienne. 2. La Chambre. 3. St Michael. 4. Tencignon. And, 5. Lanebourg.

St John de Maurienne is situated in a pleasant valley on the river Arche, twenty miles south-west of Montfrier, and is a populous well-built town, considering the country, and the See of a Bishop, suffragan to the Archbishop of Vienne in Dauphiné.

7. The duchy of Aouste is bounded by the Valais on the north; by the Vercellois and the vallies of Sefia on the east; by Maurienne on the south: and by Savoy on the west: and is by some geographers placed in Savoy, and by others in Italy: and consists of eight large vallies, being about fifteen leagues in length from east to west, and ten in breadth from north to south. The chief towns are, 1. Aouste. 2. Morges. 3. La Tuille. 4. Avise. 5. Court Major. 6. St Remi. 7. Donas. 8. Chatillon. And, 9. Bart.

The city of Aouste is situated in the middle of a valley of the same name, upon a little river, fifty miles north of Turin: it is the See of a Bishop, whose palace, with the ruins of a Roman amphitheatre, are all the publick buildings which travellers mention as worth the viewing.

The air of Savoy is much colder than that of Italy, being situated on the north side of the Alps, or rather upon them. The general distemper of the country, as in other mountainous places, is that of swelled throats or wens, from which few of them are free, supposed to proceed from their drinking snow-water. Their chief rivers are the Here, the Arche, and the Arve; and their lakes, those of Bourget and Annecy. The principal mountain is that of Mount Cenis, supposed to be the highest of all the Alps, which has a road over it, and divides Savoy from Piedmont. The antients called this hill, or chain of hills, *Alpes Cottiae*. A modern traveller relates, that the ascent is very troublesome, and in several places dangerous on account of the narrow passages on the brinks of high precipices, where if the beast the traveller rides happens to stumble, he falls half a mile at least before he reaches the bottom; but the mules which are used in crossing these hills are generally very sure-footed. On the top of this mountain is a plain about two leagues over, at the end whereof, on the entrance into Piedmont, is an inn and a little chapel, called the Transis, where they bury people that are frozen to death, or smothered in the snow. The Romans stiled all nations who inhabited the northern side of the Alps, *Transalpini* and *Bar-*

*baria*, and looked upon them as a barbarous uncivilized people; and the present Italians, it seems, stiled them *Tramontani*, and have but a mean opinion either of the Savoyards, or any other people on this side; infomuch that if a man be guilty of any egregious blunder, they immediately call him a *Tramontano*.

The nobility and gentry of Savoy are as complaisant and obliging as their neighbours of Italy, and not altogether so formal and precise. The common people are generally good-natured, honest, sober, and laborious, but exceeding poor; which does not proceed so much from the barrenness of the country, being more fruitful in many parts of it than Switzerland, but from the despotick power of the Prince and great Lords, whose vassals the peasants are, being not allowed a subsistence out of the lands they manure. So great is the scarcity of corn in some of their villages, that travellers relate, it is a rarity to meet with a piece of bread, and that they have been forced to content themselves with a glass of wine and a few chesnuts, the usual food of the natives, at their inns upon the great road. Their poverty therefore obliges many of the natives to go abroad: We find Savoyard chimney-sweepers, pedlars, and raree-show-men, in every part of Europe, who are used to live so frugally at home, that they often return to their own country with a good round sum of money. A modern traveller assures us, that he knew one of them that kept a shop at Turin, who had brought three hundred guineas out of England, which he had got by his raree-show. The country however produces wine, and some corn, apples, pears, and other fruits. They have also large herds of black cattle, goats, hogs, venison, and wild fowl in the woods and mountains, and plenty of fish in their lakes and rivers: Their hares and partridges, as well as bears and foxes, on the tops of the Alps, are frequently white, as they are in the north of Russia and Greenland. Here are large woods of fir-trees, which afford masts, pitch, and tar, for shipping, and they have some oak-timber: their woods also abound in walnuts and chesnuts, which make a great part of the food of the peasants, as well as of their hogs. Here are also some marble and stone quarries, and coal-pits, and in several places mineral waters, and hot baths, of which those at Aix near Chambery are most resorted to. They have also several salt-pits, especially in the Tarentaise, and some salt-fountains, which furnish them with good white salt. In Fossigny there are allum mines, and the valley of Aouste affords a good sand for making crystal glasses.

## P I E D M O N T.

## CHAP. III.

Contains a description of Piedmont.

THE principality of Piedmont, so named from its lying at the foot of the Alps, is bounded by the valley of Aouste, and part of the duchy of Milan towards the north; by another part of Milan, and the Montferat on the east; by the territories of Geneva, and the county of Nice on the south; and by Dauphiné and Savoy on the west; extending an hundred miles in length from north to south, and about seventy miles in breadth from

and extent.

CHAP. III. from east to west, and is generally computed to be three hundred miles and upwards in circumference. It may be divided into eight parts, or provinces, viz. 1. Piedmont Proper. 2. The marquisate of Suza. 3. The marquisate of Saluzzes, or Saluzzo. 4. The county of Asti. 5. The lordship of Verceil. 6. The principality of Masserano. 7. The marquisate of Ivrea. And, 8. The valleys of the Vaudois.

Piedmont Proper is bounded by the marquisate of Suza on the north; by the Montferat towards the east; by the territories of Geneva, and the county of Nice on the south; and by the marquisate of Saluzzo on the west. The chief towns whereof are, 1. Turin. 2. Brandis. 3. Chivas. 4. Montcalier. 5. Carignan. 6. Quieras, or Quierasco. 7. Mondovi. 8. Coni. 9. Fossano. 10. Savillano. 11. Pignerol. 12. Marfalia. And, 13. Rivoli. The principal whereof are,

Turin. 1. Turin, the capital of this principality, and of the King of Sardinia's dominions in Italy; the *Augusta Taurinum*, or *Taurania*, of the ancients, situate in the latitude of forty-four degrees fifty minutes; nine degrees to the eastward of London, near the confluence of the rivers Doira and Po; from the last of which it is about three hundred paces distant. The town is of a square figure, about three miles in circumference; and admired for its spacious squares, piazzas, broad streets, lofty and magnificent buildings, and particularly the King's palace, which for the beauty of the several apartments, the richness of the furniture, the paintings, the cabinets of curiosities, and the library, is scarce to be paralleled. The palace of the Prince of Carignan, the cathedral and the Jesuits chapel, are also much admired. The chapel of the Holy Handkerchief, lately built of black marble, is a pretty piece of architecture. This handkerchief according to tradition, was presented to our Saviour by a compassionate virgin, as he was carrying his cross to the place of crucifixion, who having wiped his face, returned it back to her with his picture imprinted on the linnen in the most lively colours; but 'tis said, there are some other places which pretend to be in possession of this precious relique.

The Holy Handkerchief.

The fortifications of the place are as fine as the nature of the ground will permit, and the citadel a regular pentagon: nor were the French able to take either the one or the other after a most furious siege of ten weeks continuance in the year 1706; but had it not been relieved in a very critical hour by the arms of the allies, commanded by the Duke of Savoy and Prince Eugene, it could not have held out many days longer; for the enemy was master of the outworks, and the besieged had scarce powder left to salute their Prince when he made his triumphant entry into his capital city, which he found little better than a heap of rubbish, the French King having given particular orders not to leave a house standing that their bombs or red-hot bullets could reach; but it is now for the most part rebuilt to great advantage. Nor did the Grand Monarch's resentment rest here: the plantations of olives, the vines, the groves, the walks, and all the fine avenues to this charming city, which stood in one of the pleasantest plains in Europe, were ordered to be destroyed; a loss not so easily to be repaired as the buildings, which the Duke afterwards endeavoured to retaliate, when he marched into France to the siege of Thoulon.

Turin is the See of an Archbishop; and a Uni-

VOL. II.

versity was erected here about the year 1405; besides which, there are academies for riding, dancing, and martial exercises; and the court is said to be as polite as any in Europe: the people in general also are much in the favour of our modern travellers, who seem better pleased with their reception here than in many other cities of Italy. The natives have not that stiffness and insincerity, which they insinuate are inseparable from the Italians, who live more to the southward. And one convenience Mr ADDISON mentions in this town, which is not to be met with in others, and that is, a rivulet on the upper side of the city, which is turned into the streets every night, and clears them of all manner of filth, serving also to lay the dust in summer, which otherwise in this populous place would be intolerable; but among all the conveniences and beauties of Turin, their tattered paper windows are no small disgrace to it: Nothing sets off our buildings in this part of the world like our noble sash-windows of crown-glass; whereas in this, and the rest of the cities of Italy, they content themselves with paper lights, and these frequently torn and out of repair, which makes their most magnificent palaces have a scandalous aspect.

Without the town, the Capuchins cloyster, which stands upon a lovely mount, and affords a prospect of the whole city and the neighbouring country, is much admired; as are the royal palace of La Venerie, about three miles out of town, and that of Valentin, situate on the banks of the Po, about a mile distant from the city. The barbarous ravages committed here, and in the rest of the Duke of Savoy's territories by the French in the two last wars, have justly created the utmost abhorrence and detestation of that nation among the common people.

Chivas, or Chivazzo, is a strong fortress, situate on the Po, about twelve miles to the northward of Turin, taken by the French in the year 1705, after a brave defence; but surrendered to the Duke of Savoy again the year following on the raising of the siege of Turin.

Chivas.

Mondovi is situated upon an eminence at the foot of the Apennine mountains, about forty miles to the southward of Turin, a large, beautiful, and well-peopled city, the See of a Bishop, suffragan to the Archbishop of Turin. It is defended by a citadel, and esteemed a place of strength, and the second city of Piedmont.

Mondovi.

Coni lies about thirty miles to the southward of Turin, is reckoned a strong place, and hath a citadel built without the town, upon a neighbouring hill.

Coni.

Fossano, which derives its name from the multitude of fountains about it, is the See of a Bishop, suffragan to the Archbishop of Turin, and is defended by a castle. This place lies about fifteen miles north-east of Coni.

Fossano.

Pignerol, situated on the river Chiese, about sixteen miles south-west of Turin, a strong fortress on the frontiers towards Dauphiné, and for a considerable time in the possession of the French King, who being obliged to restore it to the Duke of Savoy in the year 1696, demolished the fortifications; but the Duke being at liberty to fortify his frontier places by the treaty of Utrecht, has since put this and the rest in a posture of defence. The situation of the rest of the towns of Piedmont will be found in the map bound up with this volume, but do not seem to merit a particular description.

Pignerol.

county.

Asti town.

Verue.

Ceve.

Vercell  
barony.Vercell  
city.Bielle city  
and coun-  
ty.

The marquise of Susa lies at the foot of Mount Cenis, and is bounded by Dauphiné, a province of France, on the west; and by Piedmont Proper on the east; being about forty miles in length from north to south, and ten in breadth; the only considerable town whereof is,

Susa, situate on the river Doira, twenty miles north-west of Turin, a town of the utmost importance to the King of Sardinia, lying on a pass out of France into his country. The French demolished the citadel on their taking it in 1704; but being yielded to the Duke of Savoy at the treaty of Utrecht, he was left at liberty to repair the fortifications of this and his other frontier garisons.

The marquise of Saluzzes, or Saluzzo, is bounded by Piedmont Proper towards the north and east; by the counties of Nice and Tende on the south; and by Dauphiné and Barcelonette on the west; extending about thirty miles in length from east to west, and twenty in breadth from north to south, in which district rises the river Po, at the foot of mount Vesulo: The chief towns whereof are Saluzzo and Carmagnola.

Saluzzo stands on an eminence at the foot of the Alps, about a mile from the banks of the Po, and twenty south-west of Turin. It is the See of a Bishop, suffragan to Turin, though he pretends to depend immediately on the Pope. The cathedral is a magnificent structure, and there is an old castle, but of no great strength.

The county of Asti is bounded on the north, east, and south, by Montferat; and by Piedmont Proper on the west; extending about thirty miles in length from north to south, and about twenty miles in breadth: The chief towns whereof are, Asti, Verue, and Ceve.

The city of Asti stands on the river Tanaro, about twenty-five miles to the eastward of Turin; 'tis a large populous place, well fortified, and defended by a citadel and castle, and the See of a Bishop, suffragan to the Archbishop of Milan; and for the number and beauty of it's palaces and publick buildings is said to equal most towns in Lombardy.

Verue is a strong fortress, situate on a rock close to the river Po. It held out a siege of six months against all the efforts of France in the year 1705, nor did the Governor surrender 'till the place was become one heap of rubbish; but it is since re-edified, and the works repaired.

Ceve is the capital of a marquise, a small but very pretty town, situate on the Tanaro, about seven miles south-east of Mondovi.

The lordship of Vercell is bounded by the duchy of Milan, and the vallies of Sesia on the north and east, and by Montferat on the south; extending in length about thirty miles from east to west; and twenty from north to south: the chief town whereof is Vercell.

The city of Vercell, or Vercelli, is situate on the river Sesia, near the frontiers of Milan, fifteen miles to the northward of Casal, and near forty north-east of Turin. It is a large fortified town, and a Bishop's See, suffragan to Milan, and the cathedral a handsome Gothic structure. It was taken by the French in the year 1705, but quitted by them the next year, on the raising the siege of Turin, after they had demolished the fortifications.

The city of Bielle, the capital of a small territory, to which it communicates it's name, stands on the river Cervo, fifteen miles to the westward

of Vercell, of which I meet with nothing particular.

The principality of Masserano lies to the northward of Vercell; the chief town whereof is of the same name; sixteen miles north-west of Vercell, but I do not meet with any particular description of it.

The marquise of Ivrea lies to the southward of the valley of Aouste; the chief town whereof is of the same name, situate on the river Doira, about twenty-five miles north-west of Vercell, a large populous place, but not admired for the elegance of it's buildings: it is a Bishop's See, suffragan to Turin, and had the reputation of a strong town till the French took it in the year 1704, and demolished the fortifications.

The vallies of the Vaudois are five, viz. 1. Those of Pragelas, or Cluson. 2. Perouse. 3. St Martin. 4. Angrogne. And, 5. Lucerne. Bounded by Piedmont Proper on the east, west, and north, and by the marquise of Saluzzo on the south. The chief towns whereof are, 1. Lucerne. 2. St Martin. And, 3. Perouse, or Perusa.

The town of Lucerne, or Lucerna, the capital of these vallies, stands about six miles to the southward of Pignerol, and communicates it's name to all of them, being as often called the vallies of Lucerne as of the Vaudois.

St Martin's is the chief town of another of these vallies, and lies to the northward of Proper Lucerne.

Perusa, the chief of a third fruitful valley, lies about four miles to the northward of Pignerol. The natives were called Waldenses and Vaudois, from one PETER WALDO, or VAUD, a merchant of Lyons, who, about the year 1610, began to exclaim against the errors of the Church of Rome, and having gained a multitude of profelytes to his opinions, was expelled the territories of France with his disciples, and settled in these vallies, where they remained in quiet for some years; but the late Princes of the house of Savoy have left no means unattempted to bring them over to the Church of Rome, and indeed used them so rigorously, that many of them were forced to fly for refuge into Switzerland, where about four thousand of these people having taken arms, and formed themselves into regiments, ventured to return into their country again in a hostile manner, being commanded by ARNAUD, one of their celebrated preachers, and TUREL, a Mason by trade, who forced their way into Savoy, defeating several detachments of the French and Savoyard troops; and their Prince, at the intercession of King WILLIAM, gave the rest of them liberty to return and enjoy the free exercise of their religion; till the Duke having made a separate treaty with France, in the year 1696, that crown insisted on his banishing them again, or compelling them to be reconciled to the Church of Rome, which occasioned a fresh persecution. This prince however breaking with France in the year 1703, took the Vaudois again into his favour, and employed them in the defence of their country against France, in which they did him good service at first, but some of them afterwards put themselves under the protection of the French.

The principal rivers of Piedmont are the Po, the Tanaro, the Stura, and the Doira, or Duria. This country lies between the Alps on one side, and the Apennine hills on the other; but is not encumbered with barren rocks and mountains, as it's

CHAP. IV. **Piedmont.** its neighbours of Savoy and the State of Genoa are. On the contrary, there is not a more desirable climate, a pleasanter or more fruitful province in Italy, abounding in corn, wine, fruits, rice, cattle, and fowls of all kinds, wild and tame; excellent cheese, silk, flax, hemp, and minerals; but the crop is sometimes destroyed by storms of hail, which are called the Plague of Piedmont, when it is almost ready for the sickle. In plentiful years they export great quantities of corn and rice, as well as cattle, silk, linnen cloth, wrought iron, and paper; infomuch that no country of it's dimensions yields so great a revenue to it's Prince; what they want most is a large breed of horses, with which they are supplied from Germany.

I proceed next to the dominions of the King of Sardinia which lie to the southward of Piedmont; and these are, 1. The county of Nice. 2. The county of Tende. 3. The county of Broglio, or Bueil. 4. The principality of Oneglia. And, 5. The principality or valley of Barcelonette. But this last was yielded to France by the peace of Utrecht, anno 1713.

## CHAP. IV.

*Treats of the counties of Nice, Tende, &c.*

**County of Nice.** **Situation and extent.** THE county of Nice is bounded by the marquisate of Saluzzo on the north; by the county of Tende and the territories of Genoa on the east; by the Mediterranean on the south; and by the county of Broglio, or Bueil, and Provence, on the west. The country produces plenty of oil and wine, and but little corn, being very mountainous. It is divided into four vicariats, which contain thirty towns and upwards, the chief whereof are Nice and Villa Franca.

**Nice city.** The city of Nice, or Nizza, stands on the Mediterranean shore, in a pleasant plain, at the foot of the Alps, ten miles to the northward of Antibes, and sixty to the southward of Pignerol, and is defended by a strong castle situate on a rock, which commands both the town and the harbour. The Prince's palace, the Jesuit's chapel, and the cathedral, are said to be pretty structures. The private houses are lofty, and the streets regular, but the place suffered very much in the late wars, being several times taken and retaken, and the fortifications were demolished by the French, when they found they should not be able to keep it; however, it was yielded to the King of Sardinia by the peace of Utrecht, who was left at liberty to repair the fortifications again by that treaty.

**Villa Franca city.** Villa Franca is situated on the same shore, about five miles to the eastward of Nice. It seems to have a better harbour, and is defended by two forts. This town was also taken by the French in the late wars, but surrendered to the King of Sardinia, the then Duke of Savoy, by the ensuing Peace.

**County of Tende and town.** The county of Tende is bounded by Piedmont on the north, by the territories of Genoa on the east, and by the county of Nice, on the south and west; the chief town whereof is Tende, situate at the foot of the Apennine, about thirty miles to the northward of Villa Franca, and hath a castle for it's defence.

**Broglio county and town.** The country of Broglio, or Bueil, sometimes reckoned part of the county of Nice, is bounded by the valley of Barcelonette on the north, by

the county of Nice towards the east, and by Provence in France on the south and west; the chief town whereof is Broglio, situate on the frontiers of Provence, about thirty miles to the northward of Nice.

The principality of Oneglia lies on the Mediterranean, encompassed on three sides by the territories of Genoa, being about twenty-five miles in length, and eight in breadth; the chief town whereof is Oneglia, situate on the sea, about seventy miles south-east of Turin. 'Tis said to be a populous trading place, and the country about it to abound in oil and fruits.

The principality or valley of Barcelonette is bounded by the marquisate of Saluzzo on the north, by the county of Nice on the east, by Broglio on the south, and by Provence on the west; extending thirty miles in length from east to west, and twenty in breadth from north to south; the chief town whereof bears the name of the province, and stands about fifty miles north-west of Nice. This principality, as it was formerly dependent on Provence, the French King insisted should be restored, and confirmed to him by the peace of Utrecht, which was accordingly granted him. And here it is very fit to give an abstract of that treaty, as far as it relates to the boundaries between France and the dominions of the King of Sardinia. By this treaty his most Christian Majesty yielded and transferred to his Royal Highness of Savoy (the late King of Sardinia) the valley of Pragelas, with the forts of Exilles and Fenestrelles, and the vallies of Oulx, Sezane, Bardouche, and Chateau-Dauphin, and all about the water, which comes from the Alps on the side of Piedmont, which his most Christian Majesty had possessed himself of during the war. Reciprocally his Royal Highness yielded to his most Christian Majesty the valley of Barcelonette and it's dependances; so that the summit of the Alps and the mountain, were to serve for boundaries between France, Piedmont, and the county of Nice, in such manner that the plains upon the said summits and the heights should be divided; and half the river flowing from the side of Dauphiné and Provence, should belong to his most Christian Majesty, and those on the side of Piedmont and the county of Nice should belong to his Royal Highness of Savoy. And for the greater validity of the said cessions, they were ratified and reciprocally registered in the courts of Parliament and Chambers of accounts of Paris and of Dauphiné; as also in the Senate and Chamber of accounts of Turin, and the Senate of Nice. I proceed now to describe the King of Sardinia's dominions which lie to the eastward of Piedmont; and these are the duchy of Montferat, the Alexandrin, the Vigevano, and the Lomelin in the Milanese.

## CHAP. V.

*Treats of the duchy of Montferat, &c.*

THE duchy of Montferat is bounded by the lordship of Verceil on the north, by the Alexandrin on the east; by the territories of Genoa on the south; and by the county of Asti on the west: the chief towns whereof are, 1. Casal. 2. Chief Pontea. 3. Lucedia. 4. Acqui. 5. Nice de la Paille. 6. Trino. 7. Albe or Alba.

1. Casal, the capital of Montferat, sometimes called St Vas, situate on the banks of the Po, in a fine

a fine plain, thirty miles to the eastward of Turin, and fifteen to the southward of Verceil, a strong town, but frequently taken and re-taken in the late wars. It is a well-built populous city, and a Bishop's See, suffragan to the Archbishop of Milan.

2. Acqui, the *Aque Statellæ* of the Romans, which receives its name from its mineral waters, being much resorted to at present, as well as antiently on that account, and lies about twenty miles to the southward of Casal. It is a Bishop's See, suffragan to Milan.

3. Trino, situate near the Po, six miles to the westward of Casal, remarkable for little but the defeat of the Duke of Savoy by the French, in the year 1703.

4. Albe, the *Alba Pompeia* of the Romans, the capital of the district called the Albefan, situate on the Tanaro, twenty miles to the westward of Acqui.

The Alexandrin lies between the territories of Genoa and Milan on the south and east, and Montferat on the north-west; the chief towns whereof are Alexandria and Bosco.

Alexandria is situated ten miles south-east of Casal, and forty south-west of Milan, being divided in two parts by the river Tanaro, and is a Bishop's See, suffragan to the Archbishop of Milan.

The Vigevano lies between Novara on the north, Milan on the east, and the Lomelin on the south; the chief towns whereof are Vigevano and Mortara.

Vigevano is pleasantly situated on the river Tesin, twenty miles south-west of Milan, defended by a castle built upon a rock, and is a Bishop's See, suffragan to Milan.

The Lomelin lies to the southward of Vigevano, the chief towns whereof are Valencia, or Valenza, Lumello and Frescarolo.

Valenza is situate near the Po, on the confines of Montferat, twelve miles to the eastward of Casal; a little fortified town, which travellers do not think worth a particular description.

The vallies of Sessia lie between the river of the same name, and the lake Major.

The duchy of Montferat, the Alexandrin, the Vigevano, and Lomelin, are pleasant fruitful countries, watered by the river Po, yielding corn, wine, and oil; and as they are contiguous to Piedmont, are a very valuable addition to the King of Sardinia's dominions. Formerly the Montferat was divided between this Prince and the Duke of Mantua; but upon the death of that Duke without issue, anno 1708, the Emperor transferred the Duke of Mantua's part to his Sardinian Majesty. Afterwards the Alexandrin, and the rest of the territories in the Milanese, above-mentioned, were granted to his Royal Highness with the island of Sardinia, in lieu of Sicily, which he was obliged to quit to the Emperor; not that these are an equivalent, but the powers of Europe were pleased to have it so. And even in the Montferat the Emperor gave him a great deal of disturbance, by exempting several lordships from his jurisdiction, which occasioned a misunderstanding between the courts of Vienna and Turin for a considerable time.

The administration of the government in Savoy and Piedmont, the county of Nice, Montferat, and the rest of the dominions of the King of Sardinia, is committed to a Council of State, in

which his Majesty presides; next him sit the Princes of the Blood, and below them six Counsellors of State, the Principal Secretary, the Clerk of the Council, and other officers. There is also a Council of Finances, or Court of Exchequer, for each province, consisting of two Presidents, a Comptroller, Secretary, and other requisite officers: and a Chamber of Accounts consisting of three Presidents, three Chevaliers of accounts, sixteen Masters of accounts, a Treasurer-General, two Secretaries, a Comptroller, &c.

Justice is regularly administered in all cases where the government is not concerned. There are three Senates to which appeals are made from inferior tribunals; the first for Savoy, the second for Piedmont, and the third for Nice and its dependancies. The Senate of Savoy is held at Chambery, and consists of four Presidents, sixteen Senators, of whom the Abbot of Hautecombe is always one, the Advocate-General, the Attorney-General, two Clerks of the Senate, and two Secretaries. The Senate of Piedmont sits at Turin, and consists of four Presidents, two Knights, eighteen other Senators, an Advocate-General, an Attorney-General, a Clerk, and other necessary officers. The Senate of Nice is held in the capital city, and is composed of two Presidents, six Counsellors, an Advocate, an Attorney-General, Clerk, &c.

As the King of Sardinia is absolute in his dominions, these Senates or Parliaments are subject to his controul; and though common matters are referred to them, yet where the government is concerned, like the Parliaments of Paris and other cities of France, they serve only to record the decrees and edicts of the Prince.

## CHAP. VI.

*Contains an abstract of the history of Savoy and Piedmont, with an account of his present Sardinian Majesty's family, revenues, forces, titles, interests, and pretensions.*

SAVOY was antiently possessed by the Allobroges, the Centrones, Nantuates, Garocelli, and other barbarous people, as the Romans styled them. TERENTIUS VARRO reduced part of them to the obedience of Rome, and AUGUSTUS the rest, forming them into a province. When the Empire was over-run by the northern nations, Savoy underwent the common fate, and was subject sometimes to one, and sometimes to another. The Burgundians incorporated it with the kingdom they established in part of Gallia Celtica and Gallia Narbonensis. After the destruction of the Burgundian kingdom, it came into the hands of BEROLD, the son of HUGH Duke of Saxony, who going into Italy with his uncle the Emperor OTHO III, about the year 999, had the government of this country conferred upon him, and at length acquired the sovereignty of it. But my business being chiefly with modern history, I shall only give the names of his immediate successors, unless I meet with something remarkable in their respective administrations.

HUMBERT I, succeeded his father BEROLD, anno 1027.

AMADEUS I, son of HUMBERT, 1048.

ODO, brother of AMADEUS, 1050.

AMADEUS II, son of ODO, 1080.

HUMBERT II, his son, 1095.

AMADEUS III, his son, 1103.

HUMBERT III, his son, 1149.

THOMAS, his son, 1186.

AMADEUS IV, his son, 1233.

BONIFACE, his son, 1253.

PETER, the seventh son of Count THOMAS, in prejudice of the sons of his eldest brother, succeeded, anno 1263.

PHILIP, his brother, the eighth son of Count THOMAS, succeeded, 1276.

AMADEUS V, son of THOMAS, succeeded in prejudice of his elder brother PHILIP's children, 1284.

EDWARD, his son, 1323.

AIMON, his brother, 1329.

AMADEUS VI, his son, 1343.

AMADEUS VII, his son, 1383.

Duke of  
Savoy suc-  
ceeds to  
Piedmont.

AMADEUS VIII, his son, made a Duke by the Emperor SIGISMUND; and LEWIS of Savoy, Prince of Piedmont, dying without issue, he succeeded to his dominions, 1391.

LEWIS, his son, succeeded on his father's resignation, who retired into the priory of Ripailles, on the lake of Geneva, where being chosen Pope by the name of FELIX V, and governed nine years, for the peace of the church he resigned the popedom to his competitor, and retired again to the monastery of Ripailles, 1434.

AMADEUS IX, his son, 1465.

PHILIBERT I, his son, 1477.

CHARLES I, his brother, succeeded his aunt, Queen CHARLOTTE, in the Kingdom of Cyprus, 1482.

CHARLES-JOHN-AMADEUS, his son, 1490.

PHILIP II, son to LEWIS, 1496.

PHILIBERT II, his son, 1497.

CHARLES III, son to PHILIP II, 1504.

EMANUEL-PHILIBERT, his son, 1553.

CHARLES-EMANUEL, his son, 1580.

VICTOR-AMADEUS I, his son, 1630.

FRANCIS-HYACINTHUS, his son, 1637.

CHARLES-EMANUEL II, his brother, 1638.

VICTOR-AMADEUS II, his son, the present Sovereign of Savoy, Piedmont, &c. succeeded his father CHARLES-EMANUEL, on the 12th of June, 1675, during his minority. He was born on the 14th of May, 1666, and married ANNE-MARY of Valois, daughter to PHILIP Duke of ORLEANS, and HENRIETTA daughter of CHARLES I, King of England, anno 1684, by whom he had issue MARY-ADELAIDE, mother to the present French King, and MARY-LOUISA-GABRIELLA, married to PHILIP V, the present King of Spain; who is since dead, as well as the rest of the King of Sardinia's children, except CHARLES-EMANUEL-VICTOR, the present Prince of Piedmont, who married the Princess Palatine of Sultzbach, sister to the Prince of Sultzbach, heir to the Elector Palatine, in the year 1722, who the same year being brought to bed of a Prince, died in child-bed; nor did her son survive her much above two years: so that the King of Sardinia's dominions in Italy, are in danger of going to another branch of his family, viz. that of Carignan, if the Prince of Piedmont has no male issue. The Salique Law, it seems, is in force here, neither the females, or their issue, can inherit the dominions of Savoy or Piedmont. Of the branch of Carignan there are several males still living, besides the present Prince of that name. The celebrated Prince EUGENE is of this house, but there are several before him in the succession.

The Duke of Savoy entered into the grand alliance in the year 1690, and the Confederates  
VOL. II. NUMB. LXIX.

CHAP.  
VI.  
Piedmont.

sent him a good body of troops, and large remittances of money, to enable him to make head against the French: but he was generally unfortunate in this war; and particularly in the year 1693, when the French obtained a complete victory, and Duke SCHOMBERG, General of the English auxiliaries, was mortally wounded in the field of battle. His Royal Highness made a separate peace with France in the year 1696, in consideration of their restoring all the towns they had taken from him during the war, except Pignerol, and their paying him four millions of livres, (400,000 l.) It was also agreed that the Duke of Burgundy should marry his daughter, as hath been intimated already. On the other hand, the Duke agreed to banish all the French Refugees in his territories, and prohibit the Vaudois from conversing with his other subjects.

Upon the death of CHARLES II, King of Spain, he joined the French, and in concert with them endeavoured to prevent the Germans, under Prince EUGENE, penetrating into Italy. But after the Germans had passed the Alps, and got footing in that country, he began to listen to the proposals that were made him by the allies; and of this LEWIS XIV having received some intimation, ordered his Generals to make his troops prisoners: whereupon the Duke arrested the Ambassadors of France and Spain, with all the French at Turin, and a regiment of horse of the same nation, that lay in the neighbourhood. About which time his Royal Highness received the following short letter from the most Christian King, viz.

‘ Monsieur,

‘ SINCE religion, honour, alliance, treaties, and your own hand, are of no force between you and me, I have sent my cousin, the Duke of Vendosme, to explain my mind to you, and he will give you four and twenty hours to consider what you have to do.’

The Duke, notwithstanding he had married one daughter to the heir of the crown of France, and another to the King of Spain, remained unmoved in his resolution of adhering to the allies. Whether they offered him better terms than France, or whether he observed that they were an over-match for LEWIS XIV, and that this conduct would turn to his advantage in the end, whatever he might suffer for the present; he bravely resolved to venture all, though he had at that time no forces able to make head against France. Prince EUGENE indeed who commanded the Emperor's army in Lombardy, sent him from time to time such small detachments as he could spare, and these served to form a flying camp, and harass the French army, while they laid siege to his towns, but could not prevent the taking them one after another. Vercell, Suza, and Ivrea, were forced to surrender in the year 1704; and Verue, after a six months siege, in the year 1705, underwent the same fate: but all his fortresses were so well defended, that the French lost the flower of their troops before them, and he gained time thereby till the Confederates could march to his assistance; for the French laying siege to Turin on the 3d of June, 1706, Prince EUGENE joined the Duke of Savoy with the body of the Imperial army on the 28th of August following, and on the seventh of September they attacked the enemy before Turin with their

Battle of  
Turin.

CHAP.  
VI  
Piedmont

their united forces, and gained a compleat victory. The same day the Duke entered his capital city in triumph, which was reduced to the last extremity, having endured a siege of three months, and spent all their powder. In this engagement the Duke of Orleans and the Marshal MARSH, who commanded the French, were both wounded, and MARSH died of his wounds three days after. The allies took an hundred and fifty pieces of cannon, fifty mortars, and seven thousand prisoners, with all the enemy's tents, ammunition, and baggage, and made a prodigious slaughter amongst them; whereupon not only the towns in Savoy and Piedmont which the French had taken were immediately reduced to the obedience of their Sovereign the Duke of Savoy, but the Imperialists made themselves masters of the Milanese, and drove the French entirely out of Lombardy. The following year, 1707, Count TAUN, the Imperial General, marched with a detachment of fifteen thousand men into the kingdom of Naples, in reducing whereof he met with but little opposition. The Duke of Savoy and Prince EUGENE at the same time marched into France with forty thousand men, and in conjunction with the confederate fleet, commanded by Sir CLOUDESLEY SHOVEL, laid siege to Thoulon; but having lain before that city about a month, the taking of it was found impracticable, and the Duke marched back again into Italy, the French being in no condition to oppose his return; or if they were, did not think fit to hazard a battle in their own country, where a defeat might have been fatal to them. The Duke, by way of retaliation for the havoc the French had been guilty of in Piedmont, destroyed all the olive-trees about Thoulon, and in the country through which he marched. And this was the last considerable enterprize his Royal Highness was concerned in during the war; there happening to be a misunderstanding between the Emperor and him, concerning some fiefs in the Montferat: however, at the peace concluded in the year 1713, the services the Duke of Savoy had performed, and the hazards he had run in the confederate cause, induced the high allies to confer on him the kingdom of Sicily; to which the King of Spain consented, on condition of his Sicilian Majesty's entering into a strict alliance with him.

The Spaniards invade Sicily.

In the month of August 1717, the King of Spain commanded the Marquis de Lede to make a descent on the island of Sardinia with six or seven thousand men, and made himself master of the island, notwithstanding it was yielded to the Emperor by the treaty of Utrecht. The following year, 1718, the same General invaded Sicily with seventeen or eighteen thousand men, and most of the towns opened their gates to him, and submitted to King PHILIP. Whereupon the Emperor, Great Britain, and France, entered into an alliance, which, upon the States-General coming into it, obtained the name of the Quadruple Alliance, whereby they engaged to see the peace of Utrecht performed in all it's articles, except such as they should consent to alter: and in one of the said articles it was stipulated, That whereas the cession of Sicily by the treaty of Utrecht to the house of Savoy was solely made for rendering that peace more solid and lasting, and not on the account of any right the King of Sicily had thereto, which had not produced the desired effect; the Princes who made the said treaty of Utrecht therefore, for the repose of Italy, had thought it lawful for them, even without the consent of the

parties concerned, to abrogate that article of the said treaty which regarded the kingdom of Sicily, and to require that the King of Sicily should restore to his Imperial Majesty the said island and kingdom, with all it's dependencies. In return whereof his Imperial Majesty should yield to the said King of Sicily the island and kingdom of Sardinia, in the same manner he possessed Sicily: on condition nevertheless, that the reversion of the said kingdom of Sardinia should be reserved to the crown of Spain, whenever the house of Savoy should fail of heirs male. His Imperial Majesty also confirmed to the King of Sardinia all the cessions made to him of the Montferat, and of the provinces, towns, and places transferred to him in the Milanese; and acknowledged the right of the said King of Sicily to succeed to the crown of Spain, on failure of male issue of King PHILIP and his posterity; provided that no Prince of the house of Savoy, who should succeed to the kingdom of Spain, should possess at the same time any part of the continent of Italy. To which alliance the King of Sicily acceded, and agreed to take upon him the title of King of Sardinia, instead of King of Sicily.

The King of Spain also being over-powered by the Imperialists and their allies, agreed to evacuate the islands of Sicily and Sardinia, to acknowledge the Emperor's title to one, and the King of Sardinia's to the other; and, in short, to accede to the quadruple alliance: though it is highly probable, that neither his Sardinian or Catholick Majesty were perfectly satisfied with the terms of it. His Sardinian Majesty's dominions having enjoy'd a profound peace ever since the year 1720, that Prince has applied himself to correct such abuses, as had crept into the administration during the late wars, and to encourage trade and manufactures. He has also ordered the laws to be reviewed, which were grown too voluminous, and reduced them to a narrower compass, and abridged and shortened the proceedings in courts of justice, to the great satisfaction of his subjects.

His present titles are VICTOR-AMADEUS, by the grace of God, King of Sardinia, Duke of Savoy, Chablais, Aouste, Genevois, and Montferat; Prince of Piedmont, Achaia, Morea, and Oneglia; Marquis of Salusses and Suza; Earl of Asti, Geneva, Nice, Tende, and Romont; Baron of Vaud; Lord of Verceil, Friburg, Marro, Piella, Novella; Prince and perpetual Vicar of the holy Roman Empire in Italy, and King of Cyprus, &c.

As the King of Sardinia is a member of the Empire, he has a session in their Dyets amongst the Princes of the Circle of the Upper Rhine, and contributes his quota to a war against the Turks; but I don't find he is subject to the laws and constitutions of the Empire in other respects, unless it be that he receives the investiture of such territories as he enjoys in the Montferat and Milanese from the Emperor.

The ordinary revenues of this Prince are usually computed at five hundred thousand pounds sterling per ann. but this seems to be no more than an uncertain guess: however, as he is possessed of several rich and fertile provinces, they must be very considerable; and as he is absolute in his dominions, he can augment them at his pleasure. What he has to consider is, that he does not too much oppress his subjects by laying on them duties greater than they can bear, and thereby discourage them from cultivating and improving

proving their lands to the best advantage, which would in the end redound to his own loss. And as he is surrounded by Princes more potent than himself, he must take care also not to give his people too great provocations, lest they should be induced to change their masters, as we find some of the Vaudois did in the last war, putting themselves under the protection of the French.

Forces.

He is always obliged to have a good body of troops in time of peace, to garrison his frontier towns against France and the Milanese; but he does not seem to be governed by the German principle, of keeping up twice as many forces as he can maintain. It is with reluctance that he is ever drawn into a war either by France or the Empire; and when he finds it unavoidable, and that he must declare for the one party or the other, he takes care to make an advantageous bargain: to have such sums advanced, and pensions annually paid him, that he has little occasion to burthen his subjects with extraordinary taxes. In all that long and terrible war he was engaged in for thirty years, till the peace of Utrecht, I question whether he paid ten thousand men with his own money; and though his country suffered very much, he was at last amply rewarded by an addition of several fine countries to his former territories, and placed in the rank of Kings. The taking Sicily from him again by the same powers who had conferred that kingdom on him, without any provocation on his part, must be a very great mortification; but as it is, he has been no great sufferer by his adherence to the allies: had he been biased indeed by considerations of blood or natural affection, it might have been expected that he should have declared for France and Spain, his two grandsons being heirs to those two kingdoms; but kindred or friendship, seldom determine Princes or States in forming their alliances. He might be apprehensive, that if France and Spain had success in the war, as their territories lay contiguous to his own, they would put what terms they pleased upon him, and he must become a vassal to LEWIS le Grand. Whereas by taking part with the Confederates, he might enlarge his dominions, and make a greater figure in Europe than any of his ancestors had done; and the success has shewn the wisdom of his choice. And here give me leave to observe, that no Prince has discovered a greater reach in politicks than the King of Sardinia, in defending his small territories for so many years against the most powerful and ambitious Prince in Europe, who lay contiguous to him, and attacked him with the utmost fury. In the first war, though he had lost the best part of his country, he had the address to get every place restored him, except Pignerol, by a treaty to marry one daughter to the heir of France, and another to the King of Spain, and to procure large sums of money from France to reimburse the charges of the war. In the second war, though he joined the French, and admitted their troops into his country, when he changed hands, and came over to the Confederates, he so contrived matters, that the French had not an opportunity of surprizing any of his towns, but every one of them defended themselves to the last extremity, and gave his new allies an opportunity of relieving him. To say what his interest would be in case of a rupture between the allies of Vienna and Hanover, would be presumption in me; but if we may judge at his future conduct by the past, we may conclude he will not be in haste to de-

clare for either; and when he does, the powers that offer him the greatest advantages will have him. Should he take the Vienna side, no doubt but the maritime powers will soon deprive him of his kingdom of Sardinia; but this is a loss which the Imperialists can easily make him amends for, by enlarging his Italian territories, and may perhaps erect him another kingdom in Lombardy, if they should stand very much in need of him.

The republicks of Geneva and Genoa are as much inferior in strength to his Sardinian Majesty, and as apprehensive of his designs against them, as he is of France or the Emperor; and were they not protected by their respective allies, would be in danger of falling under his power. Nor does he want a pretence to attack Geneva, if he should meet with a favourable opportunity, his ancestors having been Sovereigns of that city, as they were also of the neighbouring country of Vaud, which the Switzers made themselves masters of, and still keep by a strong hand. He is not yet indeed in a condition to recover either. But none of these States would willingly see his Sardinian Majesty more powerful than he is, being well assured he would revive his antiquated claims on their respective countries, if he knew how to support them by his arms.

## CHAP. VII.

*Treats of the territories and coast of Genoa, the antient Liguria.*

THIS country is properly called, *The coast of Genoa*; extending along the Mediterranean Sea, from the river Var to the Magra, an hundred and fifty miles in length, and not being above twenty in breadth, and in some places scarce ten. It is bounded on the land side by the Alps and Apennine hills, which separate the Genoese from the county of Nice, Piedmont, Montferat, the Milanese, and Parma on the west, north, and north-east; it is bounded by the Duchy of Florence towards the east; and by the Mediterranean, or the Riviere de Genoa on the south.

The country lying thus open to the south sun, and the rocks and mountains covering it from the northern winds, the air is much warmer than in the neighbouring country of Piedmont, and in summer it is excessive hot. The tops of the mountains are perfectly bare, having neither wood nor herbage upon them; but the bottom and south side of the mountains are well planted with vines, olives, mulberries, and other fruit-trees, and in some places with palm-trees, the last of which are rarely found in other parts of Italy; but the soil yields scarce any corn, nor have they great plenty of fish in their seas; or rather, as some relate, these seas are so tempestuous, that the fish are not easily taken here. Some travellers indeed assure us, that they have seen large shoals of fish upon this coast in fine weather, which may easily be reconciled with the former accounts; for let there be ever so great a plenty of fish in a calm, they always disappear in stormy weather, which this coast is very subject to.

The Genoese, as Mr ADDISON observes, are generally esteemed a cunning industrious people, and more enured to hardship than the rest of the Italians, which was the character of their ancestors,

flores, the antient Ligurians. As the barrenness of the country continues, no wonder, says my author, that their manners are the same; for nothing makes men's wits sharper than want. But there may be this further reason given for their sagacity and dexterity in business, namely, that all their nobility and gentry apply themselves to trade, and are better acquainted with the mysteries of over-reaching and cozening those they deal with, than the gentry of other countries. It is very rare to find a tradesman above the little arts of tricking and deceiving his customers, either in the price or goodness of what he sells; and those that have been bred up in such practices, are seldom observed to have that spirit and generosity which is so natural to gentlemen. Let an overgrown tradesman come and settle in the country, you shall see him practising all the little arts in the neighbourhood he lives in he was used to in his shop, as often as he meets with an opportunity: if he is guilty of a charitable or benevolent act, it is usually by his last will and testament, which is not to take place till after he is dead, and this by way of composition with heaven perhaps for the extortion and knavery of his youth.

Habits.

The quality in Genoa are usually clothed in black, and wear no swords; but throw a cloak over them when they got out, notwithstanding the heat of the country. As for the poorer sort of people, such as labourers, husbandmen, &c. they scarce wear any cloaths at all, nor have occasion for any, the weather is so warm. The people of a middle rank follow some the Spanish and others the French modes, according as they are affected. The womens petticoats, who are pleased with the Spanish fashions, are stuffed out with farthingals; while the men wear broad hats, long-waisted doublets with hanging sleeves, and strait breeches, buckling themselves up with broad leathern belts.

Towns.

The chief towns are, 1. Genoa, the capital. 2. Gavi. 3. Coghereto. 4. Varragio. 5. Noli. 6. Albenga. 7. St Lorenzo. 8. Taggia. 9. St Remo. 10. Vintimiglia. 11. Oneglia. 12. Final. 13. Sarzana. 14. Lerice. 15. Spezza. 16. Porto Venere. 17. Monterosso. 18. Sestri. 19. Lavagne. 20. Rapallo. 21. Porto Fino. 22. Brugnato. 23. Torriglia. 24. Vergagny. And, 25. Chivari.

Genoa city.

The city of Genoa lies upon the sea, embracing the harbour in form of a crescent, in forty-four degrees thirty minutes north latitude; part of it is on a flat, close to the shore, the other part rises gradually with the hill. The houses are lofty, and beautifully painted on the outside, and afford one of the finest prospects in the world to those who approach it from the sea. The harbour is large and deep, but lies open to the south-west, the most troublesome wind that blows in these seas. They have built a mole, which secures their galleys and small vessels from storms as well as enemies, but the larger lie exposed to both: nor could they protect the town itself from a bombardment, when the French fleet came before it in the year 1684, the heart of the town was almost destroyed; but it is since rebuilt to great advantage: nor did the finest palaces which stood towards the outside of the town receive any great damage. The Genoese have since built another mole and several forts, which they have provided with long guns to secure them against the like misfortune; but whether it will answer their ex-

pectations or not, I find is much questioned. Most of the streets are very narrow, and the houses built six or seven stories high, which occasions the lower rooms to be dark, but defends them from the scorching heat of the sun. The buildings are of brick or stone, the walls generally plastered over and painted, and the roofs flat. The new street, according to Mr ADDISON, is a double range of palaces from one end to the other, built with an excellent fancy, and fit for the greatest Princes to inhabit. They are richly adorned with marble, and the fronts of four or five of them entirely of that kind of stone; but these are all the marble houses in Genoa, though, according to the accounts of many travellers, one would be inclined to think the whole town was built with it. Five or six of the streets are of a great breadth, and the houses very magnificent; as they are also in the suburb of St Pietro D'Arena. There are a great many beautiful palaces standing along the sea-shore, which makes the town appear much larger than it is to those who sail by it; but the circumference of the city is not above six miles. It is surrounded by a wall and other fortifications, and at a little distance there is a second wall, which takes in the hills that command the place. The streets being too narrow for coaches to pass, chairs and litters are chiefly used by the quality instead of them.

There are in the place about thirty parish-churches, twenty colleges, and as many convents and religious houses; the steeples and towers whereof are no small ornament to the city, and may be seen at a great distance at sea. But what seems peculiar to this town is their gardens of flowers and greens on the roofs of their houses, and in their balconies, where the foundation will bear them. The principal publick buildings are, 1. The cathedral, dedicated to St LAWRENCE, a large edifice, but not so beautiful as many other Italian churches. The things most remarkable on the inside are the marble pillars which support the roof, and a marble statue of St JOHN the Evangelist. The ashes of St JOHN the Baptist are said to be preserved in this church in a silver vessel, which stands upon four porphyry pillars. They shew also a large dish made of one single emerald, which, according to tradition, was presented to SOLOMON by the Queen of Sheba, and is the same which our Saviour eat the paschal lamb out of. The church of the Annunciation is the finest in Genoa, built at the sole charge of the family of LOMELLINI: the roof is gloriously gilded, the pillars that support it are of marble, and the walls covered with the most exquisite paintings; the altars are magnificent, and adorned with fine pictures done by RUBENS, and other great masters. The churches of St CYR, St MATTHEW, and St MARY of Carignan, are also well worth viewing.

The Duke of DORIA's palace has the best appearance on the outside of any in Genoa: it takes up all the ground from the sea-shore to the top of the hill; in the lower part of it is a magnificent gallery, paved with black and white marble, and supported by pillars of the same stone, being an hundred and twenty paces long, and stands in full view of the port. Beyond this is a fine garden, adorned with fountains and statues, amongst which one of them represents ANDREW DORIA, the head of the family, under the figure of NEPTUNE, much larger than the life. As the palace rises higher upon the ascent of the hill, the apartments are still more magnificent; nor can any thing

VII.  
Genoa.

thing be richer than the furniture; the very bedsteads are of silver, and nothing is to be seen but tables of jasper, alabaster, agate, or silver; among which there is one of silver, said to weigh twenty-four thousand crowns. One room, Mr ADDISON observes, is hung with tapestry, in which are wrought, the figures of the great persons that family has produced; nor can any house in Europe show a longer line of heroes, who have preferred the good of their country to all other views. There is another statue erected to the memory of ANDREW DORIA at the entrance of the Doge's palace, with the title of, *The deliverer of his country*. But to return to the palace of DORIA; it is filled with statues, busts, bas-reliefs, and the most exquisite paintings; the hall through which we enter is built in form of a portico, and covered with pictures drawn by the best hands. Beyond this part of the palace is a beautiful summer-house in the middle of a fine garden, which reaches to the top of the hill, adorned with grotto's, fountains, and statues; and among other curiosities, there is a tomb and epitaph of a dog, that had a legacy of five hundred pounds per annum left him for his maintenance.

The palaces of Durazzo, Palavicino, Spinola, Baldi, Grimaldi, Lomellini, and Turfis, also are deservedly admired. But Mr ADDISON seems to prefer the Villa Imperiale, a mile out of town, to any of them. The Doge's palace is a large building, where are chambers for the great and little Council, and for the colleges, as also lodgings for the Doge, and some of the Senators and their families; but this is much inferior to the private palaces of the nobility, both in point of architecture and materials. It is not to be conceived, says a French writer, how many beauties may be discovered with the single cast of an eye in the new street of Genoa: all is enchanting! all astonishing! When we have viewed one of these palaces, we are apt to think that nothing can excel it, and yet the beauty of the next, will make us forget what we just before so much admired. The Jesuits church may also well be ranked among the Genoese palaces, if we regard the materials, the architecture, or the painting with which it is adorned. Mr ADDISON complains, that there are but few antiquities to be met with in this city: he saw no other than the rostrum of an old Roman ship, which is made of iron, and ends in a boar's head: this was found in the harbour of Genoa as they were cleaning it. In the arsenal, where 'tis pretended there are arms for forty thousand men, they shew several pieces of armour, which, according to tradition, were worn by certain Genoese ladies, in a croisade against the Turks, in which they distinguished themselves by their bravery.
