## ACCOUNT

OF

## HIMSELF and of his WRITINGS:

Faithfully extracted from his various WORKS.

To which are added,

- I. His CHARACTER, as it has been written fince his Decease.
- II. His APHORISMS, or Rules of Health.
- III. His METHOD of curing a Cold.
- IV. His REMARKS upon Pythagoras, Cornaro, Sir Isaac Newton, the famous Mr. Law, Dr. Barwick, &c.
- V. His CHARACTER of the Hon. GEORGE BAILLIE, Efq;

- VI. An ACCOUNT of Dr. PIT-CAIRN, and his WRIT-INGS, by Dr. SEWELL.
- VII. Some EXTRACTS from LEWIS CORNARO, a Noble Venetian, concerning the Preservation of Health, and prolonging of Life.
- VIII. An uncommon Method of prolonging human Life to 115 Years, by Means of the Breath of Young Women.

### LONDON:

Printed and Sold by J. WILFORD, at the Three Flower-de-Luces, opposite to the Sessions-House, in the Old-Bailey. M.DCC.XLIII.

(Price One-Shilling.)

Oppenheum +

Newly publish'd, in One Volume in Folio, (Price 1 l. 10 s. neatly Bound and Letter'd) containing 212 Sheets:

MEMORIALS and CHARACTERS of above 200 eminent and worthy PERSONS of Both Sexes; more particularly of the NOBILITY and GENTRY of Great Britain, from the Year 1600 to the present Time: Interspers'd with several valuable LIVES. Collected and compil'd from a great Variety of AUTHORS, whose NAMES are presix'd to each LIFE or CHARACTER; among which are contain'd those of the following

### NOBLEMEN and GENTLEMEN.

- I. The Dukes of Albemarle, Bedford, Lauderdale, Rutland.
- II. The Lords Barnard, Delamere, Digby, Falkland, Holles, Somers, Stafford, Sudbury.
- III. Sir Thomas Adams, Sir William Armyne, Sir Roger Braidshaigh, Sir Roger Burgoyne, Sir John Chapman, Sir Richard Fanshaw, Sir Richard Hoghton, Sir Robert Leicester, Sir John Norton, Sir Hugh Pollard, Sir Geo. Santt-Paule, Sir Edward Seymour, Knts. and Barts.
- IV. Sir Thomas Bludworth, Sir John Buckworth, Sir William Cockayne, Sir George Dalston, Sir Stephen Fox, Sir John Gayr, Sir Edward Giles, Sir Matthew Hale, Sir Richard Hoare, Sir Henry Johnson, Sir John King, Sir Anthony Rouse, Sir Edmund Turnor, Sir Peter Vandeput, Sir Thomas Wharton, Sir Geo. Whitmore, Kts.
- V. Andrew Barker, George Baillie, James Bonnell, Robert Boyle, Edward Colston, Ferdinando Hastings, Algernon Grevile, Henry Hoare, Richard Legh, Robert Nelson, Walter Norbane, Edward Peyto, Dennis Rolle, Henry St. John, Thomas Sutton, Christopher and John Vane, Francis Willoughby, Esquires.

# Dr. CHETNE's

Own ACCOUNT of

## HIMSELF.

Was born of healthy Parents, in the Prime of their Days, but disposed to Corpulence by the whole Race of one Side of my Family. I passed my Youth in close Study, and almost constant Application to the abstracted Sciences, and consequently in

great Temperance and a sedentary Life; yet not so much, but that I sometimes kept Holyday, diverted myself with the Works of Imagination, and rouzed Nature by ageeable Company and good Cheer.

Upon my coming to London, I, all of a sudden, chang'd my whole Manner of Living: I found the Bottle Companions, the younger Gentry, and Free-livers, to be the most easy of Access, and most quickly susceptible of Friendship and Acquaintance; nothing being necessary for that Purpose, but to be able to eat lustily, and swallow down much Liquor; and being naturally of a large Size, a chearful Temper, and tolerable lively Imagination; and having, in my Country Retirement, laid in Store of Ideas and Fasts; by these Qualifications I soon became caressed by them, and grew daily in Bulk and in Friendship wirh these gay Gentlemen and their Acquaintances.

B

I

I was tempted to continue this Course, no Doubt from a Liking, as well as to force a Trade, which Method I had observed to succeed with some others; and thus constantly dining and supping in Taverns, and in the Houses of my Acquaintances of Taste and Delicacy, my Health was in a few Years brought into great Distress, by so sudden and violent a Change. I grew excessively fat, short-breath'd, lethargic, and listless.

He then gives an Account of a violent Fever he was feized with, and proceeds, p. 327.

At this Time I left off Suppers of all Kinds, even at Dinner eating but a small Quantity of Animal Food, and drinking very little fermented Liquor, well knowing that Diseases must always be cured by their Contraries. On this Occasion, all my bouncing, protesting, undertaking Companions forfook me, and dropp'd off like Autumn Leaves: They could not bear, it feems, to fee their Companion in fuch Misery, but retired to comfort themselves with a cheerupping Cup, leaving me to pass the melancholy Moments with my own Apprehensions and Remorfe. Even those who had shared the best Part of my Profusions, who, in their Necessities, had been assisted by my false Generosity, and, in their Disorders, relieved by my Care, did now entirely abandon me; fo that I was forc'd to retire into the Country quite alone, being reduced to the State of Cardinal Wolfey, when he faid, that if he had served his Maker as faithfully and warmly as be bad his Prince, be would not have for saken him in that Extremity: And so will every one find, when Umion and Friendship is not founded on solid Virtue, and in Conformity to the divine Order, but in sensual Pleafures and mere Follity. This Circumstance I mention, because

because I thought then, it had some Share in my succeeding Melancholy, p. 330.

While I was thus forfaken by my Holiday Friends, and my Body was, as it were, melting away like a Snow-ball in Summer, being dejected, melancholy, and much confined at Home, by a Course of mineral Medicines, and Country Retirement, I had a long Seafon for Meditation and Reslection, (my Faculties being then as clear and quick as ever) which I was the more readily led into, that I concluded myself infallibly entering into an unknown State of Things.

Having had a liberal and regular Education, with the Instruction and Example of pious Parents (who at first had designed me for the Church) I had preserved a firm Persuasion of the great and sundamental Principles of all Virtue and Morality; viz. The Existence of a supreme and infinitely perfect Being, the Freedom of the Will, the Immortality of the Spirits of all intelligent Beings, and the Certainty of future Rewards or Punishments.

These Doctrines I had examined carefully and had been confirmed in, from abstracted Reasonings, as well as from the best natural Philosophy, and some clearer Knowledge of the material System of the World in general, and the Wisdom, Fitness, and beautiful Contrivance of particular Things, animated and inanimated; so that the Truth and Necessity of these Principles was so riveted in me (which may be seen by the first Edition of my Philosophical Principles, published some Years before that happened as never after to be shaken in all my Wanderings and Follies: And I had then the Consolation to reslect, that in my loosest Days, I had never pimp'd to the Vices or Insidelity of any,

any, but was always a determined Adversary to both.

But I found, that these alone were not sufficient to quiet my Mind at that Juncture, especially when I began to confider feriously, whether I might not (thro' Carelesness and Self-Sufficiency, Voluptuousness and Love of Senfuality, which might have impaired my Spiritual Nature) have neglected to examine with fufficient Care; if there might not be more required of those who had had proper Opportunities and Leisure; if there might not, I say, be higher, more noble, and more enlightening Principles revealed to Mankind some where; and if there were not more encouraging and enlivening Motives propofed, to form a more extensive and beroic Virtue upon, than those arising from Natural Religion only (for then I had gone little farther than to have taken Christianity and Revelation on Trust) and lastly, if there were not likewise some clearer Accounts discoverable of that State I was then (I thought) apparently going into, than could be obtained from the mere Light of Nature and Philosophy.

Such were my Reflections in this my melancholy Retirement; and this led me to call to Mind, which of all my numerous and various Acquaintances I could wish to resemble most, now in these my (to me seemingly approaching) last Moments; and who, among all those of my particular Acquaintances, was be, who being of sound natural, and duly cultivated Parts, had most strictly and constantly liv'd up to their Convictions under the commonly received Principles, and plain Consequencies of Christianity: In a Word, who it was I could remember to have received, and lived up to the plain Truths and Precepts

Precepts contain'd in the Gospels, or more particularly in our Saviour's Sermon on the Mount.

At that Time, among many whom my Memory fuggested to me, I fix'd on one, a worthy and learned Clergyman of the Church of England, sufficiently known and distinguished in the Philosophical and Theological World (whom I dare not name, because he is still living, tho' now extremely old;) and as in studying Mathematicks, and in running over (as I was able) Sir Isaac Newton's Philosophical Works, I had always pick'd out, and mark'd down, the Authors and Writings mostly used and recommended by those others, and by Him, because I thought they could best judge of such; so in this Case, the more quickly to settle my Mind, and quiet my Conscience, I resolved to purchase, study, and examine carefully, fuch Spiritual and Dogmatick Authors, as I knew this venerable Man did most approve and delight in.

In this Manner I collected a Set of religious Books and Writers, of most of the first Ages since Christianity, recommended by him, with a few others of the most spiritual of the Moderns, which have been my Study, Delight, and Entertainment, in my Retirements ever since: And on these I have formed my Ideas, Principles, and Sentiments; so as under all the Varieties of Opinions, Sects, Disputes, and Controversies, that of late, and since the earliest Ages, have been canvassed and bandied in the World, I have scarce ever since been the least shaken, or tempted to change my Sentiments or Opinions, or so much as to hesitate in any material Point.

This tedious, perhaps, impertinent Circumstance I mention, because the Fright, Anxiety, Dread, and Terror, which, in Minds of fuch a Turn as mine (efpecially under a broken and cachettick Constitution, and in fo atrocious a nervous Case) arises, or at least, is exasperated from such Reflections, being once setled and quieted, That after becomes an excellent Cordial, and a constant Source of Peace, Tranquillity, and Chearfulness, and so greatly contributes to forward the Cure of fuch nervous Diseases: For I never found any fensible Tranquillity or Amendment, 'till I came to this firm and fetled Resolution in the main; viz. To neglett nothing to secure my eternal Peace, more than if I had been certified I should die within the Day; nor to mind any Thing that my secular Obligations and Duties demanded of me, less, than if I had been ensured to live fifty Years more. This, tho' with infinite Weakness and Imperfection, has been much my fettled Intention in the main fince.

After relating the Progress and Cure of his Distemper, for several Pages, he concludes, p. 363.

From the most extreme Misery, I do now enjoy as perfect Health, as much Activity and Chearfulness, with the full, free, and perfect Use of my Faculties; a Facility of Study, and of going about the Business of my Profession, and, in short, of every rational Function of Life, as I was ever capable of in my best Days, and indeed, of every Thing worth living for, as a free and rational Intelligence: Every Thing, I say, except that I cannot eat and drink so highly and voluptuously as I have formerly; and if I know my Heart (which I am sure I do not fully) tho' I were to be eternal and unaccountable, I should live (at least wish to live, in the main, and as to Diet) as I now do, and would

would not willingly and deliberately go thro' the fame Misery, for the mere Gratification of my Senses only; no, not to obtain the Dominion of our System, and all the Glories and Pleasures in it.

What I may happen to do, God only knows; I am too old, I hope, to make any new Trials and Changes in this my bodily Regimen: And indeed, to what Purpose? Being as well as any, and indeed better than most are, at my Time of Day: And therefore, with God's Grace, if my Health, Senses, and Love of Virtue, continue with me the same, I shall, I hope, go on in the Method now described, and live, and I hope die, in continual Gratitude to the best of Beings, who, by an over-ruling Providence, and as it were by mere casual Hints, far beyond the Reach of my Penetration, has irresistibly (as I should almost say, if I selt not my own Liberty) directed the great Steps of my Life and Health hitherto.

Misericordias Domini in æternum cantabo.

Which (for the Sake of the English Reader) is to fay.

I will sing the Mercies of the Lord for ever.

He died at Bath, April 12, 1743. Aged 72. Since which the following excellent CHARACTER has been given of him.

### 

### THE

## CHARACTER

OF

## Dr. CHETNE.

HE extraordinary Circumstances of his Life in a medical Sense may be best collected from his various Works. - As a Physician he feemed to proceed, like Hippocrates of old and Sydenbam of late, upon a few perceptible Truths. -He writ chiefly to the Studious, the Voluptuous, and those who inherited bad Constitutions from their Parents, and confequently must have been greatly mifreprefented by those who needed not his Aid, therefore ridicul'd him. A Man, who combates human Pleasures and Passions, will never want Enemies.—That he might be mistaken in some Parts may be readily allowed, but it plainly appears, that he writ from the full Conviction of his Heart.—But to come nearer to the Point, and within the common Judgment of Mankind, his System has a peculiar Tendency to promote Virtue and Religion, to calm the Passions, refine the Mind, and purify the Heart.

It has been the common, nay a proverbial Phrase, to charge the Professors of Physic with Irreligion, it is hoped, falsely: However, Dr. Cheyne had a peculiarly sincere and vital Warmth for Christianity.

He

He considered it in the primitive Ages as it was practised, and not in the present as 'tis taught. He made his Writings all subservient to Virtue and the Glory of God. He lost not his Creator in the infinite Works of Creation; he lov'd the Clergy, and was beloved by them. He died, as he ever wish'd and besought God, calm and without a Pang. His last Hours were entirely spent in Prayer, grounded on a full Considence of Christ's all-sufficient Merit.

## Dr. CHETNE's

Own ACCOUNT of his

## WRITINGS

Was on the Account of my great Master and generous Friend, Dr. Pitcairn. He thought himself ill-used by some of his Brethren of the Profession who then were at intestine War on the Subject of Fevers; and fancied the handsomest Way to bring them down, was to exhibit a more specious Account of this Disease, than any of them had shewn. His Business then in the Practice of Physick was so great, as not to allow him sufficient Time for such a Work. Two others therefore, with myself, were joined to manage the Affair: In which he was to cut and carve, and to add the practical Part. My Province was the Theory. I was then very young in the Profession.

and living in the Country. But in a few Days I brought in my Part finished, as it now appears, under the Title of The New Theory of Fevers. The others either suppress'd or forgot theirs; and mine, without the least Alteration, but in a few Words, was order'd for the Press. I could not resist the Commands of my Friend; but would not fuffer my Name to be put to it, being conscious it was a raw and unexperienced Performance. There are tho', fome Things in it, which may be of Use to Beginners, both as to the Method of Philosophising on the Animal Occonomy, and in the Account of the Manner of the Operation of the greater Medicines. The Foundations also and the Causes assigned for acute and slow Fevers, I still think folid and just, and more particular and limited than those of any other Theory yet published. But it wants fo much filing and finishing, so many Alterations and Additions, as would cost me more Labour and Pains than the writing a new Treatise on the same Subject: So that out of mere Laziness and Inappetency, I have thrown it by as unripe Fruit, and fuffered it to be as if it never had been.

My next Sally was in a Book of abstracted Geometry and Algebra, entitled, Methodus Fluxionum inversa, brought forth in Ambition and bred up in Vanity. There are some Things in it tolerable for the Time, when the Methods of Quadratures, the Mensuration of Ratio's, and Transformation of Curves, into those of other Kinds, were not advanced to such Heights as they now are. But it is a long Time since I was forced to forgoe these barren and airy Studies for more substantial and commodious Speculations: Indulging and Rioting in these so exquisitely bewitching Contemplations, being only proper for publick Professors, and those born to Estates, and who

are under no outward Necessities. Besides, to own a great but grievous Truth, tho' they may quicken and sharpen the Invention, strengthen and extend the Imagination, improve and refine the reas'ning Faculty, and are of Use both in the necessary and the luxurious Refinement of mechanical Arts; yet having no Tendency to rectify the Will, sweeten the Temper, or mend the Heart, they often leave a Stiffness, Positiveness, and Sufficiency on weak Minds, much more pernicious to Society, and the Interests of the great End of our Being, than all the Advantages they bring them can recompence. They are indeed Edge-Tools, not to be trusted in the Hands of any, but those who have already acquired an humble Heart, a lowly Spirit, and a fober and teachable Temper. For in others they are very apt to beget a fecret and refined Pride, an over-weening and over-bearing Vanity (the most opposite Temper to the true Gospel-Spirit, which, without Offence, I may suppose to be the best Disposition of Mind) that tempts them to prefume on a Kind of Omniscience, in Respect of their Fellow-Creatures, that have not rifen to their Elevation; and to fet up for an Infallibility, or at least a decisive Judgment, even in Matters which do not admit of a more or less (their proper Object) of which Kind whatfoever relates to the infinite Author of our Being most certainly is. Upon all which Accounts, conscious of my own Weakness, I have long fince bid them an Adieu, farther than as they ferve to amuse, or are useful in the absolute Necessities of Life.

The Defence of that Book against the learned and acute Mr. Abr. de Moivre, being written in a Spirit of Levity and Resentment, I most sincerely retract, and wish undone, so far as it is personal or peevish,

C 2

and ask him and the World Pardon for it; as I do for the Defence of Dr. Pitcairn's Dissertations, and the New Theory of Fevers, against the late learned and ingenious Dr. Oliphant. I heartily condemn and detest all personal Resections, all malicious and unmannerly Turns, and all salse and unjust Representations, as unbecoming Gentlemen, Scholars, and Christians; and disprove and undo both Personances, as far as in me lies, in every Thing that does not strictly and barely relate to the Argument.

The first Part of the Philosophical Principles, that of Natural Religion, consists merely of Discourses and Lectures of Natural Philosophy, and of its Consequences on Religion, occasionally read or discoursed to that most noble and great Person, the Duke of Roxburgh, so great an Ornament to his Country, and his high Employments, to whom they were inscribed. I thought they might be of Use to other young Gentlemen, who, while they were learning the Elements of natural Philosophy, might have thereby the Principles of natural Religon insensibly instilled into them. And accordingly it has been and still is used for that Purpose at both Universities.

The fecond Part of the Philosophical Principles, to wit, that of Revealed Religion, was added afterward, to shew, that all our Knowledge of Nature was by Analogy, or the Relations of Things only, and not their real Nature, Substance, or internal Principles: That from this Method of Analogy (the only Medium of human Knowledge) we should be necessarily led to conclude the Attributes or Qualities of the supreme and absolute Infinite, were indeed analogous to the Properties or Qualities of finite Beings, but only in such a Manner as the Difference be-

tween Infinite and Finite requires; and that therefore, not being able to know precifely these Differences, we ought implicitely to believe without reafoning, what is revealed to us concerning the Nature of the infinite Being; or bring our Reason to submit to the Mysteries of Faith. How I have succeeded is not for me to determine. As the End was honest, I am secure the great Principles and the fundamental Propositions are true and just.

The Essay on the Gout and Bath Waters was brought forth by mere Accident. The first Draught being, as I there mentioned, only a Paper of Directions for a Gentleman, my Friend and Patient, troubled with the Gout. It was enlarged upon different Occasions, and published to prevent its being pyrated; several Copies having been given out to others in the same Circumstances.

As to my Essay of Health and Long Life, its Origin was as cafual as that of my former. My good and worthy Friend, Sir Joseph Jekyl, having been at Bath for a Confirmation of his Health, at his Departure defired me to draw up some Instructions in Writing to direct him in the Conduct of his Health for the future, and in the Manner of supporting his Spirits free and full, under the great Business he was engag'd in. I was then in the Hurry of our Season, and could not fo foon answer his Expectation, as his real Worth, and my fincere Esteem required. I thought myself therefore the more obliged, as foon as I had Leifure, to exert myself to the uttermost in Obedience to his Commands. At first I drew up most of these Rules at the End of the feveral Chapters; but, upon Reflection, thought it not Respect enough to his good Tafte and Capacity to judge of the Reasons of Things,

to prescribe him bare and dry Directions in Matters of so great Moment. I added therefore the philosophical Account and Reasons of these Rules, which make up the Bulk of the Chapters themselves. He, out of Love to his Fellow-Citizens (which was one shining Part of his Character, and which I ought to suppose had in this Instance only imposed on his better Judgment) desired they might be made publick. Upon which Account several Things have been since added, to make the whole of more general Use. If therefore any Thing in this Treatise be tolerable, or if any Person receive Benefit by it, they owe it entirely to that excellent Person, upon whose Account solely it was undertaken, and at whose Request it is published.

I know not what may be the Fate and Success of this Performance; nor am I sollicitous about it, being conscious the Design was honest, the Subject weighty, and the Execution the best my Time, my Abilities, and my Health would permit, which cannot bear the Labour of much Fileing and Finishing. Being careful not to increach on the Province of the Physician, I have concealed nothing my Knowledge could suggest to direct the Sufferer, in the best Manner I could, to preserve his Health, and lengthen out his Life: And I have held out no false or delusory Lights to lead him astray, or torment him unnecessarily.

If it were possible any Set of Men could be offended at my Performance, it might be my Brethren of the Profession, for endeavouring to lessen the Materia Morbifica. But as this would be the most malicious, unjust, and unworthy Reslection could be thrown on Scholars and Gentlemen of a liberal Education; so I never entertain'd the most remote Vanity to think any Endeavour of mine would make so considerable a Change

Change in the Nation; especially when the Devil, the World, and the Flesh were on the other Side of the Question, which have stood their Ground even against the Rules of Life and Immortality brought to Light by the Gospel.

All I can fay as an Apology is, that of whatfoever Indifference my Concerns as an Author may be to my Reader, yet they were not fo to me; this being the only Place and Time I may have to adjust them in, and it being the Heighth of my Ambition,

Nil conscire mibi, nulla pallescere culpa.

N. B. The above ACCOUNT of the foregoing Articles is taken from the Essay of Health and Long Life, to which it is prefix'd. What has been publish'd since are as follow, with the Doctor's own Account of them subjoin'd, viz.

I. The English Malady: Or, a Treatise of Nervous Diseases of all Kinds. In Three Parts.

THE Title I have chosen for this Treatise, is a Reproach universally thrown on this Island by Foreigners, and all our Neighbours on the Continent, by whom nervous Distempers, Spleen, Vapours, and Lowness of Spirits, are in Derision, called the ENGLISH MALADY. And I wish there were not so good Grounds for this Resection. The Moisture of our Air, the Variableness of our Weather, (from our Situation amidst the Ocean) the Rankness and Fertility of our Soil, the Richness and Heaviness of our Food, the Wealth and Abundance of the Inhabitants, (from their universal Trade) the Inactivity and sedentary Occupations of the better Sort, (among whom this

this Evil mostly rages) and the Humour of living in great, populous, and consequently unhealthy Towns, have brought forth a Class and Set of Distempers, with atrocious and frightful Symptoms, scarce known to our Ancestors, and never rising to such fatal Heights, nor afflicting such Numbers in any other known Nation. These nervous Disorders being computed to make almost one Third of the Complaints of the People of Condition in England.

This Work has lain finish'd by me, as it now appears (at least in the main) these several Years past, and was intended as a Legacy and Dying-Speech, only to my Fellow-Sufferers under these Complaints. And had certainly never appear'd, (till its Author had disappear'd) had it not been for the perhaps indiscreet Zeal of some of my warmest Friends, who (upon the late Frequency and daily Encrease of wanton and uncommon Self-murderers, produc'd mostly by this Distemper, and their blasphemous and frantick Apologies grafted on the Principles of the Insidels, and propagated by their Disciples) extorted it from me, to try what a little more just and solid Philosophy, join'd to a Method of Cure, and proper Medicines could do, to put a Stop to so universal a Lunacy and Madness.

What I pretend to have done in some Degree in the following Treatise, is, That I hope I have explain'd the Nature and Causes of Nervous Distempers (which have hitherto been reckon'd Witchcraft, Enchantment, Sorcery and Possession, and have been the constant Resource of Ignorance) from Principles easily, natural and intelligible, deduc'd from the best and soundest Natural Philosophy; and have by the plainest Reasoning, drawn from these Causes and this Philosophy, a Method of Cure and a Course of Medicines specifically

cifically obviating these Causes, confirm'd by long Experience and repeated Observations, and conformable to the Practice of the ablest and best Writers on these Diseases.

There are two Sorts of Readers I have not the most remote Hopes of convincing or giving Satisfaction to; viz. the Voluptuous and Unthinking. Those who value Life only for the Sake of good Eating and Drinking, and those whose thinking Faculties and Organs have never been truly form'd or duly cultivated; neither of these will ever bear or can receive any Conviction or Reasoning from such Principles as I lay down. But the Laws of Nature, and the immutable Relations of Things, are too stubborn to bend to such Gentlemen; and I should not chuse to study such a Sort of Particulars, to learn uncorrupted Nature, its Laws and Order, no more than I should apply to a monstrous Production to learn the Genius of a Tribe, or a Species either of Vegetables or Animals. Possibly even they themfelves may be convinc'd at least in some Measure, when their proper Time is come; and fooner or later it may come, unless the Minute Philosophy prevail, and become the Standard. For probably when they begin to feel violent Pain, long Sickness, habitual Low Spirits, or enter upon the Limits of both Worlds, they may be convinced. For, in the main, I believe the Cause of these Distempers here assign'd, just and adequate, and on the Success of the Methods of Cure laid down in general (in Cases where any thing would succeed) I could venture my Reputation, Fortune and Life.

If any of your Authors without Names, who wound in the Dark; your Hackney-Scriblers, who want only to give their Lucubrations Sale; your profane and bold Wits, who fight behind Jingle and Rhime; your Phi-

maths,

maths, who, without Experiment or Observation, want only to shew a way; or your Pestle-and-Mortar Men, who have more Time on their Hands than Business, think fit to try their Parts on this Performance; for their Encouragement, they need only consider the Author as gone to his long Home, or his Faculties (as they could wish) impair'd or extinct. But if any Sober and Serious Person, who has Nature in View, and is in Search of Truth only, ready to embrace it on what Side of the Question sever it lies, has any Difficulties or Doubts, he may find some one or other who may give him all the Satisfaction he can desire; if it be true (as it most certainly is) that where the Philosopher ends, there the Physician begins.

N. B. At the End of the English Malady, is the AUTHOR's own CASE at large, from whence the ACCOUNT of Himself (as to his Morals and Religious Principles) at the Beginning of this Pamphlet is extracted.

II. An Essay on Regimen. Together with Five Discourses, Medical, Moral, and Philosophical.

The following Essay was written to instruct all sober and serious Persons, how to preserve, or regain their Health; but chiefly to direct and relieve my Fellow-sufferers, the Scorbutic, Gouty, Consumptive, or Nervous Valetudinarian-low-livers; to make them pass their Lives the most comfortably, the Degree of their Distempers, the Time of Life, the Nature of Things, and the secret Orders of Providence, will permit. And since they must be deprived, in some Degree, of the grosser sensual Pleasures; since all sentient and intelligent Beings are made for Happiness, will by mere Instinct, seek it some-how, and some-where; since their

their necessary Low-living will naturally (in time at least) make them bigh-spirited, and their intellectual. Organs more acute, penetrating, and delicate; I have endeavour'd, by the following Discourses, to supply them with some suitable Entertainments and Amusements, such as I have often agreeably diverted my leifure Hours with.

I am very sensible, by this Work, I shall make myself obnoxious to two very different Kinds of Men, the Stiff, Rigid, and Precise; and the Licentious, Unguarded, Spurious, Free-Thinkers. The first, very probably, will censure my Conjectures and Sentiments, as dangerous and presumptuous, and myself, as being wife above what is written, and arrogantly prying into the Secrets of infinit Wisdom. It is very possible I may have been faulty, in this particular. I am fensible, that some even undoubted Truths, that may hurt the Weak, ought to be concealed, or enjoy'd only in fecret; the same Degrees of Light not being equally luminous and perceptive to all Eyes. But fince old Men, and Valetudinarians especially, become, as it were, Children a second Time, and, in their second Childhood, those must have their Rattles as well as these; I thought it fafer, as I am fure it is much more entertaining, to play with Ideas, philosophic Conjectures, and fuch Amusements, how weakly soever founded, as tend to make Virtue and its Sourse amiable, justify the Conduct of Providence, and mend and rejoice the Heart without hurting the Head, than to dwell on the dark Side of Things, that lead to Pyrrbonism, Fatalism, Infidelity, and Despair. If I thought I had advanced any thing derogatory from the Amiableness of infinit Perfection, contrary to the Doctrine of the earliest and purest Times of Christianity, contradictory to the Analogy of Faith, and the Form of found Words, I had COIII-

committed these Sheets to the Flames, with the Hand of their Author, before I had published them. But, on the contrary, I hoped they might agreeably entertain my Valetudinarian, who being placed by his low Health, in the middle State, between both Worlds, the old and the new, must unavoidably, at some Times, figure to himself some Sort of a Map of the next World. I was therefore willing to try to illuminat it, the best I could, and to trace some of the Out-lines of the Passages from this to that Mansion; by endeavouring to illustrat, from not so common a Set of Principles and Philosophy, some great and fundamental Truths, establish'd on more popular Proofs, viz. that there is no Possibility of Happiness here or hereafter, without Purity of Heart and Life; and that the true Reason of the present Darkness, both in Providence and Revelation, is the Difficulty of recovering this Purity of Heart and Life, to its utmost Perfection, in free lapsed Intelligences, confistent with their Liberty, and the Harmony of the Divine Attributes, which infinit Power and Wisdom will not, I might say, cannot, counteract.

I apprehend less Quarter from the opposit Set of Men, who may honour me with Enthusiasm, Romanceing, and Castle-building, without any solid Foundation. All I have to say is, that perhaps my Manner of explaining some great Truths, and a sew of the Consequences I draw by my Method, may be desective: And perhaps, from some of the Links being dropt, and from Faults in the wording, the Chain of the Reasoning may not be always clear and strong; but I am sure the Foundation is solid and just, and allowed to be such by all true Philosophers; and without it, all general and abstracted Reasoning (on these imperceptible Subjects) must be vain; I mean, without admitting Analogy: For without supposing the Evidence and Probability

bability of it, (it being in Things only, what Proportion is in Numbers, and its Progressions being only like the higher and subsequent Terms of a Series in Algebra, from some of the first and simplest Terms being given) no general Laws, nor universal Propositions, can be found out, in Mathematicks, Philosophy, or Morality. For Induction, either in Experiment, Observation, or Calculation, must be always particular and limited. Perhaps the Method, when manag'd by a clearer Head, and a more solid Judgment, may become a noble Source of divine Knowledge, and a sublime Philosophy. Mathematitians well know, that there are feveral different Methods of investigating the same Propositions in Algebra and Geometry; and there is scarce a Geometer, but has his own Method of Investigation. The same Conclusions, drawn from different demonstrated Truths, give a sensible Pleasure, and a stronger Conviction, to an honest Heart, and a Lover of Truth; and I could not but be delighted with the Universality, Simplicity, and Luminousness of the Method of Analogy, and the other Principles I have laid down in the following Discourses, not having met with an Objection, Difficulty, or even a Puzzle almost, in Nature, Providence, or Revelation, which had not an eafy, confequential or probable Solution from them, which is, at least, a Prejudice in their Favour. I had nothing to do, but to try the Difficulty, in its most simple and obvious Cases, (as I used to do in Algebra, to find out univerfal Canons) and attentively to observe the Conditions of the Progression, till the higher Terms involved the Complication.

There are some Persons made so by Nature, that they are slow, dark, gloomy, joyless, puzzling, and perplexing, and they pass for the wise, prudent, guarded Men of the World: They may attack Error, but seldom

dom find out Truth by themselves; like the Scuttlefift, they spout out their own black Liquor on the pellucid Element. If they are bonest and sincere, they are much to be pitied, and are to be treated with Humanity and Charity, being in the State of those born poor and blind, and so destitute of the Necessaries and Conveniences of Life. They must do the best they can, and be charitably supplied, and with Docility be willing to be led by others; and thus, tho' their Trial might be bard and severe, yet their Victory would be meritorious and glorious. But, on the contrary, it often happens, that Licentiousness, Self-sufficiency, and a supercilious Contempt of others, are the true Causes of their Darkness and Indigence, and that they have themselves, by wrong or no Culture, stunted the Organs of their Faculties, and by a perpetual Mal-regimen have distorted them.

I take common Happiness, in our natural State at prefent, to lie in the Pursuit of the general Measures of Thinking, Acting and Living, follow'd by the greatest Part of the middling Rank of our Species (as it is in their Order in other Animals); and common Sense (as it is diffinguished from cultivated and refin'd Sense) to lie in affenting and conforming to the Truths and Manners, agreed upon explicitely or implicitely, in the Community where Providence has placed us, without some irrefistible, that is, miraculous Evidence, or a peaceable, filent, and not intermeddling Self-conviction to the contrary. And he who pretends to be bappy, as to his outward Circumstances, out of common Life, or wife as to intellectual Endowments, out of common Sense, in Things on a Level with his Occupation and Education; I take him always to labour under some undiscover'd chronical nervous Distemper, be the other Appearances what they will, and have been feldom

seldom mistaken in a particular Case. For tho' a sound Mind be not the only fure Evidence of a found Body, yet it will always shew, that none of the great Organs of Life are intirely spoilt, or greatly damaged, however tender and delicate they may be. It is more difficult, than perhaps most Men are aware of, to determin, with any Degree of Exactness, the Limits that separat Wisdom from Folly, Wrong-headedness from intellectual Sanity; the most perfect Man here has a Mixture of both: Optimus ille, qui minimis urgetur. Certain it is, that true Wisdom, and a sound Mind, confifts in first pondering, and then doing, every thing as near as we can, with Order, Number, Weight and Meafure: But fince Precision is incompatible with Finitude, if we endeavour to be constantly progressive towards Perfection, tho' by gentle Steps, neither stopping nor turning afide, but doing the best we can without Scrupulofity, and generously hopeing and believing, that infinit Wisdom and Goodness has, or will supply the rest, in his own Time and Manner, we cannot fail.

Were I to choose for myself, considering the many certain Miseries and Temptations of this State of Probation, the few uncertain Antidotes, and much fewer fincere, durable, and real Pleasures; I had much rather have the weaker, than the stronger System of Nerves, within the Extremes. I had rather choose to be contented with the flight and flender, than covet the strong and pungent Pleasures. I had rather be happy in a Dream, than miserable awake. In a word, I had rather choose to be an innocent, benevolent, tho weaker and more credulous Person, than a malicious, critical, spurious Free-thinker, even with Regard to this Life only. They most certainly are comparatively, unhappy, and joyless in themselves, and are unharmoniously fram'd, in Body as well as Mind, who can delight, delight, and employ their Talents, on throwing Darkness and Doubts even on the imaginary Happiness
(suppose it such) of their Fellow-Creatures: Nothing
but Rancour, and acrid Juices, could be pleased with
tearing and destroying Childrens Play-things; and the
wisest Man here is comparatively but a Child.

As to myself, I can bonestly affirm, I have had but one uniform Manner of thinking in Philosophy, Physic; and Divinity, in the main, ever fince my Thoughts were fix'd, and my Principles establish'd: They may have had Alternatives of greater Light and Darkness; occasionally and transiently, according to the State of my Spirits, Knowledge, and Experience; but in the Heart of my Soul (so to speak) I have been uniform, and under the same Convictions, as to the Fundamentals of these Sciences; and always thought spurious Free-Thinkers, active Latitudinarians, and Apostolic Infidels, (it being a Contradiction they can be certain in their Negative Opinions, or by them when propagated, should do any Good to their Fellow-Creatures, but an infinit deal of Hurt) under some obstinat bodily Distemper, and much more proper Subjects for Medicin, than Argument; and that a low Diet, long and obstinatly persisted in, would at last cure both their Body and their Mind, so far as it depends on the Body, especially where Vice and Infidelity have not become habitual, as they certainly have in old Sinners: As I firmly believe, and am as much convinced as I am of any natural Effect, that Water-drinking only will preferve all the Opulent healthy from every mortal Distemper, bateing Accidents, hereditary and epidemical Diseases; and that a Diet of Milk and Seeds, with Water-drinking only, duly continued, and prudently managed, with proper Evacuation, Air, and Exercise, is the most infallible Antidote for all the obftinat

stinat Diseases of the Body, and Distemperatures of the Mind, so far as it depends on the Body, the present State of Things will permit; and that it will cure every Disorder in the Body, cureable, and render the Distemperature of the Mind more tractable; and that, in all Events, it will make both more tolerable, than they can possibly be otherwise.

- N. B. At the End of the Practical Essay on the Regimen of Diet, &c. he concludes with the following useful Aphorisms, which we shall here beg Leave to transcribe, for the Benefit of those who may have not yet seen that Book, and as a Specimen of the whole. viz.
- I. A Constant Endeavour after the lightest and the least of Meat and Drink a Man can be tolerably easy under, is the shortest and most infallible Mean to preserve Life, Health, and Serenity.
- II. He that would preferve a clear Head, and equal Spirits, must keep his Stomach clean, his Bowels moderatly empty and uncomprest.
- III. On bad Nights, Lowness, Flatulence and Oppression of Spirits, of any Continuance, the only certain Reliefs are, a small Phlebotomy, a gentle Vomit, a domestic Purge, rideing a Horse-back, and a Regimen of the lightest and the least persisted in.
- IV. Small frequent Phlebotomies are the quickest and most effectual Mean to mend the Blood, and to cure Cachochymy, if a Regimen of the lightest and least be joined.
- V. Gentle and repeated Evacuation upwards and downwards, (especially, and perhaps only, Vomits) by

the Medicines most familiar and experienced, (the Action and Exercise of Vomiting is its chief Use) are the surest, quickest, and most effectual Mean to prevent or remedy the ill Effects of Gluttony, Over-loading, and Repletion, (that is, almost all chronical Distempers) provided the lightest and the least be join'd afterwards.

- VI. Diseases are always to be cured by their Contraries, the high! Diet by the low, the hot by the cool, the sapid by the insipid, the thick and gross by the thin and poor, Repletion by Fasting, Inactivity by Exercise. Health acquir'd and possessed lies in the middle Regimen, between these two Extremes.
- VII. Perfect Health and good Spirits depend chiefly, if not only, on the easy and pleasant Play or Performance of the Animal Functions, viz. the Digestion, Circulation, Respiration, Perspiration, muscular Motion, and the Secretions.
- VIII. He that would be foon well, must be long sick, that is, treat himself as a Valetudinarian in most things.
- IX. Exercise and gentle Evacuation will supply the Place of Abstinence, and Abstinence will supply the Place of Evacuation; but the first two are still preferable, because they damage the Solids least.
- X. Quantity in Food will supply Quality, and Quality will supply the Place of Quantity; but in very bad Cases it is most secure to join both.
- XI. There is but little in a specifick Regimen of Diet to remedy or antidot a specifick Distemper; Abstinence in general, or a constant Endeavour after the lightest and

and the least, will constantly supply the Place of any specific particular Regimen of Diet: But in very bad Cases, a particular Choice of the most specific Regimen that Art, Experience and Philosophy shew to be most proper, is not to be neglected.

XII. The Regimen of Diet by which one is cured of a particular Distemper, ought to be continued, at least in some Degree, especially if the Person is not much under Fifty, else the Distemper will return with more severe and worse Symptoms than at first, as Experience has constantly shew'd.

XIII. Every wife Man, after Fifty, ought to begin to lessen at least the Quantity of his Aliment; and if he would continue free of great and dangerous Distempers, and preserve his Senses and Faculties clear to the last, he ought every seven Year go on, abateing gradually and sensibly, and at last descend out of Life as he ascended into it, even into the Child's Diet.

XIV. He that is old when he is young, that is, treats himself as a wife old Man does, or ought to do, by great Temperance, Air and Exercise, if he lives past Thirty-five, will be young when he grows old in Years.

XV. No Person of any Fortune ever died, or suffer'd acute Pains, or mortal Distempers, by the too cool, too little, or too insipid in Diet; all by the too bot, high and savoury: But Virtue and Health lie in the golden Mean, so difficult to be found, and only to be secur'd by the lightest and the least a Man can be tolerably easy under.

XVI. The eternal Law of Nature, by intense Pain in Craveing and Hunger, will never suffer a Person in E 2

his right Senses to go on long obstinatly, and to his Hurt, in the too little.

XVII. Water pure, clear and insipid, is the sole Beverage that can procure or continue Health, and a clear Head, being the sole Fluid that will pass through the smallest animal Tubes without Resistance; next to it are aqueous, or weak fermented Liquors.

XVIII. Water tepid or cold, or impregnated with the specific Vegetables, or Minerals, that Experience has found proper to antidot a given Distemper, is the true Panacea in both acute and chronical Distempers: Nature has prepared no other Medicin for us, but Water impregnated with Vegetables in their Juices, or natural Mineral Waters on the Surface of the Earth.

XIX. Milk is the only Food prepared by Nature for young, that is, weak and tender animal Bodies; and there is no real Difference between a young, tender, animal Body, and a difeafed grown Animal, but that, of the two, the last is the worst; but it will cost Labour and Patience to make Milk agree in bilious Cases.

XX. Milk and sweet sound Blood differ in nothing but in Colour: Milk is Blood, which almost directly comes from the Chyle into the Teats of the Animal; and Blood is Milk which has gone many Rounds in the Circulation, and is ground a little in the Lungs, where being mixt with the Nitre of the Air, it receives its Scarlet Colour; it is a Medium between animal and vegetable Food.

XXI. Whey sweet, or medicated with the Juice of any specific Plant, Sage, Balm, or Orange, or antiscorbutic, vulnerary, or pulmonic Plants, will supply the the Place, and are preferable to most Decoctions, of Plants, Infusions, Apozems and Diet-Drinks whatso-ever, except those of the strong Detergents, as Horse-Radish, Mustard-Seed, and the like, where necessary.

XXII. Goats Whey being a natural Infusion from gentle Heat, and gentle Triture, of the fine aromatic and nitrous Vegetables on which Goats feed only, is one of the very best Diluents, Detergents, Cleansers and Sweetners of feorbutic and falin Cachochymies.

XXIII. Friction Morning and Night, and in Winter Washing with warm, and Drying before a Fire, and in Summer with cold Water, is an excellent Mean to facilitat and promote the Perspiration; to clean the Cuticle, and cure cutaneous Uncleanness and Defedations, cold Batheing is excellent, and preferable to every Washing in Cases where the Blood is sweet and thin, the Solids too lax only.

XXIV. Cincture with a broad quifted Belt about the Loins, to keep the Bowels in their natural Situations, and the chylous Vessels in their best Locality, and in slabby Constitutions, weak Bowels and Atrophies, is of great Benefit.

XXV. Rideing is the best of all Exercises to get Health, and to promote the Digestions, especially in nervous Distempers, where the Abdomen and the Meseraic Glands are principally affected: But Walking is best to preserve Health already got, because it is the most natural, and the most universal Promoter of all the Excretions.

XXVI. In Nature or Art there is no fuch immediat Cure for low Spirits, Anxiety, and Want of Sleep,

as rideing a Horse-back, long Journies with Fasting, or rather a very soft light Feeding with warm thin Liquors at Resting-Places, but that the least possible that actual Fainting will permit.

XXVII. Next to Rideing, is either a Vomit, or Fasting almost to Faintness, and then only a little spiced Wine and Water warm, and a Mouthful or two of dry Bisket every 5th or 6th Hour, with continued Frition, with a course Cloth, warm Flannel, or a Flesh-Brush, especially on the Spine, in Faintings and extreme Lowness.

XXVIII. To procure natural Rest, nothing is like four or five middling Pills of true Assatida, with four or five Grains of pure succatrine Aloe, taken going to Bed.

XXIX. The only Way to fecure tolerable Spirits in very low Cases, is a constant Endeavour to make Hunger the greatest Pain, and to cheat the Appetite and Craveing with little, warm, light Liquors at large Intervals.

XXX. Good Hours will be always a most beneficial Mean to preserve Health and Spirits, to go to Bed by Ten, and rife by Six.

XXXI. Whosoever would preserve his Health and Spirits to the last, even when he is in Possession of it, ought to pass through the great Operations of Physic in the Spring, viz. To bleed, vomit and purge, whether he have apparent Necessity or not; for Scurvy, or scorbutic Juices, is the great chronical and fundamental Distemper of Britain; all the rest are but Sprouts and Branches of it. And therefore,

XXXII. Vomits often repeated, at least as often as the Symptom of any Ail aggravats, increases or exasperats, are the sole universal Antidote and Panacea of Britain; an ailing Person cannot repeat them too often, they will always prove beneficial and salutary.

XXXIII. In cold Feet nothing like batheing them in tepid Water a little before going to Bed.

XXXIV. A low Diet seldom extirpats, or totally eradicats, any bereditary chronical Distemper, unless it be in the young, the middling aged, or the strong and healthy, who have otherwise tolerable Stamina; in the very puny, delicat and slender, in the old, and far advanced in Lise, even after Fifty, in the strongest, it only abates the Violence of their Symptoms, makes them less severe, and the Returns seldomer, and only prolongs the Duration of their Lives.

XXXV. The natural Diseases of the Poor and Necessitous are generally owing to a bad, unwholesome, unsound Diet, and the Want of due Care of the other Non-naturals, Cleanness and Shelter; and are generally cured by their Contraries, viz. a good, wholesome, plain Diet, and a due Cleanness, Shelter from the Inclemency of Seasons, and an easy Mind.

XXXVI. If it happen that the Poor, and those having no Property of their own, by Stealth, Robbery, or unlawful Means, enter on and pursue the Luxury of the Rich and Opulent, not having the other Necessaries and Conveniences of Life, neglecting, or not being able to afford, or being inured to want the necessary Care of the other Non-naturals, their Diseases are then the most atrocious, painful and miserable of

any; which is the Reason that the acute and contaginous Distempers begin first, spread faster, and are more mortal among them, than those of the better Sort.

XXXVII. Diet; a proper well regulated and parfimonious, cool Diet, is the far greatest Article of long Life and Health; but the other Non-naturals are to be carefully attended to, and guarded against, else it will not avail alone, which is the Case in Monasteries, Desarts, and long Sea Voyages.

N. B. Before we come to give an Account of the last Article of Dr. CHEYNE's Writings, we thought it not improper to subjoin to the foregoing Aphorisms, His Method of curing a COLD, taken from his Essay on Health and Long Life; where (in Pages 29 and 30 of the 8th Edition of that Book) he says,

has made it out, beyond all Possibility of doubting, that catching of Cold, is nothing but sucking in, by the Passages of Perspiration, large Quantities of moist Air, and Nitrous Salts, which, by the thickening the Blood and Juices, (as is evident from Bleeding after catching Cold) and thereby obstructing, not only the Perspiration, but also all the other finer Secretions, raises immediately a small Fever and a Tumult in the whole Animal Œconomy: and, neglected, lays a Foundation for Consumptions, Obstructions of the great Viscera, and universal Cacheries.

The Tender therefore, and Valetudinary, ought cautiously to avoid all Occasions of catching Cold; and if they have been so unfortunate as to get one, to set about its Cure immediately, before it has taken too deep Root in the Habit.

From

From the Nature of the Disorder thus described, the Remedy is obvious; to wit, lying much a Bed; drinking plentifully of small, warm Sack-Whey, with a few Drops of Spirits of Hart's Horn; Posset-Drink; Water-Gruel, or any other warm, small Liquor; a Scruple of Gascoigne's Powder, Morning and Night, living low upon Spoon Meats, Pudding, and Chicken, and drinking every Thing warm: In a Word, treating it at first as a small Fever, with gentle Diaphoreticks; and afterwards, if any Cough or Spitting should remain, (which this Method generally prevents) by softening the Breast with a little Sugar-Candy and Oil of Sweet-Almonds; or a Solution of Gum Ammoniac, an Ounce to a Quart of Barley Water, to make the Expectoration easy; and going cautiously and well clothed into the Air afterwards.

This is a much more natural, easy and effectual Method, than the Practice by Balsams, Linetus's, Pectorals, and the like Trumpery in common Use, which serve only to spoil the Stomach, oppress the Spirits, and burt the Constitution.

III. The Natural Method of Curing the Diseases of the Body, and the Disorders of the Mind depending on the Body. In Three Parts.

In my Essay on Regimen, I promised the World my Thoughts concerning, The natural Method of cureing the Diseases of the Body, and the Disorders of the Mind resulting from such Diseases, on the Principles of Philosophy laid down in that Essay, which, by a Course of sisty Years Study, I have discover'd to be the most Rational, and in forty Years Prastice of Physic, have found them to be the most Effectual.

F

This Promise I have in the following Sheets endea-vour'd to perform, whether to the Satisfaction and Benefit of the Public, Time and Experience must shew. To a Delicacy of Sentiment and Correctness of Style, I have small Pretensions; to convey my own Thoughts to others, with as much Plainness and Perspicuity as my Subject would admit of, has been my principal View; and if the serious attentive Reader sinds himself instructed, the Intention of the Writer is answer'd, and his Credit, as a Pen-man, is of small Import.

Nature and her Laws, a competent Knowledge of the animal Oeconomy, and the best Observations which I have been capable of makeing on my own Success in Practice, or on that of the ablest of my Profession, are the Foundation of every thing by me advanced. Theory I have given into as far only as seemed necessary to reconcile the Method and Medicins by me recommended, to the truest Idea which I could frame of the Distemper to be cured: For the rest, the Reader is referred to the Essay above-mentiond, and its Appendages.

In a Design extensive as this, it will not be expected that I should descend either into Forms of Medicins, or the particular Circumstances of every Distemper under Consideration; this will be the necessary Duty of the Physician in ordinary, who, if he approves the general Directions by me given, will readily adapt them to any particular Case, its Degrees and Symptoms.

It cannot, I should hope, give any reasonable Offence, if in a Work of this Kind, many particular Things should occur, which probably I may have alneady ready advanced in some former Treatises; my Apology for which is, that in all I know of Physic, I have but one general System; Nature being ever one and the same, and proceeding in all animal Functions and Operations by the same, or at least by analogous Laws.

What I learned from Books, Speculation and Philofoply, by Trial and Experience I have found to be greatly defective, as well in many Distempers, whereof I myself have felt the Weight, as in the Cases of my Patients; and this Experience has led me to throw off all unsuccessful Methods and Medicins, and to confine myself to such only, by which I had Reason to think the principal Point in View, viz. a lasting Cure, might be obtained. This Method of proceeding reduces the Practice of Physic into a narrow Compass, viz. 1. To proper Evacuations of the feveral proper Kinds. 2. To attenuating and deobstruent Medicins, of which I find the mild ponderose to be generally the best; and after a due Use of these, 3. The gentle Astringents and Strengthners of the Solids, 4. A proper and specific Diet, with Air and Exercise.

This is my general System: This, if just and solid, brings all that can be pertinently said on the Cure of Distempers, into an easy and intelligible View, and makes many of the same Methods and Medicins common to different Cases and Patients. Whatever exceeds, is calculated either for the easy Death, or to keep up the Courage and Hopes, of the Patient.

It would not become me to fay, that the Method here laid down, how judiciously soever applied, will in every Case absolutely cure or save: This, however, I venture to affirm, viz. that the Continuance of this Method for a due Time, has done, in very bad Case

F 2

fes, and, by GOD's Bleffing, will do more than any other which has yet been so strongly and clearly enforced and explained, or is commonly used.

I may be deceiv'd myself, but, if I know my own Heart, have not a single Temptation to deceive others. My Age is little short of seventy Years, at which Time in Life, a Thought of adding to my Reputation, or to my Purse, would be extreme Folly: The first is now at the Disposal of the Public, the latter will soon be in the Hands of my Executors.

But after all, though I should convince the World, I must not expect to convert it: Lessons of Abstinence and Self denial loofe their Weight, when offered to strong Passions, and bigh Spirits; and the greatest Part of my Disciples will probably always be such, as have labour'd through the tedious Courses of Physic without Success, whose Sufferings have soured the false Pleasures resulting from sensual Appetites, and who are at length willing to renounce Luxury, in order to leffen Misery. To these I seriously affirm, that this Method, strictly and for Time sufficient pursued, will afford all the Ease which human Art can give, or human Nature receive; and as the Time is hourly stealing on, when Art can do no more, an Observance of these Rules will be the calmest and easiest Way of lying down in Death.

Let this fingle Confideration then recommend the System proposed, viz. That it has a necessiary Tendency to alleviat the Pains of Life, and to soften the Terrors of Death.

Thus far the Doctor's own ACCOUNT of His Last Labours in Medicin, hitherto publish'd: We shall now now oblige the Reader with some few EXTRACTS from them; wherein are contain'd some singular Instances of the good Essects of Temperance and Abstinence, so strongly recommended by him; as likewise of the fatal Consequences of the contrary Vices. viz.

I. Have a due Esteem for the Philosophers and wise Men both of Antiquity and later Ages; those who have labour'd to cure the Diseases of the Mind, and those who have suggested effectual Means for the Cure or Reisef of the Distempers of the Body; as well as for those who have discover'd the Wisdom and Beauty of the Works of the Author of Nature. The Christian Philosophy, represented in its true Light, is infinitely beyond any thing that ever was thought of, or could possibly enter into the Heart of Creatures to imagine, for extirpating the Diseases of the Mind, as is allow'd even by its Adversaries themselves: For remedying the Distempers of the Body, to make a Man live as long as his original Frame was defign'd to last, with the least Pain, fewest Diseases, or Loss of his Senses, I think Pythagoras and Cornaro (for fuggesting a general and effectual Mean) by far the two greatest Men that ever were; the first, by vegetable Food, and unfermented Liquors; the latter, by the lightest and the least of animal Food, and naturally fermented Liquors. Both lived to a great Age: But what is chiefly to be regarded in their Conduct and Example, both preserv'd their Senses, Chearfulness and Serenity, to the last; and, which is still more to be regarded, both, at least the last, dissolv'd without Pain or Struggle; the first having lost his Life in a Tumult, as is faid by some, after a great Age of perfect Health. Vide Pages 66, 67, of the last mention'd Book.

In another Place, (viz. Page 296,) his further RE-MARKS upon CORNARO are as follow, viz.

II. Cornaro, who was possibly a fingle Instance, amongst Men of Rank and Affluence, of a long Life, high Health and Spirits to the last, secured these valuable Bleffings by the mere Force of Regimen, even after a luxurious, and confequently an unhealthy and dispirited Youth. At Forty, he began to curb his Appetites, and to manage his Diet, which, after feveral Essays, he fixed at twelve Ounces of Food, and fourteen of Wine in twenty-four Hours; from this Time, (viz, the Age of Forty) gradually leffening his Diet, till he reduced it to the Yolk of an Egg (i. e. about an Ounce of folid Food in twenty-four Hours, and probably did the same by his Wine). He enjoyed a perfect State of Health, and was at the fame time in bigh Spirits to the Age of an Hundred, or, as some Authors fay, an Hundred and Twenty: A very extraordinary Instance this, in a Man of Cornaro's Rank in Life, who had in his Youth indulged in bigh Food, and rich Wine. Now it is highly probable, that from the Time of the first Reduction of his Food so, at the Age of Forty, he must gradually have lessened the daily Quantity, about two Ounces every ten Years, till he had at Length reduced it to an Ounce a Day. The happy Refult of this gradual Reduction shews, that he must naturally have had strong Solids: For I am quite persuaded, that if instead of this stinted Quantity of animal Food, he had, at the Age of Forty, confined himself to Cow's Milk and Bread, to Vegetables and Water only, he might probably have lived to a much greater Age, with a clearer Head, and higher Spirits; for the fovereign Method of prolonging Life is to preserve the Blood in a thin, sweet, and

and balmy State, by which only the Circulation can be kept sufficiently extensive and full, through the various Meanders of the Capillaries, and all their delicate Circumvolutions in the Glands: For natural Death by reason of Age only, is the necessary Result of thickening the Blood, which gradually lessens the Extent of, and finally stops, the Circulation, even in the Trunks of the Vessels.

III. I have been credibly inform'd, that Sir Isaac Newton, when he applied himself to what is esteem'd the greatest Stretch of human Invention and Penetration, (viz. the Study, Investigation and Analysis of the Theory of Light and Colours) to quicken his Faculties, and fix his Attention, confin'd himself to a small Quantity of Bread, dureing all the Time, with a little Sack and Water, of which, without any Regulation, he took as he found a Craving, or Failure of Spirits. And the famous Mr. Law, Projector of the Missippi, to keep his Head clear, and Faculties acute, in order to obtain a Superiority of Skill in Game, liv'd many Years on half a Chicken a Day, with about a a Pound of Bread, and drank nothing but Water or aqueous Liquors, and by that Means won great Sums on the Square. Many more Instances I could give of great Men in all Ages, and of all Professions, who maintain'd their Superiority of Parts, their Attention, Penetration, just and close Thinking, by extreme Temperance and Abstinence. But I chose these two, because they have been, and still are, much distinguish'd and known in their vastly different Ways; and that any one who thinks it worth his while, may be fatiffied about the Truth of the Facts. Vide Page 81, ib.

IV. When I advise the Lightest and the Least, I mean, To take regularly Something and Somewhat; for

for Nothing neither admits of Degrees nor Qualities. Suppose (to shew the Absurdity) a Man took balf a Pound of Bread and a Pint of Water three Times a Day, what would be the Consequence? The Objector thinks the Patient would certainly die; his concocting Juices would turn acrid, and fo spoil his Blood, and thereby he would pine, and at last extinguish; and yet Cassian tells us, that the antient Hermits allow'd themselves but a Pound (or even less) of Bread with Water in Twenty-four Hours; and most of them liv'd to an Hundred, some to an Hundred and Fifty, others to Two hundred Years, without Difeafes, and with great Serenity and Chearfulness. And Dr. Barwick tells us, in the Life of his Brother, who, in the late Civil Wars, had for many Years been confin'd in a low Room in the Tower, dureing the Usurpation; that at the Time of his going in, he was under a Phthisis, Airophy, and Dyscrass, and liv'd on Bread and Water only feveral Years there; and yet came out at the Restoration, sleek, plump, and gay. Many fuch Instances I could produce, but it would be lost Labour. Vide Page 210, ibid.

V. In England alone, from Gluttony and Intemperance in fermented Liquors, and from unguarded Leachery, I have been told, that a late worthy and learned Physician, that had examin'd into the Numbers confin'd for Lunacy and Madness, upon the strictest Examination, found they reach'd to a Number I dare not name. And another Physician ascribed Wrong-headedness, gloomy Thinking, Melancholy, Despondency and Darkness on the Imagination, to the abounding of Choler in the Stomach, which every one knows to arise from Intemperance and Excess. Whatever be in these Gentlemens Observations and Opinions, it cannot be doubted, that the clear, ready, and pleasant Exercise

of the intellectual Faculties, and their easy and undifturb'd Application and Attention to any Subject, is never to be obtained, but by a free and regular Performance of the natural Functions, which, as has been shewn, the lightest and the least Food can only procure. Vide Page 85, ibid.

#### KENKENKEN KENKEN KENKEN

#### Dr. CHETNE's CHARACTER

Of the Honourable

#### GEORGE BAILLIE, Esq;

THE Honourable George Baillie, Esq; descended from an antient and virtuous Family in North-Britain, was a Gentleman, who, in this corrupt Age, did Honour to human Nature, and was a great Instance (according to my best Observation) of the Essicacy of the Grace, Wisdom, and Power of the Almighty.

At one and the same Time he was a most zealous Patriot, a very able Statesman, and the most persett Christian, that this, or any Age has produced; Piety, Charity, Justice and Truth, being the Basis of all his private Resolves, and publick Transactions. He considered Mankind as his Family, and each Individual as his Child, and as the Image of his Heavenly Father. He continued steadily in his own Church and Principles, when at Home, and in his Country; discouraging Indifference and Wavering in the external, as well as internal Life of Religion, but without Rigidness and Narrowness of Soul; believing Charity to be one of

the

the Cardinal Virtues, and a guarded Freedom, effential to our unlapfed and recovered Natures.

I had the Honour of an intimate Acquaintance with him for the last thirty Years of his Life. I have studied him in all the various Scenes he passed through; in Posts of great Honour, in the Troubles of private Life, in Health and Sickness, in Business and Retirement; and with great Truth I can affirm, that in all these several Scenes, I never knew his Superior in folid Virtue and just Thinking.

His Courage was undaunted, and his Patience immoveable; his Piety unfeigned, and his Truth exact to the greatest Precisian. Having been bred in the School of Affliction, his Compassion was never denied to those who were in Distress, even by their own Indiscretions. He spent the last twelve Years of his Life in constant Meditation, Contemplation, and Prayer. It was truly a Life bid with Christ in God. He passed through several States of Purisication and severe Trial, unknown to common and unexperienced Christians.

His Father (a few Hours before his Life must have ended by the Hardships of his Confinement) was, for his Love to his Religion and Country, most barbarously put to Death by the Severity of the then Administration, and the Madness of the Times; whereby his Estate was forfeited, and his Son obliged to retire into Holland.

Coming into England with the Prince of Orange, he narrowly escaped perishing at Sea; on which Account, all his Life after, he kept a rigorous Fast once every Week, spending the whole Day in Meditation, Prayer, and Praises to his Deliverer.

During all the Times of his great and arduous Employments, he never failed Morning and Night to retire a confiderable Time to his Closet, and prostrate himself before his Maker. His Faith and Trust, that the Children of the Righteous shall never want Bread, was so firm, that in all his Difficulties and Missortunes, he never saved any Thing for Fear of Want, (when the Expence was charitable, necessary, or decent; ) and in his Prosperity he never squandered arway any Thing oftentationsly or uselessy.

His private Charities were as great and extensive, as they were secret and constant. In short, in his Rank and Order, under the present Lapse of human Nature, and the flagrant Corruption of this Age and Nation, he was in every Thing a most perfect Example to his Family, to his Friends, and to his Country.

He died August 6, 1738, at Oxford, Aged 75.

# VERSES to Dr. CHEYNE, on the foregoing CHARACTER.

Let T venal Pens in trifling Numbers flow,
And undeferved Praise on Peers bestow;
Thy Panegyricks want no Help of Art,
Spontaneous Off rings of an honest Heart.
O! happy Baillie, blest with Length of Days,
Well may thy Happiness our Envy raise:
Happy in Life, more happy in thy End,
Most happy after Death, in such a Friend,
Thy Virtues and thy Worth to recommend.

3 ome \*\*\*

Some ACCOUNT of Dr. ARCHI-BALD PITCAIRN, and his Writings, by Dr. SEWEL.

R. PITCAIRN was one of the first, who leaving the Old Conjectural Method of Phyfical Writers, struck into a New and more Solid Way of Reasoning, grounded upon Observations and Mathematical Principles.

He studied many Years abroad, where his great Learning, and successful Practice, procured him the Esteem of all Foreigners, and spread his Reputation into as many different Countries, as the Variety of Students of Physic in Holland owed their Birth to, every one carrying home a high Opinion of Dr Pit-cair N's useful Knowledge in that Science.

These Qualifications in his Art raised him in a little Time to the Professorship at Leyden, unto which he was chose in the Year 1691, as much to the Reputation of the Scottish Nation as his own. Here he began his excellent Lectures, in a Manner, which confirmed his Auditors in the just Notions they had conceived of him, as of one who was to banish the Old salse Maxims of Physic, and lay more certain and infallible Fundamentals of the most comprehensive Art the Mind of Man is capable of attaining. It were needless to inform the Reader what Errors he reformed, what new Lights he spread over the Face of Physic, and what admirable Hints he gave for its suture Im-

Improvement, such as the Genius of a second PITcair, or a present Mead, might indeed carry to that desireable Pitch, which other Learned Men have hitherto labour'd at in vain. There is no Page in his Dissertations wherein something of this Nature may not be observed, and the Book it self will be the best Evidence of the Truth we affert.

He continued in the Chair at Leyden sometime, and published a great many of his curious Pieces in that Place, all which were admired by the Learned of the Faculty; and though some of his Opinions met with Adversaries, the Doctor had no Occasion to give himself the Trouble of a Vindication, the Justness of his Reasoning raising him up Advocates wherever Truth prevailed over Sophistry, and good Sense was preferred to the Jargon of unintelligible Terms.

He had in all Probability continued longer at this Place, but some private Concerns obliged him to retire into his own Country, where his Fame had already made Way for an honourable Entertainment among all Persons of the best Sense and Quality. Here he continued his Practice with equal Applause and Success, keeping at the same Time a Correspondence with most of the great Men of the Faculty in all Parts of Europe, whom either his Writings or Conversation at Leyden had made his Friends and Admirers. Indeed he was the freest and most communicative of his Advice of any Person, perhaps, that ever made so eminent a Figure in his Profession, never refusing either to fatisfy by Letter the Curiofity, or inform the Mind of the Enquirer. His Friendship with the great Bellini, and Monf. Hecquet, must never be forgotten; and it is evident from their Writings, that they feemed to be proud of that Name, and took all Occasions to do Justice to the Merit of their Friend.

This may lead us into some Part of his private CHARACTER, of which there are too many Witnesses living to make us say any Thing but strict Truth.

In the Business of his Profession he was always ready to ferve every one to the utmost of his Power, and even to contribute to their Health at the Danger of his own. He was a Man of too good Sense to be a Humourist in Physic, or refuse Attendance out of Pique, or Prejudice, or Affectation: He understood the Value of Lite too well to facrifice it to Caprice and Humour. There is one Thing more remarkable of him; That he was not at all concern'd about Fees. and frighted from his Duty by the Sight of Poverty in his Patient, nay, he went with greater Chearfulness to those from whom he could expect nothing but good Will, than to Persons of the highest Condition. Besides, in Cases which seemed to require that Affistance, he not only gave away his Skill and Medicines, but extended his Generofity for the Provision of other Conveniences for the Sick, and left the Marks of his Charity, as well as of the Liberality of his Art, behind him. The Virtue of Charity was really so much his own, in the Use of it, that he contrived a most secret and decent Manner of conveying his Benevolence, and relieved many who knew not their Benefactor.

In short, he was one of the greatest and most useful Men in his Protession this Age has produced, of a free and universal Genius, a good Orator, Poet, and Philosopher. He was of a pleasant, engaging Humour. mour. Life sate very easy upon him in all its Circumstances. He despised many, but hated none. He loved his Friends, and laughed at his Enemies. Thus he drew out Life to about sixty Years: And it was not long before he died, that he gave us that excellent Picture of himself in a Copy of Verses, which are at least equal, both in their Easiness, Simplicity, and Elegance of Thought and Stile, to any of Catullus, and far superior to any modern Composition of that Kind. They have been printed by Mr. Prior, who honour'd them with an Imitation; how near the Original, the Reader may judge.

#### Ad AMICOS.

Du M studeo sungi sallentis munere vita,

Adsectoque viam sedibus Elysiis,

Arctoa slorens Sophia, Samiisque superbus

Discipulis Animas morte carere cano.

Has ego corporibus prosugas ad Sidera mitto,

Sideraque ingressis otia blanda dico;

Qualia conveniunt Divis, Queis sata volebant

Vitai saciles molliter ire vias,

Vinaque Cælicolis media inter gaudia libo,

Et me quid majus suspicor esse viro.

Sed suerint nulli, forsan, quos spondeo, cæli,

Nullaque sint Ditis Numina, nulla Jovis;

Fabula sit terris agitur quæ vita relictis,

Quique superstes, Homo, qui nibil esto Deus;

Attamen esse bilares, & inanes mittere curas

Proderit, ac vitæ commoditate frui,

Et festos agitasse dies, ævique fugacis

Tempora perpetuis detinuisse jocis.

His me parentem præceptis occupet Orcus;

Et mors seu Divum, seu nibil esse velit.

Nam Sophia Ars illa est quæ fallere suaviter boras

Admonet, atque Orci non timuisse minas.

#### To his FRIENDS.

S Tudious the busy Moments to deceive,
That fleet between the Cradle and Grave,
I credit what the Gracian Dictates say,
And Samian Sounds o'er Scotia's Hills convey.
When mortal Man resigns his transsent Breath,
The Body only I give o'er to Death:
The Parts dissolv'd, and broken Frame I mourn,
What came from Earth, I see to Earth return.
The Immaterial Part, th' Etherial Soul,
Nor can Change vanquish, nor can Death controul.
Glad I release it from its Partner's Cares,
And bid good Angels wast it to the Stars.
Then in the flowing Bowl I drown those Sighs,
Which, spite of Wisdom, from our Weakness rise.

The Draught to the Dead's Memory I commend, And offer to the now Immortal Friend. But if oppos'd to what my Thoughts approve, Nor Pluto's Rage there be, nor Pow'r of Jove; On its dark Side, if thou the Prospect take, Grant all forgot beyond black Lethe's Lake: In total Death suppose the Mortal lie, No new hereafter, nor a future Sky: Yet bear thy Lot content, yet cease to grieve; Why, e're Death comes, dost thou forbear to live? The little Time thou hast 'twixt Instant now And Death's Approach, is all the Gods allow; And of this Little hast thou ought to spare To fad Reflection, and corroding Care? The Moments past, if thou art wife, retrieve, With pleasant Mem'ry of the Bliss they gave. The present Hours in present Mirth employ, And bribe the future with the Hopes of Joy. The Future, few or more, howe'er they be, Were destin'd erst, nor can by Fate's Decree Be now cut off, betwixt the Grave and Thee.

Thus ends Dr. Sewel's ACCOUNT of Dr. PITCAIRN, who (as Dr. Cheyne acknowledges) was his great Master, and generous Friend; which is the chief Reason of our inserting it; concluding with a LIST of the PIECES contain'd in his WORKS.

### A LIST of Dr. PITCAIRN'S WRITINGS!

I. A N Oration on the Excellency of the Art of Physic. II. The Theory of the Distempers of the Eye. III. A Differtation upon the Circulation of the Blood thro' the minutest Vessels of the Body. IV. A Differtation of the Causes of the different Quantity that the Blood flows with thro' the Lungs of living Creatures and Embryo's. V. A Differtation upon the Motion which reduces the Aliment in the Stomach to a Form proper for the Supply of the Blood. VI. A Solution of the Problem concerning Inventors. VII. A Differtation upon the Circulation of the Blood in born Animals and Embryo's. VIII. A Differtation concerning the Cure of Fevers by Evacuation. IX. A short Differtation concerning the Effects of Acids and Alkalies in the Cure of Distempers. X. Some Observations concerning. Womens Monthly Courses. XI. Of the Increase of the Quantity of the Blood in the natural State, and the Proportion of the Increase. XII. Concerning the Ingress of the Distemper, commonly call'd, The Lues Venerea. XIII. Concerning the Small-Pox. XIV. For the Arthritidis, or Gout. XV. Of the Division of Distempers. XVI. The Method of curing the Small-Pox, written in the Year 1714, for the Use of the Noble and Honourable Family of March.

As a proper Sequel to the above, we think we cannot do better than to give some EXTRACTS from CORNARO himself, an Author (as we have seen) in so much Esteem with Dr. CHEYNE; and as their Sentiments and Method of Life, were founded upon the same Principles, and equally calculated for the Benefit of Mankind in general, so we hope they may prove no less useful and beneficial to our Readers in particular.

Some

Some EXTRACTS from LEWIS CORNARO, a Noble Venetian, concerning the Preservation of Health.

Hereas several Persons, whose weak Constitution required great Care in the Management of it, have been well fatisfied with what I have written concerning Sobriety, the Experience which they have had of the Usefulness of my Counsels, and the Acknowledgments which they have made thereof; encourage me to take up my Pen again, that I may convince those, who meet with no Inconvenience from Intemperance, that they are in the wrong in relying fo much on the Strength of their Constitution.

Let it be ever so well compos'd, yet it holds not good but to fuch an Age. These Persons seldom arrive to Sixty, but they decay all of a fudden, and perceive themselves loaded with a Complication of Distempers. Some are Gouty, Dropfical, and Rheumatical: Others are subject to Cholicks, the Stone and Piles; lastly, to abundance of Distempers, which would probably never have happen'd to them, if they had been so wise as to have taken Care of themselves in their Youth. If they die infirm at Fourscore Years of Age, they might have lived in Health to an Hundred, and so have run out the Term of Life, which Nature has left open to all Men.

It is to be supposed that this common Parent wishes that all her Children might live at least a Century; and fince fome among them have lived to a longer Date, why should not others have a Right of expect-

ing the same Advantage?

I do not difagree, but that we are subject to the Stars which were predominant at our Birth. Their good or bad Aspects, enseeble or strengthen the Springs of our Life; but Man being endued with Judgment and Reason, ought to repair by his prudent Conduct, the Harm which his Planet may have done him; he may prolong his Days by the Means of a sober Life, to as long a Period, as if he had been born Strong and Lusty. Prudence prevents and corrects the Malignity of the Planets; they give us certain Inclinations, they carry us out to certain Passions; but they lay no Violence upon us, we may resist 'em, and in this Sense a wife Man is above the Stars.

I was born very Cholerick and Hasty; I slew out into Passion for the least Trisle; I hussed all Mankind, and was so intolerable, that a great many Persons of Repute avoided my Company. I apprehended the Injury which I did my self; I knew that Anger is a real Frenzy; that it disturbs our Judgment, that it transports us beyond our selves, and that the Disserting ence between a passionate and a mad Man, is only this, that the latter has lost his Reason for ever, and the former is only deprived of it by Fits. A sober Life cured me of this Frenzy; by its Assistance I became so moderate, and so much Master of my Passion, that no Body could perceive that it was born with me.

A Man may likewise with Reason, and a regular Life, correct a bad Constitution; and notwithstanding the Tenderness thereof, may live a long Time in good Health. I should never have seen Forty Years, had I followed all my Inclinations, and yet I am in the Eighty Sixth Year of my Age. If the long and dangerous Distempers which I had in my Youth, had not consumed a great deal of the Radical Moisture, the Loss of which is irreparable, I might have promis'd

But without flattering my felf, I find it to be a great Matter to have arrived to Forty Six Years more than I ever expected, and that in my Old Age my Constitution is still so good, that not only my Teeth, my Voice, my Memory, and my Heart, are in as good a Condition, as ever they were in the briskest Days of my Youth; but likewise my Judgment has lost

nothing of its Clearness and Force.

I am of the Opinion, that this proceeds from the Abridgment I make of my Food, proportionably to my growing into Years. Experience, which tells us, that Infants have a greater Appetite, and are more often hungry, than grown Men, ought likewife to teach us, that in Old Age we have lefs need of Nourishment, than in the Beginning of Life. A Man who is very old, can hardly eat, because he can scarce digest what he eats; a little serves his Turn, and the Yolk of an Egg is a good Meal to him. I shall be fatisfied therewith to the End of my Days, hopeing, by this Conduct, neither to dye with Violence, nor with Pain, not questioning but that they who will imitate me, will meet with as eafy an Exit, fince we are all of the same Species, and made up of the same Materials.

Since nothing then is more advantageous for a Man upon Earth, than to live long; he is obliged to preferve his Health as far as possible, and this he cannot do without Sobriety. 'Tis true, indeed, that there are several who eat and drink plentifully, and yet live to an Hundred Years of Age. 'Tis by their Example that others flatter themselves with the Hopes of attaining to the same Age, without any Occasion of laying a Restraint upon themselves. But they are in the wrong upon these two Accounts: First, because there is hardly one in a Thousand, that has so strong

rally end their Lives by fuch Distempers, as put them into great Agonies by dying, which would never happen to those that have the same Government of themselves that I have. A Man runs the Risque of not attaining to Fifty Years of Age, for not daring to undertake a regular Course of Life; which is no impossible Thing, since 'tis what I, and several others, have practised, and do practise. And a Man becomes insensibly a Murderer of himself; because he cannot be persuaded, that notwithstanding the false Charms of a voluptuous Life, a wise Man ought not to look upon it as any Hardship, to put in Practice what his Reason advises him.

Reason, if we hearken to it, will tell us, that a good Regimen is necessary for the prolonging of our Days; and that it consists in Two Things: First, in taking Care of the Quality; and, Secondly, of the Quantity; fo as to eat and drink nothing that offends the Stomach, nor any more than what we can eafily digeft. Our Experience ought to be our Guide in these Two Principles, when we are arriv'd to Forty, Fifty, or Threescore Years of Age. He who puts in Practice that Knowledge which he has of what is good for him, and goes on in a frugal way of Living, keeps the Humours in a just Temperature, and prevents them from being alter'd; tho' he fuffer Heat and Cold, tho' he be fatigu'd, tho' his Sleep be broke: provided there be no Excess in any of them. This being so; what an Obligation does a Man lie under of living foberly? And ought he not to free himfelf from the Fears of finking under the least Intemperature of the Air, and under the least Fatigue, which make us fick upon every flight Occasion?

'Tis true, indeed, the most sober may sometimes be indisposed, when they are unavoidably oblig'd to transgress

fransgress the Rules which they have been used to observe: But then, they are certain, that their Indisposition will not last above Two or Three Days at most;
nor can they fall into a Fever. Weariness and Faintness are easily remedied by Rest and good Diet. The
Malignancy of the Stars cannot put the malignant
Humours in a Ferment, in Bodies which have them
not: Tho' Distempers which proceed from Intemperance, have an internal Cause, and may be dangerous;
those which are deriv'd from the Insluences of the
Planets, affect us only externally, and cannot produce

any great Diforders.

There are some who feed high, and maintain, that whatfoever they eat is so little Disturbance to them, that they cannot perceive in what Part of their Body their Stomach lies; but I aver, that they do not speak as they think; nor is it natural. 'Tis impossible, that any created Being should be of so perfect a Composition, as that neither Heat nor Cold, Dry nor Moift, should have any Influence over it; and that the Variety of Food which they make use of, of different Qualities, should be equally agreeable to them. Those Men cannot but acknowledge, that they are sometimes out of Order: If it is not owing to a sensible Indigestion, yet they are troubled with Head-achs, want of Sleep, and Fevers; of which they are cur'd by a Diet, and taking fuch Medicines as are proper for Evacuation. It is therefore certain, that their Distempers proceed from Repletion, or from their having eat or drank fomething which did not agree with their Stomachs.

Most old People excuse their high Feeding, by saying, that it is necessary for them to eat a great deal, to keep up their natural Heat, which diminishes proportionably as they grow in Years; and, to create an Appetite, 'tis requisite to find out proper Sauces, and without thus humouring their Palates, they should be soon in their Graves. To this I reply, That Nature, for the Preservation of a Man in Years, has so composed him, that he may live with a little Food; that his Stomach cannot digest a great Quantity; and that he has no need of being afraid of dying for want of eating, since when he is sick, he is forced to have Recourse to a regular Sort of Diet, which is the first and main Thing prescribed him by his Physicians. Lastly, That if this Remedy is of such Essicacy, as to snatch us out of the Arms of Death, 'tis a Mistake to suppose, that a Man may not, by eating a little more than he does when he is sick, live a long

Time without ever being fick.

Others had rather be disturb'd Twice or Thrice a Year with the Gout, the Sciatica, and other Epidemical Distempers, than to be always put to the Torment and Mortification of laying a Restraint upon their Appetites; being sure, that when they are indisposed, a regular Diet will be an infallible Remedy and Cure. But let them be inform'd by me, that as they grow up in Years, their natural Heat abates: That a regular Diet, despis'd as a Precaution, and only look'd upon as Phsiyc, cannot always have the same Effect nor Force to draw off the Crudities, and repair the Disorders, which are caused by Repletion; and, lastly, that they run the Hazard of being cheated, by their Hope and their Intemperance.

Others fay, that it is more eligible to feed high, and enjoy themselves, tho' a Man lives the less while. It is no surprizing Matter, that Fools and Madmen should contemn and despise Life; the World would be no Loser, whenever they go out of it: But 'tis a considerable Loss, when wise, virtuous, and holy Men drop into the Grave. If one of them were

a Bishop, he might have been an Archbishop, in growing older: If he were in some considerable Post in the State, he might have arrived to the highest: If he were learned, or excelled in any Art, he would have been more excellent, and done more Honour to

his Country and himself.

Others there are, who perceiving themselves to grow old, tho' their Stomach becomes less capable of digesting well every day than other, yet will not, on that Account, abate any Thing of their Diet. They only abridge themselves of the Number of their Meals; and because they find two or three times a day is troublesome, they think their Health is sufficiently provided for, by making only one Meal; that so the time between one Repast and another, may (as they say) facilitate the Digestion of those Aliments, which they might have taken at twice: For this Reason, they eat at this one Meal fo much, that their Stomach is overcharg'd, and out of Order, and converts the Superfluities of its Nourishment into bad Humours, which engender Diseases and Death. I never knew a Man that liv'd long by this Conduct. These Men would doubtless have prolong'd their Days, had they abridg'd the Quantity of their ordinary Food, proportionably as they grew in Years, and had eaten a great deal less, and a little oftner.

Some again are of Opinion, That Sobriety may indeed preserve a Man in Health, but does not prolong his Life: To this we say, That there have been Persons in past Ages, who have prolong'd their Lives by this Means; and some there are at present, who still do: It shortens not our Days, as the Insirmities contracted by Repletion do. A Man of an ordinary Reach may perceive, that, if he desires to live long, it is better to be well than sick; and that, consequently,

Temperance contributes more to a long Life, than an

excessive high Feeding.

Whatsoever the Sensualists may say, Temperance is of infinite Benefit to Mankind: To it he owes his Preservation: It banishes from his Mind the dismal Apprehension of dying: 'Tis by its Means that he becomes wise, and arrives to an Age, wherein Reason and Experience furnish him with Assistance, to free himself from the Tyranny of his Passions, which have lorded it over him for almost the whole Course of his Life.

O happy State of Life! which, befides other Bleffings with which thou favoureft an Old Man, dost preserve his Stomach in so perfect a Tone, as to make him relish a Piece of dry Bread, better than the Voluptuous do all their dainty Morsels, and best season'd Dishes. The Appetite which thou gavest us for Bread, is just and reasonable; since 'tis the most proper Food for Mankind, when attended with a Desire of Eating. A sober Life is never without such an Appetite. So that by eating a little, my Stomach is often craving after the Manna; which I sometimes relish with so much Pleasure, that I should think I trespass upon the Duty of Temperance, did I not know that one must eat it to support Life; and that one cannot make use of a plainer, and a more natural Diet.

My Spirits are not injur'd by what I eat; they are only reviv'd and supported by it. I always find my self in an even Temper, always chearful; and more so after, than before Meals. I use my self, presently upon rising from Table, to write or study, and never find, that this Application of Mind, after Eating, is prejudicial to me: For I am equally capable at all Times of doing it, and never perceive my self drow-zy, as a great many People do. The Reason of this is, because the little I eat is not sufficient to send up

the

the Fumes from the Stomach to the Head, which fill the Brain, and render it uncapable of performing its Functions.

What I eat, is as follows; viz. Bread, Soop, new-laid Eggs, Veal, Kid, Mutton, Partridges, Pullets, and Pidgeons. Among the Sea-fish, I chuse Goldenis, and of the River-sish, the Pike. All these Aliments are proper for old Men; who, if they be wise for themselves, would be contented with these, and seek for no other.

A poor old Man, who has not wherewith to purchase all these, should be satisfied with Bread, Broth, and Eggs; but not to eat much of them at a Time; and so to regulate himself, with respect to the Quantity of his Diet, as that he may not die but by a meer Dissolution. For it is not to be supposed that a Stab, or the like, is the only violent Death; Fevers, and a great many other Distempers, of which one dies in Bed, are to be counted as such, being caused by those Humours, against which Nature would not struggle,

if they were Natural.

I cannot understand how it comes to pass that fo many, otherwise prudent and rational, cannot refolve upon laying a Restraint upon their insatiable Appetites, at Fifty or Threescore Years of Age, or at least when they begin to feel the Infirmities of old Age coming upon them. They might rid themselves of them by a strict Diet; but they become incurable, because they will not observe a Regimen. I do not wonder so much, that young People are fo hardly brought to fuch a Refolution; they are not capable enough of reflecting, and their Judgment is not folid enough to refift the Charms of Sense: But at Fifty, a Man ought to be govern'd by his Reason, which would convince us, if we would hearken to it, that to gratify all our Appetites, Appetites, without any Rule or Measure, is the way to become infirm, and to die young. Nor does the Pleasure of Taste last long, it hardly begins, but 'tis gone and past; the more one eats, the more one may, and the Distempers which it brings along with it, last us to our Graves. Now should not a sober Man be very well satisfied, when he is at Table, upon the Assurance; that as often as he rises from it, what he eats will do him no Harm?

## MAXIMS for the prolonging of LIFE.

IS not good to eat too much, or to fast too long, or to do any thing else that is preternatural.

Whoever eats or drinks too much, will be fick. The Distempers of Repletion are cur'd by Abstinence.

Old Men can fast easily; Men of ripe Age can fast almost as much; but young Persons, and Children, that are brisk and lively, can hardly fast at all.

Growing Persons have a great deal of Natural Heat, which requires a great deal of Nourishment, else the Body will pine away: But Old Men, who have but little Natural Heat, require but little Food, and too much overcharges them.

It must be examin'd, what Sort of Persons ought to feed once or twice a Day, more or less; Allowance being always made to the Age of the Person, to the Season of the Year, to the Place where one

lives, and to Custom.

The more you feed foul Bodies, the more you hurt yourselves.

N. B. For the ensuing Extract, (which we hope will be no disagreeable Amusement to the Reader) we think ourselves obliged to inform him, that we are beholden to the Gentleman's Magazine for May, 1743.

An

**\*** 

An uncommon Method of prolonging human Life to 115 Years, by Means of the Breath of young Women; extracted from the following curious Piece, lately publish'd at Cobbentz, viz.

HERMIPPUS REDIVIVUS, sive Exercitatio Physico-Medica curiosa, de Methodo
rara ad cxv Annos propagandæ Senectutis per Anbelitum Puellarum, ex veteri Monumento Romano,
deprompta, nunc Artis Medicæ fundamentis stabilita, & rationibus atque Exemplis, necnon singulari Chymiæ Philosophicæ paradoxo illustrata &
consirmata. Autore Jo. Henr. Cohausen, M.D.

'HERMIPPUS REVIVED, or a curious Phyfico Medical Differtation, on an uncommon
Method of prolonging human Life to 115
Years, by means of the Breath of young Women; copied from an ancient Roman Monument, now established on a Physical Basis by
Arguments and Examples, and illustrated and
confirmed by a very singular Paradox in Chymical Philosophy. By Dr. Cohausen of Coblentz.'

THIS Piece is founded on the Roman Inscription by Thomas Reinesius.

Æsculapio & Sanitati L. Colodius Hermippus Qui vixit Annos cxv. Dies v. Puellarum Anhelitu Quod etiam post Artem Ejus Non parum mirantur Physici. Jam posteri sic vitam ducite.

Human Breath, fays M. Cohausen, is no other than Air expressed by the Lungs, and, consequently, saturated with Particles from the Blood of the Person discharging it. As a Person labouring under an infectious Disease may communicate it by his Breath; so the pure Breath, and insensible Transpiration, of a healthy young Girl, may contribute to rouse the sluggish Motion of an old Man's Blood, and give it a brisk and strong Circulation. There are various Examples of the great Power of Air and Odours, in nourishing human Bodies, and at least, in supporting and maintaining the Lamp of Life, when almost extinguished. And he shews, from natural Reason, that the human Breath may bring People out of a Swoon.

Having laid down these Principles, he states his Hypothesis thus in the Platonick Style; When Thysbe emits her Breath, she throws off, with that Air, certain Spirits or Vapours from her Blood. Hermippus respiring them, they easily mix with his Blood. Thus the Vapour excited by the vital Heat of Thysbe, passes thro' the Æther into the Lungs and Blood of Hermippus; without a Metaphor we may say, that the Spirits of Thysbe warm the Heart of the old Man. For these Spirits being vigorous, sull of Life and Vivacity, they must naturally re-animate the half-frozen Blood of Hermippus. We may even go so far as to say, that with his own he enjoys a borrow'd Life; and therefore we need not wonder, that he should last twice as long as other Men.

The Condition of Life, therefore, which is most capable of furnishing such a constant Supply of young and wholsom Breaths, must be very eligible. Our Doctor suggests that of a Director of a College of young Women, or, in other Words, a Confessor of

youthful

youthful Nuns; and in support of this Notion, he remarks, that such as have had the Education of young People, have frequently reach'd a very advanc'd Age.

The Sophist Gorgias lived to be 108, the Sophist Protagoras to 90, the celebrated Philosopher and Rhetorician, Isocrates, to 98, the Grammarian Euphranor. taught at upwards of 100, and Orbilius, who was famous for his ill Nature, lived a Century. To these he adds Lewis Cornaro, a Nobleman of Venice, who had been always infirm to his 35th Year, and then abandoning Medicines, prolong'd his Life to 90 by Dint of a wife Regimen. Amongst other Particulars he tells us this; That he bred up 11 of his Nephews, all Sons of the fame Father and Mother, and all fout healthy Youths; that with these, after he return'd from the Senate, he us'd to play and dance. He adds, that little Children made always a Part of his Amusements, and that he look'd upon them, till they were upwards of Five Years old, as fo many little Players, to whom he owed the greatest Pleasure he enjoyed in the latter Part of his Life, and, which is more to our Purpose, the Preservation of his Health,

In the Maidens, which he would have bred up under his Hermippus, the Doctor requires that they should be all young, innocent, chaste, healthy, and have sweet Breaths. Such, he supposes, was Abishag the Shunamite, whom the Physicians recommended to King David to warm his Blood, by lying with him in the Night, and serving him in the Day. He likewise supposes, that the innocent Pastimes, the chaste Caresses, the humourous Frolicks of these young People, should rejoice and revive the Spirits of the old Man; who, he takes it for granted, must be of a gentle, chearful Disposition, and equally ready to

indulge, and even to share in their Pleasures.

#### PAMPHLETS OF ENTERTAINMENT.

- I. THE Metamorphofis of the Town; or, A View of the present Fashions. A Tale, after the Manner of Fontaine. Written by the late celebrated Mrs. Elizabeth Thomas, more particularly distinguished in Mr. Pope's Letters by the Name of Sapho. The Fourth Edition. Price 1 s.
- II. The Secret HISTORY of Queen ZARAH. Translated from the Italian Copy by the late Ingenious Mrs. Manley; and design'd as a Looking-Glass for an Illustrious Lady. Price 15. 6d.
- III. The Female Polititian; or, the Statesman un-mask'd. A Novel. By the Author of the Prude. Dedicated to the Countess of Cardigan. Price 15. 6d.
- IV. The History of Intriguing, from its Original to the present Time. Second Edition. Price 15.
- V. The Polite Philosopher; or, an Essay on that Art, which makes a Man Happy in Himself, and Agreeable to Others. Third Edition. Price 1 s.
- VI. Advice to the Fair. An Epistolary Essay from a young Gentleman to his Sister, on Dress, Converse, and Marriage. Price 1 s.
- VII. Rural Felicity; or, the Delight and Excellence of a Country Retirement. Price 15.
- VIII. A Collection of Ballads, and some other Occasional Poems. By the late Ingenious Mr. William Tunstall, during his Confinement in the Marshalsea, on Account of the Preston Rebellion. Price 15. 6 d.
- IX. Original Poems and Translations. By the Rev. Tipping Silvester, M. A. Fellow of Pembroke College, Oxon; and Lecturer of St. Bartholomew's the Great, London. Price 1 s. 6 d.
