ASTRONOMERS

AND

PHILOSOPHERS.

In a LETTER to a
Reverend PROFESSOR.

To which is prefixed,

The THEORY of a COMET, by Sir Isaac Newton.

Ego nostris non assentior: non enim existimo Cometen subitaneum ignem, sed inter æterna opera Naturæ.—Quid autem miramur, Cometas, tam rarum Mundi spectaculum, nondum teneri legibus certis, nec initia eorum sinesque notescere, quorum ex ingentibus intervallis recursus est?—Veniet tempus, quo illa quæ nunc latent, in lucem dies extrabat, & longioris ævi diligentia. Veniet tempus, quo posteri nostri tam aperta nos necisse mirentur. Erit qui demonstret aliquando, in quibus Cometæ partibus errent, cur tam seducti à cæteris eant, quanti qualesque sint.

Senec. Quæst. Nat. lib. 7.

DISSELTION

HISTORICAL

Describing the Nature, &c. of Comets, as gathered from Observation, according to the Sentiments of Sir Isaac Newton, and other the best modern Astronomers.

ECAUSE Comets seldom appear, their Nature, Motion, Distance, Tails, and other Particulars regarding them, have not been accurately observed till within less than a Century past.

We think it will not be unacceptable therefore, if, by Way of Introduction to the following Differtation, we explain, in a few Words, their principal Phænomena, upon which the modern Hypothesis of them is founded.

First then, Comets which proceed according to the Order of the Signs, are all, a little before they disappear, usually more flow or retrograde, if the Earth move between them and the Sun; and, on the contrary, swifter, if the Position of the Earth be in a different Part of the System. But those which proceed contrary to the Order of the Signs, are swifter when the Earth is between them and the Sun, and

splendid, immediately after their I ranfit of the

and flower, or retrograde, if the Earth be in a contrary Situation. The Reason of this is, that when they wander not among the fix'd Stars, but the Planets, their Appearance is affected by the Earth's Motion in the same Manner as the Planets, which makes them feem to move fometimes flower, fometimes

fwifter, and even fometimes retrograde.

Secondly, So long as they move swiftly, they proceed, with regard to us, in large Circles; but in the End of their Course they decline from these Circles, and, whenever the Earth is moved one Way, they are borne the contrary. The Reason of this is, because in the End of their Course, when they go from the Earth almost in a right Line, that Part of their apparent Motion, which rifes from their Paralaxes, bears a greater Proportion to their whole apparent Motion.

Thirdly, They move in Elipses, the Nave of which is in the Center of the Sun, and by Lines drawn from the Sun, they describe equal Areas in equal Times: The Reason of which is, that they do not rove out of one Vortex into another, with an uncertain Motion; but, as they belong to the folar System, return with a constant and perpetual Motion in their

own Orbits.

Fourtbly, The Light of their Heads increases in their Recess from the Earth towards the Sun: On the contrary, in their Recess from the Sun towards the Earth, it decreases: Because, when they revolve in the Regions of the Planets, their Access to the Sun bears a Proportion sufficiently great to their whole Distance.

Fiftbly, Their Tails appear most large and splendid, immediately after their Transit of the

folar Region; because their Heads, being then most intensely heated, emit the greatest

Quantity of Vapours.

Sixtbly, Their Tails always decline from their Opposition to the Sun into those Parts, which their Heads leave as they proceed in their Orbits. Of which the Reason is, that all Smoke, or Vapours, issuing from a Body in Motion, ascends obliquely, still receding from that Part, in which the emitting Body proceeds.

Seventhly, That the Deflexion or Declination, cæteris paribus, is less when the Head approaches nearer the Sun, and also less near the Head of the Comet, than at the Extremity of the Tail: Because the Vapour ascends more swiftly near the Head of the Comet, than at the Extremity of the Tail; and when the Comet is less remote from the Sun, than

when more.

Eighthly, The Tails in their convex Part are somewhat more splendid, and distinctly terminated, than in their concave Part; because the Vapour in the swelling Part that proceeds, being somewhat fuller and thicker, reslects the Light more copiously.

Ninthly, The Tails, at their upper Extremity, always feem broader than near the Head of the Comet. The Reason of which is, that a Vapour, in open Space, continually

rarifies and dilates.

Tenthly, The Tails are transparent, and even the smallest Stars are seen thro' them; because the Vapours, of which they consist, are extremely thin.

These are the chief Phænomena of Comets, and the apparent Reasons of them; which

are little agreeable to the Dreams of the Antients, and the not very happy Conjectures of most modern Philosophers. Yet there were, even among the Antients, some who took them for perpetual Stars, that moved in their own Orbits. Seneca, in the Passage we have chosen for a Motto, goes further, and prophelies that some time or other their true Nature will be found out. It has been fo in the present Age, by the most excellent Sir Isaac Newton, who proves them to be folid, compact, fixed and durable Bodies; and in fhort, a Kind of Planets, which move freely various Ways in oblique Lines, and very often have a Motion quite contrary to the Course of the other Planets; that their Tail is a very thin Vapour, which the Head or Nut emits in

Proportion as it is heated by the Sun.

According to the Reasoning of the same Philosopher, the Duration of Comets is proved by the Degrees of Heat they imbibe in their Perihelia. He made a Calculation, that the Comet in 1680 must contract a Heat 2000 times greater than that of a red hot Iron. Whence he concluded, that its Body must be very compact, and as ancient as the World: Otherwise it could not have relisted the Rays of the Sun, in that Proximity, but must have evaporated. The Line, he fays, comprised between the Center of the Sun and this Comet, in its Perihelia, was to the Radius of the Earth's Orbit as 600 to 100,000. The Heat perceived on the Earth, then, was to that of the contrary 350,000 to 10,000,000,000, or as 1 to 28,000. Now as the greatest Heat in Summer is to that of boiling Water, but as I to 3 1, and as this last is yet four times less

than

than that of red hot Iron, he found that the Iron's Heat was to that of the Comet as 14 to

28,000, or as I to 2000.

But the periodical Revolutions of the Comets, is what at present engages the principal Attention of many Philosophers. The Return of that which appear'd in 1682, may be expected in 1757 or 1758; there being the greatest room to believe it was the same that was seen in 1607: For there was so little Difference found between the Velocity, the Nodes, and the Inclinations of the one and the other, that it may be consider'd merely as the Attraction of the Planets, and other Comets.

M. Cassini has discovered, that almost all those transient Bodies have a Road different from that of the Planets. This new Zodiac. and periodical Return, removes the only naturai Cause we had to apprehend Danger from them: For if there were fortuitous Bodies, which accidently might fall in with our Ecliptie, what a Difaster would it be for our Earth. if unhappily it should chance to be in the same Point. The Idea of two Bombs, which burft on dashing together in the Air, is infinitely below what we ought to have of fuch a Rencounter as this. But fortunately for us, it has been discovered that the greatest Part of the Comets, in the Nodes of their Orbits, are much nearer the Sun than our Earth, Venus, or Mercury. This is the great Foundation of our Security, in the only Particular we have to dread; and in this we learn how many Thanks we owe to the Supreme Being, for so great a Benefit.

CONTENTS.

REASON I. Against the Presages of Comets, deduced from Natural Philosophy.

REASON II. That if Comets had the Power to produce any Thing upon Earth, it might as well be Prosperity as Calamity.

REASON III. That Astrology, which is the Foundation of all Predictions from the Comets, is the

most ridiculous Thing in the World.

REASON IV. That if it were true that Comets have always been followed by many Calamities, there would be yet no room to think either that they are the Signs or the Causes of them.

REASON V. It is false that more Calamities have happened in Years immediately succeeding the Ap-

pearance of Comets, than at other Times.

REASON VI. That the general Persuasion of Mankind is of no Weight to prove the malignant Influences of Comets.

REASON VII. founded on Divinity. That if Comets were ominous of Calamities, God must have wrought Miracles to confirm the World in Idolatry.

DISSERTATION

ON

COMETS, &c.

SIR,

HO' I am no Aftronomer, ei- No good Reather in Fact or by Profession, son for believe I have confidered carefully what mets presages. the best Writers on the Subject of Comets have published; but I must own, that nothing of it

all feems convincing to me, except what has been faid against the popular Error, "That "they threaten the World with an infinite

" Number of Calamities."

I cannot comprehend therefore, how for learned a Man as you, Sir, who from the very Return of the late Comet, at a Time prefix'd, should have been convinced that they

they are Bodies Subject to the ordinary Laws of Nature, and not Prodigies; can run with the Torrent of Mankind, and imagine, with the Vulgar, in Spite of the Reasonings of the wifer Few, that they are Heralds of Arms, fent from God to declare War against the human Species. If you were a Preacher, I should pardon you; because such Thoughts, being naturally the most proper to dress in all the pompous and pathetic Ornaments of Rhetorick, do much more Honour to those who retail them, and make deep Impression on the Consciences of the Hearers, than a hundred other Propositions demonstratively proved. But I cannot relish, that a Collegiate Tutor, who has nothing to perfuade the People of, and who ought to nourish his own Mind with the purest Reason, should fall into Sentiments fo insupportable, and trust his Faith to Tradition, with a few Scraps of the Poets and Historians, than which there cannot be a worse Foundation.

Authority of the Poets.

To begin with the Poets: You are not ignorant, Sir, that they are all so fond of besprinkling their Works with pompous Descriptions, such as those of Prodigies, and giving an Air of Marvellous to all the Adventures of their Heroes, that, to arrive at these Ends, they invent a thousand strange. Things. Far therefore from believing, on their Word, that the Ruin of the Roman Republic was the Effect of two or three Comets, I would not even believe that any such Comets did appear, if others had not confirmed it. We are to imagine, that a Man who once takes it in his Head to write a Poem,

a Poem, takes Polietion of all Nature at the fame Time; Heaven and Earth act but by his Order; Eclipses or Earthquakes happen if he thinks good; and all the Elements move as he fees Occasion: Armies in the Air, or Monsters on Earth, you behold as many also as he pleases; Angels and Dæmons appear whenever he ordains; the Gods themfelves, mounted on Machines, are ready to supply his Occasions; and as Comets, above all Things, are needful for him, because of the Prejudice there is in their Behalf, he certainly feizes all he finds in History: If he finds none, he makes them himself, and makes them in fuch a Manner, as to shew Heaven most peculiarly interested in his Subject. Who would not laugh, to fee Men of Understanding give no other Proof of the Malignity of these new Stars, than the Terris mutantem regna Cometen of Lucan; the Regnorum everfor rubuit lethale Cometes of Silius Italicus; the Nec diri toties arsere Cometæ of Virgil; the Nunquam terris spectatum impunè Cometen of Claudian, and other like Sayings of the Poets?

Historians, I confess, do not assume the Authority of fame Liberty of inventing extraordinary Phæ- the Historians. nomena: But they discover, for the most Part, so great a Propensity to report all the Miracles and Visions which the Credulity of the Vulgar has authorized, that it would be imprudent to credit all they deliver of this Kind. Whether they believe their Histories would appear too fimple, without Prodigies and supernatural Accidents; or that they hope by this Sort of Seafoning to pleafe the

natural Taste of Mankind, and to keep the Reader always in Breath; or that they imagine these miraculous Strokes will signalize their Histories in suture Times; it is certain that Historians take great Delight in Tales of the wonderful Class. Livy, tho a Man of good Sense and elevated Genius, is an eminent Proof of this; and his History, otherwise almost perfect, is full of ridiculous Omens.

But, not to call in Question the Authority of the Historians, let us confent to believe there have been as many Comets as they record, and as many Misfortunes in the Years following as they relate. If I grant this fo be it; this is all I will grant, and all you can reasonably defire. And what does the Whole of it amount to? I defy you, with all your Subtlety, to infer from it, that the Comets were either the Causes, or the Signs, of those Missortunes which followed their Apparition. The Testimony of the Historians then, can only prove that Comets have appeared, and that there have been Diforders in the World; which is far from proving that one of these two Things is the Cause or the Prognostic of the other: Unless you will admit, that a Woman, who never puts her Head out at Window in Fleet-street, but she sees Coaches pass by, may imagine that she is the Cause of their Passing; or at least, that her putting out her Head should be a Presage to all the Neighbourhood, that Coaches certainly will pass.

Authority of Tradition.

After this it would be superfluous to give a particular Resutation of the Prejudice of Tradition: For it is manifest, that if the

antient

antient superstitious Opinion concerning Comets, has any just Foundation, it consists entirely in the Testimony of Historians, and other Writers of different Ages; so that if this Testimony be of no Weight, as I shall by and by make more apparent, all the Suffrages sounded upon it must vanish at once.

Pity we cannot look into the Minds of Men, at the Instant they chuse an Opinion! I am fure if this could be, we should reduce the Votes of Thousands and Thousands to the Authority of two or three Persons, who having broach'd a Doctrine, which they are supposed to have examined thoroughly, impose it on others by the Prejudice of their own Merit; and these again on others, who find it more agreeable to their natural Indolence to believe at once what is told them, than to be at the Pains of confidering it themselves. Thus the Number of credulous and idle Followers, by increasing every Day, produces a new Engagement to bring more into an Opinion which they fee fo general, and which they perfuade themselves would never have become fo, but for the Solidity of their Reafons who first established it. At last a Man fees himself obliged to believe what all the World believes, for fear of passing for a conceited Fellow, who thinks he knows more than any Body elfe, and contradicts the most venerable Antiquity: It becomes meritorious to examine nothing, and rely wholly on Tradition.

Judge yourself, if a hundred Millions of Men engaged in an Opinion by such Means, can make it a whit the more probable; and if all the great Prepoficifion ariting from this Multitude of Disciples, ought not in Justice to be reduced to the Opinion of two or three. who perhaps have examined what they Reflect, Sir, on the many fabulous Opinions that have been hunted down within these few Years; Had they not all a great Number of Partifans? Did it not appear that these Sticklers for them, only copied the Sentiments of others? Were all these Opinions then any more than one, than his who broach'd it? By the same Rule conclude, that tho' many Nations, and many Ages, agree to accuse the Comets of all the Disasters that have happened in the World after their Apparition, the Sentiment has no more Probability, than if feven or eight only had embraced it; because among all who do, or have believed this, scarce more have examined it upon the Principles of Philosophy.

Why the Phinot produced.

Would you know, Sir, why I have not losophers are made Use of the Authority of the Philosophers, as well as the Poets and Historians? My Reason is this: Because I am persuaded that if the Suffrages of the Philosophers has made any Impression on your Mind, it is only as they make the Tradition more general, and not for the Reasons with which they support it. You know better than to be the Dupe of any Philosopher whatever, provided he attacks you in a Way of Reasoning only; for I must do you the Justice to say, that you follow only the most pure Reason, where, you think Reason has any Business. Shall I tell you then, as an old Friend, how you first came to fall into this vulgar Opinion, without

without confulting the Oracle of your Reafon? It is because you think there is something divine in the Matter, as it has been faid of certain Diftempers upon the Authority of Hippocrates: It is because you imagine that the general Confent of all Nations, thro' all Ages, can proceed only from a Kind of Inspiration; Vox Populi, Vox Dei: It is because you are used, in your Character of a Priest, to reason no longer, as soon as you imagine you fpy a Mystery: In a Word, it is because, having a timorous Conscience, you readily believe that the Corruption of the World puts into the Hands of God the most dreadful Scourges; which however the good Deity will not use, 'till he has seen whether Men will repent, as he mercifully waited a hundred Years before the Deluge. Sir, fills your Head with a fophistical Authority, from which you cannot defend yourfelf, even by that Address which enables you fo well to unravel the false Reasonings of the Logicians.

REASONI

Against the Presages of Comets.

"That it is very probable they have no "Power of producing any Effect upon the Earth."

Tho' I cannot promise myself, from what I have said, to convince you by Reasons of Philosophy; I shall however first introduce such as occur to me, and then talk to you upon

upon Principles of Religion, to confirm what I have advanced.

Extent of At-

It is very uncertain, whether Bodies fo remote from the Earth, can emit thither any Matter capable of great Action: For if it be the universal Sentiment of Philosophers, fince they have been obliged to abandon the common Opinion concerning the Matter of Comets, that the Atmosphere of the Earth, and the Vapours that it expands, terminate in the middle Region of the Air, at most three or four Leagues high; why should we think that the Atmospheres of Comets extends many Millions of Leagues? No Reason can be affigned why the Planets and Comets should produce Effects quite to the Earth, while the Earth cannot produce any at all beyond fo small a Distance.

If Comets emit any Thing but Light.

Will it be said that since Comets send us Light, they may as well send us any Thing else? The Answer is easy. The Light they send us proceeds originally from the Sun, and they contribute to send it hither merely in the Quality of dark Bodies, which reslect it from themselves: So that whatever Hypothesis you have recourse to, to explain the Propagation of Light, whether that of Aristotle, Epicurus, or Descartes, or the Principles of Sir Isaac Newton, it will be evident that the Comets may shine upon us without any positive Action of their own, and without emitting to us the least Particle of their own Substance.

If their Light Will it be faid that the Light detaches a detaches any Number of Atoms from the Body of the Atoms.

Comet, and brings them to us when it comes hither

hither by Reflection? If this be all, no Addit on is requisite to the former Answer. The Atoms which the Light of the Sun exhales from the Earth and the Water, follow the reflected Light but a very little Way, and by Parity of Reason it is the same with

those it exhales from other Bodies.

Will it be faid, that even the Light reflected by the Comets, is capable of doing great Harm? This is improbable, because that Light is no more, when the Effects ascribed to the Comets are produced; and that, befides, the Action of this Light is so feeble with regard to us, that a fingle Taper, in the Midst of a Field, would both illuminate and warm the circumambient Air more than this Comet. As it would be ridiculous, therefore, to attribute to the Light of this Lamp the Power of producing great Changes in the Sphere of its Activity, it is equally ridiculous to attribute to the Comets the Power of altering our Elements, and disturbing the public Tranquility. For to own that the Light of Comets is only that of the Sun extremely weakened, and yet to attribute to it Effects that the Sun cannot produce, is like maintaining that a Candle, which cannot keep the Cold out of a Closet, is sufficient to warm all the Inhabitants of a large Town.

Will it be faid, that there is much Dif- That it is as ference betwixt the Earth and the Comets, and difficult for that the' the Exhalations of the Earth cannot descend as to ascend to the Region of the Comets, it does aftend. not follow that the Virtue of the Comets cannot extend to us; because it is much easier to descend than to rise, and there is an Ascent

from hence to the Comets, but a Descent from them to us? But it is not difficult to demolish this Objection, even upon the old Systems of Philosophy: For if it has any Force, it is from the Supposition that the Earth is in the Centre of the World, and that all Bodies gravitate towards it. As we do not expect, however, at this Day, to meet with many of this Opinion, we shall not take up any Time to refute the Consequences of it. And admiting the Sun to be the Centre of Motion and Gravity, as the Generality of Mankind do now, the whole Objection falls to the Ground.

That the Ex-

Wrong to be

positive without Proof.

But let us grant, for Argument's Sake, bolations of Co- that the Comets may fend their Exhalations of they could to the Earth; does it follow that Mankind the earth should be affected by them? Not in the least: evolute produce For an Exhalation, in passing thro' such an Es Effett bere. immense Space, would be divided into such infinitely small Particles, and these be so expanded over the whole folar System, that they could no more alter any Part of it, than the smallest Grain of Salt, when dissolved, would alter a very large Ciftern of Water. Nay, the whole Body of a Comet, reduced to Powder, and expanded in this Manner, could be of no more Consequence to our Globe, than the faid Grain of Salt in the Ciftern, or, if you please, in a large Pool.

> Finally, will it be faid, that it is not impossible that Comets should elance to the Earth a very active Matter or Quality? This is the most reasonable Thing that can be said on the Subject, and yet it is faying nothing at all; because it is not only possible, but even very apparent, that the Comets elance to the

> > Earth

Earth neither Quality nor Matter capable of any great Action; and because in Questions where there is no more Reason for one Side than for the other, those who affirm are always more to blame, than those who suspend their Judgment. So that as we have no positive Reason that may incline us to believe the Insluence of Comets, and, on the contrary, as we have many Reasons to incline us to reject that Opinion, those who take the first Side of the Question are manifestly wrong.

REASON II.

That if Comets had the Power to produce any Thing upon Earth, it might as well be Prosperity as Calamity.

In the fecond Place, supposing that Comets fend to the Earth many Particles capable of great Action, there is no more Reason to maintain that they ought to produce Peftilence, War, or Famine, than that they are productive of Health, Peace, and Plenty: For no Man knows the Nature of these Corpuscula, their Figure, their Motion, or the other Qualities of their Parts. Is it any better Sense to say, the present Comet, which has not made us a bit warmer than usual for the Time of the Year, will cause a War three Years after it is gone, because, by warming the Mass of Blood, it will make Men more vindictive; than to fay that it will bring on a Peace at that Time, because, by cooling the Mass of Blood, it will render Mankind wifer?

C 2 Yes,

Objection.

Yes, some perhaps will answer; it being more probable, that the gross Matter, which comes to us from the Extremities of the solar System, not being proportioned to the terrestrial Bodies, does every Thing contrary to us, than it is, that it brings or preserves favourable Dispositions. It may augment the Cold in Winter, and the Heat in Summer, and drive every Thing to Extremes.

Answer. Tanswer All these or

I answer, All these are Conjectures in the Air, no more probable than what may be made on the other Side. I may as well suppose that this gross Matter is a fat unctuous Ferment, which makes the Earth sertile, like the Slime which the Nile leaves after its Inundation; that it purifies the Air from the Seeds of all Diseases, and is so philtrised before it comes to us, as to be incapable of doing us any Injury.

REASON III.

That Astrology, which is the Foundation of all Predictions from the Comets, is the most ridiculous Thing in the World.

In the third Place I say, that the Predictions of Comets turning only upon astrological Principles, they cannot but be very ridiculous; because there never was any Thing more impertinent, more chimerical, than Astrology; nothing more ignominous to human Nature, to the Shame of which, it will be eternally recorded, that there have been Men Cheats enough to deceive others, under Pretence of knowing

knowing heavenly Things, and Men Fools enough to give credit to those Cheats, fo far as to fet up the public Office of an Aftrologer, and not to dare put on a new Garment, or plant a Tree, without his special Approbation.

Would you know of one of these Profes- Jargon of th fors, what are the particular Things predicted Aftrologers. by this Comet? He will tell you, that the particular Virtue of a Comet depends upon the Quality of the Sign, and the House in which it began to appear, and also on the Aspect it was in with the Planets. That this Situation must be particularly regarded, in order to make the Horoscope of a Comet; to which must be added, the Consideration of the Signs thro' which it passes successively. Then he tells you, that there are masculine Signs, and feminine Signs; earthy Signs and watry, cold Signs and hot, diurnal Signs and nocturnal, &c. That every Planet prefides over a certain Portion of the Earth, and a certain Species of Mankind, and Things; Saturn, for Example, over Bavaria and Spain, over a Part of Italy, over Ravenna and Ingolftad, over the Fews and the Moors; over standing Ponds, Common-Sewers, and Church-Yards; over old Age, over the Spleen, over Black and Tawny, over Sour; for even Colours and Taftes come under their Domination. He will add, that the Signs, and in particular those of the Zodiack, have also their proper Divisions upon the Globe of the Earth, for the Exercise of their Power. The Ram, for Example, rules over all Things subject to the Planet Mars, his Guest, (for you must observe, that every

every Planet has a Lodging affigned him, in fome Sign of the Heavens) which are, The North, a Part of Italy and Germany, England, and the Capital of Poland; the Liver, the Gall; Soldiers, Butchers, Bailiffs, Hangmen; Red, Bitter, Pungent. Besides this, he reigns over Palestine, Armenia, the Red Sea, Burgundy, the Cities of Mentz and Marseilles. The Astrologer will tell you farther, that there are twelve Houses to consider in the Heavens, of which each has its particular Functions, and belongs to a certain Planet. For Example, the first House regards Lite, and the Constitution of the Body; and the last refers to Enemies, Imprisonments, and the Fidelity of Domesticks. Mercury, more than any other Planet, takes Pleasure in the first; and from thence bestows a happy Life, and a strong Constitution. Venus delights in the fifth, and promises Joy thro' Children.

Astrological Conclusion.

This, and many other Remarks of the same Nature, being laid down; the Aftrologer will tell you to what Countries, what People, or what Cattle the Comet is peculiarly fent, and what Sort of Ills it threatens them with. the Ram, it fignifies bloody Wars, great Mortality, the Depression of great Men, the Elevation of those that are mean, terrible Droughts, in the Countries subject to the Domination of that Sign. In the Virgin, it fignifies dangerous Miscarriages, Imprisonments, the Sterility and Death of many Women. In the Scorpion, besides the preceding Ills, it threatens Reptiles and Locusts without Number. In the Fishes, Disputes upon Articles of Faith, frightful Apparitions in the Air, Air, Civil-Wars, Plagues; and always the

Death of great Men.

If it unluckily happens that the Comets pass thro' Signs of a human Figure, as the Twins, the Virgin, Orion, &c. Mankind are to feel the Effects of it. If they pass thro' the Signs of the Ram, the Bull, the Swan, the Eagle, the Fishes, it is to the Animals of those Species that they are sent. If the Signs are masculine, Males are to suffer by it; if feminine, Women. If they traverse the immodest Parts of any Constellation, the Omen is terrible to unchaste Women. If the Comet is faturnine by its Situation, or its Aspect, it produces all the bad Effects afcribed to Saturn; as Jealoufy, Melancholy, Distrust, and Terror. It in the fecond House, which is that of Riches, it fignifies Losses, Thests, Bankruptcies, and fo on: For in general, an Aftrologer judges of the Influence of a Comet by the Rule, according to which he pretends that fuch a Sign, in fuch a House, and with fuch an Afpect, presages this or that, to such particular Things.

Very feldom do they make a Comet signify Comets feldom any Thing good. There was however a Swifs made to signi-Astrologer, who, having remarked in 1661, sy any Thing

and disappeared at its Feet, assured the World that it foretold the Ruin of the Turkish Empire by that of Germany: Which was so far from being verified by the Event, that two Years after, the Turks had like to have taken all Hungary, and would manifestly have invaded the Hereditary Austrian Dominions, if the Supply sent to the Emperor by

the King of France, had not put him in a Condition to make his Peace with the Sultan. The Predictions of an Aftrologer are like those of a Poet; always fatal to the Ottomans, but without any bad Confequence. whole last Century, all the French Poets, with the Air of an Oracle, chanted forth the Destruction of the Grand Turk by the Kings of France, and erected Trophies for the latter upon the Banks of Fordan and Euphrates. The redoubtable Mr Despreaux, who had been for merry at Sallies of this Kind, at last fell into them himself. I expect Thee, says he to Lewis XIV, in two Years, upon the Banks of the Hellespont; and lo! he was as false a Prophet as the rest of his Brethren.

It is no new Thing for Aftrologers to reafon in this Manner. In the Time of Pliny it was the same. It is no indifferent Matter, says that Author, whether the Comets dart their Rays this or that Way, or receive their Virtue from certain Stars, or represent particular Things, or Shine in certain Parts of the Heavens. Now consider, Sir, whether a Man must not have put off all Shame to lay down Principles of this Sort. What, because a Comet appears near certain Stars, which the Antients have been pleased to call the Virgin, in Complaifance to the poetic Fiction, which makes Justice, or the Virgin Astrea, in Difgust with the corrupted World, ascend to Heaven; are Women for this Reason to be barren, or to miscarry, or not to get any Husbands? Can any two Things in the World hang worfe together?

It was mere Whimfy that occasioned this The celestical Sign to be represented under the Figure of a Signs merels Woman: For, in fact, it is no more like a hu- imaginary. man, than any other Form. But if it were true that it refembled a human Figure, have we Eyes good enough, with our best Tellescopes, to differn whether it be a Male, or a Female, that it is most like? If we could distinguish even that, how could we know whether it was a Virgin, or a Woman? In a Word, could we make all these subtle Distinctions, and be fure that a certain Number of Stars are so situated as to form the Likeness of a spotless Maid, would it follow that they must communicate to a Body, perhaps thirty millions of Leagues distant, an Influence contrary to the Multiplication of human Nature? It would be infinitely more reasonable to advance this Impertinence; That if a Baker was to make the Figure of a Man or a Woman upon a Cake, that Cake would be turned into Poison for all the Men or all the Women who eat it. One may justly say to the Astrologers, what Pliny says of another Species of Cheats: That to have spoke such a Thing seriously, proves a Man to bave a Contempt for those he speaks to, and that the Impunity of Lying is shamefully great.

I shall not take up your Time with a Detail of Proofs for what I advance. There are already many good Treatifes, universally known, which demonstrate the Falsity of that chimerical Art. I believe that no Man ever writ against Astrologers without consounding them, and who could not say what the Romans said of Africa, That the Subject assorbed

them

them a Harvest of Triumphs: If there be any such Writer, he deserves the same Notice that the Emperor Gallien took of a certain Knight, upon whom he settled a Pension for having pursued a Bull a long time, without

being able to hit him once.

The Opinion of the Many not to be relied on.

A thousand Instances might be produced from History, of the great Credit Astrology has been in. Whether we confider the antient Pagans, or the modern Infidels, nay the Christians themselves, and even those of our own Nation, we shall every where meet with a plentiful Harvest. If all this should be thought a Digression, I shall now let you see that it is not a useless one: For my principal Defign in it, is to discredit the Authority of Opinions founded upon the Multitude. I do this better, than to shew that Astrology, which never had the least Probability for its Foundation, has however infatuated the greatest Part of the World in all Ages? If you fay, that tho' the Multitude believe in Aftrology, the Opinion founded on its Predictions is talfe and ridiculous; it is equally true that the Predictions made from Comets, as they have no other Support but the Principles of Aftrology, are no less ridiculous than that Science itself, notwithstanding the great Number of People who believe in them. In all Matters, but those of Faith, the only Fayour we should shew to long Possession, and the great Number, is to give them the Preference, every thing else being equal: For if Prejudice be admitted, it should be rather in Favour of one who is fingular in his Opinion, than of the Multitude.

REASON IV.

That if it were true that Comets have always been followed by many Calamities, there would yet be no room to think either that they are the Signs or the Causes of them.

To return to my Point: If it be true, Sir, that there never appeared a Comet, that was not followed by many Calamities, this proceeds only from the Condition of Things in this World, which subjects them to an Infinity of Changes. The fame Influence may fafely be attributed to whatever we please, as the Marriage of a King, or the Birth of a Prince; because it is certain that no King was ever married or born, but what some great Missortunes fucceeded in one Part of the World or other. In a Word, it is as probable, as Affairs usually run, that after any Year we fix on, some Calamity will happen in some Part of the World, as it is, that at any Hour of the Day, if an Inhabitant of Fleet-street or Cheapside looks out at the Window, he will fee People passing along the Street. But the Citizen's looking out has no Influence upon the Pastengers, and they would go by at the same time if the good Man had kept his Window shut. The Comet in like Manner has no Influence upon Events, and every Thing would have happened just as it did, if no Comet had appeared. REASON

REASON V.

It is false that more Calamities have happened in Years immediately succeeding the Appearance of Comets, than at other Times.

The following Particulars are evident from History. I. That by reflecting on what has passed, either in the whole World, or in any large Part of it, we shall see that as many Misfortunes have happened in Years remote from the Appearance of a Comet, as in those that have fallen nearest to such Appearances. II. That the Years which have been thought infected by the Influence of Comets, are remarkable for as prosperous Events in some Parts of the World, as any other Times whatever. III. That some of the most terrible Events have not been preceded by any Comet, and that the most remarkable Prosperities have been so preceded. To say all, in a few Words, we may lay it down for certain, that if we take the whole History of the World, and compute with Care, the Good and the Ill that have been felt in general, within the Compass of fifteen or twenty Years, we shall find that one with another, the Good and the Ill are pretty equally proportioned at all Times; which proves that the Years which follow the Apparition of Comets have nothing to diffinguish them from others, and that consequently it is very unjust to judge in Opposition to all Experience.

The fame Observation may be made against One Time is those who pretend that great Events depend not more forupon particular Seasons. All that can be nother. proved, with regard to Months, Days, Years, and Numbers, is, that God has not fixed the Events which tend to punish any People, or to the Foundation or Ruin of Empires, more to one Time than another. The contrary would be an Affectation unworthy of the divine Majesty, and which can be attributed to him only by those superstitious Minds, which suppose his Providence always bufy about Trifles. The Scripture and the Fathers declaim against this Abuse in many Places, and it is false that History favours it. We might appeal to all that the Pagans fay concerning lucky and unlucky Days, and concerning the Fatalities they attribute to certain Names, and refute their Opinion from their own Records.

It is certain that those who are the least ac- Proof of the quainted with History, will cite you many Inefficacy of Diforders that happened after the Appearance Comets. of Comets, without speaking of any Prosperity that arrived at the fame Time. For Example, they retail to you all the Warsthat harraffed Europe between the Year 1618 and the Peace of Munster, and throw the whole Load of these Calamities upon the Back of the poor Comet, without faying a Word on the other Side. But, besides that this is stretching the Power of Comets beyond their just Bounds; that what they call an Ill, has been productive of great Good to the best Part of Christendom, which was thereby delivered from the Danger it was in of loting its Liberty;

berty; besides this, I say, who does not perceive, that if we once give ear to all these Quoters of Examples, you open a Way to all Sorts of Superstitions and old Women's Tale: For there is no good Dame who cannot furnish you with a thousand tiresome Circumstances, as the Death of twenty or thirty of her Relations or Friends, upon that Day or Year, in which the made one of thirteen in Company at Table; and the many Troubles she always went thro' after letting the Salt-feller fall; without faying a Word of any Party of Pleasure she was in, or any good Fortune that happened to her.

But let us come to real Facts with regard to Comets. It is not now the Question whether they have Power to alter our Elements, whether they predict in Quality of Causes or of Signs, and appear particularly whenever Mankind have any great Misfortunes to fuffer. We are to justify the Fact, which we shall hear denied, by fome Perfons, whenever we men-

tion it.

Experience, manage it, a formidableEntrenchment.

I remember to have read in Cicero, that the as some People Knowledge of Omens is more founded upon the Observation of Events, than upon Reafon; and that in Things of this Nature we ought not to enquire after the Caufes, like Carneades and Panatius, who, with Epicurus, were almost the only Infidels with regard to this pretended Science. When they asked if it was Jupiter that ordained the Crow to scream on the left Hand, and the Raven to fcream on the right; all the Answer they got was, that it ill became them to pry fo far into those Matters; that fince the Experience of all Ages confirmed the Truth of Divination,

tion, they ought to be contented; that there were Herbs of which the Virtues were known, but not the Cause which produced those Effects; notwithstanding which, no Man scrupled to use them in Physick. On this Occasion, Cicero produces a great many Things in Nature, the Properties of which are known to us, but not the Causes of all those Properties, and makes his Brother, the Dialogist, say, that he is content, with knowing such Things are done, tho' he is ignorant in what Manner.

This, Sir, is exactly your Case: Let a Philosopher press you as much as he will upon the Manner in which Comets predict our Miffortunes; all you have to fay to him is, that tho' he knows not in what Manner the Sun illuminates the World, he is not the less affured, with the Rest of Mankind, that the Sun does illuminate the World, because Experience evidently demonstrates it: That, for the same Reason, Experience having taught us that Comets are followed by Misfortunes, we ought to believe they are ominous, tho we know not in what Manner they are fo. may, I must own, attack you very successfully in this Entrenchment; but, while you are able to appeal still to Experience, you will always find a Place of Security. For this Reason, Sir, I refer you first to the Tribunal of Experience, and will let you fee that it does not decide in your Favour.

In the feven Years that followed the two frightful Comets of 1665, can you in Consci- followed 1665 ence fay that Europe was extremely afflicted, with those that and in Danger of being ruin'd? Do you re- preceded 1652, mark any Calamities, more than common in

Comparison of the Years that in both which thois pear'd.

those Years? Did any barbarous Nations, like the Huns, the Goths, the Ulans, the Normans, bring Desolation upon a Number of Provinces? Did the Pestilence depopulate the most sourishing Kingdoms, and send to the Grave one half of Mankind? Was Famine complained of in most Countries? Were Monarchs dethron'd by the Rebellion of their Subjects, or the Usurpation of their Neighbours? What Heresies and Schisms arose in that Period? Was Impunity of Crimes authorized by those in Power? On the contrary, is it not true that Pestilence, War, and Famine, spared the human Species as much as Humanity has

Reason to expect?

I find but four Wars recorded during that whole Time; that of the Turks and the Venetians; that of the Spaniards and the Portuguese; that of the Dutch and the English; and the Campaign of Lise, between the French and the Spaniards. The two first, which began long before the Comet appear'd, were happily ended in this very Time; and the other two were ended almost as soon as begun. Does not this shew us that the Instuence of the Comets in Question was more inclined to Peace than War, because it terminated Wars that had begun without their Participation, and soon brought on a Pacification of those which begun under their Reign.

The Year 1668 peculiarly prosperous. The Year 1668 was peculiarly prosperous, because, by the Treaty of Aix la Chapelle, the King of Spain recovered a Province that he could never have reconquered, and secured to himself the Possession of all that remained to him of the Low Countries, which he must infallibly

infallibly have loft, if the War had continued. Peace became general in all the West, which alone is a great Happiness to Mankind. All the Christian Princes laid aside their Jealousies and Suspicions. Can we say, after this, that the Comets of 1665 were followed by a Deluge of Calamities? Ought we not to laugh at the Aftrologers, who foretold that Schifms, Herefies, Bloodshed, and a thousand other horrid Ills, would be the Confequence of them?

It fignifies little, on the other Side, to Calamities bemention the Plague of London in 1665; the tween 1665, Fire of the same City the next Year; the and 1672. Earthquake in 1667, which swallow'd up the Republick of Ragusa; the burning of Mount Ætna in 1669, and other Accidents of the same Nature: These were indeed dreadful Things to those who suffered particularly by them, but were neither of general Confequence, nor very extraordinary; and it is eafy to shew that at other Times, more tragical Misfortunes of the fame Kind have happen'd; as the Fire of Moscow, the Capital of Muscowy, which was entirely reduced to Ashes by the Tartars in 1571; the Earthquake in Afia, in the Reign of Tiberius, which swallowed up twelve large Cities in one Night; that which destroyed 20,000 Lacedemonians, and buried their whole City under a Part of Mount Taigetus, 469 Years before Christ; that which happen'd in Canada in the Year 1663, and that in Peru in 1604, which in less than an Hour overfet almost every Thing for an Extent of 300 Leagues long, and 70 broad; the burning of Vesuvius in 1631; the Plague which depopulated the Capital of the Empire, E which

which purfued the Emperor to Prague, whither he fled for Refuge, and afterwards spread itself in several Provinces with frightful Effects. Besides, ought these two or three Calamities to over-balance the Felicity brought by fo many Treaties of Peace, and the Revival of Literature and Science in France, from whence it has spread over the Northern Nations? Never pretend to fay, that I have not taken a Period fufficiently extensive: For common Sense must assure us, that if Comets predict any Thing, it is for the first fix or feven Years that follow them; and it is upon this very Foundation that their Malignity is proved from History.

Calamities in Europe between 1645 and 1652.

For Variety, Sir, let us look over another that happened Set of Years, selected from a Time entirely purified of all the ill Air of Comets. Reflect on what passed in Europs between the Year 1645, and the Comet that appear'd in 1652. You will fee the long Wars of Germany, faid to be predicted by the Comet in 1618, entirely put an end to at Munster: But you must allow that Comet a very tedious Time to purge itself, if you think its Influence continued as long as this War. The three last Campaigns of the Allies against the House of Austria, so remarkable for many bloody Actions, fall within the Period that I have chosen. To mention only the Battle of Norlingen, in which the Prince of Conde fully revenged the Affront, which the Swedes had received there ten or twelve Years before; and the Sacking of Prague, when many Ladies, of the first Quality, were reduced to the hard Terms of being exposed in

the Streets, in their Smocks only. Even thefe were not the worst Calamities that happened within this Period, when a furious Spirit of Sedition seemed to be let loose all over Europe.

We find Charles I, King of England, condemned to Death by his own Subjects, and this Period. beheaded with many shocking Circumstances. We find his Son, Charles II, obliged to hide himself in an Oak, after having seen all his Troops cut in Pieces at the Battle of Worcester; to fly afterwards out of his Kingdom, almost without Necessaries; happy that in this poor Condition he could elude the Search made after his Person, and avoid the Fate of his Father. We find France torn in Pieces by a cruel Civil-War, which loft her almost all the Conquests she had made in twelve Campaigns; fensible of the pernicious Shame of destroying herself, like the Roman Republick, when no other Power was able to hurt her. We find the Kingdom of Naples in Rebellion against her Sovereign; the French at War with the Spaniards in Flanders, Italy, and Catalonia; Portugal in Arms against Holland, and against Spain at the same Time; Kmielniski, General of the Collacks, in Rebellion against Poland, and in League with the Tartars, filling that Kingdom with Defolation; taking Advantage of the Death of the brave Uladiflaus, bringing the Cham into Poland, joining him, and, with an Army that has had no Equal fince Attila, belieging the Poles in their Entrenchments, and reducing them to the last Extremity. We find that the Peace concluded in 1649, on Conditions very difadvantageous to Poland, is of short E 2 Duration, DVEEL

Seditions in

Duration, and Hostilities are again renewed by fresh Irruptions of the Costacks and Tartars, who commit a thousand Outrages, and cause the utmost Calamities before they are totally defeated. We find the Muscovites in such a furious Insurrection, that the Chief Ministers of State cannot find an Afylum, even in the Palace of their Emperor, against the Infolence of the Mutineers. The Czar gives up to them the Victims they demand, fuffers his principal Officers to be knock'd on the Head with Clubs, and, after having got off his Brother-in-law, who was also his Favourite, begs his Pardon of the People. We fee in Comstantinople Seditions so horrible, that Sultan Ibrahim, after having been compell'd to abandon the Vizer Azem to the Fury of the Mob, who strangle him, is himself strangled in Turn. Nor was this all: The Janiflaries and Spakis, who are the principal Forces of the Ottoman Empire, grew fo outrageous against each other, that they are upon the Point of deciding their Quarrel by Force of Arms. The Sultana Kiofem who governs the State during the Minority of the young Sultan her Grand-son, conspires to have him strangled by the Janisaries: But the Sultan's Mother prevents her by a Counter-plot, procures her to be strangled in his Room, and cuts off the Chief Officers of the Janisfaries. We fee the Venetians at War with the Times. which spreads the most frightful Calamities thro' all the Coasts of Dalmatia and the Archipelago. We meet with a hundred other Disorders, the Detail of which would be tirefome, as I think it superfluous. What I have

have mentioned is more than sufficient to make you own, that the seven Years which I pitch'd upon after the two Comets, are not half so full of calamitous Events as these I am now speaking of, which were the Sequel of no Comet, but, on the contrary, preceded that in 1652, and sollowed those Years allotted to the Expiration of that in 1618.

Confess it then frankly, Sir, That there are Inference.

Calamities without Comets, and Comets without

Calamities; and that to reason after the vulgar Manner, the Peace of Munster ought to
pass for a Sign of the Judgments of God, because it was followed by so many Missortunes

all over Europe.

Our proverbial Friend will, I know, tell me on this Occasion, that One Swallow does not make a Summer. My Answer is: Let him turn over History with Care, and he will find what Examples he pleases of the same Nature. A German Author of the XVIth Century, named Elias Major, has collected a great Number of them, and remarks expressly, that the most celebrated Treaties of Peace have been concluded foon after the Apparition of fome Comet; that many idolatrous Nations have been converted to the Gospel, in Times marked with the same Character; and that the same Things might be faid of the Foundation of the most celebrated Universities. For you, Sir, who are so deep in the Canons, the Fathers, and the Cafuiffs, as to have no Time for fuch a Lecture, I have by and by an Argument that requires no fuch Reading at all.

Oracies

REASON VI.

That the general Persuasion of Mankind is of no Weight to prove the malignant Influences of Comets.

But I have yet one more philosophical Reafon, and, I think, no inconfiderable one. General Tradition, and the unanimous Confent of Mankind, are no Prescription against Truth. If they were, we must own, that all the Superstitions which the Romans learned Auguries and of the Tuscans, in relation to Auguries and Prodigies, and all the Impertinencies of the Pagans regarding Divination, were fo many incontestable Truths, because Mankind had as much Prevention in their Favour, as in Favour of Comets. We must own that the Devil, the Father of Lies, did nevertheless, for a long Succession of Ages, give out Oracles full of Truth, Sincerity, and Faithfulness: For there was a Time when all the World gave Credit to Oracles. It would be impossible to answer this Argument, reported by Cicero, That the Oracle of Delphos had never become fo famous, nor had all Nations and Kings fent thitber so many Presents, if all Ages had not experienced the Truth of its Answers. What could be more plaufible than this, allowing it once proved that Apollo did utter many true Oracles. But the Whole falls to the Ground when we deny the Principle it is founded on, viz. That Opinions generally established are true. Nothing is in Fact more false than this Maxim,

Oracles.

Maxim, even from the Example of that very Oracle, which was confulted from all Parts; tho' its ambiguous Answers were a fatal Snare to many Nations, and an Effect of the most abominable Imposture. It is with good Reafon then that I deny the Principle founded on general Belief, fince it is eafy every Day to discover a thousand Blunders in the most univerfally received Opinions. That, for Example, of the Dog-star, which is thought to Dog-star. bring fultry unwholfome Weather: Whereas our Reason assures us there is nothing more false than the pretended Fervor of that Star; and Experience, ever fo little attended to, will convince us, that July, oftner than August, is the hottest Month in the Year.

What has been affirmed of certain Remedies, that you must have Faith in order to give them their Effect, may be applied to a great Number of Traditions. Would you wish not to be undeceiv'd? Believe without examining: For if you employ some Time to fearch Things with a critical Temper, you will foon find that Experience does not agree with the public Voice. Here follow more Examples

of it.

If there are any celestial Bodies whose Influences can have any Virtue upon our Earth, fluence. the Moon doubtless is the chief, as being the nearest to us. Hence we believe her to be the Cause of a great many Things. occasions an Increase and Decrease in the Marrow and Brain of Animals; regulates Heat and Cold, Rain and Tempests. have rainy Weather at a new Moon, you must not expect to have fine Weather return, 'till

Moon's In-

the

she is at the Full: If the Rain cease not then, you must wait with Patience 'till the next Change. It is just the same with Droughts, Frosts, &c. because the Conjunctions and Oppositions of the Moon have the Property of changing the Weather. Hence it is that in Conversation, since nothing occurs more frequently than the Subject of Rain, Cold, Drought, and the like, we often hear some of the Complainants enquire after the Full or New Moon, and console themselves upon the Change that is then to happen. These are Sentiments common to all Countries, and to Persons of all Conditions.

Absurdity of that Notion.

Yet those who have taken the Pains, for twenty or thirty Years successively, to examine the Marrow of Animals, have remarked, that in what State foever the Moon be, some Bones are found with a great deal of Marrow in them, and others with a very little: Which shews that the Moon has no Part in all this, any more than it has in the Fulness or Emptiness of Oysters and Crabs. fay the fame Thing with regard to the Change of the Weather, and maintain, after having observed it attentively a great while, that there is no one Day to be fixed on in all the Lunar Months, in which the Transition from rainy to fine Weather, from Thaw to Frost, or the like, is more frequent than in another. If we had a good Series of Observations, we should find that the Temperament of the Air depends fo little upon the Full Moon, that we might reckon as many dry Moons, whose Change was in wet Weather, as we could rainy Moons after Changes ot

of the same Kind: So true is it, that the Change of the Weather follows no Rule that is known to us. It would be easy for me to demonstrate, that Reason is in this quite contradictory to the common Sentiment: But I chuse rather to appeal to Experience, which is no lefs in my Favour, tho' the Error still remains. Nor is it furprifing that an Error thould become general, when we fee how little Men confult their own Understanding while they give Credit to what Others fay, and the little Advantage they make of the Opportunities they meet with, to undeceive themselves.

Give me Leave to ask you, Sir, if you ever And of feve took notice of the Croud of Authors, who ral others. have faid, one after another, That a Man weighs more Fasting than after a Meal; that a Drum-head made of Sheep-skin, would burft at the Sound of a Drum-head made of Wolf'sskin; that Vipers destroy their Mothers in coming out of their Belly, and occasion the Death of their Sires the Moment they are form'd; with other Things of the same Nature? Men have not been content to receive their for certain Facts, but have taken the Pains to fearch the Causes of them: They have been applied to moral Subjects; Advocates have done themfelves Honour by alluding to them at the Bar; Preachers have drawn from them a thousand fine Comparisons; an infinite Number of Themes have been given on them in the Classes at the University. Yet all these Things are contrary to Experience, as those have testified who have had the Curiofity to clear them up.

Causes of the Authority of an Opinion.

It appears farther, that Men of Learning fometimes take as little Caution as the Vulgar, and that a Tradition, fortified by their Testimony, is not for that Reason exempt from Falsehood. Let us not be imposed on then by the Name of Scholar. How do we know, if a great Doctor, who advances a particular Opinion, has taken more Pains for his own Conviction, than the most ignorant Fellow who believes it without Reflection? If the Doctor takes a Thing as much upon Truft, his Voice has no more Authority than that of the Clown; because the Weight of any Man's Testimony, ought to be in Proportion to the Degree of Certainty he has acquired, by examining thoroughly into the Fact.

I repeat it again: A Sentiment cannot become probable from the great Number of those who follow it, but in Proportion as it has appeared true to Persons independent of all Prevention, by the fingle Force of a judicious Examination, accompanied with Exactness, and a thorough Knowledge of Things. It has been very well faid, that one ocular Witness is more credible than ten who speak upon Hear-say: And we may as justly say, that one Man of Understanding, who speaks nothing but what he has fully confidered, and found proof against all Objections, gives more Weight to his Sentiment than a hundred thousand vulgar Minds, who follow one another like Sheep, and depend intirely upon the Credit of their Leaders. For this Reason Themistius and Cicero have expressly declared; the first, that he would give more Credit to what Plate should signify by a Nod of the Head,

Head, than to what all the other Philosophers should affirm upon Oath; and the latter, that the fingle Authority of Plato, without any Proof, would demolish all his Incredulity.

I had forgot one very effential Remark, which permit me to introduce here. Mankind have generally had a frightful Idea of with regard to Eclipses, as if they were Omens of the most Eclipses. tragical Events. Both the antient Pagans, and the modern Christians, have had very

strange Thoughts on this Subject.

Nicias, General of the Army which the Athenians had fent into Sicily, after many Among the Pa-Losses, saw himself obliged to return home. gans. All Things having been prudently concerted to hoist fail without the Enemy's Knowledge, an Eclipse of the Moon intervened. Nicias, instead of improving an Opportunity so favourable, was feized with fuch a fuperstitious Fear, that he durst not stir from his Post. On the contrary, he thought it adviseable to stay a whole Lunar Revolution, in the Imagination that the Influences of the Moon extended to her next Opposition, or at least to her Change. This was more than even the Diviners required, who would have confined him not above three Days. What was the Confequence? The General, by attempting to avoid the Perfecution of the Eclipse, had his Retreat entirely cut off, was himself taken Prisoner, and saw all his Army ruined by one Means or other.

All the fine Harangues that Agathocles made to his Soldiers, when they difembark'd in Africa, could not support them against the Terrorthey were feized with upon having F 2 1een

Superstition

But by good Luck Agathocles was less superstitious than Nicias, and consequently better able to use his own Understanding: He took upon himself to interpret the Prodigy, and told the Troops, that if the Eclipse had indeed happened before their Embarkation, the Presage would have been to their Disadvantage; but as it sell out after they had set sail, the Prediction turned against those they were going to War with. By this Means he calmed their Terror; and others have made the same Use of these Appearances since. All History however confirms the Fact, that Eclipses were in general looked upon as satal Omeas.

Among the Christians.

The fame Opinion is yet prevalent among the Multitude. Modern Historians feldom mention an Eclipse, without telling us that it predicted the Death of such a King, the Sedition of a certain Province, or some like Misfortune which falls in their Way. From common Almanack-Makers, up those who only calculate Nativities of Quality, there is not one but will tell you that Eclipses are ominous of War, Famine, Pestilence, Inundations, the Death of great Men. and other calamitous Matters: And they meet with more Credit on these Articles, than when they only foretel Rain or Cold. There happened an Eclipse in 1654, from which some predicted no less than a Deluge like that of Noah, or the total End of the World by Fire: Others went no farther than State-Convultions, and the entire Ruin of Rome. They had, in fhort, fo intimidated Mankind, that those who were content to shut themfelves

selves up in Cellars, or close Chambers, well warmed and perfumed, passed for very hardy People, and thought they had a Right to laugh at those who were fearful. This was only what their Physicians ordered, to avert the bad Influence of the Eclipse: And, in Reality, they had great Force of Mind, in Comparison with those who dreaded the End of the World. The Consternation was fo great, that a Country French Priest, not being able to confess all his Parishioners who were in Apprehensions of Death, was obliged to tell them, that they need not be in so much Hurry, for the Eclipse was put off for a Fortnight.

Thus you fee both Antients and Moderns, Pagans and Christians, are perfectly united in this Sentiment, that Eclipses are ominous of great Misfortunes. Yet nothing is more falle; because Eclipses can neither be the Cause, nor

the Sign, of any Evil whatever.

I fay an Eclipse, either of the Moon or the That Eclipses Sun, can do us no Harm; because the utmost cannot be the it effects, is to prevent the Earth from being Cause of Ill. illuminated a short Time, which can be of no bad Confequence. When Pericles, one of the greatest Men of Antiquity, who had been freed from all vain Apprehensions by the Philosopher Anaxagoras, was ready to fail on a great Expedition, with the Fleet under his Command, an Eclipse of the Sun so terrified the Pilot, that he was all in Confusion. Pericles, feeing this, spread his Cloak before the Man's Eyes, and ask'd him if he felt any bad Consequence from it. None at all, says the Pilot. There is no Harm then, replies Pericles, in the Sun's being eclipsed: For all the Difference betweenst

betwixt my Cloak, which covers your Eyes, and the Body that eclipses the Sun, is, that the latter is bigger than the former. This Reflection is so adapted to all Capacities, that it is sur-

prizing more do not make it.

Every one will allow, that, without the least Injury to Health, a Man may be whole Days in Places much darker than the Obscurity of the greatest Eclipse, and that a Tree may be close covered three or four Hours, without affecting either the Leaves or the Fruit thro' the rest of the Year. Country-man wou'd be glad at fome Times to lengthen the Nights, that the Heat of the Sun might not continue fo long upon the Fruits of the Earth. Thick Clouds, which obscure the Air for several Days together, much more than an Eclipse of four or five Digits can do for a Minute, are often found to be advantageous. If the Moon should stay a whole Day in her Conjunction with the Sun, can it be imagined the Earth would receive any Damage from it? A Man may live a whole Day without eating or drinking, and yet not die, nor fall fick, nor be the worfe three Days after: Yet every one knows that Nourishment is more necessary to Life than the Light of the Sun, which some Nations live without for Months together. How comes it to pass then that the Moon cannot, for a few Moments only, intercept the Rays of the Sun, but it must bring on numerous Calamities? What is merrier still; why must the Malignity of this Eclipse go to Court only, chuse the King from among all his Attendants, and throw him into a mortal Fever? Can

Can any Thing be more ridiculous, than to fee People, who fortify themselves against the Rays of the Sun by all the Artifices imaginable, behind Windows, Blinds, and Curtains; who are afraid to ftir out in the Day, without a Mask or an Umbrella; to fee thefe very People tremble at the Thought of an Eclipse, which, properly fpeaking, may perhaps be only a good Office which the Moon does the

Earth in very fultry Weather?

An Eclipse can no more be the Sign, than Nor the Signs. it can be the Caufe of those Ills that afflict Mankind; which is the last Resource of all your astrological Predicters. The Reasons are these: I. Eclipses are the Effects of an Order so natural, that there is no petty Astronomer who cannot foretel the Day and Hour of their Appearance, many Ages before it comes: II. They happen at all Times, and in every Country; fometimes more than four in the same Year; often at Hours when no Body perceives them, but those who wait on Purpose; often when Clouds quite hide them. from our Sight.

The first of these Reasons is exceeding strong: For if Eclipses are the natural and necessary Consequences of the celestial Motions, they fall out independently of Man, and without any Relation to his Merits or Demerits, and must certainly happen all the same, whether God has or has not a Mind to chastise Mankind: They cannot then be ominous of the divine Justice. Besides, we must renounce all Reason, or allow that an Effect of Nature cannot be the Sign of any Thing, except it either produces that Thing, or is produced

produced by it, or that they both depend upon the same Cause. If by examining the Cause of the Movements of certain Beasts. which are faid to prefage Rain, we find that the same Cause produces Rain, or has a neceffary Connection with that which produces Rain, we shall be to blame if we deny that these Motions are ominous of wet Weather: Otherwise we ought certainly to deny it, upon the same Principle as we reject the Superstitions of the antient Pagans, who imagined that the Flight of a Bird predicted the win-

ning or lofing of a Battle.

In a Word, what Probability is there that God should chuse for the Sign of his Corrections, a Thing that happens four or five Times in a Year, and very often without coming to any one's Knowledge, except from the Almanack? Signs of this Nature, to give them wherewithal to make Impression upon reasonable Creatures, should be very rare, not fent to foretel the common Inconveniencies which traverse the Life of Man every Year, but to denounce the severest of God's Vengeance in his most dreadful Ire: They ought not to depend purely and fimply upon the natural Course of second Causes, nor to happen behind Clouds, or in the Night while Men are afleep.

Application been said con-

What I have faid against Eclipses, holds to Comets of equally good against Comets, which is the Reason I have dwelt so long on that Subject. cerning Eclip- If you allow that Comets do not cause, but only predict the Misfortunes that follow them, my next Proposition will fully answer you. Before I difmiss this, let me remark,

as I have done concerning Eclipses, that Comets are attended with some Circumstances, which prove they cannot be ominous of Evil to come.

They are very frequent. No less than seven are recorded between the Year 1298 and 1314, twenty-fix between 1500 and 1543, fifteen or fixteen between 1556 and 1597. Sometimes they have appeared every Year, for many Years running. It is no uncommon Thing to fee two in the same Year, either in different Months, or at different Hours of the same Day. Four at a Time appeared in 1529; eight or nine in the fingle Those who were no Astronomers could fee none between 1665 and 1688, but these Gentlemen could discover them in 1668, 1672, 1676, and 1677. Some Comets plunge into the folar Rays the fecond Day of their Appearance, and are no more to be feen. Others, in all Probability, make their whole Revolution quite unfeen by us, because of their constant Proximity to the Sun's Body: Such was that mentioned by Seneca, which was feen by Chance during a Solar Eclipfe, and never at any other Time.

Must you not own, Sir, that these Circumstances by no Means agree with a Sign, which God sends expressly to forewarn us of our Calamities? Should these Signs be so frequent? Do they not lose their Essicacy when we are accustom'd to them? If Mankind still beheld them with superstitious Eyes, after they had seen twenty-six in the Space of forty-sour Years, was it not because they made no Use of their Reason? Would the Almighty send

G

us Signs, which only the Ignorance of Men makes them acknowledge for fuch? Why fo many Comets in one and the same Year? Is not one Sign of the same Kind enough at one Time? But why, above all, are those Comets fent, which only two or three Astronomers can see? Do not such Signs lose their Effect, and frustrate the End which Providence proposes in sending them? How can we imagine that God would fend us invisible Signs, or Signs that should be seen by only two or three faithless Astronomers, who are never likely to exhort Mankind to Repentance? Why does he fuffer Signs, which can answer the Purpose they are fent for only in Proportion as they are feen, to make their Course in a Part of the Heavens where the Sun renders them invisible? Examine all this well, Sir, and you will fee that an infinitely-wife Providence can never work to folittle Purpofe.

It is in vain to tell me, that we must not criticise on the Operations of God. That is Chicanery, as I shall make appear. The fairest Way, to remove the Difficulties I have furrounded you with, is to own that Comets are Works of Nature, which, without any Relation to the Happiness or Misery of Man, revolve in their, Orbits according to the general Laws of Motion: And, as you cannot maintain that those Comets, which are seen by two or three Persons only, were Signs to Mankind, confess that there are Comets which fignify nothing. Whence it will refult, that none of them all can foretel any Thing; because the Difference between a Comet that appears to all the World, and

one that makes only a very private Appearance, is no more than this: That the latter is farther from us than the former; which can make no Alteration in the Nature of these Bodies.

REASON VII. founded on Divinity.

That if Comets were ominous of Calamities, God must have wrought Miracles to confirm the World in Idolatry.

I could add more Reasons to the preceding, and more Authorities to support each of them, if I did not know, Sir, that you are to be convinced only by religious Arguments. Such is that I now offer, which occurred to me upon recollecting my former Ideas con-

cerning the Comet in 1665.

A Clergyman of my Acquaintance, who had often in vain laboured to persuade me this Argument. that the faid Phænomenon was predictive of some Ill, no sooner heard of the Death of Philip IV, King of Spain, but he came to me in all Haste, and asked, with an Air of Triumph, If I had yet the Obstinacy to maintain, after such an Example, that Comets did no Harm to the World? I told him, in Conformity to his Profession, that as God did nothing in vain, it was abfurd to think he should fend a Comet either to advance, or to foretel the Death of that Monarch; that a Prince worn out with Ills and Infirmities, who for a ment G 2 long

Occasion of

long Time had been supported, almost in Spite of Nature, by the Inventions of Phyfick, might certainly die, without God's fending, to take away his Life, a Body a hundred Times larger than the Earth, and filled, like Pandora's Box, with all Sorts of Maledictions; that it was so little necessary for God to inform the World of his Intention to take to himself the King of Spain, that all Europe was amazed he could fubfift fo long under his Distempers. My Friend could make me no Reply. A late Reflexion upon this Thought convinced me farther, that those who maintain the Predictions of Comets, not only make God do very idle Things, but Things altogether unworthy of his Holiness. I prove it thus:

Comets can foretel only in Quality of Signs.

It is an Article of Faith, that the Liberty of Man is superior to the Influence of the Stars, and that no physical Quality drives him necessarily to Evil. Thence I conclude that Comets are not the Cause of those Wars that kindle in the World, because the Design of making War, as well as the Acts of Hostility committed in Consequence of it, are all Ef-A Comet, then, fects of Man's Free-will. at the most, can be no more than a Signal of those Ills that are ready to happen on Earth, which God exhibits to the Eyes of Mankind. to incline them, by their Penitence, to prevent the dreadful Tempest, with which they are threatned: For I have irrefragably proved. by my first Reason, that the Atoms of a Comet have no Efficacy to produce the Plague, Famine, or any other Alteration in our Elements.

ments. Admit then, that Comets are only

Signs of Calamities to come.

It follows hence, that they are Bodies made on extraordinary Occasions, and no way dependent on the Chain of fecond Causes: For if they were produced by the Efficacy, and according to the natural Progress of second Causes, they could fignify nothing with regard to Futurity, except the Effects which we know to be necessarily connected with them. They prefage, therefore, neither War, nor Pestilence, nor Famine; because it is an Article of Faith, that the free Actions of Man, fuch as War, have no necessary Connection with the Qualities of a Body; and Reason informs us, that in Famine or Plague there is no necessary Connection with Comets. Comets then must be form'd miraculously by God, to advertise Mankind of the Calamities prepar'd for them, in case they do not repent. God must give them an Elevation and Motion, which may render them conspicuous to all the People in the Universe, that no Man may plead Cause of Ignorance.

Observe, Sir, a little, the terrible Consequence which flows from hence. It is, That Consequence re-God has wrought many of the most signal fulting bence. Miracles, to animate, almost thro' all the World, the languishing Zeal of Idolaters, and oblige them to offer Sacrifices, Vows, and Prayers to their false Divinities, with more Devotion than they had customarily done. For as before the Establishment of Christianity, God was known only in a little Corner of Judea, and had abandon'd all the other Nations of the World to their own bewilder'd

Ways,

A ftrange

Ways, no body, but the Jews only, understood what it was to appeale the true God, when he appeared angry. All that they knew to do, in this Confernation, was to fall down before their Idols, offer them Victims, confult the Demons, and act, by their Advice, what was most disagreeable to God. So that to light up Comets in the Heavens, was nothing else, properly speaking, than to re-double the Acts of Idolatry; and this was, in Reality, all that God could promife himfelf from them.

I do not deny but there have been Persons of good Sense among the Heathens, who acknowledged that the true Means of pleafing the Divinity, was not to offer sumptuous Hecatombs in his Honour, but to live justly, and that this was the only Sacrifice which

could appeale an incensed Heaven.

The Pagan Expiations proper only to provoke the true God.

A prongs

Confequence : 4-

But, whatever they might own, it was not to this that they had Recourse, when they would difarm the Vengeance of God. They did not immediately renounce their Pride, and the Hatred they bore their Enemies: They did not pardon the Injuries they had received; mortify their Avarice; break with their Mistresses; humbi themselves inwardly bef re God, with real Grief for their Want of Virtue: They did not promise a Converfion of the Heart, a general Reformation of their Thoughts, their Words, and their Ac-These were hard Conditions, and Money would not purchase them. chose rather, therefore, to pay for the Building of Chapels, to fill the Temples of the Divinities with Gifts and Oblations, and contributo which the Sybilline Books, the Oracles, the Augurs, or the Priests thought sit to institute. The Demons knew this, and, being permitted, by the Judgment of God, to triumph over the Credulity of Mankind, exhibited as often as possible extraordinary Phænomena; perceiving well that this would foment Idolatry, and keep up the Vigour of Sacrifices, Feasts, and other paganish Supersitions.

Inumerable Instances might be produced, to Support every Particular here advanc'd. And it fignifies nothing to fay that the Demons had no Hand in these Matters, which were only the Juggles of their Priests. Whether the evil Spirits fent real Prodigies, or their Priests only seigned them, or whether the pure Effects of Nature were not often confirued into Prodigies; the Fact remains good, that the People were frightened, and that their Terror did not bring them to true Repentance. All that they did, on the Appearances of Prodigies, to appeale the Wrath of the Gods, was in no Sense proper to appeale the true God; did not in the least diminish the Empire of Sin in the Heart; but, on the contrary, was entirely adapted to make the divine Majesty redouble his Rage. Hence it evidently refults, that God did not create and exhibit Comets to terrify Mankind, and declare to them, that, if they did not expiate their Faults, they should be severely punished.

Upon the Whole, how much soever we examine antient History, we shall find it

contribute to establish these three Truths. I. That Things which were taken for Signs of the Divine Anger, whether extraordinary Appearances or monstrous Productions, contributed only to foment the facrilegious Worship of Idols, instead of eradicating Sin from the Heart. II. That the Devil could find no better Secret for the Extension of Idolatry, than that of terrifying People by real or fupposed Prodigies. III. That the Apparition of a Prodigy, true or false, always acquired new Honours to the false Deities. We are obliged, then, to conclude, that God, by his Miracles, concurred with the Devil to establish and extend the Pagan Superstitions; or we must deny that Comets are exhibited in the Heavens as Signs to warn us of the Approach of divine Vengeance, in case of Impenitence.

God's Abbortry.

Which of these two, Sir, is most agreeence of Idola- able to our Idea of the divine Majesty? Think if it be possible that the same God, who declares by his Prophets, that nothing is more abominable to him than the Worship of Idols; who testifies more Indignation against his People, when they facrifice upon Mountains and under green Trees, when they honour the Gods of the Gentiles, than when they fall into Theft, Murder, and Adultery; who begins his Law with a double Prohibition against serving any other God but him; who, to give the more Weight to this Prohibition, proposes himself under the Character of a God all-powerful and jealous, extending the Punishment of Offences to Children of the fourth Generation, and his Goodness to obedient

obedient Parents thro' a thousand Descendants; whereas he contents himself with simply forbidding Murder, Theft, Unchastity, and Calumny: That God, who punished the Adoration of the Golden Calf by the most fignal Vengeance, by leaving his People to ferve the whole Hoft of Heaven, and thereby bring on themselves the Punishment of a long and painful Captivity; in a Word, who would not fuffer his Servants even to eat of Things facrificed to Idols: Think if it be possible, I say, that this very God should kindle up new Luminaries from time to time in the Heavens to intimidate the Nations of the Earth, and infallibly drive them to all the Acts of Idolatry which each thought proper to expiate his Crimes, and difarm the Divine Vengeance; the Gauls and the Carthaginians, for Example, to facrifice Numbers of Men: Excreable Abomination! for which the Divine Majesty, by the Mouth of his Prophets, expresses so much Indignation against the Jews, who, in Imitation of many others, burnt their Children to the Honour of Idols; and for which he punished. in fuch an exemplary Manner, the Kings Achaz and Manaffeb.

If I have proved that those Comets, which appeared before the Publication of the Gospel, now than bewere not formed expresly to advertise Man- fore Christ. kind of the Distress, which God in his Anger prepared for them; it is evident, that those which have appeared fince that time have no more Right to that Character, the same Rea-

fon still subfisting against them.

For first, If Comets before the Vocation of the Gentiles were mere natural Effects, as н

Comets no

well as Eclipses and Earthquakes; it would be as ridiculous to say that now, since the Conversion of the Pagans, Comets have changed their Kind, and are no longer Works of Nature, but miraculous Signs, as it would be to pretend that Eclipses, since that time, are become supernatural Essects. And if Comets are pure Works of Nature, it is evident, that they cannot be Signs of suture Evils; as well because, (what I have already shewn) they have no Connexion with Evil to come, as because there is no Revelation which informs us that God has established them for such Signs. Ought not this to have been told us, as well as that the Rainbow is a Surety that there will

be no fecond Deluge?

Secondly, The same Theological Reason, which amounts to a Proof for the Time preceding Christianity, has the same Force thro' all Ages fince: For, notwithstanding the admirable Progress of the Cross of Christ, the greatest Part of Mankind have continued Idolators, or turned Mahometans. At present, extended as Christianity is, and tho' it has made its Way into the New World, it is certain that most of the Nations of the Earth are still plunged in the thick Darkness of Infidelity. So that if God proposed to denounce his Anger by sending Comets, it must follow that he proposed to re-animate a false and facrilegious Devotion among Mankind; to augment the Number of the Pilgrims to Mecca, and of the Offerings that are constantly made there to the most infamous Impostor that ever lived; to cause the Building of new Mosques; to make the Torlaquis and Dervises invent new Superfitions,

stitins, and to occasion an infinite Number of other abominable Things. For the Saturn and Jupiter are no longer known, Mankind are not less proffituted, than anciently, to the most

Idolates of

extravgant Idolatry.

Without speaking of the horrid Ceremonies practifed in Mexico and Peru not long fince, the modern Paand of those human Sacrifices made in Honour gans. of their Idols, which the Spaniards have put an End to in the Places they are possessed of; who that has read, does not know that the Indians, the Chinese, and the Japanese, are most miserably wide of the Mark in all that regards Religion; that they worship Apes and Cows; confult the Devil in burning Mountains, and carry their false Devotion so far as to bury themselves alive, or drown themselves, in order to obtain the Honour of Canonization; that they build Temples to the Devils, and to the Prince of the Devils exprefly by Name (which is more than the Antients ever did) and give Way to all the Excesses of a blind and mad Superstition? Now there is so great a Connexion between believing that the God we adore is angry, and the tendering to him more zealously the Worship established by Custom, that it is impossible to defire that an idolatrous Nation should know that Heaven is in Wrath, without defiring it to renew the Exercise of its Religion with double Ardor. Confequently, if God creates Comets to teach Men that he is angry with them, and that, if they do not appeare his just Indignation, he will chastile them feverely; it must be his Design that all Infidel Nations should recur, with new Ardor, each H 2

each to his own Worship, and abominable Ceremonies: Which being false and impious, we are obliged, by Principles of Religion, to fay, that in the Intention of God Comets cannot predict any Evil. Allowing at the fame Time, that if there be extraordinary celeftial Illuminations in any Part, visible only to some City, or to some Country that knows the true God, as it happened formerly over the City of Ferusalem, they ought to be taken for Signs,

fent by a particular Providence.

bave particular Characters, which Shew they cannot be Signs.

But to imagine that a Body, which makes That Comets the Tour of the World every Day, and does not appear to threaten Christians more than Heathens, the English more than the Spaniards, is a Prodigy, which every Nation is to believe that God has made expressly to denounce its Ruin, is utterly incredible; because, besides my former Reasons, it is impossible that every Nation should be obliged to dread Advertity from the Sight of a Comet. For it appears from History, and even from every One's Reflexions, that God never chastifes all Mankind at the same Time. The most general Afflictions always spare whole Nations. The Divine Providence dispenses its Favours in such Manner, that every one has its Part in turn; and there never was feen, fince the Deluge, a general Chastisement all at once, nor a Profufion of good Fortune, at the fame Time, all over the Earth. God, were he to act otherwife, would disconcert the whole Chain of his Providence. Now, as the Experience of a great Number of Comets, which have appeared, does not teach us that God has ever made use of so extraordinary a Conduct, there

is no room to imagine, when we fee any of these transient Luminaries, that God designs to do more than he has done on other Occafions. We know, by the Events that have followed Comets, that when any have appeared, the Defign of Providence has not been to plunge all the Nations of the World in an Abysis of Calamities: On the contrary, that Providence has defigned to shower down its Favours on many People. Whence it follows, that all the People upon Earth, when they have feen a Comet, were not obliged to apprehend they were going to be overwhelmed with Calamities. Nay it is not even possible, if they confider the Course of Providence, that they should in general have such Apprehensions: For God, for the most Part, makes use of one Nation to chastise another, giving to Those the good Things he suffers them to take from These. If at the Time when the Persians ought to have dreaded the Downfal of their Empire, the Macedonians had feared the Destruction of their Kingdom, is it not certain they had been in an Error? Whence I infer, that if it was God's Intention that all People, who fee Comets, should think their Time approaching, it must be his Intention that the greatest Part of Mankind should deceive themselves: Those, for example, whom he has decreed to conquer those Kingdoms, which his Wildom fees proper to overthrow. Now as it would be impious to believe that God can have fuch Intentions, it is impossible that the Macedonians, for instance, were obliged, under the Penalty of a mortal Fine, to believe that the Comet which appeared at the

the Beginning of Alexander's Reign, threatened them with total Ruin. God therefore, not being capable of obliging Men to judge falfely of Things, cannot possibly have any fuch Defign, as to engage all the People in the World to believe, that every Comet they fee is a Prediction of their own Misfortune. Yet this must be his Design, if the vulgar Opinion of Comets were true. It is false therefore, and cannot be cleared of Impiety on any other Account, than from the little Reflection Mankind make upon the Circumstances of Comets, where they are taken for Signs of Malediction.

Summary of

In all probabilty, we fhould in general get rid bis Argument. of this Prejudice, if every one would confider, with found ludgment, the following Particulars. I. That Comets have nothing in particular, which may fignify to any People, that it is to them expressly they are fent. II. That if they have any Commission to denounce the Wrath of God, they make the Denunciation in general to all the People of the Earth. III. That they are very equivocal Signs, which could not, for example, have foretold the Destruction of the Greek Empire, without predicting the Prosperity of the Ottomans; the Death of one Pope, without prefaging the Elevation of another; the Death of a Conqueror, without referring to the Bonfires that will be kindled in other Nations, which dreaded the being brought under the Yoke of his Power. IV. That they are Signs fo general and obscure, that we see no Indication of what is in fact to arrive, more than of what will not happen. V. In a Word, That they are Signs accompanied with many Circumflances unworthy the Wisdom and Holiness of God. I have touched upon some of these Circumstances in speaking of Eclipses, and could produce more of them were it necessary.

You, Sir, may think of the Matter what you please: For my Part, I cannot take it into my Head that God proposes any thing more in the Formation of Comets, with Regard to us, than what he proposes in all other natural Effects. All those who have raised themselves to God by the Knowledge of natural Things, cannot but enter into the Views of his Providence in the Formation of his Creatures. But I cannot comprehend how a Man that takes for a Miracle what is not for has any Notion of the End which God proposes; because to me it does not seem probable, that God can ever have defign to lead us into false Judgment. Upon this Principle I believe, that if God defigned to advertise Mankind of the Calamities that threatened them, he would do it by Means which would be not only very intelligible to those he directed the Threatning to, but which could not be misconstrued by those he intended to diftinguish by his Favours.

This, I think, is sufficient to degrade Comets from the Rank that has been given them, as being Prodigies sent by God as the Heralds of his Judgments. It would be worthy only the fabulous Divinities, such as Pan and Apollo, to inject salse Alarms into the Minds of Men, and not to explain themselves but

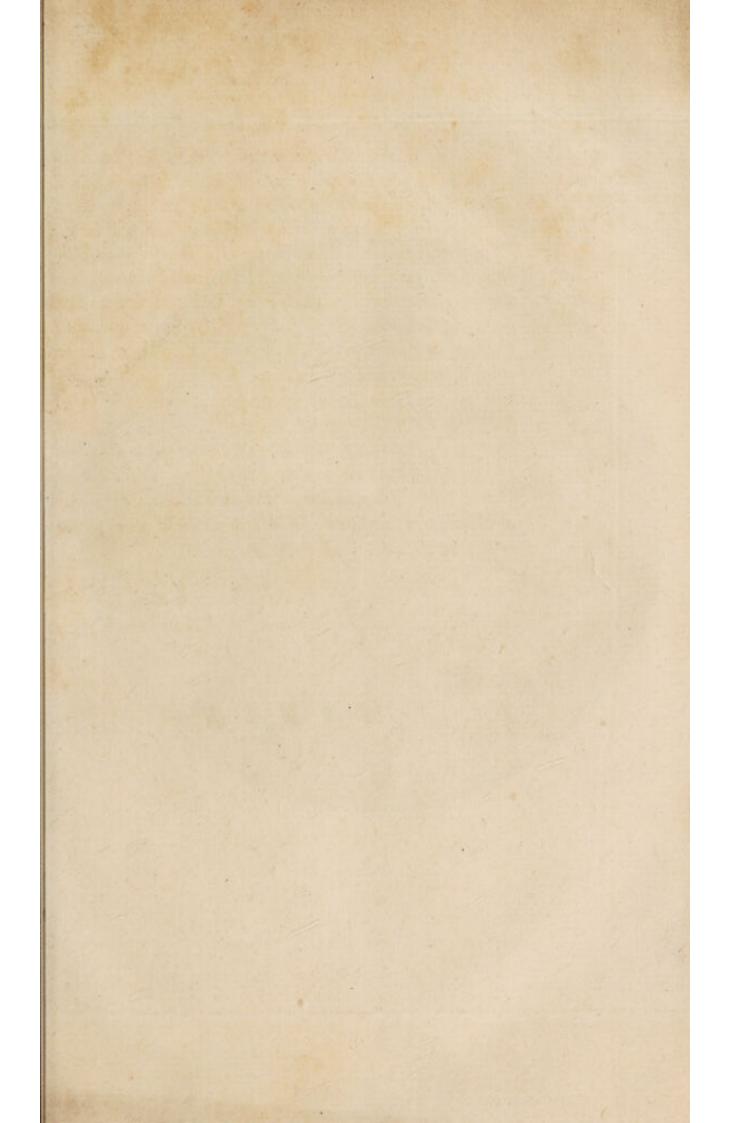

by Enigmas.

pinion concerning Comets.

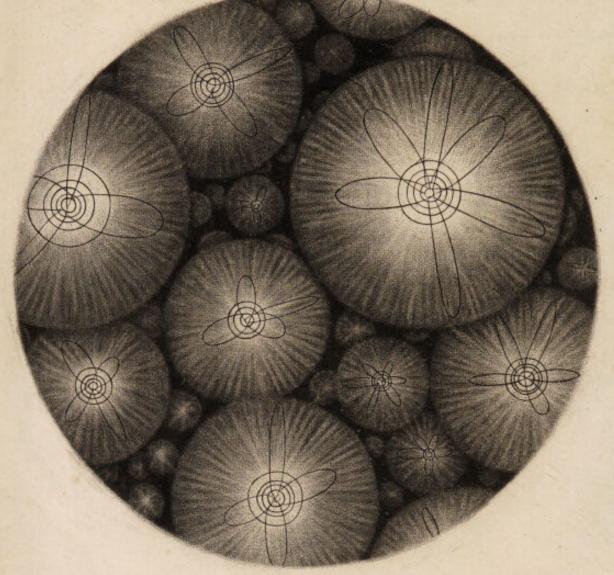

Original of It would have been as easy to trace the Rife the vulgar O- of this, and many other popular Errors, as it is to demolish any one of them; and to have proved the whole from undeniable historical Testimonies. But as this would be extending my Letter beyond the Bounds I have prescribed my felf, as well as beyond what the Subject may require, I shall only say in general (what my Author, Mr B yle, has at large made apparent) That the Opinion concerning Comets, which makes them pass for Presages of publick Calamities, is a Relick of the antient Pagan Superstition, founded in the general Passion of Mankind to dive into Futurity, and that it was introduced and preserved in Christianity thro a Prejudice, natural to all who take Things on trust, in favour of Antiquity.

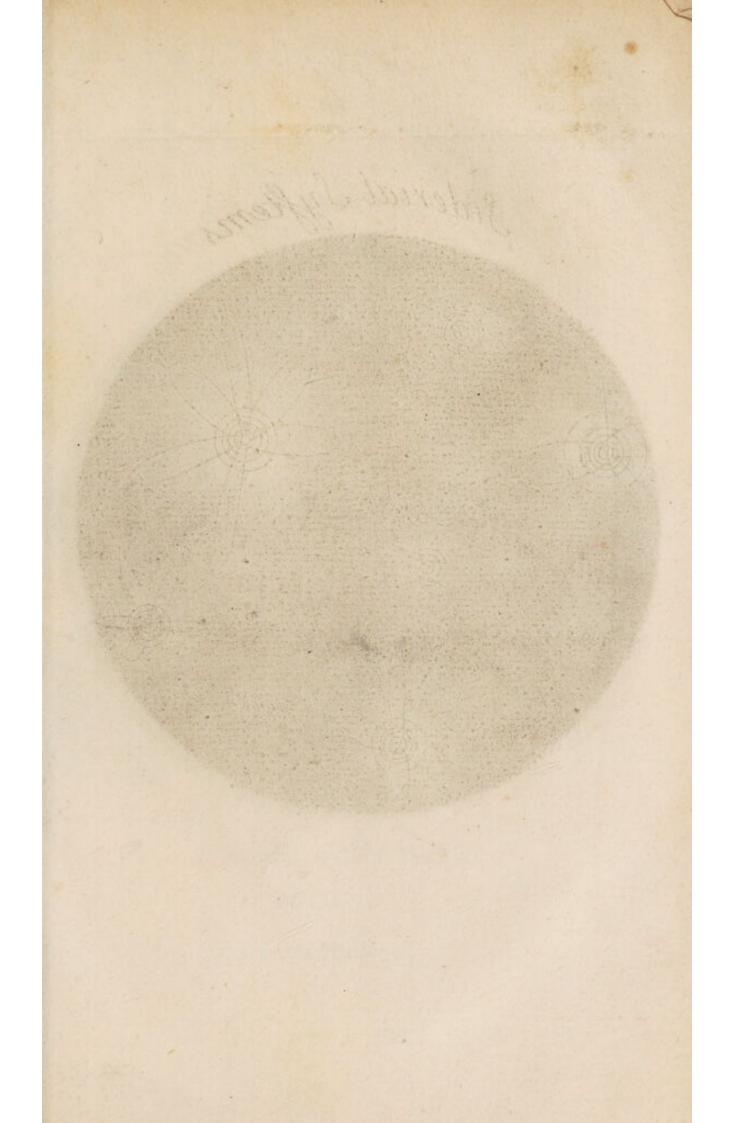

I am, Ge.
