A.D. 1857 N° 777.

Plates for the Reception of Artificial Teeth, &c.

(This Invention received Provisional Protection, but notice to proceed with the application for Letters Patent was not given within the time prescribed by the Act.)

PROVISIONAL SPECIFICATION left by Jean Ninck at the Office of the Commissioners of Patents, with his Petition, on the 20th March 1857.

I, JEAN NINCK, of No. 37, Brewer Street, Golden Square, in the County of Middlesex, Dentist, do hereby declare the nature of the said Invention for "IMPROVEMENTS IN PLACING SETS OR PARTIAL SETS OF TEETH, GUMS, AND PALATES, ON PLATES," to be as follows:—

The plates are composed of the following ingredients, gutta percha, india-rubber, sulphur of zinc, vermilion, and proto-oxide of gold, in such proportions that the heat renders the amalgamation both hard and elastic, which consequently enables the wearer to fill with the greatest ease any cavities about the gums, mouth, and palate. The substance is free from smell, and not injurious to digestion, and effectually assists the mastication of food, and at the same time retains the natural color of the mouth.

In my Final Specification I propose to give the accurate proportions of the ingredients, and likewise the manner in which I fix the teeth, and place the gums and palates.
