## Surgical Splints.

---

**LETTERS PATENT** to Henry Hides, of No. 47, Mortimer Street, Cavendish Square, in the County of Middlesex, Surgeon, for the Invention of "**AN IMPROVED SPLINT FOR SURGICAL PURPOSES.**"

Sealed the 4th May 1866, and dated the 7th November 1865.

---

**PROVISIONAL SPECIFICATION** left by the said Henry Hides at the Office of the Commissioners of Patents, with his Petition, on the 7th November 1865.

I, HENRY HIDES, of No. 47, Mortimer Street, Cavendish Square, in the  
5 County of Middlesex, Surgeon, do hereby declare the nature of the said  
Invention for "**AN IMPROVED SPLINT FOR SURGICAL PURPOSES,**" to be as  
follows:—

This improved splint is intended to be used for the reduction of fractures  
and sprains, and for other similar surgical purposes, and consists of a combi-  
10 nation of materials which when applied to the limb are in a plastic state, so  
that they can readily be moulded to the required form, but will harden in  
about half an hour. The material of which the splint is composed is felt,  
upon which is cemented a layer or lining of chamois leather. This material  
may be kept in sheets of any convenient size, and may be easily cut to the  
15 proper form and dimensions when required for use. When the splint is to be  
applied, after having cut the material to the required form, the felt side is to  
be saturated (by means of a brush or otherwise) with the hardening solution,  
which is composed of the ingredients hereafter named, and in about the fol-  
lowing proportions, namely, borax six grains, gum benzoin two scruples, and

*Hides' Improved Splint for Surgical Purposes.*

gum sandrac or juniper five and a half ounces, dissolved in about one pint of methylated spirit. The splint being now in a plastic state is fitted to the limb with the leather side inwards, and being plastic it will readily adapt and mould itself thereto. The bandages are then applied in the usual way, and in about half an hour (more or less, according to the temperature,) 5 the splint will have become perfectly hard.

**SPECIFICATION** in pursuance of the conditions of the Letters Patent, filed by the said Henry Hides in the Great Seal Patent Office on the 7th May 1866.

**TO ALL TO WHOM THESE PRESENTS SHALL COME, I, HENRY 10**  
HIDES, of No. 47, Mortimer Street, Cavendish Square, in the County of Middlesex, Surgeon, send greeting.

**WHEREAS** Her most Excellent Majesty Queen Victoria, by Her Letters Patent, bearing date the Seventh day of November, in the year of our Lord One thousand eight hundred and sixty-five, in the 29th year of Her reign, 15 did, for Herself, Her heirs and successors, give and grant unto me, the said Henry Hides, Her special license that I, the said Henry Hides, my executors, administrators, and assigns, or such others as I, the said Henry Hides, my executors, administrators, or assigns, should at any time agree with, and no others, from time to time and at all times thereafter during the 20 term therein expressed, should and lawfully might make, use, exercise, and vend, within the United Kingdom of Great Britain and Ireland, the Channel Islands, and Isle of Man, an Invention for "**AN IMPROVED SPLINT FOR SURGICAL PURPOSES,**" upon the condition (amongst others) that I, the said Henry Hides, my executors or administrators, by an instrument in writing under my 25 hand and seal, or under the hand and seal of one of them, should particularly describe and ascertain the nature of the said Invention, and in what manner the same was to be performed, and cause the same to be filed in the Great Seal Patent Office within six calendar months next and immediately after the date of the said Letters Patent. 30

**NOW KNOW YE,** that I, the said Henry Hides, do hereby declare the nature of my said Invention, and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement in writing, that is to say:—

This improved splint is intended to be used for the reduction of fractures 35 and sprains, and for other similar surgical purposes, and consists of a combi-

---

nation of materials which when applied to the limb are in a plastic state, so that they can readily be moulded to the required form, but will harden in about half an hour.

Such being the nature and object of my said Invention for "An Improved  
5 Splint for Surgical Purposes," I will proceed to describe the manner in which the same is to be or may be performed or carried into practical effect, which will be readily understood from the following explanation thereof.

The material of which the splint is composed is felt, upon which is cemented a layer or lining of chamois leather. This material may be kept in sheets of  
10 any convenient size, and may be easily cut to the proper form and dimensions when required for use. I may here remark that in some instances I find it preferable to use a lining of silk in place of chamois leather. When the splint is to be applied, after having cut the material to the required form, the felt side is to be saturated (by means of a brush or otherwise) with the  
15 hardening solution, which is composed of the ingredients hereafter named, and in about the following proportions, namely, borax 6 grains, gum benzoïn 2 scruples, and gum sandrac or juniper 5½ ounces dissolved in about one pint of methylated spirit. The splint being now in a plastic state is fitted to the limb with the leather side inwards, and being plastic it will readily adapt and  
20 mould itself thereto. The bandages are then applied in the usual way, and in about half an hour (more or less, according to the temperature,) the splint will have become perfectly hard.

Having now described the nature and object of my said Invention for "An Improved Splint for Surgical Purposes," together with the manner in  
25 which the same is to be or may be performed or carried into practical effect, I would remark in conclusion that I claim as my Invention the use for such purposes of a compound material consisting of chamois leather, or silk and felt cemented together in combination with the hardening solution, composed and applied substantially as above described.

30 In witness whereof, I, the said Henry Hides, have hereunto set my hand and seal, this Fourth day of May, in the year of our Lord One thousand eight hundred and sixty-six.

HENRY HIDES. (L.S.)
