Bandage for Females.

(This Invention received Provisional Protection only.)

PROVISIONAL SPECIFICATION left by Theodore Byron Hubbell at the Office of the Commissioners of Patents, with his Petition, on the 21st December 1868.—A communication from abroad by Augustus Hubbell, of the City and State of New York, United States of America.

I, THEODORE BYRON HUBBELL, of Euston Square, in the County of Middlesex, Manufacturer, do hereby declare the nature of the said Invention for "AN IMPROVED CONSTRUCTION OF BANDAGE TO BE USED BY FEMALES," to be as follows:—

10 The object of this Invention is to provide a bandage that will recommend itself for comfort and economy to females when affected "after the manner of women." It consists of an elastic waistband from which depends a sack for containing some absorbent material. The sack is formed of india-rubber, and a sponge or cotton waste is placed
15 therein. It is connected to the waistband by pendent strips of rubber attached by cement to the front and rear ends of the sack. When the bandage is applied the waistband comes above the pelvis, the sack fits

Hubbell's Improved Bandage for Females.

close to the person, and the front pendent strips lie over the groin. The points of the hips come between the front and back pendent strips and thus serve to retain the bandage in place. The elasticity of every part is thus ensured.
