Portable Hot Air or Vapour Bath.

(This Invention received Provisional Protection only.)

PROVISIONAL SPECIFICATION left by Benjamin Morris Oakeshott at the Office of the Commissioners of Patents, with his Petition, on the 6th February 1868.

I, BENJAMIN MORRIS OAKESHOTT, of 4, Sloane Square, Chelsea, in the County of Middlesex, do hereby declare the nature of the said Invention for "**AN IMPROVED HOT AIR, SIMPLE OR MEDICATED VAPOUR BATH,**" to be as follows :—

By this mode of construction three descriptions of baths may be applied at pleasure, viz., simple vapour, medicated or mercurial, or hot air. The pyramidal base forms a box into which all the minor parts of the projecting arm may be placed when the apparatus is not in use, so that the whole may be packed away in a small compass. The spirit lamp is fixed on a plate which is made to slide on a groove within the base; the back part of the lamp, to which an extinguisher is attached, forms a door, which when in use shuts perfectly close, and thus renders it absolutely free from danger. Immediately under the lamp is a compensating sliding weight, which when drawn out effectually counterbalances the projecting arm without adding materially

Oakeshott's Improved Portable Hot Air or Vapour Bath.

to the weight of the apparatus. On the top of the base is a removeable perforated diaphragm on which may be placed the herb, mercurial, or water container, as may be required. The cradle is made in various parts to secure portability, and can be packed away in the same compass as the bath, the whole apparatus requiring but a few minutes to get it 5 ready for immediate use.
