**Curing and Preserving Herrings and Sprats.**

**BATLEY'S SPECIFICATION.**

TO ALL TO WHOM THESE PRESENTS SHALL COME, I, BENJAMIN  
BATLEY, of Streatham, in the County of Surry, Merchant, send greeting.

WHEREAS His present Majesty King George the Third, by His Letters  
Patent under the Great Seal of Great Britain, bearing date at Westminster,  
5 the Eleventh day of September, in the fortieth year of His reign, reciting  
that I, the said Benjamin Batley, had, by my petition, humbly represented  
unto His said Majesty, that I had, by great study, invented a "NEW METHOD  
OF CURING AND PRESERVING HERRINGS AND SPRATTS," which I conceived would  
be of public utility and advantage, and praying His Majesty to grant to me,  
10 my exors, adñiors, and assigns, His Letters Patent for the sole exercise of my  
said Invention within England and Wales, and the Town of Berwick-upon-  
Tweed, for the term of fourteen years from the date of the said Letters Patent,  
was graciously pleased to condescend to my request; in which said Letters  
Patent is contained a proviso that if I, the said Benjamin Batley, should not  
15 particularly describe and ascertain the nature of my said Invention, and in  
what manner the same is to be performed, by an instrument in writing  
under my hand and seal, and cause the same to be inrolled in His Majesty's  
Court of Chancery within six months next and immediately after the date of  
the said Letters Patent, that then the said Letters Patent, and all liberties  
20 and advantages whatsoever thereby granted, should utterly cease, determine,  
and become void, as in and by the said Letters Patent, relation being there-  
unto had, may and will more fully appear.

NOW KNOW YE, that I, the said Benjamin Batley, in compliance with  
the said proviso, do hereby describe and ascertain the nature of my said  
25 Invention to be, as herein-before set forth, a New Method of Curing and Pre-  
serving Herrings and Spratts, and I further declare the operation to be per-  
formed in manner following (that is to say) :—

*Batley's Method of Curing and Preserving Herrings and Spratts.*

After severing the head and taking out the entrails of the herrings or spratts, salt the body of the fish with bay or rock or the common salt, in the casks (if not sufficiently salted as sea sticks), but the bay or rock salt is preferable, as the common is more apt to aborb the pickle and occasion the fish to rust. In the next place, pack the fish in a cask in the usual way, and between every 5 layer sprinkle a small portion of salt, and also pickle sufficient to cover the fish; such pickle to be made with one pound of bay salt, four ounces of salt-petre, and from two to four pounds of molasses (to suit different palates), to a gallon of spring water if to be procured, and boil the same till the whole of the ingredients are dissolved; (river water may answer the purpose, but spring 10 water is preferable.) When the fish are so packed, leaving a vacum between two and three inches of the head of the cask, for a full portion of pickle, then let the cask be headed up and properly coopered, with a cork hole either in the head or centre, through which may be poured a further supply of the pickle for the preservation of the fish; and when the herrings or spratts, but 15 particularly the latter, are intended for travelling, it may be adviseable to put a false top, bored with holes between the fish and cask head, in order to prevent their being to much shaken. The same proportion of any sugar might be used as a substitute for molasses, but the extra price would probably be considered as an impediment, and from one to three months should be allowed 20 for curing, in order to give the fish a full flavor before they are used or smoaked or dried. The above pickle would answer for flavoring the fish in their original state if needful, but on account of the oil and filth contained in the heads and roes, the preferable mode of curing and preserving the body of the fish is, by severing the head from and taking out the entrails, as 25 the only effectual means of eradicating the noxious qualities which would otherwise adhere to them; and in curing spratts, it is expedient to sprinkle a larger quantity of salt in proportion between each layer than is requisite for the herrings when packed in the cask, and as the spratt casks will seldom exceed ten gallons, a vacum of about one inch from the head for casks of 30 that dimension will be sufficient.

In witness whereof, I have hereunto set my hand and seal, this Seventeenth day of September, in the year of our Lord One thousand eight hundred.

BENJ<sup>N</sup> (L.S.) BATLEY. 35

Signed and sealed in the presence of

THO<sup>s</sup> HOWE,  
Clk. to Mr. Baker,  
Lincoln's Inn Fields.
