“ B—Showing the number of vaccinations performed in the municipal towns of the United Provinces on children under one year of age during the year 1937-38 ..	224B-225B

Seventieth Annual Report of the Director of Public Health, United Provinces, for the year ending 31st December, 1937.

CHAPTER I

METEOROLOGY AND ECONOMIC CONDITIONS, I.E., PRICES OF FOOD-GRAINS, ETC.

The cold weather period, January and February—Weather during January was generally dry except for scattered thundershowers, mainly in the hills and the adjoining plains of the west United Provinces. There was no rainfall in the United Provinces east.

Copious rain fell during February. Thunderstorms also occurred intermittently, and the associated rainfall was widespread. The total rainfall was in large excess.

Skies were less clouded in January and more clouded in February. Humidity was in excess in February. Minimum temperature was below normal in January and above it in February.

The hot weather period, March to May—Weather in March was generally dry except for the rainfall associated with isolated thundershowers in the Kumaun hills and in the West United Provinces. The total rainfall of the month was in large defect.

April was associated with local thundershowers in the hills and the adjoining plains. The total rainfall was in large excess in the United Provinces West.

During May thunderstorms were fairly frequent. They caused local to widespread rain in the province. The total rainfall was in slight defect in the United Provinces West.

Cloud amount was in excess in April. Humidity was generally normal. Minimum temperature was in defect in March while the maximum temperature was in defect in April.

The monsoon period, June-September—There was widespread rain in the hills with local or scattered falls in the adjoining plains in June. Thunderstorms were fairly frequent for a week and there was widespread rain during the last week of the month.

The monsoon extended in the beginning of July and caused fairly widespread rain over the province during the first week. It weakened slightly thereafter but revived at the beginning of the second fortnight. There was widespread rainfall in the province during the third week. There was again a lull in its activity at the beginning of the fourth week when only local or scattered rain fell. The monsoon became active again and caused widespread rain on the last three days of the month.

During August the monsoon continued fairly active and caused widespread rain, its activity being stimulated. There was a break in the west of the province except for occasional thundershowers. In the East United Provinces, however, the break was interrupted by a temporary weak revival of the monsoon which caused local to nearly general rain from the 12th to 16th. The monsoon again revived and a fairly widespread and locally heavy rain fell. The heavy rainfall caused floods in the East United Provinces resulting in loss of life and damage to property.

The monsoon was generally weak at the beginning of September. It strengthened, however, on the 3rd in the East United Provinces and extended into the West United Provinces on the next day causing widespread or local rain throughout the province. The monsoon was active and rainfall was locally heavy between the 13th and 15th. Local thundershowers continued in the Kumaun hills till the 21st. Scattered falls also occurred in the East United Provinces on the last three days of the month.

The percentage departures of rainfall for the two sub-divisions of the province during the monsoon period were as follows :

		June	July	August	September	June to September
United Provinces East	..	-29	-4	+18	-41	-7
United Provinces West	..	-24	-16	-23	-8	-18

Cloud amount was normal or in excess in August and September. Humidity was generally normal. Both the maximum and minimum temperatures were also normal.

The retreating monsoon period, October-December—There was local to nearly general rain in the East United Provinces between the 3rd and 7th October. There was also local rain in the Kumaun hills on the first and the last two days of the month. Weather during the month was otherwise dry. The total rainfall of the month was in moderate excess in the United Provinces East, and in large defect in the United Provinces West.

Weather during November was generally dry except for scattered thundershowers in the province and local rain in the hills. The total rainfall was in large defect. Low temperatures prevailed in the Kumaun hills and in the West United Provinces.

During December there were a few falls of rain in the West United Provinces and local thundershowers in the hills. Last week of the month recorded nearly general rain in the West United Provinces. The weather during the month was otherwise dry. The total rainfall was in large defect in the United Provinces East, and in moderate excess in the United Provinces West.

Cloud amount was normal or in excess during the period. Humidity was generally low in the south of the province in December. Both the maximum and minimum temperatures were normal.

The total rainfall for the whole year was normal in the United Provinces East, and in slight defect in the United Provinces West.

Agriculture and economic conditions—The average outturn of kharif crops was estimated to range between 10 and 16 annas in the rupee. The outturn of cotton was 77 per cent. of the normal against 60 per cent. of the normal last year and the quality of the lint was reported to be good. Wheat crop is reported to have been generally sown in time but on decreased area owing to insufficiency of moisture in the soil at the sowing time.

Condition of the Agricultural and labouring classes remained satisfactory throughout the year under report.

The following table shows the average retail prices in rupees per maund of the chief food grains during 1937 :

1937	Wheat	Barley	Gram	Rice	Arhar da
January	4.238	2.665	2.818	4.175	4.197
February	4.166	2.715	2.829	4.175	4.057
March	3.831	2.347	2.567	4.210	4.149
April	3.540	2.359	2.395	5.882	4.136
May	3.369	2.297	2.332	4.305	4.219
June	3.355	2.226	2.300	4.273	4.210
July	3.623	2.300	2.433	4.396	4.603
August	3.600	2.664	2.407	4.348	4.717
September	3.481	2.658	3.433	4.315	4.785
October	3.527	2.352	2.401	4.175	4.751
November	3.441	2.688	2.37	4.048	5.076
December	3.543	2.313	2.415	3.934	4.920

CHAPTER II

VITAL STATISTICS

The population of the United Provinces, excluding the Indian States of Rampur, Tehri-Garhwal and Benares according to the census of 1931, is 48,408,763, and on this the provincial birth and death-rates shown in this report have been calculated. The area of the province is 106,248 square miles and the average population per square mile is 456.

The population of the United Provinces for mid year 1937, estimated by the natural increase method is 51,990,009. The sub-joined table gives the birth and death-rates for 1937 based on these populations :

Census (1931) population	..	Birth-rate	Death-rate
Estimated (1937) population	..	35.92	21.38
	..	33.45	19.91

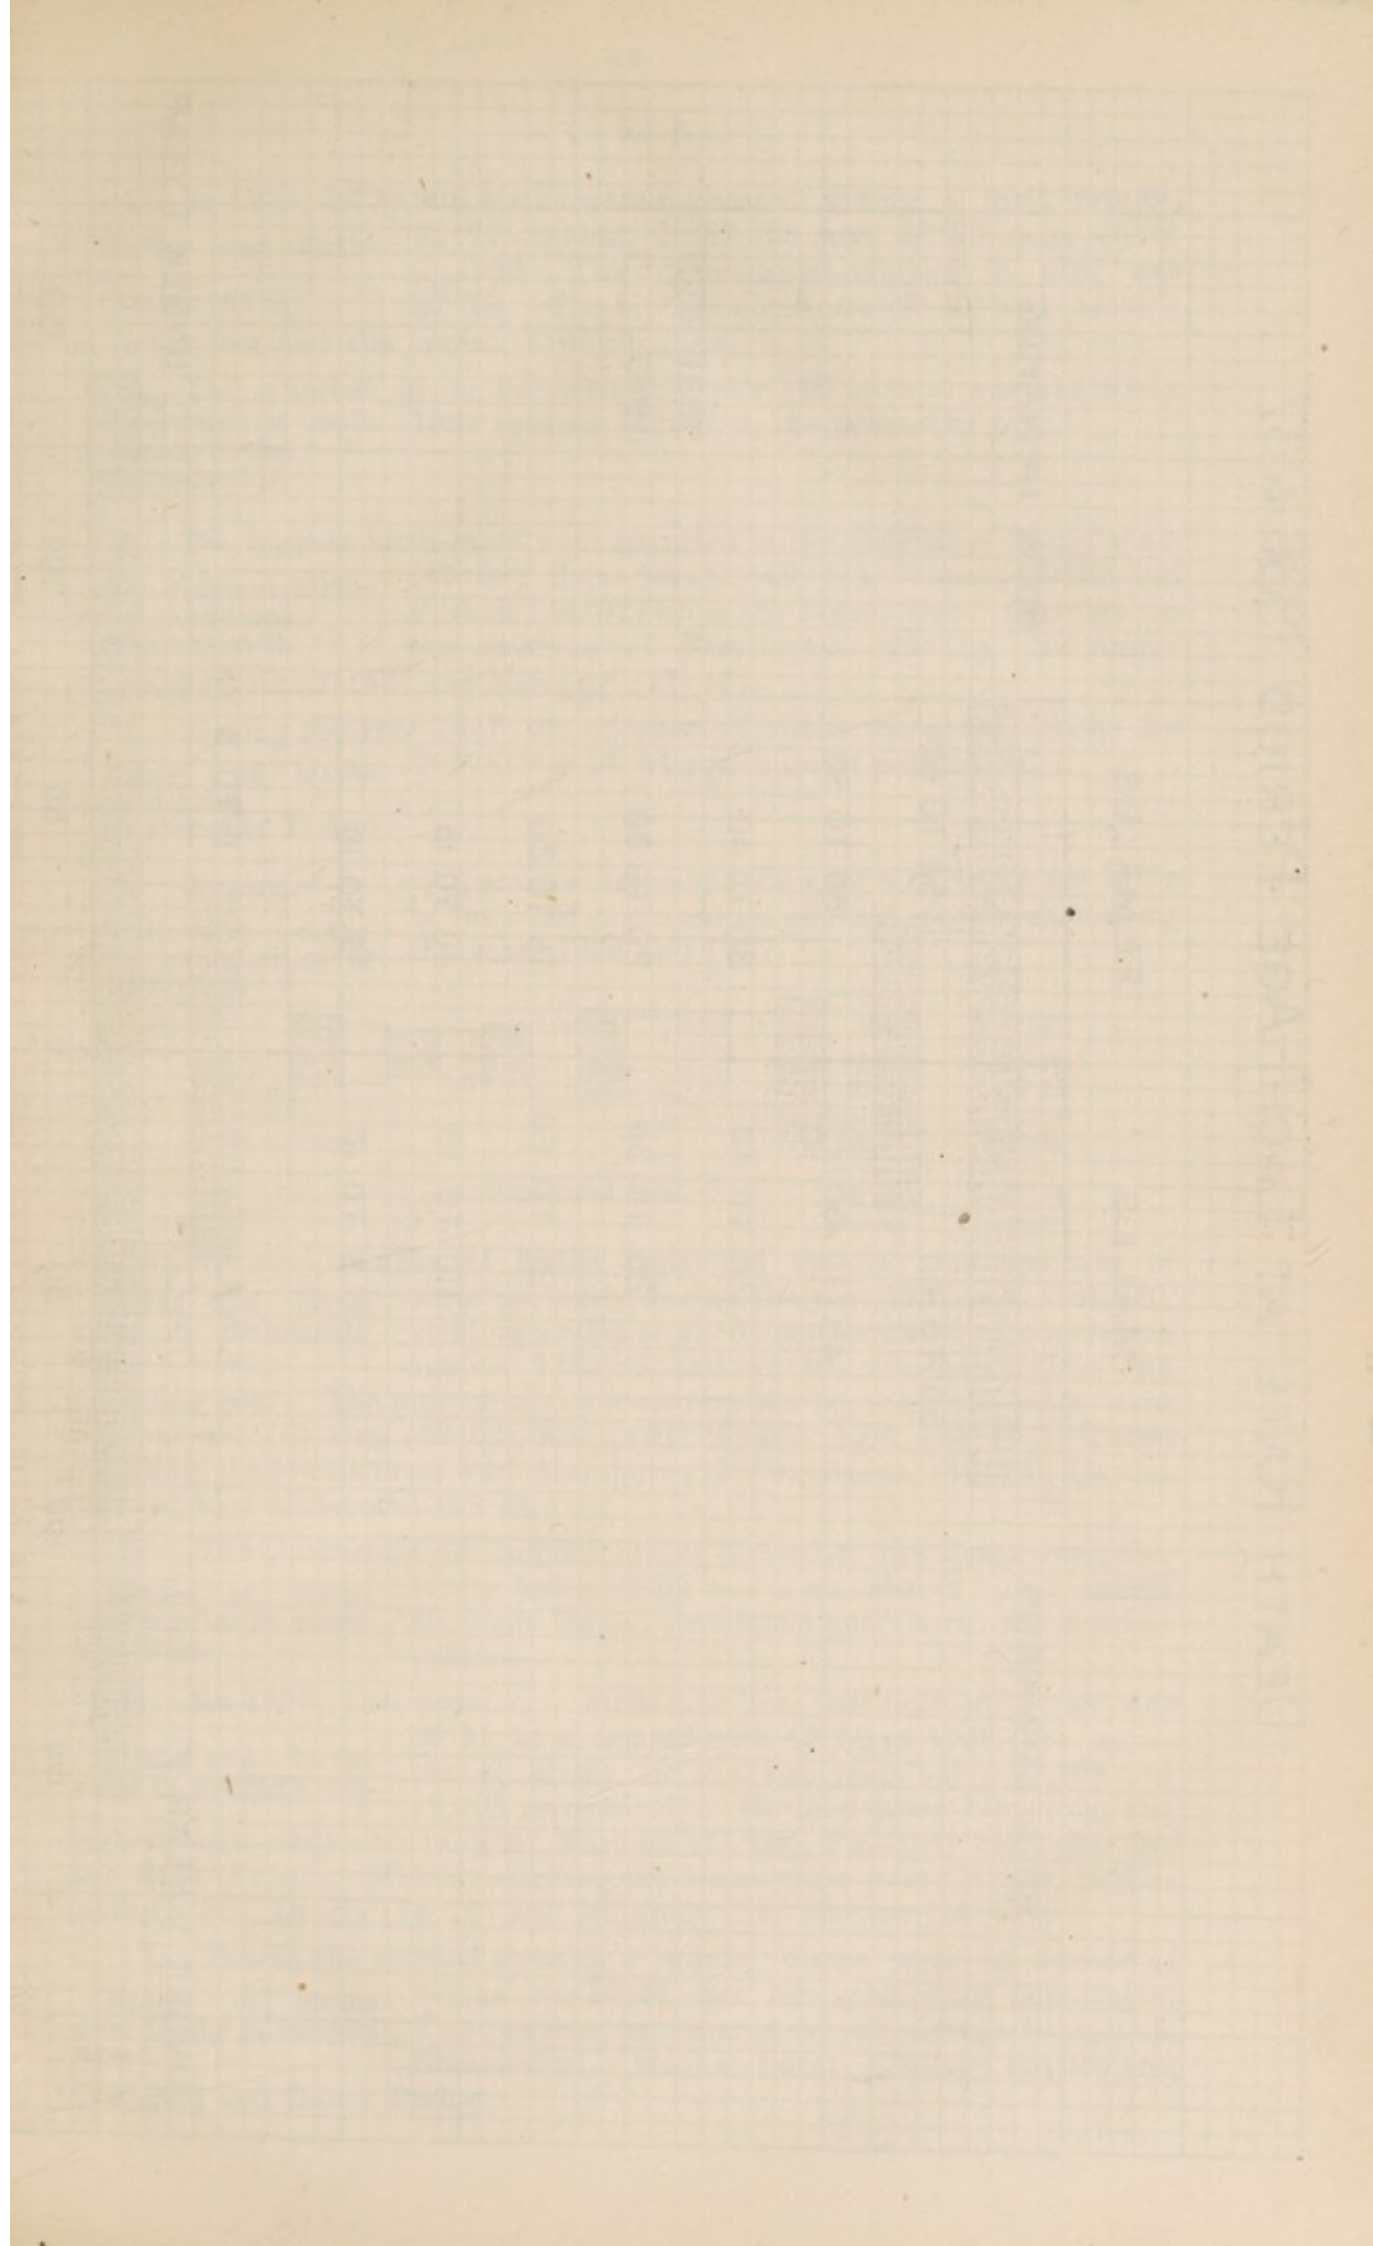

2. In 1937, the provincial birth-rate showed a decrease of 3.07 over that of the preceding year, and of 1.21 over the quinquennial average, the rates for the two years and for the quinquennial period being 35.92, 38.99 and 37.13 per mille of population, respectively. The provincial death-rate for the year showed a decrease of 1.23 as compared with that of the preceding year and of 1.63 compared with

the quinquennial average, the figures for the two years and for the quinquennial period being 21.38, 22.61 and 23.01, respectively.

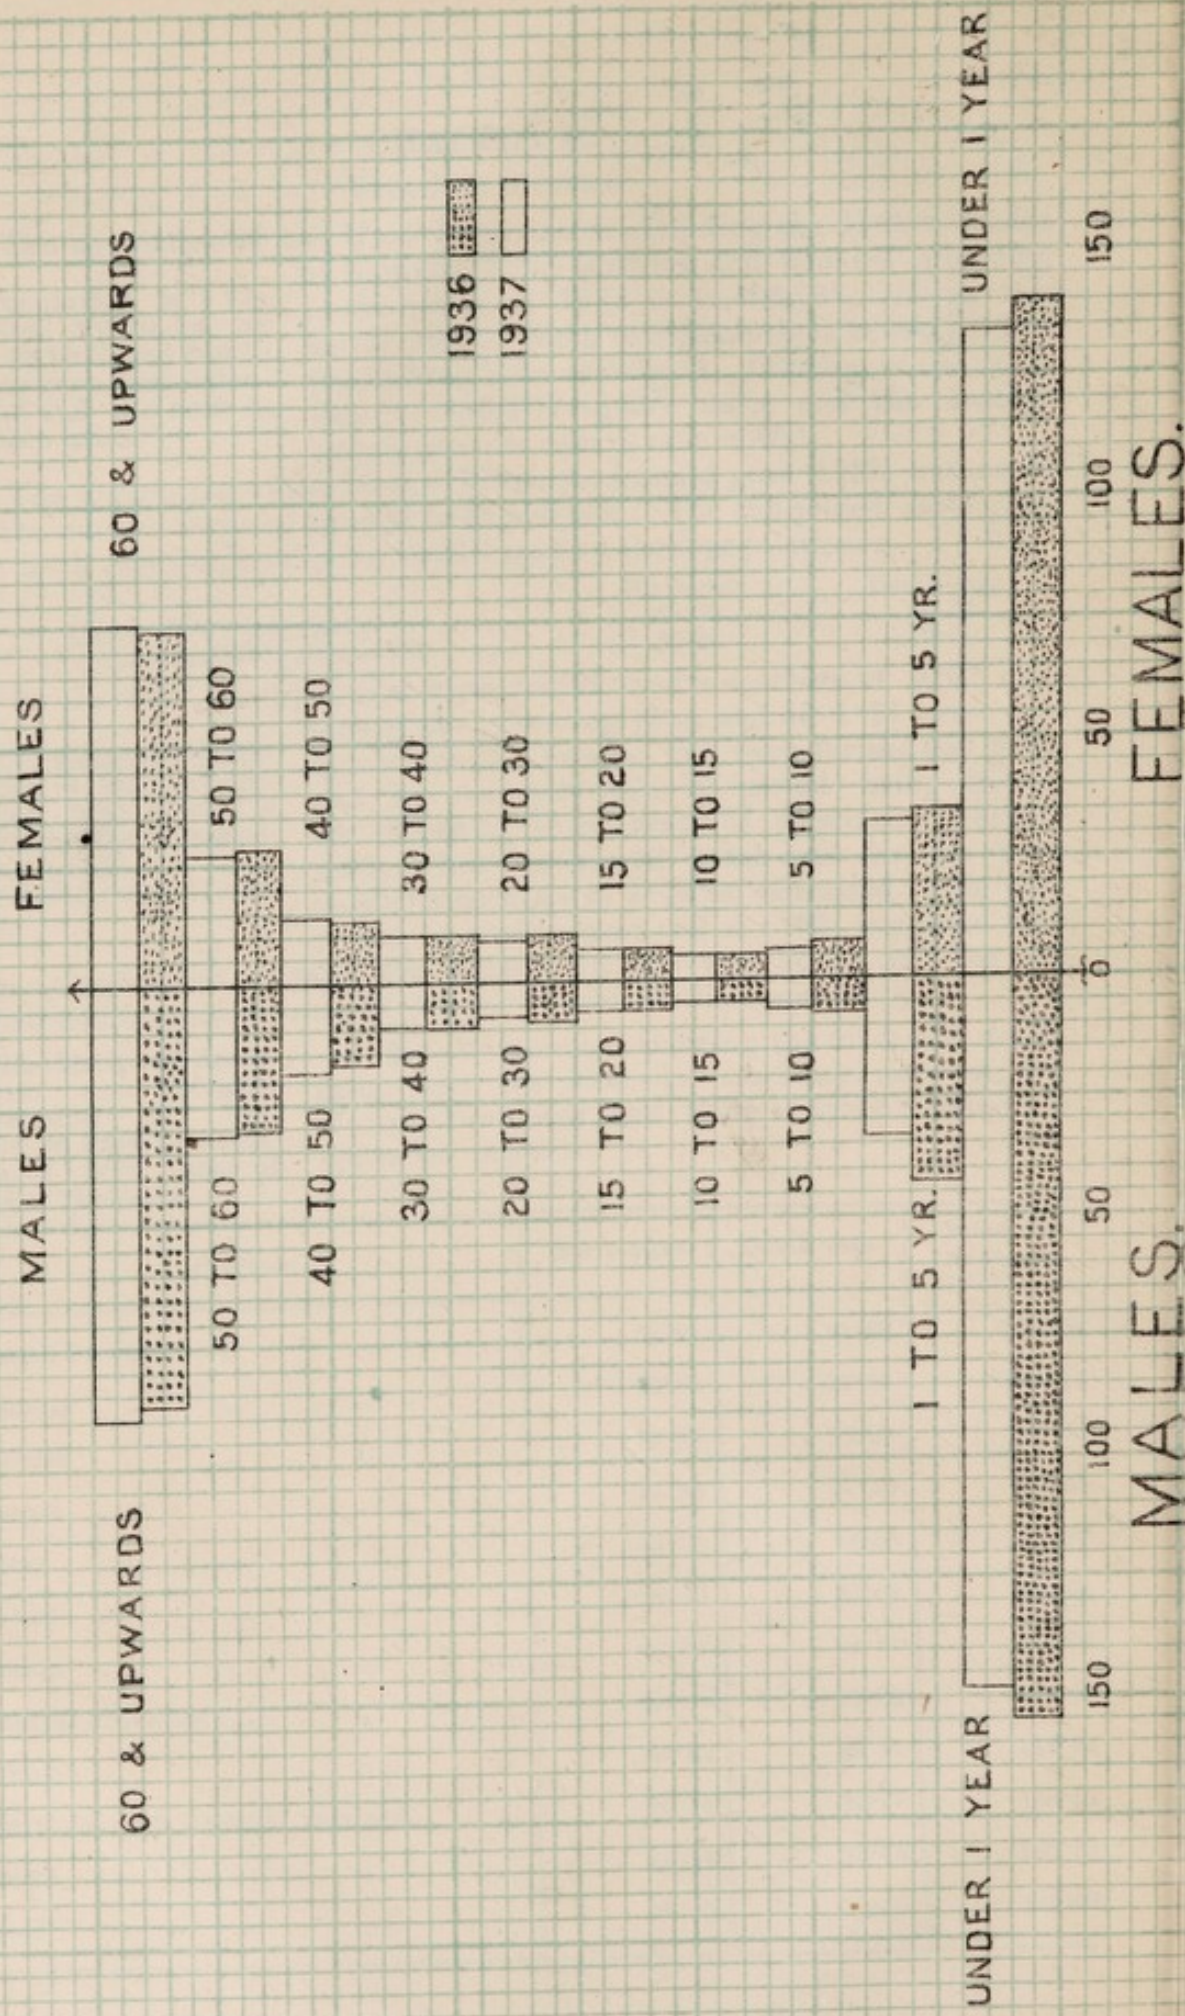

The birth and death-rates and infantile mortality of the United Provinces compared with those of other provinces.

3. A statement showing the birth and death-rates and the infantile mortality rates of the United Provinces and those of other provinces is appended below :

Province	Birth-rate	Death-rate	Infantile mortality
United Provinces	35.92	21.38	142.33
Bombay	40.68	27.50	160.74
Madras	38.72	23.99	169.70

DEATH RATE AT EACH AGE PERIOD 1936 & 37.

4. In 1937, 1,738,906 births were registered giving a birth-rate of, **Births and birth-rates.** 35.92 against 1,887,598 and 38.99, respectively in 1936. The quinquennial average in 1937 was (Statement I). 37.13. The highest birth-rate (3.80) was recorded in October and the lowest (2.07) in June.

5. The number of males born to every 100 females was 112.91 in 1937 against 112.61 in the preceding year. **Proportion of male to female births.** (Statement I).

6. The highest birth-rates were recorded in the districts of Moradabad (47.60), Bulandshahr (46.71), Jhansi (46.67) and **The different birth-rates considered** (Statement I). Pilibhit (46.02) while the lowest were recorded in the districts of Partabgarh (25.18), Sultanpur (27.09), Ballia (27.43) and Mainpuri (27.46).

7. During the year 1937, the number of births exceeded deaths by **Excess of births over deaths.** 703,903 or 14.54 per mille of population. (Statements I and II).

8 Appended is a comparative statement showing birth-rates per mille in the chief communities of these provinces during the years 1936 and 1937. **Birth-rates in the chief communities of the Province.**

				1936	1937
Hindus	38.98	35.95
Muslims	40.12	36.72
Christians	10.51	10.22
Other classes	24.17	20.87
Provincial rate				38.99	35.92

9. The total number of births registered in the municipalities of these provinces during the year 1937 was 165,270, yielding a ratio of 48.64 per thousand of population against 178,086 and 52.40, respectively, in the preceding year. The municipalities recording the highest birth-rates were Bisalpur (67.78), Orai (62.03), Kalpi (61.26) and Agra (61.18). Those recording the lowest rates were Mainpuri (13.69), Banda, (16.15), Hardoi (22.14), and Mussooree (22.55.) **Births and birth-rates in municipalities.**

10. The birth-rate in municipalities exceeded the death-rate, the excess being 13.93 and it was shared by all except Hardwar Union, Brindaban and Cawnpore municipalities. **Excess of births over deaths in municipalities.**

11. In 1937, the provincial birth-rate for the notified areas was 36.57, as compared with 40.50 in 1936, the number of births for the two years being 17,165 and 19,008 respectively. Notified areas recording the highest birth-rates were in order Marhera (77.04), Fatehpur Sikri (70.88) and Rath (62.55). Those recording the lowest rates were Chunar Settlement (8.59), Deoria (14.76) and Mainpuri Civil Station (14.79). **Births and birth-rates in notified areas.**

12. Taking the notified areas as a whole, births were in excess of deaths by 13.81 per thousand of the population. This excess was shared by all except Rikhikesh, Shikohabad, Moghal Sarai, Chunar Settlement, Shahganj and Gaura Barhaj. **Excess of births over deaths in notified areas.**

Deaths

13. During the year under report the total number of deaths recorded was 1,035,003 (558,917 males and 476,086 females) as against 1,094,677 deaths (586,568 males and 508,109 females) in the preceding year, the respective death-rates for these years being 21.38 and 22.61. The quinquennial average for the previous five years was 23.01.

14. Of the 48 districts, 29 returned a death-rate higher than the provincial average (21.38). Jhansi recorded the highest death-rate (33.65) and Ballia the lowest (13.54).

(For further details refer to Statement II.)

15. During the year under report the total number of deaths recorded in municipalities was 117,941, giving a death-rate of 34.71 as compared with 114,986 and 33.83, respectively in 1936. Of the 85 municipalities, 24 recorded a death-rate higher than the provincial average. Among the municipalities recording high mortality rates, Benares stood first with a death-rate of 59.13 and was followed by Cawnpore (58.49), Jhansi (52.70) and Lalitpur (48.70). The highest death-rate in Benares was against "all other causes" and "respiratory diseases," in Cawnpore against "respiratory diseases" and "all other causes" and in Jhansi and Lalitpur against "fevers."

The lowest mortality was recorded in Banda (7.76), Mainpuri (9.71), Mussooree (11.86) and Lakhimpur (13.26).

16. During the year under review the number of deaths recorded in the notified areas was 10,682, yielding a ratio of 22.76, as compared with 11,155 and 23.77, respectively in 1936. Out of 54 notified areas 25 returned a death-rate higher than the provincial average (22.76). Jalaun showed the highest death-rate (46.14) and was followed by Rath (Hamirpur) with 45.45 and Mawana (Meerut) with 39.23. The highest death-rate in Jalaun was against "fevers" and "all other causes," in Rath against "all other causes" and "respiratory diseases," and in Mawana against "fever."

The lowest death-rates were returned from Mainpuri Civil Station (5.79), Jui in the Cawnpore district (7.76) and Baghpat in the Meerut District (9.34).

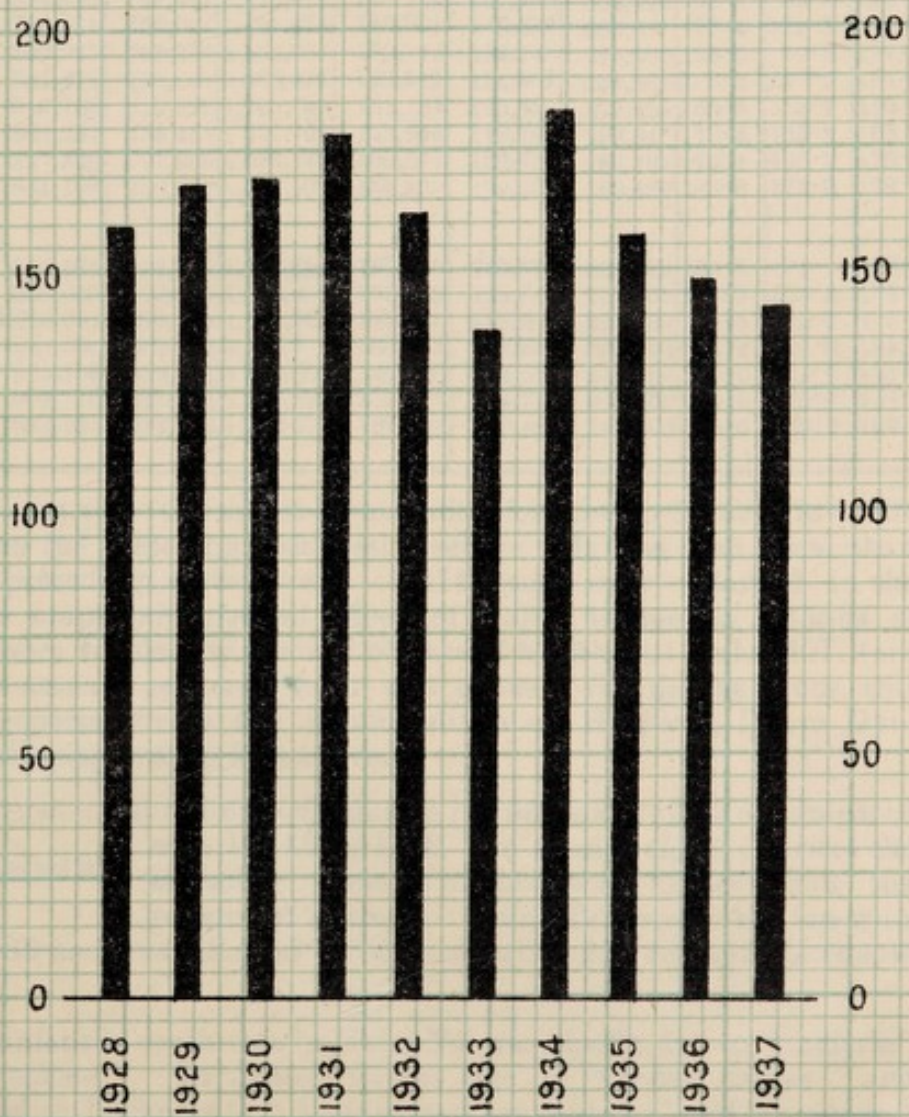

17. The highest death-rate (24.36) was recorded in December and the lowest (18.05) in March.

Mortality according to season.
(Statement III.)

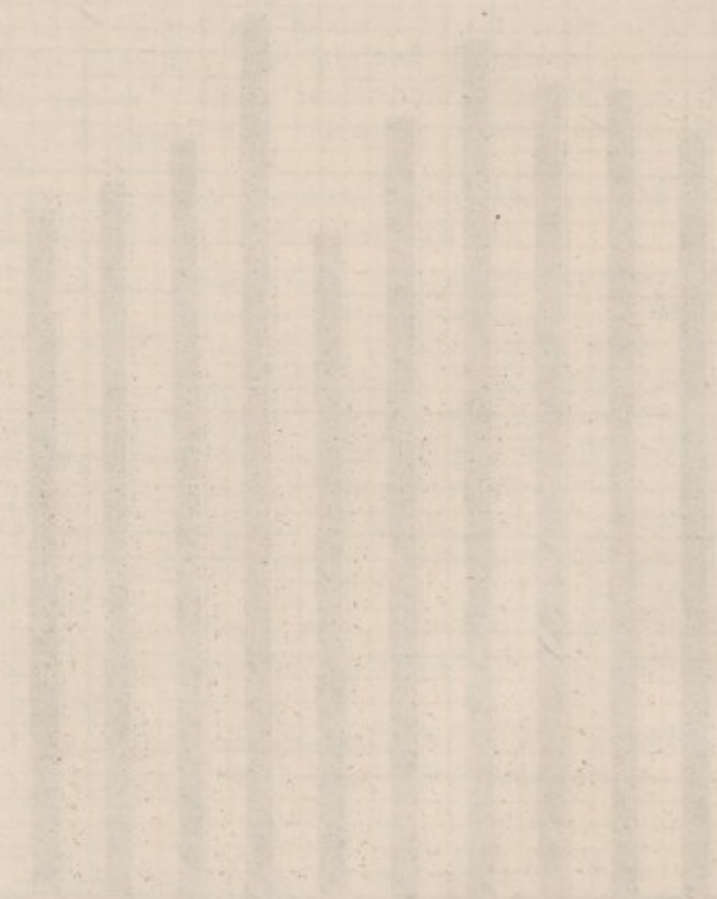

(For further details refer to Statement III.)

18. During the year under review, deaths recorded under all ages among males and females numbered 558,917 and 476,086, respectively, as compared with 586,568 and 508,109, respectively, in the preceding year, the death-rates for the two sexes were 21.96 and 20.73 in 1937 and 23.05 and 22.13 in 1936. The number of deaths among infants under one year of age was 247,503 consisting of 137,031 males and 110,422 females as against 280,359 (155,612 males and 124,747 females) in 1936. A graph relating to this mortality is annexed.

CHART SHOWING INFANT MORTALITY RATE
FROM 1928 TO 1937.

THE JOURNAL OF THE
ROYAL ANTHROPOLOGICAL INSTITUTE

(For further details refer to Statement IV.)

19. The death and death-rates among infants calculated on the births of the year for a series of years are given in the table appended below. A graph is also annexed. These rates have as usual been calculated per thousand of births :

Year	Births			Deaths of infants			Infantile mortality		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
1921 ..	819,854	740,748	1,560,602	197,223	171,908	369,131	240.6	232.1	236.5
1922 ..	769,516	690,272	1,459,788	145,928	122,834	268,312	189.6	177.3	183.8
1923 ..	864,154	771,296	1,635,450	151,67	126,42	276,994	174.2	163.9	169.4
1924 ..	833,889	741,421	1,575,310	145,194	137,248	302,442	198.1	85.1	192.0
1925 ..	785,661	699,614	1,485,275	140,991	119,688	260,679	179.4	171.1	175.5
1926 ..	820,921	731,138	1,552,059	150,14	124,74	275,260	193.3	70.6	177.3
1927 ..	881,412	785,067	1,665,479	138,328	114,557	252,885	16.9	145.9	151.7
1928 ..	916,766	818,399	1,735,165	152,134	125,32	277,454	165.9	153.1	159.9
1929 ..	824,281	733,445	1,557,726	142,944	119,701	262,645	173.4	163.2	168.6
1930 ..	895,508	797,665	1,693,173	158,571	130,610	289,181	177.1	163.7	170.8
Decennial average (1921—1930).	841,196	750,906	1,592,102	154,281	129,251	283,498	183.8	172.6	178.5
1931 ..	911,494	811,940	1,723,434	169,216	139,891	308,610	185.6	171.7	179.1
1932 ..	888,045	790,021	1,678,066	150,219	122,843	273,062	162.2	155.5	162.7
1933 ..	1,006,021	892,513	1,898,534	148,385	118,395	261,780	142.5	132.6	137.9
1934 ..	941,838	836,954	1,778,792	180,777	147,656	328,433	192.1	176.2	184.6
1935 ..	925,738	819,095	1,744,833	149,626	124,663	274,289	161.6	152.2	157.2
1936 ..	999,775	887,823	1,887,598	115,612	124,747	280,359	15.6	140.5	148.5
1937 ..	922,184	816,722	1,738,906	137,031	110,422	247,503	148.6	135.2	142.3

It will be seen that the infantile mortality for the province in 1937 was lower than the preceding decennial average. It was also lower than that of the preceding three years. 1,314 deaths were recorded in the municipalities employing medical officers of health as due to tetanus of which 1,075 were verified by medical officers of health and only 807 were found to have actually occurred from this cause. No deaths from this cause were reported from the municipalities of Hardwar, Dehra Dun, Hapur, Muzaffarnagar and Mussooree.

20. The provincial infantile death-rate in 1937 was 142.33 as compared with 148.53 in 1936. In twenty-eight districts the infantile mortality among infants was higher than the provincial average. Naini Tal topped the list with a rate of 223.35 and was followed by Jhansi with 202.48 and Lucknow with 191.46.

The high infantile death-rate in Naini Tal was chiefly due to "malaria" and "other causes." In Jhansi it was due to "other causes" and "malaria" and in Lucknow to "tetanus and convulsions" and "malaria."

The districts of Mainpuri, Gorakhpur, Azamgarh and Ballia returned the lowest infantile death-rates, viz., 97.93, 101.23, 107.92 and 108.09, respectively.

21. Mortality among infants in municipalities was higher in the year under report than the preceding year, the death-rates for the two years being 224.42 and 223.25, respectively. The infantile mortality in 32 municipal towns was higher while in 53 lower than the provincial average (224.42.) The highest infantile death-rate (339.49) was recorded in Cawnpore. It was followed by Jalesar (332.22), Jhansi (322.23) and Saharanpur (286.94).

The high mortality in Cawnpore was due to "pneumonia", "other fevers" and "exhaustion and malnutrition." In Jalesar it was due to "malaria" and in Jhansi to "exhaustion and malnutrition" "other causes", and "other fevers" and in Saharanpur to "other causes", and "other fevers".

The municipalities returning lowest mortality were, Banda (99.45), Kasganj (122.92) and Ghazipur (128.49).

22. The infantile mortality rate in all the notified areas (54 in number) was 185.32 as compared with 190.97 in the preceding year. In 25 areas the rate was above the provincial average (185.32). Mawana topped the list with an infantile death-rate of 310.34. Jhansi came next with 278.07 and was followed by Jalaun with 278.03 and Rath with 276.33.

23. During the year under report the infantile death-rate per thousand of registered births was 204.67 in the case of urban areas and 132.32 in rural areas against 206.45 and 139.21, respectively, in the preceding year.

24. As in the previous year the maximum mortality among children under one year of age was the highest in the month of September (23,978) and the lowest in the month of February, (14,878).

25. During the year under review, the infantile mortality rate per thousand of births amongst Hindus, Muslims, Christians and other classes were 142.08, 144.15, 104.48 and 129.84, respectively. [For further details see Statement IV (a)].

26. The distribution of mortality by classes shows that the highest death-rate (21.55) occurred amongst Hindus and the next highest (21.02) amongst Muslims. The mortality amongst "other classes" and "Christians" was 12.28 and 5.20, respectively.

27. During the year under report, the general death-rate was 30.02 in the case of urban areas and 20.29 in the case of rural tracts as compared with 29.78 and 21.70, respectively, in the preceding year and 32.76 and 22.07 the quinquennial averages, respectively.

28. The number of still births registered during the year under report was 14,715 against 16,598 in the preceding year. Of these there were 11,817 amongst Hindus, 2,838 amongst Muslims, 45 among Christians and 15 among other classes. As usual Gorakhpur returned the highest number of still-births (3,511) followed by Gonda (987) and Sitapur (951). The lowest number of still-births was recorded in Etah (4), Jalaun (9) and

Farrukhabad (16). No still-births were reported to have occurred in the district of Mainpuri

29. Returns embodying the results of verification of deaths which

Verification of causes of deaths. occurred within the limits of the practice of Government medical officers as well as in the medical institutions, the causes of which were verified by civil surgeons and their subordinates, show that during the year under report altogether 4,879 deaths were verified against 4,865 in the preceding year. Of these, 3,494 were reported to be due to "all other causes"; 447 to "pneumonia"; 203 to "tubercle of the lung"; 159 to "dysentery"; 97 to "other tubercular diseases"; 90 to "all other infective diseases"; 83 to "tetanus"; 68 to "enteric fever" and 62 to "malaria". "Pyrexia of uncertain origin" was responsible for 54 deaths, "cholera" for 39, "leprosy" for 25, "syphilis" for 15 and "plague" for 11. The number of deaths from "rheumatic fever" and "rheumatism," "influenza", "kala azar", "gonorrhoea", "beri-beri" "small-pox" and "scurvy" varied from 9 to 1.

Of the 4,879 deaths, 930 occurred among children, 2,760 among adults between 16 to 45 years of age and 1,189 among adults over 46 years of age and upwards.

30. During 1937, 1,471,388 entries of births and deaths were

Verification of registration of vital statistics. checked by the vaccination staff, 294,954 by the district health staff and 1,216 by the Assistant Director of Public Health, I Range.

31. During the year under review 2,062 persons were fined for

Neglect to comply with registration rules. neglect in complying with registration rules. The amount realized was Rs.733. The corresponding figures for the last year were 2,209 and Rs.866, respectively. In addition to this 9 cases were compounded on payment of Rs.21-12 as penalty and 37 persons were let off with a warning.

32. Appended is a table indicating the ratio of death per cent.

Accuracy of returns. of the total number of deaths in the returns submitted by the expert agency and the ordinary registration agency as well as the calculated number of deaths on the data supplied by ordinary agency. It will be seen that as usual deaths reported by the ordinary agency in respect of cholera, dysentery, enteric fever, kala azar and pneumonia were under reported while those returned by the same agency in respect of smallpox, plague, relapsing fever and malaria were over reported :

Name of disease	Percentage of total deaths reported by		Calculated number of deaths on the data supplied by professional agency	Actual number of deaths reported by ordinary agency
	Verified agency	Unverified agency		
Cholera ..	7.99	6.13	8,273	6,841
Smallpox ..	.20	3.09	212	3,200
Plague ..	2.25	23.22	2,333	24,036
Dysentery ..	32.59	7.39	33,729	7,652
Enteric fever ..	13.94	9.05	14,425	9,866
Relapsing fever22	..	227
Malaria ..	12.71	670.15	13,152	693 610

Pneumonia ..	91.62	16.38	94,824	16,956

CHAPTER III

THE STATE OF PUBLIC HEALTH IN THE PROVINCE AND HISTORY
OF CHIEF DISEASES

In the statement appended below are compared the death-rates per mille of the population from the most important diseases during 1936 and 1937 and the average death-rates for the preceding ten years. The figures for 1937 as compared with 1926 show a decrease under all heads except "plague," "dysentery and diarrhoea" and "respiratory diseases," while compared with the decennial average there is an increase under the head "respiratory diseases" only.

Chief causes of mortality.	Death-rate per mille for 1936.	Death-rate per mille for 1937.	Average death-rate for preceding ten years 1927-36.	Increase or decrease as compared with 1936.	Increase or decrease as compared with decennial average.
Cholera	·14	·13	·60	—·01	—·47
Smallpox	·30	·07	·22	—·23	—·15
Plague	·15	·50	·61	+·35	—·11
Fever	17·60	16·37	18·30	—1·23	—1·93
Dysentery and diarrhoea	·34	·35	·37	+·01	—·02
Respiratory diseases ..	·89	·92	·79	+·03	+·13
Injuries	·44	·43	·44	—·01	—·01
All other causes ..	2·75	2·61	2·76	—·14	—·15
All causes	22·61	21·38	24·04	—1·23	—2·66

A comparative diagram of deaths by causes is annexed opposite.

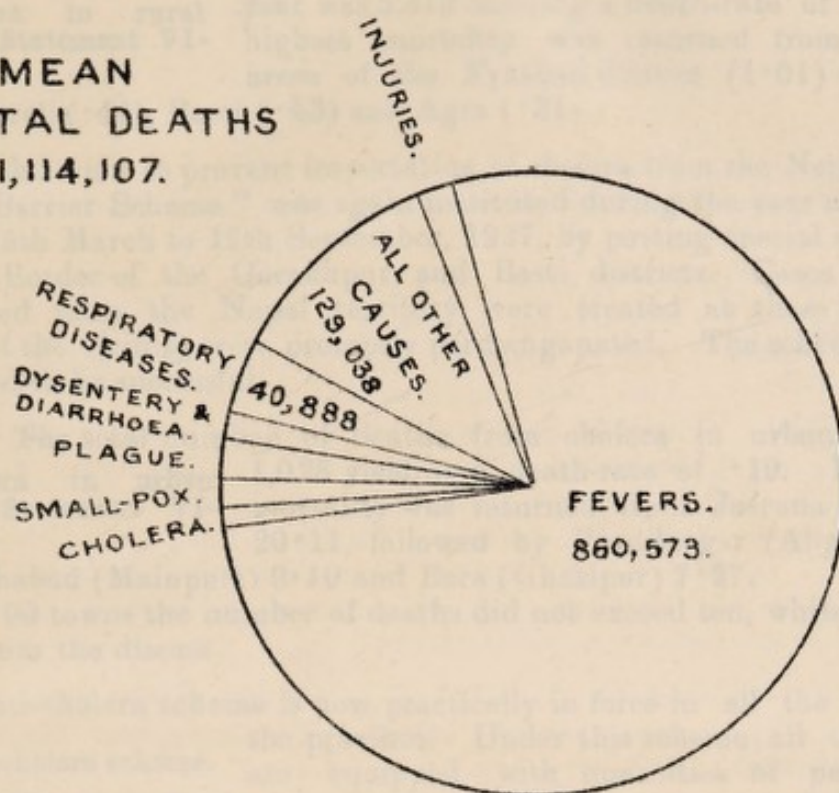

Cholera

2. During the year under report cholera was responsible for 6,341 deaths against 6,793 in the previous year. The deaths and death-rates from cholera in the Province (Statement VII). rates per thousand of the population for the two years were respectively ·13 and ·14 and the quinquennial average was ·25. The maximum mortality (1,518) occurred in November and the minimum (10) in January.

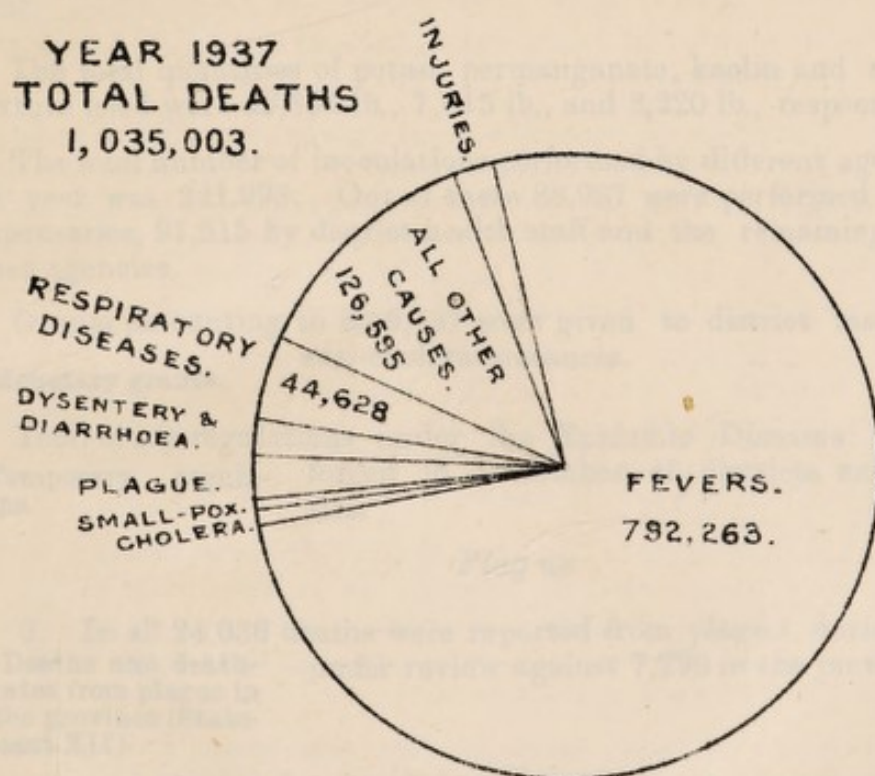

3. In nine districts out of 48 the mortality rate from cholera exceeded the provincial death-rate. The district of Fyzabad headed the province with a death-rate of (1·02) followed by Basti and Rae Bareilly (·43 each), Agra with (·34), Mainpuri with (·33), Sultanpur with (·25), Partabgarh with (·24), Ghazipur with (·23) and Gonda with (·19). The districts of Almora and Naini Tal remained practically free from cholera. In the districts of Cawnpore, Fatehpur and Mirzapur the mortality was

1,032,003

too low to yield a ratio. Other districts showing low mortality were Budaun, Moradabad, Banda, Lucknow, Unao and Hardoi with a uniform death-rate of $\cdot 01$ each.

4. The number of deaths from cholera in rural areas during the year was 5,313 showing a death-rate of $\cdot 12$. The areas (Statement VI-A) highest mortality was returned from the rural areas of the Fyzabad district ($1\cdot 01$) followed by Rae Bareilly ($\cdot 44$), Basti ($\cdot 43$) and Agra ($\cdot 31$).

With a view to prevent importation of cholera from the Nepal territory the "Barrier Scheme" was again instituted during the year under report from 15th March to 15th September, 1937, by posting special staff to the Nepal Border of the Gorakhpur and Basti districts. Cases of cholera imported from the Nepal territory were treated at these centres and wells of the vicinity were promptly permanganated. The scheme has been reported to be successful.

5. The total number of deaths from cholera in urban areas was 1,028 yielding a death-rate of $\cdot 19$. The highest areas (Statement VI-B) mortality was returned from Jaspur (Mainpuri) $20\cdot 11$, followed by Purdilnagar (Aligarh) $15\cdot 73$, Shikohabad (Mainpuri) $9\cdot 10$ and Bara (Ghazipur) $7\cdot 27$.

In 99 towns the number of deaths did not exceed ten, while 316 were free from the disease.

Anti-cholera scheme is now practically in force in all the districts of the province. Under this scheme all the districts are equipped with quantities of permanganate of potash and kaolin in accordance with the scale prescribed by Government.

The total quantities of potash permanganate, kaolin and essential oils mixture used were 40,654 lb., 7,015 lb., and 2,220 lb., respectively.

The total number of inoculations performed by different agencies during the year was 221,993. Out of these 88,037 were performed by travelling dispensaries, 97,515 by district health staff and the remaining 36,441 by other agencies.

Grants amounting to Rs.9,737 were given to district magistrates for anti-cholera measures.

Monetary grants.

Temporary regulations under the Epidemic Diseases Act were enforced in a number of districts and municipalities.

Plague

6. In all 24,036 deaths were reported from plague during the year under review against 7,290 in the previous year. Deaths and death-rates from plague in the province (Statement XII).

The rates per thousand of the population for the two years were respectively $\cdot 50$ and $\cdot 15$ and the mean for the previous 5 years was $4\cdot 45$.

The deaths from this disease during the last decade were as follows :

Years	Deaths
1927	15,570
1928	80,948
1929	37,678
1930	10,946
1931	31,225
1932	21,497
1933	9,335
1934	47,688
1935	23,019
1936	7,290

The highest mortality (7,139) occurred in March and the lowest (102) in October.

7. Azamgarh District with a death-rate of (2·83) headed the province. Plague in districts inclusive of towns (Statement XII). Other heavily infected districts in order of severity were Gorakhpur, Meerut, Muzaffarnagar and Basti with the respective death-rates of (2·40), (1·81), (1·71) and (·97). No deaths were returned from the districts of Dehra Dun, Muttra, Agra, Mainpuri, Etah, Budaun, Shahjahanpur, Pilibhit, Farrukhabad, Etawah, Cawnpore, Fatehpur, Allahabad, Jhansi, Jalaun, Hamirpur, Banda, Naini Tal, Almora, Garhwal, Lucknow, Unao, Rae Bareilly, Sitapur, Hardoi, Kheri, Gonda, Bahraich, and Partabgarh, while the number of deaths reported from the districts of Bareilly, Ghazipur and Bara Banki was too low to yield a ratio.

8. The provincial death-rate from plague in 1937 in the case of all towns of the United Provinces was ·35. The Plague in urban areas (Statement VI-B). highest mortality was noticed in Atraulia (Azamgarh) 44·78, followed by Rabupura (Bulandshahr) 22·96, Pahasu (Bulandshahr) 21·41 and Nizamabad (Azamgarh) 20·87.

In 40 towns the number of deaths did not exceed ten, while 370 towns were free from the disease.

9. The total number of deaths in rural districts was 22,155 in 1937, showing a death-rate of ·51. Of the rural districts Plague in rural areas (Statement VI-A). returning the highest mortality rates Azamgarh stood first with a death-rate of (2·87), followed by Gorakhpur (2·42), Meerut (2·10) and Muzaffarnagar (1·66).

No deaths were reported from the rural areas in 31 districts.

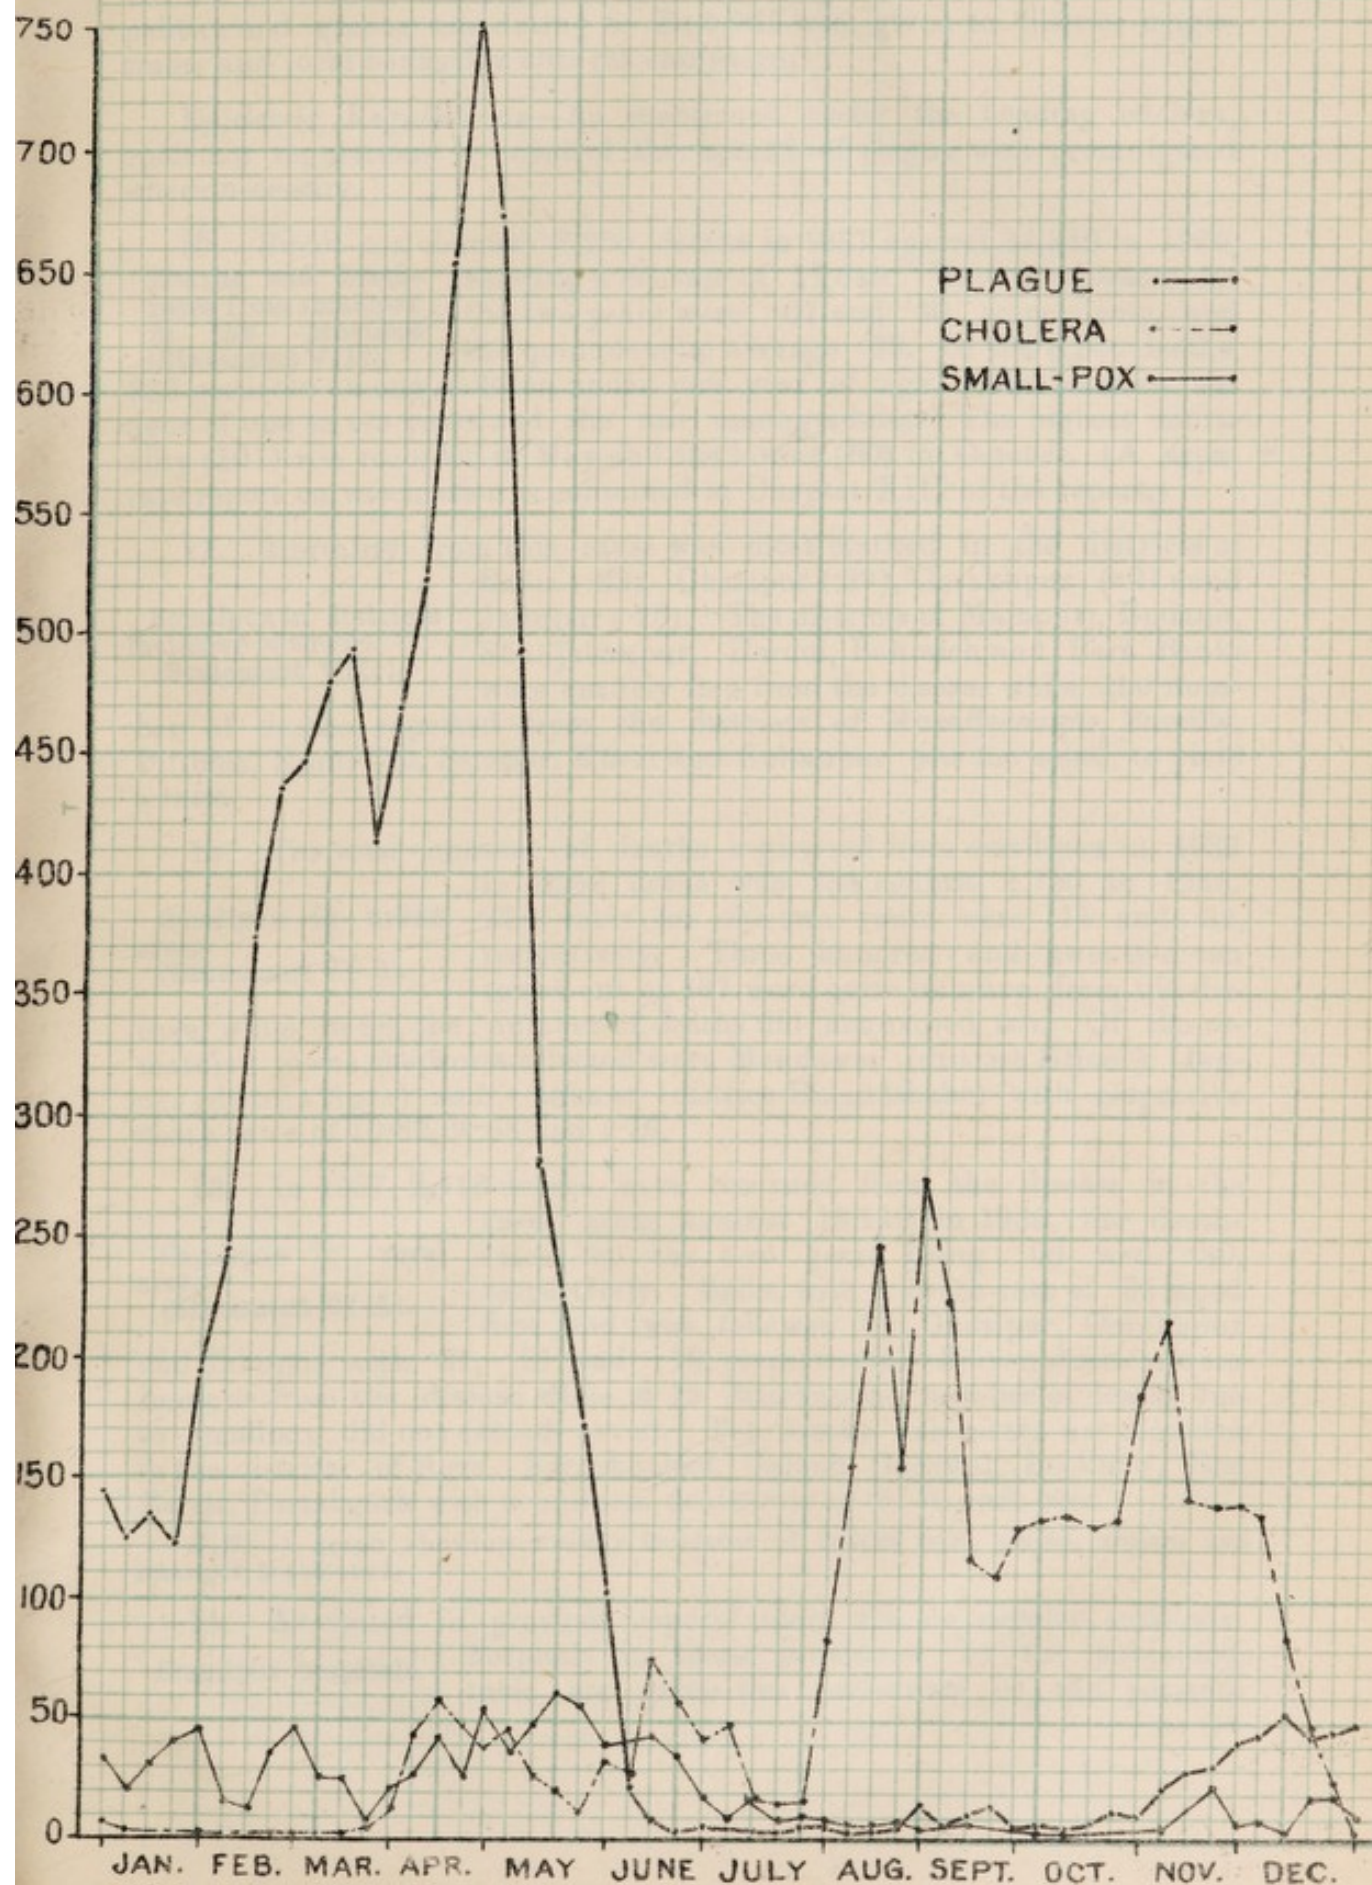

Inoculation—The total number of inoculations performed during the year was 311,558 of which 148,281 were performed by travelling dispensaries (including reserve and temporary medical officers) 111,847 by district health staff and the remaining 51,430 by other agencies.

Plague inoculations are now becoming more popular.

Evacuation—Evacuation of the infected dwellings is a measure which is gradually getting popular with the masses. It is most useful in checking an epidemic of plague. Rupees 4,287 were placed at the disposal of district magistrates to assist people in evacuating their houses and for expenditure on other anti-plague measures.

Rat-destruction—Anti-rat campaign was carried out in 20 districts, 32 municipalities and 4 notified areas in the province. The total number of rats killed during the year under report was 2,387,721.

WEEKLY INCIDENCE OF DEATHS FROM EPIDEMIC DISEASES DURING THE YEAR 1937.

Rat destruction was carried out by means of trapping and baiting. Cyanogas fumigation was also carried out in some places this year with good results. Two thousand one hundred and thirty-five pounds of Barium carbonate were supplied free of charge to districts and municipalities and grants amounting to Rs.5,921 were given to district magistrates and local bodies for anti-rat campaign.

Epidemic Regulations—As mentioned under the heading cholera, epidemic regulations to control the spread of plague were promulgated where necessary.

10. Small-pox claimed 3,200 deaths in 1937 against 14,849 in 1936, showing a decrease of 11,649. The death-rates for the two years were .07 and .30, respectively, and the quinquennial average .28. Of the 3,200 deaths, 933 occurred among children under one year of age, 1,034 between the ages of one to ten years and the rest among adults. The highest mortality (501) was recorded in May and the lowest (60) in October. (A separate report on vaccination is contained in Chapter XIII of the report.)

11. Mortality from this cause was most marked in the districts of Ballia (.33), Ghazipur (.29), Gorakhpur (.21) and Jaunpur (.20). The districts of Mainpuri, Budaun, Shahjahanpur, Hardoi, Bahraich and Bara Banki were entirely free from the disease while the number of deaths reported from the districts of Muzaffarnagar, Bareilly, Pilibhit, Naini Tal, Sitapur, Kheri and Sultanpur was too small to yield a ratio.

12. The total number of deaths registered from small-pox in 1937 in these areas was 784 against 1,730 in 1936. The rates for the two years were .14 and .32, respectively. Three hundred and twenty-seven towns out of 437 were quite immune from the disease, while in 98, the number of deaths did not exceed ten. Of the remaining towns the worst affected were Mandawar (district Bijpur), Jagner (district Agra) and Bankaur (district Bulandshahr) with respective death-rates of 10.82, 9.68 and 4.75.

13. In 1937, 2,416 deaths were returned from the disease in the rural areas against 13,119 in 1936, the death-rates for the two years being .06 and .30, respectively. Ballia with a death-rate of .35 stood first and was followed by Ghazipur, Gorakhpur and Jaunpur with .31, .21 and .19, respectively. Eleven districts were immune from the disease while in 15 districts the number of deaths due to smallpox did not exceed seven. The lowest death-rate was recorded in the districts of Agra, Farrukhabad, Jalaun, Garhwal, Lucknow, Rae Bareli, Partabgarh with a uniform death-rate of .01 in each case.

N.B.—A graph showing weekly incidence of deaths from plague, cholera and smallpox is attached.

14. As stated in previous reports there are no regular smallpox hospitals in these provinces. In the subjoined table are given the particulars of the patients

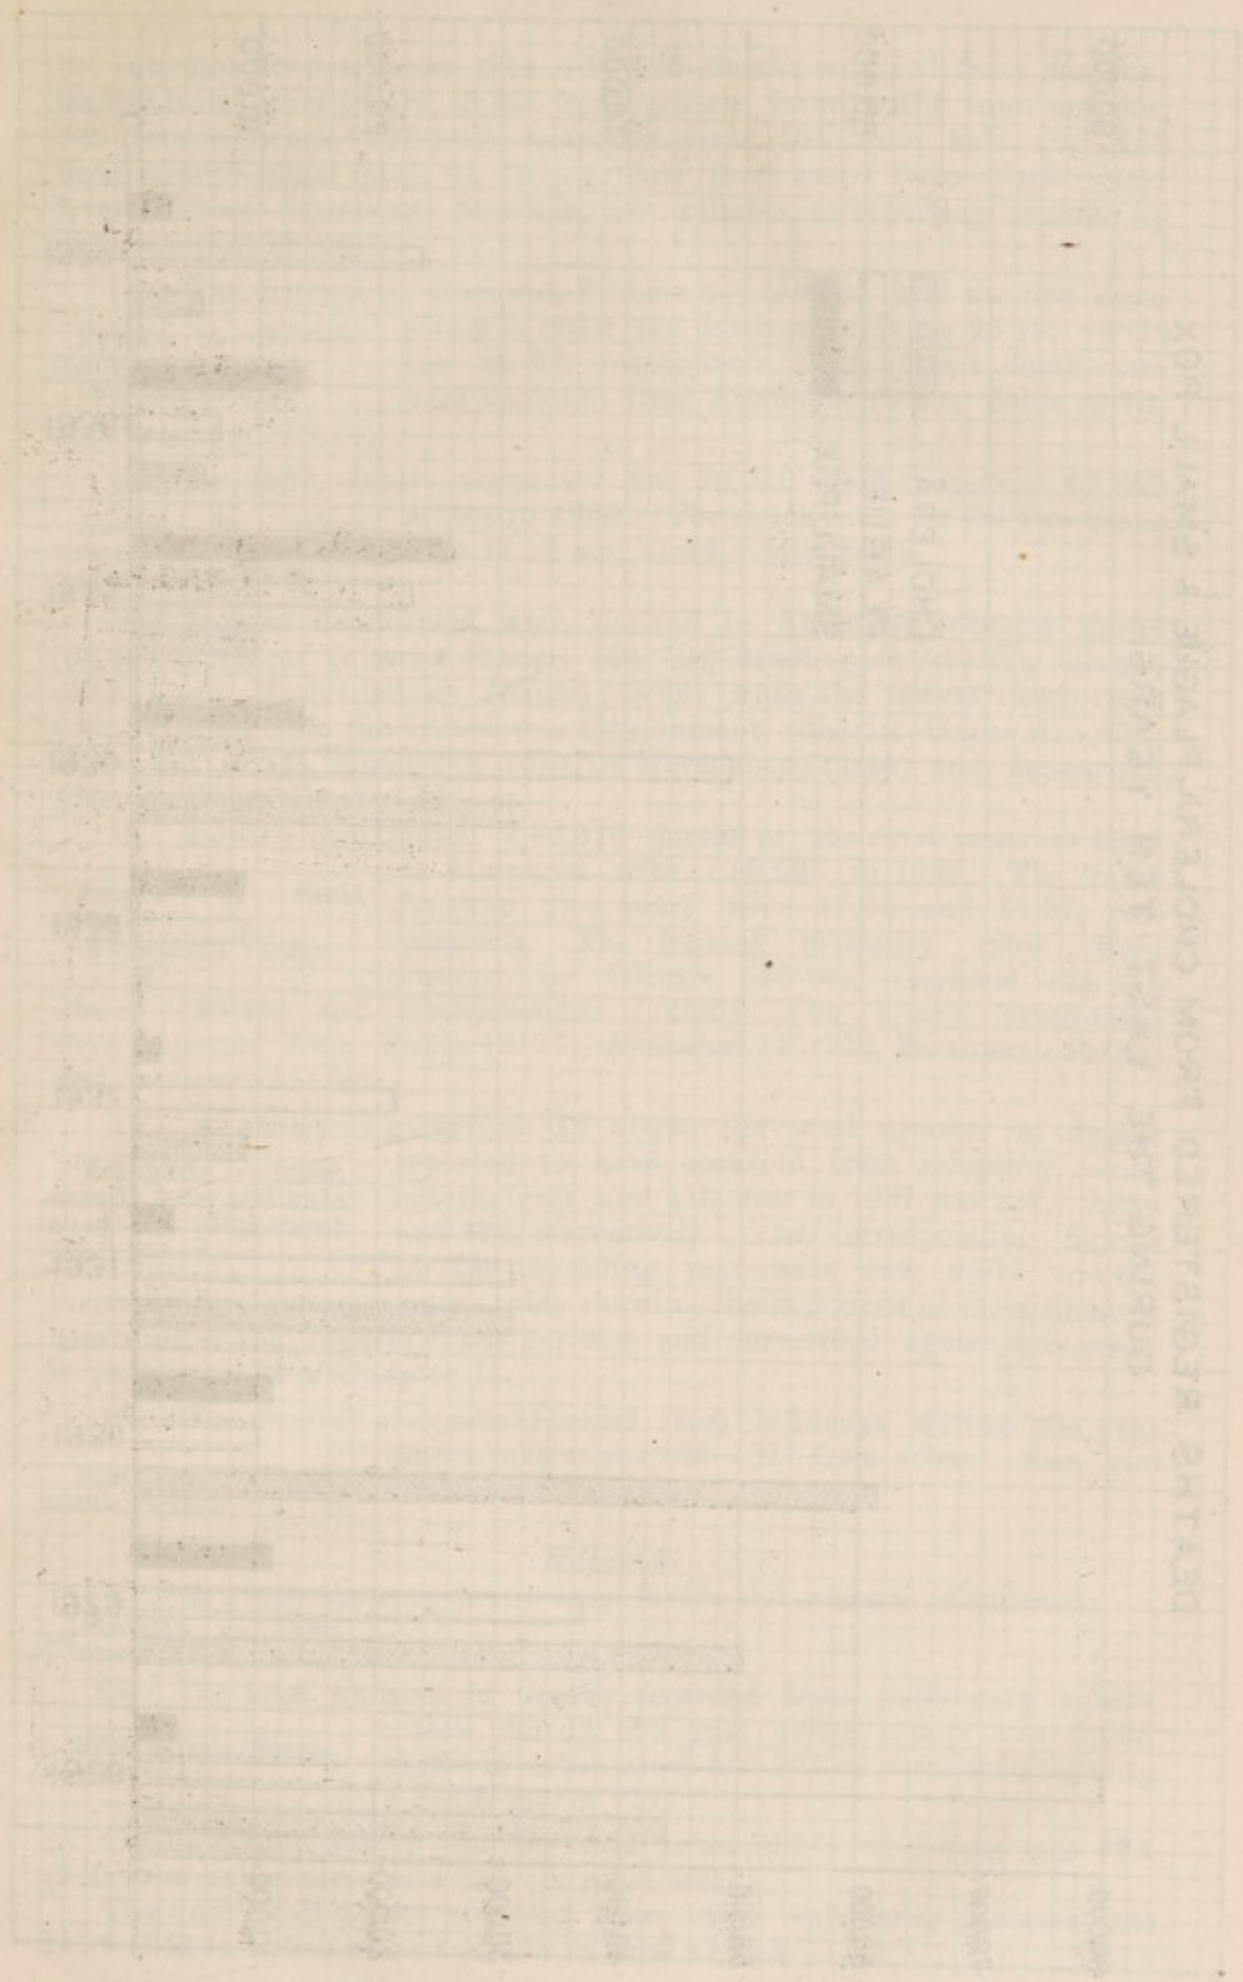

treated in the infectious diseases hospitals where such exist or in the hospitals with infectious diseases wards :

Serial number	Name of place where the hospital is situated	Number of patients treated in the hospital.	Vaccinal condition of the patients treated in the hospitals					Remarks
			Vaccinated as evidenced by presence of one or more vaccination cicatrices	Stated to have been successfully vaccinated, but no vaccination cicatrix present	Stated to be unvaccinated or vaccinated unsuccessfully and no vaccination cicatrix present	Previously unvaccinated, but vaccinated during incubation of smallpox	Stated to have been successfully revaccinated	
1	Dehra Dun ..	27	19	..	8	All cured.
2	Mussoorie ..	13	10	..	3	
3	Hardwar ..	9	9	
4	Muttra—							
	Muttra Municipality.	1	1

15	Azamgarh ..	3	2	..	1	

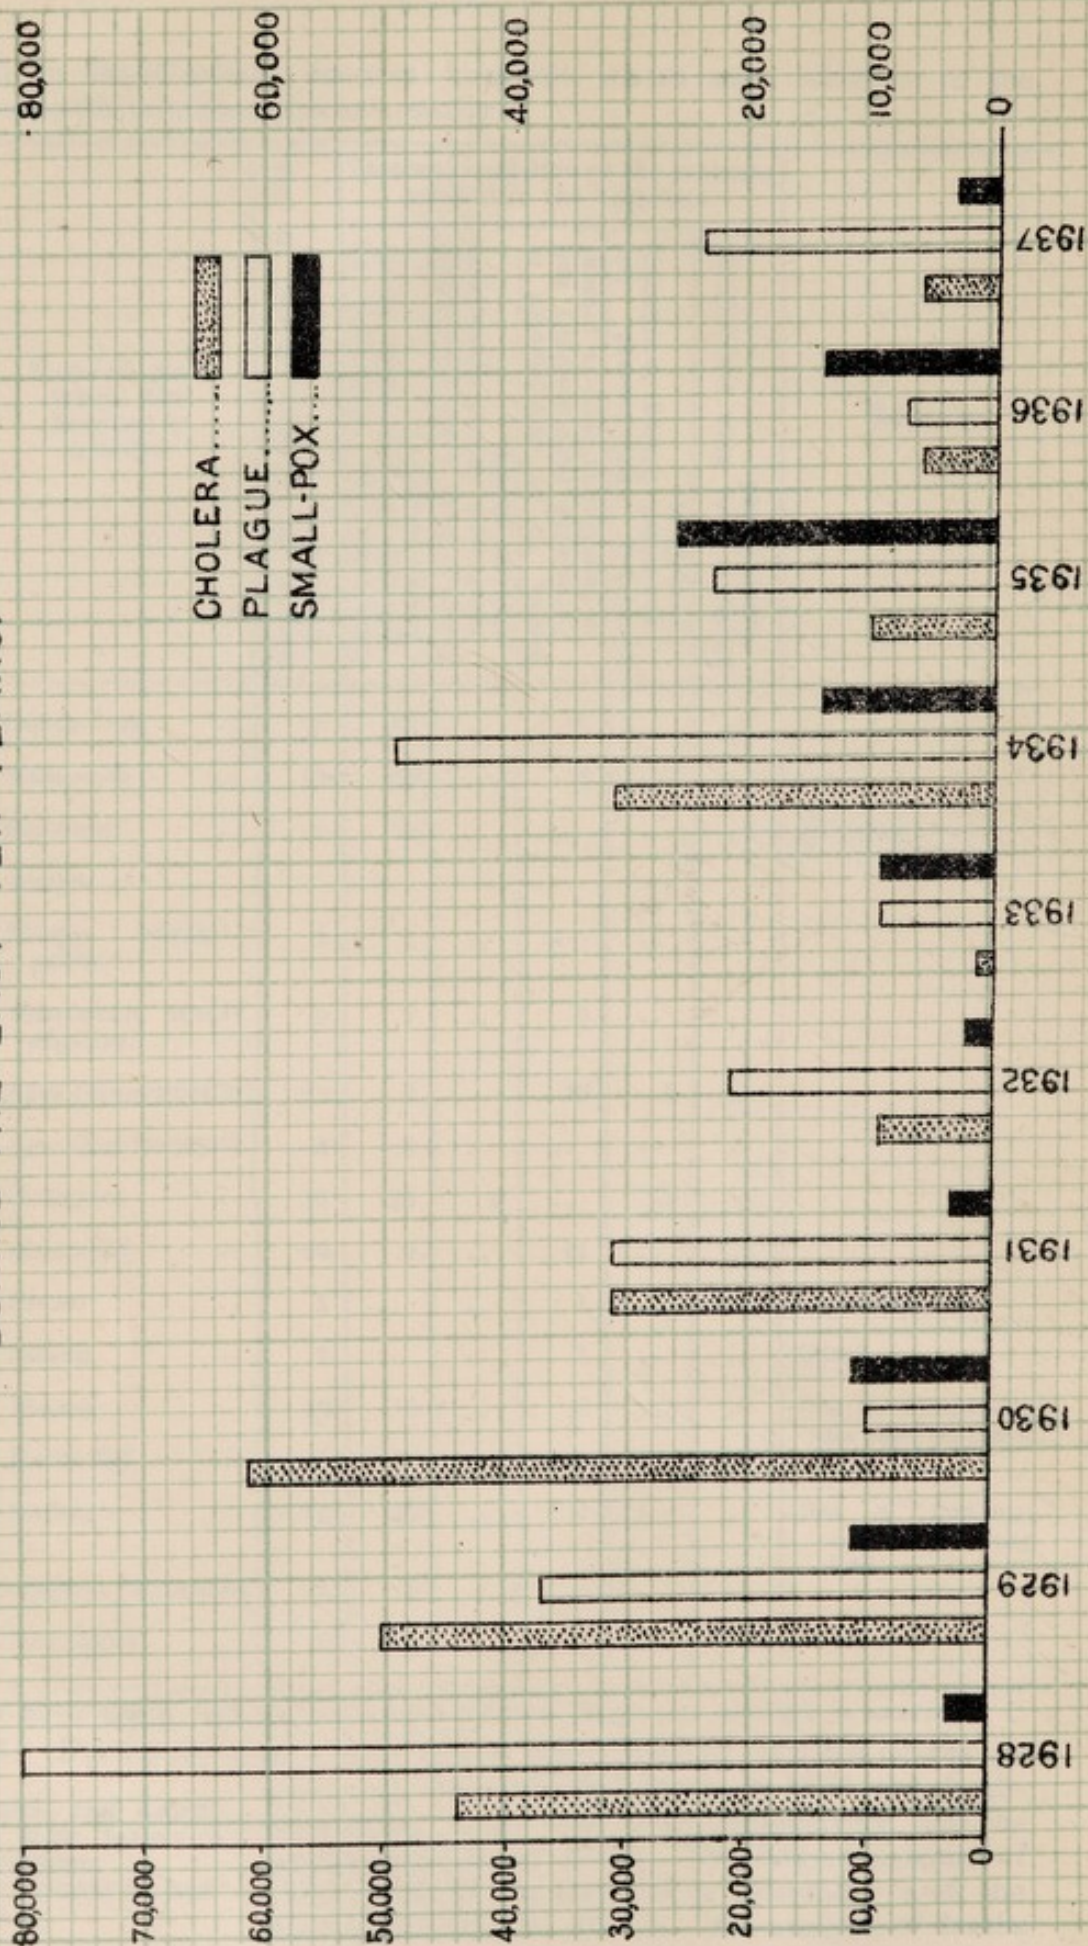

N.B.—A graph showing deaths from cholera, plague and smallpox is annexed.

15. During the year under review fevers claimed 792,263 deaths as compared with 851,847 deaths in 1936, the death-rates being 16.37 and 17.60, respectively, and the quinquennial mean 17.78. The largest number of deaths (79,911) was recorded in December and the smallest (52,885) in March. An analysis of deaths

Deaths and death-rates from fevers in the province.
(Statements IX and VI- (a)].

DEATHS REGISTERED FROM CHOLERA, PLAGUE & SMALL-POX DURING THE LAST TEN YEARS.

by sub-classification shows that 6,93,610 deaths occurred from malaria, 83,799 from other fevers, 9,366 from enteric fever, 4,371 from measles, 520 from influenza, 227 from relapsing fever, 184 from kala azar, 158 from cerebro-spinal fever, 21 from typhus fever and 7 from black water fever. These figures are, however, not reliable, as reporting is done by illiterate chaukidars.

16. The districts of Garhwal, Pilibhit and Jhansi held the first three places in order, the death-rates being 25·12, 24·26 and 24·22, respectively. The lowest death-rates were returned from Allahabad (9·40), Ballia (9·70) and Fatehpur (10·38).

17. In 1937, fevers accounted for 60,250 deaths against 62,252 deaths in 1936. The death-rates for the two years were 11·10 and 11·44, respectively.

The highest death-rates were noticed in Amaupur (district Etah) (64·49), Gursarai (district Jhansi) (44·59), Madhogarh (district Jalau) (40·55) and Math (district Jhansi) (44·46) while the lowest death-rates were reported from the Lansdowne Cantonment (district Garhwal) (·68), Naini Tal (1·11), Kundarkh (district Moradabad) (1·44) and Mussooree (district Dehra Dun) (1·45).

18. Fevers contributed 7,32,013 deaths in the rural areas in 1937 as compared with 7,89,595 in 1936. The rates for the two years were 17·03 and 13·37, respectively. The highest mortality rates were noticed in Pilibhit (26·10), Garhwal (25·35), Jhansi (25·15) and Shahjahanpur (24·90). The lowest death-rates were reported from Ballia (9·77), Allahabad (10·31), Fatehpur (10·35) and Jaunpur (11·86).

19. As shown in paragraph 15 above the total number of deaths reported to have occurred from relapsing fever, enteric fever and kala azar in 1937 was 227, 9,366 and 184, respectively. The corresponding figures for the preceding year were 256, 9,911 and 87, respectively. A comparative table showing the incidence of these diseases according to the reports of the verified and unverified agencies is given in paragraph 32 of Chapter II.

20. The number of deaths reported from influenza during the year under review was 520—311 from urban areas and 209 from rural areas.

Malaria

21. A graph showing deaths from fevers and malaria is annexed.
(Malaria *Vide* Chapter VIII.)

22. The total number of deaths recorded from pulmonary tuberculosis during the year under report was 5,635 (5,304 in urban areas and 331 in rural areas) giving a death-rate of ·11.

The number of deaths recorded from tuberculosis of joints was 175 (110 from urban areas and 65 from rural areas).

The number of deaths recorded from other tubercular diseases was 115 (94 in urban areas and 21 in rural areas).

Dysentery and Diarrhoea

23. During 1937, dysentery and diarrhoea were responsible for 17,126 deaths, representing a death-rate of .35. The corresponding figures for the preceding year were 16,677 and .34 respectively, and the mean ratio for the previous five years .32. The highest mortality (2,006) was reported in June and the lowest (651) in February.

Deaths and death-rates from dysentery and diarrhoea in the province. (Statement X).

24. As usual the highest death-rate (3.78) was returned from Garhwal. Then came Dehra Dun with 1.47 and Almora with 1.36. The lowest death-rate was noticeable in Mainpuri .01. Banda, Kheri and Gonda returned a uniform death-rate of .04.

Dysentery and diarrhoea in districts inclusive of towns. (Statement X).

25. During the year under review the mortality from dysentery and diarrhoea in towns was 2.28 per mille as compared with 2.24 in the preceding year. Of the towns showing the highest death-rate Srinagar (Garhwal district) topped the list, the death-rate being 13.17. Katra (Partabgarh district) stood second with 10.35. High death-rates (9.31) were also recorded in Rikhikesh (Dehra Dun district) and in Fatehganj East (district Bareilly) (7.88). In 197 towns the number of deaths did not exceed 10, while 107 were free from the disease.

Dysentery and diarrhoea in rural areas. (Statement VI-A).

26. These diseases were responsible for 4,722 deaths in 1937 as compared with 4,461 in 1936, the resulting ratios per thousand of the population during the two years being .11 and .10, respectively. Of the districts showing the heaviest mortality Garhwal with a death-rate of 3.76 stood first and was followed by Almora with 1.34, Dehra Dun with .76 and Naini Tal with .34. The lowest mortality was recorded in Etawah, Cawnpore, Jhansi, Banda, Jaunpur, Kheri and Gonda with a uniform death-rate of .01 in each case.

Respiratory Diseases

27. These diseases were responsible for 44,628 deaths during the year under review as compared with 42,973 in the preceding year. The death-rates for the two years and the mean for the previous five years were .92, .89 and .84, respectively. The highest number of deaths (4,781) was recorded in December and the lowest (2,837) in July.

Deaths and death-rates from respiratory diseases in the province. (Statement XI).

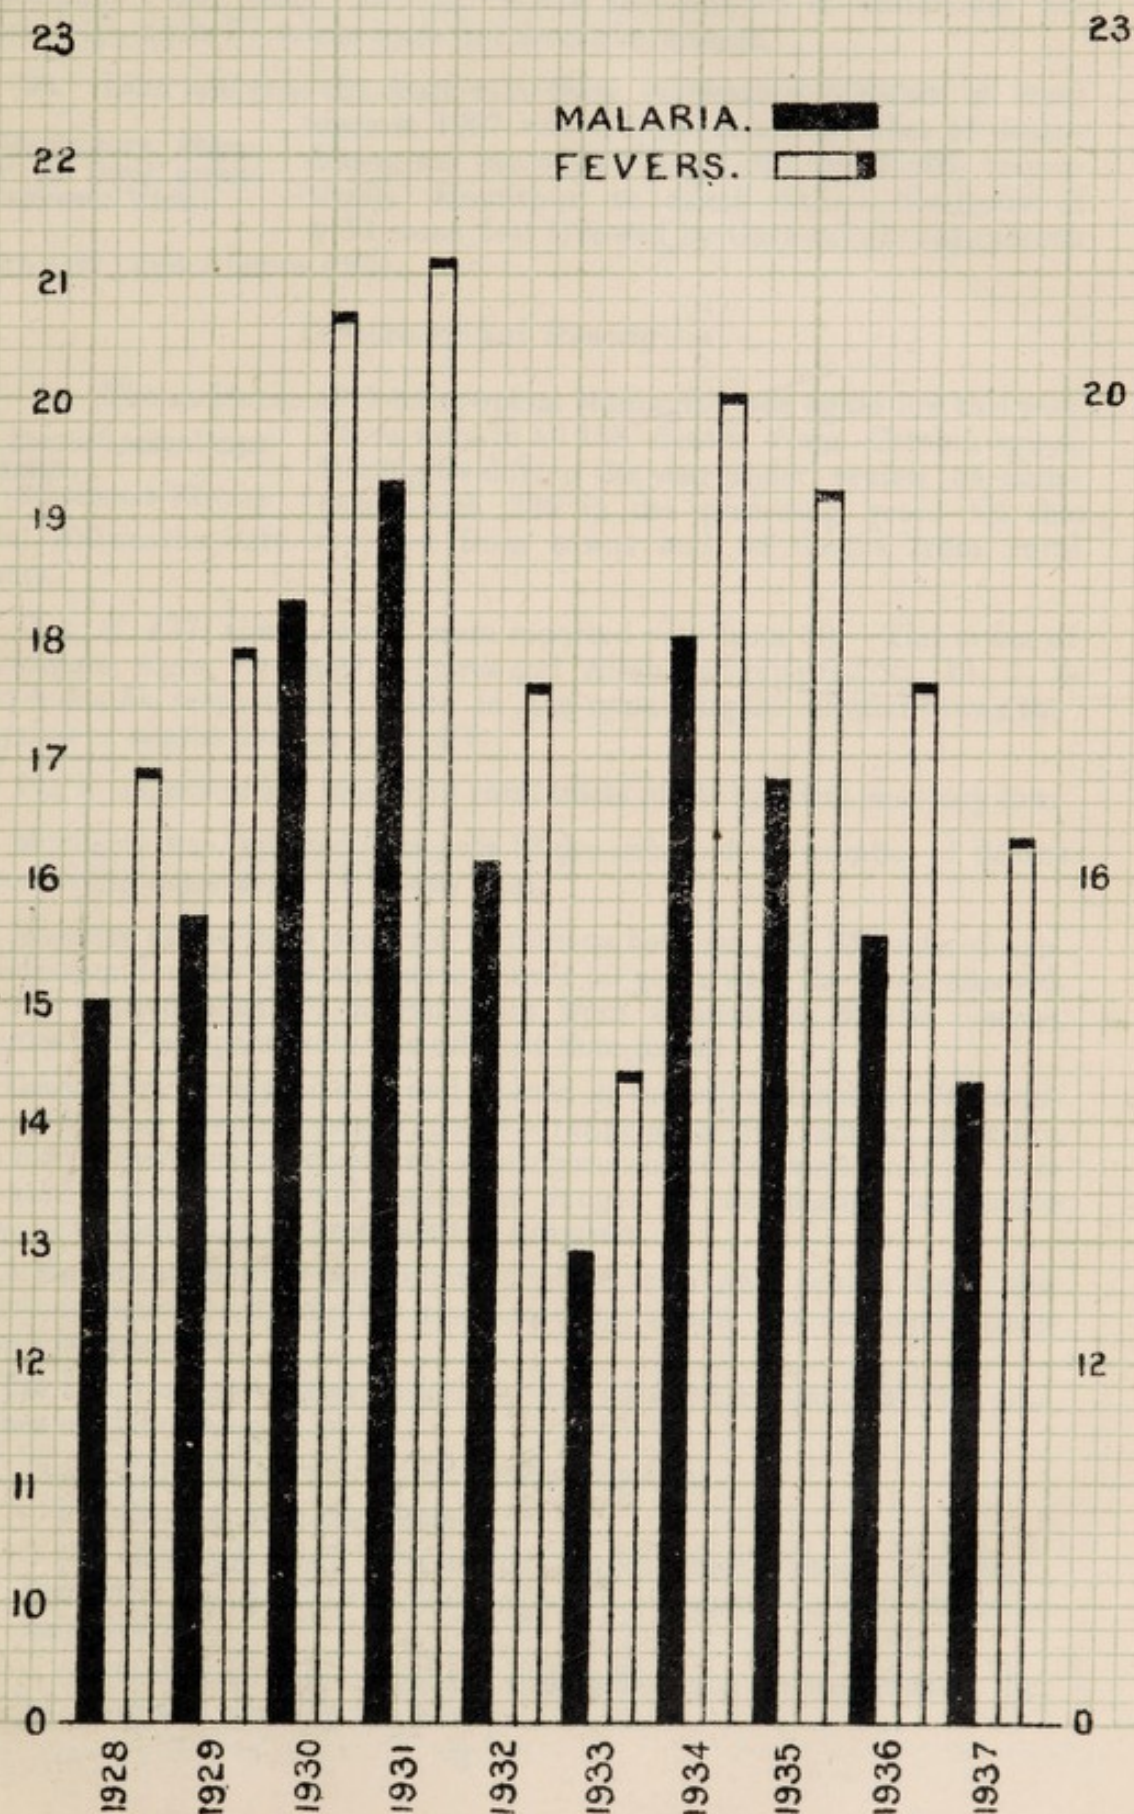

28. As usual, Hamirpur stood first with a death-rate of 4.49 and Cawnpore second with 4.26. Then followed Lucknow with 3.70 and Agra with 3.62. The districts returning the minimum mortality from these causes were Sultanpur (.04), Mainpuri (.05) and Kheri, Gonda, and Partabgarh with a uniform death rate of (.06.)

Respiratory diseases in districts inclusive of towns (Statement XI).

29. In 1937, these diseases were responsible for 37,107 deaths in towns against 35,463 deaths in 1936. The death-rates for the two years were 6.83 and 6.52 respectively. Like last year Cawnpore returned the highest mortality (22.47), followed by Bhowali

Respiratory diseases in urban areas. (Statement VI B).

(Naini Tal district) (21·28) and Agra (16·20). The towns returning the lowest mortality were Mainpuri (·06), Shikarpur (district Bulandshahr) (·09) and Khekra (district Meerut), Reotipur and Sherpur (district Ghazipur) (·10) each. In 155 towns the number of deaths did not exceed 10, while 77 towns were free from the disease.

30. Like last year the death-rate from respiratory diseases in rural areas in 1937 was ·17, the actual number of deaths during the two years being 7,521 and 7,510, respectively. Hamirpur as usual with a death-rate of 4·51 stood first followed by Garhwal (1·14), Dehra Dun (·87) and Almora (·85).

Cerebro-spinal Meningitis

31. The incidence of Cerebro-spinal Meningitis was again low this year. There were in all 158 deaths from Cerebro-spinal Meningitis during the year under review as compared with 236 in the preceding year. Of this total, 100 deaths were reported from towns and 58 deaths from rural tracts.

Out of 437 towns, cases were reported only from 30. The cities of Cawnpore, Agra, Lucknow, Benares and Allahabad reported 32, 19, 7, 5 and 4 deaths, respectively, while in the remaining 25 infected towns the number of deaths did not exceed 2.

The incidence of the disease in rural tracts of the districts was very low.

Mortality was reported from only 12 districts and the number of deaths reported did not exceed 14 in any case.

Majority of the cases occurred in persons between 5 to 35 years of age. Children under one year and persons over 50 years were the least affected. It was noticed that all communities were susceptible to the disease, females were comparatively less affected than males.

Cases were mostly isolated and treated in the infectious diseases hospitals or in civil hospitals where special arrangements for lumbar puncture and for repeated injections of anti-meningococcus serum were made. It is essential that people should realize the danger of the disease and come forward immediately for treatment in hospitals.

A statement showing the number of seizures and deaths from the disease as registered during the year according to age, sex and community groups is appended.

The following preventive measures were adopted to combat the prevalence of the disease.

- (1) Patients were removed to the hospitals.
- (2) Houses were disinfected.
- (3) Relations were advised to expose their clothes, beddings, furniture, etc., to the sun daily, to avoid overcrowding and unnecessary worry.
- (4) Contacts were supplied with potassium permanganate for gargling and cleaning the nose.

(5) Roads and "kachcha patris" were watered both morning and evening to keep down dust.

(6) Leaflets and posters dealing with preventive measures were distributed to the public.

(7) Strict supervision was kept over the local cinemas. The managers were warned against over-crowding and sealing of doors and windows during shows.

(8) Particular attention was paid towards the general sanitation, disposal of night-soil and rubbish and the cleansing of the whole area.

Statement showing the number of seizures and deaths from Cerebro-spinal Meningitis as recorded according to age, sex and community in the United Provinces during the year 1937

Age groups	Hindus		Muhammadans		Christians		Others		Total	
	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female

Number of seizures in this statement includes all seizures, i.e., whether recovered or dead.

Epidemic Dropsy

32. The total number of deaths reported from the disease during the year under review was 64 against 145 of the last year. Out of 64 deaths, 26 occurred in rural areas and 38 in urban areas.

Epidemic Dropsy.
[Statement VI-(a)].

The highest mortality (14) was reported from the Jhansi district, followed by Benares town with 13 deaths, Allahabad town with 6 deaths and Cawnpore town with 4 deaths. In other infected towns and rural tracts of districts the number of deaths reported did not exceed 3 in any case.

The disease was fairly widespread in the cities of Benares, Allahabad and Cawnpore and consequently an officer of this department was placed on special duty to investigate the causes of the disease in those places and to suggest suitable preventive measures.

The principal findings of this investigation are as follows :

Benares—The largest incidence of the disease was amongst the Bengali community although it was found to a smaller extent among the general population. It affected the poor and the middle class people mostly. Both sexes and all ages appear to be equally affected.

The factors responsible appear to be both food deficiency and food intoxication.

Allahabad—The disease was mostly confined to the Bengalis of middle and well-to-do classes and males and females were equally affected. Children under 10 years were affected much less than those above this age.

Sixty-five per cent. of the cases studied used mustard oil from one source. The outbreak in Allahabad appeared to be more of food intoxication than of food deficiency.

Cawnpore—The disease affected all the communities but the largest number of cases were found among the Muhammadans. The disease was not confined to the Bengalis, 97.5 per cent. of the cases having occurred amongst United Provinces men. It affected chiefly partial rice eaters and mustard oil users but a few cases have also occurred among non-rice eaters and those who do not use mustard oil. Both vegetarians and non-vegetarians have suffered but the incidence was greater among the latter and both sexes have suffered but males are affected more than females.

The chief features of the disease were dilatation of the heart, swelling of feet and legs, fever, gastro-intestinal trouble and cardiac pain. In some cases glaucoma was also present during the course of illness. The finding was that the disease was Epidemic Dropsy and not Beri-beri.

Necessary measures to prevent the spread of the disease were taken in all cases.

Injuries

33. Out of 20,814, total deaths due to injuries, 1,682 were suicides, 14,276 were caused by wounds or accidents. Snake bites and wild beasts were responsible for 4,547 and rabies for 309.

Deaths from several minor causes in the province.
(Statement VI).

34. In 1937, 3,897 deaths were due to injuries. Of these 153 deaths were due to suicides, 3,386 to wounds or accidents, 250 to snake bites and wild beasts and 108 to rabies.

Deaths from several minor causes in towns. (Statement VI-B).

35. During the year under review the total number of deaths recorded under the head injuries was 16,917. Of these 1,529 were suicides. Wound or accidents accounted for 10,890, snake and wild beasts for 4,297 and rabies for 201.

Deaths from several minor causes in rural areas. (Statement VI-A).

(Further details will be found in Statement VI.)

All other causes

36. The total number of deaths recorded under this head in the province during the year under review aggregated 126,595, the death-rate being 2.61 as compared with 133,124 and 2.75, respectively, in the preceding year.

Deaths and death-rates under the heading "All other causes." (Statement VI).

37. In 1937 deaths from "all other causes" in towns numbered 45,669, yielding a death-rate of 8.41 against 44,826 and 8.24, respectively, in 1936.

Deaths and death-rates under the heading "All other causes" in towns. (Statement VI-B).

38. Altogether 80,926 deaths were recorded during the year under report in rural areas under this head against 88,298 in the preceding year. The death-rates for the two years were 1.88 and 2.05, respectively.

Deaths and death-rates under the heading "All other causes" in rural areas. (Statement VI-A).

39. During 1937, deaths from this cause in the province numbered 2,078 and in towns and rural areas 1,557 and 521 respectively, as compared with 2,389, 1,809 and 580, respectively, in 1936.

Deaths from child-birth [Statement VI-(a).]

Year	Number of villages visited	Patients treated	Inoculations	
			Anti-plague	Anti-cholera
1937	2,078	1,557	47,147	37,143
1936	2,389	1,809	41,141	30,714
1935	2,580	1,828	31,203	30,301

CHAPTER IV

EPIDEMIOLOGY

Rai Bahadur Dr. A. C. Banerjea, M.B., DR. P. H., Assistant Director of Public Health (Malariology), United Provinces, Staff. held the charge of this branch throughout the year in addition to his other duties.

The staff consisted of 45 medical officers of the United Provinces Subordinate Public Health Service, Grade II. Of this, 33 officers held charge of travelling dispensaries and twelve were engaged on reserve duty. Fifteen to 20 temporary medical officers were also engaged during the year on epidemic duty in various districts of the province, their services being retained for periods of varying duration according to the epidemiological needs. One storekeeper was also attached to epidemic stores at Lucknow.

2. There was no change in the number and constitution of travelling dispensaries. Out of 33 travelling dispensaries, 26 were provincial, 4 district boards, 1 Forest (Kheri) and two belonged to Tarai and Bhabar Government Estates. Each of the four district boards, viz. Pilibhit, Gorakhpur, Cawnpore and Muttra, contributed Rs.1,000 towards the maintenance of their travelling dispensary. The Forest and Tarai and Bhabar Estates travelling dispensaries are entirely run at the cost of the departments concerned.

In addition to above one reserve travelling dispensary was mobilized at Ram Nagar (Naini Tal) for six months for supervision of sanitary arrangements of the pilgrim route and rendering medical aid to pilgrims to Badri Nath and Kedar Nath.

The activities of the district board travelling dispensaries were confined to their respective districts, while the Forest and Tarai and Bhabar Estates travelling dispensaries worked in their respective areas. The provincial public health travelling dispensaries were engaged in normal times in affording medical relief to the rural masses and in other public health works within the districts, while during epidemics they carried out preventive measures in the interior of the districts affected. Public confidence in these peripatetic dispensaries is gaining ground every year as is amply borne out by the amount of their work. The total number of patients treated and the number of inoculations performed by these units during the last three years were as follows :

Year	Number of villages visited	Patients treated	Inoculations	
			Anti-plague	Anti-cholera
1935	3,959	154,847	47,147	38,145
1936	4,145	159,490	41,784	38,714
1937	6,670	228,886	51,889	39,202

The medical officers in charge travelling dispensaries also helped in rural uplift work and carried out sanitary improvements in a number of villages. They also trained a large number of village aiders in village aid scheme and in anti-epidemic work and distributed literature on various epidemic diseases.

3. During the year 1937, 82 new village medicine chests were supplied and 3,122 chests which were previously supplied to 45 plains districts were replenished. Village medicine chests. These chests have been popular with the villagers in being of considerable help in providing relief for minor ailments in rural areas. 360 lbs. of quinine tablets were also distributed in rural development villages of 36 malarious districts during the autumn malaria season.

CHAPTER V

FAIRS AND FESTIVALS

The medical and sanitary arrangements of the Dikhauti Fairs at Hardwar and Rikhikesh, Piran Kaliar Fair, Roorkee, Garhmukteshar and Nauchandi Fairs in Meerut district, the Magh Mela, Allahabad, the Dadri Fair, Ballia, the Ram Naumi and Sawan Jhula Fairs at Ajodhia, the Nauratra fair Bindhachal (district Mirzapur) and the Dewa Fair, Bara Banki, were organized and supervised by the range assistant directors of public health. The arrangements of the smaller fairs were organized and supervised by the medical officers of health and their staff. All the anti-epidemic measures such as, cleaning of the mela areas before and after the fairs, cleaning and disinfection of roadside wells, strict vigilance over cases of ailments, medical inspection of incoming and outgoing pilgrims during important fairs, enforcement of temporary regulations under the Epidemic Diseases Act, etc. etc. were carried out. Wide publicity to hygiene principles and measures for prevention of epidemics and other diseases was given by the staff of the Hygiene Publicity Bureau and local departmental staff. All the fairs and congregations passed off without the occurrence of any serious outbreak of any infectious disease in an epidemic form. Only two imported cases of small-pox (both cured) were detected during the Dikhauti Fair, Hardwar, two cases of cholera with one death occurred during the Debi Patan Fair, Gonda, two suspected cases of cholera with one death during the Kartiki Fair, Ajodhia, one at Lakarmandi (Gonda) and four cases of cholera (all cured) during the Dadri Fair, Ballia.

CHAPTER VI

URBAN SANITATION (INCLUDING NOTIFIED AREAS) AND MUNICIPAL WATER SUPPLIES

1. The number of whole-time municipal medical officers of health at the end of the year 1937 was the same as in 1936, viz., 34. The continued financial stringency prevented an increase in their number. The number of smaller municipal towns and notified areas, of which district medical officers of health were *ex officio* medical officers of health, was also the same as in 1936, viz., 29 and 40, respectively.

2. Reports of sweepers having stopped work on account of certain grievances were received from the cities of Meerut and Cawnpore but the situation was soon brought under control by the local authorities by bringing about an expeditious settlement.

In certain towns sweepers hold the licence for removal of night soil and rubbish which are their property. This is a most undesirable system as owing to late and unsatisfactory removal of offensive matter from the towns and its insanitary disposal, there is a danger of the outbreak of diarrhoea and other diseases. The standard sanitary method to dispose of the night-soil is by means of trenching where disposal by Sewerage System is out of the question. The municipal boards concerned should acquire suitable plots of lands for the purpose of trenching night-soil. The sanitary appliances in several towns are not according to the standards laid down by the department and this is pointed out to local authorities in the inspection reports of the officers of the department.

The general sanitation of the Firozabad municipality was a grave menace to the health of the inhabitants and resulted in a serious outbreak of cholera during the year. A grant of Rs.1,659 was given to the municipal Board for anti-cholera measures and arrangements were made for the removal of heaps of rubbish in the town. The necessity of employing an additional sanitary inspector has been pointed out to the Municipal Board.

3. Housing arrangements in large towns and cities are generally satisfactory and a large percentage of houses are double-storied and good sanitary buildings. In old cities the general layout of streets and buildings is in most cases far from satisfactory. A narrow and dark lane is a common feature. Old buildings though large and grand are in most cases not provided with proper means of ventilation and drainage. Latrines are cleansed by scavenging and in some cases latrines on the first or second floors are provided with masonry vents for the passage of night-soil which falls to the ground floor and is collected by the sweeper. Such latrines are being discouraged. Improvements in the general design of houses have made vast progress and most of the modern houses are now built with due regard to ventilation, light and sanitation. In towns equipped with underground drainage system and water-supply many of the better class Indian houses are connected with sewers and water-supply. The Improvement Trusts in Cawnpore, Lucknow and Allahabad have carried out great improvements. Some of the most congested portions of the cities have been acquired, old houses demolished, good wide roads laid and the space along the roads divided into plots which were auctioned to the public for building purposes. Type designs of various grades with

due regard to the Indian habits and mode of living have been prepared having similar frontage and a condition made with the purchasers of those plots to build their houses accordingly. To remove the congestion extensions to the towns have also been made and open fields round the towns treated in a similar manner.

4. The Infectious Diseases Hospital, Gorakhpur, commenced to function during the year. The project of the Infectious Diseases Hospitals, Allahabad, has been approved by the Board of Public Health and registered as deposit

work of 1938-39. The construction of the hospital is awaiting a settlement as regards local contributions available for the work.

5. Statements showing the results of the chemical and bacteriological analyses of water-supplies in the United Provinces for the years 1936-37 and 1937-38 were, as usual, prepared at the Provincial Hygiene Institute and submitted to the Board of Public Health, United Provinces. In the appended table are given particulars in regard to the daily consumption of water, analytical results, etc., of the existing water-supplies during 1936-37 and 1937-38.

Statement showing the results of the chemical and bacteriological analysis of water-supplies in the United Provinces for the year 1936-37 and 1937-38

* Water supplied for drain flushing and road watering, etc. No house connexions made.

† New plant started from May, 1937.

(b) There are only four public standposts and no private house connexions.

(a) and (c) Water-supply has not been introduced in this town.

As usual in nearly all the towns with piped water-supplies, water analysis was carried on by the medical officers of health in municipal laboratories. But for control purposes samples of water were also examined at the Provincial Hygiene Institute chemically and bacteriologically during the hot, rainy and cold seasons. The Assistant Director of Public Health, I Range, inspected the water-supplies of Muttra, Brindaban and Hardwar municipalities in connexion with the arrangements for the Kumbh Fairs to be held there in 1938.

The classification of the various water-supplies in the United Provinces according to the percentage of samples that came upto the standard during 1936-37 on the results of examinations carried out by municipal medical officers of health showed that more than 80 per cent. results came up to the standard in (1) Banbassa (chlorinated), (2) Fatehpur Sikri, (3) Kosi, (4) Agra (chlorinated), (5) Naini Tal (both chlorinated and unchlorinated supplies), (6) Meerut, (7) Muttra, (8) Hardwar (chlorinated and unchlorinated), (9) Cawnpore, (10) Mussoorie, (11) Benares (chlorinated), (12) Lucknow (chlorinated), (13) Debra Dun (chlorinated), and (14) Allahabad (chlorinated).

These towns showed similar results in 1937-38 with the exception of Naini Tal, and Cawnpore which reverted to class II.

Taking into consideration the seasonal analysis figures for control purposes carried out at the Provincial Hygiene Institute the results in respect of the water-supplies at Naini Tal, Muttra and Cawnpore were found to be bad during 1936-37 while those for Meerut alone were found unsatisfactory during 1937-38.

Group II showing more than 50 per cent. and less than 80 per cent. of results up to the standard consisted of (1) Aligarh, (2) Mirzapur, (3) Jaunpur (chlorinated), (4) Fyzabad, (5) Unao, (6) Jhansi (chlorinated), and (7) Bhowali. The standards for these towns were maintained during 1937-38 excepting in the case of Jaunpur and Bhowali which reverted to class III.

The water-works at Moradabad is a new installation which has been brought into operation during the year under report and according to analysis results it came under this group.

Judging from the results of seasonal analysis, the water-supplies of Aligarh, Mirzapur, Cawnpore and Jhansi showed very unsatisfactory results. Aligarh has continued to be unsatisfactory during the last three years.

During both years Group III showing less than 50 per cent. results up to standard comprised of (1) Haldwani, (2) Hathras, (3) Almora, (4) Brindaban, (5) Jhansi (unchlorinated) and (6) Gola Gokaran Nath.

6. Eleven samples of water from important Railway stations and pilgrim centres were examined bacteriologically at the commencement of and during the fairs and at the time of the prevalence of epidemic of cholera in the districts. Results of analysis carried out by the railway medical officers were as usual scrutinized at the Provincial Hygiene Institute and necessary recommendations to improve the water-supplies at these stations were made to the railway authorities.

CHAPTER VII

RURAL SANITATION

Owing to financial stringency the district health service could not be extended to any new district during 1937. The number of districts in which this service was in force was thus the same as in 1936, viz., 34. Appendix 'B' to this Report contains a summary of the more important of their activities.

2. This scheme continues. The sub-joined table will show the work done under the different heads in 1937 :

	1936	1937
1. Number of village aid dispensaries up to end of ..	4,598	5,012
2. Number of village aiders trained in Hygiene and First Aid.	40,761	62,264
3. Number of school teachers, co-operative workers, patwaris, constables and village chaukidars trained in Elementary Hygiene and First Aid and anti-epidemic work.	19,922	19,050
4. Number of wells made sanitary up to end of ..	7,814	9,171
5. Number of villages where all parts of the scheme are in force.	2,917	2,478
6. Number of villages where certain parts only of the scheme are in force.	6,244	6,028

3. Mention was made in the last year's report of the enquiry as to the adequacy of drinking water in the villages of the province. In the budget for the year 1937-38 the local Government provided a sum of Rs.35,000 for the improvement of wells and a sum of Rs.27,237 was placed at the disposal of eight district boards on the following conditions:

(i) the whole of the grant should be spent on a contributory basis, the contribution being from the district board or any private agency belonging to the rural areas, and being not less than one-fourth of the cost of the construction of the well. In the case of district boards, the contribution must be in cash; in the case of private agency it may be either in cash or in kind (including labour)—i. e., the villagers concerned who are to benefit by the construction of wells may provide material and or free labour for the construction of the well;

(ii) wells should not be constructed out of this grant in hamlets where they already exist or are being constructed out of the substantive allotment for rural development or from other sources;

(iii) the site of the wells and the number of wells to be constructed should be decided in consultation with the district rural development association, but not more than one well should be constructed in a village;

(iv) the work of construction should be supervised by the district boards' own staff and carried on under the advice of district medical officers of health in districts where there are such officers ;

(v) the district board should agree to maintain the wells constructed out of this grant in proper condition in future.

4. Diseases due to the pollution of soil and water are among the major health problems of rural areas. The use of proper latrines would very considerably reduce the

Village latrines.

incidence of such diseases but it is not easy to induce villagers to use latrines. Apart from the difficulty in altering the personal habits of the village population in this respect, the majority of them are precluded by caste and other restrictions from having anything to do with things connected with excremental matter. There are no sweepers in many villages and latrines, if constructed, cannot thus be cleaned. Apart from the age-long custom of resorting to the fields this is probably another reason why people who would use a latrine cannot do so. The type of latrine that should be recommended for villages has therefore to eliminate the need for sweepers. In the "trench pattern" latrines that have for many years been used in the United Provinces in temporary aggregations of population, the excrement has not to be carried away. All that is necessary is to cover the trench after use by earth heaped up near it, and to dig another trench and shift the screens. The use of this type of village latrines was first recommended by this Department in 1935. After two years' trial they were not found to suit village conditions, because the people were unwilling to cover up the used trenches or to touch or shift the screens from them. The trenches also got filled up in rains; the screens and partitions, which were made of straw, were sometimes blown away by winds or damaged by cattle.

In the circumstances the rural health staff have now been instructed to advise the construction of bored hole latrines, of which a large number have been constructed in the health unit in Partabgarh (U. P.), in South India and in other parts of the world. The cost of each such latrine is Rs.5. For an ordinary family one latrine should suffice for one to three years, depending upon the nature of the soil and the number of persons using it. These latrines, if properly made, should not breed flies or give offensive smell because of their depth. They require very little space and do not require the services of sweepers, since there is nothing to clean or take away. After the bore in use is nearly full, the latrine is required to be closed and another bore is used. After six months the material in the first bore under normal conditions should be reduced to innocuous poudrette which can be dug up and the material can be used as fertiliser. This large scale experiment is being watched carefully.

5. Conditions of rural housing are the same all over the province.

Rural housing.

The houses consist of mud huts with thatch roof and kachcha floor. There are no arrangements for drainage or ventilation. Cattle are kept inside the houses, as also manure. Attempt has been made to provide village houses with windows and ventilators and some success has been reached in the Health Unit area, Partabgarh, but the great objection to this is the fear of theft. However, the dissemination of knowledge concerning better housing and village planning is one of the duties of the rural health staff. In 1923 the Public Health Department prepared four types of village houses to

suit the means of the different types of men, and a large number of copies of these plans were supplied to zamindars, etc. Considerable improvements in housing conditions were carried out through the public health staff in four villages of the Rae Bareilly District by getting 66 houses built on sanitary pattern during 1937.

The provision of soakage-pits in village houses for the reception of house sullage has made sufficient headway but their upkeep is a problem. When they get choked up with mud, or the stones forming their base require re-laying, villagers are unwilling to undertake the duty themselves.

In the villages included in the rural development scheme much effort is being made to separate cattle sheds from dwellings and in almost all villages the people are advised to store their manure in pits outside the inhabited area to preserve their fertilising properties and also to improve environmental sanitation.

6. This scheme also continues, with the financial co-operation of the Rockefeller Foundation of the United States of America, the work being on the lines indicated in previous reports. The Foundation kindly extended financial support for the sixth year of this scheme, commencing 18th July, 1937.

A preliminary survey of the health conditions in the area comprised in the Unit was undertaken in 1932-33, at the commencement of this work. To judge the progress made during the period of four years, a re-survey was undertaken in 1937, which reveals remarkable progress in all directions. For instance, the number of windows and ventilators in village houses has increased by over 52 per cent. and that of parapet walls over drinking water wells by over five times. The number of soakage-pits, health societies and village dispensaries now is several times that existing at the time of the original survey. A fair proportion of cattle-sheds previously situated inside the dwelling houses have been separated, excavations have been filled up in large numbers and the vast majority of manure heaps have been removed from within the habitation. New features introduced since the inception of the health unit are 102 bored-hole latrines for individual houses. Each village in the Unit now has at least one improved type of well, a standard manure-pit, an approved type of soakage-pit, an improved cattle byre and some inexpensive windows and ventilators to serve as models.

7. The essential condition for the success of measures designed to improve rural sanitation is the willing assistance of the people, because no health organization by itself can do all that is necessary in this respect, and to continue it for all time. Experience has also shown that if the villager contributes even a little, he will feel a personal interest in, and responsibility for making the work a success. How to secure such co-operation has been a problem. A method which is being practised in the health unit area in Partabgarh with success is to arrange through a member of the Health Unit staff, usually the sanitary inspector for each village to form itself into a small health organization, called a "Health League" and by means of this league to take charge of and complete a series of village health problems. The membership of the League is often the entire population of the village but it usually has a small executive committee. It is

the duty of the health unit staff to provide the League with a list of the health problems of the area in due order of their importance. The League are advised not to carry on more than one activity at one time, and to complete each activity before attempting another. In this way the too common custom of starting too many activities at the same time and of completing none is avoided.

The method is recommended to rural health workers in other parts of the province.

8. The scheme for the appointment of resident Public Health officials for groups of villages, of which mention was made in previous reports, was continued by the district board of Gorakhpur from their own funds. In the budget for the year 1938-39 Government have provided for a recurring grant of Rs.3,600 to the Board for this scheme.

9. In the field of rural sanitary improvements, the year was one of intense activity, the local Government's programme for rural development having given it considerable impetus. The programme of health work in the areas selected for rural development consists of the supply of medicine chests, construction of manure-pits, soakage-pits, bathing platforms or sheds, latrines, improvement of cattle sheds, opening of ventilators in houses, training of indigenous dais, improvement in the recording of vital statistics and the formation of village sanitary committees.

The nature of activities required to bring about satisfactory conditions of rural hygiene are so many, and all of which appear so essential, that the attempt is sometimes made to undertake too much in the beginning. Experience has shown that this leads to confusion in the minds of villagers which, owing to the meagre contact that is possible between the field workers and villagers owing to the small staff employed, it is not possible to dispel. In the programme for village sanitation, therefore, emphasis is being laid for undertaking only a few of the most important items like drinking water-supply, soil and water pollution and environmental hygiene.

10. During the year 1937-38 the Board of Public Health gave grants aggregating Rs. 50,158 for small public health works in rural areas, against Rs.53,79½ in 1936-37. Up to 1936, the grant to each district was given in proportion to the demands received from it. In order to secure a more equitable distribution of the funds it was decided in 1937 to distribute the grant in proportion to the population and the number of villages in each division.

11. During the year 1936-37 the total income of district boards in the United Provinces from all sources including all Government grants was Rs.1,96,65,991, and excluding Government grants it was Rs.1,14,52,987. The total expenditure by district boards on Public Health was Rs.6,13,070, distributed as follows :

	Rs.
(i) Vaccination	3,10,300
(ii) Public Health establishment other than vaccination ..	1,93,217
(iii) Epidemics	40,315
(iv) All other public health purposes	68,969

Receipts of district boards from Government, the Board of Public Health and other sources specially earmarked for public health purposes were Rs.2,44,213. Out of their own revenue of Rs.1,14,52,987, the boards thus spent Rs.3,68,857, or 3.2 per cent. on public health. In 1935-36 the percentage of expenditure on this head was 3.7 and in 1934-35 it was 3.5.

CHAPTER VIII

MALARIA

The office of the Assistant Director of Public Health (Malariology), United Provinces, was held by Rai Bahadur Dr. A. C. Banerjea, throughout the year.

Dr. R. S. Srivastava continued as Senior Assistant Malaria Officer, United Provinces, up to 11th November, 1937, and thereafter as Junior Assistant Malaria Officer. Dr. Diwan Chand continued as Junior Assistant Malaria Officer up to 11th November, 1937. On return from leave Dr. P. N. Chatterjee resumed charge as Senior Assistant Malaria Officer from 12th November, 1937, and continued in that capacity to the close of the year.

In 1937, 693,610 deaths were reported under malaria as against 751,712 deaths in 1936 and the death rates for the two years were 14.33 and 15.53 respectively. The recorded death rates from all causes for these two years were 21.38 and 22.61, respectively. The recorded malaria deaths thus constitute about 67 per cent. of the deaths registered from all causes.

The system of reporting of deaths is defective, particularly in the rural areas. The prevailing tendency is to register most of the fever cases under the head 'malaria'. It is, therefore, very difficult to ascertain correctly the mortality from malaria in the province. Although there is no doubt that mortality from this cause is considerable yet the exact proportion of mortality under this head is indeterminable under the present conditions. A special feature of malaria is that it lowers the vitality of the sufferers rendering them susceptible to attacks from other diseases with the result that it causes a large proportion of indirect sickness and mortality.

The determination of case incidence of malaria particularly in rural areas is more difficult still. Due to paucity of hospitals, a large proportion of the population either goes untreated or has to depend on indigenous systems of medicine. According to the figures supplied by the Inspector General of Civil Hospitals, United Provinces, (1,224,684) patients were treated for malaria in 1937, in all the dispensaries of the province as compared with 1,497,346 patients in 1936, showing a decrease of 272,662 patients in 1937. The year 1937 thus registered a decline in both the recorded mortality under malaria and available sickness incidence as compared to 1936. It is to be noted that in the latter year there was an unusually heavy rainfall and consequent flooding of large rivers leading to out-breaks of malaria in epidemic form in 29 districts of the province. Relative to 1936, the number of such epidemic outbreaks of malaria in 1937 were very few. Although the figures given above with regard to deaths and sickness from malaria cannot be considered to be correct, this disease is certainly the greatest public health and economic problem of the country.

Summary of the Principal Activities of the Malaria Branch

I.—*Anti-malarial measures at Banbassa Headworks of the Sarda Canal*—Periodical visits were paid to Banbassa to supervise the anti-

malarial measures. Blood slides from fever cases were received from time to time from the Sarda Canal dispensary at Banbassa and the results of their examination were communicated to the Canal authorities for administering proper treatment to the sufferers.

The periodical blood examinations and the fortnightly sick returns from Banbassa hospital have served as an index of the prevailing malarial conditions and as an indication of the periods when adequate preventive measures were actually required.

The usual blanket treatment was administered to the whole population of Banbassa in the beginning of the spring and autumn malaria seasons with a view to reduce the malarial relapses and as anti-gametocyte measure.

II. Anti-malarial works in the Tarai and Bhabar Government Estates—The scheme of treatment with quinine and plasmoquine continued to be in operation in 62 villages of the Bazpur Circle and cinchona plasmoquine scheme in six villages round about Gadarpur. This has resulted in a considerable decrease in the sick rate and average number of sick days, *vide* table below :

	Quinine-plasmoquine scheme		Cinchona-plasmoquine scheme	
	In areas under scheme	In control areas	In areas under scheme	In control areas
Average sick rate	8.26	40.63	4.51	45.03
Average number of sick days ..	3.08	5.67	3.32	5.72

In addition to the treatment scheme, anti-larval measures were carried out in 46 villages. Five hundred and three breeding grounds were Paris-greened, 19 pits and six tanks were filled up and 19 drains measuring 3,543 yards were constructed.

Quinine and cinchona in pill form were also distributed through 297 village aid dispensaries besides hospitals and other agencies. It is proposed to extend the treatment scheme with quinine (and cinchona) plasmoquine to some more villages in the Tarai area.

Three-hundred and twenty-three blood slides from fever cases in the Tarai villages were examined and reports submitted.

The total quantity of quinine, cinchona and plasmoquine tablets distributed free in the Tarai and Bhabar Estates villages and the number

of persons treated under the quinine and plasmoquine schemes were as follows :

Quinine-plasmoquine scheme					Cinchona-plasmoquine scheme				
Quinine tablets		Plasmoquine tablets		Number of persons treated	Cinchona tablets		Plasmoquine tablets		Number of persons treated
5 gr.	3 gr.	1/6 gr.	1/12 gr.		5 gr.	3 gr.	1/6 gr.	1/12 gr.	
64,752	18,482	34,487	1,896	6,776	6,432	624	3,216	330	599

III—Training in the principles of malaria control—(1) A regular course of instructions in malariology including field work was given to 7 candidates of L. P. H. class.

(2) A brief refresher course on the same subject was also given to ten officers of the Provincial Subordinate Public Health Service.

IV—Malaria investigations—(a) Reports on the existing malarial conditions together with necessary recommendations were submitted about the Hamirpur town and the Benares municipality.

(b) An investigation into the cause of recorded high mortality from malaria in the Budaun municipality was carried out and report submitted.

(c) Preliminary malaria survey of some villages in the Etawah district was done and report submitted.

(d) A preliminary investigation on the outbreak of malaria in epidemic form in the Tilhar town in the Shahjahanpur district was carried out and a report with necessary recommendations submitted. Tilhar was again visited in November and a final report on the situation is being drawn up.

(e) Malaria investigation in the District Jail, Hardoi, was carried out and its report is under preparation.

(f) Two enquiries into the causes of mosquito nuisance were conducted in connexion with the Irrigation Secretariat Colony, Lucknow, and a report submitted.

(g) A study of the malarial conditions in connexion with the selection of areas for the anti-malarial schemes to be carried out out of the grant from the Indian Research Fund Association and contribution from the local Government was done and the following areas were visited :

(1) Selected areas in the Tarai and Bhabar Estates in the Naini Tal district.

(2) Nautanwa area in the Gorakhpur district.

(3) Selected villages in Hardoi and Unao districts.

(4) Khurja municipality.

(5) Kosi notified area and Brindaban municipality in the Muttra district.

(h) Investigations relating to excessive mortality from malaria were carried out in municipalities and districts through the agency of medical officers of health and district medical officers of health of districts with district health schemes with a view to improve reporting under malaria which is at present greatly exaggerated. As a result of these investigations it was found that the percentage of error varies from 0 to 92 per cent.

V—Control of malaria epidemics—Free distribution of quinine was carried out in the districts of Gorakhpur, Saharanpur, Sultanpur, Aligarh, Bara Banki, Pilibhit, Hamirpur, Bareilly, Bahraich, Gonda, Basti, Mirzapur, Sitapur, Shahjahanpur and Kheri in connexion with epidemic outbreaks or due to floods.

According to reports received 471lbs. of quinine tablets were distributed free and 182,174 patients were treated. This free distribution of quinine tablets considerably helped the cultivators in timely harvesting of *kharif* and sowing of *rabi* crops—an opinion borne out by almost unanimous reports of the district magistrates.

VI—Investigation in the Sarda Canal areas—This investigation was continued during the year. With a view to study the effects of water-logging in the Sarda Canal areas and allied tracts, selected villages in the districts of Rae Bareilly, Bara Banki, Sitapur, Kheri, Shahjahanpur and Pilibhit were visited.

The areas situated between the Khanaut river and Hardoi branch of the Sarda Canal in the Pilibhit and Shahjahanpur districts were again found to be highly malarious. The chief cause of this is heavy seepage from the canal resulting in the formation of breeding grounds of dangerous malaria carrying anopheline mosquitoes.

The pooled spleen rate of the villages under canal irrigation was found to be 19.3 per cent. as compared to 4.7 per cent. in non-irrigated villages. As in previous years the districts of Shahjahanpur, Hardoi and Pilibhit were the worst affected.

VII—Spleen census by mortuary circles in districts with health scheme—This was carried out as usual during the spring and the autumn malarial seasons.

The districts of Saharanpur, Pilibhit, Naini Tal, Hardoi, Muzaffarnagar and Sitapur reported the highest spleen rate during the autumn season and the districts of Saharanpur, Hardoi, Naini Tal, Sitapur, Pilibhit and Muzaffarnagar during the spring season.

VIII—Anti-malarial Works through the agency of Boy Scouts and Junior Red Cross groups—The scheme was in force in 37 municipalities and 24 districts in a total of 237 centres. The response from some groups has been encouraging. These groups carry out minor anti-malarial measures such as oiling, draining and filling of pits and ditches and distribution of notices in order to bring home to the public the insanitary practices conducive to malaria.

Samples of mosquitoes and larvae from these groups were received and examined.

IX—Anti-malarial bye-laws passed by the local bodies—During the year the Budaun Municipality adopted the anti-malarial bye-laws, and the total number of local bodies including cantonments having such bye-laws is now 34.

X—Special anti-malarial schemes—(i) (a) Rural mass treatment scheme with cinchona and plasmoquine.

This was continued in selected villages in the Lucknow, Hardoi and Unao districts. The necessary cinchona and plasmoquine tablets were supplied free from the reserve stock. The relapses of malaria among persons treated were found to be less.

(b) and (c) Kosi notified area and the Brindaban municipality—Two courses of 'Blanket' treatment were given to scholars in the Kosi and Brindaban primary schools. This treatment has been useful in reducing the number of sick days amongst scholars.

(ii) Scheme of distribution of cinchona through local agencies tended to afford facilities of treatment to villagers in malarious areas where there are limited number of dispensaries.

(a) Shahjahanpur Rural Uplift Association. During the year 4,878 persons were treated and 10 lb. of quinine were distributed in rural areas under this Association.

(b) Taraqqi Sabha, Pilibhit—15 pounds of cinchona and quinine were distributed by this agency and 1,822 persons were treated.

(c) Unao Panchayat village treatment scheme with cinchona and plasmoquine—This was in force in six villages.

(iii) Rural Sale scheme of cinchona products subsidised by local agencies. This scheme was operative in some villages in the Gorakhpur district, but did not make much headway.

(iv) Partabgarh Health Unit Scheme—This scheme of treatment with cinchona and plasmoquine was continued in five villages of the Partabgarh Health Unit.

VI—Rural Development Scheme—360 pounds of quinine tablets were supplied to 35 districts under the Rural Development scheme for intensive malaria treatment in the malarious villages. Besides, 689½ lbs. of quinine and 34½ lbs. of cinchona tablets were supplied for the replenishment of village medicine chests.

XI—Investigations in jails and municipalities—Blood slides of convicts in the Bareilly Central, District and Juvenile jails were received and reports submitted.

The investigations in Lucknow municipality were continued. Periodical visits were made to supervise the anti-malarial work and information with regard to chief carrier anophelines and their breeding was supplied to the medical officer of health from time to time with recommendations for modification of measures as and when necessary.

Blood slides from malaria cases from different dispensaries in the Lucknow municipality were regularly examined during the malaria seasons for the presence of the malarial parasites.

XII—Government Quinine Tablet Manufacturing Factory—The factory continued to manufacture the quinine and cinchona tablets of standard weight and quality to meet the demands from the various Government departments, viz., Public Health, Medical, Prisons, Agriculture, Irrigation, Education and other local bodies. The factory affected

sales worth Rs.67,867 during the year 1937 against Rs.99,677 in the preceding year as per details appended :

..				Quinine tablets	Cinchona tablets	Sale price realized including packing, etc.
				lbs. oz. dr.	lbs. oz. dr.	Rs. a. p.
Sold to Post Offices	590 0 0	..	14,750 0 0
Sold to others	1,677 4 4	1,452 12 0	53,117 0 0
Total				2,267 4 4	1,452 12 0	67,867 0 0

115 lbs. 4 oz. of quinine powder from the Director of Public Health's reserve stock were converted into tablets and a sum of Rs.461 were realized as conversion charges in addition to the above sum of Rs.67,867.

(ii) *Quinine reserve*—281 lbs. 4 oz. of quinine and 173 lbs. of cinchona tablets were issued from the reserve stock to the districts of Shahjahanpur Pilibhit, Cawnpore, Gorakhpur, Basti, Gonda, Bahraich and Bara Banki for replenishment of the district reserve stock.

(iii) *Government of India's quinine*—1,643 lbs. 9 oz. of the Government of India's quinine powder were converted into tablets and distributed free of charge in flooded districts.

XIII—According to the report of the Inspector General of Civil Hospitals, United Provinces, 1,514 lb. 13 oz. 6 dr. of quinine and 1,795 lbs. 11 oz. 2 dr. of cinchona were consumed during 1937 as compared with 1,962 lb. 4 oz. of quinine and 2,104 lbs. 7 dr. of cinchona in 1936. This works to an average of 18.92 grs. per patient in 1937 against minimum of 60 grs. required for each paroxysm of malaria.

The enclosed table represents the consumption of quinine and cinchona per head of population during the year 1937. The table is based on the amounts of quinine and cinchona distributed by all known sources (Medical, Jails, Health, Local bodies and other departments) but does not include the private purchases from chemists and other stores by individuals.

Statement showing the consumption of quinine and cinchona alkaloid per head of population in the districts of United Provinces during 1937

(Through all sources)

Serial number	Name of district	Consumption of quinine and cinchona alkaloid per head of population

CHAPTER IX

MATERNITY AND CHILD WELFARE

Dr. (Mrs.) T. S. Iyer, M.R.C.S., L.R.C.P., B.S., held charge of this activity and worked under the direct control of the Director of Public Health, United Provinces, who is the Vice-Chairman of the Indian Red Cross Society, United Provinces Branch.

Lady Haig continued to hold the office of the Chairman of the provincial maternity and child welfare committee and her keenness and interest gave considerable stimulus to these activities for the welfare of the mothers and children. This committee, as usual, associated in giving advice and guidance in the work under the control of the executive committee of the United Provinces Branch of the Indian Red Cross Society.

The local committees for red cross work at district headquarters of which the Collector of the district is usually the President and the medical officer of health or the civil surgeon the Honorary Secretary also assisted in child welfare work in these provinces and with their co-operation and help new centres were opened by raising local subscriptions. The municipal boards do not as a rule organize separate schemes for maternity and child welfare work. With a view to secure their active co-operation the Dufferin and Mission hospital authorities were also made active members of the local committees in some places to supervise maternity and child welfare work.

2. Thirty-six new maternity centres were opened during the year, most of them from the silver jubilee fund. The Maternity and Child-Welfare Centres. total number of centres both maternity and child-welfare as well as maternity only at the end of the year was 293 (147 rural and 146 urban) and all of these were run by the red cross. The Cotton Mills, Cawnpore and Dayal Bagh, Agra, also maintained one centre each as in the previous years.

3. The local Government continued the grant of Rs.1,22,600 towards the maintenance of maternity centres and the Finance. Central Council of the Victoria Memorial Scholarship Fund, Delhi, contributed Rs.2,800 for the improvement of indigenous dais. The executive committee of the red cross society also gave a grant of Rs.24,599. In addition to the above a sum of Rs.2,095 was realized under miscellaneous receipts which includes the fees for the maternity services rendered. The total expenditure during the year under report amounted to Rs.1,42,679. In addition to this a sum of Rs.1,12,039 was spent on maternity and child welfare work by local branches from local subscriptions, etc.

4. The number of medical women employed on preventive work in municipalities and other local bodies (red cross) Personnel. was 19 (3 M.B., B.S., 6 L.M.P. and 10 certified S. A. S.) while that of the health visitors was 22. Of these one medical woman (M.B., B.S.) and two health visitors worked in the Provincial Training Centre, Lucknow and one medical woman (L.M.P.) and four health visitors worked in the health unit, Partabgarh.

The number of assistant midwives employed was 328 against 303 in the previous year. A table showing the particulars of maternity and

child welfare centres, medical women, health visitors and trained midwives employed in this province forms appendix C of this report.

5. There is no red cross maternity hospital in these Provinces. The director of maternity and child welfare who is a Maternity service. touring officer inspects all maternity and child welfare centres. During the year under report she inspected the maternity and child welfare work both in rural and urban areas of 21 districts. During her inspections both in the centres and in people's homes she gave necessary instructions to the local workers in regard to organization and direction of maternity and child welfare work.

Clinics were held at the maternity and child welfare centres. The staff paid ante-natal and post-natal visits, trained indigenous dais, organized baby shows and gave magic lantern demonstrations and lectures in exhibition, fairs, etc.

The total number of cases conducted by the staff with or without indigenous dais during the year under report was 45,533 while that of the cases not attended to by Red Cross workers in the same area was 1,18,030. The deaths reported amongst children under one year of age in the former case were 3,345 and in the latter 26,890 yielding a ratio of infantile mortality per mille of 73.46 and 227.82 respectively as compared with 55.97 and 254.06 in the preceding year. The maternal mortality among the cases conducted with and without the dais was 2.85 per mille against 6.86 in all unattended cases and the average maternal mortality in United Provinces was 1.18. Reports of tetanus cases were investigated by the municipal medical officers of health and by the medical women and health visitors where employed. Mortality of children between 1—5 years was 36.09 per 1,000 of population.

6. The training of probationer assistant midwives as usual was carried out at the Provincial Training Centre, Lucknow, and the Dufferin and Queen Mary Hospitals, Lucknow. 32 probationers passed during March and September examinations and were awarded a certificate by the United Provinces State Medical Faculty.

Facility for Midwifery training also existed in the Cawnpore Maternity and Child Welfare Centre, in the Dufferin and in Mission hospitals; the latter two institutions trained these workers for their own needs only.

A serious effort was made to train the indigenous dais throughout the province, especially in 25 Maternity and Child Welfare Centres, where Medical Women or Health Visitors were employed and in the Health Unit, Partabgarh. A few dais were also trained by the staff employed under the Rural Development Scheme.

7. The Registration Act for Health Visitors, Nurses and Midwives has been in force since 1st January, 1937. Several municipalities and notified areas of the province have also framed bye-laws preventing practice by unlicensed midwives and dais with the result that the position in regard to clean midwifery in the province is steadily improving.

8. The more educated classes are now availing themselves in increasing numbers of the services of the trained workers and are also persuading their servants and dependants to do the same. The result of this is that about 29.75 per cent. of the total births were conducted by the Red Cross Maternity Staff.

The desired expansion of the Maternity and Child Welfare work in the rural areas of the province has not progressed for want of funds. This difficulty could be overcome if the local bodies marked certain appreciable percentage of their income each year for this work.

CHAPTER X

REPORT ON SCHOOL HYGIENE AND MEDICAL INSPECTION OF SCHOOL CHILDREN FOR THE YEAR 1937-38

General remarks THE report on the working of medical inspection of scholars covers the period from July, 1937 to March 1938. It particularly deals with the working of 13 whole-time school health officers, while in general it deals with the inspection of scholars by all the district and municipal medical officers of health. The continuity of the system and co-ordination of work was maintained under the supervision and direction of the Assistant Director of Public Health, Hygiene Publicity Bureau, Khan Bahadur Dr. A. Hamid, D.P.H., up to 9th December, 1937, and thereafter under Dr. Bhagwant Gopal, D.P.H., Assistant Hygiene Publicity Officer (Senior). This report specially deals with further investigations on nutrition done by school health officers.

Statistics of medical examination. The detailed examination of boys was conducted in 154 out of 155 anglo-vernacular schools in the larger municipalities where whole-time school health officers are employed. The number of boys whose medical history sheets were filled was about 17,600 out of 54,300 on roll, the enrolment having increased by about 300 since last year. Out of 460 primary and vernacular schools, 187 were visited. Ordinary examination, consisting of noting main defects, of more than 12,200 boys out of about 47,200 enrolled was done. About 1,900 boys were examined as "special cases" and over 7,400 boys were re-examined.

These examinations were apart from the large number of parade inspections performed in schools for ordinary inspections.

The reports submitted by the 18 medical officers of health who are *ex officio* school health officers for the schools in their municipalities show that out of a total number of 50 schools for detailed examination they visited 47 and out of 17,100 boys enrolled they examined about 4,800. These officers also inspected 139 schools out of 233 schools for ordinary examination and examined about 13,500 boys out of about 29,000 on roll. Similarly 25 district medical officers of health, who are *ex officio* school health officers for certain municipalities conducted detailed inspection in 95 schools out of 111 schools and examined more than 6,800 boys out of over 18,000 on roll, i.e. 38 per cent. The number of schools in their areas for ordinary examination was more than 7,800 out of which they inspected over 1,900 schools and examined over 120,000 out of a total enrolment of about 512,000 boys, i.e. about 22.5 per cent.

Significance of statistics—The statistics of defects mentioned below give an indication in regard to predominance of certain diseases. It is to be noted that the total for all main defects comes to 60 per cent. for urban areas and 34 per cent. for rural areas as compared with 71 per cent. and 38 per cent. of the last year, assuming that each boy had one defect.

It has also been calculated roughly that 34 per cent. of all the boys examined have one defect, 13 per cent. have two defects and 7.5 per cent. have more than two in urban areas so that there were not less than

54.5 per cent. defectives to share all the defects. These figures for rural areas are (1) 12.9 per cent., (2) 3.8 per cent. (3) 1.7 per cent. giving 18.4 per cent. defectives to share all the defects.

Statistics of defects

Poor nutrition—In the larger urban areas this defect was found in 12 per cent. against 13.9 per cent. in 1932. This percentage does not seem to vary much in rural areas being 18.3 per cent. against 19.19 per cent. and 20 per cent. in 1931-32 and 1932-33 respectively.

The incidence of the largest number of ill-nourished children has been in the age group of 6 to 11 years. It is in all cases due to faulty nutrition.

Defect in teeth—There were 12.7 per cent. of scholars with defect in teeth (caries) in urban areas and 8.7 per cent. in rural areas. Pyorrhoea was found in 6 per cent. in urban areas specially in higher age group and it was 1.4 per cent. in rural areas.

The individual reports of officers go to show that more attention is now being paid towards oral hygiene.

Enlarged tonsils and adenoids—This was found in 12 per cent. of boys in urban areas and 4.1 per cent. in rural areas. The vast difference between the two figures goes to show the advantage of open air atmosphere from which a city or town scholar is deprived of. The figures for other gland enlargement for urban areas and rural areas are 8.3 per cent. and 1.36 per cent. respectively.

The above data are clear indication of overcrowding in towns and cities and point to the necessity of more open air exercises. Cases of tuberculosis of lungs and other organs have been from time to time detected here and there.

Anaemia—The chief prevailing causes of anaemia found is chronic malaria and enlarged spleen. The percentage of anaemia due to enlarged spleen in urban areas is 0.6 and in rural areas 4.4. The high figure in rural areas is due to the fact that malarial fever is more widely spread in the villages where its control is more difficult. The figure for anaemia from other causes is very small.

Skin diseases—The percentage of scholars suffering from skin diseases (mostly scabies) is 4.2 for urban areas and 3.9 for rural areas. The bad hygienic conditions in almost all the schools in rural areas and in some schools in urban areas and the defective seating arrangements for scholars are some of the chief factors causing these defects.

Diseases of eye-lids—(Conjunctivitis and trachoma.) In urban areas the percentage of diseases of the eye-lids is 8.3 while in rural areas it is 5.6. The chief causes of this disease in rural areas are the dirty habits of scholars and dirty environment both in the schools and at their houses. There is much to be done in this respect in the form of imparting education to the scholars, teachers and parents.

Defect in vision—The figure for defective vision for the period under report is 14 per cent. The central school dispensaries, where they exist, are doing a lot in this respect. The defects of vision are being corrected by supplying free glasses as far as possible. Benares has 9.28 per cent. defectives in vision as compared with 14.4 per cent. of last year. Though there is a decline in the figure yet it is still high as compared to those of the previous years. It is due to the prevalence of epidemic dropsy which though much less in severity now is still present in the city.

Unvaccinated children—The maximum of 14 per cent. unvaccinated children as recorded in 1935-36 has been reduced to 5·7 per cent. in urban areas and from 24 per cent. to 11 per cent. in rural areas for the period under report. This remarkable reduction in the number of unvaccinated children goes to the credit of the public health staff. The total number of vaccinations and re-vaccinations performed in places where there are school health officers is about 7,000 in schools in urban areas.

Mental deficiency—The School Health Officer, Benares, performed intelligence test on 200 boys between the ages of six and eleven years. He observed that only 25 per cent. of cases were found to have intelligence quotient of 80 and less. The results of his observations are as follows :

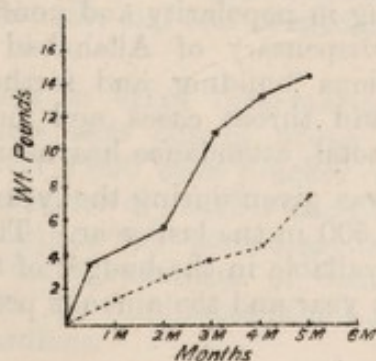

- (1) Imbecile 1 per cent. with intelligence quotient 50 and under.
- (2) Feeble-minded 13·5 per cent. with intelligence quotient 70 and under.
- (3) Border line deficiency 8 per cent. with intelligence quotient 80 and under.

He also observed that there is no co-relation between physical development and the intelligence quotient of boys.

The School Health Officer, Agra, investigated cases of mental deficiency among the scholars of municipal schools situated in the compulsory areas. He performed intelligence test on 12 boys reported to be mentally defective children and observed that there was one partially deaf and dumb, one totally deaf and partially dumb, two totally deaf and dumb, two with dull intelligence, having intelligence quotient 88 and 80, two feeble-minded with intelligence quotient 70 in each case, and four definitely feeble-minded having intelligence quotient between 60 and 68. These observations are however too few to arrive at any definite conclusion. No cases of mental deficiency were reported by other school health officers.

The scheme of free supply of milk to ill-nourished and poor children was in force in towns where the central school dispensaries existed and several school health officers have made particular inquiries and observations on the effect of milk. The total number of poor and ill-nourished boys fed on milk was 861.

The School Health Officer, Lucknow, reports that free supply of pasteurized milk was made to 205 students in 14 different institutions at the rate of $\frac{1}{2}$ lb. daily to each student during the school hours. The record of his observations is plotted below on a graph which shows a total gain of $12\frac{1}{2}$ lbs. per 100 lbs. of the body weight in students fed on milk as compared to 7 lbs. in the control. One of the schools in Lucknow realizing the importance of milk feeds to students has started its own dairy.

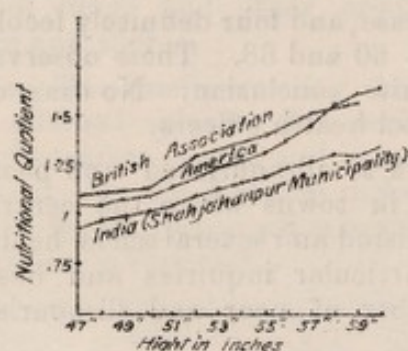

In a statement submitted along with his report the School Health Officer, Benares, observes that where pasteurized milk was supplied free to 275 students in different nine institutions with a total of 120,201 meals of $\frac{1}{4}$ seer to each student daily for an average of 20 to 60 days, 73.8 per cent. of the boys gained in weight. The average gain in weight varied from 1.4 lb. to 5.9 lb. The percentage of boys showing weight increase is as follows :

- 57.6 per cent. gained between 1 to 4 lbs.
- 31.6 per cent. gained between 5 to 8 lbs.
- 8.9 per cent. gained between 9 to 12 lbs.
- 1.9 per cent. gained above 12 lbs.

The Municipal Board, Benares, gave a grant of Rs.300 for free supply of milk which was utilized by the school health officer for supplying $\frac{1}{4}$ seer of milk daily throughout to 145 poor students out of those who were found to be suffering from the after-effects of epidemic dropsy.

In Agra and Cawnpore pasteurized milk was supplied free to 175 and 206 students, respectively, for short periods.

The School Health Officer, Shahjahanpur, has worked out a nutritional quotient to serve as a guide to the progress in the health of the school child. It is a figure arrived at by dividing the weight of the child by the height of the same individual. The nutritional quotient thus worked out for the boys in the Shahjahanpur municipality when compared with those of other countries, for example, America and England, is very much less as shown in the graphic record plotted below :

School clinics at Agra, Cawnpore, Allahabad, Benares and Lucknow continued to work. The total number of cases Remedial measures. treated at these clinics for the period under report was over 50,000 as compared with 43,000 of the last year. Maximum daily average attendance in a clinic was 61 as compared with 57 in 1936-37. The increasing attendance at the central school dispensaries speaks for itself that they are gaining in popularity and confidence of the students generally. The school dispensary of Allahabad was shifted to a more central place in a spacious building and further equipped with a dark room for eye, ear, nose and throat cases and provided with additional dental equipment. The total attendance has nearly been doubled.

Free supply of milk was given during the year under report to 861 boys as compared with 1,500 in the last year. The decrease is due to the fact that no funds were available in the budget of the school dispensaries for the first half of the year and the amount provided during the latter half was reduced.

Vision—Boys with defective vision received particular attention. They were examined by the school health officer or the honorary ophthalmic surgeon attending the clinic. 366 pairs of spectacles were supplied free to the poorer boys and 124 purchased glasses at their own cost.

Dental treatment—Four out of five dispensaries enjoyed the benefit of the services of honorary dentists. The school dispensary at Cawnpore with the help of the municipal board has been able to purchase a new dental chair which is a very useful addition. At the clinics cases of defective teeth and gums were suitably advised and attended to by the honorary dentists. In this respect the services of Khan Bahadur Dr. M. A. Shah, Dentist of the Balrampur Hospital in Lucknow, Dr. Verman in Agra and Dr. L. N. Mathur Dentist in Benares are to be specially mentioned who attended the clinics regularly. Dr. D. D. Watts, F.C.S., L.D.S., R.F.D.S. and Dr. S. S. Sharma, the Ophthalmic Surgeon, also rendered assistance at the clinic in Cawnpore. Our thanks are due to all these honorary workers who have worked at the clinics without prospects of any remuneration at a sacrifice of their practice which is commendable.

Lucknow clinic is equipped with a small clinical laboratory with a microscope. Thirty-seven different specimen of urine, stool, blood and sputum were examined. Seven minor surgical operations were also performed at this clinic.

In Cawnpore the central school dispensary continued to get the support of the Municipal Board and the scholars from the Municipal schools were in return treated by the school health officer at the dispensary just as the boys from the anglo-vernacular schools. About 30 per cent. of the total number of cases treated at this clinic were from the municipal primary schools.

The school health officers issued 541 emergent prescriptions.

The village aid medicine chests provided the best means of giving medical relief of first aid nature in rural areas. Most of the schools which have a Junior Red Cross group are keeping one such chest which is invariably under the charge of a teacher and equipped with useful remedies which are replenished from time to time from the stock of local health officers.

At Gorakhpur the Students Medical Service Association provided free glasses and dental treatment to 80 poor students out of its funds.

A students medical association was formed at Fyzabad with the Inspector of Schools, Fyzabad, as Chairman which collected about Rs.550 during the year under report as medical aid fee from the local anglo-vernacular and Government Model Schools. The amount was spent on purchasing glasses for the poor boys, employing the services of an ophthalmic surgeon and dentist and cost of medicines for the dark room examination.

The attendance of cases in other dispensaries recorded by 39 civil surgeons in 1937-38 show that out of about 62,500 school boys who attended for treatment over 2,000 were voucher cases in urban areas and out of about 84,000 the number of voucher cases was over 2,700 in rural areas. As one would expect the percentage for the municipal areas is decreasing on account of the introduction of central school dispensaries while it is increasing in the rural areas which is an evidence of greater interest taken by the guardians.

During the summer vacation and at the time of outbreak of epidemics and sometimes on other occasions, i.e. anti-rabic work, the whole-time school health officers assisted their medical officers of health under whom they were placed locally. They also officiated for them in short leave arrangements.

The whole-time school health officers performed 4,753 anti-cholera and 1,368 anti-plague inoculations.

The School Health Officer, Cawnpore, has compared the incidence of defective conditions in school boys of Cawnpore and Allahabad at different age groups and arrived at the conclusion that incidence of most of the conditions in Cawnpore is about twice that of Allahabad. It quite corroborates with the conditions of the environment and life in Cawnpore.

The School Health Officer, Shahjahanpur, has worked out average yearly increase of height and weight in school children, Hindus and Muhammadans separately. His observations are recorded in a chart below which shows that the average gain in height and weight is more in the Muhammadans than Hindus. The difference in increase may be accounted for by the different type of dietary of the two communities. Racial factor has also some effect on this.

The Education Department has included the teaching of hygiene and sanitation in the curriculum for training colleges, normal schools, high schools, anglo-vernacular and vernacular schools. In the schools one to two hours per week are being devoted for the teaching of this subject. The lectures are being given by the trained teachers in the schools, whereas in the training colleges and normal schools the school health officers are required to deliver special lectures to the teachers in infectious and general diseases.

Apart from the courses of study, prescribed in the curriculum, extra-curricular classes are also held for the certificates of the St. John Ambulance Courses in First Aid, Home Nursing, Home Hygiene and Mackenzie School Course in first aid and sanitation which is an elementary course for the boys and girls up to VIII standard. The Assistant Director of Public Health, Hygiene Publicity Bureau, is also the Honorary General Secretary of the United Provinces Provincial Centre of the St. John Ambulance Association. A large number of lectures in First Aid and Hygiene courses according to the programme of the St. John Ambulance Association was given by the school health officers in training colleges and in normal schools, also in patwari schools and to the physical training classes organized annually by the Education Department. A number of

these lectures were illustrated by magic lantern slides and cinema films of the Hygiene Publicity Bureau. The school health officers took an active part in organizing divisional and provincial ambulance competitions in conjunction with the officers of the Education Department. The annual provincial competitions were held at Benares this year. The number of examinations of candidates for first aid by the whole-time school health officers was 520 and the number of boys examined for the Mackenzie School Certificates by the school health officers was 5,343. 39 girl students were examined for Home Nursing.

At about half a dozen places refresher courses of training in Hygiene, etc. were organized by the school health officers for teachers. 377 teachers of training classes have been trained in principles of hygiene, sanitation and epidemics.

There is no fixed curriculum for the teaching of hygiene to the boys in primary schools, but on initiation by the district medical officers of health and their staff and the organization of the Junior Red Cross groups, the activities in this respect have much advanced and it has created a lot of interest in public health work. The teachers as counsellors and the boys as members of the group hold their meetings and pass useful resolutions. The boys practice health habits, fill in health habit charts and prepare songs, dramas and dialogues on health subjects. Usually the counsellor of the group gives lectures on hygiene at least once a week. Besides this the public health staff while on visit to these schools always give a talk on public health matters, hygiene, sanitation and epidemic diseases.

Propaganda material on prevention of blindness has been supplied to the Director of Public Instruction for distribution amongst the pupil teachers in the training schools and posters on health habits and a pamphlet on "Our food in villages" are supplied free to all the Junior Red Cross groups.

The number of Junior Red Cross groups formed during the calendar year 1937 was 5,025 with 110,000 members as compared with 4,576 groups and 100,810 members in the previous year.

Hygiene publicity or extension lectures on health topics were also given in schools by all the school health officers. The book "Nutritive value of Indian foods and the planning of satisfactory diets" by Dr. Akroyd was supplied to all school health officers, municipal and district medical officers of health for their guidance in giving lectures on nutrition. More than 1,700 lectures without magic lantern and 88 lectures with magic lantern were delivered on different health subjects.

CHAPTER XI

HEALTH PROPAGANDA

Khan Bahadur Dr. A. Hamid, D. P. H. Assistant Director of Public Health, held charge of this section throughout the year except for a brief period of 22 days when he was on leave. He was assisted by two assistant hygiene publicity officers, the senior was also the Honorary Joint Secretary of the Provincial Centre of St. John Ambulance Association and the junior Honorary Deputy Director of the Junior Red Cross. Dr. Hamid also worked as the Honorary Secretary and Honorary General Secretary of the Provincial Branch of the Indian Red Cross Society and of the St. John Ambulance Association, respectively.

The number of Junior Red Cross groups during 1937 was 5,025 as compared to 4,576 in 1936. The number of Red Cross work. schools with Junior Red Cross groups was 3,851 against 3,416 in 1936. About 94.46 per cent. of these were in rural areas. The number of members was 110,223 against 100,810 in 1936, of these girls were 4,392 against 6,521, in the previous year. The United Provinces Branch of the Indian Red Cross Society made a grant of Rs.1,990 to 34 districts for the purchase and maintenance of village aid medicine chests. The activities of these groups continued to be very useful and some of the main features for the year were as under :

(1) School boys of Saharanpur, Jaunpur, Fyzabad and Bara Banki held regular classes of washing parades. They also held periodical meetings and wrote health essays. They also prepared health posters, charts, models and exhibits. In the Government College, Etawah, and in a few other districts the juniors also recorded weight, height and chest measurements.

(2) At Mainpuri, Cawnpore, Lucknow, Partabgarh, Etawah, Muttra and in several schools at Aligarh, these juniors celebrated health weeks.

(3) In the districts of Saharanpur, Rae Bareli, Partabgarh, Fatehpur, Agra, Unao, Bara Banki and Sultanpur school boys distributed cinchona and quinine tablets to the sick during epidemics of malaria and undertook anti-malarial measures such as kerosining of tanks and filling of hollows. In the epidemic of cholera at Saharanpur, Rae Bareli, Fyzabad and Sultanpur, they permanganated wells and distributed essential oils mixture to the actual sufferers. They also assisted the public health authorities in anti-cholera and plague inoculations as also in vaccination.

At Aligarh and Agra, the juniors rendered first-aid in a very large number of cases of snake-bite, dog-bite, drowning and accidents. In various other districts the juniors filled excavations, dug soakage-pits, and assisted villagers in the cleaning of cattle-sheds and the local authorities in flood relief work. The juniors of the Hamirpur District contributed Rs.10-12 for relief operation in Spain.

These juniors also took active part in international correspondence and provincial competitions. Nine essays were forwarded to the Indian Headquarters in the inter-school correspondence competition and the second prize was won by the Coronation Hindu High School, Moradabad.

in essay competition on "food and health". The Theosophical National Girls' School, Benares, merited "honourable mention" in the competition.

Twenty-seven portfolios from several foreign countries were received in exchange of albums sent by juniors. Albums were also received and exchanged.

This year the Junior Red Cross Competition for the whole province was held in Lucknow in January, 1937, along with the Provincial First-aid Competition of St. John Ambulance. Thirty-two teams from different districts competed and the Harrop Jubilee Trophy and the Lady Srivastava Challenge Cup were won by the Government Model School, Agra. Besides these, seven cups, eight medals and Rs.30 in cash were also awarded.

The St. John Ambulance held the annual competition in first-aid in January, 1937. One hundred and twenty-six teams of various categories including those for the Junior Red Cross participated in the competition.

At the close of the year the activities of this Association were in force in 22 districts, two estates and 46 police centres. Two thousand one hundred and thirteen members out of which 666 were of the police force were trained in first-aid. Five thousand eight hundred and eight school boys were trained in Mackenzie School Course Certificate. There were 16 cadets and four brigade divisions in these provinces. A training camp for the officers of these divisions and members of brigade divisions was held at Panki, district Cawnpore, at the close of the year.

Popular health education work was carried out throughout the province through the usual methods, viz, magic lantern demonstrations of coloured slides, cinema shows, lectures on epidemic diseases with the help of models and pictorial posters, distribution of leaflets, exhibitions, health weeks and competitions.

The Hygiene Publicity van of the United Provinces Branch of the Indian Red Cross Society under the charge of the Hygiene Publicity Bureau fully equipped with a dynamo, health models, health films, posters, loud-speakers and gramophone records covered a distance of 4,259 miles and 88 cinema shows which were witnessed by about 85,000 persons were given. This van also conducted health publicity during the Provincial Industrial and Agricultural and the Khadi Industrial Exhibitions. Stalls equipped with posters and placards on epidemic diseases, e.g. cholera, plague, tuberculosis, smallpox, malaria, maternity and child welfare, leprosy, village sanitation, nutrition and other allied subjects were also set up in these exhibitions. Among other important exhibits were the charts, pictures and albums prepared by Junior Red Cross workers, illustration of simple first-aid method in the common injuries and accidents; village aid medicine chests and dais outfits.

A set of models was also placed for demonstration in the Devi Fair and Rural Uplift Exhibition, Mainpuri, Rural Development Exhibition, Mohan, district Unao, Qasimpur Fair and Exhibition, district Budaun, and the Health Week, Benares. A set of slides was lent to Mahananda Mission Home of Service, Ghaziabad. One magic lantern equipment with slides was lent to Thakur Mohan Singh Mehta, Katyoor, district Almora. Twenty-one lectures with magic lantern and slides supplied by the Bureau were given by the reserve medical officer on the pilgrim route. An officer of the Bureau also gave a lecture to the students of the Lucknow University on rural sanitation.

The other public health staff in the provinces gave 1,226 magic lantern demonstrations and 20,334 lectures which were attended by 297,451 and 905,489 persons respectively. The medical officer incharge fixed dispensaries delivered 910 lectures with an approximate attendance of 65,891 persons.

Cinema shows were given to the ladies at the Zenana Park, Lucknow, to the students of the Isabella Thoburn College, to the refresher class of the staff doing rural development work at the Christian College, at Lucknow University and also to the rural development organizers.

Besides usual propaganda work in districts and municipalities, exhibitions, fairs and other gatherings, the officers of the Bureau were also engaged in anti-epidemic work in Meerut, Muzaffarnagar, Firozabad, Agra, Partabgarh, Muttra, Brindaban, Etah, Kheri, Bareilly, Shahjahanpur, Tilhar, Gonda, Basti, Etawah, Mainpuri, Aligarh, Sikandra Rao, Atrauli, Bulandshahr, Jalaun, Orai, Jhansi, Lalitpur, Saharanpur, Farrukhabad, Fatehgarh, Gorakhpur, and Gonda. They gave 3,376 anti-cholera inoculations.

Arrangements for health publicity among prisoners in jails by means of magic lantern lectures were also undertaken and 100 such lectures were given.

A leaflet on beri-beri, was prepared and was given wide publicity in Benares and Allahabad where the disease was prevalent and in the Khadi and Industrial Exhibition at Lucknow. Leaflets on various epidemic diseases were reprinted and supplied to various agencies for distribution among the public. During the year under report 372,198 leaflets were distributed at fairs and other occasions and 41,232 booklets and 2,782 posters were supplied to various agencies doing hygiene propaganda work including those for rural development work. Pamphlets on "prevention of blindness" were supplied to all teacher candidates in the Training Colleges and 70 sets of new posters on "Nutrition" were distributed to the officers engaged in school inspection work.

Samples of posters of the Bureau were sent to the Judicial Secretary, Sirmoor Durbar, Nahan, and the Medical Officer, Najafgarh, Delhi Province. Copies of the pamphlet on "Programme of health work in rural areas" were supplied to the Honorary Secretary, District Village Uplift Committee, Drug, C. P., the Deputy Commissioner, Akola District, the Divisional Forest Officer, South Kheri Division, Kheri, the Railway Medical Officer, Limbe, Nyasaland, Central Africa, and the Public Health Commissioner with the Government of India for the use of the Central Health Board.

Literature was also supplied to the Lucknow University, the Engineering College, Roorkee, and the Chief Inspector of Factories and Boilers, United Provinces.

Certain propaganda material including cinema films was sent to Bandeong, "Java", in connexion with the conference on rural hygiene in the Far East.

The Bureau as usual supervised village-aid work, medical inspection of scholars in the province. Details of work under these will be found in other chapters of this report.

The Cinema Production Section of the Red Cross produced a new 35 mm film in four reels on "Key to Health" (Personal Hygiene).
Cinema section.

Copies of the following 35mm films were also prepared.

- (1) Why die of cholera—Four reels.
- (2) Our greatest enemy (Malaria)—Four reels.
- (3) Our greatest enemy (Malaria-replacement of third reel)—One reel.
- (4) Maternity—Five reels.
- (5) King of flies—Five reels.
- (6) Tragedy of small-pox—Five reels.

The artist of the Bureau was occupied in repairing wax and metal models, magic lanterns and slides. He prepared slides on rural development and a sketch of model village, charts and posters.

The voluntary contribution by local bodies for carrying hygiene propaganda work in their areas amounted to Rs.2,950 as compared to Rs.4,300 in 1936.
Voluntary contribution.

CHAPTER XII

PUBLIC HEALTH ADMINISTRATION

During the financial year 1937-38 the strength of the Executive Public Health staff remained the same as in the previous year. Appendix "D" to this report gives the distribution of this staff in urban and rural areas.

2. A sum of Rs.23,82,489 was initially passed by Government in the year 1937-38 for the entire Public Health Department, including the Public Health Engineering section and grants-in-aid for sanitary works which are distributed through the Board of Public Health. Of this, a sum Rs.16,41,856 was for activities directly controlled by the Director of Public Health. The allotment of Rs.23,82,489 included a new provision of Rs.80,000 for special anti-malarial experiments and Rs.35,000 for improvement of wells in rural areas. The former amount could not be utilised within the year, as the preliminary enquiries in connexion with the scheme of investigation had not been completed by the end of the year.

CHAPTER XIII

VACCINATION

The chapter is a resumé of vaccination work done in 1937-38 as compared with that done in 1936-37.

Period covered.

2. The number of assistant superintendents of vaccination and vaccinators employed during the year under report was

Vaccination staff. 49 and 953 against 49 and 968, respectively, in the preceding year.

3. The Vaccination Act is in force in all the municipalities, canton-

Application of the ments, notified areas and in certain town areas.
Vaccination Act.

4. During the year the total cost of vaccination in the province amounted to Rs.3,90,102 against Rs.3,88,228 in

Expenditure on vac- the preceding year. These figures exclude charge
cination. (Vaccination on account of assistant directors of public health,
statement I). their establishment, contingencies as well as the
expenditure on the maintenance of the Government Vaccine Depot. Out
of the total expenditure of Rs.3,90,102, a sum of Rs.3,14,201 was spent
in rural areas and Rs.75,901 in urban areas.

5. The average cost of each successful case of vaccination in these provinces during the year under report was 3 annas

Average cost of each and 9 pies against 3 annas and 8 pies in the
successful case of vac- preceding year.
cination. (Vaccination
statement I).

Below is appended a table showing the average cost of each successful case of vaccination in these provinces as compared with other provinces:

Province				Cost of each successful case of vaccination		
				Rs. a. p.		
United Provinces	0	3 9
Bihar	0	0 9
North-West Frontier Province	0	1 7
Delhi Province	0	3 11
Assam	0	3 4
Bengal	Information not available.	
Punjab	0	2 0
Central Provinces	0	5 9
Madras	0	7 0
Bombay	0	11 2
Sind	0	12 0

6. During the year under report 1,873,328 persons were vaccinated, 1,870,687 by special (district and municipal) staff,

Vaccination in the 489 by dispensary staff, 162 by private medical
province. (Vaccination practitioners and 1,990 at railway dispensaries as
statement I). against 1,915,251 in the preceding year, showing a

decrease of 41,923. The number of vaccination operations performed in 1937-38 also showed a decrease of 37,186 as compared with the preceding year, the actual figures for the two years being 1,885,106 (1,618,490 primary and 266,616 revaccinations) and 1,922,292 (1,637,317 primary and 284,975 revaccinations). 11,778 secondary operations were performed during the year under report as compared with 7,041 in the preceding year. The number and percentage of successful vaccinations in which the results were known during the year were 1,558,044 and 97.18 in the case of primary vaccinations and 103,624 and 43.39 in the case of revaccinations

against 1,582,104 and 97.53 and 114,815 and 45.78 respectively, in the preceding year. Each vaccinator vaccinated on an average 1,963 persons in the year under report as compared with 1,975 in the preceding year. The decrease in the number of persons vaccinated and the number of vaccinations performed is due to smallpox epidemic having been very mild during the year under report.

7. The number of persons vaccinated in towns aggregated 309,209 and the number of operations 311,452 (primary 210,624 and revaccinations 100,828). The number and percentage of successful vaccinations in which the results were known during the year under report amounted to 198,230 and 95.52 in the case of primary vaccinations and 28,263 and 30.38 in the case of revaccinations against 197,358 and 96.27 and 33,692 and 34.15, respectively, in the preceding year. The number of persons successfully vaccinated per mille of the population during the year under report was 41.67. The towns showing highest degree of protection were Mussoorie (197.92), Chakrata cantonment (181.95), Ranikhet cantonment (168.61) and Nizamabad (Azamgarh) 167.83. Amongst those showing the least protection the most conspicuous were Pithoragarh (Almora) 5.72, Muttra cantonment (6.40), Kishanpur (Fatehpur) 8.88 and Sitapur cantonment 9.35.

8. During the year under report 1,561,478 persons were vaccinated in rural districts. The number of operations performed was 1,571,013 (primary 1,407,249 and revaccinations 163,764). The number and percentage of successful vaccinations in which the results were known during the year under report were 1,359,250 and 97.43 in the case of primary vaccinations and 74,703 and 51.82 in the case of revaccinations as against 1,383,958 and 97.71 and 80,335 and 53.24 respectively, in the preceding year. The number of persons successfully vaccinated per mille of the population was 33.37. The districts showing the highest degree of protection per mille of population were Garhwal (81.40), Almora (52.68), Sultanpur (42.69) and Muzaffarnagar (41.43). Amongst those showing the least protection were Hardoi (25.37), Sitapur (27.14), Mainpuri (27.51) and Kheri (27.87).

9. The number of vaccination operations performed in municipalities was 219,041 (140,017 primary and 79,024 revaccinations) against 224,228 (140,209 primary and 84,019 revaccinations) in the preceding year. The total number of persons vaccinated in municipal towns was 217,416 against 223,248 in the preceding year. The ratio of persons successfully vaccinated per 1,000 of the population was 45.12 against 46.92 in the preceding year.

Amongst the well protected municipalities Mussoorie stood first with a ratio of 197.92 per mille and was followed by Brindaban 85.90 and Gonda 80.40. Amongst those showing the least protection were Bijnor, Tilhar and Kanauj with ratios of 25.08, 27.32 and 27.36.

The number of successful operations performed on children under one year of age was 96,398 against 99,856 in the preceding year showing a decrease of 3,458.

10. During the year under report the total number of persons vaccinated in cantonments was 14,685. The Vaccination in cantonments. total vaccination operations numbered 14,696 (5,809 primary and 8,887 revaccinations). Of these, successful primary vaccinations totalled 5,456 and successful revaccinations 3,028. The corresponding figures for the preceding year were 16,964, 16,966 (5,561 primary and 11,405 revaccinations), 5,330 and 3,635. The ratio of persons successfully vaccinated per mille of the population was 42.29 as against 44.69 in the preceding year. The rate of successful operations has decreased owing to a larger number of unsuccessful revaccinations. Since the last seven years Chakrata has been the best protected cantonment. Muttra with a ratio of 6.39 was the least protected. 13,902 operations were performed by military medical officers.

11. During the year under report the total number of persons vaccinated and that of vaccination operations performed in notified areas was 24,662 and 24,883 (20,448 primary and 4,435 revaccinations) as against 22,256 and 22,438 (18,726 primary and 3,712 revaccinations), respectively, in the preceding year. The numbers of successful primary vaccinations and revaccinations were, respectively, 19,394 and 1,678 as compared with 17,691 and 1,377 in the preceding year. The ratio of persons successfully vaccinated per mille of the population was 45.95 as against 41.59 in the preceding year.

Amongst the well protected notified areas Charbagh (district Lucknow) stood first with a ratio of 125.00, whereas Dehra Dun with a ratio of 14.59 was the worst protected.

12. The total number of vaccination operations performed by medical subordinates at dispensaries during the year under report was 489 (53 primary and 436 revaccinations) as against 180 (35 primary and 145 revaccinations) in the preceding year.

13. The total number of vaccinations performed by the railway medical staff during the year under report was 1,990 (500 primary and 1,490 revaccinations) as compared with 2,287 (792 primary and 1,495 revaccinations) in the preceding year. The percentage of successful cases in which the results were known was 96.65 in the case of primary vaccinations and 53.03 in the case of revaccinations as compared with 94.17 and 78.13, respectively, in the preceding year.

14. The public health staff inspected 7,539 schools for vaccination purposes and got 55,723 scholars vaccinated in their presence. The respective figures for the preceding year were 2,951 and 37,456.

15. During the year under report the percentage of successful primary vaccination operations in proportion to births was 58.33 in respect of children under one year of age, 25.97 in respect of those between one to six years of age and 89.57 for all ages. The corresponding figures for the preceding year were 56.22, 23.57 and 83.77.

16. No cases of encephalitis following vaccination were noticed by any of the inspecting officers during the year under report.

Occurrence of cases of encephalitis following vaccination.

17. (a) *Charge of the Depot*—The charge of the Depot was held by Government Vaccine Dr. B. S. Yajnik, D.P.H., for the whole year except Depot. Patwadungar for a short period of leave from 3rd January to (district Naini Tal). 24th February, 1938, when Dr. L. N. Saxena, D.P.H., a reserve medical officer of health, officiated for him.

(b) *Supply of calves*—The contract for the supply of buffalo-calves was given to a butcher of Bareilly at Rs.9-4 per calf excluding the cost of railway transit. All the calves were brought from Bareilly to Haldwani in specially improvised railway wagons at Government expense to avoid the risk of infection *en route* and to avoid deterioration in their physical condition by continuous marches. The cost of obtaining each calf including railway freight and feeding charges in the wagons delivered at Haldwani was about Rs.10-5 per calf against Rs.10-8 during the preceding year. After vaccination the calves were, as usual, sold to the same contractor at Haldwani at Rs.3 each.

The total number of buffalo-calves obtained was 406 (405 from the contractor and one locally) against 361 in the preceding year. Out of this 384 were sold to the contractor and one was sold locally, six were rejected and returned without any payment and 15 died. In addition to the above, eight cow-calves were obtained locally on hire at Rs.4 per calf, all of which were returned subsequently to the owner after removal of the vaccine pulp.

Physical examination of contractor's calves was done by the veterinary assistant surgeon in charge of the district board veterinary dispensary at Haldwani for a fee of Rs 5 per batch of calves.

(c) *Quantity of lymph obtained and manufactured*—The total quantity of vaccine pulp obtained during the year under report was 32,404 grammes from 403 successfully vaccinated animals giving an average yield of 80.4 grammes per animal (cow and buffalo-calves together) against 25,076 grammes from 369 animals with an average yield of 67.96 grammes in the preceding year, showing an appreciable increase of 12.44 in the yield per animal. The average yield of pulp from cow and buffalo-calves separately was 33.75 and 81.35 grammes, respectively, as compared to 33.20 and 70.48 grammes, respectively, in the preceding year.

During the year under report 1,350 grammes of seed lymph (1 in 5) from eight hill cow-calves were prepared as compared to 4,150 grammes from 25 calves in the preceding year. On account of paucity of rabbits sufficient lapine was not available for use on cow-calves for the preparation of seed lymph with the result that the quantity manufactured was much less than that in the preceding year.

One lakh sixty thousand six hundred and seventy grammes (1 in 5) of issue lymph were manufactured against 1,31,048 grammes (mostly 1 in 5 and some 1 in 7) in the preceding year. The total amount of vaccine manufactured represents 4,016,750 doses calculated on the basis of 25 vaccinations (with 3 or 4 insertions each) per gramme as compared to 3,276,200 doses in the preceding year, showing an increase of 29,622 grammes or 740,550 doses. At the beginning of the year (1st April, 1937) there was a stock of 95,540.75 grammes of vaccine lymph on account of the unconsumed balance of the year 1936-37 against 83,837.5 grammes of 1935-36.

(d) *Issue of lymph*—The total quantity of lymph issued for vaccination during the year was 121,095.75 grammes (3,027,393 doses) against 119,676.75 grammes (2,991,918 doses) in the preceding year. The increase in the amount of vaccine issued is due to the fact that some more Indian States have indented lymph from the Depot.

134,809.5 grammes of glycerinated issue lymph (1 in 5) and 454 grammes of seed lymph (1 in 5) have been set aside in the cold storage for use in 1938-39 as against 95,540.75 grammes of glycerinated issue lymph (1 in 5) and 2,308 grammes of seed lymph (1 in 5) in 1936-37 and 83,837.5 and 925 (1 in 5) respectively in 1935-36.

The cost of manufacture of issue lymph is worked out at annas 4 and pies 6 per gramme (2.16 pies per dose) in 1937-38 against annas 6 and pies 4 per gramme (3.023 pies per dose) in 1936-37. This calculation includes expenditure on the depot plus depreciation charges of buildings and plants, pensionary and leave contributions of staff and interest on capital investment.

(e) *Bacteriological and animal tests*—Bacteriological tests on vaccine lymph were carried out on every sample, as usual, before issue. The results obtained showed complete absence of streptococci and gas producing anaerobes in all the samples tested and issued. The number of viable organisms per c. c. of vaccine lymph was less than the prescribed standard of 5,000 in all the samples issued for vaccination. All samples were chloroformed and were issued only when subsequent tests showed adequate reduction of organisms. It will thus appear that the standard of bacteriological purity of vaccine lymph aimed and achieved here is the same as laid down under the British Pharmacopoea. Pathogenicity or toxicity tests on guinea-pigs were also performed as a routine measure on all the samples.

The potency test on rabbits was performed with every batch of vaccine lymph. Contents from several samples were pooled and then tested on rabbits in various dilutions ranging from 1 in 500 to 1 in 8,000. On account of paucity of rabbits for necessary tests, guinea-pigs had to be used for the potency test. The tests indicated that the vaccine was of uniformly good quality. With the improved quality of vaccine lymph it has been possible to start the vaccination season from 1st October instead of from 1st November every year. The percentage of successful operations is shown below:

Year	Total number of persons vaccinated		Total number of operations performed		Total number of secondary operations		Percentage of successful operations	
	Primary	Re-vaccinations	Primary	Re-vaccinations	Primary	Re-vaccinations	Primary	Re-vaccinations
1935-36	1,592,505	366,158	1,605,718	366,740	13,213	582	95.88	40.78
1936-37	1,680,558	284,698	1,637,817	284,975	6,764	277	97.13	45.78
1937-38	1,606,620	265,294	1,618,159	265,533	11,539	239	97.16	45.22

As the depot laboratory is not yet adequately equipped and the staff provided is insufficient it was not possible to test individual samples separately. Contents of various samples manufactured on the same day were pooled together and tests were performed on pooled mixture.

(f) *Scientific investigations and improvements*—(i) The quality of seed lymph was further improved by careful animal passages and the method of selection started in 1934-35. This has resulted in about 75 per cent. increase in the average yield of pulp in the case of buffalo calves and 175 per cent. in cow-calves per animal.

(ii) The wastage of lymph in certain districts, municipalities and notified areas was investigated and steps taken to prevent it.

(iii) Field tests on children in the municipalities of Agra, Meerut, Dehra Dun, Mussorie, Bareilly, Benares, Lucknow, Allahabad and also Naini Tal and Haldwani were started and the vaccine giving almost 100 per cent. cases success rate and almost the same percentage of insertion success rate in primary cases on six children vaccinated at every place was issued subsequently for use in the province. Comparative value of field test on children and potency-test on rabbits was established.

(iv) On account of increased potency of issue lymph manufactured now the vaccination season has been started from 1st October instead of from 1st November from this year. The results of successful vaccinations during the month of October were quite satisfactory.

(v) Deterioration in vaccine lymph, if any, by chloroforming the same was investigated and it is gratifying to record that four samples chloroformed for the first time on the day of preparation and subsequently again after seven months in October retained their potency at a satisfactory level and yielded good results.

(vi) The usual period required for proper reduction in the number of organism in vaccine lymph by the action of glycerine at cold room temperature of 32°F was investigated and it is found that the usual time required for satisfactory reduction in the number of organisms is four to six months.

(g) *Cost of lymph supplied to local bodies, military departments, etc.*—The contract price of lymph supplied to all local bodies which is subject to revision by Government once in three years was revised during the year under report and it resulted in an annual increase of Rs.985.

Contract price from all local bodies amounting to Rs.39,990 has been realized for the year 1937-38.

Lymph to the value of Rs.1,579-2 (including packing and postage) was supplied to Defence Department against Rs.1,420-14 in the previous year. The cost of vaccine lymph supplied to Indian States, private persons, railways, cantonments and other indenters amounted to Rs.8,839-12 as compared to Rs.6,409-13 in the preceding year. The increase is due to the fact that two new Indian States of Jodhpur and Benares have begun to purchase the vaccine from the Depot.

A quantity of 1,720 capillary tubes and 611 grammes of vaccine to the total value of Rs 617-5 (including packing and postage) was issued free of cost for use in jails, police lines and the Hardwar and Brindaban Kumbh fairs against 1,496 capillary tubes and 216 grammes to the value of Rs.267-12 in the preceding year, showing an increase of Rs.349-9. The reason for this increase is that this year a large number of the superintendents of jails in the United Provinces indented for free vaccine directly from this depot.

(h) *Sale and expenditure of the depot*—The total cost of vaccine lymph and other articles sold by the depot during the year under report was Rs.51,734-9-6 (Rs.50,454-10 for sale of vaccine lymph and Rs.1,279-15-6 for sale of calves, rabbits, and other miscellaneous articles) against Rs.48,071-13 (Rs.46,961-15 for sale of vaccine lymph and Rs.1,109-14 for sale of calves, rabbits, and other miscellaneous articles) in 1936-37 showing an increase in the total sales by Rs.3,662-12-6.

The total expenditure actually incurred during the year under report amounted to Rs.39,062-6-9 against Rs.41,777-15-3 (excluding pensionary, depreciation and leave charges) in 1936-37 showing a decrease of Rs.2,715-8-6.

There was no difficulty in the realization of the cost of vaccine and other articles from the purchasers including local bodies and Indian States. There were no arrears pertaining to the year 1936-37 and all outstanding dues were realized in due course.

(i) *Cold storage plant*—The annual overhauling of both the old and new plants under the supervision of Mr. A. B. Haddow, Electrical and Mechanical Engineer, Municipal Board, Naini Tal, was done during winter months. The plants gave no trouble and efficient refrigeration was produced. The temperature in the cold room was not allowed to exceed above 32°F. A new distance thermometer costing Rs.185 has been installed in the cold room. With this thermometer the cold room temperature can be read directly from the compressor room without opening the same.

(j) *Electric installation*—The supply of electric current from the Naini Tal Municipal Board's power house was satisfactory. The consumption of the current was well within the contracted units of 16,000 for Rs.3,000 per year. The important paths and crossings are now illuminated every night without exceeding the limit of consumption allowed under the contract.

(k) *Buildings and roads*—In addition to the thorough annual repairs to all the depot buildings, roads and paths, the following new constructions and necessary repairs were undertaken during the year under report and the expenditure was met out of the normal budget of the depot :

(i) New bathrooms have been constructed and privies remodelled in all the four vaccinators' quarters.

(ii) A new summer house has been constructed near the inspection bungalow in place of the old one.

(iii) New drains measuring about 650 feet in length at various places have been provided.

(iv) All the lymph grinding machines have been installed on a reinforced cement platform.

(v) Masonry manure pits have been constructed near calf-sheds.

(vi) Water-pipe line at various places has been relaid.

(vii) Paths at several places have been widened and regraded and culverts and drains provided for storm water drainage.

The triennial inspection of the depot buildings was done by the Assistant Engineer, Public Works Department, Naini Tal, and necessary action was taken on his suggestions.

(l) *Water supply*—E. C. D. plant for the sterilization of water-supply worked satisfactorily. The monthly cost of sterilizing the supply was found to be annas 8. The ecodolite (sodium hypochlorite) was prepared by electrolysis of 6.5 per cent. (1lb. in $1\frac{1}{2}$ gallons of water) common salt solution for half an hour instead of 10 per cent. as previously used, thus reducing the monthly cost from annas 12 to annas 8. As an experimental measure the strength of brine is now further reduced by 50 per cent. (6.5 to 3.3) to reduce the cost. At present electrolysis of 3.3 per cent. of brine for one hour (current 12-13 amp.) produces sufficient chlorine hypochlorite for efficient sterilization of two days' supply. The residual chlorine in water is found to be about 0.05 to 0.1 parts per million, and this invariably produces reduction of coli aerogenes group of organism from +1 c. c. to -100.

(m) *Control burning*—Control burning of the depot forests was done in March, 1938, and the entire area within the depot boundary was burnt with success to minimize risk of fire.

CHAPTER XIV

OTHER PUBLIC HEALTH SERVICES

HYGIENE INSTITUTE

Dr. J. T. Cornelius, M.A., PH. D., D.P.H., held charge of the Provincial Hygiene Institute, throughout the year assisted by two lecturers except for the period from 26th April 1937 to 30th June 1937 when he was on leave. Dr. H. G. D. Mathur, DR.P.H., II lecturer, held charge of the Institute during this period.

2. The following routine and special laboratory work was undertaken :

Laboratory work

(i) 336 samples of water were examined bacteriologically during the year, of which 248 samples were received from the Medical Officers of Health and District Medical Officers of Health. 77 samples were bacteriologically examined during the different seasons of the year as a measure of control on the analytical work carried out in the various Municipal laboratories. Eleven samples of water from important railway stations and pilgrim centres were also examined bacteriologically in connexion with fairs and cholera epidemics. 166 samples of water were also examined chemically. The reports of routine, weekly bacteriological and quarterly chemical analyses which are received from various local bodies were scrutinised and suitable measures for improving the quality of water, where found unsatisfactory, were recommended in cooperation with the Public Health Engineering Department. Reports from District Medical Officers of Railways on analysis of water supply were also scrutinised and suitable action was recommended to the Railway authorities and to the Assistant Director of Public Health, Epidemiology Branch. Instructions for determining doses of chlorine and alum in connexion with purification of water supply were given to Medical Officers of Health, Jhansi and Jaunpur.

(ii) 8 samples of disinfectants were received from the Stores Purchase Officer, Cawnpore, and from some of the manufacturing firms of disinfectants for determination of the Rideal Walker Coefficient. The results of the tests together with recommendations of the cheapest and best disinfectant were forwarded to the Stores Purchase Officer for notification in the *United Provinces Gazette*.

(iii) 48 samples of stools from suspected cases of cholera were examined and reported on.

(iv) 380 bacterial cultures and films from the throat swabs of prisoners in the Bulandshahr, Agra and Saharanpur jails suspected to be contacts were examined for meningococcus at the Institute.

(v) Other miscellaneous chemical examinations were also carried out such as milk, ghee, breast milk and phenyle.

3. The total number of doses of anti-cholera vaccine manufactured and supplied during the year under report was 3,26,645 c. cs. The demand for anti-cholera vaccine is increasing every year.

4. (a) (i) Investigations into the outbreaks of cerebro-spinal meningitis in district jails, Bulandshahr and Saharanpur and central jail, Agra, were carried out. The reports of these investigations together with necessary recommendations to combat the disease were rendered to the Inspector General of Prisons, United Provinces.

(ii) Data from the central jail, Agra, with regard to prevalence of tuberculosis in central jail were studied and recommendations made.

(b) Necessary advice for constructing a swimming bath at the C. G. Hostel of the King George's Medical College was given to the Principal.

(c) Investigation into Goitre Prophylaxis by Iodine administration to school children in the villages of Pithoragarh, Berinag and Lohaghat in the Almora District was continued during the year. As the results are still incomplete, the scheme is being continued.

(d) Necessary tests for the efficiency of vitro chlorinator were made.

(e) Reports of enquiries in the outbreaks of epidemic dropsy at Benares, Cawnpore and Allahabad were scrutinised and necessary recommendations were made. General instructions on "Epidemic Dropsy" for public use were issued.

(f) Samples of rice and mustard oil sent to the Institute by the Medical Officers of Health as well as by the Medical Officer on special duty in connexion with the outbreaks of epidemic dropsy were examined and the mustard oil of Colonelganj, Allahabad, which was machine-crushed was found to contain high Iodine and saponification value.

Eighteen samples of rice were examined bacteriologically for the rice bacilli (*proteus vulgatus* group) but results obtained so far were negative.

(g) Twenty-one experiments were carried out to compare the fly catching efficiency of "Frux" Fly Paper and "Tangle Foot" Fly Paper.

5. (a) An officer of the Institute made an inspection of water-works at Jaunpur and Unao, where the quality of water was reported to be unsatisfactory and necessary recommendations to improve the quality of water were made to the authorities concerned.

(b) Plans of soakage pits, Infectious Diseases Hospital, Allahabad, village well, houses for villagers were scrutinised and suggestions made.

6. The details of examinations and teaching work done at the Institute are appended below :

Training of public health personnel.

*Statement showing the number of students trained and examined
at the Provincial Hygiene Institute during 1937-38*

Name of class	Number of students in the class	Session 1936-37						Session 1937-38
		Examination April, 1937			Examination October, 1937			Number of students in the class
		Month	Number appeared including those who failed at previous examination	Number of successful candidates	Month	Number appeared including those who failed	Number of successful candidates	
L. P. H., Part I ..	14	January, 1937	18	9	October, 1937	3	3	7
L. P. H., Part II ..	14	April, 1937	9	8	Ditto	4	4	7
Grade examination of medical officers in charge travelling dispensaries, grade II.	..	Ditto	2	2	Ditto	4	3	..
Grade examination of medical officers in charge, travelling dispensaries, grade I.	..	Ditto	1	1
Laboratory assistant trained.	2
Second class post-graduates, under-graduates.	10
Undergoing training in Hygiene for M. B. B. S. degree.	41	April, 1937	32	21	October, 1937	17	14	44
P. M. S. post-graduate	10
Sanitary Inspectors, Part I.	..	February, 1938	41	33	41

7. The museum as usual served as a medium of instruction to the students and the visitors. Certain models made in connexion with the All-India Industrial Exhibition held in December, 1936, were added to the museum. The accommodation in the museum was extended by the inclusion of two verandahs on the southern and eastern sides of the museum.

Forty-seven bacteriological, parasitological and epidemiological charts were prepared by the Institute artist for use in connection with lectures and demonstrations.

The statistical charts in the museum were revised and brought up to date.

Anti-rabic Treatment

8. During 1937 one more centre was opened at Muttra at the entire cost of the Municipal Board bringing the total number of the centres in the United Provinces to 14, i.e. 13 permanent and one seasonal at Mussoorie.

9. *Number of patients who attended the centres for treatment*—During 1937, 10,210 patients attended the centres in the United Provinces against 8,824 in 1936. In addition, 14 patients of these provinces were treated at the Pasteur Institute, Kasauli. Of the 10,210 patients who attended the centres in the province 9,593 were actually treated and 617 were advised, i.e. treatment for them was not necessary.

10. *Classification of patients according to the nature of bites*—

I class	485
II class	1,084
III class	5,094
IV class	2,930

11. *Classification of patients by communities*—

Hindus	7,470
Muslims	1,813
Europeans	96
Anglo-Indians	61
Indian Christians	123
Others	25

12. *Classification of patients according to animals responsible for bites*—

Dog	7,605
Jackal	1,336
Mongoose	20
Horse	24
Donkey	12
Cat	15
Monkey	216
Wolf	16
Leopard	1
Panther	7
Cow, calf or buffalo	37
Man or taken food with hydrophobia cases	226
Rat	23
Others	9
Details not available	46

13. *Paying patients*—Of the 9,593 patients treated, cost of treatment was recovered from 482 patients against 483 last year.

THE PUBLIC ANALYST

14. The office of Public Analyst to Government, United Provinces, was held by Professor P. S. MacMahon, M.Sc. (MANC.), B.Sc., (OXON.), F.I.C. except for the period from 19th April to 18th July, 1937, during which Dr. B. M. Gupta, M.Sc., PH.D., Deputy Public Analyst to Government held that office in addition to his own duties.

15. The provisions of the United Provinces Prevention of Adulteration Act were extended during the year under report to 4 notified areas, 25 town areas and also to certain bazars and fairs in rural areas.

Extension of the Act

The Act in respect of "Turmeric" was withdrawn from the Chandausi Municipality under the General Clauses Act, 1904.

The provisions of the Act are in force in 85 municipalities, 38 notified areas, 17 cantonment areas and several town and rural areas in 38 districts.

16. The total number of samples received for analysis during the year under report was 10,225 against 9,378 in 1936 as per details appended below :

Name of articles	Total no. of samples received for analysis	Unfit for analysis	Analysed for contents	Total number certified as adulterated or genuine	
				Adulterated	Genuine
Ghee	5,469	26	..	1,331	4,112
Milk	2,197	55	..	436	1,706
Butter	77	..	2	18	57
Flours	650	33	617
Edible oils	1,431	5	..	291	1,135
Miscellaneous samples ..	401	7	16	116	262
Total	10,225	93	18	2,225	7,889

Of the 10,225 samples, 7,889 samples were certified genuine, 2,225 were declared adulterated and 93 samples could not be analysed as they were either received in a damaged condition or found unfit for analysis for various reasons. Fifteen samples of rice from Benares were examined for the determination of the percentage of phosphorous pentoxide in connection with beri-beri epidemic. Two samples of butter and one sample of hydro-sulphite of soda were also analysed in order to determine the percentage composition of these articles. No samples were received from 20 places and the attention of the authorities concerned was drawn to this omission on their part.

17. One thousand nine hundred and ninety-three persons were prosecuted under the Act. Of these 1,436 persons were fined and 89 persons were acquitted. Six persons died during the course of trial and one person was warned. The cases against 131 vendors were either filed, dismissed or withdrawn by the local authorities as the accused could not be traced when prosecutions were instituted. One person, being minor, was caned. Two persons were imprisoned for non-payment of fines and cases against 327 persons were pending at the close of the year. The total amount of fine realized for 1,436 successful cases was Rs.53,535 against Rs.42,520 realised for 985 cases in 1936.

The sub-joined table shows the number of persons fined, the total amount of fines realized and the average amount of fine inflicted in the

15 larger municipalities as also the corresponding figures for the whole province.

Serial no.	Localities			No. of persons fined	Total amount of fines in rupee inclusive of the cost of analysis credited to Government	Average amount of total fine inflicted per person
					Rs.	Rs.
1	Lucknow	197	6,312	32.00
2	Cawnpore	107	2,270	21.21
3	Agra	122	5,544	45.44
4	Benares	90	2,242	24.91
5	Allahabad	44	2,325	52.84
6	Bareilly	9	395	43.88
7	Moradabad	20	786	39.30
8	Meerut	68	2,190	34.76
9	Aligarh..	23	1,485	62.89
10	Shahjahanpur	1	30	30.00
11	Muttra..	26	1,494	57.46
12	Fyzabad	7	583	76.85
13	Dehra Dun	31	1,770	57.10
14	Mussoorie	27	1,120	41.48
15	Naini Tal	10	420	42.00
	The whole province	1,436	53,535	37.28

The average amount of fine per person was 37.28 and the punishment awarded by several trying magistrates was deterrent but in certain cases, viz. Cawnpore (21.21) and Benares (24.91) the amount of fines was much below the provincial average (37.28). In some cases fines between Rs 2 to Rs.5 were imposed. It is desirable that the local bodies should bring cases of inadequate sentences to the notice of the District Magistrate for taking necessary action in accordance with the orders of Government.

18. A sum of Rs.19,009 was credited to Government treasury. A sum of Rs.212 was also realized from private persons for the analysis of their samples. Realization of cost of analysis and other fees.

19. During the year under review, the percentage of adulterated samples in these provinces was 22.0 as against 20.9 in 1936. The sub-joined table shows the extent of adulteration. total number of samples received for examination and of those certified as genuine or adulterated in 15 larger municipalities during the last three years.

Serial numbers	Name of municipalities	1935			1936			1937		
		Total number of samples, examined and certified as adulterated or genuine		Per-centage of adultera-ted samples	Total number of samples, examined and certified as adulterated or genuine		Per-centage of adultera-ted samples	Total number of samples examined and certified as adulterated or genuine		Per-centage of adultera-ted samples
		Examined	Adulter-ated	Genuine	Examined	Adulter-ated	Genuine	Examined	Adulter-ated	Genuine
1	Lucknow	643	198	445	636	146	490	1,314	254	1,060
2	Cawnpore	1,256	153	1,113	1,205	180	1,075	1,197	197	1,000
3	Agra ..	370	68	302	1,005	159	846	1,205	140	1,065
4	Benares	295	32	213	822	326	556	618	197	421
5	Allahabad	274	89	185	143	37	106	155	49	106
6	Bareilly	189	28	111	165	37	128	44	14	30
7	Moradabad	64	18	46	163	36	127	182	26	106
8	Meerut	340	51	289	361	66	295	386	65	271
9	Aligarh	256	20	236	166	32	134	201	34	167
10	Shahjahanpur	125	28	97	50	11	39	133	23	110
11	Muttra	147	36	111	89	14	75	134	45	89
12	Fyzabad	66	12	54	95	15	80	86	16	70
13	Debra Dun	141	44	97	69	15	54	140	40	100
14	Mussoorie	116	30	86	132	15	117	137	37	100
15	Naini Tal	54	12	42	52	14	88	70	23	41
	Whole Province ..	7,789	1,723	6,066	9,257	1,939	7,318	10,114	2,225	7,889
				22.1			20.9			22.0
				Per cent.			Per cent.			Per cent.
				30.8			22.9			19.3
				12.0			10.8			16.6
				18.4			15.8			11.6
				27.8			36.9			31.8
				32.5			25.8			31.6
				20.1			22.4			31.7
				28.1			22.1			19.7
				15.0			18.2			19.3
				7.8			19.2			16.9
				23.4			22.0			17.3
				24.5			15.7			33.5
				18.2			15.7			18.6
				31.2			21.7			28.5
				25.9			11.8			27.0
				22.2			26.9			41.4

The table is not indicative of the correct position in regard to the prevalence of the evil of adulteration, as the number of samples collected is limited. It, however, indicates that the percentage of adulteration amongst the limited number of samples collected is still very high and the evil should be combated by a rigorous enforcement of the United Provinces Prevention of Adulteration Act. It is regrettable that out of 178 localities in which the Act is in force the butter, ghee and fat licensing rules of 1930 have been adopted by only 42 local areas. These rules are very useful in preventing the sale of vegetable product under the guise of genuine ghee and in preventing easy adulteration. These rules also prevent the possibility of vendors escaping the penalty of law by becoming untraceable.

20. The work in this branch is steadily increasing. 10,225 samples were analysed during the year under report against 9,378 in 1936. A comparative statement showing the figures for the last 5 years is given below :

Year						Number of samples received
1933	5,120
1934	6,448
1935	7,896
1936	9,378
1937	10,225

21. During the year under review several cases of fraudulent substitution of the contents of samples were detected and the matter is under investigation in one case. To check this evil the introduction of a standard seal having a coat of arms for the sealing of samples is under consideration.

22. Inspection of factories was as usual carried out by district and municipal medical officers of health in their capacity of *ex officio* additional inspectors of factories under the Indian Factories Act and copies of their inspection reports were submitted to the Chief Inspector of Factories and Boilers, United Provinces. The Mahabir Glass Works in Makhanpur (Mainpuri) and the H. R. Sugar Factory, Bareilly, were inspected by the Assistant Director of Public Health, I Range.

23. Two meetings of the Board of Public Health, United Provinces, were held during the financial year ending 31st March 1938, one at Naini Tal and the other at Lucknow. Further details are contained in the report of the Board which forms appendix A of the report.

CHAPTER XV

GENERAL REMARKS

1. *Public Health Essay*—The subject of the essay in connexion with the Rai Shambhu Dayal Sahib Gold Medal for 1937 was "A scheme for the improvement of the health of the school children and the sanitary condition of schools in United Provinces." In all, 63 essays were received, and the essay written by Miss Ghanti Joshi of Bareilly was adjudged to be the best and the medal was awarded to her.

2. During 1937, Dr. W. Chang, M.D., M.P.H. Technical Expert, Central Visit of officers to Field Health Station, National Economic Council the province. and Director, the Health Personnel Training Institute, National Health Administration, Nanking, China, visited the Health Unit, Partabgarh.

Personal proceedings

3(a). I held charge of the office of Director of Public Health throughout the year.

I inspected the sanitation of Almora, Bareilly, Meerut, Dehra Dun, Fyzabad-Ajodhia, Benares, Allahabad, Jhansi, Muttra, Agra, Gorakhpur, Mussoorie and Shahjahanpur municipalities, water-supply in the first ten towns and in Cawnpore, Moradabad and Haldwani. I inspected the drainage of the Lucknow Municipality and visited Gokul and Gobardhan (Muttra District) in the same connexion. I also inspected the site for sewage farm at Hardwar.

I inspected public health aspects of Rural Development work in the Allahabad, Partabgarh, Rae Bareilly, Lucknow, Sitapur, Shahjahanpur, Bareilly, Bara Banki, Fyzabad, Sultanpur, Unao, Pilibhit, Bulandshahr, Meerut, Dehra Dun, Muttra and Moradabad districts, and other rural health work of the district health staff in Sitapur, Bareilly, Meerut and Muzaffarnagar districts. I also inspected the work in the Health Unit, Partabgarh, several times.

I inspected vaccination work in the rural areas of Partabgarh, Rae Bareilly, Lucknow, Bareilly, Sitapur, Bara Banki, Fyzabad, Sultanpur, Fatehpur, Unao and Moradabad districts and in Nawabganj (Bara Banki) Fyzabad, Bareilly, Moradabad and Fatehpur towns.

I inspected medical and sanitary arrangements in the Magh Mela at Allahabad, Sawan Jhula Fair at Ajodhia and Dadri Fair at Ballia. In the last fair, I enquired into the outbreak of cholera and organized anti-cholera measures. I visited Hardwar several times and Rikhikesh, Lachmanjhula and Brindaban in connexion with the preliminary arrangements for the Kumbh Fair of 1938, and attended meetings arranged in that connexion. I also visited the Devi Fair Rural Uplift Exhibition in the Mainpuri District.

I inspected the work of the school health officers and the school clinics at Allahabad, Shahjahanpur, Saharanpur, Cawnpore, Meerut, Benares, Jhansi and Agra.

I inspected the municipal infectious diseases hospitals at Dehra Dun, Cawnpore, Meerut, Fyzabad, Benares, Allahabad, Jhansi, Muttra, Agra, and Allahabad and the site for an infectious diseases hospital at Bareilly, and discussed the project for a new infectious diseases hospital at Allahabad with the local authorities.

I conducted local investigations into the prevalence of plague in Bulandshahr, Meerut, Fyzabad, Muzaffarnagar districts, and Khurja, Meerut and Gorakhpur towns, and advised local authorities on anti-plague measures necessary. I also inspected anti-plague measures in several towns and rural districts.

I inspected anti-cholera measures in Rikhikesh, and discussed the cholera situation in the Meerut District with the Hon'ble Minister.

I inspected anti-malarial measures in some villages of the Naini Tal District and discussed with Major M. K. Afridi, I.M.S., Assistant Director, Malaria Survey of India, Kasauli, the scheme proposed to be jointly financed by the local Government and Government of India for anti-malarial measures in selected areas of the United Provinces, and the selection of the areas in which the experiment may be conducted. I also enquired into the condition of malaria in the Sarda Canal Colony at Banbassa and inspected anti-malarial measures. I advised the local authorities at Gorakhpur on the necessary anti-epidemic measures in the flooded areas of that district.

I investigated the prevalence of beri beri in the Benares Municipality and visited the infected areas.

I inspected the anti-rabic treatment centres at Bareilly, Dehra Dun, Cawnpore, Meerut, Fyzabad, Benares, Jhansi, Muttra and Agra, and the working of maternity and child welfare centres at Shahjahanpur, Pilibhit, Cawnpore and Moradabad.

I inspected candidates for admission to the sanitary inspectors' training class at all divisional headquarters and also at Almora.

I attended meetings of the Bhowali Sanatorium Trust Committee at Allahabad and of the Board of Public Health, the United Provinces State Medical Faculty, the United Provinces Medical Council, the United Provinces Nurses and Midwives' Council, and the United Provinces Branch of the British Empire Leprosy Relief Association at Lucknow. I attended the annual general meeting of the United Provinces Branch of the Indian Red Cross Society and the meetings of its Executive Committees and Branch Committee, the meetings of the Provincial Centre of the St. John Ambulance Association, and meetings of their sub-committees (e.g. maternity and child welfare sub-committee, anti-tuberculosis sub-committee and a meeting in connexion with the selection of the site for the Health School at Lucknow). I attended the annual general meeting of the Headquarters, Indian Red Cross Society and St. John Ambulance Association at New Delhi. I attended the first meeting of the Central Advisory Board of Health with the Hon'ble Minister at Simla. I also attended the Medical Research Workers' Conference at New Delhi, a selection Board held to select candidates for the United Provinces Public Health Service and a meeting of the United Provinces Public Service Commission in connexion with recruitment to the Subordinate Public Health Service.

I discussed with the Secretary to Government, United Provinces, Public Health Department, the question of quinine supplies to the United Provinces, the retrenchment proposals with the Hon'ble Finance Minister and attended a Cabinet meeting at Naini Tal to discuss the plan for expansion of the Public Health Department. I discussed the question of the housing of tuberculosis patients in the Bhowali notified area with the Inspector General of Civil Hospitals, and enquired into the working of the tuberculosis byelaws in that notified area. I also inspected the King Edward VII Sanatorium, Bhowali. I discussed with Baba Mani Ram Kali-kamliwala of Rikhikesh at Dehra Dun the question of bringing the dharamshalas on the pilgrim route to Badrinath and Kedarnath under the purview of the Sarais and Paraos Act.

I conducted the L. P. H. Examination in Parts I and II, and inspected the Government Vaccine Depot, Patwa Dangar, and the manufacture of lymph there.

I also inspected the offices of the District Medical Officers of Health at Pilibhit, Sitapur and Gorakhpur and the composting work at Shah-jahanpur.

I also discussed with the President, Board of Public Health, the question of delegation of powers to the District Medical Officer of Health, Garhwal, under various public health sections of the District Board Act and with the Municipal Medical Officer of Health and the District Medical Officer of Health, Allahabad, the proposals in connexion with the revision of the District Board and Municipalities Act.

(b) Dr. L. K. Ray, D.P.H., Assistant Director of Public Health was in charge of the I Range throughout the year. He was on tour for 156 days. He inspected Public Health aspects of rural development work in the districts of Agra, Etah, Dehra Dun, Meerut, Bijnor, Budaun, Hardoi and Lucknow and attended Divisional Rural Development Conference at Agra. He also inspected several schools and the Junior Red Cross work in these villages.

He inspected vaccination in the rural areas of Bulandshahr, Muttra, Agra, Etah, Mainpuri, Bareilly, Meerut, Saharanpur and Dehra Dun districts and in the Municipal towns of Bulandshahr, Khurja, Muttra, Brindaban, Jalesar, Etah, Dehra Dun, Saharanpur, Nagina, Dhampur and Moradabad.

He inspected sanitation of the municipal towns of Khurja, Firozabad, Jalesar, Etah, Chandpur, Kasganj, Bijnor, Sikandra Rao, Najibabad, Kairana, Pilibhit, Hardoi, Shahabad, Sandila, Nagina, Dhampur, Soron and Budaun, and drainage of certain mohallas in the Meerut Municipality. He also inspected several times sanitary arrangements in portions of Hardwar, Muttra and Brindaban municipalities, and visited Rikhikesh in connexion with arrangements for the Kumbh Mela in 1938.

He inspected anti-plague measures in the rural areas of Meerut, Saharanpur, Muzaffarnagar, Bulandshahr and Bijnor districts and in Khurja Municipality, and the work in connexion with anti-rat campaign in the towns of Soron, Bijnor, Dhampur, Pilibhit, Sikandra Rao, Chandpur and Nagina and in the villages of the Meerut District.

Dr. Ray inspected, and, where necessary, organized anti-cholera measures in the municipal towns or notified areas of Firozabad, Shikohabad,

Mainpuri, Sikandra Rao, Meerut and Hapur and in the rural areas of Agra, Mainpuri, Aligarh and Muzaffarnagar districts. He also inspected the infectious diseases hospitals at Saharanpur, Muttra, Brindaban, Hardwar and Rikhikesh and the arrangements for the segregation of infectious patients at Meerut.

Dr. Ray supervised and organized medical and sanitary arrangements of the Dikhauti Fair in Hardwar and Rikhikesh, the Piran Kaliar Fair in Saharanpur, Garhmuktesar fair and the Nauchandi fairs in the Meerut District. Towards the latter part of the year he was much occupied in connexion with the arrangements for the Kumbh melas at Hardwar and Brindaban for which he had to visit these places several times, and attend several meetings with local and railway officials besides undertaking much office work.

He also inspected some travelling dispensaries, sugar and glass factories, the water supply at Muttra, Brindaban and Hardwar, the office of one District Medical Officer of Health, and attended the meetings of certain district boards in connexion with the extension of the district health service. He checked 1,216 birth and death entries in certain towns and villages which he visited for inspection of vaccination.

(c) The charge of the II Range was held by me from 1st January to 28th February, 1937, in addition to my own duties as Director of Public Health. Dr. C. P. Trivedi, D.P.H., Medical Officer of Health, Agra, was appointed Assistant Director of Public Health for the II Range from 1st March, 1937.

As Assistant Director of Public Health, II Range, I supervised the medical and sanitary arrangements of the Magh Mela at Allahabad.

Dr. Trivedi was on tour for 156 days during the ten months for which he held the office of Assistant Director of Public Health.

He inspected public health aspects of rural development work in the districts of Mirzapur, Benares, Ballia, Sultanpur, Bara Banki, Etawah, Bahraich, Fyzabad, Jaunpur, Basti and Azamgarh.

He inspected vaccination in the towns and rural areas of Cawnpore, Benares, Ballia and Mirzapur and sanitation of the municipal towns of Ghazipur, Ballia, Jaunpur, Azamgarh, Lalitpur, Orai, Kalpi, Fyzabad, Basti, Gonda, Bahraich, Bara Banki, Etawah, Farrukhabad, Kanauj and Sultanpur.

He inspected anti-plague measures in the districts of Benares, Gorakhpur, Azamgarh, Fyzabad, Sultanpur, and anti-cholera measures in Etawah, District.

Dr. Trivedi supervised medical and sanitary arrangements of the Nauratra fair, Bindhachal, district Mirzapur, Ram Naumi and Sawan Jhula fairs in Ajodhia, Dadri Fair in Ballia, and Dewa Fair in Bara Banki.

He also inspected five travelling dispensaries, anti-rabic treatment centre at Gorakhpur, the offices of district medical officers of health at twelve places, and attended meetings of certain district boards in connexion with the extension of the district health service.

4. Two cases of false claims of travelling allowance—one by an officer of the United Provinces Public Health Service and the other by an officer of the United Provinces Subordinate Public Health Service—were brought to notice during the year under report and they are under investigation. The officer of the United Provinces Public Health Service has been suspended pending enquiry in his case.

5. The staff of the Head Office is considerably overworked and the need for an increase in staff which was applied for by my predecessors is keenly felt. My Head Assistant M. Raihanul Haque has however continued to maintain the efficiency of my office at a very high level. My thanks are due to him for his valuable assistance. Amongst the clerks deserving particular mention for their good work are Babu Maharaj Bahadur Srivastava, the Head Clerk, M. Afzal Ullah, my camp clerk and Messrs. Debi Prasad Saxena and A. C. Banerji.

K. P. MATHUR,

M.R.C.S., L.R.C.P., D.P.H., RAI BAHADUR,
Director of Public Health, United Provinces.

LUCKNOW:

1st July, 1938.

Report of the Director of Public Health
United Provinces

APPENDIX A

Forty-fourth Annual Report of the Board of Public Health, United Provinces for the year ending 31st March, 1935

The total amount placed at the disposal of the Board of Public Health for expenditure on Public Health Works during the year 1934-35 was Rs. 2,15,000 and consisted of the following items:

(1) Special assistance to District Boards	Rs. 1,00,000
(2) Special assistance to District Boards	Rs. 1,00,000
(3) Special assistance to District Boards	Rs. 1,00,000
(4) Special assistance to District Boards	Rs. 1,00,000

APPENDICES

to the

Report of the Director of Public Health United Provinces

It was further recommended to Government that the Board of Public Health, who have to deal with loans and grants to local bodies for major and important sanitary works, and as such, whose functions are far more responsible than those of the Board of Industrial Loans, Government of India should be placed under the Government and be placed under the control of the Government.

It was further recommended to Government that the Board of Public Health should be placed under the Government and be placed under the control of the Government.

During the year under report only two meetings of the Board were held, one at Naini Tal and the other at Lucknow. The Board was not held along with the Assembly session.

The following cases received the attention of the Board:

(1) Special Assistance to District Boards

A statement showing the loans derived from pilgrim tax and the expenditure incurred for the benefit of the pilgrims from the year 1931-32 to 1934-35 was submitted to the Board. It was submitted that the Board should be placed under the Government and be placed under the control of the Government.

APPENDICES

to the

Report of the Director of Public Health
United Provinces

APPENDIX A

**Forty-fourth Annual Report of the Board of Public Health,
United Provinces, for the year ending 31st March, 1938**

THE total amount placed by Government at the disposal of the Board of Public Health for expenditure on Public Health Works during the year 1937-38 amounted to Rs.1,79,431 and consisted of the following items :

	Rs.
(1) Grant for Special assistance to pilgrim centres (Recurring)	50,250
(2) Grant for Urban sanitation (Recurring)	66,181
(3) Grant for Rural and minor sanitary works (Recurring) ..	53,000
(4) Grant for Regrant of lapses	10,000
Total	<u>1,79,431</u>

These amounts after reappropriations sanctioned by competent authority stood as noted below :

	Rs.
(1) Special assistance to pilgrim centres	74,492
(2) Urban sanitation	54,581
(3) Rural and minor sanitary works	50,158
(4) E—Works	200
Total	<u>1,79,431</u>

It was represented to Government that the funds placed at the disposal of the Board of Public Health were very limited with the result that they had to postpone many important and urgent demands; and that the meetings held in a year are few and far between and therefore the President had to take action in the majority of the cases in anticipation of the approval of the Board who have only to confirm the action taken by him.

It was further represented to Government that the Board of Public Health, who have to deal with loans and grants to local bodies for major and important sanitary works, and as such, whose functions are far more responsible than those of the Board of Industrial Loan Commissioners at whose disposal the Government used to place a lump sum annually for the purpose of making advances to industrialists, should get a lump sum of say 10 to 12 lakhs for giving loans to local bodies for major sanitary works, provision for which should be made in the form of a fund which may be called the Local Bodies Loan Fund.

During the year under report only two meetings of the Board were held, one at Naini Tal and the other at Lucknow. The second meeting was held along with the Assembly session.

The following cases received the attention of the Board :

(a) Special Assistance to Pilgrim Centres

A statement showing the income derived from pilgrim tax and the expenditure incurred specifically for the benefit of the pilgrims from that income for the last three years was called for from all the local bodies having pilgrim centres in these provinces. It was considered by the Board and forwarded to the Director of Public Health to report if his demands were being met in full. He has reported that the

Municipal Boards of Brindaban, Hardwar, Mirzapur, Muttra and Soron are meeting the demands for public health works: whereas those of Allahabad and Benares are negligent in this respect. The Fyzabad Municipal Board make enormous savings annually from the pilgrim tax and can easily earmark at least Rs.30,000 per annum to finance the Ajodhya water supply and drainage schemes which are pending since long.

Ajodhya—An estimate amounting to Rs.4,20,750 for water supply and another estimate amounting to Rs.4,60,034 for the drainage of this town were approved by the Board of Public Health many years ago, but the works could not be taken in hand so far on account of the inability of the Fyzabad Municipal Board to finance them either from their own funds or by taking a loan. The statement referred to above revealed the fact that large savings to the extent of about Rs.30,000 annually accrue to the Fyzabad Municipal Board from pilgrim tax and it has been pointed out to them that the income from pilgrim tax, not spent on pilgrims, is ample to finance the water supply and drainage schemes. As these schemes were prepared in 1929 and have now become out of date, the Municipal Board have been advised to get them revised.

Baldeo (district Muttra)—The project amounting to Rs.26,856 for the drainage scheme of the Baldeo Town Area was sanctioned by the Board in 1935-36, but the scheme could not be taken in hand for want of funds. It must be said to the credit of this small Town Area Committee that it has collected funds to the extent of half the cost of the scheme and a grant of the other half has been sanctioned by the Board. The work will be taken in hand during the ensuing financial year.

Brindaban—The temporary water supply arrangements at the Kumbh Mela held at Brindaban during the year were entrusted to the Public Health Engineering Department. An estimate amounting to Rs.17,659 was submitted to and sanctioned by the Board of Public Health. A grant of Rs.7,000 was given towards its cost as well as sanction to the utilization of the unspent balance of Rs.822-0-5 out of the grant of Rs.17,538 sanctioned during the years 1934-35 and 1935-36 for the construction of three tube-wells at Brindaban towards the same was accorded.

Hardwar—In 1935-36 a grant of Rs.1.00 lakh was sanctioned by the Board towards the cost of the Hardwar drainage scheme, estimated at Rs.5,57,579, out of which, Rs.8,898 were paid in 1935-36, Rs.55,057 in 1936-37 and the balance, viz. Rs.36,045 have been paid during the year under report.

The estimate was revised to include the sewage farm and the revised estimate amounts to Rs.6,19,453. The Municipal Board asked for a further grant of Rs.100 lakh to complete the revised scheme in its entirety. The Board were unable to accede to the request of the Municipal Board out of their limited funds and therefore they recommended the grant to Government for special consideration who communicated the orders that a grant could not be given but if the Municipal Board were willing to take the whole amount as a loan Government would advance the necessary funds. The Municipal Board have been informed accordingly.

It was reported by the Director of Public Health that for want of funds the latrines and pail depots could not be constructed at Hardwar, and as the non-provision of these would seriously hamper the work of his department in maintaining sanitation at the Kumbh Fair, he requested the Board of Public Health to sanction a grant of Rs.20,000 for the purpose, which was made available by the Board.

A grant of Rs.8,000 to meet the extra cost involved in covering the drain for a distance of about 8 furlongs opposite the village Jagjitpur in connexion with the drainage scheme was refused for want of funds.

A loan of Rs.2,50,000 was made available to the Municipal Board during the year to meet the expenses of the Kumbh Fair.

Sanction was accorded to the project amounting to Rs.96,451 for town planning of Bhopatwala and training of Bagh Rao at Hardwar including construction of a bridge over Bagh Rao at an estimated cost of Rs.13,482.

Indian Red Cross Society, United Provinces Branch—For the last 11 or 12 years the Board have sanctioned to this Society every year a grant of Rs.12,000 for the production of cinema films on health and hygiene for exhibition purposes at fairs and religious gatherings. During the year under report a sum of Rs.5,000 only was made available.

An application for repeating the usual grant for 1938-39 was made by the Society. The Board decided that a grant of Rs.5,000 only be made available next year on the distinct understanding that no further grant will be sanctioned by them in future for this purpose.

Nimsar (district Sitapur)—The project amounting to Rs.18,000 for effecting improvements to Chakra Tirth at Nimsar was submitted to and approved by the Board and a grant of the entire cost sanctioned as a special case. The work will be taken in hand during the next financial year.

Pilgrim Route, Garhwal—The Board sanctioned grants aggregating Rs.20,000 towards the cost of constructing sweepers' huts on the pilgrim route, Garhwal, during the last four years. During the year under review, a further grant of Rs.5,000 on account of the 5th instalment has been sanctioned. The estimate amounting to Rs.44,188 for constructing 96 huts was sanctioned by the Board of Public Health in the year 1934-35.

The Director of Public Health resubmitted for sanction and allotment of full funds the project amounting to Rs.8,027 for the construction of cholera huts on the pilgrim route at Devprayag, Rudraprayag and Guptakashi in the Garhwal district. The project was approved and a grant of the entire cost sanctioned as a special case. The grant will be paid during the year 1938-39.

Piran Kaliar, district Saharanpur—The usual annual grant of Rs.2,797 was sanctioned to defray the cost of the sanitary arrangements at Piran Kaliar fair held in May, 1937.

From the inspection report of the year on the fair water supply, it was noticed that the supply was insufficient during the hot days of

the fair period. The fact was brought to the notice of the Sajjada Nashin Sahib and he was asked to consider the duplication of the plant to which he replied that he was not in a position to do so as no funds were available for the scheme. It was therefore decided by the Board that more particulars of the fair especially in regard to dates should be called for from him. If the fair is to be held in the cold weather less water will be required by the pilgrims and the scheme for the duplication of the plant will probably be not necessary.

(B) Urban Sanitation

Out of the schemes discussed by the Board during the year, projects for works, as detailed in Appendix III, the estimated cost of which aggregated Rs.21,45,910, were administratively or finally sanctioned. In addition to these, forecasts of cost for certain works were also approved.

The results of the chemical and bacteriological analysis of water of municipal water supplies for the year 1936-37 were considered and recorded. As decided by the Board last year that the Director of Public Health should submit along with the above results also a note on incidence of water-borne diseases in various municipalities so that they may be in a position to judge how far the improvement is required, the Director of Public Health forwarded two statements showing death rates from water-borne diseases, from which it was found that piped water supply is not the only factor influencing the incidence of intestinal diseases, but there are other factors also such as fly nuisance, overcrowding, drainage, etc. This is evident as the percentage of towns with piped water supplies showing low incidence was double that of towns with no piped water supplies.

All the water-works in these provinces were inspected by the Mechanical Engineer for water works during the year. The Board considered the action taken by the following Municipal Boards on the inspection reports of the Mechanical Engineer :

(1) Almora, (2) Cawnpore, (3) Fatehpur-Sikri, (4) Haldwani, (5) Hardwar, (6) Hathras, (7) Kosi, (8) Lucknow, (9) Meerut, (10) Mirzapur, (11) Muttra and (12) Naini Tal.

The action taken by these Municipal Boards with the exception of Meerut and Mirzapur was found more or less satisfactory.

The Meerut Municipal Board did not take satisfactory action on the inspection report of the Mechanical Engineer for the year 1935-36 and they were informed that if the state of affairs was not improved within a reasonable time, the fact would be reported to Government and would also be considered by the Board when the question of a grant-in-aid or a loan for any of their works, whatsoever, would come up. In spite of repeated reminders and reporting the matter to Commissioner, it was in August last that the Municipal Board submitted the report after more than a year and a half, from which it was noticed that the bad state of affairs still persisted and the Municipal Board were not willing to enforce most of the important recommendations made from time to time by the officers of the Public Health Engineering Department and had evaded or ignored the advice tendered by them to make improvements in the water supply undertaking. The Board of Public Health

had no alternative but to report the matter to Government but as subsequently they learnt from the Superintending Engineer, Public Health Department, that the Municipal Board had begun taking action and some improvements had already been effected, they decided to await a further report from the Public Health Engineering Department.

The condition of the Mirzapur water-works is far from satisfactory for the last several years and two years ago the Government were requested to take such action against the Board as they might find advisable under the Municipalities Act. No improvements are reported to have been made since then and the matter has again been referred to Government.

Allahabad—Sanction was accorded to the projects, part I for the provision of a new rising main across the Jumna Bridge, estimated to cost Rs 84,697 and part II for extensions to the sewage farm, estimated at Rs.1,05,695, in connexion with the sullage disposal scheme of the Municipality. But in view of the limited resources at the disposal of the Board of Public Health no grant could be made available and the Municipal Board had to apply for a loan of the entire cost viz. Rs.1,90,392 which has been recommended to Government for sanction.

Sanction was also accorded to the project amounting to Rs.1,97,694 for the Infectious Diseases Hospital but the Board of Public Health could not see their way to accede to the request of the Municipal Board for a grant of half the estimated cost and have asked them to take a loan of the entire cost.

It was noticed that the Municipal Board have not yet utilized the loan of Rs.50,000 sanctioned in 1934-35 for the purchase of meters and they were informed that if the loan is not utilized in the near future, the Government would be requested to withdraw it and utilize it elsewhere.

The Superintending Engineer, Public Health Department, has been asked to investigate and report if the Lowther Road Sewer is large enough to take the sullage from the Katra-Colonelganj drains as well as the drainage from the George Town New Extension Scheme without being overloaded.

Almora—A grant of Rs.1,000 equal to half the cost was sanctioned to the Almora Municipal Board for the construction of five incinerators.

Benares—The following projects were sanctioned:

	Rs.
(1) Water supply extension filtration plant ..	2,18,152
(2) Improvement of Kachauri Gali ...	13,804
(3) Trial bores at Tulsighat ..	1,825

A grant-in-aid asked for towards the cost of constructing a building for Child Welfare Maternity Centre at Benares, for which a project amounting to Rs.27,800 was submitted, was refused as the Board were not in a position to give grants for such purposes.

Dehra Dun—The project amounting to Rs.2,72,274 for water supply reorganization and extension of distribution system was sanctioned; but the Board owing to their limited resources were unable to make a grant of half the estimated cost asked for by the Municipal Board.

A loan of the entire cost had, therefore, to be applied for by them which was sanctioned by Government. However, at the end of the year, the Board of Public Health sanctioned a grant of Rs.12,275 towards this scheme by reappropriating the savings from other heads.

It must be said to the credit of the Dehra Dun Municipal Board that they have decided to try the scheme of general metering of all private connexions in the Municipality and a loan of Rs.15,000 asked for by them for the purchase of water meters, has been sanctioned by Government.

Sanction was also accorded to the revised estimate amounting to Rs.5,54,982 for Bandal Nadi water-supply extension.

The Board sanctioned in 1935-36 a project amounting to Rs.63,385 for Lakkhibagh drainage and made a grant of Rs.10,000 towards its cost on the condition that the Municipal Board would complete the scheme as their funds permit. It was reported during the year that the first instalment of the scheme had been completed and the grant of Rs.8,435 equal to half the cost of the second instalment was asked for, which was refused and the Municipal Board were asked to complete the scheme as previously decided.

Firozabad—A grant of Rs.3,000 for purchasing a motor lorry and another grant of Rs.5,000 for acquiring land for trenching purposes asked for by the Firozabad Municipal Board were refused as the Board considered that a grant for such purposes was not a fair charge on their funds.

Gonda—The Municipal Board asked for a grant of Rs.32,300 towards the cost of remodelling the north outfall in connexion with the drainage scheme, which was refused to them as the Board were averse to making any grant for the drainage scheme unless adequate flushing arrangements are provided.

Gorakhpur—Sanction was accorded to the supplementary project amounting to Rs.10,786 for the drainage extension (second instalment). A grant of the entire cost, viz., Rs.10,786 was also sanctioned as a special case.

Hardoi—The Board approved a programme for four years for improvement of wells in the Municipality and sanctioned grants for the last three years' programme. During the year under report, a grant of Rs.219, equal to half the cost of the fourth year's programme, was made.

Hathras—The estimate amounting to Rs.5,745 for providing a chlorinating plant in connexion with the water supply scheme was sanctioned and a grant of Rs.2,872, equal to half the cost, was made.

Jhansi—The Board sanctioned the project amounting to Rs.19,845 for the improvement of Ganda Nala in Sipri Bazar and made a grant of Rs.6,000 on the condition that the Municipal Board would contribute Rs.3,000 during the year and complete the scheme from their own funds during the next two years.

Sanction was accorded to the utilization of the saving of Rs.133 from the grant of Rs.4,997 made in 1935-36 for the construction of the Infectious Diseases Hospital at Jhansi towards the cost of installation of electric light to, and white washing of, the hospital.

Lucknow—Government were informed that there were serious deficiencies in the existing arrangements for the drainage and sewerage of the Lucknow-Urban Area as a whole and that there should be greater co-ordination between the several authorities which were responsible for it. In view of the great importance of this question from the point of the public health of Lucknow, a committee to enquire into and report on the subject was appointed by Government. The committee have submitted their report which is under the consideration of the Government.

The consideration of the project amounting to Rs.8,167 for installing a Venturi Flume Meter at the Jugauli sewage farm was postponed.

The failure of the Municipal Board to utilize the loan of Rs.50,000 sanctioned last year for the purchase of meters was noted by the Board who informed the Municipal Board that if meters were not purchased in the near future they would request Government to withdraw the loan and divert it towards some other urgent works.

Sanction was accorded to the project amounting to Rs.1,88,404 for the construction of an additional large settling tank at Aishbagh water-works; but the loan application of the Municipal Board for Rs.1,88,404 to finance the above project was returned to them with the remark that the work of providing additional pumping plant at Aishbagh and Gaughat water-works should be taken up first as the Superintending Engineer, Public Health Department, considers it more important than that of constructing an additional large settling tank.

Sanction was also accorded to the revised estimate amounting to Rs 64,978-15-6 for the Infectious Diseases Hospital and a further grant of Rs.8,000 was given towards its cost.

Muttra—A forecast of cost amounting to Rs.3,50,000 for the reorganization of the water supply was submitted to and approved by the Board and it was decided that the question of allotment of funds will be considered when detailed proposals are submitted.

The consideration of the question of constructing a Tuberculosis Hospital was postponed in view of the appeal issued by Her Excellency the Marchioness of Linlithgow in connexion with the King-Emperor's Anti-Tuberculosis Fund.

Sanction was accorded to the project amounting to Rs 19,294 for the construction of a 48 inch storm water drain in mohalla Antapara. A grant of Rs.9,294 was made by the Board of Public Health and a loan of Rs 10,000 was sanctioned by Government to meet the estimated cost.

A grant of Rs.865, equal to half the cost, was sanctioned for constructing a permanent light roofed structure at the Infectious Diseases Hospital.

Another grant of Rs.800 asked for the purchase of a refrigerator in connexion with the equipment of the hospital was refused as the board do not make grants for such purposes.

Permission was given to the utilization of Rs.426 of the unspent balance of Rs.462-13-8 from the grant of Rs.5,316 sanctioned in 1934-35 for reconstructing the dispensary block of the hospital towards

the cost of constructing three feet apron round the dispensary block and the Medical Officer's quarters and a privy and a store-room in the Medical Officer's quarter.

Muzaffarnagar—Sanction was accorded to the project amounting to Rs.70,200 for the drainage scheme. With regard to a grant of Rs.35,100, equal to half the cost of the scheme, it was decided that as the Board had no funds to make any grant the year under review, the Municipal Board should apply next year. Their application for a loan of the other half, viz. Rs.35,100 was recommended to Government for sanction but as the grant was not made available during the year, the loan was also not advanced.

Unao—A forecast of cost amounting to Rs.21,500 for the extension of water supply mains in the Stevensonganj, Parao and Civil Lines Area at Unao in connexion with the water supply scheme was approved and it was decided that the Municipal Board be informed that the Board would be prepared to consider favourably the question of a grant when detailed proposals are submitted and provided drains are constructed *pari passu* with the extension of water supply.

(C) Rural and Minor Sanitary Works

The practice hitherto followed in connexion with the allotment of funds for petty health works in rural areas of the provinces was that a list of such works proposed every year by the District Magistrates to be carried out in rural areas of their districts used to be called for and the available funds at the disposal of the Board of Public Health used to be allotted in rough proportion to their demands. During the year under review this practice was discontinued and system of divisional allotment in proportion to the population and the number of villages in each division was inaugurated, *vide* Appendix no. I.

Funds to the extent of Rs.50,158 were made available, as mentioned in Appendix II(c), for small public health works, such as drainage schemes, construction of new sanitary wells, improvement and repairs of existing wells, filling of depressions and so forth.

The Director of Public Health forwarded the statistics showing the number of villages in these provinces in which drinking water is available at a very great distance or not available at all, from which it was noticed that in 1,662 villages of these provinces distributed over 35 districts, good drinking water is not available, and that water is available only in small quantities in many other villages. The Board regarded this as a matter of great importance and represented to Government that if they are to give effect to the scheme of constructing wells in these villages to remove the hardship caused by the present insufficiency of drinking water, they will require a great deal of more money. The Government were pleased to provide more funds and a scheme to provide financial assistance was drawn up by them. The total cost of constructing a good pucca well of a diameter of 5 feet and depth 30 feet was estimated at about Rs.500 and the Government were to meet only the cost of material required for building the wells, subject to a maximum of Rs.375 for each well. A sum of Rs.35,000 was provided by the Government during the year for expenditure on constructing wells and in the first instance the Board were asked to

control and distribute the allotment. But, later on, the scheme was transferred to the Rural Development Department and therefore the Board could not take any action in the matter.

Anupshahr (district Bulandshahr)—A forecast of cost amounting to Rs.33,143 for the drainage scheme of this town was prepared by the Public Health Engineering Department in 1926. The District Magistrate, Bulandshahr, reported that the state of drainage of the town of Anupshahr, which is a pilgrim centre of considerable importance, is far from satisfactory and the drainage scheme can only be carried out if it is wholly financed by the Board of Public Health. In view of the inability of the Notified Area Committee to find even Rs.1,640 per annum towards the maintenance charges of the scheme, it was decided that the committee be asked to think of another scheme which will not entail such expensive maintenance charges.

Bareilly—The question of a grant of Rs.1,000 or alternatively 25 hand pumps for water supply arrangements during the mela held at Chaubari Ghat of Ram Ganga on the occasions of Jeth Dashehra and Kartik Puran Mashi Ashnan was considered by the Board and it was decided that the Director of Public Health be asked to report if the funds could not be used more profitably on the construction of pucca wells in the mela area as the Board do not view with favour the proposal for purchasing hand pumps.

Dewa (district Bara Banki)—A grant of Rs.5,880 has been placed at the disposal of the Executive Engineer, Well Boring Operations Division, Cawnpore, towards the cost of the extension of the pipe line along the Dargah Road and in the Shrine at Dewa. The estimate amounting to Rs.6,660 for this work had already been sanctioned by the Board.

Kosi (district Muttra)—Sanction was accorded to the project amounting to Rs.78,896 for Kosi Kalan drainage and the proposal of the Notified Area Committee to carry out the scheme piecemeal was approved. Also a grant of Rs.10,000 was sanctioned towards its cost and the Notified Area Committee were asked to contribute a similar sum by taking a loan of that amount.

Ramnagar (district Naini Tal)—The project amounting to Rs.14,000 for Ramnagar water supply was sanctioned by the Board of Public Health in the year 1936-37. A grant of Rs.7,000, equal to half the cost of the scheme was made by the Board during the year.

The consideration of the project amounting to Rs.19,182 for the drainage scheme was deferred until the water supply scheme was completed.

(D) E—Works

Dewa Fair water supply—A sum of Rs.200 was placed at the disposal of the Executive Engineer, Well Boring Operations Division, Cawnpore, for making payment of the final bill for the Dewa Fair water supply scheme which has been financed entirely by the Board.

Syed Salar Fair (Bahraich) water supply—Sanction was accorded to the fair project amounting to Rs.37,920 for Syed Salar Fair water

supply, but no funds could be made available as the provision for a grant for this work, made in the budget for the year under report, was not passed by Government.

Malaria Sub-Committee

As there was no important business which could be referred to the Sub-Committee, no meeting was held during the year under report. A few cases were, however, disposed of by the Chairman.

Rai Bahadur Dr. K. P. Mathur, M.R.C.S., L.R.C.P., D.P.H., Director of Public Health, held the office of the Chairman of the Sub-Committee throughout the year.

The following are the names of the members who served on the Sub-Committee during the year under report:

1. Col. J. A. S. Phillips, C.I.E., D.P.H., I.M.S., Inspector General of Civil Hospitals, United Provinces.
2. Mr. F. D. Tunncliffe, M.C., Superintending Engineer, Public Health Department, United Provinces.
3. Major D. R. Ranjit Singh, O.B.E., (late) I.M.S., Allahabad.
4. Rai Bahadur Dr. B. N. Vyas, M.B., Lucknow.
5. Khan Bahadur Hafiz Ghazanfarullah, Allahabad. From 1st April to 7th August, 1937.
6. Rai Bahadur Kunwar Surendra Pratap Sahi, Chairman, District Board, Sultanpur. From 1st April to 21st November, 1937.

Khan Bahadur Hafiz Ghazanfarullah and Rai Bahadur Kunwar Surendra Pratap Sahi ceased to be the members of the Sub-Committee on 7th August and 21st November, 1937, respectively, as their term of membership of the Board expired on these dates. The matter of appointing new members in these vacancies will be referred to the Board.

Dr. A. C. Banerjea, M.B.B.S., D.P.H., Assistant Director of Public Health (Malariology), United Provinces, continued to perform the duties of the Secretary to the Sub-Committee.

General

The budget estimate of the office of the Secretary as well as of the grants and loans for sanitary schemes for 1938-39 were approved and forwarded to Government but it was regretted that owing to the small number of meetings it was impossible for the Board to consider the budgets before submission to Government.

The last annual report of the Director of Public Health and the Superintending Engineer, Public Health Department, copies of which were supplied to members, were recorded.

The annual report on the working of the Board of Public Health for the year ending 31st March, 1937, prepared by the Secretary, was passed and a copy was forwarded to the Director of Public Health, United Provinces, for incorporation in his annual report, as usual.

It was further decided that a copy of the report be sent to the Secretary, Legislative Assembly, United Provinces, who was requested to inform the Honourable Members of both the Houses of the Legislature

that a copy of the same can be had on requisition from the Secretary of the Board.

A copy was also ordered to be supplied to the Press.

The following scale of charges for tender forms issued by the local bodies, as suggested by the Superintending Engineer, Public Health Department, was approved and recommended to Government for sanction :

Estimated amount	Charges per (set of two copies)
Rs.	Rs.
5,000 to 10,000	2
10,001 to 15,000	3
15,001 to 20,000	4
20,001 to 30,000	5
30,001 to 50,000	6
50,001 to 75,000	7
75,001 to 1,25,000	8
1,25,001 and more	10

The proposal of Messrs. Duncan and Stratton and Company of Bombay for sewage disposal in large municipalities of the United Provinces, which was circulated to the Municipal Boards of Agra, Allahabad, Benares, Cawnpore and Lucknow for consideration, was ordered to be shelved as none of these Boards expressed their willingness to adopt the scheme.

The term of membership of the following members expired in February, 1937 and Government were requested to appoint members for a term of two years in these vacancies :

1. Khan Bahadur Muhammad Maqsud Ali Khan Saheb, Saharanpur.

2. Chaudhri Dharya Singh, M.B.E., Bharaul, Mainpuri.

Government orders regarding filling up of these vacancies have not yet been received.

Dr. Mahmud Ullah Jung, Bar-at-law, M.L.C., and Pandit Dwarka Prasad* Misra, B.Sc., LL.B., Chairman, District Board, Bareilly, were appointed by Government as members of the Board up to the afternoon of the 22nd March, 1939 [and not for the usual term of two years as laid down in Public Health Department notification no. 176/XVI-(P.H.)—51-22, dated 23rd May, 1923], vice Khan Bahadur Hafiz Ghazanfarullah and Rai Bahadur Kunwar Surendra Pratap Sahi whose term of office expired on 8th August and 22nd November, 1937, respectively.

During the year under report, the office of the President was held by Mr. H. Bomford, C.I.E., I.C.S., Junior Member, Board of Revenue, till 2nd March, 1938, when he handed over charge to Mr. P. W. Marsh, C.I.E., I.C.S., Junior Member, Board of Revenue.

Mr. K. Chattopadhyaya held the office of the Secretary till 7th May, 1938, when Mr. S. G. Naravane took over charge from him.

The following members served on the Board during the year under report :

Names	From	To
1. Colonel J. A. S. Philips, C.I.E., D.P.H., I.M.S., Inspector General of Civil Hospitals, United Provinces.	1st April, 1937..	31st March, 1938.
2. Mr. A. B. Reid, C.I.E., I.C.S., Secretary to Government, United Provinces, Local Self-Government and Public Health Departments.	Ditto ..	24th September, 1937.
3. Mr. S. P. Shah, I.C.S., Secretary to Government, United Provinces, Local Self-Government and Public Health Departments.	25th September, 1937.	31st March, 1938.
4. Rai Bahadur Dr. K. P. Mathur, M.B.C.S., L.R.C.P., D.P.H., Director of Public Health, United Provinces.	1st April, 1937..	Ditto.

12. Khan Bahadur Shah Nazar Husain, Rais and Special Magistrate, post office Behat, district Saharanpur.	Ditto ..	31st March, 1938.
13. Rai Bahadur Kunwar Surendra Pratap Sahi, Chairman, District Board, Sultanpur.	Ditto ..	21st November, 1937.
14. Pandit Dwarka Prasad Misra, B.Sc., LL.B., Chairman, District Board, Bareilly.	22nd November, 1937.	31st March, 1938.

S. G. NARAVANE,

LUCKNOW : *Secretary, Board of Public Health,*
United Provinces.
Dated May 31, 1938.

APPENDIX I

No. 1426-35/BPH.—543/23

FROM

K. CHATTOPADHYA, Esq.,

SECRETARY, BOARD OF PUBLIC HEALTH,

UNITED PROVINCES,

TO

ALL COMMISSIONERS OF DIVISIONS,

UNITED PROVINCES.

Dated Lucknow, April 30, 1937.

SIR,

I AM directed to refer you to the memorandum of instructions in connexion with the submission of proposals for small public health works in rural areas, circulated with this office letter no. 1625-34/B P.H.—543/23, dated October 27, 1933, and to say that the practice hitherto followed in calling for lists of small public health works proposed by the District Magistrates to be carried out in rural areas of their districts and allotting the available funds at the disposal of the Board of Public Health in rough proportion to their demands was examined by the Board of Public Health at their meeting held on March 8, 1937, and it was decided that grants for small public health works should in future be given in proportion to the population and the number of villages in each division.

2. In view of this decision they did not pass any order on the requisitions and lists received from many districts. The grants will henceforth be allotted to the divisions in proportion to the population and the number of villages in each division. In suggesting the allotment to districts, Commissioners should endeavour as far as possible to follow the same principle and a table showing the allotment calculated for each district on the basis of population and number of villages is attached for guidance. The District Magistrates should, therefore, as soon as possible submit applications in the prescribed form together with the necessary plans and estimates for the works which they may select for execution during the current financial year for grants-in-aid having regard to the amount noted against each district. It will be open to Commissioners to suggest variation of the allotments from district to district having regard to the urgency or importance of the works proposed.

3. I am to add that applications for grants-in-aid together with necessary plans and estimates should in future be submitted to this office by the middle of March every year, at the latest, so that after getting the proposals scrutinized technically it may be possible to allot funds in the beginning of each financial year. This will enable the District Officers to start the works in April or May and thus avoid the risk of lapses or the works remaining incomplete at the end of a financial year. The submission of the list by February 1 will not henceforth be necessary. It may be noted that other conditions and rules for the allotment of these grants remain unaltered and should be strictly complied with.

4. I am to add further that the total amount placed at the disposal of the Board of Public Health for allotment towards the cost of small public health works at present is Rs.53,000, including a recurring grant of Rs.700 for the town areas in the Muzaffarnagar district. A sum of Rs.50,000 has, therefore, been divided between all the divisions and the balance of Rs.2,300 has been kept aside for meeting urgent demands. It may be mentioned here that the amount distributed in the table attached does not include the amount of regrants for which money to the extent necessary will be allotted separately.

I have the honour to be,

SIR,

Your most obedient servant,

K. CHATTOPADHYA,

*Secretary, Board of Public Health,
United Provinces.*

No. 1436-1513/B.P.H.—543/23

COPY forwarded for information and guidance to—

- (1) All District Magistrates, United Provinces.
- (2) All District Medical Officers of Health, United Provinces.

No. 1514-15/B.P.H.—543/23

COPY also forwarded to the Director of Public Health, United Provinces, and the Superintending Engineer, Public Health Department, United Provinces, for information.

By order,

K. CHATTOPADHYA,

*Secretary, Board of Public Health,
United Provinces.*

Table showing the percentage of grant to be given for small public health works for each division in proportion to the population and number of villages in each division
