Seventy-third Annual Report of the Director of Public Health, United Provinces, for the year ending 31st December, 1940

CHAPTER I  
METEOROLOGY

During the cold weather the rainfall was normal except in the month of February when it was in excess. Relative humidity was in excess in February and both the maximum and minimum temperatures were normal.

The hot weather was dry. The rainfall was in excess in March, normal in April and in moderate defect in May. Humidity was in defect. Maximum temperature was below normal in March while the minimum temperature was above it in May.

The monsoons started late and were associated with a few breaks. They withdrew from the province about the 25th of September. During the retreating monsoon period October-December the weather was generally dry and the rainfall was scattered and deficient. Humidity and temperature were normal.

The total rainfall was in slight defect in the east of the province and normal in the west.

## CHAPTER II

*Chief Vital Statistics and population*

The chief vital statistics of the United Provinces during 1940 were :

(1) Population according to 1931 census on which rates in the various statistical statements attached to the report have been calculated	.. .. .	48,408,763
(2) Mid year estimated population by the natural increase method (1940)	.. .. .	54,200,289
(3) Births	.. .. .	1,680,595
Birth rate per mille (census population)	.. .. .	34.72
Birth rate per mille (estimated 1940 population)	.. .. .	33.01
(4) Deaths	.. .. .	1,054,181
Death rate (census population)	.. .. .	21.78
Death rate (estimated 1940 population)	.. .. .	19.45
(5) Birth and death rates in the chief communities of the province—		
	Birth rate	Death rate
Hindus	.. .. . 34.69	21.78
Muslims	.. .. . 35.70	22.65
Europeans and Anglo-Indians	.. .. . 7.71	3.14
Indian Christians	.. .. . 10.28	5.01
Other classes	.. .. . 25.45	13.81
(6) Infantile mortality rate per 1,000 births	.. .. .	135.34
Mortality amongst infants was the highest (24,056) in the month of June, and the lowest (14,687) in the month of February, 1940.		
(7) Still Births	.. .. .	11,360

These figures by classes were as follows :

Amongst Hindus	.. .. .	8,839
" Muslims	.. .. .	2,467
" Christians	.. .. .	22
" other classes	.. .. .	32

(8) *Verification of causes of deaths*—During the year under report 5,172 deaths were verified by civil surgeons and their subordinate medical officers. Of these total verified deaths 898 were among children, 3,016 among adults from 16 to 45 years of age and 1,258 among adults exceeding 45 years of age.

(9) *Verification of registration of vital statistics*—During 1940, 1,339,600 entries of births and deaths were checked by the vaccination staff, 346,000 by the district health staff and 900 by the Assistant Director of Public Health, I Range.

(10) *Neglect to comply with registration rules*—The number of persons fined and the amount of fines realized for non-compliance of these regulations were 1,303 and Rs.666 respectively. 110 cases were compounded on payment of Rs.60 and one person was let off with a warning.

(11) The birth, death and infantile mortality rates of the United Provinces as compared with those of other provinces :

Province				Birth-rate	Death-rate	Infantile mortality rate
United Provinces	..	..	..	34.72	21.78	135.34
Bombay	..	..	..	42.07	27.91	169.36
Madras	..	..	..	38.65	24.96	168.66
Bengal	..	..	..	33.70	22.26	159.28
Bihar	..	..	..	30.8	19.1	150.6
Orissa	..	..	..	35.85	24.72	183.09
Assam	..	..	..	30.80	18.78	141.75
Central Provinces	..	..	..	37.58	30.30	226.07
Punjab	..	..	..	47.84	27.94	178.22
North-Western Frontier Province	..	..	..	29.87	21.60	144.17
Delhi..	..	..	..	53.31	27.87	158.70
Sind ..	..	..	..	21.15	18.77	115.72

## CHAPTER III

GENERAL HEALTH OF THE PROVINCE INCLUDING EPIDEMIOLOGY  
OF CHIEF DISEASES

## CHOLERA

The following table shows the total cholera mortality in the province during the past decennium :

Year				Deaths	Year				Deaths
1931	..	..	..	81,118	1936	..	..	6,798	
1932	..	..	..	9,734	1937	..	..	6,341	
1933	..	..	..	1,915	1938	..	..	70,622	
1934	..	..	..	81,908	1939	..	..	27,782	
1935	..	..	..	10,412	1940	..	..	26,099	

The mortality in towns and rural areas during 1940 was 1,822 and 24,277, respectively, giving a death-rate of .33 and .56. The death-rate for the province as a whole was .54 against the quinquennial average of .50.

The number of deaths from cholera during the various quarters of the year was:

Quarter					Number of deaths
First (January to March) .. .. .	..	..	..	..	168
Second (April to June) .. .. .	..	..	..	..	4,742
Third (July to September) .. .. .	..	..	..	..	16,447
Fourth (October to December) .. .. .	..	..	..	..	4,742
				Total	26,099

The mortality was the highest in the third quarter of the year amounting to 63 per cent. of the annual figure. The highest figures were recorded in September and the lowest in February.

The two divisions of Benares and Gorakhpur, comprising eight districts, recorded 17,700 deaths from cholera or nearly 68 per cent. of the total deaths, while the population of these two divisions is roughly only 25 per cent. of the provincial total. Thus the bulk of cholera mortality occurred in these two divisions during the third quarter of the year.

In the extreme eastern districts of the province, the epidemic commenced in March and April, while in the extreme western districts it did not commence till May and June.

Besides the district health staff and medical officers of travelling dispensaries, 20 temporary medical officers were engaged for varying periods for epidemic duty.

The number of anti-cholera inoculations performed during the year was 837,307. The other anti-epidemic measures consisted of permanganation of wells, disinfection of infected houses and articles, isolation of

the sick and their treatment with essential oils mixture or kaolin and prophylactic treatment of contacts with essential oils mixture.

Thirty-three thousand lbs. of permanganate of potash were supplied for disinfection of wells and 21,150 lbs. of kaolin and 1,685 lbs. of essential oils mixture were distributed. Monetary grants amounting to over Rs.11,000 were made to affected districts for incidental expenses connected with anti-epidemic measures. Temporary regulations under the Epidemic Diseases Act were enforced where necessary.

### PLAGUE

2. The following table shows the total mortality from plague in the province during the past decennium:

Year						Deaths
1931	..	..	..	..	..	81,225
1932	..	..	..	..	..	21,497
1933	..	..	..	..	..	9,835
1934	..	..	..	..	..	47,688
1935	..	..	..	..	..	23,019
1936	..	..	..	..	..	7,290
1937	..	..	..	..	..	24,036
1938	..	..	..	..	..	13,436
1939	..	..	..	..	..	21,662
1940	..	..	..	..	..	11,725

During 1940 the mortality recorded in towns was 935 and in the rural areas it was 10,790, giving rates per mille of .17 and .25 respectively. The provincial death-rate was .24 against the quinquennial average of .37.

The number of deaths from plague during the four quarters of the year was:

Quarter						Deaths
First	..	..	..	..	..	7,263
Second	..	..	..	..	..	4,095
Third	..	..	..	..	..	92
Fourth	..	..	..	..	..	275
					Total	11,725

The first quarter recorded the largest number of deaths, accounting for 62 per cent. of the annual total. The month recording the highest mortality was March, while the month with the least mortality was August.

The Benares and Gorakhpur divisions recorded 11,060 deaths from plague or nearly 94 per cent. of the provincial mortality. Thus, it is in these two divisions and during the first quarter of the year that the epidemic was mostly prevalent. The infection in these eight districts continued practically throughout the year and the worst infected district was Jaunpur. The only districts other than those of Benares and Gorakhpur divisions which showed any appreciable infection were Fyzabad in the eastern part of the province and Saharanpur at the extreme west of the province.

The central and southern districts of the province were free from plague.

Inoculation, evacuation and destruction of rats and rat-fleas were the principal preventive measures enforced. Routine anti-rat campaign

was carried out in 12 districts and 26 municipalities. Owing to the stoppage of supplies of calcid, fumigation of premises where rat mortality or cases of human plague were reported was carried out with cyanogas 'A' dust.

During the financial year 1939-40, covering the main plague season of the year under report Rs.2,500 and Rs.3,000 were given by Government as special grants to the municipalities of Gorakhpur and Mirzapur, respectively, on condition that the municipal boards spent an equal amount. In these two towns severe out-breaks of plague had been occurring in the past.

The mortality from plague in these towns during the last five years was as under :

Year	Deaths	
	Gorakhpur	Mirzapur
1936	198	..
1937	78	3
1938	40	411
1939	16	359
1940	..	6

The epidemic was successfully dealt with in these towns as the mortality from this cause in Gorakhpur was nil and in Mirzapur there were only 6 deaths during the year under review.

193,046 preventive inoculations were given during the year. In places where the epidemic was virulent temporary regulations to enforce effective anti-plague measures including evacuation of infected premises were applied with successful results.

### SMALLPOX

3. The mortality from smallpox during the past ten years has been as under :

Year	Deaths
1931	3,855
1932	2,779
1933	9,844
1934	14,817
1935	26,032
1936	14,849
1937	3,200
1938	4,411
1939	10,205
1940	15,861

The mortality in towns and rural areas during 1940 was 3,765 and 12,096. The respective rates per mille of the population were .69 and .28. The mortality for the whole province worked at .33 as compared with .24 for the previous quinquennium.

The distribution of the mortality from smallpox during the quarterly periods of the year was :

Quarter	Deaths
First .. .. .	3,930
Second .. .. .	7,878
Third .. .. .	2,728
Fourth .. .. .	1,325
Total .. .. .	15,861

The second quarter of the year recorded the largest number of deaths, amounting to 50 per cent. of the annual total. The mortality was the highest during May and the lowest during October.

The two divisions of Gorakhpur and Benares recorded 6,924 deaths, viz. 44 per cent. of the provincial total. Relative to their population strength which is 25 per cent. of the provincial total, these two divisions, showed a higher mortality figure, although this is not so well marked as in the case of cholera and plague.

It may be stated that in all the eight districts in these divisions the disease continued in all the months of the year. The districts which recorded the highest mortality rate from smallpox in the province were Bijnor (1.78), Jaunpur (1.34), and Fatehpur (1.18).

In the table below, the particulars of cases treated with regard to their vaccinal state are set out. These cases relate only to those segregated and treated in the infectious diseases hospitals, where such exist, and in general hospitals with infectious wards :

Serial number	Name of place where the smallpox hospital is situated	Number of patients treated in the hospital	Vaccinal condition of the patients treated in the hospitals				Remarks
			Vaccinated as evidenced by presence of one or more vaccination cicatrices	Stated to have been successfully vaccinated, but no vaccination cicatrix present	Stated to be unvaccinated or vaccinated unsuccessfully and no vaccination cicatrix present	Previously unvaccinated, but vaccinated during incubation of smallpox	
1	Dehra Dun ..	49	34	..	15	..	One unvaccinated died.
2	Rikhikesh ..	11	5	..	3	3	
3	Mussoorie ..	7	5	..	2	..	All cured.

11	Allahabad ..	50	11	..	37	..	
12	Jhansi ..	2	..	..	2	..	

Serial number	Name of place where the smallpox hospital is situated	Number of patients treated in the hospital	Vaccinal condition of the patients treated in the hospitals					Remarks
			Vaccinated as evidenced by presence of one or more vaccination cicatrices	Stated to have been successfully vaccinated, but no vaccination cicatrix present	Stated to be unvaccinated or vaccinated unsuccessfully and no vaccination cicatrix present	Previously unvaccinated, but vaccinated during incubation of smallpox	Stated to have been successfully re-vaccinated	
13	Benares ..	98	51	..	42	..	..	Four vaccinated and ten unvaccinated died.
14	Naini Tal ..	32	15	4	13	..	..	
15	Lucknow ..	190	99	..	91	..	..	35 unvaccinated and 16 vaccinated died.
16	Ajodhya (Fyzabad)	11	8	..	3	..	..	Three unvaccinated died.
17	Moradabad ..	5	..	..	5	..	..	

A separate note on vaccination is contained in Chapter XII.

### FEVERS

4. *All fevers*—The mortality from fevers distributed over quarterly periods during 1940 was:

Quarter						Deaths
First	..	..	..	..	..	186,239
Second	..	..	..	..	..	224,117
Third	..	..	..	..	..	198,982
Fourth	..	..	..	..	..	204,334
					Total	813,622

The mortality was the greatest in the second quarter, followed closely by the fourth.

There was a decrease under fevers during 1940, from the previous year, the recorded figures being 813,622 against 858,491. The respective death-rates were 16.81 and 17.73, while the quinquennial rate was 18.07. Fevers accounted for about 77 per cent. of the total mortality from all causes in the province during 1940. Statement IX sets out the number of deaths under fevers and the mortality rates of each district and gives the monthly distribution of the deaths.

High mortality rates were noticed in the districts of Bareilly (27·64), Bijnor (26·53), Jhansi (25·42) and Pilibhit (24·95).

The mortality recorded under this head and the rate per mille in towns and rural areas were :

				Mortality	Rate
Towns	..	..	..	65,697	12·07
Rural areas	..	..	..	747,925	17·41
Total				813,622	16·81

The towns with high mortality rates were Islamnagar (Budaun) 56·22, Harduaganj (Aligarh) 45·33 and Afzalgarh (Bijnor) 44·05.

(a) *Malaria*—There were 717,319 deaths recorded under malaria during 1940 as compared with 754,168 during the previous year, the mortality rates being respectively 14·82 and 15·58. 690,692 deaths were reported from the rural areas and 26,627 from the urban areas, the respective mortality rates being 16·07 and 4·89.

The mortality as recorded under malaria is greatly exaggerated and during 1940 formed as much as 68 per cent. of the total mortality of the province. This is due to the system of reporting in the rural areas through the village chowkidar under which practically all cases in which fever is a symptom are relegated to this group.

The six districts comprising the Rohilkhand division recorded the highest rates in the province.

Ten districts reported localized outbreaks of malaria epidemics.

Further details on malaria control schemes are given in Chapter VII.

(b) *Enteric fever*—There were 6,615 deaths from enteric fever during 1940, there being a decrease under this head from the previous year during which year there were 7,367 deaths. The urban and rural areas contributed 3,923 and 2,692 deaths with death-rates of ·72 and ·06.

Statement VI(a) gives the details of district figures.

(c) *Relapsing fever*—The number of deaths reported under this head during 1940 was slightly lower than that in the previous year, the figures being 51 and 187, respectively. The urban and rural contributions were 29 and 22.

Statement VI(a) gives the distribution according to districts and towns.

(d) *Kala-azar*—There were 83 deaths from kala-azar during 1940 against 81 during 1939. The respective urban and rural figures for 1940 were 25 and 58.

Recent investigation into the prevalence of this disease disclosed that the districts of Benares and Gorakhpur have been recording the largest number of cases. Government have accordingly made arrangements for the treatment of these cases in the following five specially equipped centres :

- (1) King Edward VII Hospital in the Benares municipality.
- (2) Chandauli in the Benares district.
- (3) Gorakhpur „ „ } In the Gorakhpur district
- (4) Deoria „ „ }
- (5) Maharajganj „ „ }

As the cases of kala-azar were found more common in Lachhmipur village than in Maharajganj (Gorakhpur district) the centre at the latter place was shifted to Lachhmipur.

The public health staff in these places are on the lookout of kala-azar cases and they advise sufferers to go to these hospitals for treatment. In obscure cases specimens are sent by the hospitals to the Provincial Pathologist in the King George's Medical College, Lucknow, for diagnosis.

In certain other eastern districts intensive surveys are in progress to delimit foci of infection, as it is suspected that the disease is more prevalent than current mortality or hospital attendance figures suggest.

### INFLUENZA

(e) *Influenza*—The number of deaths reported from influenza during the year under report was 195 from urban areas and 149 from rural areas.

(f) *Cerebro-spinal meningitis*--During 1940, deaths from this disease aggregated 76 against 89 of the preceding year. 60 of these were reported from towns and 16 from rural districts. Mortality was most conspicuous in the towns of Agra (14), Karwi (Banda) (9), Benares (5) and in the rural areas of Agra (6) and Jhansi (8).

Serum treatment was given to the patients admitted in civil hospitals and necessary preventive measures were adopted to check the spread of the disease.

### DYSENTERY AND DIARRHOEA

5. The quarterly distribution of the deaths recorded during 1940 under this head was :

Quarter						Deaths
First	..	..	..	..	..	2,326
Second	..	..	..	..	..	5,096
Third	..	..	..	..	..	5,151
Fourth	..	..	..	..	..	3,665
				Total	..	16,238

The third quarter followed closely by the second recorded the largest number of deaths. The mortality under this group of causes decreased during 1940 as compared to the previous year, the recorded figures being 16,238 and 17,962, respectively. The death-rates for these years were .33 and .37. The mortality was the highest in June and the lowest in February. The respective mortality in urban and rural areas was 11,430 and 4,808 with death-rates per mille of 2.10 and .11.

The districts recording high rates were Garhwal (3.94), Dehra Dun (1.43), Moradabad (1.40) and Almora (1.08).

The towns with high rates were—Lalitpur (Jhansi) (10.06), Jalesar (Etah) (8.35) and Hapur (Meerut) (8.20).

### RESPIRATORY DISEASES

6. *All respiratory diseases*—The quarterly distribution of mortality from this group of causes during 1940 was :

Quarter						Deaths
First	..	..	..	..	..	11,393
Second	..	..	..	..	..	10,901
Third	..	..	..	..	..	8,618
Fourth	..	..	..	..	..	9,381
				Total	..	40,293

The distribution was fairly even in the four periods of the year, with slight excess during the first and second quarters.

The highest recorded mortality occurred in January and the lowest in July. The disease caused slightly lower mortality during 1940 than the preceding year, the figures being 40,293 and 41,398, respectively. The respective death-rates were  $\cdot 83$  and  $\cdot 85$ , while the mean for the previous five years was  $\cdot 92$ .

The mortality under this head in urban and rural areas was 32,654 and 7,639. The death-rates for these areas were 6 $\cdot$ 00 and  $\cdot 18$ .

The districts which recorded high rates were, Hamirpur (4 $\cdot$ 89), Agra (3 $\cdot$ 64), Cawnpore (3 $\cdot$ 36), Dehra Dun (3 $\cdot$ 21) and Lucknow (3 $\cdot$ 21).

The towns of Budaun (18 $\cdot$ 63), Cawnpore (17 $\cdot$ 92) and Agra (16 $\cdot$ 40) also recorded high rates.

*Pulmonary tuberculosis*—In 1940, the total number of deaths recorded from pulmonary tuberculosis was 5,839 (5,263 in urban areas and 576 in rural areas), giving a death-rate of  $\cdot 12$  for the province as a whole.

Mortality was most conspicuous in the towns of Cawnpore (4 $\cdot$ 50), Budaun (3 $\cdot$ 41) and Bijnor (3 $\cdot$ 66).

The number of deaths recorded from tuberculosis of joints was 169 (63 from urban areas and 106 from rural areas.)

The number of deaths recorded from other tubercular diseases was 2,010 (1,315 in urban areas and 695 in rural areas).

### EPIDEMIC DROPSY

7. During 1940, 55 deaths were reported from this disease against 29 in the preceding year. Of these 47 were reported from towns and 8 from rural districts. The largest number of deaths (15) was reported from Benares city.

All the cases were treated either in the infectious diseases hospitals or at the fixed dispensaries.

Necessary preventive measures were taken to check the spread of the disease.

People were advised to exclude rice and mustard oil from their diet and to take plenty of green vegetables and fruits.

### DEATHS FROM CHILD-BIRTH

8. In 1940 altogether 1,921 deaths were recorded as having occurred in the province from child-birth (1,488 in towns and 433 in rural areas) against 2,230 deaths in 1939 (1,710 in urban and 520 in rural areas).

### INJURIES

9. 16,669 deaths were recorded under this head during 1940 of which 1,387 were due to suicides, 11,911 to wounds or accidents, 3,141 to snake-bites or wild beasts and 230 to rabies.

### ALL OTHER CAUSES

10. The deaths on this account were 113,674 in 1940, yielding a death-rate of 2 $\cdot$ 35 against 122,148 and 2 $\cdot$ 52, respectively, in the preceding year.

CHAPTER IV

FAIRS AND FESTIVALS

As usual, the medical and sanitary arrangements of important fairs were organized and supervised by the assistant directors and those of smaller fairs by the local public health staff. Due precautions to prevent importation of infectious disease into the fair area and its spread therefrom were taken by the enforcement of Epidemic Regulations and the institution of posts for inspection of pilgrims travelling by rail or road. The latter measure was taken only in connection with important fairs of the year viz., Magh Mela, Allahabad, Dadri fair, Ballia and the Ram Naumi and Sawan Jhula fairs, Ajodhya.

2. Rural Uplift, agricultural, industrial and rural development exhibitions were also held in several districts.

3. All the fairs and congregations passed off without the occurrence of any infectious disease in an epidemic form except for some cases of cholera in the fairs at Ajodhya.

4. The hygiene publicity bureau undertook publicity of public health measures by means of cinema demonstrations and public health exhibitions in important fairs.

EPIDEMIOLOGY

During 1940-41 4 cases were reported from the district against 23 in the preceding year. Of these 4 were reported from towns and 8 from rural districts. The largest number of deaths (15) was reported from Benares city.

All the cases were treated either in the infectious diseases hospitals or in the district hospitals. In the district hospitals the patients were treated in the wards and in the infectious diseases hospitals they were treated in the wards. The patients were treated in the wards of the infectious diseases hospitals and in the district hospitals. The patients were treated in the wards of the infectious diseases hospitals and in the district hospitals.

DEATHS FROM CHILD-BIRTH

In 1940-41 181 deaths were reported as having occurred in the province from child-birth (1,234 in towns and 421 in rural areas) against 2,300 deaths in 1939 (1,710 in towns and 590 in rural areas).

LEPROSY

1,668 deaths were reported under this head during 1940-41 which was as against 1,611 in 1939. The number of deaths in 1940-41 was 1,668 and in 1939 it was 1,611.

ALL OTHER CAUSES

The deaths on this account were 1,18,874 in 1940-41 against 1,18,874 in 1939. The deaths on this account were 1,18,874 in 1940-41 against 1,18,874 in 1939.

## CHAPTER V

## URBAN SANITATION (INCLUDING NOTIFIED AREAS AND MUNICIPAL WATER-SUPPLIES)

The number of medical officers of health in municipalities remained unchanged during the year. The scale of sanitary inspectors for some of the municipalities was raised on the basis of increase in population revealed by the census of 1931.

2. The sanitary conditions of municipal towns continued to be the same as reported last year excepting minor works consisting of repairs to roads, drains, markets, etc. which were undertaken by several municipal boards on the recommendations of inspecting officers. The municipal board of Allahabad, constructed sewer lines on Grand Trunk and Lowther Roads for storm water. The municipal board of Benares also extended sewer lines in various parts of the city. The Fatehpur municipality constructed 1,908 feet of new drains.

3. A table giving particulars in regard to daily consumption of water, analytical results, etc. of the existing water supplies for the calendar year 1940 is appended below :

Serial number	Towns with water supplies	Daily consumption of water per head in gallons during 1940	Number of house connections since the opening of water works up to 31st December, 1940	Number of samples analysed during 1940		Number of samples that came up to the standard	
				Chemically	Bacteriologically	Chemically	Bacteriologically
1	Dehra Dun .. ..	17.2	1,519	12	203	12	200
2	Mussoorie .. ..	15.8	1,013	15	225	15	222
3	Hardwar Union ..	31.3	417	9	148	9	121
4	Meerut .. ..	19.1	2,540	4	90	4	67
5	Aligarh .. ..	6.9	851	6	102	3	84
6	Muttra .. ..	16.6	3,014	8	154	7	42
7	Hathras .. ..	9.4	637	4	157	4	127
8	Kosi .. ..	12.8	58	4	23	4	18
9	Agra .. ..	22.5	5,661	4	158	4	157
10	Moradabad .. ..	2.1	741	4	50	4	31
11	Fatehpur Sikri ..	11.1	17	2	10	2	10

Serial number	Towns with water supplies	Daily consumption of water per head in gallons during 1940	Number of house connections since the opening of water works up to 31st December, 1940	Number of samples analysed during 1940		Number of samples that came up to the standard	
				Chemically	Bacteriologically	Chemically	Bacteriologically
12	Cawnpore .. ..	48.8	19,853	4	208	4	178
13	Allahabad .. ..	35.6	9,899	4	216	4	106
14	Jhansi .. ..	5.9	171	12	153	..	13
15	Benares .. ..	45.7	18,629	4	171	4	131
16	Mirzapur .. ..	23.1	3,334	4	71	2	44
17	Naini Tal .. ..	15.0	629	16	267	14	192
18	Haldwani .. ..	14.4	215	2	12	2	4
19	Almora .. ..	11.4	9	..	90	..	11
20	Lucknow .. ..	41.4	17,835	4	211	4	113
21	Unao .. ..	7.9	382	4	50	4	41
22	Gola Gokarannath .. ..	3.4	12	3	4	3	1
23	Fyzabad .. ..	22.3	1,784	4	90	4	77
24	Jaunpur .. ..	5.0	422	4	47	3	28
25	Bhowali* .. ..	..	4	No analysis was done			
26	Ghazipur .. ..	7.9	458	3	19	3	13
27	Bahraich .. ..	..	..	1	2	..	..

\*There are only four public standposts and no private house connections.

As usual in nearly all towns with piped water supplies water analysis was carried on by medical officers of health in municipal laboratories. For control purposes samples of water were also examined at the Provincial Hygiene Institute.

4. Seven samples from railway stations were analysed during fairs and epidemics and reports of analysis received from the Railway Divisional Medical Officers were scrutinized at the Provincial Hygiene Institute. The railway authorities were, as necessary, advised to improve their water supplies.

## CHAPTER VI

### RURAL SANITATION

The sub-joined table will show the work done under the "village aid" scheme :

	1939	1940
1. Number of village aid dispensaries .. ..	4,122	3,907*
2. Number of village aiders trained in hygiene and first aid .. ..	40,327	39,676
3. Number of school teachers, co-operative workers, patwaris, constables and village chaukidars trained in elementary hygiene and first aid and anti-epidemic work .. ..	15,359	18,635
4. Number of wells made sanitary .. ..	10,519	12,330*
5. Number of villages where all parts of the scheme are in force .. ..	2,219	2,755
6. Number of villages where the scheme is in force partially .. ..	5,562	5,921

\* These are progressive totals from previous years.

2. The rural development organization gave special attention to improvement of village water supplies and distributed a sum of Rs.2,93,000 for the purpose in various districts. A contribution from the villagers for whose benefit a new well was to be constructed was made a condition to these grants-in-aid. This has not prevented the utilization of the grants, as it is reported local resources were pooled to ensure eligibility for the grants.

3. The subject of rural housing has been discussed in previous reports and the main defects mentioned. The requirements indicated to villagers in this respect are of the simplest kind possible, i.e., ventilators should be opened, outlets provided for smoke, floors should slope towards a soakage pit and that cattle-sheds should be separated from living portions of the house. The advice is gaining ground and encouraging results are imminent. The District Medical Officer of Health of Allahabad reports that in cases of all new constructions efforts are generally made to conform to a sanitary type of village house and in the case of existing buildings owners are persuaded to provide ventilators. The largest success has, however, been achieved in the health unit area of Partabgarh, where windows and ventilators in village houses have been provided in large numbers. The results achieved here would seem to refute the theory generally advanced that villagers are too conservative or too afraid of thieves to open windows and ventilators. The essence of the success in Partabgarh is close personal touch of the staff with villagers. It is hoped that within the limits of their other duties members of the health staff in other districts will also be able to secure similar results.

In Fyzabad 710 ventilators were fixed in existing houses and 50 sanitary houses were constructed in various villages. In Bahraich a village gutted by fire was reconstructed on sanitary lines. From the report of the Rural Development Department for 1940 it appears that improvement in housing conditions is being made in all villages where the scheme operates, that people are taking advantage of the advice given to them; that more people are putting up ventilators in houses and that new village sites are being laid down and new houses are constructed on improved plans.

4. A new activity of the health unit in Partabgarh during the year was re-vaccination campaign against smallpox. No less than 26,000 individuals, mostly in villages, were re-vaccinated and the operation was found no more difficult than the primary vaccination of children and infants.

In the reports of previous years have been given details of the work being done in the unit. It is not proposed to re-state them, except that the unit is being increasingly used for purposes of practical demonstration to workers in rural hygiene for investigation, experiment and research on public health problems and for epidemiological studies. Studies in the designing and construction of village sanitary conveniences are being continued and public preferences for the different types are being investigated.

5. Collaboration with the rural development organization is one of the most important duties of the district health staff. The department has issued stringent orders in consultation with the rural development officer that co-operative efforts should be made to improve village sanitary conditions through persuasion or, if necessary, by prosecution of all delinquents. The following extract taken from the report of the rural development officer for 1940 gives an idea of the work being done by that department in the field of public health and sanitation with the help of the staff of this department:

“ Efforts were fairly successfully continued for the improvement of village sanitation. Propaganda and demonstration were carried out in rural areas and manure pits and soakage pits were made in large numbers in almost all rural development villages. It is a fact that in a large number of villages sites and lanes are now cleaner than before and people come forward more readily for inoculation in times of epidemics.”

6. During the year 1940-41 the Board of Public Health gave grants aggregating Rs.41,447 for small public health works in rural areas, against Rs.49,564 in 1939-40. The grants were given on the condition that a local agency was available to supervise the construction and future maintenance of the works, the agency being the village panchayat, a co-operative or better-living society or the rural development organization.

7. During the year 1939-40 the total income of district boards in the United Provinces from all sources, including all Government grants, was Rs.1,97,64,873 and excluding such grants it was Rs.1,14,53,803. The total expenditure by district boards on public health was Rs.6,28,237 distributed as follows:

	Rs.
(i) Vaccination .. .. .	3,03,147
(ii) Public health establishment, other than vaccination ..	2,08,915
(iii) Epidemics .. .. .	38,710
(iv) All other public health purposes .. .. .	77,465

Receipts of the district boards from Government, the board of public health and other sources especially earmarked for public health purposes were Rs.1,97,442. Out of their own revenue of Rs.1,14,53,803 the board spent Rs.4,30,795 or Rs.3.8 per cent. only on public health. In 1938-39 the percentage of expenditure on this head was 3.7, in 1937-38 it was 3.2 and in 1936-37 also it was 3.2.

## CHAPTER VII

## MALARIA

Malaria in epidemic form was reported from the districts of Shah-jahanpur, Gorakhpur, Bijnor, Bareilly, Unao, Moradabad, Pilibhit, Bahraich, Sitapur and Meerut. (State ment VI(a)]. 251 lbs. of quinine and cinchona were distributed free out of the reserve stock to 57,834 sufferers from malaria in the above districts. During 1940, 717, 319 deaths were reported from malaria as against 754,168 in the preceding year, the death rates for the two years being 14.82 and 15.58 respectively.

Verification of deaths reported under malaria showed that the percentage of malaria deaths recorded correctly varied from 0 per cent. to 100 per cent.

2. (a) Malaria surveys and investigation on specific local malaria problems were carried out in the following places and necessary recommendations made :

Routine activities.

Group of villages in Meerut district,  
Agra city and Jagrajpur village in the Agra district,  
Sitapur,  
Hardwar,  
Meerut city,  
Azamgarh,  
Dogadda and Kotdwara in the Garhwal district,  
Orai municipality,  
Daryaoganj village in Jaunpur district.

Filariasis inquiry was conducted in Dehra Dun and Kala azar enquiry in the Gorakhpur district.

(b) A census of enlarged spleens amongst school children was carried out during spring and autumn malaria seasons in districts under health service.

The districts of Naini Tal, Saharanpur, Pilibhit, Moradabad and Mirzapur reported the highest spleen rates during the autumn and districts of Saharanpur, Pilibhit, Meerut, Unao and Kheri during the spring season.

3. The special anti-malaria schemes operating in the Naini Tal and the Hardoi districts in collaboration with the Indian Research Fund Association were continued. The scheme in the Hardoi district was extended to 6 more villages.

Special schemes.

4. Tarai and Bhabar Estates anti-malaria scheme :

(a) *Treatment schemes*—The treatment schemes which were first introduced on the advice of the malaria branch in October 1934 to 26 villages in pargana Bazpur have gradually been extended in the intervening years and the total area now covered by the schemes is about 95 square miles comprising 210 villages with a population of nearly 24,000 persons.

The number of cases of malaria treated was 6,754. About 21 lbs. of quinine sulph tablets, 15 lbs. of cinchona febrifuge tablets, 2,053 plasmquine tablets of 1/6 grain each and 365 plasmquine tablets 1/12 grain each were consumed. An additional quantity of quinine sulph was also spent in mixture form.

Quinine and cinchona were also distributed in the Estates through fixed and travelling dispensaries, peshkars, padhans, and rural development organizations, the public health staff and village aid dispensaries. The total amount of quinine and cinchona distributed through all sources in these Estates was 98 lbs. and 118 lbs, respectively.

(b) *Anti-larval measures with Paris green*—This was continued in villages Kicha, Sittarganj, Khatima and Tauakpur.

5. Mass treatment scheme with cinchona and plasmquine for malaria in selected villages is in force in some malarious parts in the districts of Hardoi, Unao and Lucknow and has shown good results.

6. Blanket treatment to school children with cinchona and plasmquine was given at the commencement of the two malaria seasons (spring and autumn) at Kosi and in the autumn only at Brindaban. The object is to cut off the reservoir of infection at the critical phase of malarial transmission and thus to minimize the spread of the disease. This scheme has minimized sickness from malaria amongst scholars in these two towns.

7. *Training in the principles of malaria control and laboratory work*—Candidates for the examination of chief sanitary inspectors were given training on malaria and anti-malaria measures.

Blood films collected during the various malaria surveys and also received from Benares Central Jail, Sitapur Reserve Police forces, Lucknow hospitals, Jaunpur and Gorakhpur districts were examined. The mosquitoes collected by the members of Boy Scouts and Junior Red Cross groups of 269 centres were also examined.

8. *Anti-malaria byelaws*—The number of local bodies which have adopted these byelaws continue to be 35.

9. *Free distribution of quinine in the villages under Rural Development Scheme*—369½ lbs. of quinine sulph tablets and 665 lbs. of cinchona tablets were supplied to 48 districts for distribution in villages under the Rural Development Scheme.

10. *Government Quinine Tablet Manufacturing Factory*—(i) Sale of Quinine and Cinchona Tablets.

The factory sold quinine and cinchona tablets worth Rs.74,343 against Rs.71,786-3 in the preceding year, as per details below :

	Quinine tablets	Cinchona tablets	Sale price realized including packing charges
	Lbs. oz.	Lbs. oz.	Rs. a.
Sold to Post Offices .. .. .	682 0	..	21,615 0
Sold to others .. .. .	1,008 4	1,964 8	52,728 0

(ii) *Sale of quinine and cinchona powders*—During the year under report 1,752 lbs. of quinine and 1,537 lbs. of cinchona powders worth Rs.64,131-14 were sold against Rs. 48,144-8 in the preceding year.

(iii) *Quinine Reserve*—371 lbs. of quinine and 2 lbs. of cinchona tablets were issued from the provincial reserve to the districts of Dehra Dun, Saharanpur, Agra, Bareilly, Bijnor, Shahjahanpur, Pilibhit, Allahabad, Banda, Gorakhpur, Naini Tal, Lucknow, Sitapur, Kheri, Gonda, Bahraich and Mirzapur for replenishment of the district reserve stock and epidemic purposes.

11. *Consumption of quinine in the Province*—According to the reports of the civil surgeons and the superintendents of jails of the province 1,132 lbs. 11 oz. of quinine and 1,426 lbs. 8 oz. of cinchona were consumed during 1940 as compared to 1,819 lbs. 5 oz. of quinine and 2,021 lbs. 14 oz. of cinchona during 1939. As 1,167,559 cases of malaria were treated in hospitals in the province during 1940 this works out to an average of 21.06 grains per patient treated in 1940 against a minimum of 60 grains required for each paroxysm of malaria. The appended table shows the consumption of quinine and cinchona products in the urban and rural areas of the province during 1940. The figures are based on the amounts of quinine and cinchona distributed by all sources (medical, jails, public health, local bodies and other departments) but does not include private purchases.

	Quinine	Cinchona	Total

## CHAPTER VIII

## MATERNITY AND CHILDWELFARE

This section is under the charge of a whole time medical woman, the Director of Maternity, for executive and supervisory control over the maternity work in the province. There is also a Provincial Maternity and Childwelfare sub-committee for direction of policy. Lady Hallett is the Chairman of this committee and her keen interest in the work is an encouragement to workers. This work is being carried out under the aegis of the Indian Red Cross Society and is controlled by the Director of Public Health in his capacity as Vice-Chairman of the Society.

There are local committees for red cross work at district headquarters. The collector of the district is the president and the medical officer of health or the civil surgeon is usually the honorary secretary of the district committee.

There is no separate municipal organization for maternity and childwelfare work. The centres in urban areas are organized by the District Red Cross Societies and are financed partly by the Provincial Branch and partly by local contributions. Active co-operation of the Dufferin and Mission Hospital authorities is secured through enrolling them as active members of the local committees.

2. The staff engaged in domiciliary midwifery in these provinces is shown in the appendix A of this report. Besides Domiciliary midwifery cases conducted in this staff, the services of women doctors in hospital cases are utilised for domiciliary midwifery of different nature in places where the red cross medical women are not employed.

The normal cases were, as usual, conducted by the assistant midwives under the guidance of the red cross medical women, and abnormal cases were advised to go to the nearest local women hospitals.

The maternity staff also paid ante natal visits, performed the necessary postnatal work, trained indigenous dais and organized baby shows and magic lantern demonstrations. They also gave lectures during exhibitions, fairs, etc.

3. The total number of centres is 334 (175 Maternity Centres. rural and 159 urban).

There is no red cross maternity hospital in the United Provinces. Clinics are held at maternity and childwelfare centres.

4. The training of probationer assistant midwives was, as usual, carried out at the Silver Jubilee Health School, Lucknow. Facilities for training maternity and childwelfare workers in domiciliary midwifery and house visiting and was supplemented by 3 months hospital training at the Dufferin hospital and one weekly lecture and demonstration at Queen Mary's hospital, Lucknow. Thirteen probationers were declared successful during March and September examinations.

Facility for midwifery training also existed in the Cawnpore maternity and childwelfare centre. The Dufferin and Mission hospitals also trained these workers for their own needs.

The health visitors' class has also been started from January 1, 1941. The medium of instruction is Hindustani. A children's nursery has been started in the Silver Jubilee Health School and four babies are being looked after during the 1st year of their life. All the probationers in the school in turn do their duty in connexion with these babies. This is giving them practical training in the care of babies. The results of this new activity are encouraging.

A serious effort continued to be made to train the indigenous dais throughout the province, especially in the maternity and childwelfare centres where medical women or health visitors are employed.

The training of indigenous dais by the Rural Development Department has also been continued through the agency of the Red Cross Society, United Provinces Branch. The required number of the Rural Development Maternity Centres for training of local dais could not be opened for want of suitable workers but 21 maternity centres have so far been opened.

This organization has been designed to train dais in clean midwifery. As dais generally are of ignorant class their training has been slow and tedious. There has, however, been aroused a certain awakening in these women and a keen desire to learn work properly.

**Legislation 5.** No new legislation was enacted during the year.

6. The local Government paid the usual grant of Rs.1,22,600 in 1940.

**Finance.** The Central Council of Victoria Memorial Scholarships Fund, Delhi, continued their annual grant of Rs.2,800 for training of indigenous dais. The Executive Committee of the Red Cross Society contributed Rs.24,285. In addition to the above a sum of Rs.1,615 was realized under miscellaneous receipts, including fees for the maternity services rendered. Against these total receipts of Rs.1,85,999 including the opening balance the expenditure aggregated Rs.1,45,595. A sum of Rs.2,04,185 was also spent on maternity and childwelfare work by local branches by raising subscriptions locally.

7. The total number of cases conducted by the staff with and without dais during the year under report was 52,353 while that of the cases not attended in the same area was 95,259. The deaths reported amongst children under one year of age in the former case were 2,413 and in the latter 29,118 yielding a ratio of infantile mortality per mille of 46.13 and 305.67 respectively, as compared with 56.55 and 344.63 in the preceding year. The maternal mortality among the cases conducted by the staff with or without dais was 2.25 per 1,000 births against 7.81 representing this mortality in all unattended cases in the same area. The maternal mortality rate for the province as a whole was 1.13.

8. The chief difficulties are

**Difficulties facing the administration of Maternity and Child Welfare work in the province.**

1. Inadequate local supervision.
2. Growing but yet inadequate sense of co-operation and discipline among the workers.

3. Paucity of funds for the expansion and improvement of the work.

## CHAPTER IX

## SCHOOL HYGIENE AND MEDICAL INSPECTION OF SCHOOL CHILDREN

The report is for the calendar year, 1940, instead of for the school session 1940-41.

2. The thirteen wholetime school health officers working in the bigger municipalities conducted detailed examination of the boys in 174 out of 178 Anglo-Vernacular institutions. The number of boys whose medical history sheets were filled was 21,500, out of about 61,700 scholars on the roll. About 3,600 scholars were re-examined and 1,200 were examined as special cases. About 5,400 scholars out of 62,500 on the roll of the vernacular institutions were also examined.

The *ex officio* school health officers conducted detailed medical examination in 148 out of 172 Anglo-Vernacular schools and out of a total of about 48,740 scholars on the roll they examined 18,720. They also inspected 3,019 schools out of 11,229 for ordinary examination and examined about 179,810 boys out of 792,420 on roll.

The number of cases treated at the Central School Dispensaries was 80,500.

Out of about 43,310 and 10,285 scholars who attended fixed dispensaries for treatment in urban and rural areas 1,842 and 3,600 were voucher cases.

3. The defects were noticed in 45 per cent. cases in urban and in 22·3 per cent. cases in rural areas. Among the boys examined in detail in urban areas about 31·7 per cent. had one defect only, 14·6 per cent. two defects and 6·5 per cent. more than two defects. These figures for rural areas for one, two and three or more defects were 14·1, 5·3 and 2·9 per cent., respectively.

4. In the urban areas 14·1 per cent. of the scholars were found to be poorly nourished. In the 13 bigger towns, the highest percentage of poorly nourished scholars (29 per cent.) was recorded at Lucknow, Cawnpore and Saharanpur whereas in the remaining towns it was between 10—20 per cent. Faulty nutrition and lack of knowledge about balanced diet is the chief reason, to eliminate which an endeavour is being made by the school health officers through talks and lectures at the clinics and the schools.

5. 12·8 per cent. of the scholars in urban areas and 9·3 per cent. in rural areas were found with defective teeth mainly caries. Pyorrhoea was found in 3·3 per cent. cases in the urban areas and 1·5 per cent. in the rural areas.

6. Honorary dentists are attached to all central school dispensaries excepting at Gorakhpur, Shahjahanpur, Bareilly, Saharanpur and Jhansi. The total number of dental cases attended at the central school clinics was 2,500. In Cawnpore and Fyzabad, the scholars of the municipal institutions also derived the benefit of treatment at these clinics as the respective local authorities contributed Rs.300 and Rs.150 towards their maintenance.

As this arrangement is in the mutual interest of both it deserves the consideration of the remaining boards.

7. This defect was found in 16·4 per cent. cases in the urban areas and 4·5 per cent. in the rural areas. If simple enlargement of tonsils is considered the incidence of this disease will be about 40 per cent. This ailment needs special notice and the wholetime school health officers have instructions to arrange for the application of throat paints in the schools regularly every day.

The figures of the glandular enlargements in the urban and rural areas were 5·9 and 2·03 per cent., respectively.

8. Anaemia due to enlarged spleen was found in 0·45 per cent. scholars in urban areas and in 1·5 per cent. in the rural areas.

9. The percentage of skin diseases in urban and rural areas was 2·7 and 2·3, respectively. Due to the adoption by certain schools of washing and bathing schemes and also due to progress in the knowledge about personal cleanliness this defect is gradually disappearing in both rural and urban areas.

10. In urban areas the percentage of diseases of eye lids detected was 6·6 while in the rural areas it was 4·8.

Diseases of eye lids,  
conjunctivitis and  
trachoma.

11. In urban areas 7·5 per cent. scholars suffered with defective vision. The figure for rural areas cannot be correctly estimated for want of proper facilities to detect the same.

Special attention was paid to the testing of vision in those places where the central school dispensaries are working. The services of honorary ophthalmologists have been obtained in seven out of 13 towns with whole-time school health officers. They are still wanting at Benares Agra, Gorakhpur, Shahjahanpur, Bareilly and Saharanpur. The honorary ophthalmologists are doing the work either at the central school dispensary or at their private clinics in cases in which the requisite ophthalmic instruments, etc., are not available at the dispensary. One hundred and sixty-six pairs of glasses were supplied free to the poor boys. Eighty-one boys purchased the same on the advice of the school health officers.

12. The percentage of unvaccinated children recorded in the schools of urban and rural areas was 12·2 and 35·6, respectively.

Unvaccinated children.

13. A limited number (858) of poor ill-nourished scholars was supplied with milk free from the budget of the central school dispensary in the five bigger towns. Each scholar was supplied with  $\frac{1}{2}$  lb. pasteurised or boiled milk every day and due to lack of funds the duration of supply extended from a fortnight to a month only. In order to derive full benefit from this measure the duration of supply should be at least 3 months.

Free milk to ill-nourished children.

14. The subject of hygiene is included in the curriculum of training colleges, normal schools, high schools, anglo-vernacular and vernacular schools and on an average about one to two hours per week are devoted to the teaching of this subject. The school health officers continued to deliver lectures to the teachers of the training colleges in hygiene, sanitation and infectious diseases.

The various courses of the St. John Ambulance Association including first aid to the injured, home nursing, hygiene and sanitation and the elementary Mackenzie school course in hygiene, sanitation and first aid for the junior boys are being taught in the schools and colleges as extra curricular activities. The whole-time school health officers, municipal medical officers of health and district medical officers of health assist in the training and examination of the candidates in these subjects. They examined about 4,400 scholars in Mackenzie school course and 350 in first aid to the injured. They also took active interest in organising the district, divisional and provincial ambulance and Junior Red Cross competitions in conjunction with officers of the Education Department.

Special lectures on prevention of blindness were arranged in important towns for the benefit of the pupil teachers in training colleges and schools. Literature on this subject was also distributed for the use of pupil teachers in training colleges. A large number of lectures on other health subjects including dietetics and nutrition were also delivered in the schools, some of which were illustrated by magic lantern slides. Health habit posters and pamphlets "Our food in villages" were also widely distributed.

15. The extension of the scheme of free supply of milk and the provision of necessary dental and ophthalmic equipment in the central school dispensaries of the eight smaller towns, are desirable. These will be undertaken during the next year when more funds are likely to be allotted. Another desirable step is to locate school clinics in centrally situated buildings.

The investigations undertaken by the school health officers regarding the height and weight of scholars at different age groups, incidence of fluorosis and goitre are still in progress.

## CHAPTER X

## HEALTH PROPAGANDA

The number of schools with Junior Red Cross groups and that of these groups rose to 5,209 and 6,088 as against Red Cross Work. the respective figures of 2,592 and 3,677 of the preceding year. The members to these groups aggregated 143,791.

The members are given practical training in healthy habits and practices and are educated to serve the community. They constitute useful public health units, with Red Cross aims and objects. They rendered assistance in the enforcement of anti-epidemic measures and in the propaganda for prevention of blindness. They also advanced war measures by collection of contributions. Certain selected groups which volunteered to maintain medicine chests at their own cost were entrusted with the administration of their chests. Participation in Junior Red Cross competitions, exhibitions, health dramas, construction of sanitary conveniences in villages, exchange of portfolios (albums) with foreign countries were among other things the normal activities of these groups.

2. There was considerable expansion in the activities of the St. John Ambulance Association. The number of district centres in the province rose from 25 to 43. There were 16 ambulance divisions with 515 members, nine nursing divisions with 184 ladies and 19 cadet divisions with 480 members. The training camp was held at Bilwa in the Bareilly district in which demonstrations on air raid precaution, drill, transport of patients and camp sanitation were given. The motor ambulance of the Association was used in giving practical training to the members of Brigade divisions in loading and unloading exercises. The work of training in First Aid and Home Nursing assumed great importance. The training amongst women showed better response and 422 women were given home nursing courses. The total number of persons who obtained the Association's certificates during the year was 5,078 as against 4,530 in the last year. 6,884 school boys were trained in the Mackenzie school course in first aid, hygiene and sanitation as compared to 6,310 in the last year.

226 volunteers were enrolled by the Joint War Committee of the Indian Red Cross Society and St. John Ambulance Association for various duties connected with War work.

3. The health publicity work and education of masses in hygienic principles and anti-epidemic measures by means of lectures, distribution of leaflets, posters, homely talks, cinema shows, etc., was the normal feature and was advanced by all public health officers in towns and districts in addition to the staff of the Bureau. The Bureau participated in 27 exhibitions and set up 4 exhibitions in important fairs and gatherings. The exhibition at the Magh Mela, Allahabad, was opened by Lady Hallett and was visited by His Excellency the Governor.

The hygiene publicity van equipped with public health models, loud speakers, cinema films and gramophone records toured in 22 districts covering a distance of 6,105 miles. It gave 105 cinema shows with an estimated attendance of about 214,000 persons.

4. 242,320 leaflets, booklets and pamphlets and 3,356 posters were issued for free distribution. The Bureau also prepared booklets on leprosy and on prevention of enlargement of tonsils and adenoids and designed a new poster on prevention and treatment of rabies.

Supply and distribution of literature, posters, etc.

5. The preparation of a new film on Nutrition was undertaken during the year under report and copies of six other films were prepared.

Cinema Section.

6. The voluntary contributions by local bodies for carrying hygiene propaganda work in their areas amounted to Rs.2,600 as compared to Rs.2,050 in the preceding year.

Voluntary Contributions.

## CHAPTER XI

### PUBLIC HEALTH ADMINISTRATION

Appendix " B " to this report gives the strength of the executive public health staff below the rank of assistant directors of public health.

Public Health personnel.

2. The post of Assistant Director of Public Health (Malariology and Epidemiology) which was left unfilled as an experimental measure from November 15, 1939, was filled up from October 1940.

3. A sum of Rs.23,85,815 was provided by Government in their budget for the year 1940-41, for the entire Public Health Department, including the Public Health Engineering section and the grants-in-aid for sanitary works which are distributed through the Board of Public Health. Out of this, a sum of Rs.18,66,165 was for activities directly controlled by the Director of Public Health.

Budget grants.

## CHAPTER XII

## VACCINATION

Vaccination throughout the province is the responsibility of local bodies. Forty-nine assistant superintendents of vaccination and 940 vaccinators were employed on vaccination during the year 1940-41. Vaccination was also offered by sanitary inspectors, medical officers of fixed and railway dispensaries and by private medical practitioners. Military medical officers performed vaccination in cantonments.

There was no change in the territorial areas in respect of compulsory vaccination.

2. The number of vaccinations performed by various agencies during the year was 2,029,521 (1,609,738 primary and 419,783 revaccinations) as against 2,106,269 (1,635,158 primary and 471,111 revaccinations) in the preceding year. The number of secondary operations performed was 10,834 against 9,936 in the preceding year. The number and percentage of successful vaccinations in which the results were known were 1,546,310 and 98.86 in the case of primary vaccinations and 162,188 and 44.57 in the case of revaccinations against the previous year's figures of 1,568,037, 96.91, 151,678 and 36.39, respectively.

The total number of persons vaccinated was 2,013,687 against 2,096,333 in the previous year. Each vaccinator vaccinated on an average 2,114 persons.

The number of children under one year of age successfully vaccinated was 1,008,396 against 991,678 in the preceding year. The ratio of infantile successful vaccinations to total births was 59.98.

3. Details of vaccination work in districts and towns are given in the statistical statements on vaccination which also give detailed information in relation to work done by various agencies.

4. The number of schools inspected for vaccination was 3,847 and the number of scholars vaccinated was 98,885.

5. Expenditure incurred on vaccination in the province amounted to Rs.3,81,695 against 3,78,294 in the preceding year. This excludes expenditure on assistant directors of public health and on Government Vaccine Depot. Out of the total expenditure of Rs.3,81,695 a sum of Rs.3,05,153 was spent in rural areas and Rs.76,542 in urban areas.

6. The average cost of each successful case of vaccination in these provinces as well as in other provinces of India is given below :

						Rs. a. p.
United Provinces ..	..	..	..	..	..	0 3 7
N.-W. F. Province ..	..	..	..	..	..	0 2 2
Delhi ..	..	..	..	..	..	0 3 2
Assam ..	..	..	..	..	..	0 3 2
Bengal ..	..	..	..	..	..	..
Punjab ..	..	..	..	..	..	0 2 9
Bihar ..	..	..	..	..	..	0 0 9
Orissa ..	..	..	..	..	..	..
Central Provinces ..	..	..	..	..	..	..
Madras ..	..	..	..	..	..	0 7 2
Bombay ..	..	..	..	..	..	0 10 2
Sind ..	..	..	..	..	..	0 13 6

7. No case of encephalitis following vaccination was reported.

\* Information not available.

8. (a) *Supply of calves*—The contract for the supply of buffalo calves was given to a butcher of Bareilly at Rs. 7-10 Government Vaccine depot, Patwadangar, (district Naini Tal). per calf, exclusive of charges for railway freight on the understanding that the animals will be returned after vaccination at Rs. 2-14 each. The total number purchased was 473. Out of this, 403 were sold to the contractor, 10 were rejected and returned without any payment and 60 died.

Every care was taken to prevent infection and the calves were immunized against rinder-pest by the veterinary assistant surgeon at Haldwani along with their medical examination.

Ten bull calves were obtained locally for the preparation of seed lymph. After removal of vaccine pulp they were returned to the owners.

(b) *Quantity of lymph obtained and manufactured*—The total quantity of vaccine pulp obtained was 28,472 grammes from 454 successfully vaccinated animals with an average yield of 62.7 per animal. The average yield of pulp from buffalo and bull calves separately was 63.3 and 36.6 grammes, respectively.

1,698 grammes of seed lymph (1 in 5) (including the lymph prepared from the English and Swiss samples) from 10 hill bulls were prepared.

140,530 grammes (1 in 5) of issue lymph were manufactured and this quantity was increased by 6,781 grammes (1 in 6) by dilution raising the total quantity for issue to 147,311 grammes. This represented 3,682,775 doses calculated on the basis of 25 vaccinations (with 3 or 4 insertions each) per gramme.

(c) The total quantity of lymph issued for vaccination was 138,213.25 grammes (3,455,331 doses).

The cost of manufacture of issue lymph used for human consumption was annas 4-3 per gramme (2.06 pies per dose) as compared with annas 4-7 per gramme (2.21 pies per dose) in the previous year.

Seed lymph amounting to 995 grammes including 126 grammes prepared from English and 97 grammes from Swiss samples and glycerinated issue lymph amounting to 137,634.75 grammes were set aside in the cold storage for use in 1941-42.

(d) *Bacteriological and animal tests*—Vaccine lymph was bacteriologically tested before issue. The results evinced complete absence of streptococci and gas producing anaerobes in all the samples tested and issued. The number of viable organisms per c. c. of vaccine lymph was less than the prescribed standard of 5,000 in all the samples issued for vaccination. All the samples were chloroformed and were issued only when subsequent tests showed adequate reduction of organisms. It will thus appear that the standard of bacteriological purity of vaccine lymph aimed and achieved here is the same as laid down under the British Pharmacopoeia. Pathogenicity or toxicity tests on guinea-pigs were also performed on all samples.

The potency of lymph was also tested on rabbits on each production of vaccine lymph. The tests indicated that the vaccine was of uniformly good quality.

Samples of vaccine lymph from London and Switzerland were obtained last year and some vaccine lymph was manufactured from these strains. Comparative trial of the United Provinces strain with the imported

samples was undertaken on a large scale by school health officers, Medical Officer-in-charge, Health Unit, Partabgarh, and the Superintendent of the Vaccine Depot, on school children at Haldwani. The result of the investigation indicated that although the United Provinces vaccine failed to react on guineapigs to the same extent as the imported vaccine yet on rabbits and on revaccination of children it gave the same success rate as the imported ones. 48 tests were also performed for the presence of the number of viable organism at the Provincial Hygiene Institute, United Provinces.

(e) The contract price for the supply of lymph to local bodies was revised for the triennium 1940-41 to 1942-43. Realization from all local bodies amounted to Rs.37,760. Lymph to the value of Rs.2,680 (including packing and postage) was supplied to the Defence Department Sales to Indian states, private persons, railways, cantonments and other indentors amounted to Rs.17,042.

407 grammes of vaccine to the value of Rs.336 (including packing and postage) were issued free for use in jails.

(f) *Income and expenditure of the depot*—The total receipt on the sale of vaccine lymph and other articles during the year under report amounted to Rs.59,248 against the total expenditure of Rs.39,498 giving a net profit of Rs.19,750.

(g) *Cold storage plant*—The plant gave no trouble and efficient refrigeration was produced. The temperature in the cold room was not allowed to exceed 32°F.

(h) *Buildings and roads*—Annual repairs and necessary improvements were carried out.

(i) *Water supply*—The E. C. D. plant for sterilization of water supply worked satisfactorily. There was acute shortage of water supply during May and June on account of extreme reduction in the yield of spring water at Naini Tal. Lake water from Naini Tal had to be used after chlorination.

## CHAPTER XIII

## OTHER PUBLIC HEALTH SERVICES

*I—Administration of travelling dispensaries*

Thirty-one travelling dispensaries operated during the year. Twenty-six belonged to the Government, two to district boards and one to forest and two to Tarai and Bhabar estates. Five reserve travelling dispensaries were also mobilized and posted for short periods in connection with fairs and epidemics at Budaun, Saharanpur, Agra, Muttra and Ramnagar (Naini Tal). A temporary cadre of 20 medical officers was sanctioned for epidemic work. This staff was employed when necessary.

The activities of travelling dispensaries other than those belonging to public health department were restricted to their respective areas. The disposition of provincial travelling dispensaries was regulated according to epidemic and other needs. These units visited 5,580 villages, treated 184,863 patients and performed 60,956 anti-plague and 156,122 anti-cholera inoculations. They also assisted in rural uplift, hygiene publicity work and in the execution of village sanitary measures.

*II—Hygiene Institute*

2. 371 samples of water were examined bacteriologically for control purposes, of which 252 samples were from local bodies, 7 from railway stations and 112 samples from factories and other sources. 185 samples of water were examined chemically, of which 166 were from local bodies and 19 from factories. The authorities concerned were advised for improvements warranted by analysis reports.

15 samples of disinfectants, 69 samples of stools from suspected cholera cases and 106 samples of miscellaneous articles viz. vaccine lymph, blood smear from dead rats and sera, factory effluents, ghee, milk, butter, phenyles, bleaching powder, asafoetida, chlorogen, alum, biscuits, air, papain broth and cholera vaccines were also examined and reported on.

3. 583,476 doses of cholera vaccine were manufactured and supplied to the epidemiology branch. 3,597 doses of T. A. B. vaccine were also prepared as an experimental measure.

4. All the classes remained in abeyance except the chief sanitary inspectors' refresher course. Lectures on hygiene for students of the M.B., B.S., class and the post graduate course for the P. M. S. officers were delivered at the Institute as usual.

The following examinations were also conducted :

- (1) Examination of medical officers of health in local enactment relating to public health.
- (2) Grade examinations of medical officers incharge travelling dispensaries.
- (3) Examination for chief sanitary inspectors.
- (4) L. P. H. examinations, Parts I and II.
- (5) M.B., B.S. examinations in hygiene in April and October.

5. This was reorganized with a view to make it more attractive to the public and more instructive to the students.  
Museum.

6. An investigation into the prevalence of fluorosis among the school children was carried out. 261 samples of water and from different places were examined. The water of the wells in the districts of Allahabad, Agra, Benares, Meerut, Cawnpore, Etawah and Partabgarh and in a school in Brindaban was found to contain flourine above the permissible limit of 1.0 per cent. Public water supplies of Fatehpur Sikri, Dehra Dun (Kolhukhet) and Kosi showed flourine contents varying from 1.3 to 1.7 parts per million. Among the school boys examined, dental fluorosis was reported to be present in Allahabad, Benares, Meerut and Cawnpore. Kolhukhet water supply in Dehra Dun district with a high flourine content is suspected to be responsible for an incidence of about 25 per cent. of dental fluorosis among school boys examined. The highest incidence of dental fluorosis was found in the district of Meerut especially in village Mohammadpur Quadim, where the maximum flourine content was 3 parts per million and also in other villages showing high flourine contents in the wells. Boys coming from villages in Allahabad, Benares and Cawnpore using water from wells found to have a high flourine contents were the most affected. The investigation is being continued.

Goitre prophylaxis by the administration of Tincture of Iodine to school children in the villages of Pithoragarh, Lohaghat and Berinag in the Almorah district was continued during the year under report. The neck measurement of the boys after six months of bi-weekly administration of Tincture of Iodine showed a decrease of  $\frac{1}{4}$  to 1 inch in all students with goitre.

Helminthic infection in Lucknow has been found to be present in 51.83 per cent. of stools of which 47.3 per cent. was due to Hookworm infestation. To determine the source of this infection washings from 21 samples of vegetables, such as potatoes, lauki, sag, torai and bhutta were examined bacteriologically and also microscopically for ova and larve of helminthic parasites. No evidence of the presence of any pathogenic ova was obtained. Further investigation is being carried on to determine the relative incidence of helminthic infection in various selected groups of population living under different sanitary conditions.

Two booklets one on nutrition and the other on soil and water supply were prepared at the request of the Education Expansion Officer, United Provinces, for the use of village libraries.

### III—Anti-rabic treatment

7. The number of treatment centres in the United Provinces continued to be 17 including the one seasonal centre at Mussoorie.

8. *Number of patients who attended the centres for treatment—* 14,827 patients attended the centres against 12,824 in the previous year. Of these, 14,129 were actually admitted to treatment and 698 were advised.

9. *Classification of patients according to animals responsible for bites.*

Dog	..	..	..	..	..	..	11,342
Jackal	..	..	..	..	..	..	1,727
Mongoose	..	..	..	..	..	..	19
Horse	..	..	..	..	..	..	25
Donkey	..	..	..	..	..	..	20
Cat	..	..	..	..	..	..	57
Monkey	..	..	..	..	..	..	338
Wolf	..	..	..	..	..	..	30
Leopard	..	..	..	..	..	..	1
Panther	..	..	..	..	..	..	15
Cow, calf or buffalo	..	..	..	..	..	..	50
Man or taken food with hydrophobia cases	..	..	..	..	..	..	409
Others	..	..	..	..	..	..	46

10. *Paying patients*—Cost of treatment was recovered from 424 patients against 525 in the last year.

**Public Analyst**

11. The provisions of the United Provinces Prevention of Adulteration Act were further extended to three important fair areas and four districts. The operation of the Act was also extended to additional articles of food stuff in certain localities where it is already in force. The Act is now in force in 85 municipalities, 44 notified areas, 17 cantonment areas, 5 important fairs and several town and rural areas in 40 districts.

12. The total number of samples received for analysis during the year under report was 12,353 against 11,814 in the preceding year as per details in the appended table.

Serial number	Name of food-stuff	Number of samples received for analysis	Samples found unfit for analysis	Analysed for constituents	Samples certified adulterated	Samples found genuine
1	Ghee	5,768	20	..	1,283	4,510
2	Milk	2,739	75	..	718	1,946
3	Butter	84	..	..	16	68
4	Flours	856	2	..	112	742
5	Oils	1,785	19	..	207	1,559
6	Miscellaneous	1,126	21	5	352	748
	Total	12,353	137	5	2,638	9,573

13. The percentage of samples found adulterated was 21·6 against 18·8 in the preceding year. The appended table shows the total number of samples received for examination and of those certified as genuine or adulterated in the 15 larger towns during the last two years.

Serial number	Name of Municipalities	1939				1940			
		Total number of samples examined and certified as adulterated or genuine			Percentage of adulterated samples.	Total number of samples examined and certified as adulterated or genuine			Percentage of adulterated samples
		Examined	Adulterated	Genuine		Examined	Adulterated	Genuine	
1	Lucknow .. ..	1,125	182	943	16·2	1,189	173	1,016	14·6
2	Cawnpore .. ..	1,198	205	993	17·1	1,251	242	1,009	19·3
3	Agra .. ..	1,132	106	1,026	9·4	682	86	596	12·6
4	Benares .. ..	757	157	600	20·7	692	145	547	21·0
5	Allahabad .. ..	324	57	267	17·6	225	35	190	15·6
6	Bareilly .. ..	71	12	59	16·9	102	22	80	21·6
7	Moradabad .. ..	119	12	107	10·1	311	76	235	24·4
8	Meerut .. ..	428	51	377	11·9	437	43	394	9·8
9	Aligarh .. ..	271	33	238	12·2	156	25	131	16·0
10	Shahjahanpur .. ..	136	33	103	24·3	143	43	100	30·1
11	Muttra .. ..	319	71	248	22·2	202	53	149	26·2
12	Fyzabad .. ..	127	17	110	13·4	140	20	120	14·3
13	Dehra Dun .. ..	129	46	83	35·6	243	75	168	30·9
14	Mussoorie .. ..	194	61	133	31·4	122	24	98	19·7
15	Naini Tal .. ..	50	15	35	30·0	137	38	99	27·7
	Whole province .. ..	11,689	2,203	9,486	18·8	12,211	2,638	9,573	21·6

This table indicates that the practice of sophistication in food-stuff is more common in municipalities like Moradabad, Shahjahanpur, Muttra, Dehra Dun and Naini Tal.

14. 2,595 persons were prosecuted under the Act, of whom 1,819 persons were convicted and fined, one person was sentenced to imprisonment while seven persons had to undergo imprisonment for non-payment of fines.

In one case the offender was bound down and one person was warned. 122 persons were acquitted and 10 cases were dismissed for technical defects in prosecution. Five cases were withdrawn by local authorities. 60 persons absconded, 73 were untraceable and five persons died during trial. Cases against 495 persons are pending in the court. Three cases were compounded by the local authorities although compounding of cases under the Act is not permissible and the Government have drawn the attention of the local authorities to this fact.

The total amount of fine inflicted in 1819 successful cases was Rs 80,137 against Rs.53,499 for 1368 successful cases in 1939.

The appended table shows the number of persons fined, the total amount of fines in rupees and the average amount of fine inflicted per case in the 15 large municipalities of these provinces as also the corresponding figures for the whole province :

Name of municipality	Number of persons fined	Total amount of fines in rupees (inclusive of the cost of analysis)	Average amount of fine inflicted per case
		Rs.	
1. Lucknow .. .. .	111	3,165	28·5
2. Cawnpore .. .. .	108	7,205	66·7
3. Agra .. .. .	67	3,909	58·3
4. Benares .. .. .	94	5,791	61·6
5. Allahabad .. .. .	12	915	76·3
6. Bareilly .. .. .	21	587	28·0
7. Moradabad .. .. .	75	2,822	37·6
8. Meerut .. .. .	41	1,915	46·7
9. Aligarh .. .. .	19	1,040	54·7
10. Shahjahanpur .. .. .	10	397	39·7
11. Muttra .. .. .	44	2,824	52·8
12. Fyzabad .. .. .	19	698	36·7
13. Dehra Dun .. .. .	64	3,981	62·2
14. Mussoorie .. .. .	12	423	35·3
15. Naini Tal .. .. .	34	825	24·3
For the whole province ..	1,819	80,137	44·0

The average amount of fine per case was Rs.44·0 for the whole province as compared with Rs.39·1 in 1939. The punishment awarded was generally deterrent but in the municipalities of Lucknow, Bareilly,

Moradabad, Shahjahanpur, Fyzabad, Mussoorie and Naini Tal the fine inflicted by the courts was much below the provincial average.

15. About Rs.25,000 were credited into the Government treasury on account of the cost of analysis in accordance with section 19(3) of the Act. A sum of Rs.380 was also realized from private persons for the analysis of their samples.

16. The butter, *ghee* and fat licensing rules are in force in 75 local areas out of 191. They are gradually being enforced in other areas. These rules are very useful in checking easy adulteration and are commended for adoption by all local authorities.

17. (a) The Provincial Government framed a new rule under section 14(1) (f) of the United Provinces Prevention of Adulteration Act, 1912, as subsequently amended, that no person shall manufacture for sale or sell or expose or store for sale any sweetened aerated water, *sharbat*, or any other sweetened food, etc. containing saccharine or any other synthetic sweetening agent, unless the name and proportion of saccharine or such sweetening agents were explicitly stated by means of a declaratory label.

(b) As some doubt existed whether samples of suspected *ghee* could be legally collected for analysis under the Adulteration Act from the shops of *halwais*, a circular was issued on the authority of the judgment of the High Court, Allahabad, to all the district and municipal medical officers of health, pointing out that in cases in which the provisions of the Act were extended in respect of *puris* and sweetmeats, and *halwais* did not declare by means of a signboard or otherwise the name of the fat or oil used by them for preparing *puris*, sweetmeats, etc., samples of suspected *ghee* from such shops, in addition to the samples of finished products could be collected where official inspectors were satisfied that adulterated *ghee* had been used or was intended to be used for the preparation of *puris*, sweetmeats, etc., for sale.

(c) During the year under report it was noticed that in certain cases prosecutions were not instituted at all or were allowed to be withdrawn by municipal boards, on payment of a nominal penalty by the accused persons. As such action had the effect of nullifying the standing orders of the Government for awarding deterrent punishment on guilty persons, instructions were issued by Government that all cases under the United Provinces Prevention of Adulteration Act in which there was a *prima facie* proof of the offender's guilt, should be sent to court, which would after taking into consideration any plea put forward by the defence, either let off the accused or award such punishment as might be justified by the circumstances of the case, and that the local authorities should not take upon themselves the responsibility of inflicting punishment on guilty persons by either not sending the case to court or withdrawing it after it had been referred to a court. A few such cases were noticed particularly in the municipalities of Muttra, Muzaffarnagar and Shahjahanpur. As the offences under the Act are not compoundable, it is desirable that local authorities should refrain from withholding, withdrawing or compounding cases in future.

(d) The report of the *ad hoc* committee appointed by the Central Advisory Board of Health to investigate the whole question of food adulteration in India, with particular reference to legislation and varying standards in force in different provinces, was carefully considered. While further recommendations to be made by the committee about legislative measures and many other important and controversial matters relating to food standards are awaited, various recommendations already made by the committee regarding food standards, which have been approved of by the Central Advisory Board of Health, have been noted by the Public Analyst for guidance while arriving at decisions about the purity or otherwise of samples of food-stuffs.

18. Under the Indian Factories Act the local district and municipal medical officers of health are *ex officio* additional inspectors of factories. Instructions were

**Industrial Hygiene.** issued to these officers to make at least half-yearly inspections. Their attention was also drawn to the rules in regard to the samples of water being taken and despatched to the Provincial Hygiene Institute for analysis and report. Inspections are being made by these officers and the reports are submitted to the authorities concerned.

<p>Dr. S. M. Saxena, throughout the year.</p>	<p>(1) Medical Officer in charge, Hygiene Dept. Public Health.</p>
<p>Dr. A. V. Chatterjee, throughout the year.</p>	<p>(2) Medical Officer in charge, Provincial Hygiene Institute.</p>
<p>Dr. B. M. Gupta, from May 1910 to the end of the year.</p>	<p>(3) Public Analyst, Government, United Provinces, Lucknow.</p>
<p>Dr. S. M. Saxena, from January 1 to May 11, 1910.</p>	<p>(4) Assistant Director of Public Health, Provincial Hygiene Institute.</p>

I made the following inspections :

Sanitation of 9 municipalities, vaccination work in 5 districts and 8 municipalities and one notified area, rural health work in 7 districts, 8 rural development dispensaries, 3 public health travelling dispensaries & school dispensaries, 7 infectious diseases hospitals, 3 anti-rabic centres, anti-epidemic measures in several municipalities and districts, working of special anti-malarial schemes in Haridwar and Nainital districts, water supply in several places and sites for several public health works.

I also inspected the Health Unit, Patna, with the Government Vaccine Depot, Patna, and medical and sanitary arrangements of 3 important lairs.

## CHAPTER XIV

## GENERAL REMARKS

No legislation affecting public health was passed by the Government.

## Public Health Acts

2. For the award of Rai Shambu Dayal Sahib Gold Medal an essay "How can the public co-operate best with the Public Health Department in the prevention of diseases and the promotion of the health of the people" was competed by 15 candidates. The essay written by Mr. Ram Gopal Singh of Shahjahanpur was adjudged as the best and the medal was awarded to him.

3. I held charge of the office of the Director of Public Health throughout the year. The following officers held charge of the ranges and special branches :

Designation	Charge held by
(1) Assistant Director of Public Health, I Range.	Dr. L. K. Ray, throughout the year.
(2) Assistant Director of Public Health, II Range.	Rai Sahib Dr. B. P. Mital, throughout the year.
(3) Assistant Director of Public Health, Malariaology and Epidemiology Branches.	The post remained in abeyance up to October 3, 1940. Rai Sahib Dr. S. P. Srivastava from October 4, 1940 to the end of the year.
(4) Public Analyst to Government, United Provinces.	Mr. P. S. MacMahon from January 1 to May 11, 1940. Dr. B. M. Gupta from May 12, 1940 to the end of the year.
(5) Medical Officer-in-charge, Provincial Hygiene Institute.	Dr. J. T. Cornelius, throughout the year.
(6) Medical Officer-in charge, Hygiene Publicity Bureau.	Dr. S. N. Saxena, throughout the year.

I made the following inspections :

Sanitation of 9 municipalities, vaccination work in 6 districts and 6 municipalities and one notified area, rural health work in 7 districts, 6 rural development dispensaries, 2 public health travelling dispensaries, 4 school dispensaries, 7 infectious diseases hospitals, 3 anti-rabic centres, anti-epidemic measures in several municipalities and districts, working of special anti-malarial schemes in Hardoi and Naini Tal districts, water supply at several places and sites for several public health works.

I also inspected the Health Unit, Partabgarh, the Government Vaccine Depot, Patwadangar, and medical and sanitary arrangements of 3 important fairs.

I attended 74 meetings of various institutions.

The two assistant directors of public health of the ranges inspected vaccination work in 26 districts, 31 municipalities and 7 notified areas, sanitation of 29 municipal towns, 9 notified areas including sanitary survey of the Juhi notified area and a Tea Plantation Estate. They visited 19 districts including municipalities and some other places in connexion with the inspection and direction of anti-epidemic measures and 8 districts for the inspection of rural public health work. They supervised medical and sanitary arrangements of 15 important fairs and exhibitions.

They also inspected 11 public health travelling dispensaries, rural development ayurvedic, unani and allopathic dispensaries in 32 districts, infectious diseases hospitals and segregation huts in 14 places and two school dispensaries. They also inspected the offices of the district medical officers of health in 9 districts and 6 anti-rabic centres.

The activities of special branches has been dealt with in other chapters.

4. The enquiry into the case of extortion of money against a

head clerk of district medical officer of health's office, a mention about which was made in the last year's report, was completed during 1940 and the official was removed from the service. The conduct of two other head clerks of district medical officers of health's offices was found suspicious in respect of certain financial transactions, both of these were degraded—one to the cadre of II clerks of district medical officers of health (from the scale of Rs.50—4—70 to Rs.32—2½—42) and the other by two stages in his own scale of pay (Rs.50—4—70) for two years.

A. C. BANERJEA, M.B., DR.P.H.,
