**The Seventy-eighth Annual Report of the Director of Public
Health, United Provinces for the year ending
December 31, 1945**

CHAPTER I

Meteorology

The cold weather period: January and February—Western meteorological disturbances affected the weather in January, causing severe spells of cold weather about the beginning of the second week. The month's rainfall was in very large excess. Maximum temperature was below normal in January and normal in February, while minimum temperature was normal in January and below normal in February. Relative humidity was above normal in January and below normal in February.

The hot weather period: March to May—Rainfall was in large defect in March. During April it was normal in west United Provinces and in very large excess in the east. The first half of May was dry. Maximum temperature was normal except in April when it was in defect. Minimum temperature was normal. Humidity was in excess during April and normal during the other two months.

Monsoon periods: June to September—The weather in the first half of June, was practically dry. Fairly widespread rainfall occurred during the last week of the month, and during July. There was a break in the activity of the monsoon during the major part of the first week of August, but fairly good rainfall occurred from the 10th to 18th and widespread rain up to the third week of September, interspread with local or scattered showers in early part of that month. Maximum temperature was above normal in June and below normal in September. Minimum temperature was normal throughout the period.

The retreating monsoon period: October to December—Fairly widespread rain occurred throughout the Province during the first two days of October, and widespread rain in the east United Provinces later in the month. The total rainfall during October was in large excess. For the rest of that month and during November the weather was dry.

Taking the year as a whole, total rainfall was normal in east United Provinces and in slight excess in the west.

CHAPTER II

Vital Statistics

The following are the chief statistical data for the year, 1945.

(a) Comparison of Provincial figures with those of preceding year

	Total		Rural		Urban	
	1945	1944	1945	1944	1945	1944
Mid-year estimated population.	57,885,878	57,224,567	50,430,410	49,919,660	7,455,468	7,304,907
Total births	1,580,961	1,436,026	1,317,668	1,209,561	263,298	226,465
Birth-rate per mille.	27·31	25·09	26·13	24·23	35·32	31·00
Total deaths	1,096,985	1,072,412	917,942	887,953	179,043	184,459
Death-rate per mille.	18·95	18·74	18·20	17·79	24·01	25·25
Infantile deaths.	194,761	178,823	145,884	135,214	48,877	43,609
Infant death-rate per thousand births.	123·19	124·53	110·71	111·79	185·63	192·56

(b) Comparison by communities in the Province

	Birth-rate per mille		Death-rate per mile	
	1945	1944	1945	1944
Hindus	27·50	25·27	19·36	18·94
Muslims	28·53	26·02	18·45	19·26
Europeans and Anglo-Indians ..	13·56	13·54	4·73	4·55
Indian Christians	18·35	19·43	9·13	9·63
Other classes	5·81	5·66	2·81	3·09

(c) Comparison with figures of other Provinces for 1945

Province	Birth-rate per mille	Death-rate per mille	Rate of natural increase	Infant mortality per thousand births
1. United Provinces.. ..	27·31	18·95	8·36	123·19
2. Punjab	36·10	19·40	16·70	145·00
3. N.-W. F. Province	16·74	11·14	5·60	116·98
4. Sind	14·33	10·23	4·10	103·90
5. Madras	29·45	22·27	7·18	169·43
6. Bombay	33·70	26·40	7·30	161·23
7. Assam	16·76	13·37	3·39	130·51

Birth-rate for the Province (27·31) was higher than that in the previous year (25·09) and in the year preceding that (24·71) but it was lower than the mean of the previous five years (29·02). The death-rate for the Province (18·95) was almost the same as in the previous year (18·74) and slightly less than that in the year previous to that (19·23).

2. *Registration of vital statistics*—(a) Reporting of births and deaths is compulsory in urban areas. The number of persons fined for failure to report was 1,735. The amount of fine realised was Rs.1,485 or less than a rupee per case.

(b) The causes of death as initially reported to municipal health authorities were verified in about 53 per cent. of the cases, and some 9 per cent. of the reports thus verified were found incorrect.

(c) In rural areas where registration is not compulsory medical officers of health check omissions, as well as inaccuracies as to cause of death as registered by village chaukidars. Out of 1,350,128 births and deaths verified it was found that 20,859 had not been registered.

CHAPTER III

General Health of the Province and the History of Chief Diseases

1. *Cholera* was responsible for 77,345 deaths (4,489 in towns and 72,856 in rural areas), against 40,291 in the previous year. All the districts were affected—the districts of Jhansi, Gonda and Banda showing the heaviest incidence rate consistently with their population figures. Highest mortality was returned in the months of May-June. Over 3,373,600 anti-cholera inoculations were given (against 1,972,800 in the year 1944 and 908,582 in the year preceding that). Ice and ice-cream was

incriminated in an explosive outbreak in Lucknow City in May. All District Magistrates in the United Provinces were therefore requested to pass orders under the Defence of India Rules prohibiting the sale of these articles and of cut-fruits except in hotels and restaurants or subject to proper covering to the satisfaction of the Medical Officer of Health. This had a good effect.

Help in the hospitalisation of cases was again rendered in Jhansi District by the staff of the local Military Hospital. This time they put up a field hospital in the heart of an infected area, many miles from the district headquarters and provided an ambulance unit (8 ambulances) for transfer of cases from far off villages. Some 200 patients were admitted to hospital during a period of 13 days, of whom 45 only died. The hospital was very popular, people coming to it of their own accord from long distances. The hospital staff also performed 14,900 anti-cholera inoculations in 49 villages.

Great difficulties were experienced in dealing with the epidemics owing to shortage of medical officers. The services of doctors of branch dispensaries had therefore to be requisitioned in many places for local duty. Government also approved of a small payment to doctors of mill, estate and private dispensaries who performed epidemic duty in their areas. An extra number of epidemic assistants was employed for a part of the year.

2. *Plague* was responsible for 14,024 deaths (912 in towns and 13,112 in rural areas) against 15,454 in the previous year. Over 535,584 anti-plague inoculations were performed (against 322,960 in the preceding year and 175,230 in the year 1944) and as plague has been showing an upward tendency in the past three years, anti-rat campaign was undertaken in 17 municipal towns and in selected villages of 21 districts where the disease is endemic. Financial assistance has been provided by Government to cover the cost in many of these cases. Naib-tahsildars were appointed for short periods in certain districts to assist public health staff in evacuation of the villages and in putting up of temporary living accommodation, and for disinfection of dwellings and grain godowns.

Hitherto hospitalisation of plague cases in rural areas had not been undertaken owing to absence of hospital facilities. During the year one plague hospital was improvised as an experimental measure in the heart of an infected area in Banaras District, and it successfully treated a large number of cases. On the basis of this experience another hospital has been opened in the middle of an infected tract in Faizabad District and has been even more successful. There were no ambulances for the transfer of cases but patients came to the hospital in their own or hired conveyances from long distances, and the percentage of recovery has been very high.

For some time closer co-operation has been found to be necessary with other administrations in anti-plague measures where the endemic area has extended to beyond the Provincial boundary. After mutual consultations, arrangements were made during the year by the Punjab Health Department and the Banaras State for reciprocal anti-rat campaign in specified area bordering the United Provinces. At the

request of the Australian Trade Commissioner an organization was put up during the year for the fumigation of all carpets exported to Australia from Mirzapur District where plague was prevalent.

As in the case of cholera, the Provincial Government sanctioned the payment of a reward of eight annas to village chaukidars in all cases where their reports of first out-break of plague may reach the District Medical Officer of Health at the district headquarters within 48 hours. Government also sanctioned a similar reward for any reports of first rat mortality in any area which may reach the Medical Officer of the nearest dispensary within the same period. Medical Officers of dispensaries are already required to take anti-plague measures in areas up to 5 miles or so of their dispensaries. Information of rat mortality is now sent to them so that they may investigate the significance of such mortality and, if it is due to the approach of plague-let District Medical Officers of Health know so that timely preventive measures may be undertaken.

3. *Small-pox* caused 22,128 deaths (2,928 in urban areas and 19,200 in rural areas) against 10,066 in the previous year. The districts of Ghazipur, Azamgarh and Faizabad showed the highest incidence.

4. *Fevers*. This general heading comprises malaria, enteric fever, measles, relapsing fever, kala azar, influenza, cerebro-spinal fever, typhus fever, and other fevers. The mortality from all fevers was 813,592 against 846,861 in the preceding year. The decrease is primarily under malaria.

The incidence of the more important of the fevers is discussed below :

(a) *Malaria*—The number of deaths registered under this head was 723,414 (27,883 in towns and 695,531 in rural areas) against 747,949 in 1944.

(b) *Relapsing fever*—381 deaths (28 in towns and 353 in rural areas) were registered under this head against 216 in 1944.

(c) *Enteric fever* was responsible for 9,317 deaths (3,800 in urban areas and 5,517 in rural) against 11,786 in 1944. Over 66,860 C. Cs. of TAB Vaccine was issued, primarily under the scheme for the inoculation of government servants.

(d) *Kala Azar* was responsible for 128 deaths (60 in urban and 68 in rural areas) against 148 in 1944. The disease is mostly prevalent in the eastern districts of the Province, but cases from Allahabad District have been reported. Two travelling dispensaries in Gorakhpur District and one in Banaras continued to work exclusively on survey and detections of cases, and for their treatment on outdoor lines. The more advanced cases were referred to the sadar hospital and selected branch dispensaries.

(e) *Influenza* was responsible for 506 deaths (230 in urban and 270 in rural areas, against 278 in 1944.

(f) *Cerebro-spinal Meningitis* was responsible for 85 deaths (71 in urban and 14 in rural areas) against 88 in 1944 and was, as usual, sporadic in incidence. Arrangements existed for its treatment at all district hospitals, many branch dispensaries and two municipal infectious diseases hospitals.

5. *Respiratory diseases* were responsible for 38,329 deaths (32,452 in urban and 5,877 in rural areas) against 37,226 in the previous year. Pneumonia and pulmonary tuberculosis are the main diseases in this group. Their incidence is discussed below:

(a) *Pneumonia*. This was responsible for 16,479 deaths (16,155 in urban and 324 in rural areas) against 17,358 in 1944.

(b) *Tuberculosis (pulmonary)* was responsible for 4,976 deaths (4,297 in urban and 679 in rural areas) against 4,153 in 1944. Tuberculosis of other forms is not included under "Respiratory diseases" but is discussed here to give a complete picture of the incidence of Tuberculosis in general. Tuberculosis of bones was responsible for 256 deaths (135 in urban and 121 in rural areas) against 144 in 1944.

Other tubercular diseases were responsible for 2,446 deaths (1,698 in urban and 748 in rural areas) against 2,119 in 1944.

6. *Dysentery and Diarrhoea* were responsible for 19,358 deaths (13,963 in urban and 5,425 in rural areas) against 17,340 in 1944.

7. *Beri-beri* was responsible for 64 deaths (57 in urban and 7 in rural areas) against 74 in 1944.

8. *Injuries* were responsible for 12,668 deaths (1,143 from suicide, 8,784 from wounds or accidents, 2,331 from snake bites, 124 from rabies and 286 from injuries caused by wild animals). The corresponding figures from these causes for 1944 were 1,237 from suicide, 9,312 from wounds or accidents, 2,670 from snake-bites, 157 from rabies and 242 from injuries caused by wild animals.

9. *All other causes* claimed 99,511 deaths against 91,556 in 1944.

10. *Deaths at child-birth (i. e. Maternal Mortality)* numbered 2,361 (1,892 in urban and 469 in rural areas) against 1,809 in 1944, but these figures are quite incorrect as reporting is particularly defective under this head.

11. *Leprosy* was responsible for 722 deaths (195 in urban and 527 in rural areas) against 754 in 1944. The United Provinces branch of the British Empire Leprosy Relief Association continued to aid certain local leprosy clinics, and maintained the Special Leprosy Officer who continued survey and treatment work in Sitapur District. Out of 357 villages visited by him, some 266 contained lepers, which shows the very scattered nature of its incidence. The affected persons were advised treatment, and contacts were given advice on measures of personal protection. The special officer also trained 11 medical officers of rural dispensaries and 4 practitioners in the modern methods of treatments. In view of the public interest created by these operations in Sitapur District subscription has since been raised for building a

for a separate leprosy clinic to be attached to the district hospital. The United Provinces Branch of the Association received a sum of Rs.20,000 from the unspent balance of the Silver Jubilee Fund, with which it proposes to extend the work.

CHAPTER IV

Fairs and Festivals

(a) *Ardh Kumbh Mela*—This six-yearly mela was held at Hardwar in April, 1945. Cholera had occurred in all previous gatherings. For the mela of the year 1945, therefore, in addition to the usual measures of sanitation, the Provincial Government prohibited the entry into Hardwar or within ten miles of it of any person who did not carry a certificate of protection by anti-cholera inoculation within the previous six months. Barriers were put up on the approaches to Hardwar at which a check for the certificate was made. Those not in possession of them were inoculated there before being allowed to enter. A separate report has been issued on these and other health arrangements made for this mela. There was no real opposition to the inoculation scheme. A protest raised by the local shop-keepers in the fear of reduced business died down as soon as it was seen that inoculation itself was not causing any reduction in visitors. The special armed constabulary manned the barriers and earned high praise for their smartness and courtesy. All expenditure on the compulsory inoculation scheme was met by the Provincial Government and fully justified itself, as no case of cholera occurred in the mela area or in any adjoining area after its dispersal, a fact without parallel in the history of these gatherings.

(b) Measures to safeguard the health and sanitation at annual fairs and festivals were supervised by the Public Health staff and there was no serious epidemic outbreak in any of them, although most of them attracted large gathering in spite of railway and bus traffic restrictions.

CHAPTER V

Sanitation and Water Supply in Urban Areas

The maintenance of municipal conservancy services continues to be difficult owing to shortage of petrol to work rubbish-lorries and the high prices of labour and material. The public is demanding a better standard of sanitation but, far from improving upon the present scale, most municipal boards have not increased staff and appliances in proportion to the increase in population of towns which has taken place during the war years. The result has been great insanitation, causing greater prevalence of plague, cholera and typhoid. Municipal boards have been advised individually, as well as by general letters, to bring up the deficiency, by phasing the requirements over a number of years and making financial provision accordingly.

2. *Building bye-laws*—Newly constructed houses in urban areas are often occupied before sanitary arrangements are completed, and this causes nuisance. To prevent this insanitation Government

amended the model municipal by-laws by adding a clause prohibiting newly erected buildings from being used for residential purposes until all sanitary arrangements provided in the plan sanctioned by the municipal board have been completed.

3. *Protection of food from contamination*—In addition to local action taken by District Magistrates as an anti-cholera measure for specified periods, municipal boards were advised to pass bye-laws requiring vendors to protect from external contamination of food which may be eaten in the same state in which it may be purchased. Boards were also advised to prohibit the sale in uncovered containers of such articles on the edges of drains or too near stables, public latrines or manholes and to include itinerant vendors in these restrictions. Ice under present conditions of retail sale is liable to contamination owing to the too common practice of drying the saw dust and gunny on the pavement. The sale of ice was therefore brought within the purview of municipal bye-laws by laying down that it shall be kept in clean receptacles, covered with clean saw-dust or gunny and protected against contamination to the satisfaction of the Medical Officer of Health, and by laying down that every ice-vendor shall provide a properly consolidated open space, clean and of sufficient size, for drying wet saw-dust, gunny, etc. used for covering ice and shall not spread any sawdust or gunny used for covering the ice on any road pavement or drain.

4. *Composting town refuse*—This was continued in many towns. Over 53,300 tons of compost manure was prepared, of which the greater part was sold outright. For the remainder the Agriculture Department are trying to overcome the causes responsible for the lack of demand, viz., prejudice and difficulty of transport. Experiments conducted with this compost on wheat and barley crops showed greatly increased yield of grain and similarly remarkable results were noticed in the case of garden products and vegetables.

5. *Utilization of sewage for agricultural purposes*—The Provincial Government appointed a committee with the Director of Public Health as Chairman to advise on the utilization of town sewage, much of which at present runs to waste. Some meetings have been held.

CHAPTER VI

Rural Sanitation

Advice was given to the Rural Development staff and to villagers on the construction of village sanitary works and the improvement of village wells. The Health Unit at Pratapgarh continued to serve as a training ground in rural health work.

2. *Expenditure by district boards on Public Health*—The total income of district boards in the Province from all sources including Government grants, during the year 1944-45 was Rs.2,62,08,587 and excluding such grants Rs.1,32,60,717. Total expenditure by these Boards on Public Health was Rs 7,24,226 as detailed below :

	Rs.
(i) Vaccination	3,65,399
(ii) Public Health Establishment other than vaccination ..	2,46,804
(iii) Epidemic.. .. .	44,505
(iv) All other Public Health purposes.. .. .	67,518

The receipts of the boards from Government, the Board of Public Health and from other sources for Public Health purposes amounted to Rs.98,572. Out of their own revenue of Rs.1,32,60,717, therefore, they spent Rs.6,25,654 only, or 4·7 per cent. on public health. In the year 1943-44 the percentage of such expenditure was 4·5 and in the year 1942-43 it was 4·9.

CHAPTER VII

Malaria

Malaria showed lesser incidence, its prevalence in epidemic form having been reported from 12 districts against 17 in the year 1944, and 28 in 1943. Twenty eight lb. of cinchona and 2,91,500 tablets of quinine substitutes were distributed free in these districts. Supply of quinine and quinine substitutes by the Government of India was continued at considerably below the market rate. Insecticides, including kerosene oil continued to be in short supply but the release of a certain quantity of D. D. T. permitted of better control of malaria in institutional schemes (construction works, police lines, etc.)

2. Malaria surveys and investigations were undertaken at 16 places and recommendations were made to the authorities concerned. An investigation was made of the accuracy of the figures returned under "Malaria" by the hospitals by requiring Medical Officers of hospitals and dispensaries to send blood films of cases admitted and treated by them as for malaria. Out of some 1,500 slides thus obtained and examined, only 1/5th were positive for malaria. Allowing for a margin for the absence of the parasite in occasional samples, the investigation points to too great an error in diagnosis. Inspector General of Civil Hospitals has drawn the attention of his Medical Officers to the need for greater circumspection in returning a case as of malaria.

3. An anti-malaria drive in accordance with the appeal issued by the former Governor of the United Provinces was carried out during this year also. The measures comprised oiling and deweeding of tanks, filling up of depressions and treatment of the sick. In some places an anti-malaria week was observed in the early part of September during which boys of primary schools went about carrying posters. Exhibitions and lectures were also organized. There was co-operation between civil and military authorities in organizing such and other educative campaign on malaria and generally in the day-to-day anti-malaria measures of mutual interest. Shortage of insecticides prevented a more definite effort.

4. *Sale of quinine and substitutes*—This department is the agency for distribution of all quinine and cinchona (powder and tablets), and quinine substitutes, required by Government departments, hospitals and dispensaries and by such medical practitioners and chemists as agree to take it on the specified conditions. A total of 5,251 lb. of quinine, 1,742 lb. of cinchona, 4,962,700 tablets of quinine substitutes, and 2,936 boxes of injectible quinine was sold during the year under this scheme.

CHAPTER VIII

Maternity and Child Welfare

The number of medical women, health visitors and assistant midwives, including those under the Rural Development Department, employed in the maternity and child-welfare organization was 15, 31 and 335, respectively, against 21, 32 and 338 in the previous year. To improve the standard of work at the local centres certain medical women in charge of maternity centres were granted study leave to attend a short course of training in Maternity and Child Welfare at the All-India Institute of Hygiene and Public Health, Calcutta.

2. The number of centres which functioned during the year was 449, against 338 in 1944. Some 43,715 confinements were conducted by the staff of the centres against 43,394 in the previous year. Infantile mortality among cases conducted by such staff was 43.8 per thousand, against 237.3 among cases not confined by them. Mortality rate among mothers whose confinements had been conducted by the trained staff was 4.2 per thousand. No reliable figure in respect of cases not attended by trained staff is available. The number of abnormal cases sent to the hospital by the Maternity staff was 911.

3. The training of health visitors and assistant midwives was continued at the Silver Jubilee Health School. Four in the former category and 17 in the latter qualified during the year. Training of *daïs* was continued, over 451 having been admitted at various centres of whom 184 were awarded local license to practise in their areas.

4. *Finance*—The Provincial Government gave the usual grant of Rs. 1,62,600 for running the Maternity and Child Welfare organisation in the Province. The United Provinces Branch of the Indian Red Cross Society gave a grant of Rs. 14,000. A sum of Rs. 5,300 was provided by the central headquarters of the Red Cross for certain specified purposes. Local contributions, miscellaneous receipts and grants from municipal and district boards amounting to Rs. 1,46,763 made up for the rest of the expenditure.

CHAPTER IX

Health of the School Child

School medical inspections in the United Provinces are conducted by whole-time School Health Officers in 13 larger towns and Municipal and District Medical Officers of Health in other places. The scheme of examination is "detailed" for English Middle and High Schools, and "ordinary" in other institutions.

Detailed examinations were conducted in 331 out of 408 institutions specified for the purpose, and 43,600 scholars out of about 146,200 on roll were seen. As three examinations only in the whole period up to High School standard is required, all scholars on roll are not required to be seen every year. Keeping this in view, the number inspected was fairly high. About 9,000 scholars were examined as special cases. For "ordinary" examinations 2,395 institutions out of 11,598 subject to the scheme were visited and 1,31,950 out of 850,100 boys on roll were examined and advised.

2. *Defects*—The following is a table of the main defects noticed in urban and rural group of scholars. Figures for the previous year have been given for purposes of comparison:

Nature of defect	Percentage of cases found defective			
	Urban		Rural	
	1945	1944	1945	1944
1. Poor nutrition	19.6	17.1	19.7	19.8
2. Teeth and gums	8.6	8.1	8.2	10.2
3. Pyorrhoea	1.7	2.2	2.0	2.3
4. Tonsil and adenoids	13.9	15.3	5.2	4.2
5. Mouth-breathing	3.8	3.5	1.1	0.6
6. Other glandular enlargements	4.4	5.1	1.2	0.8
7. Diseases of eyelids	6.2	6.1	3.7	3.
8. Defective vision	9.0	9.5	1.6	2.3
9. Enlarged spleen	1.0	0.9	4.4	5.1
10. Skin diseases	2.0	1.5	3.4	3.2
Boys with one defect only	40.0	51.2	25.1	17.3
Boys with more than one defect	16.6	20.9	6.2	9.3

3. *Correction of defects*—In 13 places where separate clinics exist for the treatment of scholars, a total of 92,785 cases were treated against some 89,600 in 1944. About 825 were tested for refraction by Honorary Ophthalmologists, and about 1,550 by Honorary Dentists attached to some of these clinics. Two hundred and twenty-five pairs of glasses were supplied free to boys unable to afford the cost.

4. Talks on the special health needs of boys were given by School Health Officers during the course of the examinations and in contact with parents who were encouraged to visit the clinics along with their children.

CHAPTER X

Health Education

Health Education was carried on by officers of the Hygiene Publicity Bureau, and by District, Municipal and School Health Officers, and to small extent also by Medical Officers of Dispensaries. Lectures were illustrated by magic lantern slides. Posters and leaflets were also used on suitable occasions. Articles were occasionally contributed to the Press. The publicity van gave 106 demonstrations in 21 districts,

to an approximate gathering of over one lakh people. Health exhibitions were organized at several places. Propaganda on the need for balanced diets and how to secure them, and on Tuberculosis, was specially included in the programme. Lectures on the prevention of blindness were given in some of the Normal Schools by specialists. Elsewhere they were given by officers of the Public Health Department. Officers of the Bureau and local Medical Officers of Health co-operated in the training of selected officers of the Indian Army in rural health work and in starting the pre-release course in rural hygiene for the lower ranks due for demobilization.

2. *Red Cross*—Over 108,680 scholars (of whom 1,299 were girls) were registered in 6,908 Junior Red Cross groups in 4,311 schools during the year, against 122,480 scholars in the previous year. Ninety-seven per cent of the year's membership was in primary schools. These groups are in a small way meant for health education in their areas, and were therefore asked to do anti-malaria propaganda and to take some anti-malaria measures in and around their schools, and some propaganda on prevention of tuberculosis. All institutions which had a registered group were supplied literature on the subject. New groups registered during the year were supplied literature and posters on the prevention of blindness. The more active of the groups received a gift of one first-aid outfit each 124 such outfits were issued.

3. *St. John Ambulance Association*—Total number of persons trained in various courses of the Association and granted certificates was 3,455 against 3,979 in 1944. In addition 4,433 certificates were granted to school children in First-Aid, Hygiene and Sanitation by the lower standard against 4,712 in 1944.

The number of ambulance divisions at the close of the year was 30 with a total strength of 932 members against 27 and 955 in 1944. The number of nursing divisions was 9 with a total strength of 153 and that of cadet divisions of boys and girls was 47 with a membership of 1,059. The Ambulance divisions worked at several fairs.

CHAPTER XI Public Health Administration

Mention was made in the last year's report of the difficulties experienced in obtaining medical officers for epidemic duties, leading to the creation of a new class of workers, viz. Epidemic Assistants, for routine disinfection and inoculation. The position regarding medical officers deteriorated further during the year, only nine being employed at the end of the year against a cadre of 47. The Epidemic Assistants had therefore to be continued and, consistently with the epidemic needs of the Province, their number had to be increased and now comprises a total of 180.

2. *Budget grants*—The revised budget of the Public Health Department for the year 1945-46 was Rs.44,30,100 including the allotments for Public Health Engineering Section and for grants for sanitary works. Out of this, Rs.36,72,400 was for activities directly controlled by the Director of Public Health. The actuals for the year 1944-45 for the entire department were Rs.40,58,458 indicating a *per capita* expenditure of Re.-0-1-1 by Government. Rs.34,22,035 out of this actual expenditure was for activities controlled by the Director of Public Health.

CHAPTER XII

Vaccination

There are 443 towns in the United Provinces for purposes of vital statistics. Vaccination was compulsory in 264 of these. Taking the figures for all towns, 682,885 persons were vaccinated or re-vaccinated in the year, against 617,473 in 1944. In rural areas 1,811,848 persons were vaccinated or re-vaccinated against 1,662,040 in 1944. The increase in both cases is under re-vaccinations.

The approximate number of children under one year of age available for vaccination in 1945 was 214,421 in towns and 1,171,779 in rural districts, of whom 137,226 and 708,992 respectively, or 64.00 and 60.51 per cent. were vaccinated. The number vaccinated in the age group 1—6 years was 48,179 in towns and 352,002 in rural districts, against 52,752 and 384,311 in 1944.

2. The number of vaccinations performed in 1945 was 2,569,156 (1,389,447 primary and 1,179,709 re-vaccinations, against 2,344,677 (1,388,235 primary and 956,342 re-vaccinations) in 1944. The percentage of successful vaccination in which results were known was 97.63 in the case of primary operations and 71.37 in the case of re-vaccinations. No case of encephalitis following vaccination was reported.

3. Total expenditure by local bodies on vaccination amounted to Rs.5,41,182 (Rs.4,28,237 in rural areas and Rs.1,12,945 in urban). The average cost of each successful vaccination was annas four and pies three, which is slightly more than in the last year.

4. *Government Vaccine Depot*—The amount of vaccine lymph manufactured was 238,397 grammes against 167,408 grammes in 1944. The quantity of lymph issued during the same period was 194,472 grammes against 201,256 grammes in the previous year.

CHAPTER XIII

Other Public Health Services

Travelling dispensaries—The total number of travelling dispensaries under the control of this department at the beginning of the year was 48, including 16 of the Rural Development Department, but only 16 worked, others having remained closed owing to non-availability of medical officers. Those that functioned visited some 1,270 villages and treated over 155,765 persons.

Hygiene Institute

2. *Training of health personnel*—The following courses and the connected examinations were held at the institute besides casual training in individual cases :

- (i) Post-licenciates course for officers of the Subordinate Public Health Service.
- (ii) Course of training for Sanitary Inspectors.
- (iii) Part of the course for health visitors.
- (iv) Course in Hygiene for the M.B., B.S. of the Lucknow University.

(v) Three classes for the training of Epidemic Assistants.

(vi) Course for Chief Sanitary Inspectors.

(vii) Course in water purification methods for Waterworks Engineers.

3. Four hundred and forty-seven samples of water from various sources were examined chemically and bacteriologically as to their fitness for human consumption, and the results of local examinations made by Medical Officers of Health were scrutinised as a check over these local analysis. 997 other samples were examined for various purposes. Officers of the institute were deputed for several local investigations, viz. prevalence of Typhoid fever in Naini Tal, Goitre in Dehra Dun valley, Tuberculosis among factory workers, Lead-poisoning among workers of the Printing Presses, water contamination in Almora and Trade effluents disposals in Kanpur.

4 *Manufacture of cholera vaccine*—Over 1,784,860 C. Cs. of cholera vaccine were manufactured.

Anti-rabic Treatment

5. Some 13,692 patients were admitted to treatment against 13,770 in the preceding year. Approximately ninety per cent. of the patients had been bitten of by dogs and the rest by jackals, and other animals. The number of patients who paid for the cost of treatment was 490. Others were treated free.

Public Analyst

6. The total number of samples of food and drugs submitted to the Public Analyst for analysis as to adulteration was 11,751 against 10,127 in 1944. The following table shows the result of analysis :

Name of food samples	Number of samples received for analysis in 1945	Percentage of adulteration	
		1945	1944
1. Ghee	2,791	14.99	12.7
2. Milk	5,477	40.40	37.4
3. Butter	185	39.55	26.0
4. Flour	192	15.34	39.6
5. Edible oils	1,722	19.03	22.1
6. Miscellaneous	1,484	22.58	17.5

7. Total number of persons prosecuted was 3,571 of whom 2,904 were convicted. A sum of Rs.32,850 was realised as the cost of analysis in such cases, besides fines and the cost of prosecution. The average fine inflicted in cases relating to the sale of adulterated article was as follows :

Four persons were also sent to jail.

Cases tried by Stipendiary Magistrate

	Rs. a. p.
(a) For first offence 48 8 0
(b) For subsequent offence 109 14 0

Cases tried by Honorary Magistrate

	Rs. a. p.
(a) For first offence 24 15 0
(b) For subsequent offence 71 9 0

8. Orders were issued by Government for adulteration check over 'ata' sold in Government ration shops, and for institution of prosecution in all cases in which the adulteration or the presence of dust and extraneous matters of non cereal-origin may be certified. In the case of mixed 'ata' sold as such under the Rationing Scheme, the nature and composition of the grist is communicated to the Medical Officer of Health and to the Public Analyst and adulteration is certified only when it departs to the prejudice to the buyer from that authorised admixture. At the request of Government, samples of foodgrain and ata from Government issue godowns are also being analysed as an administration check on quality.

9. To encourage the detection of adulterated food, Government have issued orders for the grant of rewards to sanitary inspectors in important cases which result in conviction.

10. *Waste Ghee*—Attention was drawn during the course of the year to the increasing adulteration of Ghee by what is commonly called "waste ghee". This is the product left after crude ghee is heated for purpose of greater clarification and large quantities of it accumulate at the ghee heating centre of the Army Department at Agra. It is released by the Government of India only for the manufacture of soap and dubins for harness, and under an express contract that it shall be used only for such manufacture, and will on no account be sold for human consumption or used for purposes of adulterating ghee. It has nevertheless been used by unscrupulous vendors for adulterating ghee. Action under the United Provinces Prevention of Adulteration Act against such practice is rendered difficult as the analytical figures for this article are the same as for genuine ghee, and proof of adulteration cannot therefore be provided. Pending further consideration of the situation, the Provincial Government have advised District Magistrates to control the sale of waste ghee by local orders.

CHAPTER XIV**Industrial Hygiene**

At the end of the year 644 factories were subject to the inspection of Medical Officers of Health in respect of sanitation, and the provisions made for health, safety and convenience of the operations. Out of these, 290 were inspected, 92 more than once. Recommendations as necessary were made in each case. The attention of the Chief Inspector of Factories had to be called in some cases where the recommendations were not being implemented.

2. *Sanitation of Labour Camps*—Aggregation of labour at large construction works have frequently lead to outbreaks of cholera. As the result of representations made during the past few years orders were re-issued by the Public Works Department making it obligatory for the local Engineers in charge of works to maintain camp sanitation in the proper manner, to protect the source of drinking-water, to report outbreaks of disease to the Public Health Department and to help in the inoculation of labour. The principle of these orders have subsequently been extended to works controlled by local bodies and are now being recommended to the Forest Department in respect of labour working in forests where lack of control over the food and water supply have caused outbreaks of cholera.

In accordance with the standing orders of Government, Public Health Department was consulted about health arrangements required at several camps put up in connection with large Irrigation and Hydro-electric projects.

General—The year has been a difficult one owing to wide-spread outbreak of cholera in the Province and the shortage of medical officers and other staff. Difficult food conditions have no doubt complicated the health problems and are bound to adversely affect the health of the people in the years to come. Overcrowding in towns with growing insanitation and the neglected state of sanitation of the vast rural areas call for immediate attention.

LUCKNOW :
26th June, 1946.

A. C. BANERJEA,
Director of Public Health,
United Provinces.
