Statistical Statement

(VITAL STATISTICS).

Statement I.—Births registered in the districts of the Uttar Pradesh during the year 1947	From 18 to 21
“ I(a)—Still births registered according to classes and sexes of U. P. during 1947	22 to 25
Statement II—Deaths registered in the districts of U. P. during 1947	26 to 29
III—Deaths registered in the rural districts and towns of the U. P. during 1947	30 to 57
“ IV—Deaths registered according to age in rural districts and towns of U. P. during 1947	58 to 121
“ IV(a)—Deaths of infants under one year registered in the rural districts and towns of the U. P. according to class during 1947	122 to 153
“ V—Deaths registered according to classes and sexes in the districts of the U. P. during 1947	154 to 161
“ VI—Deaths from different causes and births registered in the Rural districts and towns of U. P.	162 to 225
“ VI(a)—Deaths registered from certain causes in the rural districts and towns of U. P. during 1947	226 to 289
“ VII—Deaths registered from cholera in the districts of U. P. during each month of the year 1947	290 to 293
“ VIII—Deaths registered from small-pox in the districts of the U. P. during each month of year 1947	294 to 297
“ IX—Deaths registered from fevers in the districts of the U. P. during each month of the year 1947	298 to 301
“ X—Deaths registered from dysentery in the districts of the U. P. during each month of the year 1947	302 to 305
“ XI—Deaths registered from respiratory diseases in the districts of the U. P. during each month of the year 1947	306 to 309
“ XII—Deaths registered from plague in the districts of U. P. during each month of the year 1947	310 to 313

The Eightieth Annual Report of the Director of Public Health, United Provinces, for the Year Ending December 31, 1947.

CHAPTER I

METEOROLOGY.

The cold weather period: January and February.—Weather in January was characterised by two wet spells in its first and last weeks. Rainfall was normal in East U. P. and in slight defect in the west.

The first week of February was practically dry. An active western disturbance moving across the country was responsible for widespread rainfall in the North-West U. P. and local rain elsewhere on 8th and 9th. Fairly widespread thunderstorms were experienced again from 14th to 16th February. Weather during the rest of the month was practically dry. Rainfall in February was in moderate defect.

Maximum and minimum temperatures were below normal in January and above normal in February. Humidity was generally above normal.

The hot weather period: March to May—Sporadic thunderstorm activity was experienced in the Province in March. Rainfall was in slight excess in East U. P. and nearly normal in the West.

April was practically dry, the total rainfall of the month everywhere being in large defect.

In May a few showers fell in western U. P. in the first week. Thereafter the weather was dry up to the 24th excepting a few showers in the hills. In the last week scattered thunderstorms occurred mainly in the northern district. Rainfall in this month was in slight defect in East U. P. and in large defect in west. Maximum and minimum temperatures were above normal during the last weather of March-May. Humidity was above normal in March and generally below normal in the next two months.

Monsoon period: June to September—The Province and in particular eastern districts experienced frequent thunderstorms during the first fortnight of June. Weather thereafter till almost the end of June remained dry. The first advance of south-west monsoon into East U. P. occurred on the 28th causing widespread rainfall from 28th to 30th. Rainfall in the month was in moderate defect.

The monsoon was rather weak till the 11th of July and strengthened on the 12th, from which date to the end of the month there was widespread rain on most of the days. Rainfall in July was in moderate excess in East U. P. and in slight defect in the West.

The monsoon was fairly active throughout August. Although wet weather was experienced on most of the days in the month, the total rainfall in August was in moderate defect over the Province.

During September abundant rain fell in Western and North-Western districts of the Province. It was widespread over the entire Province during periods 7—12th and again from 15—17th. Rainfall in this month was normal in East U. P. and in large defect in the West.

Maximum and minimum temperatures were generally above normal in June and nearly normal in July and August. Maximum temperature was below normal and minimum temperature above normal in September. Humidity was below normal in June and generally above normal in July, August and September.

The retreating monsoon period: October to December—Local thunder-showers were experienced mostly in Eastern districts in the first week of October. Weather remained practically dry during the rest of the month. Rainfall in the month was in moderate defect.

Weather in November remained practically dry and rainfall in the month was therefore in large defect everywhere. The same generally was the case in December.

Maximum temperature was below normal in October and above normal in November and December. Minimum temperatures and humidity were generally above normal during this period.

Taking the year as a whole, total rainfall was normal both in east and west U. P.

CHAPTER II

VITAL STATISTICS

The following are the chief statistical data for the year 1947:

(a) Comparison of provincial figures with those of preceding year:—

	Total		Rural		Urban	
	1947	1946	1947	1946	1947	1946
Mid-year estimated population.	59,208,306	58,547,092	51,452,868	50,934,563	7,755,438	7,612,529
Total births ..	1,356,209	1,459,738	1,093,569	1,209,795	262,640	249,943
Birth-rate per mille	22.91	24.93	21.25	23.75	33.86	32.83
Total deaths	970,172	918,834	781,120	761,067	189,052	157,767
Death-rate per mille	16.39	15.69	15.18	14.94	24.38	20.72
Infantile deaths	157,943	161,358	110,583	118,966	47,360	42,392
Infant death rate per thousand births.	116.46	110.54	101.12	98.34	180.32	169.61

(b) Comparison by communities in the Province:

	Birth rate per mille		Death rate per mille.	
	1947	1946	1947	1946
Hindus	22.88	25.08	16.41	15.96
Muslims	25.01	26.28	17.53	15.74
Europeans and Anglo-Indians ..	6.72	11.87	4.03	3.89
Indian Christians	19.23	16.33	11.94	8.31
Other Classes	4.78	4.56	5.18	2.27

(c) Comparison of birth and death rates of U. P. with those of other provinces for the year 1947:

Province	Birth rate per mille	Death rate per mille	Rate of natural increase	Infant mortality per thousand births
1. United Provinces ..	22.91	16.39	6.52	116.46
2. Bihar	17.81	15.16	2.65	..
3. West Bengal	20.2	18.3	1.9	144.8
4. Bombay	32.87	25.0	7.87	161.9
5. Madras	32.72	20.06	12.66	146.76
6. Central Provinces ..	34.72	33.46	1.26	242.99
7. East Punjab	33.4	19.5	13.9	154.0
8. Orissa	26.75	26.95	0.20	200.60

Birth rate for the Province (22.91) was lower than that in the previous year (24.93) and in the year preceding that (27.31). It was also lower than the mean of the previous five years (26.11). Death rate (16.39) was slightly higher than that of previous year (15.69) but lower than that of the year preceding that (18.95), and was also lower than the mean of the previous five years (18.22).

2. **Registration of vital statistics**—(a) Reporting of births and deaths is compulsory in urban areas, and prosecutions were instituted for failure to report. Causes of death, as reported to Municipal authorities, were verified by Health authorities and a fair percentage of them were found incorrect.

(b) Reporting of births and deaths is not compulsory in rural areas. Village chaukidars make notes of the events from which the monthly returns are compiled. Rural health staff check omissions and errors in chaukidar's records. A fairly large number of omissions were found.

CHAPTER III

GENERAL HEALTH OF THE PROVINCE AND THE HISTORY OF CHIEF DISEASES

1. **Cholera** was responsible for 24,728 deaths (2,444 in towns and 22,284 in rural areas) against 50,663 in the previous year. First cases were reported somewhat simultaneously from different parts of the Province in the middle of March. The disease was at its peak in the month of September, eastern districts being mostly affected.

Three rural cholera hospitals were opened in the districts of Mainpuri, Sultanpur and Unnao. They treated 126 patients of whom 102 recovered. It is proposed to develop such treatment facilities as ambulances (already sanctioned) for removal of patients, begin to function. Over 1,867,420 anti-cholera inoculations were performed against 2,275,300 in the previous year.

2. **Plague** showed a higher figure for the year as a whole than in the previous year, total number of deaths being 51,455 (3,950 in towns and 47,505 in rural areas) against 18,206 in 1946. The greater part of these figures for the year 1947 are for the first four months of the year which were a continuation of the plague season of 1946-47 during which the disease had the highest incidence of recent years. The disease died down in the hot weather and reappeared in September but in considerably milder form.

Over 1,873,916 inoculations were performed against 1,237,700 in the previous year. Anti-rat campaign by cyanogassing was undertaken in affected areas, along with D.D.T. spraying in infected premises. Evacuation was also advocated for which necessary alternative accommodation was provided, along with chaukidars for watch and ward of evacuated villages. Fifty-three temporary hospitals with bed strength of 1,008 put up in the most affected districts. Over 5,750 cases were admitted of whom 4,670 or 81.11 per cent. recovered.

3. **Small-Pox** caused 6,437 deaths (1,386 in urban areas and 5,051 in rural areas) against 5,608 in the previous year. The epidemic was mild with a slight rise in the period April-June.

4. **Fevers**—This general heading comprises malaria, enteric fever, measles, relapsing fever, Kala-azar, influenza, cerebrospinal fever, typhus fever, black water fever, and other fevers. The mortality from all fevers was 731,549 against 696,436 in the preceding year. The increase is primarily under Malaria.

The incidence of the more important of the fevers is discussed below:—

(a) **Malaria**—The number of deaths registered under this head was 633,878 (29,545 in towns and 604,333 in rural areas) against 616,708 in 1946.

(b) **Relapsing Fever**—Two hundred and ten deaths (13 in towns and 197 in rural areas) were registered under this head, against 233 in 1946.

(c) **Enteric Fever**—was responsible for 11,554 deaths (4,746 in urban areas and 6,808 in rural) against 9,355 in 1946. Over 106,700 c.cs. of TAB vaccine were issued, mostly under the scheme for the inoculation of Government servants.

(d) **Kala-azar**—was responsible for 148 deaths (81 in urban and 67 in rural areas) against 132 in 1946. These figures are greatly under-reported as the actual incidence of the disease is quite considerable in Eastern districts of the Province. Ten only of the twenty travelling units sanctioned for survey and treatment began work in August. They were distributed over the districts of Gorakhpur, Deoria, Basti, Azamgarh, Jaunpur, Allahabad and Banaras and during a period of five months surveyed 1,039 villages with aggregate population of 89,530, made 11,077 blood examinations and found 8,677 of these positive. Serious cases are referred to fixed dispensaries all of which have been equipped for its treatment.

(e) **Influenza**—was responsible for 439 deaths (261 in urban and 178 in rural areas) against 394 in 1946.

(f) **Cerebro-spinal Meningitis**—was responsible for 45 deaths (34 in urban and 11 in rural areas) against 56 in 1946. The incidence was sporadic.

5. **Respiratory diseases**—were responsible for 37,923 deaths (30,685 in urban and 7,238 in rural areas) against 33,553 in the previous year. Pneumonia and pulmonary tuberculosis are the main diseases in this group. Their incidence is discussed below:—

(a) **Pneumonia** was responsible for 16,733 deaths (15,903 in urban and 830 in rural areas) against 13,653 in 1946.

(b) **Tuberculosis** (pulmonary) was responsible for 4,964 deaths (3,623 in urban and 1,341 in rural areas) against 4,594 in 1946.

Tuberculosis of other forms for official statistical purpose is not included under "Respiratory diseases" but is discussed here to indicate the incidence of this disease in all its forms. Tuberculosis of bones was responsible for 683 deaths (91 in urban and 592 in rural areas) against 411 in 1946. Other tubercular diseases were responsible for 2,868 deaths (1,794 in urban and 1,074 in rural areas) against 2,308 in 1946.

Educational work on the cause and prevention of tuberculosis was carried on at local clinics where some persons were seen. Fifty copies of film trailer on Tuberculosis have been distributed to cinema houses in the Province for exhibition. Illustrated posters and booklets on Tuber-

culosis were also supplied to over 4,500 schools with Junior Red Cross Groups.

6. **Dysentery and Diarrhoea**—were responsible for 18,936 deaths (14,638 in urban and 4,298 in rural areas) against 16,010 in 1946.

7. **Beri-Beri**—was responsible for 76 deaths (55 in urban and 21 in rural areas), against 63 in 1946.

8. **Epidemic Dropsy**—has been appearing from time to time in some cities of Eastern U. P. Investigations showed the presence of the oil of **Argemone Mexicana** in mustard oil in proportion suggestive of deliberate admixture. Introduction of legislation to permit of inspection and seizure of stocks of oil and oilseeds particularly those in oil mills, is being considered.

9. **Injuries**—were responsible for 11,819 deaths of which 1,088 were from suicide, 8,212 from wounds or accidents, 2,195 from snake-bites, 137 from rabies and 187 from injuries caused by wild animals. The corresponding figures for 1946 were 1,190 from suicide, 9,135 from wounds or accidents, 2,659 from snake-bites, 121 from rabies and 197 from injuries caused by wild animals.

10. Under all other causes 87,325 deaths were recorded against 85,056 in 1946.

11. **Deaths at child-birth** i.e. maternal mortality numbered 1,946 (1,573 in urban and 373 in rural areas) against 1,963 in 1946. These figures are quite inaccurate, as reporting is particularly defective under this head.

12. **Leprosy**—was responsible for 544 deaths (127 in urban and 417 in rural areas) against 491 in 1946. The U. P. Branch of the British Empire Leprosy Relief Association continued to maintain the Special Leprosy Officer who surveyed some 250 villages in the Sitapur district and advised treatment at the district hospitals for advanced cases and treated some on the spot. Number of cases treated out at district hospital was 302. Orders were issued to Vaccinators when on tours to contact leper cases in their districts and advise them to avail themselves of facilities for treatment provided at leper asylum and colonies. Routine treatment with *Hydnocarpus* oil with creosote has been continued for the majority of patients but a trial has been made with Promin in selected cases and some encouraging results have been noted. A few selected cases were put under calcium-vitamin therapy with gratifying results but the experiment and research in therapeutics could not be continued for various reasons. A good deal of work was also done in the leprosy centres at Kanpur and Banaras towns and in the district of Almora. Accommodation at the Chandag leper home in Almora district was enlarged and a nursery was opened to accommodate 2 babies of infective patients presenting themselves for treatment.

13. **Goitre**—has been chronic in the Jaunsar-Bawar pargana of Dehra Dun district. An experimental scheme for the distribution of iodised salt to people in this is under consideration.

Treatment of infectious disease in separate Infectious Diseases Hospitals is provided in 21 larger towns only. Establishment of similar hospitals in other towns has not taken place mainly as there is not enough work for them in non-epidemic periods. In smaller towns detached blocks are to be put up in the premises of existing hospitals and hospital staff will give treatment. Thirty-six blocks are to be constructed in the first instalment, for the larger towns separate Infectious Diseases Hospitals are to be maintained but will be gradually taken over by the Provincial Government, those at pilgrim centres being given preference.

CHAPTER IV

FAIRS AND FESTIVALS

Measures to safeguard health and maintain sanitation at annual fairs were organised by the Public Health staff and there was no serious epidemic outbreak in any of them.

CHAPTER V

URBAN SANITATION

The maintenance of municipal conservancy continues to be difficult owing to high prices of labour and material. The public is demanding a better standard of sanitation which boards have not been able to provide. Cities are getting more and more thickly populated. Sanitary staff and implements have not been increased in proportion. Several Municipal Boards have housing and town planning schemes, but serious shortage of building material is holding up much needed extension of residential and factory areas and construction and reconstruction of private houses. There were sweepers' strike at many places. A Committee was appointed by Government to enquire into the wages and conditions of work of sweepers. On the basis of its recommendations standard rates of remuneration have been fixed for sweepers employed by Municipal Boards. Improvement in their working conditions have also been ordered. Medical Officers of Health were appointed in twelve towns during the year, bringing the number of towns with Medical Officers of Health to 51.

An attempt to produce agriculture compost from our town refuse was made some years ago. It has been developed and extended during the past two years, and is now in operation in 100 towns, producing some 4 millions tons of manure. When applied to crops it has been found to yield about

one maund of extra food crop and about 2½ maunds of extra straw per acre. In view of the tremendous advantage which it means to the Food production drive, it is proposed to extend it to all fair areas, notified and town areas, railway settlements and cantonments.

Expenditure by Municipal Boards on Public Health.—The total receipts of municipal boards from all sources including Government grants during the year 1946-47 was Rs. 4,73,05,224 out of which expenditure on items of Public Health was as follows:—

	Rs.
1. Public Health staff including all establishment charges on Public Health	51,42,248
2. Registration of births and deaths	96,781
3. Maternity and Child Welfare	81,380
4. Vaccination	1,10,762
5. Epidemic diseases excluding hospitals and dispensaries and infectious diseases hospitals but including cost of quinine	2,74,114
6. Fairs and markets	1,28,240
7. Slaughter-houses	1,42,866
8. Infectious disease hospitals	2,77,365
9. Conservancy { Capital	5,62,170
{ Ordinary	19,33,287
10. Drainage { Capital	3,33,643
{ Ordinary	9,52,269
11. Water Supply { Capital	16,51,178
{ Ordinary	36,33,176
12. Food Adulteration	15,081
13. Town improvement including paving of streets, removing of obstruction, etc	9,72,795
14. Public health propaganda	1,540
15. Miscellaneous sanitary charges	5,18,124
Total	1,68,27,019

CHAPTER VI

RURAL SANITATION

Advice was given to the Rural Development staff and to villagers on the construction of sanitary works and the improvement of wells. A provision of Rs. 3 lakhs was made in the year 1947-48, for sinking wells in villages included in the Rural Development Department's scheme. A sum of Rs. 3,33,000 has been provided for interest-free loans to individuals or to groups of persons who may require assistance for improvement or construction of drinking water wells. A further provision of Rs. 2½ lakhs was made for augmenting water supplies in hills.

The Health Unit at Partabgarh served as a training ground in rural health work.

2. **Expenditure by District Boards on Public Health**—The total receipts of District Boards in the Province from all sources including Government grant during the year 1946-47 was Rs. 3,02,42,195 out of which expenditure on Public Health was as follows:—

	Rs.
1. Public health staff including all establishment charges on public health	2,78,581
2. Vital statistics (registration of births and deaths)
3. Maternity and child welfare]	16,553
4. Vaccination	4,77,905
5. Epidemic diseases excluding hospitals, dispensaries and infectious diseases hospitals but including cost of quinine	43,564
6. Fairs and markets	33,477
7. Slaughter-houses	3,601
8. Infectious Diseases Hospitals	2,169
9. Conservancy { Capital
{ Ordinary	4,495
10. Drainage { Capital	3,657
{ Ordinary	2,392
11. Water Supply { Capital	880
{ Ordinary	10,395
12. Food Adulteration
13. Town or village improvement (such as widening and paving of streets and removal of obstructions)	15,932
14. Public health propaganda	2,610
15. Miscellaneous sanitary charges	6,786
Total	9,12,997

CHAPTER VII

MALARIA

Malaria. Eight districts reported epidemic outbreak, against 12 in the previous year including some visited by floods. Over 7,84,000 tablets of Mepacrine and quinacrine hydrochloride 2,57,400 tablets of Paludrine, 32 lbs. of quinine sulph. and 17½ lbs. of cinchona febrifuge were issued free of charge out of Government stocks. Malarial surveys and investigations were carried out in 11 places, and advice rendered for control measures. Treatment schemes with quinine-plasmoquine and cinchona plasmoquine were in operation in 211 villages of Terai and Bhabar Government Estates—an hyper-endemic area for malaria. The estate also distributed anti-malarial drugs to its tenants free of charge as a measure of relief against malaria.

Special Anti-malaria Units. Out of six units sanctioned only two were functioning at the end of the year for lack of staff.

An Anti-malaria Unit was established at Kicha in Naini Tal district in connection with Terai Colonisation Scheme. Another similar unit was

established in Mowana tehsil of Meerut district in connection with Ganga Khadar Development Scheme. The anti-malaria organisation put up some years ago in connection with the Sarda Hydel Scheme in Terai continued to function.

Sale of quinine and substitutes. This department is the appointed agency for distribution to Government departments, institutions, medical practitioners and chemists of quinine and cinchona products and substitutes released by Government of India at reduced rates. A total of 4,929 lbs. of quinine sulphate, 2,269 lbs. of cinchona febrifuge, 207 lbs. of Tota quina 44,62,900 tablets of quinine substitutes, 1,922 boxes of injectible quinine and 4,46,000 tablets of paludrine hydrochloride were distributed to these authorities.

CHAPTER VIII

MATERNITY AND CHILD WELFARE

Three hundred and thirty-two centres functioned during the year against 331 in 1946. Some 33,677 confinements were conducted, against 47,491 in the previous year. Over 590 abnormal cases were sent to the hospital. Infantile mortality among cases conducted by the staff was 34.56 per thousand births, against 206.52 in the group not confined by them. Mortality rate among mothers whose confinement had been conducted by the trained staff was 3.04 per thousand. No reliable figure in respect of cases not attended by trained staff is available.

The number of medical women, health visitors and assistant midwives employed during the year, including those pertaining to the Rural Development Scheme, was 16, 41 and 314 respectively, which is almost the same as in the previous year. Some improvement is noticeable in the supply of candidates for Health Visitors' and Midwives training.

The training of health visitors and assistant midwives was continued at the Silver Jubilee Health School. Five of the former and 22 of the latter qualified during the year. Training of **dais** was continued at various centres. Three hundred and seventy-four of these were awarded local licence to practise in their areas.

4. Finance. The Provincial Government give a sum of Rs. 3,42,250 as grant-in-aid for Maternity and Child Welfare. The U. P. Branch of the Indian Red Cross Society gave a sum of Rs. 14,000. The Centre Headquarters of the Red Cross provided a sum of Rs. 5,600 for specified purposes. Miscellaneous receipts and interest amounted to Rs. 2,031. Grants from Municipal and District Boards to local centres, amounting to Rs. 1,06,144 made up for the rest of the expenditure.

CHAPTER IX

HEALTH OF SCHOOL CHILD

Medical inspection of scholars was conducted by whole-time school health officers in 14 larger towns and by Municipal and District Medical Officers of Health in other places. For English middle and high schools the scheme of examination is somewhat detailed. For others it is less so.

Examination on detailed lines were conducted in 316 out of 408 institutions specified for the purpose, and 35,976 scholars out of about 1,74,135 on roll were seen. For ordinary examinations 1,603 institutions out of 7,995 were visited and 81,849 out of 732,874 boys on roll were examined and advised.

2. Defects. The following is a table of the main defects noticed in urban and rural group of scholars. Figures for the previous year have been given for purpose of comparison:—

Nature of defect	Percentage of cases found defective			
	Urban		Rural	
	1947	1946	1947	1946
1. Poor nutrition	17.5	16.2	26.2	10.1
2. Teet and gums	6.1	6.7	13.7	9.2
3. Pyorrhoea	2.1	1.6	1.0	3.4
4. Tonsil and adenoids ..	12.6	13.0	5.1	2.1
5. Mouth breathing	2.3	2.8	0.6	1.2
6. Other glandular enlargements	3.4	4.3	1.8	0.6
7. Diseases of eyelids	3.3	4.5	6.7	3.9
8. Defective vision	9.7	9.3	2.0	1.2
9. Enlarged spleen	0.6	3.7	2.1	4.3
10. Skin diseases	3.1	3.9	2.8	2.8
Boys with one defect only ..	25.7	35.2	13.1	28.6
Boys with more than one defect.	16.9	16.8	5.0	6.3

3. Correction of defects. In 13 places where separate clinics exist for the treatment of scholars, 94,810 cases were treated. Over 1,260 cases of refraction were seen by honorary ophthalmologists and over 1,490 by honorary dentists attached to some of these clinics. Two hundred and fifty-five pairs of glasses were supplied free to boys in indigent circumstances. Some

370 boys who were in indigent circumstances and whose nutrition required to be fortified were supplied milk or vita-milk free. Talk on their individual health needs were given to the boys and to their parents.

4. **Milk feeding schemes** subsidised by Government were continued in the primary schools in Lucknow and Kanpur. The privately sponsored scheme in a girls' school in Lucknow was also continued and is greatly appreciated by guardians.

CHAPTER X

HEALTH EDUCATION

Health education was as usual carried on by officers of the Hygiene Publicity Bureau, by district, municipal and school health officers, and to a small extent by medical officers of dispensaries. Illustrated by magic lantern slides, posters and leaflets were used. Articles were contributed to the press and poster advertisements were inserted in newspapers. Some talks were given on the Radio. Eight shows were given at roadside villages by the publicity van. Health exhibitions were organised at many places. Propaganda on the need for balanced diets, and on tuberculosis was undertaken. Lectures on the prevention of blindness were organised in schools in urban and rural areas. Posters, literature and syllabus of the course on the subject were supplied to Lecturers and leaflets to pupil teachers in Training Colleges and Normal Schools and to Junior Red Cross groups.

2. **Red Cross.** There was a marked fall in membership for Junior Red Cross. About 85,760 scholars (of whom 4,742 were girls) were registered in 4,748 Junior Red Cross groups in 3,248 schools, against 108,800 scholars in the previous year. The decrease is due to disturbances in the normal working of schools caused by strikes. In order to give impetus to the expansion of this work in districts short refresher courses for teachers and inspecting staff were conducted. Junior Red Cross groups did health propaganda in their villages, particularly on bazar days and in fairs. One hundred and five first-aid out-fits were distributed for training in elementary first-aid and in epidemic emergency to groups which had shown particular keenness.

3. **St. John Ambulance Association.** Over 2,930 persons obtained certificates in various courses of the Association against 3,020 in the preceding year. In addition 2,374 certificates were granted to school children in First Aid, Hygiene and Sanitation by the lower standard against 2,909 in 1946.

4. The number of Ambulance divisions at the close of the year was 35 (an increase of two over previous year) with a total strength of 963 members. The number of Nursing divisions was 8 as last year, with a total strength of 186 and that of cadet divisions of boys and girls 56 (47 in

1946) with a membership of 1,286. Ambulance divisions worked at several fairs. As a link between cadet divisions and adult divisions the formation of students divisions has been introduced.

CHAPTER XI

PUBLIC HEALTH ADMINISTRATION

Malaria and Epidemiology were hitherto a combined charge under one Assistant Director. In view of increase in the work of both branches, they were created separate charges from October 1, 1947 each under one Assistant Director.

Budget grants. The revised budget of the Public Health Department for the year 1947-48 was Rs. 97,37,100 including allotment for Public Health Engineering Section and grants for sanitary works. Out of this Rs. 66,67,600 was for activities directly controlled by the Director of Public Health. The actuals for the year 1946-47 for the entire department was Rs. 70,16,988 of which Rs. 51,12,434 was for activities controlled by the Director of Public Health.

CHAPTER XII

VACCINATION

There are 443 towns in the United Provinces for purposes of vital statistics of which vaccination was compulsory in 249. Taking the figures for all towns 407,334 persons were vaccinated or re-vaccinated in the year against 412,657 in 1946. In the rural areas 1,578,841 persons were vaccinated or re-vaccinated against 1,641,993 in 1946. The decrease is both under primary and re-vaccinations, and is due partly to fall in births and partly to disturbed conditions in rural areas.

The approximate number of children under one year of age available for vaccination in 1947 was 215,230 in towns and 982,986 in rural districts, of whom 132,254 and 653,101 respectively or 61.43 and 66.44 per cent were vaccinated. The number vaccinated in age group 1—5 years was 50,390 in towns and 345,471 in rural districts.

2. The number of vaccinations performed in 1947 was 1,995,243 (1,339,693 primary and 655,550 re-vaccinations) against 2,062,714 (1,396,138 primary and 666,576 re-vaccination) in 1946. The percentage of successful vaccination in which results were known was 97.86 in the case of primary operation and 77.38 re-vaccinations. No case of encephalitis following vaccination was reported.

3. **Government Vaccine Depot.** The amount of vaccine lymph manufactured was 141,951 grammes against 202,648 grammes in 1946. Quantity issued during the same period was 166,849 grammes against 171,320 in the previous year.

CHAPTER XIII

OTHER PUBLIC HEALTH SERVICES

Hygiene Institute. Courses and examinations for sanitary inspectors and health visitors were conducted at the Institute, besides the course in Hygiene for the M.B.B.S. of Lucknow University. Opinion was given on over 2,220 samples of factory effluents, water, food, ice, chemicals and pathogenic material submitted to it by Medical Officers of Health and others, and control check over local analysis of public water supplies was continued. Officers of the Institute also investigated an outbreak of epidemic dropsy in Gorakhpur, of suspected pellagra in Hamirpur Jail, and causes of pollution of water supply at Almora.

2. **Cholera Vaccine.** Over 1,582,038 c.cs. of cholera vaccine were manufactured.

3. **Anti-rabic Treatment** was decentralised to District Headquarters Hospitals with effect from October 1, 1947.

4. **Food adulteration.** The number of food samples submitted to the Public Analyst for analyses was 14,421 against 13,378 for foods and drugs in 1946. The following table shows the result of analyses:—

Name of food samples	No. of samples received for analyses in 1947	Percentage of adulteration	
		1947	1946
1. Ghee	3,012	22.9	24.55
2. Milk	6,983	47.4	45.69
3. Butter	187	37.6	37.69
4. Flour	965	34.8	23.88
5. Edible oils	1,733	22.7	10.20
6. Miscellaneous	1,541	28.3	29.63

Number of cases sent up for prosecution was 4,503 of whom 3,671 resulted in conviction. The average fine inflicted for the offence of adulteration was as follows:—

Cases tried by Stipendiary Magistrates.

						Rs.	A.	P.
(a)	For first offence	57	6	0
(b)	For subsequent offence	207	15	0

Cases tried by Honorary Magistrates.

						Rs.	A.	P.
(a)	First offence	47	0	0
(b)	For subsequent offence

A sum of Rs. 44,868 as additional fine was realised to cover the cost of analyses in cases resulting in prosecution.

5. Drugs standard control. The Drugs Act passed by the Central Legislature some years ago to control the standard and purity of drugs was applied to the U. P. with effect from October 1, 1947. Director of Public Health was appointed controlling authority and medical officers of health as inspectors. Licences for manufacturing concerns are to be issued by the Provincial Government and for all others by medical officers of health. The Public Analyst to Government has been appointed Analyst. He analysed 22 samples of which three were found adulterated.

CHAPTER XIV

INDUSTRIAL HYGIENE

Medical officers of health inspected factories for sanitation, and advised on the provisions necessary for safeguarding health of workers.

Complaints of nuisance from sugar factory and distillery wastes have become frequent. The matter has been referred for investigation by a representative committee.

GENERAL

Medical and sanitary arrangements at refugee camps.—As batches of refugees began to arrive in the Province, camps for their reception were put up at which sanitary arrangements were organised. These comprised of the protection and augmentation of water-supply, maintenance of camp sanitation and conservancy, inoculation against cholera and typhoid, and vaccination against small-pox and, where necessary, the adoption of anti-

mosquito measures. As the result of these precautions there was no outbreak of disease at any of the camps. All large settlements have been provided with midwives and a dispensary, with arrangements to remove serious cases to nearest hospital. Smaller camps which have not enough work for wholtime medical officers are visited by doctors of the nearest dispensaries. Multi-Vitamin tablets are distributed by health authorities to expectant and nursing mothers, and to children whose nutritional condition may require to be fortified.

Rural hospitals.—From March 1, 1947 administrative control of all State and State-aided allopathic dispensaries in rural areas, numbering some 400, was transferred to the Public Health Department. This was done with a view to ensure effective supervision by District Medical Officers of Health who tour in rural areas and to enable services of the dispensary doctors being utilised for treatment and preventive work in their areas.

Future plans.—The Bhole Committee appointed by the Government of India submitted its report in the year 1946. A Provincial Committee appointed by the Government to advise on the implementation of its recommendations endorsed the general scheme of the Bhole Committee and most of its recommendations. Many of these have been implemented in the budget of the year 1948-49 and as the first step, Medical and Public Health work have been placed under a single administration. This took effect from March 3, 1948 from which date a new era began in health administration of the Province. Medical relief and public health work is being integrated in every field to give maximum service to the people for the money spent. Henceforth there will be no thinking in terms of "Medical" and "Health".

A. C. BANERJEA,

Director of Medical and Health Services, U. P.

Patwa Dangar (District Naini Tal):

June 26, 1948.
