CHART I
DEATHS IN 1945 AND PREVIOUS YEARS.

ANNUAL PUBLIC HEALTH REPORT FOR 1945.

CHAPTER I.

METEOROLOGY.

1. *Rainfall.*—The rainfall in June was generally deficient over most of the Province while in July it was fairly substantial and wide-spread over the greater part of the reporting areas, except in the south-eastern regions of the Deccan and the Karnatak. It was fairly substantial over the greater part of the Province in August. In September it was heavy in Gujrat and North Deccan, substantial in Konkan, but generally inadequate in South Deccan and Karnatak. In October it was deficient, being light to fair over most of the Province.

Gujarat.—In June the rain was fairly substantial and evenly distributed in the Southern areas, while in July it was fairly substantial and wide-spread. It was continuous in the middle of August particularly in the south of the division. In September it was heavy while it was occasional in the first week of October.

Konkan.—In June the rainfall was fairly substantial and evenly distributed, while it was wide-spread in July. It was substantial in August and September. In October it was adequate in the south and inadequate in the central regions of the division.

Karnatak and Deccan.—Rain was inadequate in the eastern areas in June. It was fairly substantial and wide-spread in the Western parts and generally deficient in eastern regions. In August the rainfall was substantial in the western parts while it was generally inadequate in South Deccan, Karnatak and eastern parts and heavy in North Deccan in September. In October rainfall was deficient in the first week in the south-eastern areas of Deccan and the eastern parts of Karnatak while the first 3 weeks of the month recorded beneficent rainfall.

CHAPTER II.

VITAL STATISTICS (INCLUDING POPULATION, EMIGRATION AND IMMIGRATION).

2. *General Remarks.*—The year under report has recorded an increase of 28,431 deaths accompanied by an increase of 5,085 births as compared with the previous year. The increase in deaths is mainly shared by the epidemic diseases, cholera and plague, which were rather severe during the year and also to some extent by the omnibus heading of "all other causes" under which deaths, causes of which could not be specifically ascertained, are grouped. The major heads of fevers, Dysentery and Diarrhoea and Respiratory Diseases and also Small-pox recorded less deaths during the year as compared with the previous year.

During the year under report cases of mal-nutrition or abnormal mortality or morbidity were not reported from any area.

Details of various causes of deaths will be found in Chapter III.

The male deaths as usual exceeded the female deaths.

Still-births.—The number of still-births recorded was 10,080 as compared with 11,303 in 1944. The percentage of still-births to live births was 1·35 as compared with 1·52 recorded during the previous year. The percentage recorded in Bombay City was 6·39. From the rates it is evident that the recording of still-births is not as complete as it should be and the figures of Bombay City can be presumed as nearer to the correct figure.

The infant mortality rate was 161·23 per 1,000 registered births as compared with 166·09 in 1944. The decrease recorded in infant deaths was 2,780 which is welcome especially as the number of births has increased as compared with the previous year.

3. The Province is divided into three Registration Districts comprising of 20 Districts and Bombay City, one hundred and eighty-seven rural circles (talukas and petas), one hundred and seventy-three town circles and six Cantonments. These divisions are shown in Appendix V to this report.

4. *Population.*—The total population of Bombay Province according to the census of 1941 was 20,815,697, consisting of Indians, Europeans and Anglo-Indians, etc. The mid-year estimated population for 1945, according to the "Arithmetical Progression" method works out to 22,147,626. This shows an increase of 6·39 per cent. on the census population of 1941. The area in square miles is 76,389 and average population per square mile comes to 289.

5. *Changes in area.*—Sholapur taluka has been divided into two divisions viz. Sholapur North and Sholapur South. In Ratnagiri District two new talukas viz. Lanja and Kankavli have been formed.

6. *European and Anglo-Indian Vital Statistics—Europeans.*—The European population according to the census of 1941 is 22,640 as against 18,028 as per the census of 1931. In 1945 the number of births recorded was 521 against 536 in 1944. Of the births 265 were males and 256 females against 266 and 270 respectively in the previous year. There were 266 deaths as compared with 392 in 1944. Of the deaths 206 were males and 60 females against 321 and 71 respectively.

7. *Anglo-Indians.*—The population according to 1941 census was 14,034 as against 14,176 in 1931. The number of Anglo-Indian births recorded was 267 against 244 in the previous year. Of the births 122 were males and 145 females against 127 and 117 respectively in 1944. There were 108 deaths as compared with 144 in 1944.

The vital statistics of Europeans and Anglo-Indians have been included in Appendix V to this report.

VITAL STATISTICS OF INDIANS.

8. *Births.*—There were 746,395 births registered during the year in the Province as compared with 741,310 in 1944, showing an increase of 5,085 over the previous year and of 6,674 over the quinquennial average of 1940-44 (739,721).

The annual number of births and birth-rates recorded in the previous years were :—

Year.	Births.	Birth-rate per mille of population.
1932-35 mean	713,456	38·32
1936-40 mean	752,336	38·31
1941	763,112	36·49
1942	724,726	34·04
1943	713,640	33·10
1944	741,310	33·93
1945	746,395	33·70

As compared with the quinquennial mean of births (739,721) for the years 1940-1944 the variation recorded during the last two years is slight. In spite of the increase of 5,085 births during 1945 as compared with the previous year the birth-rate worked out on the estimated population has shown a decline of ·23 as the population is progressively increasing.

9. *Birth-rates in Collectorates.*—The highest birth-rate was recorded in West Khandesh District (42·58). The next was Sholapur (40·22). Fourteen Districts had birth-rates between 30 and 40 per mille of the estimated population and four Districts between 20 and 30. The lowest rate (26·54) was recorded in Bombay Suburban District. Eleven Districts recorded a rise in the birth-rate, as compared with the previous year and decline was noticed in the remaining nine Districts.

10. *Birth-rates in rural areas.*—The total birth-rate for the rural areas in the Province was 34·05 as against 34·40 in 1944. Among the talukas and petas in the Province 85 i.e. 45 per cent. returned rates over 35 per mille of estimated population. One of these areas returned a birth-rate of over 50 per mille, 36 areas between 40 and 50 per mille and 48 areas between 35 and 40 per mille. Fifty areas had rates between 30 and 35 and 52 had rates below 30 per mille. The rates varied from 53·14 in Sakri taluka of West Khandesh District to as low a figure 11·37 in Poona City taluka in Poona District.

11. *Birth-rates in urban areas.*—The birth-rate for urban areas in the Province was 32·70 as against 32·61 in 1944. Among towns very high birth rates were recorded in Vengurla (65·55), Dohad (50·61), Borsad (49·63), Malwan (49·19). Low birth-rates were reported from Gokarn (10·55), Sangamner (10·69), Indapur (10·70) and Khanapur (11·75). Details are shown in Appendix V to this report.

12. *Births in Bombay City.*—The births recorded in Bombay City numbered 53,170 giving a birth rate of 32·57 as against 56,907 and 35·58, respectively, in 1944.

13. *Births in Cantonments.*—Among the six cantonments the highest birth-rate was recorded in Kirkee Cantonment (36·23) and the lowest in Belgaum Cantonment (6·85).

14. *Births according to sex.*—385,585 male and 360,810 female births were registered during the year, as compared with 382,790 and 358,520 respectively, during 1944. For every 100 female births there were 106·86 male births, the previous year's ratio being 100 to 106·77.

15. *Still-births.*—There were 10,080 still-births registered during the year, i.e. 1·35 for every 100 live-births as against 11,303 and 1·52 during 1944. The percentage of still-births to live-births recorded varied from ·14 for Ratnagiri and Kolaba Districts to 3·70 in Kanara District and 2·00 for Bijapur District. The percentage in Bombay City was 6·39 against 5·92 in the previous year. Distribution by classes and sex and Collectorates is shown in Annual Form No. I (a) in Appendix V.

16. *Verification of Vital Statistics.*—The officers of the Public Health Department detected 1,243 births and 113 deaths which had not been registered in the different areas of the Province. The omissions detected were brought to the notice of the local authorities with recommendation to pay more attention to the accurate registration of births and deaths.

17. *Deaths.*—584,892 deaths were recorded in the Province during 1945 as compared with 556,461 in 1944, the quinquennial average being 523,348. Mortality figures and death-rates registered in the Province during previous years, are given in the following table :—

Year.	Deaths.	Death rate per mille of estimated population.
1932-35 mean	486,484	26·11
1936-40 mean	506,845	25·81
1941	539,737	25·81
1942	516,548	24·26
1943	502,531	23·31
1944	556,461	25·47
1945	584,892	26·40

As in the case of birth statistics the death statistics have also shown a rise.

18. *Death-rates in Collectorates.*—Five Districts, viz. Sholapur (34·38), East Khandesh (33·72), Broach (32·14), West Khandesh (30·53), and Nasik (30·23) had death-rates above 30 per mille of population. Twelve Districts had death-rates above 30 per mille and three below 20 per mille. The death-rates were low in the Districts of Bombay Suburban (15·73) and Thana (16·34). The death-rate in Sholapur, East Khandesh, West Khandesh and Nasik was to some extent influenced by the prevalence of severe cholera epidemic in addition to the usual influencing factors e.g., deaths grouped under "Fevers", "Respiratory Diseases" and "all other causes". In Broach District more deaths were recorded under "Fevers", and "all other causes".

100
150
200

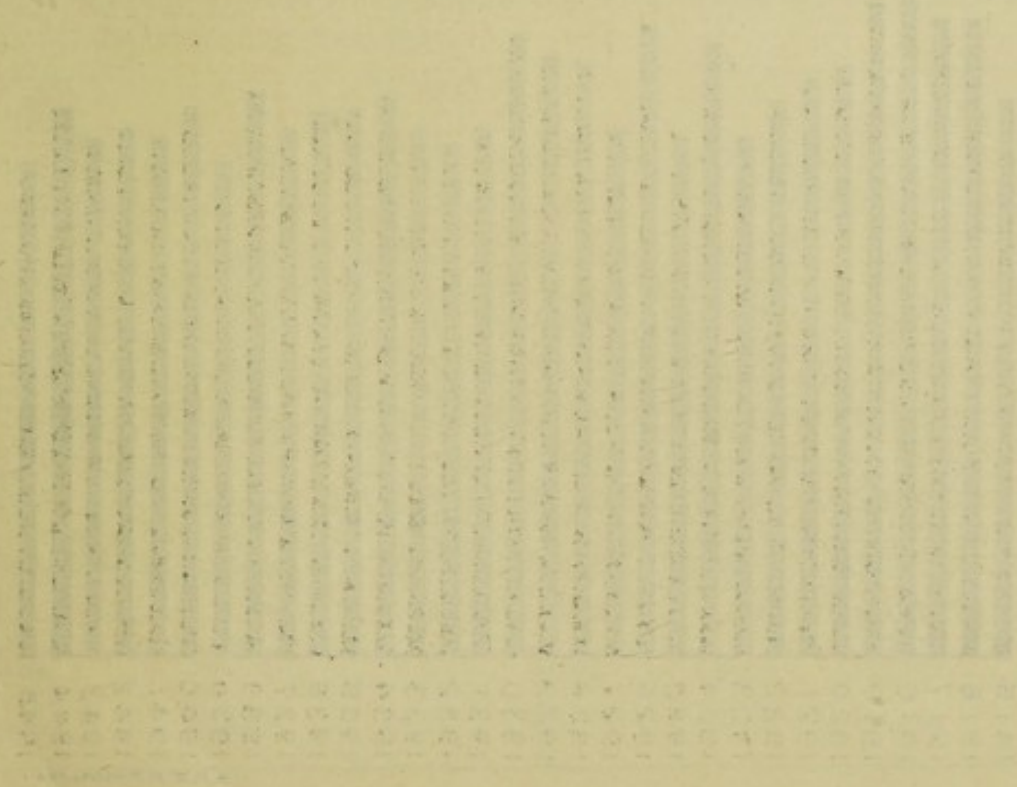

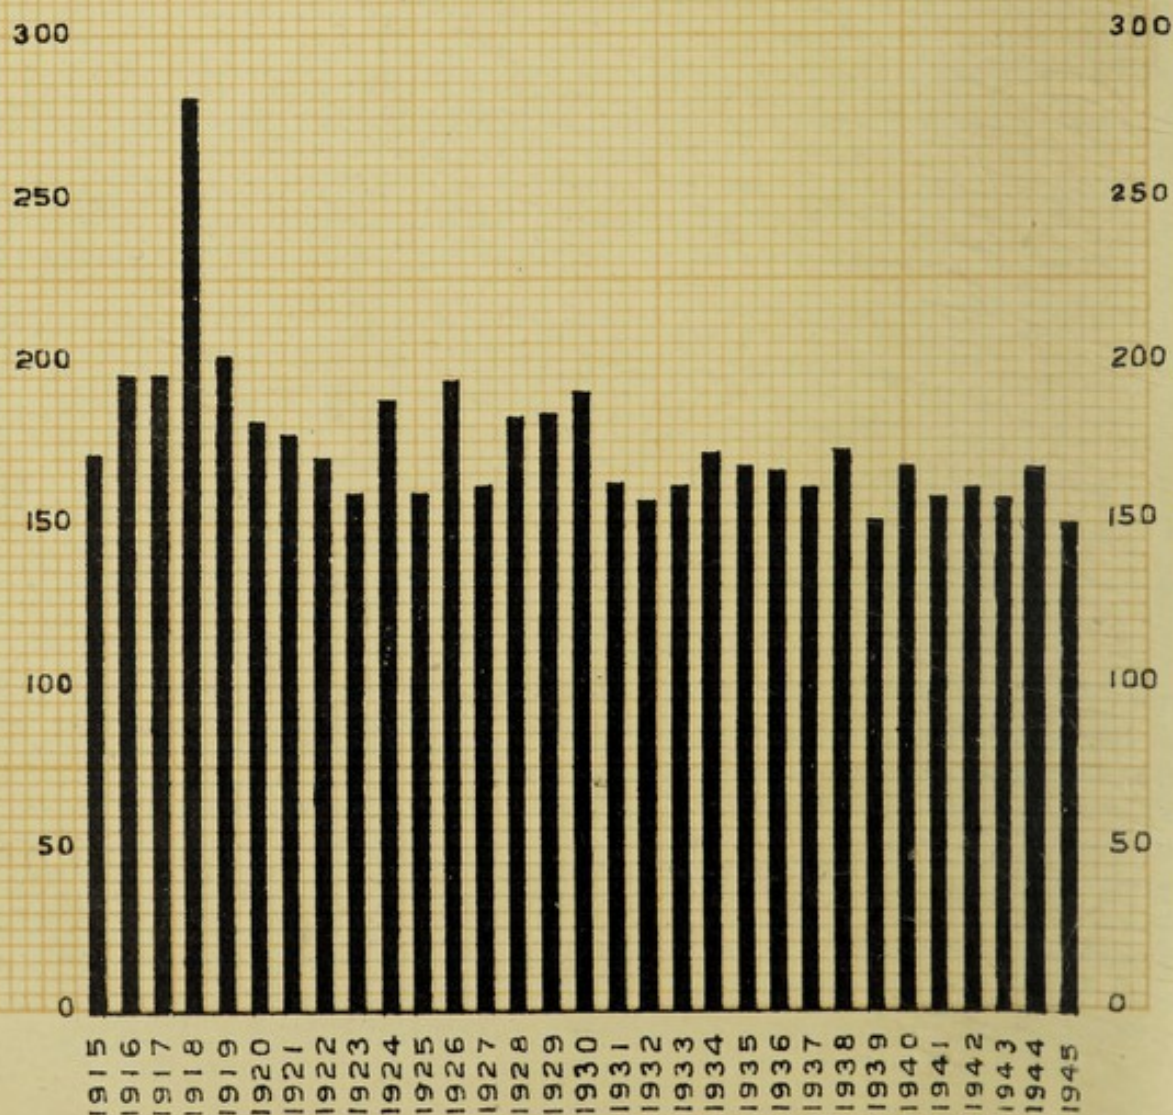

CHART II
CHART SHOWING INFANT MORTALITY RATE,
IN THE BOMBAY PROVINCE, FROM 1915 TO 1945.

19. *Death-rates in rural areas.*—Among the talukas and Petas no taluka reported a death-rate of above 50 per mille of population. Seven talukas had death-rates between 40 and 50 per mille, 15 between 35 and 40 per mille, 34 between 30 and 35 per mille and 141 below 30 per mille. The highest death-rate (47·86) was recorded in Barsi taluka and the lowest rate was reported from Dahanu taluka (7·13). The total rural death-rate for the Province was 26·27 as against 25·58 in 1944.

20. *Death-rates in urban areas.*—Among towns high death-rates were reported from Vengurla (46·42), Talegaon Dabhade (45·47), Chikodi (44·87) and Pandharpur (40·95). In Talegaon Dabhade town deaths under "Fevers" and "Respiratory Diseases" and in Pandharpur and Vengurla towns deaths under "Respiratory Diseases" and "all other causes" influenced the death-rate. In Chikodi town Plague prevailed in a very severe form during the year. Low death-rates were recorded in Junnar (8·02), Islampur (9·3) and Gokarn (9·76). The urban death-rate for the whole of the Province was 25·65 as against 25·18 in 1944. The death-rate recorded in Bombay City was 24·64, against 26·18 in 1944.

21. *Death-rates in Cantonments.*—The lowest death-rate was recorded in Belgaum Cantonment (4·69) and the highest in Kirkee Cantonment (30·44).

22. *Excess of births over deaths.*—Births exceeded deaths by 1,61,503 against 1,04,849 in 1944. The percentage rate of increase in the population was ·73.

23. *Deaths according to sex.*—During the year under report the deaths among males numbered 3,00,223 and among females 2,084,669. The ratio of deaths of males to 100 deaths of females was 105·46 as compared with 106·95, in 1944.

24. Deaths by castes or classes and by sex are recorded in Annual Form No. V, Appendix V.

25. *Deaths according to causes, compared with previous years.*—The following table shows the number of deaths in 1945 and the ratios per 1,000 of population arranged according to causes and contrasted with figures for 1944 and with the average for the preceding five years:—

		1944		1945		Mean of five years.	
	No.	Ratio.	No.	Ratio.	No.	Ratio.	
Cholera	...	1,639	·08	24,691	1·11	8,187	·39
Small-pox	...	7,212	·33	4,699	·21	5,633	·27
Plague	...	2,514	·11	11,779	·53	2,959	·14
Fevers	...	215,027	9·84	200,538	9·05	187,532	8·86
Dysentery and Diarrhoea	...	22,493	1·03	21,214	·96	23,781	1·13
Respiratory Diseases	...	108,398	4·96	105,994	4·79	103,954	4·91
Injuries	...	7,569	·35	6,577	·30	7,213	·34
Other causes	...	191,609	8·77	209,400	9·45	184,089	8·71
All causes	...	556,461	25·47	584,892	26·40	523,348	24·75

Graphs showing the incidence of deaths under the chief causes for the year under report, compared with the previous years are shown in Charts I and IV. Graphs showing the annual incidence of deaths from epidemic diseases, cholera, small-pox and plague, are shown in Chart VI.

INFANT MORTALITY.

26. *Infant mortality.*—The number of deaths under one year was 1,20,343 in 1945 as against 1,23,123 in 1944, the ratio per 1,000 of births being 161·23 and 166·09 respectively. Male infant deaths exceeded female infant deaths by 7,499. Of the infants who died 46,807 i.e. 39 per cent. of the total infant mortality, died before they were one month old, 26,553 of these i.e. 22 per cent. of the total infant deaths were under one week and 20,254 i.e. 17 per cent. over one week. Of the remaining 43,191 i.e. 36 per cent. were over one month and under six months and 30,345 i.e. 25 per cent. were between six and twelve months old. In 1944 the percentages in the age group of under one month between one and six months and six and twelve months were 37, 36 and 27 respectively.

27. *Infant mortality in urban and rural areas.*—The urban and rural infant death-rates per 1,000 registered births for the Province were 183·98 and 153·42 respectively, as compared with 192·47 and 157·21 respectively in the previous year. Infant mortality in 1945 as compared with the previous years is shown in the table below :—

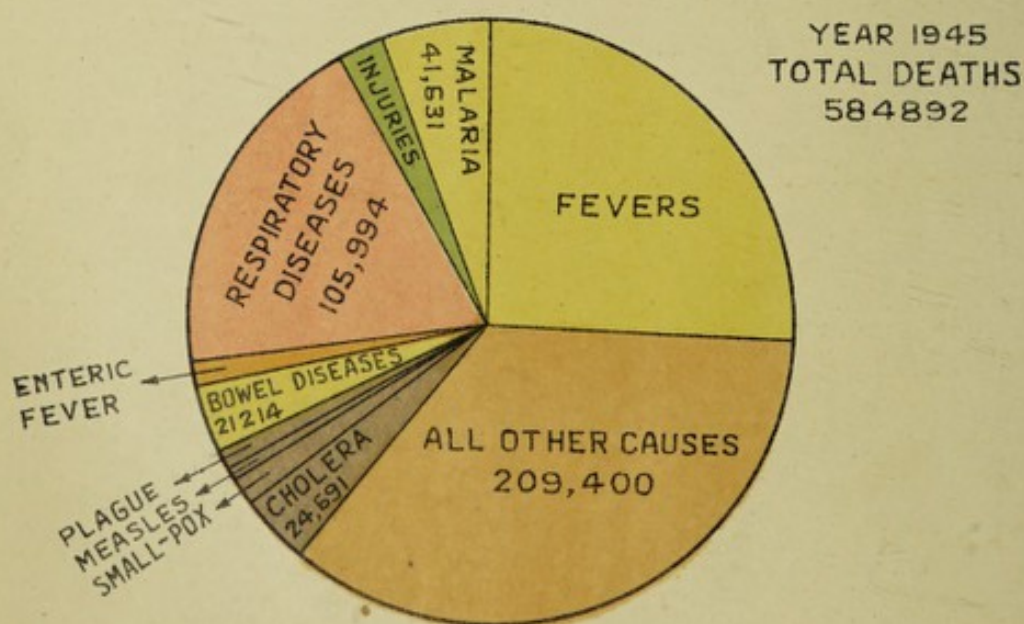

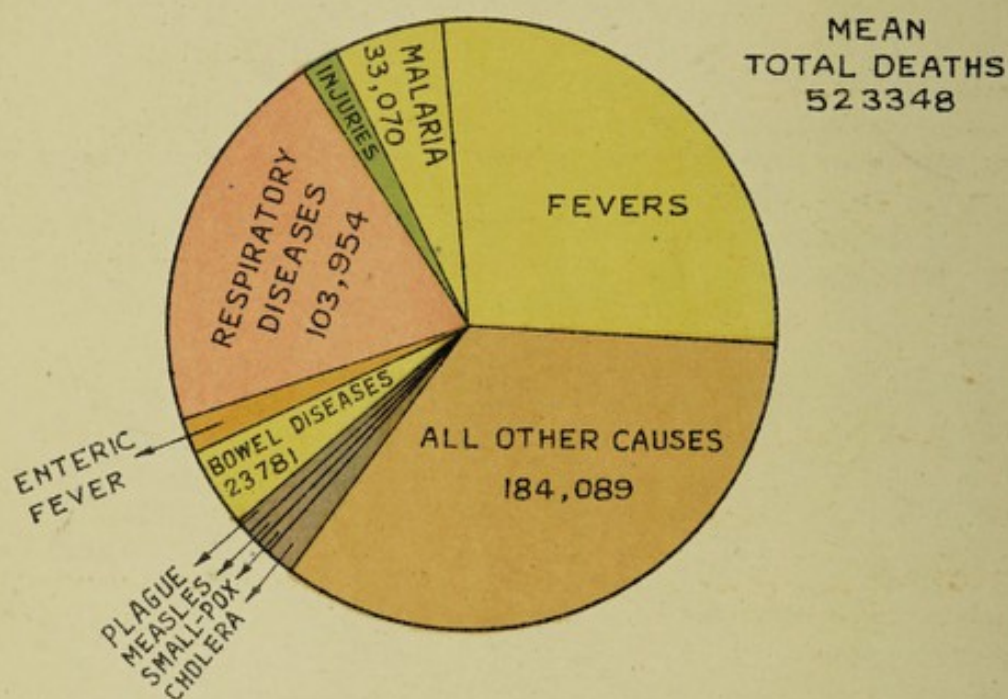

Year.	Deaths under 12 months.			Births registered.			Infant death-rate per 1,000 births.			Infant deaths per 100 of total deaths.
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.	
1916-20 mean	64,131	55,719	119,850	291,606	274,110	565,716	219·93	203·27	211·86	15·92
1921-25 mean	54,635	46,147	100,782	301,679	282,575	584,254	181·10	163·31	172·50	23·09
1926-30 mean	64,088	54,286	118,374	330,921	311,953	642,874	193·67	174·02	184·13	24·62
1931-35 mean	64,045	53,842	117,887	366,082	344,345	710,427	174·95	156·36	165·94	24·37
1936-40 mean	66,906	56,929	123,835	387,420	364,913	752,333	172·74	155·98	164·61	22·70
1941	65,505	55,793	121,298	393,411	369,701	763,112	166·50	150·91	158·95	22·47
1942	63,194	53,139	116,333	374,551	350,175	724,726	168·72	151·75	160·52	22·52
1943	60,749	51,574	112,323	369,072	344,568	713,640	160·60	149·68	157·39	22·35
1944	65,949	57,174	123,123	382,790	358,520	741,310	162·28	158·47	166·09	22·13
1945	63,921	56,422	120,343	385,585	360,810	746,395	165·77	156·38	161·23	20·57

Detailed figures of infant mortality are given in Annual Form No. VI (A). High infant death-rates were recorded in the towns of Poona Suburban (516·48), Dakore (330·38), Poona City (319·55), Pandharpur (311·97), and Surat (307·47) and in rural areas in the Districts of East Khandesh (258·61), Broach (236·80), Kaira (175·27) and Nasik (171·11). Though contributory causes e.g. measles, small-pox, Diarrhoea, pneumonia and other respiratory diseases were present in those areas they were not so abnormal as to explain the high infant mortality rate and it has largely to be attributed to the incomplete registration of births.

CHART III

COMPARATIVE STATEMENT OF DEATHS BY CAUSES FOR THE MEAN 1940-1944 AND 1945.

CHAPTER III.

THE STATE OF PUBLIC HEALTH IN THE PROVINCE OF BOMBAY AND
HISTORY OF CHIEF DISEASES.

28. *General Remarks on the health of the Province.*—An increase of 28,431 deaths and 5,085 births was recorded during the year as compared with the previous year. As regards the increase in the number of deaths, it may be partly due to the fact that two major epidemic diseases viz. Cholera and Plague were raging in several Districts of the Province. Other major heads of "causes of deaths" have shown a decline as compared with the previous year, the exception being "all other causes" which has shown a rise. Another factor to be reckoned with is the steady rise in the population. Apart from the increase that may be due to immigration the estimated mid-year population for 1945 calculated by the Arithmetical progression method has shown a percentage increase of 6.39 on the 1941 census population which may have also partly influenced the mortality figure. Cases of malnutrition or any abnormal morbidity or mortality were not reported from any area during the year under report.

The details of comparison with the previous year show that Fevers recorded a decrease of 14,489 deaths, Small-pox of 2,513 deaths, Respiratory diseases of 2,404 deaths, Dysentery and Diarrhoea of 1,279 deaths and Injuries of 992 deaths. On the other hand, Cholera showed an increase of 23,052 deaths, Plague of 9,265 deaths and "all other causes" of 17,791 deaths.

In spite of the increase in the Provincial birth figure, the infant mortality rate has shown a decrease from 166.09 in 1944 to 161.23 in 1945. Infant deaths per 100 of total deaths have also shown a decrease from 22.13 in 1944 to 20.57 in 1945.

Details of various diseases as compared with the previous year and also with the quinquennial average are given under separate headings in paragraph 25 and further comparison is shown in graphic form in the charts inserted in the report.

29. *Fevers (General Prevalence).*—Deaths due to fevers numbered 2,00,538 in 1945 against 2,15,027 in 1944, the mean of the previous five years being 1,87,532. The death rate was 9.05 against 9.84 in 1944. The urban death-rate was 5.61 and the rural 10.02.

Fever mortality in previous years.—The mortality recorded under this heading in previous years is as given below :—

Year.	Fever deaths.	Ratio per mille.
1932-35 mean	164,501	8.88
1936-40 "	170,658	8.68
1941	180,929	8.65
1942	188,356	8.86
1943	180,489	8.37
1944	215,027	9.84
1945	200,538	9.05

Distribution of fever deaths is shown in Annual Form No. IX.

30. *Death-rates from fevers in Collectorates.*—High death-rates due to fevers were recorded in the Collectorates of Broach (17·43), East Khandesh (16·48) Ahmedabad (12·65) and West Khandesh (12·11).

31. *Death-rates from fevers in urban and rural areas.*—High death-rates from fevers were recorded in the towns of Dholka (23·29), Jambusar (22·33), Anand (21·91) and Viramgaon (20·96). In rural areas high death-rates were recorded in the Districts of Broach (19·10), East Khandesh (18·64), and Ahmedabad (18·32). Out of the total deaths (2,00,538) due to fevers 52,226 are accounted for by the sub-heads Malaria (41,631), Enteric fever (6,443), Measles (3,871), Cerebro Spinal Fever (222), Influenza (53), Kala Azar (5) and Typhus (1). The remaining deaths come under the omnibus heading of "other fevers" for want of specific details regarding the causes of deaths.

Details of deaths from fevers are shown below:—

Malaria—(Vide Chapter V).

32. *Enteric fever.*—Deaths due to enteric fever during 1945, numbered 6,443 against 6,648 in 1944, the ratios being ·20 and ·30 respectively. The death-rate for urban areas was ·32 and that for rural areas ·27.

33. *Deaths from enteric fever in urban and rural areas.*—The disease was more prevalent in the towns of Sholapur (179 deaths), Poona (133), Surat (112), Ahmedabad (57). In Bombay City 616 deaths were registered as compared with 456 in 1944. In the rural areas more deaths due to enteric fever occurred in the Districts of Dharwar (572), Ahmednagar (551), Kolaba (518) and Poona (411).

Free diagnostic aid to the private medical practitioners by examining the clinical material sent by them is continued at the Haffkine Institute, Parel, Bombay.

In the affected areas preventive measures e.g., inoculation with T. A. B. vaccine, disinfection of water supplies, anti-fly campaign and propaganda by means of leaflets were carried out.

34. *Measles.*—3,871 deaths due to measles were recorded against 6,847 in 1944, the death-rate being ·17 against ·31 in 1944. The urban death-rate was ·30 and the rural ·12.

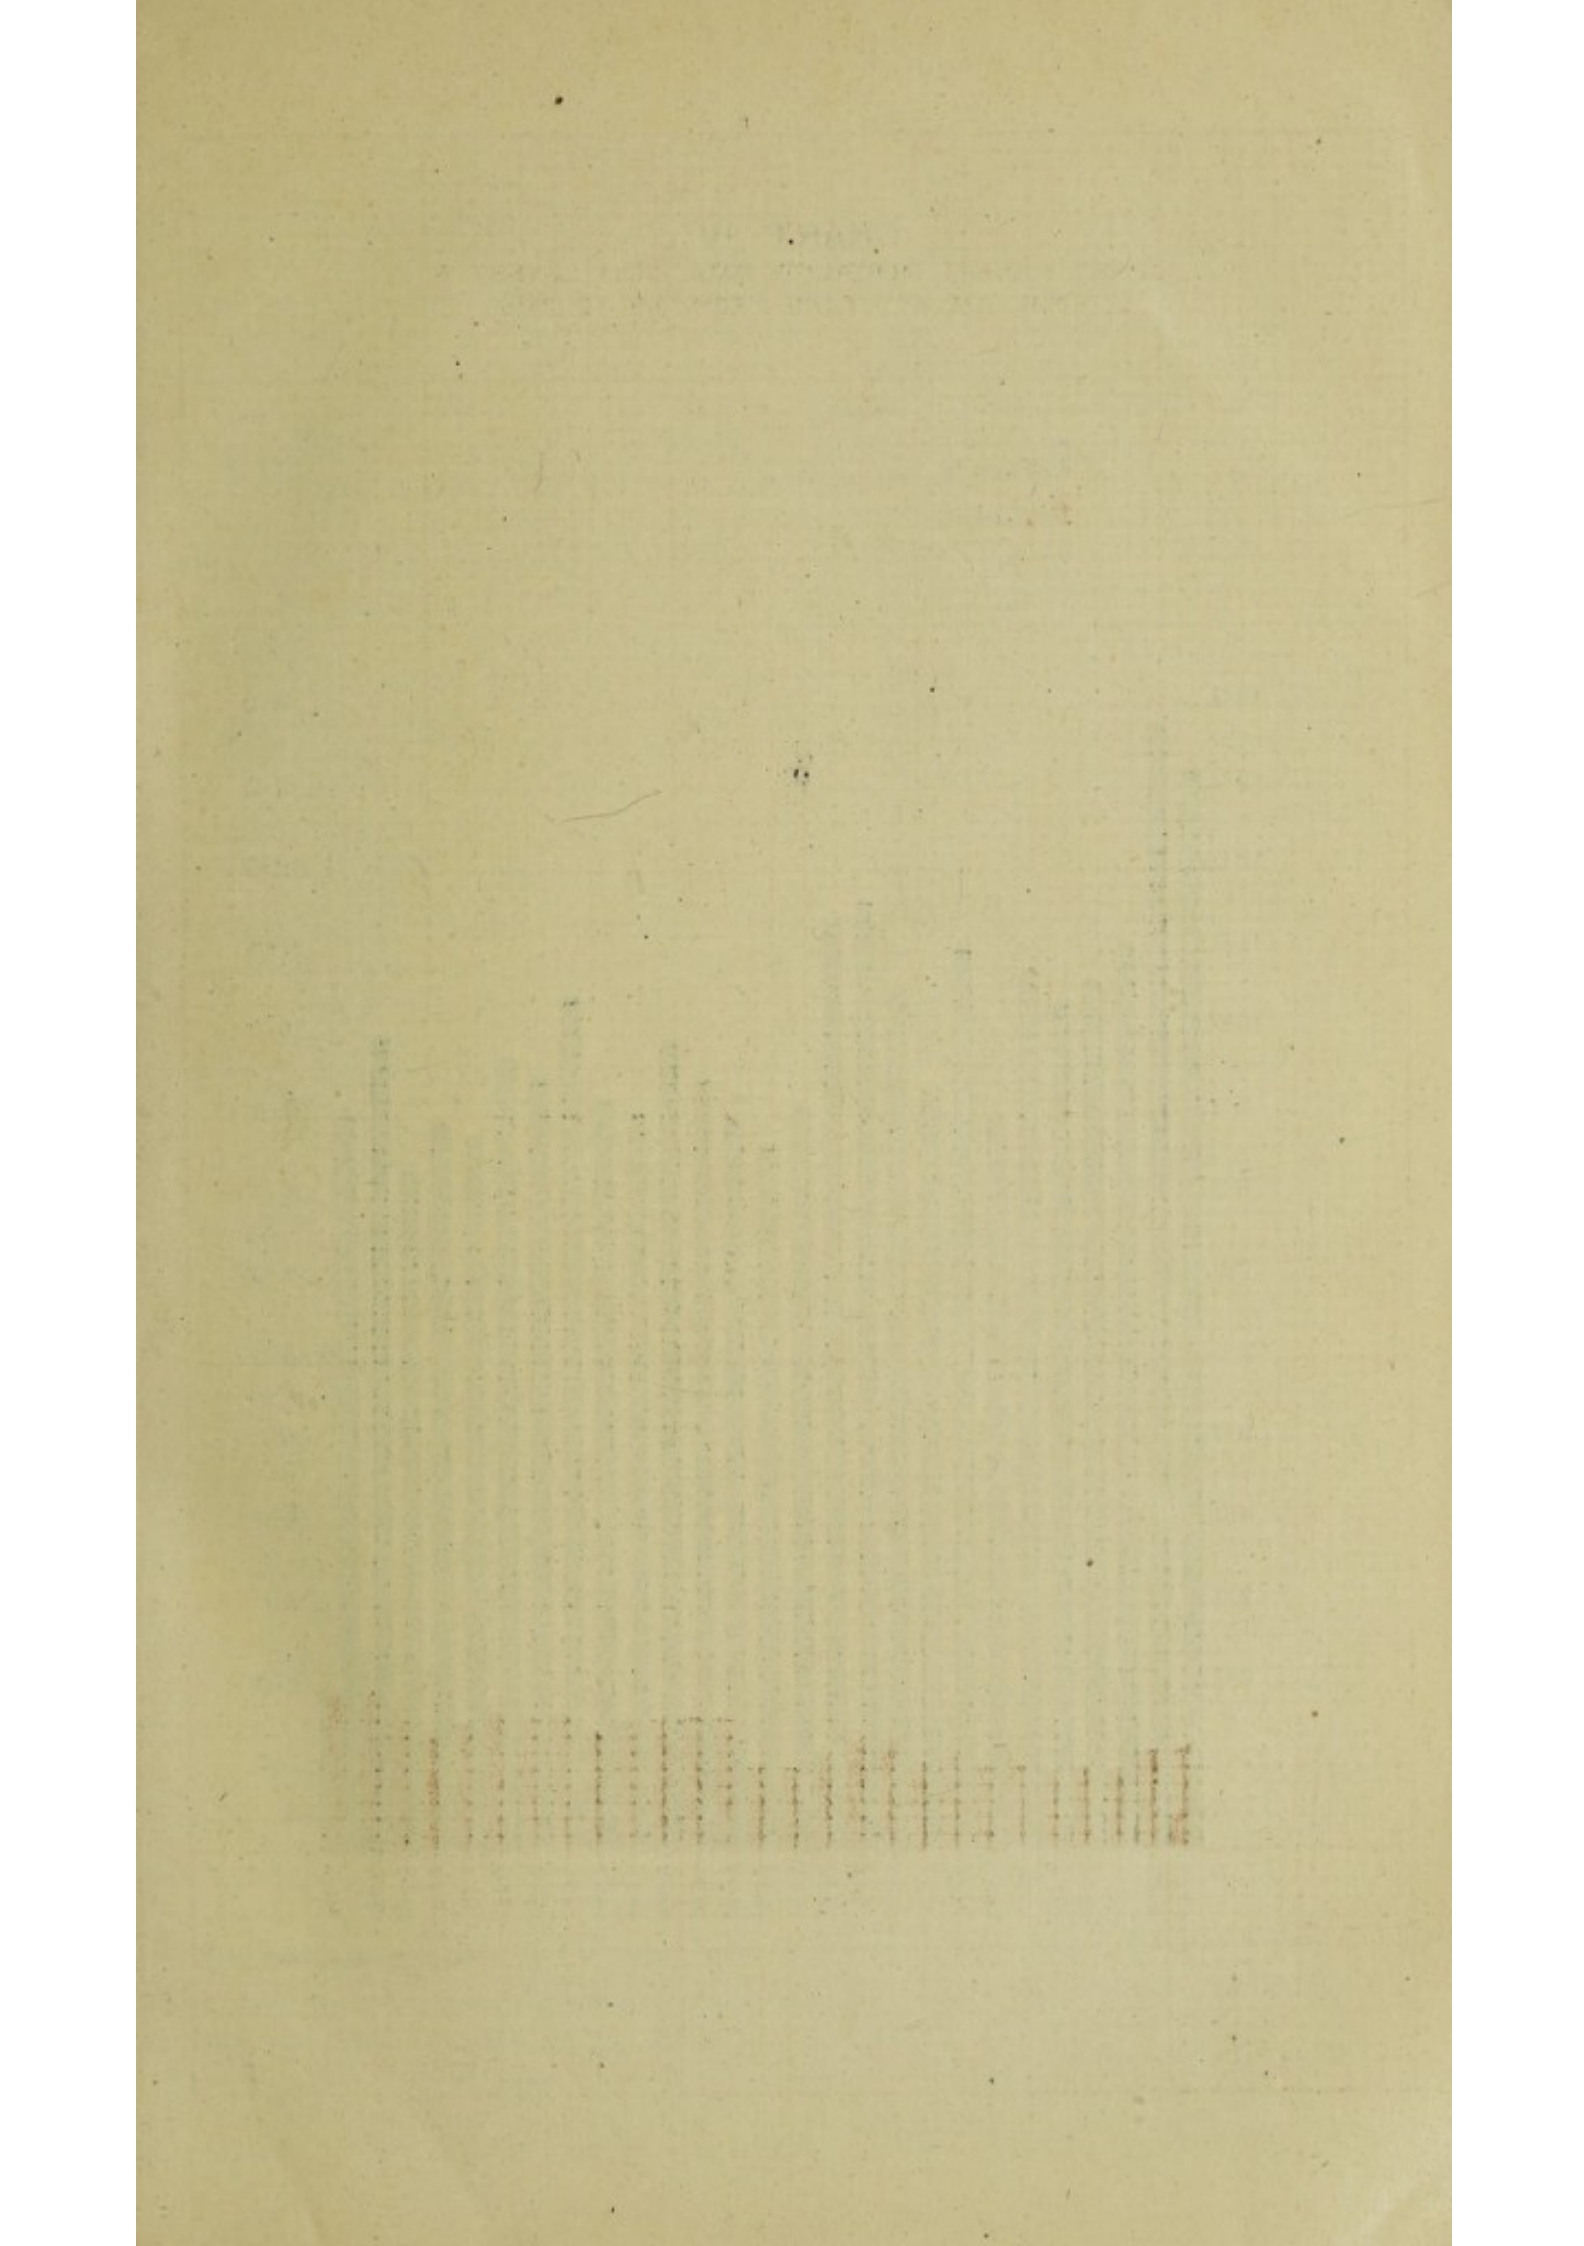

35. *Deaths from measles in urban and rural areas.*—The disease was more prevalent in the towns of Sholapur (398 deaths), Surat (287), Ahmedabad (218) and Poona (133) and in rural areas in the Districts of Belgaum (403), Sholapur (245), West Khandesh (205) and Ratnagiri (179).

The epidemic of measles was comparatively less severe during the year. This is in keeping with the less number of deaths recorded under Respiratory Diseases including Pneumonia as many deaths from measles with Pneumonia complications are registered under the general head "Respiratory diseases" by the untrained village agency.

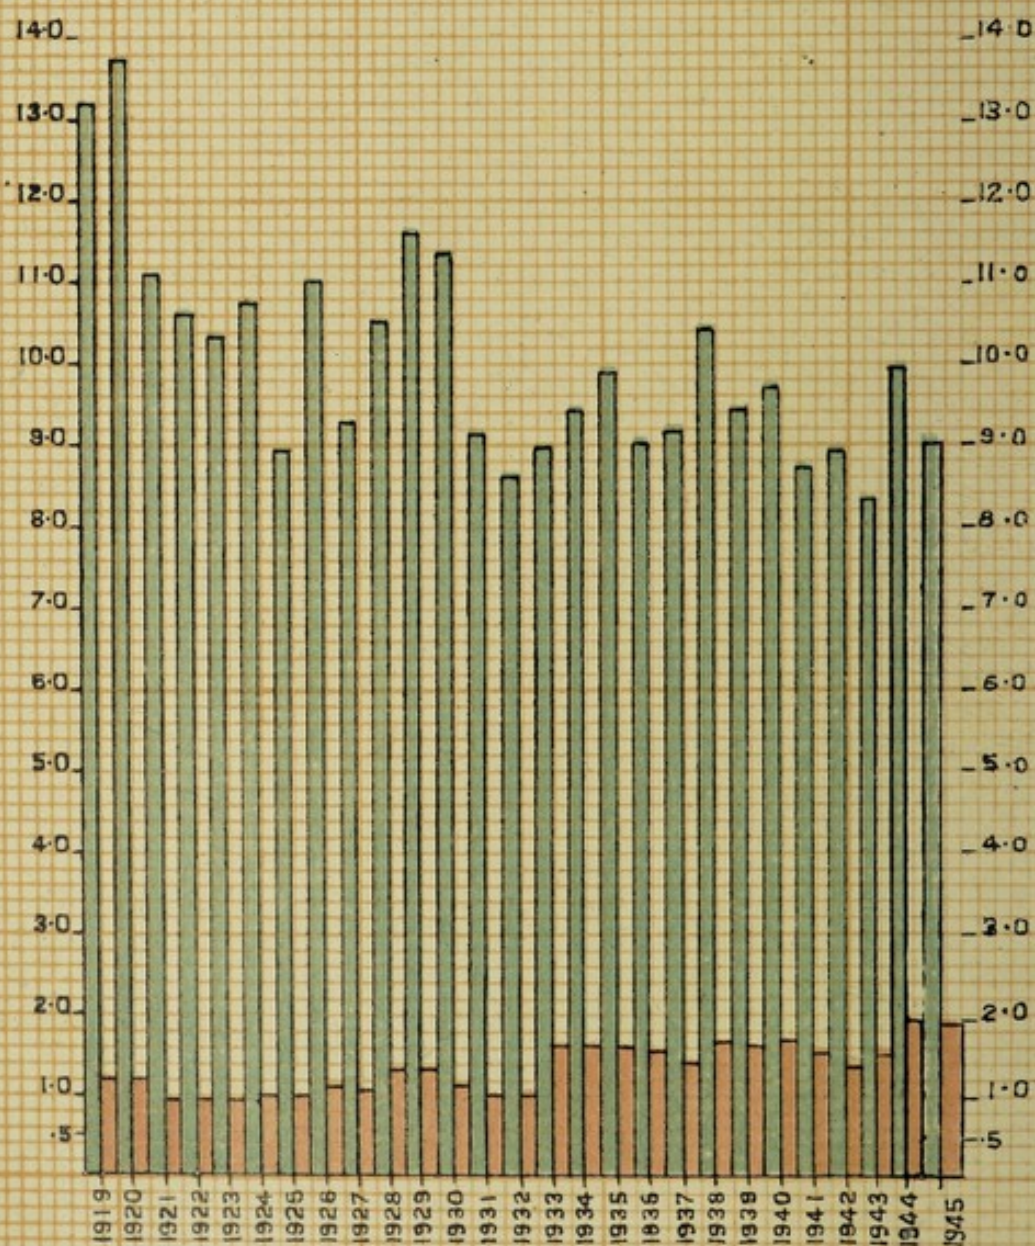

36. Relapsing fever was absent during the year.

37. *Kala Azar.*—Five deaths due to Kala Azar were reported four of which were from Bombay City and one from East Khandesh District.

38. *Typhus.*—Three deaths from Typhus fever were recorded in Bombay City during the year, none of which was louse borne.

 Fevers
 Malaria

G. PI. P. PCDNA, 1947.

39. *Cerebro Spinal Fever*.—Out of the 222 deaths reported under this head, 211 were in urban areas and eleven in rural areas. The urban and rural figures in 1944 were 189 and one respectively. Among towns Bombay City had 111 deaths, Ahmedabad town had 62 deaths, Broach town 20 and Sholapur town 7. In the remaining areas only sporadic infection resulting in solitary cases was reported. In rural areas also infection was sporadically reported from Surat, Ahmedabad, Sholapur and Dharwar Districts. Isolation of cases was only possible in big towns leaving Infectious Diseases Hospitals e.g., Bombay City, Ahmedabad and Sholapur. In Broach town, a temporary hospital was provided for the purpose. Treatment with Sulpha drugs was adopted and penicillin was also made available for treatment of cases. Propaganda by means of leaflets, talks, etc., regarding the causes and prevention of the disease was carried out in the areas involved. In Bombay City which had the highest incidence, 285 cases were reported distributed throughout the year the first three months having higher incidence as compared with the remaining months. Mortality by age periods shows that out of 111 deaths six deaths occurred in the age group of below one year, twelve in the age group of one to ten years, 24 in 10 to 20 years, 31 in 20 to 30 years, 27 in 30 to 40 years and eleven deaths above 40 years of age.

40. *Respiratory Diseases (General prevalence)*.—The total number of deaths due to Respiratory diseases recorded during 1945 was 105,994 against 108,398 in 1944, the mean of the previous five years being 103,954.

The mortality recorded under this head in previous years is given below :—

Year.	Deaths.	Ratio per mille of estimated population.
1932-35 mean	95,829	5.14
1936-40 mean	112,227	5.72
1941	105,538	5.05
1942	102,134	4.79
1943	100,706	4.67
1944	108,398	4.96
1945	105,994	4.79

The year under report shows a decrease of 2,404 deaths as compared with the previous year, but an increase of 2,040 as compared with the mean of the previous five years. Of the total deaths due to respiratory diseases 22 per cent. were reported as due to Pneumonia and 21 per cent. as due to Phthisis. The bulk of the deaths (55 per cent.) were returned under the heading "other respiratory diseases" for

want of definite information. The death-rate for urban areas (6.73) was higher than that in the rural areas (4.79). The number of deaths due to Respiratory Diseases remain at a higher level and in spite of occasional fall in annual deaths the general tendency is towards a gradual increase. The diseases of the Respiratory system, prominent amongst which is phthisis, find favourable conditions to thrive in crowded insanitary urban areas from which they disseminate to rural areas. The measures to be effective have to be directed towards improving sanitation and housing conditions in crowded urban areas. It is essential that drastic action is taken by the local bodies for eradication of insanitary and slum areas and for enforcement of rules and regulations regarding town planning, proper ventilation of houses, etc.

41. *Death-rates from Respiratory Diseases in Collectorates.*—High death-rates were recorded in the Collectorates of Kaira (6.58), Surat (6.35), Poona (5.56) and Broach (5.38). Low rates were recorded in the Districts of Satara (2.57) Panch Mahals (2.67) and Kanara (2.69).

42. *Death rates from Respiratory Diseases in urban and rural areas.*—High death rates were recorded in the towns of Dakore (14.62), Matar (14.42), Sholapur (12.43) and Bardoli (11.57). In rural areas high death-rates were recorded in the Districts of Kaira (6.92), Broach (6.07) and Surat (6.02).

43. *Seasonal Mortality from Respiratory Diseases.*—Variations in the recorded deaths due to this cause in different months were only slight as is evident from the figures shown in Annual Form No. XI in Appendix V to this Report. The highest number of deaths, however, occurred during December and the lowest during June as compared with other months.

44. *Phthisis.*—There were 22,347 deaths due to phthisis recorded during the year against 22,304 in 1944. In spite of decrease in the total deaths due to Respiratory Diseases a slight increase has been registered in deaths under Phthisis. The disease is not notifiable except in a few progressive municipal towns and the local bodies are apparently reluctant to enforce the notification on account of their inability to provide appropriate facilities for diagnosis, segregation and treatment of the cases. The available statistics are however sufficient to prove the growing menace of this disease. Government has initiated a campaign against the menace by affording facilities free of charge for diagnosis and treatment of cases of phthisis at the Civil Hospitals at Ahmednagar, Surat, Poona, Nasik, Sholapur and Belgaum. There are also private sanatoria including charitable ones at places like Malavli, Miraj, Hukeri, Panchgani and Vengurla. It is however necessary that the maximum benefit is taken of these clinics by the Public and the local bodies can carry out intensive propaganda in this respect by organizing health units to go from house to house giving talks and advising suspected cases to attend the nearest clinics.

The Secretary, Tuberculosis Association of India, New Delhi, can afford facilities for training the Health Visitors by organizing a "Tuberculosis Health Visitors' Course" if sufficient candidates come forward.

45. *Deaths from Phthisis in urban and rural areas.*—The urban death rate was 1.30 and the rural .90 as compared to 1.29 and .92, respectively in 1944. Among towns the incidence was high in Varangaon (6.35), Vengurla (5.70), Savda 3) and Talegaon (4.00). High rates for rural areas were recorded in the Districts of Kolaba (2.24), Ratnagiri (1.98) and Kaira (1.72).

46. *Pneumonia*.—There were 23,842 deaths from Pneumonia registered during the year as compared to 25,601 in 1944. The death rate was 1·07 per mille population as compared to 1·17 in 1944.

47. *Deaths from Pneumonia in urban and rural areas*.—The urban death rate was 3·14 and rural ·33. High death rates for urban areas were recorded in the towns of Sholapur (6·98), Pandharpur (5·63), Bardoli (5·40) and Sirur (2·27) and in rural areas in the Districts of Surat (2·21) and Broach (1·51).

48. *Whooping Cough*.—Deaths due to this cause numbered 1,429, the ratio being ·06 against 2,125 and ·09 respectively recorded in 1944. Out of the total deaths 228 occurred in urban areas and 1,201 in rural areas.

49. *Dysentery and Diarrhœa (General Prevalence)*.—During the year under report deaths from Dysentery and Diarrhœa numbered 21,214, the preceding years' figures being 22,493 and 23,781 the quinquennial mean. The death-rate was ·96 against 1·03 in 1944.

50. *Dysentery*.—Under this heading 3,153 deaths were registered against 201 the death-rate being ·14 against the same number in 1944.

Among towns high death-rates were returned from Erandol (2·03), Vengurla (·33) and Parola (1·28) and in rural areas in the Districts of Kaira and Ahmednagar (·30 each).

51. *Diarrhœa*.—18,061 deaths giving a death-rate of ·81 were recorded as due to Diarrhœa against 19,292 and ·88 respectively in 1944.

High death-rates due to diarrhœa were returned from the towns of Pandharpur (·33), Yawal (3·12) and Talegaon (2·75) and in rural areas in the Districts of Belgaum (1·92), Kanara (1·32) and Poona (1·29).

In Appendix I a table is given showing the effect on the death rate of the introduction of piped water supply.

52. *Injuries*.—There were 6,577 deaths due to injuries as against 7,569 in 1944 and 7,213 the quinquennial mean.

53. *Deaths from Snakebite*.—Among 6,577 deaths due to injuries 942 were on account of snakebite. The highest number was reported from Ratnagiri District viz. 114 against 228 in 1944. Next was Satara District with 104 deaths against 112 in 1944.

54. *Deaths from Rabies*.—Among the deaths from injuries 88 deaths were registered as due to Rabies as against 100 in 1944. Among towns Ahmedabad had the highest number (10) and in rural areas Belgaum District had 1 death.

55. *Suicidal deaths*.—646 deaths under this head were reported (290 males and 356 females), against 788 in 1944. The Districts showing large numbers were Warharwar (154), Belgaum (105) and Bijapur (87).

56. *Deaths from other causes*.—The number of deaths registered under this heading was 209,400 against 191,609 in 1944, the mean of the previous five years being 184,089. The death-rate was 9·45 against 8·77 in 1944, the

quinquennial mean being 8.71. The number of deaths recorded under this head in previous years was as follows:—

Year.	No. of deaths.	Ratio per mille.
1932-35 mean	166,147	8.92
1936-40 mean	175,572	8.93
1941	193,943	9.28
1942	178,199	8.37
1943	177,413	8.23
1944	191,609	8.77
1945	209,400	9.45

57. *Deaths from Child birth.*—Under this heading 4,604 deaths were recorded in 1945 as compared with 6,176 in 1944. In Bombay City 133 deaths were registered as against 193 in 1944. The maternal mortality rate per 1,000 registered births including still births in the Province works out to 6.09 as compared with 8.20 in 1944.

The maternal mortality works out to death of one woman in child birth for 164 births including still-births as compared with one per 122 in 1944.

58. *Deaths from Child-births in Collectorate.*—The death-rate was high in Kanar District where it was 1 woman died in child-birth to every 42 births including still births. The next was Belgaum where the proportion was 1 to 94.

59. *Deaths from Child births in urban areas.*—High rates were recorded in Viramgaon (1 to 28), Bagalkot (1 to 41) and Amalner and Guledgud (1 to 4 each).

60. *Diphtheria.*—249 deaths due to Diphtheria were reported during the year as against 237 in 1944. Out of these 158 occurred in town circles and 91 in rural circles.

61. *Chickenpox.*—Under this head 128 deaths were registered as against 193 in 1944.

62. *Leprosy.*—There were 947 deaths reported against 923 in 1944. Among rural areas the Districts of Satara (173), Ahmednagar (122) and Sholapur (114) and among towns Nasik (14), Sholapur (6), and Barsi (5) had higher number of deaths. Bombay City recorded 63 deaths against 66 in 1944.

63. *Cancer.*—1,010 deaths due to this cause were registered as against 847 in 1944. Bombay City had 317 deaths due to cancer, Surat 74 deaths and Ahmedabad 71.

64. *Mumps.*—Five deaths due to this cause were reported against 11 in 1944.

65. *Acute Poliomyelitis.*—Six deaths due to this cause were reported from Bombay City against 19 in 1944.

66. *Beri Beri* was absent.

The number of deaths from chief causes for each Collectorate and by months is shown in Annual Forms VII to XII in Appendix V to this Report.

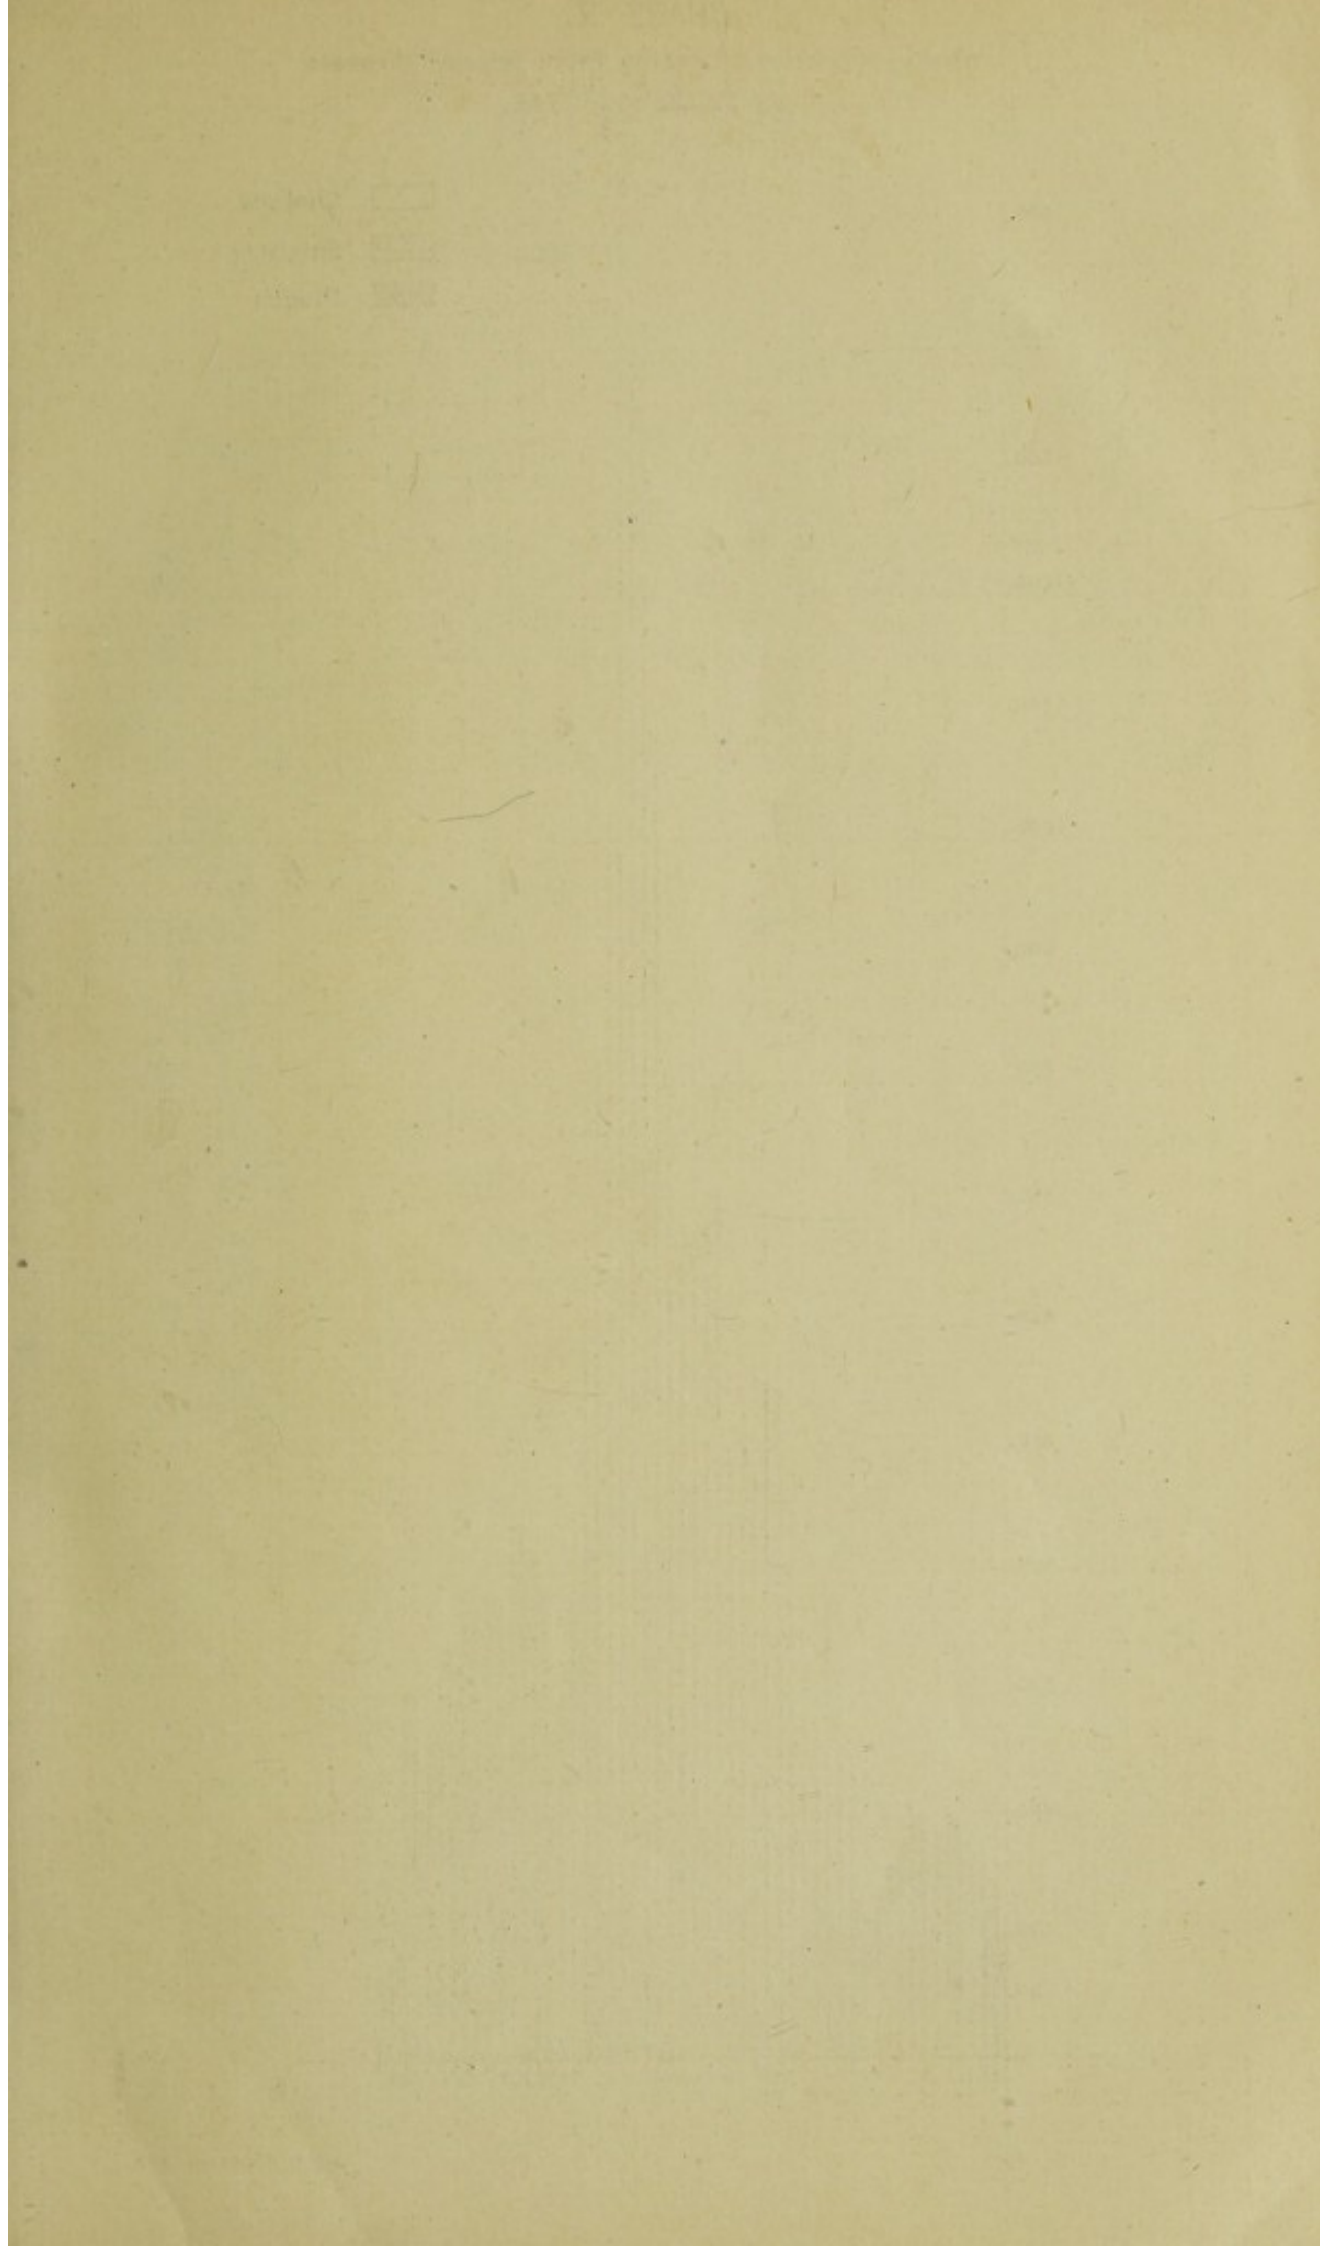

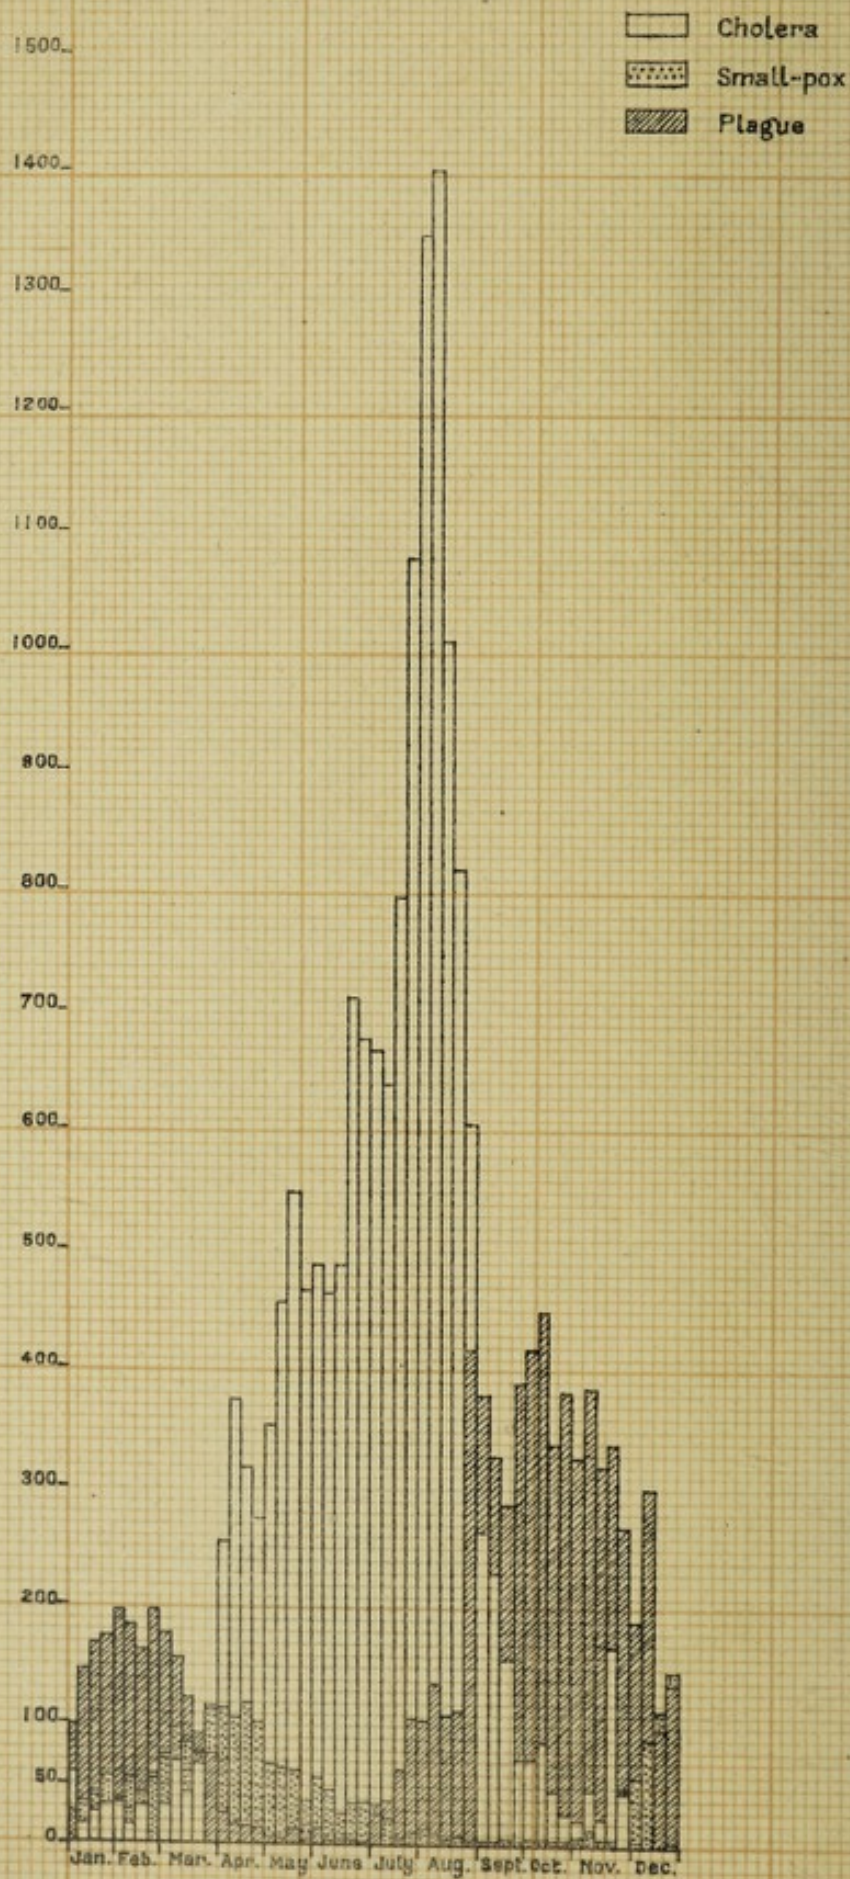

CHART V.

Weekly incidence of deaths from epidemic diseases
during the year 1945.

CHAPTER IV.

EPIDEMIOLOGY.

67. *Cholera (General Prevalence).*—Cholera claimed 24,691 deaths as compared with 1,639 in 1944 and 8,187 the quinquennial average for the previous five years. The death-rate was 1.11 as against .08 in the previous year and .39 the quinquennial mean. The urban and rural death ratios of the Province were .42 and 1.36 respectively.

Cholera prevailed in a very severe epidemic form in several districts of the Province during 1945. The number of villages affected was 3,274 in 266 registration circles as compared with 454 and 126 respectively in 1944. There were 41,462 cases against 3,356 in 1944. The case mortality rate was 59.55 per cent. as compared with 48.84 per cent. in 1944.

The following table gives the number of deaths recorded in previous years since 1911 :—

Year.	Number of Deaths.	Year.	Number of Deaths.
11	...	1929	2,673
12	5,808	1930	15,142
13	57,789	1931	18,578
14	5,108	1932	1,338
15	17,778	1933	7,794
16	350	1934	11,361
17	18,610	1935	11,191
18	16,554	1936	11,304
19	8,832	1937	10,992
20	51,235	1938	3,813
21	2,047	1939	1,786
22	3,092	1940	716
23	2,743	1941	16,706
24	9,212	1942	11,095
25	7,827	1943	10,780
26	56	1944	1,639
27	72	1945	24,691
28	26,020		
	6,667		

Distribution—Vide Annual Form No. VII.

68. *Deaths from Cholera by Collectorates.*—All the Collectorates were more or less affected. The Collectorates severely affected were East Khandesh (4,898 deaths), Sholapur (3,293), West Khandesh (3,259) and Ahmednagar (2,798). The infection in the districts of Broach, Ahmedabad, Bombay Suburban, Kanara and Ratnagiri was very mild.

69. *Deaths from Cholera in Urban and Rural Areas.*—In the Province the number of deaths recorded in the urban areas was 2,476 and in rural areas 22,215 against 197 and 1,442 respectively in 1944. High death-rates were recorded in the towns of Chopda (6·99), Rahimatpur (6·79), Vairag (5·55) and Kopergaon (5·15) and in rural areas in the districts of Sholapur (4·03), East Khandesh (3·85), West Khandesh (3·75) and Ahmednagar (2·46).

70. *Brief History of Cholera epidemic.*—The mortality due to cholera recorded during the year was the highest since 1927 during which year 26,020 deaths due to this cause were registered. The infection which was mildly prevalent from the beginning of the year in the districts of Nasik, Ahmednagar, Satara, Sholapur, Belgaum and West Khandesh flared up since March and raged with severity during the period of May to August, the highest number of deaths 7,064 being registered during August. The infection rapidly declined from September onwards and during December the lowest figure of deaths for the year (48) was recorded.

The worst affected district was East Khandesh in which 668 villages in 35 circles of registration were involved resulting in 8,722 cases and 4,898 deaths. Infection appeared in the district during March in Bhadgaon Peta which spread to Bhusawal Parola, Jalgaon and Raver talukas during April. Amalner, Yawal and Erandol talukas were affected in May and the remaining talukas in June. The severity was highest in August in which month 2,705 deaths occurred. Thereafter a rapid decline set in and the district became totally free from November. The second in order of severity was Sholapur District which had 4,621 cases and 3,293 deaths reported from 294 villages in 17 circles of registration. The infection was sporadic up to April and began to spread since May. The month of July recorded the largest number of deaths (1,251). All the talukas were infected of which Sholapur, Barsi Malsiras and Madha were the worst affected. In West Khandesh District 5,867 cases and 3,259 deaths were reported from 440 villages in 17 circles of registration. Sporadic incidence was reported up to April in which month infection appeared in Sakri, Shirpur and Sindkheda talukas and spread during the following month to Shahada, Nandurbar and Taloda talukas. The infection was at its height during July and August when all the talukas were more or less affected. In Ahmednagar District 4,205 cases and 2,798 deaths occurred in 137 villages involving 16 circles of Registration. The talukas of Kopergaon, Sheogaon, Newasa, Rahur and Jamkhed were more affected. In Nasik District 436 villages were affected in 21 circles of Registration and 4,876 cases and 2,663 deaths were reported. The infection was carried over from 1944 in Malegaon and Kalwan talukas which took an upward trend from February. All the talukas were affected of which Beglan, Malegaon, Yeola, Chandor and Nandgaon were the worst affected. Of the remaining districts Poona, Satara, Bijapur, Thana, Kaira, Kolaba, Pandharpur, Mahals, Belgaum and Surat had moderate epidemic incidence and the disease was mild in the remaining districts.

71. *Preventive measures.*—Disinfectants, e.g., Tropical Chloride of Lime and Lysol White and anti-cholera drugs were stocked at the taluka offices and the dispensaries in the districts well in advance of the cholera season. Anti-cholera

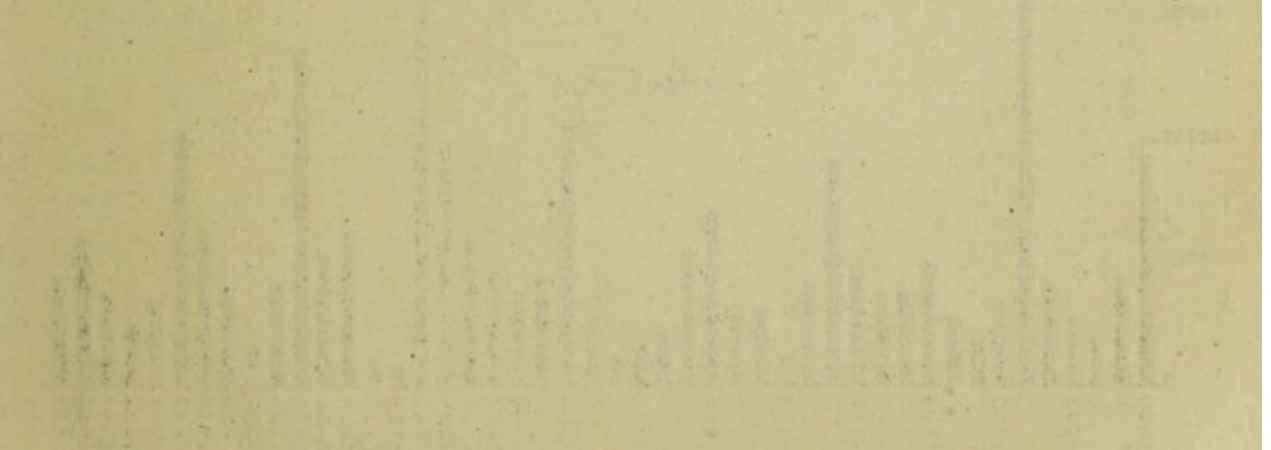

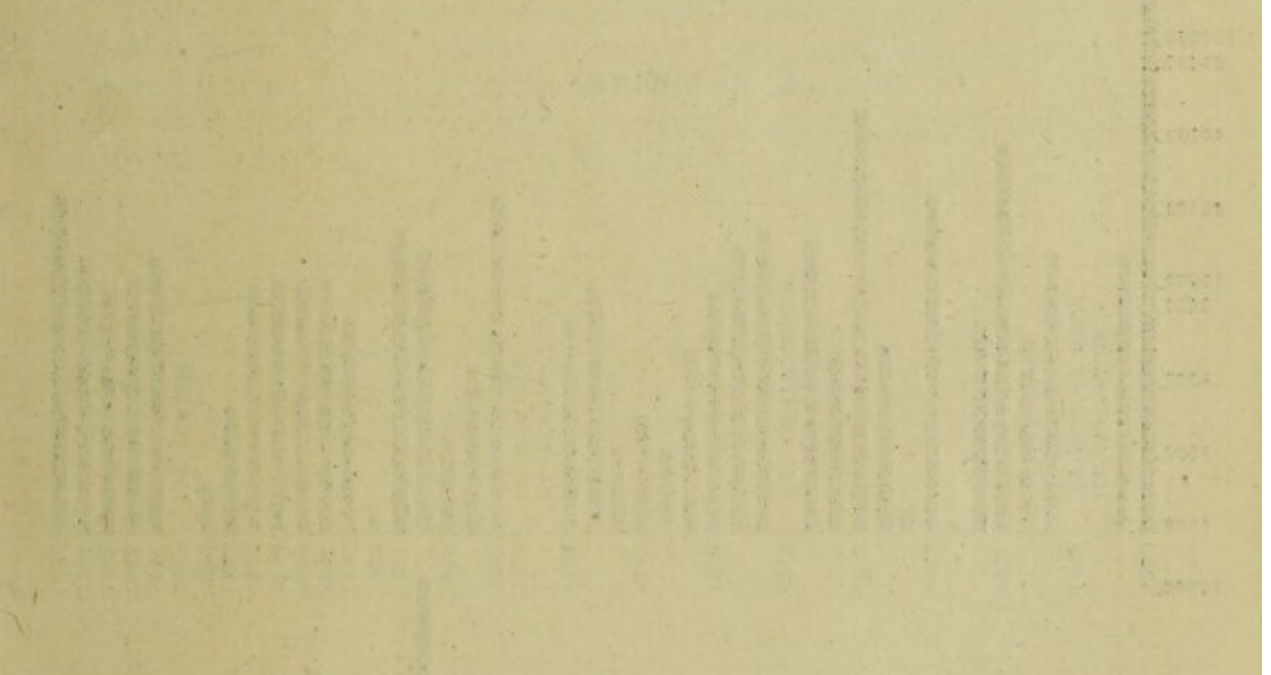

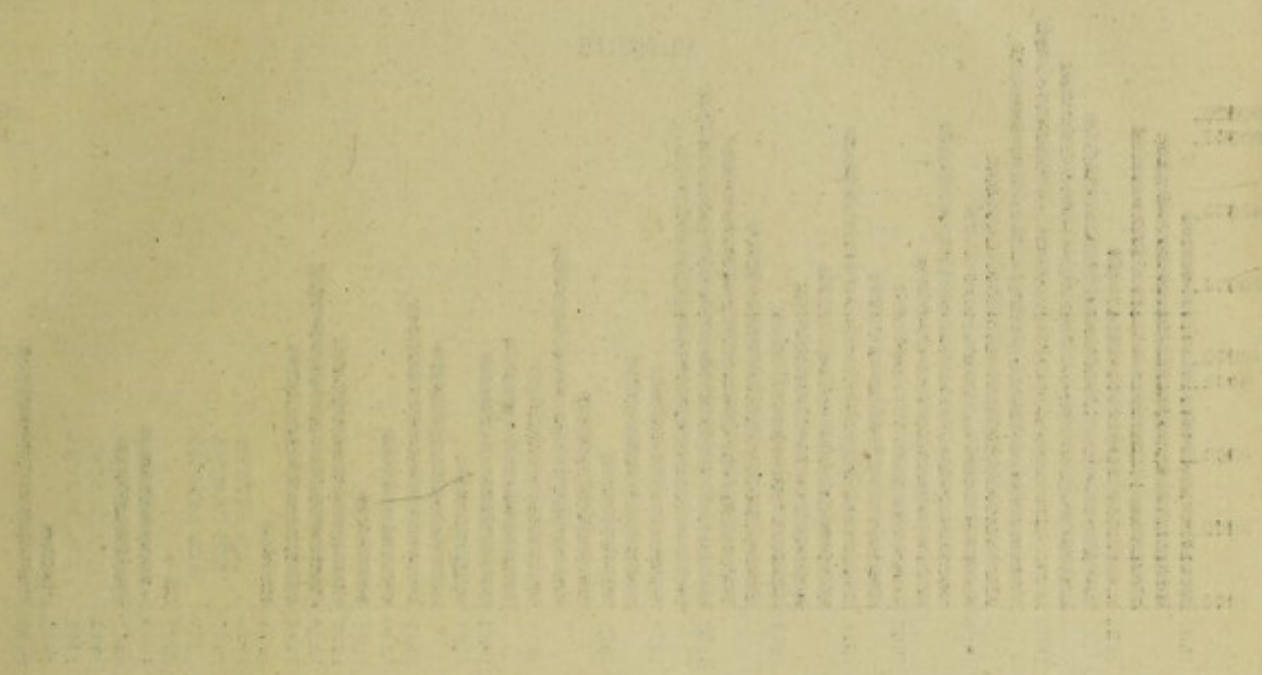

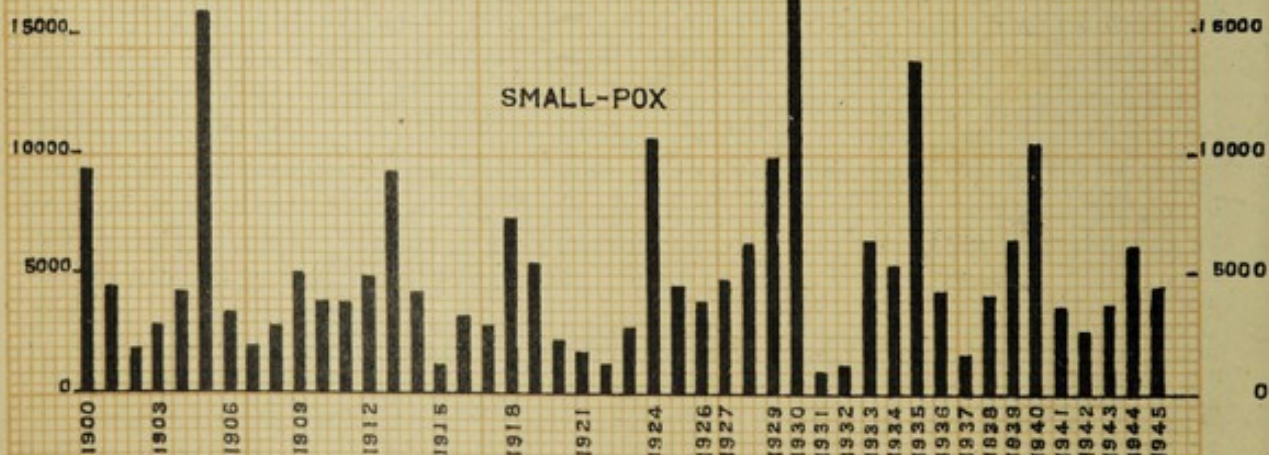

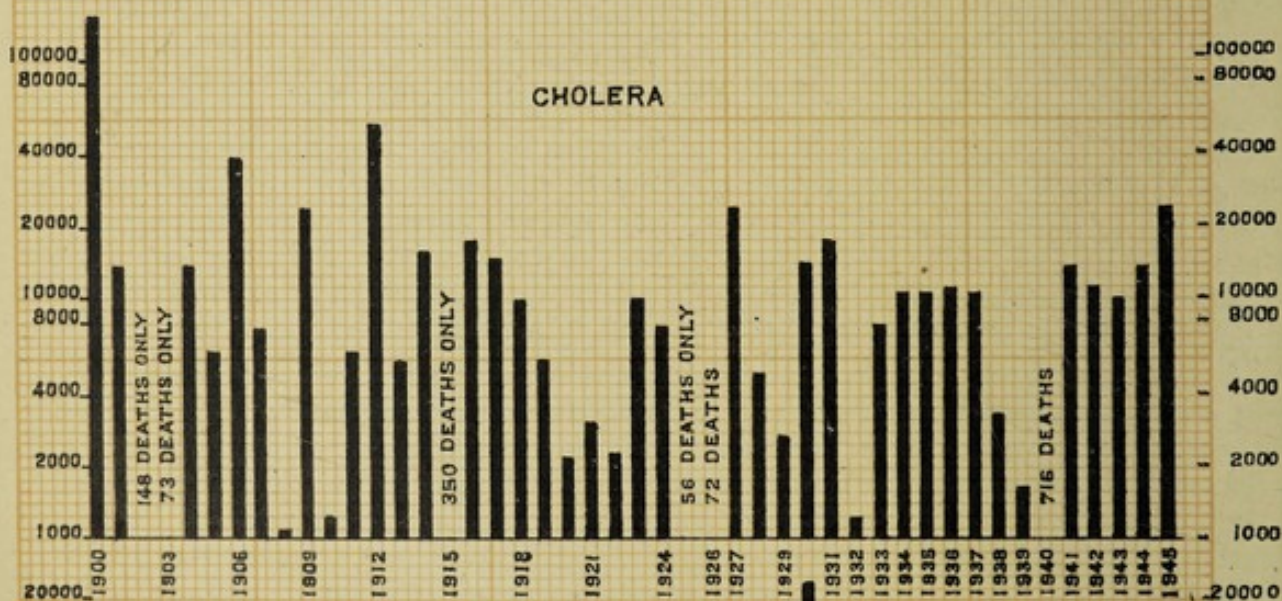

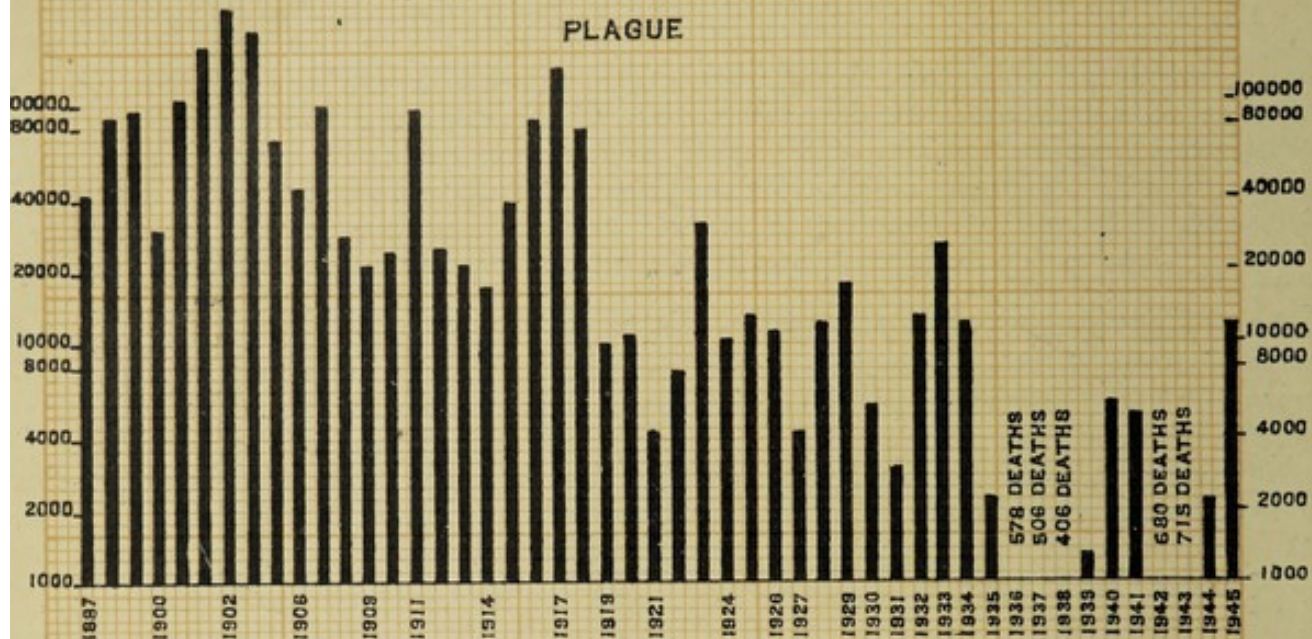

CHART VI

ANNUAL INCIDENCE OF DEATHS FROM EPIDEMIC DISEASES.

Scale figures represent actual deaths for Plague and Cholera.

Figures are at their long intervals and only those above 1000 are shown.

measures were organised in all the infected areas by appointing special staff for the purpose. Fifteen special Medical Officers, 56 inoculators, 7 Subordinate Medical Officers and all the Subsidised Medical practitioners in the affected areas were placed on full time anti-cholera duty to assist the permanent staff. In East Bandesh District which was highly affected squads were appointed under the inoculators for regular disinfection of water supplies and infected material. A special post of Assistant Director of Public Health (Epidemics) was created by Government from the beginning of June 1945 who could devote continued attention to the severely cholera infected districts relieving the permanent Assistant Directors to look after the other areas in their charges. Regular disinfection of water supplies and mass inoculation were concentrated upon. Necessary precautionary measures were taken at the important fairs at Pandharpur to avert cholera out-break at the Pilgrim Centre.

Inoculations.—The total number of persons inoculated during the year was 44,580 against 2,64,208. The inoculations were performed by the Special Medical Officers, trained inoculators, Epidemic Medical Officers, Dispensary Medical Officers, Subsidised Medical Practitioners and private practitioners.

72. *Expenditure on cholera outbreak and inoculation work.*—

During the year under report, a grant of Rs. 45,000 was sanctioned by Government for measures against outbreaks of cholera e.g. supply of potash permanganate and Tropical chloride of lime for sterilisation of village water supplies and lysolomite for disinfection, as well as cholera treatments and ingredients for Tomb's mixture. Out of this sum, Rs. 43,262 were spent. Expenditure on pay, travelling allowance and contingencies of Government inoculators on cholera duty amounted Rs. 3,205, and that on cholera vaccine to Rs. 13,492.

SMALL-POX (GENERAL PREVALENCE).

73. Small-pox deaths during 1945 numbered 4,699 against 7,212 in 1944. The death-rate during 1945 was .21 as compared with .33 in 1944, the quinquennial mean being .27. The annual mortality for previous years is given in the following table:—

Year.	No. of deaths.
1901-10 mean	4,775
1911-20	4,430
1921-30	6,337
1931-40	5,536
1941	3,784
1942	2,744
1943	3,898
1944	7,212
1945	4,699

Small-pox was reported from 842 villages in 193 Registration Circles as compared with 1,683 and 232, respectively, in the previous year. As compared with the previous year small-pox was mild during 1945. The number of cases reported was 12,208 and the case mortality rate works out to 38 per cent.

Of the 4,699 small-pox deaths, 1,602 were among infants under one year of age and 1,442 among children between 1 and 10 years i.e. 65 per cent. of the total small-pox deaths were among children below 10 years of age.

The susceptibility of the child population to the disease is evident from the above figures. Though vaccination is growing in popularity there is still a large section of the population who evade the same. Annually about 5 to 7 lacs of people undergo primary vaccination and an equal number is revaccinated. A few thousand acquire natural immunity after passing through an attack of small-pox. These groups represent a total number of persons protected each year but when compared with the total population they comprise a small percentage only. Those who evade vaccination are a constant source of danger as they help to start the epidemic which then spreads rapidly among population which is not protected by vaccination or which has lost immunity of primary vaccination performed many years ago. Vaccination of all children and revaccination of grown up children and adults is therefore advocated as a personal protection. Compulsory Vaccination Act has been applied by Government at the request of the Local Bodies concerned to 110 towns and 26 villages including Bombay City and the Six Cantonments.

74. *Deaths from Small-pox by Collectorates.*—Higher incidence was recorded in the Collectorates of East Khandesh (1,098 deaths), Ahmednagar (844), Nasik (502), Surat (484) and Ahmedabad (409).

75. *Deaths from Small-pox in Urban and Rural areas.*—Among the towns high death-rates were recorded in Kasoda (5.35), Jamner (3.67), Surat (2.30), Betawad (2.11) and Pathardi (1.45) and in the rural areas in the districts of East Khandesh (.91), Ahmednagar (.74) and Nasik (.49).

76. *Brief History of Small-pox epidemic.*—The highest incidence was in East Khandesh District in which 1,098 deaths were reported from 200 villages. The disease was moderately severe during the previous year in the district. The infection which had however died out during September to November 1944 reappeared in December and showed progressive rise till March during 1945. Then a decline set in and during August the infection disappeared from the district. The district of Ahmednagar came next in severity. 844 deaths were reported from 15 villages. The infection was present throughout the year. The month of April had the highest number of deaths. In Nasik district 502 deaths were reported from 142 villages. Surat District had 484 deaths reported mainly from Surat town (414) and a few surrounding villages. In Ahmedabad District 409 deaths occurred of which 375 were reported from Ahmedabad town. The districts of Thana (226 deaths), Sholapur (204), Poona (166), Broach (116) and Ratnagiri (112) had moderate infection. In the remaining districts the disease was very mild.

The disease was severe from March to May. The lowest incidence was during October (45 deaths).

In the affected and threatened areas vaccination and revaccination campaign was intensified on a mass scale by appointing extra vaccinators. Propaganda in favour of vaccination and prompt notification, and explaining other preventive measures was also carried out by means of magic lantern slides, leaflets, posters and talks.

77. *Vaccinal condition.*—The table given below shows the vaccinal condition of Smallpox cases treated in Infectious Diseases Hospitals, Civil Hospitals and Dispensaries :—

Ages.	Total No. of cases.	Vaccinated as evidenced by the presence of one or more vaccination cicatrices.															Total among vaccinated. Stated to have been vaccinated but no vaccination cicatrix present.	Stated to be unvaccinated (or vaccinated unsuccessfully and no vaccination cicatrix present).	Previously unvaccinated but vaccinated during incubation of smallpox.	Stated to have been successfully revaccinated.		
		No. attacked after following year after vaccination.

PLAGUE (GENERAL PREVALENCE).

78. The Plague incidence during the year under report showed an increase of 9,265 deaths as compared to the previous year. The number of deaths recorded was 11,779 in 1945 against 2,514 in 1944. The quinquennial average of plague deaths was 2,959. The death-rate was .53 during the year as compared with .11 in 1944 and .14 the quinquennial mean.

Plague infection was reported from 995 villages in 139 registration circles, as compared with 282 and 59 respectively in 1944. The total number of attacks recorded was 18,124 giving a case mortality rate of 64 per cent. against 56 in 1944.

The total number of plague deaths recorded in each year since 1911 is given below :—

Year.		Number of deaths.	Year.			Number of deaths.
1911	...	97,248	1929	...	...	18,014
1912	...	27,863	1930	...	...	5,026
1913	...	24,840	1931	...	...	3,506
1914	...	18,529	1932	...	...	14,446
1915	...	40,689	1933	...	...	24,560
1916	...	79,349	1934	...	...	13,307
1917	...	1,59,858	1935	...	...	2,453
1918	...	73,893	1936	...	...	578
1919	...	9,041	1937	...	...	506
1920	...	13,471	1938	...	...	406
1921	...	4,617	1939	...	...	1,472
1922	...	7,692	1940	...	...	5,573
1923	...	33,251	1941	...	...	5,311
1924	...	9,092	1942	...	...	680
1925	...	12,551	1943	...	...	715
1926	...	9,839	1944	...	...	2,514
1927	...	4,075	1945	...	...	11,779
1928	...	13,563				

The upward tendency of plague seen since 1943 reached a peak in 1945. The last major peak recorded was in 1933 with 24,560 deaths and minor peaks occurred during 1940 and 1941 with 5,573 and 5,311 deaths respectively. The infection during 1945 was wide-spread as districts like Nasik, Ahmednagar and East Khandesh which are generally free from plague were seriously involved in the epidemic. Factors like over-crowding in small villages which came into prominence on account of extensive military works in their vicinity in certain districts, rapid movement of labourers from place to place, etc., are the contributory causes which may have played their part in the spread of plague.

79. *Deaths from plague by Collectorates.*—From the distribution of plague given in Form No. XII it will be seen that the Districts of Satara (5,310 deaths), Solapur (1,951), Belgaum (1,336), Poona (1,322), Ahmednagar (820) and Nasik (590) were the worst affected. Moderate infection was reported from Solapur and East Khandesh Districts. In the Districts of Dharwar, Ratnagiri, and Bijapur mild incidence was registered. The Districts in Gujarat were totally free.

80. *Deaths from plague in Rural and Urban areas.*—The number of deaths recorded in rural areas was 9,525 and in urban areas 2,254 equal to a ratio of 4.28 and .38 respectively. Among the towns infected by plague higher incidence was reported from Chikodi (23.19), Tasgaon (12.73), Sangamner (11.49), Indapur (11.14) and Asta (10.81) and in rural areas in the Districts of Satara (3.62), Sholapur (2.23) and Poona (1.07).

81. *Brief History of plague epidemic.*—Satara District stood first in order of severity. Five thousand three hundred and ten deaths were reported in the District from 398 villages. All the 24 circles of registration were infected. The infection which had assumed epidemic proportions during the last quarter of 1944 was carried over with vigour and raged severely up to March 1946. During April, May and June there was a progressive decline, the lowest number of deaths (7) being registered during June. From July however the incidence again began to rise reaching a peak in October with 1,079 deaths registered during that month. Tasgaon, Satara, Khatav and Karad were the worst affected talukas and Shirala Peta was practically free except for a few sporadic cases. Among town circles Karad, Satara, Sashta and Tasgaon were badly affected. In Sholapur District 1,951 deaths due to plague were reported from 159 villages. In Sholapur District also infection which was severe in the last quarter of 1944 was carried over. The disease however progressively declined in the first half of 1945 and recorded the lowest number of deaths during June (3). From July there was recrudescence of epidemic spread which reached its maximum during September. Among talukas Sholapur, Barsi, Madha and Karmala and among towns Sholapur, Barsi, Vairag and Kurduwadi were badly affected. In Belgaum District 126 villages were affected from which 1,336 deaths were reported. Belgaum, Kamppgaon, Chikodi and Hukeri talukas were mainly affected. Among towns Belgaum and Chikodi had a severe epidemic of plague. The infection of the previous year remained in a mild form up to June and thereafter it went up resulting in a moderately severe epidemic during the period September to November. In Poona District 1,322 deaths were reported from 141 villages. The period of severity was the last four months of the year. In Ahmednagar 69 villages and in Nasik 48 villages reported plague infection. In the remaining affected Districts the disease prevailed in a mild form. West Khandesh, Thana, Bombay Suburban, Bijapur and Kanara Districts remained practically free except for a few sporadic cases reported from them.

82. *Ratting operations.*—Ratting operations were carried out in 47 towns in the Province. In Bombay Province excluding Bombay City 8,96,591 rats were caught and destroyed, of which 67,262 rats were examined and 477 were found to have been plague infected. Poison baiting carried out in rural as well as urban areas in the Province resulted in 1,21,245 rats being destroyed. In Bombay City the ratting operations were carried out as usual throughout the year and 2,89,414 rats were caught and destroyed. Also 5,39,531 rats were found dead or killed. Three lac forty-five thousand and seventy-eight rats were examined of which none was found to be plague infected.

83. Special anti-plague measures were organized in Satara, Sholapur, Belgaum, Poona, Ahmednagar and Nasik Districts which were severely affected. They consisted of mass inoculation, cyanide fumigation, rat baiting and trapping and disinfection with kerosene oil and soap emulsion for which special staff was appointed in all the affected Districts. Mobile units were formed in the Districts of Satara, Sholapur, Belgaum, Poona, Nasik and Ahmednagar for quick transport of medical staff and equipment from village to village in the affected areas.

Inoculation.—The total number of persons inoculated during the year was 6,62,330 against 3,18,797 in 1944. The following table shows the number of inoculations performed during the last few years and its ratio to the number of plague deaths:—

Year.	Number of attacks of plague.	Number of deaths of plague.	Number of inoculations.	Number of doses of plague vaccine issued within the Province.	Ratio of inoculations to number of deaths.
1928	19,583	13,563	1,32,340	2,55,789	9.7 to 1
1929	27,850	18,014	2,95,544	3,47,920	16.4 „ 1
1930	7,796	5,026	1,09,400	1,23,206	21.7 „ 1
1931	5,481	3,506	74,288	1,07,333	21.2 „ 1
1932	21,861	14,446	2,46,146	2,72,510	17.1 „ 1
1933	35,664	24,560	5,59,723	5,97,946	22.8 „ 1
1934	20,020	13,370	2,76,375	2,99,208	20.8 „ 1
1935	4,070	2,453	1,13,418	1,13,567	35.7 „ 1
1936	875	578	41,738	61,678	72.2 „ 1
1937	781	506	62,271	1,25,136	123.06 „ 1
1938	717	406	41,560	76,648	102.36 „ 1
1939	2,430	1,472	80,200	1,58,517	54.48 „ 1
1940	10,058	5,573	5,91,617	5,56,181	106.16 „ 1
1941	8,752	5,311	3,32,437	3,42,437	62.59 „ 1
1942	1,141	680	19,611	52,446	28.84 „ 1
1943	1,355	715	2,04,843	2,87,590	286.49 „ 1
1944	4,446	2,514	3,18,797	5,68,904	126.80 „ 1
1945	18,124	11,779	6,62,330	13,01,969	56.23 „ 1

The number of inoculations (6,62,330) shown above relates to the work done under the control of the Public Health Department in rural as well as urban areas. It is presumed many more inoculations were performed independently by private institutions, concerns, labour camps, etc., by indenting the vaccine direct from the Haffkine Institute reports of which have not been sent to the Public Health Department. This is evident from the figure of doses issued by the Haffkine Institute as compared with the number of inoculations performed. The measure being now popular especially in urban areas people undergo the same spontaneously and in spite of best efforts on the part of the local bodies to collect complete statistics many inoculations go unreported.

Rs. 22,987 were spent on cyanide fumigation. The expenditure on pay, travelling allowance and contingencies of Government inoculators on plague duty amounted to Rs. 10,841. Rs. 8,412 were spent on the purchase of plague vaccine during the year.

84. *Plague Recrudescence Enquiry.*—The staff of the Plague Recrudescence Enquiry was engaged in compilation, statistical calculation and tabulation of the flea and rodent data of different places surveyed in Sholapur, Dharwar and Belgaum Districts. Plague infected places in some talukas of the Southern Registration District during the years 1930-45 were plotted on a skeleton map with a view to study the progress of plague in them.

The experiments carried out to ascertain the pulicidal value of D.D.T. and 666, were continued. One hundred and ninety-six such experiments were conducted. These experiments have shown a marked residual killing power of both these compounds, especially that of D.D.T. for fleas. They extend to us reasonable hope that by systematic and careful use of the dusts and the sprays of D.D.T. and those of 666 also, it would be possible to exterminate fleas from plague infected and other premises, including rodent burrows, and personal effects of their inmates.

INFLUENZA.

85. Influenza caused 53 deaths during the year against 63 in 1944. Out of the total deaths, 38 occurred in urban areas and 15 in rural areas. The cases were sporadic and no particular area had high incidence. Bombay City had 61 deaths against 37 in 1944. The disease was mainly of a mild respiratory type.

CHAPTER V.

MALARIA.

86 During the year, 41,631 deaths from malaria were recorded against 41,925 in 1944. The death rate from malaria was 1·85 as against 1·92 in the previous year. The urban and rural death rate was ·70 and 2·26 respectively.

87. *Deaths from malaria by Collectorates.*—The largest number of deaths from malaria was recorded in the collectorate of Nasik (7,007), West Khandesh (4,334), East Khandesh (5,751), Poona (4,504), Belgaum (3,976), Dharwar (2,968), Ahmednagar (2,682) and Kanara (818). The rates of deaths per 1,000 of estimated population for the above Collectorates are in the following order Nasik (7·10), West Khandesh (5·20), East Khandesh (4·94), Poona (4·34), Belgaum (3·49), Dharwar (3·15), Ahmednagar (2·46) and Kanara (2·15).

88. *Relation of deaths from malaria to deaths from fever.*—During the year under report 200,536 deaths from fevers were recorded out of which 41,631 were attributed to malaria. The percentage of deaths from malaria to those from fever was 20, as compared with 19 in 1944.

89. *Seasonal mortality of malaria.*—During the first half of the year the incidence was most prevalent in the months of January to March showing decline in the successive months up to June while in the latter half it prevailed increasingly, the highest number of deaths being recorded in December.

90. *Deaths from malaria in urban and rural areas.*—High death rate was recorded in Prantij (16·33), Bhagur (12·32), Belawad (11·62), Shendurni (8·22), Nagardeol (6·54), and Nawapur (5·59) and in the rural areas in the districts of Nasik (7·10), West Khandesh (5·20), East Khandesh (4·94) and Poona (4·34).

91. *Anti-malaria measures and touring medical officers on malaria duty.*—For the malaria season only one temporary medical officer could be appointed to visit the Villages in malarious parts of the Province and to treat cases of fevers found in them. The Medical Officer and Epidemic Medical Officers visited 536 villages and treated 15,906 persons for malaria and examined 12,216 children for enlarged spleen out of which 6,343 were found to have enlarged spleen.

The Medical Officers worked under the general supervision and instructions of the Assistant Directors of Public Health.

In the Central Registration District 45,170, five grains and 52,150 two grains tablets of quinine, in the Southern Registration District 88,725 five grains, and 1,10,893 two grains tablets and in Northern Registration District 1,16,701 five grains, 1,98,000 two grains tablets of quinine were distributed. These were distributed through the Inspector Sanitation and Vaccination, Malaria Medical Officer, Epidemic Medical Officer, Revenue Authorities and Administrative Officers of School Boards. In the Central Registration District 108,354 and in Northern Registration District 190,689 cases of malaria were treated at civil Hospital and dispensaries.

92. *Distribution of quinine and quinine substitutes.*—During the period under report Government sanctioned a grant of Rs. 1,52,000 for (1) free distribution of Quinine, (2) Sale of Quinine at Post Offices, (3) Sale of Quinine Hydrochloride Treatments, and (4) purchase of quinine substitutes for the Province of Bombay.

Rupees 1,25,375 were spent on purchase and manufacture of quinine tablets for free distribution, in supplying quinine Tablets for sale at Post Offices and to certain officials and institutions on payment, in preparing and supplying quinine hydrochloride tablets in the form of treatment, as well as purchase of mepacrine hydrochloride tablets for free distribution in the rural areas and sale to Government Departments and Local Bodies.

Quinine worth Rs. 17,988 and tablets of quinine substitutes worth Rs. 12,433 were distributed free to the public through Revenue and other officials, the Administrative Officers of District School Boards, and officers and subordinate staff of the Public Health Department.

The Assistant Director of Public Health, Central Registration District, Poona, credited a total amount of Rs. 30,771 realised from the same of quinine tablets at Post Offices and also to Government Departments and Local Bodies and sale of Quinine Treatment Parcels and Quinine substitutes.

The cost of quinine and quinine substitutes issued for free distribution through School Boards and through the Officers of Public Health and Revenue Departments was as under :—

Serial No.	District	School Boards.		Officers of the Public Health and Revenue Departments.	
		Quinine.	Quinine substitutes.	Quinine.	Quinine substitutes.
		Rs.	Rs.	Rs.	Rs.
1.	East Khandesh	75		250	245

*Includes supply to the Assistant Director for his Registration District.

93. Malaria Organisation.

(1) Staff:—

Permanent.	Temporary*
Assistant Director of Public Health	4 Medical Officers.
Entomologist	2 S. M. S. Officers.
Two Medical Officers	1 Engineering Supervisor.
Five Laboratory Assistant†	1 Sanitary Inspector.
Eight Insect Collectors	2 Laboratory Assistants.
Two clerks	24 Insect Collectors.
4 Peons and 5 Sweepers	2 Clerks. 4 Peons and 2 Sweepers.

*The temporary posts of 2 S.M.S. Officers, 2 Laboratory Assistants and some inferior staff were not filled due to paucity of candidates.

†As against 4 S.M.S. Officers and 2 Laboratory Assistants sanctioned permanently five Laboratory Assistants were employed due to non-availability of the former.

(2) A brief summary of the activities Malaria Organisation is given below:—

(a) *A fluviatilis*, the vector in Kanara District, was confirmed to enter houses for purposes of feeding principally in the first quarter of the night after dusk and complete feeding mostly before midnight emphasising the need for stringent methods of personal prophylaxis even in the period prior to retirement under a net-covered bed.

(b) Rice fields were confirmed as constituting definite sources of breeding of the larvae of this species and have therefore to be included in any anti-larval control programme. Portions of the rice-fields nearer to human habitations, covered by seepages from a tank higher up, containing water in constant emplacement either above the surface or through the subsoil, and especially in the later stages of paddy culture were found to be the especially favoured habitatous.

(c) The failure of the twice a week spray with pyrethrum extract in reducing adult mosquito and malarial prevalence was definitely shown to be due to the out door resting habits of *fluviatilis*. Every evening and during the night a considerable proportion of this species, whatever the stage of the gonotrophic cycle, was found to leave human dwellings for outdoor shelters, they returned to houses every evening only when they are ready for a meal of blood and this feeding cycle was determined to be a minimum of 48 hours in certain seasons (some specimens of the same blood feeding every 72 hours even though ready for feeding in 48 hours). And 72 hours in other season (some specimens feeding every 96 hours). Based on these conclusions it was determined that a spacing programme of spray killing with pyrethrum extract, 2 consecutive days of spray, one day no

pray, 2 consecutive days of spray against and two days without spray will substantially reduce the survival rate at the end of a fortnight and hence the incidence of malaria as well.

(d) *Experiment with D. D. T.*—Showed that (1) in the dosage of 1 quart per 1,000 square feet of sprayed surface using a 5 per cent. D. D. T. solution in inferior erosene did not materially reduce culex mosquito nuisance, (2) in the above dosage *A. culicifacies*, the vector in Poona re-appeared at the end of 21 days in sufficient numbers exceeding five per man hour to bring about malaria transmission. Hence the spray interval has to be about 3 weeks during the malaria season, (3) where anti-larval work is in progress a single spray of D. D. T. at the height of mosquito prevalence in July-August after the advent of the south west monsoon, was enough to keep down adult culicifacies prevalence for the rest of the season provided anti-larval work was continued. It was found in Poona rural area that if this single D. D. T. spray was not carried out in July-August anti-larval work was by itself insufficient to prevent adult prevalence exceeding the estimated critical density of five per man hour and (4) in the case of *A. fluviatilis* one D. D. T. spray was enough to keep adult prevalence below the estimated critical density of 4 per 10 man hours for a period of two months.

(e) *Survey.*—(a) A survey was, carried out in Ahwa and Waghai in the Dangs district administered, by the Central Government. The spleen rate was 60 per cent. in Ahwa and 81 per cent. in Waghai and the parasite rates 28 per cent. and 31 per cent. respectively. As the survey was carried out in March which was an off season for malaria the vector species was not determined. It is either *fluviatilis* or *culicifacies* probably the former. Nine hundred and eleven adults of eight different species were collected during the survey period. Three hundred and twenty-four were dissected with no infection being found. Seven hundred forty-four larvae of different species were collected.

(b) The whole of Dharwar district was surveyed by the two Squads sanctioned in Government Resolution, General Department, No. 2781/33, dated 16th January 1945. The survey is still in progress at the end of the year. It has so far shown that the talukas of Kalghatgi, Hangal and Kod are hyperendemic nearly as badly as Kanara District which they adjoin and Dharwar, Ranebennur, Haveri, Bag and Mundargi talukas have foci of hyperendemic malaria and the rest of the district liable to epidemic outbreaks of malaria. There is a definite demarcation of wet and dry zones the former with hyperendemic malaria and the latter with foci of hyperendemic or moderately endemic malaria and with a liability to epidemic outbreaks.

From October to December 1945, 5,341 children between 2 and 10 years were examined and the spleen rate was 33.02 per cent. among them. Three thousand three hundred and sixty-one adult anopheles of 15 different species were collected. Three hundred and twenty-four specimens were dissected. Among them nil *fluviatilis* out of 158 dissected and 4 *culicifacies* out of 119 dissected were found to be infected with human plasmodia. (Nil gut and nil gland in *fluviatilis* and 2 guts and 2 glands in *culicifacies* 2,724 larvae of 15 different species of anopheles were collected during the same period.

In Kanara District 29,483 adult anopheles of 20 different species were collected. Among these *fluviatilis* numbered 25,290. Five hundred and eighteen were dissected including 436 *fluviatilis*. Twenty-six *fluviatilis* were found to be infected (13 guts and 15 glands). Thirty-three thousand eight hundred and one larvae of 20 different species were collected during the year. One thousand six hundred and thirty-eight children between 2 and 10 years were

examined with a spleen rate of 34.06 per cent. Nine hundred and twenty-n children were examined for malaria parasites with a parasite rates of 17.7 per cent. M. T. accounted for 58.4 per cent. of total infections, B. T. 3. per cent. and Quartan 23.8 per cent. Three hundred and thirty infants were examined for parasites and 6.3 per cent. were found infected.

(d) *Bijapur Town*.—From April to December 1945, 10,043 adults anophelines 16 different species were collected. Two thousand and fifty-four adults were dissected including 1,466 *fluviatilis*, 425 *culicifacies* and 136 *stephensi*. No infection was met with. Seven thousand two hundred and one anopheline larvae of 7 different species were collected in the same period. Of 1,546 children between 2 and 10 years examined the spleen rate was only 1.7 per cent. and the parasite rate was 1.3 per cent. among 302 children examined. There is thus no evidence of malarial endemicity in Bijapur Town.

(e) *Salsette Island*.—The scheme of malaria survey and control sanctioned by Government Resolution, General Department, No. 5225/33, dated 9th August 1944 was put into operation only from July 1945 and even then without the Medical Officer sanctioned for the scheme. As the Army authorities were carrying out control measures in most of the villages the year was spent in carrying out an engineering survey of the streams flowing from the Vikhroli Hills to the Thane Creek with a view to provide dams at suitable places and flush them. In this area as already reported *fluviatilis* was found to be the principal vector in a survey carried out in 1943. During 1944 this species was relatively scarce due to the control measures. Altogether 24,947 adults of 16 different species were collected till the end of December 1945 and out of 345 adults dissected including 32 *culicifacies* and 53 *fluviatilis* only 2 of the latter was found infected. (gland 1). During the same period 11,344 larvae of 16 different species were collected.

(f) *Greater Poona*.—During the year 12,537 adults and 7,090 larvae of 15 different species were collected. *Culicifacies* the vector in this area was most prevalent. 1,506 adults were dissected including 796 *culicifacies* 32, *stephensi* and 643 *fluviatilis* without any infection being found. One thousand five hundred and sixty-six children between 2 and 10 years were examined with a spleen rate of 13.8 per cent. as compared with 15.8 per cent. in 1944. The parasite rate was 17.3 per cent. as compared with 18.4 per cent. in 1944. The infant parasite rate was nil.

(4) *Malaria Control measures*.—(a) *Greater Poona*.—Control scheme which started in August 1944 was in continued progress in 1945. The measures consisted of treating the two rivers, smaller seasonal streams and the irrigation canals with 1 per cent. of Copper cyanide in road dust, and the burrow and quarry pits with malerial. The Nagzari nullahs which receive sullage were treated with malerial. The Parwati swamp which has been reclaimed considerably by filling was treated with malerial and Copper cyanide in the remaining water collections. Control measures also continued in the rural areas around Poona. Once a week pyrethrum spray was carried out in Kadakvasla and Vadgaon, Copper cyaniding combined with a single D. D. T. spray in September in Hingane Budruk and Kothrud and D. D. T. spray once in 3-4 weeks in Mundwa. This scheme caters to a total estimated population of about 400,000 at a cost of Rs. 50,000 per year which is shared between the Government (34,000) Poona City Municipality (10,000), Poona Suburban Municipality (5,000) and Poona District Local Board (1,000). Although the scheme has been in progress only for a year and a half good results by way of reduction of malaria have been achieved especially in the riverine areas which previously

exhibited high malarial prevalence. The table given below shows the data regarding spleen rates and dispensary cases:—

No.	Area.	Spleen rates.		Dispensary admission malaria cases.					
		1944.	1945.	1941.	1942.	1943.	1944.	1945.	
1	Poona Suburban—								
	(a) Yeravada	82	36	2,878	3,190	3,198	3,391	1,148	
	(b) New Kirkee	70	15	—	—	—	—	—	
2	Poona City								
	Shivaji Nagar	19	8	2,730	2,029	1,738	1,924	1,067	
	Narayanpeth	22	13	2,970	2,162	2,728	1,617	1,226	
3	Mundawa	86	33	..	..	..	..	..	
4	Hingane Budruk	38	27	..	..	..	..	..	
5	Khadakvasla	31	25	..	..	..	..	..	
6	Kotharud	56	42	..	..	..	..	..	

(b) *Kanara*.—(i) Spray killing with pyrethrum four times a week spaced as previously described, was carried out in Mundgod and Pala. Spleen rates have come down in Mundgod from 57·8 per cent. in 1943 to 37·1 per cent. in 1945 and from 46·0 per cent. in 1943 to 38·1 per cent. in Pala. In Mundgod the average annual admissions due to malaria from among the local residents was 2,679 during the period 1941 to 1944. In 1945 it was only 2,052. This reduction was mainly manifest during the usual peak month of November and hence a more sensitive index of the reduced transmission of the disease. But there was still some transmission in the area as seen from the infant parasite rate being as high as 3·01 per cent.

(ii) Copper cyaniding paddy fields, clean weeding streams and channels and spray killing twice a week with pyrethrum were carried out in Sirsi which has a population of 12,000. The good results previously reported were further improved upon. The spleen rate at the end of 1945 was only 10 per cent. as against 20 per cent. in 1942 and the infant parasite rate nil as against six per cent. in 1944 and 17 per cent. in 1942.

(iii) Cleanweeding of streams and channels was continued in Yellapur till October but later this place was included in D. D. T. experiments. Apart from the slow progress achieved by cleanweeding of streams and channels unaided by other types of control a further difficulty was experienced in Yellapur in that the clean channels amidst paddy fields underwent scouring during the monsoon and the ryots therefore objected to this measure. The spleen rate in Yellapur at the end of 1945 was only 23 per cent. as compared with 69·7 per cent. in 1943 and the infant parasite rate nil as compared with 14·0 per cent. in 1943. The average annual malaria cases during 1941 to 1943 was 2,931 but in 1945 it was only 1,733.

(iv) Experiments with D. D. T. These were in progress in Dandeli, Supa, Anchikeri and about 50 villages in Sirsi Taluka at the end of the year under report. The main conclusions from the point of view of *fluviatilis* prevalence have

been recorded earlier and results by way of malaria reduction are too early to assess as the work has only been in progress for about 3 months.

(v) In Haliyal with a population of about 7,000 all streams and channels were cleanweeded and paddy fields treated with Copper cyanide till September 1945. Later only one D. D. T. spray was carried out. Practically no *fluviatilis* has since been found. The spleen rate has been reduced to 34.0 per cent. at the end of 1945 from 66.7 per cent. in 1943 and the infant parasite rate to 1.4 per cent. from 23.0 per cent. The average annual malaria cases in Haliyal from 1941 to 1944 were 6,439 but in 1945 it was only 2,657 the reduction in this place too occurring mainly during the usual peak month of November.

(vi) *Training*.—Two Subordinate Medical Officers from the Dangs Tract and one Sanitary Inspector from Seyagram Wardha, attended a course of training in malaria investigation and control in addition to subordinate personnel newly recruited under the Organisation.

CHAPTER VI

FAIRS AND FESTIVALS.

94. *Pandharpur*.—The principal day of the Ashadhi Fair fell on 21st July 1945. The total number of pilgrims who attended the fair was 1,20,727 against 1,02,411 in 1944. The amount of tax collected was Rs. 36,083-12-0.

As in the previous years arrangements were made in all Civil Hospitals and Dispensaries for free inoculation against Cholera of intending pilgrims and to supply to them of certificates of inoculation well before the fair was due to be held. The intending pilgrims were informed through the Municipalities and taluka offices to get themselves inoculated at their place of residence and were told that unless they produced inoculation certificates, they will have to submit to inoculation at Pandharpur before entering the City. A press note to this effect was published and also broadcast. The Director of Public Health, Central Provinces and the Director of Medical and Public Health Departments, His Exalted Highness the Nizam Government were requested to provide facilities for inoculation of the intending pilgrims. The prevalence of Cholera in Sholapur and other adjoining districts necessitated prohibition of entry of uninoculated persons into Pandharpur and a notification was issued by the District Magistrate, Sholapur, under section 45 of the Bombay District Police Act, I of 1890, prohibiting entry of uninoculated persons into Pandharpur town during the period of the fair. The Pilgrim Committee opened inoculation centres from 15th July 1945 for free inoculation of pilgrims. Forty-nine medical graduates and licentiates and 20 assistants were appointed at different Nakas of Pandharpur and at the Railway Station. The number of pilgrims inoculated by them was 65,810. The rest of the pilgrims arrived with certificates of previous inoculation. Thirty-four thousand five hundred and fifty-eight inoculations were performed on a voluntary basis among the resident population and the pilgrims who had come to Pandharpur before the actual fair began, for which arrangements were made 1-1/2 months before the fair started.

Owing to the difficulty of obtaining public health staff the palkhi processions were banned but individual pilgrims were not prevented from going to Pandharpur. Precautionary measures were however taken as usual. The District Health Officer, Satara and Sholapur, were requested to make the necessary sanitary arrangements.

and inspection of groups of people that were proceeding to Pandharpur with the help of their staff.

The Great Indian Peninsula and Barsi Light Railways made the necessary sanitary arrangements at Kurduwadi Station for pilgrims arriving there. The Civil Surgeon, Solapur, made the usual medical arrangements outside the railway premises at Kurduwadi.

At Wakhari, the last camp before entering Pandharpur, the usual arrangements, i.e., water supply, trenches, Infectious Diseases Hospital etc. were ready in time.

Health of Pilgrims.—The infectious diseases hospital was opened on the 15th July 1945, with the necessary staff and equipment. In all 129 cases were admitted to the hospital of which 92 were of cholera and 35 of dysentery.

Other Fairs.—The Nivrittinath Fair at Trimbak (District Nasik) was held in the month of January 1945. About 40,000 pilgrims attended the fair. The Inspector of Sanitation and Vaccination, Nasik Southern Division, supervised the sanitary arrangements.

The fair at Alandi held in November 1945 attracted about 25,000 pilgrims. Sanitary arrangements were made by the Municipality and supervised by the Inspector of Sanitation and Vaccination and the Epidemic Medical Officer, Poona District. Plague was prevalent there. Arrangements for inoculation, and fumigation of the pilgrims' belongings were therefore made. The fair passed off without any untoward incidence.

The Manek Thari Punem and the Rath Jatra fairs at Dakor (District Kaira), were held on the full-moon days of Ashwin and Ashadha months, respectively. The total number of pilgrims who paid the tax at all the fairs was 2,24,916. Sanitary arrangements were suggested by the Assistant Director of Public Health, North Registration District Ahmedabad and were carried out by the Pilgrim Committee. The Inspector of Sanitation, Panch Mahals and Kaira Districts attended the important fairs and helped the Municipal Medical Officer of Health in carrying out the sanitary arrangements. The Shukaltirtha Fair (District Broach), was held on 19th November 1945 and was attended by 24,984 pilgrims. The Inspector of Sanitation and Vaccination, Broach, supervised the sanitary arrangements. The Vautha fair in Ahmedabad District was held from 18 to 20th November 1945 where about 50,000 pilgrims congregated. The Inspector of Sanitation and Vaccination, Ahmedabad attended the fair and supervised the sanitary arrangements.

The fair at Saundatti Yellamma (District Belgaum) which was to be held in December 1945 was banned as plague situation was bad in the district. About 8,000 pilgrims visited Shri Yellamma Temple for Darshan during the period of the fair. The fair passed off with a clean bill of health. The principal day of the fair at Anshankari (District Bijapur) came off on the 29th December 1944. The District Health Officer, Bijapur, camped there and supervised the sanitary arrangements. The Mahashivratri Fair at Gokarn (District Kanara) was celebrated from 7th February to 18th February 1945. The Inspector of Sanitation and Vaccination, Kanara, S. D. and the Sanitary Inspector, Shock Squad Scheme inspected the sanitary arrangements made by the Municipality.

CHAPTER VII.

URBAN SANITATION.

95. *Classification of Municipalities.*—There are 131 municipalities in the Province. Of these excluding the Bombay Municipality, the Ahmedabad, Nadiad, Broach, Surat, Thana, Bandra, Kurla, Ahmednagar, Jalgaon, Bhusaval, Amalner, Chalisgaon, Dhulia, Nasik, Malegaon, Poona city, Poona Suburban, Lonavala, Satara, Sholapur, Pandharpur, Belgaum, Bijapur, Dharwar, Hubli, Gadag-Betgeri, Barsi, Kalyan, Godhra, Ratnagiri, and Parle-Andheri Municipalities are borough municipalities; Viramgaon, Bagalkot, Yeola, and Guledgud are city municipalities and the rest are District Municipalities.

96. *Number of Medical Officers of Health.*—During the year under report Medical Officers of Health having British Diploma in Public Health were employed in Poona city, Nasik, Ahmedabad, Surat, Sholapur, and Pandharpur. The Ahmedabad Municipality also maintained one fully qualified Deputy Health Officer. Health Officers holding the Medical degree of the Bombay University and B.Hy (Bombay) or D. P. H., Bombay or Calcutta were employed at Broach, Dhulia, Hubli, Ahmednagar and Bandra. The Bijapur municipality employed a medical graduate with junior health officers' examination certificate and Malegaon and Jalgaon municipalities employed L. C. P. S., with junior Health Officers' examination certificate as their Medical Officers of Health, while Dharwar municipality employed a L. C. P. S. with D. P. H. and Hy., (Bengal). The Dakor municipality employed a medical licentiate with the sanitary Inspector's examination certificate as its Medical Officer of Health.

97. *Number of Sanitary Inspectors.*—One hundred and twenty-eight qualified sanitary Inspectors were employed in 59 towns. Ahmedabad 16, Sholapur 11, Poona city 10, Surat 9, Pandharpur, Belgaum and Hubli 4 each, Ahmednagar, Bandra, Nasik, and Dhulia 3 each; Kurla, Ghatkopar, Barsi, Bijapur, Bagalkot, Dharwar, Gadag, Broach, Nadiad, Godhra, and Jalgaon 2 each and the following had one each, Sangamner, Baramati, Ratnagiri, Trimbak, Malegaon, Manmad, Kalyan, Juhu, Karad, Mahabaleshwar, Panchgani, Igatpuri, Poona Suburban, Ilkal, Guledgud, Gokak, Nipani, Ranebennur, Haveri, Bulsar, Janibusa, Ankleshwar, Kapadwanj, Anand, Borsad, Dohad, Dholka, Chalisgaon, Bhusava, Parola, Amalner, Yawal, Erandol, Chopda, and Nandurbar.

98. *Municipal Sanitary Works.*—Advice was given to municipalities by the Assistant Directors of Public Health in matters of water supply, conservation, prevention and spread of diseases and sanitary matters generally. Action was taken by many of the municipalities on the suggestions of the Assistant Directors of Public Health of which the following is a brief summary:—

Satara spent Rs. 1,929 on pucca masonry gutters and Rs. 2,608 on construction of public latrines; Wai spent Rs. 1,486 on construction and repairs to gutters and repairs to public latrines; Mahabaleshwar spent Rs. 450 on rebuilding waste weir of yena lake; Ashta spent Rs. 1,254 on repairs to latrines and gutter; Vita spent Rs. 1,701 on new gutters; Sholapur spent Rs. 64,504-12-4, on improvement to sewers, drains, latrines and urinals; Barsi spent Rs. 4,677 on drainage, pucca dust bins and cattle trough; Bagalkot spent Rs. 3,008-8-0 on construction of wells and repairs to gutters, latrines, wells and roads.

aundatti spent Rs. 1,320 on masonry dust bins and latrine of 12 seats; Bail-Hongal spent Rs. 2,267 on pucca drainage gutters; construction of reservoir for drinking water and kitchen rooms in the municipal dispensary; Haveri spent Rs. 5,943 on road widening, construction and repairs to gutters; Dharwar spent Rs. 41,644-4-8 on drains, construction of new beef, mutton and fish market, covering slabs, construction of latrines, Cement Concrete bedding and drains; Hubli spent Rs. 1,46,050 on drainage and construction of latrines; Gokak spent Rs. 647-4-0 on construction of dust bins and storm water drain; Gadag spent Rs. 2,133 on construction of surface drain; Ranebennur spent Rs. 1,940-15-0 on construction of gutters and drains and repairs; Sirsi spent Rs. 2,500 on drinking water well and Honawar spent Rs. 2,584 on repairs to road, baramshala, gutters and market. Raver spent Rs. 6,950 on construction of gutter and road widening. Nandurbar constructed surface drains measuring about 144 feet, laid 2 pipes of underground drainage and connected sullage water of 24 houses to underground drainage. Taloda carried out repairs to roads and underground gutters. Work of similar type was carried out by Amalner, Bhusaval, Chalisgaon, Parola, Erandol, Dhulia and Chopada municipalities.

9. *Municipal Water Supply*.—There are piped water supplies in 37 towns. Water supplies in 21 towns were adequately protected.

10. *Infectious Diseases Hospitals*.—The Infectious Diseases Hospital, Poona, treated 2,085 patients of whom 512 died. The highest No. (954) was from plague. There were 282 admissions from small-pox and 204 from cholera. Temporary Infectious Diseases Hospitals were opened at Nasik and Ahmednagar for treating plague cases.

11. *Action taken by the municipality under Municipal Acts and Bye-laws*.—Forty-one Municipalities issued 12,795 notices under different bye-laws pertaining to public health matters of which 9,704 were complied with, 3,735 prosecutions were launched and 3,112 convictions were obtained. Prosecutions in case of 414 notices were withdrawn.

12. *Board of Public Health Works*.—During the year 2 meetings of the Board were held in the months of July and October 1945. The following proposals of different local bodies were approved by the Board for preparation of plans and estimates :—

Dhulia Drainage.

Karad Water Supply.

Tasgaon Water Supply.

Sinnar Water Supply and drainage.

Bhusaval Water Supply.

Bhiwandi Water supply and drainage.

Navalgund drainage.

Grants-in-aid were recommended by the Board for certain schemes as follows :—

Improvement to Sirur water supply	...	...	50 per cent.
Trimbak water supply-pumping plant	...	...	50 per cent.
Nadiad water supply	...	...	33½ per cent.
Nadiad drainage	...	...	33½ per cent.
Ahmednagar drainage.	} proposal only approved.		
Kaira water supply			

The Board appointed a sub-committee to go into the question of constitution functions, and powers of the Board. In regard to the question of policy regarding grants-in-aid to municipalities the Board accepted the maximum limits, viz. 5 per cent. grant-in-aid in the case of minor municipalities and 33½ per cent. in the case of the Borough municipalities as laid down by Government but considered that in special cases the Board should have the discretion to recommend an increase over and above the maximum limits on consideration of merits of the case.

CHAPTER VIII.

RURAL SANITATION.

103. *District Health Officers.*—In addition to the four full time District Health Officers working in the districts of Surat, Sholapur, Bijapur and Ahmedabad Government sanctioned the extension of the District Health Officers scheme July 1945 to the Districts of Nasik, Ahmednagar, East and West Khandesh and Dharwar and Satara Districts, the health staff, which was hitherto with the District Local Boards concerned, was taken over by Government from 1st September 1945. In the Districts of Nasik, and Ahmednagar the District Health Officers took charge of their posts on 19th November 1945 and 23 November 1945 respectively. Owing to paucity of qualified candidates for the post of District Health Officers, no District Health Officers could be appointed in East and West Khandesh Districts.

The activities of the District Health Officers were mainly directed towards the suppression and prevention of epidemic diseases. Vaccination and revaccination were carried on on a large scale and greater attention was paid to water supplies and sanitation of fairs. The staff made it a practice to scrutinize the vital statistics of all the villages visited and the defects noticed were pointed out to the village officers and necessary advice given. In Surat District the Rural Development Board encouraged the village officers for prompt reports of outbreak of epidemics, granting rewards and an amount of Rs. 50 was utilised as rewards to five Patels. A good deal of propaganda was carried out by way of magic lantern lectures by the District Health Staff.

The Sanitary squads are getting more popular in villages. They turned to much useful work in cleaning villages, disinfection of drinking water supplies and infected material, construction of soakpits and borehole latrines, removal of manure heaps from inhabited areas, filling of pits and hollows, draining pools and treating other mosquito breeding places, laying barium carbonate baits and disinfection of houses.

The Civil Surgeons of Kaira and Kanara continued to act as District Health Officers in addition to their duties.

104. *Epidemic Medical Officers.*—The services of Epidemic Medical Officers were mostly utilised for work in connection with Cholera, plague and malaria. They visited villages for sanitation and control of epidemic diseases at the time of fairs. They were also required to inspect camp sites of Palkhis going to Pandharpur for the Ashadhi fair and to arrange for the purification of the water supply, etc.

Out of 20 posts of Epidemic Medical Officers and 20 Sanitary Inspectors in the Shock Squad Scheme (i.e. standing staff for dealing with the initial stage of epidemics) only 7 and 15 posts respectively could be filled up.

105. *Health Unit, Sirur.*—On the whole the progress of the Health Unit work was fairly satisfactory. Eighty-one omissions in Birth and death Registers maintained by the village Patils were detected as against 181 in 1944. One case of plague imported from Poona was reported in the area. Preventive measures were immediately taken and there was no further spread. Cholera was prevalent all round the area and cases were imported in the Health Unit area. There were 62 cases and 38 deaths. 11,328 inoculations were carried out. Smallpox was in sporadic form. There were 31 cases and 3 deaths as against 14 attacks and 4 deaths in 1944. 1,903 primary and 6,133 revaccinations were performed. During the year 13 wells were improved and 7 step wells closed and a pump was fixed to a well. Seven bore hole latrines were constructed against 6 in 1944. One hundred and forty-four windows were opened in walls of residential houses during the year as against 129 in 1944. Soak pits made during the year numbered 83. The number of kitchen gardens made during the year was 12. A village cleaning week was observed in all the villages in November 1945. All the women staff was given special training in the Health Unit itself and they are named as "Arogya Sahayikas" (Health Assistants). The Arogya Sahayikas paid 14,401 home visits as against 7,500 in 1944. The number of clinics held was 53. The prenatal, infant, preschool and post-natal visits amounted to Rs. 16,531. The Arogya Sahayikas also held demonstration classes. The sessions held during the year were 152 and the total attendance was 1,959. The talks on home demonstration covered the subjects on personal habits, infant care, sanitation, stories, games, sewing, cooking, nursing, first-aid, singing. School health work is being conducted in 4 schools in the Health Unit area and is showing considerable progress. The Unit is serving the Bombay Province as training centre in Public Health for Subsidised Medical Practitioners, Sanitary Inspectors, Health Visitors and Military Officers. A course of 3 months was held for Subsidised Medical Practitioners in Sanitary and Public Health work. Seventeen Subsidised Medical Practitioners attended the course. Sanitary Inspectors and students from the Health Visitors, Schools, Bombay and Poona, also visited the Health Unit for training in rural health work. Military Officers who are under post-war reconstruction training were also sent to the Health Unit to see improvement in Sanitation and mass education of rural population. Five batches of 25 each visited Sirur in 1945. Propaganda was conducted as usual by giving talks on rural sanitation and Health Exhibition at public shows.

106. *Land acquisition in villages for relieving overcrowding.*—In one village in each of the Sholapur and Belgaum districts land was acquired for village extension with a view to relieve over-crowding. Sites for village extension in 2 villages of Belgaum District and 5 of Dharwar were approved by the Assistant Director of Public Health, Southern Registration District. No progress in this direction was reported from any other districts.

107. *Village water supply.*—Government placed at the disposal of the Commissioners a grant of Rs. 5,00,000 and of the Public Works Department that of Rs. 4,24,500 for improvement of village water supply. Work of construction of new wells was undertaken in 7 villages of Kaira District, 2 of Broach, 11 of East Khandesh, 8 of Satara, 2 of Sholapur, 7 of Bijapur and 26 of Kanara. The total Number of new wells constructed in the above districts was 140. In Ahmedabad District repairs to wells and tanks were carried out in 3 villages. Two hundred and eighty-nine step wells were converted into draw wells in the districts of Satara, Sholapur, Bijapur, Belgau Belgaum, Dharwar and Kanara.

108. *Sanitary Committees and Village Panchayats.*—Sweeping roads, cleaning ponds, keeping sanitation and improving it, repairing latrines and constructing

new ones, consideration of extension of villages, removing manure heaps, looking the cleanliness of school children etc., were some of the activities of these bodies. The Officers of this Department gave necessary advice with regard to sanitation of the villages.

109. *Guineaworm*.—The scheme for eradication of guineaworm in the districts of Satara and Dharwar by appointing special staff on anti-guineaworm workers for disinfection of drinking water supplies by means of T. C. L. sanctioned by Government in 1943 at an estimated cost of Rs. 1,953 for each district, the whole cost to be paid to District Local Boards by Government as grant-in-aid was continued. Six anti-Guineaworm workers were appointed in each of these districts.

Satara District.—1,374 cases were reported from 82 villages in Satara district and the six workers visited 98 villages and disinfected 89 step wells, 68 ads, 32 hels, 32 Zaras.

Dharwar District.—Eight hundred and fifty-five cases were reported from 100 villages in Dharwar district and the six workers visited 138 villages and disinfected 114 step wells and 78 houdas.

110. *Rural Development*.—District Rural Development Boards have been functioning in all the districts for preparing and carrying out schemes of development in the villages. These boards are to spend funds at their disposal on improvement and development of agriculture, animal husbandry and health education, communications, cottage industries, co-operative institutions, marketing, social and economic betterment and cognate objects in rural areas. During the course of their tours the Inspectors of Sanitation and Vaccination delivered lectures to the villages on general sanitation, water supply, removal of refuse, and night soil, closing up of pits formed in the Gaothan, conversion of step wells into draw wells, importance of air and ventilation, epidemic diseases and their prevention, personal hygiene, balanced diet, physical culture, etc. Classes were also held by the Inspectors at various taluka headquarters for village Police Patels and Secretaries of Village Panchayats for training in village sanitation. They also trained the Assistant Rural Development Inspectors in the district in the technique of vaccination and inoculation. They accompanied the village up-lift vans during tour and delivered lectures on rural sanitation and hygiene. The vaccinators as usual impressed upon the villagers the necessity of getting their children vaccinated in time. Officers of the Department carried on propaganda in connection with the "Grow More Food and Leafy Vegetables" campaign. The following is the resume of improvement work in villages in the different districts during the year 1945.

Panch-Mahals.—The touring Medical Officer of the Medical-cum-Propaganda Unit with a gramophone and records and Magic lantern in this district is touring in the areas of Bhils in Dohad Taluka and explaining to the backward Bhils the methods of leading a good and healthy life. He is also distributing free medicines to the Bhils. Grants were sanctioned for the table dispensaries in Dohad, Jhalod and other talukas. Thus the larger amount of the grants was spent for the advancement of backward classes of the District. Grants were also sanctioned for anti-malaria campaign, Baby and Health Week and for village tank at Paravadi and well for backward classes at Kalol.

The village people were taught by practical method to keep the water supplies and streets clean by the Taluka Village Uplift Committee and the improvement in this respect is appreciable in selected villages.

Satara.—A maternity centre at Umbraj, taluka Karad is run by the Rural Development Board and Rs. 608 were spent over it. The Board paid a grant of Rs. 1,500 to the Satara Health Association which is conducting an Infant Welfare Centre, a Maternity hospital and children's hospital at Satara and 5 maternity centres at Wathar, Rahimatpur, Yelapur, Tasgaon and Panchgani. A grant of Rs. 500 was paid for the scheme of giving first aid training to grown up boys in schools. Village cleaning week was observed in the district from 27th October to 2nd November 1945. Rupees 661 were spent by the Board for a well at Yedemanchidra in Walwa Taluka.

Broach.—The scheme of improvement of sanitation in villages prepared by the Civil Surgeon, Broach and Inspector of Sanitation and Vaccination, Broach and Kaira, was carried out by the Assistant Rural Development Inspectors in Ankleswar and Broach taluka at a cost of Rs. 1,000. Other work done was disinfection of wells with Potassium Permanganate and Tropical Chloride of Lime, prevention of collection of manure near wells, etc. The Medical Officers gave instructions to the women about personal hygiene and diet to be given to mothers, children and nursing babies. A baby Health Week was observed at Nabipur under the supervision of Sanitary Association, Broach. Essays were called for from the school boys on "Public Health" and cash prizes amounting to Rs. 50 were given to deserving candidates.

Kolaba.—Demonstrations to train the public in disinfecting drinking well water was held by the Rural Development staff. An amount of Rs. 327 was spent for purchasing one ton of Tropical Chloride of Lime and 550 wells were disinfected. An amount of Rs. 2,608 was sanctioned for conversion of step wells, into draw wells but all works could not be completed for want of cement.

Twenty-eight small dams were constructed across the rivers in this district and an amount of Rs. 959 was spent over it by the Board. Silt was removed from 137 wells and 26 tanks in Roha and Mangaon talukas.

Ratnagiri.—Temporary bunds across rivers and Nallas for water supply and irrigation purposes have been put up at several places. There are 19 subsidised Medical Centres in this district and it is seen that the public takes the advantage of the rural medical relief scheme. There are two trained Dais one, at Khanu appointed by the Bombay Mofussil Maternity Child Welfare and Health Council and the other at Rajapur Dispensary appointed by the Red Cross Society, Ratnagiri Branch. Their services are very useful to the public. There are classes for the Secondary dai training at the Civil Hospital, 5 candidates were admitted, 4 were examined and 3 passed.

Poona.—A sum of Rs. 625 out of the funds of the Rural Development Board was given as grants to centres like Mundhawa Child Welfare Centre, Village Panchayat, Talegaon (for construction of new latrines) charitable dispensary at Karda (for medicines), etc., An amount of Rs. 4,675 was sanctioned for the works of water supply in village such as repairs to parapet wall of tank, repairs to wells, deepening of wells and for new wells, etc., in 28 different villages of the district.

Sholapur.—Two Maternity Homes (at Degaon and Kumbhari) in Sholapur Taluka are solely run by the Rural Development Association and are progressing satisfactorily. The nurses at the above two homes have been provided with a bullock cart and they visit the surrounding villages and give advice to expectant mothers and medicines to ailing children. Children and women are also treated as out patients in the maternity homes.

Villagers were advised to keep their homes and roadside gutters clean and to construct manure pits away from their residential quarters. Grants were also given to Taluka Development Associations for carrying out such works.

Surat.—An amount of Rs. 1,000 was allotted from the grant of the Board for constructing Bore hole latrines in schools in 10 villages. Rupees 50 were paid as rewards to Police Patels of 5 villages for submitting prompt reports regarding outbreaks of epidemics within 24 hours.

Rupees 250 were given as a subsidy to Red Cross Society for conducting table dispensaries in the district. Propaganda was carried on regarding keeping separate cattle sheds, manure pits, ventilators, cleaning water troughs and surroundings of drinking wells, construction of soak pits, etc.

Thana.—Ten teachers have been trained in the class at Thana Civil Hospital in the table dispensary scheme and Ayurvedic Medicines worth Rs. 1,500 were given to 60 table dispensaries. Propaganda in Public Health was made during big fairs and Agricultural shows by means of lectures. There are 7 dais and 7 Subsidised Medical Centres and these dais render valuable help to the women of the poorer classes.

Eleven new wells were constructed in Umbergaon Taluka and in Thana Taluka. Two village tanks were repaired at a cost of Rs. 2,300.

Belgaum.—An amount of Rs. 2,004 was contributed by the Board towards the construction of wells in 6 villages. Two of these works were completed and the remaining 4 were in progress.

The Rural Uplift Van toured in the district and lectures were delivered by the Sanitary Inspectors on rural health, sanitation, etc.

Bijapur.—One step well was converted into a draw well in Bagewadi Taluka and one Gunda was constructed at Malligihal in Hungund Taluka at a cost of Rs. 410. Nineteen Bore hole latrines were constructed and an amount of Rs. 442 was spent for construction of female latrines at Mattagi.

An amount of Rs. 200 was given to Almil village dispensary for furniture for treating indoor patients. Rupees 250 were sanctioned by the Board for purchase of 32 medicine chests for villages having no medical aid. Two dais were trained at the Civil Hospital.

Nasik.—Propaganda for keeping the surroundings, and the watering places clean, for constructing cattle sheds away from the dwelling places, providing road side gutters for drainage, making manure pits outside the village, and to make free use of quinine in checking of malaria was made in many villages by the Rural Development Inspector and his assistants.

Prompt measures were taken against the epidemics during the outbreak of epidemics like cholera, small-pox, plague, malaria, Quinine pills were distributed freely and mosquito breeding places were disinfected.

Bombay Suburban District.—An amount of Rs. 6,185-8-0 was spent by the District Local Board over the construction of north-side gutter at Versowa. Rs. 4,000 out of these were sanctioned by the Collector and Rs. 1,000 by the Rural Development Board.

Mepacrine tablets worth Rs. 200 were distributed in malaria stricken areas near Borivli, and Nanala through the Inspector of Sanitation and Vaccination and social workers.

Dharwar.—There are 80 medicine chests with some common drugs ointments and in 80 central villages. These were replenished and sufficient supply of quinine and mepacrine tablets was made available to the affected localities. The Assistant Rural Development Inspectors carried out their duties as usual advising the villagers about cleanliness of villages, removing manure heaps outside village sites etc.

Ahmedabad.—Activities in the selected villages for development purposes were carried out by the Assistant Rural Development Inspectors and they carried out propaganda for bore hole latrines and trench latrines in the same villages.

East Khandesh.—An amount of Rs. 700 was distributed for construction of gutters and roads. A village cleaning week was observed from 28th October 1945 to 2nd November 1945 throughout the district. Villagers took part in observing it and successful propaganda was made for cleansing the villages, constructing manure pits with the help of leading persons from villages.

At Sangvi Bk. in Yawel taluka the Village Improvement Committee has constructed huts for segregation of lepers.

Propaganda on general sanitation, hygiene, etc., by means of 16 MM. films was carried out in the district by the District Information Officer. The Mobile Publicity Van No. 2 of the Director of Information also made propaganda in public health matters.

CHAPTER IX.

MATERNITY AND CHILD WELFARE.

111. *The Bombay Mofussil Maternity Child Welfare and Health Council.*—The number of Maternity and Child Welfare centres affiliated to the Council during the year 1945 was 41. Grants amounting to Rs. 28,023 were given to the Maternity Homes and Welfare Centres affiliated to the council. Rs. 10,147 and Rs. 11,258 were spent at Chakan and Bhilawadi welfare units respectively from the respective funds allotted to them. The diploma of the council "trained dai" was awarded to 77 senior Dais who were trained in 12 institutions. In addition to the above, Assistant midwives diploma of the Bombay Nurses, Midwives and Health Visitor's Council was awarded to 7 students trained in Alibag and Sholapur Maternity Homes affiliated to the Bombay Mofussil Maternity Child Welfare and Health Council. The council disbursed grants amounting to Rs. 8,400 during the period to 14 centres for training of dais and assistant midwives.

The council runs a Health school at Poona with financial assistance from Government. Out of four students admitted in 1944 one left the school and the remaining three passed the Health Visitors' Diploma Examination. Out of the six students admitted for the year 1945-46 one being full trained nurse was exempted from the preliminary examination and the remaining five have passed this examination and are studying for the final examination.

The work of the Welfare Unit, Chakan (Poona District), was carried on the same lines as that of last year and is showing progress. Ninety-five Maternity cases were conducted by midwives and senior dais. Out of these 30 were conducted in the maternity home of the centre. Six hundred and five toddlers, 274 infants and 237 expectant mothers are on the Health Visitors' list. Eight hundred and twenty-five talks were given to parents by the staff. Dai training classes are conducted in this unit. Sewing classes and little mothers' classes are also held regularly and the lady Medical Officer gives health lectures in the schools of that area.

The Bhilawadi Welfare unit which was started on 26th July 1944 is showing much progress. The welfare work is proving popular among the villagers in the neighbourhood. During cholera and plague, services of the staff were very valuable. Dai training classes are conducted here also. Sewing classes, little mothers' classes and health talks are also organised. Forty-seven maternity cases were conducted by midwives and senior dais. Out of these 46 were conducted in the maternity

home of the centre. One-hundred and seventy seven infants, 135 toddlers and 78 expectant mothers are on the Health Visitors' list, and are receiving regular visits in their homes. Two hundred and ten post natal cases were visited in the home by the Health Visitors. Two thousand and seventeen talks were given to individual parents by the staff. The unit staff also performed plague and cholera inoculation and vaccinations. The council received the following grants from Government during the financial year 1945-46 for its various activities in connection with Maternity and Child Welfare work :—

Rs. 13,000 for general work of the council.

Rs. 10,000 for training of senior dais, assistant midwives, and midwives.

Rs. 2,000 for appointment of a touring lady doctor and for milk distribution, etc.

Rs. 8,000 for Poona Health School.

112. *Satara Health Association*.—The Association maintains a Hospital at Satara in which 2,033 women and children were treated. The number of indoor patients was 3,354 and that of outdoor 23,361. In addition the Association has maintained six centres in the district. The Association receives a grant-in-aid of Rs. 2,000 per annum from Government.

113. *The Bombay Presidency Infant Welfare Society*.—The Society maintains three maternity homes, seven infant welfare centres, and one creche in Bombay City. During the year under report there were 2,523 confinements at the maternity homes as against 3,105 in the previous year. The number of expectant mothers admitted to all centres was 2,925, while the visits of expectant mothers to clinics numbered 39,008. The society nurses visited 5,296 post natal cases at home. It gave a grant of Rs. 5,000 to the Bombay Mofussil Maternity Child Welfare and Health Council for work in the mofussil.

Seven students were admitted into the society's Health Visitor's Institute at Bombay. All the students passed their part I examination. This Institution receives a grant-in-aid of Rs. 5,500 annually from Government.

114. *Measures taken to reduce infant mortality*.—The Assistant Director of Public Health, N. R. D., Ahmedabad, reports that Bhusaval Municipality maintained a maternity home attached to its dispensary. The Surat Municipality started the Lakhapati Maternity Home where no fees are charged from any body. The District Local Board maintained five midwives. In Nadiad town there are three maternity homes in the town one of which belongs to the Municipality. The Broach Municipality maintained one Maternity Home. The Ahmedabad Municipality continued to maintain the Chinoy and Saraspur maternity homes. Besides there are two Health Visitors and seven midwives engaged by the Municipality. The District Local Board, West Khandesh, appointed 12 trained dais and that of East Khandesh four trained midwives to work in the district.

The Assistant Director of Public Health, S. R. D., Belgaum, reports that there is a very limited number of institutions carrying on ante-natal work in the Division. The institutions that carry on the kind of work are those conducted by the Health Association at Satara, Vaduj, American Marathi Mission, Satara, Rahimatpur, Umbraj, Yellur and Panchagani.

The Indian Red Cross Society, Dharwar Branch, has maintained a child welfare centre. The centre distributed milk to infants and toddlers and held clinics for children. Ante-natal, post natal and expectant mothers were advised.

The lady health visitor appointed for anti-opium propaganda in Sholapur district carried on propaganda in villages surrounding the municipal area of Sholapur and about five miles round. She visited 2,963 houses and saw 998 infants that were being administered opium. She saw 149 ante-natal and 215 post-natal cases. She advised parents impressing on them the ill-effects of this drug on the tender children.

The lady health visitor in Khandesh district carried on anti-opium propaganda in 230 villages of Bhadgaon Peta and Jalgaon Taluka (East Khandesh) and detected 1,836 children who were administered the drug. She explained to the villagers the evil effects of opium drugging and instructed individual women about personal hygiene, care of infants, cleanliness of house, etc.

Of the two posts of health visitors for anti-opium propaganda duty in Ahmednagar district the health visitor in Kopargaon taluka continued to work. The other post was filled up by a qualified midwife (in Sangamner taluka) in the absence of a health visitor. They carried on anti-opium propaganda and gave necessary advice to pregnant women. They trained village dais in the technique of delivery cases. The health visitor at Kopargaon visited 172 villages, conducted 40 delivery cases, accompanied the Rural Uplift Van in four talukas and did propaganda work. The midwife in Sangamner taluka visited 82 villages and did propaganda work.

CHAPTER X.

115. *School Hygiene and Medical Inspection of School Children.*—Schools were visited from time to time, during the course of their visits for vaccination work, by the vaccinators or for inspection thereof by the Inspectors of Sanitation and Vaccination. Besides the Inspectors of Sanitation and Vaccination took the opportunity of giving instruction to the school children on personal cleanliness, school hygiene, cholera, plague and vaccination and the protection afforded by vaccination against small-pox.

Instruction in health and hygiene is imparted in Primary Schools. In standard VII of Boys' Schools, Physiology and Hygiene are the subjects of the course prescribed for that standard and at the final examination questions on hygiene are set. In Girl Schools, Hygiene is taught as one of the regular subjects of instruction. In the course of studies in primary training institutions for men, the subjects of "Hygiene" and "Physiology" have been prescribed for the second year class, while in the training institutions for women, these subjects have been prescribed for the first year class and "Domestic Science" for the second year class. Equipped with the knowledge of these subjects the teachers are in a better position to pay attention to children's cleanliness, correct sitting posture, proper holding of books, etc. Care is also generally taken by the school authorities to see that the school houses are, as far as possible, well lighted and ventilated.

Propaganda work in school hygiene is done by way of lectures, demonstrations, and magic lantern slides. The Visual Instruction Branch of the Educational Department also demonstrates occasionally in rural areas by magic lantern slides the principles of cleanliness and sanitation. Of the various topics dealt with in these illustrated lectures, the subject of health and hygiene forms an important part. Government inspecting officers also deliver lectures with the aid of magic lantern on health and hygiene for the benefit of school children and the general public.

Schemes for medical inspection of school children prepared in accordance with Government Resolution, General Department, No. 4110, dated 19th July 1940, were in force in the area of the District Local Boards, Kolaba, Panch Mahals and Bijapur—and those of the Municipalities of Bombay, Bandra, Satara, Jalgaon, Dhulia, Amalner, Ahmedabad, Surat, Hubli and Gadag and also in the Ahmednagar Cantonment area during the year 1945. The statistics of medical inspection of children are as follows :—

Surat Municipality.—Number of children examined—15,869. Number of children suffering from diseases of throat 2,603, eyes 364, teeth 738, nose 45, ear 153, heart 58, constipation 626, skin 551, miscellaneous 613 and defects 14.

Jalgaon Municipality.—Number of children examined was 1,940. Number of children suffering from the diseases of throat 333, eyes 53, teeth 105, nose 24, ear 28, heart 40, lungs 8, liver 109, skin 79 and miscellaneous 223.

Bombay city.—20,018 children were examined. Number of children suffering from diseases of throat 3,236, eyes 1,912, teeth 8,099, nose 490, ear 396, heart and circulation 479, lungs 398, skin 3,949 and enlarged spleen 150.

CHAPTER XI.

HEALTH PROPAGANDA.

116. *Health Section of the Bombay Mofussil Maternity, Child Welfare and Health Council.*—The Presidency Health Section continued to carry on propaganda in health, maternity, child welfare and nutrition by holding health exhibitions, cinema demonstrations and lectures at various places in the Province. A radio programme has been introduced with the aid of a radio set given by the All-India Radio, Bombay. Gramophone records on health subjects supplied by the Public Health Department are also used. A projector with talkie equipment has been supplied to the Council by the Public Health Department with a view to bring health campaign up-to date and make it more popular and attractive both in rural and urban areas. On behalf of the Rural Development Boards exhibitions and cinema shows were arranged. The health section helped the Municipal Corporation, Bombay, in arranging health exhibitions and cinema shows. It organised 26 Health and Food Exhibitions combined with cinema shows and 6 cinema demonstrations in Bombay City in the educational institutions, labour welfare centres and mills.

During the year 196 centres were helped. 78 centres held both exhibitions and cinema shows and 118 centres organised cinema shows only. About 3,06,215 persons (men and women) attended the various programmes. The Public Health Department supplied 35 m.m. films on (1) Good Eating (2) Waste Not and (3) Guinea-worm, with sound track in Marathi, Gujarathi and Kannada. Films were also obtained on loan on the subjects of Hygiene, Malaria, Maternity and Child Welfare from the Burmah Shell Company, Ltd., Information films of India and Red Cross Film Circulation Library.

117. *Sanitary Associations.*—The work done by the different sanitary Associations is as follows :—

Broach Sanitary Association.—The Association arranged to deliver 17 magic lantern lectures on prevention of blindness, malaria, cholera, village sanitation, Smallpox and flies and 64 demonstration lectures on flies, smallpox, cholera, malaria, tuberculosis, village sanitation, cleanliness, meningitis, milk, food and personal hygiene. It held 2 health shows in Broach City, delivered lectures on maternity and health subjects, arranged 38 cinema shows in various parts of the City and in 6 villages of the district and screened films on various health subjects. With the co-operation of the Broach Red Cross Society the Association arranged to examine 495 ante-natal, 245 infant cases and weighed 245 babies at the Municipal Aminabai Dispensary and gave ante-natal advice and instructions on health. In co-operation with the St. John Ambulance Association, Broach Centre, it held 12 classes in First Aid to the injured. Village medical aid was continued in co-operation with the local Red Cross branch in 137 villages and 36,549 patients took advantage thereof.

Bombay Sanitary Association.—The Health Visitor of the Association inspected in all 580 chawls, and carried on inspections of houses and chawls in different slum areas in the city with a view to finding out conservancy defects and to carry out educational work by group talks. The Health Visitor delivered in all 63 lectures by means of magic lantern, out of which 31 lectures were on Typhoid and the remaining 32 on cholera.

Arogya Mandal, Poona.—The members of the City Inspection Committee visited different localities of the city and brought defects regarding sanitation to the notice of the Poona City Municipality and got complaints of the aggrieved

parties remedied. The Child Welfare Centre of the Arógya Mandal gave necessary advice and treatment to mothers and children. The Mandal opened a free anti-plague inoculation centre during the epidemic and many people took advantage of the centre. In co-operation with the Poona Medical Society the Mandal arranged lectures on health subjects to the students of schools with the aid of cinema films. The Mandal co-operated with regard to the sanitary arrangements of the Alandi Municipality during the fair and made the necessary suggestions. They also carried out the anti-plague inoculation work at Alandi.

Ahmedabad Sanitary Association.—The Association, in co-operation with different branches, arranged exhibitions and cinema shows at 15 places in Ahmedabad City and the district. Magic lantern lectures were also given. Propaganda materials such as models, charts, posters films, etc., were supplied by the Association with a view to carry on propaganda. Rural Development Board, Ahmedabad, organized Agricultural Exhibition at Sanand and the Association arranged stalls and distributed leaflets on different health subjects. The Association organised shows at different mills for the benefit of the operatives of the mills. In co-operation with the Sanitary Association the Gujrat Divisional Branch of the Bombay Mofussil Council organised shows at the Rohit mills, the New Swadeshi mills, the Gujrat Cotton mills and the Saraspur mills. At all the four mills exhibits and cinema shows were arranged. School students and many people from surrounding localities take advantage of the sanitary museum at Ahmedabad where exhibits are explained.

118. *Propaganda by means of Magic Lanterns.*—The Inspectors of Sanitation and Vaccination and Sanitary Inspectors under the District Health Officers' Scheme delivered magic lantern lectures during the course of their regular tour and also in the areas affected by epidemics.

CHAPTER XII.

RELATION OF FOOD TO HEALTH AND DISEASE.

119. *Prices of Food Grains.*—The prices of food grains in Bombay City were lower than those in the previous year by 3 per cent. Those in Deccan were higher than those in the previous year by 6 per cent., the percentage in Karnatak and Konkan remaining the same.

120. *Adulteration of Food Stuffs.*—The Bombay Prevention of Adulteration Act, 1925, was in force in the towns of Bombay, Ahmedabad, Surat, Broach, Dhulia, Solapur, Ahmednagar, Amalner, Kurla, Hubli, Kapadvanj, Thana, Nadiad, Bhadkpar-Kirol, Pandharpur, Nasik, Belgaum, Ankleshwar, Parle Andheri, Godhra, Limbik, Poona City, Bulsar, Barsi, Bhusaval and Dharwar. Its provisions are being extended to other towns.

The following table shows the number of samples examined by the Public Analyst concerned and also gives the number of genuine and non-genuine samples :—

Town.	Samples examined.			Samples found adulterated.			Total percentage.	
	Milk.	Ghee.	Other food stuffs.	Milk.	Ghee.	Other food stuffs.	1945.	1944.

CHAPTER XIII.

HOUSING URBAN AND RURAL.

121. *Government Industrial Housing Scheme in Bombay City.*—It consists of 20 chawls of reinforced concrete construction, each containing 80 rooms. The chawls are situated at the following centres:—

Name of Centre.	No. of Chawls.
Delisle Road	32
Naigaum	42
Worli	121
Sewri	12
Total	207

The total number of rooms and shops available for occupation in the chawls are 16,233 and 311 respectively. The sanitation of the chawls at all the centres was satisfactory, in spite of the fact that the chawls are over-crowded due to war. During the year under report all the chawl areas were free from any kind of disease.

epidemic. Certain institutions, such as the Bombay Presidency Infant Welfare Society, and the Bombay Mofussil Maternity, Child Welfare and Health Council continued to provide medical relief to tenants in chawls through maternity homes and creches. Institutions such as the Naigaum Social Service Society and Young Men's Christian Association are carrying on social and athletic activities for the benefit of the people in the D. D. Chawls. Municipal schools are situated in the chawl centres and the Municipality is also conducting a free dispensary at Worli. The Bombay Presidency Women's Council, the Blind Relief Association, etc., are carrying on beneficial activities for the benefit of the tenants. The Bombay Educational League's School continues to provide educational facilities in their high school at Worli. Recreational centres have also been provided at all the chawl centres. The people take active interest in all the activities of the centres which are now grown very popular among them.

22. *Urban Housing*.—During the year under report 27 development schemes covering an aggregate area of 1,575 acres of land in urban areas in Ahmedabad, Nasik, Kandesh, Ahmednagar and Dharwar Districts and 19 lay outs of final plots in Town Planning Areas covering an area of about 100 acres were prepared and supplied to various owners in Town Planning Scheme areas. The lay-outs prepared for Karwadi and Laxmiwadi in Ahmednagar District make adequate provision for comfortable housing facilities for factory labour. Work in connection with the acquisition of land for Hubli Town Development including road widening and slum clearance schemes was continued during the year.

123. *Housing Societies*.—During the year 1944-45, twelve new Housing Societies were registered (two in Bombay, one at Poona, four in Kaira District and five in each of Panch Mahals) bringing the total number of societies to 126 as against 114 during the previous year. The total number of members of these societies was 10,788. Ahmedabad City with a net work of 54 societies continued to be the main centre of co-operative housing activities. In Bombay City and Suburbs the societies organised during the boom period on the co-partnership tenancy system which has to incur very heavy building costs were advised to reorganize their working by taking advantage of the rise in prices of lands and buildings and by selling, if necessary, some of their properties which could not be usefully utilised by their members.

124. *Housing sites for members of the Backward Classes*.—The Backward Class Department helps in providing suitable housing sites for members of the scheduled classes by acquiring lands and disposing of the plots to individual members at a nominal occupancy price. Provision for sale of plots for building purposes has been made at different places. Moreover, some of the municipal authorities in various districts have taken steps to provide suitable housing sites for scheduled classes residing within their limits. Government has ordered that with a view to break down the isolation of scheduled class quarters that is so frequently to be found in villages, the houses of the scheduled classes should be shifted closer to the main village centres, waste lands where available being granted to the scheduled classes for housing purposes on payment of reasonable occupancy price. Instructions have also been issued to Collectors that wherever it is noticed that scheduled classes are residing in low lying, marshy or deserted far off places, every attempt should be made to acquire sites in or near the villages for housing them.

125. *Industrial Hygiene including Hygiene of Mines*.—No factories could be inspected during the year by the Assistant Directors of Public Health. There is only one important manganese mine in Halol Taluka of Panch Mahals conducted by the Managing Agents of Messrs. Killick Nixon & Co., Bombay. The information

regarding condition of the labourers employed in the mines as well as that of the Freelandganj Railway Workshop at Dohad is as under :—

Name. 1	Number of employees.		Total Number of cases treated.		Number of cases due to Phthisis.		Important Sub-heads.			
	2		3		4		Influenza.		Accidents.

CHAPTER XIV.

PUBLIC HEALTH SERVICES AND ADMINISTRATION.

Public Health Laboratories.

126. *Poona Laboratory.*—Mr. F. Barretto, M.B.E., D.P.H., was in-charge of the Laboratory throughout the year except during his leave period from 17th to 30th November 1945 when Rao Bahadur R. K. Mhatre, D.P.H., Assistant Director of Public Health, Central Registration District, Poona, was in addition charge. The following table shows the number of different samples examined bacteriologically in the Public Health Laboratory :—

Cantonment Water Works.	Poona City Water Works.	Holkar's Bridge Water Works.	Swimming Baths, Poona.	Other sources.	Total.
2,173	604	1,186	75	3,288	7,326

The chemical work was as follows :—

Water from Poona Cantonment Water Works.	Water from other sources.	Sewage Effluent.	Food, Drugs, Chemicals, etc.	For dose of Steriliser and free chlorine.	Other Miscellaneous.	Total.
853	1,136	412	2,835	10,582	68	15,886

The result of the samples of water examined bacteriologically is shown below :—

Source.	Percentage of samples showing absence of lactose fermenter in 100 c.c.
Poona Cantonment Water Works	99.6
Holkar's Bridge Water Works	94.5
Poona City Water Works	71.1

periments.—A number of samples of ghee and oil, adulterated with vegetable oil, were examined during the year for determination of their liquid and fatty acids. A modified method of test was adopted in which alcohol petroleum spirit (40°–60°) were used instead of ether which was found to be satisfactory in detecting adulteration and further experiments on these are being carried out.

Samples of Potassium Permanganate and Sulphuric acid were examined for qualities.

The Assistant Director of Public Health, in-charge Public Health Laboratory, Poona, visited Mahabaleshwar, Hubli, Dharwar, Nasik and Trimbak in connection with water supplies. Mr. C. B. Almoula, Chemical Assistant, visited the Visapur in connection with the chlorination of its water supply. Demonstrations were given in the Laboratory to the students from the College of Engineering, Poona, B. J. Medical School, Poona, Ideal High School, Poona, and a batch of Army Officers sent by the Services Resettlement Liaison Officer, Poona.

A student of the University Technical Institute, Matunga, was trained at the Laboratory for 3 months. Mr. V. S. Shirke, M.Sc. deputed by the Director of Public Health, Kolhapur, was also given a course of training in the Laboratory for 3 months. The Medical Officer, Sangli, was given a course of training in bacteriological examination of water. A Conference of Health Officers of Bombay, Ahmedabad, Surat and Sholapur Municipalities and the Municipal Analysts, Bombay, Ahmedabad and Surat was inaugurated at this Laboratory on 6th and 7th June 1945 by the Director of Public Health. The Assistant Director of Public Health, in-charge Public Health Laboratory, Poona, took the chair and continued the work of the Conference. Suggestions from various local bodies, who have applied the Bombay Prevention of Adulteration Act to their areas, regarding the difficulties experienced by them in the administration of the Act were invited and placed before the Conference. In all 62 items were discussed and a report submitted to the Director of Public Health.

27. *The Municipal Laboratory, Ahmedabad.*—Mr. M. V. Sane, M.B.B.S., B.Hy., Officer in-charge of the Laboratory examined 119 samples of water chemically and 373 samples of water bacteriologically; 373 pathological samples received from Municipal Dispensaries, and labour Hospital and Private Medical Practitioners were examined in addition.

28. *The Municipal Laboratory, Surat.*—1,869 samples in all were analysed, of which 19 samples of water were for chemical analysis and 50 for bacteriological analysis.

29. *Public Health Administration.*—The Public Health Department consists of the Director of Public Health as the Head of the Department, 6 Assistant Directors of Public Health, three being in-charge of Registration Districts, one in charge of Vaccine Institute, Belgaum, Public Health Laboratory, Poona, and Malariology and an Entomologist in the Malaria Organization. A post of Assistant Director of Public Health (Epidemics) has been temporarily created on account of serious epidemic situation. The Assistant Directors of Public Health in charge of Registration Districts are in charge of vaccination in British territories excluding Bombay Municipality and the Cantonments. Nine full-time District Health Officers are working in nine districts while the Civil Surgeons in two other Districts have been acting as Ex-officio District Health Officers in

addition to their duties. There are 5 Medical Officers and 2 Subordinate Medical Service Officers in Malaria Organization, 15 Epidemic Medical Officers, 25 Inspectors of Sanitation and Vaccination, 39 Sanitary Inspectors and 391 Vaccinators including candidate vaccinators constitute the subordinate staff.

130. *Selected Districts.*—The system introduced in the year 1910, by which the control of vaccination in four districts of the Province is exercised by the local boards of those Districts, was continued throughout the year. The control of vaccination in the area of Satara and Dharwar District Local Boards rests with those bodies. The health staff of Satara and Dharwar District Local Board was taken over during the year.

Appendices II and III of this report show particulars of health services in rural and urban areas and particulars of maternity and child welfare centres health visitors and midwives in urban and rural areas.

Appendix IV shows the annual income and expenditure of institutions working in co-operation with the Public Health Department in the Province during the year 1945-46.

131. *Training of Sanitary Inspectors.*—There were 137 candidates on the class roll in Bombay, two of whom subsequently discontinued. Seven private candidates who had deposited their fees withdrew the fees. Out of 128 candidates who attended the Course 126 together with one candidate who had filled the terms last year but could not appear for the examination and 40 repeaters making a total of 167 enlisted their names for the examination. Out of these two repeaters absented themselves from the examination. Of the 165 students who appeared for the examination 114 were declared successful, subject to the approval of the Royal Sanitary Institute, London.

132. The Assistant Director of Public Health, Northern Registration District Ahmedabad, made a complete survey of seven towns and five villages (with Pan-chayats or Sanitary Committees). Seven towns and villages were visited for vaccination purposes. He visited one dispensary and two sub-jails. Several schools were also inspected at the time of sanitation and vaccination inspection. Sites for Housing and Dispensaries, etc. at 10 places were inspected. He visited 72 towns and villages for general advice on Public Health questions such as Water Supply drainage, complaints regarding sanitary matters and special investigation into outbreak of epidemic diseases. He visited the Aerodrome areas near Ahmedabad and discussed the anti-malaria measures with the Officer Commanding. The work done by the district health staff in different places was inspected by him. He delivered lectures in Hygiene to the students of the B. J. Medical School Ahmedabad. He attended the meetings of the Public Health Sub-Committee of the District Rural Development Board, East Khandesh and the Ahmedabad Central Prison.

The Assistant Director of Public Health, Central Registration District, Poona visited 100 villages and towns for control of the epidemics of plague and cholera. Ten villages were visited for inspection of various sites and enquiries into complaints regarding insanitation, night-soil depot, etc. The Military camps at Bandra and Santa Cruz were also visited by him for inspection of sanitation in their neighbourhood. He visited Nasik and Trimbak for sanitary arrangements for the Sinhastha fair and Alandi for Kartiki fair. He also visited 12 villages in connection with Post War Reconstruction Planning. Lectures were delivered to the students of the B. J. Medical School, Poona.

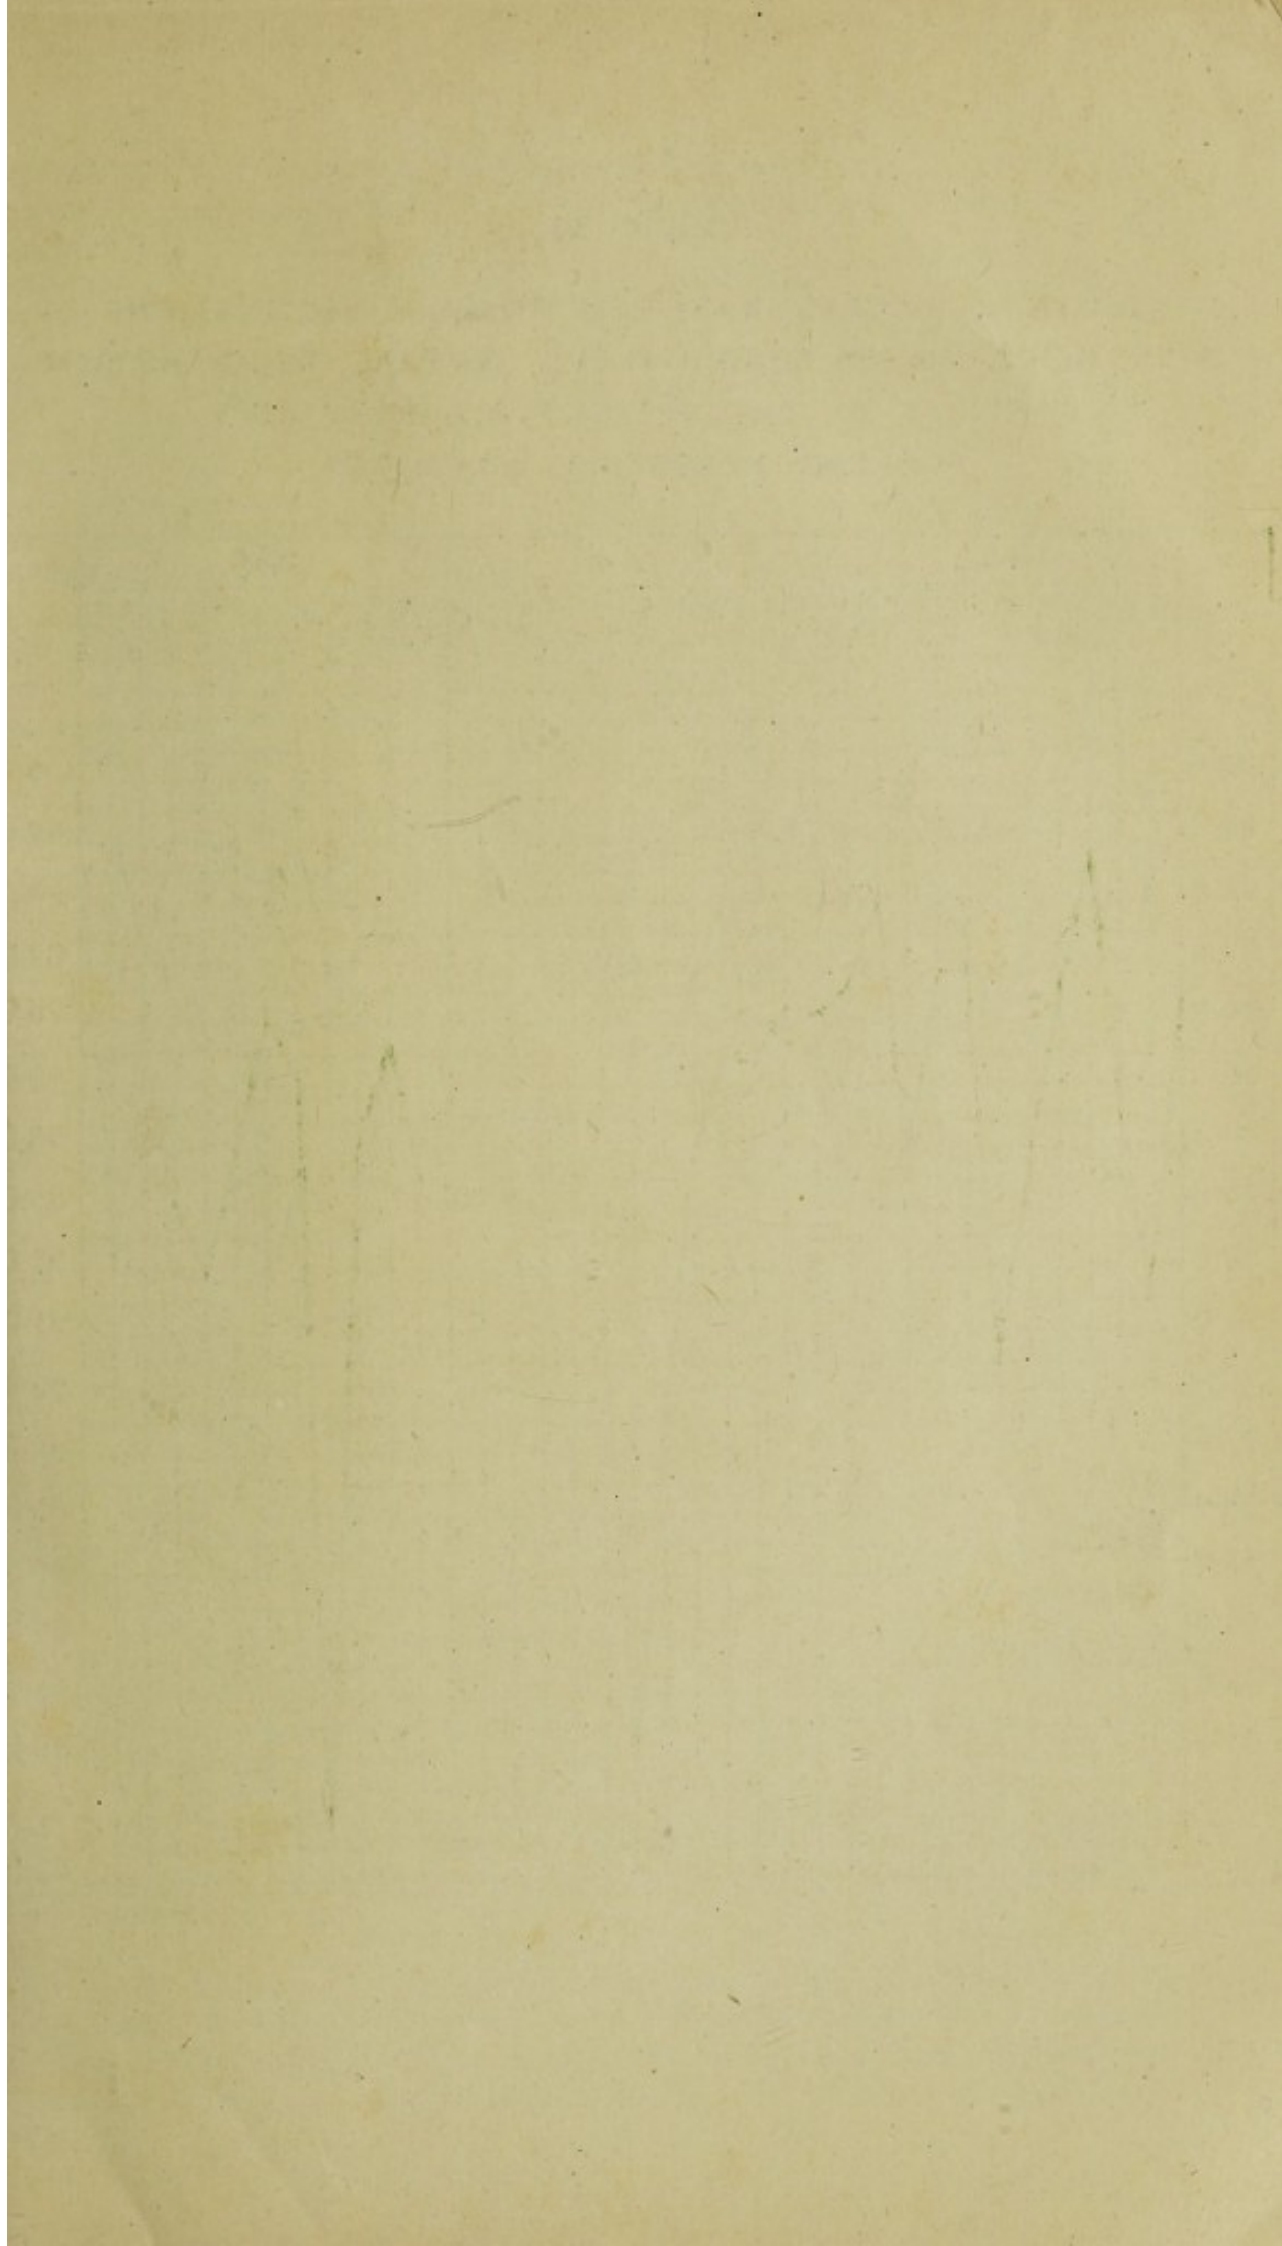

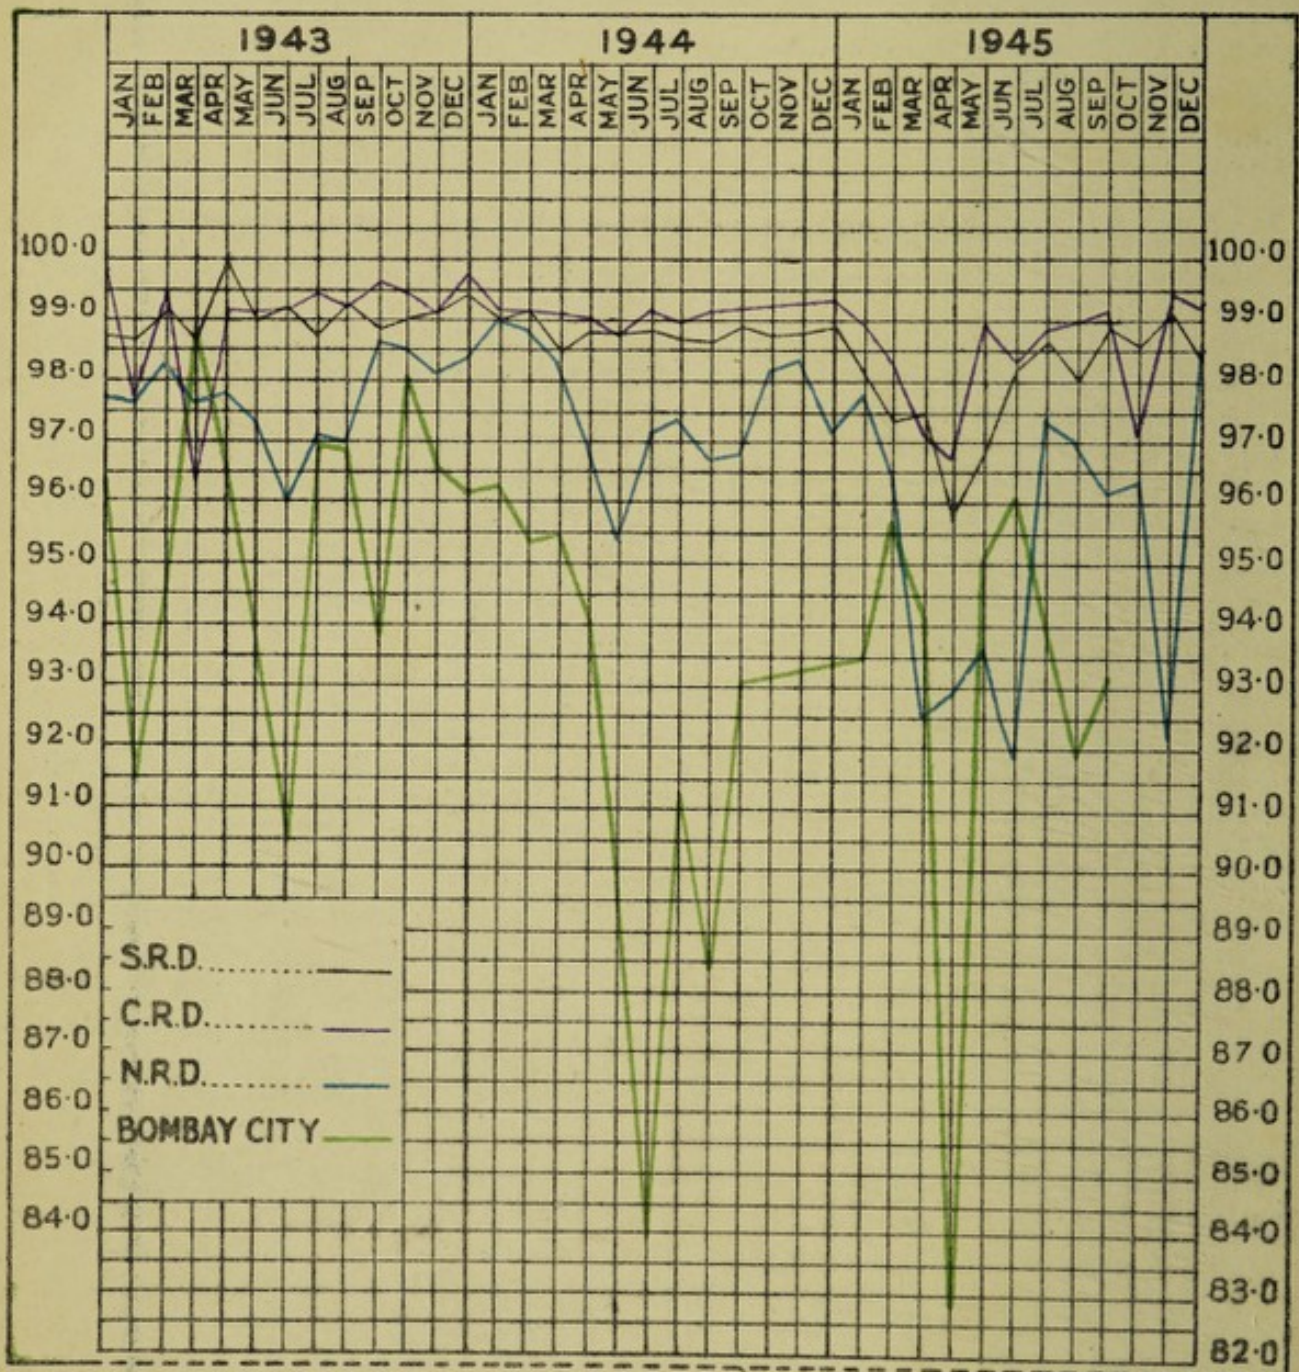

CHART VII

INSERTION SUCCESS RATES OF PRIMARY VACCINATIONS
WITH GLICERINATED LYMPH IN THE SEVERAL REGISTRATION
DISTRICTS OF THE PROVINCE & BOMBAY CITY
FOR THE YEARS 1943, 1944 & 1945.

The Assistant Director of Public Health, Southern Registration District, Belgaum, visited in all 139 villages and towns for various purposes during the year. Out of these, he visited 66 villages for anti-plague measures and only three for inspection of vaccination, twelve for inspection of sanitary arrangements at the fairs, five for inspection of sanitary arrangements, three for malaria and eleven for other public health propaganda. The sanitary arrangements at the Sambere aerodrome were also inspected. All the important fairs of Pandharpur and Saundatti-Yellamma were visited and personal directions were given regarding the sanitary arrangements.

The Director of Public Health for the Government of Bombay visited 82 villages and towns in connection with water supply, drainage, sanitation, epidemics, malaria, births, complaints, maternity and child welfare work, etc. He attended the meetings of the Bombay Nutrition Committee, the Infectious Diseases Hospital Committee, the Bombay Mofussil Maternity, Child Welfare and Health Council, the Bombay Presidency Infant Welfare Society, the Board of Physical Education, the Bombay Nurses, Midwives and Health Visitors' Council, the Board of Public Health Works, the Provincial Rural Development Board, etc. A conference of the Administrative Medical Officers and Directors of Public Health of Provinces held at New Delhi in November 1945 was also attended by him.

CHAPTER XV.

VACCINATION.

133. *Primary Vaccination.*—(Appendix VI—Statement No. 1)—During the year 1945 634,582 persons were primarily vaccinated against 670,704 in the previous year.

Results.—Out of 634,582 primary vaccinations performed 547,371 or 86·20 per cent were successful and 5,876 or ·92 per cent unsuccessful. In the remaining 81,335 or 12·88 per cent the results could not be ascertained. The percentage of success—including unknown was 98·94. Three hundred and seventy infants were vaccinated a second time owing to failure of the first operation.

Age and sex.—Of the primary vaccinations, 325,519 were males and 309,063 were females, giving a proportion of 105·32 to 100. 426,298 or 67·17 were infants under one year and 116,789 or 17·40 between the ages of one and 6 years.

134. *Revaccination.*—(Appendix VI—Statement No. I)—655,645 persons were revaccinated against 13,08,327 in the previous year and the percentage of successful cases in which the results were known was 35·97. The result could not be ascertained in 58·60 per cent of cases.

Vaccination in police lines and out posts is being carried out regularly. Vaccinators in charge of important fairs were directed to push on primary and revaccinations well in advance of the fairs.

135. *Cost of vaccination.*—Cost of vaccination came to Rs. 9,17,949-13-6 during 1945-46, against Rs. 6,74,630-10-7 in 1944-45. The average cost of each successful case of vaccination was Rs. 1-6-9 as against Rs. 0-14-11 in the previous year and the average cost of each vaccination was Re. 0-11-4.

136. *Vaccine Institute, Belgaum.*—During the year 79,60,140 doses of lymph were manufactured compared with 33,11,070 during the previous year. 57,51,015 doses of lymph were issued during the year. Results of primary vaccination were personally scrutinized by the Assistant Director of Public Health in charge Vaccine Institute, Belgaum. The chart showing results of monthly primary vaccinations for three years in the three Registration Districts and Bombay City is attached. During the year purity and potency of all lymphs were tested as usual. The cold room for storing lymph has continued to give satisfactory results.

One thousand five hundred and eight cow calves and two buffalo calves were vaccinated. The rate of hire was Rs. 20 per cow calf and Rs. 25 per buffalo-calf during the year.

Expenditure.—The expenditure for the year amounted to Rs. 2,52,686 including the amount spent for current repairs, buildings, interest and depreciation on capital outlay, supervision charges and pension contribution as against Rs. 1,73,473 in the previous year. The cost per dose despatched came to 7.42, pies as against 8.3 pies in 1944-45.

137. *Compulsory vaccination.*—Excluding Bombay City and six cantonments of Ahmedabad, Ahmednagar, Poona, Kirkee, Belgaum and Deolali, the Vaccination Act has been applied to 103 towns and 26 villages of the province.

Complaints were lodged under section 23 (1) of the Act in 20 cases by the Sholapur Municipality with the result that nine cases were vaccinated. Vaccination was postponed in seven cases due to sickness and the remaining four cases were still pending. The Sirsi Municipality had launched prosecution against eight persons under the Act. The result was that in four cases the guardians got their children vaccinated and the remaining four produced medical certificate for illness of their children.

138. *General remarks.*—A training class for candidate vaccinators was held as usual at the Vaccine Institute, Belgaum. There were 10 candidates all of whom passed the final test.

One candidate from Sind was given special training in the preparation and preservation of lymph and in the theory and practice of vaccination. Three Sanitary Inspectors were given intensive training for a fortnight.

The Vaccine Institute, Belgaum, was visited during the year by the following distinguished visitors:—

1. His Excellency the Rt. Honourable Sir John Colville, G.C.I.E., T.D., Governor of Bombay.
2. Major General Robert Hay, C.I.E., M.B. (Edin), D.P.H. (Glas.), D.T.M. & H. (Liverpool), K.H.P., I.M.S., Surgeon General with the Government of Bombay.
3. Sir Ivon Taunton, C.I.E., B.A. (Cantab.), I.C.S., J.P., Adviser to His Excellency the Governor of Bombay.

K. A. GANDHI, D.P.H.,

Poona, 9th July 1946.

Director of Public Health for the
Government of Bombay.

APPENDIX I.

The following table shows year of completion of drainage or water works and a comparison of mean death rate in the towns concerned for periods preceding and subsequent to installation.

In column 7 is given for comparison the death rate of the adjoining rural circle for the year under report:—

District.	Towns.	Date of completion of work.		Mean death-rate (a).		Death-rate in adjoining rural circle (a).	Mean death-rate from Cholera, plus dysentery and diarrhoea.		Remarks.
		Drainage.	Water Supply.	For years preceding the installation.	For the year (succeeding installation) ending 1945.		For the years preceding works.	For the years following the works ending 1945.
