Annual Report on the
Health of the Population of
West Bengal

For the Year
1951

Preface

In presenting the Annual Health Report for 1951, an attempt has been made in the following lines to place before the readers some of its principal features with special bearing on the conditions of health of the people of the State and also certain aspects of activities of this department in which there has been a definite development and an encouraging progress.

It will be interesting to note that malaria which took toll of more than one lakh of lives in 1946 and much more in the preceding years was responsible for only 36,000 deaths during the year under report.

During the quinquennium of 1938-42, out of every thousand live-births 160 infants died on an average per year and the similar mortality figures were 157 and 137 for the quinquenniums 1942-46 and 1946-50 respectively, while during the year under review 109 infants died per thousand of live-births. Although the death rate *per se* was still very high, nevertheless the reduction of infant mortality was definitely encouraging.

On a closer study of both the positive and negative aspects of the health condition of the people of the State in the year under review, it is encouraging to note that it showed marked improvement in spite of the difficulties, the State was confronted with, arising out of influx of thousands and thousands of displaced persons from East Bengal that crossed the border during 1950 as well as in 1951.

The State paid special attention, *inter alia*, to the health of the displaced persons from East Bengal and maintained a special organisation for preventive and sanitary health measures exclusively for refugee camps, colonies, etc. Besides, 26 relief hospitals and dispensaries with 460 beds for indoor patients amongst those persons were also maintained during the year under review.

To relieve pressure on the permanent infectious diseases ward at N. R. Sircar Hospital, the State maintained during 1951, an Infectious Diseases Hospital at Beliaghata, Calcutta, with a total strength of 150 beds. Even this arrangement having been found inadequate, Government sanctioned the establishment of a permanent Infectious Diseases Hospital with a target strength of 1,000 beds at Beliaghata as a development measure and the work was commenced during 1951.

Position of the State of West Bengal so far as nursing facilities are concerned, has been steadily improving. Total number of nursing personnel including trained and probationers came up to 2,000 in 1951 against 1,200 in 1950.

Rural Health Centre Scheme.—The scheme provides for re-organisation of the whole medical and public health services into a unified health service with the ultimate aim of establishment of Health Centres in each of the unions and thanas in the rural areas of the State gradually. During 1951-52, 25 Health Centres (3 Thana and 22 Union) providing 346 beds were opened in different parts of the State raising the total to 11 thana and 91 union health centres with 1,146 beds since inception.

The Calcutta Dental College was taken over by Government in 1950. Hitherto the Licentiate Course in Dental Surgery was being given in the institution. The institute is since being upgraded and the question of introduction of the course for the Degree of the Bachelor in Dental Surgery was under active consideration of the State and the University.

Leprosy.—Under the 5-year Development plan, the total number of beds in the Gouripore State Leprosy Colony was increased to 212 during the year under report from 100 in 1949 and 100 more beds were under construction. The Gouripore Leprosy Colony is situated about 6 miles off from Bankura town and covers an area of about 516 acres which provides for segregation, medical treatment and rehabilitation of infectious cases of leprosy.

Four leprosy outdoor clinics—three attached to Howrah, Krishnagar and Berhampore Sadar Hospitals and one Municipal Leprosy Clinic at Burdwan were taken over by Government during the year under report with a view to improving the clinics by providing modern methods of treatment and other facilities.

Anti-malarial measures.—Districtwise anti-malaria scheme by house to house residual spraying of DDT was introduced in the district of Bankura in the year 1950. During the year under report the operations were extended to another district, viz., Birbhum. Thus a population of 23.88 lakh residing in 5,732 villages and 8 towns was brought under protection during the year under report.

Necessary data on incidence of and mortality from malaria in the whole area under operation was collected and the general picture revealed by the reduction in incidence and death was extremely encouraging.

Pulmonary tuberculosis.—One of the formidable diseases causing enormous loss to the country is tuberculosis.

In the State of West Bengal, particularly since the partition of the province and its aftermath, this disease has appeared in a menacing manner. A gradual rise of cases of this disease treated in various hospitals and dispensaries of the State has occurred from 16,869 in 1947 to 34,174 in 1951. Although the incidence has been considerably high the specific death rate from pulmonary tuberculosis was 0.3 in 1951 compared to 0.4 in 1950 per thousand of population. This is partly due to the advent of the anti-biotics and other modern drugs in the treatment of tuberculosis and partly to increased alertness on the part of the public for securing early diagnosis and treatment.

The State Government has increased more than double the provision for T.B. beds—1,796 beds in 1951 as compared to 826 in the year 1946. More beds were being opened. Fifteen Chest clinics were provided by the Government. The State has 4 important sanatoria and hospitals for T.B. In the Medical College, Calcutta, an up-to-date Chest Department has been developed.

For the treatment of refugee T.B. patients who could not be hospitalised immediately domiciliary treatment service has been organised in certain localities of Calcutta by the State Government. The Bengal Tuberculosis Association have also developed similar service for refugee and non-refugee cases in certain areas of the city. The object is to arrange treatment at their homes as far as possible so that they may not remain unattended merely because of dearth of beds in hospitals.

The State has provided funds for making available anti-biotics and other special drugs free of charge to poor patients.

For specialised post-graduate training in tuberculosis, the T.D.D. Course (Tuberculosis Diseases Diploma Course) has been organised in Calcutta.

The BCG. vaccination scheme has been in operation in the State since April, 1949. Up to December, 1951, a total number of 5.71 lakh of persons were examined by Tuberculin Test, of whom, 1.78 lakh of persons

were vaccinated with BCG. The State has been providing rupees one and half lakh every year for this purpose.

Various schemes on water-supply, drainage, etc., in municipal areas, on relief work (water-supply and sanitary arrangements) in refugee camps and colonies both in urban and rural areas, on sanitary and water-supply projects of Kanchrapara Development Area and other places were executed at a total capital expenditure of Rs. 46,67,000.

For rural water-supply a total amount of Rs. 20,00,000 was spent for sinking, re-sinking and repairs to 46,000 tube-wells all over the State of West Bengal. Besides, a sum of Rs. 6,27,000 was expended towards execution of water-supply and sanitary projects in different health centres of the State and at the Digri Sanatorium, Midnapore.

APPENDICES.

Report of the Director of Health Services, West Bengal, for 1951.

Vital Statistics of the districts of West Bengal for the year 1951.

APPENDIX I.

Annual Form No.—	Pages.
I—Births registered in the districts of West Bengal	110
IA—Still-births registered according to class and sex in the districts of West Bengal	111
II—Deaths registered in the districts of West Bengal	112
III—Deaths registered in the districts (rural circles) and towns of West Bengal	113
IV—Deaths registered according to age in the districts (rural circles) and towns of West Bengal.	118
IV(A)—Deaths of infants under one year according to community in each district of West Bengal.	142
V—Deaths registered according to class in the districts of West Bengal	143
V(A)—Births registered according to class in the districts of West Bengal	145
VI—Births and deaths registered from different causes in the districts (rural circle) and towns of West Bengal	148
VI(A)—Deaths registered from different causes in the districts (rural circles) and towns of West Bengal.	158
VII—Deaths registered in each month from cholera in the districts of West Bengal	188
VIII—Deaths registered in each month from small-pox in the districts of West Bengal.	190
IX—Deaths registered from fevers in the districts of West Bengal during the month	192
X—Deaths registered from dysentery and diarrhoea in the districts of West Bengal	194
XI—Deaths registered from respiratory diseases in the districts of West Bengal	196
XII—Deaths registered from plague in the districts of West Bengal during each month.	198

APPENDIX II.

Statistics on Hospitals and Dispensaries in West Bengal with treatment of cases.

Statements—

A—Showing the number of Civil Hospitals and Dispensaries in West Bengal	200
B—Showing the distribution of medical personnel in West Bengal	202
C—Showing the number of indoor and outdoor patients treated in the State Public, Local Fund, private aided and subsidised dispensaries in West Bengal.	206
D—Showing the number of beds of the indoor and outdoor patients of surgical operation and geographical distribution of infectious and other diseases treated in all classes of medical institutions in West Bengal.	262
D(i)—Showing the patients from various diseases in Calcutta and Mufassil hospitals and dispensaries with number of deaths.	
E—Showing the result of the surgical operations performed in the State Public, Local Fund, private aided and subsidised dispensaries in West Bengal.	280
F—Showing the income and expenditure of State Public, Local Fund, private aided and subsidised dispensaries in West Bengal.	300
G—Account of invested capital of hospitals and dispensaries in West Bengal	352
H—Showing the number of indoor and outdoor patients, according to class and sex treated in the State Public, Local Fund, private aided and subsidised dispensaries in West Bengal.	357

APPENDIX III.

Statements showing treatment of cases treated at the Pasteur Institute and its centres in West Bengal.

	Pages.
Statements—	
1—A general statement regarding patients treated at the Institute and centres from start of the Institute.	358
2—A general classification of patients attending the Institute and its centres ..	358
3—Deaths from hydrophobia amongst persons treated at the Institute and centres	359
4—Classification by animals which bit, scratched, or licked the patients ..	359
5—Statement showing brains submitted and examined for rabies	360
6—Classification by animals which bit, scratched or licked the patients ..	360

APPENDIX IIIA.

Statement of the Chemical Examiner to the Government of West Bengal.

Statement—

1—Summary of work done (human poisoning cases, animal poison cases, etc.) ..	361
2—Showing the result of medicolegal analysis according to cases	362
3—Showing the nature of poisons detected according to articles received ..	366
4—Showing the places wherefrom viscera for poison were received	370
5—General analysis of cases received from Government Departments ..	373

APPENDIX IV.

Statements—

1—Showing particulars of vaccination in West Bengal	374
2—Summary of vaccinations done, shown according to districts, towns, tea gardens, etc.	386
(a)—Showing the total number of persons vaccinated with the number of those successfully vaccinated during the four years ending with 1951.	387
3—Showing side by side the ratios, per mille of population, of deaths from smallpox and the number of successful vaccinations.	388
4—Showing the degree of protection afforded to infants in West Bengal.	390

APPENDIX V.

Statements—

A—Showing Health Services in rural areas of West Bengal	394
A(i)—Showing Health Services in urban areas of West Bengal	396
B—Showing maternity and child welfare centres, health visitors and trained mid-wives in rural areas in West Bengal.	400
B(i)—Showing maternity and child welfare centres, health visitors and trained mid-wives in urban areas of West Bengal.	401

APPENDIX VI.

Statements—

1—Statistics with regard to Municipal Waterworks in West Bengal ..	404
2—Showing total expenditure on drainage and sewerage works in municipalities in West Bengal.	414

Annual Report on the Health of the Population of the State of West Bengal for the year 1951

Part I

A table of the vital statistical figure of the quinquennial average of 1938-42 and of the years 1946 to 1951 is given below:—

	Quin- quennial average (1938-42).	1946.	1947.	1948.	1949.	1950.	Quin- quennial average. (1946-50).	1951.
1. Birth rate per mille of population.	25.1	24.7	20.1	21.3	22.8	20.3	21.8	21.9
2. Death rate per mille of population.	18.7	19.6	18.2	18.1	17.4	16.7	18.0	13.0
3. Excess of births over deaths.	+6.4	+5.1	+1.9	+3.2	+5.4	+3.6	+3.8	+8.9
4. Infant mortality per thousand of live-births.	160.1	143.3	144.8	136.7	130.0	129.8	136.9	109.5
5. Diarrhoea and Dysentery death rate per mille of population.	0.9	1.1	1.1	1.1	1.1	1.1	1.1	0.8
6. Cholera death rate per mille of population.	0.9	0.5	0.5	0.6	0.6	0.8	0.6	0.2
7. Smallpox death rate per mille of population.	0.1	0.2	0.1	0.4	0.06	0.6	.27	1.1
8. Kala-azar death rate per mille of population.	0.3	0.1	0.1	0.1	0.1	0.1	0.1	.06
9. Malaria death rate per mille of population.	6.5	4.9	3.9	3.6	3.6	2.7	3.7	1.5
10. "Other fever" death rate per mille of population.	6.2	5.3	5.4	5.1	4.7	4.7	5.0	3.6
11. "Enteric group of fevers" death rate per mille of population.	0.2	0.2	0.2	0.2	0.2	0.2	0.2	0.1
12. Deaths from plague (numbers).	..	8	7	15	52	3	..	8

A marked improvement on the health condition of the people of the State of West Bengal was noticed during the year under report. The birth rate increased from 20.3 in 1950 to 21.9 per mille in 1951. The death rate also dropped to 13.0 per mille in 1951, from the quinquennial (1946-50) average—18.0 and 16.7 per mille in the preceding year. The resultant positive balance—excess of births over deaths—showed an appreciable increase. From the quinquennial (1946-50) average—3.8 and 3.6 per mille in 1950 it rose to 8.9 during the year 1951.

A notable feature of vital occurrences during the year under report was the steady decline of infant mortality which came down to 109.5 per thousand of live-births in 1951 from 143.3 in 1946 and quinquennial (1938-42) average—160.1.

It is gratifying to note that malaria which used to take the heaviest toll of lives in the State is on steady decline. The mortality due to this cause dropped from 103,339 in 1946 to 36,294 in 1951. The statement furnished below will clearly show the improvement of malaria situation in the State of West Bengal:—

	Quin- quennial average (1938-42).	1946.	1947.	1948.	1949.	1950.	1951.	Decrease of malaria mortality per cent. below the quinquen- nial average (1938-42).
Malaria deaths		103,339	82,539	76,576	77,406	57,973	36,294	..
Malaria death rate per mille of population.	6.5	4.9	3.9	3.6	3.6	2.7	1.5	77
"Other fevers" death rate	6.2	5.3	5.4	5.1	4.7	4.7	3.6	42
	<u>12.7</u>	<u>10.2</u>	<u>9.3</u>	<u>8.7</u>	<u>8.3</u>	<u>7.4</u>	<u>5.1</u>	<u>59</u>

Deaths from "Other fevers" which were mostly undiagnosed cases of malaria showed considerable decrease.

Morbidity and mortality figures of kala-azar and enteric group of fevers also showed appreciable improvement.

Of all epidemic diseases, deaths from cholera recorded in 1951 the largest fall, i.e., from 0.8 per mille in 1950 to 0.2 in 1951.

But unfortunately the mortality from smallpox rose considerably during the year under report when compared with figures of 1950.

Incidence of and mortality from plague also recorded a slight rise over the previous year though both the figures for occurrences and deaths from the disease were very much lower than those of 1949.

Chapter I

HISTORY OF CHIEF DISEASES.

Cholera.—Number of deaths from cholera during 1951 in comparison to the preceding year is furnished below:

	State.		Urban areas.		Rural areas.	
	1950	1951	1950	1951	1950	1951
Death from cholera ..	17,447	5,676	6,276	2,590	11,171	3,086
Cholera death rate per mille of population.	0·8	0·2	1·5	0·5	0·6	0·2

There was considerable decrease of cholera deaths both in urban and rural areas.

In 1951 five municipalities, namely, Uttarpara, Basirhat, Tamluk, Chakda and Taki reported death rates 2;5, 1;9, 1;8, 1;6 and 1;4 per mile respectively.

The district of Calcutta recorded highest death rate of 0·7 per mille in 1951 followed by Howrah (·5) and 24-Parganas (;3) and the lowest death rate (0;001 per mille) was returned by the district of Jalpaiguri where only one death was recorded.

Seasonal incidence.—The highest mortality was recorded in April while the lowest in September.

Anti-cholera measures.—The Mobile Medical and Public Health staff in employ of the State were mobilised all over West Bengal for carrying out anti-cholera measures in close co-operation with the District Public Health staff working under local bodies. 206 Mobile Medical Units and 430 Health Assistants including 6 Mobile Medical Officers and 10 Health Assistants newly appointed for the district of Cooch Behar merged in the State during 1950 were maintained by Government during the year under report. Besides, additional Medical and Public Health staff were also retained exclusively for refugee camps. During the year under report, there were 26 refugee camps including 4 "D" type camps situated in different parts of the State. A separate staff consisting of 1 Camp Health Officer (for Dhubulia Camp), 16 Epidemic Doctors, 8 Sanitary Inspectors, 34 Health Assistants and 16 Disinfectors were maintained for affording medical and public health measures to the population of those camps.

A total quantity of 3,644,890c.c. of anti-cholera vaccine was supplied free to local bodies, Asansol Mines Board of Health, Subdivisional Health Officers and others. In all 2,782,596 anti-cholera inoculations were performed.

Temporary cholera regulations under the Indian Epidemic Diseases Act, 1897, were enforced in the following districts and municipality:—

District.	Period of promulgation.	Municipality.	Period of promulgation.
(1) Midnapur ..	2 months.	Tamluk ..	3 months.
(2) Calcutta ..	7 ..		

Smallpox.—There was considerable increase of smallpox deaths when compared to the preceding year.

	State.		Urban areas.		Rural areas.	
	1950	1951	1950	1951	1950	1951
Death from smallpox ..	12,268	26,888	8,532	10,976*	3,736	15,912
Death rate per mille ..	0·6	1·1	2·0	1·9*	0·2	·9

*Low death rate in 1951 is due to adoption of 1951 census population instead of 1941 as base for estimating mid-year population for calculation of the rate.

The table above shows increase of smallpox deaths both in urban and rural areas. The city of Calcutta and Howrah Municipality were responsible for 31 per cent. of the total deaths due to smallpox as against 58 per cent. in 1950.

Smallpox deaths by age.—Out of total deaths due to smallpox 8·4 per cent. occurred amongst infants under one year of age and 21·6 per cent. amongst children between one and ten years of age.

Anti-smallpox measures.—A total quantity of 4,632,495 grains of vaccine lymph was supplied free to local bodies and other recognised agencies—Subdivisional Health Officers, Civil Surgeons and others. There was heavy demand for supply of the vaccine lymph and the State had to purchase a total quantity of 738,000 grains of lymph from outside to meet the demand.

The epidemic staff of the Health Directorate fully co-operated with the local public health staff in carrying out all anti-smallpox measures wherever necessary. In all, 9,467,723 vaccinations were performed as detailed below:—

Vaccination performed.

	1951.		1950.	
	Total operation.	Total successful.	Total operation.	Total successful.
Primary vaccination	1,173,856	926,255	813,482	678,615
Re-vaccination	8,293,867	2,930,753	6,312,480	2,830,920
Total	9,467,723	3,857,008	7,125,962	3,509,535

Besides other anti-smallpox measures, temporary small-pox regulations under the Epidemic Diseases Act, 1897, had to be promulgated in the following districts and municipalities highly affected with the epidemic:—

District.	Period of promulgation.	Municipalities.	Period of promulgation.
(1) Burdwan ..	4 months.	(1) Nabadwip	6 months.
(2) Minapore ..	3 ..	(2) Howrah ..	6 ..
(3) Murshidabad ..	6 ..		
(4) Nadia ..	3 ..		
(5) Calcutta ..	6 ..		
(6) Malda ..	3 ..		

Plague.—This is the fourth year since the re-appearance of plague in Calcutta in 1948. Altogether 8 deaths from plague were recorded in the

State against 3 in the previous year, of which 6 belonged to Calcutta and 2 to South Dum Dum Municipal area.

During the year under report, 30 cases (26 cases from Calcutta and 4 cases from Bhatpara and South Dum Dum Municipalities) suspected to be suffering from plague were admitted into the Nilratan Sircar Medical College, Calcutta. Out of these, 16 cases were found bacteriologically positive. Another case, though bacteriologically negative was diagnosed as plague on clinical examination and the rest were declared to be non-plague. Only one case was imported and the rest were indigenous. These 17 cases were distributed as follows according to place of occurrence along with those of previous years:—

Place of occurrence.	1948.	1949.	1950.	1951.
(1) Calcutta	142	322	4	14
(2) Howrah	3	38	1	..
(3) Suburban areas	12	39	..	3
	<u>157</u>	<u>399</u>	<u>5</u>	<u>17</u>

Areas affected.—During the year under review plague was reported from Calcutta and from two out-stations, viz., Bhatpara and South Dum Dum Municipalities. Wards No. 5, 7 and 10 in Calcutta were the most affected areas.

Varieties of plague in 1951.—All were bubonic cases excepting one which was proved to be a case of septicaemic plague with terminal lung involvement.

The summary of anti-plague measures undertaken is recorded below:—

Place.	Anti-plague inoculation.	Disinfestation.		Destruction and collection of rats by—			Laboratory work.	
		Huts.	Buildings.	Cyanogas operation.	Poison bait.	Collection by trapping.	Number of rodents received.	Result of examination.
Calcutta ..	149,448	321	2,970	32,929	792	44,850	75,111	Infection was found in ten rats comprising of <i>Gunomys varius</i> , <i>Rattus rattus</i> , <i>Rattus norvegicus</i> .
Howrah ..	41,899	139	612	5,486		5,017		
Out-station	3,549	24	..	450		162		
	<u>195,396</u>	<u>484</u>	<u>3,582</u>	<u>38,865</u>	<u>792</u>	<u>50,029</u>	<u>90,749</u>	

	Laboratory work.	
	Fleas collected from rats trapped.	Varieties found in examination.
Calcutta ..	24,802	5,154 <i>X. cheopis</i> and 19,648 <i>X. astia</i> .
Howrah ..	3,820	1,132 <i>X. cheopis</i> and 2,688 <i>X. astia</i> .
	<u>28,622</u>	

A close scrutiny of monthly occurrences of the disease showed that the plague cases and rats showing infection came mostly during the period when cheopis index remained high, viz., during the months from March to May.

Fevers.—Death from fevers showed decrease:—

	1950.	1951.
Total deaths from fevers	167,065	130,944
Death rate per mille of population ..	7.8	5.4

The highest death rate (12.5) due to fevers was recorded by the Birbhum district and the lowest (1.8) returned by the district of Calcutta.

	State.		Urban areas.		Rural areas.	
	1950.	1951.	1950.	1951.	1950.	1951.
Malaria.						
Deaths from malaria ..	57,973	36,294	2,240	2,036	55,733	34,258
Death rate per mille of population.	2.7	1.5	.52	0.4	3.2	1.3

The highest malaria death rate (3.8) was recorded by the Nadia district followed by Birbhum (3.4), Darjeeling (2.6) and the Malda district (2.4) while the lowest was returned by Calcutta (0.4).

Distribution of malaria deaths by sex, district and month has been shown in the table at page 9.

The mortality figures due to kala-azar, enteric fevers, influenza, showed decrease while deaths due to measles, cerebrospinal fever and black water fever showed slight increase over the figures of the preceding year as will appear from the table given below:—

	Total deaths.		Death rate per mille of population.	
	1950.	1951.	1950.	1951.
Kala-azar	2,009	1,476	0.09	0.06
Enteric fevers	4,086	3,572	0.2	0.1
Influenza	300	289	0.01	0.01
Measles	1,191	1,640	0.06	0.07
Cerebrospinal fever	323	341	0.01	0.01
Black water fever	20	29	0.001	0.001
Other fevers	101,163	87,270	4.7	3.6

Deaths from diarrhoea and dysentery showed decrease both in urban and rural areas:—

	State.		Urban areas.		Rural areas.	
	1950.	1951.	1950.	1951.	1950.	1951.
Deaths from diarrhoea and dysentery.	24,795	18,494	10,540	9,025	14,255	9,469
Death rate per mille of population.	1.6	1.3	3.6	2.6	1.1	0.9

The highest death rate from Respiratory disease (3.9 per mille) was returned by the city of Calcutta in 1951 followed by the districts of Jaijpur and Darjeeling with death rates 3.3 and 2.4 per mille respectively while the lowest death rate 0.3 per mille was returned by Murshidabad and Malda districts.

In 1951, pneumonia and tuberculosis of lungs were responsible for 70 per cent. of total deaths from all respiratory diseases.

	State.		Urban areas.		Rural areas.	
	1950.	1951.	1950.	1951.	1950.	1951.
Pneumonia ..	16,272	14,614	5,899	5,606	10,373	9,008
Death rate per mille of population.	0.8	0.6	1.4	1.0	0.6	0.5

Mortality figures due to respiratory diseases showed decrease both in urban and rural areas when compared to the preceding year.

Pulmonary tuberculosis was responsible for 7,837 deaths in 1951 against 7,721 in the previous year. The death rates were 0.3 and 0.4 per mille in 1951 and 1950 respectively. The death rates in the urban and rural areas were 0.7 and 0.2 per mille respectively in 1951:—

Deaths from tuberculosis of lungs in urban and rural areas of West Bengal from 1949 to 1951.

Year.	Calcutta.		Other municipalities.		Rural areas.		Total for the State.	
	Deaths.	Rates.	Deaths.	Rates.	Deaths.	Rate.	Deaths.	Rates.
1949 ..	2,689	1.3	1,345	7.6	3,950	0.2	7,984	0.4
1950 ..	2,705	1.3	1,159	0.5	3,857	0.2	7,721	0.4
1951 ..	2,847	1.1*	1,259	0.4	3,731	0.2	7,837	0.3

*Low death rate in 1951 is due to adoption of 1951 census population instead of 1941 population as base for estimating mid-year population for calculation of the rates.

Deaths due to whooping cough, other respiratory diseases and injuries showed decrease when compared to the preceding year:—

	Deaths.		Death rate.	
	1950.	1951.	1950.	1951.
Whooping cough ..	752	578	0.4	0.2
Other respiratory diseases ..	9,730	8,828	0.4	0.4
Injuries ..	7,478	7,333	0.4	0.4

Table below will show the number of deaths from various types of injuries during 1950-51:—

Causes.	Number of deaths.	
	1950.	1951.
Homicide	273	254
Suicide	1,092	1,228
Wounds and accidents	4,495	4,173
Snake bites	1,415	1,453
Attacks of wild animals	77	107
Rabies	126	118
	<u>7,478</u>	<u>7,333</u>

Of the two causes—suicide and wounds and accidents—deaths due to the first cause showed increase while mortality due to the second cause showed decrease.

All other causes.—Total deaths due to all other causes as recorded in 1951 were 93,024 against 95,347 in the previous year, the death rates being 3·8 and 4·4 per mille respectively.

Deaths from tuberculosis of lungs in urban and rural areas of West Bengal from 1949 to 1951

Year	Cigarettes		Other respiratory		Total for the State	
	Deaths	Rate	Deaths	Rate	Deaths	Rate
1949	1,345	1·2	1,129	0·9	2,474	2·1
1950	1,302	1·2	1,129	0·9	2,431	2·1
1951	1,150	1·1	1,129	0·9	2,279	2·0

* Low death rate in 1951 is due to adoption of 1951 census population instead of 1947 population as base for calculation and year population for calculation of the rate.

Deaths due to whooping cough, other respiratory diseases and injuries showed decrease when compared to the preceding year:—

Year	Whooping cough		Other respiratory diseases		Injuries	
	Deaths	Rate	Deaths	Rate	Deaths	Rate
1950	783	0·7	9,730	8·8	7,478	6·5
1951	578	0·5	8,838	8·0	7,333	6·4

Total deaths from Malaria and death rates according to months, etc., of the districts of West Bengal during the year 1951.

Chapter II

VITAL STATISTICS.

Area and population.—The area in square miles and the population of the State of West Bengal were 31,004 and 24,810,308 respectively as per census of 1951.

The district of Cooch Behar excluding the municipal town of Cooch Behar as well as the Port, Fort and Canal areas of Calcutta were not within the purview of any Births and Deaths Registration Act. The area and the population of the State under registration were 29,676 square miles and 24,144,636 respectively according to the census of 1951.

Vital statistics and population as shown in the report, if not otherwise indicated, do not relate to the district of Cooch Behar and the aforesaid areas of Calcutta.

Estimated mid-year population.—Estimated mid-year population of the districts of West Bengal for 1951 as compared with 1951 and 1941 census figures are shown in the table below. It will be seen that there was an increase of 13·9 per cent. in the population of 1951 census over that of 1941 and this increase was shared by all the districts. The estimated mid-year population for 1951 of each district also showed increase over those of 1951 census figures.

Estimated mid-year population for 1951 as compared with those of 1941 and 1951 census.

District.	Estimated population for 1951.	Census population for—		Percentage variation Increase (+).	
		1941.	1951.	Between census 1941 and 1951.	Between census and estimated mid-year population 1951.

Annual Statistics—All India Census—1951—Part II—Mortality and Fertility Statistics—1951

Estimated mid-year population by communities for 1951 as compared with the population of 1951 census are shown below:—

Communities.	Census population, 1951.	Estimated mid-year population.	Percentage variation increase (+) between 1951 census and 1951 estimated population.
Hindus	18,986,882	19,035,544	0·2
Muslims	4,731,276	4,740,826	0·2
Christians	174,740	174,891	0·1
Buddhists	81,557	81,536	..
Others	164,695	165,498	0·5

Estimated mid-year population of towns and rural districts has been furnished in annual Form No. VI of Appendix I.

Registration of births and deaths.—During the year under report there was no change in the system of registration of births and deaths in the State.

Under the Bengal Births and Deaths Registration Act, 1873, one hundred and one prosecutions were instituted, out of which there were 44 convictions and 12 acquittals, four cases were struck off and 41 were pending for the trial at the end of the year under report. A sum of Rs. 115-12 only was realised as fine during 1951.

Births.—Altogether 530,874 births; 276,176 and 254,698 being males and females, respectively, were recorded in the State of West Bengal, during 1951. The total birth rate was 21·9 per mille in 1951 against 20·3 per mille in the previous year. Thus an increase of 22·2 per cent. in the registered birth figures was recorded during the year under report over the similar figures for 1950. Compared with the previous year, eight districts, namely, Burdwan, Birbhum, Bankura, Midnapore, Hooghly, Howrah, Nadia and Murshidabad recorded high birth rates while in the remaining districts the birth rates were low in 1951. The highest birth rate 29·7 per mille was recorded by the Birbhum and Jalpaiguri districts and the lowest rate 14·6 per mille by the 24-Parganas district.

Birth according to communities.—During the year under report "Other Class" (i.e., communities other than Hindus, Muslims, Buddhists and Christians) recorded highest birth rate 45·5 per mille against the birth rate of 5·6 per mille in the previous year. The high difference in the rate is due to fall in the population of "other class" in the census of 1951.

During the year under report 108 male births were recorded for every 100 female births against 109 in the previous year.

Seasonal incidence.—Births and birth rates by month for 1951 as compared with those for 1950:—

Months.	Number recorded.		Annual rates per mille.	
	1950.	1951.	1950.	1951.
January	38,301	40,754	21.4	20.2
February	36,453	41,080	20.4	20.4
March	37,722	45,980	21.1	22.8
April	34,300	40,717	19.2	20.2
May	34,442	42,862	19.3	21.3
June	32,443	43,919	18.2	21.8
July	29,571	42,835	16.5	21.2
August	29,245	43,267	16.4	21.5
September	35,289	45,107	19.7	22.4
October	37,573	45,294	21.0	22.5
November	44,843	50,690	25.1	25.1
December	44,076	48,369	24.7	24.0

The highest birth rate (25.1) was recorded in the month of November and the lowest (20.2) during the months of January and April. Compared with the previous year birth rates were high in all the months of the year under report excepting the months of January and December when the rates were low and November during which the rate was stationary.

Deaths.—During the year under report, 314,218 deaths with a death rate of 13.0 were recorded in the State against 358,878 deaths with a rate of 16.7 in the previous year; thus yielding a decrease of 12.4 per cent. in 1951.

The death rates for males and females were 12.7 and 13.3 per mille, respectively, in 1951 against 16.1 and 17.5 in the previous year.

One hundred and eleven male deaths were recorded for every 100 female deaths in 1951 as against 108 in the previous year.

The highest death rate (18.6) was recorded by the Calcutta and Darjeeling districts in 1951 while the lowest rate (8.8) was returned by the 24-Parganas district. Compared with the previous year death rates were low for all the districts.

Deaths according to communities.—The highest death rate (26.4) was recorded by the "Other Classes" (i.e., all communities other than Hindus, Muslims, Buddhists and Christians) and the lowest rate (8.4) was returned by the Christian community.

During the year under report the deaths and death rate for other classes were 4,375 and 26.4 as against 5,535 and 3.8 in the previous year and this discrepancy in the rate of 1951 was due to fall in the population figure of the "Other Classes" in 1951 census.

During the year under report the highest death rate 15.7 per mille was recorded in the month of March and the lowest rate 11.2 per mille in the months of September and October (*vide* statement III, Appendix I).

Deaths according to ages.—The table below will show that the death rates were still very high amongst the infants under one year of age and the aged above 60 years. Compared with the previous year the death rates were low in 1951 in every age group which indicates that the general health condition of the people was much better in 1951 than what was in 1950.

Deaths according to ages :—

Ages.	Deaths.			
	1950.		1951.	
	Number.	Rate.	Number.	Rate.
0—1	56,371	129·8	58,140	109·5
1—5	47,366	19·2	44,432	20·1
5—10	21,924	7·1	19,582	7·0
10—15	12,722	5·3	10,807	3·7
15—20	16,529	8·3	14,589	6·0
20—30	38,836	9·6	32,651	7·2
30—40	34,631	11·0	28,754	8·1
40—50	33,750	17·2	26,961	10·6
50—60	34,895	30·9	27,875	18·0
Above 60	61,851	78·6	50,427	40·0

Still-births.—10,600 still-births were recorded during 1951 against 9,905 in the previous year. The still-birth rates per thousand births, i.e., live and still-births combined was 19·6 in 1951 against 23 in 1950; thus showing a decrease of 12 per cent.

During the year under report, the highest still-birth rate (23·3) was recorded by the Christian community while the lowest (10·6) was returned by the "Other Classes".

Infant mortality.—A total of 58,140 deaths amongst infants under one year of age was recorded in 1951 against 56,371 in the previous year. The infant mortality rate was 109·5 per mille of live-births in 1951 against 129·8 in the previous year indicating a decrease of 15·7 per cent.

The distribution of infant deaths according to sex and urban and rural areas for 1951 as compared with 1950, is shown in the table below :—

	Male.				Female.				Total.			
	Infant deaths.		Rates per mille of live-births.		Infant deaths.		Rates per mille of live-births.		Infant deaths.		Rates per mille of live-births.	
	1950.	1951.	1950.	1951.	1950.	1951.	1950.	1951.	1950.	1951.	1950.	1951.
Urban ..	9,031	9,845	202·9	180·3	8,097	8,673	199·3	170·6	17,128	18,518	201·2	175·6
Rural ..	20,537	21,841	118·4	98·5	17,709	17,781	105·9	87·2	39,246	39,622	112·4	93·1
Total ..	30,568	31,686	135·0	114·7	25,806	26,454	124·2	103·9	56,374	58,140	129·8	109·5

Distribution of infant deaths according to ages :—

Ages.	Infant deaths.		Death rates per 1,000 of live-births.	
	1950.	1951.	1950.	1951.
Within 24 hours	3,892	4,407	9.0	8.3
Between one day and one week	11,649	12,504	26.8	23.6
Between one week and one month	11,242	12,171	25.9	22.9
Under one month	26,783	29,082	61.7	54.8
Between one month and three months	10,106	9,846	23.3	18.5
Between three months and six months	9,111	9,358	21.0	17.6
Between six months and twelve months	10,371	9,854	23.9	18.6
Under one year	56,374	58,140	129.8	109.5

During the year under report out of every thousand new born, 109.5 died within the first year; of which 8.3 within the first day and 54.8 died within the first month of their life.

Compared with the previous year, infant mortality rates for different age groups were low, which indicates better health of infants during the year under report compared with that of 1950.

Deaths.—3,182 deaths due to maternal causes occurred in 1951 against 3,182 in the previous year. Death rate per thousand of live births due to these causes was 5.9 against 6.5 in the previous year indicating a decrease of 9.2 per cent. in the mortality figures due to these causes.

CORRIGENDUM

Page 17 of the printed copy of Annual Health Report for 1951
Line of paragraph 2 under Chapter III—Malaria—

Substitute the words “in the State of West Bengal” *for* “in Hospitals
and dispensaries”.

CORRIGENDUM

IV of the printed copy of Annual Health Report for 1931
of paragraph 2 under Chapter III—Malaria—
delete the words "in the State of West Bengal" for "in Hospitals
and Dispensaries".

Chapter III

MALARIA AND KALA-AZAR.

Malaria.

Incidence of malaria was normal throughout the year. Free distribution of anti-malaria drugs through the Mobile Medical Units, Subdivisional Health Officers, etc., was intensified on reports of localised increase of malaria incidence.

The number of deaths recorded in hospitals and dispensaries during the year under review was 36,294 against 57,973 during 1950. The number of malaria cases treated in hospitals and dispensaries was 1,595,863 against 418,773 in 1950.

Distribution of Anti-malaria Drugs.—1. *Free.*—Anti-malaria drugs were allotted to the different districts for free distribution through the following agencies :—

A. Through district boards—

- (i) for hospitals and dispensaries owned and aided by district boards.
- (ii) for distribution by other agencies viz., rural health staff, anti-malaria societies and school teachers, etc.

B. Through Civil Surgeons—

- (i) for hospitals and dispensaries other than those owned and aided by the district boards.
- (ii) for distribution through Government health staff and other agencies approved by district boards.

An amount of 22,741 lbs. quinine and cinchona products (manufactured by the Government of West Bengal) valued at Rs. 7,49,796 was purchased during 1951-52 as against 8,486 lbs. in the previous year. A total quantity of 10,918 lbs. quinine, 5,924 lbs. of cinchona and 1,058 lbs. totaquina was distributed as against 10,156 lbs. quinine and 6,040 lbs. of cinchona in the last year.

The table below shows the actual consumption of anti-malaria drugs in the rural and urban areas of the State during the last three years :—

Particulars.	Quantity.					
	1949.		1950.		1951.	
	Rural.	Urban.	Rural.	Urban.	Rural.	Urban.
1. Quinine (in lbs.) ..	7,620	1,058	8,643	1,179	13,897	5,160
2. Cinchona febrifuge (in lbs.)	4,410	658	4,887	556	6,147	4,116
3. Quinine substitutes (in lbs.)	5,975	704	4,880	573	425	202
4. Totaquina (in lbs.) ..	500	413	248	105
5. Other cinchona alkaloids (in lbs.)	103	122	10
Total ..	18,608	2,833	18,410	2,307	20,839	9,593

The following table will show the sale of quinine and cinchona products during the last three years:—

Particulars.	Quantity.					
	1949.		1950.		1951.	
	Rural.	Urban.	Rural.	Urban.	Rural.	Urban.
1. Quinine (in lbs.) ..	2,370	4,758	27,470	28,278	14,494	9,823
2. Cinchona (in lbs.) ..	449	1,318	2,881	477	3,653	573
3. Totaquina (in lbs.) ..	160	182	24	5	2,311	118
4. Other cinchona alkaloids (in lbs.).	25	2	3	5	1	..
5. Quinine substitutes (in lbs.).	66	24	3	28
Total ..	3,070	6,284	30,381	28,793	20,459	10,514

Anti-malaria Grants.

A. *Local Bodies (Municipalities).*—Government made grants-in-aid as usual to the extent of 50 per cent. of the total estimated expenditure to certain municipalities who agreed to carry out anti-malaria measures in their respective areas on the understanding that the balance would be borne from their own fund. A list of municipalities and district boards who carried out anti-malaria measures with satisfactory results during the last three years is shown below:—

1949.	1950.	1951.
(1) Raniganj.	(1) Raniganj.	(1) Raniganj.
(2) Bankura.	(2) Serampore.	(2) Serampore.
(3) Serampore.	(3) Bhatpara.	(3) Bhatpara.
(4) Bhatpara.	(4) Gobardanga.	(4) Gobardanga.
(5) Gobardanga.	(5) Krishnagore.	(5) Krishnagore.
(6) Krishnagore.	(6) Nabadwip.	(6) Nabadwip.
(7) Nabadwip.	(7) Santipur.	(7) Santipur.
(8) Santipur.	(8) North Barrackpore.	(8) Englishbazar.
(9) Chakdah.	(9) English Bazar.	(9) Chakdah.
(10) Jalpaiguri District Board.	(10) Jalpaiguri District Board.	

B. *Special Grant-in-aid.*—A special anti-malaria grant of Rs. 2,000 was made available to the Central Co-operative Anti-malaria Society, Ltd., during the year under report, towards the cost of (a) carrying anti-malaria propaganda work and (b) establishment of new anti-malaria and public health societies on co-operative basis.

Control of malaria in rural areas through voluntary efforts.—Spraying residual insecticides on co-operative basis has been continued with satisfactory results in certain rural areas. In this scheme the local people actively participate in anti-malaria operations; insecticides and equipments are supplied free of cost by Government and training of volunteers and technical supervision are arranged by the Health Directorate. Popularity of this scheme may be judged from the fact that number of such schemes has increased from 4 (in 1948-49) to 53 during the year under report. A list of such schemes in operation during the last three years is given below :—

District.	1949-50.	1950-51.	1951-52.

Government sponsored Anti-malaria works.

- (1) Burdwan Civil Stations (Burdwan).
- (2) Arambagh Municipality (Hooghly).
- (3) Singur (Madhubati) (Hooghly).
- (4) A Ludlowii Control in Budge Budge (24-Parganas).
- (5) A Ludlowii Survey work in the industrial riparian areas around Calcutta.
- (6) Spraying Squads.
- (7) Survey Squads.
- (8) Treatment Centre.

(1) and (2)—Malaria Control Measures in the Burdwan Civil Station and Arambagh Municipal Area were carried out as usual and the measures effectively kept the local incidence of malaria at a very low level in the year under report.

(3) *Singur (Madhubati)*.—The area covered by this scheme is about 33 square miles around S. N. Mallick Model Health Training Centre, Singur, with a population of about 63,000 consisting of nearly 12,000 families living in 8,800 houses. The following measures were undertaken:—

- (a) Anti-adult D.D.T. spraying of all the houses.
- (b) Curative treatment of cases with paludrine.
- (c) Prophylactic use of paludrine as far as possible.

Frequency of application varied according to the spleen rates of the different areas. In addition to paid labourers local volunteers were utilised as far as possible. Spleen rates for the last three years show a gradual decline.

Distribution of villages according to spleen rates.

Spleen rates in per cent.	1949. 1950. 1951.		
	Number of villages.	Number of villages.	Number of villages.
0—5	13	55	68
6—10	31	8	1
11—20	16	1	0
21—30	4	0	0
Total	64	64	69

(4) *A. Ludlowii Control at Budge Budge*.—The anti-malaria operations in Budge Budge area were as usual carried out with contribution from certain local firms, municipality and the Government during the year under report. The area covered by this scheme is about 5 square miles with a population of 65,000 of which 14,000 work in the local industrial concerns. The breeding places are the innumerable tanks, ponds, railway and roadside borrowpits and a swamp extending over ten acres. The area contains about 1,500 water collections of which 1,100 are permanent and the rest temporary. Anti-larval work has successfully checked breeding of *A. sundaicus* and helped to protect the health of the residents.

(5) *A. Ludlowii Survey*.—With a view to protect the city of Calcutta and the surrounding industrial areas from a possible invasion of *A. sundaicus* regular survey work was carried out in and around the Salt Lakes on the eastern fringe of the city and the riparian areas.

Breeding of *A. sundaicus* was detected from the following areas:—

(A) *Calcutta Corporation*.—(1) Mathpukur, (2) Pagladanga, (3) Topsia, (4) Nebugola, (5) Maniktola, (6) Gobra, (7) Phariapara, (8) Rashmoni Bazar, (9) Bahirsurah, (10) Kadapara, (11) Kankurgachi, (12) Muraripukur, (13) Bagmari and (14) Ultadanga.

(B) *Salt Lakes (Control Area)*.—(1) Topsia, (2) Nuniabhery, (3) Kaptabhery, (4) Dhapa Lock, (5) Naobhanga, (6) Kudghata, (7) Anandapur, (8) Gurerbhery, (9) Gariabad, (10) Bamanabad, (11) Gharbhanga and (12) Golaghat.

(C) *Other riparian areas*.—(1) Along with the Barasat-Basirhat Railway line.—

(a) Rajarhat (P.S.), (b) Barasat (P.S.) and (c) Bashirhat (P.S.).

- (2) Along with the river Hooghly.—
 (a) Natibpur, (b) Jagannathpur, (c) Baikuntapur, (d) Fuleswar,
 (e) Fathepur within the jurisdiction of Uluberia and (f) Baurai.
- (3) Along with Kalighat-Falta Railway lines.—
 (a) Shivanipur, (b) Fathepur and (c) Falta (proper).
- (4) Patipukur under South Dum Dum Municipality.—
- (5) East Indian Railway line.—(i) Sealdah Section.—
 (a) Baranagar P.S. and (b) Dum Dum P.S.
- (ii) Southern Section.—
 (a) Sonarpur, (b) Baruipur and (c) Canning.

Intensive breeding was detected along with the entire tract from Piali to Malta served by the Sealdah-Canning Section of the East Indian Railway and in consequence thereof Ghutura Sharif and also the adjacent villages, Bansra and Makaltala were under the grip of malaria in the autumn of 1951.

The adults of the species were collected from the incoming trains at Sealdah Station. At Majherhat Station on the Kalighat-Falta Railway winged form of the species were collected from the trains staying over-night at Shivanipur and Falta. Species were also caught at Kristopur Lock Gate from boats carrying different cargoes from Sundarbans, Sandeshkhali and Kulpi.

Positive findings were duly reported to the respective local bodies for taking up necessary anti-larval measures. Few local bodies and the Railway authorities only took necessary steps.

(6) *Spraying Squads*.—Popularity of residual insecticides led to increasing requests from various institutions for demonstration of D.D.T. spraying technique. Spraying squads have been formed at headquarters for this purpose.

(7) *Survey Squads*.—Malaria survey was carried out prior to initiation of any control scheme by the permanent survey squads of this Directorate. The number of such survey was 100.

(8) *Treatment Centre*.—Malaria Treatment Centre at Jagaddal in the district of 24-Parganas under the supervision of the Entomologist, Malaria Section, Malaria Research Laboratory, continued functioning during the year under report.

Development Programme.

(A) Malaria Control in the Fringe Area of Salt Water Lakes.

(B) Districtwise Malaria Control Schemes.

(A).—The scheme consisted in controlling the breeding places of *A. sundaicus* in the salt-water-logged marshes on the east of Calcutta extending over an area of about $7\frac{1}{2}$ miles in length. To protect the city of Calcutta and its surroundings from infiltration of *A. sundaicus*, a dangerous carrier species, a belt of at least half a mile deep all along the western border of the Salt Lakes was first brought under control. Later on the control area had to be extended over a depth of three quarter of a mile in certain places. The whole area has been divided into 6 blocks, each in-charge of one Malaria Inspector with 3 to 4 labour gangs consisting of one mate and 12 to 13 labourers.

Special attention has been paid to thorough removal of undergrowth vegetation from all water collections, as every tank or *beel* in the area is a potential breeder of *A. sundaicus*. Vast swamps thus cleared of aquatic vegetation have been maintained in a cleansed state by constant vigilance.

All the breeding places were treated with malariol or D.D.T. wettable powder.

Regular larval samplings of the treated areas were carried out. Density of adult mosquito population has also been observed by regular collection from 50 catching stations—38 within and the rest outside the operated area.

The anti-larval measures have successfully controlled the breeding of *A. sundaicus* and kept the malaria incidence of the eastern part of Calcutta at a very low level.

1950	.. 18	263

(B) *Districtwise Malaria Control Schemes*.—Anti-malaria campaign by spraying all the houses with residual insecticides in a district on entirely Government expenses was first undertaken in the malaria season of 1950 when Bankura district was taken up. During the year under report the operations were extended to another district, viz., Birbhum. Thus a population of 23.88 lakhs residing in 5,732 villages and 8 towns were protected in the year, 1951.

For the purpose of anti-malaria operations each of the districts has been placed under a District Medical Officer with three to four Malaria Supervisors under him. Each Supervisor has three to four Malaria Inspectors who have two to three labour gangs consisting of one mate and six labourers for each gang. Motor vehicles have been provided for transport of men and materials.

Two rounds of D.D.T.-Aromex emulsion in a dosage of 50—60 mgs. were applied in areas with spleen rates over 20 per cent. and in other areas one round only was deemed sufficient. Entomological findings and general malaria picture reveal that residual house spraying as a single measure is able to reduce very considerably malaria and its vector.

Malaria Research.

- (1) Entomology.
- (2) Malaria Control under I.C.M.R.

(1).—During 1951, mosquito larvae and adults numbering 29,962 collected from different areas of West Bengal were identified. Altogether 848 adult mosquitoes sent periodically by the Air Port Health Officer, Dum Dum, were also identified and reports sent to him. Anopheline mosquitoes collected from different areas were dissected and examined for malaria infection to determine the species responsible for the transmission of malaria in the area concerned but none showed positive result. The following species were dissected viz.,—*A. annularis*, *A. stephensi*, *A. varuna*, *A. hyrcanus*, *A. vagus*, *A. subpictus*.

Rearing of *A. stephensi* in the laboratory for transmission experiments was continued.

Blood smears from different parts of the State were examined for malaria infection. Out of 2,390 smears examined, 484 were positive for malaria parasites as follows:—M.T. 259, B.T. 212 and Quartan 13. Of the different types of malarial infection M.T. predominated during the months of June to December and B.T. during February to April and most of the Quartan cases were recorded in September to November and in January to February during dry weather.

(2) *Report on the working of the experimental Anti-malaria Scheme with different formulations of D.D.T. at Pandua (Hooghly).*—The scheme was continued for the third year (i.e., 1951-52). The results obtained do not show much variation from the observations of previous two years.

The malaria sickness figures for the period 1946-1951 and the effects of different formulations of D.D.T. on spleen rate for the three years under experimentation are given in Tables I and II.

Statistical Evaluation.—Different dosage of D.D.T. suspensions at 45 mgms. with three and five applications, 56 mgms. with three applications and 90 mgms. with three applications were tried in three consecutive years and after each year's spray the mean spleen rates were observed. It appears that after first year's spray, the D.D.T. suspension at 90 mgms. with three applications showed definite reduction in the spleen rates, after second year's spray, besides the above preparation, the D.D.T. suspension at 45 mgms. with three applications rendered definite reduction in the mean spleen rates

and after third year's spray the applications of D.D.T. suspension at different dosage as stated above, reduced the mean spleen rates significantly. But it is to be noted that the applications of the D.D.T. suspension at dosage 90 mgms. with three applications was capable to reduce significantly the spleen rate even after the first year.

D.D.T. Emulsion was also tried at dosage 56 mgms. with two and three applications and 112 mgms. with one application in three consecutive years and the analysis of the mean spleen rates relating to the areas under treatment indicates following results:—

The application of D.D.T. emulsion at dosage 56 mgms. with two applications reduced effectively spleen rates after spraying in three consecutive years while the same preparation with three applications reduced the spleen rates even after second year's spray. No effective result was noticed after first year's spray with either of the dosage mentioned above. The treatment of D.D.T. emulsion at dosage 112 mgms. with one application significantly reduced the mean spleen rates even after first year's spray and further reduction was noticed after spraying in the subsequent years.

The application of D.D.T. emulsion initially at dosage 112 mgms. followed by dosage 56 mgms. after 2 months and dosage 28 mgms. after 6 months was also effective in reducing the mean spleen rates after second and third year's spray.

Treatment of D.D.T. solution at dosage 56 mgms. with one application did not show any improvement in reducing spleen rate after first year's spray but curiously enough it showed an increase. After second year's spray, the spleen rate was much reduced but this reduction was not statistically significant while after third years' spray definite improvement was observed in reduction of mean spleen rate. But the sample was so small (23) that it would be wrong to arrive at any conclusion from this group. Treatment of breeding places of mosquitoes with Gammexane powder showed definite improvement in reducing spleen rates even after first year and this improvement was also maintained after second and third years.

This may be noted here that the application of D.D.T. emulsion at dosage 112 mgms. with one application rendered in one case significant and in other case insignificant results. This rouses doubt in the sampling. Again the increase in the mean spleen rates after first year's spray with D.D.T. solution was also perhaps due to some defects in the sampling process or due to activities of unscrupulous investigators.

In view of the points raised above, it would be difficult to say which form of D.D.T. preparation is most effective in controlling malaria in the area under investigation. However on the basis of the data received, the following conclusion can be made:—

- (1) Application of D.D.T. suspension at dosage 90 mgms. with three applications is more effective than other dosage in reducing mean spleen rates.
- (2) D.D.T. emulsion at 112 mgms. dosage with one application appears to be more effective than other dosage.
- (3) Application of D.D.T. solution appears to be less effective than above two preparations of D.D.T.
- (4) Application of Gammexane powder on the breeding places of mosquitoes appears to be quite useful in controlling malaria.

TABLE I.
Annual suffering from Malaria as seen from the records of Charitable Dispensary at Pandua.

	1946.	1947.	1948.	1949.	1950.	1951.

+ Indicates improvement.

- Indicates deterioration.

Kala-Azar.

(i) Incidence of kala-azar cases during the year under report was normal. A total number of 38,848 cases against 29,589 in last year was treated in hospitals and dispensaries during the year. Deaths recorded in the State of West Bengal were 1,476 against 2,009 in 1950. The death figure gave a decrease of 26.5 per cent. and that of incidence an increase of 31.3 per cent. against last year's figures.

(ii) A sum of Rs. 19,700 against Rs. 20,100 in 1950-51 was made available to the various district boards as grants-in-aid to help them in the anti-kala-azar work within their respective districts. In addition to such anti-kala-azar grants-in-aid to district boards kala-azar specifics valued at Rs. 17,000 against Rs. 16,250 in 1950-51 were distributed through the district boards and the Civil Surgeons to facilitate free treatment of kala-azar patients by approved doctors of the district boards and Mobile Medical Units, Subdivisional Health Officers, etc., during the year under report.

(iii) The Central Co-operative Anti-malaria Society, Limited, was given a special grant of Rs. 2,500 in addition to free supply of kala-azar specifics valued at Rs. 1,000 for running these kala-azar treatment centres on co-operative basis.

(iv) A special grant of Rs. 7,500 was made available to the Darjeeling District Board for the continuance of special anti-kala-azar work in Tarai and hill valleys.

TABLE II
Effect of publication of quarterly bulletins to malaria

Chapter IV

URBAN SANITATION AND WATER-SUPPLY.

In urban areas, municipalities are entrusted with maintenance of public health, water-supply, drainage, conservancy and medical measures within their respective areas. Major projects on water-supply, sewerage and drainage involving considerable expenditure which is beyond the resources of any municipality, are taken up by the State under direct control and supervision of the Directorate of Public Health Engineering. Such scheme is financed at 2/3rd:1/3rd basis, i.e., 2/3rd of the estimated cost of such scheme is paid by Government as grant-in-aid and the balance 1/3rd by the municipality concerned as its share of contribution. In case the municipality fails to find its share of contribution, an equivalent amount is advanced to it as loan by the State.

(A) **Sanitary Administration.**—During the year under report 19 Health Officers and 87 Sanitary Inspectors were employed by different municipalities of the State.

(B) **Income and Expenditure.**—The average rate of taxation per head of population under the municipal administration was Rs. 3-1 in 1950-51 against Rs. 4-12-10 in 1949-50.

The total income and expenditure of the municipalities under main heads are furnished below:—

Items.	1950-51. Rs.	1949-50. Rs.	Percentage of expenditure to total income including opening balance.	
			1950-51.	1949-50.
Opening balance at hand	16,95,620	25,60,262
Income including opening balance	1,77,33,013	2,00,50,771	108.5	..
Total expenditure including debts	1,92,33,102	1,82,60,757	..	9.1
Expenditure on public health	1,02,82,615	1,11,18,554	58.0	55.5
Public safety	11,38,004	9,54,450	6.4	4.7
Roads	15,60,451	13,64,068	8.8	6.8
All other expenses	62,52,032	48,23,685	35.3	24.1

Note.—Figures of six municipalities have been excluded from the statement as the discrepancies found in the statistics supplied by the local bodies could not then be reconciled.

The average expenditure per head of municipal population (2,871,625) on the several health items is given below:

Items.	Total expenditure.		Average expenditure per head of municipal population per year.					
	1950-51. Rs.	1949-50. Rs.	1950-51. Rs. a. p.		1949-50. Rs. a. p.			
Water-supply	18,89,808	14,78,453	0	10	6	0	11	3
Drainage	9,11,409	8,80,836	0	5	1	0	6	8
Conservancy	54,88,996	54,74,645	1	14	7	2	9	9
Charges on account of Health Officers and Sanitary Inspectors.	2,76,681	2,70,256	0	1	6	0	3	0
Hospitals, dispensaries and epidemic charges.	5,69,253	5,29,308	0	3	2	0	4	0
Vaccination	92,604	83,159	0	0	6	0	0	5
Plague charges	301	751
Markets and slaughter house	76,285	62,103	0	0	5	0	0	5
Registration of births and deaths	33,190	32,299	0	0	2	0	0	2

Besides sanitary and public health measures carried out by local bodies, the activity of the Directorate of Public Health Engineering, West Bengal, is summarised below. The function of this organisation includes those activities which mainly relate to Public Health Engineering, viz., Water-supply, drainage and sewerage and other Public Health Engineering Schemes :—

- (i) Preparation and execution of water-supply and drainage and other Public Health Engineering Schemes.
- (ii) Control and supervision of water-supply and other Public Health Engineering Schemes of local bodies or other societies, bodies, etc.
- (iii) Execution and maintenance of Government schemes of sanitary arrangement, water-supply, etc.
- (iv) Execution of Development Schemes, viz.—
 - (1) Rural Water-supply Scheme No. 187.
 - (2) Municipal Water-supply and Drainage Scheme No. 191.
- (v) Anti-malaria Drainage and Flood Flushing Scheme.
- (vi) Control and supervision and maintenance of septic and other sewage disposal installation in factories.
- (vii) Certification of demands of pipes for domestic water-supply and gas connection.
- (viii) Inspection of water, sewerage and sewage disposal and septic tanks installation.

Preparation of water-supply and drainage and other Public Health Engineering Schemes.—*Schemes prepared.*—The following schemes were drawn up during the year under review :—

(a) Water-supply Schemes.

	Rs.
(1) Extension scheme of pipe lines of Hooghly Chinsurah Waterworks	34,480
(1) B. E. College Water-supply Improvement Scheme ..	3,75,700
(2) Sanitation schemes of the "ARCON" structure in Digri. T.B. Sanatorium	39,000
(3) Sanitation scheme for Tomluk Subdivisional Hospital	4,650
(4) Water-supply and sanitary arrangement for Uttarpara State Hospital	12,700
(5) Supplementary estimate for Salua Water-supply Scheme (E.F.R.)	63,439
(6) Sinking and resinking of tubewells in flood affected areas of Sabong	75,015
(7) Sinking and withdrawing of tubewells in the Air Ports, Hooghly	4,908
(8) Sinking and withdrawing tubewells at Kamarpukur, Arambagh Subdivision, Hooghly	1,717
(9) Dhobyghat at Digri T.B. Sanatorium with water-supply arrangement	6,470
(10) Sinking tubewell for electric earthing at De budge House Burdwan	930
(11) Augmentation of water-supply at Bhabendrabala Chest Clinic, Serampore	6,600

	Rs.
(12) Suri Provincial Sadar Hospital Scheme ..	41,600
(13) Water-supply and sanitary arrangement for Health Centres	62,000
(14) Water-supply and sanitary arrangement for the staff quarters at Digri T.B. Sanatorium	31,000
(15) Augmentation of water-supply at Digri T.B. Sanatorium by sinking 6" dia. tubewell	30,800
	8,56,529
(b) Drainage—Hooghly Chinsura Drainage Scheme—(Municipal)	545,500
B. E. College Sewerage Scheme (other Department of the same Government)	190,000
	7,35,500

Work of other Department of Government.—*Kanchrapara Development Area.*—9,652 acres of land on either side of the Chandmari Railway Station, East Indian Railway, district Nadia, have been acquired by the Government of West Bengal to build up a suitable town with a view to relieve congestion in the city of Calcutta and rehabilitate refugees from East Pakistan. The township will cover 6,345 acres leaving all round a green belt for Agricultural Development.

The town will have water-supply, sewerage and drainage of the up-to-date standard.

Progress—13 contracts amounting to Rs. 22,56,500 were let out and progress was satisfactory.

Miscellaneous Projects—Relief and Rehabilitation Schemes.—246 estimates to the value of Rs. 40,31,244 were prepared during the year under review.

Estimated costs of schemes prepared were as follows:—

	Rs.
(1) Estimates for municipalities and other towns ..	5,79,980
(2) Relief Work Schemes	40,31,244
(3) Works of other Department of the same Govt. ..	10,46,529

Control and supervision and execution of water-supply and other Public Health Engineering Schemes of local bodies or other societies, bodies, etc.—Schemes were executed to the value of Rs. 31,14,089.

Estimated costs of sketch projects prepared for municipal and other towns were as follows:—

	Rs.
(A) Water-supply	8,91,009
(B) Drainage and sewerage	7,35,500
Schemes for relief works (on water-supply, sanitary, drainage, etc.)	40,31,244
Works of other departments of the same Government (on water-supply, sanitary measures, drainage, etc.)	10,46,529

Inspection of Waterworks and sewerage works.—The annual inspections of various municipal waterworks and sewerage works were made and necessary reports with recommendations were forwarded to the municipal authorities concerned for necessary action.

The following waterworks and sewerage works were inspected by the Executive Engineer, Public Health Engineering:—

Darjeeling Waterworks, Krishnagor Waterworks, Jalpaiguri Waterworks and Bankura Waterworks.

The following waterworks were inspected by the Assistant Engineer, Public Health Engineering (Mechanical):—

Bankura Waterworks, Midnapore Waterworks, Titagarh Sewerage Works and Burdwan Waterworks.

Various septic tanks and activated sludge plants in Mills and Factories were inspected by the Anti-malarial Engineer.

The total capital expenditure on various works executed was as follows:—

	Rs.
(1) Municipal schemes (Vide Appendix VI) ..	3,57,701
(2) Works of other Government Departments ..	31,975
(3) Relief work in Refugee Camps and Colonies both in urban and rural areas (water-supply and sanitary arrangements for displaced persons from East Bengal)	19,05,561
(4) Kanchrapara Development Area (Kalyani) ..	22,56,500
(5) Kanchrapara T.B. Hospital Water-supply and Sewerage	15,383
(6) K. S. Ray T.B. Hospital Water-supply and Sewerage	72,999
(7) Works of other Departments of the State on water-supply, etc.	26,706
	46,66,825

Maintenance of Works.—The following works were maintained during the year under review:—

- (1) Kalimpong Waterworks.
- (2) Darjeeling Improvement Fund Water-supply in Darjeeling District.
- (3) Kanchrapara T.B. Hospital Water-supply.

The Chief Engineer, Public Health Engineering as advisory authority had to certify demand of pipes for domestic water-supply and other purposes.

Local inspections were made for verification of the demands at site.

1,175 numbers of applications were certified by the Chief Engineer, Public Health Engineering and sent to Civil Supplies, West Bengal, for issue of permits.

Management of sewerage and waterworks by the local bodies.—There are 29 waterworks in operation in the State. As required by the rules regulating

the management of waterworks and sewerage works of local bodies, the following routine duties were carried out viz. :—

- (1) Checking of monthly returns.
- (2) Scrutiny of annual budget estimates.
- (3) Scrutiny of monthly reports.
- (4) Scrutiny of quarterly returns of house connections.
- (5) Scrutiny of annual abstract account of depreciation.
- (6) Inspection of machineries of the waterworks.

Quality of Drinking water.—The monthly analysis report on the samples of water collected from the various waterworks were scrutinised. On the whole, the water supplied to the public was of very high quality. In isolated cases of unsatisfactory results of analysis, the municipal authorities were forthwith advised as to the steps to be taken to improve the quality of water.

Amounts received as departmental fees for works executed during the year under review were as follows:—

	Rs.	a.
(1) Fees for preparation of schemes	245	12
(2) Fees for supervision of execution	24,896	10
(3) Miscellaneous receipts	8,499	8

In addition to the local public health staff, 430 health assistants and 300 public health nurses were employed by Government and distributed throughout the State. They worked in co-operation with the local public health staff under direct control and supervision of Subdivisional Health Officers appointed by the State.

District Boards' income and expenditure.—Total receipts and expenditure on some main items during 1950-51 are shown below:—

	1950-51	1949-50
Opening balance at hand	10,38,112	22,30,934
Total receipts including opening balance	84,13,198	66,92,408
Total expenditure excluding debts, etc.	53,20,111	71,02,777
Expenditure on communication	13,92,038	23,05,432
Buildings	1,18,392	1,41,201
Water supply and Water-works	1,32,422	1,38,236
Drainage	1,503
Total Public Work	23,37,208	24,17,442
Sanitation	10,24,422	12,81,747
Vaccination and other charges	1,82,192	1,82,192

Notes.—Figures of two district boards have been excluded from the statement as the figures found in the statistics supplied by the local bodies could not be reconciled.

Chapter V

RURAL SANITATION.

In rural areas district boards are primarily responsible for medical relief, public health activities, water-supply, etc. They maintain hospitals and dispensaries, kala-azar and leprosy centres and rural health circles with grants-in-aid from Government.

Every district board employs a fully qualified Health Officer. He supervises the work of the rural health circles, kala-azar centres, operation under Bengal Food Adulteration Act and directs public health activities relating to control and prevention of epidemic outbreaks, etc., within his area. Excluding the district of Darjeeling, there were 226 rural health circles. Each rural health circle had the following staff:—

- (1) Qualified Sanitary Inspector—1.
- (2) Health Assistant—1.
- (3) Additional Health Assistant—1.
- (4) Permanent Vaccinator—1.
- (5) Medicine Carrier—1.

In the district of Darjeeling there were 14 health circles. Each health circle was headed by a medical man, designated as Rural Medical Officer of Health.

In addition to the local public health staff, 430 health assistants and 206 mobile medical units maintained by Government were distributed throughout the State. They worked in co-operation with the local public health staff under direct control and supervision of Subdivisional Health Officers appointed by the State.

District Boards' income and expenditure.—Total receipts and expenditure on some main items during 1950-51 are shown below:—

Items.	1950-51.	1949-50.	Percentage to total receipts.	
			1950-51.	1949-50.
	Rs.	Rs.		
Opening balance at hand ..	15,28,126	25,99,034
Total receipts including opening balance	84,13,198	98,98,408
Total expenditure excluding debts, etc.	53,29,111	71,62,777	63·3	72·4
Expenditure on communication ..	13,02,036	23,05,435	15·5	23·3
Buildings	1,18,592	1,41,201	1·4	1·4
Water-supply and Water-works ..	1,52,423	1,38,236	1·8	1·4
Drainage	1,563	..	0·02
Total Public Work	22,37,508	34,17,842	26·6	35·5
Sanitation	10,34,432	12,81,247	12·3	12·9
Vaccination and other charges ..	1,62,195	1,82,189	1·9	1·8

Note.—Figures of two district boards have been excluded from the statement as the discrepancies found in the statistics supplied by the local bodies could not then be reconciled.

Rural Water-supply.—The following work was carried out during the year under report under Development Scheme No. 187:—

- (1) Number of tubewells sunk—372.
- (2) Number of choked tubewells resunk—365.
- (3) Number of derelict tubewells repaired—45,300.
- (4) Number of masonry and ring wells sunk—90.
- (5) Number of masonry and ring wells resunk—217.

A sum of rupees twenty lakhs was sanctioned by Government for rural water-supply. Materials were purchased out of this grant and allotments were made to the District Officers for execution.

The total capital expenditure on various works in the rural areas is shown below :

	Rs.
(1) Rural Water-supply Schemes	20,00,000
(2) Water-supply and Sanitary arrangements in Health Centres of the State	5,80,600
(3) Water-supply and Sanitary arrangements at Digri T.B. Hospital (M.R. Bangur Sanatorium) ..	46,402
(4) Water-supply and Sanitary arrangements in Eastern Frontier Rifle Camp	29,673
(5) Water-supply, etc., at Haringhata Firm ..	3,437
	26,60,112

Maintenance of Works.—The following Works were maintained during the year under review:—

- (1) Digri T.B. Hospital Water-supply.
- (2) Beltola Refugee Camp.

Canga Sagar Mela.—Arrangements for supply of pure drinking water to the pilgrims attending the annual fair at the Sagar Island was made by the State at the request of the District Board of 24-Parganas.

Chapter VI

HOSPITALS AND DISPENSARIES.

Classifications of Institutions.—The hospitals and dispensaries were classified as before, viz.—

1. (a) State Public Institutions (Class I).
 - (b) State-managed Hospitals (taken over from local bodies by the Government as a temporary measure for better working).
 - (c) A.G. and F.R.E., Hospitals (temporary State Public Hospitals established as auxiliary to existing hospitals found to be inadequate to cope with the incidence of diseases).
 - (d) Health Centres (established mostly in rural areas having both preventive and curative functions).
2. State Special Institutions (Class II), e.g., Police Hospitals and Institutions of special departments, such as Communications and Works, Forest, Irrigation, etc.
3. Local Fund Institutions (Class III)—managed and maintained by local bodies.
4. Private-aided Institutions (Class IV).
5. Private non-aided Institutions (Class V)—
 - (i) Under Government supervision.
 - (ii) Not under Government supervision.
6. Railway Hospitals and Dispensaries (Class VI).
7. Private Institutions receiving subsidies from local bodies (Class VII).
8. Union Board Dispensaries.
9. Village Dispensaries.
10. Ayurvedic, Homeopathic and Unani Hospitals and Dispensaries.

Calcutta Hospitals and Dispensaries.—*Number.*—During the year under report there were 69 civil hospitals and dispensaries including 2 A.G. Hospitals in Calcutta, of which 38 had accommodation for inpatients, while the remaining 31 gave treatment in outdoor departments only.

Beds.—The total number of beds in the Calcutta hospitals was 5,975 including 350 beds available in the two temporary A.G. Hospitals functioning in the city.

Patients treated.—During the year under report the number of indoor and outdoor patients, were 161,297 and 1,553, 402 respectively in the Calcutta hospitals and dispensaries, the death rate amongst indoor patients being 6·2 per cent.

Diseases.—The statistics for some of the principal diseases treated in Calcutta hospitals and dispensaries for 1951 are given below:—

	Number of outdoor patients.	Number of indoor patients.	Death rate amongst in-door patients. Per cent.
Cholera	792	5,111	24·2
Small-pox	313	3,084	35·0
Malaria	123,466	6,306	3·5
Diseases of the eye	184,428	7,601	0·2
Leprosy	9,450	361	8·9
Mental diseases	1,743	128	9·4
Venereal diseases	26,185	685	1·8
Tuberculosis of lungs	16,379	1,656	21·3

Mufassil Hospitals and Dispensaries.—*Number.*—The total number of hospitals and dispensaries in the mufassil during the year under report was 1,068 including 133 A.G. and F.R.E. Hospitals as well as 100 health centres. Of these institutions 370 had accommodation for in-patients, while the remaining 698 gave treatment in outdoor departments only.

Beds.—The total number of beds in mufassil institutions was 10,986 including 3,410 beds available in A.G. and F.R.E. Hospitals and 1,094 beds in health centres.

Patients treated.—During the year under report the numbers of indoor and outdoor patients were 183,920 and 3,903,306 respectively in the mufassil institutions, the death rate amongst indoor patients being 3·6 per cent.

Diseases.—The statistics for some of the principal diseases treated in mufassil institutions for 1951 are given below:—

	Number of outdoor patients.	Number of indoor patients.	Death rate amongst in-patients. Per cent.
Cholera	1,467	943	23·8
Small-pox	987	880	19·7
Malaria	1,433,718	32,373	1·2
Diseases of the eye	185,277	9,211	0·1
Leprosy	1,830	232	3·4
Mental diseases	825	89	4·5
Veneral diseases	25,183	1,341	1·6
Tuberculosis of lungs	13,436	2,703	15·1

A.G. and F.R.E. Hospitals.—The Famine Relief Emergency Hospitals were first opened on a temporary basis mostly in the rural areas with a view to cope with the menacing heavy incidence of diseases in the trail of the terrible Bengal Famine of 1943. They were subsequently renamed as Auxiliary Government Hospitals and continued to function as auxiliary to the existing hospitals found to be inadequate to meet the requirements of the people. During the year under report, there were 124 A.G. Hospitals

with 3,610 beds. There were also 11 F.R.E. Hospitals with 150 beds in some areas where scarcity conditions still prevailed. A total of 84,347 cases were treated in these hospitals as against a total of 62,495 of the previous year.

Calcutta.—There were two A. G. Hospitals with 350 beds functioning in Calcutta during the year under report. A total of 3,245 cases were treated in 1951 as against 3,509 cases in the preceding year. The statistics for some of the more important diseases as compared with those of the previous year are shown below:—

Diseases.	Admission.	1951.		1950.			
		Number of deaths.	Death rate amongst admitted cases.	Admission.	Number of deaths.	Death rate amongst admitted cases.	
			Per cent.			Per cent.	
(1) Cholera	
(2) Small-pox	11	
(3) Malaria	629	49	7.8	607	58	9.6
(4) Pneumonia	496	127	25.6	193	50	25.9
(5) Dysentery	716	244	34.1	507	225	44.4
(6) Kala-azar	102	13	12.7	170	32	18.8
(7) Tuberculosis	352	137	38.9	316	115	36.4
(8) Venereal diseases	15
(9) Other diseases	924	175	18.9	1,716	389	22.7
Total	3,245	745	22.9	3,509	869	24.8

Mufassil area.—During the year under report there were 133 A. G. and F.R.E. Hospitals with 3,410 beds. A total of 81,102 cases were treated in 1951 as against 59,136 cases in the preceding year. The statistics for some of the more important diseases as compared with those of the previous year are shown below:—

Diseases.	Admission.	1951.		1950.			
		Number of deaths.	Death rate amongst admitted cases.	Admission.	Number of deaths.	Death rate amongst admitted cases.	
			Per cent.			Per cent.	
(1) Cholera	177	38	21.4	975	321	32.9
(2) Small-pox	233	29	12.4	523	75	14.3
(3) Malaria	23,296	319	1.4	15,257	317	2.1
(4) Pneumonia	1,727	79	4.6	1,473	127	8.6
(5) Dysentery	6,372	271	4.3	5,858	639	10.9
(6) Kala-azar	8,506	115	1.4	4,971	236	4.7
(7) Tuberculosis	205	47	22.9	149	56	37.6
(8) Venereal diseases	488	10	2.0	229	7	3.1
(9) Other diseases	40,098	906	2.3	29,701	2,077	7.0
Total	81,102	1,814	2.2	59,136	3,855	6.5

(A) **Arrangement for treatment of cases of infectious diseases.**—A large number of cases of infectious diseases were admitted into the permanent Infectious Ward at Nilratan Sarkar Hospital. Besides this, the Infectious Diseases Hospital at Beliaghata, Calcutta, was maintained at the expense of the State as in the previous year with an accommodation for 150 beds during the year under report. As a permanent measure, arrangement has been made to establish an Infectious Diseases Hospital with 912 beds at Beliaghata and the work was already started by collection of necessary materials for construction.

In rural areas, arrangement for treatment of cases of infectious diseases existed in all A.G. and F.R.E. Hospitals.

(B) **Relief Hospitals and Dispensaries.**—As in the previous years, the State continued to maintain refugee camps at different parts of West Bengal. Besides public health measures by appointment of Sanitary Inspectors, health assistants and disinfectors exclusively for these camps, facilities for medical relief were afforded to the displaced persons by maintenance of 26 Relief hospitals and dispensaries during the year 1951. Names with locations of these hospitals and dispensaries are mentioned below:—

District.	Hospitals.	Number of beds.	Dispensaries.
Nadia	1. Dhubulia Relief Camp Hospital	125	1. Ranaghat Women's Camp.
	2. Relief Camp Hospital at Cooper's Camp, Ranaghat.	125	
	3. Relief Camp Hospital at Kanchrapara	50	
Howrah	4. Relief Camp Hospital at Ghusuri	50	
	5. Relief beds at Belur A. G. Hospital	10	
Hooghly	6. Relief Camp Hospital at Bansberia Women's Camp.	10	
	7. Relief Camp Hospital at Raj Kissen Street, Uttarpara.	10	
	8. Relief Camp Hospital at Bhadrakali Women's Camp.	10	
Burdwan	9. Relief Camp Hospital at Nababnagar	20	2. Kanksa, Burdwan.
			3. Bogra, Burdwan.
			4. Ratibati, Burdwan.
			5. Salampur, Burdwan Camp I.
			6. Salampur, Burdwan Camp II.
			7. Salampur, Burdwan Camp III.
			8. Ramchandrapur, Burdwan
			9. Kashipur, Burdwan.
			10. Thik-hai-Club, Burdwan.
			11. Gopalpur, Burdwan.
	24-Parganas	10. Children's Hospital, Cossipore	20
			13. Babughat, 24-Parganas.
11. Relief Camp Hospital at Titagarh.		10	14. Kartickpur, 24-Parganas.
Midnapore	12. Relief Camp Hospital at Dudkundi	20	
	12	460	14

(C) **Disease of the eye.**—A total number of 386,517 different eye diseases were treated in Calcutta and mufassil hospitals and dispensaries

as against 339,555 cases in the preceding year, of which a large number was treated by the Eye Infirmary of Medical College, Calcutta. Although there was no separate Eye Hospital in the State, facility for treatment of different eye diseases existed in the following hospitals where beds were provided for indoor patients:

	Number of beds.
(1) Eye Infirmary, Medical College Hospital, Calcutta ..	139
(2) Nilratan Sarkar Medical College Hospital, Calcutta ..	26
(3) Sambhunath Pandit Hospital, Calcutta	4
(4) R. G. Kar Medical College Hospital, Calcutta ..	38
(5) U. N. Memorial Hospital, Calcutta	2
(6) Islamia Hospital, Calcutta	9
(7) Mayo Hospital, Calcutta	11
(8) Birbhum Sadar Hospital	4
(9) Bankura Sammilani Medical School and Hospital ..	12
(10) General Hospital, Jalpaiguri	14
(11) Berhampore Sadar Hospital	28
(12) Walsh Hospital, Serampore	9
(13) Fraser Hospital, Burdwan	9
Total ..	305

Chittaranjan Seva Sadan, Calcutta, also maintained an out-patient department for treatment of eye diseases of women and children but there was no arrangement for treatment of indoor patients.

Three travelling eye dispensaries subsidised by the State treated a considerable number of cases of eye diseases. A summary of the work done during the year under report is given below:—

Number of cases of eye diseases treated.	Eye operation performed.	Lectures delivered on preven- tion of blindness.
46,947	1,456	53

(D) **Mental diseases.**—There is no Government Mental Hospital in the State but in Calcutta there is one Mental Observation Ward consisting of 30 beds. This ward is used only for certification of cases before they are sent to the Mental Hospital, Ranchi. However, there was a proposal for converting 15 of these 30 beds into Treatment Section which was under consideration of Government. The State maintained 517 beds in the Indian Mental Hospital, Kanke, Ranchi, during the year 1951 and paid contribution to the Inter-Provincial Mental Hospital, Ranchi for maintenance of about 200 beds for treatment of mental cases sent from West Bengal.

A statement of Mental Hospitals run by local organisations and clinics maintained as annexe to Medical College Hospitals at Calcutta along with number of beds and cases treated is furnished below:—

Name with location of the mental Hospital or Clinic.	Number of beds during 1951.	Number of cases treated during 1951.		
		Old.	New.	Total.
(1) Lumbini Park Mental Hospital	.. 80	69	168	237
(2) Mankundu Mental Hospital 60	41	53	94
(3) Unmad Asram, Dum Dum 80	48	128	176
(4) Clinic attached to R. G. Kar Medical College Hospital, Calcutta.	..	939	251	1,190
(5) Clinic attached to Medical College, Calcutta	1,196	1,196
	220	1,097	1,796	2,893

(E) **Venereal Diseases.**—During the year under review, 22 V.D. Clinics were run by the State of West Bengal. Of these 12 were in the metropolis and 10 in the districts. These clinics were attached to the out-patient departments of the different hospitals, Governmental as well as non-governmental.

The V.D. Clinics in Calcutta were attached to the following institutions:—

Medical College Hospitals	2
Nilratan Sarkar Medical College Hospitals	2
Sambhu Nath Pandit Hospital	2
Lady Dufferin Victoria Hospital	1
R. G. Kar Medical College Hospital	2
Calcutta National Medical Institute Hospital	2
Chittaranjan Seva Sadan	1
		<u>12</u>

The V.D. Clinics attached to the district hospitals were as follows:—

Howrah General Hospital	2
Walsh Hospital Serampore (Hooghly)	2
Fraser Hospital (Burdwan)	2
K. E. M. Hospital (Midnapore)	2
Victoria Hospital (Darjeeling)	2
		<u>10</u>

Sanction was received for starting 8 new V.D. Clinics, two clinics in each of the districts of (1) Jalpaiguri, (2) Nadia, (3) Bankura and (4) 24-Parganas. These, however, could not be started during the year under review.

The number of V.D. patients treated in the different clinics during the year totalled to 241,653 against 200,972 in 1950, 227,062 in 1949.

Of the patients treated during the year 36,458 were new cases and of them 7,921 were women.

The classification of the new cases into different categories of profession in life is given below:—

Males.		Females.	
Business 6,295	Prostitutes 718
Clerk, Shop Assistants 3,605	Housewives 4,998
Students 1,320	Office Workers 564
Domestic servants, office peons 9,145	Students 238
Labourers 8,105	Labourers 741
Dependants 67	Domestic and maid servants 563
		Dependants 99
	28,537		7,921

The classification of the new cases according to the type of the venereal diseases is shown below:—

Syphilis acquired 12,852
Congenital 583
Gonorrhoea 7,169
Canceroid 1,230
Other diseases of venereal origin 14,624
	36,458

The figures above show the importance of venereal diseases in producing diseases which are debilitating or degenerative in nature. The large number of such cases points to the urgent necessity of increasing the facilities of early diagnosis and treatment in order to prevent the diseases which are of much sociological importance.

The number of arsenicals injected during 1951 came to 36,008 against 36,313 of 1950 and 47,331 of 1949.

The serological laboratory examined free of charge specimen of blood for Kahn and Meinicke tests. The number of samples examined for the purpose were 22,370 and of these, 7,345 samples were positive.

The pay-clinic introduced in the previous year provides for diagnosis, periodical checks and complete course of confidential treatment on payment of Rs. 15 only. These clinics have been organised in some of the clinics and the work is carried out in the evening. It is proving useful to the working people of moderate economic means.

In the interest of better and comprehensive medical care programme particularly with reference to social and environmental background, medical-social workers were recruited to work in different medical institutions. Their routine work consists of hospital work as well as domiciliary

visits. In the hospitals they would generally help the patient in proper routing and will have to interpret the emotional and psychological factors in sickness situation. They will also have to explain to the patients individually the treatment procedures prescribed by the physician. This explanation involves details in diet, work, precaution against communicable diseases and other health education activities. After the hospital work, the medical-social workers will go for home visiting. The objectives of home visiting are to study the social and environmental background of the patient, emotional and psychological factors in human relationship and adjustment. The other objectives are health education activities, contract-tracing, case holding and follow-up of cases.

Seventeen medical-social workers were recruited for the purpose. Before they were posted in different hospitals, they underwent a training for 3 months. This training consisted of didactic lectures as well as as demonstrations and participations in the training programme. The subjects studied included sociology, psychology, rehabilitation and public health in its broad aspects. Of these medical-social workers, 8 were posted in the V.D. Clinics. The re-organised scheme of the medical-social workers came under operation in the last part of the year.

Health Education. The publicity activities were carried out by the Publicity Department of the State which consisted of the usual channels of leaflets, brochures, films, slides, posters, placards amongst others on Anti-V.D. measures. Radio talks were given on the subject to different categories of listeners both urban and rural areas.

Legislative Activities.—West Bengal Undesirable Advertisement (Control) Act, 1948, came into force on 15th August 1951. The undesirable advertisements have been controlled to a large extent due to willing collaboration of the recognised journals and publications. There have been, however, a number of prosecutions by the Police under this Act.

(F) **Pulmonary Tuberculosis.**—The disease was more prevalent in urban areas than in rural areas.

Year.	Number of deaths from pulmonary tuberculosis.			Rate per mille.		
	Rural.	Urban.	Total.	Rural.	Urban.	Total.
1950	3,864	3,857	7,721	0.2	0.9	0.4
1951	4,106	3,731	7,873	0.2	0.7	0.36

Besides these, there must have been several hundreds of deaths from the disease which were suppressed due to the fear of social stigma attached to the tuberculosis families. The disease was gradually on the increase especially in industrial areas. To fight this malady effectively, the State in addition to increased number of beds in different tuberculosis hospitals and sanatoria, carried out B.C.G. campaign in different areas especially in those places where the disease was highly prevalent.

B.C.G. Vaccination.—During the year 12 teams (each with one Medical Officer and 2 assistants) employed by the State and 2 Medical Officers and 2 assistants appointed by Ross Institute of Tropical Hygiene for the Tea Estates in Darjeeling and Jalpaiguri districts examined 312,799 persons by tuberculin test of whom 109,617 were inoculated with B.C.G. vaccine. Necessary equipment, motor vehicles, tuberculin and B.C.G. vaccine were supplied by the W.H.O., UNICEF and the Government of India. The State has been providing an amount of one and half lakh every year for this purpose.

During the year under report, altogether 15 Chest Clinics—7 at Calcutta, 1 at Howrah and the remaining 7 in mofussil districts—functioned in the State. A full list of these clinics is given below:—

- (1) Chest Clinic at Serampore run by the Subdivisional T.B. Association, Serampore.
- (2) Chest Clinic attached to Fraser Hospital, Burdwan, run by the Burdwan T.B. Association.
- (3) Chest Clinic attached to Midnapore Sadar Hospital run by the Midnapore District T.B. Association.
- (4) Chest Clinic attached to Berhampore Sadar Hospital.
- (5) Chest Clinic run by the Municipality, Darjeeling.
- (6) Chest Clinic attached to the Budge Budge Municipal Hospital run by the Budge Budge Anti-T.B. Association.
- (7) Chest Clinic attached to Chittaranjan Hospital, Gorachand Road, Entally.
- (8) Chest Clinic attached to Howrah General Hospital.
- (9) Chest Clinic attached to Medical College Hospital, Calcutta.
- (10) Chest Clinic attached to R. G. Kar Medical College Hospital, Belgachia.
- (11) Chest Clinic run by the Servants of Humanity Society, Calcutta.
- (12) Chest Clinic attached to Islamia Hospital, Calcutta.
- (13) Chest Clinic of Kiron Sashi Sebayatan, Calcutta.
- (14) Chest Clinic run by the Calcutta Corporation, Kidderpore.
- (15) Chest Clinic attached to Charteris Mission Hospital, Kalimpong, Darjeeling.

Of these, six Chest Clinics—at Serampore, Burdwan, Midnapore, Berhampore, Darjeeling and Budge Budge run by local Tuberculosis Associations continued to receive the recurring grant towards the maintenance of a Tuberculosis Health Visitor employed for each of them. The Chest Clinic at Howrah was an Institution affiliated to the Bengal T.B. Association. The Bengal T.B. Association received a Government grant of Rs. 20,000 for carrying out Anti-T.B. campaign. Moreover, the Association raised Rs. 1,14,157 through tuberculosis seal sales campaign. Out of this amount, the Association maintained 29 Tuberculosis Health Visitors in different Chest Clinics affiliated to it. In all 127,586 persons were attended in the 15 Chest Clinics mentioned above of whom 30,336 were new and 97,250 old cases.

Beds for T.B. patients.—The total number of beds maintained for treatment of T.B. patients during the year under report was 1,796, as compared to 1,381 in 1950 and 826 in the year 1946.

A detailed list showing the names of T.B. Hospitals and Sanatoria along with their respective number of beds is given below:—

	Beds.		
	Government.	Non-Government.	Total.
(1) Kanchrapara T. B. Hospital	600	..	600
(2) Beliaghata T. B. Hospital	100	..	100
(3) M. R. Bangur Sanatorium, Digri, Midnapore	98	..	98
(4) Suresh Sarkar Road A. G. Hospital, Entally	150	..	150
(5) Kumud Sankar Roy T. B. Hospital, Jadavpur	100	326	426
(6) Kumud Sankar Roy T. B. Hospital for Refugee Patients	50	..	50
(7) S. B. Dey Sanatorium, Kurseong	150	150
(8) Patipukur T. B. Hospital attached to Astanga Ayurvedic College Hospital, Calcutta.	50	50
(9) T. B. Hospital for the prisoners in West Bengal (Suri)	20	..	30
(10) Clarke T. B. Hospital, Darjeeling	26	26
(11) Lowis Jubilee Sanatorium, Darjeeling	8	8
	<u>1,128</u>	<u>560</u>	<u>1,688</u>

T. B. Wards in other hospitals—

(1) Medical College Hospital, Calcutta	24	..	24
(2) R. G. Kar Medical College Hospital, Belgachia	20	..	20
(3) Burdwan Sadar Hospital	24	..	24
(4) Howrah General Hospital	2	..	2
(5) Jalpaiguri Sadar Hospital	10	..	10
(6) Hooghly Sadar Hospital	3	..	3

(8) Krishnagar Sadar Hospital	3	..	3
(9) Bankura Sadar Hospital	4	..	4
(10) Suri Sadar Hospital	2	..	2
(11) Berhampore Sadar Hospital	6	..	6
(12) Serampore Chest Clinic	6	6
Total	<u>102</u>	<u>6</u>	<u>108</u>
Grand Total	<u>1,230</u>	<u>566</u>	<u>1,796</u>

Of the total number of beds, 17,961, and 1,230 were mentioned by Government and the rest by other institutions.

A domiciliary treatment service for refugee T.B. cases was started towards the end of 1950 and it continued during the year under report. A medical officer, a nurse and a peon were appointed under this scheme. Many cases amongst the refugees were treated free of charge at their

homes. The State has provided funds for making available antibiotics and other special drugs free of charge to poor patients.

At the K. S. Roy T.B. Hospital an outdoor clinic for treatment of refugee patients was opened. A part-time Medical Officer was appointed by the State for the purpose. A large number of T.B. cases were diagnosed amongst the refugees and treated at this clinic.

(G) **Leprosy.**—Leprosy is another problem which calls for immediate attention to be tackled with. Besides treatment of leprosy cases in leprosy clinics run by local bodies or in a few leprosy homes or hospitals run by local organisations there was no satisfactory arrangement for segregation, treatment and rehabilitation of infectious leprosy cases, which obviously acted as source of infection to the people in the surrounding areas. To remove this long-felt want, a leprosy colony was started entirely at the expense of the State at Gouripore in the district of Bankura on 1st September 1949 with 100 beds under the five-year plan. The colony is situated in the rural area over 316 acres of isolated dry high level laterite soil. The number of beds of the colony was increased from 100 to 212 during the year 1951 and it was still in the process of further expansion till the target of 500 beds is reached. The Gouripore Leprosy Colony has also a laboratory and an out-patient department which contains as well as an well-equipped hospital with infectious wards for cases of small-pox, cholera, T.B., etc.

The Leprosy Investigation Centre taken over by the State from the West Bengal Branch of Hind Kusht Nivaran Sangh during 1950 was annexed to Gouripore Leprosy Colony. The centre operated over 42 villages surrounding it with approximately 10,000 population and had its outdoor clinic where Sulphone drugs were administered for treatment of infectious leprosy cases. The aim and object of the centre is to take into study the epidemiological aspect of leprosy in rural areas with high endemicity and to find out if the infection can be controlled by Sulphone treatment without strict isolation.

Altogether 95 leprosy clinics were maintained through the State by Government, local bodies, local organisations. Of these, 4 Leprosy Clinics viz., Howrah, Krihnagore, Berhampore and Burdwan were provincialised during the year under report with a view to improve and run them on modern line. Out of 95 clinics, 5 were State-managed, 72 run by local bodies and 18 by local associations. Amongst them 42 clinics run by local bodies and one maintained by a local organisation received a total amount of Rs. 9,974 as grants-in-aid during the year under report.

Beside leprosy clinics, the following leprosy homes, etc., were run by foreign mission, local association and others during the year under report:—

Name of the Institutions.	Run by—	Number of beds maintained during 1951.
(1) Bankura Leprosy Home ..	The Mission to Lepers ..	215
(2) Ranigunj Leprosy Home ..	Ditto ..	120
(3) Asansol Leprosy Settlement with one Leprosy Hospital and 5 Segregation Camps.	Asansol Leprosy Relief Association in collaboration with Asansol Mines Board of Health.	130
(4) Albert Victor Leprosy Hospital ..	A Board of Trustee under Act IX of 1935.	149
(5) Silda Leprosy Colony ..	A local committee ..	30
(6) Kalimpong Leprosy Colony ..	Church of Scotland ..	100
		744

Except Asansol Leprosy Settlement which was financed by the Asansol Leprosy Relief Association and Asansol Mines Board of Health, other homes, hospital and colonies received a total amount of Rs. 1,16,138 as capitation grants during the year, 1951-52. Rs. 10,000 was also paid to West Bengal Branch of Hind Kusht Nivaran Sangh for propaganda and publicity work.

Total number of leprosy cases (both old and new) treated in all leprosy institutions during 1951 is furnished below:—

Men	11,894
Women	3,456
Children	1,389
Total						16,739

The total expenditure of the Calcutta hospitals and dispensaries under classes I, III and IV during the year under report was Rs. 1,07,68,416 as against Rs. 1,06,63,665 in the previous year and that of medical hospitals and dispensaries of the above categories including the expenditure under different heads is tabulated below:—

(1) Salaries	38,21,884	18,14,303
(2) Medicine	14,18,977	4,13,808
(3) Diet	23,19,521	8,88,338
(4) Apparatus	2,71,408	30,797
(5) New buildings, additions, etc.	3,61,811	17,178
(6) Repairs to buildings	8,68,742	71,257
(7) Miscellaneous	18,60,037	2,88,449
Total	1,07,68,416	38,84,470

Chapter VII

INCOME AND EXPENDITURE OF HOSPITALS AND DISPENSARIES.

Finance.—Income.—Excluding the opening balance, the total income of the Calcutta institutions under classes I, III and IV amounted to Rs. 1,07,69,272 as against Rs. 1,06,77,684 of the previous year and that of mufassil institutions under classes I, III and IV including the subsidised, amounted to Rs. 30,96,705 as against Rs. 24,60,760 in the preceding year. The receipts under different heads are shown below:—

	Amount.	
	Calcutta.	Muffasil.
	Rs.	Rs.
(1) Government contributions	88,06,356	15,90,099
(2) Local and municipal fund contributions	5,96,097	10,01,274
(3) Fees and contributions from patients	11,81,706	2,19,499
(4) Funds collected by hospital committees, etc.	55,230	1,35,486
(5) Miscellaneous	1,29,883	1,50,347
Total	1,07,69,272	30,96,705

Expenditure.—The total expenditure of the Calcutta hospitals and dispensaries under classes I, III and IV during the year under report was Rs. 1,07,69,416 as against Rs. 1,06,63,565 in the previous year and that of mufassil hospitals and dispensaries of the above categories including the subsidised was Rs. 29,84,470 as against 24,24,156 in the previous year. The expenditure under different heads is tabulated below:—

	Amount.	
	Calcutta.	Muffasil.
	Rs.	Rs.
(1) Salaries	39,21,864	18,14,363
(2) Medicine	14,18,977	4,13,866
(3) Diet	23,19,521	3,58,559
(4) Apparatus	2,71,469	20,797
(5) New buildings, additions, etc.	3,61,811	17,179
(6) Repairs to buildings	6,06,742	71,257
(7) Miscellaneous	18,69,032	2,88,449
Total	1,07,69,416	29,84,470

Chapter VIII

MATERNITY AND CHILD WELFARE.

In spite of local apathy in previous years, the Government extended its offer to pay two-third cost of construction of Maternity and Child Welfare Centres and the full pay of lady health visitor to any locality where the public was ready to bear the running cost and the rest of the establishment cost of such centres. Unfortunately public response, as in previous years, was again very poor.

A sum of Rs. 2,00,000 was provided under Development Scheme as grants for establishment of new centres and development of the existing centres including salaries of lady health visitors, but only 2 proposals could be sanctioned after proper scrutiny—one for establishment of a centre at Baidyabati, district Hooghly, and the other at Kanchrapara, district 24-Parganas, and Rs. 32,172 only was spent out of this amount. Besides this, Rs. 23,706 was sanctioned as capital grant for development of the two running maternity and child welfare centres—one at Ushagram, Burdwan, and the other at Bagda, Midnapur.

In addition to the budget provision of Rs. 2,00,000 for establishment of new centres, etc., under the Development Scheme, Rs. 36,000 were provided in the budget for the year 1951-52 for payment of salaries of lady health visitors attached to those centres, not borne under the Development Scheme.

During the year under review, altogether 37 maternity and child welfare centres functioned in different parts of the State of which 16 worked under "Development Scheme" and 21 under "Other Scheme".

Out of these 37 centres, 34 were managed by local committees and 3 by the State. Eight maternity beds were provided in the three Government maternity and child welfare centres and 108 in those managed by the local committees.

A sum of Rs. 4,151 was spent towards the salary of the staff for the 3 Government institutions and Rs. 50,532 was spent for the pay of the lady health visitors attached to other centres managed by local committees. Besides the expenditure incurred by Government, a sum of Rs. 1,24,431 was spent by the local committees for maintenance of the maternity and child welfare centres during the year under review.

Besides providing one lady health visitor in each centre, the Government maintained 2 midwives and 2 dais at Ariadaha, district 24-Parganas, and at Bagda, district Midnapur.

For contribution towards carrying out Health Exhibition, baby shows, etc., and for training of indigenous dais, a sum of Rs. 15,300 was also provided in the budget. Out of this provision the following amounts were spent:—

- (1) Rs. 1,200 paid as grant to Bengal Health Education Committee.
- (2) Rs. 1,000 paid as grant to District Maternity and Child Welfare Committee under I.R.C.S.
- (3) Rs. 1,500 paid as grant to Ram Krishna Mission Sishumangal Pratisthan, Calcutta.
- (4) Rs. 1,600 paid as grants towards carrying one Health and Child Welfare Exhibition by various organisations outside Calcutta.

and the balance was spent as grants towards conducting dai-training classes at different districts.

A summary of work done in the maternity and child welfare centres is furnished in the following table:—

MATERNITY AND CHILD WELFARE

(i) No. of visits.—

Ante-natal	6,461
Post-natal	5,225
Revisits	23,689

(ii) No. of confinements attended—

(a) In the centres	1,074
(b) Outside centres	1,233

In addition to the budget provision of Rs. 2,00,000 for establishment of new centres, etc., under the Development Scheme, Rs. 36,000 were provided in the budget for the year 1951-52 for payment of salaries of lady health visitors attached to those centres, not borne under the Development Scheme.

During the year under review, altogether 37 maternity and child welfare centres functioned in different parts of the State of which 16 worked under "Development Scheme" and 21 under "Other Scheme".

Out of these 37 centres, 34 were managed by local committees and 3 by the State. Eight maternity beds were provided in the three Government maternity and child welfare centres and 108 in those managed by the local committees.

A sum of Rs. 4,151 was spent towards the salary of the staff for the 3 Government institutions and Rs. 50,522 was spent for the pay of the lady health visitors attached to other centres managed by local committees. Besides the expenditure incurred by Government, a sum of Rs. 1,24,431 was spent by the local committees for maintenance of the maternity and child welfare centres during the year under review.

Besides providing one lady health visitor in each centre, the Government maintained 2 midwives and 2 dais at Ariabaha, district 24-Parganas, and at Bahga, district Midnapur.

For contribution towards carrying out Health Exhibition, baby shows, etc., and for training of indigenous dais, a sum of Rs. 15,300 was also provided in the budget. Out of this provision the following amounts were spent:—

- (1) Rs. 1,200 paid as grant to Bengal Health Education Committee.
 - (2) Rs. 1,000 paid as grant to District Maternity and Child Welfare Committee under I.R.C.S.
 - (3) Rs. 1,500 paid as grant to Ram Krishna Mission, Sishumangal Pratishan, Calcutta.
 - (4) Rs. 1,600 paid as grants towards carrying out Health and Child Welfare Exhibition by various organisations outside Calcutta.
- and the balance was spent as grants towards conducting dai-training classes at different districts.

Chapter IX

NURSING.

The position of the State of West Bengal so far nurses are concerned is steadily improving. More and more trained hands—both senior and junior—could be supplied to various State hospitals, in and outside Calcutta against their demands. The total number of nursing personnel came up to about 2,000 in 1951 against 1,200 in 1950.

The progress so far achieved is, however, still below the satisfactory level so as to meet adequately the requirements of all State-managed district and subdivisional hospitals, special hospitals, Health Centres, A.G. and F.R.E. Hospitals.

The centre for training of assistant nurses and assistant nurse-cum-midwives already started in 1949 at Fraser Hospital, Burdwan, for improving the rural nursing services was continued. The scheme was formulated by Government for giving a shorter course of training in nursing to girls with lesser educational qualifications than those eligible for higher courses of training. 105 untrained nurses who had been working in A.G. and F.R.E. Hospitals and found suitable for admission to this course were sent up for training in the above course, of whom 99 joined.

Educated girls including a considerable number of displaced girls were recruited for nurses and midwives' training both in senior and junior courses in the different institutions recognised by the West Bengal Nursing Council for the above purpose after they were found suitable by a Selection Committee.

A proposal offered by the World Health Organisation to improve the nurses' training in Medical College Hospital with the help of 4 International Sister Tutors was considered and accepted by the State. The introduction of the Pupil Training School Course in all Training Centres for nurses is under the consideration of the State.

Kanchrapara T.B. Hospital.—Like previous year, much difficulty had to be experienced to post adequate number of trained nurses to meet the increased demand of Kanchrapara T.B. Hospital consequent upon increase in the number of beds and unwillingness of nurses to serve in the T.B. Hospital. After their diet money was increased from 1-4 to Rs. 2 per day per head, 8 posts of Sisters out of 10 could be filled up with great difficulty.

M.R. Bangur Sanatorium, Digri.—This Sanatorium was started in August 1950 with 25 beds and the number of patients came up to 65 in the year 1951 and with the increase in the number of beds the number of nurses to this institution had to be proportionately increased.

Training of Nurses.—The training of girls in nursing including the various categories, viz., senior certificated, junior certificated and assistant nurses including midwifery continued during the year under review, vide statement I attached.

(1) Candidates returned during the year after taking higher training from the institutions are noted below:—

Miss Ashima Nandy.
Miss P. Hazra.
Miss P. D. Silva.
Miss Binapani De.

} From U.K. after finishing training in general nursing.

All of them except the first one who went on leave and did not resume duty were posted as staff nurses to Medical College Hospital, Calcutta.

(2) Miss Shuva Das Gupta was selected and sent to the College of Nursing, New Delhi, in 1951 to study B.Sc. (Nursing Course) with Scholarship awarded by the State Government for 4 years.

(3) Of the 4 candidates deputed by the State to the Delhi College of nursing in B.Sc. (Hons.) Course in 1948 one left her studies and the other three continued.

(4) The following candidates also were sent to New Delhi and Madras for higher training as noted against each with scholarship awarded by Government during the year 1951:—

- (1) Miss Niroj Bala Dey—Sister Tutor's Course, New Delhi.
- (2) Miss C. Areng—Sister Tutor's Course, New Delhi.
- (3) Miss A. Thomy—Sister Tutor's Course, New Delhi.
- (4) Miss E. Pope—Nursing Administration, General Hospital, Madras.
- (5) Miss I. Biswas—Nursing Administration, General Hospital, Madras.

During the period under report, none returned after finishing studies in the above courses.

STATEMENT I.

Names of Training Institutions.

Names of institutions.	Nature of training.	Number admitted.	Number qualified.
(1) Medical College Hospitals	Senior midwifery	34	31
	Junior midwifery	22	19
	Probationer nurses	47	34

(6) Victoria Hospital, Darjeeling	Senior training	3	..
	Junior training	..	2

STATEMENT II.

List of institutions recognised by the West Bengal Nursing Council for training of Nurses and Midwives.

- (1) Lady Dufferin Victoria Hospital.
- (2) R. K. Mission Shishumangal Pratisthan.
- (3) The Sir John Anderson Health School, Calcutta (Training Institution for Health Visitor).
- (4) Campbell Medical College Hospital (N. R. Sarkar Medical College Hospital).
- (5) Medical College Hospitals, Calcutta.
- (6) Presidency General Hospital, Calcutta.
- (7) Chittaranjan Seva Sadan.
- (8) Calcutta Medical School and Hospital.
- (9) Fraser Hospital, Burdwan.
- (10) Baldeodas Maternity Home, 22, Nilmoney Mitter Street, Calcutta.
- (11) R. G. Kar Medical College Hospital.
- (12) Jalpaiguri General Hospital.
- (13) Charteris Hospital, Kalimpong.
- (14) Victoria Hospital, Darjeeling.
- (15) Chittaranjan Hospital.
- (16) Sambhu Nath Pandit Hospital.
- (17) London Missionary Hospital, Jiaganj.
- (18) Santal Mission Hospital, Sarenga.

*(iii) Work in rural areas.—*School hygiene work in rural areas was done through District Board Sanitary Inspectors and Health Officers. The Health Officers, there is a Government order on 50:50 basis for appointment of a separate staff consisting of 1 School Medical Officer, 1 school nurse and 1 person for reception. But the response so far received is far from satisfactory. In particular, the school hygiene scheme is in operation in municipalities after taking part in the work during the year under report contained the work during the year under report.

*(iv) Work in Calcutta.—*Result of school medical inspection in Calcutta carried out by the two School Medical Officers under the Health Directorate of West Bengal is given below:—

Number of defective boys kept under observation	Number of boys with gross defects and notified to the parent for treatment	Total number of boys examined
431	2,102	6,308

Chapter X

MEDICAL INSPECTION OF SCHOOL CHILDREN AND SCHOOL HYGIENE WORK.

The School Hygiene work of the State of West Bengal may be divided into 3 parts—

- (i) Work in Calcutta.
- (ii) Work in municipal areas other than Calcutta.
- (iii) Work in rural areas.

(i) **Work in Calcutta.**—School hygiene work in Calcutta is at present carried on by two part-time School Medical Officers. The existing arrangement can hardly be considered satisfactory to serve the vast student population in the metropolitan city. To improve the position, posts of two whole-time School Medical Officers in place of the present part-time ones have been sanctioned and steps are being taken for recruitment to these 2 posts.

(ii) **Work in municipal areas.**—In municipalities employing qualified Health Officers, there is a Government scheme for subsidy to those bodies on 50:50 basis for appointment of a separate staff consisting of 1 School Medical Officer, 1 school nurse and 1 peon for regular school medical inspection. But the response so far received is far from satisfactory. Out of 18 municipalities with qualified Health Officers, only in two, viz., Bally and Darjeeling, the school hygiene scheme is in operation. Budge Budge municipality after taking part in the scheme during the last two years, discontinued the work during the year under report.

(iii) **Work in rural areas.**—School hygiene work in rural areas was done through District Board Sanitary Inspectors, in-charge of rural health circles which consist mainly of non-medical items of works, viz., weight, height taking, anti-cholera inoculation, anti-smallpox vaccination, etc. But with the gradual establishment of Thana and Union Health Centres, the Rural Medical Officers of Health attached to Thana or Union Health Centres are now available to take up the school medical examination work within their respective areas as one of their prescribed duties.

Scrutiny of school and hostel building plans.—Fifty plans were received for scrutiny of which 46 were approved.

Distribution of UNICEF skimmed milk powder among the school children.—UNICEF skimmed milk powder was distributed among the school children of the State through several voluntary agencies for the improvement of the health condition of the children, but in Calcutta, reconstituted pasteurised milk was distributed under supervision of the School Medical Officers of this Directorate in 12 schools. The number of such beneficiaries was 4,840 daily in 12 schools.

The detailed work done in connection with school hygiene in Calcutta, municipalities and rural areas is shown below:—

1. **Work in Calcutta.**—Result of school medical inspection in Calcutta, carried out by the two School Medical Officers under the Health Directorate of West Bengal is given below:—

Total number of boys examined	6,206
Number of boys with gross defects and notified to the guardian for treatment.		2,105
Number of defective boys kept under observation	..	451

A. Defects or Diseases—

	Number of boys examined	Age	Weight in pounds	Height in inches	
1. Poor health	1,521				
2. Diseases of eye—					
(a) Defective vision	701				
(b) Conjunctivitis	45				
(c) Squint	13				
3. Diseases of throat and mouth—					
(a) Enlarged tonsils—	868				
(b) Carious teeth	365				
(c) Unclean teeth	122				
(d) Ulcer tongue	118				
4. Diseases of ear—					
(a) Otorrhoea	49				
(b) Defective hearing	7				
5. Diseases of lungs—					
(a) Bronchitis	104				
(b) Asthma	1				
6. Diseases of heart—					
(a) Functional	7				
(b) Organic	2				
7. Diseases of skin—					
(a) Ringworm	76				
(b) Scabies	42				
8. Defective speech—					
(a) Stammering	12				
9. Enlarged spleen (Spleen index 3)					
10. Enlarged liver					
11. Malaria					

12. Average height and weight with the number of boys examined with their ages :—

Age.	Number of boys examined.	Weight in pounds.	Height in inches.
5	396	34	36
6	432	39.5	43
7	595	42.5	43.6
8	511	48	47.6
9	561	51	49
10	512	57.5	51
11	518	61	53
12	561	67.5	54
13	588	78	56
14	578	85.5	60
15	544	92	62
16 and over	410	100.5	63

B. Free distribution of spectacles to the poor boys having defective eye sight.—34 boys were supplied free spectacles.

C. Number of Hygiene lectures delivered by the School Medical Officers.—40.

D. Follow up work by the school nurse.—

(a) Number of houses visited	799
(b) Number of defective boys contacted during visit	575
(c) Number of houses where health talk was given to the boys	732
(d) Number of houses revisited	335
(e) Number of boys whose defects were cured by persuasive methods.	241

2. Work in municipalities.—Out of 18 municipalities, only 3 municipalities have sent their reports. Eight municipalities replied that they did not hold medical examination during the year and 7 municipalities have not replied. The result of medical examination of the school children of the 3 municipalities is given below as far as supplied by them:—

(1) Total No. of boys examined	390
(2) Total No. of boys notified for defects	200
(3) Total No. of boys kept under observation	72
(4) Nature of defects or diseases detected :—				
(i) Poor health chiefly mal-nutrition	30

(4) Nature of defects or diseases detected :—

(ii) Diseases of eye—			
(a) Defective vision	26
(b) Conjunctivitis	5
(c) Squint	1
(iii) Diseases of mouth and throat—			
(a) Enlarged tonsils	33
(b) Adenoids	7
(c) Carious teeth	90
(c) Pyorrhoea Alveolaris	6
(iv) Diseases of ear—			
Otorrhoea	9
(v) Diseases of lungs—			
Bronchitis	16
(vi) Diseases of heart—			
(a) Functional	16
(b) Organic	2
(vii) Diseases of skin—			
(a) Ringworm	8
(b) Scabies	30
(viii) Stammering			
..	2
(ix) Enlarged spleen			
..	9
(x) Enlarged liver			
..	8
(xi) Without pock mark or vaccination			
..	112
(xii) Average height and weight with the number of boys examined with their ages :—			

Age.	Number of boys examined.	Weight in pounds.	Height in inches.
5 ..	21	40.5	43
6 ..	30	41.5	44
7 ..	33	42	46
8 ..	31	44	46.5
9 ..	38	46	47.5
10 ..	42	51	49.25
11 ..	45	55.5	51
12 ..	48	61	53.5
13 ..	52	68	56
14 ..	21	75	58
15 ..	15	88	60.5
16 and above ..	14	97	61

3. (a) **Work in rural areas.**—Out of 13 district boards, only 2—Jalpaiguri and Midnapur—have sent their reports on medical examination of school children for 1951. The result of their examination is given below as far as supplied by them:—

1. Total number of children examined	4,622
2. Nature of defects or diseases:—			
(i) Poor health	1,182
(ii) Disease of eye—Defective vision	30
(iii) Diseases of throat and mouth—			
(a) Enlarged tonsils	110
(b) Carious teeth	268
(c) Pyorrhoea alveolaris	4
(d) Rhinitis	2
(iv) Diseases of ear—			
Otorrhoea	59
(v) Diseases of skin—			
(a) Unclean teeth	70
(b) Ringworm	146
(c) Scabies	18
(vi) Without pock mark or vaccination	112
(vii) Average height and weight with the number of boys examined with their ages:—

Chapter X (A)

INDUSTRIAL HYGIENE.

The Industrial Hygiene Section attached to the Directorate of Health Services, West Bengal, came into existence as a separate entity from the middle of June 1951 by the appointment of an Assistant Director of Health Services, Industrial Hygiene.

At the start, an industrial survey of West Bengal was conducted. By the end of September 1951, the survey was completed and many informations of all important factories in West Bengal with addresses and the number of employees in each were collected. Several industrial maps giving the distribution of industries in different districts have also been prepared to facilitate organisation of this section.

The second work that was taken up was to gather information regarding health and welfare services in different factories. This investigation was still being conducted at the end of the year and it will be sometime before this can be completed.

Previously there was no separate organisation for medical inspection of factories. This is one of the most important functions of the industrial hygiene programme of a State. It was realised after visits to factories that the standard of health and welfare services and environmental conditions in large number of factories needed improvement and proper medical inspection was essential. With a view to introduce this, a scheme for appointment of 3 Medical Inspectors of Factories was prepared by this section and was still being considered by the Government at the end of this year.

The industrial hygiene should not be confined to study of problems inside the factory but should give consideration to the effects of the industry on the environment outside the factory such as pollution of water or of the atmosphere, etc. When the State activity regarding industrial hygiene was known to local bodies, several municipalities like Dum Dum, South Dum Dum, Baranagor, Khardah, Bally, Bansberia, Tollygunge, Bhatpara and others sought its advice as regards their problem of environmental sanitation due to industrial expansion. In each case after proper investigation recommendations were made to the municipalities and in most cases they were accepted by the local bodies and the factories concerned. There was every indication at the end of this year that this important portion of the work would grow in course of time.

Chapter XI

MEDICAL AND PUBLIC HEALTH EDUCATION.

I. M.B.B.S. Course.—The following were the Medical Colleges in West Bengal during the session under report for study of M.B.B.S. Course of the Calcutta University:—

- (a) Medical College, Calcutta (Government) .. 130 seats for the 1st year students.
 (b) Nilratan Sarkar Medical College, Calcutta (Government). .. 150 seats for the 1st year students (100 in June and 50 in November session).
 (c) R. G. Kar Medical College, Calcutta (non-Government). .. 111 seats for the 1st year students.
 (d) Calcutta National Medical Institute (College), Calcutta (non-Government). .. 100 seats for the 1st year students.
- Total—491 Seats.

The seats were reserved for students hailing from other States in Government Medical Colleges:—

(a) Medical College, Calcutta	6	
(b) Nilratan Sarkar Medical College, Calcutta	2	
	8	
Total	8	Seats.

The double-shift training of students was introduced in the Medical Colleges, Calcutta, during the year 1948. But during the year under report admission of the new students under the double-shift scheme was discontinued. But facilities have been given to the students already admitted under the scheme to complete the Course.

II. Condensed M.B.B.S. Course.—Arrangement was made for admission of students into the condensed M.B.B.S. Course in the following Medical Colleges in this State:—

- (a) Medical College, Calcutta—100 seats (50 in June session and 50 in November session).
 (b) R. G. Kar Medical College, Calcutta—100 seats.

III. Licentiate Course.—The following were the recognised medical schools in West Bengal for imparting training for the L.M.F. Course of the State Medical Faculty, West Bengal:—

- (a) Nilratan Sarkar Medical School, Calcutta (Government).
 (b) Ronaldshay Medical School, Burdwan (Government).
 (c) Jackson Medical School, Jalpaiguri (Government).
 (d) Calcutta Medical School, Calcutta (non-Government).
 (e) National Medical Institute (School), Calcutta (non-Government).
 (f) Sannilani Medical School, Bankura (non-Government).

IV. Pharmacy Course.—The Pharmacy Training Centre at Jalpaiguri where Licentiate Course in Pharmacy of the State Medical Faculty, West Bengal, continued to function as usual.

The available number of seats in the course is 50 every year.

V. Research and Post-Graduate Training.—The following Post-Graduate and Research Institutions afforded facilities for training during the year under report:—

- (1) School of Tropical Medicine, Calcutta.
- (2) All-India Institute of Hygiene and Public Health, Calcutta.

The former imparted training for the following courses of the faculty of Tropical Medicine and Hygiene, Bengal:—

- (a) D.T.M. Course
- (b) L.T.M. Course.

The All-India Institute of Hygiene and Public Health provided advance course in the various branches of Public Health and Hygiene and research facilities, viz., (i) D.P.H., (ii) L.P.H., (iii) D.Sc (P.H.), (iv) D.M. & C.W., (v) Dif. Diet, (vi) M.E. (P.H.), (vii) D.I.H.

There were arrangement for post-graduate training on various subjects in Laboratories of the Calcutta Medical College and School of Tropical Medicine, Calcutta, for a period not exceeding six months on payment of usual fees. There was also arrangement for post-graduate training in the various wards of the Medical College Hospital for three months on payment of usual fees. Diploma in Ophthalmic Medicine and Surgery, Diploma in Gynaecology and Obstetric and Diploma in Tuberculosis Diseases are also being taught in the Calcutta Medical College.

VI. Dental Training.—The Calcutta Dental College has been provincialised by Government. The L.D.S. (Licentiate in Dental Surgery) Course was being taught in the Institution and the question of introduction of B.D.S. (Bachelor in Dental Surgery) Course there was under consideration during the year under report which is now on the way of finalisation.

VII. Faculties.—The following Faculties continued their activities during the year under report:—

- (1) State Medical Faculty, West Bengal.
- (2) General Council and State Faculty of Homeopathic Medicine, West Bengal.
- (3) General Council and State Faculty of Ayurvedic Medicine, West Bengal.
- (4) Faculty of Tropical Medicine, West Bengal.

No Committee was set-up during 1951 for considering the question of Medical Education in the State.

Government sanctioned the following grants in favour of the following non-Government medical institutions during the year 1951-52:—

	Rs.
(1) R. G. Kar College, Calcutta	15,000
(2) Calcutta National Medical Institute (College), Calcutta	20,000

The University of Calcutta was also awarded a grant of Rs. 30,000 for the purpose of medical education during the year under report.

Women are eligible for admission in the medical institutions like men. No seats were kept reserved for women.

Chapter XII

OTHER PUBLIC HEALTH ORGANISATIONS.

The Asansol Mines Board of Health is a statutory body constituted under Government Notification No. P.H. 1011/3M-7/49, dated 2nd June 1950. During the year under review, the Board was formed of 10 members with the District Magistrate, Burdwan, as its ex-officio Chairman.

The total area covered by the Asansol Mining Settlement was 413 square miles comprising of 7 police stations and 2 municipalities—Asansol and Raniganj—with a total population of 5,48,697 (1951 census).

The Mines Board of Health was primarily responsible for the medical and public health measures, educational and other welfare activities of the mining settlements.

The main income of the Board was derived from a levy of tonnage cess and a cess on the royalties from mines. During the year under review, the tonnage cess was levied at Rs. 4 per 100 tons on the average output of mines and the cess on the royalties at 44 per cent. of the road cess payable by royalty receivers.

Income and expenditure of the Board of Health under main items for the year 1951-52 are shown below:—

<i>Income.</i>		Rs.
Opening balance		1,00,893
Income from tonnage cess and royalty cess		3,97,861
Medical		5,057
Law and Justice		7,143
Grants from coal mines welfare fund		4,100
Miscellaneous		8,362
		<hr/> 5,23,416 <hr/>
<i>Expenditure.</i>		
General administration		31,664
Medical and Public Health		2,88,431
Civil Works		69,311
Other expenditure		36,175
		<hr/> 4,25,581 <hr/>
	Closing balance	97,835
		<hr/> 5,23,416 <hr/>

Vital Statistics.—The Sanitary Assistants in employ of the Board of Health collect the statistics of births and deaths at thana parade. The vital occurrences for the year as compared with previous year are given below:—

	1950.	1951.
Total Birth	7,153	8,317
Total Death	5,071	5,005
Infant Death	666	691
Birth rate	15.5	17.9
Death rate	10.9	10.8
Infant mortality rate	93.1	83.0
Cholera Death rate	0.90	0.43
Small-pox	0.15	0.82
Malaria	0.56	0.34
Other fevers	4.74	4.67
Dysentery and Diarrhoea	0.29	0.23
Other causes	3.44	3.34

General Health.—The general health of the mining settlement continued to be satisfactory. The birth rate rose to 17.9 in 1951 as against 15.5 in 1950 whereas the death rate remained almost the same. The infant mortality rate fell from 93.1 to 83.0. Except for smallpox, death rates from all other infectious diseases showed a healthy decline.

Control of Epidemics.—*Cholera.*—There were 730 cases with 247 deaths from cholera compared with 1,102 cases and 512 deaths of 1950. Usual anti-cholera measures, isolation of the cases, disinfection, quarantine, anti-cholera inoculations, etc., were taken. In all 136,710 inoculations were performed.

Smallpox.—Smallpox was more prevalent than in 1950. There were 3,822 cases with 347 deaths from smallpox. Beside isolation, disinfection, etc., 250,110 vaccinations were performed.

Malaria.—A total number of 12,594 cases of malaria were treated with 27 deaths recorded in the colliery dispensaries during 1951 against 16,778 cases with 31 deaths in the preceding year.

Control of malaria.—Malaria control was undertaken by two bodies, viz., the Coal Mines Welfare Fund and the Board of Health. The control measures consisted of 4 rounds of spray of DDT during the transmission season from June to November.

Suppressive treatment with paludrine were given to 12,567 persons. 11,076 blood films were examined of which 1,095 were positive. 49,341 mosquitoes were caught; of these 15,555 were dissected. Two were positive.

Besides 6 anti-malaria units, each consisting of one Malaria Supervisor, one Malaria Inspector assisted by collieries worked in 6 groups in highly malarious villages. Anti-malaria campaign carried out consisted of regular cleaning out of tanks, *dolas*, etc., treatment of breeding places with oil mixed with DDT powder. As a result of continuous campaign during the last few years, almost all the villages under these 6 units were showing less incidence of malaria.

Sickness in collieries.—There were 225,084 cases of sickness with 415 deaths against 200,212 with 417 in the preceding year. Malaria cases treated showed decline. A total number of 12,594 cases of malaria were treated with 27 deaths against 16,778 with 31 deaths during 1950.

Miners' Welfare.—(a) *Welfare activities of the Coal Mines Welfare Fund in Raniganj Coal Field.*—The Coal Mines Welfare Fund was derived from cess levied at the rate of annas 6 per ton of coal and coke despatched by road or rail by collieries. After deducting from the central charges, the fund was distributed to the area in proportion to the amount of coal produced. The allocated fund was apportioned between the housing and other general welfare account in the ratio of 2 to 1.

Two regional hospitals at Chora and Searsole run out of the welfare fund treated a total number of 25,469 patients.

The following grants were distributed out of the welfare fund:—

		Non-recurring	Recurring	Purpose.
		grant.	grant.	
		Rs.	Rs.	
Asansol Mines Board of Health	..	12,360	3,500	For establishment of blood bank.
Asansol Leprosy Settlement	..	25,000	..	For construction of segregation block for colliery patients in Asansol Leprosy Settlement.
Asansol Mines Board of Health	..	54,382	..	To be utilised for extended sanitary services.

Other welfare activities of the Coal Mines Welfare Fund consisted of the following:—

- (i) **Anti-T.B. work.**—A. T. B. Clinic was under construction at Searsole Regional Hospital. A team was trained for BCG vaccination at Chora Regional Hospital.
- (ii) **Provision of creche and pit head bath.**—More new creches and pit head baths were started.
- (iii) **Mobile cinema.**—One mobile cinema was maintained for the Raniganj Coal Field.
- (iv) **Opening of multipurpose welfare societies.**—These institutions are to provide (1) Women Welfare Centres, (2) Adult Education Centre and (3) Recreation Centres including childrens' park. One such centre at Mithani Colliery was completed during 1951 and one at Sitalpur Colliery was nearing completion.
- (v) **Women's welfare.**—The fund maintained 5 Kamin Kalyan Centres for training of "Kamins" in anti-crads, clay modelling, etc., and imparting primary education to the miners' children.
- (vi) **Improvement of housing of colliery labour.**—The Board's programme of housing of labour in providing windows, kitchens, bath, etc., according to the Coal Mines Welfare Commissioner's specifications was kept to the schedule by most of the collieries.
- (vii) **Medical facilities in collieries.**—The Asansol Mines Board of Health contributed to the L.M. Hospital, Asansol and Raniganj Hospital for cases treated from the collieries. The Board's Bacteriological laboratory examined free of charge clinical samples sent from colliery hospitals and Coal Mines Welfare Fund regional hospitals.

Food samples were also examined at the Chemical Section of the Laboratory under the Bengal Food Adulteration Act.

(viii) Education facilities of collieries.—During the year under review the Fund appointed one Education Officer and the Multi-purpose Welfare Centres offered facilities for education to the miners. Nursery schools were run by the Kamin Kalyan Centres under the Coal Mines Welfare Fund. Besides one high school, two middle schools and 50 primary schools were maintained by the coal companies. In all about 100 schools were available for primary education in the Raniganj Coal Field.

Leprosy Control.—During the year under report, the Asansol Mines Board of Health maintained in co-operation with the local Leprosy Relief Association, one Leprosy Settlement, one Leprosy Hospital, 5 Segregation Camps and 14 Leprosy Clinics for which a staff of 5 whole-time Leprosy Officers, one part-time Leprosy Officer and 14 assistants were maintained. Construction of a Segregation Block for the infectious cases from collieries provided by the Coal Mines Welfare Fund was nearing completion towards the end of the year.

A summary of work done on leprosy, maternity and child welfare centre and analysis of food clinical samples during 1951 is furnished below:—

Leprosy.—14 *Leprosy Clinics.*—Total number of patients treated—1,609 (male—1,176, Female—433, Infectious—435, Non-infectious—1,174).

5 Segregation Camps.—Total new cases treated—60.

Asansol Leprosy Hospital.—Total cases treated—50 (male).

Maternity and Child Welfare -

Prenatal visits—1,084.

Cases confined and attended—5.

Infant attended—80.

Toddlers attended—142.

Laboratory—In all 1,672 clinical samples were examined. A total number of 302 food samples were examined of which 26 were found adulterated. Analysis of milk and ghee samples showed cent. per cent. adulteration.

Samples of water examined	3
Special samples examined (Dried milk powder, etc)	3
Samples tested for argemone oil—	
Number of samples	259
Found positive	Nil

Cooch Behar.—The district was merged in the State of West Bengal during 1950, but absorption of the staff of the then Cooch Behar State was not finalised during the year under report.

The Medical and Public Health administration of the district was carried out under the control and supervision of the Civil Surgeon, Cooch Behar. He was assisted by a Sub-Assistant Health Officer. During the year under report, there were 5 Subdivisional Health Circles in charge of 5 Sanitary Inspectors, and 3 Thana Health Circles in charge of 3 Assistant Sanitary Inspectors.

A Maternity and Child Welfare Centre worked at the district Headquarters with the staff consisting of one lady health visitor, one nurse, one midwife and one *dai*.

The anti-malaria work by spraying DDT in houses and malarial drains, *jheels*, tanks, *dobas*, etc., was carried out by a staff of two Malaria Inspectors, two mosquito collectors, one surveyor, two laboratory assistants and 30 coolies.

The total expenditure incurred on account of public health administration in the district was 1,10,284.

The total population according to 1951 census was 671,158 of which 361,860 males and 309,298 females.

A summary of vital statistical occurrences in the district during the year under report is given below:—

Total Births	8,178
Total Deaths	4,627
Still Births	136
Infant Deaths	683
Deaths from small-pox	42
Deaths from cholera	7

Registration of births and deaths was poor. The system of recording births and deaths by declaring each Thana Health Circle Inspector as Registrar of Births and Deaths was not introduced in this district during the year under review.

Incidence of cholera and smallpox was normal. A total number of 124,132 inoculations was performed. In all 167,620 persons were vaccinated of which 111,549 were males and 56,071 females.

A summary of anti-malaria activities carried out during the year under report is furnished below:—

(A) **Laboratory work.**—(1) Anopheles adult mosquitoes caught and verified at the malaria laboratory:—

Species verified:—

- (i) *A. phillippinensis*.
- (ii) *A. annularis*.
- (iii) *A. pallidus*.
- (iv) *A. minimus*.
- (v) *A. aconitus*.
- (vi) *A. varuna*.
- (vii) *A. maculatus*.
- (viii) *A. subpictus*.
- (ix) *A. vagus*.
- (x) *A. hyrcanus*.
- (xi) *A. barbirostris*.
- (xii) *A. culicifacies*.

(2) Anopheles larvae (mature) caught and varified, at the laboratory :---

Species verified :—

- (i) *A. hyrcanus.*
- (ii) *A. barbirostris.*
- (iii) *A. vagus.*
- (iv) *A. maculatus.*
- (v) *A. pallidus.*
- (vi) *A. subpictus.*
- (vii) *A. aconitus.*
- (viii) *A. minimus.*
- (ix) *A. phillippinensis.*
- (x) *A. varuna.*
- (xi) *A. anularies.*
- (xii) *A. culicifacies.*

(B) Other anti-malaria measures.

Place.	Area (sq. miles).	Treatment of breeding place.
(i) Cooch Behar town	3	(a) Clearing of tanks <i>dobas</i> and <i>jheels</i> , etc. (b) Spraying of Malarial "B" on Nikashi drains, house drains, storm water outlet, cesspit wells, <i>jheels</i> , tanks and <i>dobas</i> , etc. (c) Jungle clearing from road side and open plots of Government lands. (d) Spraying of DDT solution K(DDT) at 474 houses. (e) Spraying of DDT suspension W(DDT) at 1,935 houses.
(ii) Khagrabari	3/4	(a) Clearing of tanks and <i>dobas</i> , etc. (b) Spraying of Malarial "B" on water surface. (c) Jungle clearing from vacant lands. (d) Spraying of DDT suspension W(DDT) at 73 houses.
(iii) Newtown	1/2	(d) Sprayed DDT suspension W(DDT) at 38 houses.
(iv) Gandhi Colony	1/4	(d) Sprayed DDT suspension W(DDT) at 102 houses.
(v) Debendra Nagar	1/4	(d) Sprayed DDT suspension W(DDT) at 22 houses.
(vi) Subhas Colony	1/4	(d) Sprayed DDT suspension W(DDT) at 28 houses.
(vii) Doriahat Colony	1/4	(d) Sprayed DDT suspension W(DDT) at 37 houses.
(viii) Kharimala Khagrabari	1/4	(d) Sprayed DDT suspension W(DDT) at 48 houses.

- (3) Quantity of Malarial "B" used 1,040 gallons.
 (4) Quantity of red kerosine grade III used 362 gallons.
 (5) Quantity of DDT powder 5 per cent. used 181 lbs.
 (6) Quantity of DDT Geigy 50 per cent. wettable used 196 lbs.
 (7) Quantity of Flit with 5 per cent. DDT used 20 gallons.

Maternity and Child Welfare Work.—The activity shown in this connection is given in the following table:—

	Centre's work.	Domiciliary work.
Ante-natal visit	1,181	858
Infant visit	6,090	1,093
Post-natal visit	810	895
Infants treated with cod-liver massage	151	..
Births delivered at home by Centre's staff	158

Milk to the total quantity of 1,436 lbs. was distributed and 8 lbs. of cod-liver oil were used for treatment of infants.

Singur Health Centre.—The centre is located in a rural area at a distance of 21 miles north-west of Calcutta. It consists of 4 contiguous union boards—Singur, Balarambati, Bora and Begumpore, situated in the Serampur Subdivision of Hooghly district. The total area is 32.98 sq. miles. There are 68 villages with about 74,994 and roughly 12,000 families in about 8,800 houses.

The Singur Health Unit was re-organised in the year 1944 on a co-operative basis between the Government of West Bengal and Government of India represented by the All-India Institute of Hygiene and Public Health, Calcutta.

The objectives of this re-organisation were—

- (i) to determine and demonstrate methods of public health administration with essential medical protection to the rural population.
 (ii) to afford opportunity for training medical and public health personnel, particularly post-graduate.

The Public Health Administration Section of the All-India Institute of Hygiene and Public Health is responsible for the overall administration of the centre and the Assistant Professor of Public Health Administration from the institute is the Officer-in-charge of Administration.

A. Services. (1) *Improvement in the collection of vital statistics.*—The scheme of collection of vital statistics was carried out mainly through village choukidars. The information was supplemented by the village health committee members in charge of vital statistics for their respective areas. Verification of births and deaths were done by the Sanitary Inspectors and Lady Health Visitors during their village tour.

Some of the chief vital events during 1951 are tabulated below:—

Births	2,396	38.19	(rate per 1,000).
Deaths	823	13.11	(Ditto.)
Infant deaths	257	107.26	(Ditto.)
Maternal death	12	4.95	(Ditto.)
Malaria death	10	15.93	(rate per 100,000).
Cholera death	15	23.90	(Ditto.)
Diarrhoea and Dysentery death	40	63.75	(Ditto.)
Enteric fever death	22	35.06	(Ditto.)
Small-pox death	10	30.28	(Ditto.)

(2) *Control of communicable diseases.*—The programme for control of cholera, smallpox, typhoid and malaria worked quite satisfactorily except in some villages where the people did not give any co-operation. But Singur being located between Sheoraphuli, a business centre, and Tarakeswar, a religious centre, there is always a danger of perpetual infiltration of cholera, typhoid, smallpox from these 2 places.

Diseases.	Attacks.	Deaths.	Anti-cholera inoculation.		
			Vaccina- tion.	TAB vaccination	Disinfection. Houses. Dobas. Tanks.
Cholera	45	15	7,143		
Typhoid	43	22			
Small-pox	22	19			
			3,654 (Pri.)	29,905 (Re.)	

Malaria.—Malaria control measures were carried out on the following lines:—

- (i) DDT spraying (2 per cent. mixture) in all the houses.
- (ii) Curative treatment with quinine, paludrine and other anti-malarial drugs.
- (iii) Prophylactic use of paludrine as far as possible.

Spraying operation was started with 68 villages in the area, 43 villages were sprayed 2 times and 25 villages once. Total area sprayed was 19,362,002 sq. ft.

A total quantity of 5,356 anti-malaria tablets were distributed amongst the people both as prophylactic and curative measures.

The result of anti-malaria operation was very satisfactory. The number of malaria deaths decreased from 98 in 1949 and 27 in 1950 to 10 deaths in 1951. The spleen rates taken in the villages showed a marked decrease.

(3) Environmental sanitation consisted of the following items of works:—

(A) (a) Number of tube-wells sunk	4
(b) Number of tube-wells resunk	23
(c) Number of tube-wells repaired	792
(d) Number of aprons to tube-wells constructed	22
(B) Bore hole latrines—	
Newly bored	45
Re-bored	107
Dug-well latrine constructed	21

The maternity and child welfare activities of the centre included home visits and clinic attendance by lady health visitors for antenatal and post-natal cases, infants and toddlers. Domiciliary midwifery cases were also attended in addition to those by the Maternity Home.

The details of work done by lady health visitors are shown below:—

Home visits (1st visit)			Clinic attendance(1st visit)				
Ante-natal.	Post-natal.	Infant.	Antenatal.	Post-natal.	Infant.	Toddler.	Children.
2499	1637	2515	603	251	309	169	117

The *dais* paid 1755 antenatal and 959 post-natal visits and attended to 235 cases of confinements.

(4) S. N. Mallik Maternity Home admitted 198 cases of labour out of which 36 were of complicated pregnancy and the rest normal.

(5) *School Health*.—The school health programme was carried out in 28 schools with 46 hygiene trained teachers during 1951. 668 students were medically examined of whom 448 were found defective. 61 cases were referred to Calcutta hospitals for treatment.

A total number of 2,477 students received treatment in the schools and central clinics.

(6) *Laboratory work*.—(a) Laboratory services was given free of cost to the general population of the locality on the recommendation of the local practitioners. A total of 3,844 samples of blood, sputum, urine, faeces, etc., were examined.

(b) Laboratory service for Maternity and Child Welfare.—A total of 1,687 samples of blood, urine, sputum, etc., were clinically examined.

(c) Laboratory service for school health.—66 samples were clinically examined.

(d) Laboratory service for epidemic work.—A total of 15 samples including 4 samples of foeces for detection of cholera vibrio were bacteriologically examined.

(7) *Food Control*.—Beside inspection of grocery and sweetmeat shops and destruction of rotten fish and unwholesome foodstuff, 25 samples of mustard oil were analysed of which 1 was found adulterated. One case under Bengal Food Adulteration Act was started in the year.

(8) *Health Education* through usual health education procedure, viz., magic lantern show, demonstration with posters and charts, cinema show, baby show and health exhibition was arranged during the year, under review. A baby show and health exhibition was organised during the year. It was opened by Dr. B. C. Das Gupta, Director of Health Services, West Bengal, on 8th April 1951. The exhibition continued for 3 days.

(9) *Union Health Advisory Committee and Village Health Committee* which were of help to the Health Centre staff held their meetings regularly.

B. Training of personnel.—The field training was given to the following categories of students:—

(1) *From All-India Institute of Hygiene and Public Health.*—

D.P.H., D.P.H. and Hygiene students	... 58
D.M.C.W. students	... 1
Special Course students in M. & C. W.	... 6
Nutrition and Dietetics	... 3
International Training Course on Nutrition	... 23
Public Health Engineering	... 6
M.B. (P.H.) students	... 7
D.I.H. students	... 16

During the period of field training the students lived in tents and carried on the epidemiological investigations and other studies in the neighbouring villages. The programme was based on observation and demonstration and limited participation in the activities of the Health Centre under the guidance and supervision of the different heads of the department and the staff of the Institute in collaboration and co-operation of the Health Centre staff.

(2) *Sir John Anderson Health School for Health Visitors.*—Health Visitor students—15.

The students were in residence from 2nd December 1951 to 30th December 1951.

(3) *University of Calcutta.*—Social Hygiene students—17.

(4) *Students of Social Work Course.*—30.

Demonstrations on rural hygiene were arranged for the students on Social Work Course of Calcutta University and also for the trainees of Social Hygiene Section of the Health Directorate. One day lecture demonstrations were given on the following subjects:—

(a) Public Health Administration.

(b) School Health, Maternity and Child Welfare Work.

(c) Health Education.

(d) Sanitation—

(i) Sanitary disposal of refuse.

(ii) Safe course of drinking water.

(e) Control of malaria by DDT residual spray.

(f) Public Health Laboratory.

(5) *Dais students.*—The training period covered 6 months.

(6) *Refresher Course for the trained hygiene teachers of the Primary Schools.*—Refresher Course for the trained hygiene teachers were completed in four batches in four unions.

Visitors.—The Centre had a number of distinguished visitors both from within the country and abroad as far as Malaya and U. S. A.:—

U. S. A.	15
India	11
W. H. O. (Geneva)	6
W. H. O. (Bangkok)	2
	<hr/>
	34

During the period of field training the students lived in tents and carried on the epidemiological investigations and other studies in the neighbouring villages. The programme was based on observation and demonstration and limited participation in the activities of the Health Centre under the guidance and supervision of the different heads of the department and the staff of the Institute in collaboration and co-operation of the Health Centre staff.

(2) Dr. John Anderson Health School for Health Visitors—Health Visitor students—16.

The students were in residence from 2nd December 1951 to 30th December 1951.

(3) University of Calcutta—Social Hygiene students—17.

(4) Students of Social Work Course—30.

Demonstrations on rural hygiene were arranged for the students on Social Work Course of Calcutta University and also for the trainees of Social Hygiene Section of the Health Directorate. One day lecture demonstrations were given on the following subjects:

- (a) Public Health Administration.
- (b) School Health, Maternity and Child Welfare Work.
- (c) Health Education.
- (d) Sanitation—
 - (i) Sanitary disposal of refuse.
 - (ii) Safe course of drinking water.
- (e) Control of malaria by DDT residual spray.
- (f) Public Health Laboratory.
- (g) Vis students.—The training period covered 6 months.
- (h) Refresher Course for the trained hygiene teachers of the Primary Schools.—Refresher Course for the trained hygiene teachers were completed in four batches in four unions.

Chapter XIII

NUTRITION.

Work on Nutrition during the year under review is summarised under the following heads:—

- (1) Summary of major developments.
- (2) Nutrition survey.
- (3) Nutrition measures.
- (4) Hospital kitchen.
- (5) Nutrition canteens.
- (6) Health Education and training of personnel in Nutrition.
- (7) Summary of the activities of the State Nutrition Advisory Committee.

1. **Summary of Major Developments.**—*Proposal for the development of nutrition work in the State.*—The proposal for the development of nutrition work includes two-fold programme—short-term and long-term, the former being a part of the latter. The short-term programme was under active consideration of the Government. It was realised that the accommodation problem required to be solved in order to implement the scheme in a satisfactory manner. In view of this the proposal for construction of a Nutrition Research Laboratory has been taken up by the Government.

2. **A. Nutrition Survey.**—(i) *General.*—The Nutrition Officer (Assistant Director of Health Services, School Hygiene and Nutrition) made a general survey of the nutritional status of the infants, children and nursing and expectant mothers in a large number of relief camps, schools and maternity and child welfare centres situated in both urban and rural areas of the State and advised distribution of protective food to the mal-nourished people, viz., free distribution of milk, vitamin tablet and Cod liver oil.

(ii) *Survey of the Nutritional Status of the School Children.*—A nutrition survey of 6,296 children belonging to a number of primary and secondary schools was made in Calcutta with particular attention to nutritional status and incidence of deficiencies amongst the children. 20 per cent. of these children were found to be suffering from poor health due to general mal-nutrition, but these children did not show any specific deficiency. 14.3 per cent. of the children showed specific deficiency. Of these 1.01 per cent suffered from xerosis, 0.07 per cent. from night blindness, 6 per cent. from dental caries, 1.6 per cent. from angular stomatitis, 3 per cent. from ulcer of the tongue, 26 per cent. from bleeding gums and 4.8 per cent. from bony abnormality due to old rickets. Many of the children showed multiple deficiency.

B. Diet Survey.—(i) A general survey of the average dietary of the inmates of the refugee camps in the districts and also a preliminary general survey of the average dietary consumed by the people in Darjeeling district were made. A critical examination of the possible causes of high incidence of tuberculosis in Darjeeling district was also made with particular reference to the possible influence of the local dietary.

(ii) A critical study of the existing diet scales of—

- (a) a number of Government, Government-aided and municipal hospitals,
- (b) The nutrition canteen in Darjeeling,
- (c) the Armed Constables at Barrackpore,

and also of the mid-day meals in a number of Government and Government-aided schools was made and suggestion for improvement was given.

3. **Nutrition Measures.**—A. *Free Milk Distribution.*—1,460,260 pounds of milk powder received free of cost from the UNICEF was distributed amongst under-nourished children, infants up to one year, nursing and expectant mothers and other mal-nourished women in the different relief centres, orphanages, maternity and child welfare Centres and a large number of mal-nourished students in the institutions and Homes throughout the State.

B. *Free Distribution of UNICEF Rice.*—Seven hundred and forty tons of rice received free of cost from the UNICEF were distributed amongst a large number of children belonging to the State and State-aided Orphanages, Relief Centres and other institutions.

C. *Free distribution of Vitamin tablets.*—About 300,000 multi-vitamin tablets were distributed by Indian Red Cross Society through various relief centres and a large number of these were also distributed through the schools, relief centres and other institutions by the State Government.

D. *Mid-day Tiffin Scheme in the School.*—Fifty-three Government and Government aided schools in the different districts participated in the mid-day tiffin scheme of the Education Directorate under direct supervision of the District Officers and with the help of the Government grant. An amount of Rs. 24,000 was sanctioned by the Education Department as grants-in-aid for carrying out this scheme.

E. *Proposal for large scale production of Food Yeast.*—A scheme for establishing a small-sized pilot plan for production of dried food yeast in the State was submitted to the Government as a Nutrition measure to make up the deficiency of protein of high biological value and B group of vitamins in the average dietary of the people of State.

4. **Hospital Kitchen.**—The diet kitchen established last year at the Medical College Hospital, Calcutta (in connection with the dietetics course of the All-India Institute of Hygiene and Public Health), has been working satisfactorily. Special diets were prepared by a qualified dietitian for a number of patients for treatment in this hospital.

5. **Nutrition Canteens.**—The question of establishing a number of Nutrition canteens has been under consideration and a number of cheap and nutrition menu for such canteens have been suggested.

6. **Health Education and training of personnel on Nutrition.**—(a) A number of talks on Nutrition was given in the relief camps and milk canteens and also to the school children and their parents and guardians with particular reference to the utilisation of the cheap nutritious articles of food in the best possible way.

(b) A course of lectures on Practical Nutrition was given to a number of Social workers on training under the Health Directorate.

7. **Summary of the activities of the State Nutrition Advisory Committee.**—(i) *Reorganisation of the Nutrition Advisory Committee.*—With the object of better representation the State Nutrition Advisory Committee have included representatives from the Education, Food and Civil Supplies Departments of the Government.

(ii) *Reorganisation of the Mid-day Tiffin Scheme in the Schools.*—A proposal for preparation of a suitable menu for this purpose has also been under active consideration of the Committee.

(iii) *Investigation in the relationship of Khesari Dal to the incidence of Lathyrism.*—The Committee discussed the question of the possibility of Khesari Dal having influence on the incidence of Lathyrism in West Bengal from different angles and formed a sub-committee for the purpose of investigating into the subject.

Chapter XIV

LABORATORIES.

For the manufacture of anti-cholera vaccine, vaccine lymph and anti-rabic vaccine and for the purpose of medico-legal work and analysis of foodstuff, water and drugs, the State maintained its own laboratories. A list of such laboratories and the nature of work carried on in each is given below:—

(1) **West Bengal Public Health Laboratory.**—The work of the laboratory may be classified into 2 categories:—

(a) Bacteriological.

(b) Chemical.

The bacteriological work consisted of—

(i) examination of all water samples received from municipal and other waterworks and

(ii) examination of rats collected from Calcutta Port area.

(2) **West Bengal Vaccine Laboratory.**—Manufacture of anti-cholera vaccine for supply within and beyond the State.

(3) **West Bengal Vaccine Institute.**—Vaccine lymph for meeting the State's requirements mainly is produced in this Laboratory.

(4) **Drug Control Laboratory.**—All drugs, patent or otherwise are analysed at this laboratory.

(5) **Pasteur Institute.**—Anti-rabic vaccine required for prophylactic treatment against Hydrophobia is produced at this Institute.

(6) **Chemical Laboratory.**—All samples of—

(i) blood, urine, fæces, etc.

(ii) explosives, petrol, kerosene, etc.

(iii) excisable drug, such as preparations of opium, cocaine, etc.

are examined and analysed in the Chemical laboratory.

Beside the above, the following public health laboratories are run by local bodies. In respect of Darjeeling Municipal Laboratory, the State contributes annually Rs. 1,800 towards its maintenance:—

(1) Darjeeling Municipal Public Health Laboratory.

(2) Jalpaiguri District Board Public Health Laboratory.

(3) Murshidabad District Board Public Health Laboratory.

(4) Nadia District Board Public Health Laboratory.

(5) Birbhum District Board Public Health Laboratory.

Asansol Mines Board of Health run at its own cost a Public Health Laboratory to serve its own area.

(1) **West Bengal Public Health Laboratory.**—The activity of the laboratory is classified into two categories:—

(i) Bacteriological

(ii) Chemical.

For the purpose of better working of the West Bengal Public Health Laboratory the work is classified under the two categories, bacteriological and chemical.

(i) *Work in the Bacteriological Section of the Laboratory.*—A. *Examination of water.*—The sources of samples were—

(1) 15 Municipal and three other Waterworks, e.g., the first at the B. E. College, Sibpore, the 2nd at the Polytechnic, Asansol and the third at Budge-Budge which belonged to the Calcutta Port Commissioners.

(2) Jute Mills within Naihati Municipality.

(3) 62 Jute Mills under the Indian Jute Mills Association and a few other mills.

Examination of water from the sources (1), (2) and (3) with one exception was carried out once a month.

(4) Jails and Sub-jails, the samples were collected once a year.

(5) Other Government Departments, commercial concerns and private parties

The numbers of samples from the above stated sources examined as well as those examined in the previous year were as follows:—

	1951.	1950.
Municipal and other Waterworks	985	1,118
Jute Mills	1,758	1,899
Jails	28	38
Other Government Departments	156	169
Mercantile concerns and private parties	243	188

B. The special examinations done and the numbers of samples examined as compared to those examined in the previous year are given below:—

Nature of work.	Number of samples.	
	1951.	1950.
Examination of rats from the Calcutta Port Area	2,353	2,394
Disinfectants	Nil	Nil
Foodstuff	Nil	1

It will be interesting to make some observations on the subject of examination of rats which has been carried out at the bacteriological section of the laboratory, now for over 20 years from the Port area of the city of Calcutta. It should be mentioned at the outset that this laboratory has not detected on dissection a rodent with active or incipient *P. pestis* infection, from the above stated area, during the last 17 years. The usual rat in Calcutta, as has been well established, is *Gunomys varius*, the plague resistant species. An increase in the rats of the *Rattus rattus* species occurred

during the past 3 or 4 years but the previous preponderance of *Gunomys* various is again being established as will be seen from the following figures:—

Rat species.	Percentage of each received for examination.	
	1951.	1950.
<i>Gunomys</i> various	84.3	76.4
<i>Rattus rattus</i>	8.8	19.1
<i>Rattus norvegicus</i>	6.3	3.4
<i>Bendicota indica</i>	0.5	1.0

(II) *Work in the Chemical Section of the Laboratory.*—*Water.*—The sources of the samples of water were the same as those stated in connection with the work at the Bacteriological Section.

The numbers of samples analysed during the year under report (1951) as compared to those analysed during the previous year were as follows:—

Source.	1950.	1951.
Waterworks	309	396
Jute Mills	921	1,040
Jails	7	14
Other Government Departments	65	40
Other sources	120	137
	<u>1,422</u>	<u>1,627</u>

Sewage.—The numbers of samples of sewage and effluents examined during the year under report and the previous year were as follows:—

	1950.	1951.
	70	85

The examination of the samples of sewage and effluent of a newly installed trickling filter plant at a suburban hospital to investigate its efficiency was started towards the end of the year at the request of the Public Health Engineering Department. The arrangement for the collection of the samples for analysis was made by the stated Department. The number of samples from this source was only 16 during the year. The work is being continued.

Foodstuff.—The total number of samples of foodstuff received for examination during the year was 4,376 as compared to 4,742 received during the year 1950. The sources from which these were received and the number from each source are given below:—

District Boards and Municipalities	...	2,947
Government hospitals	...	907
Other Government Departments	...	464
From courts in connection with cases under the B. F. A. Act	..	45
Other sources	...	13
		<u>4,376</u>

The nature of the samples received from the district boards and municipalities, the number of each and the percentages which these form of the total are given in the following table:—

	District Boards.				Municipalities.			
	1951		1950		1951		1950	
	per cent. of the total.	per cent. of the total.	per cent. of the total.	per cent. of the total.	per cent. of the total.	per cent. of the total.	per cent. of the total.	
Mustard oil ..	1,851	91.7	2,107	90.6	715	77.0	970	82.2
Ghee ..	59	2.9	33	1.4	41	4.4	49	4.1
Milk ..	65	3.2	135	5.8	136	14.6	140	11.9
Butter ..	3	0.1	3	0.1	6	0.6	7	0.6
Dahi ..	7	0.3	8	0.3	9	1.0	Nil	..
Chhana ..	3	0.1	4	0.2	11	1.2	6	0.5
Atta & wheat flour	2	0.1	3	0.1	Nil	..	5	0.4
Tea ..	25	1.2	31	1.3	11	1.2	3	0.2
Sugar..	3	0.1	2	..	Nil	..	Nil	..

Of the samples of food-stuff which were received during the year under report from Government hospitals, 885 were of milk, 2 of ghee, 14 of butter and 6 of mustard oil.

The total number of samples analysed during the year under report was 4,356 as compared to 4,590, analysed during the previous year. The number of samples of different foodstuff from district boards and municipalities analysed during the year and the percentage of adulteration as compared to the percentages of adulteration in 1949 and 1950 are tabulated below:—

Food articles.	District Boards.				Municipalities.			
	No. of samples analysed in 1951.	Per cent. found adulterated in 1951.	Per cent. found adulterated in —		No. of samples analysed in 1951.	Per cent. found adulterated in 1951.	Per cent. found adulterated in —	
			1950.	1949.			1950.	1949.
Mustard oil ..	1,820	24.7	43.8	39.4	732	20.0	44.0	39.5
Ghee ..	47	51.0	83.3	75.6	42	33.3	36.4	41.0
Milk ..	65	40.0	79.4	88.8	136	65.4	70.2	76.2
Butter ..	3	100.0	100.0	100.0	6	66.6	66.6	100.0
Dahi ..	7	100.0	71.4	100.0	9	77.7	100.0	100.0
Chhana ..	3	66.6	100.0	14.3	11	54.5	100.0	..
Atta & wheat flour	2	Nil	Nil	7.1	Nil	..	25.0	12.5
Tea ..	36	19.4	4.5	16.7	15	13.3	Nil	Nil
Sugar..	3	Nil	50.0	50.0

There was a distinct decrease in the percentage of adulteration of samples of mustard oil during the year as compared to that of previous years. The decrease in the percentage of adulteration of samples of milk was presumably due to the comparatively small number of samples of this foodstuff which was collected for examination. The same observation applied to some of the milk products. Although the number of samples of tea sent for examination was not large, yet an appreciable rise in the percentage of adulterated samples was noticeable.

The sale of tea containing a high percentage of non-tender or woody stalks at the Calcutta tea sales was reported by the Health Officer, Calcutta Corporation, to be more frequent during the year under report than at any time previously. This he corroborated by sending several samples of such tea for examination. A high hard stalk content would undoubtedly affect the flavour of tea. This laboratory adopted the common physical method for determining the hard stalks in tea and examined exhaustively samples to determine,

- (1) how the presence of hard stalks affected the prescribed standards of purity of tea;
- (2) how the presence of hard stalks affected the caffeine and tannin content of tea;
- (3) if the hard stalks imparted to a sample of tea any specific analytical character.

The work was still not complete at the end of the year.

Research work.—During the year under report research work was carried out in the limited time and with the limited resource available after doing the routine work. This work was of varied nature, such as, the finding of improved method for the detection of groundnut oil in mustard oil, a more precise method for the estimation of non-tender stalks in tea, studies on the rancidity of butter-fat, and caffeine and tannin contents of Indian tea and their relation, if any, to the amount of non-tender stalks present. The following papers and abstracts were published:—

- (1) "A Rapid Method for the estimation of non-tender stalks in tea"—By S. N. Mitra, Public Analyst (Food & Water). Jour. & Proc. of the Inst. of Chemists (India), Vol. XXIII, Sept. & Dec., 1951.
- (2) "Detection of Groundnut oil in mustard oil"—By S. N. Mitra, Current Science, Vol. 20, No. 6, June, 1951.
- (3) "Studies on the rancidity of butter-fat" Part I and Part II—By S. N. Mitra, Abstracts, 39th Indian Science Congress, 1952, Part III, p. 131-133.
- (4) "Caffeine & Tannin contents of Indian tea and their relation, if any, to the amount of non-tender stalks present"—By A. K. Sen, S. N. Mitra & S. C. Roy, Abstracts of 39th Indian Science Congress, 1952, Part III, p. 133.

The income which accrued to the laboratory and the expenditure incurred by it during the last ten years including the year under report are given below:—

	Income. Expenditure.	
	Rs.	Rs.
1942	48,512	78,123
1943	48,029	77,976
1944	34,606	84,496
1945	37,160	96,969
1946	38,999	1,19,828
1947	44,149	1,18,689
1948	40,132	1,21,208
1949	39,619	1,21,957
1950	47,486	1,20,160
1951	47,398	1,18,615

(2) **West Bengal Vaccine Laboratory.**—The activities of the laboratory during the year under review have been quite consistent and satisfactory in view of the demand and supply of anti-cholera vaccine according to the requirements of the State.

The year started with an opening balance of 2,241,310 c.c. of anti-cholera vaccine in hand and produced more than 33 lakhs to meet the demand of the State and also to keep a sufficient reserve stock at the end of the year.

The actual figures are given below:—

Opening balance	2,241,310 c.c.
Output	3,305,000 c.c.
Received from the District Stores	81,300 c.c.
			<hr/>
			5,627,610 c.c.
Total Issue	4,023,305 c.c.
Closing balance	1,604,305 c.c.

The total sale-proceeds of vaccine amounts to Rs. 23,650-15 and at the market rate of anna one per c.c. The total cost of vaccine produced would amount to Rs. 2,60,562 as against the total expenditure of Rs. 1,21,242.

Full particulars regarding the issue of vaccine to different districts, including supplies to other non-chargeable and chargeable parties are given below:—

A. Non-chargeable parties—

1. Districts and Municipalities	3,287,850 c.c.
2. Asansol Mines Board of Health	50,000 c.c.
3. Deputy Director of Health Services (Public Health)	250,000 c.c.
4. Others	57,040 c.c.
				<hr/>
				3,644,890 c.c.

B. Chargeable parties—

1. Calcutta Corporation	230,000 c.c.
2. Refugee Camps	103,000 c.c.
3. Railways, Tea Gardens, Mills, etc.	45,415 c.c.
				<hr/>
				378,415 c.c.

In addition to the normal functions of the laboratory regarding the production and issue of anti-cholera vaccine, this laboratory had to handle a huge stock of plague and typhus vaccine during the year for proper storage and distribution.

Demonstrations, as in the previous years for students of M.B., D.P.H. and Laboratory Technicians Courses were duly held during the year.

(3) **West Bengal Vaccine Institute.**—The activities of the institute during the year were as follows:—

The total number of calves vaccinated during the year 1951 was 3,985 against 3,287 and 2,262 of the year 1940 and 1949 respectively. The average

yield of pulp per calf during the year was approximately 182.1 grain as against 197.8 and 142.9 of 1950 and 1949 respectively.

The quantity of vaccine lymph produced during the year was 241,950 c.c. or 3,629,250 grains as against 216,764.9 c.c. or 3,251,474.8 grains and 1,616,400 grains in 1950 and 1949 respectively.

The institute had to make purchase of 49,200 c.c. of vaccine lymph from outside this State to meet her requirements.

The cost of manufacturing lymph has been 7.87 pies per grain or 9.83 annas per c.c.

The total expenditure including overhead charges for supervision, etc., amounts to Rs. 1,02,491-7-3 and Rs. 1,47,814-11-0 for 1950 and 1951 respectively.

The total sale-proceeds of vaccine lymph including cash and B. T. sales amounts to Rs. 89,034-6-0 as against Rs. 89,707-9-6 of the last year.

Quantity of vaccine supplied free to local bodies	281,535 c.c.
Sale (Cash, V.P., etc.)	13,802 c.c.
B. T.	13,496 c.c.
	<hr/>
	27,298 c.c.
	<hr/>
	308,833 c.c.
	<hr/>

Demonstration was given to the D.P.H. and M.B. students on the method of preparation of anti-smallpox vaccine like previous years.

(4) **Provincial Drug Control Laboratory.**—On the eve of partition of Bengal, the Provincial Drug Control Laboratory was shifted from the control of the Director of West Bengal Public Health Laboratory who was also appointed as a Chief Analyst in addition to his own duties.

In 1949 the Public Analyst (Drug) was appointed, who was also appointed as the Government Analyst under the Drugs Act.

The work carried out by the laboratory in 1951 was as follows:—

No. of samples analysed in Chemical Section.	No. of samples analysed in Pharmacology Section.	No. of samples analysed in Bacteriology Section.	Total.
91	6	10	107

Research work.—Some research was carried out by the Government Analyst and a paper was published "Argemone and Mustard Seeds" in the Indian Medical Gazette, Vol. LXXXV, No. 11, 1950.

The income by analysing private samples (11 in number) was Rs. 350.

Other public health laboratories run by local bodies and other statutory body.—The table below will show the number and nature of food samples analysed and found adulterated at those laboratories:—

Name of Public Health Laboratory.	Mustard oil.		Ghee.		Milk.		Dahi.		Chhana.		Others.		Total.	
	Ana-lysed.	Adul-terated.	Ana-lysed.	Adul-terated.	Ana-lysed.	Adul-terated.	Ana-lysed.	Adul-terated.	Ana-lysed.	Adul-terated.	Ana-lysed.	Adul-terated.		
1. Murshidabad Public Health Laboratory—

Percentage of adulteration.

	Mustard Oil.		Ghee.		Milk.		Dahi.		Chhana.		All other samples.		Total.	
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
Rural areas	12.5	53.7	58.5	87	25	11.4	19.3
Municipal areas	10.7	41.9	46.1	100	100	16.5	31.3

There was distinctly low percentage of adulteration of samples of mustard oil both in urban and rural areas during the year under report. Adulteration of samples of ghee and milk remained high in rural areas and that of Dahi both in urban and rural areas was found to be too high. Although adulteration of Chhana in rural areas was low, high percentage of adulteration was noticed in those samples in urban areas—presumably due to the collection of a very small number of samples of this foodstuff. Adulteration of other samples (tea, atta, butter, etc.) remained to be low both in urban and rural areas during the year under report.

(5) **Pasteur Institute.**—The institute remained open throughout the year including sundays and holidays for the treatment of cases attending the outdoor department. Despatch of vaccine to the treatment centres and private practitioners were made as usual.

The total number of patients that attended the institute during the year was 5,012 as compared with 4,327 of the previous year. This shows an increase of 685 cases over last year seeking treatment. Of these 5,012 cases, 1,522 cases were given full course of treatment, 664 cases did not complete treatments, 1,126 cases were referred to other hospitals and treatment centres and 1,700 cases were given advice only as no treatment was considered necessary in their cases. To 13 of these advice cases, special course of treatment (3 injections only on 3 consecutive days) were given as they were all severe bite cases and the biting animal remained alive and well after the 10th day's period of observation.

Vaccine manufactured.—The total quantity of vaccine manufactured during the year was 9,33,911 c.c. of 5 per cent. suspension.

Treatment.—The vaccine in use throughout the year was 5 per cent. sheep brain suspension in 5 per cent. carbol saline prepared by Sample's method with Paris strain of fixed virus. The doses are given below:—

	Adults.	Children.
Class I 2 c.c.	2 c.c. daily for 7 days.
Class II 5 c.c.	5 c.c. daily for 14 days.
Class III 10 c.c.	5 c.c. daily for 14 days.
Special cases	.. 10 c.c.	5 c.c. daily for 3 days.

Centres.—During the year 7,915½ courses of treatment were sent to the various centres in the districts for the treatment of patients. Out of the total number of courses of treatment sent, 2,571 statistical cards were received back and the health returns were sent on that basis. Out of 2,571 cases, 2,135 cases were fully treated and 416 cases were partially treated at the centres.

Results of treatment.—The statistical tables for the year 1951 were compiled in a simplified form in accordance with the suggestion of the Director-General, Indian Medical Services. The results are based on the health returns of patients received back after six months of completion of treatment. The percentage of health returns received of patients who completed treatment at this institute was 12·63 and the percentage of health returns of patients treated at the centres was 56·05. The total percentage of health returns received was 68·68 for the institute and centres combined.

Deaths.—There were 25 deaths during the year 1951. Of these, 15 cases reported at the institute and 10 at the centres. Twelve cases that developed symptoms of hydrophobia had no anti-rabic treatment at all and hence have been excluded from the statistics. Of the remaining 13 cases, no particulars could be obtained for 1 case and 6 cases were found to have died

of other diseases and not of hydrophobia. On analysis of the data obtained from statistical cards and queries of the remaining 6 cases of hydrophobia, it was found that 4 cases were "not cases of true failure" and the remaining 2 cases only were considered as "cases of failure" of treatment. Of the 4 cases labelled as non-failure cases, 1 had 4 injections, 2 had 5 injections and the 4th one developed hydrophobia after 13 days of the completion of the course.

Analysis of the 2 "true failure" cases.—(1) *Case No. 8.*—This was a case of face bite in a child of 7 years bitten on 17th May 1951, without any cauterisation, treatment starting on the 5th day (21st May 1951) of bite and completed on 2nd July 1951. He had only 12 injections with intermission for a day. Symptoms developed on 18th June 1951, i.e., 16th days after 12 injections. The incubation period was 32 days.

(2) *Case No. 1647.*—Patient aged 10 years sustained injuries on hand by rabid dog on 24th June 1951 which was not cauterised. Treatment was started on 26th June 1951 and completed on 9th July 1951. He developed hydrophobia on 26th July 1951, i.e., 17th day after the completion of the course. The incubation period was 32 days.

No case of post treatment paralysis was reported during the year.

The percentage of indigent cases amongst patients who were treated in this Institute in this year was 26.94.

(6) **Chemical Examiner's Report.**—During the year under review 29,104 articles, sent in connection with 7,427 cases, were examined in this department against 28,892 articles and 6,734 cases in the previous year showing an increase of 212 articles and 693 cases. The increase will be noticed under heads "Human poisoning cases", "Animal poisoning cases", "Stain cases", "Miscellaneous cases", "samples of preservatives", "Excise work (drugs)" and "excise work (alcohol)" (*vide* Appendix IIIA.)

Lectures in Organic and Physical Chemistry to the two batches of students in the 1st and 2nd year classes were delivered by the Professor of Chemistry, Medical College, assisted by the Demonstrators as usual in the teaching work.

A portion of the biochemical work for the patients of the Medical College group of Hospitals, Calcutta, of the Police Hospital, Calcutta, of the Sambhunath Pandit Hospital, Calcutta, of the Presidency Jail Hospital, Calcutta, and of the Kanchrapara Tuberculosis Hospital were conducted in the Chemistry Department by the Demonstrators under the supervision of the Professor of Chemistry as Chief Biochemist of the Medical College Hospital. The total number of articles analysed during the year, in the form of qualitative and quantitative examination of blood, urine, faeces, cerebrospinal fluid, gastric contents, etc., was 6,662 as against 8,033 in 1950. In the performance of this work, the voluntary services rendered by the Demonstrators are much appreciated.

Research work and literary contributions.—Research work was conducted in collaboration with Shri Haridas Ganguli, M.Sc., A.R.I.C., 1st Assistant Chemical Examiner to the Government of West Bengal, Sri Sukumar Sen Gupta, M.Sc., Assistant Chemical Examiner (Excise Section) and Shri Amiya Kumar Ghosal, M.Sc., Demonstrator of Chemistry, Medical College, Calcutta. The following papers were contributed to the different sections of the Indian Science Congress held in Calcutta in January, 1952:—

(A) For the Chemistry Section.—

- (1) A table for finding the weight per gallon of spirits by "Sikes". A Hydrometer for "indications" 0.0 to 6.6 (Dr. S. K. Chatterji and Shri S. Sen Gupta).

(B) For the Medical and Veterinary Section.—

- (1) Extraneous matters in biological materials (Dr. S. K. Chatterji & Shri H. D. Ganguli).
 (2) A case of accidental poisoning (non-fatal) by taking groundnuts (chinabadam) (Dr. S. K. Chatterjee & Shri H. D. Ganguli).

(C) For the Physiology Section.—

- (1) Detection of HCN in Decomposed Viscera (Dr. S. K. Chatterji and Shri H. D. Ganguli).
 (2) An observation on the PH and alkali reserve content of blood in cases of carbon monoxide poisoning (Dr. S. K. Chatterji and Shri A. Ghosal).

General Analytical Section.—1,443 articles, sent in connection with 425 cases, were examined in this section during the year under review as against 6,767 articles and 659 cases in 1950, showing a decrease of 5,324 articles and 234 cases.

Out of the above 1,443 articles examined, 1,309 were received from West Bengal, 57 from Behar, 9 from Orissa, 10 from Assam, 14 from Government of India and 44 from Miscellaneous sources.

The nature of the articles examined were as follows:—

(1) Explosives	...	781
(2) Foodstuff	...	258
(3) Drugs	...	28
(4) Petrol, kerosene, etc.	...	95
(5) Cement	...	28
(6) Fountain pens and inks	...	67
(7) Chemicals	...	42
(8) Note forging cases	...	7
(9) Postage stamps and bread tickets forging	...	51
(10) Ornaments	...	21
(11) Coke	...	5
(12) Paint	...	4
(13) Bees wax	...	7
(14) Acids and oil stains	...	13
(15) Blood, urine, faeces for lead	...	4
(16) Miscellaneous articles	...	32
		1,443

The different sources, from which the above 1,443 articles in connection with 425 cases were received, are shown in appendix IIIA.

Excise Section (Drugs and Alcohol).—During the year under review 20,098 articles, received in connection with 4,133 cases, were examined in this section. Of these 1,895 articles, in connection with 451 cases, were examined in the Drugs Branch and 18,203 articles in connection with 3,682 cases, in the Alcohol Branch as against 15,078 articles and 3,337 cases of the previous year (1,033 articles with 339 cases in Drugs Branch and 14,045 articles with 2,988 cases in the Alcohol Branch) showing an increase of 862 articles and 112 cases in the Drugs Branch and of 4,158 articles and 694 cases in the Alcohol Branch. The different sources from which the above 20,098 articles in connection with 4,133 cases were received are shown in Appendix IIIA.

A. Drugs Branch.—Out of the above 1,895 articles examined in the Drugs Branch, 1,870 were received from West Bengal, 8 from Orissa, 15 from Assam and 2 from Miscellaneous sources (States of Manipur and Kashmir).

The following excisable drugs were examined during the year under report:—

Opium	...	1,254
Poppy plants	...	23
Bhang, Ganja, Charas	...	602
Cocaine	...	16
		<hr/>
		1,895
		<hr/>

B. Alcohol Branch.—Of the 18,203 articles examined in this branch of the Excise Section, 18,094 were received from the West Bengal and 109 from Orissa.

The nature of the articles examined in the branch was as follows:—

(1) Spirituous medicinal preparations for assay of alcoholic strength only	...	15,276
(2) Mritasanjibani	...	62
(3) Water for suitability for reduction of spirit strength	...	30
(4) Distillery samples (whisky, brandy, rum, gin, rectified spirit, country spirit, denatured spirit, molasses fermented wash, etc.)	...	737
(5) Instruments (Hydrometers and Thermometers)	...	128
(6) Recipes	...	100
(7) Court cases (foreign liquor, plain spirit, bakhar, fermented wash, etc.) (Of these 1,296 samples, i.e., 82.9 per cent. were found to be illicit in origin.)	...	1,563
(8) Miscellaneous samples (medicinal preparations, foreign liquor, country spirit, rectified spirit, denatured spirit, bakhar, etc.)	...	198
(9) Samples from Orissa	...	109
		<hr/>
		18,203

Medico-legal Section.—(1) *Details of medico-legal cases.*—2,869 cases were examined in this department during the year under review as against 2,738 in 1950, showing an increase of 131 cases. The total number of cases in which poisons, blood, semen, etc., were detected, was 2,343, i.e., in 81·67 per cent. as against 82·54 per cent. in 1950, vide appendix IIIA.

(2) *Details of Medico-legal articles.*—The total number of articles examined during the year, excluding the samples of preservatives, was 7,040 as against 6,593 in 1950, showing an increase of 447 articles, vide appendix IIIA.

Five hundred and twenty-three samples of preservatives received in connection with positive human and animal poisoning cases were also analysed.

The different sources, from which the above 7,563 articles (7,040 medico-legal articles and 532 samples of preservatives) in connection with 2,869 cases were received are shown below and compared with those of the two previous years.

A.—Human Poisoning Cases.

1. **Human Viscera.**—975 human viscera, including 22 received in connection with abortion cases, were examined as against 938 in 1950, showing an increase of 37 viscera. Poison was detected in 575 of them, i.e., in 58·97 per cent. as compared with 69·89 per cent. in 1950.

2. **Vomit and excreta.**—133 samples of vomitted matters and excreta were received along with the viscera mentioned above as compared with 101 samples in 1950. Poison was detected in 88 of them, i.e., in 66;16 per cent. as against 75·24 per cent. in 1950.

Three hundred and thirty-nine samples of vomitted matters and excreta were received for examination without any viscera accompanying them as compared with 295 in 1950. Poison was detected in 255 of them, i.e., in 75·22 per cent. as against 72;88 per cent. in 1950.

3. **Human tissues.**—78 samples of human tissues were examined beside the human viscera noted above as against 111 samples in 1950. Poison was detected in 51 of them, i.e., in 66;15 per cent. as against 74;78 per cent. in 1950.

4. **Substances other than viscera, vomit, etc., suspected to contain poison.**—479 such articles were analysed as compared with 333 in 1950. Of these 316 were received along with human viscera, vomit, etc., and in 214

of them poison was detected. The remaining 153 articles were received without any viscera, vomit, etc., accompanying them and in 84 of them poison was detected (vide appendix IIIA).

5. **Samples of preservatives.**—484 samples of preservatives, received in connection with positive human cases, were examined and no poison was detected in them.

6. The nature of the poisons detected in the viscera, vomit and excreta, tissues and substances suspected to contain poison has been shown in Appendix IIIA.

Alcohol was found to be most commonly used poison, it was detected in 418 articles. Atropine, opium, cleander, arsenic, aconite, salts of hydrocyanic acid, calotropis gigantea (madar) and copper sulphate came next in order of frequency of the detected poisons.

B.—Animal Poisoning Cases.

1. **Animal Viscera.**—The viscera of 62 animals (56 horned cattle, 4 dogs and 2 chickens) were examined during the year under review as against 37 in 1950. Poison was detected in 52 of them, i.e., in 83·87 per cent. as against 72·97 per cent. in 1950.

2. **Vomit and excreta.**—36 such articles were received along with the animal viscera as compared with 19 in 1950. Poison was detected in 29 of them, i.e., in 80·55 per cent.

Three such articles, received without any animal viscera accompanying them, were examined during the year under review, as against 6 in 1950. Poison was detected in 1 of them.

3., **Tissues other than animal Viscera.**—Only 1 such article was received for examination during the year and no poison was detected in it. One such sample was received in the year 1950.

4. **Substances suspected to be animal poisons.**—49 such articles were examined during the year under review as compared with 24 in 1950. Poison was detected in 45 of them, i.e., in 91·83 per cent. as against 83·33 per cent. in 1950. Five of these 49 articles were received along with animal viscera and poison was detected in 4 of them. The remaining 44 articles were received without any viscera of tissue accompanying them and poison was detected in 41 of them (vide Appendix IIIA).

5. **Samples of preservatives.**—39 such samples, received in connection with positive animal poisoning cases, were examined and no poison was detected in them.

6. The nature of poisons detected in the animal viscera, vomit and excreta, tissues and in substances suspected to contain poison has been shown in Appendix III A. Arsenic was detected in 38 of them, oleander in 34, white arsenic in 23, calotropis gigantea (madar) in 16, oleander and madar in 5, aconite, strychnine and brucine, and acids salicylic and citric in 2 each, and an Alkaloid (kurchi), ferri sulph, salts of lead, oleander and hair, and a resinous substance in 1 each.

C.—Stain Cases.

During the year under review 4,834 articles stated to have been stained with blood, semen, gonorrhœal pus, saliva, purged matters, etc., received in connection with 1,511 cases, were examined as against 4,681 articles and 1,449 cases in 1950, showing an increase of 154 articles and 62 cases.

1. **Blood stains in murder cases.**—3,893 articles, received in connection with 1,137 cases, were examined for detection of blood and determination of their origin. In 3,723 articles, i.e., in 95.63 per cent. of those articles blood was detected, of which 2,766 articles were found to be stained with human blood, 15 with blood of ruminant animal, 1 with a mixture of human blood and blood of ruminant animal, and 1 with human and bird's blood. In 940 articles, although the presence of blood was proved, their origin could not be determined either because the stains were too small or they were found to be disintegrated by the serological tests. No blood was detected in 170 articles (vide Appendix IIIA).

2. **Blood stains in rape and unnatural sexual offence cases.**—257 articles, received in connection with 112 cases of rape and unnatural sexual offence cases, were examined for detection of blood and its origin. In 236 of these articles blood was detected, of which 179 articles were found to be stained with human blood and in the remaining 57 articles, although the presence of blood was proved, their origin could not be determined either because the stains were too small or they were found to be disintegrated by the serological tests. No blood was detected in 21 articles (vide Appendix IIIA).

3. **Seminal stain cases.**—630 articles, received in connection with 321 cases of rape and unnatural sexual offence cases were examined and semen was detected in 536 of them. Thirty of these articles were sent to the Serologist to determine the origin of the semen. 27 of them were found to be of human origin and in 3 of them, their origin could not be determined as the stains were found to be disintegrated by the serological tests (vide Appendix IIIA).

4. **Other stains.**—224 articles bearing other stains like gonorrhœal pus, saliva, foecal matters, acids, alkalies, gunpowder, dyestuff, oil stains, etc., were examined during the year under review (vide Appendix IIIA).

D.—Miscellaneous Cases.

Three such cases were referred to this department during the year under review for examination and opinion. Sixty-one articles comprising hair, bones, etc., were examined (vide Appendix IIIA).

10. **Research work.**—(1) *Detection of hydrocyanic acid in decomposed viscera.*—Detection of hydrocyanic acid in a decomposed viscera under ordinary distillation process is a difficult problem. Combining with the sulphur of the organic tissue proteins, the acid is converted into thiocyanic acid and its salts. It is not possible to obtain hydrocyanic acid from thiocyanic acid by simple distillation with an acid. Special oxidising process has been devised by means of which hydrocyanic acid may be detected in the decomposed viscera, both qualitatively and quantitatively.

Experiments were undertaken with two to five years old retained samples of viscera, which were sent to this department for detection of poison and which were found to be highly decomposed. In selection of these cases, attention was paid in taking up some known hydrocyanic acid poisoning cases and some cases where death took place from some other means.

Methods.—(a) *Direct distillation process.*—Hundred grammes of viscera were taken from each case, minced and mixed with 100 ml. of water, acidulated with 100 ml. of dilute sulphuric acid and then steam distilled. The distillate, collected up to 50 ml. in decinormal caustic potash solution, was then tested for the presence of hydrocyanic acid.

(b) *Special oxidising process (chelle).*—The residue left in the flask was then mixed with 75 ml. of 25 per cent. w/v sulphuric acid containing 12 grammes of potassium dichromate and steam distilled. The distillate, collected up to 100 ml. in decinormal caustic potash solution, was then tested for hydrocyanic acid both qualitatively and quantitatively by Volhard's method.

Results.—By ordinary distillation process no hydrocyanic acid could be detected in any of them, but by the special oxidising process, hydrocyanic acid was obtained in those cases, which had a history of hydrocyanic acid poison. A quantitative estimation was also possible.

Comments.—Under normal conditions, putrefaction in a viscera does not produce thiocyanic acid, which is only produced from the hydrocyanic acid combining with the sulphur of the tissue proteins. It has also been proved that the conversion of hydrocyanic acid into thiocyanic acid is not quantitative.

In medico-legal work, it is advisable to look for hydrocyanic acid by this special oxidising process where the ordinary distillation process fails.

(2) *Extraneous matters in biological materials.*—Biological materials like human and animal viscera with their vomitted matters are sent to this department for detection of poisons. It is rather an interesting phenomenon that in these cases, reported either as a positive or a negative, the stomach contents, the stomach wash or the vomitted matters where examined more carefully would reveal many small particles which may not be of any academic interest, but may serve some useful purpose from medico-legal point of view. Mechanical irritants like powdered glass or diamonds, or similar substances are known to have been used for the purpose of homicide and these are of pure medico-legal interest. As a matter of fact when it was found that 206 cases consisting of human viscera and vomit had been reported as negative out of 703 cases, during the period of six months of a year, just out of curiosity they were examined again. The remnants of the liquid contents were taken and centrifuged. The deposit thus obtained were then examined under a magnifying glass and under microscope and all sorts of hair (human and of domestic animals), fibres, ants, silicate matters, etc., were detected. The sources of these extraneous matters must have been any of the followings:—(a) from the foodstuff and cooking materials (natural sources), (b) addition of these matters in the foodstuff (with intention), or (c) due to unclean receptacles used for preserving those biological materials.

As a remedial measure the following steps may be taken:—(a) the Public Health Department, dealing with the administration of foods and drugs, should, by law, condemn those food materials containing high percentage of these extraneous matters and allow prosecution of the dealers, (b) the receptacles in which these medico-legal exhibits are preserved and sent for examination, should always be thoroughly washed and cleaned before use and (c) the medico-legal experts should also keep in view the possibility of the presence of these extraneous matters in the stomach contents of an individual and always look for them in addition to the poisons as a routine method. This may reveal something, which may be of importance from the criminological point of view and may thus be helpful in the prosecution of the case.

11. **Short history of interesting medico-legal cases.**—(1) *A case of accidental poisoning (non-fatal) by taking groundnuts (chinabadam).*—A case was referred to this department by the Subdivisional Officer, Deoghar (Santal Parganas, Bihar), with a history that a girl aged 14 years while

eating groundnuts (chinabadam) felt bitter taste in a few of them. After a while she felt uneasy and started vomiting, when she was removed to a hospital, where her stomach was washed. The stomach-wash was sent to this department for detection of poison. On careful examination a trace of hydrocyanic acid and an aldehyde (benzaldehyde), the products of hydrolysis of the glycoside 'amygdalin' (common constituents of bitter almonds, peach kernel, cherry leaves, etc.) were detected. The child's life was saved after proper treatment.

(2) *Detection of Paraldehyde in viscera.*—The Assistant Surgeon, Dibrugarh (Assam), forwarded viscera (stomach and its contents, portions of liver and kidneys), of a boy aged 8 years with a history that the boy was admitted to a hospital for operation on his tonsils, when an overdose of Paraldehyde administered inadvertently caused his death. Aldehyde was detected in the portions of viscera sent.

(3) *Detection of alcohol in a burnt body.*—The Assistant Surgeon, Darjeeling, forwarded portions of viscera along with a sample of blood and urine from the burnt body of an Indian Prince, with a history, that the Prince, while under the influence of liquor, was smoking lying on his bed, dropped his cigarette end on the bed, which caught fire and the Prince, not being able to run out of the room, got suffocated in the smoke and died in the flames. When his body was recovered, it was found to be charred from head to the lower portions of both the thighs, burnt up to muscles and bones and the legs were found separated from the body in a charred condition. The abdominal wall was completely burnt, exposing the liver, stomach and intestines which were also partially charred. The front portion of the thoracic wall with the ribs were also completely burnt away exposing the lungs and pericardium which were also partially burnt. Some smoke particles and charcoal bits were found inside the trachea. The mucosa of the stomach wall was found to be congested and the stomach contained about 3 ounces of brownish fluid with some undigested food particles. Intestine contained liquid faeces. Urinary bladder contained about 2 ounces of brownish offensive urine. Alcohol was detected in the sample of blood, urine as well as in the portions of viscera sent. No other poison was detected.

(4) *Detection of hydrocyanic acid in bile and urine.*—The Assistant Surgeon, Deoghar, Santal Parganas (Bihar), forwarded the viscera of a washer-man with a sample of urine and bile from his body, for examination without any history of the case. On post-mortem examination, the internal organs were found to be highly congested with haemorrhagic spots in the stomach mucosa suggesting some irritant poison. On analysis salts of hydrocyanic acid have been detected in the portions of viscera sent as well as in the samples of bile and urine. It is curious to note that hydrocyanic acid, which produces sudden death, has so rapidly been absorbed and excreted in the bile and urine.

(5) *Sensational cases of contamination of flour in ration shop in some districts in Bihar.*—In October 1951, a very interesting case was reported in the daily newspaper that 63 persons of three different villages in the district of Muzaffarpur (Bihar) took bread made of flour at about 8 p.m. and became delirious in about 2-3 hours time. The symptom disappeared in the evening of the next day. All of them purchased flour from the same shop. Samples of bread and flour collected from the houses of two of the victims were sent to this department by the Civil Surgeon, Muzaffarpur, for analysis. This was soon followed by another incidence occurring in the district of Monghyr (Bihar) where a local medical practitioner was asked to see a few cases suffering from similar symptoms. They took bread prepared from milo, sold by a local co-operative society and after a few minutes of their taking the food they developed the symptoms. The milo in the shop of the society was found to contain small black vegetable seeds and a sample of the same (milo) was sent to this department for analysis in November 1951. In the

same month, the Subdivisional Officer, Motihari, Champaran (Bihar), forwarded five samples of milo with one sample of the black vegetable seeds said to be the adulterant. Government of Bihar, then took up the case for proper investigation and under the direction of the Director of Public Health, Bihar, Patna, the Chemical Analyst to the Government of Bihar, forwarded a sample of milo to this department for examination. This was also found to be contaminated with the same kind of small black vegetable seeds. These seeds were identified to be those of *hyoscyamus niger* and *hyoscyamine* the active principle of *hyoscyamus*, an isomer of *atropine*, was detected in the bread prepared from the flour and in the flour seized in the Muzaffarpur Case.

(6) *Glacial acetic acid used for committing suicide.*—The Officer-in-charge, Hospital Laboratory, Military Hospital, Calcutta, forwarded a sample of vomit and a sample of urine of one military personnel, with a history, that he swallowed a quantity of glacial acetic acid to commit suicide. Free acetic acid was detected in the vomited matters and salts of acetic acid with haemoglobin were detected in the urine. The life was saved after treatment.

(7) *Arsenic in food supplied from a shop.*—The Assistant Surgeon, Saharsa, District Bhagalpur (Bihar), was asked to attend members of the family of a highly posted Police Officer, who had developed symptoms of food poisoning after taking "*Halua*" (sweet) prepared by frying arraroot with ghee, sugar and water. The arraroot was purchased from a local shop. A sample of the arraroot, sugar and ghee from the house of the Police Officer, and a sample of arraroot from the shop from where it was purchased were forwarded to this department for analysis. Vomitted matters of the victims, which were collected by the Medical Officer, were also sent for analysis. Arsenic was detected in the samples of arraroot and in the vomitted matters. After proper treatment, the lives were saved.

(8) *Pachwai with aconite.*—The Subdivisional Officer, Dumka, Santal Paraganas (Bihar), forwarded 123 samples of *pachwai* seized from a local *pachwai* shop with a history, that some santals, 17 in number, took *pachwai* from the shop and shortly after they became restless and unconscious. Seven of them took medical aid and were saved. The remaining ten did not avail of any medical aid and subsequently died. The viscera of these 10 deceased persons along with their vomitted matters, which got mixed with earth, were forwarded to this department for analysis. Alcohol and aconite were detected in the samples of *pachwai* and in the viscera of each of the ten individuals who died; in the vomitted matters mixed with earth aconite only was detected.

Note.—*Pachwai*, an alcoholic beverage, containing a maximum of 12 per cent. of alcohol, produced from the fermentation of rice starch by means of the fermenting agent "*Bakhar*" consisting of *mucor* and some wild yeast is still a favourite drink among the hill tribes. Foreign substance like seeds of *Datura* and *Nuxvomica* or *Aconite* roots are often mixed with the "*Bakhar*" to make the beverage more intoxicating. But due to the want of standardisation of these "*Bakhars*", death occurs to quite a large number of these *pachwai* drinkers every year. The Government of West Bengal has recently taken up this problem of standardisation of "*Bakhar*" for solution.

(9) *Oleander and Calotropis gigantea (madar) used to kill cattle.*—The Touring Veterinary Assistant Surgeon, Ranchi (Bihar), forwarded portions of viscera from two cattle with a history that something was introduced into anus of both the cattle by means of a wooden stick and after a few minutes the animals began to struggle and died within half an hour. *Oleander* and *Calotropis gigantea (madar)* were detected in the portions of viscera sent. A double poison used for killing a cattle has not been known so far and this is rather a rare instance.

Chapter XV

FAIRS AND FESTIVALS.

The Gangasagar *Mela* at Sagar Island and the Sivaratri *Mela* at Tarakeswar are the two most important religious *melas* of West Bengal. During these two *melas*, thousands of people assemble for a day or two at Sagar for a bath or visit the Tarakeswar temple and they disperse back as quickly as they assemble. This precipitates a public health problem which requires to be tackled by a good planning and thorough organisation to stamp out the possibility of outbreak of epidemic diseases.

Gangasagar Mela.—About a lakh and a quarter of pilgrims collected for a bath on 14th January 1951 and 15th January 1951 (the days of ceremonial bathing).

The arrangements made at the *mela* ground are summarised below:—

Siting of huts.—In the matter of planning of huts and other structures there was a distinct improvement on that of last year. The area of the *mela* ground was widened to about 2 square miles. A wide spacious beach with a number of straight broad and denominated roads leading through rows of the huts to the back of the *mela* ground where latrine blocks were situated was provided. Road maps were hung up at important crossings and places as well as at the beach which served to guide the pilgrims properly.

Bathing place.—An attempt was made to persuade the boatmen to moor their boats on either ends of the beach so as to leave a clear and unobstructed bathing place. The result was a clean beach with a tolerably clean bathing place.

Water-supply.—Two tanks—Nos. 5 and 6 were used for drinking purposes of which tank No. 6 was dewatered towards the end of 1950 in compliance with the recommendations of the Health Directorate. Both the tanks were chlorinated thoroughly just prior to the *mela*. Three pumps were fitted by the Public Health Engineering Branch to draw the water from the tanks, which after further chlorination was distributed through pipes and 29 tanks (usually of 250 gallons capacity) each fitted with 3 to 8 taps. The chlorination of the tap water was found adequate. The tanks were all found securely locked this year.

The entire water-supply arrangement was in charge of an Assistant Engineer of the Public Health Engineering.

The quality of water supplied was quite satisfactory but the quantity needed further augmentation to cope with the demand.

Sweetmeat shops.—There was a number of sweetmeat shops in the *mela*. Some of the vendors covered the food materials whereas others did not. Supervision over these shops was tightened with effective result. Fortunately there were no flies in the *mela* this year.

Conservancy.—1,000 seats in trench latrine were provided. 700 of these were provided with wooden platforms whereas the rest was with usual bamboo ones. There were also a few dustbins dug this year and the refuse was disposed off by burning. The conservancy staff consisted of 80 sweepers under 5 Sanitary Inspectors and 2 Health Assistants. This year this service was more efficient and beach was found particularly clean.

Preventive measures.—The Sanitary staff consisted of 5 Sanitary Inspectors and 2 Health Assistants from the District Board of 24-Parganas.

Medical Relief.—The Medical staff consisted of 7 Medical Officers, 2 compounders, 8 nurses (4 male and 4 female) of the District Board and 14

volunteers of the St. John Ambulance Brigade and a few of the Indian Red Cross. There was adequate supply of medicine and equipment. A temporary Isolation Hospital was also constructed at the *mela* ground with 20 beds for cholera, 4 for smallpox and 15 for leprosy cases.

Two dispensaries were run in the *mela* ground with one provided with 4 emergency beds. In all 930 outdoor cases and 5 indoor cases were treated.

Epidemic Control.—There was no outbreak of any epidemic disease in the *mela*. Five suspected cholera cases were imported into the *mela*, all hailing from outside the State. These five cases improved and were removed to the Subdivisional Hospital at Diamond Harbour.

There was no death from cholera in the *mela* but there was one death from smallpox, the patient, a U.P. man from Jaunpur was picked up dead from an incoming boat by the *mela* volunteers. The contacts were all vaccinated and segregated, and the boat was disinfected.

Disposal of the dead.—There were only two deaths—one from smallpox as stated above and the other of an old patient aged 60. The bodies were disposed of by burning by *mela* volunteers.

Sanitary, conservancy and water-supply arrangements at different stations.—Besides, at different embarking and disembarking stations—Outramghat, Diamond Harbour, Kakdwip, Kachubari, Mansadwip and other wayside stations, sanitary, conservancy and water-supply arrangements were made. The Health Directorate deputed adequate medical and public health staff to each of the stations. Special arrangements were made to receive infectious cases at the State and A.G. Hospital at Diamond Harbour and A.G. Hospital at Kakdwip.

Number of inoculation against cholera, vaccination against smallpox and number of ordinary maladies treated are recorded according to the different stations :—

	Anti-cholera inoculations.	Vaccination.		Cases treated.
		Primary.	Re-vaccination	
(i) Outramghat ..	8,343	11	4,289	Nil
(ii) Diamond Harbour ..	61,731	131	6,559	241
(iii) Kakdwip ..	9,156	25	2,469	239
(iv) Kachubaria ..	2,708	..	2,226	190
(v) Namkhana ..	2,604	8	405	..
(vi) Horaghat ..	1,053
(vii) Mansadwip ..	883
	86,478	175	15,948	670
Mela ground (proper) ..	10,520	14	1,424	935
	96,998	189	17,372	1,605

Sivaratri Mela at Tarakeswar.—The *mela* was held for 2 days on the 6th and 7th March 1951. Approximately 20,000 people from outside visited Tarakeswar during the occasion besides a few thousand local people.

Adequate medical, sanitary and public health measures were made by the management of the Estate.

Health Directorate staff consisting of 3 Mobile Medical Units, 1 Sanitary Inspector and 2 Health Assistants in addition to local District Board staff were deputed to the *mela*.

There were a few cases of diarrhoea, dysentery and malaria. The Estate hospital with 14 beds including 4 beds for infectious diseases was kept ready for receiving patients. Besides, the St. John Ambulance Brigade opened a first-aid centre and some cases of diarrhoea were treated and removed by them to the hospital.

A total number of 7,984 inoculations were performed and 2,577 persons were vaccinated.

Tarakeswar Gazan Mela.—The *mela* lasted for 5 days from 11th April 1951 to 15th April 1951. About 12,000 "*Gazan Sanyasis*" attended the *mela*.

Necessary measures for accommodation for pilgrims, water-supply and conservancy were taken by the Estate authorities.

Fortunately there was no case of cholera or smallpox. A few cases of malaria, respiratory and other diseases were treated by the Mobile Medical staff deputed at the *mela*.

Two Mobile Medical Units opened First-aid Centres in Tarakeswar Estate building beside another centre opened on the Railway Platform by the Medical staff of the Railways.

A total of 7,162 inoculations were performed and 6 primary and 1,570 revaccination done.

Number of inoculation against cholera, vaccination against smallpox and number of ordinary maladies treated are recorded according to the different stations:—

Station	Primary	Revaccination	Total
(i) Tarakeswar	2,543	411	2,954
(ii) Diamond Harbour	81,731	131	81,862
(iii) Keshwip	8,138	25	8,163
(iv) Kachubaria	2,708	228	2,936
(v) Nankharna	2,002	405	2,407
(vi) Horiganj	1,503	—	1,503
(vii) Mowship	1,503	—	1,503
Total	94,525	1,175	95,700

Sivatali Mela at Tarakeswar.—The *mela* was held for 2 days on the 14th and 15th April 1951. Approximately 20,000 people from outside Tarakeswar during the occasion besides a few thousand local people. Adequate medical, sanitary and public health measures were made by the management of the Estate.

Chapter XVI

ORGANISATION OF HEALTH SERVICES.

The Director of Health Services, West Bengal, was the Technical Adviser to the Government in medical and public health matters. He was also the *ex officio* Secretary of the Medical and Public Health Department.

On the Secretariat side, the Director of Health Services-cum-Secretary was assisted by one Deputy Secretary, one Assistant Secretary, one Special Officer (Legislation) and one Registrar.

On the Directorate side, the Director of Health Services was assisted by 4 Deputy Directors and Chief Engineer (Public Health Engineering), each of whom was in charge of a particular branch, viz.—

- | | |
|--|--|
| (1) Administration Branch—dealing with cases relating to the medical administration. | Deputy Director of Health Services (Administration). |
| (2) Medical Relief Branch—dealing with various development schemes on medical side, also services, e.g., medical education, research, etc. | Deputy Director of Health Services (Medical Education, Research and Planning). |
| (3) Accounts, Audit and Verification Branch—dealing with inspection of accounts of the institutions and officers under this Directorate. | Deputy Director of Health Services (Accounts, Audit and Verification). |
| (4) Public Health Branch—dealing with all matters relating to the public health administration. | Deputy Director of Health Services (Public Health). |
| (5) Public Health Engineering Branch—dealing with all matters relating to sanitary engineering, water-supply, etc. | Chief Engineer, Public Health Engineering. |

The Deputy Directors of Health Services and the Chief Engineer (Public Health Engineering) in their turn were assisted by Assistant Directors of Health Services and other officers as shown below—

- | | |
|--|---|
| (1) Deputy Director of Health Services (Administration). | (i) Administrative Officer (Stores), |
| | (ii) Regional Assistant Director of Health Services, |
| | (iii) Administrative Officer (Administration), |
| | (iv) Drug Licensing Officer. |
| (2) Deputy Director of Health Services (Medical Education, Research and Planning). | (i) Assistant Director of Health Services (Vital Statistics), |
| | (ii) Superintendent of Nursing Services, |
| | (iii) Administrative Officer (Medical Relief). |

- (3) Deputy Director of Health Services, (Public Health).
- (i) Assistant Director of Health Services (Epidemic and Communicable Diseases),
 - (ii) Assistant Director of Health Services (School Hygiene and Nutrition),
 - (iii) Assistant Director of Health Services (Social Hygiene and Health Education),
 - (iv) Two Regional Assistant Directors of Health Services (Public Health Administration).
 - (v) Assistant Director of Health Services, (Tuberculosis),
 - (vi) Assistant Director of Health Services, (School Hygiene for Girls and Maternity and Child Welfare),
 - (vii) Assistant Director of Health Services, (Industrial Hygiene),
 - (viii) Assistant Director of Health Services, (Malaria Research and Planning),
 - (ix) Assistant Director of Health Services (Leprosy)—post remained vacant during the year under report.
- (4) Chief Engineer, Public Health Engineering ..
- (i) 3 Executive Engineers for 3 Divisional Offices.
 - (ii) Assistant Engineer (Mechanical Division),
 - (iii) Assistant Engineer (Planning),
 - (iv) Assistant Engineer (Malaria).

The medical administration in the districts was supervised by the Civil Surgeons with the help of Additional Civil Surgeons, Assistant to Civil Surgeons, Assistant Surgeons, Sub-Assistant Surgeons, Medical Officers of Health.

On the Public Health side, the two Regional Assistant Directors of Health Services were mainly responsible for the supervision of Public Health Administration in the districts. The Subdivisional Health Officers directly supervised and controlled the activities of Mobile Medical Units and Government Health Assistants distributed all over the State. During the year under report, 206 Mobile Medical Units and 430 Government Health Assistants worked in different parts of the State, including 6 Mobile Medical Units and 10 Government Health Assistants newly appointed for the Cooch Behar district which was merged in the State during 1950. Absorption of the pre-merger medical and public health staff of the district in the set-up of the Health Directorate was well under progress and appointment of a District Health Officer for the Cooch Behar district where no district board was yet constituted, was under active consideration of Government.

As regards Public Health Engineering, the district administration was carried on by the Executive Engineers who were assisted by Assistant Engineers, Supervisors and Overseers.

On medical side, the State maintained all provincialised hospitals and dispensaries at Subdivisional Headquarters, A.G. and F.R.E. Hospitals, and Thana and Union Health Centres. These were run under direct control and supervision of the Civil Surgeons. Besides, the State paid grants-in-aid to hospitals and dispensaries run by local bodies and maintained or subsidised medical schools and colleges at the city or at some of the district headquarters.

In addition to grants-in-aid paid to different Leprosy Institutions, one Leprosy Colony (at Gouripore of Bankura district) with accommodation for infectious cases (with provision for expansion) was entirely managed by the State. Besides anti-malaria schemes or survey or other anti-malaria measures including distribution of large quantity of anti-malaria drugs were carried out by the State or through the agencies of local bodies out of the allotments sanctioned for the purpose. Various schemes on water-supply, drainage and sanitary measures were executed in municipal areas under direct control and supervision of the Public Health Engineering.

On measures for rural water-supply, a large sum of money was placed at the disposal of the Chief Engineer, Public Health Engineering, and water-supply projects for sinking and resinking or repairs to tubewells in rural areas were executed through the agencies of the district authorities under supervision of the Public Health Engineering Supervisors and Overseers with money and materials purchased out of the allotted amount.

District boards and municipalities maintained their respective Public Health and Medical staff and carried out measures on medical, sanitary, public health and water-supply measures in their own areas.

All district boards employed qualified District Health Officers. For the purpose of rural public health administration, excluding Darjeeling, 226 Rural Health Circles were run by district boards and worked by qualified Sanitary staff under direct control and supervision of the District Health Officers.

The Rural Health Circle staff carried mainly prophylactic measures against outbreaks of epidemic diseases and performed duties in connection with Bengal Food Adulteration Act and as Registrars of Births and Deaths, etc.

The special scheme known as Darjeeling Rural Public Health Organisation worked in the district of Darjeeling. Under this scheme, 14 Rural Health Circles (Medical Treatment Centres) mainly at the State expenses were maintained during the year under report.

In Municipal areas, Sanitary and Public Health measures were carried out by Municipal Health Officers assisted by public health staff or by qualified Sanitary Inspectors in those municipalities which employed no Health Officers.

District boards and municipalities also maintained other medical and water-supply arrangements in their respective areas. In rural areas, Dispensaries and Kala-azar Centres were also run by local bodies with or without grants-in-aid received from the State.

Rural Health Centre Scheme.—The scheme provides for re-organisation of the whole medical and public health services into a unified health service comprising both preventive and curative measures and carrying out positive health work in the rural areas with the ultimate aim of establishment of Health Centre in each of the Unions and Thanas in the rural areas of the State gradually. During 1951-52, 25 Health Centres (3 Thana and 22 Union) containing 346 beds were opened in different parts of the State raising the total to 11 Thana and 91 Union Health Centres with a total number of 1146 beds.

These Health Centres provide for medical treatment through indoor beds and outpatients' dispensaries. On the public health side, their function is to carry out prophylactic measures of inoculation, vaccination and other measures against outbreak and spread of epidemic diseases. They also look after maternal and child health, health of school children, etc.

Chapter XVII

PERSONAL PROCEEDINGS—1951.

- Director of Health Services—Dr. B. C. Das Gupta, B.Sc., M.B., D.P.H. (Lond.), M.R.C.P. (Ire.), D.T.M. & H. (Lond.).
- Deputy Director of Health Services, (Administration)—Dr. A. M. Sen, M.B.
- Deputy Director of Health Services, (Medical Education, Research and Planning)—Dr. D. P. DUTTA, M.B., D.P.H., D.T.M. & H. (Lond.), M.R.C.P. (Edin.).
- Deputy Director of Health Services, (Public Health)—Dr. S. K. Sarkar, M.B., D.P.H.
- Deputy Director of Health Services, (Accounts, Audit and Verification)—Dr. K. S. Mitra, M.B.E., B.A., A.S. A.A. (Lond.), A.I.R.A.
- Chief Engineer, Public Health. Engineering—Shri P. C. Bose, B.S.C., (Glass.), M.I.E. (Ind.), F.N.I.
- Personal Assistant to the Chief Engineer, Public Health Engineering—Shri Sudhindra Nath Das, B.Sc., A.M.I.E. (Ind.).
- Personal Assistant to Director of Health Services—Mr. B. S. Regel, B.Sc., W.B.C.S.
- Administrative Officer (Administration)—Shri A. D. Chakraborty, B.A.
- Administrative Officer (Medical Relief)—Shri B. N. Das Gupta, M.A.
- Administrative Officer (Stores)—Shri P. K. Mukerjee, M.A.
- Assistant Administrative Officer (Stores)—(1) Dr. S. K. De, M.B., up to 26th July 1951. Dr. S. K. Sen, M.B., from 27th July 1951, (2) Shri A. K. Hore (Public Health Engineering), B.E.
- Special Officer (Supervision)—Dr. P. C. Dutta, M.B., Ch.B. (Edin.), L.R.C.P. (Lond.), M.R.C.S. (Eng.), F.R.C.S. (Edin.), D.P.H. (Edin.).
- Special Officer (Health Centre)—Dr. N. C. Das Gupta, M.B., D.T.M., M.R.C.P. (Edin.), D.P.H. (Lond.).
- Director of Social Hygiene and Health Education—Dr. Sourin Ghosh, M.B., L.R.C.P. (Lond.), F.R.C.S. (Eng.).
- Assistant Director of Health Services (Epidemic and Communicable Diseases)—Dr. K. P. Bhattacharya, M.B., D.P.H.
- Regional Assistant Director of Health Services (Public Health Administration), Western Circle—Dr. D. N. Das, M.B., D.P.H.
- Regional Assistant Director of Health Services, North and Eastern Circle—Dr. S. K. Chatterjee, M.B., D.P.H., D.T.M.
- Regional Assistant Director of Health Services (Public Health)—Dr. B. N. Brahmachari, M.B., D.P.H.
- Assistant Director of Health Services (Industrial Hygiene)—Dr. H. Mukherjee, M.B., D.I.H. (Lond.), from 7th June 1951.
- Assistant Director of Health Services, (School Hygiene for Girls, Maternity and Child Welfare)—Dr. P. G. Choudhury, B.Sc., M.B., D.P.H., up to 15th February 1951. Dr. (Mrs.) Anila Banerjee, M.B., D.M.C.W., from 16th February 1951.

- Assistant Director of Health Services (Tuberculosis)—Dr. S. Majumdar, M.B., D.P.H., F.C.C.P. (America).
- Assistant Director of Health Services, (Vital Statistics)—Dr. P. G. Choudhury, B.Sc., M.B., D.P.H.
- Assistant Director of Health Services, (School Hygiene and Nutrition)—Dr. S. R. Sen Gupta, M.B., D.P.H., Ph.D. (Aberdeen).
- Assistant Director of Health Services, (Malaria Research and Planning)—Dr. N. Ganguli, M.B., D.T.M., D.P.H., from 1st March 1951.
- Superintendent of Nursing Services—Mrs. M. Mitter, R.N., R.M., R.H.V.
- Drug Licensing Officer—Dr. D. Sett, M.B.
- Inspectors of Drugs—Dr. K. C. Sen Gupta, M.B.
Dr. S. N. Datta, M.B.
Shri R. Sen Gupta, B.Pharm.
Shri T. Ray Mahasay, B.Pharm.
- Entomologist—Dr. P. Sen, M.Sc., Ph.D. (Lond.), D.I.C.
- Officer-in-charge, Ludlowii Survey and Control—Dr. S. N. Banerjee, M.B., D.P.H.
- Assistant Malariologist—Dr. G. C. Sinha, M.B., D.P.H.
- Epidemiologist—Dr. Gour Mohan Das, B.Sc., M.B., D.T.M., D.P.H.
- Officer-in-charge of Training, Singur Health Centre—Dr. J. K. Bhattacharjee, B.Sc., M.B., D.P.H. (Cal.), M.P.H. (John's Hopkins).
- Assistant Officer-in-charge of Training—Dr. P. C. Sen, M.B., D.P.H.
- Chief Analyst Provincial Drug Control Laboratory and Director, Public Health Laboratory, Calcutta—Dr. A. K. Sen, M.B., D.P.H. (Eng.), M.R.C.P. (Edin.).
- Superintendent, West Bengal Vaccine Laboratory—Dr. N. K. Roy, B.A., D.Bact. (Manchester).
- Superintendent, West Bengal Vaccine Institute—Dr. J. B. Bose, M.B., D.P.H., D.T.M.
- Superintendent, Pasteur Institute—Dr. K. P. Banerjee up to 25th April 1951.
- Medical Officer, Writers' Buildings—Dr. Bireswar Dutta, M.B.

Public Health Engineering.

- Executive Engineer (Eastern Circle)—Shri A. K. Banerjee, B.Sc., B.E., A.M.I.E. (Ind.).
- Executive Engineer (Western Circle)—Shri G. N. Mitra, B.E., A.M.I.E. (Ind.).
- Anti-malaria Engineer—Shri G. C. Ghosh, B.E., C.E., M.R.S.F., A.M.I.E. (Lond.).
- Assistant Engineer (Mechanical)—Shri G. N. Chatterjee, B.E., A.M.I.E. (Ind.).
- Assistant Engineer (Planning)—Shri B. N. Sen, B.E.
- Assistant Engineers—(1) Shri Sanat K. Majumdar, B.E., C.E., A.M.I.E.
(2) Shri Subir Das Gupta, B.E.
(3) Shri A. T. Majumdar.
(4) Shri L. C. Sen Gupta, B.E.
(5) Shri Hara Mohan Majumdar.
(6) Shri Sitangsu Sekhar Mazumdar, B.Sc. A. $\frac{1}{2}$ I.E. (Ind.).
(7) Shri Surendra Nath Das, B.E.

- Principal-cum-Superintendent, Medical College Hospital, Calcutta—
Dr. D. C. Chakravarty, F.R.C.S.E.
- Principal-cum-Superintendent, Lake Medical College and Hospital, Calcutta
—Dr. K. L. Sen, D.O.M.S. (Lond.), F.R.C.S.E.
- Principal-sum-Superintendent, Nilratan Sarkar Medical College and
Hospital, and Superintendent, Nilratan Sarkar Medical School, Cal-
cutta—Dr. A. K. Dutta Gupta, M.B., D.T.M.
- Surgeon-Superintendent, Presidency General Hospital, Calcutta—Dr. N. C.
Chatterjee, M.B.
- Surgeon-Superintendent, Sambhu Nath Pandit Hospital—Dr. S. Basu, up
to 1st July 1951. Dr. S. C. Gupta, from 2nd July 1951.
- Superintendent, Lady Dufferin Victoria Hospital, Calcutta—Dr. M.
Catchatoor.
- Surgeon-Superintendent, Howrah General Hospital—Dr. M. B.
Talukdar, M.B.
- Chemical Examiner to Government of West Bengal—Dr. S. K. Chatterjee,
M.B., D.T.M., Ph.D. (Edin.).
- Superintendent, Mental Observation Ward, Bhowanipore—Dr. Kabir
Hossain, M.B., D.T.M.
- Bacteriologist to Government of West Bengal—Dr. B. P. Tribedi, M.B.,
D.B. (Lond.).
- Medical Officer, Governor's Staff Dispensary—Dr. H. C. Mukherjee, L.M.F.
- Blood Transfusion Officer, Calcutta—Dr. A. Sen, M.B.
- Superintendent, Kanchrapara T. B. Hospital—Dr. K. S. Ray, M.B., T.D.D.,
up to 20th May 1951. Dr. S. K. Ganguly, M.B., D.T.M., T.D.D. (Wales),
from 21st May 1951.
- Superintendent, M. R. Bangur Sanatorium, Digri—Dr. N. M. Sinha, M.B.,
T.D.D. (Wales).
- Superintendent, Ronaldshay Medical School, Burdwan—Dr. P. B. Bhatta-
charjee, M.B., D.T.M.
- Superintendent, Jackson Medical School, Jalpaiguri—Dr. A. B.
Banerjee, M.B.
- Civil Surgeon, 24-Parganas—Dr. S. Basu, M.B., up to 1st July 1951,
Forenoon, Dr. S. C. Gupta, from 1st July 1951, Afternoon.
- Civil Surgeon, Howrah—Dr. M. P. Talukdar, M.B.
- Civil Surgeon, Hooghly—Dr. H. D. Banerjee, M.B., up to 16th April 1951,
Forenoon. Dr. H. K. Indra, M.B., D.O. (Lond.), from 16th April 1951,
Forenoon.
- Civil Surgeon, Midnapore—Dr. P. S. Bhattacharjee, M.B.
- Civil Surgeon, Murshidabad—Dr. H. K. Datta, M.B.
- Civil Surgeon, Birbhum—Dr. H. C. Maitra, M.B.
- Civil Surgeon, Bankura—Dr. N. C. Dewan, M.B.
- Civil Surgeon, West Dinajpur—Dr. Sukumar Bhattacharjee, M.B.
- Civil Surgeon, Jalpaiguri—Dr. A. B. Banerjee, M.B.
- Civil Surgeon, Darjeeling—Dr. S. N. Choudhuri, M.B.
- Civil Surgeon, Malda—Dr. C. R. Dutta, M.B., D.T.M., D.P.H.
- Civil Surgeon, Burdwan—Dr. P. B. Bhattacharjee, M.B., D.T.M.
- Civil Surgeon, Nadia—Dr. S. P. Goswami, M.B., up to 7th July 1951, After-
noon. Dr. S. Basu, M.B., from 8th July 1951, Forenoon.
- Civil Surgeon, Cooch Behar—Dr. R. N. Guha Majumdar, B.Sc., M.B., F.R.C.S.
(Edin.), F.R.F.P. & S. (Glas.).

Subdivisional Health Officers:

- Dr. Gour Hari Sen, M.B., D.P.H.—Subdivisional Health Officer, Katwa.
- Dr. Jagat Bandhu Chatterjee, M.B., D.P.H.—Subdivisional Health Officer, Barrackpur.
- Dr. Niranjana Kumar Sarkar, M.B., D.P.H.—Subdivisional Health Officer, Ghatal.
- Dr. Atulananda Das Gupta, M.B., D.P.H. and D.T.M.—Subdivisional Health Officer, Berhampore.
- Dr. Hari Sadan Ghosh, M.B., D.P.H. and D.T.M.—Subdivisional Health Officer, Jhargram.
- Dr. Pramatha Nath Guha Biswas, M.B., D.P.H.—Subdivisional Health Officer, Tamluk, from April 1951.
- Dr. Sailendra Kumar De, M.B.—Subdivisional Health Officer, Burdwan, Sadar, from April 1951.
- Dr. Sakti Bhusan Roy, M.B., D.P.H.—Subdivisional Health Officer, Bankura, Sadar, from middle of April 1951 then to Arambagh up to middle of October 1951 after which he went on leave.
- Dr. Ramesh Acharjee, M.B., D.P.H.—On deputation as Camp Health Officer, Dhubulia.
- Dr. Subal Chandra Panja, M.B., D.P.H.—Subdivisional Health Officer, Malda, from middle of April 1951.
- Dr. Satya Niranjana Kar, M.B., D.P.H.—Subdivisional Health Officer, Kalna.
- Dr. Manindra Bhusan Das Gupta, M.B., D.P.H.—Subdivisional Health Officer, Asansol.
- Dr. Biswanath Banerjee, M.B., D.P.H.—Subdivisional Health Officer, Suri.
- Dr. Haridas Chakraborty, M.B., D.P.H.—Subdivisional Health Officer, Uluberia and Howrah Sadar.
- Dr. Saradindu Mukherjee, M.B., D.P.H.—Subdivisional Health Officer, Lalbagh.
- Dr. Ardhendu Lal Roy, M.B., D.P.H.—Subdivisional Health Officer, Howrah Sadar and thence to Raiganj.
- Dr. Amal Krishna Pal, M.B., D.P.H.—Subdivisional Health Officer, Diamond Harbour.
- Dr. Debendra Chandra Pal, M.B., D.P.H.—Subdivisional Health Officer, Bongaon.
- Dr. Jamini Kanto Basu, M.B., D.P.H.—Subdivisional Health Officer, Serampore.
- Dr. Gopal Chandra Pal, M.B., D.P.H.—Subdivisional Health Officer, Midnapur, Sadar, up to 16th April 1951 and then on leave.
- Dr. Prafulla Chandra Ganguly, M.B., D.P.H.—Subdivisional Health Officer, Midnapur, Sadar, from 17th April 1951.
- Dr. Manindra Prasad Mukherjee, M.B., D.P.H.—Subdivisional Health Officer, Baraset.
- Dr. Santosh Kumar Roy Choudhury, M.B., D.P.H.—Subdivisional Health Officer, Jangipur.

Dr. Rajendra Nath Sen, M.B., D.P.H.—Subdivisional Health Officer, Alipore (24-Parganas).

Dr. Suresh Prasanna Roy, M.B., D.P.H.—Subdivisional Health Officer, Basirhat.

Dr. Santimoy Das Gupta, M.B., D.P.H.—Subdivisional Health Officer, Chinsurah.

Dr. Jyotirmoy Nath, M.B., D.P.H.—Subdivisional Health Officer, Bankura, Sadar, from 16th April 1951.

Dr. R. N. Banerjee, M.B., D.P.H.—Subdivisional Health Officer, Jalpaiguri, Sadar.

Dr. Rabindra Nath Gupta, M.B., D.P.H., D.T.M.—Subdivisional Health Officer, Ranaghat.

Dr. Golak Chandra De, M.B., D.P.H.—Subdivisional Health Officer, Kandi.

Dr. Sudhir Kumar De, M.B., D.P.H.—Subdivisional Health Officer, Contai.

Dr. Radhashyam Sinha Biswas, M.B., D.P.H.—Subdivisional Health Officer, Krishnagar.

Dr. Madhu Sudan Gupta, M.B., D.T.M.—Subdivisional Health Officer, Rampurhat, up to May 1951 and then on D.P.H. training.

Dr. Sakti Pada Mukherjee, M.B., D.P.H.—Subdivisional Health Officer, Vishnupur, from 1st May 1951.

Dr. Rabindra Nath Mukherjee, M.B., D.P.H., D.T.M.—Subdivisional Health Officer, Rampurhat, from 25th July 1951.

P ART II.

Year	1881	1882	1883	1884	1885	1886	1887	1888	1889	1890	1891	1892

APPENDIX III.

STATEMENT 1.

A General statement regarding patients treated at the Institute and Centres from start of this Institute.

Year.	Total treated (completely and incompletely treated cases).	Total death.	Total death rate percentage.	Advice cases.
Up to 1950	1,48,925	720	.48	35,383
1951	4,757	6	.13	1,700
Total	1,53,682	726	.47	37,083

STATEMENT 2.

A General classification of patients attending the Institute and its centre during the year 1951.

	Class—I.	Class—II.	Class—III.	Total.
Number fully treated	141	2,952	584	3,677
Percentage to total	3.84	80.28	15.88	100
Total deaths	6
Total death rate percentage47
Percentage to Health Returns	68.68
Number not fully treated (presumably at risk)	1,080
Advice cases not at risk	1,700
Total	6,457

STATEMENT 3.

Deaths from Hydrophobia amongst persons treated (Institute and Centres), 1951.

Serial No.	Case No.	Number of days from commencement of treatment to onset of symptoms.	Sex.	Age in years.	Biting animals.	Duration of illness.	Interval between bite and death in days.	Class of cases.	Duration of treatment in days.
1	2	3	4	5	6	7	8	9	10
		Days.		Years.		Days.	Days.		Days.
1	8	28	Male ..	7	Dog ..	3	33	Class—III (5c.c.) (face bite).	12 days 1 day in remission.
2	1858	5	Do. ..	11	Do. ..	1	21	Class—III (10 c.c.)	4
3	2567	27	Female	6 years.	Do. ..	2	28	Class—II (5 c.c.)	14
4	Sl. No. 1455/1950.	10 months.	Male	..	Do. ..	10	10 months.	Class—II (5 c.c.)	5
5	1647	30	Do. ..	10	Do. ..	5	35	Class—III (5 c.c.)	14
6	1462	28-11-51 to December 1951.	Do. ..	28	Do.	October 1951 to December, 1951.	Class—III (10 c.c.)	5

STATEMENT 3.

Classification by animals which bit, scratched or licked the patients in 1951.

Animals.	Number treated.	Percentage to total.	Deaths.	Percentage of death rate.
Dogs	4,221	88.74	6	.14
Jackals	325	6.83	0	= 0
Monkey	120	2.82	0	= 0
Cat	68	1.62	0	= 0
Buffalo	3	.07	0	= 0
Wolf	2	.05	0	= 0
Human	1	.02	0	= 0
Total	4,747	100	6	.14

STATEMENT 4.

Classification by Animals which bit, scratched or licked the patients (Institute and Centre), 1951.

Animals.	Numerator—Deaths.		Denominator—cases.		
	Number treated.	Percentage to total.	Number treated.	Percentage to total.	Death rate percent.
Dogs	4,221	88.74	4,221	88.74	$\frac{6}{4221} = .14$
Jackals	325	6.83	325	6.83	$\frac{0}{325} = 0$
Wolf and tiger	4	.08	4	.08	$\frac{0}{4} = 0$
Total	4,747	100	4,747	100	.14

1.

Water works in West Bengal, 1951.

Total capital expenditure up to 1951.	Annual cost of maintenance (exclusive of loan charges).	Cost of delivery of 1,000 gallons (exclusive of loan charges).	Source of supply.	Type of filter employed.	Type of engines and pumps.
10	11	12	13	14	15
Rs. a. p.	Rs. a. p.	Rs. a. p.			
6,32,657-0-0	12,721-0-0	1-2	River Banks fed by Damodar and 1 tube-well.	Five slow sand filter beds.	Two Tangye's horizontal crude oil cold starting engines, rated 77 B. H. P. 28" single stage low lift type Tangye's centrifugal pumps, direct belt driven capacity of each 52,000 gallons per hour, average total lift 39". Two Tangye's triplex single acting horizontal plunger pumps. The shaft is coupled direct to the engine by friction clutch and the pumps are driven through a single reduction helical gearing. Capacity of each pump 47,000 gallons per hour. Average total lift 96-34'. One Tangye's "AA" type oil engine 2½ B.H.P. single cylinder for workshops. One Lancashire boiler and one horizontal compound Worthington condensing pumping engine.
44,78,820-0-0	5,54,017-0-0	0 4 3	Hooghly River	Ten slow sand filter beds.	For unfiltered water—Two vertical high speed unflow engines direct coupled with two 20" Worthington low lift centrifugal pumps. Average total head—3 feet. For filtered water—One Worthington vertical triple expansion flywheel triplex pumping engine. One Worthington horizontal triple expansion Duplex pumping engine. Two horizontal compound condensing Duplex pumping engines by Evans and Deans. Average total head 92" Five Lancashire boilers.
4,47,181-0-0	76,855-0-0	8-88	River Bhagirathi.	Two slow sand filter beds.	Filtered water pumping station—Two horizontal single cylinder Blackstone spring injection crude oil engines each of 34 B.H.P. at 375 R.P.M. Two Gwynnes invincible single stage centrifugal pumps, size 5 inches. Capacity each—30,000 against total head 120 feet. Unfiltered water pumping station—In a barge. One Crossley cold starting crude oil engine, 24 B.H.P. One Tangye's centrifugal pump 30,000 against 90 feet and one Crossley 24 B.H.P. horizontal semi-diesel crude oil engine. One Mather and Platt's centrifugal pump 30,000 gallons against 100 feet and one 26 B.H.P. Crossley crude oil engine and one Gwynne invincible pump (1940 at Rs. 4,7000). All the pumps are direct belt driven from the engines. Average total lift 55 feet.
71,950-0-0	16,890-0-0	13-6	W. W. Calcutta Corporation, Municipa Deep, tube-well connected with an E. reservoir.
17,452-0-0	Supplied from Shyamnagar Jute Mill, Dunber Cotton Mills and 18 tube-wells.

No.	Name of Municipality.	Year of completion.	Area served.	Designed capacity of works.	Approximate population served.	Average daily supply in gallons.	Average daily supply per head of population in gallons.	Total capital expenditure during 1951.

53,202-0-0	5,262-14-9 53,202-0-0	5.50	Hooghly River local Jute Mills and 5" dia. tube-well.	
1,10,153-15-0	70,075-0-0	..	30 springs on the Senchel spring.	For subsidiary service to St. Pauls' School and three adjacent properties two 10 H. P. motors, one Rees Ronturbo pump and one Haward Taylor duplicate plunger pump. Pumping plant at "Konkola". One Ruston Hornsby horizontal 4 cycle semi-diesel crude oil engine. B.H.P. 66. One Worthington vertical single acting triplex ram pump, direct belt driven.
1,50,507-4-0	17,467-4-0	5.1 annas.	Three Jewell pressure filters.	Gravity supply.
8,24,248-0-0	86,542-0-0	2.42	River Hooghly	Four slow sand filter beds.	Two Deutz 4 stroke, 6 cylinder full diesel engines, 130/150 B. H. P. 375 R. P. M. Low lift from river to settling tanks, Two Amag Hilpert, single stage centrifugal pumps, capacity 1,250 gallons per minute. Total head 46.5'. High lift. Two Amag Hilpert two stage centrifugal pumps, capacity 1,000 gallons per minute. Total head 204 feet. All the pumps are belt-driven.
1,64,809-0-0	26,585-0-0	6.4 annas.	Darakeswar and Gandheswari River.	Two infiltration galleries in the bed of river Gandheswari and 2 tube-wells in the river Darakeswar.	Gandheswari Station— One Madaag Krupp vertical single cylinder two stroke, diesel engine of 25 B. H. P. One Klein Schanzlin and Backer centrifugal pump, direct coupled to the engine through a gear box; capacity of pump per hour 12,000 gallons against a head of 115 feet. One Crompton-Parkinson drip-proof squirrel cage rotor motor, 13 B. H. P. 440 volts., 3 phase, 50 cycles A. C. R. P. M. 1,430 directly coupled to a Mathar, and Platt Medivane split casing type medium lift centrifugal pump capacity 200 gallons per minute at a total head of 115 feet. Erected in July 1941.
					Darakeswar Station— One Lister vertical twin cylinder 4 stroke 14 B. H. P. diesel engine R. P. M. 1,000 driving a centrifugal pump of Polsonometer Co. capacity 200 gallons per minute against a total head of 153 feet at 1,650 R. P. M. One Madaag Krupp vertical single cylinder two stroke diesel engine of 30 B. H. P. and one Klein Schanzlin and Backer centrifugal pump coupled through a gear box. Capacity 15,000 gallons per hour. Total head 127 feet.

1,95,872-0-0	20,397-0-0	6-74	River Hooghly	One Paterson's gravity filter.	One Crompton-Parkinson, squirrel cage induction motor and two high lift Tangye's centrifugal pumps, capacity 10,000 gallons against 52 feet total head. Two Tangye's semi-diesel crude oil engines. Countershaft belt-driven average total lift 63'-7".
19,56,105-11-6	Springs of river Rilli and Homes Spring.	Gravity Supply.
4,61,084-0-0	21,741-0-0	2-2	River Jalangi	Two Jewell mechanical gravity filters. Filtering capacity 12,000 gallons per hour each.	These are kept as stand-by, one Black stone crude oil-engine of 15 B. H. P. One Ramsomes, Sims and Jefferies semi-diesel engines, 15 B. H. P. Two Ramsomes, Sims and Jefferies semi-diesel engine, 10 B. H. P. each Two Worthington 2½" high lift centrifugal pumps. Two Worthington 3" medium lift pumps and one 6" Worthington low lift centrifugal pump. All direct belt driven. Total average lift 43' 9". High lift— Two sets of Worthington split casing type centrifugal pump. Capacity 24,000 gallons against 45 feet head per hour. Direct coupled to Crompton Parkinson's 440 volts., 3 phase. 50 cycles. R. P. M. 1,440 induction motors of 10 B. H. P. each. Medium lift— Two sets of centrifugal pumps of 24,000 gallons against 26 feet head per hour. Direct coupled to induction motors of 7.5 B. H. Pd. and 1,430 R. P. M.
....	From local Mills and tube-wells.	River side L. L.— One centrifugal pump of 33,000 G. P. H. against 30 feet head Capacity direct couple to Induction motor of 1,450 R. P. M. and 10 B. H. P. motors and centrifugal pumps of both M. L. and L. L. are exactly like those of H. L. sets.
6,08,883-10	21,742	2-4	Two T. Ws. in the bed of Cossye River with auxiliary tube-wells.	One 42 B. H. P. Campbell horizontal crude-oil engine, one Crossley 46 B. H. P. four-cycle horizontal cold starting engine 1940, two vertical treble ram pumps. Direct belt-driven average total lift 135 capacity 25,000 G. P. M.
3,42,041	18,948	3-9	Damodar River	Two Campbell high compression crude-oil engines of the horizontal single cylinder ordinary cold starting type 26 B. H. P. Two Campbell vertical treble ram water pumps capacity 12,500 gallons per hour each. Direct belt-driven. Average total lift 174' 5".
2,47,324-15	18,564	7-26 annas.	Infiltration gallery in the bed of river Maurakhi.	Two three-throw ram pumps of 7,500 gallons capacity each direct belt driven by two 15 B. H. P. Campbell high compression horizontal heavy oil engines. Average total lift 135' 7".
2,57,897-7	14,126-8	2-42	Supplied from local Mills.

No.	Name of Municipality	Year of completion.	Area served.	Designed capacity of works.	Approximate population served.	Average daily supply in gallons.	Average daily supply per head of population in gallons.	Total capital expenditure during 1951.

7,52,958-13	45,775-9	2 2	River Hooghly	Three Paterson's rapid gravity type filters capacity 34,000 gallons each complete with air wash plant and chloro-nome.	Unfiltered station— (i) Three 5" Gwynne's centrifugal "KL" pumps for low lift direct coupled to "Asca" 12 H. P., 400 volts. 3 phase 50 cycles induction motors running at 1,440 R. P.M. Each set capable of delivering 33,500 gallons of water per hour against a total head of 47 feet. Filtered station— (ii) Three 5" Gwynne's centrifugal "K" pumps for high lift direct coupled to three "Asca" 30 H. P., 400 volts. 3 phase, 50 cycle induction motors, running at 1,440 R. P. M. Each set capable of delivering 34,000 gallons of water per hour against a total gauge head of 124 feet. Transformer— (iii) One "Asca" 3 phase, oil immersed, self-cooled core type transformer, rated 100 K. V. A. at 50 cycles and designed for a voltage ratio of 6,000/400 volts. at full load.
1,48,574-0	67,942	2 5	River Hooghly	3 Nos. Peterson gravity filters size—13' x 25' capacity 22,250 gallons per hour each.	Riverside station— One Pulsometer vertical spindle Axisc flow propeller pump output 120,000 G. P. H. against a total head of 12 feet direct coupled to vertical spindle squirrel cage 3-phase 50 cycle, 400 volts. 13 H. P. A. C. motor. Low Lift pumping sets— 3 Nos. Pulsometer type horizontal single stage 6" centrifugal pump. Each capable of pumping 33,500 G. P. M. against a total head of 41 feet direct coupled to squirrel cage 3-phase, 50 cycles, 400 volts., 11 H. P. A. C. motors. High Lift station— 3 Nos. Pulsometer type horizontal single stage 5" centrifugal pump capacity 33,500 G. P. H. each against total head of 90 feet direct coupled to squirrel cage, 3-phase, 50 cycles, 400 volts., 25 H. P. A. C. motors. Transformer— One double wound core, oil immersed self-cooled transformer, capacity 100 K. V. A. when operating on 3-phase, 50 cycle supply and having a voltage ratio of 6,000/400 volts.
8,81,447-4	31,031	0 2 8	From Calcutta Corporation and 2 Nos. of Tube-wells of Garden Reach Municipality.
