GRANT HIGGINS AND PARTNERS

TO

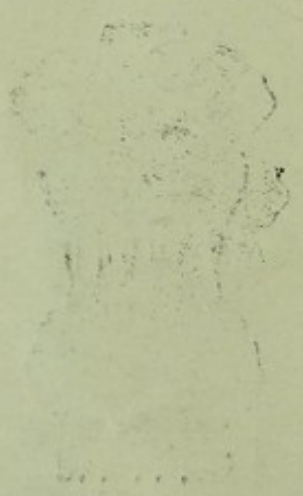

THE ANNUAL MEETING

OF THE

BOARD OF MANAGERS OF THE
NEW YORK AND HUDSON RIVER
CANAL COMPANY

HELD AT NEW YORK

ON THE 11th DAY OF

22501398706

EXPLANATORY NOTE

In this volume Statistics of Hospitals and Dispensaries are shown mainly on the same lines as were adopted in the Indian Medical Review 1938 with some minor adjustments necessitated by the changed conditions, *e.g.* statistics of institutions under the supervision of Political Department or External Affairs have been omitted. Similarly, statistics relating to Missionary Institutions have not been shown separately. It was not intended to make any major break in continuity from the past this time, in order that it may be possible to assess the changes in the decade for which data for individual years could not be published. There is a demand for information on individual hospitals. This point has also been responsible for maintaining *status quo*. However, it is proposed that as from next year only changes in the number of institutions should be given and less emphasis should be laid on publishing details of individual institutions in this All India review. For data of the latter type a reference to the Annual Reports of the individual States should meet the need.

EXPLANATORY NOTE

Consequent on the integration of the medical and public health activities at the Centre since 15th August 1947, it has been decided that the Annual Report of the Director General of Health Services, Government of India, will henceforth cover both the aspects of health activities in the country and accordingly, statistics concerning these subjects are being shown together in this publication. The vital and health statistics which used to appear annually in the Statistical Appendices to the Annual Report of the public Health Commissioner with the Government of India, are given in Part I of the publication, while Part II (issued in a separate volume) contains the statistics relating to medical institutions last issued in the Indian Medical Review 1938.

The Statistics presented for 1947 relate to India as after partition and this has led to a break from the statistics for previous years which relate to undivided India. On account of the difficulty in securing the relevant material it has not been possible to separate the more important vital statistical figures of births, deaths and infant deaths for previous years for the portions of Punjab, Bengal and Assam, forming part of India. Any arbitrary division of the recorded figures on proportionate area of 1941 census population basis, is little more than an expedient which may be justified in the circumstances for a particular calculation, but seems to be out of place when primary statistics are being presented as in this brochure. Accordingly, statistics relating to N. W. F. P. and Sind which have in their entirety gone to Pakistan, have been excluded, but those for Punjab, Bengal and Assam prior to 1947 have been given for the whole of the undivided provinces as they existed before partition. As has been explained in the previous issue, Bengal figures for 1946 relate to West Bengal only. This makes the absolute figures for these years uncomparable with the corresponding figures for 1947 but does not materially affect in so far as derived rates are concerned. To give an idea of the magnitude of changes in area and population due to partition, the following 1941 Census figures are given :—

Provinces	Before partition			After partition (Indian Republic Portion)		
	Area in sq. miles	Total popula- tion in 000	Registra- tion area population in 000	Area in sq. miles	Total population in 000	Registra- tion area popula- tion in 000
Punjab	99,089	24,819	28,379	37,428	12,697	12,697
Bengal	77,442	60,307	60,059	28,155	21,196	21,196
Assam	54,951	10,205	9,418	50,296	7,472	6,684
India	1,581,410	388,998	292,642*	1,220,011	318,898	227,787*

* Relate to Provinces only.

In order to avoid repetition when presenting data, references have been made to Footnotes A, B and C which mean as follows :—Footnote A—Only 1947 data

relate to East Punjab, the data for other years relate to undivided Punjab. Footnote B—Only 1946 and 1947 data relate to West Bengal, the data for other years relate to undivided Bengal. Footnote C—The data for 1947 relate to Indian Provinces as after partition the data for other years cover these provinces as before partition with the exception that in 1946 only the data for West Bengal has been included.

Another change to which attention need be drawn, relate to the method of estimating population. Population estimates published in the previous issues have been made by projecting 1941 Census population by the Arithmetical Progression. It is felt that this mathematical method is out of time with indications given by the recorded figures of births and deaths. As is well known in India there is little migration in or out of the country and population growth is mainly determined by the excess of births over deaths. The following figures relating to undivided India show that since 1941 Census the growth of population has been highly fluctuating :—

Year	Births	Deaths	Excess of Births over Deaths
1941	9,425,671	6,413,042	3,012,629
1942	8,714,555	6,336,313	2,378,242
1943	7,775,893	7,108,786	667,107
1944	7,708,195	7,307,131	401,064
1945	8,374,463	6,608,726	1,765,737
1946*	7,654,226	4,955,820	2,998,689

* Excluding East Bengal.

Even though the reliability of the absolute figures of excess of births over deaths may be open to questions owing to the accepted under-registration of vital events the trend suggested by them is explainable in the light of events in the country. After 1941, the conditions consequential to war strained the economy of India to the utmost. Famine conditions which prevailed in greater parts of the country in 1943 and 1944 must have slowed the normal pace of population growth. Adverse conditions persisted to some extent in 1945 but 1946 showed a greater recovery towards normal conditions.

In the circumstances, it would appear improper to base population estimates on the last intercensal rate of population growth, which is implied in the arithmetical progression method. The method should take into account the indications given by the recorded births and deaths and therefore the population estimates have been made on a modified form of 'natural increase' method. The increase in population has been estimated by rating up the recorded excess of births over deaths by a deficiency factor suggested by the last intercensal data and the present tendencies. The provincial break up of the population of India has also been similarly estimated. Following partition, there was an unprecedented migration of population across the borders of India. Its magnitude is a matter of surmise but it is held that a movement of the order of 5 millions took place on either side of the Western border; the position as regards other parts of India is obscure. In the estimates the shift of

population as a result of these movements could not be allowed for. The population estimates on the revised basis for the preceding decade are given below :—

Year	Population India Total in 000	Population of Registration Areas in 000 (Provinces only)
1938	374,920	282,110
1939	379,981	285,900
1940	385,343	289,978
1941	389,857	293,219
1942	393,631	295,853
1943	396,618	297,680
1944	398,416	298,321
1945	400,900	299,621
1946	404,970	302,480
1947 (as after partition)	338,731	240,511

Attention may be drawn to the repercussion of wide-spread civil disturbances in the country following partition on the machinery for registering vital events in certain affected areas. It has been more fully commented upon in the narrative portion of the Report. It may suffice here to say that in areas violently affected of which East Punjab and Delhi may be specially mentioned, the normal arrangements for the registration of births and deaths broke down and it was some time before they could be restored. Again, there was a large floating population seeking rehabilitation and this must have resulted in a greater number of omissions in registration.

The usual tables showing vital and health statistics are shown in this volume.
