RAPPORT ANNUEL

ANNUAL REPORT

1952

1952

M. le Président et

MM. les Membres du Comité exécutif,

Messieurs,

J'ai l'honneur de transmettre à votre Comité le rapport du Service de santé pour l'année 1952.

Dans une première partie, j'expose l'état des dépenses pour l'année financière 1952-1953; dans la deuxième partie, je fais des commentaires au sujet du mouvement démographique et de l'évolution des maladies contagieuses; enfin, dans la troisième partie de mon rapport, je décris les améliorations apportées au service en 1952.

Suivent les rapports des diverses divisions.

ÉTAT DES DÉPENSES

Année financière 1952-53

Je dois faire remarquer que l'année financière, au lieu de correspondre avec l'année du calendrier, commence maintenant le 1er mai d'une année, pour se terminer le 30 avril de l'année suivante.

Par conséquent, les dépenses mentionnées dans le tableau qui suit correspondent avec la nouvelle année financière de la Ville, tandis que le reste du rapport annuel, rapports des divisions, tableaux, etc., continue d'être basé sur l'année du calendrier.

Le total des dépenses du Service de santé pour l'année financière 1952-53 a été de \$2,320,367.00 To the Chairman and Members of the Executive Committee,

Gentlemen:

I respectfully submit to your Committee the report of the Department of Health for the year 1952.

In the first part, I show the statement of expenses for the fiscal year 1952-1953; in the second part, I make commentaries in connection with the demographic movement and the development of contagious diseases; finally, in the third part of this report, I explain improvements made in the Department of Health in 1952.

Then, follow the several reports from the different divisions.

STATEMENT OF EXPENDITURES

Fiscal Year 1952-1953

I must note that the fiscal year does not correspond with the calendar year, as it now begins on May first of each year to end on April 30th of the following year.

Consequently, expenditures mentioned in the following table correspond with the new fiscal year adopted by the City, while the rest of the annual report, the reports from divisions, tables, etc., are still, as in the past, based on the calendar year.

The total expenditures of the Department of Health for the fiscal year 1952-53 were \$2,320,367.00

Pour évaluer les dépenses par tête de population, nous devons prendre comme base les données de l'année 1952; la population ayant été évaluée à 1,035,600 on obtient le résultat suivant: In order to estimate the expenditure per capita of population, we must take as a basis the figures for 1952; the population being set at 1,035,600, we arrive at the following figure:

| | Montant | Par tête |
|-----------|----------------|----------|
| Total des | | |
| dépenses | \$2,309,606.19 | \$2.23 |

Total expenditures.. \$2,309,606.19 \$2.23

La liste ci-dessous indique, en détail, la répartition des dépenses pour l'année financière 1952-1953. The following list shows, in detail, the division of expenditures for the fiscal year 1952-1953.

MOUVEMENT DÉMOGRAPHIQUE ET COMMENTAIRES

DEMOGRAPHIC MOVEMENT AND COMMENTS

POPULATION

Pour l'année 1952, au 1er juillet, la population "de jure" de Montréal, soit celle domiciliée à Montréal, a été évaluée à 1,035,600 âmes par le démographe du Service de santé. Pour établir cette évaluation, ce dernier se base d'abord sur les résultats du recensement fédéral décennal, tenant compte aussi des facteurs suivants: accroissement naturel de la population, recensements annuels locaux, émigration.

Tous les chiffres publiés dans ce rapport, à moins d'indication contraire, ont été obtenus après élimination des non-domiciliés et inclusion des domiciliés à Montréal, nés ou décédés hors de Montréal.

ACCROISSEMENT NATUREL DE LA POPULATION

L'accroissement naturel de la population s'établit par le surplus des naissances sur les décès.

L'excédent des naissances sur les décès en 1952 a été de 15,416 contre une moyenne de 12,958 pour les dix années de 1942 à 1951, soit une augmentation de 2,458 pour l'année 1952.

L'accroissement naturel de la population représente un taux de 14.9 par 1,000 habitants pour 1952.

POPULATION

For 1952, as of July 1st, the "de jure" population of Montréal, or of persons resident in Montréal, is estimated at 1,035,600 by the demographer of the Department of Health. To compute this estimate, he has taken as a basis, in the first place, the results of the federal decennial census, taking into account the following factors: natural increase of population, annual local census, emigration.

All figures published in this report, except when otherwise stated, have been calculated after excluding the nonresidents and including persons resident in Montréal, who have been born or have died elsewhere.

NATURAL INCREASE OF POPULATION

This figure is arrived at by calculating the surplus of births over deaths.

The excess of births over deaths in 1952 was 15,416 against an average of 12,958 for the ten years from 1942 to 1951, showing an increase of 2,458 for the year 1952.

The natural increase of the population gives a rate of 14.9 per 1,000 population for 1952.

Tableau I

Nombre de naissances et de décès et accroissement naturel pour l'année 1952 et par période de 5 et de 10 années depuis 1942.

Table I

Number of births and deaths and natural increase for year 1952 and by 5 and 10-year periods since 1942.

| Période d'années | Naissances | Décès | Excédent de nais- sances sur les décès |
|--|--------------------|------------------|---|
| Period of years | Births | Deaths | Excess of births over deaths |
| 1942–1946 (5 ans—years) 1947–1951 (5 ans—years) | 108,899 118,922 | 48,870 49,373 | 60,029 69,549 |
| 1942–1951—moyenne 10 ans —mean for 10 yrs | 22,782 | 9,824 | 12,958 |
| 1952 | 25,303 | 9,887 | 15,416 |

NATALITÉ

Le nombre des naissances en 1952 a été de 25,303 contre 24,740 en 1951, soit une augmentation de 563 naissances sur l'année précédente.

Le taux par 1,000 habitants est de 24.4, soit une augmentation de 0.2 sur l'année précédente, une augmentation de 0.6 sur la moyenne des cinq années de 1947 à 1951 et également une augmentation de 0.9 sur la moyenne des dix années précédentes.

Le tableau II permet de comparer le nombre et le taux des naissances de l'année 1952 avec ceux des dix années précédentes, prises séparément et par période de cinq et de dix années.

BIRTHS

The number of births in 1952 totalled 25,303 against 24,740 in 1951, showing an increase of 563 births over the preceding year.

The rate per 1,000 inhabitants is 24.4, or an increase of 0.2 over the preceding year, an increase of 0.6 over the average for the five years 1947-1951 and also an increase of 0.9 over the average for the ten preceding years.

Table II shows a comparison between the number and rate of births for 1952, with those of the ten previous years, taken separately and by five and tenyear periods.

Tableau II

Population, nombre de naissances et taux par 1,000 habitants pour chaque année et par période de 5 et de 10 années, de 1942 à 1952.

Table II

Population, number of births and rate per 1,000 population for each year and for 5 and 10-year periods from 1942-1952.

| Année | Population | Nombre de naissances | Taux par 1,000 habitants | |
|-------------------|----------------|---|------------------------------|--|

| Moyenne 10 ans | | | | |
| Mean for 10 years | 968,188 | 22,782 | 23.5 | |
| 1952 | 1,035,600 | 25,303 | 24.4 | |

NUPTIALITÉ

Le nombre des mariages en 1952 a été de 11,286; il y en avait eu 11,142 en 1951, ce qui représente une augmentation de 144 mariages sur l'année précédente.

Le taux par 1,000 habitants est 10.9 soit le même que pour l'année 1951 et accusant une diminution de 0.3 sur la moyenne des cinq années de 1947 à 1951 et également de 0.5 sur la moyenne des dix années de 1942 à 1951.

MARRIAGES

The number of mariages in 1952 was 11,286; there were 11,142 in 1951, representing an increase of 144 marriages over the preceding year.

The rate per 1,000 population is 10.9, being the same as for the year 1951 and showing a decrease of 0.3 over the average for the five years from 1947-1951 and also a decrease of 0.5 over the average of the ten years between 1942-1951.

Le tableau III permet de comparer le taux et le nombre des mariages en 1952 avec ceux des dix années précédentes, par année et par période de cinq et de dix années.

Tableau III

Population, nombre de mariages et taux par 1,000 habitants pour chaque année et par période de 5 et 10 années de 1942 à 1952. Table III gives a comparison of the rate and number of marriages in 1952 with those of the ten previous years, yearly and by five and ten-year periods.

Table III

Population, number of marriages and rate per 1,000 population for each year and for 5 and 10 year periods from 1942-1952.

| Moyenne 10 ans Mean for 10 years | 968,188 | 11,066 | 11.4 |
| 1952 | 1,035,600 | 11,286 | 10.9 |

MORTALITÉ

Le nombre des décès en 1952 s'est élevé à 9,887, comparativement à 9,932 en 1951, soit une diminution de 45 décès sur l'année précédente.

Le taux des décès par 1,000 habitants en 1952 est de 9.5, soit une diminution nouvelle de 0.2 sur l'année précédente.

DEATHS

The number of deaths in 1952 totalled 9,887, compared to 9,932 in 1951, or a decrease of 45 deaths over the previous year.

The death rate per 1,000 inhabitants in 1952 is 9.5 or a new decrease of 0.2 over the previous year.

Pour la huitième année consécutive dans l'histoire de la santé à Montréal, le taux de la mortalité générale en notre ville, soit 9.5 par 1,000 de population, s'est maintenu au-dessous de 10 par 1,000 de population.

La mortalité générale parmi la population domiciliée à Montréal est peu élevée, si l'on tient compte des dangers auxquels l'exposent les conditions actuelles. Le caractère de plus en plus cosmopolite de la population qui envahit notre métropole, le surpeuplement des logements et la promiscuité des porteurs de germes, sont des facteurs qui exposent davantage la population.

Le tableau IV expose l'état de la mortalité depuis 1942 pour chaque année et par groupe de cinq et de dix années.

Tableau IV Population, nombre de décès et taux par 1,000 habitants pour chaque année et par période de 5 et 10 années de 1942 à 1952.

For the eighth consecutive year in the health history of Montréal, the rate of general mortality in our City, 9.5 per 1,000 population, has remained below 10 per 1,000 population.

The general death rate for residents of Montréal is quite low if we consider the risks to which they are exposed. The increasingly cosmopolitan character of the population which invades our metropolis, overcrowding in dwellings, contacts with germ carriers, all are factors which tend to endanger the health of the public.

Table IV shows the trend of the death rate since 1942 for each year and for five and ten year periods.

Table IV Population, number of deaths and rate per 1,000 population for each year and for 5 and 10 year periods from 1942-1952.

PRINCIPALES CAUSES DE LA MORTALITÉ GÉNÉRALE

Les maladies dégénératives: les maladies du coeur, le cancer ainsi que les maladies du nouveau-né sont les trois principales causes de décès pour 1952.

Le cancer, les lésions vasculaires cérébrales, les malformations congénitales et le diabète accusent une augmentation sur l'année précédente, avec des taux respectifs de 159.6, 49.8, 22.2 et 17.9, comparativement à 159.1, 42.4, 17.0 et 16.7 en 1951.

Les accidents, les pneumonies, les néphrites, la tuberculose accusent une diminution, avec des taux respectifs de 39.6, 35.6, 33.8 et 23.4 en 1952, contre 42.5, 40.9, 37.8 et 35.4 en 1951.

Tableau V

Rang des dix principales causes de décès, nombre des décès, taux par 100,000 de population—1951-1952.

PRINCIPAL CAUSES OF GENERAL MORTALITY

The diseases caused by degeneration: those of the heart, cancer and also the neo-natal diseases were the three main causes of death during 1952.

Cancer, cerebral vascular lesions, congenital malformations and diabetes show an increase over the preceding year, with respective rates of 159.6, 49.8, 22.2 and 17.9, against 159.1, 42.4, 17.0 and 16.7 in 1951.

Accidents, pneumonia, nephritis, tuberculosis show a decrease with respective rates of 39.6, 35.6, 33.8 and 23.4 in 1952, against 42.5, 40.9, 37.8 and 35.4 in 1951.

Table V

Relative rank of the ten chief causes of deaths, number of deaths, rate per 100,000 population—1951-1952.

| Rang | Causes des décès (1) | Nomb déc | | Taux par 100,000 de population | |

Les numéros entre parenthèses correspondent à ceux de la classification des causes de décès d'après la nomenclature internationale de 1948.

Numbers in parentheses correspond to those of the classification of causes of deaths according to the international list of 1948.

MORTALITÉ MATERNELLE

Le nombre des décès maternels en 1952 a été de 29, comparativement à 23 en 1951; ce nombre était de 62 en 1942.

Le taux de la mortalité maternelle par 1,000 naissances à Montréal a été de 1.2 en 1952, comparativement à 0.9 en 1951. Ce taux était de 3.0 en 1942.

Le tableau VI qui suit montre la diminution de la mortalité maternelle depuis 1942, de 3.0 à 1.2, soit une régression très appréciable de 1.8 dans l'espace de dix ans.

Causes de la mortalité maternelle

Les principales causes de la mortalité maternelle sont de deux catégories, comme cela est indiqué dans le tableau VII qui suit.

Notons d'abord les causes inhérentes à la grossesse même, par ordre de fréquence: les toxémies (0.16), les avortements sans infection (0.12), les hémorragies (0.08), les infections (0.04), les grossesses ectopiques (0.04) et les autres maladies et accidents de la grossesse (0.04).

Parmi les causes de décès pendant et après l'accouchement, notons: les autres maladies et accidents (0.31), les infections (0.24), les toxémies (0.08), et les hémorragies (0.04).

MATERNAL MORTALITY

The number of maternal deaths in 1952 was 29, compared to 23 in 1951, it was 62 in 1942.

The death rate of maternal mortality per 1,000 births in Montréal was 1.2 in 1952, against 0.9 in 1951. This rate was 3.0 in 1942.

Table VI that follows shows decrease of the death rate since 1942, from 3.0 to 1.2, a very appreciable decline of 1.8 within the course of ten years.

Causes of maternal mortality

The principal causes of maternal mortality are divided into two categories as shown in the following table VII.

We enumerate first the causes attributable to pregnancy itself, according to their frequency: toxemia (0.16), abortion without infection (0.12), haemorrhages (0.08), infections (0.04), ectopic gestation (0.04) and other diseases and accidents (0.04).

Among other causes occurring during and after childbirth, we note: other diseases and accidents (0.31), infections (0.24), toxemia (0.08) and haemorrhages (0.04).

Tableau VI

Table VI

MORTALITÉ INFANTILE

Le nombre des décès enregistrés en 1952 chez les enfants de moins d'un an a été de 1,095, comparativement à 1,054 en 1951, soit une augmentation de 41 décès.

Le taux de ces décès par 1,000 naissances vivantes est de 43.3 en 1952, comparativement à 42.6 en 1951, soit une légère augmentation de 0.7.

INFANT MORTALITY

The number of deaths registered in 1952 among children under one year of age totalled 1,095, compared to 1,054 in 1951, showing an increase of 41 deaths.

The death rate per 1,000 live births was 43.3 in 1952, compared to 42.6 in 1951, or a slight increase of 0.7.

Tableau VIII

Tableau indiquant la population, les naissances (mort-nés exclus), le taux des naissances par 1,000 habitants, les décès chez les enfants âgés de moins d'un an et le taux de ces décès par 1,000 naissances vivantes, par période de cinq années, de 1900 à 1949 et pour les années 1950-1951 et 1952.

Table VIII

Table showing population, births (less stillbirths), the birth rate per 1,000 population, deaths among infants under one year and the death rate per 1,000 live births in five year periods, 1900-1949 and for the years 1950-1951 and 1952.

| 1952 | 1,035,600 | 25,303 | 24.4 | 1,095 | 43.3 |

Mortalité chez les illégitimes

La mortalité infantile élevée chez les enfants illégitimes contribue à maintenir à un haut niveau le taux spécifique de cette mortalité à Montréal.

Deaths among illegitimate children

The high death rate of illegitimate children has the effect of keeping the specific infant death rate very high in Montréal.

Tableau IX

Nombre de naissances, de décès audessous d'un an et taux par 1,000 naissances vivantes, légitimes et illégitimes, en 1952.

Table IX

Number of births, deaths under one year and rate per 1,000 live births, legitimate and illegitimate, for 1952.

| Légitimité Legitimacy | Naissances Births | Décès au-dessous de 1 an Deaths under 1 year | Taux par 1,000 naissances vivantes Rate per 1,000 live births |
|---------------------------|----------------------|---|---|
| Légitimes—Legitimates | 23,786 | 969 | 40.7 |
| Illégitimes—Illegitimates | 1,517 | 126 | 83.1 |
| Total | 25,303 | 1,095 | 43.3 |

Le tableau IX montre l'écart qui existe entre la mortalité infantile chez les enfants légitimes, dont le taux est de 40.7 par 1,000 naissances vivantes et celle des enfants illégitimes, dont le taux est de 83.1 par 1,000 naissances vivantes pour l'année 1952.

La mortalité chez les illégitimes représente une diminution, comparativement à 1951; le taux est de 83.1 par 1,000 naissances vivantes en 1952, comparativement à 105.3 en 1951, soit une diminution de 22.2.

Principales causes de la mortalité infantile

Le tableau X qui suit montre quelles sont les dix principales causes de décès chez les enfants de moins d'un an pour l'année 1952. Il indique, en plus, le rang qu'elles occupent par ordre de fréquence.

Ce tableau révèle que la débilité occupe le premier rang. Les causes congénitales réunies: la débilité, les malformations congénitales, l'asphyxie et l'atélectasie post-natales, le déséquilibre alimentaire, les maladies hémolyTable IX shows the difference between the death rates among legitimate children which is 40.7 per 1,000 live births and that of illegitimate children which reaches 83.1 per 1,000 live births for 1952.

Mortality among illegitimate children has shown a decrease compared with 1951; the rate of 83.1 per 1,000 live births in 1952, compared to 105.3 in 1951, a decrease of 22.2.

Principal causes of infant mortality

Table X that follows shows the ten main causes of death among children under one year of age for 1952. It also shows the relative rank of each in order of frequency.

This table shows that immaturity stands in first place. Congenital causes taken together: immature births, congenital malformation, postnatal asphyxia and atelectasis, nutritional maladjustment, the haemolytic diseases and

tiques et les autres maladies du nouveauné, donnent un taux total de 24.6 par 1,000 naissances vivantes. Leur nombre total de 623 représente 56.9% des décès de cet âge. other diseases of new born babies give a total rate of 24.6 per 1,000 live births. Their total reaches 623, or 56.9% of deaths at this age.

Les gastro-entérites, colites et diarrhées du nouveau-né occupent le sixième rang, avec un taux de 2.1, accusant cependant une diminution de 0.1 par 1,000 naissances vivantes sur l'an dernier. Gastro-enteritis, colitis and diarrhea of new-born are in sixth place, with a rate of 2.1 showing though a decrease over the preceding year of 0.1 per 1,000 live births.

Les pneumonies occupent le troisième rang avec 163 décès au taux de 6.4 pa 1,000 naissances vivantes. Pneumonia take the third rank, with 163 deaths and a rate of 6.4 per 1,000 live births.

On remarquera que les maladies contagieuses n'apparaissent plus au tableau des dix principales causes de décès de la mortalité infantile. Cette cause est remplacée par les maladies hémolytiques du nouveau-né, une autre cause congénitale. Ce changement souligne l'importance grandissante des causes congénitales et prénatales. We will note that contagious diseases are not shown any more among the ten principal causes of deaths of infant mortality. This cause has been replaced by the haemolytic diseases of new born, another congenital cause. This change toulines the increasing importance of the congenital and prenatal causes.

Diarrhées et entérites

Diarrhea and Enteritis

Pour 1952, le taux par 1,000 naissances vivantes des décès attribuables aux diarrhées et entérites est de 2.1, comparativement à 2.2 en 1951, soit une diminution de 0.1 par 1,000 naissances vivantes. For 1952, the death rate per 1,000 live births due to diarrhea and enteritis was 2.1, compared to 2.2. in 1951, or a decrease of 0.1 per 1,000 live births.

Le tableau XII qui suit indique le nombre et les taux des décès par diarrhées et entérites, longtemps une cause principale qui ne cesse de rétrograder pour atteindre un taux de 2.1 en 1952. Table XII which follows gives the number and death rate for diarrhea and enteritis, during a long time a chief cause which has declined to a rate of 2.1 in 1952.

Tableau XII

Natalité par 1,000 de population et mortalité infantile due aux diarrhées et entérites par 1,000 naissances vivantes par période de 5 ans de 1920 à 1949 et pour les années 1950-1951 et 1952.

⁽¹⁾ Ce total inclut les décès des rubriques 571, 572 et 764 de la nomenclature internationale de 1948.

This total includes deaths assigned to numbers 571, 572 and 764 of International List of 1948.

LES MALADIES CONTAGIEUSES

La situation des maladies contagieuses, malgré une augmentation du nombre de cas en 1952, a continué d'être aussi favorable, avec une mortalité inférieure, pour la première fois, à 3 décès par 100,000 de population; il n'y eut que 22 décès attribuables à ces maladies, comparativement à 26 les deux années précédentes. Le nombre des cas déclarés a été de 16,932, contre 12,716 en 1951, soit 4,216 cas de plus.

C'est la **rougeole** qui, durant les premiers mois de l'année 1952, fut responsable de cette hausse, avec 6,441 cas rapportés et 8 décès, par rapport à 2,665 cas et 8 décès en 1951.

Durant les premiers mois de 1952, les cas de **scarlatine** furent rapportés en plus grand nombre et les chiffres s'établissent pour l'année entière à 3,199 cas et 1 décès, comparativement à 1,638 cas et 1 décès en 1951.

Au cours de l'année 1952, le nombre des cas de **coqueluche** a augmenté, principalement à partir du mois de juin et 1,799 cas et 4 décès furent enregistrés en regard de 906 cas et 4 décès en 1951.

La mortalité par diphtérie a de nouveau diminué en 1952, avec 30 cas et 2 décès (ce qui est encore trop, quand on a à sa disposition une mesure préventive aussi efficace que l'immunisation), soit un taux de mortalité de 0.2 par 100,000 de population, comparativement à 0.4 en 1951 et 2.8 en 1942.

Les cas de **typhoïde** et de **poliomyé**lite ont aussi été moins nombreux en 1952, soit 23 et 27 cas respectivement, **sans aucune mortalité.**

Le nombre et le taux des décès par grippe et pneumonies, soit 372 décès et 35.9 par 100,000 de population, sont

COMMUNICABLE DISEASES

As for communicable diseases, in spite of an increase number of cases in 1952, the situation has continued to be as favorable, with a lower death incidence for the first time, that is to say, 3 deaths per 100,000 population; there were only 22 deaths caused by these diseases, compared to 26 in the two previous years. The number of cases reported was 16,932, as against 12,716 in 1951, or 4,216 more.

Measles, in the first months of 1952, caused this increase, with 6,441 reported cases and 8 deaths, compared to 2,665 cases and 8 deaths in 1951.

Scarlet fever cases were reported in greater number and the figures for the year show 3,199 cases and 1 death, compared to 1,638 cases and 1 death in 1951.

During 1952, cases of **whooping cough** increased, especially as from the month of June. 1,799 cases and 4 deaths were reported, as against 906 cases and 4 deaths in 1951.

Mortality from diphtheria was again lower in 1952, with 30 cases and 2 deaths (still even too much when we have available such an effective measure as immunization), or a rate of 0.2 per 100,000 population, compared to 0.4 in 1951 and 2.8 in 1942.

There have been fewer cases of typhoid fever and poliomyelitis in 1952: 23 and 27 cases respectively, with no death.

The number and mortality rate from grippe and pneumonia, 372 deaths and 35.9 per 100,000 population, show a

aussi diminués en 1952, comparativement à 1951 où ils avaient été de 534 décès, avec un taux de 52.3.

Le contrôle des maladies contagieuses

Les médecins du Service de santé ont fait, en 1952, 3,291 visites de contrôle et les infirmières, 12,454 visites à domicile pour assurer le dépistage des maladies contagieuses et faire les enquêtes épidémiologiques; 4,429 cas de contagion ont été hospitalisés.

La vaccination et l'immunisation

En 1952, 23,410 personnes ont été vaccinées contre la variole; 19,952 enfants ont été immunisés contre la diphtérie et contre la coqueluche.

L'émission de la carte de santé

En 1952, 51,942 cartes de santé ont été émises à autant de manipulateurs d'aliments, barbiers et autres personnes pour qui elle est requise. Sur ce nombre, 21,937 personnes se sont présentées pour la première fois et 30,005 ont renouvelé leur carte. Il a été fait 32,337 prises de sang. 32,241 radiographies pulmonaires ont été prises chez les personnes pour qui la carte de santé est obligatoire.

Depuis le mois de septembre 1952, des prélèvements de la gorge et du nez furent faits parmi le personnel des maternités privées afin de dépister les porteuses de streptocoque hémolytique et de staphylocoque doré en vue de prévenir les éclosions de pyodermite parmi les nouveau-nés.

La lutte contre la tuberculose

La tuberculose, en 1952, a accusé une régression marquée. Le nombre de cas rapportés au fichier central de la Division a été de 1,618 et on a enregistré 242 décès de tuberculose sous toutes ses formes, soit un taux de mortalité de 23.4 par 100,000 de population.

diminution in 1952, compared to 1951, when there had been 534 deaths and a rate of 52.3.

Communicable Diseases Control

The physicians of the Department of Health made, in 1952, 3,291 visits and the nurses, 12,454 visits to the homes to assure the control of communicable diseases and to perform epidemiological investigations; 4,429 cases of communicable diseases were hospitalized.

Vaccination and Immunization

In 1952, 23,410 persons were vaccinated against smallpox; 19,952 children were immunized against diphtheria and against whooping cough.

The Health Card

In 1952, 51,942 health cards were issued to food handlers, barbers, etc., for whom they are required. Of this number, 21,937 persons were seen for the first time and 30,005 renewed their health card. 32,337 blood tests were made. 32,241 radiographs of the lungs were taken of the persons for whom the health card is required.

Since the month of September 1952, throat and nose specimens were made among the personnel of the private maternities to find the carriers of hemolytic streptococcus and yellow staphylococcus to prevent the outbreaks of pyodermatitis in new borns.

The Fight against Tuberculosis

Tuberculosis decreased again during the year 1952. The number of cases reported at the Central Record Office of the Division was 1,618 and 242 deaths from all forms of tuberculosis were registered, or a mortality rate of 23.4 per 100,000 population.

Tableau XIII

Nombre et taux par 100,000 de population des décès par tuberculose pulmonaire et autres formes par période de 5 années de 1915 à 1949 et pour les années 1950, 1951, et 1952.

Table XIII

Les infirmières attachées à cette Division ont fait 5,955 visites à domicile; 7,642 épreuves (Vollmer et Mantoux) à la tuberculine ont été faites à la Clinique Laurier, dans les consultations municipales et les écoles.

A la consultation radiologique municipale Laurier, 29,953 radiographies ont été prises; on a fait 664 tubages gastriques et 64 sédimentations pour The nurses of this Division made 5,955 visits to the homes; 7,642 tuber-culin tests (Vollmer and Mantoux Patch Tests) were made at the Laurier Municipal Clinic, in the Municipal Well-Baby Clinics and the schools.

At the Laurier Municipal X-Ray Clinic, 29,953 pulmonary X-Rays were taken; 664 gastric lavages and 64 préciser le diagnostic de la tuberculose; 6,621 analyses des expectorations ont été requises.

Le nombre total des radiographies et fluoroscopies pulmonaires de dépistage prises en 1952 à Montréal s'élève à 406,051, si on évalue à 10,000 celles qui ont été faites dans les hôpitaux généraux et par les médecins en clientèle privée,

| Consultation radiologique mun | icipale |

| TOTAL | 406,051 |

Le travail de ces organismes antituberculeux, auxquels s'ajoutent l'hôpital du Sacré-Coeur, le sanatorium St-Joseph de Rosemont, le Grace Dart Home, la Clinique du BCG et les autres institutions du même genre contribue à l'amélioration du problème de la lutte antituberculeuse qui ne sera réglé véritablement que lorsque nous aurons tout l'armement et le nombre de lits de sanatorium nécessaires.

Vaccination par le BCG

A la Clinique municipale Laurier, où est située la Division de la tuberculose, 187 vaccinations par le BCG ont été faites au cours de l'année 1952.

Le 17 novembre, à la suite d'une entente avec l'Institut de microbiologie et d'hygiène et la collaboration des Commissions scolaires catholique et protestante, le Service de santé, par son personnel, avec l'aide d'une équipe sedimentation tests were made to confirm the diagnosis of tuberculosis; 6,621 sputum analyses were required.

The total number of pulmonary radiographs and fluoroscopies in 1952 for detection of tuberculosis in Montréal reaches 406,051, taking at around 10,000 those taken in general hospitals and private doctors' offices.

The work of these anti-tuberculosis organisms, to which must be added the Sacred Heart Hospital, the St. Joseph Sanatorium, the Grace Dart Home, the B.C.G. Clinic and other similar institutions, contributes to the improvement of tuberculosis situation which will only be definitely settled when we will have all the equipment and sanatorium beds we require.

B.C.G. Vaccination

In the Laurier Municipal Clinic, where the Division of Tuberculosis is located, 187 B.C.G. vaccinations were carried out during 1952.

On November 17th, following an agreement with the "Institut de microbiologie et d'hygiène de l'Université de Montréal" and the co-operation of the Catholic and Protestant School Boards, the Department of Health, with its staff, assisted by a "mobile squad",

mobile composée d'un médecin (Dr G. Roy) et de deux infirmières mises à notre disposition, a entrepris la vaccination par le BCG dans les écoles du district sanitaire Maisonneuve.

Du 17 novembre au 22 décembre, 4,129 élèves ont subi l'épreuve du BCG et 2,667 enfants ayant eu une réaction négative, ont été vaccinés dans 15 écoles.

En tout, 14,484 vaccinations par le BCG ont été faites durant 1952, soit à la Clinique municipale Laurier, dans le district sanitaire Maisonneuve, à l'Institut Bruchési, au Royal Edward Laurentian Hospital, à l'Université de Montréal, à la Clinique du BCG et dans les hôpitaux généraux.

LES MALADIES VÉNÉRIENNES

Le nombre total des cas de maladies vénériennes déclarés à Montréal en 1952 a été de 3,545, dont 1,179 de syphilis et 2,366 de blennorragie, soit une nouvelle diminution de 257 cas sur 1951. Les cas de syphilis à la phase contagieuse (syphilis récente: primaire et secondaire) accusent une légère augmentation, avec 151 nouveaux cas déclarés, comparativement à 147 cas en 1951.

Les infirmières attachées à cette Division ont conduit 1,599 interviews et fait 20 visites d'enquête à domicile, sans compter le temps consacré aux dossiers et en communication avec les médecins, les cliniques et la Division des maladies vénériennes du Ministère provincial de la santé.

86 cas de syphilis et 12 cas de blennorragie, soit en tout 98 cas de maladies vénériennes ont été dépistés. On a, en plus, vérifié le traitement de 740 cas de syphilis; 105 cas ont été référés pour diagnostic et traitement, dont 15 aux médecins et 90 aux dispensaires antivénériens. comprising a doctor (Dr. G. Roy) and two nurses placed at our disposal, undertook B.C.G. vaccination in the schools of the Maisonneuve Health District.

From November 17 to December 22, 4,129 pupils were given the B.C.G. test and 2,667 children showing negative reaction, were vaccinated in 15 schools.

For the year 1952, 14,484 B.C.G. vaccinations were performed, at the Laurier Municipal Clinic, in the Maisonneuve Health District, Bruchési Institute, Royal Edward Laurentian Hospital, Université de Montréal, B.C.G. Clinic and general hospitals.

VENEREAL DISEASES

The total number of cases of venereal diseases reported in Montréal in 1952 was 3,545, of which 1,179 of syphilis and 2,366 of gonorrhea, or a new decrease of 257 cases on the figures of 1951. Syphilis at its contagious stage (recent syphilis: primary and secondary) shows a slight increase in 1952, with 151 new cases reported, as compared to 147 cases in 1951.

The nurses of this Division gave 1,599 interviews and made 20 visits to the homes, without mentioning the time given to records and in getting in touch with physicians, clinics and the Division of Venereal Diseases of the Provincial Ministry of Health.

86 cases of syphilis and 12 cases of gonorrhea, or a total of 98 cases of venereal diseases were detected. Moreover, we followed up the treatment of 740 cases of syphilis; 105 cases were referred for diagnosis and treatment, of which 15 to physicians and 90 to the antivenereal diseases clinics.

Le nombre et le taux des décès attribuables à la syphilis accusent une nouvelle diminution en 1952, avec 55 décès et un taux de 5.1 par 100,000 de population, comparativement à 63 décès et un taux de 6.1 en 1951.

La collaboration avec la Division provinciale des maladies vénériennes s'est établie comme suit: la Division municipale des maladies vénériennes lui a déclaré 153 cas; 21 cas nous furent référés par la Division provinciale et nous lui en avons rapporté 12 cas.

La liaison et l'échange de renseignements ont été continués avec le Service de la police et 7 rapports ont été transmis à ce Service et nous avons demandé son aide pour retracer 32 contacts.

L'HYGIÈNE DE L'ENFANCE

L'hygiène maternelle, infantile et préscolaire

Au cours de l'année 1952, 253 mères se sont inscrites dans les quatres consultations prénatales municipales et elles y ont été suivies régulièrement avec les 98 mères qui étaient demeurées inscrites au 31 décembre 1951; 408 consultations leur furent données par les médecins; 5,656 visites furent faites à domicile par les infirmières de tous les districts sanitaires pour le bénéfice des mères enceintes ou récemment accouchées.

Dans les 62 consultations municipales de nourrissons et préscolaires en 1952, 11,879 nourrissons et 7,369 préscolaires ont été inscrits pour la première fois; la surveillance médicale périodique de ces nouveaux inscrits qui sont venus s'ajouter aux 8,490 nourrissons et 22,198 préscolaires qui fréquentaient encore régulièrement les consultations au 31 décembre 1951, a nécessité 131,337 examens et consultations et 40,848 visites à domicile de la part des infir-

The number and death rate from syphilis showed another decline in 1952, with 55 deaths or a rate of 5.1 per 100,000 population, compared to 63 deaths and a rate of 6.1 in 1951.

Collaboration with the Division of Venereal Diseases of the Provincial Ministry of Health has been as follows: the Municipal Division of Venereal Diseases reported 153 cases; 21 cases were referred to our Division by the Provincial Division, and we did report to them 12 cases.

Effective liaison and exchange of information were continued with the Police Department and 7 reports have been referred to this Department and we also asked their help to retrace 32 contacts.

CHILD HYGIENE

Maternal, Infant and Preschool Hygiene

During 1952, 253 mothers were registered in the four municipal prenatal clinics and have been followed regularly with 98 other mothers still registered on December 31, 1951; 408 consultations were given them by the doctors; 5,656 visits to the homes were made by the nurses of all the health districts for the benefit of pregnant or recently delivered mothers.

In the 62 Municipal Well-Baby and Preschool Clinics, during 1952, 11,879 infants and 7,369 preschool age children were registered for the first time; the periodic medical supervision of those newly registered children who have been added to the 8,490 infants and 22,198 preschool age children still regularly attending the clinics on December 31, 1951, has required 131,337 examinations and consultations and 40,848 visits to the homes from the

mières du Service. Durant l'été, 4,769 enfants ont été examinés avant leur départ pour les colonies de vacances et les camps de Guides.

48 maisons de pension pour enfants et 35 hôpitaux et maternités privés ont obtenu un permis du Service de santé; ces établissements ont nécessité 1,557 visites en enquêtes de la part des infirmières préposées à leur surveillance.

L'inspection médicale des écoles

Au cours de l'année scolaire 1951-1952, 49,387 écoliers ont subi un examen de nouvel élève, de cas référés ou de dépistage par les médecins inspecteurs qui, par ailleurs, ont fait 14,395 examens de cas spéciaux; les infirmières ont complété leurs entrevues titulaire-infirmière dans 3,852 classes comprenant un nombre total de 98,666 enfants; elles ont fait de plus 209,380 examens de cas spéciaux et 25,655 visites à domicile. 3,011 instituteurs ont été examinés.

La nutrition

Au cours de l'année 1952, l'enseignement de la nutrition se poursuivit activement auprès des infirmières du Service; les infirmières attachées aux cliniques dentaires reçurent une attention toute spéciale.

Le programme d'enseignement de la nutrition dans le public fut grandement intensifié au cours de l'année. Les médiums les plus employés pour la diffusion des principes d'alimentation rationnelle furent: les cliniques prénatales, les écoles, les réunions de parents, les groupements paroissiaux, la radio, le journal et les terrains de jeux.

A titre de consultante, les services de la nutritioniste furent réclamés par plusieurs institutions en vue d'y améliorer la valeur nu ritive des repas qui y sont servis. nurses of the Department. During summer, 4,769 children were examined before their departure for summer and Guide camps.

48 boarding houses for children and 35 private hospitals and maternities secured a licence from the Department of Health. These establishments necessitated 1,557 visits and investigations from the nurses in charge of their supervision.

School Medical Inspection

During the school year 1951-1952, 49,387 pupils were submitted to the new admission, referred case or screening examination by the medical inspectors who, besides, made 14,395 examinations of special cases; the nurses have completed their teacher-nurse conferences in 3,852 classes including a total number of 98,666 pupils; moreover, the nurses made 209,380 special case examinations and 25,655 visits to the homes. 3,011 teachers were medically examined.

Nutrition

During the year 1952, the teaching of nutrition to the nurses of the Department was continued and special attention was given to the nurses of dental clinics.

Nutrition education programme for the public was greatly intensified during the year. The mediums most commonly used for this teaching were the following: the prenatal clinics, the schools, the parents' meetings, the parochial groups, the radio, the Press and the playgrounds.

As a consultant, many institutions asked her advice in order to improve the nutritive value of the meals they were serving.

L'hygiène mentale

Au cours de l'année scolaire 1951-1952, 2,438 enfants ont subi le test psychométrique dans les écoles et, à la clinique d'hygiène mentale, en 1952, on a examiné 637 enfants et donné 856 consultations. Les infirmières attachées à la Section de l'hygiène mentale ont eu et fait 864 entrevues et enquêtes à la clinique, à domicile, à l'école ou ailleurs.

L'HYGIÈNE DENTAIRE

En collaboration avec la Ligue d'hygiène dentaire et la Commission des écoles catholiques, le Service de santé a continué, en 1952, sa campagne conjointe d'éducation dans les écoles; 65 séances ont ainsi été données à 31,349 élèves.

Dans les écoles (1951-1952), 63,754 élèves ont eu leurs dents examinées; on a trouvé 143,025 dents cariées chez 43,136 cas de carie dentaire.

Dans les 14 cliniques dentaires municipales, 25,825 enfants ont été traités et ont subi 81,646 traitements pour obturations, extractions et pansements. A la clinique d'orthodontie municipale (Université de Montréal), 87 enfants ont été sous traitement et 391 examinés.

L'INSPECTION DES ALIMENTS

L'inspection du lait et de la crème à la campagne a nécessité 16,474 inspections dans 5,053 fermes; 90,600 vaches ont été examinées; 595 interdictions ont été portées contre les producteurs de lait et de crème. En ville, 6,458 endroits et 1,466 véhicules ont été visités et ont nécessité 23,295 inspections. En 1952, on a reçu à Montréal (district métropolitain) 135,116 gallons de lait par jour et on en a consommé 117,147 gallons par jour; 99.79% de ce lait vendu et consommé est pasteurisé, soit une augmentation.

Mental Hygiene

During the school year 1951-1952, 2,438 children were given the psychometric test in schools and, at the Mental Hygiene Clinic, in 1952, 637 children were examined and 856 consultations were given. The nurses of this Section gave and made 864 interviews and investigations at the clinic, at the homes, at school or elsewhere.

DENTAL HYGIENE

In co-operation with the League of Dental Hygiene and the Catholic School Board, the Department of Health has continued during 1952 its joint educational campaign in the schools. 65 lectures were given to 31,349 pupils.

In the schools (1951-1952), 63,754 children had their teeth examined; 143,025 decayed teeth were discovered among the 43,136 cases examined.

In the 14 municipal dental clinics, 25,825 children were examined and received 81,646 treatments for fillings, extractions and dressings. At the Municipal Orthodontia Clinic (Université de Montréal), 87 children were under treatment and 391 were examined.

FOOD INSPECTION

Inspection of milk and cream in the country necessitated 16,474 inspections on 5,053 farms; 90,600 cows were examined; 595 producers of milk and cream were interdicted. In the City, 6,458 places and 1,466 vehicles were visited and necessitated 23,295 inspections. In 1952, we received, in Montréal (metropolitan area) 135,116 gallons of milk daily and 117,147 gallons were consumed daily; 99.79% of the milk sold and consumed is pasteurized, which is an increase.

Il a été nécessaire de faire 61,341 inspections pour la surveillance des viandes dans les divers établissements et 183,492 livres de viandes diverses furent condamnées.

Dans les restaurants, salles à manger, épiceries ou autres établissements de produits alimentaires, 48,225 inspections ont été faites. 163,520 livres d'aliments divers ont été condamnés.

Un total de 150,183 inspections ont été faites par les inspecteurs sanitaires de la Division et 26,036 avis ont été envoyés. 190 actions ont été prises par l'inspection des aliments contre les établissements mal tenus, malpropres ou pour avoir eu en leur possession des aliments impropres à la consommation humaine.

L'INSPECTION SANITAIRE

La construction en 1952 a été plus considérable qu'en 1951. En effet, 6,647 permis de construction ont été émis contre 6,632 en 1951; le nombre de nouveaux logements est passé de 6,910 en 1951 à 8,954 en 1952, soit une augmentation de 2,044.

Les constructions nouvelles ou modifiées ont nécessité 35,733 inspections, 6,179 autorisations de plomberie et l'approbation de 6,208 plans de plomberie. La section de la constructionplomberie a eu à enquêter 671 réclamations, soit un sommet.

Le nombre de plaintes a atteint 12,185; 6,909 ont été trouvées fondées; 23,486 inspections ont dû être effectuées pour enquêter ces plaintes et rechercher les causes d'insalubrité dans les bâtiments. Il faut souligner le très important travail fait cette année dans le but d'éliminer l'eau stagnante sur les terrains vagues.

The supervision of meat required 61,341 inspections in the various establishments and 183,492 pounds of meat were condemned.

In restaurants, dining rooms, grocery stores and other food establishments, 48,225 inspections were made and 163,520 pounds of various food stuffs were condemned.

A total of 150,183 inspections were made by the sanitary inspectors of the Division and 26,036 notices were sent. 190 actions were taken before the court against dirty or improperly kept establishments or for having foods which were unfit for human consumption in their possession.

SANITARY INSPECTION

The field of construction shows an improvement in 1952 over 1951: 6,647 building permits were issued against 6,632 in 1951. The number of new dwellings raised from 6,910 in 1951 to 8,954 in 1952, showing an increase of 2,044.

New or modified constructions have required 35,733 inspections, 6,179 plumbing authorizations and the approval of 6,208 plumbing plans. The construction-plumbing section had also to investigate a new peak in the number of claims, 671.

The count of complaints has reached 12,185, of which 6,909 were ascertained as well founded; 23,486 inspections have been made to investigate the complaints and other cases of unsanitary conditions in buildings. An important work has been realized towards the elimination of stagnant water on vacant lots.

Les inspecteurs du casier sanitaire ont visité 11,686 logements.

La surveillance de la disposition des déchets a requis 63,876 inspections au cours desquelles nous avons trouvé 47,988 contraventions au règlement 1797 et servi 37,209 avertissements aux intéressés.

L'application des règlements spéciaux a nécessité 34,807 inspections, contre 33,523 en 1951; 721 échantillons d'eau ont été prélevés dans 66 bains publics et bassins de pataugeage et 1,215 épreuves ont été faites pour la recherche du chlore résiduel dans l'eau. 1,701 demandes de permis relatives à ces règlements ont été étudiées.

La destruction des mauvaises herbes au 2,4-D a nécessité l'arrosage de 617 acres de terrain infesté d'herbe à poux et d'herbe à la puce. Dans les 9 stations de captage de pollen établies à travers la ville, au cours de l'été, nous avons constaté que la période propice à la fièvre des foins a été plus courte que l'an dernier, soit du 19 août au 6 septembre, au lieu du 21 août au 13 septembre 1951.

En tout, en 1952, 169,588 inspections sanitaires ont été faites; 82,229 défectuosités et causes d'insalubrité ont été constatées et 10,577 avis officiels ont été envoyés aux personnes intéressées; 12,630 épreuves diverses ont été faites: à l'eau, à l'air, à la fumée, à la menthe, etc.

LES LABORATOIRES

Le nombre des analyses bactériologiques et chimiques en 1952 a été de 72,951, réparties comme suit: lait, crème et sous-produits: 28,223; eau de l'aqueduc et des bains publics: 2,696; eau de lavage (restaurants, tavernes, laiteries): 3,668; al'ments divers (viandes, conThe inspectors concerned with the sanitary record of dwellings have visited 11,686 dwellings.

The control of garbage disposal required 63,876 inspections in the course of which 47,988 contraventions to Bylaw 1797 were found and 37,209 notices given out to the people concerned.

The enforcement of special By-laws has necessitated 34,807 inspections, against 35,523 in 1951; 721 samples of water were collected in 66 baths and wading pools and 1,215 tests were made to detect the residual chlorine in water. 1,701 applications for permits concerned with these By-laws have been given attention.

The destruction of noxious weeds by 2,4-D has required the spraying of 617 acres of ground infested with ragweed and poison ivy. At the 9 ragweed pollen catch stations scattered over the City during the summer, we found that the period inducing hay fever has been shorter in 1952 than in 1951, namely from August 19 to September 6, whereas in 1951, it lasted from August 21 to September 13.

Altogether, in 1952, 169,588 sanitary inspections have been made; 82,229 defects and other unsanitary conditions were attended to and 10,577 official notices delivered to people responsible; 12,630 tests were completed: water, air, smoke, mint, etc.

LABORATORIES

The number of bacteriological and chemical analyses in 1952 reached 72,951, divided as follows: milk, cream and by-products: 28,223; water from the aqueduct and swimming pools 2,696; wash water (restaurants, taverns and dairies): 3,668; miscellaneous foods (meat, canned foods, etc.): 2,664;

serves, etc.): 2,664; analyses bactériologiques des crachats et sécrétions pour diphtérie, tuberculose, typhoïde, gonorrhée, etc.: 13,874; sang (analyse chimique, cytologie, etc.); 4,258; urines: 13,852; diverses: 3,192; prises de sang pour la recherche de la syphilis: 524.

LE CONTRÔLE MÉDICAL

En 1952, il y a eu 10,787 visites et examens des employés municipaux retenus à domicile par maladie et 87 rapports spéciaux à la suite d'examens concernant l'état de santé de certains fonctionnaires. De plus, l'on a fait subir un examen médical à 1,329 aspirants à un emploi (fonctionnaires, constables et cadets pompiers), procédé à 15 examens de mise à la retraite et départ et 279 cas ont été revisés. Au bureau médico-légal, on a examiné 3,497 accidentés du travail et de la rue et fait des expertises pour le Contentieux municipal.

LA DÉMOGRAPHIE

Au cours de l'année 1952, le docteur Ant-B. Valois, M.P.H., démographe et surintendant de la Division de la démographie, a quitté le Service de santé pour accepter le poste de directeur du Service d'hygiène de la Ville de Verdun, P.Q., dans la région métropolitaine de Montréal. Le Service de santé s'est réjoui de cette promotion, mais on a vu, avec regret, le docteur Valois quitter ses fonctions de démographe de la Cité.

L'ENSEIGNEMENT DE L'HYGIÈNE

Le Service de santé a continué ses activités habituelles dans le domaine de l'enseignement de l'hygiène par la publication du rapport annuel, du BULLE-TIN D'HYGIÈNE et d'autres publications éducatives, articles et commubacteriological analyses of sputum and smears for diphtheria, tuberculosis, typhoid, gonorrhea, etc.: 13,874; blood (chemical analyses, cytology, etc.): 4,258; urine: 13,852; miscellaneous: 3,192; collecting blood for syphillis test: 524.

MEDICAL CONTROL

In 1952, 10,787 visits and examinations of municipal employees absent from work through illness and 87 special reports following examinations concerning the state of health of a certain number of employees were made. Moreover, there were examined 1,329 applicants for positions with the City of Montréal (municipal employees, policemen and cadets for the Fire Department), 15 for superannuation and 279 cases revised. At the medicolegal office, 3,497 persons were examined in connection with injuries sustained at work or on the street and expert reports were also made for the Municipal Law Department.

DEMOGRAPHY

During the year 1952, Dr. Ant.-B. Valois, M.P.H., Demographer and Superintendent of the Division of Vital Statistics, left the Department of Health to become Director of the Health Department of the City of Verdun, P.Q., in the Montréal metropolitan district. The Department of Health was very happy to see him obtaining this promotion, but was very sorry to see doctor Valois leave the services of the City.

PUBLIC HEALTH EDUCATION

The Department of Health continued its usual activities in the realm of the public health education, to the publication of the Annual report, the HEALTH BULLETIN, other educational pamphlets, articles and press

niqués aux journaux, dont l'hebdomadaire "Le Service de santé parle à Montréal".

Il a continué sa contribution à l'émission de causeries à la radio, en particulier au poste CKAC, le troisième lundi de chaque mois, à la "Tribune des conférenciers—Quart d'heure de Concordia", à l'émission hebdomadaire "Bonjour mamans" et au cours des mois d'été, d'une troisième émission "Le Service de santé vous parle" et, à quelque reprises, au forum "Occuponsnous de nos affaires".

Des causeries ont aussi été données devant différents clubs sociaux et organisations.

Au cours de l'année, le Service de santé a continué sa collaboration aux universités de Montréal et McGill dans l'enseignement et l'entraînement de certains groupes d'étudiants.

LES DISTRICTS SANITAIRES

Le nouveau centre municipal d'hygiène Rosemont, installé dans le nouveau centre civique, situé à 6100, 9e avenue a été ouvert au public le 15 avril 1952'

Cette installation nouvelle a permis une redistribution des districts sanitaires dans la partie nord de la ville et la création d'un neuvième district, appelé le District sanitaire Saint-Édouard.

Le docteur E. Chabot, médecin chef de district, a gardé la direction du district sanitaire Rosemont et le docteur E.-L. Patenaude, médecin chef de district, a été nommé en charge du district sanitaire Saint-Édouard.

Le docteur E. Lalande, nommé médecin chef de district, a pris charge du district sanitaire Sud-Ouest. releases to the newspapers, including the weekly communiqué "Department of Health Calling Montréal".

It continued to contribute to radio talks, especially over station CKAC, on the third monday of every month, on the programme "La Tribune des conférenciers — Quart d'heure de Concordia". It also participated in the weekly broadcast "Bonjour mamans" and during the summer time, a third broadcast "Le Service de santé vous parle" was given. The Department of Health also participated once in a while in the forum "Occupons-nous de nos affaires".

Addresses were also given before several social clubs and organizations.

During the year, the Department of Health has continued its co-operation with both local universities: Montréal and McGill, regarding teaching and field work of certain groups of students.

HEALTH DISTRICTS

The new municipal Health Centre in Rosemont, installed in the new community building, 6100, 9th Avenue, was opened to the public April 15, 1952.

This new centre has allowed a new distribution of the health districts in the northern part of the City and the establishment of a 9th district:

Saint-Edouard Health District.

Dr. E. Chabot, district health officer, retained direction of the Rosemont Health District and Dr. E. L. Patenaude, district health officer, was appointed to direct the Saint-Edouard Health District.

Dr. E. Lalande, appointed district health officer, took charge of the South-Western Health District. Le district sanitaire Maisonneuve a été le premier district choisi pour entreprendre la vaccination par le BCG dans les écoles et pour organiser cette vaccination dans les consultations de nourrissons de ce district.

Dans le district sanitaire Sud-Ouest, on a inauguré le nouveau local de la consultation de nourrissons et d'enfants d'âge préscolaire et de la clinique dentaire, situé à 01088, rue Charlevoix. Il s'agit d'un immeuble, propriété de la Ville, qui a été aménagé et modifié à cette fin.

Le travail accompli par les médecins chefs de district et les médecins apparaît dans les rapports des divisions des maladies contagieuses et de l'hygiène de l'enfance.

Section du Nursing

Les infirmières hygiénistes ont fait 117,051 visites à domicile, dont 18,580 visites de contrôle des maladies contagieuses, de la tuberculose, des maladies vénériennes et pour l'hygiène mentale; 51,345 pour les consultations prénatales municipales et les consultations municipales de nourrissons et d'enfants d'âge préscolaire; 26,346 pour fins scolaires; 2,091 visites et enquêtes dans les maisons de pension pour enfants; 7,345 visites diverses et 11,344 visites à des foyers où il n'y a pas eu de réponse.

Les infirmières ont eu dans les écoles 5,225 entrevues avec les parents et 3,852 conférences avec le personnel enseignant. Dans les consultations municipales de nourrissons et d'enfants d'âge préscolaire, la clinique d'hygiène mentale, la clinique de la tuberculose et les maladies vénériennes, les infirmières ont eu 37,226 entrevues.

The Maisonneuve Health District was the first to be chosen for B.C.G. vaccination in schools and for the organization of this vaccination in the well-baby clinics of the district.

In the South-Western Health District, the new offices for a well-baby and preschool clinic and dental clinic, at 01088 Charlevoix Street, were inaugurated. This consists of a building owned by the City which was equipped and remodelled for this purpose.

The work accomplished by the District Health Officers and by the doctors will be shown in the reports of the Divisions of Communicable Diseases and Child Hygiene.

Nursing Section

The public health nurses made 117,051 visits to the homes, of which 18,580 for control of contagious diseases, tuberculosis, venereal diseases and for mental hygiene; 51,345 for prenatal, well-baby and preschool municipal clinics; 26,346 for school children; 2,091 visits and investigations in boarding houses for children and private maternities; 7,345 visits for various reasons and 11,344 visits to persons not seen.

In the schools, the nurses had 5,225 interviews with parents and 3,852 conferences with school personnel. In the municipal well-baby and preschool clinics, the Mental Hygiene Clinic, the Tuberculosis Clinic and the Division of Venereal Diseases, the nurses had 37,226 interviews.

LA DÉFENSE CIVILE

Deux objectifs principaux ont retenu l'attention du Service de santé de la défense civile en 1952:

- 1°—L'organisation des hôpitaux métropolitains en prévision d'un désastre;
- 2°—L'établissement de postes de premiers secours.

Les hôpitaux

Un "Comité des hôpitaux" a été formé. Les membres de cet organisme ont été recrutés au sein des grands hôpitaux et des sociétés médicales de Montréal. Un plan-type d'organisation d'un hôpital en prévision d'un désastre a été élaboré et les responsabilités de chaque hôpital métropolitain ont été définies.

Postes de premiers secours

Des points de rassemblement pour secouristes et des dépôts d'approvisionnement de matériel de premiers secours ont été choisis à la périphérie de la zone cible. Des fournitures médicales en provenance d'Ottawa ont été emmagasinées afin de parer à toute éventualité.

Autres activités

Élaboration du plan d'organisation des services de morgue et d'inhumation. Cours spéciaux aux gardes civils, infirmières du "Victorian Order of Nurses", etc.

En collaboration avec les autorités provinciales de la Défense Civile, organisation, à l'intention des médecins de langue française de la Province, d'un cours de quatre jours sur les aspects médicaux de la guerre A B C; 31 médecins du Service de santé ont suivi ces cours et se sont qualifiés.

CIVIL DEFENSE

The Civil Defense Health Service has been centered on two main objectives in 1952:

- 1°—The organization of the metropolitan hospitals in view of a disaster;
- 2°—the establishment of First-Aid Posts.

Hospitals

The "Hospital Committee" was formed. Members of this organization have been recruited among the most important hospitals and medical societies of Montréal. A model plan of organization of an hospital in view of a disaster has been designed and responsibilities of each metropolitan hospital defined.

First-Aid Posts

Assembly points for first-aid workers and depots of first aid supplies have been marked in the periphery of the target area. Medical supplies from Ottawa have been stockpiled in view of an emergency.

Other activities

Establishment of the organization plan of the mortuary services.

Special courses to wardens, nurses of the "Victorian Order of Nurses", etc.

In co-operation with the Provincial Civil Defense authorities, organization for the French speaking physicians of the Province of a four-day-course on the medical aspect of A B C warfare; 31 physicians of the Department of Health have taken this course and qualified.

LE PERSONNEL

Promotions

Le docteur EmileLalande, M.P.H., médecin hygiéniste à la Division des districts sanitaires, a été promu médecin chef de district à la même division, le 29 février 1952.

Mlle Corinne Lessard, infirmière hygiéniste à la Division des districts sanitaires, Section du Nursing, a été promue infirmière chef de groupe à la même division, le 29 février 1952.

À leur retraite

Mlle Ellen Free, infirmière à la Division des districts sanitaires, Section du Nursing, est à sa pension depuis le 15 mars 1952, après 18 années de service.

Mile Blanche-Isabelle Boucher, infirmière à la Division des districts sanitaires, Section du Nursing, est à sa pension depuis le 3 septembre 1952, après 24 années de service.

Décès

- M. le docteur Georges Piché, dentiste à temps partiel à la Section d'hygiène dentaire, est décédé le 9 avril 1952.
- M. J.-A. Desjardins, inspecteur sanitaire à la Division de l'inspection des aliments, est décédé le 26 juin 1952.
- M. Patrick Brunet, inspecteur sanitaire à la Division de l'inspection des aliments, est décédé le 25 novembre 1952.

Succès des boursiers 1951-52

Le docteur J.-V. Théorêt, médecin vétérinaire inspecteur à la Division de l'inspection des aliments et Mlles Simone Larocque et Louise Olivier,

THE PERSONNEL

Promotions

Dr. Emile Lalande, M.P.H., public health doctor in the Division of Health Districts, has been promoted district health officer, in the same division, on February 29, 1952.

Miss Corinne Lessard, public health nurse in the Division of Health Districts, Nursing Section, has been promoted supervisor nurse in the same division, on February 29, 1952.

On Pension

Miss Ellen Free, nurse in the Division of Health Districts, Nursing Section, was superannuated on March 15, 1952, after 18 years of service.

Miss Blanche-Isabelle Boucher, nurse in the Division of Health Districts, Nursing Section, was superannuated on September 3, 1952, after 24 years of service.

Deaths

Dr. Georges Piché, dentist part time in the Section of Dental Hygiene, died on April 9, 1952.

Mr. J. A. Desjardins, sanitary inspector in the Division of Food Inspection, died on June 26, 1952.

Mr. Patrick Brunet, sanitary inspector in the Division of Food Inspection, died on November 25, 1952.

Success of the Scholarship Winners 1951-52

Dr. J.-V. Théorêt, veterinary inspector in the Division of Food Inspection and Misses Simone Larocque and Louise Olivier, nurses in the

infirmières à la Division des districts sanitaires, Section du Nursing, boursiers de la Ville à l'École d'hygiène de l'Université de Montréal durant la session universitaire 1951-52, ont obtenu leur diplôme d'hygiéniste. Ils ont, par la suite été promus: le docteur Théorêt, comme médecin vétérinaire hygiéniste et Mlles Larocque et Olivier, comme infirmières hygiénistes.

MM. A. Germain, T. Mongeon et M. Cardinal, inspecteurs sanitaires à la Division de l'inspection des aliments et MM. L. Huot et C.-E. Bourgault, inspecteurs sanitaires à la Division de l'inspection sanitaire, également boursiers de la Ville, ont poursuivi des études en hygiène publique durant la session universitaire 1951-52 et ils ont tous obtenu une attestation d'étude.

En vertu de l'entente fédérale-provinciale, des bourses avaient été accordées au docteur J.-Clarence Bouillon, L.C.D., chef de la Section d'hygiène dentaire et à Mlle Yvette Notebaert, alors infirmière hygiéniste à la Section d'hygiène mentale. Le docteur Bouillon a obtenu sa maîtrise en hygiène publique (M.P.H.) de l'École d'hygiène de l'Université Columbia de New York et Mlle Notebaert, son baccalauréat ès sciences du Teachers College de la même université.

Boursiers 1952-53

Continuant la politique qu'elle adoptait il y a plus de 20 ans, la Ville de Montréal a accordé, encore cette année, des bourses d'étude à six employés du Service de santé. Ces bénéficiaires, qui iront étudier à l'École d'hygiène de l'Université de Montréal, sont les suivants:

le docteur Louis-Georges Huard, médecin à la Division des districts sanitaires, pour l'obtention du diplôme en hygiène publique (D.H.P.); Division of Health Districts, Nursing Section, who were granted scholarships from the City at the Ecole d'hygiène de l'Université de Montréal during the university term 1951-52, have all secured their degree in public health. Later on, they have been promoted: Dr. Théorêt, as public health veterinary and Misses Larocque and Olivier, as public health nurses.

Messrs. A. Germain, T. Mongeon and M. Cardinal, sanitary inspectors in the Division of Food Inspection and Messrs. L. Huot and C.-E. Bourgault, sanitary inspectors in the Division of Sanitary Inspection, who were also granted scholarships from the City to take post-graduate studies in public health during the university term 1951-52, have all secured a certificate of studies.

According to the federal-provincial plan, scholarships have been awarded to **Dr. J.-Clarence Bouillon**, L.D.S., chief of the Section of Dental Hygiene and to **Miss Yvette Notebaert**, formerly public health nurse in the Section of Mental Hygiene. **Dr. Bouillon** has secured his master in public health (M.P.H.) from the School of Hygiene of Columbia University, New York and **Miss Notebaert**, her degree of bachelor of sciences from Teachers College of the same University.

Scholarships 1952-1953

Pursuant to its policy inaugurated more than 20 years ago, the City of Montréal, again this year, has granted scholarships to six employees of the Department of Health. These scholarship winners, who will study at the Ecole d'hygiène de l'Université de Montréal, are the following:

Dr. Louis-Georges Huard, doctor attached to the Division of Health Districts, to obtain his diploma in public health (D.P.H.);

le docteur Maurice Mercure, médecin vétérinaire inspecteur à la Division de l'inspection des aliments, pour l'obtention du diplôme en médecine vétérinaire publique (D.H.V.P.);

Mlles Marguerite Gauthier et Madeleine LePage, infirmières à la Division des districts sanitaires, Section du Nursing et Mlle Laurette Senécal, infirmière à la Division de l'inspection sanitaire, pour l'obtention de leur diplôme d'infirmière hygiéniste (I.H.);

Mlle Yolande Lorrain, infirmière hygiéniste à la Division des districts sanitaires, Section du Nursing, suit des cours d'administration et de surveillance en nursing à l'École des infirmières diplômées de l'Université McGill.

En vertu de l'entente fédérale-provinciale, Mlle Gertrude Dallaire, infirmière chef de groupe à la Division des districts sanitaires, Section du Nursing, a obtenu une bourse pour aller étudier à l'École d'hygiène de l'Université Columbia, New York, en vue d'obtenir le baccalauréat ès sciences.

Six inspecteurs du Service de santé, MM. J.-N. Tremblay, Paul Gaudet et Marcel Monnette, de la Division de l'inspection des aliments et MM. Robert Cadieux, Bernard Paquette et Jean-Paul Miller, de la Division de l'inspection sanitaire, ont aussi obtenu des bourses d'étude de la Ville pour leur permettre de suivre le cours pour inspecteur sanitaire, organisé durant le deuxième terme de l'année, à l'École d'hygiène de l'Université de Montréal.

Cinq infirmières du Service, Mlles Annette Labonté, Françoise Marion, Jeanne Lamarche, N. Callahan et Mme G. Guernon, ont obtenu des bourses de la Ville pour suivre des cours d'hygiène mentale au cours de l'année scolaire 1952-53.

Dr. Maurice Mercure, veterinary inspector in the Division of Food Inspection, to obtain his diploma in public health veterinary medicine (P.H.V.S.)

Misses Marguerite Gauthier and Madeleine LePage, nurses in the Division of Health Districts, Nursing Section and Miss Laurette Senécal, nurse in the Division of Sanitary Inspection, to obtain their diploma as public health nurse (P.H.N.)

Miss Yolande Lorrain, public health nurse in the Division of Health Districts, Nursing Section, takes post-graduate studies in administration and supervision in nursing at the School for Graduate Nurses of McGill University.

According to the federal-provincial plan, Miss Gertrude Dallaire, supervisor nurse in the Division of Health District, Nursing Section, has secured a scholarship to study at the School of Hygiene of Columbia University, New York, in order to secure her degree of bachelor of sciences.

Six inspectors of the Department of Health, Messrs. J.-N. Tremblay, Paul Gaudet and Marcel Monnette, of the Division of Food Inspection and Messrs. Robert Cadieux, Bernard Paquette and Jean-Paul Miller, of the Division of Sanitary Inspection, have each been awarded a scholarship from the City, to follow the course for sanitary inspector, organized during the second part of the academic year of the Ecole d'hygiène de l'Université de Montréal.

Five nurses of the Department of Health, Misses Annette Labonté, Françoise Marion, Jeanne Lamarche, N. Callahan and Mrs. G. Guernon, have secured a scholarship from the City to follow a course in mental hygiene during the 1952-53 school year.

En terminant, je désire exprimer la reconnaissance du Service de santé aux administrateurs de la Cité, aux organisations professionnelles et sociales, officielles et volontaires et à la population en général pour leur généreuse et bienveillante collaboration. Aux postes de radio et à leurs dirigeants, aux journaux et aux chroniqueurs municipaux, j'exprime toute ma gratitude pour l'aide précieuse qu'ils nous ont apportée dans notre travail d'éducation et de propagande.

Un sentiment personnel que je crois devoir exprimer à cette occasion, c'est un merci sincère et cordial au personnel du Service de santé pour son dévouement et l'intérêt qu'il a pris à son travail. I wish to express the gratitude of the Department of Health towards the City Administrators, the professional and social organizations, official and voluntary, the population in general for their generous collaboration. To the radio stations and their directors, the newspapers and the City reporters, I express my gratitude for their precious co-operation in our educational work and propaganda.

I extend my most sincere personal thanks to the staff of the Department of Health for its devotion to duty.

Le directeur du Service de santé,

Director, Department of Health.

LA COMMISSION D'HYGIÈNE

BOARD OF HEALTH

1952

Les membres de la Commission d'hygiène ont été nommés par résolution du Conseil municipal, en date du 30 mars 1951, pour la durée du terme du Conseil ou jusqu'à leur remplacement dans les six mois suivant l'élection générale municipale, en vertu des pouvoirs qui lui sont conférés par le règlement no 105, tel que modifié par les règlements nos 1044, 1188, 1781 et 2008.

Les membres de cette Commission sont les suivants:

Son Honneur le Maire, ex officio;

Le président du Comité exécutif, ex officio;

Le directeur du Service de santé, ex officio;

Le conseiller W. R. Bulloch;

Le conseiller A.-D. Quintin;

Le conseiller Hector Prud'homme:

Le conseiller E.G.D. Murray;

Le conseiller Conrad Archambault;

Le conseiller Ruben Lévesque;

Le doyen de la faculté de médecine de l'Université de Montréal;

Le docteur Gaston Lapierre, membre de la faculté de médecine de l'Université de Montréal;

Le docteur Albéric Marin, membre de la faculté de médecine de l'Université de Montréal;

Le doyen de la faculté de médecine de l'Université McGill;

Le docteur R. Percy Vivian, membre de la faculté de médecine de l'Université McGill:

1952

The members of the Board of Health were appointed by resolution of the Montréal City Council, on March 30th, 1951, for the term of Council or until replacement within six months following the general municipal elections, under powers conferred by By-law No. 105 as amended by By-laws Nos. 1044, 1188, 1781 and 2008. The members of the Board are:

His Worship the Mayor, ex officio;

Chairman of the Executive Committee, ex officio;

Director of the Department of Health, ex officio;

Councillor W. R. Bulloch;

Councillor A.-D. Quintin;

Councillor Hector Prud'homme:

Councillor E. G. D. Murray;

Councillor Conrad Archambault:

Councillor Ruben Lévesque;

Dean of the Faculty of Medicine of the Université de Montréal;

Doctor Gaston Lapierre, Member of the Faculty of Medicine of the Université de Montréal;

Doctor Albéric Marin, Member of the Faculty of Medicine of the **Univer**sité de Montréal;

Dean of the Faculty of Medicine of McGill University;

Doctor R. Percy Vivian, member of the Faculty of Medicine of McGill University;

- Le docteur L.-P. Ereaux, membre de la faculté de médecine de l'Université McGill;
- M. T.-J. Lafrenière, ingénieur sanitaire et professeur à l'École Polytechnique de l'Université de Montréal;
- Le docteur Andrejs Pakalnins, membre de la faculté de génie civil de l'Université McGill;
- Le docteur Ernest Charron, doyen de la faculté de chirurgie dentaire de l'Université de Montréal:
- Le docteur D. P. Mowry, membre de la faculté de chirurgie dentaire de l'Université McGill;
- M. Paul-A. Gagnon, pharmacien pratiquant.

Le président de cette Commission est le conseiller A.-D. Quintin.

Au cours de l'année, la Commission a perdu l'un de ses membres dans la personne de M. Kenneth Tyrrell qui est décédé le 3 juillet 1952.

Au cours de l'année 1952, les sous comités des maladies vénériennes, de l'épidémiologie et des statistiques vitales, de la tuberculose, de l'hygiène dentaire et du génie sanitaire ont été appelés à étudier certaines questions et à faire leur rapport à la Commission d'hygiène. Parmi les questions étudiées, dont la Commission a pris connaissance et approuvé la teneur, sont:

- a) le rapport préliminaire du docteur
 Ad. Groulx sur les activités du Service de santé pour l'année 1952;
- b) un rapport du Service de santé sur le dépistage de la tuberculose et la vaccination par le BCG chez les écoliers;
- c) une communication du sous-comité de la tuberculose concernant le "Rapport de l'enquête sur l'organisation du Service de santé—Division de la tuberculose";

- Doctor L.-P. Ereaux, Member of the Faculty of Medicine of McGill University;
- Mr. T.-J. Lafrenière, Sanitary Engineer and Professor at Polytechnical School of the Université de Montréal;
- Doctor Andrejs Pakalnins, Member of the Faculty of Civil Engineering of McGill University;
- Doctor Ernest Charron, Dean of the Faculty of Dental Surgery of the Université de Montréal;
- Doctor D. P. Mowry, Member of the Faculty of Dental Surgery of McGill University;
- Mr. Paul-A. Gagnon, Practising Druggist.

The chairman of the Board was Councillor A.-D. Quintin.

During the year, the Board lost one of its members, Mr. Kenneth Tyrrell, on July 3rd, 1952.

In 1952, the sub-committees on venereal diseases, epidemiology and vital statistics, tuberculosis, dental hygiene and sanitary engineering were called upon to study certain questions and report to the Board. Among the questions studied and which have been referred to the Board and approved in principle are:

- a) preliminary report from Dr. Ad. Groulx on the activities of the Department of Health during 1952;
- b) report from the Department of Health on tuberculosis detection and B.C.G. vaccination among school pupils;
- c) communication from the sub-committee on tuberculosis concerning the "Report on the survey of the Department of Health Division of Tuberculosis";

d) des rapports des sous-comités, tout particulièrement de l'hygiène dentaire sur la fluoration de l'eau de consommation dans la cité de Montréal. Cette question de la fluoration de l'eau de consommation a été soumise à la Commission d'hygiène et a été référée au sous-comité du génie sanitaire, pour étude.

Cette Commission a de plus approuvé les résolutions suivantes, à l'effet:

- a) 1° que la viande de cheval est comestible;
 - 2° de prier le directeur du Service de santé de préparer un projet de modification à un règlement à l'effet de permettre la vente de la viande de cheval, etc.;
- b) que la ventilation et les travaux de balayage, lavage, nettoyage quotidiens des véhicules de transport en commun constituent des moyens simples et efficaces de protection publique;
- c) que le dégagement de fumée à la cour de triage et à la rotonde Turcot constitue une nuisance au confort des individus et à la propreté.

Un projet d'avis par le Service de santé a aussi été approuvé, avertissant tous les laitiers que le dépôt de caisses à lait et de bouteilles vides sur des supports à l'extérieur de leur voiture à traction animale pendant le transport et la livraison, ne sera plus toléré. d) reports from sub-committees, especially on dental hygiene, on water fluoridation and its consumption in the City of Montréal. This question was submitted to the Board and referred to the sub-committee on sanitary engineering, for study.

This Board also approved the following resolutions:

- a) 1° that horse flesh is edible;
- 2° asking the Director of the Department of Health to draft an amendment to the By-law to allow sale of horse meat, etc.;
- b) that ventilation and daily sweeping, washing and cleaning of mass transportation vehicles are simple and effective measures of public protection;
- c) that smoke emanating from the Turcot round-house and railway yards are a nuisance affecting the comfort of persons and cleanliness.

A draft of notice by the Department of Health was also approved warning all milkmen that leaving milk or empty bottles in crates outside vehicles drawn by animals would no longer be tolerated.

Le secrétaire,

ARTHUR HOOPER,

ARTHUR HOOPER.

Secretary.

ENSEIGNEMENT DE L'HYGIÈNE AU PUBLIC

SECTION OF PUBLIC HEALTH EDUCATION

par

ADRIEN PLOUFFE

Docteur en hygiène publique Directeur adjoint du Service de santé

Le Rapport annuel

En 1952, nous avons publié le rapport annuel de 1951 qui contenait le rapport du directeur sur l'état des dépenses 1951-1952, une étude sur le mouvement démographique avec commentaires (la population, l'accroissement naturel de la population, la natalité, la nuptialité, la mortalité, les principales causes de la mortalité générale, la mortalité maternelle et la mortalité infantile); un chapitre sur les maladies contagieuses, la vaccination et l'immunisation, l'émission de la carte de santé, la lutte de la tuberculose, les maladies vénériennes: un chapitre sur l'hygiène de l'enfance, l'hygiène mentale, l'hygiène dentaire, l'inspection des aliments, l'inspection sanitaire, les laboratoires, le contrôle médical, la démographie, l'enseignement de l'hygiène, les districts sanitaires, le personnel; boursiers 1951-1952; l'Institut canadien des inspecteurs sanitaires: la Commission d'hygiène; venait ensuite le rapport de la Section de l'enseignement de l'hygiène au public.

Le Bulletin d'hygiène

Le Bulletin d'hygiène a été publié au cours de l'année 1952. Voici les principaux articles: La situation présente des maladies contagieuses, par le Dr G. Charest. Alimentation de l'adulte, par Mlle Fernande Durand. La Division de l'hygiène de l'enfance, par le Dr Ad.

by

ADRIEN PLOUFFE
Doctor of Public Health
Assistant Director,
Department of Health

The Annual Report

In 1952, we published the 1951 Annual Report which contained the report of the Director on the Statement of Expenditures 1951-1952, an appreciation of the demographic movement with comments (population, natural increase of population, birth rate, marriage rate, deaths, principal causes of general mortality, maternal mortality, infant mortality); a chapter on contagious diseases, vaccination and immunization, the health card, the tuberculosis fight, the venereal diseases; a chapter on child hygiene, mental hygiene, dental hygiene, food inspection, sanitary inspection, laboratories, medical control, vital statistics, public health education, health districts, the personnel; scholarships 1951-1952, the Canadian Institute of Sanitary Inspection; the Board of Health; then came the report of Public Health Education.

The Health Bulletin

The Health Bulletin was published during the year 1952. Here are the main articles: The Present Situation of Communicable Diseases, by Dr. G. Charest. Adult Nutrition, by Miss Fernande Durand. The Division of Groulx. Le Dr Valois, par le Dr Ad. Groulx. Bilan-santé à Montréal en 1952, par le Dr Ad. Groulx. La prévention de la grippe, par le Dr Ad. Groulx. Child Hygiene, by Dr. Ad. Groulx, Dr. Valois, by Dr. Ad. Groulx. The Health in Montréal in 1952, by Dr. Ad. Groulx. The Prevention of Influenza, by Dr. Ad. Groulx.

RADIO

Sous les auspices de diverses associations et grâce à l'amabilité des postes de T.S.F., des membres de notre personnel ont donné un bon nombre de causeries radiophoniques. A la tribune des conférenciers du poste CKAC, une émission appelée le quart d'heure de Concordia est mise à la disposition de la ville. Une fois par mois, le directeur du Service de santé est invité à y prononcer une causerie sur les diverses activités de son service.

JOURNAUX

Le Service de santé a adressé aux quotidiens des nouvelles et des communiqués qui sont de nature à intéresser le public et à le mettre en garde contre les méfaits de la maladie.

Comme les années précédentes, la Section de l'enseignement de l'hygiène au public a apporté une collaboration spéciale aux journaux et aux revues. Plus de 900 articles différents ont été publiés sous diverses rubriques: Service de santé; Le capital-santé; Pour servir votre santé; Sauvegarder sa santé; Le Bulletin de la bonne santé; Le capital vivant; Une idée saine tous les jours, etc., etc.

De plus, nous avons continué, en 1952, la publication d'un communiqué hebdomadaire intitulé: Le Service de santé parle à Montréal. C'est un entrefilet court, en style simple, concis et qui est envoyé à tous les journaux de la métropole.

RADIO

Under the auspices of various associations and through the courtesy of radio stations, members of our personnel have given a good number of radio talks. At the CKAC Speakers' Platform, a broadcast called Concordia 15-minute period is placed at the disposal of the City. Once a month, the Director of the Department of Health is invited to deliver a radio talk on the different activities of his department.

NEWSPAPERS

The Department of Health has transmitted to the newspapers, news items and releases which tend to interest the public and safeguard it against the ill effects of sickness.

As in the preceding years, the Section of Public Health Education has offered special unceasing collaboration to the newspapers and periodicals. More than 900 different articles were published under various titles: Department of Health; Health is Wealth; To Serve your Health; Safeguard your Health; The Good Health Bulletin; The Living Capital; A Health Idea every day, etc., etc.

Moreover, we have continued, in 1952, the publication of a weekly release entitled: The Department of Health Calling Montréal. It is a short paragraph, in simple style and concise, which is sent to all the newspapers of the Metropolis. Il convient de rendre un hommage particulier à nos quotidiens, à nos hebdomadaires et à nos revues qui réservent toujours l'accueil le plus généreux et une place de choix, à nos communiqués, à nos nouvelles et à nos articles de propagande.

La collaboration des journaux et des postes de radio est infiniment précieuse. Et une organisation comme le Service de santé est heureuse de le reconnaître. La publicité par l'entremise du journal et des ondes radiophoniques constitue actuellement l'instrument de propagande le plus efficace et le plus dynamique qui existe.

En conséquence, le Service de santé s'acquitte d'un devoir fort agréable en remerciant la presse et les postes de T.S.F. pour l'hospitalité sans égale qu'ils ont accordée, en 1952, aux idées bienfaisantes que nous nous efforçons de répandre dans les rangs de la population.

C'est grâce à cette magnifique coopération, que nous pouvons transmettre les messages du Service de santé au grand public. We must give particular recognition to our daily newspapers, to our weekly publications and to our periodicals which always gave our releases, news and propaganda articles a generous welcome and top-billing.

The collaboration of newspapers and radio stations is invaluable to an organization such as the Department of Health. Publicity through the newspapers and radio broadcasts constitutes at present a medium of propaganda which is unexcelled — the most dynamic in existence.

Consequently the Department of Health performs a most agreeable duty when it offers its thanks to the press and radio stations for the cordial hospitality they have offered, in 1952, to the profitable ideas which we endeavour to spread among our population.

It is due to this magnificent collaboration that we are able to transmit to the public the messages of the Department of Health.

Mlle B. Laliberté, M.A., infirmière en chef.

Mlle M. Ritchie, assistante-infirmière en chef.

Mlle A. Martineau, assistante-infirmière en chef.

INFIRMIÈRES SURVEILLANTES:

Mlle M. Olivier, district sanitaire Maisonneuve.

Mlle B. Rainville, district sanitaire St-Jacques.

Mlle C.-A. Lessard, district sanitaire Sud-Ouest.

Mlle L. Leblanc, district sanitaire Rosemont.

Mlle M.-A. Lacroix, district sanitaire Notre-Dame-de Grâce.

Mlle Y. Lévesque, district sanitaire de Lorimier.

Mlle G.-D. Côté, district sanitaire Nord.

Mlle L. Charbonneau, district sanitaire Ouest.

MHe R. Pilon, district sanitaire St-Édouard.

Mlle G. Dallaire, étudiante à l'Université Columbia de New York.

COMMENTAIRES

Au début de septembre 1953 un neuvième district, le district sanitaire St-Édouard a été organisé et comprend une partie du territoire des districts sanitaires Rosemont et Nord.

Comme ce nouveau district sanitaire n'a fonctionné que quatre mois durant l'année 1952, le travail accompli apparaît dans les tableaux respectifs des districts Rosemont et Nord.

Miss G. D. Côté, Northern Health District.

Miss L. Charbonneau, Western Health District.

Miss R. Pilon, St. Édouard Health District.

Miss G. Dallaire, Student at Columbia University, New York.

COMMENTS

At the beginning of September 1953 a ninth district, St. Édouard Health District, was organized and is made up of parts of Rosemont and Northern Health Districts' territory.

As there was only four months of operation during 1952 for this new health district, the work accomplished is shown in the tables of Rosemont and Northern Health Districts respectively.

RAPPORT de la

SECTION DU NURSING

REPORT of the NURSING SECTION

by

par

Mlle BRIGITTE LALIBERTÉ, M.A., Infirmière en chef

Le nursing dans un service de santé occupe une place prépondérante, et son programme d'activités est déterminé par les demandes des différentes divisions ou sections.

Au cours de l'année 1952, en raison du personnel insuffisant et des demandes sans cesse croissantes, la section du nursing a dû scrutiner, évaluer, diminuer certaines activités afin de faire face aux problèmes les plus pressants. L'ouverture de plusieurs nouvelles écoles, la subdivision de plusieurs grandes paroisses, l'arrivée d'un grand nombre d'étrangers ne parlant ni le français ni l'anglais, sont autant de facteurs qui ont contribué à compliquer l'administration de la section du nursing.

Si dans bien des cas, les zones respectives des infirmières ont été réduites géographiquement, la cédule du travail a été bouleversée par les absences de plusieurs mois d'une ou de plusieurs infirmières pour cause de maladie, laissant des zones non couvertes, travail qui a dû être assigné à d'autres infirmières au détriment de leur zone respective.

Les activités des infirmières surveillantes se sont limitées en grande partie à la redistribution de façon équitable du travail de chaque infirmière, à la corrélation des efforts avec les autres organismes volontaires, et une grande partie du temps fut employée à l'entraînement Miss BRIGITTE LALIBERTÉ, M.A., Chief Nurse

The place of Public Health Nursing in a Health Department is preponderant, and its program of activities is determined by the demands and needs of the different divisions or sections of the service.

During 1952, due to lack of sufficient personnel and increasing demands, the Nursing Section had to scrutinize, evaluate and reduce some activities in order to meet the more pressing needs. The opening of several new schools, the subdivision of large parishes, the arrival of foreigners without knowledge of French or English, are factors which have rendered the administration of the Nursing Section a very difficult task.

In many cases, though the geographical areas served by one nurse was reduced, the work schedule was upset when no replacement was made for staff members absent for long periods due to illness. The work in these uncovered areas was added to that of other nurses to the detriment of their respective districts.

Supervisory activities were directed toward equitable redistribution of nursing service, closer correlation with the non-official agencies and training of Public Health Nursing students from des étudiantes des Universités McGill et Montréal, entraînement qui stimule le personnel.

La vaccination par le B.C.G. dans les écoles, l'ouverture de plusieurs jardins d'enfants et d'écoles privées a créé une demande pour les services des infirmières, demande qui a servi à faciliter d'excellentes relations et qui a favorisé une plus étroite collaboration entre le personnel enseignant et le personnel du service de santé.

Un programme continu d'éducation du personnel dans les districts respectifs a été maintenu par des assemblées bimensuelles, des cours sur la défense civile. La contribution la plus importante de l'année est sans aucun doute, l'institut de trois demi-journées sur le développement physique, émotif, social du préscolaire.

Au point de vue administratif, la section du nursing a interprété le rôle des hygiénistes à des groupes communautaires, a vu à l'élévation des standards du service par la préparation de manuels de procédures.

Montréal and McGill Universities. Training of these students stimulates our personnel.

B.C.G. vaccination in the schools, the opening of kindergartens and private schools created a demand for nursing service. This has brought closer cooperation and excellent relationships between our staff and the teaching personnel.

A continuous staff education program has been carried on by bi-weekly staff and supervisory conferences. Aside from civil defence courses, the outstanding contribution was the Institute on the Growth and Development of the preschool child.

Administrative emphasis of the Nursing Section was placed upon the interpretation of Public Health Nursing to community groups and the elevation of standards by the preparation of manuals of procedures.

Home Visits Classified by Type:

Division des maladies contagieuses

Division of Communicable Diseases

DIVISION

DES

MALADIES CONTAGIEUSES

DIVISION

OF

COMMUNICABLE DISEASES

par

le docteur G. CHAREST, M.P.H., surintendant

Durant l'année 1952, le taux de mortalité par maladies contagieuses aiguës a continué d'être aussi favorable que durant les deux dernières années pendant lesquelles le taux avait été inférieur, pour la première fois, à 3 décès par 100,000 de population. Il y eut 22 décès attribuables à ces maladies en comparaison de 26 décès pour chacune des deux années antérieures.

Cependant, le nombre de cas déclarés a été de 16,932 et dépasse de 4,216 le nombre de cas de l'année 1951.

C'est la rougeole qui, durant les premiers mois de l'année 1952, fut responsable de l'excédent du nombre de ces cas avec 6,441 cas rapportés et 8 décès par rapport à 2,665 cas et 8 décès en 1951.

Durant les premiers mois de 1952, les cas de scarlatine furent rapportés en plus grand nombre et les chiffres s'établissent pour l'année entière à 3,199 cas et 1 décès comparativement à 1,638 cas et 1 décès en 1951.

Depuis le milieu de l'année 1952, le nombre des cas de coqueluche a augmenté rapidement et 1,799 cas et 4 décès furent enregistrés en regard de 906 cas et 4 décès seulement en 1951.

Il n'y eut que 2 décès attribuables à la diphtérie, 4 décès à la méningite méningococcique et 1 décès respectivement pour la varicelle, l'érysipèle et la dysenterie bacillaire. by

G. CHAREST, M.D., M.P.H., Superintendent

During the year 1952, the mortality rate by acute communicable diseases has continued to be as favorable as for the two preceding years during which the rate had been lower, for the first time, than 3 deaths by 100,000 population. There have been 22 deaths attributable to these diseases in comparison to 26 deaths for each of the two preceding years.

However, the number of reported cases has been 16,932 and exceeds by 4,216 the number of cases for the year 1951.

It is measles which, during the first months of the year 1952, was responsible for the excess in number of cases with 6,441 cases reported and 8 deaths to compare with 2,665 cases and 8 deaths in 1951.

During the first months of 1952, the cases of scarlet fever have been reported in greater number and the figures give for the total year 3,199 cases and 1 death comparatively with 1,638 cases and 1 death in 1951.

During the last months of 1952, the number of cases of whooping cough has increased rapidly and 1,799 cases and 4 deaths were registered in regard to 906 cases and 4 deaths in 1951.

There were 2 deaths caused by diphtheria, 4 deaths by meningococcal meningitis and 1 death respectively for chickenpox, erysipelas and bacillary dysentery. Cette année, il n'y eut pas d'éclosion de poliomyélite et seulement 27 cas furent signalés à notre attention et il ne survint aucun décès.

Le sommaire qui suit fait voir les activités de la division des maladies contagieuses pour l'année 1952: This year, there was no outbreak of poliomyelitis and only 27 cases were brought to our attention and there were no deaths.

The following summary shows the activities of the division of communicable diseases for the year 1952:

| Nombre de cas rapportés de maladies contagieuses aiguës Number of cases of acute communicable diseases reported | 16,932 |
|--|--------|
| Nombre de cas de tuberculose pulmonaire Number of cases of pulmonary tuberculosis | 1,545 |
| Nombre de cas de tuberculose (autres formes) Number of cases of tuberculosis (other forms) | 73 |
| Nombre de décès en maladies contagieuses aiguës Number of deaths from acute communicable diseases | 22 |
| Nombre de décès en tuberculose pulmonaire Number of deaths from pulmonary tuberculosis | 217 |
| Nombre de décès en tuberculose (autres formes) Number of deaths from tuberculosis (other forms) | 25 |
| Nombre de cas hospitalisés Number of cases admitted to hospitals | 4,429 |
| Visites de contrôle par les médecins Visits by physicians (Visits of control) | 3,291 |
| Visites par les infirmières (Visites en tuberculose non comprises) Visits by nurses (Tuberculosis visits not included) | 12,454 |
| Visites par les infirmières en tuberculose Visits by nurses for control of tuberculosis | 5,955 |
| Nombre de maisons affichées Number of houses placarded | 130 |
| Nombre de vaccinations contre la variole Number of vaccinations against smallpox | 23,410 |
| Nombre d'immunisations contre la diphtérie Number of immunizations against diphtheria | 19,952 |
| Nombre d'immunisations contre la coqueluche Number of immunizations against whooping cough | 19,952 |
| | |

N.B. Pour le détail des immunisations, voir les tableaux VII à XI (inclus). N.B. For details of immunizations, see tables VII to XI (inclusively).

Section de la carte de santé

En 1952, 51,942 cartes de santé ont été émises à des manipulateurs d'aliments, des barbiers ou coiffeurs de même qu'au personnel des hôpitaux.

De ce nombre, 21,937 personnes ont fait application pour la première fois et 30,005 ont renouvelé leur carte de santé.

Le nombre de prises de sang pour la recherche de la syphilis fut de 32,337 soit une diminution de 1,489 par rapport à l'année 1951.

Le nombre de radiographies pulmonaires fut de 32,241 dont 27,983 par la Ligue Anti-tuberculeuse de Montréal Inc. et 4,258 par la Clinique Laurier. Il y eut également 1,085 réexamens à la Clinique Laurier durant le cours de l'année, afin de suivre les cas suspects gardés sous observation.

Depuis le mois de septembre 1952, des prélèvements de la gorge et du nez furent faits parmi le personnel des maternités privées afin de dépister les porteuses de streptocoque hémolytique et de staphylocoque doré en vue de prévenir les éclosions de pyodermite parmi les nouveau-nés.

I-Émission de la carte de santé

Health Card Section

In 1952, 51,942 health cards have been issued to food handlers, barbers or hairdressers and also to hospitals' personnel.

Out of this number, 21,937 persons have made application for the first time and 30,005 have renewed their health card.

The number of blood samples submitted for the detection of syphilis was 32,337 which represents a reduction of 1,489 in comparison to the year 1951.

The number of pulmonary x-ray pictures was 32,241 from which 27,983 were done by the Antituberculosis League of Montreal Inc. and 4,258 by the Laurier Clinic. There were also 1,085 reexaminations at the Laurier Clinic during the course of the year, in order to follow the suspicious cases kept under observation.

Since the month of September 1952, throat and nose specimens were made among the personnel of the private maternities to find the carriers of hemolytic streptococcus and yellow staphylococcus to prevent the outbreaks of pyodermatitis in new-borns.

Division de la tuberculose

Division of Tuberculosis

DIVISION

DE LA

TUBERCULOSE

par

le docteur LÉO LADOUCEUR, Surintendant

La mortalité par tuberculose et par 100,000 de population, est de 23.4 en 1952, diminution de 33% sur le chiffre de 1951. Cette baisse est due à deux facteurs essentiels:

- a) dépistage précoce
- b) hospitalisation acceptée par un pourcentage toujours plus élevé de tuberculeux et dont la maladie d'ailleurs est à un stade moins avancé. Traitement plus efficace, surtout des tuberculoses récentes, grâce aux antibiotiques. Généralisation et emploi plus judicieux des divers procédés chirurgicaux à notre disposition pour la négativation des tuberculoses fibreuses, anciennes.

Nous avons à signaler comme innovation en 1952:

- a) l'achat d'un nouvel appareil radiologique à 305 est avenue Mont-Royal.
- b) notre vieil appareil modernisé est déjà installé au Centre Rosemont où une deuxième clinique radiologique municipale est ouverte au public chaque jeudi de 1½ heure à 4½ heures. Nous sommes disposés, si le nombre des consultants le requiert, à multiplier les jours de consultation.

DIVISION

OF

TUBERCULOSIS

by

LÉO LADOUCEUR, M.D.,

Superintendent

The mortality rate from tuberculosis per 100,000 of population is 23.4 in 1952. A decrease of 33% on the figures for 1951. Two factors are responsible for that diminution:

- a) case finding programme
- b) the hospitalization is accepted by an higher percentage of tuberculous patients whose illness is at an early stage. Better control by antibiotic if early cases of tuberculosis. Generalization and more judicious use of the various surgical procedures at our disposal to turn negative all forms of tuberculosis.

We should mention as innovation in 1952:

- a) the purchase of a new x-ray equipment in 1952 at 305 Mount Royal Avenue East.
- b) our old renovated apparatus is already in operation at Rosemount Health Centre where a second Municipal X-Ray Clinic is open to the public every Thursday from 1½ to 4½ hrs. We are ready to open some other days if required by the public.

c) commencée le 17 décembre dernier, la cuti-réaction au B.C.G. La vaccination des négatifs, l'examen radiographique des enfants positifs et des autres membres de la famille. J'y reviendrai plus longuement à l'item B.C.G.

Central File Recording

Le fichier central permet de fournir sur le problème antituberculeux à Montréal, des statistiques précises. Nous remercions les instituts antituberculeux, les sanatoriums et hôpitaux spécialisés ou non, les médecins qui nous ont fourni, au cours de 1952, les renseignements indispensables à la bonne tenue du fichier.

Le fichier central

The Central File Register allows us to give on the tuberculosis problem some accurate data. We are grateful to the antituberculosis institutes, sanatoria, hospitals and the doctors who have provided us in the course of 1952 with the essential information pertaining to the keeping of a good filing system.

c) initiated last November the 17th.,

vaccination of the

the B.C.G. cuti-reaction. The

reactors, a chest x-ray for the positive and for the other members

of the family. I will return to this

topic in the B.C.G. Chapter.

- (1) According with the stage of the disease.
- Means minimal, moderately advanced or far advanced pulmonary tuberculosis.

Nous constatons, ici comme ailleurs, que si la mortalité est en nette regression, baisse de 33% par rapport à 1951, la morbidité ne suit pas une courbe descendante aussi marquée, diminution 9.5 dans le nombre des cas de tuberculose déclarés par rapport à 1951.

Here, as elsewhere, we are finding an appreciable reduction in the mortality rate, a decrease of 33% with 1951. Unfortunately the morbidity does not exactly follow the same trend. A decrease of 9.5 in the number of cases reported in 1951.

Tableau II

Répartition par groupes d'âges des nouveaux cas de tuberculose pulmonaire et non pulmonaire enregistrés à Montréal en 1952.

Le dépistage de la tuberculose dans les industries par la Ligue Antituberculeuse de Montréal

La Ligue, sous la présidence de M. C. O. Monat, a continué son travail de dépistage au cours de l'année écoulée. Elle aide le service de santé dans l'examen des manipulateurs d'aliments. Également, un appareil à demeure, installé à 3446 avenue de l'Hôtel de Ville, permet l'examen préembauchage ou autre, de tous ceux qui se présentent. 43,870 personnes y ont été radiographiées en 1952.

Tableau VIII

Classification des radiographies prises par la Ligue Antituberculeuse de Montréal de 1945 à 1952 inc.

Case finding programme of the Antituberculosis League in Industries

The League, under the leadership of Mr. C. O. Monat, continued its case finding programme during the last year. Its cooperation has rendered feasible the mass x-ray survey of the food handlers. In the meantime the League has fixed up permanent equipment at 3446 City Hall Avenue and proceeds with the pre-employment x-ray of all those coming in. 43,870 persons were x-rayed in 1952 at this local.

Table VIII

Distribution of x-rays taken by the Antituberculosis League of Montréal from 1945 to 1952 inc.

Les instituts antituberculeux

Les instituts Royal Edward Laurentian Hospital, Montréal Division, Bruchési et le dispensaire de l'Hôpital du Sacré-Cœur ont continué, au cours de 1952, leur merveilleux travail. Le tableau suivant en fait voir les résultats.

Antituberculosis Institutes

The Royal Edward Laurentian Hospital, Montréal Division, l'Institut Bruchési and the outdoor clinic of l'Hôpital du Sacré-Cœur carried on their effective work in 1952. The following table shows the results.

Tableau IX

Détail des activités de trois organismes antituberculeux volontaires à Montréal en 1952.

Table IX

Detail of the activities of three antituberculosis agencies in Montréal in 1952.

| Organisme ———————————————————————————————————— | Premiers Examens First Exam. | Radiographies fluoroscopies Radiographs fluoroscopies | Laboratory | Pneumopéritoine — Pneumothorax — Pneumo- peritoneum | Visites des infirmières Visits by Nurses |
|---|---------------------------------------|--|------------|---|---|
| Bruchési | 9,723 | 40,762 | 16,487 | 5,708 | 7,873 |
| Royal Edward | 6,265 | 29,290 | 11,138 | 6,802 | 13,014 |
| Sacré-Cœur | 1,192 | 5,082 | 2,054 | 1,441 | 231 |
| Total | 17,180 | 75,134 | 29,679 | 13,951 | 21,118 |

Enfin, quatre hôpitaux généraux, l'Hôpital Notre-Dame, l'Hôtel-Dieu de Montréal, le Montreal General Hospital et le Royal Victoria Hospital ont installé un appareil photo-fluorographique pour l'examen pulmonaire de tous les patients qui entrent à l'hôpital. Au total, plus de 400,000 radiographies pulmonaires ont donc été faites au cours de 1952 à Montréal et dans la banlieue.

La vaccination par le B.C.G.

La vaccination par le B.C.G. prend à Montréal un nouvel essor. Le service de santé de la Ville de Montréal a entrepris le 17 novembre dernier, d'abord dans les écoles du District sanitaire Maisonneuve, grâce à une équipe mobile prêtée par l'Institut de microbiologie et d'hygiène, Service du B.C.G., la cuti-réaction par le B.C.G. des écoliers de la métropole. Les négatifs sont vaccinés après avoir obtenu, au préalable, le consentement des parents, et les positifs sont radiographiés en même

At least four general hospitals, Hôpital Notre-Dame, Hôtel-Dieu de Montréal, Montréal General Hospital and
Royal Victoria Hospital, are using a
photo-Roentgenographic equipment for
the pre-admission chest examination of
their patients in public or private ward.
Over 400,000 chest x-rays have been
taken in Montreal and suburbs during
1952.

The B.C.G. Vaccination

The B.C.G. vaccination is soaring in Montréal. The Health Department of the City of Montréal has started last November the 17th., first, in the schools of the Maisonneuve Health District, due to a mobile squad lent by the Institut de microbiologie et d'hygiène service of B.C.G., the cuti-reaction by the B.C.G. of the school age population. The negative reactors are vaccinated the previous consent of the parents, being obtained. The positives are x-rayed as well as the other members

temps que tous les autres membres de la famille. C'est un travail d'envergure et qui devra s'échelonner sur une période de 4 à 5 ans, Le Service de santé se propose également de donner le B.C.G. aux enfants d'âge préscolaire dans toutes les cliniques de nourrissons. Déjà à la Clinique Laurier, depuis plus de deux ans, nous vaccinons ceux qui veulent bien s'y présenter. 187 vaccinations dont 8 revaccinations ont été faites en 1952.

of the family. It is a farsighted planning which will have to be worked out over a period of from 4 to 5 years. The Health Department is also interested to give the B.C.G. to the children in the preschool age population in all the babies' clinics. At the Laurier Clinic, since two years, we vaccinate all those coming for this purpose. 187 vaccinations of which 8 re-vaccinations have been made in 1952.

Division des maladies vénériennes

Division of Venereal Diseases

DIVISION

DES

MALADIES VÉNÉRIENNES

par

le docteur F. DUSSAULT, M.P.H., Surintendant

Le total des prises de sang au cours de l'année s'est élevé à 35,457. De ce total 32,352 sont au crédit de la Section de la carte de santé.

Le nombre des interviews par les infirmières fut de 1,599. Elles ont fait 20 visites.

Servant de liaison entre la Division provinciale des maladies vénériennes et le Service municipal de la Police nous avons transmis à ce dernier 7 rapports concernant des endroits qui furent associés à des infections vénériennes (facilitation), et nous avons demandé son aide pour retracer 32 contacts.

Il y eut 55 décès attribuables à la syphilis ce qui a donné un taux de 5.1 par 100,000 de population.

Le tableau suivant est un relevé du travail de la Division en rapport avec le dépistage des cas, la vérification et la surveillance du traitement.

DIVISION

OF

VENEREAL DISEASES

by

F. DUSSAULT, M.D., M.P.H., Superintendent

35,457 blood specimens for serologic test for syphilis were taken during the year, of which 32,352 are to the credit of the health card Section.

The nurses carried out 1,599 interviews and made 20 home visits or calls at place of work.

In liaison between the Provincial Division of venereal diseases and the municipal Department of Police we transmitted to the latter 7 reports on places which were associated with venereal infections (facilitation). We also asked their help to retrace 32 contacts.

55 deaths attributed to syphilis were registered in 1952, giving a rate of 5.1 per 100,000 population.

The following table is a summary of the work of the Division pertaining to case finding, treatment verification and follow-up.

Ce taux est basé sur le nombre d'accouchements ayant eu lieu à Montréal.

This rate is calculated on the number of confinements done in Montréal.

2. CONSULTATIONS DE NOURRIS-SONS ET D'ENFANTS D'AGE PRÉSCOLAIRE

Le nombre de consultations municipales de nourrissons et d'enfants d'âge préscolaire a été réduit à 61 au cours de l'année 1952, par la fermeture de la consultation dans la paroisse Sainte-Bernadette.

En plus, 24 consultations indépendantes, dont 18 françaises, dirigées par les Gouttes de lait paroissiales et 6 anglaises, dirigées par la "Child Health Association", ont aussi continué leurs opérations dans les limites de Montréal.

Tableau IV

Ce tableau indique les résultats du travail fait dans les trois groupes de consultations de nourrissons et d'enfants d'âge préscolaire pour l'année 1952

2. WELL-BABY AND PRESCHOOL CLINICS

The number of municipal well-baby and preschool clinics was decreased to 61 during the year 1952 on account of the closing of Ste-Bernadette parish's clinic.

Besides, 24 independent clinics, of which 18 French directed by "Les Gouttes de lait paroissiales" and 6 English directed by the Child Health Association, continued operating in the City limits of Montréal.

Table IV

This table indicates the general results of the work done in the clinics during the year 1952

3. GARDERIES DE NOURRISSONS

Les deux garderies de nourrissons (celle du Parc Lafontaine et l'autre à l'île Ste-Hélène) furent ouvertes durant les mois de juillet et août. Un médecin fut en fonction tous les jours au Parc Lafontaine et, à l'île Ste-Hélène, les jours de pique-nique seulement.

Les résultat des opérations de ces garderies est indiqué comme suit:

| Consultations | 264 |
|---|-------|
| Pesées | 35 |
| Pansements | 252 |
| Vaccinations | 1,317 |
| Revaccinations | 120 |
| Certificats | 1,215 |
| Examen des enfants qui entrent à l'école en septembre | 200 |

4. L'INSPECTION DES MAISONS DE PENSION POUR ENFANTS ET DES MATERNITÉS ET HOPITAUX PRIVÉS

La surveillance des maisons de pension pour enfants et des maternités et des hôpitaux privés, s'est poursuivie comme il est indiqué dans le tableau V qui suit:

3. OPEN-AIR CLINICS

The two open-air clinics, the one in Lafontaine Park and the other in Ste-Hélène's Island, were opened during the months of July and August.

The operations' result of these clinics is indicated below:

| Consultations | 264 |
|---|-------|
| Weighings | 35 |
| Dressings | 252 |
| Vaccinations | 1,317 |
| Revaccinations | 120 |
| Certificates | 1,215 |
| Examination of children enter- ing school in September | 200 |

4. INSPECTION OF CHILDREN'S BOARDING-HOUSES AND MATERNITIES AND PRIVATE HOSPITALS

The supervision of children's boarding-houses and maternities and private hospitals, has been carried out as indicated in the table which follows: Tableau V

II — L'INSPECTION MÉDICALE DES ÉCOLES

1. EXAMEN MÉDICAL DES ÉLEVES

Le travail de l'inspection médicale des écoles, primaires et primairessupérieures, catholiques et protestantes, françaises et anglaises, et d'un certain nombre d'écoles indépendantes ou privées, s'est poursuivi au cours de l'année 1951-1952 comme il est indiqué dans les tableaux qui suivent.

Tableau VI

Nombre d'écoles, de classes et d'élèves et moyenne d'écoles et d'élèves par médecin et par infirmière

II — MEDICAL INSPECTION OF SCHOOLS

1. MEDICAL EXAMINATION OF PUPILS

The work of "Medical Inspection of Schools", primary and Junior High, Catholic and Protestant, French and English, and in a certain number of independent or private schools, was accomplished in the course of the school year 1951-1952, as is indicated in the following tables.

Table VI

Number of schools, classes and pupils and average number of schools and pupils for each doctor and nurse

| | 1951-1952 | Catholi- ques Catholic | Protes- tantes — Protestant | Privées Independent | Total |
|--------------------------|------------------|------------------------------|--------------------------------------|------------------------|------------------|
| Nombre | écoles—schools | 223 | 43 | 68 | 334 |

| Pas revenus pour lecture Number of cases who did not return for reading | 417 | 13 | 430 |
| Ont reçu le BCG Have been vaccinated with B.C.G. | 14 | | 14 |

V — DISTRIBUTION DE PUBLICATIONS COURANTES

Plusieurs milliers de publications, soit sous forme de circulaires, dépliants, pancartes, etc., ont été distribuées comme par le passé par la Division de l'hygiène de l'enfance. Elles étaient fournies par le Service de santé, le ministère de la santé (Québec) et le ministère de la santé nationale (Ottawa).

VI - NUTRITION

Au cours de l'année 1952, les activités de la nutritioniste furent nombreuses et variées.

V — DISTRIBUTION OF LITERATURE

A great number of publications, circulars, pamphlets, posters, etc., have been distributed as previously by the Division of Child Hygiene. Those were supplied by the Department of Health (Montréal) the Ministry of Health (Québec) and the Department of National Health (Ottawa).

VI - NUTRITION

During the year 1952, the nutritionist's activities were numerous. L'enseignement aux infirmières demeura toujours, cependant, parmi les plus importantes; c'est pourquoi, en plus des causeries données dans les districts sanitaires, elle organisa, pour les infirmières attachées aux cliniques dentaires, des causeries traitant spécialement du rôle de l'alimentation dans la formation et la conservation des dents.

L'enseignement de l'hygiène alimentaire aux enfants dans les écoles fut appuyé par l'organisation de projets de classe sur l'alimentation rationnelle de même qu'il fut complété par des causeries aux parents, lesquelles étaient suivies de périodes de libre discussion.

L'étude des habitudes alimentaires des étudiants des écoles supérieures se continua avec succès et elle servit même de guide à l'enseignement à donner à chaque groupe étudié.

Pour les adultes, elle donna sous les auspices de groupements sociaux tels que: Le Service de préparation au mariage et Le Service d'orientation des foyers, des causeries (9) sur l'importance d'une alimentation rationnelle vis-à-vis du maintien de la santé; environ mille personnes assistèrent à ces causeries.

De plus, invitée cinq fois comme conférencière à l'émission de la "Tribune des conférenciers de CKAC — Quart d'heure de Concordia", elle y traita des principaux problèmes de nutrition, des influences de l'alimentation sur le maintien de la santé ainsi que de la valeur nutritive des divers aliments. Les journaux et les revues lui servirent également pour transmettre ses messages à la population.

Enfin, à titre de consultante, on la retrouva à la clinique prénatale, à la consultation de nourrissons et d'enfants d'âge préscolaire de même que dans nombre d'institutions pour la réorganisation du service alimentaire, l'élaboration de menus appropriés aux besoins du groupe ainsi qu'au budget alimentaire.

Nevertheless, the teaching of nutrition to the nurses has remained among the most important ones; therefore, in addition to the lectures given to the staff nurses of each sanitary district, she organized, for the nurses of the dental clinics, special lectures on the functions of nutrition in the formation and conservation of teeth.

The teaching of nutrition to school children was reinforced by the organization of class projects on nutrition principles and it was completed by lectures to parents which were followed by free discussion periods.

The study on food habits of high school students was continued successfully and it was used also as a guide for teaching each specific group studied.

For adults, under social groups' patronage such as "Service de préparation au mariage" and "Service d'orientation des foyers", she gave lectures (9) on the importance of good nutrition towards the maintenance of health; about a thousand persons attended those lectures.

In addition, invited five times as the guest speaker at "La Tribune des conférenciers de CKAC — Quart d'heure de Concordia", she spoke on the most common nutritional problems, the influences of nutrition on the maintenance of health as well as about the nutritive value of different foods. Advice were also transmitted to the population through newspaper and magazine.

Lastly, her assistance as a consultant was required at the prenatal clinic, at the well-baby and preschool clinic as well as by many institutions for the reorganization of their food service, the planning of menus suitable to the needs of the group as well as to their food budget.

SECTION

DE

L'HYGIÈNE MENTALE

by

par

le docteur J.-E.-A. MARCOTTE, psychiatre

Le travail de la section de l'hygiène mentale, ayant pour objet la prévention des mésadaptations qui découlent de la déficience intellectuelle ou des anomalies affectives, s'est effectué, comme d'habitude, dans les écoles de notre ville et aux deux cliniques médico-psychologiques des centres de Lorimier et Rosemont.

- 1. L'hygiène mentale scolaire a consisté dans l'examen psychométrique, par les psycho-techniciennes, de 2,438 enfants suspects d'arriération intellectuelle ou présentant des anomalies de comportement et dans la revision et le diagnostic de ces cas par les psychiatres. Dans des entretiens individuels ou collectifs avec le personnel scolaire, les psychiatres et les infirmières se sont efforcés de faire un enseignement vulgarisé de l'hygiène mentale qui a été bien accueilli et donne déjà des résultats appréciables. Notre personnel a aussi collaboré, de façon très active, à une étude spéciale de la déficience mentale et des besoins qu'elle suscite dans les écoles de la commission protestante.
- 2. Aux deux cliniques, l'une ouverte régulièrement cinq après-midi par semaine pour les nouveaux cas et plusieurs avant-midi pour des entrevues subséquentes et des cas d'urgence, l'autre fonctionnant un après-midi depuis juin 1952, 637 sujets ont été examinés et ont requis, de la part des psychiatres et des infirmières, un total de

SECTION OF MENTAL HYGIENE

Dr. J. E. A. MARCOTTE, psychiatrist

The activities of the Section of Mental Hygiene, aiming at the prevention of maladjustments arising from intellectual deficiency or emotional abnormalities, were carried on as usual in the schools of our city and at the two medico-psychological clinics located at the de Lorimier and Rosemont Centres.

- 1. Mental Hygiene in the Schools has consisted in the psychometric testing, by the psycho-technicians, of 2,438 pupils suspected of intellectual retardation or presenting behavior troubles and in the diagnostic revision of such cases by the psychiatrists. In individual or group talks to the school personnel, our psychiatrists and nurses have attempted an informal teaching of mental hygiene which has been well received and is already showing some result. Our personnel has also, and in a very active manner, helped the Protestant School Board with a special survey of mental deficiency and needs arising therefrom in its Montréal schools.
- 2. At the two clinics, one opened regularly five afternoons weekly for new admissions and several forenoons for follow-up interviews and emergencies, the other functioning one afternoon since June 1952, 637 subjects have been examined and have required, from our

- 1,720 entrevues avec les jeunes sujets eux-mêmes, leurs parents, des travailleuses sociales et autres personnes intéressées.
- 3. Au cours de 1952, deux nouvelles infirmières ont été assignées à notre section et ont reçu des bourses pour parfaire leur préparation spécialisée à l'Université de Montréal.

Les deux tableaux qui suivent résument le travail de la section:

psychiatrists and nurses, a total of 1,720 interviews to the young patients themselves, their parents, social workers and other individuals concerned.

3. During 1952, two more nurses have been assigned to our Section and have been granted scholarships to complete their specialized training at the Université de Montréal.

The following two tables summarize the work of the Section:

OF

L'HYGIÈNE DENTAIRE

DENTAL HYGIENE

par

by

le docteur J.-C. BOUILLON, L.C.D., M.P.H.,

chef de la section

Dr. J. C. BOUILLON, L.D.S.,
M.P.H.,
Chief of the Section

Voici les principales activités de la section de l'hygiène dentaire:

- Inspection dentaire dans les écoles et campagne d'éducation;
- II. Cliniques dentaires municipales;
- III. Clinique d'orthodontie.

The principal activities of the Section of Dental Hygiene consist of:

- Dental inspection in the schools and educational campaign;
- II. Municipal dental clinics;
- III. Orthodontia clinic.

I. INSPECTION ET CAMPAGNE DANS LES ÉCOLES

En même temps que l'inspection dentaire régulière dans les écoles, nous poursuivons notre campagne conjointe d'alimentation rationnelle et d'hygiène dentaire; nous avons donné 65 séances éducatives au cours de l'année 1951-1952.

Le tableau suivant indique les résultats de ce travail d'inspection et d'éducation auprès de 63,754 élèves dont 67.6% présentaient des caries dentaires à l'examen.

I. INSPECTION AND CAMPAIGN IN THE SCHOOLS

The joint campaign of nutrition and dental hygiene was pursued in the schools while the regular dental examination was continued by the personnel of the Section. Sixty five lectures were so given during the school term 1951-1952.

The following table shows the results of this educational campaign and dental examination at which 63,754 children were examined; 67.6% of them were found with dental caries.

II. CLINIQUES DENTAIRES II. MUNICIPAL DENTAL MUNICIPALES

Nous comptons maintenant onze cliniques dentaires municipales depuis l'ouverture de la nouvelle clinique Rosemont, et quatre cliniques indépendantes où nous donnons nos services.

La Junior Red Cross nous continue sa collaboration en tenant des cliniques dans quelques écoles protestantes.

CLINICS

There are now eleven municipal dental clinics since the new Rosemont dental clinic has been opened, and four independent clinics where we give dental care.

The Junior Red Cross still co-operates with us in giving clinics in some protestant schools.

Division de l'inspection des aliments

Division of Food Inspection

DIVISION

DE

L'INSPECTION DES ALIMENTS

DIVISION

OF

FOOD INSPECTION

par

A.-J.-G. HOOD, D.M.V., surintendant

Le travail accompli dans cette division, pour l'année, est résumé dans les 18 tableaux suivants concernant l'inspection du lait, des viandes et des établissements de produits alimentaires. by

A. J. G. HOOD, D.V.M., Superintendent

The work accomplished in this division during the year is summarized in the following 18 tables concerning the inspection of milk, meat and food establishments.

SECTION No 1

INSPECTION DU LAIT

SECTION No. 1

MILK INSPECTION

Tableau I

Table 1

| Établissements — Establishments | 11,511 |
|---|----------|
| Inspections | 38,303 |
| Vaches examinées — Cows examined | 90,600 |
| Échantillons de lait, crème, crème glacée, prélevés pour analyses chimiques et bactériologiques | 16,719 |
| Samples of milk, cream and ice-cream collected for chemical and bacterio- logical analyses | |
| Examens divers du lait, de la crème et de la crème glacée | |
| Various examinations of milk, cream and ice-cream | 135,032 |
| Gallons de lait examinés — Gallons of milk examined | ,080,256 |
| Gallons de lait et sous-produits consommés par jour | |
| Gallons of milk and various by-products consumed per day | 132,447 |
| Gallons de lait confisqués — Gallons of milk confiscated | 20,370 |
| Pinte de crème confisquée — Quart of cream confiscated | _ |
| Plaintes — Complaints | 37 |
| Avis écrits — Written notices | 22,935 |
| Actions prises — Actions taken | 28 |
| Actions en cour — Actions in court for judgment | 8 |
| Action renvoyée — Action dismissed | 1 |
| Condamnations — Condemnations | 19 |

Division des laboratoires

Division of Laboratories

DIVISION DES LABORATOIRES

DIVISION OF LABORATORIES

par

R. BÉRARD, M.D.,

le docteur R. BÉRARD, surintendant

Superintendent

by

Les analyses bactériologiques et chimiques effectuées au cours de l'année ont atteint le total de 72,951, réparties entre les différentes divisions du Service de santé, le Service de la Police et les médecins de la Ville de Montréal.

Le sommaire des analyses effectuées dans la Division des laboratoires est indiqué dans les tableaux qui suivent. The total number of bacteriological and chemical analyses made during the year was 72,951, divided among the different divisions of the Department of Health, the Police Department and the private practitioners of the City of Montréal.

The summary of analyses performed in the Division of laboratories is indicated in the following tables.

Tableau I Sommaire des analyses

Table I Summary of analyses

| _ | | |
|----|---|--------|
| 1. | Diagnostic: — Diagnosis: | |
| | Crachats: bacille de Koch — Sputum: tubercle bacilli | 9,441 |
| | Prise de sang: sérodiagnostic de la syphilis Collecting blood: serodiagnosis of syphilis | 524 |
| | Sang, selles, urines: typhoïde et paratyphoïdes A et B Blood, stools, urine: typhoid and paratyphoid fever A and B | 475 |
| | Sang: analyses chimiques et cytologiques — Blood: chemical and cytological analyses | 4,258 |
| | Sécrétions de gorge: diphtérie et angine de Vincent — Throat swabs: diphtheria and Vincent's angina | 1,453 |
| | Sécrétions urétrales et vaginales: gonocoque — Urethral and vaginal swabs: gonococcus | 2,505 |
| | Urine: analyse chimique — Urine: chemical analysis | 13,852 |
| | Autres analyses — Miscellaneous analyses | 3,192 |
| | | 35,700 |

| 2. | Produits alimentaires: — Food products: Lait, crème et sous-produits — Milk, cream and by-products | 28,223 |
|-----|---|--------|
| | Aliments solides, viandes, aliments en conserve, etc. — | 20,220 |
| | Solid foods: meat, canned foods, etc | 2,664 |

Division du contrôle médical

Division of Medical Control

DIVISION DU CONTRÔLE MÉDICAL

DIVISION OF MEDICAL CONTROL

par

by

le docteur LOUIS ROUX, surintendant et conseiller médico-légal LOUIS ROUX, M.D., Superintendent and Medical Adviser

Le tableau suivant indique le travail accompli par cette division.

The following table shows the work performed by this division.

| I- | -Contrôle médical—Medical Control | Т | otal |
|-----|--|------------------|--------|
| 1 | Visites et examens des fonctionnaires retenus à domicile par maladie Visits and examination at home of employees absent through sickness Examens spéciaux re: état de santé Special examinations re: state of health | 10,787 | 10,874 |
| II- | —Bureau médico-légal—Medico Legal Office | | |
| 1 | Examen des accidentés au travail Examination of injured workmen a) au bureau—at the office | 2,358 36 | 2,394 |
| | b) Rapports: premiers Reports: first subsequent | 823 484 | 1,307 |
| 2 | Examen des accidentés de la rue Examination of street casualties a) au bureau—at the office | 269 834 | 1,103 |
| | b) Rapports: premiers Reports: first subsequent | 682 410 | 1,092 |
| 3 | Examens pour le Fonds de Pension (employés et constables) Examination for Pension Funds (employees and constables) Aspirant à un emploi et aspirants titulaires New candidates and candidates to regular employment Revision. Mise à la retraite et départs Superannuations and departures. | 482 674 55 | 1,224 |
| 4 | Examens pour le Service des incendies Examinations made for the Fire Department re: nouveaux cadets—new cadets. Mise à retraite et départs Superannuations and departures. Revision. | 173 2 224 | 399 |

Division de la démographie

Division of Vital Statistics

DIVISION DE LA DÉMOGRAPHIE

OF VITAL STATISTICS

par

by

Docteur ANT.-B. VALOIS, M.P.H.,

Démographe et surintendant (x)

Dans les pages qui suivent sont présentées, sous forme de tableaux, les principales statistiques de la division de la démographie pour l'année 1952, précédées d'un index. Dr. ANT. B. VALOIS, M.P.H.,

Demographer and Superintendent (x)

In the following pages are published in table form the most important statistics of the Division of Vital Statistics for the year 1952 preceded by an index.

INDEX DES TABLEAUX (1)

TABLE INDEX (1)

| Tableau I—Population de Montréal par sexe et par race et pourcentage correspondant à chaque race. I—Population of Montréal by sex, race and percentage corresponding to each race | | POPULATION | Page |
|--|---------|--|------|
| Table I—Population of Montréal by sex, race and percentage corresponding to each race | Tableau | | |
| Table Croissement naturel par 1,000 de population selon les races. II—Excess of live births over deaths and rate of natural increase per 1,000 population by race | Table | I-Population of Montréal by sex, race and percentage corres- | |
| Table II—Excess of live births over deaths and rate of natural increase per 1,000 population by race | Tableau | | |
| Tableau III—Nombre des mariages et taux par 1,000 de population, classés par race. | Table | II—Excess of live births over deaths and rate of natural increase | |
| par race. | | MARIAGES — MARRIAGES | |
| | Tableau | | |
| Table 111—Number of marriages and rates per 1,000 population classified according to race | Table | III-Number of marriages and rates per 1,000 population classified | |
| NAISSANCES — BIRTHS | | NAISSANCES — BIRTHS | |
| Tableau IV-Nombre des naissances vivantes et taux par 1,000 de population, | Tableau | | |
| Table IV—Number of live births and rates per 1,000 population by sex and race | Table | IV-Number of live births and rates per 1,000 population by sex and | |

A l'exception des mariages, les statistiques des naissances et des décès sont celles des personnes domiciliées à Montréal qui sont nées et décédées à Montréal et hors de Montréal.

⁽¹⁾ With the exception of marriages, the vital statistics of births and deaths are those of residents of Montréal who were born and died in and out of Montréal.

⁽x) Le Dr Valois a quitté le Service de santé le 12 mai 1952, pour devenir directeur du Service de santé de la Ville de Verdun, P.Q.

⁽x) Dr Valois left the Department of Health on May 12, 1952, to become director of the Department of Health of the City of Verdun, P.Q.

NAISSANCES (suite) — BIRTHS (continued)

| | T | Page |
|---------|--|------|

^{*}Lecture barométrique réduite au veau de la mer et à 32° F. †Les moyennes mensuelles du thermomètre et du baromètre sont le résultat de relevés faits toutes les deux heures sur des enregistreurs automatiques. (a) "+" indique que la température est au-dessus, "-" qu'elle est en-dessous de la moyenne des 78 dernières années. ‡Humidité relative, le point de saturation étant 100. Moyenne des relevés faits toutes les 4 heures d'après un hygromètre automatique.

Note: Les moyennes annuelles sont calculées d'après les moyennes mensuelles.

La température maxima fut de 90.7 (Fah) au-dessus de zéro, le 15 juillet; la plus basse température fut de 11.0 au-dessous de zéro, le 30 janvier. Le plus grand écart de température fut donc de 101.7. Le plus grand écart de température en un seul jour fut de 29.0 le 28 janvier; le moindre fut de 2.8 le 1 juin. La journée la plus chaude fut le 15 juillet avec une moyenne de 82.1 au-dessus de zéro. La journée la plus froide fut le 29 janvier avec une moyenne de 4.5 en-dessous de zéro. Humidité relative 30, le 30 avril. Grêle 3 jours "Brouillard 19 jours. Orages électriques 19 jours. La première trace de neige apparut le 7 octobre. Elle tomba d'une manière appréciable le 5 décembre. Maximum de pluie en un jour, 2.86 pouces, le 21 août. Maximum de neige, le 22 janvier, 5.4 pouces en 6 heures.

^{*}Barometer readings reduced to sea level and 32° F. †The monthly Thermometer and Barometer means are from bi-hourly readings from self-recording instruments. (a) "+" indicates that the temperature has been higher, "-" that it has been lower than the average for 78 years. ‡Humidity relative, saturation being 100. Means of readings every four hours from recording hygrometer.

Note:-Yearly means are averages of monthly means.

The greatest heat was 90.7 (Fah) above zero, on July 15th, the greatest cold was 11.0 below zero on January 30th. The extreme range of temperature was therefore 101.7 degrees. The greatest temperature range in one day was 29.0 on January 28th; the least range was 2.8 on June 1st. The warmest day was July 15th when the mean temperature was 82.1 above zero. The coldest day was January 29th when the mean temperature was 4.5 below zero. The minimum relative humidity observed was 30 on April 30th. Hail on 3 days. Fog on 19 days. Thunderstorms on 19 days. First trace of snow on October 7th. First appreciable snowfall on December 5th. The greatest rainfall in one day was 2.86 inches on August 21st. The heaviest snowfall was on January 22nd when 5.4 inches fell in 6 hours.
