The year 1973 was a landmark in the history of the Calgary Health Department. In April of 1973, the Government of Alberta announced that, retroactive to the first of the year, it would fund 100% of the Local Health Services of the Health Units and City Health Departments. The Local Health Services in Calgary had over many years been operating as a Department of the City, governed by City Council. Provincial requirements now made it necessary for the Local Board of Health, which had been inactive for many years, to take its place as responsible for providing the services and administering the Regulations required by the Provincial Board of Health, under The Public Health Act. Accordingly, the Local Board of Health for the City of Calgary Health District, met four times in 1973, the first meeting being August 31st.

Dr. Leslie Allan, who joined the staff in 1950 as the Deputy Medical Officer of Health, resigned from his position of Medical Officer of Health September 1974. Under his administration the regionalization of the Child Health Services with regional Health Centres and the generalization of the Public Health Nursing Program took place. He was instrumental in establishing many programs which are now taken for granted as Health or Environmental Services.

Some items of note in the year 1973 were:-

- . The Federal Government's requirement that illegal immigrants register without penalty by October 31st, 1973, led to rather a large number of persons being notified to us as suffering from intestinal parasitic diseases.
- . The outbreak of Cholera in Italy led to a great increase in requests for immunization of travellers against this disease.
- . A strike of the staff nurses took place in June. It fortunately lasted only two weeks.

We gratefully acknowledge kind co-operation, collaboration, assistance or advice from:-

The Alberta Department of Health & Social Development, Division of Local Health Services and other Divisions, Superintendents and Staffs of Provincial Hospitals and Sanatoria;

The Alberta and Calgary Tuberculosis & Respiratory Disease Association, the Kinsmen's Club;

The Alberta Mental Health Services;

The Alberta Social Hygiene Clinic;

The Provincial Laboratories;

The Victorian Order of Nurses;

The Staffs of each of the Hospitals in Calgary;

The Calgary Interfaith Television Committee & the various Press, Radio & Television Personnel & Companies;

POPULATION GROWTH - CALGARY - 1968-1973

The Volunteers from the Calgary Birth Control Association & the various individual Volunteers who have helped us greatly;

Finally, we wish to record appreciation of our newly active Board of Health, the many Services of the City of Calgary, and our own good Staff.

Year	Population Census	Over-All Increase	Natural Increase	+ Previous Year

RECENT TRENDS IN FERTILITY - CALGARY - 1970-1973

There has been a reduction in all the indices which would contribute to a fertility level greater than replacement level and this reduction has Drop In Annual Births over the five years.

Statistically:-

	1970	1971	1972	1973	Drop In Annual Births 1970 to 1973
All Births To City Residents	8,149	7,586	7,183	7,224	11%
All Births To Out-Of-Town Residents	987	822	784	764	23%
All Births In Calgary	9,136	8,408	7,968	7,988	12%
Illegitimate Births To Residents	958	747	696	625	35%
Illegitimate Births To Non-Residents	350	226	209	140	60%
Illegitimate Births In Calgary	1,308	973	905	765	43%
(Abortions In Calgary Hospitals	400	1,301	1,708	1,908)	

BIRTHS TO CALGARY RESIDENTS 1969 AND 1973

The Calgary Family Planning Clinic is only one feature in a complex of inter-related factors influencing the fertility picture in Calgary. Some of these factors are changes in the laws relating to abortion, changes in attitudes and customs, interest by the communications media and the public, co-operation from physicians and hospitals in contraception, sterilisation and abortion, acceptability and proliferation in our City of educational programs which include birth control information under a variety of auspices.

Percentage Of Total Births That Were:-	In Year 1969	In Year 1973
Of Birth Order		
1	40.1	43.4
3	16.0	10.8
4	8.1	4.7
> 4	6.6	3.0

Born To Mothers

Aged Under 20	12.0	11.8
Aged Over 40	1.5	0.6
Mean Parity Of Mothers Giving Birth	2.15	1.89
Median Age	25	25

There has been a reduction in all the indices which would contribute to a fertility level greater than replacement level and this reduction has been gradual over the five years.

Statistically:-

Optimum Births:- Births With (a) few medical complications for both mother and child
(b) few social and economic handicaps

Non-Optimum Births:- (a) of higher parities:- these are steadily dropping
(b) to mothers aged over 40:- these are dropping
(c) to mothers aged under 20:- these are not dropping in greater proportion than are total births
(d) illegitimate births:- these are dropping in much greater proportion than total births

Abortions:- Continue to rise

The Calgary Family Planning Clinic is only one feature in a complex of inter-related factors influencing the fertility picture in Canada and Calgary. Some of these factors are the changes in the laws relating to birth control and abortion, changes in attitudes and customs, interest by the communications media and the public, co-operation from physicians and hospitals in contraception, sterilization and abortion, acceptability and proliferation in our City of educational programs which include birth control information under a variety of auspices.

For the attendance and services rendered at the Calgary Family Planning Clinic, please see Page 52.

There were 3 illegitimate infants born with deformities indicated by asterisks. In addition to the 73 infants born with deformities apparent at birth, 17 other infants were found to have congenital deformities according to death certificates, raising the total of resident infants born with deformities in 1973 to 100.

THE CHIEF CAUSES OF DEATH ARE:-

1.	Diseases of the heart and circulatory system (Code No. A 79 - A 86) accounted for 808 deaths. Vascular lesions affecting the central nervous system (Code No. A 70) accounted for 271 deaths	808 + 271	=	1,079
2.	Neoplasms of all forms (Code No. A 44 to A 60)		=	634
3.	Violent and accidental deaths (Code No. AE 138 to AE 149)		=	323
4.	Diseases of the respiratory system (Code No. A 87 to A 97) i.e. Influenza, Pneumonia, Bronchitis, Emphysema, Bronchiectasis, etc.		=	233
5.	Diseases of the digestive system (Code No. A 99 to A 107) i.e. Peptic Ulcers, Hernia, Appendicitis, Ulcers of Liver, Cholecystitis, Etc.		=	156
6.	Certain diseases of early infancy, including birth injuries, infections and prematurity (Code No. A 130 to A 132)		=	54
7.	Congenital malformations - deaths in all age groups (Code No. A 127 to A 129)		=	54
8.	Diabetes Mellitus (Code No. A 63)		=	41
9.	Diseases of the genito-urinary system (Code No. A 108 to A 114) i.e. Nephritis, Pyelitis, Renal Calculi, Prostatitis, Hypertrophy, etc.		=	37

DEATHS FROM INFECTIVE DISEASES:-

1.	Tuberculosis, Pulmonary, including deaths of Calgary residents in Sanatoria that were registered in Calgary (Code No. A 1)		=	2
2.	Tuberculosis, Non-Pulmonary (Code No. A2)		=	3
3.	Infectious Hepatitis (including two non-resident cases) (Code No. A 34)		=	4
4.	Septicemia and Pyæmia (two non-resident cases) (Code No. A 20)		=	2
5.	Meningococcal Infection (Code No. A 23)		=	1
6.	Acute Viral Infection (Code No. A 43)		=	1
7.	Acute Infectious Encephalitis (Code No. A 29)		=	1
8.	Herpes Simplex Encephalitis (non-resident case) (Code No. A 43)		=	1
9.	Sarcoidosis (Code No. A 43)		=	1
10.	Syphilis (Code No. A 10)		=	1

VITAL STATISTICS

LIVE BIRTHS - 1969 - 1973

Out of 7,988 live-born babies born in Calgary in 1973, 585 were premature (the weight recorded as 5½ pounds and less) -- this represents 7.3% of all births.

Year	Population	Births Incl. Non-Residents	Rate Per 1,000 Population	Births Residents Only	Rate Per 1,000 Population
1973	424,787	7,988	18.8	7,224	17.0
1972	412,777	7,967	19.3	7,183	17.4
1971	398,034	8,408	21.1	7,586	19.0
1970	385,436	9,136	23.7	8,149	21.1
1969	369,025	8,349	22.6	7,429	20.1

STILLBIRTHS - 1969 - 1973

Year	No. of Stillbirths Incl. Non-Residents	Rate Per 1,000 Live Births Gross	Stillbirths Residents Only	Rate Per 1,000 Live Births Net
1973	67	8.4	59	8.2
1972	68	8.5	63	8.8
1971	89	10.6	77	10.1
1970	112	12.2	101	12.4
1969	101	12.1	84	11.3

MARRIAGES - 1973

Number of marriages performed in the City of Calgary in 1973 was 4,460. This represents a rate of 10.5 per 1,000 population.

DEATHS AND MORTALITY RATES - 1969 - 1973

Year	No. of Deaths Incl. Non-Residents	Rate Per 1,000 Population	No. of Deaths Residents Only	Rate Per 1,000 Population

One case of death due to Syphilis was reported in a female of the age group 60 yrs. & over. Since reporting practice so grossly varies from city to city, no valid comparison with other cities can be made. However, incidence of Gonorrhoea in Calgary is rising in recent years. The total reported cases for 1973 are greater by 22% than for 1972.

Case Rate 8 per 100,000.

Approximately 150 on chemotherapy or chemoprophylaxis.

Transportation provided for 4 patients to Baker Memorial Sanatorium.

Transportation provided for 5 patients to City Hall.

In addition to the two nurses on the Board of Health engaged full time in the Tuberculosis Control Program, there are two employees of the Alberta Tuberculosis Association largely funded by the Kinsmen Club, namely the x-ray technician (full time) and the receptionist (half time). These functions are carried out and co-ordinated with the other operations of the Local Board of Health, with some expert direction from the Division of Tuberculosis Control of Alberta, Department of Health and Social Development, especially the Staff of the Baker Memorial Sanatorium.

The school population served in 1973 was 80,506. These were students of:-

Calgary Public School System (Elementary & Junior High).....	62,569
Calgary Separate (Roman Catholic) School System	17,297
Hebrew	276
Peretz Institute	55
Calgary Christian School	245
Seventh Day Adventist School	60
Adult Day Centre	4
Total	80,506

No major change in Program took place this year. As outlined in our Annual Report for the year 1971, the barriers to an effective program of the public health nurse in the high school had been accumulating. The latest difficulties were the re-organization of the school systems so that there were no home rooms and the introduction of the semester system. It had become more difficult and less popular for the students to consult the nurse than to consult the counsellor or social worker. Meetings with the involved Administrations, both locally and centrally, had failed to lead to a situation where the time devoted to service in the high school was effectively used and in September 1973 public health nursing time was no longer scheduled in the high schools.

The physical examinations by physicians of pupils in schools were less numerous -- only 194 for the year. These were pupils selected by the nurses as possibly needing some advice or care and more likely to get it if the problem is noted and referred by a doctor. Some service to school children is also rendered at the City Hall. This is usually something exceptional regarding an infection or other possible problem better sorted out in this way than waiting for an appointment with private physician or sending to emergency at a hospital. Referrals from school nurses also come to the City Hall for threshold audiometer testing and certain cases where eyeglasses, though needed, have not been acquired.

No. of pupils given audiometer threshold hearing tests	202
No. of pupils showing hearing loss	62
No. referred to ear specialist	50
No. of pupils provided with free glasses	7

The Alberta Government's Early Childhood Services Program was introduced in the spring of 1973. While the Departmental responsibility for this Program is with the Department of Education and services delivered are educational, the aim is to integrate as much as possible with health, recreation, social and community services. Staff Nurses, Assistant Medical Officer of Health and Supervisors have all been involved in meetings of Advisory Committees for planning and delivery, both centrally and locally. It was at first presumed by those responsible for these Programs that the results of the usual services from our Child Health Centres, such as physical examinations, Denver Developmental Screening Tests, would help to establish priorities of need for the Early Childhood Educational Services by identifying areas of the City where neglect had resulted in poor physical health and nutrition, retarded development and other problems. It has had to be pointed out that our statistics cannot validly be used as a basis for supporting claims by one community group that their area needs an Early Childhood Educational Program more than another area. The real purpose of these examinations -- to help the mother know and understand the health, development and needs of her child -- is nonetheless supportive to the aims of Early Childhood Education. The increased understanding of one another's functions, strengths and limitations is profiting all.

The upper Table indicates the status of immunization of children in the City at the end of their pre-school life. The lower Table indicates the status of immunization of children in the City at the end of their first year in school.

The column "LAPSED" is for tabulation of those who have had a full primary series but for whom the recommended time for a booster has passed without their having had it. Fairly good levels of immunity would also be possessed by most of those children counted in the "LAPSED" column. Although a small number of proven cases of Measles occurred late in 1973, no full scale epidemic occurred in that year. We assume that the levels of protection by vaccination of the population of the age groups usually so susceptible to this disease are keeping the outbreak from becoming a large epidemic.

Please note that in the lower Table "FULL IMMUNIZATION" Column, under the Percentages, the upper figures refer to the year 1972 while the lower figures refer to the year 1973.

USAGE OF MULTIPLE ANTIGENS IN 1973 IMMUNIZATIONS

(D) DOSES = Total Doses Including The Completed And Reinforcing

(C) COMPLETED = The Last Dose In A Series

(R) REINFORCING = Booster Subsequent To A Series

	DIPHTHERIA & TETANUS			TETANUS & POLIO (BIAD)			DIPH. & PERTUSSIS + TETANUS (TRIPLE)			TRIPLE + POLIO (QUAD)		
	D	C	R	D	C	R	D	C	R	D	C	R
Infants	13	7	2				239	43	153	15,195	4,303	8
Pre-School	1,117	55	1,051	3	1		10,502	451	9,687	2,771	793	68
School	7,021	967	4,459	8	2	1						
Adults	58	18	5	242	54	15						
1973 TOTALS	8,209	1,047	5,517	253	57	16	10,741	494	9,840	17,966	5,096	76
1972 (FOR COMPARISON)	15,735	1,274	12,632	253	70	18	9,891	674	8,836	17,023	4,869	196

In addition to the above, 2 doses of TAB + Tetanus were used for adults.

For sheer numbers of immunizations given in 1973, see also the following Tables. The level of protection achieved in the Community is sufficient that these diseases for which there are good immunizations are not occurring in Calgary. Measles, until recently a disease which virtually no one escaped, did not become epidemic this year in Calgary even though it was epidemic in Winnipeg. However, a few proven cases did occur in Calgary.

diminishing since the recommendation by International, National and Provincial Advisory Bodies that routine administration of Smallpox Vaccination was no longer necessary or wise.

USAGE OF SINGLE ANTIGENS IN 1973 IMMUNIZATIONS

- (D) DOSES - All Doses Including The Completed & Reinforcing
 (C) COMPLETED - The Last Dose In A Series
 (R) REINFORCING - Booster Dose Subsequent To A Series
 (P) PRIMARY SMALLPOX VACCINATION

SMALLPOX REVACCINATION

	RED MEASLES	RUBELLA	SMALLPOX		SALK			SABIN			TETANUS		
			P	REV.	D	C	R	D	C	R	D	C	R

The number of students given supervisory field work and opportunity for observation and instruction in our programs has increased by 30% and 32% in 1972 and 1973 respectively. In the latter part of 1973 it was necessary for the Assistant Director of Nursing to delegate much of this to another staff member.

LABORATORY REPORT FOR 1973

The City of Calgary Health Department has maintained a Laboratory at the City Hall to do bacteriological tests on milk, bacteriological testing on water from the source of supply, and from the distribution system.

15 pounds cereal

50 pounds cheese

40 quarts fresh milk

2 pounds mixed pickles

In the course of the year 1973, 4,141 samples were cultured. Results of these bacteriological examinations provide the adequacy of the treatment process and safeguard against any chance of accidental contamination in the distribution system going undetected. A rather large peripheral area within the Calgary City limits.

The statistical summary of district inspections indicates the volume of work accomplished by 13 District Inspectors, one Housing Inspector and one Dairy Inspector, under the supervision of their Chief and Assistant Chief Public Health Inspectors. The number of staff has remained the same, while Calgary's population and area have increased greatly over the past few years. Our ratio of staff to population is much lower than in other large Canadian cities.

While the chance to follow up on problems more closely would be desirable and appreciated, the standards kept up in establishments is, on the whole, good. Punitive measures like prosecution or removal of licenses are little used. Increasing the understanding of operators and owners, staff and householders, while maintaining good relationships, has accomplished a good deal, and much credit is due to the leadership and personal qualities of our Public Health Inspectors over the years.

The past year has seen a new thrust, using group educational methods for instructing food handlers in sanitation. It is hoped that with more staff in the year 1974 and increasing educational opportunities for our staff, the inspectional and environmental side of our Public Health work will get the emphasis that is due. Since this work is carried out with so little fanfare, and, since we take for granted low infant death rates and low death rates from Tuberculosis, we forget that sanitary controls of food, milk, water and housing need to be maintained to maintain these gains.

LABORATORY REPORT FOR 1973

The City of Calgary Health Department has for a number of years maintained a Laboratory at the City Hall to do bacteriological cultures from swabs of utensils in establishments serving food and beverage, certain tests on milk, bacteriological testing on water from the source of supply in the purification plant and from the distribution system.

In the course of the year 1973, 4,063 water samples were cultured. Results of these bacteriological examinations provide a thorough check on the adequacy of the treatment process and safeguard against any chance of accidental contamination in the distribution system going undetected. A rather large peripheral area within the Calgary City limits remains relatively undeveloped and there are many water wells. 830 samples of well water were tested bacteriologically and 670 of them were also chemically tested.

A check on the handling and bacteriological and other quality of milk as it is provided for sale in the stores or on the milkman's truck is provided. 2,374 samples of milk were thus tested.

The bacteriological testing of swabs from glassware, forks, etc. from restaurants and beverage rooms verifies the adequacy of the dishwashing and handling procedures and provides a readily appreciated tool in the education of food handlers. 4,141 such bacteriological samples were processed in 1973.

NUTRITIONIST'S ANNUAL REPORT 1973

The Nutritionist provided services in a manner similar to previous years; however, more time was spent as a resource person or consultant than in providing direct service. With the City increasing in population and area, it is felt that time can be more effectively used in this manner than in providing individual service. Even with this emphasis on a more consultative role, a great deal of time was nevertheless spent in answering individual telephone inquiries, distributing nutrition information to individuals and conducting personal interviews with the staff and public. Visits to homes and institutions were not as great in number this year, as the Public Health Nurse, with the support of the Nutritionist, was encouraged to counsel families in food budgeting and nutrition.

From January to June 1973, the Nutritionist made monthly afternoon visits to the City Health Clinics for the purpose of answering staff inquiries, to observe and appreciate the needs of various areas in the City and to speak with mothers referred by the Public Health Nurses. It was decided that this time was not being effectively used by the Nutritionist or Public Health Nurses and this Program was discontinued. However, it was thought that frequent contact with the Public Health Nurse was important and in September 1973 clinic visits were resumed on a monthly basis. These clinics now take the form of a brief presentation and discussion in the morning on current topics, programs and concerns on nutrition. These sessions are proving to be beneficial to both the Public Health Nurse and Nutritionist and are being continued in 1974. Some of the topics discussed in 1973 were:- Vitamin E; Nutrition Canada; Diet For Coronary Heart Disease; Vegetarian Diets. The newsletters, which were distributed to the Public Health Staff on a bi-monthly basis until June 1973, were discontinued when the monthly clinic discussions began. The Nutritionist, however, writes the occasional newsletter for Nutritionally Speaking, the newsletter distributed by the Provincial Nutritionist to all Public Health Staff in the Province.

The Nutritionist acted on several Committees to plan for Programs on Nutrition. Programs of special interest were:- a Nutrition Seminar on Food Additives and Nutrient Labelling, held at the University and attended by a large number of Home Economists, Dietitians, Public Health Staff and the public; a series of eighteen half-hour T.V. Programs on Nutrition, planned in co-operation with CARET-T.V. (these Programs will be shown in the spring and fall of 1974); the planning for a presentation on Nutrition and Obesity for the 1974 Alberta Home Economics Association Convention; the Heartline Program, planned in co-operation with the Department of Agriculture and the Heart Foundation. Heartline is the presentation of phone-recorded messages on diet for the prevention of heart disease.

Nutrition talks were again presented to many professional and community groups. The topic most frequently requested and presented was on basic Nutrition and food budgeting. With food costs increasing so rapidly, many consumers are looking for economical meal ideas which are adequate nutritionally.

Information on meat alternates and complementary proteins has also been requested by consumers. Some of the groups to whom this material was presented were:- Mother's Time Out Groups; the City Social Workers; Mental Health Groups. Prenatal Nutrition was discussed with the girls at the Adult Day Centre on several occasions, and several schools were visited with the importance of diet being discussed with the students.

This year, a Guide To Better Food Budgeting was developed, for use by resource persons working with the public, such as the Public Health Nurses and Social Workers. It contains suggestions for helping families with food budgeting and a table of economical foods and their cost, which is used to determine the average cost for food for meals at home in Calgary. Food costing is presently being done every three months in order to keep these tables up to date.

A slide series telling of the duties of a Public Health Nutritionist was developed to help with presentations on the Nutrition Program. Help was given to the Foot-hills Hospital in developing a tape in Nutrition for Breast Feeding Mothers.

This year, several conferences were held with the Provincial Nutritionist and other City Nutritionists, to discuss programs, develop publications, exchange ideas and nutrition information.

Preliminary results of Nutrition Canada, the National Nutrition Survey, were released in November. A briefing and discussion session was held with Dr. Sabry and Dr. Forbes to discuss these results. The Provincial results are expected to be released in the spring of 1974. When the results are released, it is expected that the Provincial Government will study and evaluate the nutritional status of Albertans and will be recommending new Nutrition Programs.

STATISTICAL SUMMARY

The following Table presents a summary of the work performed by the Nutritionist for the year 1973:-
