## INTRODUCTION

During the year 1976 the City of Calgary has continued to grow, and the programs of the Calgary Local Board of Health have been expanding to meet the increased demand. As well as expansion of existing programs, the Calgary Local Board of Health has expanded into a number of new areas.

The first pages of this report give some demographic details of the city's population in 1976, together with information on morbidity and mortality. As in the past year there have been some minor changes in the tables to take full advantage of the computer resources provided by the Province.

The figures show that the city increased by 16,231 residents. The birth rate remains slightly above the national average, while death rate is slightly below. The specific causes of death recorded correspond closely with those for Canada as a whole.

Among the morbidity data recorded, it is notable that the venereal diseases continue to be very prominent. The figures recorded for cases of gonorrhea are considered to be somewhat misleading. They would appear to show an increase of some 30% over 1975. However, if 1975 is compared with 1974, then there was during that time period no apparent increase. It is considered that this is probably a false picture and arose from alterations in methodology and notifications. If, therefore, the 1976 figure be related back to 1974, then there has been an increase of a little less than 15% per annum over the two year period. This is in accordance with the trends that have been seen during the last several years and should be considered a more appropriate comparison. It remains the fact that gonorrhea is by a long way our most serious communicable disease problem. While efforts to deal with this at the clinical level remain the responsibility of the Provincial Division of Social Hygiene, the staff of the Board of Health have been increasing their efforts to provide public information and group teaching in this area, and will continue this endeavour.

Performance statistics of the individual programs are given in subsequent sections, and preceded by some brief comments by the Director of each of these Divisions.

Certain special events of the year 1976 may be noted. Most prominent perhaps was the "Swine 'Flu" program, and sufficient publicity has already been given to this episode. Suffice to say that the Board of Health stood ready to provide this facility, and extensive amounts of time and effort were put into organizing the necessary clinics. From the beginning public acceptance was low, dropping to zero following the anxieties that arose concerning side effects observed in the United States program. The effects of this withdrawal of nursing time from regular duties can be seen quite clearly in the report of the Nursing Division.

During the year the Board accepted responsibility for two completely new programs. The first of these was the Home Care Program, which had previously been administered by the Calgary Branch of the Victorian Order of Nurses. This program was taken over by the Board of Health on April 1st, and the administrative staff who had previously worked in the program were taken on to the establishment of the Board. The program has progressed well, and continues to show a steadily increased demand for this service.

soft hand, more or less like a woman's and younger than his wife, but they had been together for over twenty years and often had to travel far and wide to find quiet time to talk to each other about their love and their future. They had been married for many years now, and they were still very much in love.

"I am in a difficult situation now," said the woman. "I have to leave my husband and go back to my parents' home. I don't know what to do. I am afraid that he will never let me come back again. He has been very angry with me since we got married."

"It's not good for you to leave him like that," said the man. "You should stay with him and try to work things out. You two seem to be very compatible."

"I know it's not good for me to leave him like that," said the woman. "But I have to leave him because I can't stand living with him anymore. He is always criticizing me and telling me what I'm doing wrong."

"Well, if you want to leave him, then you should leave him. You shouldn't stay with someone who doesn't respect you or treat you like that."

"I understand that you have to leave him like that," said the man. "But I think you should stay with him for a while longer before you leave him. You should give him a chance to change his ways and see if he can be a better person. If he doesn't change, then you should leave him."

"I know it's not good for me to leave him like that," said the woman. "But I have to leave him because I can't stand living with him anymore. He is always criticizing me and telling me what I'm doing wrong."

"Well, if you want to leave him, then you should leave him. You shouldn't stay with someone who doesn't respect you or treat you like that."

...../Cont.'d.

Year

1976

A second program that was undertaken by the Board on April 1st 1976 was the Educational Program in Family Life and Family Planning which is described in this report under the title "Focus: Family Planning". This program had previously been under the administration of the Calgary Birth Control Association, funded by Federal grants. The staff involved and the program as a working entity was taken over by the Board, and since that time strenuous efforts have been made to expand the scope of this program to include a very close relationship with the work of the Nursing Division. Most encouraging progress has been made with this program.

Year

1976

Two Senior Members of Staff who joined the Board in 1976 should be mentioned. On the 1st November Dr. John Garson joined the Board as Associate Medical Officer of Health. Dr. Garson came to us from family practice in Saskatoon, Saskatchewan, and has had extensive training in paediatrics, public health practice and epidemiology as well as his many years experience in family practice. His contribution to the clinical programs of the Board and to the development of special projects which relate to new services has already been significant.

Year

1975

For several years the Board has been attempting to engage the service of a full-time Health Educator, and these efforts were brought to a successful conclusion in the fall of 1976 when Mr. John Seaborn joined the staff. Initially, this was a joint project with the Provincial Government, with Mr. Seaborn giving 50% of his time to the programs of the Board, but after a short time this arrangement was changed to allow for his 100% participation in the Calgary programs. Mr. Seaborn comes to us from the fields of education and the development of his role as a Consultant to all the professional members of staff is proceeding rapidly.

Year

1976

We gratefully acknowledge the continued co-operation, collaboration and assistance which has been available to us from many agencies in the Health and Social Service field within the city boundary. The opportunity to work with our colleagues in other organizations, both Government and voluntary, is very much appreciated by all the staff.

Year

1975

Expanding populations and expanding ambitions to provide new areas of service have done nothing to lighten the burdens which are carried by the staff. The quality of service they are providing remains at a high level, and the progress that has been made reflects the success of their efforts.

Year

1975

On behalf of the staff I would also like to express thanks to the members of the Board of Health for their support and guidance. The willingness of the Board to accept new responsibilities and to give their support to new concepts is a great stimulation to the staff in their daily work.

A second broader type was represented by the group which had been mainly engaged with the "mining" aspect of the business and had little or no interest in the production of gold bullion. This group was predominantly composed of persons who had been involved in the mining industry for many years, and who had a long history of association with the mining industry. They were generally older men, and their experience in the mining industry was often reflected in their personal lives. They were also generally more interested in the mining industry than in other industries, and they tended to be more conservative in their financial management.

The third group of miners was composed of younger men, mostly in their late thirties or early forties, who had recently entered the mining industry. These miners were generally younger than the first group, and they tended to be more adventurous in their financial management. They were also more interested in the mining industry than in other industries, and they tended to be more conservative in their financial management.

The fourth group of miners was composed of middle-aged men, mostly in their late forties or early fifties, who had been in the mining industry for many years. These miners were generally older than the first group, and they tended to be more conservative in their financial management. They were also more interested in the mining industry than in other industries, and they tended to be more conservative in their financial management.

We believe that the characteristics of the miners in this study are representative of the miners in the United States. The miners in this study were predominantly white males, aged between 30 and 50 years old, and they were mostly married. They were mostly employed in the mining industry, and they were mostly married. They were mostly employed in the mining industry, and they were mostly married.

The miners in this study were predominantly white males, aged between 30 and 50 years old, and they were mostly married. They were mostly employed in the mining industry, and they were mostly married.

Our findings indicate that the miners in this study are representative of the miners in the United States. The miners in this study were predominantly white males, aged between 30 and 50 years old, and they were mostly married. They were mostly employed in the mining industry, and they were mostly married.

POPULATION GROWTH - CALGARY 1972 - 1976

<u>Year</u>	<u>Births Residents Only</u>	<u>Deaths Residents Only</u>	<u>Natural Increase Births Minus Deaths</u>
1976	7,997	2,528	5,469

## VITAL STATISTICS

THE CHIEF CAUSES OF DEATH ARE:

LIVE BIRTHS - 1972 - 1976

1. Diseases of the heart and circulatory system (Code No. A80 to A89) accounted for 1,285 deaths.

Year	Population	Births Incl. Non-Residents	Rate per 1,000 Population	Births Residents Only	Rate per 1,000 Population
1976	470,043	8,980	19.2	7,997	17.0
1975	453,812	8,697	19.2	7,783	17.2
1974	433,389	8,130	18.8	7,263	16.8
1973	424,787	7,988	18.8	7,224	17.0
1972	412,777	7,967	19.3	7,183	17.4

STILLBIRTHS - 1972 - 1976

2. Diseases of the heart and circulatory system (Code No. A90 to A99)

3. Peptic Ulcers, Beriberi, Appendicitis, Cirrhosis of the Liver, Cholangitis, etc.

Year	No. of Stillbirths Incl. Non-Residents	Rate per 1,000 Live Births Gross	Stillbirths Residents Only	Rate per 1,000 Live Births net
1976	80	8.9	65	8.1
1975	68	7.8	55	7.1
1974	63	7.7	53	7.3
1973	67	8.4	59	8.2
1972	68	8.5	63	8.8

4. Symptoms, liability, ill-defined and unknown causes of mortality (Code No. A136 to A137)

MARRIAGES - 1976

The number of marriages performed in the City of Calgary in 1976 was 4,874. This represents a rate of 10.4 per 1,000 population.

DEATHS AND MORTALITY RATES - 1972 - 1976

Year	No. of Deaths Incl. Non-Residents	Rate per 1,000 Population	No. of Deaths Residents Only	Rate per 1,000 Population
1976	3,007	6.4	2,528	5.4
1975	2,992	6.6	2,519	5.6
1974	2,927	6.8	2,439	5.6
1973	2,762	6.5	2,373	5.6
1972	2,626	6.4	2,278	5.5

## VITAL STATISTICS

## LIVE BIRTHS - 1925 - 1926

Year	Population	No. of live-births	Rates per 1,000 population	No. of stillbirths	Rates per 1,000 population	No. of deaths	Rates per 1,000 population
1926	470,063	2,993	6.3	8,080	17.0	11,0	23.0
1925	423,813	2,783	6.5	7,888	18.5	11,5	27.0
1924	403,280	2,553	6.8	8,130	20.8	10,8	26.8
1923	384,282	2,554	6.8	7,088	18.8	11,0	28.0
1922	375,272	2,485	6.6	7,005	18.8	11,4	29.4

## STILLBIRTHS - 1925 - 1926

Year	No. of stillbirths	Rates per 1,000 population	No. of live-births	Rates per 1,000 population	No. of stillbirths	Rates per 1,000 population	No. of deaths	Rates per 1,000 population
1926	80	6.3	2,993	6.3	11,0	23.0	11,0	23.0
1925	89	6.5	2,783	6.5	11,5	27.0	11,5	27.0
1924	89	6.8	2,553	6.8	10,8	26.8	10,8	26.8
1923	91	6.8	2,554	6.8	11,0	28.0	11,0	28.0
1922	89	6.6	2,485	6.6	11,4	29.4	11,4	29.4

## MARRIAGES - 1926

The number of marriages registered in the City of Gefira in 1926 was 4,844.  
This represents a loss of 10% per 1,000 population.

## DEATHS AND MORTALITY RATES - 1925 - 1926

Year	No. of deaths	No. of deaths per 1,000 population	No. of live-births	No. of deaths per 1,000 population	No. of deaths	No. of deaths per 1,000 population
1926	3,002	6.3	2,993	6.3	11,0	23.0
1925	3,003	6.5	2,783	6.5	11,5	27.0
1924	3,024	6.8	2,553	6.8	10,8	26.8
1923	3,025	6.8	2,554	6.8	11,0	28.0
1922	3,050	6.9	2,485	6.6	11,4	29.4

## THE CHIEF CAUSES OF DEATH ARE:

	1974	1975	1976	1977	Gross	Net
1. Diseases of the heart and circulatory system (Code No. A80 to A 88) accounted for 1,285 deaths. Vascular lesions affecting the central nervous system (Code No. A 85) accounted for 291 deaths.					86	139
					11.9	17.4
					14.6	
	1,285 + 291				=	1,576
2. Neoplasms of all forms (Code No. A 45 to A 61)					=	676
3. Violent and accidental deaths (Code No. AE 138 to AE 150)					=	263
4. Diseases of the respiratory system (Code No. A 89 to A 96) i.e., Influenza, Pneumonia, Bronchitis, Emphysema, Bronchiectasis, etc.					=	234
5. Diseases of the digestive system (Code No. A 98 to A 104) i.e., Peptic Ulcers, Hernia, Appendicitis, Cirrhosis of the Liver, Cholecystitis, etc.					=	144
6. Allergic, endocrine system, metabolic and nutritional diseases, diseases of the blood forming organs (Code No. A 62 to A 68)					=	96
7. Certain diseases of early infancy, including birth injuries, infection and prematurity (Code No. A 131 to A 135)					=	75
8. Diabetes Mellitus (Code No. A 64)					=	64
9. Symptoms, senility, ill-defined and unknown causes of mortality (Code No. A 136 to A 137)					=	47
10. Diseases of the nervous system and sense organs (including Apoplexy) (Code A 72 to A 79)					=	44
A 130 All other congenital anomalies						
A 131 Birth injury and difficult labour						
A 132 Conditions of placenta and cord						
A 133 Anoxic and hypoxic conditions not elsewhere classified						
A 135 Other causes of perinatal morbidity and mortality						
A 137 Symptoms and other ill-defined conditions						
AB142 Accidents caused by fires						
A 146 All other accidental causes						

THE CHIEF CAUSES OF DEATH ARE:

1. Diseases of the heart and circulatory system (Code No. A 88 to A 98) according to the present and previous year (Code No. A 99 to A 101) accounting for 1,282 deaths. Accidental injuries affecting the central nervous system (Code No. A 82) accounting for 261 deaths.
2. Malaria = 1,282 + 261
3. Measles = All forms (Code No. A 82 to A 84)
4. Whooping cough and croupous bronchitis (Code No. A 138 to A 140) Accounting for 1,102 deaths.
5. Bronchitis, etc. = Diseases of the respiratory system (Code No. A 86 to A 88) according to the last two years (Code No. A 89 to A 91), e.g., tuberculosis, pneumonia, bronchitis, emphysema, bronchiectasis, etc.
6. Cerebral diseases = Diseases of the brain and spinal cord (Code No. A 92 to A 104) according to the present and previous year (Code No. A 95 to A 106) accounting for 1,042 deaths.
7. Arteritis, aneurysm, etc., arterio-sclerosis and malignant disease = Diseases of the blood forming organs (Code No. A 85 to A 87) accounting for 1,020 deaths.
8. Infectious and parasitic = Certain diseases of excretory function, including pellagra, typhus fever, cholera, dysentery (Code No. A 131 to A 132) accounting for 1,012 deaths.
9. Malaria = Malaria (Code No. A 86)
10. Diseases of the heart and circulatory system causing death - III-class and unknown cause of mortality (Code No. A 138 to A 141) accounting for 972 deaths.
11. Diseases of the nervous system and sense organs (Infectious Virology) (Code No. A 85 to A 87) accounting for 850 deaths.

## INFANT DEATHS AND MORTALITY RATES - 1972 - 1976

9.

HAWAIIAN

Clinic Attendance 2,366

Home Visits 838

It is my pleasure to present a report for the Community Health Nursing Division of the Calgary Local Board of Health for the year 1976.

PHN 135

Other Calls 43

The Provincial Child Health Record came into use January 1976. As we are continuing to use an individual series consent and an individual series consent in the school program, we have had to change our procedures. The Provincial record has been modified to allow for this type of consent. We are still using the same nursing forms including the Public Health Nurses report.

Tuberculin Tests 2,597

The number of children attending our clinics and the number of children recorded in the Provincial Child Health Record are different from former years and the figures varied with the number of children attending. This change in recording does not reflect any change in recording.

At Clinic	1,402
Outside Clinic	1,195
Total Reactors	440

The Swine Flu Program made it necessary for us to re-schedule some of our programs. This Program was conducted in January. The number of tests for 1976 does not include those usually done in the fall.

Grade I Reactor Rate 0.22  
Grade IX Reactor Rate 1.1

Child Health Centre clinic attendance increased over the year. However, that the number of new infections decreased, the centre has increased.

Tuberculosis Cases - new, active

In order to evaluate our program, a survey was conducted by the staff and consumer surveys were conducted. This survey was held during the month of November with the staff and developed our program for the following year. The cases in the program included:

Case Rate Per 100,000	9.14
Pulmonary	30
Non-Pulmonary	13

Streptomycin Injections 101

Chemotherapy 150 (approx.)

or Chemophylaxis at any given time

Increased services to E.C.D. children. A Health Nurse to be available for health teaching to the children, teachers and parents and to do a hearing test as possible.

The change to "pneumonia" in the schools.

### X-RAY CLINIC - ALBERTA T.B. & R.D. ASSOCIATION

The retention of X-ray services in the schools and related concerns in the junior high schools.

COMMUNITY HEALTH NURSING DIVISION

It is my privilege to present a report for the Community Health Nursing Division of the Calgary Local Board of Health for the year 1976.

The Provincial Child Health Record came into use January 1976. As we are continuing to use an implied consent in our Child Health Centres and an individual series consent in the schools for immunization and examination procedures the Provincial record has been modified to allow for this type of consent. We are using the Provincial Nursing forms including the Public Health Nurses report. Therefore, statistics regarding our Nursing programs are recorded differently from former years and the tables included with the nursing report reflect this change in recording.

The Swine Flu Program made it necessary for us to re-schedule some of our programs e.g. the T.B. Skin Testing Program. This Program was conducted later in the school year and the total number of tests for 1976 does not include those usually done in the fall term. The cancellation of some of the Child Health Centre programs for the Swine Flu may also account somewhat for the decreased total clinic attendance for this year. It is noted however that the number of new infants and new preschoolers attending the centres has increased.

In order to evaluate our programs, briefs were requested from the staff and three consumer surveys were conducted. During March we held discussions with the staff and developed our program for the coming year. The changes in the program included:

1. Increased Health Teaching content in the first home visit to the family following the registration of a new baby. This visit now includes an assessment of the child's health and of the family as a whole.
2. Increased service to E.C.S. programs - the Community Health Nurse to be available for health teaching to the children, teachers and parents and to do a hearing test as possible.
3. The change to "positive" recording in the child health records in the schools. The retention of only the records for those children with health related concerns in the junior high schools.
4. Increased emphasis on geriatric programs.

The statistical table - Clinic - School and Group Service gives a break down of service by age and type of service. It will be noted that service was provided to 47,265 school children and 1,440 were referred for follow up. The totals for adults show we also provided service to 10,345 in this age group.

The totals regarding home visiting service show the diversity of ages and topics that are covered in the program. The Community Health Nurses continue to be very actively involved in Health teaching programs and attendance at these programs in 1976 totalled 74,502. In addition to home visits, service was provided in district offices (to 3,367 individuals) and by telephone (on 32,587 occasions). Our nursing time was increased at the Adult Day Centre this last year to

## ATTENDANCE AT CHILD HEALTH CENTRES - 1976

Infant Attendance	1970	1971	1972	1973	1974	1975	1976
	1,203	1,771	7,514	932	10,342	702	10,283

provide service for the increased enrollment at this school and our Community Health Nurses provided 179 pre-natal classes.

In April of this year, Mrs. Evelyn Nyberg retired as Supervisor of the Bowness District and Mrs. Elizabeth Dimitric was appointed as the Supervisor for the Bowness District. Mrs. Joyce Connors and Miss Catherine Broad retired from the Nursing Staff during 1976.

In May official opening ceremonies were held for the Anderson Road and Rundle District Offices.

In September the majority of the Child Health Centres went on to an appointment system and this seems to be working out very satisfactorily.

Over the year it was necessary to realign some of our nursing districts to provide increased nursing service in the high growth areas such as Forest Lawn and Rundle and I appreciate the co-operation of the staff that made this possible.

In conclusion, I would like to thank all the staff for the service they have provided to the citizens of Calgary over this last year and I would like to thank you Dr. Hosking on my own behalf and that of the staff for your support and guidance.

## CLINIC ATTENDANCE

Frances M. Moore  
Director of Nursing

	Clinics	New Infant	Infant	New Pre-School	Pre-School	School Age	Adult	TOTAL	Average Attendance
A.M.	1,203	1,771	7,514	932	10,342	702	10,283	31,544	26.2

EVENING	287	— 656	2,628	340	2,767	142	1,743	8,276	26.8

brought services for the increasing population of this people and our Community.  
Hastily written in a free-hand class.

In April of this year, Mrs. Eva May Parker left for the summer to the mountains  
districts and Mr. George Gouraud with Miss Sophie from whom  
Miss Sophie, Mrs. Joyce Gouraud and Miss Sophie's brother left for the mountains  
districts. Scott family 1926.

In my official duties  
District Officer.

In September the majority of the City Hospital Council went up to an audience  
where and this was to be worked out area association.

Over the last it was necessary to keep some of our members interested  
in the necessary material which is the high point when we have this position  
kind of a situation the co-operation of the community.

In conclusion, I would like to thank all the staff for the service they have  
provided to the citizens of Custer and I hope I may like to  
thank you Dr. Horning on my own behalf and for the work and support  
and guidance.

Hannah M. Moore  
Director of Nursing

ATTENDANCE AT CHILD HEALTH CENTRES - 1976

The prevalence of dental disease in the community continues to be a major public health problem. Preventive measures known to be effective are available but are not being sufficiently utilized. For a large segment of the population, there are inadequate treatment facilities and manpower to meet their needs. Therefore alternative methods of delivering comprehensive services including the use of auxiliary personnel, must be considered.

In order to provide and/or update standards and guidelines for more comprehensive services which will more effectively meet the health (dental) needs of the population, an increasing amount of attention is being focused on the study of health services in general. Health services research is concerned with the organization, staffing, financing, utilization, and evaluation of health services, hopefully to produce knowledge that will contribute to improved delivery of health care.

In view of the problems facing the Provincial Government today in the area of its public spending programs, social institutions are more and more being asked to provide "proof" of their legitimacy and effectiveness.

DENTAL DIVISION ANNUAL REPORT - 1976.

In order to justify and to confirm support, Increasing  
present being put on public service and community program workers  
to evaluate their activities and to judge the worth of their programs.

Evaluation is an essential part of planning and management. It relates  
Dental disease presents itself in three (3) major forms:

- (1) dental caries
- (2) periodontal disease
- (3) malocclusion.

Since there is no self-repair process, once established in the individual and left untreated, dental disease leads to the loss of natural teeth, often with debilitating consequences upon general health.

of a model program encompassing certain standards.

The prevalence of dental disease in the community continues to be a major public health problem. Preventive measures known to be effective are available but are not being sufficiently utilized. For a large segment of the population, there are inadequate treatment facilities and manpower to meet their needs. Therefore alternative methods of delivering comprehensive services including the use of auxiliary personnel, must be considered.

In order to provide and/or update standards and guidelines for more comprehensive services which will more effectively meet the health (dental) needs of the population, an increasing amount of attention is being focused on the study of health services in general. Health services research is concerned with the organization, staffing, financing, utilization, and evaluation of health services, hopefully to produce knowledge that will contribute to improve delivery of health care.

In view of the problems facing the Provincial Government today in the area of its public spending programs, social institutions are more and more being asked to provide "proof" of their legitimacy and effectiveness

Dental disease prevalence is still at about 80% among all patients.

- (1) dentin caries
- (2) periodontal disease
- (3) malocclusion.

Since there is no self-help process, one's participation in the dental program must be initiated by the dentist, dental hygienist, dental laboratory, and dental laboratory. The dental laboratory can help, often with dental appliances which facilitate patient care.

The prevalence of dental disease in the community continues to be relatively stable and seems to be influenced by public health programs. Prevalence remains much too high. Not a large percentage of people have good oral health. This is due to the following factors: lack of knowledge, lack of motivation, lack of time, lack of money, lack of access to dental services, lack of dental facilities, and lack of dental personnel.

In order to provide adequate dental services for more comprehensive services apply with more effective use of the dental services of the dental profession, the dental profession must be concerned with the delivery of dental services to the public, dental services research to determine new procedures, dental education, dental legislation, and dental administration to provide dental services to the public.

This is why the dental profession must continue to work to improve dental services to the public.

in order to justify modern society's continued support. Increasing pressure is being put on public service and community program workers to evaluate their activities and to judge the worth of their programs. by restorative treatment alone; good dental health habits are considered Evaluation is an essential part of planning and management. It relates results to objectives or goals; it is the process of relating the actual achievement of a service or program to the results predicted in the plan. The measurement criteria (performance indicators) in program evaluation may be:

- i- purely subjective - a program may be evaluated in terms of what the people responsible for it believe it has accomplished.
- ii- objective - the program in question may be evaluated in terms of a model program encompassing certain standards.
- iii- a combination of subjective and objective factors. Whenever possible, program evaluation should be based on objective criteria in order to minimize the hazards of subjective interpretation.

Goals for dental activities have seldom been discussed. The dental profession is guided by an intuitive idea of what good dentistry is. Good community dentistry is often understood as good individual dentistry for all inhabitants of the community. Since the level of unmet need for dental treatment by most objective standards is high, need for a precise definition of goals has not arisen. Most dental activities are accepted as a step in the right direction. However, the complexity and cost of modern dentistry are increasing at such a rate that intuitive planning is no longer considered to be adequate, especially if dentistry is considered to be of public interest, a civic right, and not merely a matter between dentists and patients.

Goals in community health planning should be based on the values, needs and resources of the community in question. When analyzing goals a distinction should be made between dental health and dental care. Some

## (With Sample Objectives and Indicators)

goals for dental care, e.g. equity of access, may concern social justice but do not necessarily lead to better dental health. It is generally agreed that good dental health for a whole community cannot be achieved by restorative treatment alone; good dental health habits are considered to be a better way to promote dental health. Existing research indicates that there are chances to attain an acceptable level of dental health if the community effort is systematically planned and executed. There are indications that a reduction in the prevalence of dental disease can be brought about by new and effective means in the future. Long-term planning should be flexible enough to respond to new opportunities.

OBJECTIVE

To encourage the use of more intensive methods of health care which will bring about more improvements in dental health.

and more effectively.

and more effectively.

and more effectively.

OBJECTIVE

To inform parents and/or guardians of their children's dental defects and the possible consequences of such defects remaining untreated.

Clinical Dentists  
Dental Assistants

PERFORMANCE INDICATORS

- \* 2,145 dental examinations (with appropriate follow-ups) were conducted during 1976.
- \* 9,221 visual examinations (with appropriate referrals) were completed during 1976.

OBJECTIVE

To ensure the individual is aware of and encouraged to follow good dental health practices.

Clinical Dentists  
Dental Assistants

PERFORMANCE INDICATORS

- \* 1,639 clinical educational sessions were conducted during 1976.
- \* 9,153 clinical educational sessions were conducted during 1976.
- \* Lessons, puppet scripts, educational materials, etc. were designed to be used with children of various ages.

## DENTAL DIVISION GOALS

(With Sample Objectives and Indicators)

### Goal 1

*To effect systematic planning and sustained implementation of health education.*

#### OBJECTIVE

To encourage people to use the existing health care system more intelligently and more effectively.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

#### PERFORMANCE INDICATORS

- \* The improved utilization of clinical services by the Community.
- \* The sustained improvement of individual patient attitudes and oral health habits.
- \* 3,437 teeth were completed during the 1976 year.
- \* 584 teeth were extracted during the 1976 year.

#### OBJECTIVE

To provide treatment services (fillings, extractions, crowns, etc.)

Clinical Dentists  
Dental Assistants

#### OBJECTIVE

To inform parents and/or guardians of their children's dental defects and the possible consequences of such defects remaining untreated.

Clinical Dentists  
Dental Assistants

#### PERFORMANCE INDICATORS

- \* 2,145 dental examinations (with appropriate follow-ups) were conducted during 1976.
- \* 9,221 visual examinations (with appropriate referrals) were completed during 1976.

#### OBJECTIVE

To provide emergency dental health care services for the relief of pain and/or anxiety.

Dental Hygienists

#### PERFORMANCE INDICATORS

- \* 1,215 emergency cases were handled during 1976.

#### OBJECTIVE

To ensure the individual is aware of and encouraged to follow good dental health practices.

Clinical Dentists  
Dental Assistants

#### PERFORMANCE INDICATORS

- \* 1,639 clinical educational sessions were conducted during 1976.
- \* 9,153 clinical educational sessions were conducted during 1976.
- \* Lessons, puppet scripts, educational materials, etc. were designed to be used with children of various ages.

Dental Hygienists

**Goal 2**

*To provide the highest quality  
of treatment services  
to the children of Calgary.*

**OBJECTIVE**

To provide diagnostic and prognostic services on request.

Clinical Dentists  
Dental Assistants

**PERFORMANCE INDICATORS**

- \* 5,156 appointments were assigned during 1976.

**OBJECTIVE**

To provide treatment services (fillings, extractions, crowns, etc.)

Clinical Dentists  
Dental Assistants

**PERFORMANCE INDICATORS**

- \* 3,437 teeth were completed during the 1976 year.
- \* 584 teeth were extracted during the 1976 year.

**OBJECTIVE**

To provide minor preventive orthodontic therapy.

Clinical Dentists  
Dental Assistants

**PERFORMANCE INDICATORS**

- \* 192 appliances were inserted during the 1976 year.

**OBJECTIVE**

To provide emergency dental health care services for the relief of pain and/or anxiety.

Clinical Dentists  
Dental Assistants

**PERFORMANCE INDICATORS**

- \* 215 emergency cases were handled during 1976.

**OBJECTIVE**

To promote the use of dietary fluoride supplements for those children not on communal water fluoridation.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

**PERFORMANCE INDICATORS**

- \* 34,737 fluoride prescriptions were dispensed by the Local Board of Health.

To carry out activities

**Goal 3**

To provide preventive treatment services for the purpose of reducing dental disease.

OBJECTIVE

To provide prophylaxes (tooth-cleaning) on request.

Within the dental health programs in school curriculums.

Clinical Dentists  
Dental Assistants

Dental Hygienists

PERFORMANCE INDICATORS

- \* 1,555 prophylaxes were completed during 1976.

- \* 9,173 prophylaxes were completed during 1976.

OBJECTIVE

To perform cursory oral examinations on

OBJECTIVE

To provide the application of topical fluoride on request.

Dental Hygienists

Clinical Dentists  
Dental Assistants

Dental Hygienists

PERFORMANCE INDICATORS

- \* 1,217 oral examinations were performed during 1976 year.

PERFORMANCE INDICATORS

- \* 1,488 patients were treated with topical fluoride during 1976.

- \* 9,156 patients were treated with topical fluoride during 1976.

OBJECTIVE

To provide classroom instruction and/or information (on request) on dental health topics.

Dental Hygienists

OBJECTIVE

To promote the use of dietary fluoride supplements for those children not on communal water fluoridation. (Chewing, rinsing, mouthrinsing, etc.) to encourage the establishment of personal preventive dental health habits.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

PERFORMANCE INDICATORS

- \* 34,757 fluoride prescriptions were dispensed by the Local Board of Health.
- \* 1,000 students participated in organized brush-ins during 1976.

- \* 461 Grade 5 students participated in flossing sessions during 1976.

To correlate dental health activities at the local level with health programs at school level.

OBJECTIVE

To develop meaningful dental health programs within Calgary's preschool system.

OBJECTIVE

To initiate and promote the development of effective dental health programs in school curriculums.

PERFORMANCE INDICATORS

- \* Puppet plays, prepared by the hygienists, were presented to 9,325 preschool children.

PERFORMANCE INDICATORS

- \* The initiation of 2 pilot programs (flossing, mouth rinsing) in the Calgary School System which emphasize the role of prevention in dental health.

OBJECTIVEOBJECTIVE

To perform cursory oral examinations on children within the school environs.

Dental Hygienists

Dental Hygienists

PERFORMANCE INDICATORS

- \* 1,217 oral examinations were completed during the 1976 year.

OBJECTIVE

To provide classroom instruction and/or information (on request) on dental health topics.   
 personnel to discuss dental health topics with parents of preschool children.

Dental Hygienists

Dental Hygienists

PERFORMANCE INDICATORS

- \* 21,434 students were instructed regarding various aspects of dental health during 1976.

A talk was given to parents at the Victoria Park Day Care Centre.

OBJECTIVE

To involve students (and teachers) in participatory learning activities (brushing, flossing, mouthrinsing, etc.) to encourage the establishment of personal preventive dental health habits.

Dental Hygienists

PERFORMANCE INDICATORS

- \* 3,961 Grade 3 students participated in organized brush-ins during 1976.

- \* 461 Grade 5 students participated in flossing sessions during 1976.

**Goal 5**

*To correlate dental health activities at the local level with health programs at preschool level*

**Goal 6**

*To enlist the support of all individuals, groups and agencies dedicated to the promotion of individual health.*

**OBJECTIVE**

To develop meaningful dental health programs within Calgary's pre-school system.

Dental Hygienists

**PERFORMANCE INDICATORS**

- \* Puppet plays, prepared by the hygienists, were presented to 9,325 preschool children.
- \* Five week dental health programs were developed for 3 City Day Care Centres during the summer months.

**PERFORMANCE INDICATORS**

- \* 14 visits were made to the various clinics by pediatric residents, etc.

**PERFORMANCE INDICATORS**

- \* A total of 13 presentations
- \* A total of 11 field trips to dental division clinical areas, were handled during 1976.

**OBJECTIVE**

To encourage health professionals to become more effective educators of the public by making them

Clinical Dentists  
Dental Hygienists  
Dental Assistants

**OBJECTIVE**

To provide clinical information-orientation activities for preschool groups on request.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

**OBJECTIVE**

To stimulate and conduct public informational and educational programs

Dental Hygienists

**OBJECTIVE**

To provide resource personnel to discuss dental health topics with parents of pre-school children.

Dental Hygienists

**PERFORMANCE INDICATORS**

- \* 1 presentation was offered on a local television station.

**PERFORMANCE INDICATORS**

- 1 talk was given to parents at the Victoria Park Day Care Centre.
- 1 talk was given to parents at Victoria Park Day Care Centre, children at Spruce Cliff After School Care Centre and the Children's Service Centre, instructors and boys involved in the Beaver Groups.

**Goal 6 (continued.)**

To enlist the support of all individuals, groups and agencies dedicated to the promotion of individual health.

**Goal 6**

**OBJECTIVE**  
To enlist the support of all individuals, groups and agencies dedicated to the promotion of individual health.

To encourage and assist students in preparing, qualifying and establishing themselves in health careers.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

**OBJECTIVE**

To encourage health professionals to become more effective educators of the public by making them aware of the magnitude of the dental disease problem, and the types of services and facilities available to combat it.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

Dental Hygienists

**PERFORMANCE INDICATORS**

A total of 55 visits were made to various clinics by dental hygiene students, dental assistance students from S.A.I.T., nursing students, dietetic internes during the 1976 year.

\* 1 career day presentation was shown and discussed at Bishop

**PERFORMANCE INDICATORS**

\* 14 visits were made to the various clinics by pediatric residents, etc.

\* A total of 13 presentations were made to the public health nurses within the Calgary Health District, Local Board of Health.

Program at Mount Royal College.

**OBJECTIVE**

**OBJECTIVE**  
To establish and promote liaison and cooperation

To stimulate and conduct public informational and educational programs designed to improve the health and welfare of the community.

Clinical Dentists  
Dental Hygienists

Dental Assistants

Dental Hygienists

**PERFORMANCE INDICATORS**

\* Members of the dental division

**PERFORMANCE INDICATORS**

\* 1 presentation was offered on a local television station.

\* Talks on various dental topics were presented to a wide variety of community groups including residents at Bow Centre, parents at Victoria Park Day Care Centre, children at Spruce Cliff After School Care Centre and the Children's Service Centre, instructors and boys involved in the Beaver Groups. Information from health professionals.

**OBJECTIVE**

To reduce dental misunderstandings by education of people about the scope and limitations of dentistry.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

**PERFORMANCE INDICATORS**

\* Numerous requests for information and advice from the general public by means of telephone calls and personal contacts, were processed by the dental division staff.

Goal 6 (continued..)

*To enlist the support of all individuals, groups and agencies dedicated to the promotion of individual health.*

OBJECTIVE

To encourage and assist students in preparing, qualifying and establishing themselves in health careers.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

Palm Dairy also had to increase their manufacturing equipment due to increased population demand.

The Housing Inspector, working in conjunction with the Building Inspector, and with other departments such as Fire, Electrical, Minimum Maintenance, has presented very beneficial information to the departments concerned on the subject of housing conditions when problems have been encountered. The Housing Inspector has been designated as neighbourhood improvement areas. The Housing Inspector has been of great assistance in the upgrading of these areas.

The Health Education Inspection Division had a very active program. The following presentations were presented to the following groups:

OBJECTIVE

To establish and promote liaison and cooperation with and between other organizations concerned with health care.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

Secondary Schools  
Elementary Schools  
Food Industry Staff  
Service Clubs & Church Groups  
C.R.A. Course #1 (2 day program)  
C.R.A. Course #2 & #3 (1 day program)  
Public Health Inspectors  
Public Health Nurses (Orientation)  
Dietetic Interns  
Other

The total presentations were one hundred - thirteen (113) of 3,356.

The programs presented in the elementary schools in conjunction with Public Health

OBJECTIVE

To reduce dental misunderstandings by education of people about the scope and limitations of dentistry.

Clinical Dentists  
Dental Hygienists  
Dental Assistants

PERFORMANCE INDICATORS

- \* A total of 55 visits were made to various clinics by dental hygiene students, dental assistant students from S.A.I.T., nursing students, dietetic internes during the 1976 year.
- \* 1 career day presentation was shown and discussed at Bishop Grandin High School.
- \* Increasing requests for dental health education information, etc. from students.
- \* Lectures on various dental topics were presented to 30 dental assisting students at S.A.I.T. and 48 students enrolled in the Day Care Program at Mount Royal College.

PERFORMANCE INDICATORS

- \* Members of the dental division served on a total of 2 task forces and committees.
- \* The dental division handled 41 requests for specific statistical information from various supporting agencies.
- \* A total of 19 fee estimates were validated for government agencies.
- \* 1 presentation was made to staff members at Spruce Cliff Centre.
- \* The dental division processed numerous requests for advice and information from health professionals.

PERFORMANCE INDICATORS

- \* Numerous requests for information and advice from the general public by means of telephone calls and personal contacts, were processed by the dental division staff.

ANNUAL REPORT FOR THE ENVIRONMENTAL HEALTH INSPECTION DIVISION

Several changes and renovations took place during 1976. The Inspection Training Program will lead the nation in

CITY OF CALGARY HEALTH DISTRICT

The City of Calgary is divided into 18 districts. Every establishment that the public has access to, is inspected one or more times during the year by the assigned inspector. With the addition of three new inspectors, all areas of inspection were well covered as indicated in the statistical report which follows this report.

There were 102 sets of plans submitted to the Assistant Chief Inspector for his approval. This includes a complete check of the plans and numerous on-site inspections.

The Dairy Division is continuing to lift samples from the two operating dairies. Silverwood Dairy has closed down and has been taken over by Alpha Dairy, which has had to increase the milk handling facilities to be able to handle the demands placed on them. This transaction was completed as of the end of December.

Palm Dairy also had to increase their manufacturing equipment to handle the increased population demand.

The Housing Inspector, working in conjunction with the District Health Inspectors, and with other departments such as Fire, Electrical, Mechanical Inspection and minimum maintenance, has proved very beneficial. Requests for inspections are sent to the departments concerned and the resultant reports are useful in dealing with housing conditions when problem housing has been encountered in areas which have been designated as neighborhood improvement areas. The R.R.A.P. program has been of great assistance in the upgrading of the older areas of housing.

The Health Education Inspection Division had a very active year. Programs were presented to the following groups:

<u>No. of Presentations</u>		<u>Attendance</u>
1	University of Calgary	23
4	S.A.I.T.	77
10	Vocational Schools	309
35	Secondary Schools	962
6	Elementary Schools	665
21	Food Industry Staff	491
3	Service Clubs & Church Groups	156
2	C.R.A. Course #1 (2 day program)	204
9	C.R.A. Course #2 & #3 (1 day program)	308
2	Public Health Inspectors (Inservice)	26
7	Public Health Nurses (Orientation)	52
3	Dietetic Interns	3
8	Other	102

The total presentations were one hundred - thirteen (113) with a total attendance of 3,356.

The programs presented in the elementary schools in conjunction with Public Health Nurses have been very successful.

The Inspection Division is continuing to receive most favorable comments from the local media as a result of our health education programs. National and Provincial exposure was also most favorable as a result of the Inspection Division's participation at the National Sanitation Training Program held in conjunction with the C.R.A. Midwest Show in Edmonton.

Several changes and revisions to the C.R.A. National Sanitation Training Program took place during 1976. Calgary's Inspection Division still leads the nation in the number of programs presented and attendance.

There were also presentations on Radio, T.V. and to the press. There were 84 requests for Public Health posters and pamphlets filled.

There were numerous changes in the Calgary Exhibition and Stampede during the year. This was the first year for Canada's Conklin shows since the last war. This was a very clean operation and they were most cooperative with The Local Board of Health. All rides were monitored and found satisfactory.

The inauguration of a new food commissary operated by the Stampede Board was most successful. Food came from inspected sources which made the inspector's work easier. All food concessions were inspected numerous times each day and night. All public facilities were regularly checked and the Stampede staff are to be commended on their cleanliness. Due to the constant inspection of all food concessions, there were very few complaints received.

I am pleased to express once more my appreciation for the continued support and counsel received from the Medical Officer of Health, the Assistant Medical Officer of Health and the Public Health Nursing Staff. Also, I wish to commend the Inspectional Staff on a job well done. Their cooperation has been greatly appreciated.

Respectfully submitted,

N.L. Bruce, C.S.I (C), M.R.S.H.  
Chief Public Health Inspector

## HIGHLIGHTS FROM MONTHLY ANNUAL LABORATORY REPORT FOR 1976

We have successfully completed another year of analytical Services for the Local Board of Health, City of Calgary.

The total volume of samples and the workload in general has increased from 1975 by approximately 900 samples, or 7% of the total volume.

This phenomenon reflects the rapid population and industrial expansion within the City of Calgary Health District which in turn creates new problems connected with the increased usage of biocides, detergents, oil and greases etc. Accidental spillages of organic and/or chemical origin, shock pollutions caused by sudden downpours or rapid and erratic snow melting, all add to the increased workload of the lab.

The lab. personnel have attempted to enlist the support of allied agencies dedicated to the promotion of better health in the community. To this end they have worked with:

1. The University of Calgary, Chemical Engineering Faculty spot-checking oils and greases on the Bow River.
2. Environment of Canada, Analytical Services, Calgary on the use of biocides within the Calgary Health District.

Similar studies are contemplated in the future on a more frequent basis in order to give the local population the greatest possible protection.

The chemical and bacteriological monitoring of approximately 800 private wells within the City's perimeter is also being maintained. This serves to not only protect the users of these waters but aids in better understanding of problems connected with the subsurface water supplies.

The detailed functions of this laboratory are as follows:

### WATER:

- a) Responsible for final qualitative determinations of all drinking water supplied by the City of Calgary through its two treatment plants.
- b) Evaluating and plotting the safety level for human consumption according to 'The Canadian Drinking Water Standards' of connected, superchlorinated and reflushed new water mains and interconnections.
- c) Determining the origin of the reported water seepages when other detecting methods have failed.
- d) Handling all complaints from the individual water users and from the industrial sector, including consultations and liaison work with the public at large, industry and other City Departments.

### MILK:

Responsible for qualitative evaluations of all processed milk products in the City of Calgary at the plant and retail levels.

### FOOD:

Conducting bacteriological (Swab Tests), chemical and microscopic examinations of beverages, soft drinks, cereals, adulterated solid and liquid food, foreign matter etc.

HIGHLIGHTS FROM MONTHLY REPORTS

## REPORT FOR 1976

The average annual water consumption per person per day, including the industry in Calgary has reached 180 gallons (173 gallons in 1975).

The raw water bacteriological and chemical quality of the Glenmore Reservoir has been very stable in 1976. The Bearspaw Reservoir is more erratic, although the bacteriological quality has improved to some degree.

The regular sampling of the Elbow River discharging into Glenmore Reservoir (Weasel Head) began on February 16th as compared with April 14th in 1975.

The Elbow River froze over at the intake of the Glenmore Reservoir on December 6th as compared with November 21st in 1975.

In closing, the Lab. staff is very appreciative of the help and advice given throughout the year by Dr. David Hosking, Medical Officer of Health. We would also like to thank Dr. E. Laishley, University of Calgary for his constructive advice on biological matters during 1976, and a word of thanks for their cooperation goes to many members of the Local Board of Health affiliated with our work, to other City Departments and Agencies.

### NUTRITIONIST'S REPORT

IN ADDITION, THE NUTRITIONIST CHAIRED THE JANUARY IN-SERVICE PROGRAM FOR THE LOCAL BOARD OF HEALTH STAFF.

INTRODUCTION:

THE THERAPEUTIC DIVISIONS WERE COSTED FOR SOCIAL SERVICES.

THE WORLD HEALTH ORGANIZATION DEFINES HEALTH AS:

a state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity.

NUTRITION MUST BE CONSIDERED AN INTEGRAL FACTOR IN ANY PROGRAM ATTEMPTING TO PROMOTE OPTIMAL HEALTH. THE NUTRITION DIVISION CONSISTS OF ONE PERSON, THE NUTRITIONIST WHO, AS ILLUSTRATED ABOVE, ACTS IN A SUPPORTIVE MANNER TO THE MANY HEALTH PROFESSIONALS WITHIN THE LOCAL BOARD OF HEALTH AND TO THE COMMUNITY AT LARGE.

OBJECTIVE 1: TO KEEP LOCAL BOARD OF HEALTH PROFESSIONAL STAFF INFORMED REGARDING CURRENT NUTRITION INFORMATION AND RESOURCES.

PERFORMANCE CRITERIA:

A TOTAL OF 64 IN-SERVICE SESSIONS WERE CONDUCTED WITH LOCAL BOARD OF HEALTH STAFF. SOME OF THE TOPICS CONSIDERED WERE: ORAL CONTRACEPTIVES AND NUTRIENT UTILIZATION, NUTRITION AND ATHLETES, FOMON'S WORKSHOP, GERIATRIC NUTRITION AND DIET AND HYPERACTIVITY.

CONSIDERABLE TIME WAS SPENT IN PREVIEWING AND ACQUIRING AUDIOVISUAL MATERIALS TO SUPPORT THE NUTRITIONAL COMPONENT OF THE CLINICAL PROGRAMS.

AS SOME REQUIRED MATERIALS WERE NOT AVAILABLE, IT WAS NECESSARY TO PRODUCE CERTAIN ITEMS. THESE INCLUDED: AN INFANT FEEDING MANUAL, A GUIDE TO SNACKING, REVISED INFANT NUTRITION TEARSHEETS. THE NUTRITIONIST PARTICIPATED IN 4 ORIENTATION SESSIONS FOR NEW LOCAL BOARD OF HEALTH STAFF.

IN ADDITION, THE NUTRITIONIST CHAIRED THE JANUARY IN-SERVICE PROGRAM FOR THE LOCAL BOARD OF HEALTH STAFF.

OBJECTIVE 2: TO PROVIDE NUTRITIONAL INFORMATION, AND COUNSELLING TO THE COMMUNITY AT LARGE.

PERFORMANCE CRITERIA:

LECTURES ON VARIOUS NUTRITION TOPICS WERE PRESENTED TO A WIDE VARIETY OF COMMUNITY GROUPS INCLUDING MOUNT ROYAL, ALBERTA RED CROSS INSTRUCTORS, V.O.N., REGISTERED DIETITIANS, CHURCH GROUPS, SENIOR CITIZENS ETC. A TOTAL OF 34 SUCH LECTURES WERE PLANNED AND PRESENTED.

FOOD PRICES WERE COLLECTED ON FOUR SEPARATE OCCASIONS IN ORDER TO PRODUCE A BOOKLET: GUIDE TO BETTER FOOD BUDGETING WHICH WAS DISTRIBUTED TO PROFESSIONALS BOTH AT THE LOCAL AND PROVINCIAL LEVEL.

THERAPEUTIC DIETS WERE COSTED FOR SOCIAL SERVICES.

MENU ASSESSMENTS WERE DONE FOR SEVERAL LOCAL ORGANIZATIONS. ONE OF THE MORE TIME CONSUMING ASSESSMENTS INVOLVED THE METIS SCHOOL LUNCH EVALUATION.

AN ARTICLE ON "FIBRE" WAS PRODUCED, SUBMITTED AND SUBSEQUENTLY PUBLISHED IN THE "ALBERTA HOME ECHOES", A JOURNAL RECEIVED BY ALL ALBERTA HOME ECONOMICS TEACHERS.

NEW INFANT FEEDING GUIDELINES: "GUIDE TO YOUR BABY'S CARE" WAS DISTRIBUTED TO LOCAL PHYSICIANS, HOSPITALS, AND TEACHING INSTITUTIONS.

A SECTION ON PRENATAL NUTRITION WAS ORGANIZED AND PRESENTED AS A INSTRUCTIONAL PROGRAM TO THE FIRST YEAR CALGARY MEDICAL STUDENTS. THIS INCLUDED EVALUATION IN THE FORM OF EXAMINATIONS.

OBJECTIVE 3: TO ENGAGE IN PUBLIC RELATIONS ACTIVITIES PROMOTING THE LOCAL BOARD OF HEALTH IN GENERAL AND THE NUTRITIONAL COMPONENT IN PARTICULAR.

PERFORMANCE CRITERIA:

THE NUTRITIONIST WAS INVOLVED IN PROGRAMS SUCH AS HEARTLINE AND CAMP SLIM TEEN.

INFORMATION WAS PROVIDED TO A VARIETY OF INDIVIDUALS BY WAY OF THE TELEPHONE. DURING THE YEAR A TOTAL OF 1400 TELEPHONE CALLS WERE RECEIVED.

THE NUTRITIONIST ENGAGED IN 36 INTERVIEWS.

THE NUTRITIONIST WAS INVOLVED IN 7 RADIO AND/OR TV PRESENTATIONS.

## FOCUS: FAMILY PLANNING

OBJECTIVE 4: TO ENGAGE IN PROFESSIONAL TASKS WHICH MAINTAIN PROFESSIONAL VISIBILITY THROUGHOUT THE PROVINCE.

PERFORMANCE CRITERIA: The grant service offered by the Calgary Birth Control Association, and a non-renewable grant from Health and Welfare Canada. When

FOUR DIETETIC INTERNS FROM THE CALGARY GENERAL HOSPITAL WERE RECEIVED FOR ORIENTATION AS TO PUBLIC HEALTH NUTRITION. A TOTAL OF 16 DAYS WAS SPENT WITH THE INTERNS. IN ADDITION, 1/2 DAY WAS SPENT WITH THREE NURSING STUDENTS.

THE NUTRITIONIST ASSISTED IN THE COORDINATION OF "THE CONTEMPORARY DIETITIAN - OPTIONS AND OPPORTUNITIES" SEMINAR SPONSORED BY THE ALBERTA REGISTERED DIETITIAN ASSOCIATION AND THE DEPARTMENT OF CONTINUING EDUCATION.

THE NUTRITIONIST ARRANGED A NUTRITION WORKSHOP FOR THE CHILD WELFARE LEAGUE OF NORTH AMERICA. THIS IS TO BE HELD IN JUNE OF 1977.

WITH ASSISTANCE FROM THE ASSOCIATE MEDICAL OFFICER OF HEALTH, THE NUTRITIONIST PREPARED A RESEARCH PROPOSAL IN DECEMBER AS ONE OF THE PRE-REQUISITES FOR ATTENDANCE AT THE HEALTH CARE EVALUATION SEMINAR HELD IN FEBRUARY, 1977.

THE NUTRITIONIST ACTED AS A CONSULTANT ADVISOR IN THE ALLOCATION OF GRANT MONIES FOR PROFESSIONAL NUTRITIONAL RESOURCES AND IN THE PRODUCTION OF NUTRITIONAL MATERIALS (SLIDE TAPE PRESENTATION ON NUTRITION FOR THE ELDERLY AND A PAMPHLET ON IRON).

THE NUTRITIONIST ATTENDED ALL REGULAR PROVINCIAL NUTRITION MEETINGS AND ALSO THE ALBERTA PUBLIC HEALTH ASSOCIATION CONVENTION HELD IN LETHBRIDGE AS WELL AS THE PUBLIC HEALTH ASSOCIATION WORKSHOP IN CALGARY. ONE WEEK WAS SPENT AT AN INFANT FEEDING WORKSHOP IN IOWA.

Respectfully submitted,

Judith Martindale  
Education Coordinator

## PROGRAMS

## FOCUS: FAMILY PLANNING

On April 1, 1976 The Calgary Local Board of Health began the administration of a family planning education outreach project. This project had originally been a part of the service offered by The Calgary Birth Control Association, and had been funded with a non-renewable grant from Health and Welfare Canada. When the grant was completed the Government of Alberta offered the program to the Calgary Local Board of Health. The Board then accepted the responsibility for its administration and supervision.

Staff for the project included an education coordinator, a half-time assistant coordinator, a corps of trained volunteers and one half-time support staff. Office space was located in the Thornhill Health Centre. At the time of transition, the name Focus: Family Planning was chosen for the project.

The project was originally designed to operate as a demand service. Focus: Family Planning has continued to function within this philosophy, although consideration of the establishment of priorities will be required due to the pressure of increased requests. From April 1 to December 31, 1976, 180 presentations were made to 4452 participants. These presentations covered a wide variety of topics and were offered to professional and lay groups (see statistical summary). Sessional educators contributed 192½ hours of presentation time.

Responsibility for supervision of practicum students was accepted by Focus. One Nursing student and one student from the Faculty of Social Welfare completed practicums during the Fall Semester. These students became part of the education team, and completed independent study projects.

As part of her professional commitment, The Education Coordinator has become The Local Board of Health's representative on the Board of Directors of Planned Parenthood, Alberta. She attended the annual general meeting of the Planned Parenthood Federation of Canada, and while there, presented a workshop titled "Community Outreach Education".

During the last week in October the Assistant Coordinator attended the American Association of Sexuality Educators, Counsellors and Therapists Conference and the International Congress of Sexology in Montreal. She also had the opportunity to visit three offices of Planned Parenthood - Montreal, Ottawa and the National Office in Ottawa. The Provincial Government's Opportunity for Interchange was attended by both professional staff members. These conferences provided valuable information and professional contacts for staff of Focus: Family Planning.

Respectfully submitted,

Judith Martindale  
Education Coordinator

## CALGARY HOME CARE PROGRAM

### ANNUAL REPORT - 1976

Owing to the transfer of the Calgary Home Care Program from the Victorian Order of Nurses to the Local Board of Health on April 1, 1976, this report will include only nine month's data. It was felt it would be appropriate to begin with a brief description of the program as it has evolved, its objectives and criteria for admission.

#### HISTORY

As the first program of its kind in Alberta, and after many years of negotiation, the Calgary Home Care Program was initiated in April, 1970. The program was administered as a pilot project by the V.O.N., financed by the Alberta Hospital Services Commission with funds channelled locally through the Calgary Auxiliary Hospital and Nursing Home District No. 7.

During the initial six years, admissions to the program increased rapidly. The single greatest factor influencing expansion occurred in the third year when the criteria for admission were altered to include a single professional service, i.e. nursing or physiotherapy, in lieu of hospitalization as a qualification for admission.

The primary goal of home care remains; to combine the resources of modern medicine with the emotional, social and other contributions which family and home can make in caring for patients who still need professional services, but who do not need the full range of facilities and services of the general hospital.

#### DEFINITION

The Calgary Home Care Program is a community based program which provides a central contact point where persons under the care of a physician can apply for services. Basically, a home care program is an administrative framework which arranges for, co-ordinates, and controls the use of medical and para-medical services procured from community resources to meet the needs of selected patients in their own homes under the direction of the physician, and upon early discharge from the hospital or in lieu of admission to hospital.

The objectives of the program as outlined in the original contract have remained as follows:

1. to provide co-ordinated services to meet the needs of selected patients who may be adequately cared for in their homes
2. to demonstrate that a home care program can free general hospital, auxiliary hospital and nursing home beds by shortening or obviating the need for institutional care of selected patients
3. to provide continuity of comprehensive treatment and rehabilitation in the home under the direction of the family physician for patients either from hospital or from the community
4. to provide care in the environment of home and family, which, given certain essential conditions, is particularly beneficial for selected patients
5. to estimate the cost of providing co-ordinated services to selected patients at home and prepare supporting data

6. to develop methods of operating a home care program administered by an official agency which will integrate the services available in the community that are required to provide adequately for the care of patients in their own homes.

The criteria for admission to the program are:

1. the patient must be under the medical supervision of a physician
2. the patient's medical condition must be such that he can be treated adequately at home with the services available through the program
3. in addition to the physician's care, the patient must be in need of one professional service available through the program. This service, i.e. nursing or physiotherapy, must be in lieu of hospitalization
4. the patient and his family must be willing to participate in the program
5. the home situation must be judged adequate to enable care of the patient at home
6. the patient must live in the area served by the program (i.e. Calgary City limits)

#### SERVICES

A Home Care Program is made up of component parts, the services which it obtains from participating agencies. The three basic services offered and co-ordinated by the Calgary Program include visiting nursing, physiotherapy, and homemaking. Other services provided on an individual need basis include; social service consultation, transportation for medical reasons, provision of drugs and dressings, sick-room equipment - loan or rental, mobile laboratory service, Meals on Wheels, occupational therapy and respiratory therapy.

Nursing service provided by the Victorian Order of Nurses on a fee for service basis was required by 91.7 percent of the patients for an average of 8.1 visits per patient.

Physiotherapy is provided by a therapist employed by the Board of Health. Because of an increase in this area, a part-time physiotherapist supplements the service. Physiotherapy was required by 14.6 percent of the patients for an average 11.8 visits per patient.

Homemaking service is obtained primarily from the Calgary Family Service Bureau. This service was required by 11.9% of the patients for an average of 84.3 hours per patient.

Consulting services are obtained from the Social Service Department, Holy Cross Hospital. The social worker is involved in regular case conferences, and in individual consultation with patients requiring help.

Occupational Therapy consultation continues to be obtained primarily from the O.T. department of the Calgary General Hospital. Physical aids are supplied by them or obtained from the Red Cross Loan Cupboard or on a rental basis from various medical-surgical supply companies.

Two respiratory technology services that have been recently established in the city have been used occasionally for consultation and to provide equipment for patients requiring inhalation therapy at home.

Occasionally, patients on the program required the services provided by commercial agencies operating in the community. These include Calgary Home Domestics, Comcare and Health Care Services Upjohn Limited, which provide a variety of home health aides from registered nurse to homemaker.

### STATISTICAL ANALYSIS

Over the past several years, there has been an ever increasing number of patients admitted to the program as well as a greater number of physicians availing themselves of home care services for their patients. A large number of the patients admitted are in the category generally referred to as senior citizens, but we are very proud of the fact that there is a very broad age representation including large numbers of premature newborn infants discharged from hospital earlier than the traditional 2500 grams.

A total of 503 patients was admitted in the period of April 1, 1976 to December 31, 1976. This represents an increase of 14.5% over the same time period the previous year. In terms of admissions, June and November, 1976, were the most active months in the history of the program, with a total of 70 and 71 admissions respectively. During this time, a total of 493 patients was discharged. This indicates that the trend towards an active caseload which was noted in previous reports remained consistent. A total of eighty patients required two or more services provided by the program.

Owing to a continued contact with Dr. E. J. Love, Professor, Faculty of Medicine, Division of Community Health Sciences, further descriptive statistical data and tables will be available in July, 1977. Dr. Love has compiled the data generated by the program's caseload since its inception.

Since the program is financed by Alberta Social Services and Community Health, the services arranged for and agreed to by the program are provided at no direct cost to the patient. An estimated per diem cost for these services was calculated at \$12.00 and the average per patient cost \$229.69. These figures compare favorably with previous years.

### STAFF ACTIVITIES

In June, 1976 Dr. J. B. Dundas, the Medical Director, circulated a letter to the various Chiefs of Departments of the four acute hospitals. This letter explained the purpose and objectives of the Calgary Home Care Program and requested to meet with the various medical disciplines if they so wished to discuss Home Care as a viable alternative to hospitalization. The response to this was fairly disappointing.

At the monthly medical staff meeting in November at Alberta Children's Hospital, Dr. Dundas presented a summary on Home Care to the physicians present. As well, in November, a presentation was given to the third year nursing students at the University of Calgary as a part of their Community Health Program.

The program staff participated in a research project, in late November, being undertaken by the Division of Health Services Administration, University of Alberta. The main objective of this study, entitled, "Patient Classifications by Types of Care", was to develop an assessment instrument and an accurate procedure to identify and classify patient's needs according to the type of health and social services that they require. Our participation was in the form of using their assessment tool, while still in the developmental stages, to classify twenty-two randomly selected patients that were then on the caseload.

In conclusion, we should like to express our appreciation to Dr. David Hosking. His continued interest, support, and enthusiasm has made the transfer of authority from the Victorian Order of Nurses to the Local Board of Health so smooth as to go virtually unnoticed.

Respectfully submitted,

J. Brock Dundas, M.D.  
Medical Director

## **HEALTH EDUCATION - HEALTH PROMOTION CONSULTANT**

AS OF MID-SEPTEMBER, 1976 THE LOCAL BOARD OF HEALTH ACQUIRED A PART TIME HEALTH EDUCATOR. THIS POSITION WAS A SHARED ONE WITH 51% OF THE TIME ALLOCATED TO THE BOARD AND THE OTHER 49% TO THE PROVINCE.

### STATEMENT OF PURPOSE

THE HEALTH EDUCATION - HEALTH PROMOTION CONSULTANT OFFERS ASSISTANCE AND SUPPORT TO HEALTH PROFESSIONALS (BOTH AT THE PROVINCIAL LEVEL, LOCAL BOARD OF HEALTH LEVEL, AND HEALTH UNIT LEVEL) IN THE AREA OF PROGRAM DEVELOPMENT AND HEALTH PROMOTION.

### KEY RESULT AREAS

#### LOCAL BOARD OF HEALTH

#### PROVINCIAL

1. Development of an "in house" staff newsletter.
2. Development of an "illustrated Annual Report" suitable for distribution to schools and community organizations.
3. The production of a slide-tape production to promote Local Board of Health Programs.
1. To assist in the organization (and delivery) of health promotion conferences at a regional level
2. The development of a resource handbook to be utilized by Local Health Authorities Staffs in the local production of AV materials to supplement their programs.
3. To assist in the development of a PERT chart for the development of a health promotion strategy by Local Health Authorities

## CALGARY LOCAL BOARD OF HEALTH

## STATEMENT OF REVENUE AND EXPENDITURES

FOR THE PERIOD APRIL 1, 1976 TO MARCH 31, 1977

## KEY RESULT AREAS

CONT ...

## LOCAL BOARD OF HEALTH

## PROVINCIAL

4. To assist with the cataloguing of educational resource materials so as to make them more accessible to Local Board of Health staff.
5. To produce mediated packages to serve both instructionally (i.e. materials for use in schools by various divisions) and as examples of the proper use of media and instructional design.

4. To assist the staffs of Local Health Authorities in program development.
5. To produce a M.P.P. document (M.P.P. = Management Planning Process) as required by the Department of Social Services and Community Health.

AS OF DECEMBER 31, THE HEALTH EDUCATOR HAD BEEN WITH THE LOCAL BOARD OF HEALTH A TOTAL OF 70 WORKING DAYS. THUS, WORK HAD ONLY BEGUN IN THE ABOVE AREAS. THE ROLE OF THE HEALTH EDUCATOR - HEALTH PROMOTIONAL CONSULTANT IS AN EMERGING ONE TO BE REFINED AS THE INCUMBENT GAINS A BETTER KNOWLEDGE OF PROGRAMS AND AS HEALTH PROFESSIONALS GAIN A BETTER UNDERSTANDING OF THE ROLE OF THE HEALTH EDUCATOR. MUCH OF THIS INITIAL WORK PERIOD WAS SPENT IN ORIENTATION AND PUBLIC RELATIONS ACTIVITIES.
