Eighty-second Annual report of the Director of Public Health, Uttar Pradesh for the year ending December 31, 1949

CHAPTER I

Meteorology

Although the monsoon was late in its arrival over the State there was no deficiency of rain, and total annual rainfall was normal both in east and west U. P. Notes for specific periods of the year are as follows :

Cold weather period (January-February)—The month of January was mainly dry except for a fair occasional light shower in the North. This was made up by wide-spread thunder-rain in the first fortnight of February in which month rainfall was in moderate to large excess. During the period as a whole rainfall was in moderate defect in Agra and Jhansi Divisions, in large excess in Gorakhpur and normal elsewhere.

Mean maximum temperature was slightly above normal in January and normal in February. Mean minimum temperature was above normal in both months. Humidity was normal except for slight excess in Southern districts in January. Cloud amount was below normal in both months.

Hot weather period (March—May)—Weather during March and April was mainly dry. During May thunder-storm activity increased in northern and eastern districts, particularly over Kumaun Hills in the latter half of the month.

Rainfall during March and April was in moderate to large defect except in Gorakhpur and north-west divisions in April where it was normal or in slight excess. In May it was in large excess in Banaras, Gorakhpur and Faizabad divisions; in slight excess in Kumaun and Jhansi divisions; normal in Rohilkhand and Allahabad divisions and in slight to moderate defect elsewhere.

Mean maximum temperature was generally above normal in March and April and below in May. Mean minimum temperature was above normal.

Humidity was normal in March and above normal in April and May. Cloud amount was above normal in March (and also in Kumaun division in May) ; otherwise it was below normal.

Monsoon period (June-September)—After a fortnight's dry period nearly general light rain occurred over the State. The regular monsoon penetrated east U. P. on 5th July and gave widespread rain till 21st August when it temporarily withdrew. It revived from 1st September and continued till 19th over the whole State.

Owing to late arrival of the monsoon rainfall during June was in moderate to large defect which however was nearly made up in the month of July. During August rainfall was generally normal or in moderate excess. During September it was generally in excess. Taking the monsoon period as a whole rainfall was in moderate excess in Agra division; in slight excess in Allahabad division and normal elsewhere.

Mean maximum temperature was above normal in June and normal in July, August and September. Mean minimum temperature was above normal in June and September and normal in July and August. Humidity was below normal in June; normal in July and August and above normal in September. Cloud amount was below normal in June and August and above normal in July and September.

The retreating monsoon period (October—December)—Rainfall during October was generally in excess except in the northern and western districts where it was in slight defect. In November and December it was in moderate to large defect over the whole State.

Mean maximum temperature was slightly above normal in north-western districts and generally normal elsewhere in October and below normal in November and December. Mean minimum temperature as well as humidity was above normal in October and below normal in November and December. Cloud amount was below normal in the north-western districts and above normal elsewhere in October and below normal in November and December.

CHAPTER II

Vital Statistics

The following are chief statistical data for the year 1949 :

(a) *Comparison of U. P. figures with those of preceding year*

	Total		Rural		Urban	
	1949	1948	1949	1948	1949	1948
Mid-year estimated population.	60,580,734	59,869,520	52,144,158	51,966,211	8,336,576	7,903,309
Total births ..	1,851,209	1,280,788	1,084,477	973,580	266,732	257,203
Birth-rate per mille.	22.32	20.56	20.80	18.73	31.80	32.54
Total deaths ..	766,044	819,266	608,524	659,467	157,520	159,799
Death-rate per mille.	12.65	13.68	11.67	12.69	18.78	20.22
Infantile deaths..	128,695	133,728	86,670	90,326	42,025	43,402
Infant death-rate per thousand births.	95.24	108.65	79.9	92.78	157.56	188.75

(b) Comparison by communities in U. P.

	Birth-rate per mille		Death rate per mille	
	1949	1948	1949	1948
Hindus	22·67	20·68	12·83	13·91
Muslims	22·88	21·94	13·04	13·86
Europeans and Anglo-Indians	2·83	5·30	2·87	3·26
Indian Christians	15·02	13·67	10·68	11·29
Other classes	2·33	2·78	1·32	1·56

(c) Comparison of birth-rate and death-rate of U. P. with those of other States for the year 1949

	Birth-rate per mille	Death-rate per mille	Rate of natural increase	Infant mortality per thousand births
1. Uttar Pradesh	22·32	12·66	9·66	95·24
2. West Bengal	22·36	17·43	4·93	192·76
3. Assam	15·06	8·31	6·72	89·70
4. Bombay	30·67	19·25	11·42	140·57
5. Madras	31·69	17·10	14·59	117·17
6. Madhya Pradesh	35·61	25·88	9·73	156·04
7. East Punjab	33·1	14·7	18·4	13·2
8. Orissa	26·05	22·08	3·97	175·68

The birth-rate of 22·32 for the State for the year was higher than that of the previous year (20·56) and in the year preceding that (22·91) but was lower than the mean of the previous five years (24·16). The death-rate of 12·66 was lower than that of previous year (13·68) and of the mean of previous five years (16·69).

The death-rate for the year is the lowest on record. The main reduction was under "Fevers" under which are recorded deaths which cannot be attributed to epidemic diseases like cholera, small-pox or plague, etc.

The birth-rate for the year, though slightly higher than that in the preceding year, has been showing a downward tendency for some years. This trend has been noticeable also in other States,

but the death rate for the year is marked by low which, at least in part, can only be attributed to under reporting. The age-long system of reporting by village Chaukidars is not now working satisfactorily under stress of present conditions. Under the U. P. Gaon Panchayats Act the duty of recording vital statistics has been laid on the Panchayats, and an obligation has been laid on heads of families to report the events to these bodies. Now that not more than three villages will comprise a Panchayat, large distances will not have to be traversed for the people to make the reports. This system of reporting and recording of vital statistics may begin to function by January, 1951.

2. *Verification of registration of vital statistics*—(a) Reporting of births and deaths is compulsory in urban areas. Prosecutions were instituted for failure to report. Causes of death, as reported to Municipal authorities, were verified by Health staff and a fair percentage of them were found incorrect.

(b) Reporting of births and deaths is not compulsory in rural areas. Village chaukidars make notes of the events from which the monthly returns are compiled. Rural health staff checked omissions and errors in the chaukidar records and, as usual, found a fairly large number of omissions.

CHAPTER III

State of health in the State and History of Chief Diseases

Cholera—had a much lower incidence, there having been 25,642 deaths (2,142 in towns and 23,500 in rural areas) against 52,604 in the previous year.

First cases of the year were reported from Magh Mela, Allahabad, where it was imported from Nepal and Bihar. Thereafter, cases were reported from other eastern districts but the incidence throughout was mild. Months of August and September showed a marked increase in west U. P. where the disease prevailed up to October.

Nine cholera hospitals were opened in Gonda, Basti, Garhwal, Shah-jahanpur and Mathura Districts, at which over 170 patients were treated, of whom 136 were cured. Kaolin, essential oils mixture, sulphaguanidine and specially made "Cholera tablets" containing sulphaguanidine, nicotinic acid and soda bi-carb were largely used for treatment. Over 3,811,947 anti-cholera inoculations were given in the State.

Plague also had a lower incidence, total number of deaths being 9,875 (931 in towns and 8,944 in rural areas) against 13,722 in 1948.

The beginning of the year found the districts of Saharanpur, Muzaffarnagar, Farrukhabad, Kanpur, Fatehpur, Hamirpur, Jaunpur, Deoria Basti, Lucknow, Kheri, Faizabad and Pratapgarh, and the city of Kanpur mildly infected, this being a continuation of the prevalence of the disease in these areas in the previous year. Later on, other districts in east U. P. and Bundelkhand reported infection. March was the period of highest intensity after which there was a decline and total subsidence in July.

Infection re-appeared in the month of August in Basti district and, in a mild form, in a few other districts of east U. P.

Over 1,929,750 anti-plague inoculations were performed in the State. Twenty-six plague hospitals with bed strength of 407 were set up in the districts of Unnao, Fatehpur, Kheri, Sultanpur, Hamirpur, Jaunpur, Sitapur, Jalaun, Deoria, Banda, Kanpur, Gorakhpur and Basti. Over 2,165 cases were admitted of whom over 1,815 were discharged as cured.

Anti-rat campaign—was carried out in endemic areas of several districts and municipalities and D. D. T. was used extensively for spraying and dusting of rat-holes.

Small-pox—Showed a slight decrease, causing 8,236 deaths (2,427 in urban areas and 5,809 in rural areas) against 9,629 in previous year.

A large number of districts were infected, the incidence as usual having been highest in the month of April. Vaccination and re-vaccination of contacts was carried on as usual.

Fevers—This general heading comprises malaria, enteric fever, measles, relapsing fever, kala-azar, influenza, cerebrospinal fever, typhus fever, black water fever, and other fevers. The mortality from all fevers was 596,799 against 616,003 in the preceding year. Incidence of the more important of the fevers is discussed below :

(a) *Malaria*—Number of deaths registered under this head was 521,797 (24,204 in towns and 497,593 in rural areas) against 531,165 in 1948.

(b) *Relapsing fever*—One hundred and twenty-four deaths (39 in towns and 85 in rural areas) were registered under this head, against 125 in 1948.

(c) *Enteric fever*—Eight thousand, eight hundred and three deaths (3,598 in urban areas and 5,205 in rural) were registered under this head against 10,300 in 1948.

(d) *Kala-azar*—One hundred and seventy-eight deaths (99 in urban and 79 in rural areas) were registered under this head against 146 in 1948. These figures are under-reported as village chaukidars are unable to distinguish it from other fevers.

Kala-azar has a fairly widespread incidence in eastern U. P. Twelve mobile dispensaries and all fixed dispensaries were equipped for its investigation and treatment in the districts of Gorakhpur, Deoria, Banaras, Basti, Azamgarh, Ghazipur, Mirzapur, Jaunpur, Allahabad, Faizabad and Sultanpur. Some 18,272 persons were treated at them. The 12 travelling medical units surveyed over 1,132 villages with aggregate population of 491,682, and made blood examination of 17,245 cases of whom 11,900 were found positive.

(e) *Influenza*—was responsible for 1,140 deaths (551 in urban and 589 in rural areas) against 728 in 1948.

(f) *Cerebrospinal meningitis*—was responsible for 54 deaths (20 in urban and 34 in rural areas) against 78 in 1948.

Respiratory diseases—were responsible for 29,388 deaths (25,679 in urban and 3,709 in rural areas) against 31,412 in the previous year. Pneumonia and pulmonary tuberculosis are the main diseases in this group. Figures for them were as follows :

(a) *Pneumonia*—Claimed 13,375 deaths (13,035 in urban and 340 in rural areas) against 14,093 in 1948.

(b) *Tuberculosis*—(*Pulmonary*) claimed 3,693 deaths (3,076 in urban and 617 in rural areas) against 4,105 in 1948.

Tuberculosis of other forms, though not included under "respiratory diseases" for statistical purposes is discussed here to indicate the incidence of Tuberculosis at one place. Tubercule of bones was responsible for 268 deaths (110 in urban and 158 in rural areas) against 657 in 1948. Other tubercular diseases were responsible for 2,121 deaths (1,432 in urban and 589 in rural areas) against 2,379 in 1948.

Educational work on the cause and prevention of tuberculosis was undertaken at Tuberculosis Clinics, and by the U. P. Tuberculosis Association. Some 650 shows of a film trailer on this disease were given at cinema houses in the State. Some 16,500 posters and 25,000 pamphlets on Tuberculosis were supplied to various agencies for propaganda including 2,948 Junior Red Cross Groups. A film and magic lantern slides prepared by this department were shown by its touring unit. Health Visitors employed by U. P. Tuberculosis Association visited some 25,000 houses in Lucknow and located many cases whom they persuaded to visit the clinic for further examination and treatment.

B. C. G. Vaccination—In cooperation with International Tuberculosis Campaign the State Government started mass B. C. G. Vaccination in Lucknow and Kanpur. Up to the end of December 36,790 school children were tested for Montoux I of whom 19,270 were tested for Montoux II and 11,403 of the latter were vaccinated. In view of the demand for this vaccination from other parts of the State, six more teams were since provided which, at the moment of writing, are working in nine different towns.

Dysentery and diarrhoea were responsible for 14,005 deaths (11,017 in urban and 2,988 in rural areas) against 14,945 in 1948.

Beri-beri was responsible for 128 deaths (104 in urban and 24 in rural areas) against 89 in 1948.

Epidemic dropsy—From the month of September onwards large number of cases of this disease were reported from various parts of the State. Medical Officers of Health were asked to take larger number of samples under the Food and Drugs Act and to exercise in a greater measure their powers under the Municipalities Act for search and seizure of articles unfit for human consumption. *Argemone mexicana*, both seed and oil, has since been declared a poison under the Poisons Act, which has enabled greater control over their storage and sale. A drive for the uprooting of Argemone plant has also been started in cooperation with Agriculture, Rural Development and other departments.

Injuries were responsible for 8,834 deaths of which 745 were from suicide, 6,357 from wounds or accidents, 1,465 from snake-bites, 98 from rabies and 169 by wild animals. The corresponding figures for 1948 were 697 from suicide, 6,191 from wounds or accidents, 1,570 from snake-bites, 67 from rabies and 197 by wild animals.

Under the heading "*all other causes*" 73,265 deaths were recorded against 72,229 in 1948.

Deaths at child birth (i. e. maternal mortality) numbered 1,573 (1,319 in urban and 254 in rural areas) against 1,589 in 1948.

Leprosy was responsible for 391 deaths (135 in urban and 256 in rural areas) against 411 in 1948.

The State Leprosy Officer inspected and made recommendations for improvement of existing leper hospitals and asylums in the State and advised the staff on latest methods of treatment. Treatment by Sulphone drugs is being done at all the 15 Institutions in the State and results promise to be the encouraging. The Leprosy Officer visited Almora district and Jaunsar-Bawar area of Dehra Dun valley where the incidence of this disease is comparatively greater, and did educative work among the people.

Goitre is chronic in Jaunsar-Bawar area of Dehra Dun valley. A scheme of mass administration of iodine through salt consumed in the area was started in October, 1948. Results are being watched.

CHAPTER IV

Fairs and Festivals

Except for some imported cases of cholera at the Magh Mela, Allahabad, the annual fairs in the State passed off without any out-break of disease. Inoculation against cholera was made a condition of entry for the Devi Patan fair in Gonda district, the Sawan Jhula fair in Ayodhya, and for the journey to Badrinath and Kedarnath in Garhwal. As the result of this measure there was no outbreak of cholera at any of the two fairs nor any dissemination of disease to outside public, contrary to the experience at all previous fairs where a widespread epidemic always followed the disposal of the two fairs.

At the close of the year this department was busy drawing up arrangements for the twelve yearly Kumbh melas at Vrindaban and Hardwar. Subsequent experience in 1950 showed that except for some imported cases, both gatherings passed off without any out-break of the disease. The gathering was one lakh approximately at Vrindaban and ten lakhs at Hardwar. Besides the extra care taken to keep the general sanitation at Vrindaban and Hardwar in a superb state, inoculation against cholera was made a condition of entry for all visitors. The good results as noted here must be attributed to a very large extent to this protective measure [and the stress on the general cleanliness and annihilation of the flies.

CHAPTER V

Urban Sanitation

High prices, and shortage of labour and material continued to face municipal boards and made it difficult to maintain conservancy at proper level. The Town and Village Planner appointed by State Government prepared some schemes but little headway could be made for the same reason,

Conversion of Municipal wastes into agricultural compost is at present being undertaken in 183 urban and sub-urban centres. It is the aim eventually to bring all towns under this scheme. Shortage of land, quick and cheap means of transport, and customary rights of sweepers are still impeding progress at some places. The prejudice against handling and transport of this article is disappearing as its value as a manure is being realised.

CHAPTER VI

Rural Sanitation

Rural water supply—A large number of wells were improved or constructed under the normal scheme of Rural Development department. For hills there is a separate scheme of protection and augmentation of water supply. The State Government also offered interest-free loans for construction of wells, repayable in easy instalments over a period of five years, but this has not been availed of to any large extent.

Rural conservancy—Designs of septic tank privies were circulated to District Medical Officers of Health for popularising in villages. In view of the growing shortage of sweepers in villages, and also to serve as an object lesson, State Government authorized construction of such privies in Government buildings in rural areas.

Health Unit—The Health Unit at Pratapgarh continued to function. It covers an area of 67 square miles, with one small municipality and 123 villages, and population of 60,013 rural and 19,406 urban. While the staff paid general attention to all villages included in this area, it gave emphasis on certain selected villages where through its efforts and persuasion 344 manure pits were dug, 79 soakage pits were constructed, 39 bored-hole latrines were put up, 24 drinking water wells were protected from external contamination 55, old wells were repaired, 49 cattle-sheds were made sanitary, 304 excavations were filled up, and 98 ventilators were opened. Health leagues were formed in many of these villages for facilitating progress and maintenance of these works and continued to function satisfactorily.

CHAPTER VII

Malaria

No undue prevalence was reported except from Mathura district. Anti-malarial drugs were supplied for free distribution in certain parts of the State which were affected by floods.

Malaria surveys and investigations were undertaken at other places, and necessary recommendations were made. Treatment schemes with quinine-plasmoquine and cinchona plasmoquine were undertaken in 200 villages of Tarai and Bhabar Government estates of Naini Tal district. Quinine, Cinchona, Mepacrine and Paludrine were also distributed free to persons suffering from malaria, with satisfactory results.

Malaria Control Units—The following units worked in the State :

(1) One, in connection with Sarda Hydel constructions in Naini Tal Terai ;

(2) Two in hyper-endemic areas of Bijnor and Jhansi districts. Their main activity comprised indoor residual spraying with D. D. T. and distribution of paludrine prophylaxis and treatment.

(3) Two, in connection with colonization operations at Kichha in Naini Tal Terai and Ganga Khadar of Meerut district. Measures adopted in these places comprise residual spraying of dwellings, cattle sheds etc., and the use of Paludrine for prophylaxis and treatment. Anti-larval measures were undertaken as and when necessary. A considerable reduction of malaria in the area has been brought about as the result of these operations.

(4) One, in cooperation with the Indian Council of Medical Research at Kashipur of Naini Tal Terai. It began work in June, 1949 and combines research with active malaria control needed for the colonization area in which it is situated.

(5) One, in cooperation with the World Health Organization. Its area of operation also lies in Terai and Bhabar of Naini Tal district comprising 257 villages and population of 15,000 over an area of some 300 sq. miles. This too began work in June, 1949. Its main object is to aid in development of agriculture in an area which in spite of being highly fertile has so far remained uncultivated owing to ravages of malaria. Main control measure here is D. D. T. spraying with a single dose of 200 mg. per. sq. ft. or with repeated doses of smaller amounts.

As the result of its operations mosquito nuisance and incidence of malaria in the area has considerable gone down.

Sale of quinine and substitutes—This department is the agency for distribution to Government institutions, medical practitioners and chemists of quinine and quinine products released by the Government of India at reduced rates. A total of 3,965 lbs. of quinine sulphate, 1,697 lbs. of cinchona febrifuge, 45 lbs. of tota-quina, 23,33,000 tablets of quinine substitutes and 1,864 boxes of injectible quinine were issued through this source.

CHAPTER VIII

Maternity and Child Welfare

Mention was made in last years report of the transfer of control of Maternity and Child Welfare from Red Cross to State Government. Under the re-organisation which followed State Government provided 200 rural maternity centres and took over the training institutions and

administrative organization. Primary emphasis now is on training of indigenous dais. There are arrangements to train five such at each centre on payment to each of them of a stipend of Rs.15 to Rs.20 p. m. for the entire period of nine months training. It is proposed to supply a dais outfit free of charge to those who successfully complete the course.

Eight Health Visitors, nine Diplomaed and 12 certificated Midwives and six Dais qualified from the Health School during the year, and approximately similar number of new candidates were admitted.

CHAPTER IX

Health of the School child

Medical inspection of school children—was conducted by wholetime School Health Officers in 14 larger towns and by Municipal Medical Officers of Health in others. Examinations were of two types detailed for higher Secondary Schools and less detailed for primary institutions.

Examination on detailed lines were conducted in 398 out of 729 institutions specified for the purpose, and 64,377 scholars out of 258,618 on roll were seen. For less detailed examinations 2,952 out of 14,133 primary schools were visited, and 182,489 scholars out of 1,145,797 on roll were seen and advised.

The following is a table of the main defects noticed in urban and rural group of scholars :

Nature of defect				Percentage of cases found defective			
				Urban		Rural	
				1949	1948	1949	1948
1. Poor nutrition	15.1	13.8	14.0	17.5
2. Teeth and gums	7.8	8.2	11.3	8.8
3. Pyorrhoea	2.2	2.4	3.7	2.2
4. Tonsil and adenoids	8.5	11.8	7.9	5.4
5. Mouth breathing	1.2	1.1	1.2	2.0
6. Other glandular enlargements	1.2	4.3	0.3	5.6
7. Diseases of eyelids	4.7	3.7	2.3	7.4
8. Defective vision	6.9	7.6	2.2	5.5
9. Enlarged spleen	0.2	0.5	6.4	5.5
10. Skin diseases	1.6	3.9	10.6	6.0
Boys with one defect only	23.9	22.6	10.3	29.4
Boys with more than one defect	12.6	14.5	3.0	9.1

Correction of defects—The 14 school clinics treated 38,737 new and 57,602 old cases, including those seen by honorary ophthalmologists and dentists attached to them. Cases requiring more prolonged treatment were, as usual, referred to district hospitals. Some 698 boys were supplied milk free, and 445 pairs of spectacles were issued free of charge to those in indigent circumstances. Guardians of boys were encouraged to visit clinics where special needs of their wards were discussed.

CHAPTER X

Health Education

Health education was as usual undertaken by Officers of Health Publicity Bureau of the Department and by District, Municipal and School Health Officers, and to a small extent by Medical Officers of dispensaries. Approximately 38,900 posters and 307,700 leaflets and booklets on various health subjects were supplied to various agencies for this purpose. Articles were contributed to the press and to departmental journals (Agriculture, Co-operative and Publicity). Talks were given on the Radio and from microphone stations. Health films were shown at road-side villages. Health exhibitions were organized at many places. Special emphasis was laid on Tuberculosis. Lectures were also given on the prevention of blindness in schools, and to pupil teachers in Training Colleges, Normal Schools and Junior Red Cross Groups. Field staff of other departments were given training in first-aid, elementary hygiene and sanitation. A small pamphlet on personal hygiene to be observed during pilgrimages was printed and supplied to those proceeding to Badrinath and Kedarnath in Garhwal.

Red Cross—Junior Red Cross as a health education activity was as usual undertaken among young school children. It aims at the inoculation of health habits in young persons, and development of the spirit of help in epidemics and disease. In the year 1949 there were 3,781 such groups, with 79,303 children as members mostly in rural areas against 3,412 groups with 80,673 members in 1948. The Juniors did health education in their villages by preparing posters, charts and models; and by holding health talks, etc. They also gave some help to Public Health field staff by distributing medicines in infected areas and by undertaking anti-malaria measures in and around their schools and rendering first-aid. One hundred and eighteen first-aid outfits were distributed to Junior Red Cross Groups which showed particular keenness for the work expected of them.

Short refresher courses on Junior Red Cross were organized for officers of Education Department as it is mainly through them that this movement is developed.

St. John Ambulance Association—Over, 5,230 persons were trained and awarded certificates in various courses of the Association against 4,568 in the preceding year. In addition 3,010 certificates were granted to school children in First-aid, Hygiene and Sanitation against 3,353 in 1948.

The number of Ambulance divisions at the close of the year rose to 40 (an increase of three over previous year), and the total strength to 1,054. The number of Nursing divisions at the end of the year was 9 against 6 in the preceding year, with total strength of 212, and that of cadet divisions of boys and girls was 79, with a membership of 1,880 against 60 in 1948.

First-aid posts were established at various fairs in the State. Members of St. John Ambulance Corps of Allahabad and Kanpur visited flood affected areas of their districts for first-aid relief work generally, and the distribution of medicines.

CHAPTER XI

Public Health Administration

For lack of doctors it has not been possible to fill all posts created in the previous years for control of epidemics, for mechanised units, malaria and kala-azar units. Measures have already been taken to increase the supply of doctors by increasing the number of admission to the Medical Colleges.

Budget grants—There has been increase in budget allotment consistently with increase in Public Health activities. The revised allotment for the year 1949-50 stood at Rs. 1,09,18,500 including that for Public Health Engineering Branch and for grants for sanitary works. Allotment for the year 1950-51 is Rs. 1,11,34,000.

CHAPTER XII

Vaccination

There are 446 towns in the Uttar Pradesh for purposes of recording vital statistics, of which vaccination was compulsory in 251. Taking the figures for all towns 774,155 persons were vaccinated and re-vaccinated in 1949 against 556,829 in the preceding year. In rural areas 1,730,303 persons were vaccinated or re-vaccinated against 1,706,674 in 1948.

Approximate number of children under one year of age available for vaccination in the year 1949 was 224,707 in towns and 997,807 in rural districts, of whom 142,673 and 616,857 respectively or 63.49 and 61.82 per cent, were vaccinated. Number vaccinated in age group 1—5 year was 60,761 in towns and 347,505 in rural districts.

Number of vaccinations performed in 1949 was 2,515,238 (1,347,317 primary and 1,167,921 re-vaccinations) against 2,279,527 (1,337,882 primary and 941,645 re-vaccinations) in 1948. Percentage of successful vaccination in which results were known was 97.54 for primary operation and 76.68 for re-vaccination. No case of encephalitis following vaccinations was reported.

Government Vaccine Depot—The amount of vaccine lymph manufactured was 247,557 grammes against 283,235 grammes in 1948. Quantity issued during the same period was 262,733 grammes against 257,198 in the previous year.

CHAPTER XIII

Other Public Health Services

Hygiene Institute conducted courses and examinations for Chief Sanitary Inspectors, Sanitary Inspectors and Health Visitors, the course in Hygiene for M. B., B. S. of Lucknow University, departmental examination in sanitary law for medical officers of health, and a course in Hygiene for Medical Officers attending post-graduate course. It examined 865 samples of stools from suspected cases of cholera referred from outlying districts and towns; 297 samples of disinfectants, factory effluents, etc., 57 samples of food-stuffs and 750 of water. It also carried out control check over local analysis of public water supplies. It investigated the cause of increasing brackishness of some wells in Mirzapur and Ballia districts, the prevalence of Ogawa and Inaba types of *V. Cholerae* in the State and an outbreak of infective jaundice in a district jail.

Manufacture of cholera vaccine—Over 2,681,127 c. cs. of anti-cholera vaccine were manufactured against 1,992,400 in 1948.

Nutrition—The newly established Nutrition section in the department made diet surveys in some boarding houses and among 30 families residing in refugee camps. It also investigated nutritional condition of 2,186 school children in various areas, issued 20 short articles and two pamphlets on Food and Nutrition, put up exhibitions and gave lectures to various social and welfare workers.

The Provincial Nutrition Advisory Committee was reorganized and will henceforth deal with all nutritional matters inter-related with other departments like Agriculture, Animal Husbandry, Fisheries, Food and Education.

Milk feeding schemes—Subsidised by the States Government continued to operate in primary schools of Lucknow and Kanpur Cities. In Lucknow over 4,600 boys were admitted to this scheme, Milk worth Rs.32,044 was distributed against which Government provided Rs.24,033. The balance was to be paid by the boys except those in indigent circumstances and accordingly Rs.5,804 was paid by the students and Rs.2,206 by the Municipal Board.

Multi-vitamin tablets were distributed free to inmates of refugee camps and lactating mothers attending maternity centres whose nutritional state required to be fortified.

Food adulteration—The U. P. Prevention of Food Adulteration Act was in force in most of the municipal notified and town areas; in all cantonments and in a large number of villages. Number of food samples submitted to the Public Analyst for analysis was 20,567

against 14,886 in the preceding year. The following was the result of analysis :

Food samples	No. analysed in 1949	Percentage of adulteration	
		1949	1948
1. Ghee and butter	3,690	31.69	31.45
2. Milk	7,390	41.03	43.16
3. Flour and cereals	750	44.94	59.61
4. Edible oils	4,036	49.27	30.58
5. Hydrogenated vegetable fats ..	894	44.07	..
6. Miscellaneous	2,180	29.00	31.06

Number of cases sent up for prosecution was 7,376 of whom 5,708 resulted in conviction: Average fine inflicted was as follows :

In cases tried by stipendiary Magistrates—

			Rs. a.
(a) For first offence	73 14
(b) For subsequent offence	177 0

In cases tried by Honorary Magistrates—

(a) For first offence	33 8
(b) For subsequent offence	219 0

In 12 cases imprisonment ranging from one day to three months was imposed. A sum of Rs.67,810 as additional fine was realised from cases resulting in prosecution—this to cover the cost of analysis.

Samples of hydrogenated vegetable fats were analysed mainly to test whether 5 per cent. sesame oil required to be added to it by Vegetable Oil Products Control Order, 1947, has in fact been added. Such addition is compulsory as a check against its use as an adulterant, as this amount of sesame oil, if added, will even in admixture, show a pink colour when tested by the analyst.

Drugs standard control—The provisions of the Drugs Act were applied in increasing measure. Out of 51 applications submitted during the year for licence to manufacture pharmaceuticals and biologicals, 25 were granted, 6 were rejected and 20 were under considerations at the close of the year. Out of 3,021 applications for licences to sell drugs, 57 were rejected.

Drugs analysis not requiring biological assay were undertaken by Public Analyst for the State. Out of 336 samples submitted to him 133 were found to be sub-standard. Thirty-eight prosecutions were instituted for sale or manufacture of drugs without licence or the sale of sub-standard drugs.

CHAPTER XIV

Industrial Hygiene

Municipal Medical Officers of Health continued to act as Inspectors of Factories, and to advise on health, safety and working condition of operatives.

Improper disposal of effluent from sugar factories, distilleries and tanneries has caused nuisance in some places. A committee has been appointed by State Government to advise on measures required to improve matters.

For implementation of Employees' State Insurance Scheme it was necessary to ascertain exact concentration of employees residing in industrial towns of the State and medical facilities already available to them at those places. The officer appointed by Government to make a survey for this purpose completed the work, and on the basis of his finding it is proposed to establish thirteen dispensaries employing 41 medical officers in Kanpur where the scheme is to be started in the first instance.

Refugee relief—Medical and sanitary arrangements at refugee camps were continued on lines noted in previous year's report. The larger settlements have one or more midwife and a small dispensary besides conservancy and sanitation staff. Smaller camps are visited by doctors of nearest Government or District Board dispensary, and there are arrangements for removal of serious cases to the hospital.

A. P. BAJPAI, CAPT.,

Director of Medical and Health Services,

Uttar Pradesh.

PATWA DANGAR :

June 20, 1950.

CHAPTER XIV

The first section of this chapter is devoted to a discussion of the various methods of determining the relative humidity of a gas mixture.

The second section is devoted to a discussion of the various methods of determining the dew point of a gas mixture.

The third section is devoted to a discussion of the various methods of determining the partial pressure of a gas in a mixture.

The fourth section is devoted to a discussion of the various methods of determining the volume fraction of a gas in a mixture.

The fifth section is devoted to a discussion of the various methods of determining the mass fraction of a gas in a mixture.

The sixth section is devoted to a discussion of the various methods of determining the mole fraction of a gas in a mixture.
