The Eighty-fourth Annual Report of the Director of Medical and Health Services (Health Branch), Uttar Pradesh, for the year ending 31st December 1951

CHAPTER I

Meteorology

The chief meteorological feature of the year was the late arrival of the monsoon over the State. The rainfall during the monsoon period was 25 per cent in defect, and the same was the case in respect of total rainfall.

Notes for specific seasons of the year are as follows :

Winter period (January-February)—The total rainfall during the period was 20 per cent in excess over East U. P. and 30 per cent in defect over West. Both mean monthly maximum and minimum temperatures were nearly normal during the period. Humidities were normal in January and 13 per cent below normal in February. Cloud amounts were 14 per cent above normal in January and about 40 per cent below normal in February.

Hot weather period (March—May)—The chief feature of this period was the occurrence of wide spread-thunder-showers over the State during periods 25th to 26th March and 1st to 3rd April. Isolated thunder-showers occurred during the rest of the period. Total rainfall was normal in East U. P. and 62 per cent above normal in West. Mean monthly maximum temperatures were normal in March and May and about 3°F. below normal in April. Mean monthly minimum temperatures were generally normal during the period.

Humidities were normal. Cloud amounts were normal in April and 100 per cent and 13 per cent above normal in March and May respectively.

Monsoon period (June—September)—Thunder storm activity increased during the month of June and wide-spread thunder-showers were experienced on the 15th and 16th of this month. The monsoon advanced over East U. P. on the 30th June and gave wide-spread rain over the whole State up to 4th July. Thereafter scattered showers were experienced. The monsoon was active from 1st to the 25th August and again from 6th to 14th September. Total rainfall during season was almost normal in Agra, Allahabad, Jhansi and Banaras divisions and in slight to moderate defect elsewhere in the State. The mean monthly maximum temperatures were 2 to 4°F above normal in June and July and normal in August and September. The mean monthly minimum temperatures were generally normal. Humidities were normal. Cloud amounts were also normal except for July when they were 18 per cent below normal.

Retreating monsoon period (October—December)—Weather was dry during the period except for a wet spell on 25th and 26th November mainly over the western districts. The total rainfall during this period was 24 per cent in defect. Mean monthly maximum temperatures and minimum temperatures were 3 to 6°F above normal in October and November and normal in December. Humidities were normal. Cloud amounts were normal in October, 50 per cent above normal in November and about 70 per cent below normal in December.

CHAPTER II

Vital Statistics

The following are chief statistical data for the year 1951 :

(a) *Comparison of U. P. figures with those of preceding year*

	Total		Rural		Urban	
	1951	1950	1951	1950	1951	1950
Mid-year estimated population.	63,444,718	62,187,589	54,715,072	53,510,294	8,729,634	8,677,295
Total, births..	1,252,028	1,308,645	949,002	1,036,907	303,026	271,738
Birth-rate per mille.	19·73	21·04	17·34	19·38	34·71	31·32
Total, deaths..	726,410	839,176	586,971	675,750	139,439	163,426
Death-rate per mille.	11·45	13·49	10·73	12·63	15·97	18·83
Infantile deaths	161,934	136,438	122,695	95,483	39,239	40,955
Infant death-rate per thousand births.	129·34	104·26	129·29	92·08	129·49	150·72

b) Comparison by communities in U. P.

	Birth-rate per mille		Death rate per mille	
	1951	1950	1951	1950
Hindus	18.09	21.45	10.49	13.79
Muslims	28.65	21.20	16.64	13.49
Europeans and Anglo-Indians } Indian Christians .. } ..	19.91	{ 2.56 { 14.79	10.80	{ 1.63 { 8.55
Other classes	48.08	2.26	28.72	0.95

(c) Comparison of birth rate and death-rate of U. P. with those of other States for the year 1951

	Birth-rate per mille	Death-rate per mille	Rate of natural increase	Infanty mortality per thous- and births
1. Uttar Pradesh	19.73	11.45	8.28	129.34
2. West Bengal	21.90	13.00	8.90	109.50
3. Assam	12.86	6.47	6.39	..
4. Bombay	34.03	15.91	18.12	117.17
5. Madras	27.55	16.20	11.35	118.60
6. Madhya Pradesh	33.53	24.84	8.69	193.97
7. Punjab (India)	39.91	16.60	23.31	123.41

The birth-rate of 19.73 for the State for the year was lower than that of the previous year (21.04) and the mean of the previous five years (22.35). The death-rate of 11.45 was lower than that of previous year 13.49 and also lower than the mean of previous five years (14.38). These lower rates cannot be accepted in their entirety. Because of a change in the system of reporting in rural areas, there have been many omissions in the figures returned from villages and as they constitute the major part of our figures, the provincial rates have been unduly lowered.

From 1st January, 1951, the system of reporting and recording of vital statistics in rural areas of the State has been changed. Under rules framed under the Gaon Panchayats Act, it has been made obligatory for the head of family to report all events to the President of Gaon Panchayats within three days. The records are made by the latter and a monthly statement rendered to the District Medical Officer of Health. As a check against omissions, village chaukidars also report births and deaths to Presidents of Panchayats. It will take time for the new system to become established in villages.

CHAPTER III

State of Health in the State and History of Chief Diseases

Cholera had a lower incidence, there having been 5,687 deaths (300 in towns and 5,387 in rural areas) against 6,014 in the previous year. First cases of the year were reported from the districts of Bahraich and Jaunpur in the month of March. The disease, continued in a mild form till the end of November, 1951. Over 9,81,380 anti-cholera inoculations were given.

Plague had a slight higher incidence, total number of deaths being 12,959 (441 in towns and 12,518 in rural areas) against 10,231 in 1950. The districts of Dehra Dun, Saharanpur, Farrukhabad, Kanpur, Fatehpur, Allahabad, Hamirpur, Banda, Banaras, Mirzapur, Jaunpur, Gorakhpur, Deoria, Basti, Azamgarh, Lucknow, Unnao, Rae Bareilly, Sitapur, Hardoi, Kheri, Faizabad, Gonda, Bahraich, Sultanpur, Pratapgarh, and Bara Banki were affected to some extent or the other. The disease was at its peak in March but rapidly declined thereafter. It re-appeared in the month of September and continued till the end of the year.

Over 1,208,190 anti-plague inoculations were performed. Eleven temporary plague hospitals with 134 beds were put up in the districts of Allahabad, Basti, Gorakhpur, Gonda, Hardoi, Kanpur, Mirzapur and Sitapur. Four hundred and forty-seven cases were admitted to them, of whom 413 were discharged as cured.

As a measure of control, D.D.T. was extensively used for spraying and dusting of rat-holes and for disinfection of infected houses.

Small-pox showed a higher incidence, causing 49,195 deaths (2,017 in urban areas and 47,178 in rural areas) against 27,148 in previous year. The districts of Gorakhpur, Azamgarh, Basti, Deoria, Jaunpur, and Banaras reported highest incidence. Vaccination and re-vaccination of contacts was done. Compulsory vaccination was enforced under the Epidemic Diseases Act in certain places.

Fevers—This general heading comprises malaria, enteric fevers, measles, relapsing fever, kala-azar, influenza, cerebro-spinal fever, typhus fever, black water fever, and other fevers. The mortality from all fevers was 472,552 against 667,945 in the preceding year. Incidence of the more important of the fevers is discussed below :

(a) *Malaria*—Number of deaths registered under this head was 194,720 (17,947 in towns and 176,773 in rural areas) against 583,340 in 1950.

(b) *Relapsing fever*—Six thousand three hundred and four deaths (25 in towns and 6,279 in rural areas) were registered under this head against 271 in 1950.

(c) *Enteric fever*—Forty thousand two hundred and ninety-two deaths (3,173 in urban and 37,119 in rural areas) were registered under this head, against 10,878 in 1950.

(d) *Kala-azar*—Three thousand and forty-five deaths (93 in urban and 2,952 in rural areas) were registered under this head against 181 in 1950.

Kala-azar has a fairly widespread incidence in eastern U. P. Ten travelling dispensaries functioned in the districts of Gorakhpur, Basti, Azamgarh, Banaras, Jaunpur and Allahabad. They surveyed 994 villages with aggregate population of 279,450 and treated 14,124 persons.

(e) *Influenza* was responsible for 4,651 deaths (258 in urban and 4,393 in rural areas) against 924 in 1950.

(f) *Cerebro-spinal meningitis* was responsible for 998 deaths (44 in urban and 954 in rural areas) against 63 in 1950.

Respiratory diseases were responsible for 51,598 deaths (24,233 in urban and 27,365 in rural areas) against 32,675 in the previous year. Pneumonia and pulmonary tuberculosis are the main diseases in this group. Figures for them were as follows :

(a) *Pneumonia* claimed 23,144 deaths (12,915 in urban and 10,229 in rural areas) against 16,510 in 1950.

(b) *Tuberculosis (pulmonary)* claimed 7,988 deaths (2,778 in urban and 5,210 in rural areas) against 3,674 in 1950.

Tuberculosis of other forms, though not included under "*Respiratory diseases*" for statistical purposes is discussed here to indicate the incidence of tuberculosis generally. Tubercle of bones was responsible for 910 deaths (342 in urban and 568 in rural areas) against 412 in 1950. Other tubercular diseases were responsible for 4,101 deaths (1,720 in urban and 2,381 in rural areas) against 2,088 in 1950.

Tuberculosis seal sales campaign—The second campaign sponsored by the Tuberculosis Association of India was also observed in Uttar Pradesh.

The first campaign which closed on 30th September, 1951 brought in Rs.2,33,834 out of which a sum of Rs.1,34,000 has already been distributed for approved tuberculosis projects sponsored by local authorities.

B.C.G. Vaccination—Nine teams worked during the year. Over 651,100 person were tested, of whom 167,291 were vaccinated. The cities of Banaras, Firozabad, Kanpur, Meerut, Shahjahanpur, Jhansi, Mathura, Rampur, Aligarh, Faizabad, Tanda, Hathras, Saharanpur, Ghaziabad, Gorakhpur, Unnao, Hapur, Etawah, Roorkee and Devprayag and the rural parts of Tehri-Garhwal District were covered. Mass vaccination was done in rural areas of Meerut District where 50 per cent of the population in one tahsil was tested. Public response was encouraging.

Dysentery and diarrhoea were responsible for 30,201 deaths (9,277 in urban and 20,924 in rural areas) against 12,198 in 1950.

Beri-beri was responsible for 215 deaths (55 in urban and 160 in rural areas) against 156 in 1950.

Epidemic dropsy had a considerably lower incidence as the result of measures taken in the previous year, the chief being the declaration of argemone mexicana as a poison. Great restrictions on use, storage and transport of this article, thereby placed upon it and the heavier penalties for infringement of the regulations, reduced its use as adulterant of mustard. The drive for uprooting of argemone plant was repeated and had some educative value.

Injuries were responsible for 11,583 deaths, of which 1,275 were from suicide, 7,517 from wounds or accidents, 2,041 from snake-bites, 355 from rabies and 395 from wild animals. The corresponding figures for 1950 were 701 from suicide, 5,391 from wounds or accidents, 1,189 from snake-bites, 124 from rabies and 134 from wild animals.

Under the heading "All other causes" 92,635 deaths were recorded against 75,426 in 1950.

Deaths at child-birth (i.e. maternal mortality) numbered 3,659 (1,025 in urban and 2,634 in rural areas) against 1,271 in 1950.

Leprosy was responsible for 509 deaths (116 in urban and 393 in rural areas) against 325 in 1950. The provincial branch of the Hind Kusht Nivarak Sangh maintained two clinics for treatment of lepers at the district hospitals at Kanpur and Banaras. The Leprosy Unit established by the State Government for treatment and survey in Gorakhpur-Basti-Bahraich area of U. P. also worked during the year.

Goitre is chronic in Jaunsar-Bawar area of Dehra Dun valley. A scheme of mass administration of iodine through salt consumed in the area was started in October, 1948, and has been continued.

CHAPTER IV

Fairs and Festivals

The annual fairs in the State passed off without any outbreak of disease. Inoculation against cholera was made a condition of entry into the Savan Jhula and Ram Naumi Fairs at Ajodhya, Devi Patan Fair in Gonda District, Syed Salar Fair in Bahraich District and the pilgrim route to Badrinath and Kedarnath. The usual arrangements were also made at these fairs, for maintaining general sanitation, protection of water and food supplies.

CHAPTER V

Urban Sanitation

A directive was issued by the State Government that any housing scheme comprising 12 or more houses or covering two acres or more of land should be referred by local bodies to the State Town and Village Planner for advice before being sanctioned.

Conversion of municipal wastes into agricultural compost—Eleven members of the sanitary staff of municipal towns were trained in compost making, and 23 new compost centres were opened, raising the number of such centres to 241 by 31st March, 1951. Over 338,400 tons of compost manure was prepared, and nearly the whole of it was sold out.

Subsidized sales out of it were limited to 8,155 tons only mostly for new centres. Some composting was also done in fairs.

Utilization of slaughter-house wastes—Kanpur Municipality worked this scheme, and produced approximately 300 maunds of blood meal up to 31st March, 1951. The entire quantity was sold to farmers locally, as well as to those in other places at the rate of Rs. 7 per maund. Good reports have been received on its performance.

Expenditure by municipal boards on public health—The total income of municipal boards in U. P. from all sources including Government grants during the year 1950-51 was Rs. 8,90,86,001 out of which they incurred the following expenditure on items of Public Health :

					Rs.
1.	Public Health staff (including all Public Health establishment charges)	93,21,575
2.	Registration of births and deaths	1,13,563
3.	Maternity and Child Welfare..	2,44,979
4.	Vaccination	1,88,619
5.	Control of epidemics, excluding hospitals, and dispensaries and infectious diseases hospitals, but including cost of quinine distributed	4,22,498
6.	Fairs and markets	2,01,045
7.	Slaughter-houses	1,80,066
8.	Infectious Diseases hospitals	3,41,320
9.	Conservancy	{	Capital	..	20,78,309
		{	Ordinary	..	40,99,253
10.	Drainage	{	Capital	..	14,67,309
		{	Ordinary	..	10,90,270
11.	Water Supply	{	Capital	..	21,22,114
		{	Ordinary	..	39,32,796
12.	Control of food adulteration	29,152
13.	Town improvement, including paving of streets, removing of obstructions etc.	21,68,194
14.	Health Education	4,715
15.	Miscellaneous	6,82,541
				Total	2,86,88,881

CHAPTER VI

Rural Sanitation

Public Health part of the district planning schemes took shape in the later part of the year when according to the felt needs of each area District Planning Committees prepared the district plans and targets. Out of several items of Public Health included in the plans, schemes of "saturated small-pox" vaccination and anti-malaria measures received greater attention. The object of the saturated small-pox scheme is to get vaccinations in villages done by the Secretaries of Gaon Panchayats or school teachers who live and work in the village and as the result of close and continuous contact, can vaccinate a greater number of persons than the circle vaccinator who can visit each village only once during the season. These village officials are being trained in the technique of vaccination.

In the pilot project areas coming under the development plans, Health work was undertaken on more intensive lines and was being associated with intensified activities on other items touching village life, showing promise of greater acceptance.

Under the Planning Department's Scheme, guidance to villagers on routine Public Health as well as other subjects touching village life is to be given by village level workers. One such has been appointed to a group of five villages. These multi-purpose workers were trained in Public Health as well as other subjects like Agriculture, Veterinary and Co-operative for which they are required to work.

In blocks where brick-kilns were started in connexion with the sinking of irrigation wells, or as a co-operative enterprise, villagers were encouraged to make their *kachcha* houses *pakka*, and cement and iron were released in favour of such villagers. Some ventilators were provided in village houses. Improvement of drains and lanes within residential portion and construction of soakage pits, were undertaken in some places, for which technical guidance was provided by District Health Staff.

In some districts funds were made available for the provision of safe drinking water. The allotments were mostly utilized on projects for which some contribution was available locally. Health education was undertaken at local fairs.

The Health Unit at Pratapgarh continued to function. It covers an area of 67 square miles, with one small municipality, two town areas and 123 villages, and population of 60,013 rural and 19,405 urban. A winter health education drive was launched for school children of classes VI to X. Lectures and demonstrations were arranged on the state of Nation's health, nutrition and dietetics, epidemic diseases, personal hygiene and general sanitation. The museum attached to the Health Unit was utilized for the purpose. About 1,500 boys and girls went through the course, which must have left a preliminary health impression on their minds.

A number of wells were improved and repaired ; bored-hole latrines were made and other minor sanitary improvements effected in villages of the Unit.

Maternity service in the area is well organized. 1,538 confinements were attended by the staff out of 2,654. Thirteen indigenous dais were trained.

An intensive drive was launched to vaccinate the maximum number of children born in the previous year, and as a result of this 80 per cent of the children under one year of age were vaccinated.

The Health Unit is a training centre for workers interested in the problems of rural health. During the course of the year, eleven health visitors and six sanitary inspectors besides a large number of co-operative supervisors, panchayat secretaries and school teachers were trained in practical aspects of health and hygiene.

Expenditure by district boards on public health—Total receipts of district boards in this State from all sources, including Government grants, during the year 1950-51 were Rs.6,47,52,522 out of which expenditure on Public Health was as follows :

	Rs.
1. Public Health Staff including all establishment charges on Public Health	4,94,377
2. Maternity and Child Welfare	15,566
3. Vaccination	7,10,601
4. Control of epidemics, excluding hospital dispensaries and infectious diseases hospitals but including cost of quinine ..	29,635
5. Fairs and markets	90,103
6. Infectious diseases hospitals	3,528
7. Conservancy { Capital	1,261
{ Ordinary	5,118
8. Drainage { Capital	3,600
{ Ordinary	1,545
9. Water Supply { Capital	74,900
{ Ordinary	13,801
10. Town or village improvement (such as widening and paving of streets and removal of obstructions)	5,257
11. Health Education	3,996
12. Miscellaneous items	24,901
Total	14,78,189

CHAPTER VII

Malaria

Malaria conditions were, on the whole, normal. Only three districts, viz. Saharanpur, Shahjahanpur and Kheri reported epidemic outbreaks. A liberal supply of paludrine hydrochloride tablets was made for free distribution in affected areas. Malaria surveys and investigations were undertaken at 12 places, and control measures were advised. Blood films examination for malaria and identification of mosquitoes and other insects of medical importance was carried out in the Provincial Malaria Laboratory. Lectures in recent advances in Malaria,

practical demonstrations and field training were given to 16 officers of U. P. and Subordinate Public Health Services. Lectures and demonstrations on Malaria and its control were given to officers under training for the Indian Administrative, Provincial Civil, Forest and Engineering services.

Malaria Control Units—The following worked in the State during the year :

(1) One in connection with Sarda Hydel constructions in Naini Tal Tarai.

(2) Two in hyper-endemic areas of Bijnor and Jhansi districts. Their main activity comprised indoor residual spraying with D.D.T. and distribution of Paludrine for prophylaxis and treatment.

As the result of these measures, the incidence of malaria in the operational zones in these units remained low.

(3) Two in connection with colonization operations at Kichha in Naini Tal Tarai and Ganga Khadar of Meerut District. Main control measures in this scheme were D.D.T. residual indoor spraying of dwellings, cattle-sheds, etc. and the use of Paludrine for prophylaxis and treatment.

A considerable reduction of malaria in the areas has been brought about as the result of these operations. New population has been attracted to the area and the area under cultivation has increased considerably.

(4) One, in co-operation with the Indian Council of Medical Research at Kashipur of Naini Tal Tarai. It began work in June, 1949 and combines research with active malaria control needed for the colonization area in which it is situated. Its method consisted chiefly of D.D.T. residual indoor spraying and prophylactic and curative use of Paludrine.

Here too, much population has been attracted to the area and the area under cultivation has increased.

(5) One in co-operation with the World Health Organization in Terai and Bhabar of Naini Tal District. This too began work in June, 1949, its main object being aid in development of agriculture in an area, which, in spite of being highly fertile, has remained uncultivated owing to ravages of Malaria. The area under this unit at the commencement of this scheme was 264 square miles, spread over 162 villages with a population of approximately 15,000 persons. The area of operations has since increased to 15,000 square miles, with over 526 villages covering some 80,000 persons. Main control measures here is residual D.D.T. indoor spraying with a single dose of 200 mg. per square feet or with repeated doses of smaller amounts, but with no Paludrine prophylaxis.

As the result of its operations incidence of Malaria in this area also has considerably gone down.

Sale of quinine and substitutes—This department is the agency for distribution to Government institutions, medical practitioners and chemists of quinine and quinine products released by the Government of India at reduced rates. A total of 3,325 lb. of quinine sulphate ; 760 lb. cinchona febrifuge ; 151 lb. of tota-quina ; 3,152,000 tablets of quinine substitutes and 674 boxes of injectible quinine were issued through this source.

CHAPTER VIII

Maternity and Child Welfare

Nearly all rural maternity centres functioned during the year. There are provisions for training up to five indigenous dais at each centre, but there were not enough candidates in spite of the offer of a stipend, and a total of 249 or less than one-third of the full capacity were only trained. All those that qualified were supplied a dai's outfit. For sometime the question of linking rural maternity centres to dispensaries has been under consideration. The ideal for the purpose would be the location of the centre within dispensary building but as enough space for the purpose is not usually available, orders were issued during the year that where a centre may be situated within a short distance of dispensary, it should be under the professional control of the dispensary doctor. In all such cases the doctor when required by the midwife has to attend free of charge on serious cases coming to the centre or at the home of the people. The midwife is required to help dispensary doctor in the examination of women patients needing internal examination and to conduct confinements at the dispensary if facilities for the same exist.

The Silver Jubilee Health School continued to train Health Visitors and Midwives. Five health visitors, 13 diplomaed and 15 cetificated midwives qualified from the institutions during the year.

The UNICEF during the year supplied useful articles such as equipment sets and maternity bags to the larger maternity centres in the State.

CHAPTER IX

Health of the School Child

Medical inspection of school children was conducted by whole-time School Health Officers in 14 larger towns and by Municipal Medical Officers of Health in others. Examinations were of two types : detailed for Higher Secondary Schools and less detailed for Primary institutions.

Examination on detailed lines were conducted in 449 out of 962 institutions specified for the purpose, and 78,437 scholars out of 3,17,603 on roll were seen. For less detailed examinations 3,191 out of 36,013 Primary schools were visited, and 227,071 scholars out of 2,151,988 on roll were seen and advised.

The following is a table of the main defects noticed in urban and rural groups of scholars :

Nature of defect	Percentage of cases found defective			
	Urban		Rural	
	1951	1950	1951	1950
1. Poor nutrition	16.78	21.1	20.45	11.0
2. Teeth and gums	9.25	9.1	7.7	8.6
3. Pyorrhoea	2.1	2.6	2.6	2.2
4. Tonsil and adenoids	8.6	10.8	5.5	4.2
5. Mouth breathing	1.5	2.0	0.7	1.11
6. Other glandular enlargements ..	0.9	1.6	2.2	0.9
7. Diseases of eyelids	4.5	5.1	2.2	1.8
8. Defective vision	8.3	7.0	3.7	2.7
9. Enlarged spleen	0.2	0.3	1.9	1.6
10. Skin diseases	1.7	2.2	4.2	4.3
Boys with one defect only ..	22.5	39.8	18.8	16.7
Boys with more than one defect ..	11.0	14.3	4.1	6.1

Correction of defects—The 14 school clinics treated 31,105 new and 39,419 old cases, including those seen by honorary ophthalmologists and dentists attached to them. Cases requiring prolonged treatment were, as usual, referred to district hospitals. Some 175 boys in indigent circumstances were supplied milk free, and 334 were supplied pairs of spectacles free of charge. Guardians were encouraged to visit the school clinics where individual needs of those boys were discussed. School Health Officers also gave lectures on various health subjects including first-aid, sanitation and personal hygiene. Special stress was laid on nutrition, the prevention of blindness, tuberculosis and B.C.G. vaccination.

CHAPTER X

Health Education

Health education in their respective area was undertaken by District, Municipal and School Health Officers, and to a small extent by Medical Officers of dispensaries. In the larger fairs and gatherings the work was undertaken by Health Publicity Bureau which also prepared and supplied material to local officers. Cinema films were sent out to 26 districts for screening

in local cinemas. The sets of Public Health models were in constant circulation. Public Health exhibitions were organized at 65 places. Training in Public Health subjects, first-aid and sanitation was imparted to workers in various departments. Approximately 42,800 illustrated posters and 492,923 leaflets and booklets on health subjects were issued to various agencies doing health education.

Junior Red Cross—In the year 1951, there were 4,645 groups, with a membership of 1,54,651 (including 5,324 girls) against 4,064 groups with 1,44,549 (including 6,669 girls) in the preceding year. The groups carried on health propaganda, prepared posters, charts and other health education material, and helped the District Health Staff in anti-epidemic, sanitation and anti-malaria work in and around their schools. One hundred and thirty first-aid medicine chests of the value of Rs.1,496 were distributed to the most active groups in 29 districts for practical training of the Juniors.

St. John Ambulance Association—Over 5,810 persons were trained in various courses of the Association against 5,451 in the year 1950. Over 2,220 school children qualified in the Mackenzie School Course in first-aid, hygiene and sanitation, against 3,463 in the preceding year. The number of ambulance divisions at the close of the year was 45 with a total strength of 1,173. The number of nursing divisions was 11 with a total strength of 280. The number of cadet divisions of boys and girls was 95 with a membership of 2,253. Members of the division did useful work at various fairs and gatherings.

CHAPTER XI

Public Health Administration

Budget grants—The revised estimate for the year 1951-52 stood at Rs. 99,63,000 including the provision for Public Health Engineering and the grants for sanitary works. Allotment for the year 1952-53 is Rs.1,07,63,600.

CHAPTER XII

Vaccination

There are 453 towns in Uttar Pradesh for purposes of recording vital statistics, of which vaccination was compulsory in 262. Taking the figures for all towns 7,21,705 persons were vaccinated and re-vaccinated in 1951 against 9,71,936 in the preceding year. In rural areas 2,309,709 persons were vaccinated or re-vaccinated against 2,223,172 in 1950.

Approximate number of children under one year of age available for vaccination in the year 1951 was 263,787 in towns and 826,307 in rural districts, of whom 170,401 and 660,643 respectively or 64.60 and 79.95 per cent. were vaccinated. Number vaccinated in age group 1—5 years was 64,353 in towns and 374,005 in rural districts.

Number of vaccinations performed in 1951 was 30,39,665 (15,35,973 primary and 15,03,692 re-vaccinations) against 32,05,333 (14,35,738 primary and 17,69,595 re-vaccinations) in 1950. Percentage of successful vaccinations in which results were known was 95.31 for primary operations and 85.18 for re-vaccinations. No case of encephalitis following vaccinations was reported.

Government Vaccine Depot—The amount of calf lymph manufactured was 3,00,888 grammes against 3,25,782 grammes in 1950. 63,902 grammes of sheep lymph was also manufactured in the same period. Quantity issued during the same period was 2,80,020 grammes calf lymph against 2,92,182 in the previous year. 2,5,578 grammes of sheep lymph were also issued.

CHAPTER XIII

Other Public Health Services

Hygiene Institute conducted courses and examinations for Sanitary Inspectors and Health Visitors; the course in Hygiene for M.B., B.S. and the D.T.D. of the Lucknow University; the examination in sanitary law for medical officers of health, and the post-graduate course for Public Health Officers. One Water Works Superintendent and three laboratory assistants of municipal laboratories received training about the purification of water and in the technique of Public Health laboratory work, respectively. Museum demonstrations were given to nurses under training. The Institute examined 623 samples of stools from suspected cases of cholera referred from outlying districts and towns, 74 specimens of blood-smears, 63 samples of disinfectants, factory effluents, etc. and 736 of water. It also examined 418 samples of blood, sputum, etc. A survey to detect the incidence of eosinophilla among school children of Lucknow was taken up during the year.

Manufacture of cholera vaccine—Over 3,379,800 c.cs. of anti-cholera vaccine were manufactured against 3,038,544 c.cs. in the year 1950.

Nutrition—Nutritional surveys of school children in rural areas of Meerut, Muzaffarnagar, Ballia, Farrukhabad, Unnao and Ghazipur were undertaken to find out the extent of malnutrition and under-nutrition in them. Clinical nutrition survey of 2,442 boys was made in 23 schools. Nutrition surveys of 703 workers in 12 tanneries and 1,541 workers in four factories in Kanpur was conducted by the Medical Officer-in-charge of Industrial Health Organization.

Dietary intake of 167 students living in five boarding houses was also studied.

To educate the public in nutrition and to make them nutrition-minded, articles were published in papers, leaflets and posters were distributed, exhibitions were held and short lectures were given by officers of the Public Health Department. Special lectures were given to Public Health officers under training.

Community feeding—Milk feeding scheme in Primary schools of Lucknow subsidized by the State Government continued during the year.

At Kanpur, similarly, the scheme run by the Lal Imli and Elgin Mills for their Primary schools continued. Some schools and colleges in Benaras introduced milk feeding.

Mention was made in last year's report of the allotment by UNICEF of skimmed milk powder to U. P. State Branch of the Indian Red Cross Society for free distribution to under-nourished and mal-nourished children and to expectant and nursing mothers. The distribution was continued during the year mainly through Primary schools of Kanpur, Agra, Banaras, Allahabad and Lucknow. Babies, expectant and nursing mothers attending Maternity and Child Welfare centres at Kanpur Agra, Banaras, Allahabad, Lucknow and Morad bad, the centres in Rural Health Unit in Pratapgarh and at few other places were also included.

Food adulteration—The U. P. Prevention of Food Adulteration Act was in force in most of the Municipal, Notified, and Town areas ; in all cantonments and in a large number of villages. Total number of food samples submitted to the Public Analyst for analysis was 23,207 against 24,802 in the preceding year. The following was the result of the samples analysed (excluding those broken or damaged in transit) :

Food samples	Percentage of adulteration	
	1951	1950
1. Ghee and butter	21·61	24·73
2. Milk	40·64	45·23
3. Flour and cereals	37·80	50·48
4. Edible oils	20·26	29·38
5. Hydrogenated vegetable fats	22·48	21·70
6. Miscellaneous	28·30	33·34

Number of cases sent up for prosecution was 6,653 of which 5,074 resulted in conviction. The average amount of fine imposed for the offence of adulteration was as follows :

In cases tried by stipendiary Magistrates :

	Rs.	a.	p.
(a) For first offence	65	1	0
(b) For subsequent offence	174	2	0

In cases tried by Honorary Magistrates :

	Rs.	a.	p.
(a) For first offence	45	9	0
(b) For subsequent offence	190	0	0

In 31 cases imprisonment ranging from one to three months was imposed.

Colouring of hydrogenated vegetable fats—The search for suitable colour which may be safely added to hydrogenated fat was continued. Only two synthetic dyes, viz. orange S.S. and oil Red X.O. were considered suitable, but their freedom from toxicity when subjected to high frying temperatures under Indian conditions still required to be determined. The matter is being further investigated in collaboration with the Central Drugs Research Institute, Lucknow.

Drugs Standard Control—Opportunity was given to manufacturers whose drugs were found sub-standard, to re-adjust so as to conform to the standard laid down in recognized pharmacopeias. This has had an effect in stopping the manufacture of sub-standard drugs to a certain extent. Attention of the Drugs Controller of other States and of the Drugs Controller, India, was drawn when a sub-standard drug of their State or of foreign manufacture were found to be sold in this State. Manufacturers of patent and proprietary medicines containing ingredients partly Ayurvedic and partly Allopathic, and selling them under Indian names, were required to take out licences under the U. P. Drugs Rules. Some trade in the sale of spurious and faked drugs existed in the State. One of the methods adopted is to employ pedlars to collect from consumers on payment of a good price, empty containers of the genuine drugs whose labels and phials may be in good condition, and use these containers for filling spurious drugs. Drugs commonly faked were, Chloromycetin; Streptomycin, Howard's Quinine Enquinine, Saridon, Aletris Cordial, all types of Sulpha drugs, Epehdrin tablets; Penicillin in oil, Gripe water (Woodward's), Soda salicylas; Olive Oil; Bismuth Carb and Syrup Calcii Hypophosphite. To check the malpractice, Drugs Inspectors were asked to advise consumers to break empty containers and the State Branch of the Indian Medical Association was asked similarly to advise Medical Practitioners. The police was also asked to help Medical Officers of Health in unearthing premises for the manufacture.

CHAPTER XIV

Industrial Hygiene

Municipal Medical Officers of Health continued to act as *ex officio* Inspectors of Factories and advise on health, safety and working conditions of operatives. Improper disposal of effluent from sugar factories, distilleries and tanneries has caused nuisance in some places. The Committee appointed by the State Government to advise on measures required to improve matters made certain recommendations at the end of the year.

Industrial Health Organization—The Medical Officer-in-charge of Industrial Health, studied the working conditions in 147 factories. His attention was directed mainly to potential hazards, environmental conditions like thermal conditions, lighting, washing, bathing and toilet qualities, medical and welfare facilities. In 21 factories, physical examination of the workers was undertaken by him to assess their general health and the incidence of occupational diseases. Suggestions to rectify defects were made to employers.

Employees' State Insurance started at Kanpur on 24th February, 1952. Its work will, therefore, be reviewed in the report for the next year.

A. N. CHOPRA,

Director of Medical and Health Services.

Lucknow.
