ZANZIBAR PROTECTORATE

Medical and Sanitary Report

for the

Year ended 31st December, 1946

Zanzibar: Printed by the Government Printer: 1947

Office of the
Senior Medical Officer-in-Charge,
Health Department,
Zanzibar, 10th April, 1947.

SIR,

I have the honour to submit for the information of His Excellency the British Resident and for transmission to the Right Honourable the Secretary of State, the Medical Report on the Health and Sanitary conditions of the Zanzibar Protectorate for the year 1945.

I have the honour to be,
Sir,
Your obedient servant,

J. C. EARL,

Senior Medical Officer-in-Charge,

Health Department,

THE HONOURABLE

THE CHIEF SECRETARY TO THE GOVERNMENT, ZANZIBAR. Digitized by the Internet Archive in 2019 with funding from Wellcome Library

Medical and Sanitary Report

for the year

ended 31st December, 1946

SECTION I.

Administration.

GENERAL REVIEW.

Staff.

The following medical officers were on leave: Dr. J. C. St. George Earl, Senior Medical Officer-in-Charge, Mr. C. E. Roberts, o.B.E., Specialist Officer, Dr. J. D. Robertson, and Dr. E. J. Blackaby, o.B.E., who was still on leave at the end of the year. Dr. G. T. Balean arrived in September on first appointment, Capt. A. M. Pollard arrived in March to take the place of Mr. I. S. Rutter, Dental Surgeon, transferred to Tanganyika Territory. Three posts of medical officer remained unfilled. Miss A. C. Miller, Matron, who went on leave in September prior to retirement, will be a loss to the Protectorate where she had done so much to organize the training of nurses, attendants and midwives. One nursing sister, Miss M. Miss A. R. Togneri, Miss G. E. M. Coates, Miss Howarth resigned. M. E. Smith, Miss T. Cunnick, Miss B. E. Hall and Miss M. M. Cook, Nursing Sisters, arrived on first appointment. The shortage of medical officers referred to in the Annual Report for 1945 continued and, since it was essential that officers who had spent long periods without rest should be allowed to proceed on leave, it was not possible to station two medical officers in Pemba for the greater part of the year, and no medical officer was available to perform the duties of District Medical Officer, Zanzibar, which were carried out by the Senior Medical Officer-in-Charge. position with regard to the nursing sisters was satisfactory.

Training of Non-European Personnel.

The training of nurses, attendants and midwives continued. Mrs. Hoggan, who was temporarily engaged, acted as Sister Tutor during the first half of the year; Miss V. E. M. Allen performed these duties during the rest of the year. It is still difficult to get learners with satisfactory educational standards and this applies especially to girls. Prejudice against

nursing still prevents Arab girls from coming forward for training. This is a source of great disappointment. It is encouraging to record that there were three Indian girls in training as midwives and two Indian and one Goan girl training as nurses in the senior time scale. Thirteen candidates sat for the final examination, four passed, three were referred in medicine and one in surgery. There were nine entries for the second-year examination of whom five passed and three were referred in hygiene. In the first-year examination six passed, three were referred in anatomy and physiology and six failed. Three Indian girls were examined in the examination for midwives in the senior time scale, two passed and one was referred. In the final year examination for junior time scale midwives there were two candidates both of whom failed. It was difficult to organize the training of sanitary inspectors satisfactorily since it was not possible to recruit a sanitary inspector in England for this purpose.

Hospitals.

The work of the hospitals was maintained. The number of in-patients was 6,643 compared with 6,246 in 1945. This was satisfactory but meant much extra work. A satisfactory diet was given. The cost of feeding one patient in the general ward for a day has risen from Sh. -/76 in 1943 to Sh. 1/13 in 1946.

Maternity and Child Welfare.

These services were satisfactorily maintained. There were 378 confinements in Government hospitals compared with 368 in 1945. There was a fall in the number of confinements in Pemba which may be accounted for by the absence of one medical officer for a large part of the year. The ante-natal and child welfare clinics continued to be popular and there was a slight increase in the number attending them.

School Medical and Dental Service.

It was, unfortunately, impossible to maintain the full school medical service; the rural areas in Zanzibar suffered most. The school dental service was well maintained.

Preventive Measures.

Preventive medicine forms the main part of the medical policy and it is most regrettable therefore that so little could be done in this direction during 1946.

Colonial Development and Welfare Act.

A ten-year development plan for medical services was approved by the Legislative Council in June, and plans for the construction of the new hospital in Zanzibar and for the new mental hospital were commenced.

Awards.

The awards of the Order of the British Empire to Dr. E. J. Blackaby and Dr. R. S. Taylor are recorded with pleasure.

SECTION II.

Public Health.

The total number of patients seen at hospitals and dispensaries during the last five years was as follows:—

	1942.	1943.	1914.	1945.	1946.
New cases	94,697	97,061	98,003	114,951	125,557
In-patients	-	5,446	5,854	6,246	6,643
Total attendances	359,902	338,631	351,581	409,127	430,331
Deaths in hospital	417	309	386	420	504

The principal causes of death were:-

Tuberculosis					49
Pneumonia	***				42
Diseases of the	skin,	cellular	tissue,	bones	
and organs of	locom	otion			53
Senility					111
Ancylostomiasis					20

General Diseases.

The cases referred to in the following review of the returns of sickness include only those treated by medical officers or assistant medical officers.

- Epidemic, endemic and infectious diseases.—There were 23,924 cases with 137 deaths in hospital.
 - 2. General diseases.—3,046 cases were reported.
- 3. Diseases of the nervous system and organs of sense.—There were 3,784 cases in this group. Diseases of the eye numbered 2,164 and 33 were cases of trachoma.
- Affections of the circulatory system.—664 cases were recorded. 41
 persons suffering from heart disease, 15 of whom died, were treated in
 hospital.
- 5. Affections of the respiratory system.—7,522 cases were reported. 342 cases of pneumonia with 43 deaths were treated in hospital.
- Affections of the digestive system.—There were 13,109 cases in this group.
- 7. Diseases of the genito-urinary system.—2,140 cases of non-venereal diseases of the genito-urinary system were reported.
 - 8. Puerperal state and diseases of infancy.—345 cases were treated.
- 9. Affections of the skins, cellular tissue and the organs of locomotion.—
 19,179 cases were recorded.
 - 10. Affections produced by external causes.—There were 6,354 cases.

Communicable Diseases.

(a) Insect-Borne.

Malaria.—8,995 cases were reported of which 6,818 were unclassified. 500 cases with 31 deaths were treated in Government hospitals.

Dengue.—Four cases of this disease were reported and a number of cases of fever were noted in which no diagnosis could be made. It is not improbable that these fevers are due to viruses and it is probable that some of the conditions reported as unclassified malaria belong to this group.

(b) Infectious Diseases.

Smallpox.—One fatal case was admitted to the isolation hospital with the rash in the initial stage of erruption.

Tuberculosis.—147 cases were notified during the year. The number of notifications is not a true indication of the incidence of the disease which appears to be wide-spread. The condition is acute and runs a rapid course. Most cases present themselves at hospital when it is too late for treatment to be effective.

Leprosy.—17 cases of leprosy were notified. Although cases of leprosy are not compulsorily segregated, accommodation is provided for those who wish for institutional care in the leper settlements at Walezo and Makondeni. The former is under the management of the Catholic mission, the latter is a Government institution. The two settlements dealt with the following patients:—

	Walezo.	Makondeni.
Remaining on 31st December, 1945	46	65
Admitted during 1946	21	8
Discharged	10	4
Died	6	11
Remaining on 31st December, 1916	51	58

Vital Statistics.

Estimated population.—The estimated population is 250,000.

Births and deaths.—2,664 births and 2,108 deaths were registered in Zanzibar, and 2,136 births and 1,731 deaths in Pemba.

Infantile mortality.—280 deaths of children under one year old were registered.

Still-births.—43 still-births were registered.

Maternal mortality.—The number of maternal deaths registered was 55.

Hygiene and Sanitation.

Preventive Measures.

Smallpox Vaccinations.—There were 13,033 vaccinations carried out in Zanzibar and 776 in Pemba. Thirteen persons were prosecuted for failing to have their children vaccinated within six months of birth and one for illegally transferring a vaccination certificate.

Yellow fever.—2,795 persons proceeding overseas were inoculated and issued with International Certificates. All aircraft coming from the endemic area on the mainland were sprayed with insecticide.

Fly control.—57 large flytraps were regularly maintained in the town and were baited daily. In addition 268 hanging wires covered with castor oil and resin emulsion were in daily use in the markets and in other similar places. 119 breeding places were found and destroyed.

Disinfection and disinfestation.—88 premises were disinfested with formalin, cresol or sulphur dioxide. 25 disinfections were carried out in Zanzibar Hospital. The following articles were treated in the Thresh disinfector:—

 Matresses
 ... 146

 Pillows
 ... 421

 Blankets
 ... 267

125 premises were sprayed with D.D.T. solution.

Nightsoil disposal.—Nightsoil is disposed of in septic tanks, in pitlatrines or in cesspits. Since the town of Zanzibar is so overbuilt these cesspits and septic tanks are constructed inside the houses. When cesspits are provided in houses of more than one floor the upstairs latrines are connected with the cesspits by 6-inch pipes which ventilate into the houses. The effluent of the septic tanks is disposed of in sewers which flow either into the sea or into the creek. The disposal of septic tank effluent in the creek causes considerabe nuisance, the smell at low tide is most offensive. A member of Messrs. Howard Humphries' engineering staff visited Zanzibar and made a survey for a new scheme which is very urgently needed.

Scavenging and refuse disposal.—Refuse is disposed of in Zanzibar Town, Wete, Chake-Chake and Mkoani by controlled tipping.

Water-supply.—Routine tests reveal that a high standard of purity was maintained in Zanzibar throughout the year.

Rural sanitation.—No satisfactory progress was made owing to the shortage of staff.

School medical and dental services.—It was not possible to maintain the school medical service on account of the shortage of medical officers. Only 246 children were examined. 139 were examined in Zanzibar with the following results:—

Nutrition:				Per cent.
Good				11.50
Fair				82.75
Poor				5.75
Dental diseases	***			31.50
Diseases of the	nose, ear	and thro	at	23.80
Diseases of the	eye		***	8.00
Enlarged spleen			***	44.00
Anæmia				20:00
Helminths				33.88

107 scholars were examined in Pemba with the following results:-

Nutrition	n:			Per cent.
Good		 		18.00
Fair		 		25.00
Poor		 ***		56.00
Dental	diseases	 		32.00
Enlarge	d spleen	 		83.00
Helmint	ths	 	***	77.00

The school dental service was maintained. All Government schools were visited during the year and 3,476 pupils were examined. 1,176 were found to need dental treatment.

Nutrition.—655 patients were treated for nutritional diseases. This figure represents those cases which were so marked as to be reported under this heading and the majority of persons admitted into the general wards are undernourished. There is a considerable amount of anæmia of the nutritional type and malnutrition associated with ancylostomiasis is a common cause of disability. The incidence of tropical ulcer, which is associated with undernourishment, is high among the poorer classes. It is apparent that lack of nutrition has a considerable effect on the health of the population, probably greater than any other single factor and if the nutritional state of the population were improved the incidence of many conditions such as tuberculosis, leprosy and ulcers would be considerably reduced. Undernourishment is generally due not so much to shortage of food as to lack of certain food stuffs. In Pemba there was a definite shortage of food in the first part of the year. This is reflected in the nutritional state of the school children in Pemba compared with that of those in Zanzibar.

Mosquito Control Protective Belt.

Outside Zanzibar Township.

During the past five years a considerable amount of drainage has been carried out on the town border. 1,796 feet of drains were completed during the year, making a total of 85,292 feet. These drains were graded and kept clear of long grass.

A total of 59,291 coconut shells, empty tins and other articles capable of containing water were removed.

Pemba.

In Wete 265 feet of contour drains were laid in the Water Works swamp and the low-lying ground was levelled. A concrete drain 286 feet long for the collection of storm water was constructed. In Selem swamp, Court swamp and in the Hospital swamp contour and earth drains were cleared and relaid. In the Market swamp 370 feet of stone drain were relaid and a cement drain which was damaged by heavy rain was repaired. Half of Selem swamp was planted with Pterocarpus. One-half of Slaughter House swamp was planted with Cassia and the remainder with red oil palm. In Chake Chake Cassia and Pterocarpus were planted in Tibirizi swamp and 1,970 feet of earth drain was constructed. At Mkoani 900 feet of underground drain were relaid.

Port Health Work and Administration.

270 ships and 1,412 dhows called at Zanzibar and were boarded for inspection. 973 aircraft landed on the aerodrome. 22,063 immigrants arrived and 19,925 emigrants left by sea and 1,775 immigrants arrived and 1,717 emigrants left by air. 1,889 vaccinations were carried out on ships and dhows.

18 persons suffering from trachoma were declared to be prohibited immigrants.

East African quarantine station.—This station was maintained throughout the year. 149 persons were placed under observation and 69 were allowed to land under surveillance. One fatal case of smallpox was landed from a dhow.

Report of the Dental Surgeon.

Every school was visited during the year and 3,476 children were inspected. 1,776 were found to require dental treatment. The island of Pemba had the services of a dental surgeon on three occasions totalling 70 days. The following is a summary of the work done:—

	Schools.	European.	Non- European.
Attendance	1,844 (approx.) 867	14,888
Fillings	1,682	528	155

Eye Clinic.

The Medical Officer-in-charge of the Eye Clinic was on leave for over six months during which time refraction and operative work was in abeyance.

The following cases were treated:-

New cases	 1,534
Re-attendances	 9,166
Total	 10,000

23 major and 18 minor operations were carried out. 654 candidates for Government employment were examined.

Laboratory.

Zanzibar.

The total number of examinations performed was 24,711.

Training.

There were three learner attendants in training. During the year, one laboratory assistant in training resigned and one was transferred to another department.

General.

- 1. Dysentery.—The number of isolations of dysentery organisms showed an increase of 19.5% as against 11.4% of positive isolations in 1945. This was due to improved cultural methods.
- 2. Sirochæta reccurrentis infections numbered 79. Infection occurred outside the Protectorate, mainly in the crews of dhows.
- 3. Entamæba histolytica was more prevalent during the year under review.
- 4. Malaria.—The number of positive blood films continued to show a decline.

	1944.	1945.	1946.
P. falciparum	 2,265	2,086	1,309
P. vivax	 657	478	423

	Total	 6,640

Prisons and Other Institutions.

(a) Prisons.

Zanzibar.—There were 1,144 new cases and 2,639 re-attendances at the prison infirmary and 210 prisoners were admitted to hospital. 181 cases of malaria occurred. There was a small outbreak of chicken-pox and 16 cases of amœbic dysentery were recorded.

Zanzibar—	
Number of prisoners admitted	 1,060.00
Daily average in prison	 222.74
Daily average on sick list	 13.24
Pemba—	
Number of prisoners admitted	 949.00
Daily average in prison	 57.22
Daily average on the sick list	 7.30

(b) Mental Hospital.

As was pointed out in the Annual Report for 1942 it is extremely difficult to treat mental cases in a mental hospital which forms part of the prison. Plans for a new mental hospital were commenced at the end of the year.
