ANNUAL MEDICAL AND SANITARY REPORT FOR THE YEAR 1941

Printed by the Government Printer, Belize.

British Honduras Annual Medical and Sanitary Report for the year ending 31st December, 1941.

On the grounds of economy a shortened report has been prepared. Comparative tables have been deleted and only the actual work done during the year is reported.

netion. by Dare's opposition showed that

I. Administrative.

(a) STAFF.

- 1. One Medical Officer was seconded to the British Honduras Forestry Unit together with a Sanitary Inspector, a Dispenser and a Medical Orderly. Another Medical Officer still remains in the West African Medical Service.
- The Senior Medical Officer was gazetted as Captain, British Honduras Defence Force with effect from 7th November, 1941. Twelve members of the Department joined the Home Guard.

(b) LEGISLATION.

3. Regulations relating to Cemeteries were approved by the Executive Council.

(c) FINANCE.

4.		pts—Hospital and Mental Hospital
	(1)	Personal Emoluments \$61,785.74
	(2)	Other Charges, Medical 52,874.01
	(3)	Other Charges Health Dent 20,094 90 124 754 65

- 5. The Expenditure of the Department was 8.8% of the total expenditure of the Colony.
 - 6. The Institutions in respect of which expenditure was incurred were as follows: -

INSTITUTION	Total Expenditure in Dollars	Average daily number of Patients	Cost per head per diem in Cents
Belize Hospital	7,364.36	80.	.21
Mental Hospital and Poor House	8,488.03	133.66	.19
Corozal Hospital		11.	.25
Orange Walk Hospital		4.50	.28
Cayo Hospital	746.43	6.60	.23
Stann Creek Hospital	1,667.27	19.10	.22
Toledo Hospital	1,471.30	14.27	.23

II. Public Health.

- 7. The demand for hospital accommodation in Belize has been more acute than ever especially during the latter part of the year, owing to the economic state of the Colony. A long drought, plagues of locusts and a hurricane, in addition to the deleterious effects of the war, were all contributing factors in lowering the state of health of the people. A further demand for hospital accommodation was due to remedial operations required under recruitment for foreign labour schemes.
 - 8. Two large demands were made for labour during the current year:-
- (a) Panama. Under the scheme of construction work for the Canal Zone labour was recruited privately. Many labourers were turned back from Panama owing to various defects but eventually the contractors arranged for preliminary examination by private medical practitioners in the Colony itself. Most of the rejects were due to herniae and hyperpiesis. It is estimated that about 1500 labourers from this Colony are employed in the Canal Zone.
- (b) Forestry Labourers for Scotland. The Ministry of Labour called for 500 skilled forestry labourers. The medical examination was carried out according to the instructions laid down under the Military Training Act of 1939. Actually 520 men were sent overseas but 1001 men had to be examined in order to obtain the requisite number. The men, who passed the clinical examinations, were subjected to an X-Ray photographic examination of the chest to eliminate any cases of tuberculosis. The findings were as follows:—of the 749 photographed, 13.08% shewed healed lesions, 7.14% were suspicious

and 6.28% showed active lesions. Blood pressures as shewn by differential pressures, varied according to racial groups. Of the accepted men the Ranges of Differential Pressures were as follows:— East Indians 20-60 mm; Spaniards 20-80 mm; Caribs 20-100 mm; Creoles 18-120 mm. Haemoglobin Estimation, by Dare's apparatus, shewed that the majority of readings were around 80%. Height measurements shewed the highest average to be 67 and 68 inches, respectively amongst Caribs; 67 inches amongst Creoles; 66 inches amongst Spaniards and 63 and 64 inches, respectively, amongst East Indians.

- 9. According to the official recruitment instructions—cases of Venereal Disease were not rejected if the cases were not obviously infectious and the men were otherwise fit. Kahn Reaction Tests were made in 965 cases; of these 9.22% of the whole were positive; of the accepted men 12.12% had positive reactions for Syphilis. All urines were examined for "threads" and 20.20% gave positive results: of the accepted men 23.67% were positive. Venereal Diseases in British Honduras apparently have little deleterious effect on the general health of the community. The dental condition of the recruits was bad and many were accepted, who required dental treatment, but there was not sufficient time between recruitment and embarkation to have these defects remedied. Of 932 mouths examined 42.06% shewed various degrees of defects; of the accepted labourers 41.14% had two or more defective teeth. However, many mouths were complete with perfectly formed clean teeth; this was especially noticeable amongst the Caribs.
- 10. (a) During the year 24 candidates were examined for the Royal Air Force—complete examination as prescribed by the special regulations was carried out. Nine candidates were accepted and sent overseas for training.
- (b) There was a call for skilled munition workers—51 recruits were examined, 26 being passed as medically fit.
- (c) Recruits for the local Defence Force were examined during the year but definite figures are not available.
- (d) In considering all types of recruitment it is estimated that 45% of applicants were rejected for various defects.
- 11. Dr. Henry W. Kumm of the Rockefeller Foundation spent a few weeks taking samples of blood in the Colony, paying special attention to the Toledo District where 212 specimens were taken with the object of ascertaining if "jungle Yellow Fever" exists in the Colony. Later, he reported that all but three were negative and the positives were all more than 45 years of age. One of them, a woman, had been born in Coban in the Department of Alta Verapaz of Guatemala and had only been in the Colony one year. The other two, men of 45 and 55 years of age, respectively, were born in the Toledo District. Dr. Kumm was of opinion that yellow fever has not been endemic in the southern district during recent years. He doubts very much whether jungle yellow fever ever existed in the Toledo District.
- 12. Malaria, Venereal Diseases, Tuberculosis, Helminthiasis, Anaemias and Skin Diseases are the most prevalent diseases treated by the Department.
- Malnutrition. has shown a slight increase especially in relation to deficiencies in the Vitamin B group.
- 14. The Out-Door Relief Committee under the chairmanship of the Senior Medical Officer, expended \$17,914.98 on 614 persons, a marked increase over the previous year.
- 15. The Department co-operated with the Hurricane and Locust Relief Committee in making rural surveys and distributing relief.
- 16. Gann Rest House was opened for the reception of men unable to obtain a night's shelter. The project was made possible by a gift from the widow of the late Dr. Thomas Gann, sometime Senior Medical Officer in this Colony. The scheme is maintained by equal contributions from the Out-Door Relief Committee and the Town Board. The House has accommodation for 24 persons and an average of 22 persons receive hospitality each night. The management of the place is under the capable supervision of the Salvation Army who have installed a full-time officer.
- 17. Maya Indians. The Senior Medical Officer was a member of the special committee to enquire into the affairs of this racial group living within the Colony; a special report has been published:
- 18. In the Northern District a blood survey amongst the Indians was made. 288 persons were examined to estimate the haemoglobin percentage. The range of variation was 22% in a female 23 years old to 90% in a male aged 28 years. The greatest number of persons in all ages falls between 40% and 70% Haemoglobin.

- 19. Kahn reactions were also taken and only 0.48% shewed positive reactions for Syphilis, a figure corresponding with a recent survey amongst Maya Indians in Guatemata.
- 20. Sir Rupert Briercliffe, the Medical Adviser to the Comptroller of the West Indies, made a short tour of inspection. The question of Rural Hygiene was fully discussed.
 - 21. The new clinic established in San Pedro Colombia had good results.
- 22. Infant Mortality amongst the Indians was 209 per thousand as compared with 278 per thousand in the previous year. There were 123 births and 239 deaths. The increased number of deaths can be accounted for by the epidemics of measles and diarrhoca

(I) GENERAL DISEASES.

23. The following diseases were reported from various parts of the Colony:—Cancer 108, Diabetes 20, Pneumonia 90, Tetanus 10, Deficiency Diseases 155.

(2) COMMUNICABLE DISEASES.

- (a) Mosquito or Insect-borne.
- 24. Malaria. There were 25 deaths.
- (a) The number of cases of Malaria admitted to the various hospitals was as follows:—Belize 705, Corozal 76, Cayo 59, Stann Creek 151, Orange Walk 42, Punta Gorda 167, making a total number of 1200 cases.
- (b) A small survey on the malarial problems in Stann Creek was made by Dr. L. M. Ram, the findings of which will form the subject of a published report.
- (c) Spleen rates were as follows:—Belize Town 1.9% (3004 children examined): Stann Creek Town 30.63%, Punta Gorda Town 37.8%, Orange Walk District 4.3%, Corozal District 17.0%, Cayo Town nil.
- 25. In the investigations amongst the Maya Indians of the Northern District a Malarial Parasitic Index was made. This index shewed a figure of 28.6% of which subtertian malaria was 14.3%; benign tertian malaria 11.6% and 3.7% from mixed infections. The ratio of subtertian to benign tertian would be about 54%—46% as shewn by the thick film examination.
 - 26. Black Water Fever. No cases were reported.
 - (b) Epidemic and Infectious Diseases.
- 27. Dysenteries. The total number of both types of dysentery treated during the year were 473 cases.
- 28. Pneumonias. There were 90 cases reported from the hospitals and 14 certified deaths from this disease.
- 29. Tuberculosis. There were 7 certified deaths from Pulmonary Tuberculosis and 2 deaths from other forms of tuberculosis. During the year 113 cases of Tuberculosis were admitted to the hospitals. 107 cases were notified to the Health Department.
- 30. Vollmer's patch test was made on the school children in Belize and Stann Creek Towns, details of which survey will be commented on later in this report.
 - 31. Diphtheria. 4 cases reported.
- 32. Measles. Minor epidemics occurred in all areas, the most serious outbreaks being in the Toledo District where the Maya Indians believe in immersing the patient in the cold water of the creeks just before the rash appears, thus increasing the incidence of pneumonic complications.
- 33. Cerebro-Spinal Fever. One case was reported from Orange Walk, one in Stann Creek and two in Belize, purely sporadic in origin.
 - 34. Chicken Pox. Small outbreaks in Toledo and Stann Creek Districts.
 - 35. Whooping Cough. A few isolated cases reported in the districts.
- 36. Small Pox and Vaccinations. No cases were reported. In Belize 709 vaccinations were made and 514 in the districts.

(3) VITAL STATISTICS.

37. The population at the end of the year was estimated at 61,068. The average Birth Rate of the Colony is 34.9 per 1,000 of the estimated population. The birth rate is highest in the Toledo District and lowest in the Northern Districts. The Death Rate for

the whole Colony is 16.8—highest in the Toledo District and lowest in the Northern Districts.

- 38. Infant Mortality. The figure for the whole Colony is 123.6 per thousand, Toledo has the highest mortality rate of 243.5 per thousand and Cayo the lowest with 78.5 per thousand.
 - 39. There were 98 Still Births registered during the year.
- 40. No comparative figures are available of the mortality amongst the prevailing diseases relative to the total estimated population.
- 41. Of the 1030 deaths registered 558 were not certified by Medical Practitioners, that is to say, 54.1% deaths were uncertified.

III. Sanitation and Hygiene.

(I) ADMINISTRATIVE.

- 42. The Central Board of Health met every quarter to discuss matters of general interest and more particularly the application of the Building Bye Laws.
- 43. District Nurse, Belize. During the year this nurse made 482 sick visits and 1516 visits in connection with the Infant Welfare Clinics.

(II) PREVENTIVE MEASURES.

(a) Anti-Mosquito Measures.

- 44. The suction dredger continued to operate during the year in the reclamation scheme work north of the Barracks.
- 45. The river dredger landed a considerable amount of spoil which was quickly taken away by private persons for the filling in and raising of their own lots.
- 46. In Belize during the dry season 9,107 crab holes were poisoned and filled in. 846 tanks and vats were fished with larvivorous fish.
- 47. Oiling in the towns was carried on as usual, all anopheles breeding areas in Belize being carefully mapped.

(b) Notification of Infectious Diseases by Districts.

The following are the number of cases of infectious diseases notified by Districts:-

dysentery freated during the	Belize	n Creek	Poledo	Sman fa	ie Viejo	orozal	e Walk	otal

m and Mall (c) Helminthic Diseases.

Steady progress has been made in the Corozal area with the construction of bored hole latrines in the Indian villages and settlements. The inhabitants have co-operated well and 138 latrines were installed. Pamphlets relating to Hookworm Diseases in English and Spanish, have been distributed in the infected areas.

Following the installation of bored-hole latrines, the School of San Juaquin have had negative results from hookworm stool examination.

(III) GENERAL MEASURES.

48. Propaganda. Several series of posters were exhibited in the Belize schools and pamphlets distributed in the districts. Lectures were given by several Medical Officers to school children. E. M. B. posters were displayed in Belize throughout the year.

- 49. Training of Auxiliary Personnel. Lectures to Sanitary Inspectors were continued. Good reports were received on the progress of nurses training in Panama and St. Louis, U. S. A., respectively.
- 50. Building Construction. The building regulations are only applicable to Belize. During the year 32 new buildings were erected and 37 additions made to existing buildings.
- 51. Water Supplies. The policy of installing two village wells a year was continued, one was built in Salt Creek, but an attempt to build one at Manatee failed owing to only brackish water being found.
- 52. Removal and Disposal of Rubbish. Pneumatic tyres have been fitted on all rubbish carts operating both in Belize and in the district towns. The policy of increasing the number of refuse boxes in the towns continues.
- 53. Food Handlers. 1176 certificates were issued to food handlers during the year under review in Belize Town and the districts.
- 54. Latrine Construction. In Belize Town 351 latrines were constructed. Unfortunately many of the public latrines were destroyed by the hurricane but most of them were replaced before the end of the year.

MEASURES TAKEN TO SPREAD THE KNOWLEDGE OF HYGIENE AND SANITATION.

- 55. Midwifery. Five nurses completed their training in the Belize Hospital Maternity Ward and received their Midwives Certificates.
- 56. The Antenatal Clinics have been well attended. Belize Hospital Clinic had 1383 attendances, Hutson Street Clinic, Belize, 620 and Stann Creek Clinic 119 attendances.
- 57. The Kahn Tests for Syphilis shewed 4.80% positive at Belize Hospital Clinic, 4.65% at Hutson Street Clinic and 20% at Stann Creek Clinic; in the latter group Caribs predominated.
 - 58. In Corozal 17 cases received ante-natal supervision at the Hospital.
- 59. Free milk was given daily to certain indigent mothers with most encouraging results.
- 60. Infant Welfare Work. The clinics continued to function both in Belize and the districts. In Stann Creek a local girl was appointed as a "district nurse".
- 61. The Infant Welfare League has issued a separate report on its activities.
- 62. School Medical Work. In addition to the 200 children receiving milk in Belize, the scheme was extended to Stann Creek and it is hoped to extend the scheme to all districts in the near future.
- 63. In Stann Creek the children were examined in three groups, i.e., new entrants, 8 years old and 12 years old. The spleen percentages in these groups were 37.8%, 47.3% and 42.6%, respectively. Quinine tablets were issued to 268 children. Sick children were visited in their homes. Defective teeth, 30.1%. Undernourished, 9.8%.
- 64. Vollmer's Tuberculin Patch Test was carried out on about 1,000 children between 5 and 10 years of age with the following results:—Belize Schools. Of the 550 children examined 88 shewed varying degrees of reaction, that is to say, 14.9% were positive reactors. Direct contact was traced in 27 cases. In Stann Creek 325 Carib children were examined and 89 shewed reactions after 48 to 72 hours resulting in 27.38 positive reactors. Of the Creoles 62 were examined, 10 reactions were found giving a 16.1% positive reaction.
 - 65. In Orange Walk 417 children were examined, a spleen rate of 4.3% was found.
- 66. In Corozal 279 children were examined; spleen rate 17%; defective teeth 20% and 7% unvaccinated.
- 67. In Toledo District, out of 613 children, 2.47% were undernourished, 1.9% with defective teeth and 1% with enlarged spleens.
- 68. In Belize Town 3004 children were examined; 1.9% shewed splenic enlargement. Of the 756 children who received a general medical examination, 28.5% were unvaccinated, only 4.75% were in a poor state of nutrition and 21.78% had defective teeth.
- 69. Dental treatment was carried out in the schools of Belize, Stann Creek Town and Punta Gorda.

IV. Port Health Work.

- 70. The number of boats entering the Colony has considerably dropped off during the year under review, and another grant and off montanes and another the
- 71. The number of persons attending for quarantine purposes were: Stann Creek 35, Punta Gorda 231, Barranco 31 and Cayo 124.

W. Hospitals and Dispensaries, and any and Demnit

BELIZE HOSPITAL.

- 72. Out-Patient Department. A total of 36,866 patients were seen. These include 13,426 dressings, 2,198 attendances in the V.D. Clinics. 149 minor operations. 1,614 dental treatments, 16.856 at the daily clinic, etc.
 - 73. In-Patients. 1,810 patients were admitted to the wards of which 80 died.
- 74. Maternity Ward. The number of admissions continues to increase, 614 having been admitted as compared with 404 of the previous year. There were 257 deliveries as compared with 243 of the previous year. Infantile deaths 7, still births 16, maternal deaths 4. There were 9 cases of eclampsia and 31 with albuminurea.
- 75. Venereal Diseases Clinic. There were 2,198 attendances during the year; 298 patients attended. There were 67 new male patients and 92 new female patients. The injections given were 2,065 NAB and 1,771 Bismostab, and right beviesses been brown win
- 76. Ophthalmic Clinic. Owing to the transfer of the responsible Medical Officer to one of the districts the work of the Clinic had to be suspended but it is hoped to continue this essential work in 1942.
- 77. Dental Clinics. During the year 21,756 treatments were carried out in the hospital, prisons and lunatic asylum and to members of the Defence Force. The average attendance at each hospital clinic was 62 patients.
- 78. Radiological Work. 323 radiological examinations were made, exclusive of the Forestry Unit. during the year. These included 31 Barium meals and enemata.
- 79. Surgical Work, Belize Hospital. During the year 561 operations were performed as follows: -

Abdominal	60	Anesthetics.
Gynaecolog.cal	11	Anesthetics. General
Genito Urinary	56	Spinal 45
Ano Rectal	24	Local
Orthopaedic	63	Sacral 6

244 were major operations and 317 minor operations.

80. Laboratory Work, Belize Hospital. There were 3,419 specimens for Kahn Tests-492 positive and 2,927 negative. examined and 89 shewed reactions after 48 to

24 specimens for Malarial Parasites—1 positive, 23 negative.

110 Total Blood Counts plus 1,821 Hb. single tests ranging from 10 to 100%.

brue Icterus Index, 18. goodge a beginners onew merbiide Tile Mall WognerO al Po

Fractional Tests, 10.

Blood Urea, 41.

Blood Sugar, 2.

14 Smears for G.C.—12 positive, 2 negative.

1 Smear for K. L. B.

72 specimens for K.B., 17 positive, 55 no K.B. seen.

Van den Bergh, 2.

Faeces for Amoebae, 65 specimens, 15 positive, 50 no Amoebae seen.

Faeces for Ova, 95 specimens, 56 positive, 39 no ova seen.

4,631 urine specimens done, 28 contained Trichomonas 2 males and 26 females.

81. The following details of the District Hospitals are of interest:

Toledo's	Stann C'k	Cayo	O. Walk	Corozal
Number of beds18	20	14	11	13
Admissions 498	576	247	149	309
Daily Average 14.27	19.10	6.6	4.4	11.0
Deaths 19	22	14	7	22
Percentage Deaths 3.8	3.8	5.66	4.6	7.0
Operations	_	119		_
Out-Patients Attendances				
and District Cases	1799	1636	358	649

- 82. Maternity Work in District Hospitals. Stann Creek Maternity Ward 68 cases were admitted for confinement also 4 abortion and one puerperal tetanus.
 - 83. At Corozal 10 cases were delivered in the hospital.
- 84. There is a demand from every district for small maternity wards to be built as adequate accommodation is not available in the general wards.
- 85. Branch Dispensaries. (a) The Benque Viejo clinics in Cayo in charge of a Roman Catholic Sister under the direction of the Medical Officer gave 1215 treatments.
- (b) Two dispensaries were opened in the Toledo District, one at San Antonio and the other at San Pedro Columbia, and 575 and 633 treatments respectively were given at each clinic.

VI. Prisons, Mental Hospital and Poor House.

86. Belize Prison. The Medical Officer made his daily rounds and saw 597 cases which consisted of the following complaints exclusive of admission, punishments, etc.:—

	Genito-urinary conditions inc. Gonorrhoea 46
Malingering	Wounds 31
	Ear, Nose and Throat 24
Eyes 13	Joint Diseases
Unspecified Requests 3	Examination of prisoners under medical
Skin Diseases	observation2
	Insomnia 8
Pulmonary conditions55	Neuralgic conditions
	Lymphangitis
	Infectious diseases
Mental 2	Neurosis 2
Beri-Beri 1	Unspecified diseases9

- 87. In Punta Gorda 14 prisoners received treatment and 17 were admitted into Hospital.
 - 88. Mental Asylum.
