BRITISH HONDURAS ANNUAL MEDICAL REPORT FOR THE YEAR ENDING 31st December, 1950.

Government Printer-British Honduras.

BRITISH HONDURAS ANNUAL MEDICAL REPORT FOR THE YEAR ENDING 31st DECEMBER, 1950.

I. MAIN EVENTS.

Staff. The medical staff, as authorised, consists of a Director of Medical Services, a Resident Surgeon and eight Medical Officers. The shortage of medical staff continued throughout the year, the department being short of two medical officers out of a total establishment of ten. In addition, three medical officers, one of whom is on pre-retirement leave, are now on vacation leave. Due to shortage in the past, medical officers have had to shoulder extra burdens and it has been considered advisable to grant leave to those who have qualified for it.

Dr. L. P. Younglao, Senior Medical Officer, was transferred to Trinidad

on 7th December.

Dr. L. A. P. Slinger, O.B.E., arrived in the Colony on 28th November and assumed duty on the same day as Director of Medical Services.

Two Medical Officers were recruited to the staff, namely, Dr. A. Goscinski on 20th January and Dr. J. M. Hastings on 3rd March.
Dr. S. H. Wharton, Dr. G. G. Smith, Dr. S. J. Lach went on vacation leave

and Dr. T. Patterson on pre-retirement leave during the year.

A qualified Radiographer was added to the staff at the beginning of the

An Ophthalmic Surgeon was seconded from the Jamaica Government Service for duty in the Colony for a period of three weeks. It is hoped to obtain the services of this officer twice yearly in future.

Training of Junior Personnel. Eight girls were accepted for a three-year course of training at the Belize Hospital as general nurses. Three candidates commenced training as Rural Nurses and five were admitted for midwifery training alone. The course for Rural Nurses covers twenty-one months, nine of which are devoted to midwifery.

Three qualified nurses were sent in September to the Public Health Training Station in Jamaica for a course in Public Health Nursing under a Development and Welfare Grant. It is intended that these candidates be posted in

Belize on their return to the Colony.

Six candidates successfully completed their course in general nursing, four in midwifery, whilst two passed their examinations as general nurses and midwives at the Belize Hospital.

A candidate completed a course of training as a Sanitary Inspector in

Jamaica.

Visits. Miss Alice C. Shaffer, Dr. D. Owens, Dr. Montoya, representatives of the United Nations International Children's Emergency Fund and the Pan American Sanitary Bureau, visited in January and as a result of discussions with the Senior Medical Officer, UNICEF has kindly agreed to make available to the Colony materials to the extent of U.S. \$20,000 to assist the department in controlling insect-borne diseases, particularly amongst children on a colonywide basis for a period of two years.

Dr. Grey Turner, Assistant Secretary of the British Medical Association arrived on the 24th January and had discussions with the Senior Medical Officer concerning the formation of a branch of the British Medical Association in this

Colony, or failing this a Medical Society.

Miss Alice C. Shaffer, UNICEF Representative paid a visit to the Colony on 4th May to discuss a programme for the feeding of the school children with UNICEF's assistance.

Mr. John Deal of the World Health Organization visited the Colony on the 4th August and 22nd November to inspect and advise on UNICEF's DDT Programme.

Dr. Lumps, Executive Secretary of the Caribbean Commission arrived on the 3rd September to discuss and collect data on certain aspects of Communica-

ble Diseases and Health Education.

Dr. Juan C. Caromargo of the World Health Organization arrived on 27th October to collect data on the control of Aedes Aegypti, the vector of Yellow Fever.

Mr. G. Carter, a representative of the UNICEF Mission stationed in Guatemala, arrived on 3rd November to inspect and advise on UNICEF's School Demonstration Feeding Programme.

Legislation. Ordinance No. 9 was passed to amend the Chemists and Druggists Ordinance of 1939 (No. 17 of 1939).

Finance. The estimated expenditure of the Department was \$336,953 representing 13.03% of the Colony's budget.

A.	Revenue— Laboratory Fees Hospital (Maintenance of patients		on fees)	\$658.50 14,436.92
	Total		 	\$15,095.42
	Expenditure— (1) Personal Emoluments (2) Dieting—Total Expenditure in respect of the following Institu	 utions	 	\$125,171.82 44,232.74

Belize		 		\$36,221.64	
Districts		 		26,09135	
(5) Other Charges		 		\$86,895.64	

II. DEVELOPMENT AND WELFARE SCHEMES.

Scheme D.1020—Rural Dispensaries—A supplementary grant was approved under this scheme for the inclusion of Nurses' Quarters in the dispensaries. It was planned to erect three rural dispensaries in 1950; work has started on the buildings at Barranco and Monkey River (Toledo District) and is nearing completion. The dispensary planned for Stann Creek Valley will be completed in 1951 and San Antonio, Sarteneja and Double Head Cabbage will all also be supplied with new dispensaries.

Scheme D.1108-Training of Junior Personnel. This scheme has already

been referred to in paragraph 2.

Scheme D.1334—Training of a Dispenser Tutor. This course of training

will be completed in 1951.

Scheme D.1296—Improvements to Belize Hospital. By this scheme a new Out-patient Department was constructed at the Belize Hospital, whilst the old Out-patient Department was converted into a 18-bed Female Ward. This has relieved congestion considerably on the female side and has improved the appearance of the hospital.

III. HOUSING.

In Belize, the capital city, the majority of the population live in houses constructed of timber with galvanized iron roofs and usually standing on wooden

piles about seven feet above the level of the ground, which is generally swampy and flooded in wet weather. The work of filling in plots is constantly being undertaken by private individuals and the City Council, while reclamation schemes have been undertaken by Government from time to time. Only a small number of the population lives in houses which they own.

Housing conditions elsewhere in the Colony are poor. The principal building medium is locally grown pine with imported corrugated iron for roofing. The Indians utilise native round wood for framing with mud walls and thatched

roofs made from local palmetto leaves.

The Central Housing and Planning Authority has received approval for a scheme to erect thirty-three houses and lease twenty-two lots for houses for low income groups on the north side of the city. The scheme is now completed.

IV. PUBLIC HEALTH.

COMMUNICABLE DISEASES.

The general health of the Colony remained comparatively satisfactory during the year. The death rate per 1,000 was 13.03 whilst the infant mortality rate was 106.5 per 1,000 live births, as compared with 104.8 per 1,000 in the previous year.

Malaria. In a country as low-lying and swampy as British Honduras Malaria holds the first place as the principal cause of morbidity. The disease is spread throughout the whole territory, though Stann Creek Valley, where the vector is chiefly the A. darlingi, claims the highest incidence. Out of 2,758 blood smears examined for Malaria parasites 288 or 10.44% were positive and of the number of positives 69.09% were found to be P. Falciparum. Twentynine deaths were certified by medical practitioners as against 45 in the previous year representing 6% and 9% respectively of the certified deaths of all causes.

Malaria cases admitted to the various hospitals were as follows:-

	Institu	utions			Cases	Total Admissions	Percentage of Admission
Belize				 	217	3,906	5.55
Corozal				 	39	329	11.85
El Cayo				 	63	413	15.25
Stann C	reek			 	324	1,483	21.84
Toledo				 	135	563	23.98
	Walk			 	28	216	12.96
			Total	 	806	6,910	11.66

Typhoid and Paratyphoid. Sixty-six cases of the enteric group of Fevers were notified with 6 deaths as compared with 60 cases and 5 deaths in 1949. There was a sharp rise in the endemicity of this disease in May, when fifteen cases were reported from the city.

Treatment with Chloromycetin, which for economic reasons is reserved

for the more severe cases, gave excellent results.

Dysentery. One hundred and seventy cases were notified with 16 deaths as compared with 148 cases and 25 deaths in 1949. Fifty-nine cases were of the amoebic type, 11 were bacillary and 120 unspecified.

Pulmonary Tuberculosis. Forty-nine cases were notified with 34 deaths as against 45 cases and 33 deaths in the previous year, representing a death rate of 51 and 50 per 100,000 of population respectively.

Most of the patients suffering from this disease present themselves for examination and treatment in the last and most advanced stage of the disease

where isolation and relief of symptoms is all that is possible.

Tuberculosis Hutments are provided for the isolation and treatment of twelve cases of pulmonary tuberculosis. These huts are most unsuitable and it is hoped in the near future that better and more modern accommodation will be obtained for this work.

Year				То	otal Deaths	Death rate per 100,000 of population
1940					34	50
1941	1	 			38	50
1942		 	4.		31	60
1943		 			44	50
1944		 			29	73
1945		 			37	51
1946	10	 4			42	51
1947		 			32	70
1948		 14.3	11000	19	45	71
1949		 			33	50
1950		 	4.1		34	51

Measles. Two hundred and fifty-eight cases were notified with 2 deaths. This outbreak started in Belize towards the beginning of the third quarter of the year and spread throughout the Colony.

Social Diseases. There were 5,473 attendances at the Social Diseases Clinic during the year as against 5,383 in the previous year. Fourteen cases of Congenital Syphilis and 231 cases of acquired Syphilis and 480 cases of Gonorrhoea were notified in 1950.

Of 3,684 samples of Blood taken for Kahn test 706 or 19.16% were found positive. Whilst the routine Kahn test of 714 pregnant women, attending the Ante-natal Clinic, showed positive results in 64 cases or 8.96% which gives a more accurate picture of the real incidence of Syphilis in the population.

Tables showing the distribution of cases and deaths from Communicable and Parasitic Diseases according to Districts and the age and sex distribution of deaths from Pulmonary Tuberculosis are shown in Appendices 1 and 2 respectively.

VITAL STATISTICS.

The figures and rates in respect of 1949 ar	nd !	1950 are	shown below	:
			1949	1950
Estimated population at 31st December			65,354	67,430
NT 1 63:11 11			2,548	2,657
Number of deaths from all causes			877	845
Number of deaths in Infants under 1 year	r of	age	266	284
Number of Deaths in Infants under 1 mor			112	104
Number of Still-births		Tour	86	107
Rates				
Birth rate per 1,000 of population			38.9	39.40
Crude death rate per 1,000 of population			13.41	11.04
Infant mortality rate per 1,000 live births	3		104.8	106.5
Non-natal death rate per 1,000 live births	8		40.3	39.1
Still birth rate per 100 live births			3.3	4.02
Only 56% of all deaths were certified by ed with 56.6% in 1949.	7 a	medical	practitioner	as com-

Tables showing the age and sex distribution of deaths from all causes, calssification of causes of deaths in infants under 1 year of age, comparison of births and deaths in infants under 1 year of age for the period 1944-1950 and causes of death in pre-school child (1-5 years) are shown in Appendices 3, 4, 5 and 6 respectively.

VI. PREVENTIVE MEASURES.

Hygiene and Sanitation. The Health Department is in charge of the sanitation and seavenging of the capital city and district towns in addition to the rest of the Colony. This is not a satisfactory arrangement as this work should be undertaken by the City Council and the various district boards under the advice and guidance of the Sanitation department and by so doing liberate sanitary inspectors to do more valuable work for which they have been trained.

The Health Department is also responsible for the enforcement of regulations governing the erection of all new buildings and extensions in Belize.

There is no sewerage system in the capital; night-soil is dumped, with official permission, at night time into two open canals which run through the centre of the city. The water in these canals is often stagnant and in the dry weather the portions of the canals become dry; the result is obnoxious and most unsanitary. It is hoped that the City Council will adopt some effective measures in the near future to abate this nuisance. During the year in Belize all bakeries, restaurants, hotels, slaughter houses were inspected regularly.

Mosquito Control. The campaign against Malaria and insect-borne diseases which was started in a small scale in 1949 was intensified throughout the year. Assistance from the United Nations International Children's Emergency Fund to the extent of U.S. \$24,000 in materials and equipment for a two-year campaign in Insect-Control was obtained. The campaign consists of the residual spraying of every house in the colony with a 5% emulsion of DDT twice a year for two years. The aim is to deposit 200 mgm DDT per square foot of surface and the sanitary inspectors, who supervise the work and the sprayers, were given preliminary training by an expert from UNICEF.

Before the end of the year 98% of the houses have had their first spraying, whilst work on the second spraying had started in some areas. Sufficient data, concerning adult captures following the first spraying, has not yet come in to determine the effectiveness of the campaign to date, but the general impression is that there is a noticeable reduction in the mosquito population and some districts report a fall in the number of malaria cases amongst infants. It is,

however, too early to come to any conclusions.

Enteric Control. Prompt measures were taken to control the epedemic of Lyphoid Fever which broke out in May, including the innoculation of about 4,000 people or roughly one-sixth of the population of Belize. The people were notified through the Press of the precautions they should take to avoid contracting the disease. Only eight cases were reported from the city in the subsequent three months.

Water Supplies. More wells were sanitated as public water supplies in various villages during the year.

Latrine Construction. As a preventive measure against Ancylostomiasis 163 private pit latrines were erected during 1950.

VII. HOSPITALS.

The total bed strength of the six hospitals in this colony is 225 or 3.6 beds per 1,000 of the population.

There were 6,910 admissions during the year as compared with 6,301 in

1949, made up as follows:-

C CE D CO A CARO TI DI			
Belize Hospital	 	 	3,906
Stann Creek Hospital	 	 	1,483
Punta Gorda Hospital	 	 	563
Corozal Hospital	 	 	329
Cayo Hospital	 	 	413
Orange Walk Hospital	 	 	216

Maternity Ward, Belize Hospital. There were 496 deliveries with 5 maternal deaths as compared with 490 deliveries and 2 deaths in the previous year.

Airport and Port Health Work. No cases of any of the Convention Diseases were seen in the Airport or any of the seaports and no quarantine restrictions were imposed against any country. A qualified nurse was attached to the Airport to examine all incoming passengers.

Maternal Hygiene. Clinics were held at seventeen centres throughout the Colony with a total of 6,248 attendances. In Belize the number of cases registered was 558.

Child Hygiene. Clinics were held at nineteen centres with a total attendance of 48,189. In Belize clinics were held weekly at two clinics, one on the north side and the other on the south side of the city. The following statistics show the volume of the work done in Belize and prove the urgent necessity for a Health Centre.

			Mesopo- tamia	Hudson Street	Total

No. of pounds Food Yeast		/	147	120	267

Feeding of School Children. It was possible to get assistance from UNICEF to feed 4,000 school children and 500 infants under one year of age for a period of one year. The number of school children on the roll exceeds 11,000 and of these it was possible to feed nearly 6,000 from government funds and UNICEF's assistance as compared to 420 in 1949.

A fund was started by Lady Garvey, wife of His Excellency the Governor, during the year to augment the school feeding scheme and the Red Cross Society took over the feeding of the pre-school age group of children. Soup kitchens, preparing a hot mid-day meal, have been organized where this was found possible. On the whole, a snack of milk, bread, margarine and fish liver oil capsules is being given daily throughout the school year to selected children. Parents are encouraged to assist the programme by contributing something in kind or labour, but the response has not been satisfactory. Encouraging reports have come from the schools regarding the physical and mental improvement of the children receiving this help.
