D. MEDICAL AND SURGICAL INDUCTIONS OF LABOUR

36 medical and surgical inductions of labour were performed in 1968 and 51 in 1969. Nearly all being for post-maturity, placental insufficiency and pre-eclampsia.

E. POST-PARTUM COMPLICATIONS

There were 6 cases of retained placenta needing manual removal in 1968 and 7 cases in 1969. There were 21 cases of post-partum haemorrhages in 1968 and 18 cases in 1969.

The cases of post-partum haemorrhages represent a rate of 1.6% in 1969 of the number of deliveries compared with 1.8% in 1968, 2.1% in 1967, 3.6% in 1966 and 5.7% in 1965.

This steady decrease in the number and rate of Post-Partum haemorrhages is due to the more general and efficient use of oxytocic drugs in the third stage of labour.
