ELEVENTH ANNUAL REPORT

VACCINATION REPORT

1918-1919

U.S. DEPARTMENT OF HEALTH

THE NATIONAL BUREAU OF HEALTH

**ELEVENTH TRIENNIAL REPORT ON VACCINATION IN BENGAL
FOR THE YEARS 1917-18, 1918-19 and 1919-20.**

1. I submit the following report on Vaccination in Bengal for the triennial period from 1917-18 to 1919-20.

2. **Officer-in-charge of the department.**—I was in charge of the department throughout the triennial period.

Dr. Brahmachari held charge of the office of the Deputy Sanitary Commissioner of the Presidency Circle; Drs. Sur and Ray of the Burdwan Circle; Dr. Sufi of the Dacca Circle; and Drs. Gupta, Ray and Ghosh of the Rajshahi Circle during the triennium.

3. **Strength of staff.**—The average number of inspecting officers and vaccinators in Calcutta was 14 and 62 during the triennial period against 7 and 45 during the previous epoch. In the rural areas of the Presidency they numbered 133 and 1,576, and in mufassal municipalities, dispensaries, etc., 6 and 170 as compared with 126 and 1,347, and 5 and 155 during the previous triennial period.

4. **General operations.**—Excluding about 7,538 operations performed by the British India Steam Navigation Company, the Port Health Department, Calcutta, and a sub-assistant surgeon in the Murshidabad district for which no details are available, the total number of vaccinations reported to have been performed in this Presidency during the year 1919-20 was 3,186,642 on 3,181,727 persons against 1,784,817 on 1,773,715 persons during the previous year, showing an increase of no less than 1,401,825 operations. Of the total cases, 1,646,099 were primary and 1,540,543 re-vaccinations as compared with 1,295,331 and 489,486 during 1918-19. There were thus 350,768 more primary vaccinations and 1,051,057 more re-vaccinations performed in 1919-20 than during the previous season. The average of the triennial period under review was 2,195,353 of which 1,432,923 were primary operations and 762,430 re-vaccinations, the corresponding figures of the previous triennial epoch being 1,624,214, 1,246,895 and 377,319, respectively. The average increase in the triennium thus amounts to a total of 571,139 operations. The greatly increased amount of vaccination during the season under review is to be attributed firstly to the greater prevalence of small-pox and secondly to the special efforts made to induce people to accept vaccination. Early in the season warnings were issued by this department that an epidemic was likely to occur and repeated requests were sent to civil surgeons, chairmen of district boards and municipalities and others urging them to push on vaccination as vigorously as possible. Special circulars and illustrated leaflets and posters were also prepared and widely circulated, and it is reported that these proved very effective in inducing people to accept vaccination more readily than usual.

The average rate of success in primary and re-vaccination cases during the triennial period was 96·75 and 67·95, respectively, against 96·71 and 64·29 during the previous epoch.

The average number of operations performed by a vaccinator was 1,187 against 1,045 during the previous triennial period. The average work of a licensed and a paid vaccinator was 1,105 and 1,365 respectively, as compared with 1,028 and 1,117 during the previous triennium.

As compared with the previous year (1918-19) there was an increase of operations in every district except Darjeeling, but there was slight decrease in primary vaccination in the Serampur subdivision of the Hooghly district and in the districts of Malda and Chittagong Hill Tracts. The increase was between 12,000 to 20,000 in four districts, over 20,000 to 30,000 in seven, over 30,000 to 40,000 in three, over 40,000 to 50,000 in three, over 50,000 to 80,000 in five and over one lakh in four, viz., Dacca (106,156), Mymensingh (118,677), Faridpur (171,760) and Calcutta (181,402). The decrease in Darjeeling and the increase in the Chittagong Hill Tracts in total operations were slight.

5. **Protection afforded to infants.**—During 1919-20 out of 935,708, the estimated number of available infants for vaccination, 295,676 or 315·98 per mille were said to have been successfully vaccinated as compared with 260·92 and 261·22 during the previous years. In four districts only the protection afforded to infants was over 500 per mille. As reported in previous years, the districts in the Dacca and Chittagong Divisions were the worst in this respect. The protection afforded to infants in municipalities is shown in Appendix VII attached to this report. It will be seen that 836·47 per mille of the surviving infants were protected during the year against 658·95 and 582·56 during 1918-19 and 1917-18, respectively.

6. **Recess work.**—Altogether 556,400 vaccinations were performed during the recess or non-working season of 1919-20 in connection with small-pox epidemic against 193,147 and 123,203 during the two previous years. The average recess operation of the triennial period was 290,917 as compared with 158,848 during the past triennium.

7. **Six-puncture vaccination.**—The total number of successful primary and re-vaccination operations performed in six points during 1919-20 was 214,069 and 19,051, respectively, as compared with 153,184 and 6,404 during 1918-19 and 196,136 and 3,763 during 1917-18. The average of the triennial period was 187,796 primary and 9,739 re-vaccination cases against 240,303 and 13,464, respectively, during the previous epoch.

8. **Factory and tea garden vaccination.**—Seven thousand seven hundred and seventy-five primary and 20,264 re-vaccinations were performed in factories and tea gardens in this Presidency during 1919-20 against 4,002 and 10,896, and 6,801, and 2,007 during the two preceding years. The average of the triennial period was 6,193 primary and 11,056 re-vaccination cases as compared with 5,855 and 3,704 during the previous triennium.

9. **Cost of and contribution towards vaccination.**—The total average cost of vaccination during the triennial period under review was Rs. 2,47,585-0-11 against Rs. 1,98,549-2-9 during the previous triennium, the cost of each successful case of vaccination being two annas and two pies against two annas and three pies. Out of the average cost as shown above, Rs. 35,170-4 was contributed by the district boards and Rs. 115-1-4 by cantonments against Rs. 10,818-3-6 and Rs. 96-8-10 during the previous period.

10. **Diagram illustrating death-rates from small-pox and degree of protection afforded.**—The death rates from small-pox in each district and the proportion of population protected against the disease by vaccination during the past seven years are shown in the diagram facing this page.

11. **Deaths from small-pox.**—During 1919-20 the total number of deaths recorded from small-pox was 41,200 against 12,147 and 7,020 during the two previous years, the ratio per mille of population being 90 against 26 and 15. The largest number of deaths were recorded in the districts of Rangpur (6,381), Calcutta (3,935), Dacca (3,487), Bogra (2,742), Pabna (2,636), Tippera (2,585), Mymensingh (2,360), 24-Parganas (2,021), Faridpur (1,644), Midnapur (1,619), Nadia (1,568), Howrah (1,400), Dinajpur (1,380), Hooghly (1,293), Rajshahi (1,036), Malda (899), Jalpaiguri (622) and Noakhali (608). Darjeeling, Khulna and Chittagong districts had 130, 143 and 160 deaths, respectively.

12. **Animal Vaccine Depot.**—The total number of calves vaccinated in the Animal Vaccine Depot, Calcutta, during 1919-20 was 2,742 against 2,452 and 2,299 during the two previous years, and the quantity of lymph manufactured therefrom was 1,715,101, 1,058,273 and 858,759 grains respectively. The average of the triennial period was 2,498 calves and 1,210,711 grains of lymph against 2,281 calves and 773,807 grains of lymph during the previous triennial period.

13. **Different methods of vaccination.**—During 1919-20 the total number of primary operations performed with lymph direct from calves was 6,433, with lanoline paste 1,050,601 and with glycerinated lymph 589,065 against 2,532, 1,200,089 and 92,710, respectively, during 1918-19 and 1,223, 1,334,422 and 21,695, respectively, during 1917-18. The ratio percentage of success under each of these methods was 96·96, 97·04, and 96·89 against 94·51, 95·44 and 96·69 during 1918-19 and 97·54, 96·64 and 95·13 during 1917-18.

Diagram illustrating death-rates from small-pox during the year 1919-20 and degree of protection afforded, 1913-14 to 1919-20.

▨ Indicate the death-rates from small-pox.

■ Indicate the proportion of population protected by vaccination.

<https://archive.org/details/b3149609x>

The number of re-vaccinations performed under each of these methods was 6,517, 919,378 and 614,648 with a success of 62·16, 72·22, and 60·50 per cent. respectively against 1,615, 450,927 and 36,944 with a success of 71·64, 67·05 and 41·04 during 1918-19 and 586, 243,000 and 13,675 with 55·12, 68·49 and 27·12 per cent. of success during 1917-18.

14. **Inspections.**—During 1919-20, the Deputy Sanitary Commissioners were mostly engaged on special duties in connection with outbreaks of small-pox, cholera and epidemic dropsy, and they were therefore unable to do much routine vaccination inspection work. The Civil Surgeons saw altogether 51,488 cases or 1·62 per cent. of the total operations performed in the Presidency. The Civil Surgeons of Malda, Tippera and Faridpur inspected 6,592, 4,753 and 4,628 operations, respectively. Of the rest, two, viz., the Civil Surgeons of Mymensingh and Rangpur, saw between 3,000 to 4,000 cases; 13 from 1,000 to 2,700 and 5 below 1,000 operations. No vaccination inspection was performed by the Civil Surgeons of Burdwan, Serampur, Howrah, 24-Parganas and Dacca. The Government paid Vaccination Inspectors and Sub-Inspectors inspected 1,133,556 cases or 35·63 per cent. of the total operations performed.

15. **General remarks.**—Free vaccination was introduced in the districts of Birbhum and Howrah from the beginning of 1919-20 at the cost of the District Boards, and it was continued in the Burdwan district, including the Asansol Mining Settlement area, 24-Parganas and Jalpaiguri as well as in certain thanas of the Bogra and Malda districts. It was also introduced in the Patuakhali subdivision of the Bakarganj district during the year. The district boards of Rajshahi, Dinajpur, Rangpur, Pabna, Dacca, Mymensingh, Faridpur, Chittagong, Noakhali and Tippera also appointed many paid vaccinators for the suppression of small-pox in their districts and as reported in previous years that it proved a success wherever it was introduced.

Mention has already been made of the use of illustrated leaflets and posters for the purpose of popularizing vaccination. Three large posters and a number of leaflets illustrating the danger of small-pox and the value of vaccination were prepared during the year and circulated widely among municipalities, district boards and railway and steamer companies, jute mills and tea gardens, etc., and from reports that have since been received they appear to have served a very useful purpose in educating the public and inducing them to come forward for vaccination in larger numbers than ever before. An illustrated pamphlet on small-pox and its prevention has since been prepared and is being circulated.

17. The prescribed statements are appended to these notes.

CHAS. A. BENTLEY, M.B., D.P.H., D.T.M., & H.,

Sanitary Commissioner for Bengal.

CALCUTTA;

The 6th September 1920.

STATISTICAL RETURNS.

STATEMENT NO. III.—*Showing particulars of vaccination performed by vaccinators attached to municipalities, dispensaries, etc., in the Presidency of Bengal, during the year 1919-20.*

Number.	DISTRICTS.	Number of municipalities, dispensaries, etc., in each district to which a vaccinator is attached.	Average number of vaccinators attached to municipalities, dispensaries, etc., during the year.	Total number of persons vaccinated.	Average number of persons vaccinated by each vaccinator.	NUMBER OF CASES PRIMARILY VACCINATED.					NUMBER OF CASES RE-VACCINATED.			PERCENTAGE OF SUCCESSFUL CASES IN WHICH THE RESULTS WERE KNOWN.		PERCENTAGE OF UNKNOWN CASES TO TOTAL CASES.	
						Total.	Successful.			Unknown.	Total.	Successful.	Unknown.	Primary.	Re-vaccination.	Primary.	Re-vaccination.
							Under one year.	One year and under six years.	Total of all ages.

GOVERNMENT OF BENGAL.

MUNICIPAL DEPARTMENT.

Sanitation Branch.

CALCUTTA, THE 27TH DECEMBER 1920.

RESOLUTION—No. 1355San.

READ—

The reports of the Sanitary Commissioner, the Sanitary Board and the Sanitary Engineer, Bengal, for the year 1919.

READ ALSO—

The eleventh triennial report on vaccination in Bengal for the years 1917-18, 1918-19 and 1919-20.

1. **General results—Birth-rate.**—During the year 1919 the number of recorded deaths in Bengal exceeded the number of recorded births by 396,000, or 8·7 per mille of the population. The birth-rate was only 27·5 per mille, the lowest returned since 1892; it was 5·4 per mille less than the ratio of 1918 and 5·8 per mille less than the average for the preceding five years. Every district showed a reduction in the birth-rate, and only one province in India returned a lower ratio, viz., Madras, where it was 25·5 per mille. The decrease is attributed by the Sanitary Commissioner to economic pressure resulting from the poor harvest of 1918, combined with the effect of high prices, the prevalence of influenza and the consequent excessive mortality which occurred in the latter part of 1918 and the earlier months of 1919.

2. **Death-rate.**—The number of deaths was 226,000 above the quinquennial average, though it fell short of the previous year's figure by 86,000. The death-rate represented 36·2 per mille of the population and was higher than in any year since 1905 with the exception of 1918; it was, however, less than that returned by four other provinces in India. The heavy mortality of the year was the aftermath of the influenza epidemic of 1918 and was enhanced by virulent and widespread epidemics of cholera and small-pox. In the opinion of the Sanitary Commissioner it is difficult to trace any marked correlation between the range of prices and the mortality in Bengal, the increased prices of food-grains, though they bear heavily on certain classes of the community, tending, in the presence of reasonably good harvests, to benefit a large proportion of the population; but such a correlation is observable in the case of crop outturns and mortality, deficient harvests being almost invariably followed by an increased number of deaths.

The highest mortality in the towns of Bengal was returned by Howrah, where the death-rate was 55·1 per mille. It was closely followed by Baranagore with 54·8 of which over 20 per cent. was due to cholera, dysentery and diarrhoea. The Sanitary Commissioner remarks that it is significant that over 40 per cent. of the total mortality in the latter town should have been due to easily preventible water-borne diseases of this nature, while over 14 per cent. of the mortality was due to small-pox, another easily preventible disease.

3. **Infant mortality.**—The number of deaths amongst infants declined by 55,000, but owing to the fall in the aggregate of births the actual ratio of infantile mortality was nearly exactly the same as in 1918. A large and representative committee was appointed by the Governor in Council in May 1919 to advise upon measures to reduce infantile mortality and promote child welfare, and its final report is awaited.

4. **Cholera.**—The mortality from cholera aggregated 125,000, a figure which has only once been exceeded in the last 10 years. Only one of the 116 municipalities and only 4 out of 498 registration circles were immune from the disease. The high mortality was caused by the conditions which commenced in the cold weather of 1918, viz., short rainfall in October, the early cessation of the rains and the consequent deficiency of crops. These factors led to increased emigration, the effect of which was seen in the heavy incidence of cholera at centres where cool labourers halted on their way to Assam and the Duars, and the manner in which infection spread along the river and railway routes. It is probable also that a considerable proportion of the enhanced mortality in the Burdwan and Presidency divisions was indirectly due to infection from pilgrims returning from Saugor Island, where there was an outbreak in January 1919.

The Governor in Council is pleased to notice that, in the opinion of the Sanitary Commissioner, although many local authorities are still very apathetic and slow to accept responsibility in regard to the prevention of cholera, there is evidence that they are gradually waking up to the importance of taking steps to investigate the cause of local outbreaks with a view to applying the simple means necessary for preventing the spread of infection. Action is, however, only too often belated, little or nothing being done to disinfect wells and tanks till cholera has become widespread. The Sanitary Commissioner rightly complains of the absence of concerted and systematic preventive measures and remarks:—"Cholera was reported from no less than 15,876 villages in the province, but only a few advanced districts, such as Burdwan, have as yet made any attempt to deal with this scourge of village life, and as a consequence of this neglect, every year sees many thousands of lives needlessly sacrificed and enormous economic loss occasioned to the province."

5. **Small-pox.**—Deaths from small-pox rose above the high figure of 33,000 recorded in 1915 and aggregated 37,000. Its ravages were general, but compared with last year a smaller number of children under 10 were attacked, and the enhanced mortality was chiefly among adults. In several mofussil towns it was found that the disease was imported from Calcutta and spread first among the sweepers, a class specially prejudiced against vaccination, and from them to the townspeople at large.

6. **Vaccination.**—Vaccination was stimulated by the prevalence of small-pox and by the efforts of the Sanitary Department to popularize preventive measures. Early in the season warnings were issued that an epidemic was likely to occur; illustrated leaflets and posters were circulated widely, which appear to have had a good effect; and local authorities and officers were urged to push on vaccination vigorously. The result was that the number of vaccinations increased by nearly 80 per cent, rising from 1,785,000 to 3,187,000. Free vaccination was introduced, at the cost of the District Boards, in Birbhum and Howrah and in the Patuakhali subdivision of the Bakarganj district. It was also continued in the districts of Burdwan, the 24-Parganas and Jalpaiguri as well as in certain thanas of Bogra and Malda. Several District Boards employed paid vaccinators, and this system proved successful wherever it was adopted.

7. **Fever.**—The mortality from fever, always high in Bengal, was 1,229,000 or 27.1 per mille, which was 2.9 per mille less than the rate recorded in the previous year. The effect of influenza, many of the deaths from which were returned under this head is reflected in the returns. The mortality was

especially heavy in the first six months, when also influenza was raging, fell in July and, after a slight rise in August, declined steadily each month.

8. **Anti-malarial measures.**—The four anti-malarial schemes, of which an account was given in last year's resolution, came into full operation and the results are reported to have been distinctly encouraging. Work was started on the Nawi-Sunthi and Jabuna schemes, two large drainage schemes of which the object is to resuscitate dead or dying rivers. Twenty-four municipalities having reported that they had undertaken special anti-malarial measures on lines laid down by the Sanitary Commissioner, a special enquiry was made to test the results. It was ascertained that with three exceptions (Birnagar, Panihati and Tangail) little or nothing had been attempted, and that very few of the municipal boards concerned had made any budget provision for anti-malarial work. In many of the towns moreover, the incidence of malaria was found to be so small that special measures were not really required. The special Deputy Sanitary Commissioner was, however, able to advise others as to the measures suitable to local conditions. These facts are significant of the need for local authorities enlisting the help of the Sanitary Department and having a malarial survey made before incurring expenditure. Malarial surveys were made in 276 villages, 4 collieries and one tea-garden in addition to these 24 municipalities. In spite of the increase of the price of quinine treatments effected in 1918, the issues rose by 27 per cent. Altogether 9,000 lbs of quinine were sold in this way to retail purchasers, besides which about 1,200 lbs of quinine in tablet form was issued by Government for free distribution among the poor by District Boards, municipalities and officers of the Sanitary Department.

9. **Influenza.**—The influenza epidemic of 1918 continued during the first half of the year, though in a less virulent form. Owing to deaths from it being largely ascribed to fever, it is impossible to gauge with complete accuracy the actual mortality, but the Sanitary Commissioner estimates that the total number of deaths in 1919 may be roughly taken at 200,000; and that the epidemic took a toll of nearly 600,000 lives in the two years. The incidence of the disease was far from uniform. The Burdwan and Birbhum districts appear to have suffered most severely, each probably losing an aggregate of 3 per cent. of their population during the two years; Bankura, Nadia and Murshidabad each lost $2\frac{1}{2}$ per cent. of their population; in Hooghly, Darjeeling, Jalpaiguri, Midnapore and Chittagong the deaths represent a loss of from 1.5 to 1.8 per cent.; in Noakhali, Malda, Mymensingh, Pabna and Tippera the loss is rather over one per cent; in Dacca, Rajshahi and Khulna it is rather less than one per cent; in Howrah, 24-Parganas and Dinajpur it is about .7 per cent; in Rangpur about .6 per cent.; in Bogra about .5 per cent.; and in Jessore and Faridpur between .3 and .4 per cent. only.

10. **Special enquiries.**—A resolution on the progress of anti-hook worm campaign was published on 31st May 1920, and it will be sufficient to state here that valuable investigation work has been done, knowledge of the disease and of its effects has been disseminated, and progress has been made in establishing centres for diagnosis and treatment. An investigation into the extent and causes of pollution of the water of the river Hooghly was commenced and special enquiry was made into the prevalence of *kala azar* in the districts of Dacca and Mymensingh. In the Tangail subdivision in the Mymensingh districts, it appears that there is a high rate of *kala azar* infection, and the District Board has been urged to start a campaign against the disease on systematic lines. In the Dacca district the result of the enquiry is to show that a severe stage of infection has not yet been reached, and it rests with the District Board to make a thorough survey of infected areas and to arrange for treatment, which should not only prevent the further spread of the disease but be effectual in eradicating it from the district.

11. **Asansol Mines Board of Health.**—The Governor in Council desires to acknowledge the continued good work done by the Asansol Mines Board of

Health, of the beneficial effects of which two instances may be mentioned. The ratio of infant mortality in the area under its jurisdiction was only 140 per mille compared with the rate of 342 in the district as a whole and the provincial rate of 228 : this satisfactory result is ascribed to the fact that the Board of Health employs a staff of trained midwives, who not only render gratuitous assistance to women during confinement but also act as health visitors. The effect of the efficient system of vaccination and revaccination in force is apparent from the fact that there were only 14 deaths from small-pox, all imported, and that there were only 200 local cases, none of which proved fatal.

12. **Sanitary Engineering.**—Altogether 14 schemes of water-supply, sewerage and antimalarial drainage were in course of construction during the year under the control of the Sanitary Engineer; six of these were completed, while the expenditure on new construction work amounted to four lakhs of rupees. The progress of work was impeded by several unavoidable causes. The rise in the cost of materials necessitated revision of the estimates and a consequent re-examination of the financial basis of the schemes; variations in rates of exchange and labour difficulties in England interfered with tenders for machinery and other materials, and after the acceptance of tenders there was uncertainty about delivery and delay in the fulfilment of contracts.

The growing realization of the importance of industrial housing in large labour centres congregated near the mills is evinced by the munificent contribution of 18½ lakhs, which has been made by the jute mill companies having mills along the Hooghly for schemes of sanitation in mill towns. Projects were prepared during the year under review for the sewerage of Titagarh, Naihati, Bhatpara, Kamarhati, Bhadreswar and Champdany, and for a town-planning scheme at Bhatpara, as well as for the improvement of its water-supply.

13. **Water-supply.**—Of late years the District Boards have given greater attention to the question of improving the sources of rural water-supply, and in the year under report over 6½ lakhs of rupees were spent on the construction of new tanks and wells in rural areas and over Rs. 68,000 on the upkeep of the existing sources of supply. The Governor in Council cordially appreciates the efforts of the District Boards in this direction, but doubts their sagacity in financing capital works of this nature from revenue. The Sanitary Commissioner himself points out in this connection that the practice of devoting a large portion of general revenue to items of capital expenditure, which might legitimately be met from loans, is seriously crippling the public health work of District Boards and preventing them from undertaking proper measures for the suppression of such epidemic diseases as cholera, which require a sufficiently numerous staff of suitably trained subordinates.

14. **Staff.**—The year under review witnessed a rapid expansion of the work of the Sanitary Department, the burden of which fell largely on the Sanitary Commissioner, Dr. Bentley. The thanks of the Governor in Council are due to Dr. Bentley for his devotion to duty and the untiring zeal and indefatigable energy with which he discharged the responsibilities of his office. The Governor in Council desires to express his appreciation of the efficient management of the sanitary engineering branch of the Department by Mr. G. B. Williams, and, on his proceeding on leave, by Mr. F. C. Griffin. He also desires to thank the Sanitary Board for the assistance which they rendered Government in advising on the schemes submitted by local bodies.

By order of the Governor in Council,

L. S. S. O'MALLEY,

Secretary to the Government of Bengal.

Memo. No. 1417San.

Copy (with copies of the reports*) forwarded to—

- (1) All Commissioners of Divisions for information and communication to all District Officers and Chairmen of District Boards in their respective divisions ;
