NOTES AND STATISTICS

ON

Vaccination in Burma

For the official year (April to March) 1932-33.

1. **Establishment.**—The following table compares the strength of the vaccination staff employed in the Province during the year 1932-33 with that of the two preceding years :—

Vaccination Staff.

Year.	Province or State.	District Superintendents of Vaccination	Part-time Supervising Officers.		Inspectors of Vaccination.	Head Vaccinators.	Vaccinators.
			Sub-Assistant Surgeons, etc.	Public Health Inspectors.			
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1930-31	Burma ...	38	32	26	39	...	354
	Shan States	2	2	3	42
1931-32	Burma ...	38	32	37	39	...	355
	Shan States	2	2	3	42
1932-33	Burma ...	38	32	48	30	...	351
	Shan States	2	2	3	43

BURMA.—During the year 1932-33, 351 vaccinators were employed, compared with 355 during the previous year. There was a decrease of 2 in Prome district, 1 in Insein district and 1 in Mandalay Cantonment. There were 30 inspectors of vaccination, compared with 39 in the previous year. The 9 places were, however, filled by public health inspectors who have a higher technical training. Government has informed local bodies that a qualified public health inspector is to be appointed in any future vacancy occurring in the post of inspector of

vaccination. The number of public health inspectors rose from 37 to 48, while that of the sub-assistant surgeons, etc., supervising vaccination work, remained the same.

In order to cope with local outbreaks of smallpox 41 temporary vaccinators were entertained for various periods—20 in Rangoon town, and 1 each in Pyawbwe, Moulmein, Pyinmana and Minbu towns, 3 each in Bassein and Tharrawaddy districts, 2 each in Magwe and Shwebo districts, and 1 each in Henzada, Myaungmya, Hanthawaddy, Minbu, Kyauksè, Bhamo and Mandalay districts.

SHAN STATES.—One additional vaccinator was employed in the Federated Shan States. Otherwise the staff remained the same as in the previous year.

Statement I.

2. General Review—Totals Vaccinated.—

BURMA.—A total of 1,138,145 persons are reported to have been vaccinated, compared with 894,704 in the previous year—an increase of 243,441 persons.

This was mostly due to the higher incidence of smallpox. With an increase in the prevalence of smallpox there was a corresponding greater readiness on the part of people to get vaccinated. It is to be hoped that with the spread of education it will not in the near future require an unpleasant stimulus such as an epidemic to make the people recognise the necessity of vaccination.

SHAN STATES.—The States report 120,969 persons, compared with 82,146 in 1931-32—an increase of 38,823 persons.

These figures exclude jail and ship vaccinations, but include dispensary and private vaccinations.

Statement I.

3. Operations Performed.—

BURMA.—The total number of operations performed in Burma during the year under report, excluding jail and ship but including dispensary and private vaccinations, was 1,140,152 (637,649 primary and 502,503 revaccinations), compared with 896,080 (540,865 primary and 355,215 revaccinations) in 1931-32—an increase of 244,072 operations.

An increase is reported from 32 districts and a decrease from 5.

The largest increase is reported from Mandalay (+34,640) followed by Bassein (+31,737), Myaungmya (+24,738), Tharrawaddy (+21,793) and Lower Chindwin (+20,133). Increases are also reported from the districts of Thayetmyo (+14,963), Henzada (+14,412), Tavoy (+13,302), Yamèthin (+12,974), Magwe (+10,109), Prome (+9,931), Myingyan (+9,693), Pyapôn (+8,314), Maubin (+8,137), Minbu (+7,899), Pakôkku (+6,009), Meiktila (+5,842) and Kyauksè (+5,527).

Of the five districts reporting decreases Sagaing heads the list with (−3,120), followed by Toungoo (−2,596), Akyab (−785), Salween (−121) and Thatôn (−72).

SHAN STATES.—The total number of operations performed in the Federated Shan States in the year under report was 120,969 (87,668 primary and 33,301 revaccinations), compared with 82,146 (65,080 primary and 17,066 revaccinations) in 1931-32—an increase of 38,823 operations.

4. Primary Vaccination.—

Statement I.

BURMA.—A total of 637,649 primary operations was recorded during the year, compared with 540,865 during 1931-32—an increase of 96,784. Out of 38 districts, 28 report increases and 10 decreases.

Large increases are reported from the districts of Bassein (+21,838), Tharrawaddy (+15,126), Myaungmya (+14,601), Bhamo (+7,421), Myingyan (+6,607) and Pyapôn (+6,414).

Decreases of over 1,000 are returned by the districts of Sagaing (−2,161) and Akyab (−1,113).

SHAN STATES.—The number of primary vaccinations reported for the year under report is 87,668, compared with 65,080 in the previous year—an increase of 22,588.

5. Revaccination.—A total of 502,503 revaccinations is recorded during the year, compared with 355,215 in 1931-32—an increase of 147,288. Increases are reported from 32 districts and decreases from 6 districts.

Statement I.

Large increases are reported from the districts of Mandalay (+32,573), Lower Chindwin (+20,042), Shwebo (+15,021), Tavoy (+14,184), Yamèthin (+12,810), Thayetmyo (+10,630), Henzada (+10,579) and Prome (+10,551). Increases over five but below ten thousand are returned from the districts of Tharrawaddy, Bassein, Minbu, Magwe, Pakôkku, Kyaukse and Upper Chindwin. The general increase is in keeping with the higher incidence of smallpox.

Decreases of over one thousand are reported from Rangoon (−65,781) and the districts of Toungoo (−1,625) and Thaton (−1,054). In the last two districts the travelling allowance of the vaccinators has been fixed, instead of being paid according to the journeys performed, and this is given as the cause of the falling off in the amount of work done.

6. Results of Vaccination.—

Statement I.

BURMA.—Of the 637,649 primary operations (including those performed by medical officers in charge of dispensaries and by private practitioners) performed during the year under report, 572,668 are reported as successful, compared with 498,023 in the previous year. The results of 39,118 were unknown, compared with 27,275 in the previous year. The number of failures therefore works out at 25,863, compared with 15,567 during the previous year.

Of the total of 572,668 successful vaccinations, 168,701 were on infants under one year of age and 312,615 on children of one to six years. The remaining 91,352 successful cases were on persons over six years of age.

The percentage of success in primary vaccinations of which the results were known is 95'68, compared with 96'97 in the previous year. Success rates over 99 per cent. are returned by Kyaukse (99'56) and Bhamo (99'85) districts and below 90 per cent. by Chin Hills (74'53), Myingyan (88'97), Upper Chindwin (87'07) and Lower Chindwin (89'95) districts. The remaining districts report success rates between 90 and 99 per cent.

Of the 502,503 revaccinations, 133,742 are reported as successful, compared with 81,031 in the previous year. The percentage of success in revaccinations of which the results were known is 33'25, compared with 31'71 in the previous year.

SHAN STATES.—Of the total of 87,668 primary vaccinations performed in the Federated Shan States, 70,225 are reported as successful, compared with 58,775 in the previous year. The results of 16,465 were unknown, compared with 4,551 in the previous year. The number of failures therefore works out at 978, compared with 1,754.

Of the 33,301 revaccinations, 13,077 are reported as successful, compared with 8,538 in the previous year.

The percentage of success amongst cases of which the results were known is 98'62 in primary vaccinations and 52'09 in revaccinations.

Statement I.

7. Vaccination in Towns.—

BURMA.—In the 74 towns to which the Vaccination Acts have been extended, a total of 230,276 operations were performed during the year, compared with 239,005 in the previous year. Of the total operations, 61,002 were primary and 169,274 were revaccinations, compared with 59,240 and 179,765, respectively, in the previous year. This gives an increase of 1,762 in primary and a decrease of 10,491 in revaccinations.

Of the 74 towns, 47 report an increase and 27 a decrease. The highest increases are reported from Mandalay (+25,478), followed by Tavoy (+6,266), Maymyo (+5,690), Henzada (+4,656), Akyab (+3,769), Minbu (+3,750), Myingyan (+1,701), Sagaing (+1,555), Kyonpyaw (+1,438), Syriam (+1,413), Gyobingauk (+1,239), Shwebo (+1,203) and Thôngwa (+1,080). On the other hand, a large fall is reported by Rangoon (−69,715), followed by Myitnge (−3,581), Letpadan (−3,182) and Insein (−2,004). The large increase in Mandalay was attributed to the higher incidence of smallpox and to better supervision, and the large decrease in Rangoon was due to the fact that an abnormally large number of operations was performed in the last three months of the previous year when a severe outbreak of smallpox occurred.

SHAN STATES.—A total of 4,962 operations were performed in the three towns in the Shan States during the year under report, compared with 2,170 in the previous year—an increase of 2,792.

8. Results of Vaccination in Towns.—

Statement I.

BURMA.—Out of 61,002 primary operations performed in the 74 towns, 55,497 were successful; out of 169,274 revaccinations 47,263 were successful. The percentage of successful cases to total known cases is 97·63 in primary and 36·39 in revaccinations, compared with 97·99 and 35·03, respectively, in the previous year.

Of the 74 towns, 26 report 100 per cent primary successes and 41 report successes below 100 but over 90 per cent. Seven towns return success rates below 90 per cent., *viz.* Kyaukpyu, Sandoway, Kawkareik, Mergui, Myingyan, Pyawbwe and Mawlaik.

High success rates (ranging from 70 to 100) in revaccinations were reported from Minbya, Pegu, Tharrawaddy, Thônzè, Nattalin, Ngathaingyaung, Nyaung-U, Myitkyina and Mawlaik. Low success rates, below 10 per cent., are reported from Syriam, Shwedaung, Henzada, Maubin, Danubyu, Pyapôn and Myingyan.

SHAN STATES.—Of the 1,000 primary operations performed in towns in the Federated Shan States during the year under report, 851 were successful, compared with 837 in the previous year. Of the 3,962 revaccinations, 1,057 were successful, compared with 568 in the previous year. The percentage of successful cases to total known cases is 98·84 per cent. in respect of primary operations and 46·38 in respect of revaccinations, as against 98·12 and 47·49, respectively, during the previous year.

9. Infant Vaccination in Towns.—

Appendix B.

BURMA.—Totals of 45,791 births and 12,177 deaths among infants under one year of age were registered in the 74 towns in which the Vaccination Acts are in force. The number of survivors according to these records is therefore 33,614. During the year under report, 36,198 infants under one year were successfully vaccinated—2,584 in excess of the recorded survivors.

The number of infants successfully vaccinated was in excess of recorded survivors in 33 towns, and below, in 40 towns. In one town, the figures were the same.

A large excess of infant vaccinations over survivors is reported from Mandalay (+2,022), Chauk (+490), Pegu (+451), Insein (+376), Myaungmya (+296) and Henzada (+287).

In seven towns, the number of infant vaccinations exceeded the number of births. These are Pegu, Thingangyun, Henzada, Myaungmya, Maubin, Chauk and Myinmu.

On the other hand, the number of infants successfully vaccinated under one year was considerably below the number of survivors in Rangoon (-1,293), Mergui (-194), Maymyo (-156), Prome (-138), Pyu (-137), Toungoo (-122), Sagaing (-110) and Thatôn (-104).

SHAN STATES.—In the three notified towns, where the Vaccination Acts are in force, 571 births and 104 infant deaths were recorded. The number of recorded survivors was therefore 467, of which 367 were successfully vaccinated.

Statement I
(Summary).

10. Dispensary Vaccination.—

BURMA.—Dispensary vaccinations were performed in thirteen districts in Burma during the year, which is the same number as the previous year.

During the year 2,020 primary vaccinations and 6,241 revaccinations were performed, compared with 2,660 and 4,286 operations, respectively, during the previous year.

Out of 2,020 primary operations, 420 are reported as successful and 1,555 as unknown; out of 6,241 revaccinations 953 are returned as successful and 2,246 as unknown. The percentage of successful cases to total known cases is 90'32 per cent. in primary and 23'85 per cent. in revaccination.

SHAN STATES.—These report 866 primary operations and 1,790 revaccinations, compared with 372 and 386, respectively, during the preceding year.

11. Jail Vaccination.—

BURMA.—In the jails 45,280 prisoners were vaccinated in the year under report, compared with 44,836 in the previous year. Of the 1,833 primary cases, 1,083 were successful and of the 43,447 revaccinations 14,265 were successful. The percentage of success in primary cases is 59'08 and in revaccinations 32'83.

SHAN STATES.—There is no jail in the Shan States.

Statement I
(Summary).

12. Vaccination by Private Practitioners.—During the year private medical practitioners performed a total of 3,535 primary and 3,203 revaccinations. The percentage of success amongst the verified cases is 38'66 in primary operations and 28'24 in revaccinations.

The total number of infants under one year of age successfully vaccinated, was 480; between one and six years, the figure was 1,550.

13. Ship Vaccination.—Under the provisions of Section 9 of the Burma Vaccination Law Amendment Act of 1909, as amended by Burma Act IV of 1928, 173,025 ship vaccinations were performed in the ports of Rangoon and Akyab during the year 1932-33, compared with 165,990 in the previous year. Rangoon port reported 158,215 (156,537) and Akyab port 14,810 (9,453).

14. Verification Work of Inspecting Officers.—

Statement IV.

BURMA.—Of the total number of 1,138,145 persons vaccinated and revaccinated in Burma during the year under report, District and Assistant District Health Officers and Municipal Health Officers inspected the results of 107,425 or 9'44 per cent., compared with 86,157 or 9'63 per cent. in the previous year.

Of the total number of 635,692 primary vaccinations, Inspectors of Vaccination, Public Health Inspectors and Sub-Assistant Surgeons verified the results of 372,149 or 58'54 per cent, compared with 325,216 or 60'28 per cent in the previous year ; of the total of 502,453 revaccinations they verified 221,103 persons or 44'00 per cent., compared with 152,616 or 42'97 per cent., in the previous year.

SHAN STATES.—Of the 120,969 persons vaccinated and revaccinated in the Federated Shan States during the year under report, the District Health Officers verified the results of 4,737 or 3'92 per cent., compared with 5,680 or 6'91 per cent. in the previous year.

The percentage of verification work carried out by the Inspectors of Vaccination and Head Vaccinators was 32'03 per cent. in primary and 15'70 per cent. in revaccinations, compared with 60'96 per cent. and 23'30 per cent., respectively, in the previous year.

15. Cost of the Department.—

Statement II.

The total cost of the Department, as shown in Statement II, was Rs. 4,33,526-9-7, compared with Rs. 4,26,707-6-8 in 1931-32. The average cost of each successful case of vaccination is Re. 0-9-10, compared with Re. 0-11-10 in the previous year. The lower cost was due to the larger number of vaccinations performed during the year.

If, however, the sum of Rs. 48,008-8-0 credited to Government, on account of the sale in Burma of vaccine lymph, be deducted from the total expenditure of Rs. 4,33,526-9-7, the net cost of the Department is reduced to Rs. 3,85,518-1-7, compared with Rs. 3,90,562-1-8 in the previous year. The average cost of each successful case is therefore proportionately reduced to Re. 0-8-9, compared with Re. 0-10-10 in 1931-32.

High rates of average cost are reported from the following districts, *viz.*, Arakan Hill Tracts (Rs. 1-12-9), Salween (Rs. 1-5-2) and Sandoway (Rs. 1-0-1). The cost reported for Rangoon is Rs. 2-9-6.

SHAN STATES.—The total cost of the Vaccination Department in the Federated Shan States, as shown in Statement II, was Rs. 36,728-15-0, compared with Rs. 39,114-11-0 in 1931-32. The cost per successful case of vaccination works out at Re. 0-7-2, compared with Re. 0-9-4. The decrease was due to the larger number of vaccinations performed during the year.

16. Illegal Inoculation.—Forty-seven and thirty cases of inoculations were detected in Henzada and Thatôn districts, respectively. Various fines were inflicted on the culprits in Henzada, while the inoculator in Thatôn was reported to have disappeared. In Thatôn district, six parents performed arm to arm vaccination on their children. Each was fined Rs. 2 by the Township Magistrate, Thatôn. The practice of inoculation was also detected in Magwe district, but the matter was still under enquiry at the time of report.

17. Prosecutions under the Vaccination Acts.—Rangoon reports six prosecutions, of which two were successful, one was closed and the other three were still pending in court at the end of the year. Fifty-four parents in Amherst and three in Thatôn were reported to magistrates for refusal to submit their children to vaccination and by the orders of these courts, the children were subsequently vaccinated. In Minbu 240 persons were prosecuted and some were fined. One prosecution made in Kawkareik town is still pending in court.

18. Vaccine Depot, Meiktila.—The new operation theatre and operation stable were brought into use in July. They facilitate the manufacture of an increased quantity of lymph under more satisfactory working conditions. It is now possible to manufacture 4,000 grammes of lymph per month which is about four times the demand when smallpox is not present in epidemic form. There is thus ample provision for an emergency and little danger of our supply of lymph running short.

One of the water reservoirs was replaced by a new one and a second Roturbo pump was installed.

OUTPUT OF LYMPH.—Two hundred and forty-one cow calves and 17 buffalo calves were vaccinated during 1932-33. Three cow calves failed to take.

The following table contrasts the output and issue of lymph during the year with that of the two previous years :—

Years.	No. of calves and buffaloes scraped.	Total yield.		Average yield per calf and buffalo.		Doses issued.
(1)	(2)	Oz. (3)	Grms. (4)	Grains. (5)	Grms. (6)	(7)
1930-31	223 calves	382.36	10,840	749.89	48.61	1,219,197
	22 buffaloes	97.56	2,766	1,940.11	125.72	
1931-32	180 calves	355.87	10,089	864.96	56.05	1,352,382
	13 buffaloes	58.48	1,658	1,967.06	127.54	
1932-33	241 calves	435.24	12,399	793.82	51.45	1,578,108
	17 buffaloes	120.31	3,411	3,096.43	200.65	

The average yield per cow calf decreased from 56'05 to 51'45 grammes. An outbreak of foot and mouth disease to some extent accounted for the decrease. The average yield per buffalo calf increased from 127'54 grammes to 200'65 grammes.

There was an opening balance of 3,500 grammes of lymph carried over from the previous year, and 15,810 grammes were manufactured during the year. Of this total of 19,310 grammes, 14,386 grammes were issued during the year, 1,132 grammes were used as seed lymph and a closing balance of 3,792 grammes has been carried over to the year 1933-34.

TECHNIQUE.—Ten rabbits were used for rejuvenating the seed lymph. As in previous years, seed lymph was passed through the modified Nijland cycle throughout the year (rabbit—cow calf—buffalo calf—rabbit). All lymph issued was subjected to Cunningham's potency test on cow calves and the Calmette Guerin potency test on rabbits. In addition, each lymph was tried on at least three children, before the lymph was issued, and an insertion success of 100 per cent. was obtained.

SUPPLY OF LYMPH.—Of the 1,578,108 doses of lymph issued, 1,522,929 were supplied to local bodies on payment and the balance of 55,179 doses were issued to Government institutions free of charge as follows :—4,956 to Military, 38,037 to Jails, 11,460 to Government vaccinators in Chin Hills District and 726 to the Borstal Training School, Thayetmyo.

QUALITY OF LYMPH.—Of 266,423 cases of primary vaccinations in 1932-33, the results of which were reported to the Dépôt, a success rate of 92'9 per cent. was obtained, compared with 95'82 per cent. in 1931-32. For 118,915 revaccinations reported, the percentage of success was 41'5, compared with 36'32 in the previous year.

DRY LYMPH.—Further experiments with dry lymph during the year confirmed the previous finding that the process of drying destroys a large amount of the virus. It was also found that after a year's storage dry lymph produced very weak and small vesicles and that it is about four times more costly to produce than glycerine lymph.

FINANCE.—The total maintenance expenditure of the Dépôt for the year 1932-33, was Rs. 32,972-3-0 and the total net income was 53,415-1-0, including Rs. 6,871-7-0, balance of the sale proceeds of vaccine lymph outstanding on the 31st March 1932, but excluding Rs. 7,158-4-0 balance of the sale proceeds of lymph outstanding on the 31st March 1933. The excess of income over expenditure during the year is therefore, after adjustment, Rs. 20,729-11-0.

Of the total expenditure of Rs. 32,972-3-0, a sum of Rs. 16,842-14-0 was expended on establishment, Rs. 7,574-0-0 on contingencies, Rs. 4,377-8-6 on medicines and instruments, Rs. 2,148-0-0 on the hire

of calves, Rs. 1,127-12-0 on feeding of calves and rabbits, Rs. 809-5-6 on service postage and telegrams and Rs. 92-11-0 on petty construction and repairs.

19. Training Class.—Owing to there being already a sufficient number of trained vaccinators in the Province no student vaccinators were trained at the Vaccine Depôt during the year 1932-33. Nineteen students undergoing the course of training for Public Health Inspectors were, however, given training in vaccination at the Depôt and seventeen passed the qualifying examination.

20. General Remarks.—Mr. G. H. Blaker, I.M.D., and U Myat Maung continued to hold charge of the duties of Director and Assistant Director, respectively, of the Depôt. The Depôt was visited during the year by Lieut.-Col. G. Jolly, C.I.E., I.M.S., Director of Public Health, Burma, and by Dr. J. F. Kendrick, M.D., Director, Rural Health Unit, Hlegu.

RANGOON, 21st August 1933.

E. COTTER, Major, I.M.S.,
Offg. Director of Public Health, Burma.

APPENDICES.

	PAGE
STATEMENT I.—Showing particulars of vaccination in the Province of Burma during the year 1932-33.	12
STATEMENT II.—Showing the cost of Vaccination Department in the Province of Burma during the year 1932-33.	30
STATEMENT III.—Showing the number of persons primarily vaccinated and the number of those persons who were successfully vaccinated in the Province of Burma in each of the official years 1923-24 to 1932-33.	38
STATEMENT IV.—Showing particulars of vaccination verified by Inspecting Officers during the year 1932-33.	40
APPENDIX A.—Showing the ratio per 10,000 successfully vaccinated and the mortality from small-pox by quinquennial periods.	42
APPENDIX B.—Statistics relating to the number of children under one year of age in towns available for vaccination and the number of successful operations performed on them.	43
APPENDIX C.—Showing local areas in which revaccination rules were in force.	45
APPENDIX D.—Graphs showing the vaccinations performed and the deaths from small-pox in Burma (excluding Backward-Tracts) since the year 1922-23.	46
APPENDIX E.—Diagram showing the proportion of population protected during the seven official years 1926-27 to 1932-33, and death-rate from small-pox during the calendar year 1932 in districts where full registration of vital statistics is in force.	47

APPENDIX C.—Statement showing the local areas in which revaccination rules under Section 12A of the Burma Vaccination Law Amendment Act, 1909 (as amended by the Burma Act IV of 1928) were in force.

Serial No.	Name of local areas.				Date of notification.
MUNICIPAL AND NOTIFIED AREAS.					
1	Zigôn	16th May 1929.
2	Thingangyun	16th May 1929.
3	Kanbe	16th May 1929.
4	Nyaunglebin	6th June 1929.
5	Thônze	29th August 1929.
6	Syriam	29th August 1929.
7	Myinmu	16th October 1929.
8	Ngathainggyaung	8th January 1930.
9	Moulmeingyun	8th January 1930.
10	Rangoon	4th March 1930.
11	Tharrawaddy	6th May 1930.
12	Prome	18th August 1930.
13	Taungdwingyi	13th January 1931.
14	Thayetmyo	13th January 1931.
15	Henzada	13th January 1931.
16	Tavoy	13th January 1931.
17	Kawkareik	13th January 1931.
18	Nyaung-U	13th January 1931.
19	Akyab	13th January 1931.
20	Mandalay	31st March 1932.
21	Bhamo	4th April 1932.
22	Sagaing	4th April 1932.
23	Mônýwa	9th April 1932.
24	Kyaikto	27th April 1932.
25	Mergui	18th May 1932.
26	Minbu	16th June 1932.
27	Kyangin	11th August 1932.
28	Kyônpyaw	19th September 1932.
29	Maymyo	18th January 1933.
30	Sandoway	1st February 1933.
31	Bassein	11th February 1933.
DISTRICT COUNCIL AREAS.					
1	Hanthawaddy	9th January 1932.
2	Pyapôn	28th January 1932.
3	Minbu	1st February 1932.
4	Lower Chindwin	6th February 1932.
5	Kyaukse	6th February 1932.
6	Myingyan	23rd February 1932.
7	Thayetmyo	7th March 1932.
8	Henzada	16th March 1932.
9	Insein	4th April 1932.
10	Maubin	6th April 1932.
11	Thatôn	9th April 1932.
12	Bassein	11th April 1932.
13	Mandalay	27th April 1932.
14	Tavoy	28th May 1932.
15	Magwe	14th June 1932.
16	Tharrawaddy	24th June 1932.
17	Mergui	11th July 1932.
18	Pegu	16th July 1932.
