Annual Report of the Ophthalmic Hospitals Section, 1935

Foreword

NEW UNITS

During this year, five ophthalmic branches were opened in the General Hospitals at "Shebin el-Kanater, Belbies Fashn, Balyana, and Quous. Thus the number of ophthalmic units reached 69 (of which 55 are permanent and 14 travelling). This number shows an increase of five units over that of 1934, and 46 units over that of 1923. (They are shown in detail in Table No. XXII).

PROJECTS UNDER CONSTRUCTION

(1) *Ophthalmic Hospital at Kafr el-Sheikh.*

The construction of this hospital has been put into adjudication and as soon as the Budget of 1936-1937 is approved, the State Buildings Department will begin the building operations. Treatment will be commenced immediately after completion and equipment of the building.

(2) *Enlargement of Ophthalmic Hospitals at Benha, Beni Suef, and Fayoum.*

These hospitals having become inadequate to accommodate the large number of patients seeking treatment; it has been decided to have them enlarged. The Local authorities shared in the expenses and the State Buildings Department has started the building operations.

(3) *Enlargement of the Ophthalmic Branch at Demerdash Hospital.*

This branch consists of one room amidst other sections of the hospital and being inadequate to accommodate the large number of sick patients who seek treatment, it was decided to construct a new building for this branch, which will meet the purpose. The necessary credit was approved and the States Buildings Department has actually started the construction.

PROPOSED PROJECTS IN THE 1936-1937 BUDGET

(1) *An Ophthalmic Hospital at Khalifa Quarter, Cairo.*

In view of the spread of eye diseases amongst the poor inhabitants of Khalifa Quarter and neighbouring thickly populated quarters, the construction of a hospital in this quarter has been approved in the programme of the Department. The appropriate site has been chosen. The credit required for the purchase of land and construction has been applied for in the Budget of 1936-1937.

(2) *An Ophthalmic Hospital at Aba-l Wakf.*

A part of the revenue of the Fahmia Wakfs is allotted to meet the running expenses of this hospital. The credits required for building and equipment have been applied for in the 1936-1937 Budget.

(3) *New Ophthalmic Branches in the General Hospitals.*

The creation of four new ophthalmic branches in District Hospitals has been proposed in the 1936-1937 Budget.

4) *Ophthalmic Clinics in Primary Government Schools.*

Two ophthalmic clinics in Primary Government Schools are proposed in the 1936-1937 Budget.

(5) *Enlargement of Ophthalmic Hospitals.*

The number of patients attending the ophthalmic hospitals has become so great that the in-patients sections are now inadequate to accommodate a larger number of those whose condition necessitates special care. The Department has, therefore, decided to gradually enlarge these hospitals. In the proposal of the 1936-1937 Budget it was requested to enlarge the Ophthalmic Hospitals of Sohag, Assiout and Giza.

(6) *A Travelling Ophthalmic Hospital.*

There is a travelling ophthalmic hospital in each of the provinces of Egypt, except Beni Suef Province. The necessary credit for the construction of a travelling hospital at this latter Province has been applied for in the 1936-1937 Budget.

(7) *Increase of Accommodation for the In-patients.*

It was proposed in the 1936-1937 Budget to increase some beds in the Ophthalmic Branches, where there is adequate room, so that more in-patients could be accommodated.

CLINICAL WORK

The following table shows the clinical work done in the year 1935, as compared with that of 1934 :—

	1934	1935	Increase in 1935
New Patients	928,215	1,034,986	11%
In-patients	27,860	32,623	17%
Operations	305,206	334,866	10%
Out-patients attendances	7,251,382	7,525,063	4%

BLINDNESS

The number of patients who were found blind in one or both eyes, excluding cataract cases causing blindness, was 59,481 or 5.7 per cent of all patients examined at the Ophthalmic Hospitals. By adding the cataract cases causing blindness, the percentage becomes 6.0.

The pathological causes of blindness are detailed in Table No. XI, where it is shown that acute ophthalmias form 82 per cent of all causes. The gonococcus is still the predominant factor of infection with acute ophthalmias — its ratio to total of microbes being 40 per cent.

AGE OF PATIENTS

Out of 1,034,986 new patients treated, 62,831 or 6.07 per cent were under the age of one year — 329,171 or 31.51 per cent from one to 15 years of age — 265,100 or 25.62 per cent from 15 to 30 years of age ; and 591,271 or 57.13 per cent from one to 30 years of age. This fact shows that the mass of people recognises the importance of seeking ophthalmic treatment for infants, children and youths.

SCHOOL CLINICS

Ophthalmic examination, inspection and treatment are, at present, carried out in 34 Primary Government Schools. Details of ophthalmic work in schools are given in detail in a special section at the end of this report.

10,412 pupils were examined, of whom 99 per cent were found suffering from trachoma in its various stages. About 43 per cent of these were in the serious stages of the disease (trachoma I and II). As a result of ophthalmic treatment the latter percentage fell to 19.

In this connection it is to be noted that in Government Schools, the most correct percentage of the prevalence of trachoma among school pupils, can be obtained.

This is due to the fact that the examination and treatment are carried out in such schools uniformly and regularly on pupils who are under the constant supervision of treating doctors.

Pupils of 42 other primary schools and *kuttabs* belonging to Provincial Councils in *Markazes* (Districts), where permanent or travelling ophthalmic hospitals exist, also received ophthalmic treatment at these hospitals.

EXPENDITURE

The cost of maintenance of all Ophthalmic Hospitals during the year 1935, including the cost of administration and expense of ophthalmic clinics in Primary Schools, amounted to L.E. 91,800, as shown in the detailed tables appended to this report which are significant of proper economical management. The expense per day for the out-patient was 12.2 milliemes. The in-patient cost in addition, 23 milliemes daily for food. The sources of provision of all ophthalmic units are shown in table XXII.

ACCOMMODATION

The number of beds reached 1,494, *i.e.* an increase of 28 beds over last year.

POST-GRADUATE COURSE OF OPHTHALMOLOGY

During April 1935, the number of Medical Officers who have undergone post-graduate training in ophthalmology was 20, of these 6 were inspected in the preliminary clinical course and 2 of them passed; 5 were inspected in the final clinical course and they all passed.

During October their number was 20, of whom 12 were inspected in the preliminary clinical course and 8 of them passed; 2 were inspected in the final clinical course and both failed. Those who failed once were given another chance but those who failed a second time were transferred to other branches of the Department.

PROVIDING THE OPHTHALMIC HOSPITALS WITH UP-TO-DATE APPLIANCES

The Department is taking special interest in providing the Ophthalmic Hospitals with up-to-date appliances.

XV INTERNATIONAL OPHTHALMIC CONGRESS TO BE HELD AT CAIRO, 1937

A note was received from Dr. Marx, the Secretary of the International Council of Ophthalmology, to the effect that a meeting of the Council would be held in London on April 3, 1935 to consider several subjects relating to the organisation of the next Congress, which should be decided upon by the General Committee, before sending the invitation to the Ophthalmologists of the world. Accordingly, the Egyptian Government delegated Dr. Eisa Hamdi el-Maziny Bey to represent it in that Council, as well as in the meeting of the International Association for the Prevention of Blindness, held in London on April 5, 1935. He also attended the meeting of the International Association against Trachoma, which was held about the same time.

On his return, he submitted a detailed report on his commission, of which the following is a short synopsis:—

A.—*Subjects discussed in the International Council of Ophthalmology and Resolutions taken thereupon.*

(1) Discussion of a previous resolution passed regarding the prohibition of free communications other than the two official subjects of the Congress. After the discussion, it was decided that free communications may also be allowed.

(2) Invitation from the representative of the Polish Government to hold the XVI International Ophthalmological Congress at Warsaw in 1941. This was deferred for submission to the Congress in the General meeting, not being within the competence of the Council.

(3) Proposition to add the Polish language to the languages used in the printing and publishing of the Congress work. This was rejected.

The representative of the Egyptian Government took this opportunity and drew the attention of the Council to the fact that the Arabic Language will be used in the Congress when necessary. This was agreed upon, being the language of the Country in which the Congress will be held.

(4) Discussion of the question as to whether or not it would be desirable to reconsider the question of standardization of visual acuity. This was refused on the basis that the International Committee rarely meets and the subjects discussed by them are of special interest, and their decision may not possibly be enforced for local reasons in every country.

(5) Appointing the Reporters for the Official Subjects of the forthcoming Congress. This was actually decided upon.

(6) Report of Dr. Maziny Bey on the organization of the 1937 Congress in Cairo. He stated the following:—

- (a) H.M. The King of Egypt has graciously consented to put the Congress under His High Patronage.
- (b) The various Committees and Sub-Committees usually formed for the organization of the Congress have been appointed.
- (c) The opening session will be held in the hall of the Egyptian University.
- (d) Approving the subscription fees for members as previously estimated by the Council at Paris in 1934, *i.e.* 50 gold Swiss francs for every member and 25 for each accompanying person.
- (e) The publications of the Congress, including the Ophthalmic Directory, will be undertaken by the Local Committee.

The Chairman, then, expressed his great pleasure for the High Patronage of H.M. The King of Egypt to the Congress, and presented his thanks to the Local Committee for the services rendered and which will be rendered in favour of the Congress.

The invitation to the Congress has already been published in the six official languages, *viz*: English, French, Italian, German, Spanish and Arabic. The following is a copy of the invitation.

XV CONCILIUM OPHTHALMOLOGICUM

- H.E. THE MINISTER OF PUBLIC HEALTH (President)
- H.E. U.S.S. FOR MEDICAL AFFAIRS, MINISTRY OF PUBLIC HEALTH (Vice-President)
- H.E. THE DEAN OF THE FACULTY OF MEDICINE (Vice-President)
- H.E. THE DIRECTOR GENERAL, STATE RAILWAYS, TELEGRAPHS AND TELEPHONES.
- THE UNDER-SECRETARY OF STATE, MINISTRY OF FINANCE.
- THE UNDER-SECRETARY OF STATE, MINISTRY OF EDUCATION.
- H.E. THE GOVERNOR OF CAIRO.
- THE DIRECTOR, OPHTHALMIC HOSPITALS OF EGYPT—DR. EISA BEY HAMDY EL-MAZINY (Technical Chairman of Congress)
- DR. SAYED BEY ABDEL-HAMID SOLIMAN, PROFESSOR OF OPHTHALMOLOGY, FACULTY OF MEDICINE, CAIRO.
- THE SUB-DIRECTOR, OPHTHALMIC HOSPITALS OF EGYPT — DR. MOHAMMED TEWFIK (Secretary General)
- DR. MOHAMMED TAHER BEY, OPHTHALMIC SURGEON, CAIRO (Honorary Treasurer)
- DR. MAHMOUD BEY RIAD, OPHTHALMIC SURGEON, FACULTY OF MEDICINE, CAIRO.
- DR. MOHAMMED MAHFOUZ—P.M.O. OPHTHALMIC BRANCH, ALEXANDRIA GENERAL HOSPITAL.
- DR. SALIM BEY HINDAWI, DIRECTOR MEDICAL SECTION, MINISTRY OF WAKFS.

INVITATION

Dear Sir,

According to the decision of the XIV International Congress held in Madrid in April 1933, the next Congress will be held in Cairo, Egypt.

In conformity with the decision of the International Council of Ophthalmology, London, April 1935, the meetings will be held from 8 to 14 December 1937.

The two official subjects of the Congress will be :—

1.—Arterial Hypertension of the Retina :

- General Introducers ... H. Wagner and Keith.
- Reporters Bailliart —Clinical and Physiological Aspects.
- Koyanagi—Pathological and Anatomical Aspects.

N.B.—Papers intended for reading in the Scientific Meetings should be sent directly to Dr. Marx, Oostzeedijk 316, ROTTERDAM.

All other correspondence should be forwarded to the Secretary General, XV Concilium Ophthalmologicum, P.O.B. No. 2001, Cairo, Egypt.

2.—Endocrinology and the Eye:

General Introducer ...	Snapper.
	Von Szily.
Reporters	Von Imre.
	Jeandelize.
	Lacarrere.
	Lo Cascio.

The papers should refer preferably to subjects related to the official themes. Only a certain number of papers may deal with independent subjects, provided that the International Council will pass them previously by reason of their originality and interest. The International Council has taken this decision in order to avoid the considerable accumulation of papers which in past Congresses has made efficacious debating extremely difficult. It has been thought preferable that the number of these should be reduced so that they can be discussed with the necessary fullness.

The Local Organising Committee requests the colleagues to kindly send three typewritten copies of the paper intended for reading together with a résumé of not more than 500 words to Dr. Marx, Secretary of the International Council, not later than April 1, 1937.

Number and size of lantern slides, if any, should be stated, and whether an epidiascope or microscopes (and, if so, how many) are required for the lecture.

On the occasion of the fifteenth International Ophthalmological Congress a third edition of the Directory will appear. This Directory will contain data concerning the following subjects:—

1. Names (alphabetically arranged) and addresses of all oculists in the world.
2. Titles and volumes of all periodicals which deal with any branch of ophthalmology.
3. Statement of all ophthalmological associations.
4. Hospitals for eye patients.
5. Establishments for institutions for the blind, sight-saving classes, etc.
6. Statistics regarding blindness.

The Secretary of the International Ophthalmological Council (Dr. E. Marx, Oostzeedijk 316, Rotterdam, Holland) would be glad to learn from you whether there are still other subjects of general interest for oculists which—in your opinion—might be included in the Directory.

Two exhibitions will be arranged:

1.—*A Scientific Exhibition*, comprising Anatomical and Pathological Specimens or Slides, Photographs, Radiographs, etc. Members wishing to partake will please communicate with the Secretary General stating the object to be exhibited, its size, etc.

2.—*A Commercial Exhibition*, comprising Instruments, Apparatus, Drugs, Printed matters, etc.

Inscription for membership to the Congress is open for every medical man, and those who desire, will please fill in the enclosed form and send it to the Secretary General, as early as possible together with the sum of 50 Swiss Francs, to cover the fees for subscription. The fees for ladies and other associate members of the congressists' families are 25 Swiss Francs per person—these can attend receptions, excursions, etc., but are not entitled to attend the Scientific Meetings, nor will they receive a report of the proceedings of the Meetings.

Further details of the Congress Meetings, banquets, trips, etc., will be sent in due time, as well as the abstracts of papers and the identification cards for the reduction of railway and other fares.

A housing committee will take charge of facilitating the accommodation and lodgings of the members and their families during their stay in Egypt.

The work of the Organising Committee will be greatly facilitated if the members subscribe as early as possible.

Cairo, April 1936.

Secretary General,
Dr. M. Tewfik

THE INTERNATIONAL ASSOCIATION AGAINST TRACHOMA

After the meeting of the International Council of Ophthalmology, Dr. Maziny Bey attended the session of the representatives of the International Association against Trachoma. The majority of the attendants were members of the International Council of Ophthalmology. Dr. Maziny Bey was present on behalf of himself and Dr. Tewfik, the Sub-Director of the Ophthalmic Section, who is the Secretary of the Executive Committee of the Association.

The chairman opened the session by explaining the work accomplished by the Association. He then announced the termination of his office and proposed Dr. MacCallan, one of the deputees, for the chairmanship. The Secretary, then, read the minutes of the last session, which were approved.

Another meeting was held in the afternoon when scientific matters were discussed by the chairman and members. Then Dr. Maziny Bey read, on behalf of Dr. Tewfik, the Sub-Director of the Ophthalmic Hospitals, a communication about "Trachoma in Egypt." This communication, with others, was published in a pamphlet, by the "Review of Trachoma" published in Paris.

On the following morning Dr. Maziny Bey attended the meeting of the executive Committee of the Association. The new chairman gave a speech and the minutes of the last meeting, as well as the report of the Secretary-General were read. Two members were elected for the membership of the executive committee, and Dr. M. Tewfik was re-elected for the Secretaryship of the Association.

A programme for the near future was discussed and the following was agreed upon:—

Discussion of the following subjects was referred to the coming Congress at Cairo:—

- (1) Causes of Trachoma.
- (2) Organic Chemistry and Trachoma.
- (3) The period of infection.

Some members were charged with the examination of these subjects. Other subjects were deemed worth examination in the next session of the Association in March 1933. The subjects as well as those charged with their study are shown hereafter:

Treatment of lids and Conjunctiva from Trachoma in children between 1-10 years of age, tuberculosis and syphilis excluded. Doctors: Weibaut, Quenod and Tewfik.

It was understood that what was required was the method of treatment when the consultation of a specialist was not necessary. It was finally decided to publish a pamphlet in countries infected with Trachoma, showing the method of treatment and means of prophylaxis, in a style comprehensible by the public. It was also decided to ask the Health Section of the League of Nations to cover the expenses of this pamphlet. Then the session ended.

INTERNATIONAL ASSOCIATION FOR THE PREVENTION OF BLINDNESS

The Executive Committee of the Association held a meeting on April 5, 1935, which was attended by Dr. Maziny Bey, representative of the Egyptian Government. He was elected active member on this Committee. This election was met with great pleasure, being a token of appreciation for this Country.

In the afternoon, the General Committee was held; the Vice-President opened the meeting with a short speech, then one of the members talked about a project for the classification of the causes of blindness. Another member talked about "The Hereditary Eye Diseases causing Blindness, their Social Results and the General Measures to be adopted."

Dr. Maziny Bey, then thanked the Association for his election in the Executive Committee and explained the wide measures taken by the Egyptian Department of Public Health towards preventing blindness by increasing the number of Ophthalmic Hospitals, which treat and cure thousands of patients suffering from acute Ophthalmias and Trachoma who would have lost their vision were there no such services available.

In order to give a real picture of the efforts done by the Department, he stated that the Ophthalmic Hospitals annually examine about a million new cases, and treat more than six millions in the out-patients clinics.

On the following day, the Congressists decided to attend the meeting of the Annual Congress of the British Ophthalmological Society to hear the scientific communications read therein.

Dr. Maziny Bey took the opportunity of his short stay in London, and visited the Ophthalmic Institutions where he met many of the Ophthalmologists, with a view to collect such information as would be of interest to the Ophthalmic Hospitals in Egypt. He also paid a visit to the Royal Institution for the Blind at London.

A list of interesting cases seen at the various units of the section is published monthly. About 646 cases have been recorded as interesting during 1935. The following list shows some such cases that are not frequently seen in every day's work in Egypt:—

1. Myopic chorio-retinal atrophy.
2. Hyaline degeneration of tarsus.
3. Traumatic mydriasis & dislocation of lens in A.C.
4. Post-neuritic optic atrophy.
5. Fibrosis of lachrymal gland.
6. Naevus-carcinoma of the lid.
7. Angio-endothelioma of lid with septic infection.
8. Retinitis pigmentosa & consecutive optic atrophy.
9. Spring catarrh palpebral and bulbar.
10. Leprotic mass of Rt. Limbus.
11. Opaque nerve fibres.
12. Advanced hyaline degeneration of tarsus after trachoma.
13. Thrombosis of central vein (arterio-sclerotic).
14. Acute iridocyclitis syphilitic with peculiar shape of exudate.
15. Hyaline degeneration of conjunctiva.
16. Membranous conjunctivitis negative for D.B.
17. Epithelioma of conjunctiva.
18. Post-neuritic optic atrophy after fever (malaria).
19. Streptothrix of conjunctiva.
20. Pigmented naevus of caruncle.
21. Keratitis neuroparalytic (syphilitic).
22. Coloboma of iris and choroid associated with microcornea and microphthalmos.
23. Syphilitic iritis.
24. Papilloma undergoing epitheliomatous change.
25. Inclusion cyst of conjunctiva.
26. Congenital microphthalmos.
27. Interstitial keratitis syphilitic.
28. Rodent ulcer of lid.
29. Congenital coloboma of choroid.
30. Detachment of retina & high myopia.
31. Endothelial cyst in A.C. after cataract extraction.
32. Iridocyclitis due to septic focus (urinary tract ? pyelitis).
33. Buphthalmos.
34. Lipodermoid of conj. & an overlying degenerate naevus.
35. Starting syphilitic episcleritis.
36. Primary optic atrophy, syphilitic.
37. Heterochromia irides and cilio retinal artery.
38. Haemangioma of lids extending to lower tarsal conjunctiva.
39. Hysterical blepharospasm (cured by suggestion).
40. Microphthalmos, microcornea and double opaque lenses.
41. Double congenital cataract.
42. Proptosis due to orbital cellulitis.
43. Syphilitic periostitis.
44. Unilateral complete paralysis of third nerve syphilitic.
45. Fly blown orbit.
46. Angiomatous polypus of conjunctiva.
47. Keratitis & lagophthalmos.
48. Solid dermoid of conjunctiva.
49. Sclerosis of choroidal vessels (senile).
50. Myopic central choroidal atrophy.
51. Amyloid degeneration of tarsus.
52. Membranous conjunctivitis positive for D.B. from nose.
53. Granuloma of limbus.

54. Chancre of lower lid, Spirochaeta and Wassermann positive.
55. Syphilitic chorio-retinitis.
56. Glioma retinae.
57. Primary optic atrophy in locomotor ataxia.
58. Traumatic mydriasis & subluxation of lens and rupture of choroid.
59. Microphthalmos & persistent pupillary membrane.
60. Traumatic detachment of retina.
61. Blue sclerotic.
62. Carcinoma of lid arising from a naevus.
63. Membranous conj. neg. for D.B. from the eye but Pos. from the throat.
64. Iritis (syphilitic).
65. Trantas dots in limbal spring catarrh.
66. Tuberculosis of conj. and tarsus of upper lid of Lt. Eye.
67. Lamellar cataract.
68. Fibroma of limbus.
69. Congenital sclerosis of cornea.
70. Senile central retinal atrophy.
71. Congenital coloboma of iris and lens.
72. Dendritic ulcer.
73. Angiomatous soft fibroma of conjunctiva taking a polypoid form.
74. Congenital distichiasis of four lids.
75. Adenocarcinoma of right lid.
76. Very high degree of mixed astigmatism in a conical cornea.
77. Membranous conjunctivitis positive for D.B. from Eye.
78. Persistent pupillary membrane.
79. Traumatic intraocular haemorrhage and complete absorption with recovering of good vision.
80. Pigmented naevus of conjunctiva.
81. Pigmented naevus of limbus.
82. Phthisis bulbi & a large osseous mass replacing the cornea and extending down in vitreous cavity.
83. Periostitis of the frontal border of Lt. Orbit & downward displacement of the globe.
84. Solid dermoid of outer canthus.
85. Zonular keratitis.
86. Fuchs' colobomata.
87. Syphilitic retinitis.
88. Vogt's capsular glaucoma.
89. Avascular interstitial keratitis.
90. Exophthalmos due to orbital tumour (spindle cell sarcoma of frontal sinus).
91. Keratomalacia.
92. Iridocyclitis diabetic.
93. Epithelioma of lid and orbit.
94. Hysterical amblyopia.
95. Rt. Retrobulbar, Lt. Post-neuritic optic atrophy (Rt. Max. antrum opaque).
96. Gangrene of lid.
97. Haemorrhagic retinitis (Lab. and X.R. Examinations negative).
98. Rt. and Lt. symmetrical chronic dacryoadenitis.
99. Capillary angioma taking a polypoid form and growing from conjunctiva of lower lid.
100. Thrombosis of central vein.
101. Total ankyloblepharon and apparent anophthalmos.
102. Pyramidal cataract detached in right A.C.
103. Paralysis of Lt. third nerve (? syphilitic).
104. Leproma of limbus.
105. Ophthalmoplegia externa affecting all extrinsic muscles, syphilitic.
106. Exophthalmos due to ethmoidocele, cured by operation.
107. Scleritis & sclerosing keratitis and mild cyclitis (syphilitic).
108. Detachment of retina myopic.
109. Fuchs' coloboma.
110. Double microphthalmos.

111. Chorio-retinitis, syphilitic.
112. Iridocyclitis due to sinusitis.
113. Opaque nerve fibres with enlarged blind spot.
114. Haemangioma of forehead, eyelid, and conjunctiva.
115. Incomplete atypical congenital coloboma of iris.
116. Extensive calcareous degeneration of tarsus (trachomatous).
117. Acute exacerbation of old iritis cause autointoxication pyorrhea alveolaris).
118. Chronic dacryocystitis, argyrosis of lacrymal sac.
119. Central myopic choroidal atrophy and Lt. Posterior Staphyloma.
120. Unilateral heterochromia iridis : half blue and half brown iris, no other congenital anomalies.
121. Hole of macula (traumatic).
122. Tuberculous erosion of border of lower lid.
123. Exophthalmos (through traumatic orbital haemorrhage).
124. Superficial punctate keratitis.
125. Absolute juvenile glaucoma.
126. Dermo-Fibro-Lipoma.
127. Lymphangiectasis of conjunctiva.
128. Mydriasis, macular cystic degeneration (traumatic).
129. Rupture of choroid.
130. Traumatic paralysis of 3rd, 4th, and 6th nerves & descending optic atrophy (fracture of skull).
131. Chronic retention cyst of caruncle.
132. Dermoid tumour of limbus.
133. Bilateral embolism of central retinal artery.
134. Polycoria, briskly active 3 pupils.
135. Papillitis due to severe uterine Hg. in a virgin.
136. Arterio-sclerotic fundi and thrombosis of upper temporal vein (L. Max. Antrum Opaque).
137. Upper double puncta & double canaliculi (congenital).
138. Incomplete persistent hyaloid artery (congenital).
139. Diabetic retinitis.
140. Patch of atrophy in macula (traumatic).
141. Congenital connective tissue on O.D.
142. Acute dacryoadenitis.
143. Lympho sarcoma of lachrymal sac.
144. Episcleritis (root infection).
145. Osteoma of R. Orbit.
146. Paralysis of 6th., 7th, and 8th, nerves due to haemorrhage at the base of the brain on the left side of the lower margin of the pons.
147. Chronic inflammatory granulation tissue of orbit (? tuberculous).
148. Congenital coloboma of the iris, choroid and optic disc.
149. Renal retinitis due to chronic parenchymatous nephritis.

THE OPHTHALMOLOGICAL SOCIETY OF EGYPT

The annual meeting of this society was held on Friday and Saturday, March 27 and 28, 1936 at the Giza Memorial Ophthalmic Laboratory. 88 members attended, the majority of whom being Medical Officers of the Ophthalmic Hospitals. The following are the latest topics of the most important communications delivered in the meeting :—

1. Histopathology of Trachoma of :—
 - (a) Cornea.
 - (b) Conjunctiva.
 - (c) Lachrymal Apparatus.
2. Treatment of Trachoma :—
 - (a) History.
 - (b) In the Egyptian Ophthalmic Hospitals and Government Schools.
 - (c) At Qualawoon Hospital.
 - (d) At Kasr El-Aini Hospital.
 - (e) At the Memorial Ophthalmic Laboratory, Giza.
 - (f) In other countries than Egypt.
3. Constitutional side in the Pathology and Treatment of Trachoma.
4. Iridectomy technique modified to suit iridectomy cases.
5. Thiersch method of skin grafting.
6. Enucleation with implantation of a globe in Tenon's capsule.
7. The operative treatment of detached retina of the macular region.
8. Biomicroscopy of deep keratitis with reference to some rare cases.
9. Trachomatous keratitis.
10. Trachoma of the cornea.
11. Tarsitis Syphilitica.
12. Traumatic total depigmentation of the iris.
13. Ectopia lentis.
14. Intracapsular extraction by Elschnig's method.
15. Histological examination of the lens and iris in a case of capsular glaucoma.
16. A causative study of a series of cases of sympathetic ophthalmia.
17. Operative treatment for distichiasis.
18. Some observations on the retina in primary and secondary hypertension.
19. A case of oedema of the macula with a peculiar complaint.
20. Principles of heredity in eye disease.
21. Un cas de cysticerque dans la rétine au pôle postérieur du globe.
22. Three cases of tuberculosis of the eye.
23. Fungus infection of the eye in Egypt.

TABLE I.—TECHNICAL WORK DONE AT ALL OPHTHALMIC HOSPITALS DURING 1935

1.—IN-PATIENTS : TOTAL NUMBER	32,623
Number of diets issued	502,725
<hr/>	
2.—OPERATIONS :—	
I. Major :—	
(a) Senile cataract	1,920
(b) Soft cataract	345
(c) Trichiasis or entropion	99,474
(d) Other operations	26,400
TOTAL	128,139
II. Minor (including mechanical treatment of trachoma)... ..	206,727
GRAND TOTAL, major and minor operations=Number of operations, page 21	334,866
<hr/>	
3.—OUT-PATIENTS :—	
I.—Incurable (1)	2,584
II.—Postponed	12,014
III.—Tickets issued, <i>i.e.</i> new cases	1,034,986
IV.—Old cases	6,475,479
V.—Visits made by patients to hospital for treatment=(I+II+III+IV)	7,525,063
VI.—Average number of visits made to hospital by each patient under regular treatment (old cases + tickets issued) ÷ tickets issued. The factor of incurable cases is neglected	7.26
VII.—Discharges :—	
(a) Cured	309,446
(b) Relieved	162,719
(c) Incurable(2)... ..	1,662
(d) Spontaneously ceased to attend after having attended only once	75,939
(e) " " " " " more than once	147,954
VIII.—Trichiasis cases seen among new out-patients :—	
(a) No previous operation having been performed	81,462
(b) Previous operation performed unsuccessfully (not at an Ophthalmic Hospital, but probably by some charlatan)	7,646
IX.—Spectacles ordered	2,153
X.—Constant wash cases (number of days' treatment)	1,542,826
XI.—Ages of patients examined :—	
Under one year	62,831
From 1 to 5 years	121,215
" 6 " 10 "	110,781
" 11 " 15 "	94,175
" 16 " 20 "	83,163
" 21 " 25 "	89,443
" 26 " 30 "	92,494
" 31 " 35 "	84,889
" 36 " 40 "	71,274
" 41 " 45 "	60,932
" 46 " 50 "	50,760
" 51 " 55 "	35,180
" 56 " 60 "	29,995
" 61 " 65 "	22,927
" 66 " 70 "	15,168
Over 70 years	9,759
TOTAL	1,034,986

N.B. (1) Incurable cases do not receive tickets, but are recognised as soon as seen by the surgeon as both incurable and devoid of surgical interest.

(2) Incurable cases include those which are recognised as soon as seen by the surgeon as incurable but are given tickets for statistical or other purposes.

TABLE I.—TECHNICAL WORK DONE AT ALL OPHTHALMIC HOSPITALS DURING 1935 (*contd.*)

3.—OUT-PATIENTS (<i>contd.</i>):—		
XII.—Origin of patients:—		
Patients from:		
(a) Town in which hospital is situated	437,457	
(b) Markaz in which hospital is situated	373,291	
(c) Other Markazes of same Mudiriya	137,248	
(d) Other Mudiriyas or Governorates	86,990	
TOTAL (equal tickets issued)		1,034,983

TABLE II.—LIST OF DISEASES

<i>Ametropia</i> :—		
Hypermetropia	1,770	
Myopia	2,504	
Astigmatism	1,621	
Presbyopia	514	
<i>Conjunctiva</i> :—		
Conjunctivitis, gonococcal	41,013	
" Morax-Axenfeld	4,917	
" Koch-Weeks	26,742	
" pneumococcal	3,246	
" diphtheritic	11	
" membranous	488	
Other organisms or negative and unclassified	26,951	
Trachoma I	84,237	
" IIa	152,355	
" IIb'	12,282	
" IIb''	748	
" IIc	3,112	
" III including post-trachomatous degeneration	662,951	
" IV	51,030	
Phlyctenule	45,722	
Pterygium	12,175	
Pinguecula	3,780	
Xerosis	2,883	
Symblepharon	630	
Dermoid	37	
Other conditions:		
Argyrosis	2,696	
Colloid and hyaline degeneration	129	
Hypertrophied caruncle	362	
Injuries (foreign bodies, burn, etc.)	865	
Cyst	342	
Fibroma	40	
<i>Eyelids</i> :—		
Pediculus ciliaris	2,861	
Trichiasis and entropion	96,770	
Distichiasis	157	

TABLE II.—LIST OF DISEASES (*contd.*)

Eyelids (contd.):—

Ectropion	1,547
Lagophthalmos	1,302
Blepharitis	90,608
Hordeolum	3,133
Wart	855
Chalazion	4,442
Eczema	1,834
Rodent ulcer	43
Dermoid	90
Ptosis	901
Erysipelas	7
Herpes	104
Chancre	4
Epithelioma	16
Other tumours	94
Leucodermia	57
Injuries and abscesses	2,030

Lacrimal Apparatus :—

Lacrimal fistula	556
Stenosis of the duct	668
Dacryocystitis, acute	619
" chronic	9,896
Cyst of lacrimal gland	880

Cornea :—

Ulceration, simple	49,684
" hypopyon	2,600
" perforation	10,357
" special forms	1,083
Pannus	89,763
Keratitis, interstitial	37
" trachomatous	6,209
Nebula or leucoma	354,284
Adherent leucoma	49,143
Totally opaque cornea	17,635
Staphyloma	81,099
Xerosis of cornea	1,785
Abscess of cornea	56
Conical cornea (congenital)	25
Keratitctasia	2,918
Injuries (burn, foreign bodies, etc.)	3,030

Limbus :—

Tumours	78
Dermoid	24
Epithelioma	18

Iris :—

Anterior synechia	4,000
Posterior "	4,321
Inflammation	1,894
Iris bombé	63
Irido-dialysis	121
Congenital coloboma	52
Aniridia	4
Persistent pupillary membrane	130
Iridodonesis	779
Various	168

TABLE II.—LIST OF DISEASES (*contd.*)

<i>Sclerotic :—</i>	
Ciliary staphyloma	3,750
Episcleritis	51
Injuries	143
<i>Choroid :—</i>	
Coloboma	11
Rupture	11
Disseminated choroiditis	23
Choroido-retinitis	32
Atrophy of choroid	90
Tumours	—
Albinismus	35
<i>Retina :—</i>	
Retinitis, albuminuric and diabetic	8
„ syphilitic... ..	24
„ pigmentosa	46
Detachment of retina	154
Embolism and thrombosis of retinal vessels	7
Glioma	9
Other conditions	11
Night blindness (in which retinitis pigmentosa is absent)	270
<i>Optic Nerve :—</i>	
Neuritis	37
Atrophy (<i>See table of causes of Optic Atrophy, page 19</i>)	168
Opaque nerve fibres	11
Other conditions	11
<i>Lens :—</i>	
Cataract, senile	4,935
„ soft	372
„ traumatic	189
„ lamellar	47
„ anterior polar	3,325
„ posterior „	185
„ dislocated, traumatic	293
„ „ operative	31
„ „ congenital	10
Aphakia	2,559
Secondary cataract	474
Ectopia lentis	2
<i>Vitreous :—</i>	
Opacities	371
Foreign bodies	6
<i>Muscles :—</i>	
Strabismus, alternating	2,131
„ convergent	21,123
„ divergent	22,131
Heterophoria	106
Nystagmus... ..	2,769
Paralysis	37

TABLE II.—LIST OF DISEASES (*contd.*)

<i>Glaucoma :—</i>		
Primary, acute	} Including absolute glaucoma caused by acute, } sub-acute or chronic glaucoma.	147
„ sub-acute		454
„ chronic		7,079
Secondary		12,268
<i>Globe :—</i>		
Shrunken globe		23,724
Buphthalmos		43
Exophthalmic goitre		11
Panophthalmitis		409
Microphthalmos... ..		34
Anophthalmos		7
Injury		161
<i>Orbit :—</i>		
Tumours		39
Cellulitis		38
Tenonitis		3
Periostitis		17
Injuries		78
Cyst, frontal		5
„ ethmoidal		6
Contracted socket		118
Fly-blown		25

TABLE III.—CAUSES OF OPTIC ATROPHY

Optic Atrophy :—

A. — (1) Primary :—

The spinal diseases causing the condition are :—

G.P.I.	—
Tabes	8
Disseminated sclerosis	—
Lateral sclerosis	—
Spastic paraplegia	3
Lebers hereditary optic atrophy	—
Congenital optic atrophy	1
Unknown	31

It may also be caused by :

Arterio sclerosis	2
--------------------------	---

- (2) Compression of the optic chiasma or of the optic nerve by a tumour or injury by a projectile or bony fracture may produce optic atrophy of a primary type 2

(3) Retro-bulbar neuritis :—

The acute form causes atrophy of the optic nerve, primary in type, not infrequently.

The chronic form more rarely.

Acute retro-bulbar neuritis. The causes are :—

(a) Sepsis (dental, periostitis, middle ear, accessory sinuses)... ..	3
(b) Acute fevers (including syphilis and rheumatism)	17
(c) Intoxications (alcohol, lead)	—
(d) Nervous diseases (disseminated sclerosis, acute myelitis)	—

Chronic retro-bulbar neuritis may be caused by tobacco, alcohol, diabetes, iodoform, opium, etc. —

B.—Post-neuritic :—

The causes of optic neuritis, all of which may be followed by post-neuritic atrophy, are as follows :—

(a) Sepsis (dental, periostitis, middle ear, accessory sinuses)... ..	10
(b) Acute fevers (including syphilis and rheumatism)	59
(c) Intoxications (kidney disease and diabetes, alcohol, felixmas)... ..	7
(d) Nervous diseases: Diss. sclerosis, G.P.I., epilepsy	1
(e) Anæmia	4
(f) Unknown	19
(c) Atrophy consecutive to fundus disease	1

TOTAL (equal *Optic Atrophy*, page 14) ... 168

TABLE IV.—LIST OF OPERATIONS

Eyelids:—

For trichiasis and entropion:—

Snellen's	83,641
Anagnostakis	230
Snellen-Anagnostakis	791
Canthoplasty	5,092
Grafting mucous membrane	9,174
Electrolysis (minor)	5,183
Excision of lash (minor)	2,265
Other operations	546

For Ectropion:—

Plastic	33
MacCallan's	—
Kenneth Scott's	—
Kuhnt's	21
Other operations	80
For ptosis	43
For symblepharon	130
For hordeolum and chalazion (minor)	5,438
Cyst removed	417
Wart excised (minor)	383
Restitching wounds (minor)	156
Opening abscesses (minor)	1,475
Various	312
	major... ..
	minor... ..
	34

Conjunctiva:

For trachoma:—

Expression or Mechanical treatment (minor)	107,828
Combined excision of Heistrath	346
Post-trachomatous degeneration (minor)	78,058
Other operations } (minor)	778
	(major)
	377
Pterygium	6,082

Cornea:—

Foreign body removed (minor)	2,237
Sæmisch's section	264
Cautery	610
Various	189

Iris:—

Iridectomy for adherent leucoma	4,711
„ visual	735
„ for glaucoma	1,593
„ preliminary for cataract	237
Cystoid cicatrix	6
Division of anterior synechia	18
Various	148

Lacrimal Sac:—

Excision	6,402
Various (minor)	2,892

TABLE IV.—LIST OF OPERATIONS (contd.)

<i>Lens:—</i>		
For senile cataract:—		
Extraction with iridectomy		1,580
„ after previous iridectomy...		340
For membrane after extraction : Discission		692
For soft cataract:—		
Extraction		31
Discission		72
Curette evacuation		236
Paracentesis		6
For membrane after evacuation:—		
Discission		49
Capsulotomy		8
<i>Globe:—</i>		
Trephining of cornea-sclera with iridectomy		1,295
Trephining		16
Excision		499
Evisceration		310
Paracentesis		598
Detachment of Retina		12
<i>Orbit:—</i>		
Exenteration		17
For tumour		29
„ dermoid		26
„ cellulitis		22
„ cyst, frontal		1
„ „ ethmoidal... ..		1
Tenotomy and advancement		24
Other major operations		36
Trial with magnet:—		
Positive		4
Negative		7

April	81,354
May	100,908
June	117,827
July	134,408
August	117,923
September	105,326
October	98,822
November	79,871
December	49,466
TOTAL	1,034,986

TABLE IX.—AVERAGE TEMPERATURE

The average temperature was arrived at by taking one place in Lower Egypt (Gemeiza) one place in Cairo (Giza) and one place in Upper Egypt (Assiout) and obtaining an average figure from the mean temperature at each place on each month. This is shown in appended table, the reading being in degrees centigrade.

MONTHS	GEMEIZA	GIZA	ASSIOUT	AVERAGE
January	11·2	11·6	12·4	11·7
February	12·8	13·7	14·2	13·6
March	15·0	16·2	16·9	16·4
April	18·5	19·6	21·9	20·0

Fareskour	—	3·83	—	4·42

N.B.—It is noticed in this table that the percentage of blindness varies in one hospital in different years. This is most probably due to several reasons, the important of which are : that the same blind patient might have visited the same hospital several times, that the patient might have visited several hospitals, that the surgeons of the same hospital are changed and also due to the amount of care exercised in booking these cases.

TABLE XIII.—BLINDNESS AMONG OUT-PATIENTS SINCE 1909
