BY

M. MAISTER, B.A., M.B., Ch.B., D.P.H.

MEDICAL OFFICER OF HEALTH.

July, 1953-December, 1954.

INTRODUCTORY

CITY OF PIETERMARITZBURG
PUBLIC HEALTH DEPARTMENT

To

His Worship the Mayor
and Members of the Council of the
City of Pietermaritzburg.

Ladies and Gentlemen,

I have the honour to present the Annual Report on the Health and Sanitary Circumstances of the City of Pietermaritzburg, for the period July 1st, 1953 to December 31st, 1954. This 18 month period is due to the instruction of the Union Health Department, that annual reports should cover the calendar year. In order not to 'lose' the Vital Statistics for the second half of 1953, it was decided to include these with the 1954 report.

There was a big improvement in the incidence of Infectious Disease (a drop of 40% on the 1952-53 figures). Unfortunately there was a severe outbreak of Poliomyelitis at the end of the year, a part of the big outbreak occurring throughout the Union.

Tuberculosis figures improved considerably and this Department's activities in this field have steadily been extended. Substantial measures to meet the housing shortage have been embarked upon by the City Council and the coming year should bring these to fruition.

I wish to express my thanks to all members of the Staff for the high level of efficiency maintained in the Department throughout the year.

In conclusion, I wish to record my appreciation of the support readily given to me at all times by the Mayor and Chairman and members of the Public Health Committee, and of the cordial co-operation of the various Municipal Heads of Departments.

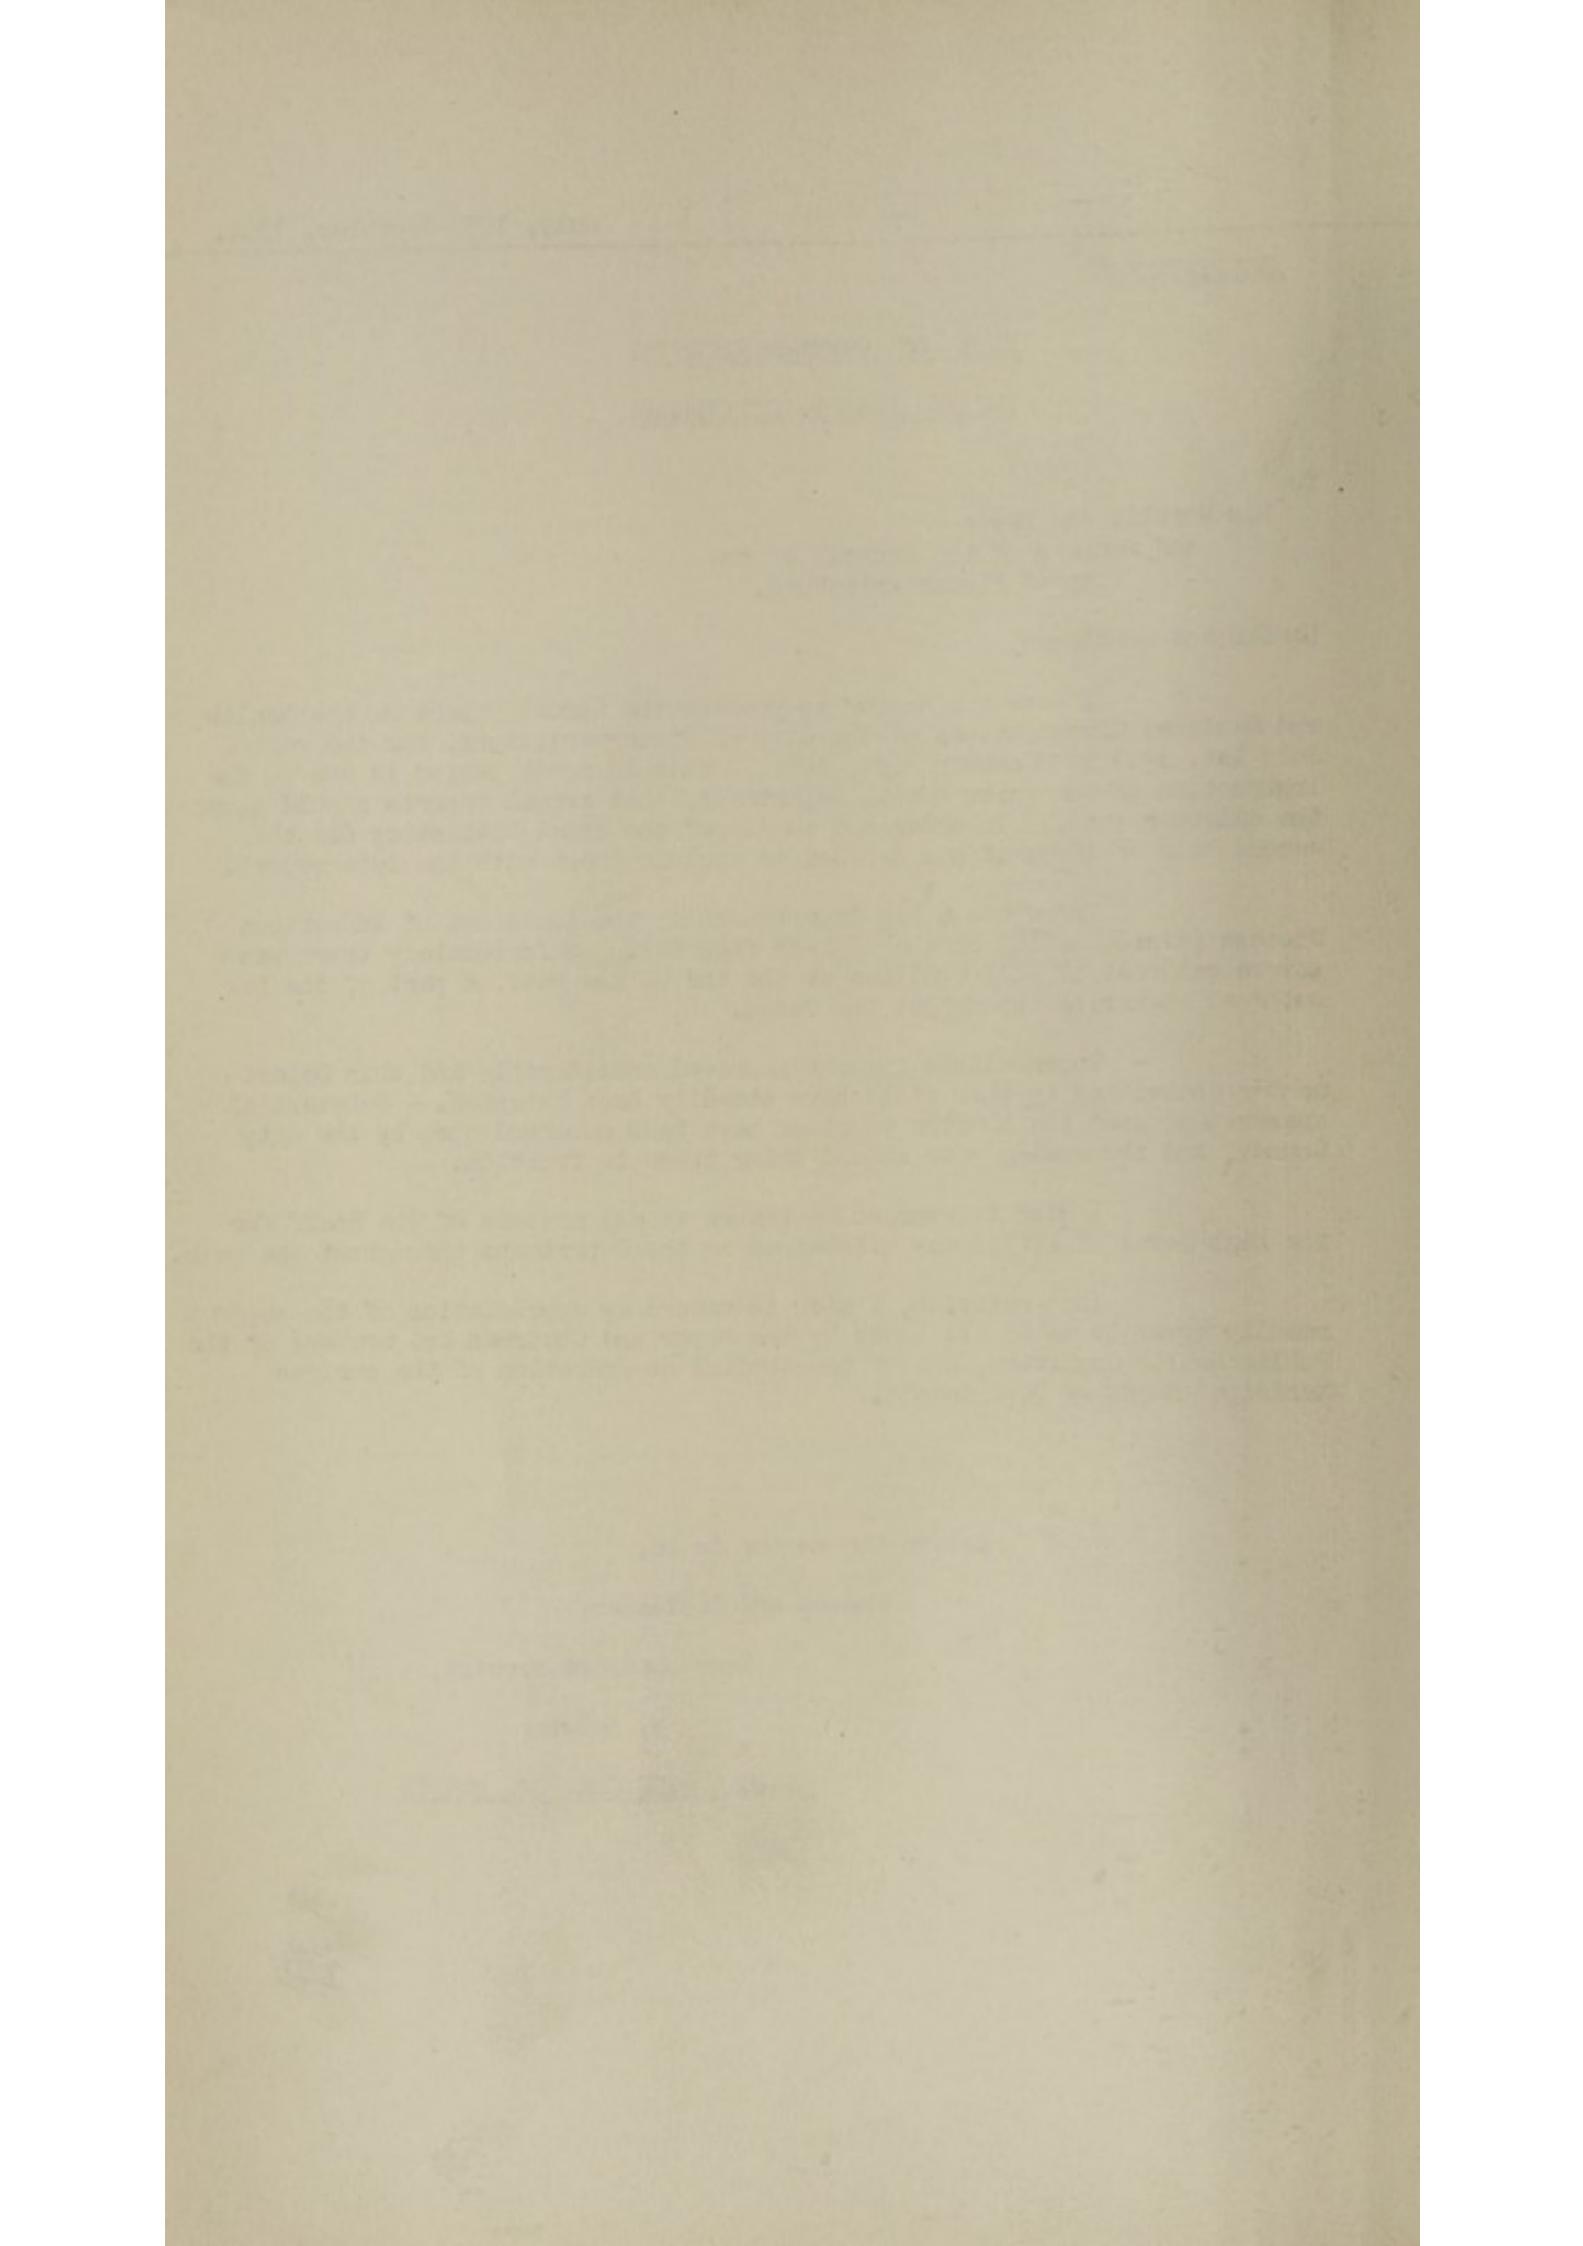

I have the honour to be,

Ladies and Gentlemen,

Your obedient servant,

M. Maister

MEDICAL OFFICER OF HEALTH

I N D E X

(1) VITAL STATISTICS:

POPULATION:

This is an estimate of the population as at December 31st, 1954, calculated for Vital Statistical purposes. Temporary Visitors, the inmates of the Mental Hospital and Fort Napier Institution, the prisoners in the Gaols and the patients in the Hospitals and the Sanatorium are excluded. This estimate is based on the Government Census of May 8th, 1951.

	European	Native	Coloured	Asiatic	All Non-Eur.	All Races

B. (1) NON-RESIDENT - July 1st, 1953 - December 31st, 1953.

European	:	88
Native	:	470
Coloured	:	8
Asiatic	:	18
All Non-Eur.	:	496
All Races	:	584

(2) NON-RESIDENT - January 1st, 1954 - December 31st, 1954.

European	:	130
Native	:	290
Coloured	:	15
Asiatic	:	29
All Non-Eur.	:	334
All Races	:	464

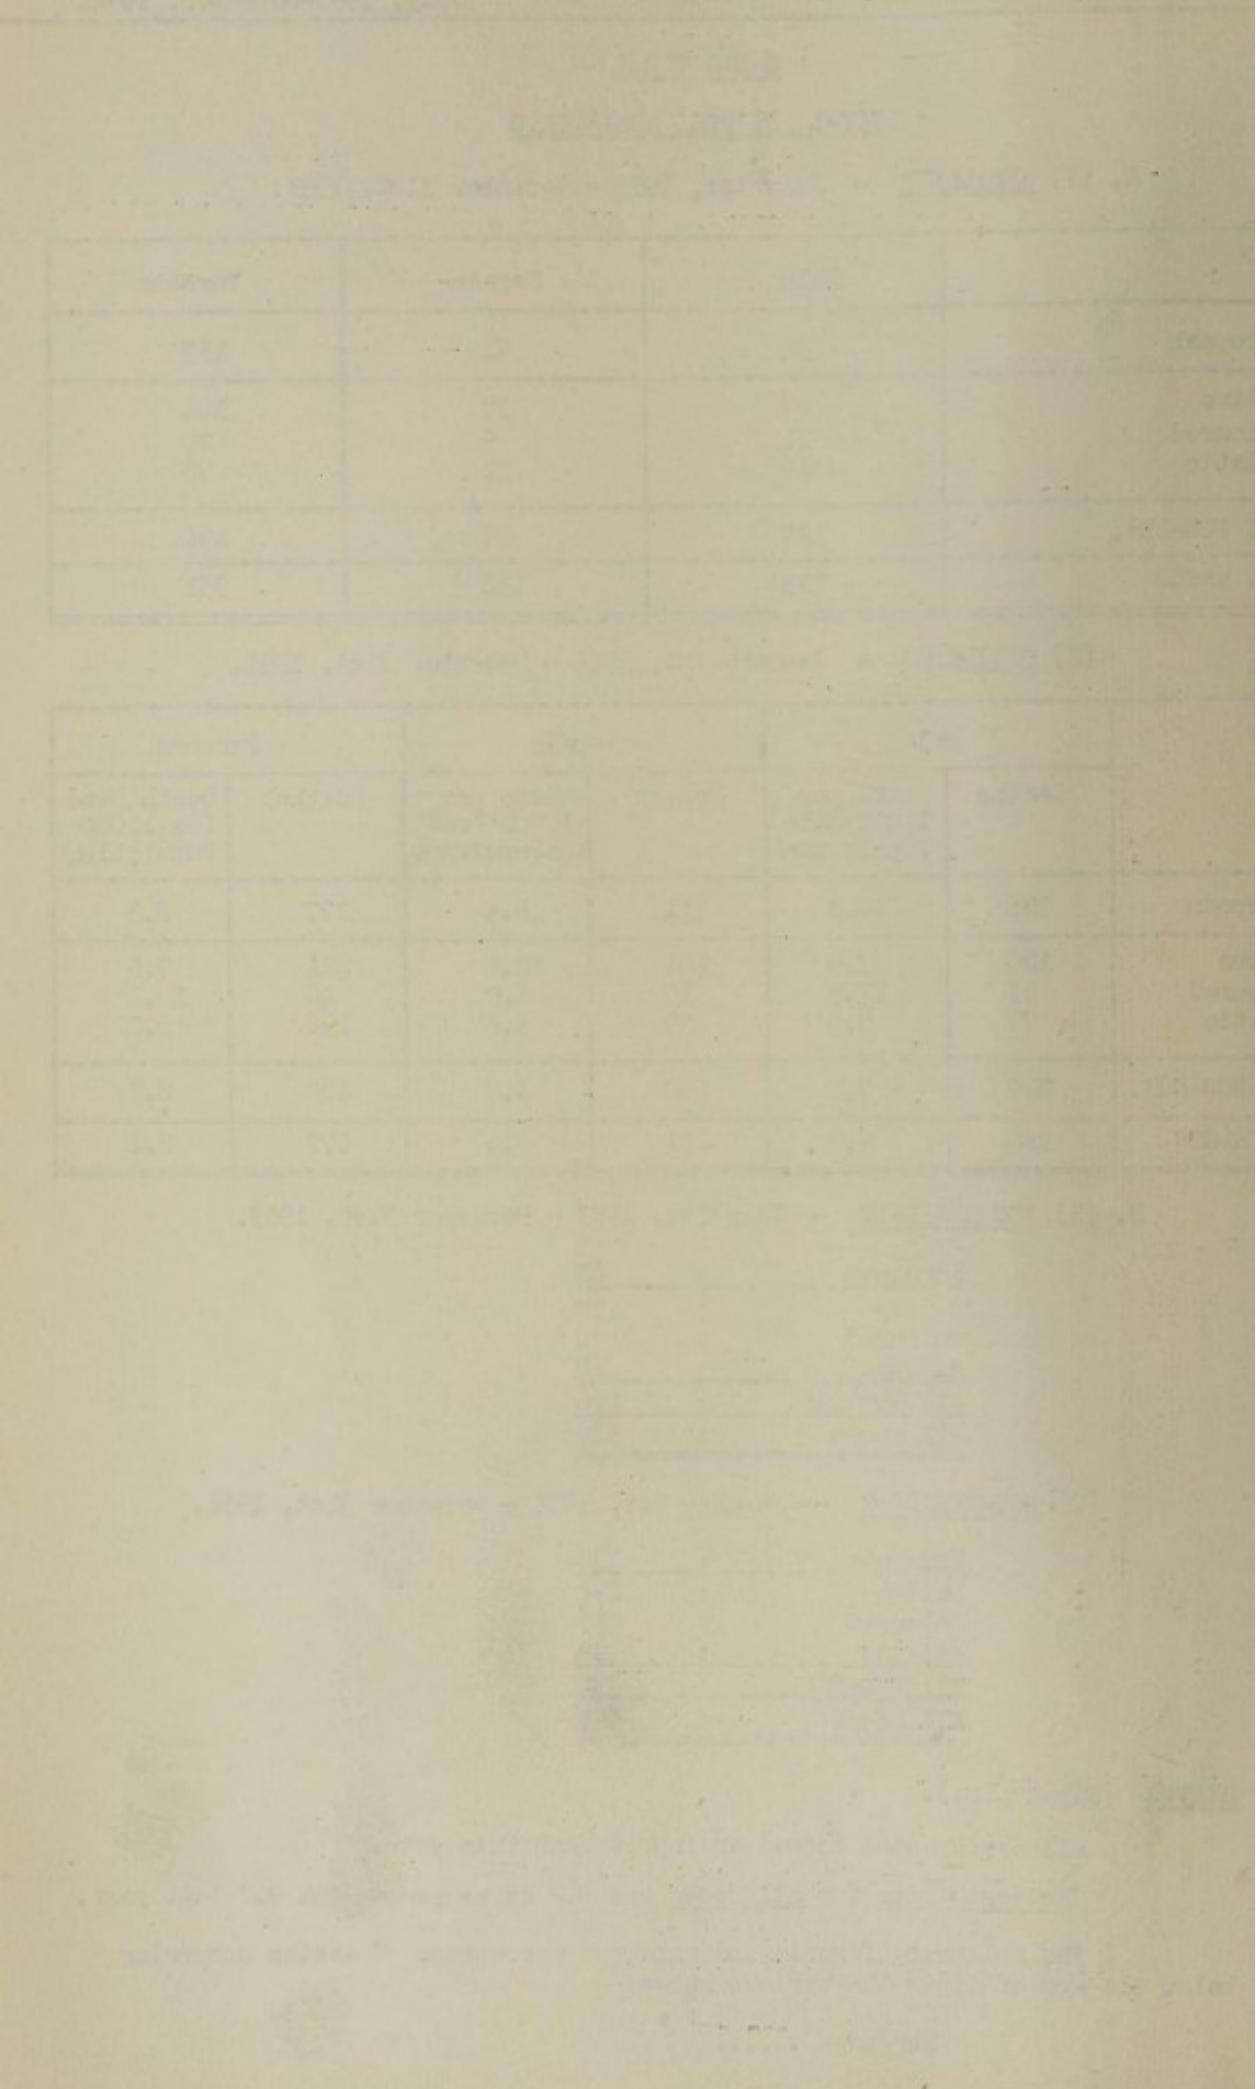

DEATHS (Pages 7-10).

All death rates showed an improvement this year.

The death rate for all races was 8.2 as compared with 9.0 last year.

The following figures indicate the percentage of deaths occurring below the age of 45 in the various races:-

European /

European	:	13%	(17% last year)
Native	:	73%	(77% last year)
Coloured	:	57%	(52% last year)
Asiatic	:	57%	(50% last year)
All Non-European	:	66%	(65% last year)

These figures once again show how much better the expectation of life is for Europeans than for Non-Europeans. The table on page 10 also indicates that Cardiac and Circulatory disease far outweighs all other causes of death among Europeans. Among Non-Europeans, respiratory disease, heart disease, bowel infections and diseases of infancy are the commonest causes of death.

(2) INFECTIOUS DISEASE

There were 194 notifications of infectious disease in 1954.
(See page 11).

ISOLATION HOSPITAL (EUROPEAN INFECTIOUS DISEASE) (Page 61).

Altogether 117 patients were admitted during the year 1954, 90 Borough and 27 Out-of-Borough. Figures for previous years were :-

July-December, 1953 : 90; 1951-1952 : 222; 1950-1951 : 204; 1949-1950 : 247; 1948-1949 : 229; 1947-1948 : 189; 1946-1947 : 170; 1945-1946 : 193; 1944-1945 : 159; 1943-1944 : 318; 1942-1943 : 334; 1941-1942 : 259; 1940-1941 : 405; 1939-1940 : 307; 1938-1939 : 216; 1937-1938 : 215.

Cases of Tuberculosis, Puerperal Sepsis and Typhoid Fever, are provided for usually at Grey's Hospital - the Provincial General Hospital - and King George V-Springfield and Wentworth Hospitals for Tuberculosis in Durban. Europeans needing hospitalisation for Venereal Disease are sent by arrangement to Wentworth Hospital, Durban. Cases of Anterior Poliomyelitis are now admitted to the Isolation Hospital for the first 3 weeks (the presumably infectious period) of their illness, and then transferred to the General Hospital or direct to the Uplands Orthopaedic Home, for further treatment in the case of Europeans, or to the General Hospital Wards or Out-Patient Departments in the case of Non-Europeans. Bulbar and Encephalitic forms requiring respirator treatment are admitted to Grey's Hospital.

NON-EUROPEAN INFECTIOUS DISEASES HOSPITAL (Page 61).

Admissions during 1954 totalled 256, 78 Borough and 178 Out-of-Borough cases. Admissions since the opening of this hospital have been as follows:-

July-December, 1953 : 130; 1951-1952 : 223; 1950-1951 : 304; 1949-1950 : 442; 1948-1949 : 308; 1947-1948 : 304; 1946-1947 : 305; 1945-1946 : 238; 1944-1945 : 332; 1943-1944 : 344; 1942-1943 : 252.

INFECTIOUS DISEASES HOSPITALISATION.

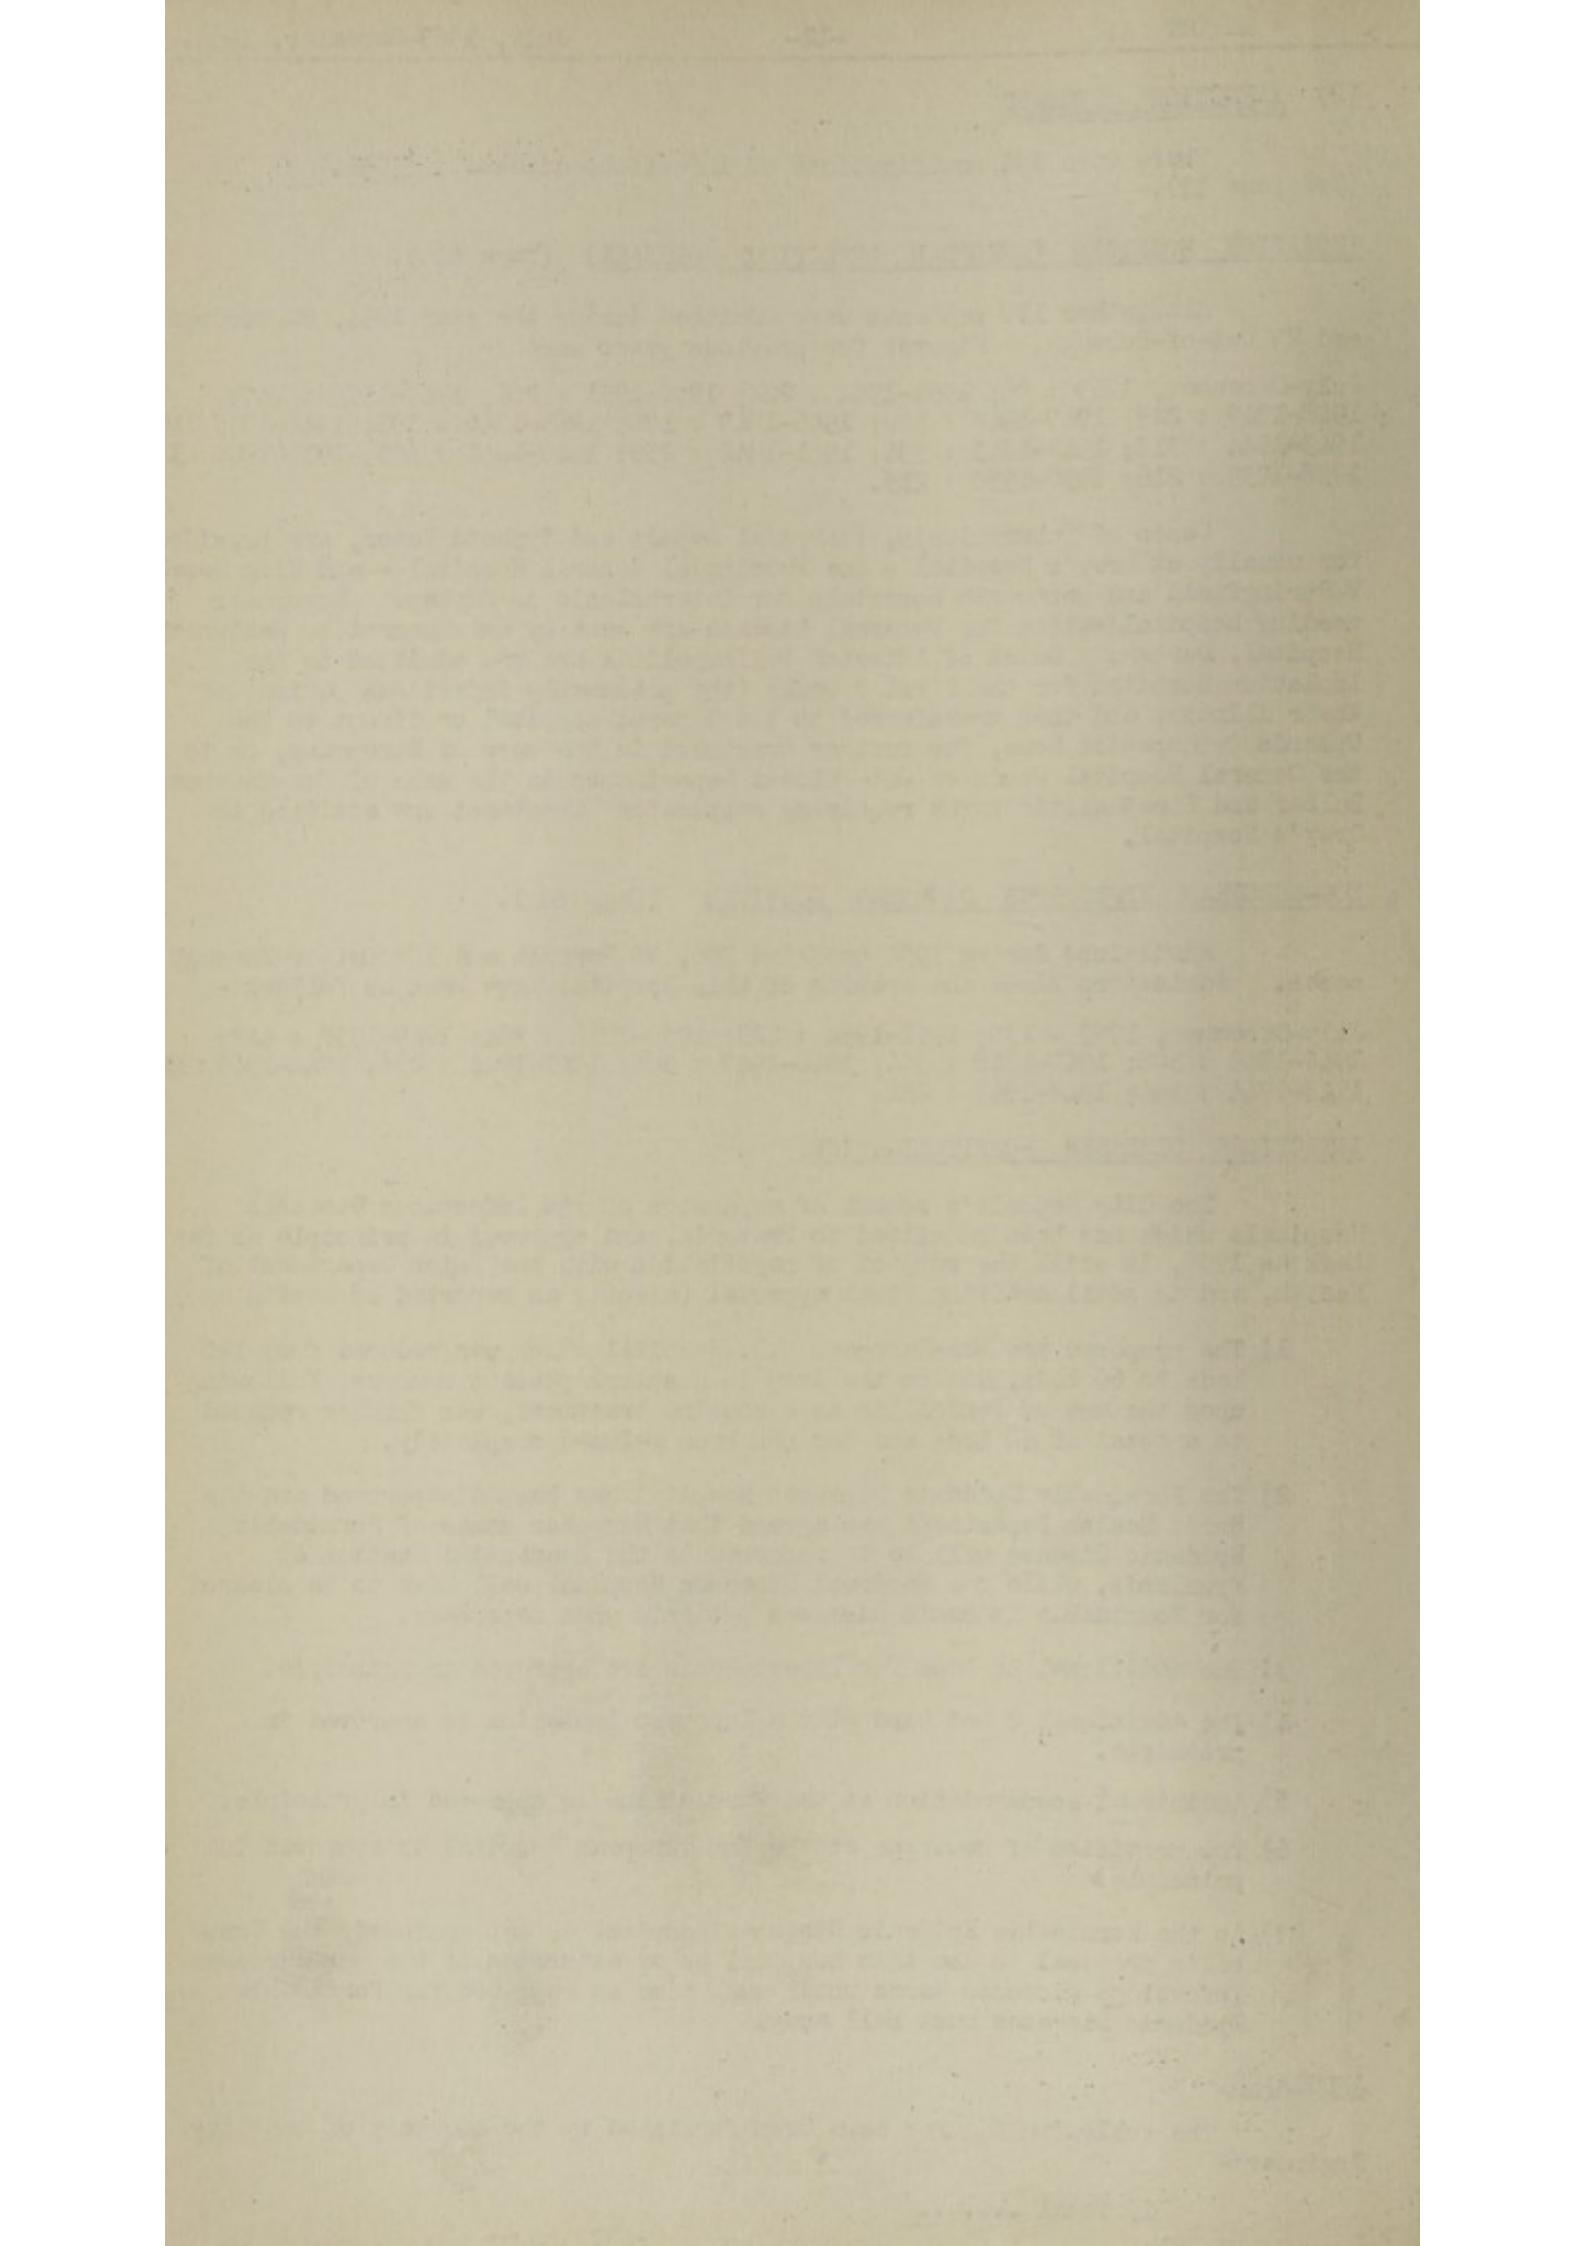

The City Council's scheme of expansion of its Infectious Diseases Hospitals which has been submitted to Pretoria, and approved in principle as far back as 1950, is still the subject of negotiation with the Union Department of Health, and is still awaiting final approval (exactly as reported 18 months ago).

- 1) The proposed new Non-European V.D. Hospital which was reduced from 120 beds to 60 beds, due to the drop in Hospital patient numbers, following upon the use of Penicillin as a routine treatment, was further reduced to a total of 40 beds and has now been refused completely.
- 2) The Formidable Epidemic Diseases Hospital has been disapproved and the Union Health Department has agreed that European cases of Formidable Epidemic Disease will be transferred to the Quarantine Station at Fynnlands, while the Venereal Diseases Hospital will have to be cleared for Formidable Epidemic Diseases patients when necessary.
- 3) The additional 24 beds for Tuberculosis are approved in principle.
- 4) The additional 2 bed ward at the European Isolation is approved in principle.
- 5) Additional accommodation at the Nurses Home is approved in principle.
- 6) The provision of sewerage at the Non-European Hospital is approved in principle.
- 7) As the Formidable Epidemic Diseases Hospital is not approved, the Council's proposal to use this hospital as an extension of the Non-European Infectious Diseases Wards until such time as required for Formidable Epidemic Diseases must fall away.

AMBULANCE.

The following figures have been furnished by the courtesy of the City Engineer:-

- 1) Total

	July-December, 1953	1954
1) Total number of cases removed :	2,916	4,420
2) Infectious cases removed :	395	886

LABORATORY WORK.

Laboratory work done by the Pathologist, Dr. D.G. Cowie:-

	July-Dec., 1953.	1954.
Swabs for Diphtheria Bacilli	41	179
Swabs for Haemolytic Streptococci	66	98
Smears and swabs for Gonococcus, organisms, etc.	0	2
Cerebro-Spinal Fluids	6	42
Blood (Sugar and other examinations)	2	1
Blood (Counts, Smears)	3	4
Cough Plates	2	7
Stools (Parasites, T.B., etc.)	6	17
Urines (Chemical, microscopic, diastatic index, etc.)..	12	19
Milk - for Bacterial Count	95	178
Milk - Phosphatase Tests	50	197
 TOTAL:	 283	 744

Work done in Departmental Laboratory:-

	July-Dec., 1953.	1954.
No. of Mosquito larvae examined :	335	3,435
No. of Mosquito adults examined :	9	10
No. of Snails examined :	1,268	1,857
No. of Physopsis identified :	35	91

NOTIFIABLE INFECTIOUS DISEASE.

(a) ANTHRAX. No cases notified.

(b) SMALLPOX. No cases were reported this year.

VACCINATION.

Unvaccinated or inadequately vaccinated Natives registering at the Municipal Pass Office are vaccinated when they are medically examined. (See page 26).

In addition, since the Smallpox Epidemic of 1944, vaccination of infants (all races) has been carried out at the Municipal Infant Welfare Clinics, and adults applying to the Public Health Department are also vaccinated. This service serves to supplement the free service available to the public through the Public Vaccination carried out by the District Surgeon.

The Registrar of Vaccination has supplied the following figures of total vaccinations in Pietermaritzburg, reported to the Registrar of Vaccination.

	July-Dec., 1953.	1954.
Successful Vaccinations (under 2).....	207	283
Successful Vaccinations (over 2).....	19	17
Insusceptible to Vaccination (under 2)	5	5
Exempted from Vaccination	0	1

The number of vaccinations carried out by this Department at its Clinics during this period was:-

July 1st,- Dec. 31st, 1953: 693 (Eur. 182; Nat. 52; Col. 90; As. 369).

Jan. 1st - Dec. 31st, 1954: 1,300 (Eur. 331; Nat. 249; Col. 140 ;As. 580).

(c) DIPHTHERIA...../

1920-21, and the first year of my teaching experience.

It was a year of great difficulty and strain. I had to learn to teach, to live with children, to work with parents, to meet all the difficulties of school life, and to do it all under circumstances which were not always favorable. But I did my best, and I am glad to say that I succeeded in making the year a success. I learned a great deal about myself and about the world around me, and I grew in many ways during the year. I am grateful to all who helped me, and I hope to continue to grow and to learn more in the years to come.

I am now looking forward to the new year with a sense of anticipation and excitement.

My first year of teaching has been a year of great learning and growth. I have learned much about myself and about the world around me, and I am grateful to all who have helped me. I am looking forward to the new year with a sense of anticipation and excitement.

I am now looking forward to the new year with a sense of anticipation and excitement.

I am now looking forward to the new year with a sense of anticipation and excitement.

I am now looking forward to the new year with a sense of anticipation and excitement.

I am now looking forward to the new year with a sense of anticipation and excitement.

I am now looking forward to the new year with a sense of anticipation and excitement.

(c) DIPHTHERIA

The total number of cases notified in 1954 was 24 as compared with 26 for July, 1952 - June, 1953, and 1 Native and 2 Asiatics died from this disease. One of these Asiatic deaths occurred in a non-immunised child, but no information could be obtained as to whether the other children had been immunised or not.

The immunisation history in 32 definite cases (confirmed by Virulence tests) admitted to our hospitals from July 1st, 1953 - December 31st, 1954, was as follows:-

Immunised	Non-Immunised
Total cases : 3 (2 Eur.; 1 Non-Eur.)	Total cases : 29 (5 Eur.; 24 Non-Eur.)
Deaths : 1 (Non-European)	Deaths : 8 (All Non-European)

1,764 Immunisation courses against Diphtheria were completed at the Infant Clinic Sessions from July 1st, 1953 - December 31st, 1954. (Bur. 660; Nat. 154; Col. 252; Asiatics 698).

In addition, the following pre-inoculation and post-inoculation Schick tests were performed. Most of the pre-inoculation Schick tests are done in older children who apply for immunisation, so as to spare them the possibility of unnecessary reaction.

Race	Pre-Inoculation Schick Tests	No. Positive	Post-Inoculation Schick Tests	No. Positive
European	87	7 (8%)	126	3 (2.4%)
Native	--	--	--	--
Coloured	--	--	--	--
Asiatic	--	--	--	--

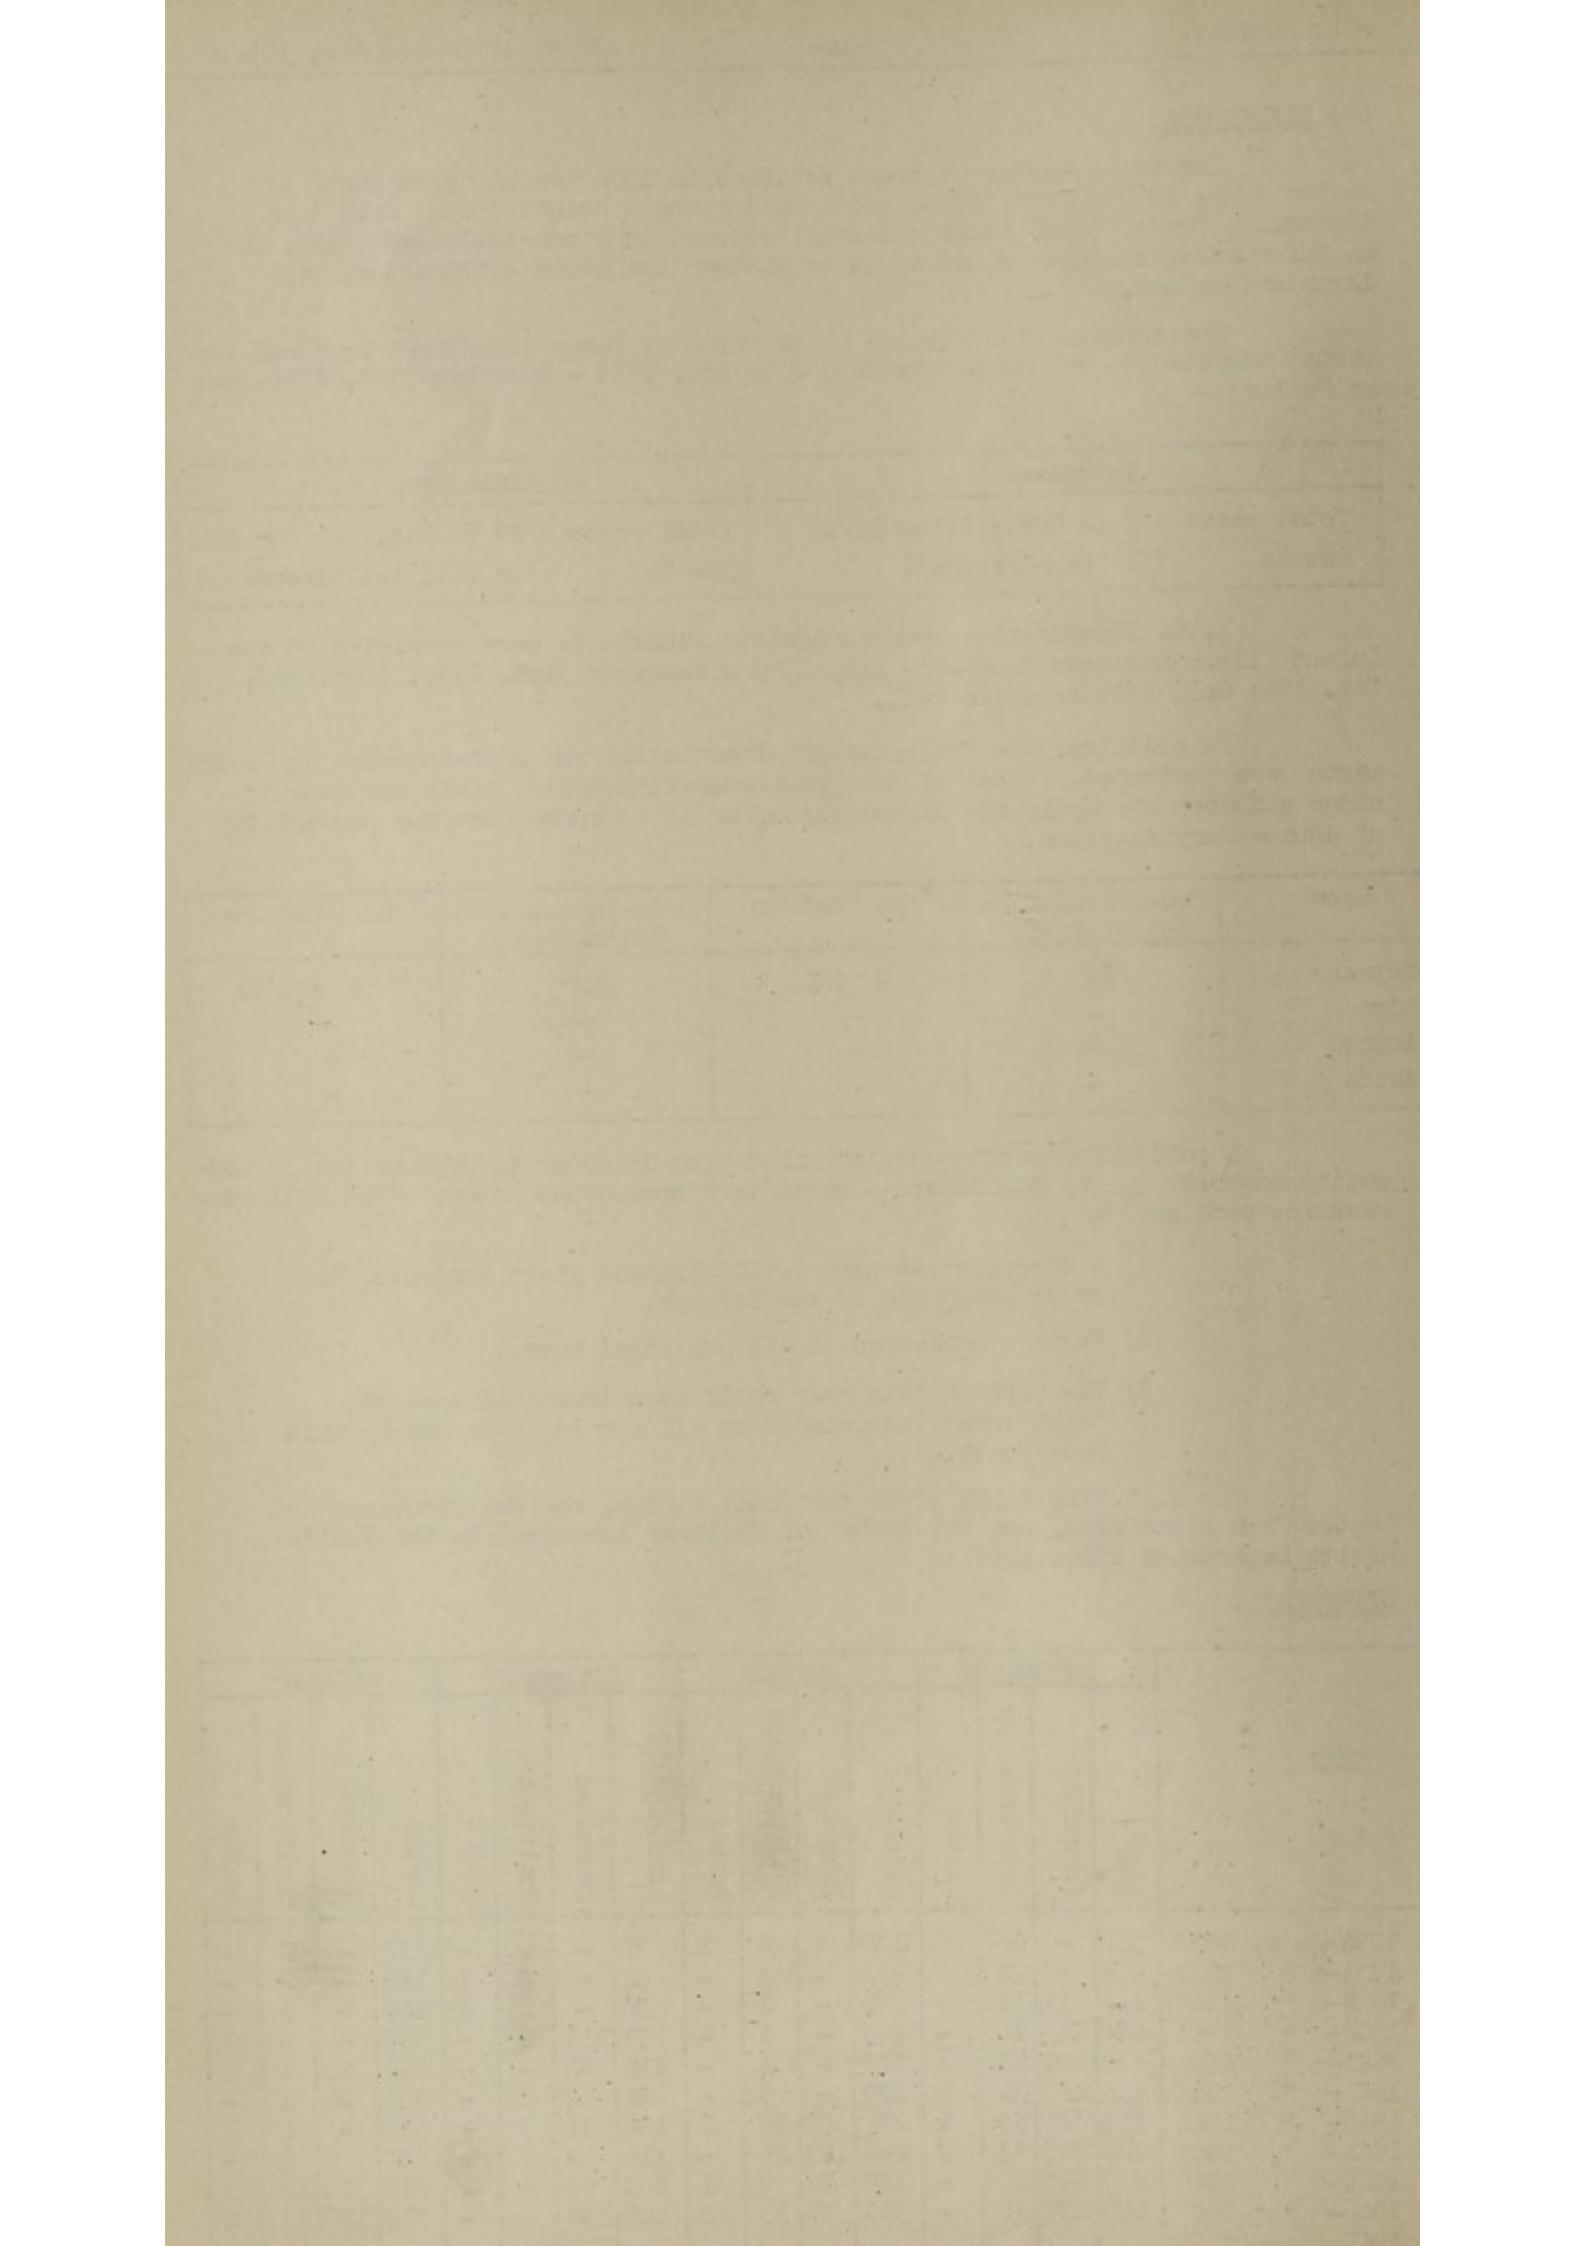

A publicity campaign was embarked upon in order to improve the immunisation response by the public and a definite response was noted. The following measures were used:-

- 1) A circular was sent (with electric light accounts) to every household in the Borough.
 - 2) Posters were used in all Municipal buses.
 - 3) The caption "Has your child been immunised against Diphtheria" was printed on all envelopes issued by this Department.

The following table gives the Total Births, the Notifications and Deaths from Diphtheria, and the Number of Children Immunised by the Public Health Department since 1937 :-

DIPHTHERIA.

No figures are available of the number of persons immunised by private practitioners, but it is believed that a considerable number of European children are now being immunised by private practitioners.

(d) SCARLET FEVER.

34 Cases were notified as compared with 29 cases last year. The disease continued to be mild. The use of Penicillin in the treatment of Scarlet Fever has enabled us to permit children to return to school after 2 weeks quarantine as throat swabs generally confirm the rapid disappearance of Haemolytic Streptococci under this form of treatment. No "return cases" have yet been encountered in our experience with this procedure.

(e) CEREBRO-SPINAL MENINGITIS.

4 Cases were notified during the year, as compared with 3 last year.

(f) ANTERIOR POLIOMYELITIS.

24 Cases were notified this year (18 Paralytic), as compared with 2 last year.

(g) ENTERIC FEVER.

6 Cases were notified, all Natives, in 1954 (2 cases not confirmed bacteriologically), and 3 Europeans were notified in the second half of 1953. (Diagnosis not confirmed by bacteriological investigations).

16 Persons were immunised (6 Europeans, 8 Natives and 2 Coloureds). The method employed was two injections of Endotoxoid (S.A.I.M.R.). All those immunised were contacts of patients suffering from Typhoid Fever, and completed the course of 2 injections. (See also page 24, section (10) Milk Supplies).

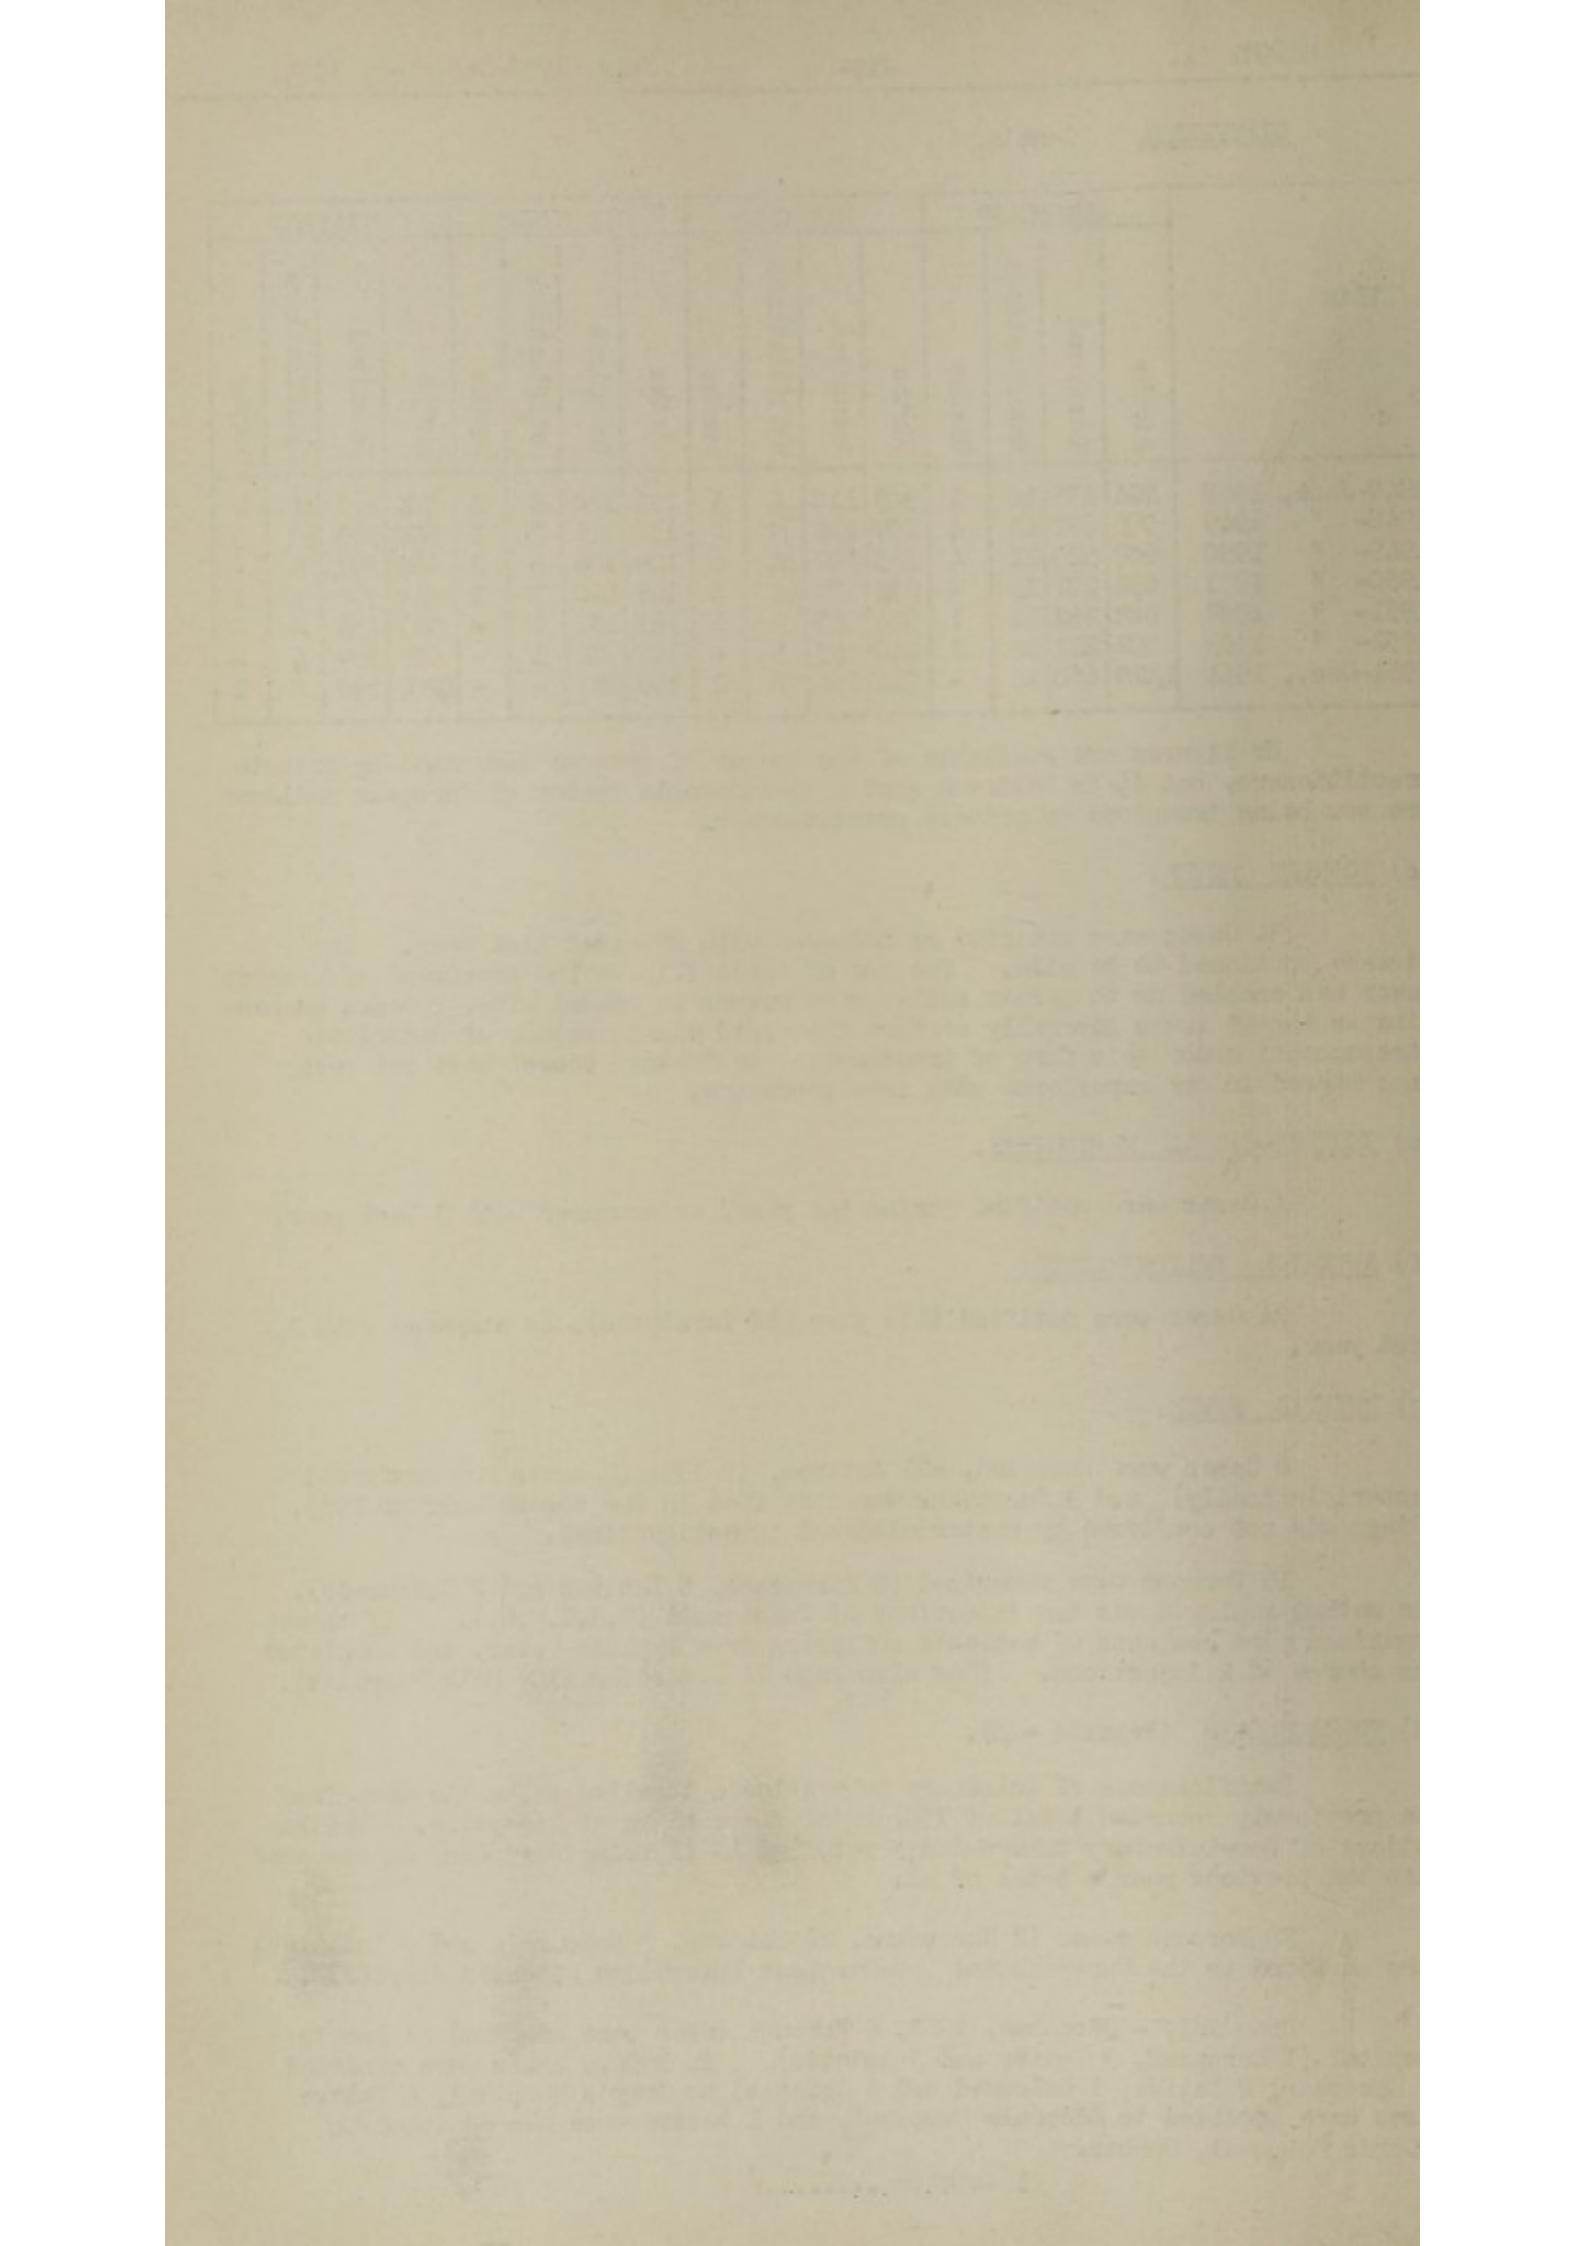

(3) TUBERCULOSIS (Pages 44-47).

Notifications of Pulmonary Tuberculosis totalled 81, a big drop from the previously recorded total of 150, 20 of these being of Europeans. Notifications of Non-Pulmonary Tuberculosis totalled 13 (1 being European) as compared with the previous year's total of 11.

30 Borough cases (2 Europeans, 20 Natives, 3 Coloureds and 5 Asiatics) were admitted to the European and Non-European Infectious Diseases Hospitals.

From July - December, 1953, 9 Borough cases were admitted to Grey's Hospital (1 European, 5 Native and 3 Asiatic). In 1954, 9 cases were admitted (5 European, 2 Native, 1 Coloured and 1 Asiatic) to Grey's Hospital, 4 Native cases were admitted to Edendale Hospital, and 1 Native case was admitted to McCord's Hospital, Durban.

1 Asiatic

(3) TUBERCULOSIS Cont'd.

1 Asiatic case was admitted to King Edward VIII Hospital, Durban, in 1954, and 1 Asiatic in the second half of 1953. 9 European, 6 Native, 1 Coloured and 2 Asiatic cases were admitted to King George V/Springfield Tuberculosis Hospital, Durban, in 1954, and 3 European, 5 Native, 3 Coloured and 4 Asiatic cases were admitted to the same hospital in the second half of 1953. 1 Coloured case was admitted to Addington Hospital in the second half of 1953. 1 Native and 1 Asiatic (Borough cases) were admitted from our Clinics to our own Non-European Infectious Diseases Hospital in the second half of 1953, and 9 Natives, 2 Coloureds and 3 Asiatics were admitted in 1954. 5 Europeans were admitted to the Wentworth Tuberculosis Hospital, Durban, in 1954, and 1 in the second half of 1953. 1 European was admitted to Lilleshall Convalescent Hospital in 1954 and 2 were admitted in the second half of 1953. 1 Coloured case was admitted to the Umlazi Mission Hospital in 1954, and 1 Native case was admitted to the Botha's Hill T.B. Settlement in 1954, and 1 Native case in the second half of 1953. 2 Asiatics and 1 Coloured were admitted to the F.O.S.A. Settlement, Durban, in 1954, and 2 Asiatics in the second half of 1953.

The scheme of subsidising rentals in tubercular families at the Sobantu Village, where a larger house was necessary to ensure the isolation of the infectious case in the home, was continued during the year, and 1 family was assisted in this way. Control by the Native Health Assistant is maintained to ensure that isolation is observed, but constant vigilance is needed and the patient's response is not always satisfactory.

The Natal Anti-Tuberculosis Association made grants to 26 families in Pietermaritzburg (1 European, 15 Native, 5 Coloured and 5 Asiatic), to enable the breadwinner to accept hospital treatment.

The following tables illustrate the trend in notifications and deaths from this disease over the period 1934-1954:-

PULMONARY TUBERCULOSIS

* Includes 1 case also notified as Pulmonary Tuberculosis.

A marked decrease (roughly 50%) in the total of notified Non-European cases of Pulmonary Tuberculosis and a marked decrease in the number of Non-European deaths reported (approximately 30%) are the salient features of this years figures.

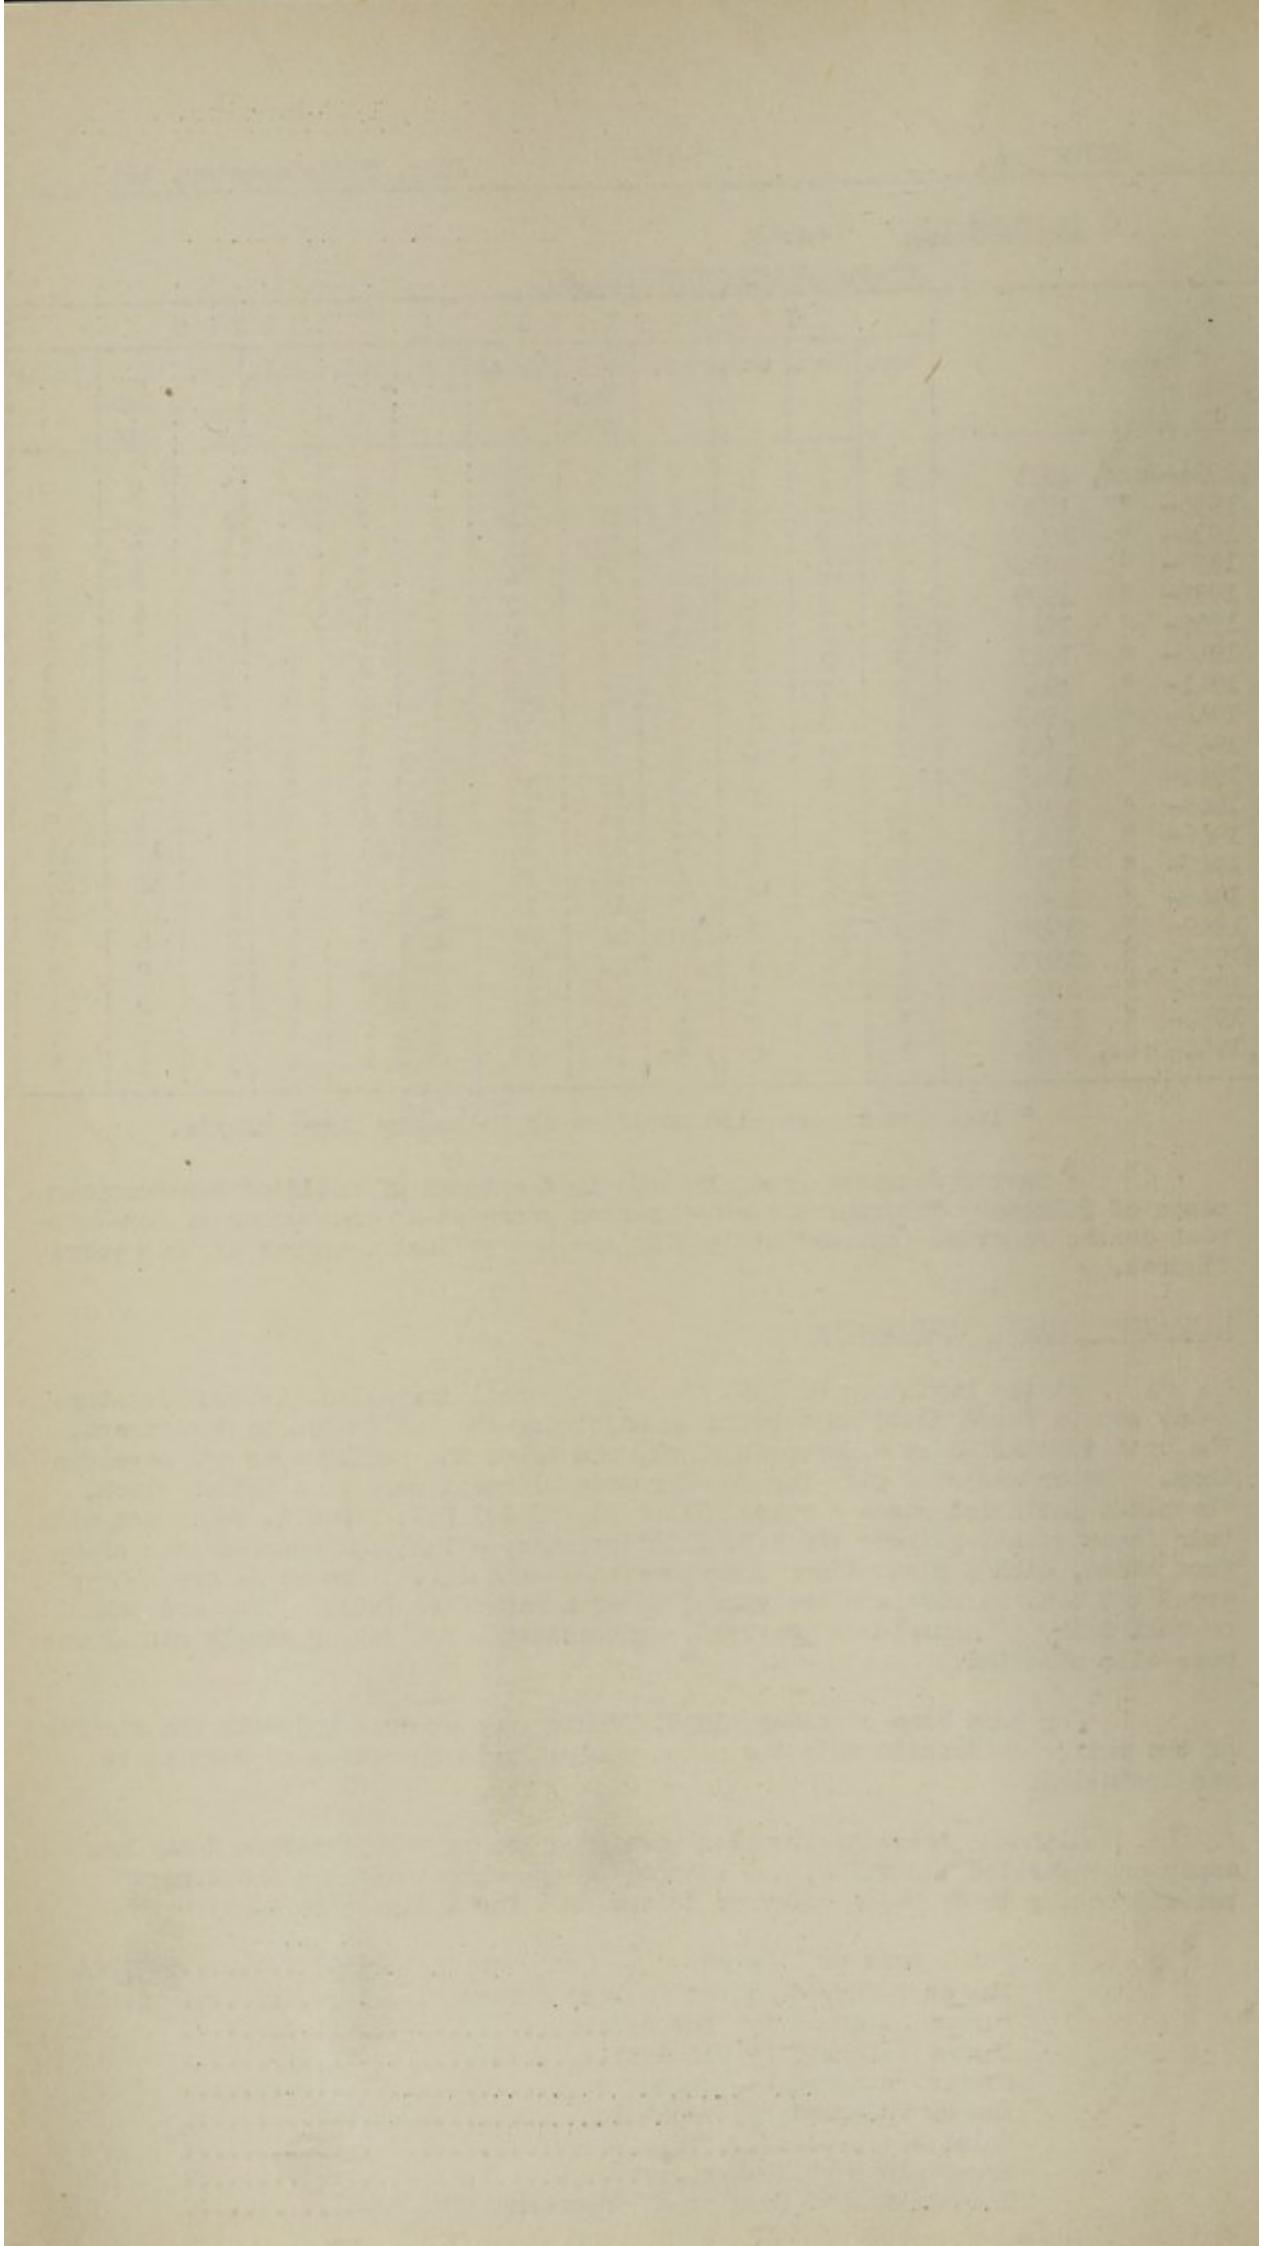

MINIATURE MASS RADIOGRAPHY

At the beginning of 1954, the City Council installed its own Miniature X-Ray set (a fixed unit) in a building adjoining the Public Health Department. The unit is staffed by a European clerk, who takes the radiographs and develops them. He is assisted with the Non-European clerical work by a Native clerk. The plant installed was a 4 valve Miller DA 250 125 K.V. 200 m.a. X-Ray set, with twin focus rotating Anode 100 K.V. Phillips tube, a Phillips motor-driven platform stand, with a photo timer incorporated in the set. The miniature X-Rays are 7 x 7 c.m. in size and are viewed under a magnifier (x2). They are taken on roll film, 40 miniatures per roll, and cassettes for taking single miniatures were also obtained.

For some time considerable difficulty was experienced with the staffing of the unit, but despite this the plant was put into operation as soon as it was installed.

Although teething troubles were experienced, the Miniature X-Ray has amply demonstrated its value, and the following table indicates the type of patient coming to or being referred to the unit for a Miniature X-Ray:-

Total persons X-Rayed: (.. December 31st, 1954)	7,244
Number referred ex Native Pass Office:	4,418
Number referred by Doctors:.....	682
Number referred by Clinics:.....	317
Number referred by Employers:.....	403
Number referred by Hospitals:.....	235
Voluntary:.....	649
Pre-employment X-Rays:.....	178
Pre-employment (Municipal Superannuation Fund).....	31

(3) TUBERCULOSIS Cont'd.

With the Miniature X-Ray plant available, contact examination at the T.B. Clinic has been reduced considerably, as a routine Miniature X-Ray of all contacts is now taken and only when abnormalities are noted are the contacts referred for closer investigation at the clinic. Routine follow-up X-Rays of T.B. patients at the Clinics and our hospitals are to a large extent being done by this Miniature plant with an occasional large plate for confirmation. The plant has also proved most useful in emergencies when we have been unable to obtain large plates from Grey's Hospital at times, due to staff shortages.

It will be noted that the voluntary applicants for X-Ray form quite an important group, as also the cases referred by employers. It is hoped that these groups of cases will increase in numbers, as they indicate that the general public is becoming aware of the importance and value of the routine miniature X-Ray.

THE TUBERCULOSIS CLINIC (Page 53).

Staff: Asst. Medical Officer of Health (Part-time), a European Health Visitor (Full-time), and a Native Health Assistant (Full-time). With the growth of the T.B. work carried out by this Department, it has been found necessary to utilise a Health Visitor on a full-time basis, instead of half-time as in the past.

During the year 1954 there were 2,708 attendances at the Clinic (including 572 Out-of-Borough cases), a 50% drop in attendances due chiefly to the fact that all contacts are now referred first of all to the Miniature X-Ray Clinic.

Out-patient continuation treatment with injections of Streptomycin and oral I.M.H. (or P.A.S.) has been used on an increasingly large scale for patients discharged from hospital, thus enabling us to utilise our hospital beds to better advantage through the much earlier release from hospital of cases who are suitable for Out-Patient treatment. Patients for whom no bed can be found in hospital are also started on treatment until beds become available, and some cases are maintained on Out-Patient treatment alone. A few such Out-Patients have rapidly become sputum negative with treatment, have improved clinically and have been maintained sputum negative, and as such constituting no danger to others while at work or at home.

At the end of the year 14 European, 29 Native, 4 Coloured and 36 Asiatic patients were receiving regular Streptomycin injections, necessitating the organisation of 2 special clinic sessions per week for this purpose. (See Page 53).

2,371 Visits were made to tuberculotics and contacts in their homes, (Borough cases only). The following notified cases were on our Tuberculosis Register as at December 31st, 1954. (June 30th, 1953, figures in brackets for comparison):-

	Eur.	Nat.	Col.	As.	All Non-Bur.	Total
Pulm. T.B.	87(57)	139(86)	48(35)	140(109)	327(230)	414(287)
Non-Pulm. T.B.	3(2)	16(8)	2(2)	3(22)	21(32)	24(34)

The Tuberculosis Hospital : (Non-European Only).

Admissions totalled 82, 28 Borough cases (20 Native, 3 Coloured and 5 Asiatic) and 54 Out-of-Borough cases (49 Native, 3 Coloured and 2 Asiatic).

(3) TUBERCULOSIS Cont'd.

1950-1951	Annual Admission Rate per Bed	1.7 patients.
1951-1952	" " " "	1.5 "
1952-1953	" " " " (including temporary beds)....	1.7 "
1954	" " " " "	2.1 "

There has been no undue delay this year in securing the admission of European cases to the Wentworth and King George V Hospitals for Tuberculosis in Durban, there being no Tuberculosis beds available for Europeans in Pietermaritzburg.

(4) VENEREAL DISEASE. (Pages 54-60).

- (a), (b) and (c) One Clinic Session is held weekly for each race and sex, conducted by the Assistant Medical Officers of Health. These Clinics are held in the Grey's Hospital Out-Patient Department Buildings. A separate Clinic Session is held for European Males, European Females and Native Females. A combined session is held for Coloured and Asiatic females, and a combined session is held for Coloured, Asiatic and Native males. One European Health Visitor (half-time only), 1 Native Nurse, and 3 Native Health Assistants, assist at the Female Clinics, while the Health Visitor and 3 Native Health Assistants, assist at the Male Clinics. Three Native Health Assistants devote their full time to Venereal Diseases.
- (d) Every effort is made to trace contacts and sources of infection and to follow-up defaulters to ensure completion of treatment. A European Health Visitor deals with the investigation and follow-up of European, Coloured and Asiatic cases, and supervises the work of the Native Health Assistants who deal with Natives only.

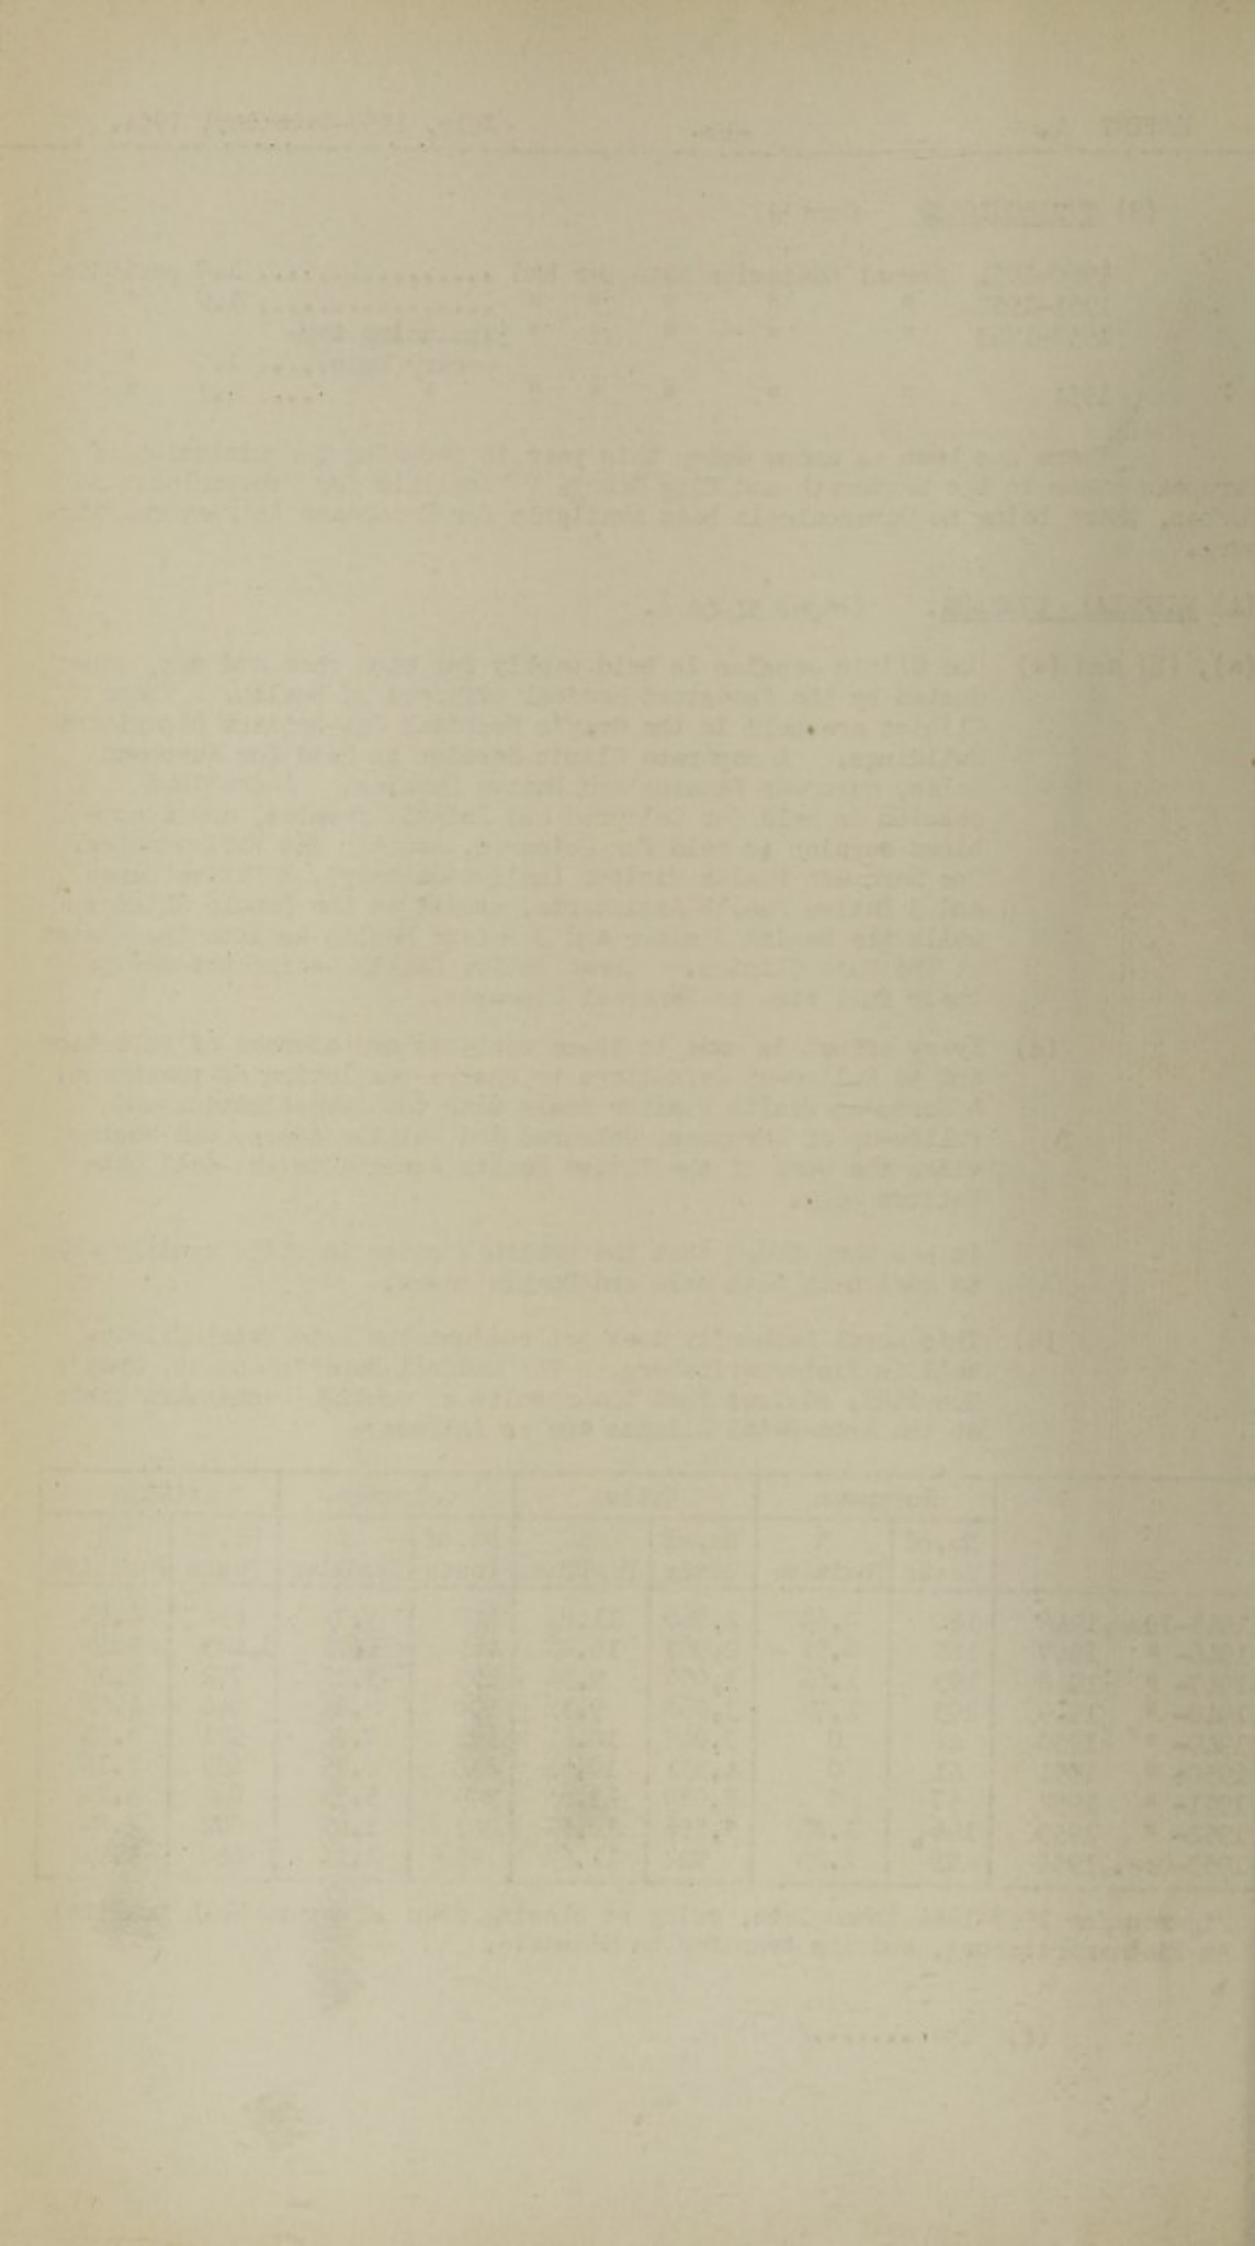

It has been found that the Health Visitor is quite readily able to deal with both Male and Female cases.

- (e) This Local Authority does not conduct the Ante-Natal Clinics held in Pietermaritzburg. The Medical Superintendent, Grey's Hospital, advises that the results of routine Wassermann Tests at the Ante-Natal Clinics are as follows:-

	European		Native		Coloured		Asiatic	
	No. of Tests	% Positive						
July, 1945-June, 1946	180	0.6%	2,860	11.8%	149	7.7%	636	2.4%
" 1946- " 1947	185	0.5%	2,963	16.8%	465	1.9%	1,423	1.6%

1949-50	5.0	5.4	-	1.0	8.8	6.1	5.1	4.7	9.7	8.6	6.3	5.0	6.9	6.6	4.2	3.5
1950-51	5.4	7.5	-	2.3	6.4	6.9	4.1	4.1	5.7	6.2	3.8	7.4	5.2	5.6	14.0	2.2
1951-52	5.0	2.5	1	1	5.5	5.6	3.0	3.6	3.8	7.4	1	2.3	3.0	5.4	2.5	1.9
1952-53	2.5	2.9	0	0	4.4	4.8	2.4	3.7	4.0	5.8	-	2.6	3.4	5.4	1.2	6.5
1954	2.1	-	0.3	-	3.8	3.6	2.8	2.6	3.8	2.2	-	10.2	3.0	2.4	-	9.3

These figures are arrived at by dividing the total number of Clinic Attendances for the period by the number of patients who attended the Clinics during that period.

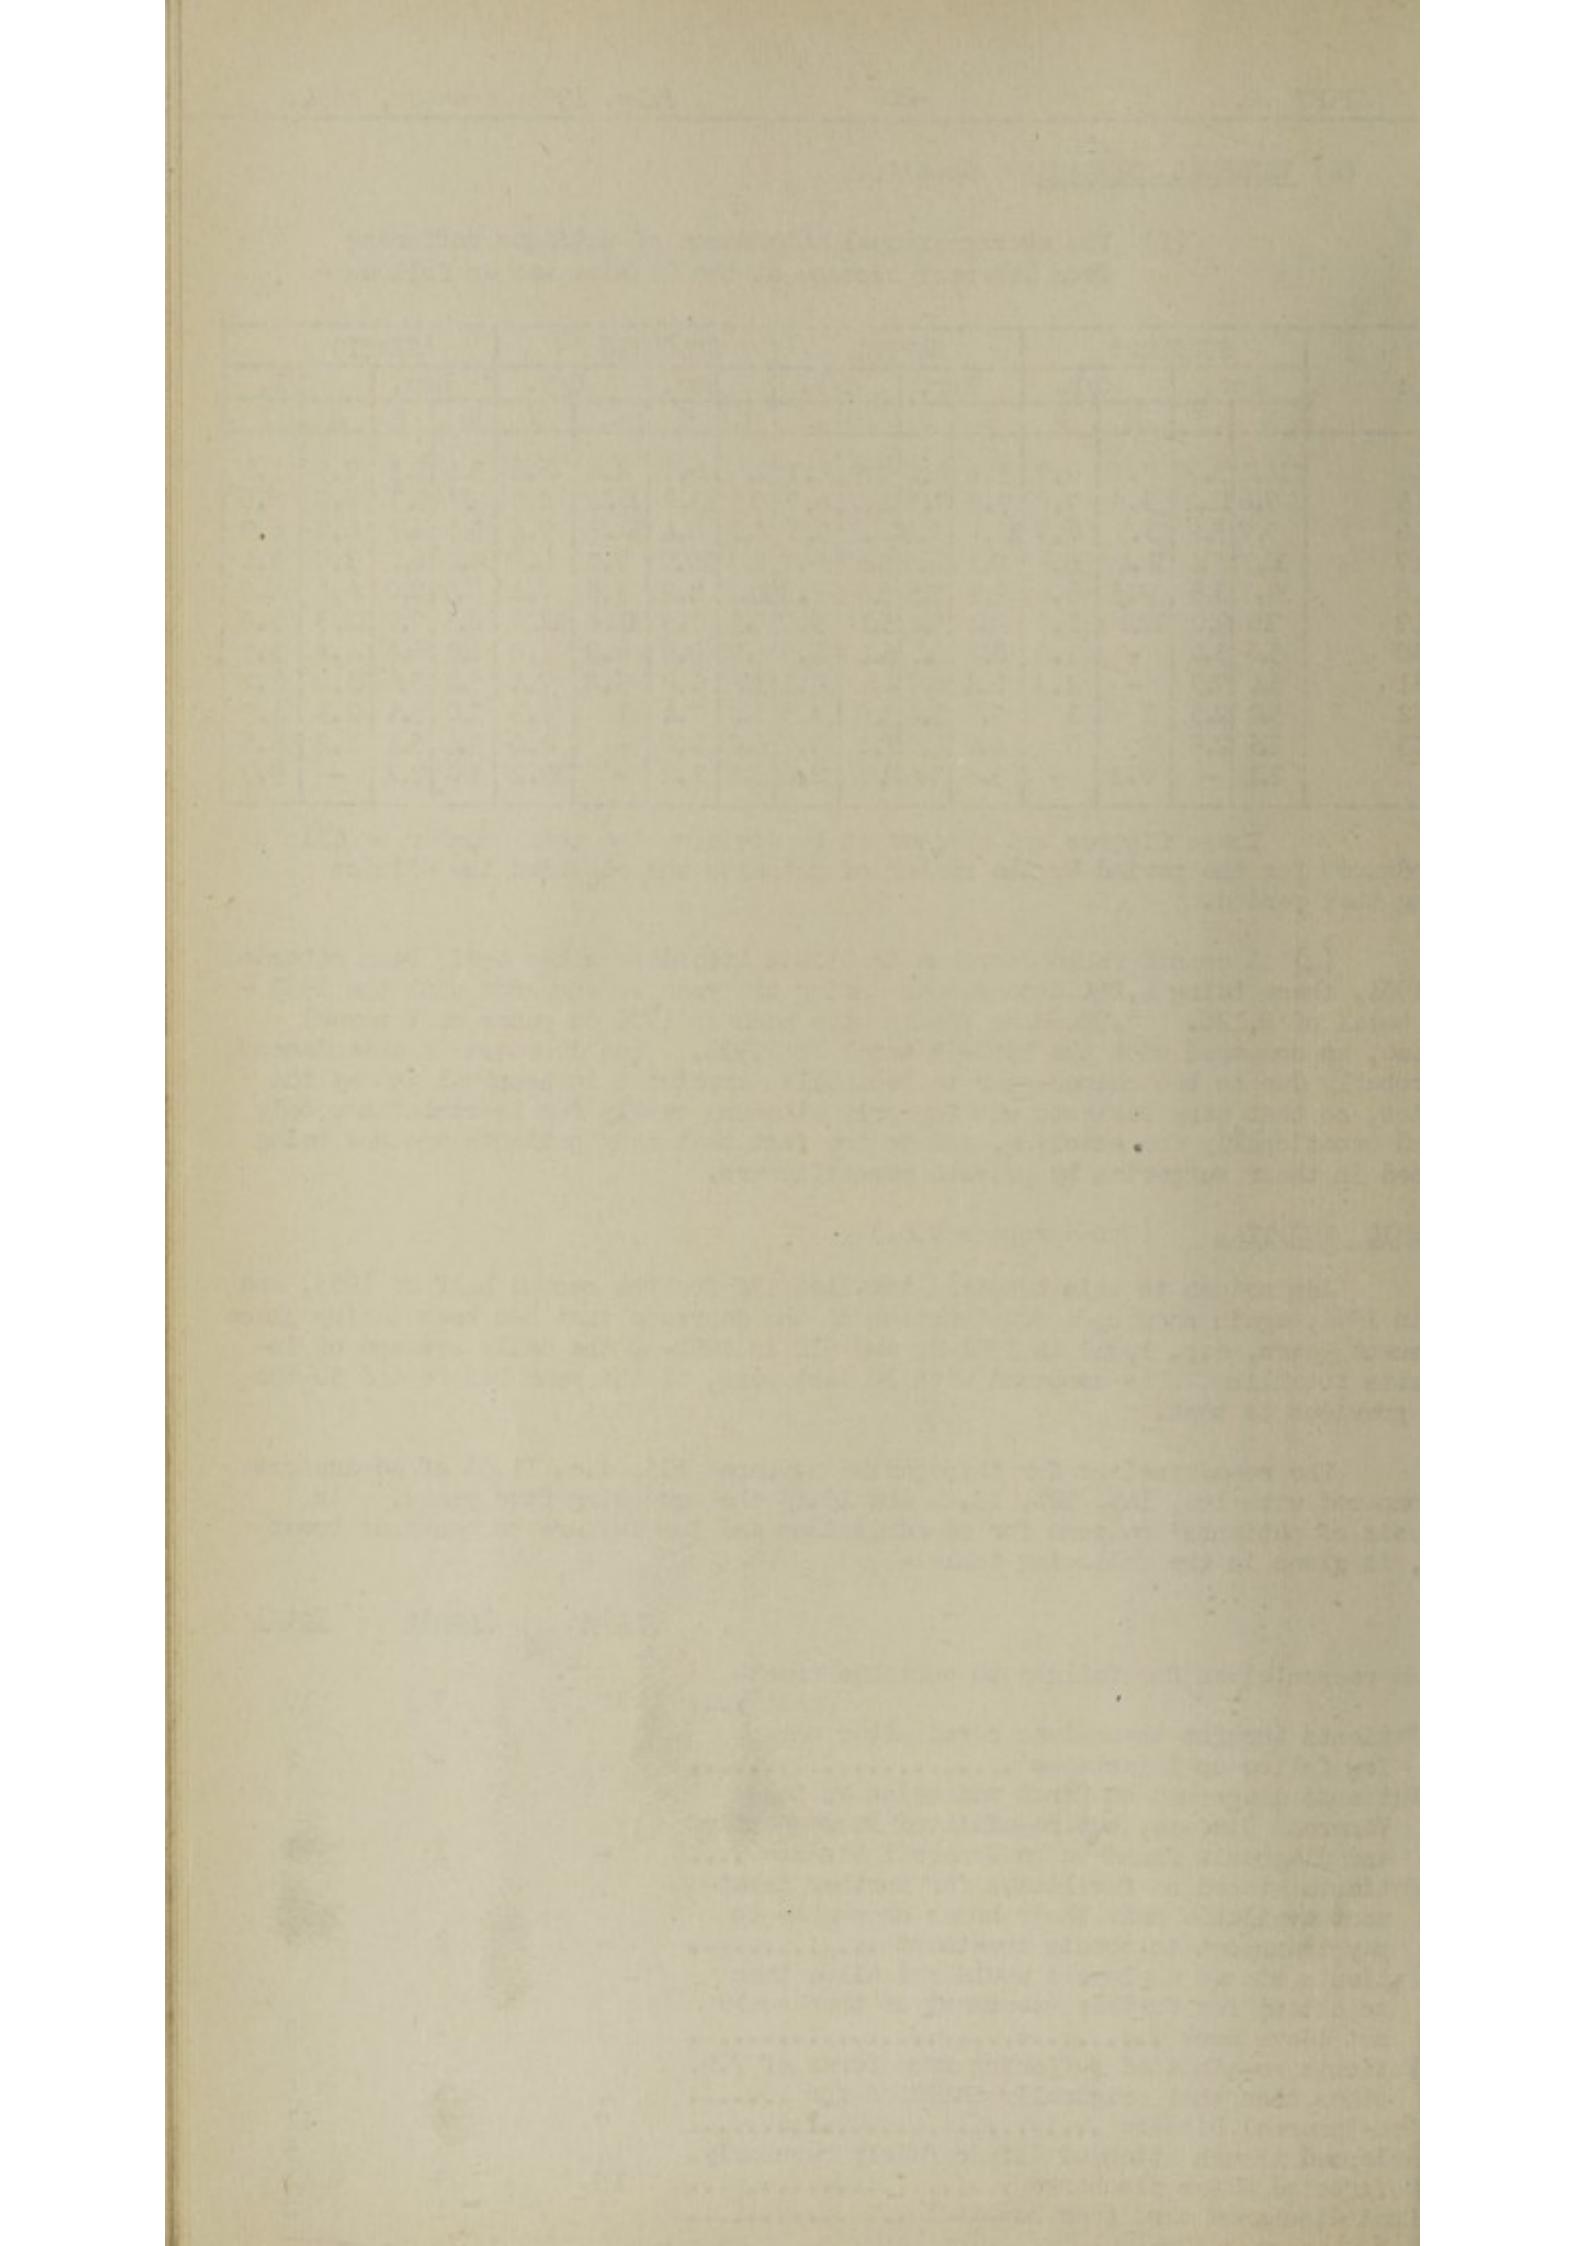

(g) A considerable decrease in Clinic Attendances has again been recorded for 1954, there being 4,064 attendances during the year as compared with the 1952 - 1953 total of 8,126. 2,980 Home Visits were paid in 1954 to cases of Venereal Disease, as compared with the 1952-53 total of 2,936. The decrease in attendances is probably due to the change-over to Penicillin treatment in hospital and at the clinics, so that many patients who formerly attended weekly for treatment now only attend occasionally for checking, and to the fact that many patients are now being treated in their surgeries by private practitioners.

EPIDEMIC HOSPITAL (Non-European V.D.)

Admissions to this hospital totalled 432 for the second half of 1953, and 561 in 1954, again showing a continuation of the decrease that has been taking place in recent years, e.g. 1,312 in 1951-2, and 910 in 1952-3, the daily average of in-patients totalling 20 as compared with 30 last year, 42 the year before and 50 the year previous to that.

The re-admissions for this period numbered 115, i.e. 11.6% of admissions as compared with 16%, 14%, 12%, 13.8% and 13.4% the preceding five years. An analysis of patients' reasons for re-admissions and for failure to continue treatment, is given in the following table:-

		Male	Female	Total
1)	No reason given for failure to continue treatment	12	7	19
2)	Patients thought themselves cured after only a few follow-up injections	2	-	2
3)	Patients diagnosed on first admission as Non-Venereal Disease, but re-admitted subsequently and diagnosis found to be Venereal Disease	-	1	1
4)	Patients stated no facilities for further treatment available near their homes or unable to pay transport to obtain treatment	-	2	2
5)	Patients stated employers would not allow them to attend for further treatment or that could not leave work	3	-	3
6)	Patients re-admitted suffering from forms of V.D. other than that originally admitted for	4	5	9
7)	Non-Venereal Disease	7	4	11
8)	Relapsed though attended Clinic fairly regularly	4	1	5
9)	Reinfected after discharge	18	23	41
10)	Lost discharge card from hospital	1	1	2
	One			

EPIDEMIC HOSPITAL Cont'd.

One can regard the re-admissions under the first three headings (approx. 1/5 of the total) as due to failure of the Educative section of the Venereal Diseases Hospital treatment. The proportion recorded in the last six years has been $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{3}$, $\frac{1}{5}$, $\frac{1}{4}$ and $\frac{1}{4}$ respectively.

With the availability of Penicillin Procaine G in Oil, Penicillin treatment of all Syphilitic cases is now routine in this hospital. All cases of Gonorrhoea receive Penicillin treatment. The 8 day course (a total of 4.8 M.u. Penicillin Procaine in Oil), adopted on the instruction of the Union Health Department, has undoubtedly shortened the average hospital stay of Syphilitic cases and brought about a reduction in the daily average of hospital in-patients.

(5) PLAQUE.

No cases of plague occurred during the year. Regular inspection of new shops and warehouses in the course of erection has been carried out and their rodent-proofing has been supervised. No rodent work has been carried out on commonage, but the rodent-proofing of existing infested premises has been dealt with intensively. All business premises handling foodstuffs are inspected routinely every three months, and particular attention is paid to rodent-proofing. A single Departmental Rodent Inspector devotes all his time to anti-rodent measures, trapping, poisoning, chiefly with Zinc Phosphide and also with "Warfarin" and similar preparations, and Cyanogas pumping being employed. Excellent results are being obtained by the use of the P. traps and the pre-baiting technique.

There are 2 Grain Stores in the City; both are now rodent-proofed. There are 2 mills in the City - both are now rodent-proof.

July, 1953 - December, 1953.

Trapping operations by Rodent Inspector : 11.	Rodents trapped	13
Poisoning " " " " : 102.	Rodents Poisoned:

2 Stables rodent-proofed - 5 inspected.

New buildings supervised for rodent-proofing : 26.

Vacant lands gassed : 8.

(6) OTHER COMMUNICABLE DISEASES:(1) MALARIA.

Control by spotting of larvae and spraying of selected breeding spots has again been carried out in the Borough. The Local Health Commission carried

(1) MALARIA Cont'd.

carried out control work in the Peri-Urban areas. No malarial mosquito vectors were discovered inside the Borough and no new infections of malaria occurred within the Borough.

Permanent work in the way of wide open drains with grassed sides and a hardened invert, was continued in the off season.

No check house spraying was carried out this season. Spraying was carried out to keep down the Anopheline population in known breeding areas and to deal with Culicine breeding which was causing a nuisance, D.D.T. suspension being used with satisfactory results.

(II) BILHARZIA.

Regular surveys were carried out for the identification of snails. Copper Sulphate was used for the treatment of areas where Physopsis were identified with a resultant rapid and considerable reduction in the number of snails found, treatment being repeated at 2 monthly intervals.

	July 1st, 1953 - Dec., 31st, 1953	1954
Snails examined	1,268	1,857
Physopsis Africana identified	35	91

Warning notice boards have been erected at the various spots used as bathing spots by Non-Europeans.

(III) ENTERITIS. in children under the age of two years accounted for 65 deaths, (3 European, 42 Native, 8 Coloured and 12 Indian), a small increase on the previous year's total of 57.

(IV) MUMPS.

Only 9 cases (all from the City) were admitted to the (European) Isolation Hospital, and 1 Native case only was admitted to the Non-European Infectious Diseases Hospital, from outside the Borough. No deaths were reported from this disease. (See table on page 61).

(V) MEASLES.

This disease was only moderately prevalent in school children this year, 29 Borough cases being admitted to the Isolation Hospital. No deaths were recorded from July, 1953 - December, 1954.

(VI) CHICKEN POX.

This disease was only moderately prevalent and, as usual, mild.

(VII) WHOOPING COUGH.

This disease was not very prevalent during the year, and no deaths were reported from this disease. Immunisation was carried out at the Infant Welfare Clinics, using a combined Whooping Cough and Diphtheria Vaccine. (See page 25).

(7) WATER SUPPLY. (See Page 66).

The water supply of Pietermaritzburg is under the control of the City Engineer's Department. It is derived from streams coming from hilly country lying to the West of the Town. From the Storage Dam at Henley the water is piped to the Purification Works, where it is treated with Ammonium Sulphate, Lime, and Aluminaferric, before filtration. After filtration, the water is treated with Chloramine before being distributed to the four service reservoirs.

The supply from the Purification Works and each of the service reservoirs has been bacteriologically examined each week by the bio-chemist in

and the other side of the paper is covered with a thin layer of white paint.

The paper is now being used for the production of a new type of insulation material.

The paper is being used for the production of a new type of insulation material.

The paper is being used for the production of a new type of insulation material.

The paper is being used for the production of a new type of insulation material.

The paper is being used for the production of a new type of insulation material.

The paper is being used for the production of a new type of insulation material.

The paper is being used for the production of a new type of insulation material.

(7) WATER SUPPLY Cont'd.

charge of the Purification Works. All employees at the Purification Works are Vi-tested. No water-borne outbreaks of disease have occurred during the year. Regular bacteriological sampling of swimming bath waters has also been carried out throughout the year, and samples of well and tank waters have also been examined.

The water supply has proved inadequate for the expanding needs of the City, and restrictions have been imposed on the use of water throughout the year. Expansion and modernisation of the Purification Works has now been completed. Metering all domestic water supplies has now been decided upon by the City Council with a view to reducing the total consumption of water by the City.

(8) NIGHTSOIL AND DISPOSAL.

The administration of this work is in the hands of the City Engineer. The greater part of the Town and Suburbs is served by water-borne sewerage, although the conservancy system is still in use in certain outlying areas. Disposal is on the sewage farm about 3 miles from the centre of the Town, where broad irrigation is carried out and the screenings and nightsoil are trenched. The City Council has acquired adjoining land, in order to extend the area available for sewage disposal, and the construction of a modern filtration plant is now well advanced.

(9) MEAT SUPPLIES (See Pages 69-70).

All slaughtering is carried out at the Municipal Abattoir, which is under the direct control of this Department. Butchers' shops are periodically inspected to ensure that they are satisfactory and that no meat which does not bear the Municipal stamp is exposed for sale. 282 Inspections of butchers' shops were made in 1954. A list of meat, fish and fowl condemned after inspection is shown on pages (67 - 68).

The Abattoir Manager reports that during the year 51,143 animals were slaughtered, a slight drop on the 1952-53 total of 51,668.

The actual slaughtering at the Abattoir is carried out by this Department.

All condemned meat and offal is transported in drums to a privately owned By-Product Plant at Bisley, just outside of Pietermaritzburg. The City Council has decided to commence with its plans for its own By-Products Plant, and for the expansion of the Abattoir. The construction of Non-European change rooms, and the provision of new Railway Siding facilities was completed during the year. The lairage accommodation has already been improved by the provision of asbestos roofing. Adequate Cold Storage accommodation has also been planned for inclusion in this expansion programme, there being none at the Abattoir at present.

ANTHRAX, etc. No cases were reported during the year.

CYSTICERCUS BOVIS AND CELLULOSAE ("MEASLES").

The following table shows the number of carcases infected with "Measles" during the past 8 years:-

	C A T T L E			C A L V E S			P I G S		
	Slaugh- tered	% In- fected	% Con- demned	Slaugh- tered	% In- fected	% Con- demned	Slaugh- tered	% In- fected	% Con- demned

(10) MILK SUPPLIES

(10) MILK SUPPLIES.

The milk supply has been carefully controlled throughout the year. In 1954 it was derived from 33 producer-distributors, of whom 17 are in the Borough, and 16 outside of the Borough.

In addition to these, there are 87 producers, 5 Borough and 82 Out-of-Borough, who send their milk to a pasteurisation plant, from where it is distributed after pasteurisation. All these dairymen are registered with this Department and their premises are inspected regularly. Approximately 82% of the milk sold in Pietermaritzburg is now pasteurised.

There are 17 cream suppliers, of whom 8 are in the Borough and 9 outside the Borough.

During the year the routine Vi-Testing of dairy employees was continued. Specimens, which are taken at the dairies or at the Health Department, are sent by pullman transport to the Durban Government Laboratory for examination, thus reaching the laboratory the same day as taken. 518 Bloods were examined in 1954 and of these 4 were reported doubtful. Repeat examination of 3 of these cases was carried out and the result was negative. The other case was lost sight of. 240 Vi-tests, all negative, were done from July to December, 1953. 666 Immunising injections of Typhoid Endotoxoid Vaccine were given to dairy employees in 1954 (270 in the second half of 1953).

(11) OTHER FOOD SUPPLIES (Pages 65 - 68).

Inspection of foodstuffs exposed for sale at the Market and elsewhere has been carried out regularly, and a considerable quantity of unsound food has been condemned (Pages 67 - 68). Condemned foodstuffs are removed to the refuse tips, made unusable, and disposed of by dumping.

Details of all licence applications dealt with by the Department are reflected in the Table on Page 71. Careful attention is paid to storage conditions, particularly to rodent-proofing, and there is a considerable improvement in this connection. 345 Inspections of the Borough Market and 2,932 inspections of other premises manufacturing or handling food were made in 1954. (Pages 72 - 74).

Food and Drugs Act. (Pages 65 - 67).

Under the Food, Drugs and Disinfectants Act, 44 samples were taken in 1954 and the results of the analyses were as follows:-

Milk: 15 Samples: 3 Samples not in accordance with requirements in regard to Solids-Non-Fat; were between 8% and 8.5%.

Ice Cream: 3 Samples: All in accordance with standards laid down.

Cream: 18 Samples: All in accordance with standards laid down.

Mince Meat: 5 Samples: All samples in accordance with standards laid down.

Sausage: 3 Samples: All in accordance with standards laid down.

In the case of the defective Solids-Non-Fat Milk Samples in the group 8% to 8.5%, letters were written to the dairymen.

Outbreaks of Food Poisoning.

In October, 1953, following a banquet, there was an outbreak of Food Poisoning totalling at least 22 cases.

The food suspected was "crayfish" - a portion only of a consignment received from Cape Town. The onset of the condition was acute, about 2 hours after consumption of the food and toxin contamination was suspected. Bacteriological investigations gave no definite evidence.

the first time in the history of the country, and the first time in the history of the world, that a nation has been compelled to go to war with another nation, and to do so in defense of its own independence, and in defense of its own right to self-government, and in defense of its own right to live in peace and quietness, and to go about its business, and to do what it pleases, without being disturbed by any other nation.

Outbreaks of Food Poisoning Cont'd.

2 Cases of Food Poisoning occurred, with fish paste being the suspected food. A haemolytic coagulase positive strain of *Staph. aureus* was isolated from the food, but not from the patients.

5 School children became violently ill after eating "tung nuts".

(12) MATERNITY AND CHILD WELFARE (Page 64) (1954).

The European Infantile Mortality Rate of 20.2 was much lower than last year's figure of 27.1, and is very satisfactory.

The Coloured Infantile Mortality Rate dropped sharply from 80.2 to 49.2.

The Indian Infantile Mortality Rate showed an increase, viz. from 34.4 to 44.7.

The Native Infantile Mortality Rate was 129. Unfortunately this figure cannot be accepted, as an examination of the figures shows that this low rate is due to an unusually large increase in births. On investigation it appears that with the removal of the hospital to Edendale, many patients there are being registered as Pietermaritzburg cases who have never resided in the City. A sample survey showed a figure of 30%.

The main causes and age groupings of Infantile Mortality in the different races are shown on pages 42 - 43.

In Europeans prematurity accounted for 50% of the Infantile Mortality. Diarrhoea and Enteritis was the chief cause of Non-European Infantile Mortality, with Broncho-Pneumonia second, Prematurity third, and Malnutrition fourth.

The Native Health Visitor appointed by the City Council has now commenced duty in this Department to work amongst the Native population, particularly in Raisethorpe.

This Department continued to supply milk to necessitous infants up to the age of 2 years, and also to a certain number of children below the age of 5. See page 64.

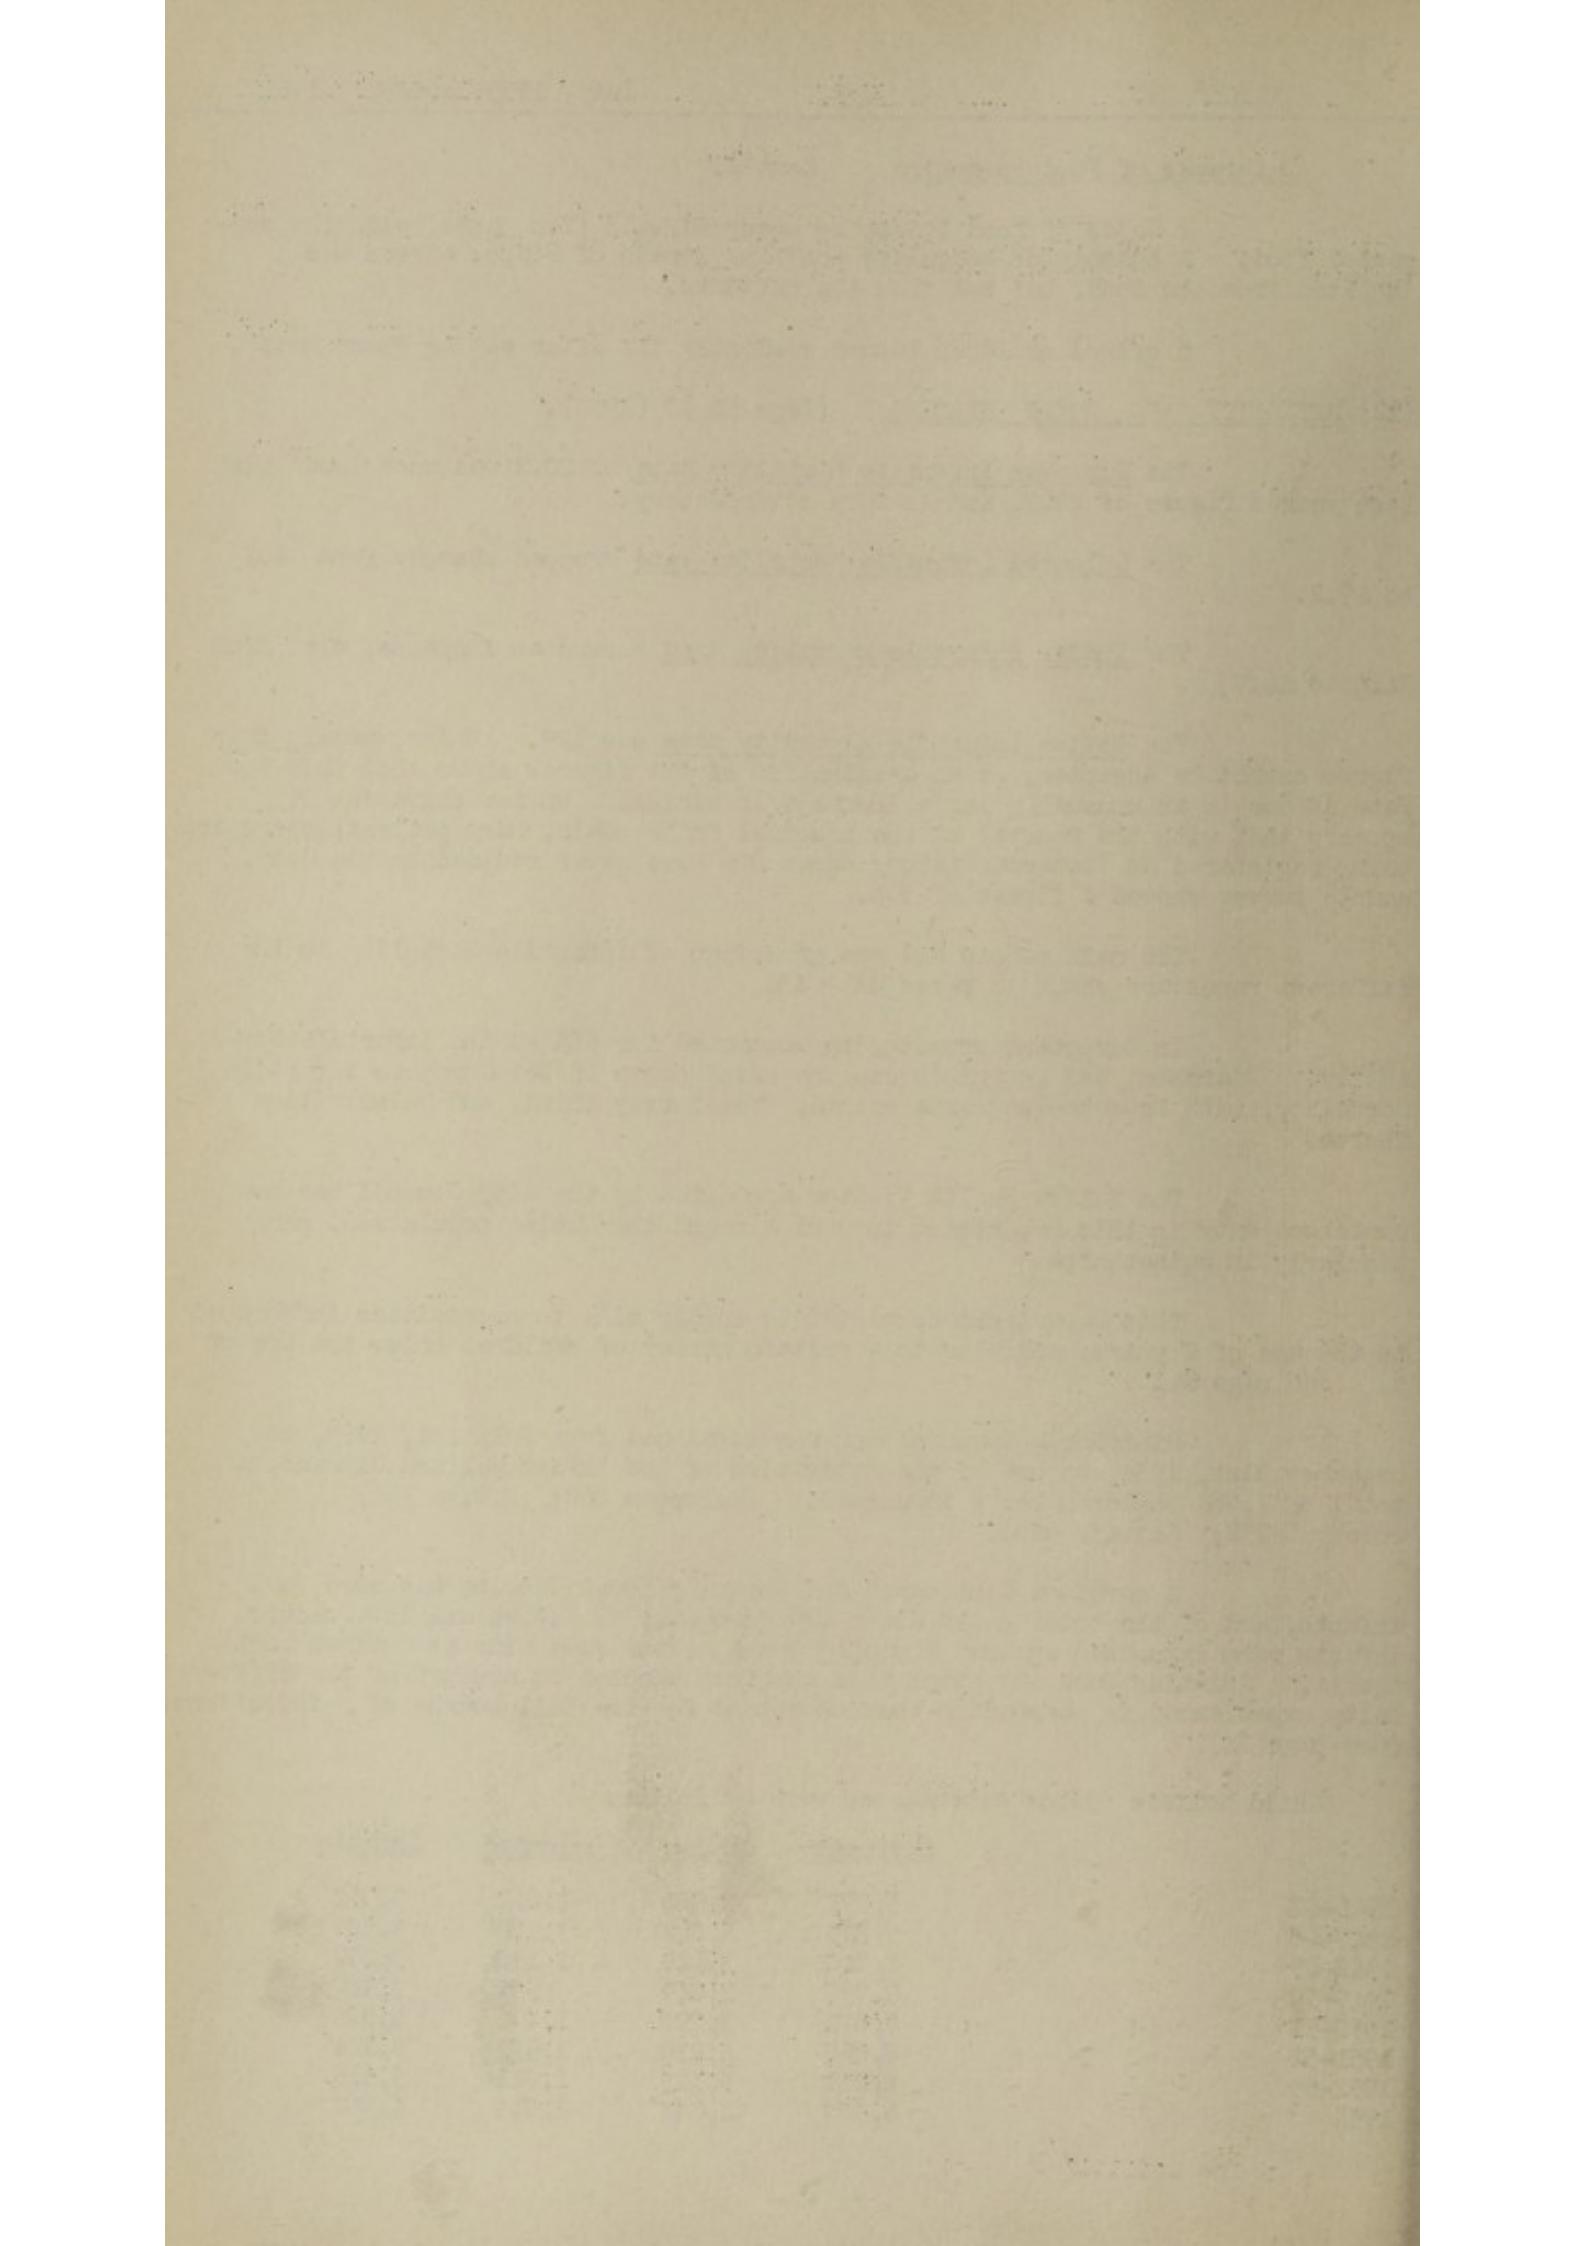

Diphtheria immunisation was continued from July 1st, 1953, to December 31st, 1954, as one of the activities of the Infant Welfare Clinics, a total of 1,764 children being immunised. (European 660; Native 154; Coloured 252; Asiatic 698).

A combined Diphtheria and Whooping Cough Vaccine was used in infants, and of the total given above 429 European, 83 Native and 130 Coloured infants were immunised against Whooping Cough at the same time as against Diphtheria. Asiatics were not given this combined vaccine on account of the difficulty experienced in persuading them to attend for the full course of 3 injections. (See page 14).

Child Welfare Clinic attendances were as follows:-

	<u>European</u>	<u>Native</u>	<u>Coloured</u>	<u>Asiatic</u>
1946-47	8,073	3,206	1,682	3,748
1947-48	6,849	3,092	1,570	3,535
1948-49	8,740	3,426	1,110	3,272
1949-50	7,778	2,649	935	3,180
1950-51	7,671	3,798	1,776	4,324
1951-52	8,068	4,230	1,989	5,164
1952-53	8,211	5,115	1,921	5,580
1954	6,577	4,674	1,743	4,872

The/

(12) MATERNITY AND CHILD WELFARE Cont'd.

The Registrar of Vaccination reports the following total of Vaccinations for Pietermaritzburg:-

	July-December, 1953.	1954.
Successful Vaccinations (under 3 years) :	207	283
" " (over 3 years) :	19	17
Insusceptible to Vaccination (under 3 years) :	5	5
Exempted :	0	1

Vaccinations carried out by this Department at the Infant Clinic sessions totalled:-

July-Dec., 1953 - Eur. 182; Mat. 52; Col. 90; As. 369.	
1954 - Eur. 331; Mat. 249; Col. 140; As. 580.	

Maternal Mortality.

2 Asiatic deaths were recorded, one from Albuminuria and Nephritis of pregnancy and one from Ectopis Gestation.

The Midwifery Training School at Grey's Hospital provides midwifery services for Europeans, Coloureds and Asiatics in the wards of Grey's Hospital, and district Midwifery Services in Pietermaritzburg (except at Raisethorpe) for Europeans, Coloureds and Asiatics. In addition, Ante-Natal Clinic Services for these races are provided. The Native Maternity Wards and Ante-Natal Services have been transferred from the temporary hospital at Mayor's Walk to the new Edendale Hospital. Native District Midwifery is carried out by the Native Municipal Midwife in the Sobantu Village, and is increasing because of the distance of the new Edendale Hospital from the Village.

The following figures have been supplied by the courtesy of the Medical Superintendent of Grey's Hospital:-

Borough cases : (From 1st January, 1954 to 31st December, 1954):-

<u>Ante-Natal Clinic Attendances:</u>		<u>District Midwifery Visits:</u>	
Europeans :	328	Europeans :	517
Coloureds :	373	Coloureds :	741
Asiatics :	1,586	Asiatics :	6,150
<u>TOTAL</u> :	<u>2,287</u>	<u>TOTAL</u> :	<u>7,408</u>

The Municipal Native Midwife conducted 3 confinements and paid 58 confinement visits during July - December, 1953, and conducted 12 confinements and paid 129 confinement visits in 1954.

Pietermaritzburg is a "Prescribed Area" under Section 39(b) of the Medical Dental and Pharmacy Act No. 13 of 1928, within which no person other than a medical practitioner or a midwife registered under the Act, shall attend any lying-in-woman for gain. There is one untrained midwife (an Asiatic) "listed" in Pietermaritzburg, and she conducted 3 confinements in the second half of 1953, and 7 in 1954. 1 Midwife's bag inspections was made in the second half of 1953, and 4 in 1954.

(13) BY-LAW NOTICES AND PROSECUTIONS (Pages 72-75).

2,492 Notices and formal letters were served regarding breaches of the Borough By-Laws in the second half of 1953, and 2,388 in 1954. 37 Prosecutions were initiated in the Magistrate's Court, as detailed on page 75.

(14) OTHER MATTERS OF HEALTH AND SANITATION.

Nursing Homes: The Registration and Inspection of Nursing Homes in Natal is now carried out by the Provincial Administration.

Complaints from Burgesses:

the last century and a half, and it is now the largest and most important library in New England. It contains over 1,000,000 volumes, and is the result of the efforts of many generations of men and women who have labored to build up a collection of great value. The library is open to all, and is a valuable resource for the study of history, literature, and science. It is a great treasure to the people of Boston and to the world.

Other Reasons for Rejection:

Scabies	:	Male : 74
Other Causes	:	Male : 2

The number of Native female domestic servants coming forward for voluntary examination remains low, despite the fact that the examination is now available every day instead of once weekly as before. Every person appearing at the Pass Office who does not possess evidence of successful vaccination, is vaccinated.

Sobantu (Native) Village Dispensary.

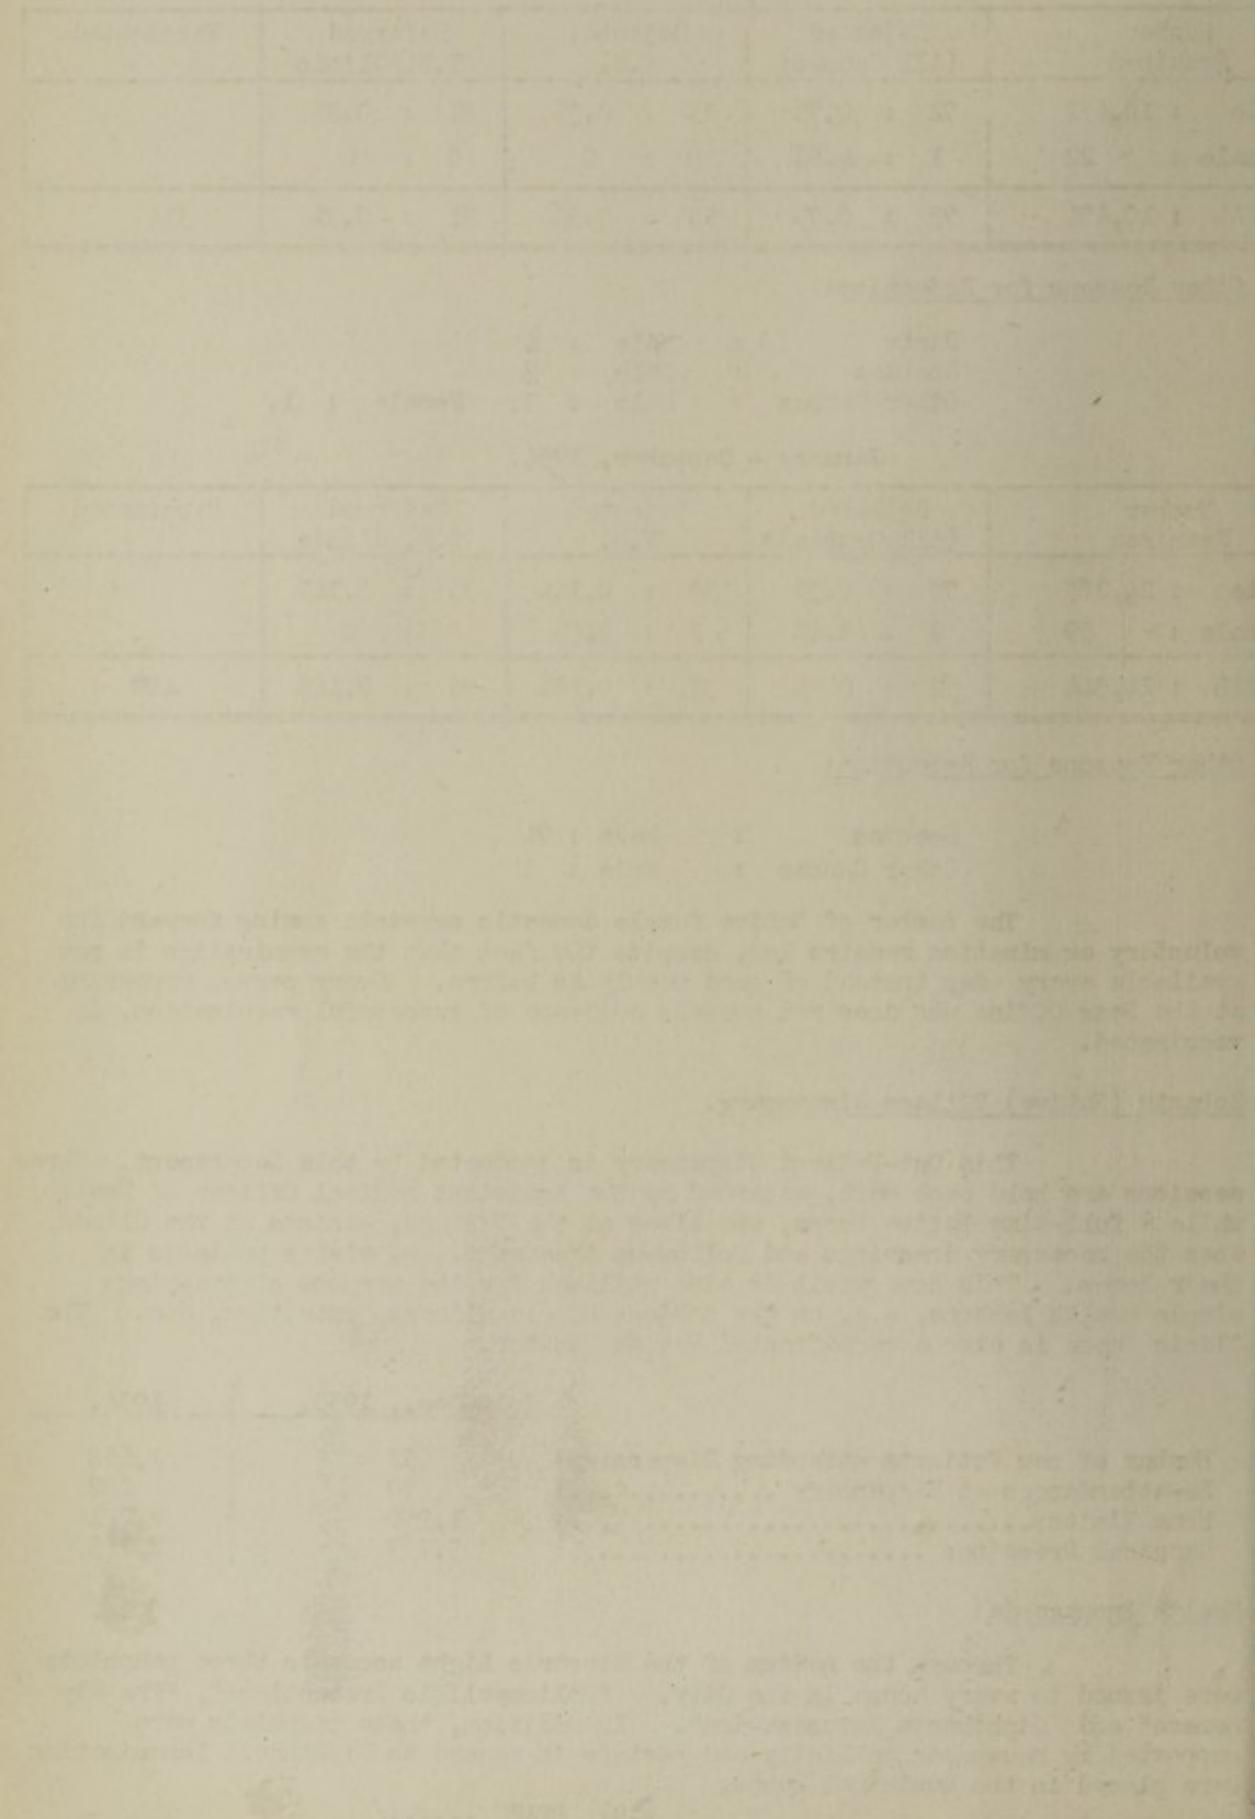

This Out-Patient Dispensary is conducted by this Department. Three sessions are held each week, attended by the Assistant Medical Officer of Health, while a full-time Native Nurse, who lives at the Village, assists at the Clinic, does the necessary dressings and follow-up treatment, and visits patients in their homes. This home visit is also utilised for the purpose of teaching simple health lessons, e.g. on the subject of cleanliness, nutrition, etc. The Clinic Nurse is also a certificated Health Visitor.

	July-Dec., 1953.	1954.
Number of new Patients attending Dispensary:	652	1,658
Re-attendances at Dispensary	70	208
Home Visits	1,350	2,221
Surgical Dressings	5,253	8,135

Health Propaganda:

Through the medium of the Electric Light accounts three pamphlets were issued to every house in the City. "Poliomyelitis Precautions", "The Fly Menace" and "Diphtheria Immunisation". In addition, these pamphlets were supported by newspaper publicity and posters in regard to Diphtheria Immunisation were placed in the municipal buses.

REPORT B.(1) HOUSING.

The City Council built 1 house for Europeans and 54 flats and 15 houses at the Sobantu Village for Natives from July 1st, 1953-June 30th, 1954, and 33 houses for Natives from July 1st, 1954-December 31st, 1954.

Powers under the Borough By-Laws have been exercised sparingly in dealing with insanitary dwellings, owing to the acute housing shortage. 10 Dwellings were condemned for demolition under Public Health By-Law 19(b), (9 of these being demolished and 1 having been converted to an open shed by the end of the period under review), and 19 dwellings were voluntarily demolished during the period July to December, 1953. Most of the buildings demolished were insanitary back yard shacks occupied as dwellings by Natives. During 1954, 13 dwellings were condemned for demolition, 15 being demolished, 7 converted to storerooms, and in 1 action is still pending), while 12 dwellings were demolished voluntarily.

Plans.

All plans of new buildings are submitted by the City Engineer to this Department for our observations.

	Approved Outright	Approved Subject to Alterations	Disapproved	Referred for additional information	Total Submitted
July-Dec., 1953 1954	242 430	53 94	27 81	19 32	341 637

New Buildings.

The City Engineer reports that 158 dwellings were completed for Europeans from July 1st, 1953 to June 30th, 1954, and 149 in the second half of 1954. 17 Dwellings for Asiatics were built from July, 1953 - June, 1954, and 26 in the second half of 1954. This is in addition to the Council building detailed above.

(2) HOUSING OF NATIVES, NATIVE OR ASIATIC LOCATIONS OR BARRACKS.

The Pietermaritzburg Sobantu Village, situated about 3 miles from the centre of the Town, at Dec., 31st, 1954, contained 807 occupied houses and various public buildings, with an estimated population of 4,842. Water is supplied by communal standpipes from the Corporation Water Supply, and sanitation is by the pail system, separate for each house. Communal ablution blocks and laundries are provided. Provision for hot baths at a small charge has been made in the recently constructed ablution blocks, and this has proved very popular.

The City Council is continuing with the construction of further National (Sub-economic) Houses and has an economic scheme under consideration as well, at the Sobantu Village. All the houses at the Sobantu Village are being built by Native labour, under European supervision.

There are three Corporation Hostels for single Natives. For Males there is the newly extended East Street Hostel (and annexes) now housing 1,750 Natives, and the Ortman Road Hostel with a capacity of 110. The Women's Hostel in Church Street houses 274 women, and an additional Women's Hostel housing 204 Natives has been established at Oribi to serve the Government Village mainly. These Hostels are under the control of the Municipal Native Administration Department, and two European Superintendents are employed. The scheme for a new Women's Hostel to house over 700 has been shelved owing to the very high tender figures received when the contract was offered. 442 Temporary Licences were granted during the second half of 1953 to house unexempted Natives under the Natives (Urban Areas) Act, pending the provision of more accommodation at the Village and Hostels, and 491 were granted during 1954.

About 60% of the Natives resident in the Town live in quarters provided on the property of their employers. These

These quarters are the subject of inspection by this Department and in general are satisfactory.

Asiatic Housing.

The Corporation owns two compounds which house the sewage farm workers and the scavenging gangs. These compounds are well constructed in brick, and house respectively 29 and 21 Asiatic Labourers, together with their wives and families, and also 13 single Asiatics and 24 single Natives, and 10 single Asiatics and 10 single Natives respectively.

The Council has appointed a Woman Housing Manager, trained under the Octavia Hill Scheme, who operates under the Estates Manager in the City Treasurer's Department.

(3) REMARKS AND RECOMMENDATIONS, AND HOUSING MATTERS OF SPECIAL IMPORTANCE REQUIRING ATTENTION.

The various estimates of housing requirements made by this Department in 1939, 1944 and 1945, were fully detailed in my 1944-1945 Report. No further surveys have been made. Summarised, these estimates revealed the following needs:-

Europeans	:	360 Dwellings
Natives	:	300 Dwellings
Coloureds	:	Approx. 50 Dwellings
Asiatics	:	Approx. 300 Dwellings

Since 1945, the following building has taken place:-

- (1) Europeans: a) 54 Houses.
b) 1,452 Dwellings and 244 Flats.
- (2) Natives: a) 412 Houses and 54 Flats.
b) Accommodation for 28 persons - aged and indigent Natives.
c) Additional Hostel accommodation for Native Males.
- (3) Coloureds: 28 National (Sub-economic) Houses.
- (4) Asiatics: 180 Houses (including 75 Sub-economic and National Houses).

Council Housing:

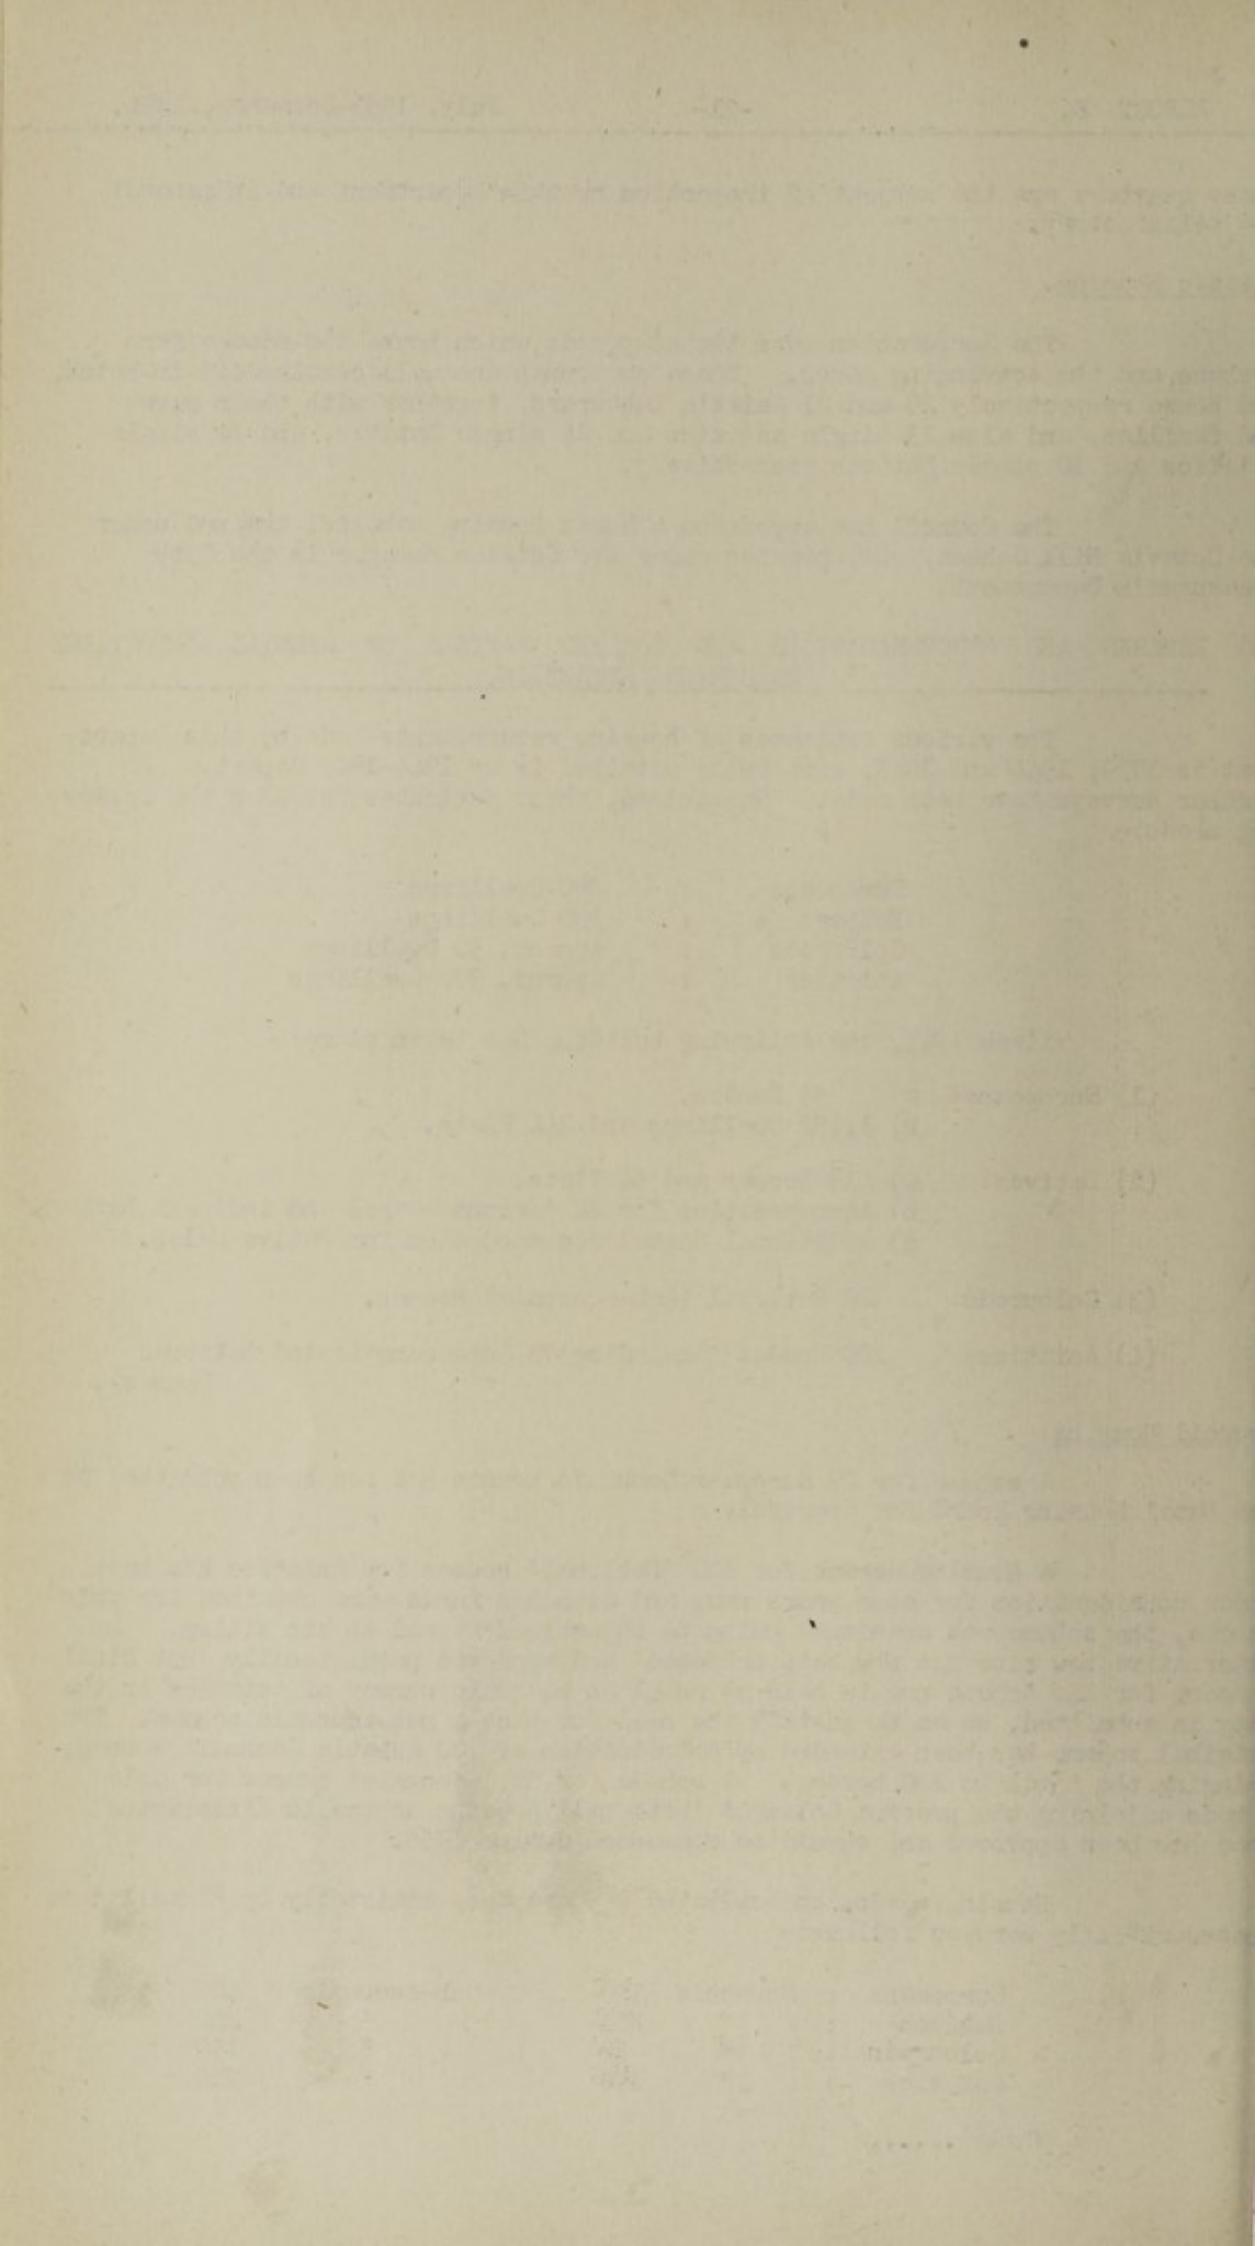

A scheme for 29 European Economic houses has now been submitted to the Natal Housing Board for approval.

A Housing Scheme for 100 'National' houses for Asiatics has been under consideration for some years now, and although funds were obtained for this scheme, the scheme was abandoned owing to objections raised to its siting. An alternative new site has now been proposed and approved provisionally, but final consent for the scheme now is held up until an economic survey of Asiatics in the City is submitted, so as to justify the need for such a sub-economic scheme. The original scheme has been extended by the addition of 100 Asiatic Economic Houses, bringing the total to 200 houses. A scheme for 50 'economic' houses for Coloureds adjoining the present Coloured 'national' housing scheme in Fitzsimmons Road has been approved and should be commenced during 1955.

Housing needs, as estimated 4 years ago, admittedly by "intelligent guesswork" only were as follows:-

Europeans	: Economic	400	Sub-economic	400
Natives	:	Nil	"	200
Coloureds	:	30	"	150
Asiatics	:	170	"	750

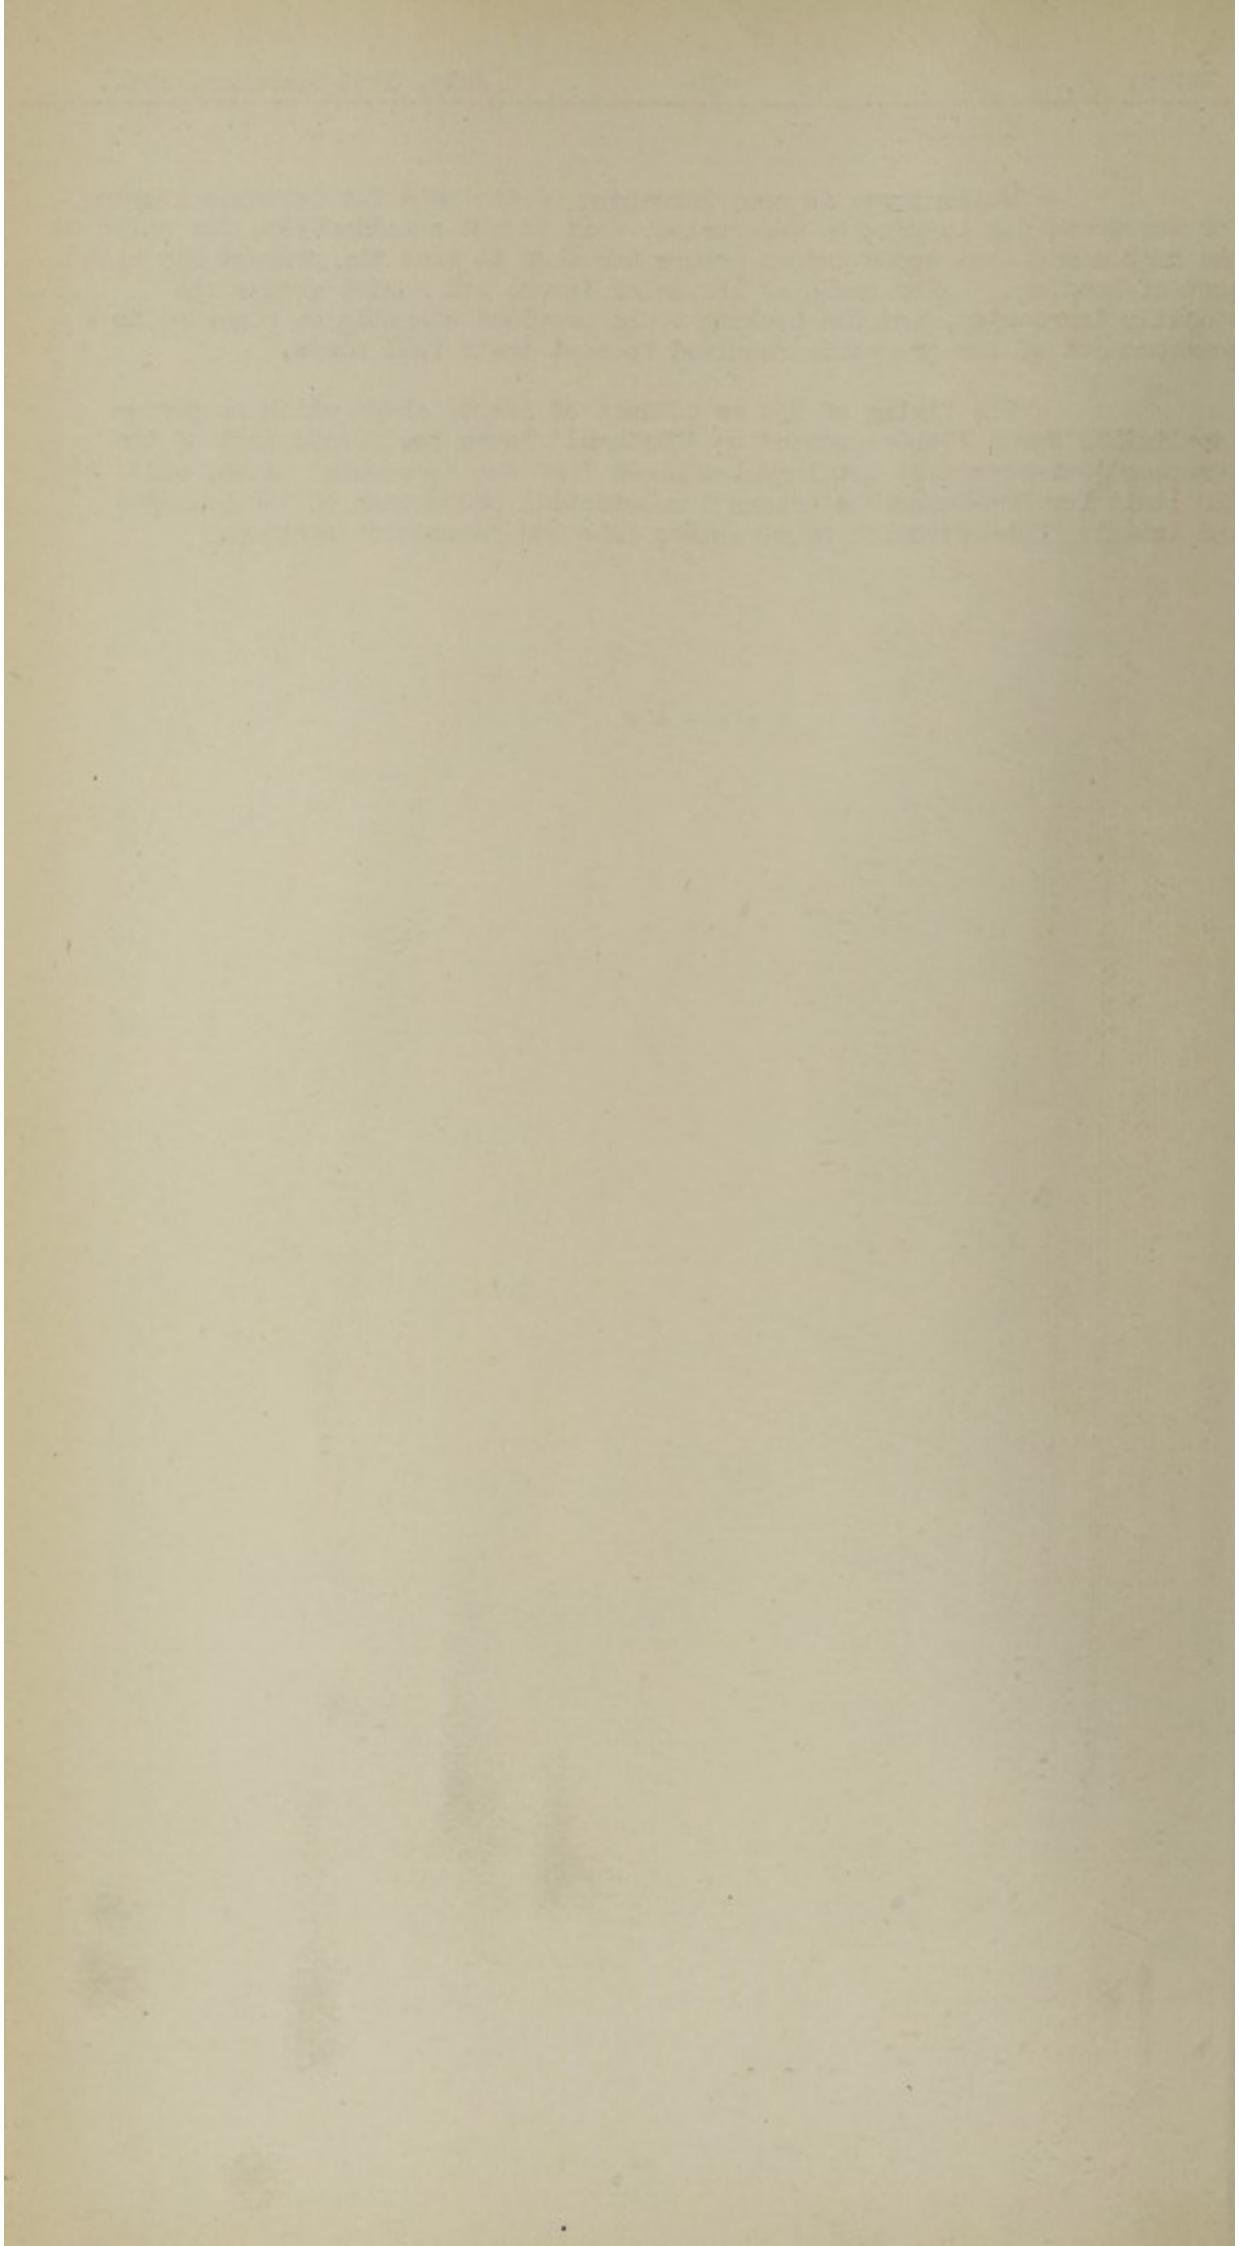

While

While there is some lessening of the need for economic housing for Europeans due to private enterprise, this is not considerable, for only the high middle and upper income groups are able to meet the present day high cost of housing. The needs of the other income and racial groups are steadily increasing, and the housing to be provided can only be regarded as a commencement of the programme required to meet their full needs.

The fixing of £30 as a limit of income above which no person is eligible for a 'Sub-economic' or 'National' House now places most of the European 'Sub-economic' total quoted above into the "Economic" class, while the £20 limit for Non-Europeans brings a substantial proportion of the Coloured and Asiatic "Sub-economic" requirements into the "Economic" section.

ISOLATION HOSPITAL AND NON-EUROPEAN INFECTIOUS
DISEASES HOSPITAL

The following alterations in diagnosis were made following observation in hospital:-

January - December, 1954.

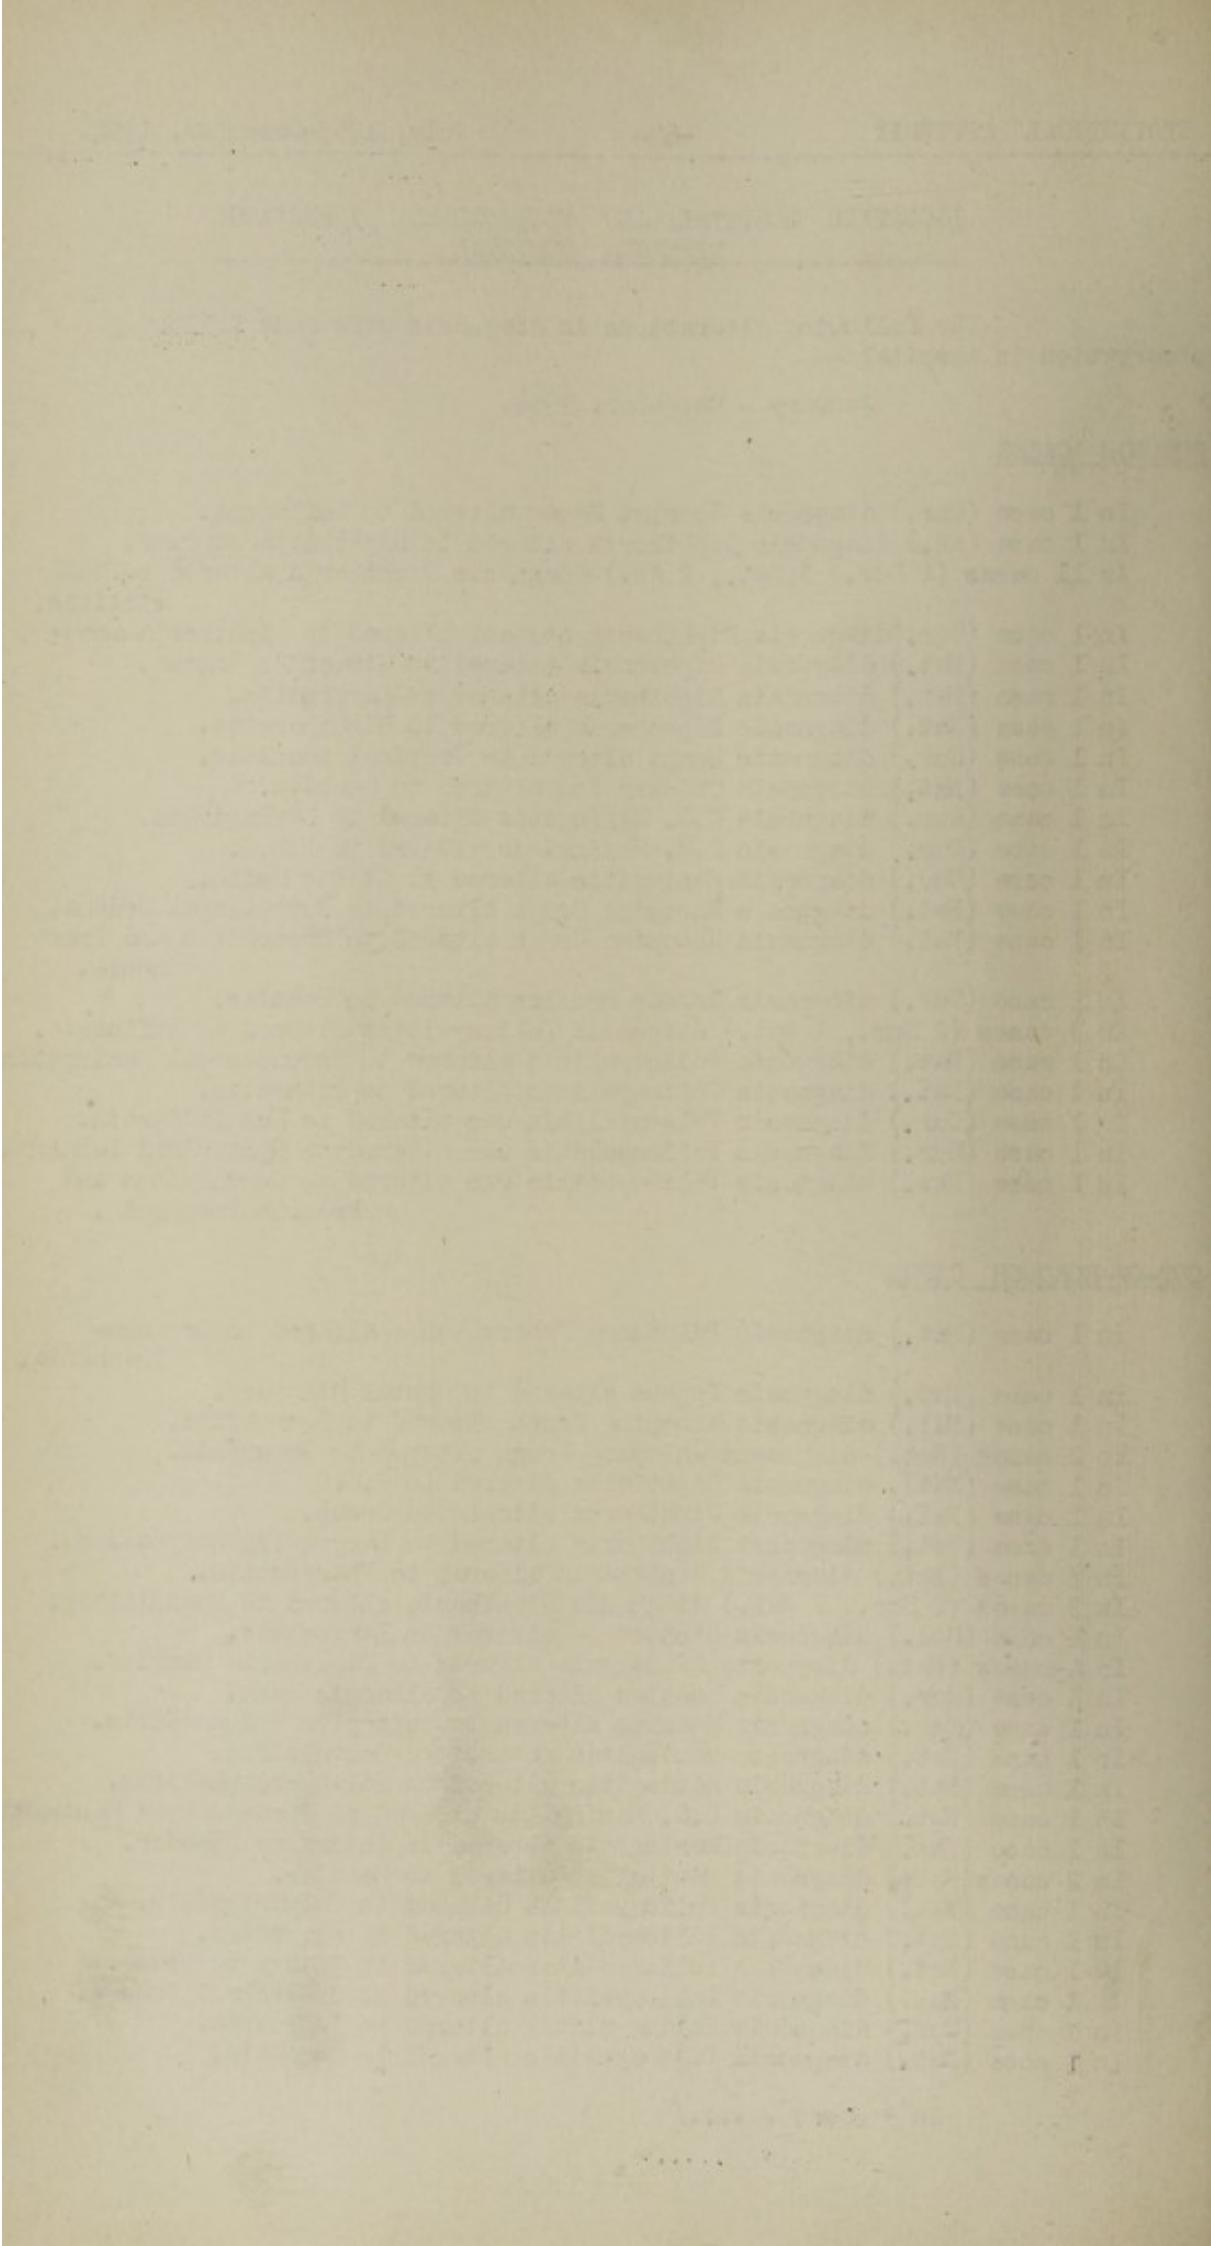

BOROUGH CASES

- In 1 case (Eur.) diagnosis Scarlet Fever altered to Influenza.
- In 1 case (As.) diagnosis Diphtheria altered to Diphtheria carrier.
- In 11 cases (4 Eur., 5 Nat., 2 As.) diagnosis Diphtheria altered to Tonsillitis.
- In 1 case (Eur.) diagnosis Diphtheria contact altered to Diphtheria carrier.
- In 1 case (Nat.) diagnosis Diphtheria altered to Vincent's Angina.
- In 1 case (Nat.) diagnosis Diphtheria altered to Laryngitis.
- In 1 case (Nat.) diagnosis Diphtheria altered to Diphtheroids.
- In 1 case (Eur.) diagnosis Mumps altered to Cervical Adenitis.
- In 1 case (Nat.) diagnosis Chicken Pox altered to Scabies.
- In 1 case (Eur.) diagnosis C.S. Meningitis altered to Meningismus.
- In 1 case (Eur.) diagnosis C.S. Meningitis altered to P.U.O.
- In 1 case (Eur.) diagnosis Meningitis altered to Otitis Media.
- In 1 case (Nat.) diagnosis Whooping Cough altered to Nutritional Oedema.
- In 1 case (Nat.) diagnosis Whooping Cough altered to Bronchitis and Pneumonia.
- In 1 case (Eur.) diagnosis German Measles altered to Measles.
- In 3 cases (2 Eur., 1 Nat.) diagnosis Poliomyelitis altered to Influenza.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Pneumococcal Meningitis.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Arthritis.
- In 1 case (Eur.) diagnosis Poliomyelitis was altered to Muscle Strain.
- In 1 case (Eur.) diagnosis Poliomyelitis was altered to Hysterical Paralysis.
- In 1 case (Nat.) diagnosis Poliomyelitis was altered to Convulsions and Broncho-Pneumonia.

OUT-OF-BOROUGH CASES

- In 1 case (Nat.) diagnosis Pulmonary Tuberculosis altered to Broncho-Pneumonia.
- In 1 case (Nat.) diagnosis Typhus altered to Mental Disorder.
- In 1 case (Nat.) diagnosis Whooping Cough altered to Bronchitis.
- In 2 cases (Nat.) diagnosis Whooping Cough altered to Pneumonia.
- In 1 case (Nat.) diagnosis Diphtheria altered to P.U.O.
- In 1 case (Nat.) diagnosis Diphtheria altered to Croup.
- In 1 case (Nat.) diagnosis Diphtheria altered to Laryngitis and Measles.
- In 2 cases (Nat.) diagnosis Diphtheria altered to Pharyngitis.
- In 3 cases (2 Eur., 1 Nat.) diagnosis Diphtheria altered to Tonsillitis.
- In 1 case (Col.) diagnosis Diphtheria altered to Laryngitis.
- In 4 cases (Nat.) diagnosis Diphtheria altered to Diphtheria Carrier.
- In 1 case (Eur.) diagnosis Measles altered to Allergic rash.
- In 1 case (Eur.) diagnosis Measles altered to Infective Endocarditis.
- In 1 case (Nat.) diagnosis Meningitis altered to Convulsions.
- In 1 case (Nat.) diagnosis Meningitis altered to Polio-encephalitis.
- In 1 case (Nat.) diagnosis C.S. Meningitis altered to Pneumococcal Meningitis.
- In 1 case (Nat.) diagnosis Meningitis altered to Injury to Bladder.
- In 2 cases (Nat.) diagnosis Meningitis altered to Measles.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Polyarthritis.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Diarrhoea.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Injury to Spine.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to ? Cerebral Tumour.
- In 1 case (Eur.) diagnosis Poliomyelitis altered to Influenza.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Osteitis.

In 3 cases

ISOLATION HOSPITAL AND NON-EUROPEAN INFECTIOUS DISEASESHOSPITAL Cont'd.CUT-OF-BOROUGH CASES

- In 3 cases (Nat.) diagnosis Poliomyelitis altered to Typhoid Fever.
- In 3 cases (Nat.) diagnosis Poliomyelitis altered to P.U.O.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to T.B. Hip & T.B. Glands Neck.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Acute Hip Disease.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to T.B. Broncho-Pneumonia.
- In 3 cases (1 Eur., 2 Nat.) diagnosis Poliomyelitis altered to Meningitis.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Fibrositis.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Abscess in Groin.
- In 1 case (Nat.) diagnosis Poliomyelitis altered to Tetanus.
- In 1 case (Eur.) diagnosis Poliomyelitis altered to Alcoholic Peripheral Neuritis.
- In 1 case (Eur.) diagnosis Poliomyelitis altered to Bornholms disease.

BIOLOGICAL INVENTORY OF THE WOODS OF MOUNTAIN

MOUNTAIN FOREST

forest biotope or forest subbiotopes at various (1,20) stages of
succession. In the mountain forest subbiotopes (1,20) there is
mainly a forest, but also a wide variety of shrubs (1,20) and a few
annuals and perennials (1,20) and a few small trees (1,20).

FOODSTUFFSSAMPLES TAKEN AND SUBMITTED FOR ANALYSIS1. MILK.(a) Bacteriological Examination. July 1st, 1953 - December 31st, 1954.

Samples with less than 30,000 bacteria per c.c.	:	17 (inc. 3 Pasteurised)
Samples with between 30,000 and 200,000 bacteria per c.c.	:	17 (inc. 1 Pasteurised)
Samples with more than 200,000 bacteria per c.c.	:	31 (inc. 2 Pasteurised)
<u>TOTAL</u>	:	<u>65</u> (inc. 6 Pasteurised)

Samples with B. Coli present in 1/100 c.c. or less	:	40 (inc. 2 Pasteurised)
Samples with B. Coli present in 1/10 but not in 1/100 c.c.	:	12 (inc. 1 Pasteurised)
Samples with B. Coli absent in 1/10 c.c. or more	:	13 (inc. 3 Pasteurised)
<u>TOTAL</u>	:	<u>65</u> (inc. 6 Pasteurised)

(b) Bacteriological Examination. 1954.

Samples with less than 30,000 bacteria per c.c.	:	30 (inc. 2 Pasteurised)
Samples with between 30,000 and 200,000 bacteria per c.c.	:	41 (inc. 8 Pasteurised)
Samples with more than 200,000 bacteria per c.c.	:	67 (inc. 1 Pasteurised)
<u>TOTAL</u>	:	<u>138</u> (inc. 11 Pasteurised)

Samples with B. Coli present in 1/100 c.c. or less	:	96 (inc. 4 Pasteurised)
Samples with B. Coli present in 1/10 but not in 1/100 c.c.	:	23 (inc. 7 Pasteurised)
Samples with B. Coli absent in 1/10 c.c. or more	:	19
<u>TOTAL</u>	:	<u>138</u> (inc. 11 Pasteurised)

(c) Chemical Examination (By Government Analyst). July-December, 1953.

Samples with Solids-Not-Fat 8.5% and over	:	2
Samples with Solids-Not-Fat over 8% and under 8.5%	:	2 (inc. 1 Pasteurised)
Samples with Solids-Not-Fat below 8%	:	0
<u>TOTAL</u>	:	<u>4</u>

Samples with Butter Fat 3% and over	:	4 (inc. 1 Pasteurised)
Samples with Butter Fat under 3%	:	0
<u>TOTAL</u>	:	<u>4</u>

(d) Chemical Examination (By Government Analyst). 1954.

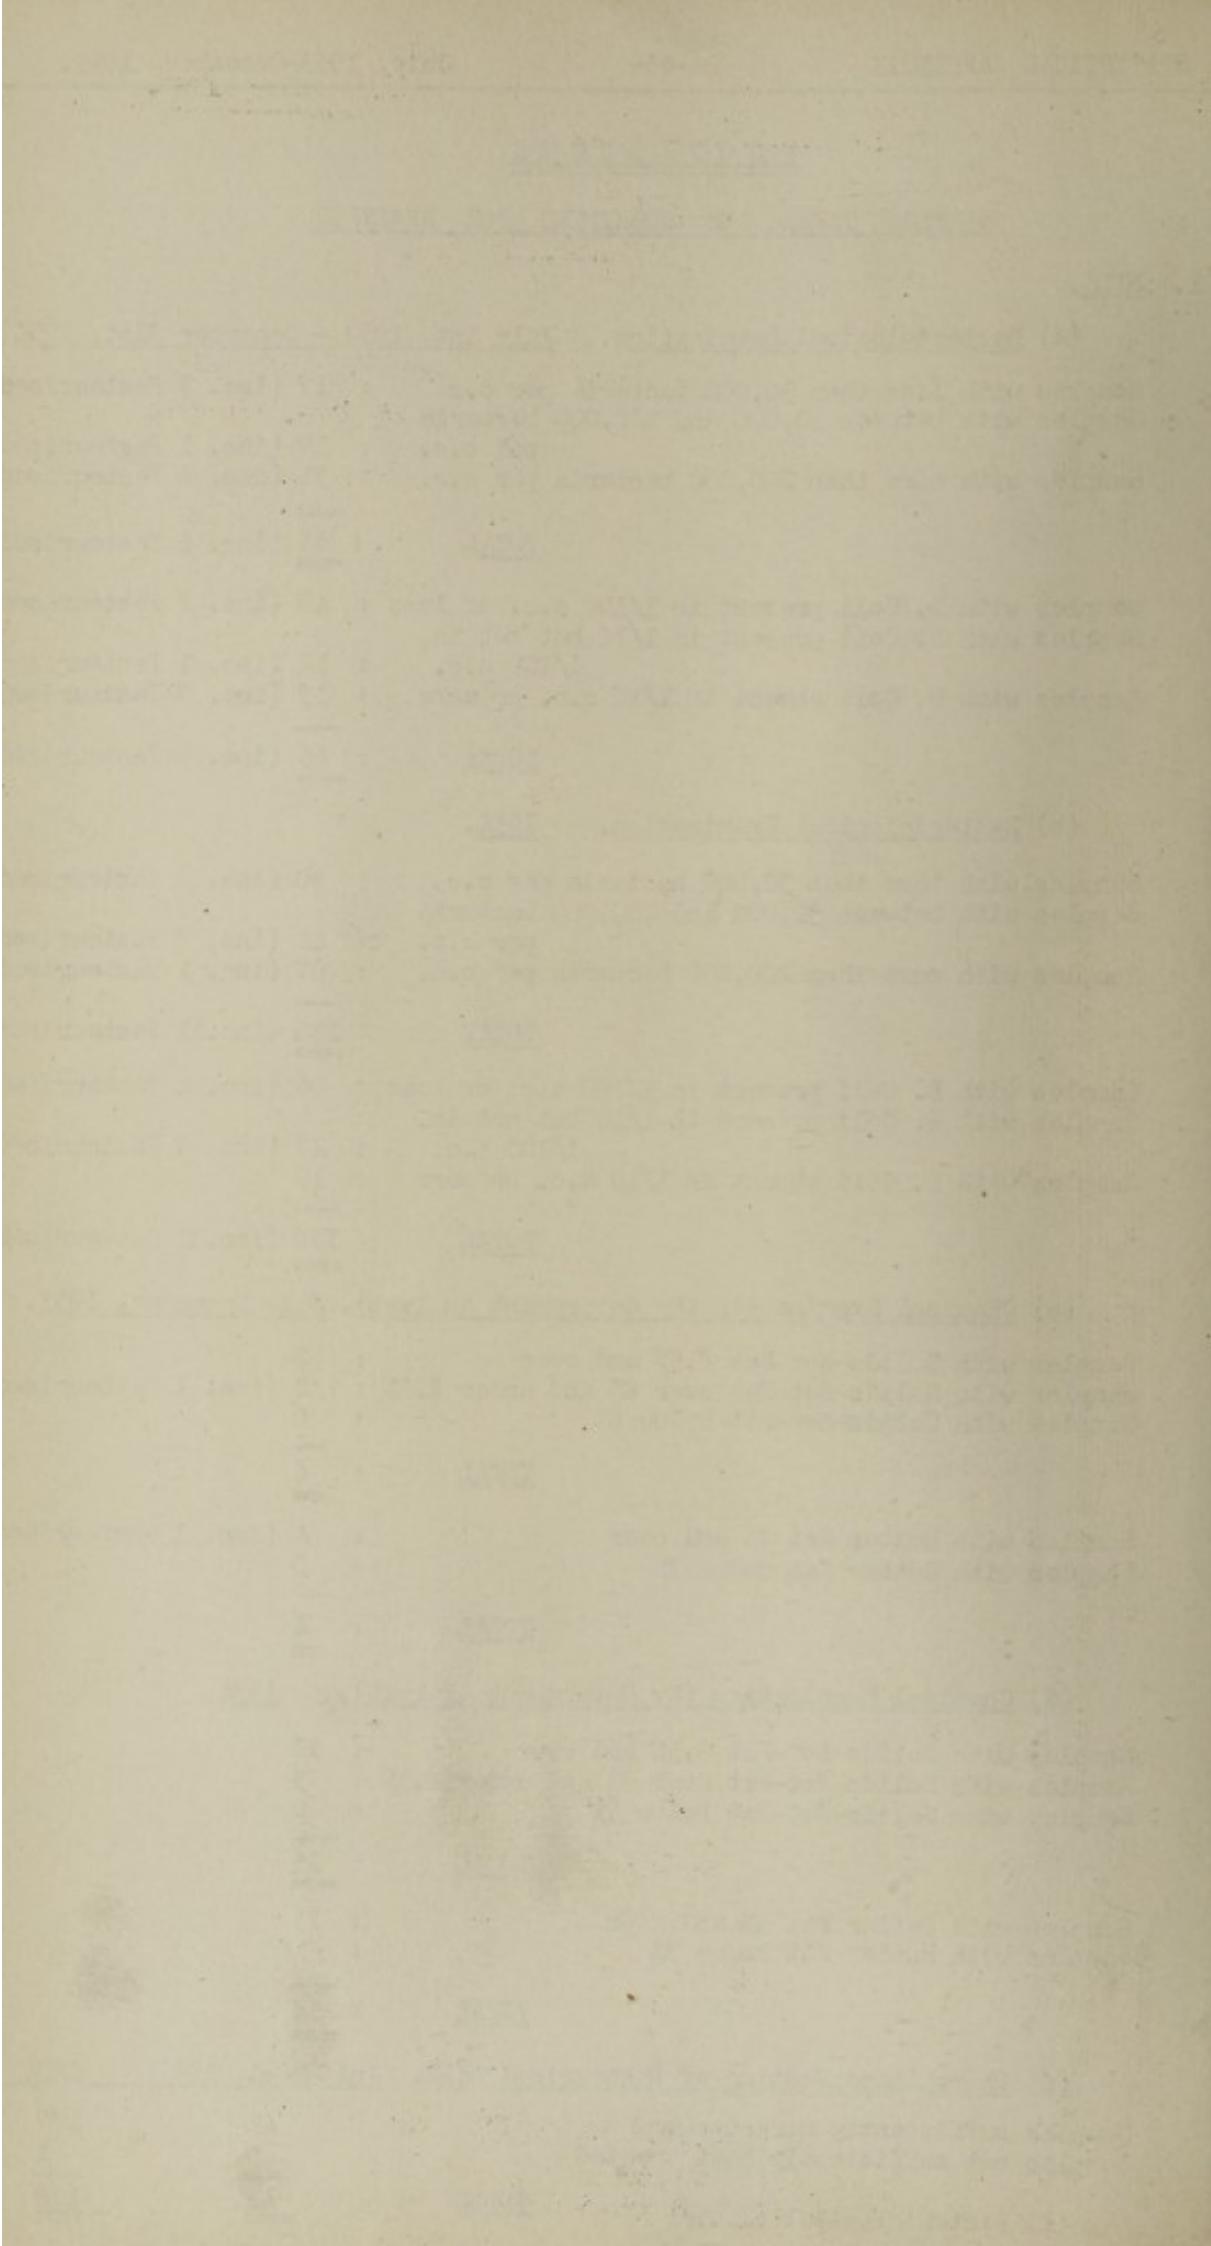

Samples with Solids-Not-Fat 8.5% and over	:	12
Samples with Solids-Not-Fat over 8% and under 8.5%	:	3
Samples with Solids-Not-Fat below 8%	:	0
<u>TOTAL</u>	:	<u>15</u>

Samples with Butter Fat 3% and over	:	15
Samples with Butter Fat under 3%	:	0
<u>TOTAL</u>	:	<u>15</u>

(e) Phosphatase Testing of Pasteurised Milk. July-Dec., 1953 1954.

Samples sufficiently heat treated	:	48	187
Samples not sufficiently heat treated	:	0	1

(f) Bacteriological TOTAL : 48 188

FOODSTUFFS Cont'd.(f) Bacteriological Testing of Milk Bottles and Cartons.

		July-Dec., 1953	1954
Samples satisfactory	:	21	23
Samples fairly satisfactory	:	2	6
Samples unsatisfactory	:	1	5
	<u>TOTAL</u>	<u>24</u>	<u>34</u>

2. ICE CREAM.

Samples of Ice Cream conforming to standard	:	0	3
Samples of Ice Cream not conforming to standard	:	0	0
	<u>TOTAL</u>	<u>0</u>	<u>3</u>

3. SAUSAGE.

Samples of Sausage conforming to standard	:	0	3
Samples of Sausage not conforming to standard	:	0	0

FOODSTUFFS CONDEMNED AS UNFIT FOR HUMANCONSUMPTION

The following foodstuffs were inspected and condemned in the Municipal Market and in Shops within the Borough:-

	July-Dec., 1953.	1954.
Apples	-	15 boxes
Bananas	8 trays	-
Barley	3 lbs.	20 lbs.
Beverages	-	16 tins.
Beans - Green	3 pockets, 69 boxes	62 pockets, 16 boxes
Beans - Dry	-	9 lbs.
Biscuits	-	56 pkts.
Beetroot	-	1 crate
Bacon, sliced	-	3 tins
Baking Powder	-	1 tin
Confectionery Colouring	-	3 bottles
Curry Powder	1 tin	-
Chutney	4 bottles	8 bottles
Custard Powder	-	3 tins
Cocoanut	-	1 tin
Coffee	1 lb., 3 bottles	1 lb., 1 tin, 2 btl.
Coffee Essence	8 bottles	2 bottles
Chilies	-	10 pockets
Cinnamon	-	1 tin
Cloves	-	1 tin
Cowpeas	-	150 lbs.
Cereals	20 packets	27 packets
Cake Mixture, Flour	1 pkt.	115 lbs.
Cream	1 tin, $\frac{1}{2}$ pint carton	2 tins
Carrots	-	2 crates
Cheese	-	4 pitts.
Cabbages	15 boxes, 100 bags	70 bags
Cucumbers	38 pockets	-
Dates	-	4 lbs.
Egg Noodles	-	2 tins
Eggs	27½ dozen	187½ dozen
Fowls, live	4	1
Fowls, dressed	-	32
Fish Paste	13 jars	21 jars
Fish, tinned	70 tins	239 tins
Fish (dried)	16 lbs.	-
Fish (fresh)	1,572 lbs.	350 lbs.
Fruit (tinned)	70 tins	939 tins
Fruit (dried)	2 boxes, 6 lbs.	265 lbs.
Fruit (crystallised)	160 lbs.	45 lbs.
Grapes	-	12 half-lugs
Guavas	-	9 trays
Guinea Fowls	1	-
Ham	-	1
Horse Radish	-	1 bottle
Haddock	-	43½ lbs.
Hors Doeuvres	-	2 bottles.
Icing	/

FOODSTUFFS CONDEMNED Cont'd.

	<u>July-Dec., 1953.</u>	<u>1954.</u>
Icing Sugar	-	4 lbs.
Ice Cream Powder	-	2 pkts.
Infant Foods	2 tins	4 tins
Jam	304 tins	314 tins
Jelly Crystals	-	2 pkts.
Lemon Curd	3 bottles	1 bottle
Lemon Cordials	-	15 bottles
Mayonnaise	-	57 bottles
Madumbies	-	4 bags
Milk (dried)	-	2 tins
Milk (condensed)	18 tins	100 tins
Milk (malted)	1 tin	-
Macaroni	-	1 pkt.
Mixed Spice	-	2 bottles
Mustard	-	1 jar
Maltabellla	-	2 pkts.
Meat (tinned)	27 tins	29 jars, 56 tins
Meat (fresh)	62 lbs. sausage	1 leg pork, 15 lbs. mutton chops
Meat (extract)	1 jar	4 jars
Mushrooms	-	20 tins, 1 tray
Maizena	3 pkts.	4 pkts.
Nuts and Raisins	-	2 pkts.
Nutmeg	-	1 tin, 1 pkt.
Nutrine	2 tins	4 tins
Ovaltine	-	2 tins
Onions	7½ bags	1 pocket
Oats	21 pkts.	63 lbs.
Pawpaws	21 boxes	-
Pears	-	6 boxes
Peaches	2 trays	34 trays
Puddings	-	15
Peas, split	-	3 lbs.
Peaflour	2 tins	12 tins
Pickles	65 bottles	102 bottles
Peanut Butter	17 bottles	23 bottles
Peanuts	-	41 tins, 100 lbs.
Pepper	1 tin	2 tins
Peas	11 bags, 1 pocket	33 pockets
Pit-Pat stuffing	-	1 packet
Plums	-	3 trays
Raisins	-	2 pkts.
Rice, powder	-	2 lbs.
Relish rice, flour, ground	-	44 pkts.
Syrup	3 tins	4 tins
Savouries	-	2 tins
Salt	-	25 pkts.
Sandwich and assorted spreads	2 jars	25 jars
Sauce	-	15 bottles
Sugar	111½ lbs.	36½ lbs.
Squash	-	2 bottles
Soup mix	-	3 tins
Sweets	-	40 lbs.
Soda - Bicarb	-	1 lb.
Tomato spreads, chutney	-	7 bottles
Tomato Sauce	-	2 bottles
Tomato Paste	-	8 jars
Tomatoes	96 boxes	106 boxes
Tea	-	3½ lbs.
Unlabelled Packages	64 tins	167 tins
Vegetables (tinned)	58 tins	214 tins
Vinegar	-	2 bottles
Vermicelli	-	3 pkts.
Watermelons	-	221
Xmas Puddings	-	4
Yeast	6½ pkts.	12 pkts.
