ANNUAL REPORT, 1933.

The Board of Management of the Adelaide Hospital, in accordance with section 12 (1) of the Hospitals Act Amendment Act, 1921, has the honour to submit for the information of the Minister, the sixty-fourth annual report on the administration, showing the condition and progress of the Institution for the year ended December 31st, 1933.

With great regret is recorded the death of Mr. F. W. Lundie. Mr. Lundie was a valued member of the Board for many years, and at all times gave efficient and unremitting service in the interests and administration of the Hospital.

Mr. E. R. Dawes was appointed by the Government as a member of the Board in place of Mr. Lundie.

The Board held 58 full meetings during the year. Several conferences with the Advisory Committee and quarterly conferences with the Honorary Medical Staff were also held. In addition, the Chairman and members confer throughout the year, and continuously visit the Hospital in connection with the administrative work. The condemnation of all worn-out and useless stores is carried out under their personal supervision.

The following figures are submitted relating to the treatment of in-patients, &c.

FINANCE.

Revenue.—The total receipts from all sources, including all branches of the Hospital, for the year 1933, were £17,575 12s. 2d., as compared with £18,303 8s. 1d. for the year 1932. The decrease is accounted for by the closing of the Infectious Diseases Block, the revenue from this Branch in 1932 being £2,657 19s. 4d., whereas in 1933 the amount received was £671 15s., a reduction of £1,986 4s. 4d.

The amount of patients' fees received on account of the Adelaide Hospital (excluding the Infectious Diseases Block and the Dental Branch) was £10,179 2s. 6d. for the year 1933, as compared with £9,506 13s. 11d. for the year 1932, an increase of £672 8s. 7d.

The total amount of fees charged to in-patients during the year was £14,229 13s. Patients' fees to the amount of £908 15s. 2d. were written off by the Board during the year.

Laboratory fees were £2,699 4s. 5d. for the year as against £2,519 4s. 4d. for the previous year, an increase of £180 0s. 1d. The revenue from this Branch amounts to approximately 56 per cent. of the expenditure.

The revenue from patients' fees from the Dental Branch was £301 5s. 10d. The majority of the patients at this Branch are in destitute circumstances, no less than 75 per cent. being either unemployed and in receipt of Government rations, or pensioners or inmates of Government Institutions.

Details of revenue for 1933 will be found in Appendix No. 2. A table of comparison of revenue for the years 1921-1933 is also shown.

Expenditure.—Details of expenditure will be found in Appendix No. 2.

The total expenditure for maintenance for all branches of the Hospital for the year 1933 was £98,169 2s. 5d. as compared with £101,633 5s. 1d. for the previous year, a decrease of £3,464 2s. 8d. The year 1932

includes £2,524 3s. 5d. for the Infectious Diseases Block, which has been closed, no expenditure for this Branch being included in the year 1933.

The expenditure for maintenance of the Adelaide Hospital (excluding the Laboratory and the Dental Branch) was £87,450 16s. 10d. for the year 1933, as compared with £87,444 1s. 5d. for the year 1932, an increase of only £6 15s. 5d., notwithstanding the fact that the number of patients treated in 1933 was 10,709 as compared with 10,604 in 1932, and the daily average number of patients increased from 496 in 1932 to 519 in 1933.

The expenditure of the South Australian Government Laboratory showed an increase of £276 9s. 1d. over the previous year.

The expenditure of the Dental Branch for the year 1933, was £5,918 12s. 6d. as compared with £7,141 16s. 3d. for the previous year, a reduction of £1,223 3s. 9d. The reduction in expenditure has been made possible by a curtailment of the denture work.

POPULATION.

The number of new patients admitted to the Hospital for the year 1933 was 10,269, being 98 more than the number admitted for the year 1932.

The daily average number of patients was 519 as compared with 496 for the previous year.

The total number of indoor patients treated during the year 1933 was 10,709 as compared with 10,604 for the year 1932.

The number of new patients attending the Out-patients' Department was 20,992, as compared with 19,898 for the previous year.

The total number of out-patient attendances in 1933 was 99,596, as against 96,896 in 1932.

The figures for 1933 show that the Adelaide Hospital, in both in-door and out-door patients, reach the highest point in the history of the Institution.

At the Tuberculosis Clinic 318 persons were under treatment during the year, as compared with 288 for the previous year.

The total number of attendances at the Dental Branch for all purposes was 50,986, as compared with 66,053 for the previous year. The admissions for treatment were 7,710 in 1933, and 10,411 in 1932. The reduction in work is brought about by the restrictions placed on the financial eligibility of patients for artificial dentures.

OBITUARY.

Sir Joseph C. Verco, Honorary Consulting Physician, who rendered valuable Honorary service during the past 32 years. The valuable advice and assistance received from time to time was greatly appreciated by the Board.

Dr. H. F. Shorney, Honorary Ophthalmologist, was a member of the Honorary Staff for 23 years and during that time signal service in the Ophthalmic Section was rendered by him.

ADVISORY COMMITTEE.

Mr. R. D. Nicholls, M.P., was appointed a member of the Advisory Committee in place of Mr. E. J. Shepherd, M.P., who tendered his resignation.

The advice received from this Committee during the year is much appreciated by the Board.

OFFICIAL VISITORS.

The following Official Visitors were appointed for a further term of one year, viz. :—

Lady Hackett Moulden.

Mrs. M. B. Martin.

Mr. T. P. Howard, M.P.

BUILDING ADDITIONS.

The construction of the new Out-patients' Building and the new Casualty and Admission Block was commenced and satisfactory progress was made during the year.

TUBERCULOSIS CLINIC.

Tenders for the erection of a new Tuberculosis Clinic on the Hospital grounds were invited in August and the work is being proceeded with.

YATES AND DA COSTA WARDS.

A recommendation has been made for the remodelling of the Yates and Da Costa Wards with provision for an Operating Theatre. This necessary work has since been held over on account of lack of funds. Every effort is being made to have this remodelling put in hand.

STEAM SERVICES.

Further extensions were approved for the supply of Hot Water and Steam Services in lieu of Gas to the following Wards, etc. :— Alfred, Leopold, Torrens, Hope, Beatrice, Da Costa, Verco, Flinders, Light, Terrace, X-ray and Radium Sections, Gynaecological, Theatre and Maids' Kitchen, at an estimated cost of £1,164 10s., and also to the Laboratory of Pathology and Bacteriology at an actual cost of £120.

It is anticipated that very considerable further savings in future gas accounts will result therefrom.

The following is a comparative cost of gas consumption :—

For 1931 (Before installation of additional steam services	£2,562	4	0
For 1933	£1,783	2	8
Annual Saving	£779	1	4

No increase in expenditure on fuel for the generation of steam has resulted from the extensions of steam services to the various Wards, etc.

Funds for these extensions are being provided by :—

The Architect-in-Chief	£60	0	0
The Commissioners of Charitable Funds	£1,224	10	0

The latter amount, plus interest, is to be repaid to the Commissioners by quarterly instalments out of proved savings in expenditure by the substitution of steam services for gas.

ADELAIDE HOSPITAL AUXILIARY.

The Sewing Circle Branch has continued during the year to supply bed linen, quilts, bed-jackets, &c., for the benefit of patients.

The Kiosk in the Hospital grounds is staffed by voluntary members and is open daily from 9 a.m. to 5 p.m. for the sale of refreshments, etc.

The result of the activities of the Auxiliary will be reflected in the future by the erection of a Women's Block at the Hospital. Funds raised by the Auxiliary and expended in providing linen, &c., for the Wards, are being subsidised by the Government and are accumulating with interest thereon towards this object.

The Board again expresses its high appreciation of the excellent work performed by the lady workers for the benefit of the patients.

LETTERS OF APPRECIATION.

Many letters were received during the year from patients and their relatives, expressing appreciation of the care and treatment received.

OPERATIONS FOR 1933.

OPERATIONS ON BLOOD VESSELS.

Ligature of arteries	3
Excision of varicose veins	—
Excision of varicocele	3
Blood transfusion.....	60
Aneurysm	—
Ligature of jugular vein	5

OPERATIONS ON MUSCLES, BURSAE, TENDONS, AND NERVES.

Tenotomy	5
Suturing tendons and muscles	32
Excision of bursa.....	1
Excision of ganglion	2
Excision of gasserian ganglion	1
Tendon transplantation	—
Nerve anastomosis or transplantation	—
Suturing nerves	—
Resection of nerve and division	19
Stretching of nerve	1
Suturing nerve	2
Excision of neuroma	1
Freeing nerve from callus	—
Injection into nerve	5
Sympathectomy	5
Ramisection	—

OPERATIONS ON BONES.

(a) Skull—	
Elevation of depressed fracture	2
Exploratory trephine	5
Unilateral subtemporal decompression	18
Ventriculography—Drainage of ventricles.....	16
Drainage of cerebral abscess	—
Removal of cerebella tumour	5
Suboccipital decompression	3
Bilateral subtentorial decompression	—
(b) Spine—	
Laminectomy	3
Excision coccyx	1
Lumbar puncture (general anaesthetic).....	16
Lumbar puncture (local anaesthetic)	—
Albees bone graft to spine	—
(c) Fractures—	
Reduction and setting of fractures (by manipulation only, under G.A.).....	8
Reduction of fractures and dislocation.....	16
Wiring of fracture	19
Plating of fracture.....	—
Removing of plates and wires	2
Suturing patella	1
Removal of callus	1
Correction of malunited fracture (osteoclasis).....	1

OPERATIONS ON BONES—*continued.*

Freshening ends of ununited fracture	—
Cleaning and setting compound fractures	16
Open reduction of Colles fracture.....	—
(d) Amputations and excisions—	
Amputation of—	
Toes	5
Foot	3
Leg	21
Thigh	1
Fingers	15
Hand	—
Forearm	6
Upper arm	—
Stump	2
Astragelectomy	—
Tarsectomy	—
Excision of metatarsal bone	2
Excision of head of radius	3
Incision of periosteum	2
Drainage of medulla	14
Sequestrectomy	18
Osteotomy	7
Excising and curetting sinuses	1
Aspiration of T.B. abscess (Bone dis.)	1
Removal of bony spurs	3
Curetting bone	1
Excision of osteophytes	4
Other excisions	7
Removal of toenails and fingernails	6
Bone graft	5

OPERATIONS ON JOINTS.

Reduction of dislocation (by manipulation).....	4
Reduction of dislocation (by open operation).....	2
Aspirating joint	4
Arthrotomy	15
Arthrectomy	—
Arthrodesis	4
Moving of stiff joints	20
Excision of semilunar cartilage.....	13
Correction of hallux valgus—Bunion.....	5
Correction of hammertoe	3
Exploration of T.B. sinus	—
Arthroplasty	1
Removal of loose bodies.....	1

OPERATIONS ON GLANDULAR SYSTEM.

Excision of gland (diagnostic).....	15
Excision of glands (therapeutic) (specify).....	32
Incision for suppuration.....	—
Partial thyroidectomy.....	36
Removal of thyroid adenoma or cyst.....	6
Removal of thyroglossal cysts and other cysts of neck	2

OPERATIONS ON ALIMENTARY SYSTEM.

Mouth, tongue, lips, &c.—	
Extraction of teeth	8
Excision of lip (partial or complete)	1
Excision of lip and glands.....	2

OPERATIONS ON ALIMENTARY SYSTEM—*continued.*Mouth, tongue, lips, &c.—*continued.*

Partial or complete excision of tongue.....	I
Partial or complete excision of tongue and glands.....	—
Excision of jaw (lower) and glands of neck.....	1
Excision of jaw (upper).....	—
Closing of salivary fistula.....	—
Oesophagoscopy.....	31
Removal of F.B. from oesophagus.....	4
Incision or excision of ranula.....	—
Removal of dentiferous cyst or epulis.....	1
Repair of cleft palate.....	2
Removal of salivary calculus.....	3
Excision of parotid tumor.....	6

Stomach and intestines—

Gastrectomy.....	11
Gastrostomy.....	2
Gastroenterostomy.....	35
Closing perforated peptic ulcer.....	20
Excision of peptic ulcer.....	4
Exploratory laparotomy.....	66
Freeing abdominal adhesions.....	5
Paracentesis abdominis.....	—
Closure of intestinal perforation.....	1
Colostomy.....	18
Enterectomy.....	1
Entero anastomosis.....	12
Enterostomy.....	3
Appendicectomy.....	533
Appendicectomy with drainage.....	22
Drainage of appendical abscess.....	13
Drainage of subphrenic abscess.....	7
Drainage of other abdominal abscess.....	11
Caecostomy.....	5
Relief intestinal obstruction.....	7
Repair of faecal fistula.....	—
Release of gastro-enterostomy.....	—
Repair of twisted omentum.....	—
Opening colostomy.....	7
Closing colostomy.....	3
Pyloroplasty.....	3
Removal of cyst from abdominal cavity.....	4
Removal of foreign body in intestines.....	—
Lateral anastomosis.....	—
Appendicostomy.....	—
Caecoplication.....	—

Hernia—

Inguinal hernia. Radical cure.....	160

RADIO-THERAPEUTIC DEPARTMENT—1933.

Total new cases	558
Total visits	9,464

The Radium Clinic continued to meet weekly during the past year, together with periodical evening meetings at which were discussed various phases of the work.

It will be noticed that there has been a substantial increase in attendances during 1933, while the bed accommodation has remained unchanged. A new and improved method of obtaining radon has enabled us to treat as out-patients many who would otherwise have needed indoor treatment, but this has been more than offset by the greater incapacity caused by the modern intensive deep X-ray treatments. Many of these patients need accommodation during the re-acting stage of one or two weeks, more than our present number of beds will allow. In order to provide nursing facilities equivalent to those offered by our radio-therapeutic equipment, at least five additional beds for both males and females would be essential.

REPORT ON DENTAL DEPARTMENT, 1933.

Superintendent—T. D. Campbell, D.D.Sc.

Senior Dental Surgeon and Demonstrator—J. F. Clark, B.D.S.

Dental Surgeons—A. E. Bolt, Miss W. E. Preedy, B.D.S. (half-time)

Senior Dental Mechanic—L. A. M. Brougham.

CHANGES IN STAFF DURING YEAR.

Mr. H. M. Wilson, Dental Surgeon, resigned and Mr. J. H. Scollin was appointed to fill his place.

Owing to alterations in the regulations with a view to restricting the eligibility for treatment, the following reductions were made in the staff.

Messrs. A. Murray and L. Souter, dental mechanics.

Mr. R. Simunsen, laboratory assistant.

Miss K. Warneken, dental nurse.

Miss R. Watson, office.

Mr. J. H. Scollin, Dental Surgeon, resigned during the year, but it was decided not to refill this position.

STUDENTS.

Students attending the practice of the Hospital were as follows :—
Second year, 3 ; third year, nil ; fourth year, 4 ; fifth year, 5 ; total 12. All the fifth year students graduated in the B.D.S. course at the end of the year.

GENERAL REMARKS.

During the year regulations covering the admission of patients were altered to exclude persons in regular employment and single persons over the age of sixteen ; excepting urgent cases requiring relief of pain.

The demand for treatment continues to be greater than the services available can deal with adequately ; therefore, much of the treatment is necessarily restricted to emergency and relief work. Also every effort is made to concentrate as much as possible on treating children ; this being considered the best means of serving the community with limited resources.

The demand for artificial dentures continues to be heavy. Reductions in the laboratory staff have nullified any relief in the pressure of work which may have resulted from the restrictions made in supplying dentures. Appointment books and waiting lists still continue to be booked up for considerable periods ahead.

The revenue received for treatment shows no improvement over last year on account of the large percentage of patients who are in receipt of rations or pensions, or who are wards of Government or charitable institutions. In all cases it is necessary for patients to present an order for treatment from some outside responsible person or official.

LABORATORY OF BACTERIOLOGY AND PATHOLOGY, ADELAIDE HOSPITAL.

STAFF.

Director :

LIONEL B. BULL, D.V.Sc., Melb.

Deputy Director :

E. McLAUGHLIN, M.B., B.S., Adel., M.R.C.P.

Bio-Chemist :

R. J. COWAN, B.Sc.

Bacteriologist in Charge of Vaccine Department.

HELEN M. MAYO, M.D., Adel.

Honorary Pathologist.

JOHN B. CLELAND, M.D., Ch.M., Sydney.

The work of the laboratory is clearly separated into two main divisions, viz., work done for patients admitted to the Adelaide Hospital for treatment and that done for private medical practitioners, boards of health, Stock Department, and other public institutions. All the work in these two main divisions is more or less of a routine character, but wherever possible, research or investigational work is carried out on diseases of man and animals, and also on the improvement of laboratory methods used in the diagnosis of disease. As far as possible this work is summarised in the following table, but this summary does not represent all the activities of the staff, which, in addition, concerns itself in the care and maintenance of apparatus ; the preparation of staining solutions, culture, media, &c., for use by students both in the Hospital and at the University ; assistance to the Honorary Pathologist in the building up and maintenance of a museum and pathological and bacteriological examinations in connection with the *post mortem* room ; the maintenance of a library of current scientific publications on pathology, bacteriology, bio-chemistry, and related subjects.

It is not possible to give a very accurate picture of the activities of the laboratory staff and the work done by giving the actual number of examinations made, for one examination may involve, for example, 10 times the amount of time that another does. For the most part, however, such a summary does convey, particularly to those familiar with laboratory work, some idea of the main activities of the staff.

The *Clinical Pathological* examinations performed for the Adelaide Hospital include—(1) The histological diagnosis of pathological tissues, several of which were immediate examinations performed during operations (such examinations are done in order to help the surgeon in determining the extent and nature of the operation necessary); (2) the examination of urine to detect abnormal chemical and morphological elements; (3) the examination of faeces to detect the presence of abnormal elements; (4) the examination of cerebro-spinal fluid to detect cellular and chemical change (this examination is extremely useful in detecting syphilis of the central nervous system); (5) the examination of the blood to detect the presence of the various anaemias and leukaemias; (6) the examination of material for the detection of *Treponema pallidum* in the diagnosis of syphilis; (7) the examination of fluids from various cavities and cysts to determine their nature.

The bio-chemical examinations performed for the Adelaide Hospital include—(1) The estimation of the amount of sugar in the blood (this examination is made as an aid to the diagnosis of diabetes, and is made either after a fasting period or after the administration of glucose when several examinations are made to trace the rise and fall in the blood sugar); (2) the estimation of the urea nitrogen in the blood; (3) the examination of the gastric contents after a test meal, either one sample at the end of one hour or smaller samples at more frequent intervals over a period of two and a half hours; (4) colloidal gold curves on cerebro-spinal fluids; (5) chemical examinations of various body fluids.

The *Bacteriological* examinations performed for the Adelaide Hospital include—(1) The examination of sputum for the detection of tubercle bacilli and other bacteria, and also for hydatid hooklets; (2) the examination of blood for the Widal reaction (this examination is important in assisting in the diagnosis of typhoid fever); (3) the examination of swabs taken from the throat and nose to detect the presence of diphtheria bacilli; (4) the examination of urine to detect the presence of tubercle bacilli, colon bacilli, and other bacteria; (5) the examination of inflammatory fluids, for the detection of bacteria, *e.g.*, pleuritic fluid for tubercle bacilli; (6) examination of cerebral-spinal fluid to detect the presence of tubercle bacilli, meningococci, and other bacteria; (7) the cultural examination of blood to detect the presence of bacteria

in the circulation; (8) the examination of faeces and urine for the detection of typhoid bacilli and other pathogenic bacteria; (9) the examination of pus for the detection of gonococci, actinomyces, and other bacteria. Bacteria isolated from the various fluids and materials are often used in the preparation of autogenous vaccines.

The *Wassermann Reaction* was performed on Thursday in each week. This reaction is of great value in the diagnosis and treatment of syphilis. The Griffith & Scott technique is employed throughout.

The examinations performed and classified under the head *Private Work* include in the main such examinations as described under clinical pathological, bio-chemical, and bacteriological examinations. Much work was done for the Board of Health. Included in the examinations are also:—Examinations of various foodstuffs for the detection of bacterial contamination; (2) examination of drinking water to determine its suitability for drinking purposes. Included under this head are regular examinations for the Hydraulic Engineer's Department and for the Adelaide Local Board of Health; (3) the examination of disinfectants to determine their germicidal power; and (4) medico-legal examinations.

The routine examinations for the *Stock Department* include—(1) Bacteriological examinations of cow's milk for the detection of tubercle bacilli and other bacteria; (2) morbid tissues for histopathological examination; (3) examination of faeces to determine the presence of parasitism; (4) examination of cow's blood for the diagnosis of contagious abortion by the agglutination test; (5) specimens removed *post mortem* from animals dying from various causes, &c.

During the year special investigations were made for the Stock Department into Arthritis in Lambs, Parasitism in Lambs, *Suipestifer* Infection in Pigs and chronic Soursob poisoning in sheep. Investigations are still being carried out in Diseases of Poultry.

The investigations into bovine Haematuria and caseous lymphadenitis in sheep which are being carried out in association with the Commonwealth Council for Scientific and Industrial Research were continued during the year.

The Vaccine Department, as well as preparing 164 separate vaccines, also administered inoculations of vaccine to hospital patients. During the year 229 hospital patients were under treatment. The majority of these patients visited the laboratory twice a week during their course of treatment, when they received their injections. In all, 1,517 doses of vaccine were administered; also 331 doses of tuberculin were given to 21 patients. Vaccines were prepared for 63 patients under the care of private practitioners, and 826 doses (including 84 doses of tuberculin and 207 doses of T.A.B. and B.C.C.), and 112c.c., were supplied in bulk to private practitioners.

The Vaccine Department continued to undertake the work of testing asthma and hay fever patients for sensitization against various extraneous substances, and to carry out the appropriate treatment.

During the year 89 patients were tested against the various pollen, protein, and epithelial extracts. Forty-nine patients were treated and received 708 doses.

During the year the sterilization and preparation of catgut for surgical use in the Hospital was carried out by the staff.

Summary and Comments.—The figures show that there has been an increase of 1,413 in the total examinations over those made during the previous year. This means a larger general increase in the work than would appear at first sight as roughly 2,000 throat swab examinations were previously made each year for hospital patients. This means that the general work has increased by approximately 3,000 examinations.

There has been a slight falling off in the number of bacteriological examinations made generally for hospital patients in addition to a decrease in bacteriological examinations of throat swabs consequent on the closing of the isolation wards and the removal of this work to the Infectious Diseases Hospital.

In all other departments the amount of work done for hospital patients has increased. The increase of work in the Out-patients' Department has increased the work of the Laboratory more than the actual figures show, as in most cases the out-patients attend the laboratory for the collection of specimens which has to be done by the laboratory staff.

VENEREAL DISEASES.—NIGHT CLINICS.

REPORT FOR YEAR ENDED DECEMBER 31st, 1933.

Improved accommodation for the treatment of venereal diseases is urgently necessary.

The Venereal Diseases Act, passed by Parliament in 1920, has not yet been proclaimed. The provisions of this Act could not be effectively carried out until accommodation for the treatment of both in-door and out-door patients is provided. It is considered that the Act should be proclaimed as soon as possible.

REPORT OF OPERATIONS FOR THE YEAR ENDED DECEMBER 31st, 1933.

Male Section.

Surgeon—G. H. Burnell, B.S., M.D., F.R.C.S.E.

Second Surgeon—H. R. Pomroy, M.B., B.S., F.R.C.S.

Report on the Night Clinic (Male Section) for the year ending December 31st, 1933.

The number of patients during the past year has again shown a moderate decrease, so that no difficulty is now experienced in giving, to those needing it, any special form of treatment necessary.

It has been possible to admit a few patients to the surgical wards for operative treatment, with gratifying results, but it is to be hoped that in the near future more beds will be available, as there are at present several patients awaiting surgical treatment, who cannot be dealt with owing to lack of indoor accommodation.

The number of patients, not suffering from venereal disease, who came for examination, again showed a substantial increase, showing that the public is realising more and more the necessity for coming early for diagnosis and treatment.

It has been necessary to exclude one or two patients from the clinic during this year, owing to irregular attendance, but this has only been done after repeated warning, and inquiry into the circumstances of each case.

Female Section.

Surgeon—R. F. Matters, M.B., Ch.M., F.R.C.S.

During the past year the number of patients attending has shown a slight decrease. Satisfactory results have been obtained, and quite a few patients have been discharged as cured.

I must again record my appreciation of the help and co-operation received from the Sisters, who have worked capably and strenuously.
