MEDICAL STAFF

Honorary Physicians

R. H. BLAIR, B.Sc., M.B., Ch. B. (Livp.).

L. W. HALE, M.D. (Lond.), F.R.C.P. (Lond.).

Dermatologist

F. A. WHITLOCK, M.B., B. Chir. (Cantab.), M.R.C.P. (Lond.).

Neurologist

N. S. ALCOCK, M.D., M.R.C.P.

Honorary Surgeons

G. P. O'DONNELL, M.B., B.Ch., B.A.O. (Dub.).

T. M. REID, M.B., Ch. B., F.R.C.S. (Edin.).

J. H. DONOVAN, M.B., Ch. B. (Leeds), F.R.C.S. (Edin.).

Honorary Ear, Nose and Throat Surgeon

M. R. SHERIDAN, M.B., Ch. B., F.R.C.S. (Edin.), D.L.O. (Eng.).

Honorary Ophthalmic Surgeon

C. HEATH, M.A., M.D. (Cantab.), D.O.M.S.

Consulting Pathologist

C. RIVERS, M.A., B.Sc. (Lond.), M.D., B.Ch. (Cantab.),
M.R.C.P. (Lond.).

Consulting Thoracic Surgeon

N. R. BARRETT, M.A., M.Ch. (Cantab.), F.R.C.S. (Eng.).

Honorary Anæsthetists

A. A. MACDONALD, M.B., Ch. B. (Glas.).

E. O'REILLY, M.B., B.Ch., B.A.O. (Dub.).

Honorary Medical Officer

D. P. CLAHANE, M.B., B.Ch., B.A.O. (Dub.).

Pathologist (Acting)

R. SALM, M.D. (Amsterdam), L.R.C.P. & S. (Edin.).

Radiotherapist

J. A. G. HAIR, M.B., B.S. (Lond.), D.M.R.E. (Cantab.).

Radiologist

A. C. P. D. THOMSON, M.C., M.B., Ch. B., D.M.R.

Honorary Dental Surgeon

W. H. C. LEAN, L.D.S., R.C.S. (Eng).

Obstetricians and Gynæcologists

J. G. HASTINGS INCE, M.B., B.S. (Lond.), M.R.C.O.G.

R. POLLOK, L.R.C.P., L.R.C.S. (Edin.), L.R.F.P. & S. (Glas.),
L.D.S. (Glas.), D.Obst. R.C.O.G.

Resident Obstetric Officer

DR. N. NOBLE, L.R.C.P., M.R.C.S.

OBSTETRIC REPORT

1947

THIS REPORT deals with the cases discharged from the County Maternity Unit at Redruth Hospital during the year 1947. "False alarms" of labour are excluded.

Booked cases are cases accepted for institutional delivery, on account of unsuitable home conditions or on medical grounds, and have attended the antenatal clinics. Emergency cases are all cases admitted direct who have not been under antenatal supervision in the clinics.

During the year 896 women were discharged from the ward. In addition 20 women who had been discharged undelivered were readmitted, of these 19 were booked cases which after investigation in the wards or on completion of treatment were returned to the antenatal clinic and subsequently readmitted for their delivery; 1 was an emergency case who was treated for pyelitis of pregnancy and readmitted at the request of her doctor for an external version, she was subsequently delivered at home. Thus there were 916 discharges from the ward.

		Booked		Emergency		Total	
		P	M	P	M	P	M
Delivered in hospital	...	246	334	142	97	388	431
Antenatal only	...	1	8	9	22	10	30

ANTENATAL ADMISSIONS (continued)

[illegible]

POSTNATAL ADMISSIONS.

During the year there were 35 women admitted after delivery.

The reasons for admission were :—

BOOKED CASES.

Primiparae 2.

Multiparae 16.

Delivered at home and admitted for nursing.

EMERGENCY CASES.

	Primiparae	Multiparae	Total
Unsuitable home conditions	1	3	4
Retained placenta	3	2	5
Acute liver atrophy	2	0	2
Perineal tear	1	0	1
Premature baby	0	2	2
Jaundiced baby	0	1	1

ABORTIONS.

Threatened abortions admitted for treatment are included in the table of antenatal admissions. Most abortions are admitted to the Gynaecological wards and are treated there and omitted from this report. One booked primigravida was treated with an inevitable abortion. One booked multiparae had a therapeutic abortion performed for essential hypertension and two emergency multiparae were treated with inevitable abortions.

Details of therapeutic abortions are appended.

THERAPEUTIC ABORTION

No.	Age	Para	Maturity in weeks	Indication	Method	Result M	Remarks
BOOKED							
7117	32	4	20	Essential hypertension B.P. 250/150	Abdominal hysterotomy	L	Sterilization.

FIBROIDS AND PREGNANCY.

There were three cases admitted with fibroids in pregnancy.

BOOKED.

20661 Aged 42 para 2 Normal labour.

21085 Aged 40 para 0 Normal labour.

EMERGENCY.

21556 Aged 37 para 2 Antenatal only for red degeneration.

OVARIAN CYST AND PREGNANCY.

EMERGENCY.

19959 Aged 44 para 3 Normal labour, pseudomucinous.
ovarian cyst removed on the 3rd
day of puerperium.

22282 Aged 43 para 0 Normal labour, ovarian dermoid
found at post-mortem
examination.

SYPHILIS IN PREGNANCY.

A routine Wasserman reaction is done on all booked cases in the antenatal clinic and on all emergency cases after admission. There were eight positive results.

Booked primigravidae	2
Booked multiparae	6

HEART DISEASE IN PREGNANCY

There were five booked cases treated in hospital.

ANTEPARTUM HÆMORRHAGE.

A case is only classified as Placenta Prævia when there is definite evidence by palpation of the edge of the placenta that it was attached in the lower uterine segment.

Cases of concealed hæmorrhage or those in which on examination of the lower uterine segment under anæsthesia no placenta was felt are classified as accidental hæmorrhage.

All cases in which no complete examination of the lower uterine segment was made are grouped under the heading antepartum hæmorrhage of unknown origin.

PLACENTA PRÆVIA.

Cases are classified as :

- | | |
|------------|---|
| 1st degree | When the edge is felt in the lower uterine segment but does not reach the internal os. |
| 2nd degree | When the edge of the placenta reaches the internal os but does not cover it. |
| 3rd degree | When the placenta completely covers the internal os when closed but not when fully dilated. |
| 4th degree | When the placenta completely covers the fully dilated os. |

EXTERNAL VERSION.

Only cases admitted for external version are included in the table. All cases found to have a breech presentation have an attempt to correct this in the antenatal clinic whenever the presentation is recognised and the pregnancy has reached the 32nd week.

BREECH DELIVERIES.

The following tables give details of all cases delivered as a breech. The case is only regarded as complicated when there is some maternal or foetal complication. Primiparity and extension of the limbs are not considered by themselves as complications.

	<hr/>

MORBIDITY OF PATIENTS.

The following table gives details of all cases which were notified as morbid in the wards. A patient is considered morbid when the temperature of 100.4 is maintained for a full twenty-four hours or recurs within twenty-four hours. A catheter specimen of urine and a high vaginal swab are taken on all cases which have a temperature over 100, or in which a temperature of 99.4 occurs on two successive days.

Morbidity of booked cases

Deaths not included below	1	
Pyrexia	21	
	—	
	22	5.5%
	—	

Morbidity of emergency cases

MORBIDITY OF PATIENTS DELIVERED IN HOSPITAL (continued).

[illegible]

(continued).

[illegible]

MATERNAL DEATHS.

Booked.

14825. Aged 42, para 4. Admitted at the 39th week for mild toxæmia of pregnancy. Medical induction at term and rapid delivery, the labour lasting about three-quarters of an hour. Some slight bleeding immediately after delivery but the patient collapsed, became restless, pale, with evidence of severe hæmorrhage. Blood transfusion immediately commenced and there was some slight improvement in the general condition a half-hour later but she had a further collapse and died 40 minutes after delivery. Post-mortem showed a tear in the right side of the uterus extending to the cervix with a large sub-peritoneal hæmorrhage in the right broad ligament.

Emergency.

12432. Aged 35, para 1. Admitted at the 32nd week with a history of slight antepartum hæmorrhage. Her general condition which was poor remained about the same for three weeks when she had a further slight loss, this was repeated the following day when she collapsed and died an hour later. Post-mortem showed a bilateral hydronephrosis and a large chronic tubo-ovarian abscess. There was also a complete placenta prævia.

15705. Aged 21, para 1. Admitted early in labour after an eclamptic fit. Blood pressure was 170/140 and the urine almost solid with albumen. She delivered herself normally 8 hours after admission of a premature stillborn child and died 5 hours later. Post-mortem showed acute liver atrophy.

20275. Aged 30, para 2. Admitted at the 37th week with severe anaemia, R.B.C. 1,300,000, hæmoglobin under 20%. She was given a 2 pint blood transfusion and had some generalised respiratory disturbance after 2 pints had been infused. The condition improved somewhat over the next 12 hours and she expelled a premature macerated foetus the following day. Her respirations became shallow and laboured some two hours later and she died 10 hours after delivery. Post-mortem showed oedema of all organs with some generalised oedema and oedema of the lungs.

21571. Aged 38, para 0. Admitted at the 20th week with sickness and vomiting after all meals and pain in the back radiating around to the chest. She had had a radical mastectomy performed 2 months previously and had had three weeks deep X-Ray therapy. Her condition deteriorated, she became drowsy and uræmic and died in coma 24 days after admission. Post-mortem refused.

22155. Aged 39, para 0. Admitted at approximately term with a history of six eclamptic fits. She had eight further fits after admission and died undelivered five hours later. Post-mortem showed liver atrophy.

22282. Aged 43, para 0. Admitted at the 38th week for mild toxæmia which was adequately controlled by rest. She delivered herself normally and died the following day. Post-mortem showed pulmonary embolus.

PUERPERAL INSANITY

7560. Booked case, aged 27, para 1. Some albuminuria and hypertension with oedema for the last four weeks of her pregnancy. Refused admission for rest during this period. Normal delivery at term of a 6lb. baby. Became restless and confused on the sixth day with typical confusional insanity and after attempts to leave the hospital was discharged home to her husband on his responsibility. Subsequently transferred to a mental hospital for observation.

INFANT REPORT.

During the year there were 841 babies born.

Details of all premature babies born alive ($5\frac{1}{2}$ lbs. weight or less) and those admitted after delivery outside are appended in the following table. There were 25 deaths of premature babies out of a total of 84 premature babies.
