REPORT OF THE TRUSTEES.

THE BOSTON CITY HOSPITAL,

BOSTON, January 31, 1894.

HON. NATHAN MATTHEWS, JR.,

Mayor of the City of Boston:

The Trustees of The Boston City Hospital, in compliance with the Ordinances, respectfully present herewith their annual report for the year beginning February 1, 1893, to January 31, 1894:

NUMBERS OF PATIENTS AND EXPENDITURES.

Number of patients remaining in the hospital

January 31, 1893	471
----------------------------	-----

Admitted from February 1, 1893, to January 31, 1894:

Medical	3,525
Surgical	3,172
Contagious	890
Ophthalmic	74
Aural	69
Gynæcological	562
	—
	8,292

Treated during the year	8,763
-----------------------------------	-------

Discharged " "	7,075
--------------------------	-------

Carried forward, 50,464

<i>Brought forward,</i>	50,464
For diseases of the nervous system	2,755
“ “ “ the throat	3,121
Surgical out-patients treated at accident-room, and not elsewhere included	1,418
	<hr/>
Total number of visits of out-patients	57,758

The entire amount expended for all departments of the hospital during the year was \$266,703.13. Of this amount \$250,569.71 was on account of the hospital proper and Epidemic Hospital, \$5,335.91 on account of the eight out-patient departments, \$9,095.71 for the Convalescent Home, and \$1,701.80 on account of determining the settlement of patients.

To the amount expended for the hospital proper, \$250,569.71, should be added the difference in the amount of stock on hand February 1, 1894, which was \$2,503.58 less than we possessed on February 1, 1893, making the total amount chargeable to the expenditures of the year, \$253,073.29. Of the total amount expended, considerable sums were for purposes not within the ordinary yearly maintenance of the patients. From the itemized table of disbursements it will be seen that there were expended for various items of new and permanent improvements, \$6,526.26; furnishing and maintaining the Epidemic Hospital, \$535.44; furnishing new stable, \$908.02; two new ambulances and one new wagonette, \$1,498; expenses incident to World's Fair Exhibit, \$1,945.46; claims awarded by city council committee, \$400; expense incurred in card cataloguing medical and surgical reports, etc., \$675.16, making a total of \$12,488.34, which, deducted from the total expenditures of the Hospital Department, leaves \$240,584.95 properly chargeable to current expenses. This amount, divided among 8,763 patients for 23,848 weeks' board, gives \$10.09 as the cost to the city of each patient per week. The weekly cost of each patient at the Convalescent Home has been \$5.60. The trustees have collected and paid into the city treasury in cash the sum

of \$56,005.15, this sum having been received principally on account of board of patients. No allowance has been made for this amount in computing the weekly net cost of each patient to the city.

The maximum number of patients in the hospital at any one time was 549, or 34+ more than last year. The minimum number at any one time was 390. The daily average number of patients was $457\frac{34}{100}$, or 24+ more than last year. The total number of patients treated in the wards was 8,763, which was 527 more than last year, and 1,451 more than two years ago.

The report of the Superintendent, presented herewith, contains, besides other information, a detailed statement of the expenditures of the year, and of the number of patients admitted, and is accompanied by the medical and surgical statistics. These reports give in detail the number of patients treated in the hospital, and the number treated in the out-patient departments during the year, with classified statements of their diseases and results of treatment.

PAYING PATIENTS.

The hospital has received during the year the sum of \$54,309.24, as an income from the board of paying patients of all classes. This sum has been received from the following sources: From the Commonwealth of Massachusetts for the board of patients for whom the Commonwealth is responsible, \$32,400.52; from other cities and towns for patients for whom they were liable, \$8,266; from private paying patients, collected by the Superintendent, \$13,642.72. The total income from these sources has been \$4,120.88 more than last year.

The accommodations for paying patients remain the same as last year, and the private rooms have been full the most of the time. There have been many applications for private rooms from persons living outside of Boston desiring such accommodations, particularly as surgical patients, which the Trustees have been obliged to reject, as they have not deemed it wise to tax unduly the hospital service, already over-bur-

dened as it has been most of the time during the past year. The Trustees have kept in view that the primary object of the hospital is the relief of those citizens of Boston who have not the means to pay for treatment at their homes. Such accommodations as the hospital affords for paying patients should be reserved for those of our own citizens, at least until the enlargement of the hospital shall afford such accommodations as are not needed by those who have the better right.

As the hospital is organized at the present time, only a limited number of private rooms are furnished for patients residing in the city of Boston or for those brought here by accident or emergency, who desire accommodations better than those afforded in the public wards and are able to pay for them.

The method pursued in the investigation of the claims of various patients in the wards, as to their right to receive free treatment, has been fully explained in recent reports. The Trustees still believe that patients who are able to pay should do so, to meet the actual cost of their support, at about ten dollars per week.

PRESENT CAPACITY OF THE HOSPITAL.

The capacity of the hospital last year was 468. No change was made in the number of available beds, until the acquisition of the Epidemic Hospital, which the Trustees were kindly permitted to use by the Board of Health. This hospital added thirty-two beds, making the entire capacity for the latter part of the year 500 beds. The daily average number of patients during the year has been 457, and the largest number on any one day, 549. So much has been said in the reports of the last two or three years that the Trustees feel that there is no further demand upon them to explain the condition and results of overcrowding. When the buildings now under construction, called the Chester Park Hospital, shall have been completed, the hospital will be entirely relieved of all infectious fever cases. When, in addition to this, the new surgical operating building and the

four new surgical wards shall be available, it is believed that the capacity of the hospital will be sufficiently increased so as to prevent, for some time to come, the overcrowding of the surgical side, which has existed for several years. Additional room will still be needed for medical cases and special diseases.

WARDS FOR CONTAGIOUS DISEASES.

The two wards for contagious diseases have been full at all times, and, during a large part of the year, have been excessively crowded. This condition at times was so serious that the Trustees were led to believe that on this account the recovery of the patients was seriously hindered, and that the mortality was increased. It furthermore affected the health of the nurses and house-officers who worked in that service, and has caused an amount of sickness greatly in excess of that of any previous year. Early in the fall, with the scarlet fever ward filled to its utmost capacity, it was necessary to reject a large number of cases. To relieve this condition of things, the Board of Health, on the request of the Trustees, placed under their supervision the Epidemic Hospital, on Swett street. This hospital was erected two years ago, at the time of the threatened invasion of cholera, and was intended for the care of an epidemic of cholera or any other serious disease that should suddenly come upon the city. The building had been unoccupied for more than a year, and this seemed to be an emergency which justified its use. During the early autumn, all convalescent scarlet fever patients were transferred from Ward A to the Epidemic Hospital. This plan worked excellently, afforded a great relief to the hospital proper, and left an abundance of room for acute cases of scarlet fever to be admitted. Later in the year many complications arose, especially from the fact that a very large number of patients were admitted as having diphtheria, but were found to have scarlet fever *and* diphtheria. In many other cases there was a complication of measles, whooping-cough, and other infectious diseases. It was found impossible, owing to the crowded condition, to

keep the patients separate. It involved a constant and repeated cleaning and sterilizing of the various rooms which had to be used for different classes of cases at different times. This condition rendered the management of this service difficult in an extreme degree. The amount of money expended in the matter of renovation has been largely increased over what has been expended on the ordinary wards that have not received infectious diseases.

The Trustees congratulate themselves and the citizens of Boston that, before the close of the present year, the new hospital, exclusively for contagious diseases, will be completed and occupied, which will relieve many perplexities incident to the management of a hospital for general diseases.

PATHOLOGICAL LABORATORY.

The new methods of scientific work recently so widely introduced throughout the hospitals of the world have demanded that this hospital also should possess every facility or doing similar work. Pending the time when the new pathological building shall be completed, the Trustees have fitted up a bacteriological laboratory for temporary use. This laboratory serves the purpose for which it was intended fairly well, and has proved a most excellent adjunct to the ward work. On the recommendation of the Hospital Staff, the Trustees have created the position of Resident Assistant Pathologist, with a salary. This officer devotes his entire time to laboratory and pathological work.

The number of house officers was found to be insufficient for properly doing the work of the Clinical Laboratory, in urinalysis, blood counting, and similar professional work. In order that this work might be systematically accomplished, the Trustees have increased the House Staff, by creating the positions of three surgical dressers and three clinical clerks. These appointments have been filled by medical students, who accept the appointment for a six months' term of service. Not only are they enabled to render an additional amount of laboratory work, but also to aid in etherization, as assistants in the wards and out-patient

departments, according to the service and the requirements for the time being.

NEW BUILDINGS.

At the date of the last report, the work had already begun upon the new hospital for contagious diseases, designated as The Chester Park Hospital. Contracts had been made for the erection of four buildings. The original intention of the Trustees was that additional isolating buildings for the treatment of contagious diseases should be placed upon the land between the hospital buildings and East Chester Park. Later, with the approval of your Honor and the City Council, it was decided to build a complete hospital establishment on the City Nursery Grounds, bounded by East Chester Park, Albany street, and Northampton street. The Trustees were of the opinion that this hospital should be practically complete in itself. For this purpose, a larger sum of money than originally appropriated was necessary, and later in the year the City Council made two appropriations from special loans: one of \$400,000 and another of \$300,000. This sum was intended not only for the construction of a complete hospital for contagious diseases, but also for additional wards and buildings for the hospital proper. Plans were formulated and contracts made later in the year, and there are now seven buildings under construction — part of them nearly completed. The buildings consist of an administration building, a domestic building, a lodge or entrance, two two-storied wards, two nurses' homes, a laundry building, and mortuary building. The buildings are progressing as rapidly as the season will permit, and it is estimated that they will be ready for occupancy by September next. After the completion of the buildings, and before occupancy, it will be necessary to construct a brick wall around the entire establishment, to grade and lay out the grounds, build roads, and take care of the surface drainage. The city has been fortunate in making favorable contracts, and the buildings are sufficiently well advanced to give a good idea of what the establishment will be when completed. Allowing that more

than two-thirds of the patients will be children, the capacity of the hospital will accommodate 250 cases of contagious diseases.

No attempt will be made in this report to give plans of this new hospital, but a complete description of all the buildings, together with plans and special features, will be reserved for the next report. The expenditures required for the completion of this hospital will be considerable. Much of this expense has been compelled by the building laws of Boston, as applied to public buildings. Every building is constructed upon slow combustion and, in many parts, fire-proof principles. Considerable expense has been necessary, in order that, as far as possible, the walls, floors, and cross corridors should be so constructed as to be non-absorbent. All the cross open-air corridors dividing the buildings into sections have been built of glazed brick. All the floors in the bath-rooms, lavatories, and open corridors are of *terrazzo*. Notwithstanding this great expense, the Trustees deem it wise that these buildings should be made thoroughly modern and should conform with the best ideas now known in hospital construction. For a hospital for contagious diseases, located upon a restricted site and easily accessible to the crowded portion of a city as large as Boston, the Trustees are of the opinion that it will be the best hospital for its purpose in this country, if not in the world.

A contract will soon be made for the enlargement of the present surgical operating building. The needs of such a building have been dwelt upon in previous reports, and the Trustees are glad that they have now the means at hand to enter upon this work.

The present operating building will be practically doubled in size. It will afford an enlarged and reconstructed operating amphitheatre built upon modern lines, and special operating rooms of sufficient capacity to give the three or more surgical services ample room at all times for doing the large amount of operative surgery that centres in a large municipal hospital.

The grade about the building will be so changed that the

lower floor will be entirely above the ground level. There will be five accident rooms, with the proper etherizing rooms, waiting rooms for friends of patients, sterilizing and instrument rooms, and two small wards, one for the accommodation of six men and the other for four women, with service rooms for the proper attendance of this class of cases. These rooms are so arranged as to make it possible properly and promptly to care for all cases that naturally come to an accident room, both out-patients and house-patients. Patients who are moribund on entrance will not be taken to the general wards; nor will accident cases, until they are in a condition to be transferred to a general ward without disturbing it. The building will likewise serve as a night ward for the reception of surgical cases. It will also contain a hospital museum for the instruction of medical students and nurses, the basis of which will be the exhibit that was sent to the World's Fair. The facilities for the steward's department will be largely increased.

Plans are also nearly completed for two two-storied surgical wards, to be placed upon the land on the surgical side formerly used as a space for tents and laundry clothes yard. One of these buildings will contain two wards for isolating surgical cases, and the other, two open wards for more severe surgical cases. These two buildings will be connected with the old corridors, carrying out the pavilion system of the hospital.

Plans are also ready for estimates upon a group of three buildings, to embrace the pathological building, mortuary, and mortuary chapel. The pathological building will contain an autopsy room, with seats for about seventy students and physicians. There will be in this building seven laboratories of various sizes for the scientific work of the hospital. There will also be accessory rooms for special original work, together with toilet rooms, and in the basement, rooms for stores and other uses incident to the work of the building. The mortuary building will contain increased and most approved accommodations for the preservation of the bodies of the dead, not only of patients who die in the hospital, but

also specially appointed rooms for Medical Examiner's cases for this part of the city. The mortuary chapel will be constructed for the special purpose of allowing the friends of patients to have funeral services for the dead.

The grounds upon which the Chester Park Hospital was situated proved too restricted for a new boiler-house, and, for reasons of economy, the Trustees decided not to construct a boiler-house for the Chester Park Hospital alone, but to build one on the land already under charge of the Trustees, in the rear of the hospital, and on the opposite side of Albany street. There is now building upon this location a boiler-house large enough to contain the heating plant for the entire establishment, both the old and the new buildings, and for all probable extensions in the future. In this building will also be located the electric-light plant which will light the entire establishment. This will require a plant of sufficient size to run 5,500 incandescent lamps, besides electric power for propelling fans for ventilation, as well as for motors in various parts of the hospital, and electricity for the medical and surgical services. The additional buildings will give an increased capacity for 388 patients, making 850 beds the total number available for patients in the old and new buildings.

The foregoing changes and increase in the capacity of the hospital, briefly described, will indicate the great accession to the hospital now going on, and which will be available during the coming year. This increase has come none too soon. The pressure upon the hospital for the accommodation of nearly all classes of cases during the past year has been largely in excess of its capacity. The hospital is crowded in nearly all parts, with a number of patients larger than is wise, either for the sick or for those who have to care for them.

HOSPITAL RENOVATIONS AND ADDITIONS.

The usual ward renovations have been carried on during the last year. Wards F, G, K, L, A, and E have been thoroughly painted and repaired, and the hospital buildings are now all in a good state of repair. The building known

as Pavilion 3, containing wards K and L, needs extensive alterations and improvements which cannot be entered upon except by a special appropriation. The water-closets, lavatories, and bath-rooms should be removed to the opposite end of the building, and the present inefficient system of ventilation be abandoned. An increased amount of light should be let into the corridors by reconstruction of the windows. The iron tanks in the basement should be removed, the old and unsightly bath-rooms should be torn out, and radical changes be made upon the building.

On the completion of the new boiler-house and the present system of heating, the heating-apparatus of the old buildings should be rearranged in order to connect with the new boiler-house. The building used as the present boiler-house should be abandoned for that purpose. The building now used as a mortuary and autopsy room, which is old, poorly constructed, and much damaged and out of plumb by the construction of the Albany-street intercepting sewer, and hardly worth reconstructing, should be torn down, and the Trustees recommend that it be replaced with a large building for increased laundry accommodations, and a sterilizing house for the hospital proper, with rooms overhead for workshops and also for servants' quarters. Elevators should be constructed so that the roof may be used for drying clothes, there being no ground left of sufficient size for this purpose.

The cool rooms in connection with the centre kitchen were so decayed from causes natural to cold-storage rooms, that it was necessary to replace them with a new structure. They were therefore enlarged and rearranged at an expense of \$5,833.18. As a storage room for hospital subsistence supplies, it can hardly be excelled.

The alterations at the entrance office, by their usefulness and means of better despatching the hospital business, have proved the judiciousness of the expenditure.

The new stable has been organized, two new ambulances have been added, and also a wagonette for the purpose of carrying patients from the hospital to the Convalescent Home.

The ambulance service was never before so well equipped as at the present time, nor has it ever before been called upon to do so large an amount of work. The total number of patients conveyed during the year was 2,735. The Trustees still believe that there should be an increase in the number of ambulances located in those parts of the city not now having them, for the purpose of taking care of casualties with despatch. There should be one or more ambulances in the more remote parts of Dorchester, another ambulance in Brighton, another in West Roxbury, and an additional one for South Boston. These ambulances should be used for emergencies only, the ordinary cases of sickness being cared for by the various hospitals in the city which already possess ambulances for the transportation of medical cases.

THE CONVALESCENT HOME.

The Convalescent Home continues its great usefulness. The benefits of the Home have been given to 452 patients, which is sixty-five more than last year. The home has given to patients 987 more days' board than last year. This has been done at a decreased cost, the average weekly cost per patient being \$5.60. There has been no increase in the bed capacity of the Home, and there has been no special change in that branch of the hospital service.

THE TRAINING SCHOOL FOR NURSES.

The Training School for Nurses has graduated 341 pupils, of whom forty have been graduated during the past year, a larger number than in any previous year. There has been an increase of four nurses, making a total of ninety-six, as against ninety-two last year. While this number of nurses is sufficient for the proper requirements of the wards when they are at their normal capacity, it was not enough when the hospital was crowded during the winter months. This condition of affairs has undoubtedly been the cause of considerable sickness among the nurses, which can only be relieved by the larger and more suitable accommodations. Much unavoidable sickness has likewise occurred from the

fact that the nurses in the Training School rotate, for instruction and practice, in different wards, and on assignment to the contagious wards, it has happened that a larger number of nurses than usual have been found susceptible to the diseases of diphtheria and scarlet fever. But as has been before alluded to, this is the only hospital in Boston where nurses are trained in the care of such diseases, and the infection of nurses and the sickness incident thereto is one of the natural sequences of such training.

It has been the endeavor of the Trustees that the nurses should have comfortable rooms, and that their means of recreation and enjoyment should be among the best afforded in any hospital. This we believe is true of this hospital and Training School, and the amount of sickness is due to the causes indicated, and not to a want of proper care of the nurses in their daily life during their course of training.

The Trustees again call attention to the fact that while there are ninety-six nurses upon the roll, the Nurses' Home accommodates only sixty-seven nurses. The house on East Springfield street, which is leased and is called the "Nightingale," provides for twenty-two nurses, and the remainder have been placed in rooms in various parts of the hospital building. When the new wards shall have been completed, there will be required at least 135 (or more) nurses in the hospital proper.

The accommodations for nurses have not kept pace with the growth of the hospital. The Trustees renew their recommendation of the last two years, that the various estates at and near the corner of Massachusetts avenue should be taken by right of eminent domain; that these houses should be pulled down, and in their place the present Nurses' Home for the hospital proper should be extended sufficiently not only to meet the wants of the present increased number of nurses, but of those necessary when the new buildings are completed, and which will be required for anticipated buildings to be constructed upon the present grounds.

The nurses' home for the Chester Park Hospital has been so constructed that the building for nurses is divided into

separate houses, having also separate dining-rooms, in order that nurses attendant upon one contagious disease shall not associate with nurses attendant upon another contagious disease. This home for nurses provides for the maximum number required at any one time, and it is expected that it will not, in ordinary times, be full. The home is so constructed as to allow various parts of it to remain unoccupied for disinfection, in case nurses exposed should infect the various rooms.

The usual course of studies, of lectures, instruction in *massage*, cooking, and operating-room work have been continued to a larger degree than during any previous year.

The Trustees appreciate the increased amount of labor that has been demanded of the nursing service, and express their gratitude for the devoted and efficient part taken by its members in caring for the sick.

THE MEDICAL AND SURGICAL STAFF.

There have been no changes during the past year in the classification of services or in the number of physicians and surgeons in attendance upon them.

The following are the changes in the Medical and Surgical Staff: E. M. Buckingham, M.D., Assistant Visiting Physician, has been promoted to Visiting Physician. H. L. Burrell, M.D., has been promoted from Assistant Visiting Surgeon to Visiting Surgeon. C. M. Green, M.D., has been promoted from Physician for Diseases of Women to Out-Patients to Assistant Visiting Physician for Diseases of Women. George H. Monks, M.D., has been promoted from Surgeon to Out-Patients to Assistant Visiting Surgeon. Vincent Y. Bowditch, M.D., has been promoted from Physician to Out-Patients to Assistant Visiting Physician. John C. Munro, M.D., has been appointed Surgeon to Out-Patients. Lewis S. Dixon, M.D., Ophthalmic Surgeon to Out-Patients, has resigned, and his vacancy has been filled by the promotion of Walter B. Lancaster, M.D., Assistant to the Ophthalmic Surgeon to Out-Patients. George Haven, M.D., has been promoted from Assistant to the Physician

for Diseases of Women to Out-Patients to Physician for Diseases of Women to Out-Patients. George H. Tilden, M.D., Physician for Diseases of the Skin to Out-Patients, has resigned, and his vacancy has been filled by the appointment of James S. Howe, M.D., formerly Assistant to the Physician for Diseases of the Skin.

The following appointments have been made during the year: Alexander Quackenboss, M.D., and John C. Bossidy, M.D., Assistants to the Ophthalmic Surgeons; Ernest E. Doble, M.D., Assistant to the Aural Surgeon; John J. Thomas, M.D., Assistant to the Physician for Diseases of the Nervous System; Harvey P. Towle, M.D., Assistant to the Physician for Diseases of the Skin; Edward Reynolds, M.D., Assistant to the Physician for Diseases of Women.

The position of Resident Assistant Pathologist has been created during the year, and William R. Stokes, M.D., has been appointed to that position.

The Trustees gratefully acknowledge the gratuitous professional skill rendered by the various gentlemen comprising the Medical and Surgical Staff. They appreciate their devotion to the patients of the hospital, and gladly avail themselves of this opportunity publicly to acknowledge the gratitude which is due to them.

GIFTS AND PERSONAL ASSISTANCE.

The Trustees take pleasure in making their annual acknowledgment of the various gifts and personal assistance rendered to patients in the hospital during the past year. Clergymen, hospital visitors, Bible readers, the King's Daughters, and others, have been more largely attendant upon the patients in the hospital than during several previous years. The City Missionary Society, under the direction of the Rev. D. W. Waldron, and the Episcopal City Missionary Society, under charge of the Rev. F. B. Allen, have rendered a large amount of assistance, not only by entertainment and kindly encouragement afforded to patients, but also by substantial aid in finding the ways and means for assist-

ing many patients at the time when they were discharged from the hospital, and stood much in need of such assistance. Carriage drives for patients have been furnished through the generosity of the Boston Young Men's Christian Union. The Flower Missions continued their weekly visits to the hospital during the summer season, and the quartettes of several organizations visited the wards on Sundays during the larger part of the year. Their kindness has been much appreciated, and frequently and favorably commented upon by the patients.

The individual contributions of Christmas gifts, of toys and games, and of reading matter have been large, and there have never before been so many or useful articles of clothing given as during the past year. Probably no hospital in Boston has such a large number of patients requiring practical aid and assistance as much as those in this hospital. The Trustees, therefore, in their behalf, desire to make special and most grateful mention of this substantial and practical aid.

The Trustees again express their own and the obligations of this community to the superintendent, Dr. Rowe, and to those who have been associated with him in the administration of the hospital, for their unwearying and faithful service and for the great professional ability and skill which they have brought to their successful work.

Respectfully submitted,

For the Trustees,

HENRY H. SPRAGUE,

Secretary.

REPORT OF THE SUPERINTENDENT AND
RESIDENT PHYSICIAN.

THE BOSTON CITY HOSPITAL, January 31, 1894.

To the Board of Trustees:

GENTLEMEN: I have the honor to present herewith my annual report of the hospital for the year, February 1, 1893, to January 31, 1894, inclusive.

The following table shows the number of patients who have each year applied for admission, and been treated at the hospital:

	Patients examined for ad- mission.	Patients admitted.	Patients accident- ally injured.	Number of out- patients treated.
From June 1, 1864, to December 31, 1864 (7 mos.)	703	475	129	371
From January 1, 1865, to December 31, 1865.....	1,451	1,066	242	1,143
From January 1, 1866, to December 31, 1866.....	1,749	1,432	345	3,324
From January 1, 1867, to December 31, 1867.....	1,913	1,534	328	7,015
From January 1, 1868, to December 31, 1868.....	2,729	2,078	417	8,794
From January 1, 1869, to April 30, 1870(16 mos.)	4,632	3,054	482	11,791
From May 1, 1870, to April 30, 1871.....	3,977	2,396	525	8,899
From May 1, 1871, to April 30, 1872.....	4,387	2,873	565	8,947
From May 1, 1872, to April 30, 1873.....	4,326	3,304	660	7,526
From May 1, 1873, to April 30, 1874.....	4,250	3,201	804	9,272
From May 1, 1874, to April 30, 1875.....	4,652	3,424	756	8,732
From May 1, 1875, to April 30, 1876.....	4,434	3,180	689	9,413
From May 1, 1876, to April 30, 1877.....	4,713	3,580	663	8,526
From May 1, 1877, to April 30, 1878.. ..	5,068	4,034	604	9,658
From May 1, 1878, to April 30, 1879.....	5,285	4,323	734	10,419
From May 1, 1879, to April 30, 1880	5,444	3,995	505	10,309
From May 1, 1880, to April 30, 1881.....	5,781	4,418	553	10,605
From May 1, 1881, to April 30, 1882.....	5,842	4,107	567	12,035
From May 1, 1882, to April 30, 1883.....	5,991	4,423	666	12,174
From May 1, 1883, to April 30, 1884.....	6,152	4,780	531	14,241
From May 1, 1884, to April 30, 1885.....	6,072	4,831	676	12,005
<i>Carried forward.....</i>	89,551	66,508	11,441	185,199

<i>Net cost to the City for maintaining Hospital</i>		
<i>proper</i>		\$184,579 80

The foregoing table of disbursements shows that the total expenditures by the Hospital Department during the fiscal year February 1, 1893, to January 31, 1894, inclusive, were \$266,703.13. This sum was divided among the three departments as follows: For the hospital proper and Epidemic Hospital, \$252,271.51; for maintaining the out-patient departments, \$5,335.91; for maintaining the Convalescent Home, \$9,095.71.

The expenditures for the hospital were partly for ordinary maintenance and partly for permanent improvements. There was expended for the alteration and reconstruction of the entrance office, \$232.03; for additions and alterations to kitchen, \$5,833.18; for furnishing new stable, \$908.02; for two new ambulances and one new wagonette, \$1,498; for expenses incident to our exhibit at World's Fair, \$1,945.46; for claims awarded by City Council Committee, \$400; for furnishing Epidemic Hospital, \$535.44; for erecting fences on East Chester Park and Albany Street, \$461.05; for expenses incurred in card cataloguing medical and surgical records, etc., \$675.16. There has also been expended for investigating the settlement of patients the sum of \$1,701.80. None of the above items should be included in the cost of the care and treatment of patients in the wards. These expenditures make a total of \$14,190.14, which, deducted from the gross expenditures of the hospital proper, leaves \$238,081.37 for current expenses. There should also be added the difference in the stock at the beginning and close of the year, making \$240,584.95 as the actual cost of maintenance for the year ending January 31, 1894. This sum was expended upon the care of 8,763

patients in the wards, for 166,939 days' board, or 23,848 weeks, and makes an average weekly cost of \$10.09 per hospital patient of all classes, against \$10.19 for the previous year. The total cost of maintenance and the weekly cost per patient, \$10.09, represent the items of hospital statistics usually given in the hospital finances.

There has been collected and paid into the city treasury during the year \$54,309.24 collected on account of the board of all classes of paying patients, as follows :

From State cases	\$32,400.52
From town and city cases	8,266.00
From private patients	13,642.72
	<hr/>
Total	\$54,309.24

There has been received \$1,550 interest from trust funds for the support of free beds, and \$145.91 from the sale of old materials. These sums, amounting to \$56,005.15, were paid in cash to the city treasury, and should be credited to the appropriation received. This reduces the net cost to the city for the Hospital Department for all purposes during the fiscal year to the sum of \$184,579.80.

The expenditure upon 15,592 out-patients has been \$5,335.91.

The total expenditures upon the Convalescent Home have been \$9,095.71, from which should be deducted \$1,730.68 assessments for sewer and sidewalks, leaving \$7,365.03 as the cost for maintaining the Home. The benefits of the Home have been given to 452 persons, who have received in all 9,191 days' board, or 1,313 weeks, at a weekly average cost of \$5.60 per patient.

Statistics of the number of out-patients, the number of their visits, the rates of mortality, the work of the ambulances, the occupation, nativity, ages, civil condition, and physical condition of patients when discharged, are elsewhere tabulated, and may prove of interest in connection with hospital data.

The maximum number of patients on any one day was 549 against 515 last year; the minimum number, 390 against 349 last year; the daily average during the year was $457\frac{34}{100}$ against $433\frac{13}{100}$ last year, being 24 more. The average length of stay was 19.05 days against 19.24 last year. The number of accident cases received was 1,495, against 1,459 last year.

The total number of deaths from February 1, 1893, to January 31, 1894, was 1,153.

Of the deaths, there occurred within forty-

eight hours of admission	447 or .051%
From diphtheria alone	203 or .023%
From all other causes	503 or .057%
<hr/>	
Total of deaths	1,153 or .131%

the rate of mortality for the year ending January 31, 1894. The percentage of deaths given is for the total number of patients treated in the hospital.

Of all patients admitted, 447 died within forty-eight hours after admission, which indicates that they were brought to the hospital in a dying condition, and medical aid could not change the result. It will further be noticed that this number nearly equals those who died from all other causes, except diphtheria.

During the year 8,763 patients have been treated in the wards, 15,592 as out-patients, and 452 at the Convalescent Home—a total of 24,807 who have received the benefits of the hospital in all departments.

During the year 10,803 persons applied for admission. Of this number 8,292 were admitted and 2,511 were rejected, the latter number being 337 more than last year. The number rejected was 23% of all persons applying. Of the number rejected, 357 were referred to the various out-patient departments; most of these cases were in every way suitable to receive relief in these departments, without the necessity of admitting them to the wards. Undoubtedly some of these could have received better care and attention

if admitted to the wards, but the crowded condition of the hospital at the times when such persons applied made their admission impossible. Among the number examined were 493 who were at the time rejected for want of accommodations, but 65 were received within three days, leaving 428 persons rejected solely for want of proper accommodations. There were 235 rejected, who, though proper cases to receive treatment in the wards, were not suffering too seriously to be denied admission, being either non-residents or had no claim upon the city of Boston. There were 118 cases rejected because they more properly belonged in the hospital of an almshouse than in a general hospital. Of the number who applied, 409 changed their minds or voluntarily withdrew for various reasons. The other causes of rejection appear in the table of applicants not admitted during the year, on page 32.

The capacity of the hospital last year was 468 beds. This has been increased during the last part of the hospital year, by the use of the Epidemic Hospital on Swett street for the treatment of scarlet-fever patients. This hospital affords thirty-two beds, and has been maintained as an adjunct ward to the hospital proper. Therefore the total capacity of the hospital for the first part of the year may be considered as being 468 beds, and for the last part of the year, 500 beds. The daily average has been 457, as against 433 last year. The following tabular form is given, showing comparative statistics as to the number of applicants for admission, patients treated, maximum and minimum numbers, on any one day, daily average in the wards, and other statistics relating to the hospital, during the past eight years.

Patients carried in ambulances			1,044	1,321	1,457	1,925	2,207	2,735
Number of deaths	603	623	772	804	752	761	958	1,153
Visits of out-patients	41,451	48,524	46,083	49,593	50,123	51,395	54,658	57,758
Number of patients rejected.	1,040	1,105	1,531	2,117	1,628	2,770	2,174	2,511

This table clearly shows a steady and marked increase not only of the work, but of the demands of the public. The amount of ambulance work has greatly increased, the number of persons conveyed being 2,735, or twice as many as three years ago. The number of accident cases received was 1,495. The daily average in the wards was 457, which is an increase of twenty-four in excess of last year, and seventy-three more than three years ago. On the contrary, the average stay of patients has considerably diminished, being now only 19.05 days. This average would have been still further reduced, if there had not been included the large number of scarlet-fever patients of whom many remained in the infectious wards for four, five, and six weeks during convalescence, on account of desquamation incident to this disease.

It will be observed that the maximum number of beds is 500, and the maximum number of patients on one day was 549.

This excessively crowded condition of the wards was for a brief time only, and was due, in a large measure, to the great number of children in the contagious service and walking cases in the surgical service. We were compelled to provide for the latter class in dormitories, the same as during the previous year. Indeed, it may be said that all parts of the hospital were full, and as a rule, nearly all the wards at certain times during the year had an excess of patients. The excess was so scattered, that with one or two exceptions, the wards did not seem crowded, yet the conditions hampered the efficient work of the nursing service. It is a question whether this condition does not, in a measure, account for the increased mortality in the infectious wards.

The contagious service has been crowded throughout the year, the total number of patients who were under treatment being 890. Of this number, 427 had diphtheria, 265 had scarlet fever, 103 scarlet fever and diphtheria, and the remaining number various complications, classified in the tables of statistics. During the entire year the scarlet-fever ward has been full, and during the early fall it was excessively crowded. We were at times compelled to reject a large number of applicants. This emergency was met by using the Epidemic Hospital, loaned to us by the Board of Health. This hospital has thirty-two beds, and although in many ways inconvenient, it has relieved us of our crowded condition. When this annex was first opened, all the convalescent scarlet-fever cases were transferred to it. But during the last winter there has been a very large number of scarlet-fever cases admitted, which were found to have both scarlet fever and diphtheria. This has compelled us to use one ward for diphtheria uncomplicated, the Epidemic Hospital for scarlet fever uncomplicated, and Ward A for cases of scarlet fever and diphtheria. There has been an unusual number of cases of diphtheria or scarlet fever which had measles, whooping-cough, or some other complication of infectious disease. This has rendered the proper management and treatment of such complications extremely difficult. The administration has been alive to the dangers

incident to such complications, and has used every endeavor to classify cases and to limit the spread of infection, but all the contagious wards have been so full that it has been difficult to maintain a proper quarantine between the cases. The number of nurses and house-officers has been considerably increased, owing to the excess of work in this division. We regret to say that a number of nurses and house-officers have contracted either scarlet fever or diphtheria. This infection was largely due to the system of rotation of house staff and nurses doing service in this division.

The new hospital for contagious diseases, now under construction, cannot be completed too soon to relieve this hospital of the dilemma that has existed for some time, and which has been so clearly and constantly pointed out in these reports during the last four or five years; namely, that wards for the reception and treatment of infectious diseases from without should never be maintained in connection with a general hospital.

The various out-patient departments have cared for an increased number of patients, the number of visits being 3,100 in excess of last year. The appointment of an additional number of externes has conduced greatly to the convenience and greater thoroughness of the work done in these departments. All the out-patient departments have treated an increased number. There is nothing especially deserving of comment in these departments except that they have rendered the most efficient service possible under the circumstances.

It has been the policy of the administration to keep all buildings in the best condition of repair possible with the means at command, and it has also endeavored to make radical permanent improvements wherever they seemed most demanded. Last year the entrance office was reconstructed, as was indicated in our last report. This has been completed during the present year, at a total expense of \$4,411.95. These alterations have proved very advantageous, and business has been much more easily despatched than during previous years. Radical repairs have been

made in the centre kitchen and the cool-rooms adjacent. The old ice-room and cool-rooms for meat, milk, and supplies were so decayed as to make it inexpedient to attempt any repairs. They were torn down, reconstructed, and enlarged on a new basis. The present arrangement gives us a store-room for twenty-six tons of ice, so arranged that it cools a large room for fresh meat, another for butter, eggs, and milk, another for cooked food, and one for vegetables and for the bakery. A spacious room has also been provided for the cutting of meat, and similar work incident to the central kitchen of a large institution. Additional rooms and conveniences were provided for grocery closets, and also for a large scullery. These improvements have cost \$5,833.18, and have proved a most economical and useful arrangement.

Various other repairs have been carried out: for boilers and heating-apparatus, \$3,070.51; for new plumbing, \$1,376.83; for laundry, \$633.72. A new sterilizing room with sterilizers has been arranged in connection with the operating amphitheatre, for the purpose of sterilizing instruments, dressings, and other necessities for operations. This has proved a great convenience, as well as efficient and safe from the surgical standpoint. New linen-closets have been constructed in two wards, and the Medical Supervisor's office has been rearranged and fitted up for better despatch in the admission and discharge of medical patients, as well as the executive work in that service.

In accordance with our previous policy, Wards F, G, K, and L were in turn vacated, and thoroughly repaired in all parts, including re-kalsomining, painting, re-finishing floors. Every part of the wards and their furniture have been carefully put in as sterile a condition as possible.

The new ambulance stable, which was just completed at the time of our last report, has been furnished in a first-class manner. Two new horses and two ambulances have been purchased for ambulance work, also a wagonette for the carrying of patients from the hospital to the Convalescent Home. These additions have cost \$2,948. The

increased accommodations have proved of great advantage in handling the larger amount of work demanded in the transportation of patients. The chambers for stable-men and other male employees have afforded the additional relief so long needed. The heating-apparatus was not successful, and it is recommended that it be radically changed during the coming season.

The Convalescent Home, which has now been used for three years, has been more than ever a gratifying success.

Number of patients in Home at the beginning of the year	27
Admitted during the year	425
Total treated during the year	452
Discharged during the year	422
Died during the year	0
—	
Total discharged	422
Number remaining in Home January 31, 1894	30
Largest number on any one day	33
Smallest number on any one day	13
Daily average number of patients	24
Average length of stay in days	20 $\frac{1}{3}$

The above table indicates that there has been an increased daily average and a diminished length of stay. The weekly cost per patient this year has been \$5.60, as against \$6.50 during the previous year. The management of the Home has been excellent. No complaints have arisen from any source, and the expressions of gratitude from many who have received its benefits have been cordial and frequent. The patients more and more appreciate the benefits of the Home, and are more ready to avail themselves of it, if they return to the Hospital for treatment a second time. The Home has been especially useful this year, as a place in which our nurses may convalesce, the number unfortunately being much larger this year than during any previous year.

The Training School for Nurses has finished its sixteenth year. The changes in the school during the last year have been as follows :

SUMMARY FROM FEBRUARY 1, 1893, TO FEBRUARY 1, 1894.

February 1, 1893, the number of nurses was 92

During the year nurses have left as follows :

Have been graduated	40
Assistant Superintendent of Nurses resigned	1
Night Superintendent transferred to Assistant Superintendent of Nurses	1
Head Nurse promoted to Assistant Superintendent of Nurses	1
Head Nurse promoted to Night Superintendent of Nurses	1
Graduate Head Nurses resigned	4
Pupils dropped for various causes (4 having died *)	12
Probationers not accepted	12
	—
Total vacancies	72
	—
Number remaining	20
Graduates returned :	
Matron of Epidemic Hospital	1
Head Nurses	9
Post-graduate nurses	2
Graduate special nurses	3
	— 15
Probationers admitted	57
Pupil nurses re-admitted	4
	— 76
	—
Remaining January 31, 1894	96

* 1 empyema, 1 typhoid fever, 1 septic diphtheria, 1 scarlet fever and diphtheria.

Nurses connected with the school February 1, 1894 :

Assistant Superintendents of Nurses	2
Night Superintendent of Nurses	1
Graduate Head Nurses	10
Senior pupils acting Head Nurses	7
Senior Assistant Nurses	28
Junior Assistant Nurses	29
Probation Nurses	12
Post-graduate Nurses	2
Graduate Special Nurses	2
Graduates, Epidemic Hospital and Convalescent Home,	3
	—
Total	96

The Training School has graduated during the year forty nurses, a larger number than any previous year; and since the formation of the school 341 have been graduated. The Superintendent of Nurses and her assistants have given 235 class recitations in the manuals and text-books. Twenty-eight lectures have been given to the school on Friday afternoons by the members of the Medical and Surgical Staff. The course of instruction will be found on p. 160 and the distribution of studies on p. 161. The general library of the Nurses' Home has increased to 665 volumes. The library of text-books has diminished in number from 298 to 221. This has been caused by weeding out a large number of books which were placed in the library several years ago, and are now either superseded or out of date. Other text-books of recent date have been added, so that while the number of books in the library is less, the value of the library has been much enhanced. The course of instruction in cooking has been given by Mrs. Dearborn, in the same way as during the last two or three years. The course in *massage*, given by Mrs. Bertha Raemisch, has been more satisfactory even than last year. The statistics of the school show that there has been an increase of four nurses, the total number now being 96. The changes have been more frequent than during any previous year. The number of

graduates has been larger. More probationers have been rejected, and a larger number of pupils, for various reasons, have been dropped. We have had no trouble in filling these vacancies from the large number of applicants.

The second nurses' home, the "Nightingale," is already fully occupied, but it is only a makeshift. The two homes are not enough to accommodate the total number of nurses, and some still remain housed in various parts of the hospital, and while the rooms are comfortable and healthful, they do not have the advantages of a special building. The Superintendent still presses this as one of the most urgent needs for the consideration of the Trustees. This is all the more imperative, because the new wards soon to be constructed will obviously compel a larger number of nurses, for whom no accommodation is now in sight.

The Nurses' Club has continued its monthly meetings during the greater part of the hospital year. The meetings have been largely attended, the non-resident graduates in some cases exceeding the number of resident nurses.

The Club has regular meetings on the first Tuesday evening of each month, and the following are among the topics that have been considered or discussed :

"The Requisite Mental Preparation for a Nurse before, during, and after her Training." Three papers by graduate nurses.

"Nursing in Contagious Diseases : (a) Isolation of patient and nurse. (b) Disinfection as practised in private nursing. (c) Quarantine of private nurses." Three papers by graduate nurses.

Address, by Prof. W. T. Councilman, on "The Scientific Side of Hospital Work."

"Missionary Nursing." A talk by Miss Linda Richards in regard to the work in Japan.

"Nurses' Uniforms." Papers read by several resident and non-resident nurses ; and discussion.

"Christmas Reunion at the Nurses' Home."

"Methods of Training in Vogue in Different Training Schools."

"The Ethics of Nursing: (a) Patient and Nurse. (b) Doctor and Nurse. (c) Friends and Nurse. (d) Nurse and Nurse. (e) School and Nurse." Five papers by graduate nurses.

The meetings have proved of great interest, and it is especially gratifying to see the large number of graduate nurses who return both for instruction and social intercourse. The club is practically an alumni association, the benefits of which are extended to nurses already in training.

There has been an unusual amount of sickness among the nurses during the year, especially among those who have been assigned in rotation to the infectious wards. This fact is mentioned with the greatest regret, because the devotion and unfaltering spirit with which the nurses have discharged their duties, not only in the hospital at large, but especially in this service, makes the matter all the more deplorable. This is due in part to the fact that there has been a number of nurses who were not thoroughly robust on coming to the hospital, and also, as is believed, because they were more receptive of infection than usual. One nurse died of scarlet fever and diphtheria, one of empyema, one of typhoid fever, and one of septic diphtheria. The Superintendent desires to express his great respect for the character and devotion shown by these nurses who were stricken with sickness while in the discharge of duties attendant with risk, and even at the cost of their lives. It is recommended that a suitable tablet be placed in the new chapel, which shall record the names not only of nurses, but also of various members of the Medical and Surgical Staff, as well as house officers, who may have the misfortune to die under circumstances similar to those above recorded.

The work of the year has been exacting, demanding much hard work and calling for the best efforts of every one. I desire to express my appreciation of the part discharged by the nurses in the Training School. No factor in the

treatment and recovery of patients is more vital than that rendered by the nursing service of a large general hospital.

During the year, under the instruction of the Trustees, the Superintendent prepared an exhibit for the World's Columbian Exposition held at Chicago. This exhibit consisted of 190 photographs, each seven inches by eleven inches. These photographs illustrated both the exterior and interior of the hospital buildings. There were sample views from all the wards and out-patient departments, as well as of the industrial and domestic side of the hospital service, and the Nurses' Homes. Views also were given of special apparatus, utensils, appliances and general conveniences for our hospital work. A large number of architectural drawings were included, showing the elevations of the hospital construction and the system of heating and ventilation. These plans included one large one, showing the first floor of all the buildings of the hospital, comprising four "city blocks." Considerable attention was given to the making of models, furniture, and special appliances, most of them being made one-third the actual size. There were arranged in show-cases, samples of the materials used for the various surgical dressings and appliances connected therewith. Miniature models of appliances and dressings were included; also glass jars containing various plain and medicated dressings, as well as special operating-room utensils, with special reference to surgery.

The work of the Training School was illustrated by an exhibition of the text-books used, samples of the ward order books and reports and various charts, all being actual examples of daily work. Two books were made, one containing all the printed forms and pages from all books used in hospital work; the other illustrated the work of the training school. The exhibit, in the main, was extremely satisfactory, and reports that came to us from the Exposition indicate that it was seen by large numbers of people, especially hospital workers, and very highly commended. The ex-

hibit received a medal for its special excellence in illustrating hospital work, the individual juror being Mr. Ernest Hart, editor of the "British Medical Journal." The exhibit has done much to illustrate the work of a large metropolitan hospital and to bring this hospital into notice.

At the beginning of the year there were 2,743 bound volumes in the Medical Library. Eighty-nine have been added during the year, making a total of 2,832. The number of pamphlets received during the year has been 345, and the number of medical periodicals, 498. It is not the intention to make this library an aggregation of all sorts and kinds of medical books, but to make it a working library for hospital physicians. There is no attempt to make complete files of all the medical journals, but only the leading and most useful ones. Nearly all the books are recent publications, and of importance.

The Medical Library has become the medical headquarters for the staff while at the hospital, and affords the best of accommodations not only for study and work, but also as an assembly room for the staff for general purposes, as well as for the examination of house-officers, nurses, and various society meetings of the hospital.

The card catalogue of the clinical case books has progressed this year, until we now have 72,394 cards of references and cross references. Nearly all the clinical records of the hospital for the past twelve years are now card catalogued. The various other rooms have effectively indicated the necessity for their creation, especially the bacteriological laboratory on the lower floor.

My thanks are due the gentlemen of the Medical and Surgical Staff for their advice and coöperation, at all times valuable and appreciated.

I recognize and gratefully acknowledge the coöperation and support given me by the various heads of departments, by the house staff, as well as by male nurses and employees generally.

In presenting my fifteenth annual report to the Trustees,

I desire to most cordially offer them my warmest thanks for their support and guidance in enabling me to execute their plans. In no year during my connection with the hospital have I had more reason to be thankful than during the one just passed.

I have the honor to be

Your obedient servant,

G. H. M. ROWE, M.D.,

Superintendent and Resident Physician.

BEQUESTS.

GOODNOW FUND. — ELISHA GOODNOW, of South Boston, who died in the year 1851, bequeathed to the city "all the rest and residue of my estate, real and personal, not otherwise disposed of," for the purpose of establishing, in the Eleventh or Twelfth Wards of the city, a hospital for the sick; one-half of said funds to be applied for the establishment and maintenance of free beds, which should always be at the disposal and under the control of the officers of the government of said hospital for the time being. Under this will the city came into possession of \$26,000 for the support of free beds.

NICHOLS FUND. — LAWRENCE NICHOLS, who died in September, 1862, made a bequest to the city of the sum of \$2,000 for "the establishment and endowment of a city hospital."

NORCROSS FUND. — 1868, January 1. The Trustees received the sum of two thousand dollars from Hon. OTIS NORCROSS, as the foundation of a fund for the benefit of patients leaving the hospital poor and destitute of proper clothing.

Balance on hand, February 1, 1893	\$343 85
Received interest	100 00
	\$443 85
Expended	114 64
	\$329 21

BALL FUND. — 1870, April 1. The Trustees received from the estate of Mr. JONAS BALL the sum of one thousand

dollars for the same purpose, and under the same restrictions, as the Norcross Fund.

The "Act to incorporate the Trustees of the City Hospitals of the City of Boston" (see Acts and Resolves, 1880, Chap. 174, approved April 7) provides that "money received by it shall be invested by the Treasurer of the city of Boston under the direction of the Finance Committee of said City: and all securities belonging to said corporation shall be placed in the custody of said Treasurer; provided always that both the principal and income thereof shall be appropriated according to the terms of the donation, devise, or bequest, under the direction of said corporations."

HOUSE RULES.

WITH RULES FOR ADMISSION, DISCHARGES, AND GOVERNMENT OF PATIENTS; ALSO RULES FOR VISITORS.

HOUSE RULES.

All employés shall be in their respective places during the hours of duty.

The doors and gates of the Hospital will be closed at 10 o'clock P.M., at which time all inmates shall be quiet, and all not on duty shall be in their rooms.

A record shall be kept of all persons entering the Hospital between the hours of 10 P.M. and 7.30 A.M.

No employés shall be absent from the Hospital, except as permitted by special rules or by the Superintendent.

The use of tobacco, wine, and intoxicating liquors is prohibited within the Hospital, unless prescribed by a physician or surgeon.

All profane and obscene language, loud talking, and incivility are prohibited.

All employés shall observe such further rules and directions for their conduct as may from time to time be established.

ADMISSION OF PATIENTS.

Applications for admission of patients may be made at the Hospital on each day of the week, Sunday excepted, between 9 and 12 o'clock A.M.

Whenever able the patient shall apply in person. When not able to apply in person, on application made by a friend the patient may be visited at his residence.

Any Trustee, or either of the physicians or surgeons in attendance, may, in case of emergency, send a patient in the first instance to the Hospital by written permit.

Persons accidentally wounded, or otherwise disabled or injured, shall be received at all hours.

Permits for admission shall be subject to the approval of

the Visiting Committee, and the committee shall, except as above, have power at any time to require the Superintendent to report to them the names of applicants before admitting them, and may dismiss any patient whom they think improperly admitted, or change the terms of admission.

Patients may be admitted by the Trustees to the privileges of the Hospital at such rates of board as the Trustees may, from time to time, determine, payment for such board being secured by the friends of the patients or by the authorities of the city or town to which the patients belong.

Whenever, in the opinion of the Trustees, the circumstances of the patient will warrant it, the whole or part of the board shall be paid. If separate apartments or articles not usually furnished at the Hospital are provided, such payment shall be made therefor as the Trustees shall deem reasonable.

No person having acute venereal disease or alcoholism shall be admitted except as a paying patient.

No person shall be admitted to the Hospital whose case is judged to be incurable, unless there be urgent symptoms which are deemed capable of being relieved.

DISCHARGE OF PATIENTS.

Patients shall be discharged by the Superintendent as before provided.

Patients discharged on the recommendation of the physicians or surgeons shall be provided with a certificate, stating their condition at the time of discharge, whether cured, relieved, or not relieved, which certificate shall be signed by the Superintendent.

Whenever a patient is removed from the Hospital without the approval of the Superintendent, a written statement to that effect shall be required from any person assuming the responsibility of the removal.

In case of the decease of a patient the Superintendent shall sign the death certificate. He shall also state the time and cause of death, the disposition made of the body, whether

delivered to friends or buried from the Hospital, in which latter case he shall mention the place of interment.

The body of any person dying at the Hospital shall not be delivered without a written receipt from the parties taking the same.

GOVERNMENT OF PATIENTS.

Patients shall implicitly observe all the rules of the Hospital.

Patients shall be in their proper places in the wards during the visits of the physicians and surgeons, between 2 and 3 o'clock on visiting days, and always by 7.30 o'clock P.M., unless specially excused by the Superintendent.

Such free patients as are able shall assist in nursing, and in such other services as may be reasonably required of them.

No patient shall leave the Hospital grounds without a pass from the Superintendent, nor his ward without the consent of the nurse in charge.

No patient shall purchase, or cause to be purchased for him, any article of food whatsoever, nor any other article, without the consent of the Superintendent.

Profane and obscene language, loud talking, and incivility are prohibited.

Patients may be visited by clergymen of their own selection, and any wish for the performance of any particular religious rite shall be indulged when practicable.

Complaints, for whatever cause, may be made to the Superintendent or Visiting Committee, and when reasonable shall be by them reported to the Trustees.

VISITORS.

No person shall visit any part of the premises, except on business, or at such time as may be fixed for the reception of visitors, without the permission of the Superintendent, or of some one of the Trustees.

On Monday, Tuesday, Thursday, and Saturday of each week, from 2 to 3 o'clock P.M., friends may be permitted to visit patients, though no patient shall receive more than

two visitors on the same day. In all cases, however, the Trustees or Superintendent may exercise discretionary powers as to excluding or admitting visitors.

Patients who are considered dangerously ill are permitted to see friends in reasonable numbers, and at reasonable hours during the day, but friends visiting such patients should not remain later than 8 o'clock P.M., and are not permitted to remain all night unless it seems probable that such patients will not live through the night.

All visitors shall leave the Hospital when the bell rings at the expiration of the visiting hour.

No visitor shall take any meal in the Hospital, or pass the night therein, without permission from the Superintendent or one of the Trustees.

No visitor shall be allowed to give any article of food or drink to a patient, unless by permission of the nurse; and any article sent to a patient shall be left with the Superintendent.

RULES OF THE CONVALESCENT HOME.

The department of The Boston City Hospital located at No. 2150 Dorchester avenue, near Milton Lower Mills in Dorchester, is known as the Convalescent Home, and shall receive such *patients recovering from acute diseases as shall be transferred to it from the main Hospital for treatment during convalescence.*

The Superintendent of the Hospital shall, under the direction of the Trustees, have the control and management of the Convalescent Home, in the same manner as of other departments of the Hospital.

The Superintendent shall appoint, subject to the approval of the Trustees, a Matron, and shall employ under their direction, such further assistants as may be necessary for the proper conduct and service of the Home.

The Matron, under the direction of the Superintendent, shall have the immediate charge of the Home, and the control of all nurses and other employés and patients. She shall reside at the Home.

ADMISSION AND DISCHARGE OF PATIENTS.

Patients shall be transferred from the Hospital to the Convalescent Home by the Superintendent, subject to the direction of the Trustees, on recommendation of the Visiting Staff or otherwise; and the Superintendent shall keep a record of all patients so transferred. When patients are so transferred they shall be considered as discharged from the Hospital. Payment of their board shall be required, the same as of patients at the Hospital, but separate apartments shall not be furnished at the Home. No person whose case is judged to be incurable shall be admitted to the Home.

Patients shall not be allowed to remain at the Home for a longer period than two weeks, except on recommendation of the physicians, or for special cause approved in writing by

the Superintendent. All patients remaining beyond the period of four weeks shall be forthwith reported to the Visiting Committee, and to the Trustees at their subsequent regular meeting.

Patients when discharged shall be provided with a certificate, stating the date of admission and discharge, and their condition when leaving the Home.

GOVERNMENT OF PATIENTS.

Patients shall implicitly observe all rules established for the government of the Home.

Patients shall rise at 7 o'clock in winter, and at 6.30 in the summer. Breakfast shall be served at 7.30 o'clock in the winter, and at 7 o'clock in the summer; dinner at 12 o'clock, and supper at 5.30 o'clock. Patients shall retire at 8 o'clock during the winter, and at 8.30 o'clock during the summer, and shall be quiet during night hours.

Such patients as are, in the opinion of the Matron, able, shall assist in light domestic work, and perform such other services as may be reasonably required of them, subject to the approval of the Superintendent or physicians.

No patient shall leave the house without permission, nor shall depart from the grounds of the Home without a pass from the Matron.

No patients shall purchase, or cause to be purchased for themselves, any article of food whatsoever, nor any other article, without the consent of the Superintendent or Matron.

Patients shall not talk to one another of their ailments.

Improper language, loud talking, and incivility are prohibited.

Patients may be visited by clergymen of their own selection, and any wish for the performance of a particular religious rite shall be indulged when practicable.

Complaints, from whatever cause, may be made to the Matron, the Superintendent, or Visiting Committee, and if of sufficient importance shall be reported to the Trustees.

VISITORS.

Friends may be permitted to visit patients on week-days, between three and four o'clock in the afternoon. In all cases the Trustees, Superintendent, and Matron may exercise discretionary powers as to excluding or admitting visitors.

Visitors shall leave the Home and grounds at the expiration of the visiting hour, and shall visit no part of the Home or grounds other than the reception-room, except by permission from the proper authority.

No person shall give any article of food or drink to a patient, unless by permission of the Matron.

THE BOSTON CITY HOSPITAL.

TRAINING SCHOOL FOR NURSES.

THE Trustees of The Boston City Hospital, in 1878, established a Training School for Nurses, in order to give to women desirous of becoming professional nurses a systematic course of training and practice.

The Training School is controlled by the Trustees of the Hospital, like all other departments of the Hospital service. The Superintendent of the Hospital has the general supervision of all matters relating to the school, its course of work and study, lectures and discipline. The Superintendent of Nurses has the immediate charge of all the nursing in the Hospital, of all persons employed in the wards, and also the instruction and management of the nurses in the Training School. All female nurses in the Hospital must be connected with the school.

The course requires two years, and includes general medical and surgical nursing, together with ophthalmic, aural, and gynaecological nursing, and also the nursing of contagious diseases. Maternity nursing is theoretically taught, but there are no maternity wards connected with the Hospital. Those wishing to receive such a course of instruction should apply to the Superintendent of The Boston City Hospital.

The most desirable age for candidates is from twenty-three to thirty-five years. They must be of sound health, and should send with their application a certificate from a physician, certifying to the fact. They should also send a brief personal history, and give the names and addresses of three responsible persons not of their own kin who know of their good character and capabilities. Upon the recommendation

of the Superintendent and the approval of the Trustees, they will be received for two months on probation. The fitness of candidates for the training and work, and the propriety of retaining or dismissing them, will be determined by the authorities in charge of the school, under the direction of the Trustees.

At the end of the first month, candidates, if considered satisfactory, are permitted to wear the cap and enter upon the regular course of training, but such candidates are not permitted to join the school formally until the end of the second month, when, if accepted, they sign an agreement to complete the prescribed course of two years, and to conform to all rules. At the end of the first six months the record and work of each pupil are carefully scrutinized as to her fitness to make a good nurse, and the right is reserved by the authorities of the Hospital to terminate then, or any time, the connection of any pupil or nurse with the school, for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

During the first two months pupils are called Probationers, for the remainder of the first year, Junior Nurses, and during the second year, Senior Nurses. Nurses who remain in the Hospital after graduation become Head Nurses.

The nurses in the Training School (including Probationers) reside at the two Nurses' Homes connected with the Hospital, which have rooms for ninety nurses. The houses afford home-like surroundings, and have the best of conditions necessary to good health and personal hygiene.

The Superintendent of Nurses has the immediate charge of the Training School, under the authority of the Superintendent of the Hospital and of the Trustees, and the nurses are subject to the rules of the Hospital, like any other service.

The instruction includes the general care of the sick, the making of beds, changing bed and body linen, managing of helpless patients in bed, etc.; giving baths, keeping patients warm or cool, prevention and dressing of bed-sores, and proper management of the patient under various conditions, with different diseases or injuries; the making and

applying of bandages and rollers, preparation of splints, application and management of surgical apparatus, applying of fomentations and poultices, the dressing of burns, ulcers, and wounds, and other minor dressings, cupping, leeching, and subsequent treatment, the administering of enemas, and use of the female catheter.

Nurses are taught how to act in the various emergencies occurring in hospital and private nursing, as well as in the accidents of ordinary life. They are also given lessons in *massage* by a professional instructor. There is a systematic course of training in cookery for the sick, the serving of food and delicacies in the proper manner, and the feeding of helpless patients, or those who resist food.

Instruction is also given in the best practical methods of supplying fresh air, of warming and ventilating sick-rooms in a proper manner, and the proper care of sick-rooms for the best good and comfort of the patient; in keeping all utensils and appliances perfectly clean and disinfected; in making accurate observations of the pulse, temperature, respiration, expectorations, the secretions, state of the skin, and eruptions; of mental condition as to delirium, stupor, shock, etc.; of the condition as to sleep, appetite, effects of diet or of stimulants and medicines; the behavior of wounds and the after-treatment in surgical operations; and in the managing of convalescents. Nurses are taught the administering of medicines and the application of external remedies, how to take notes on cases, the making up of the nurse's record, and the reports to the attending doctor.

The course of training includes a fixed course of instruction during the two years from manuals and text-books, mainly given by the Superintendent of Nurses, the Assistant Superintendent of Nurses, and graduate head nurses. Lectures and demonstrations, chiefly upon practical points, are given at stated times by the medical and surgical staff of the Hospital. While the instruction by the manuals, text-books, lectures, demonstrations, quizzes, and models is considerable, the main reliance is upon accurate daily drill in the wards, operating rooms, and other departments of the

Hospital. Examinations, both written and oral, are held from time to time by the authorities of the school and by the Hospital staff, and nurses cannot pass to graduation unless attaining, on critical marking, at least seventy per cent.

The pupils are employed as assistant nurses in the wards, operating rooms, and out-patient departments of the Hospital. They are given six months' training in medical wards, and six months' in surgical wards; the remainder of the time to be in such wards or departments as the management may appoint.

Probationers are not paid during their first month, but for the remaining months of the junior year they receive ten dollars (\$10) per month, and for the senior year, fourteen dollars (\$14) per month, to pay for the expenses of their uniform, personal clothing, and other minor requirements. This sum is in nowise intended as wages, it being considered that their education during this time is a full equivalent for their services. When the full term of two years is completed the nurses receive, if they pass all the examinations and are otherwise satisfactory, a diploma certifying to the regular course of training and practice, and are then permitted to wear the graduates' badge of the school.

The majority of graduates engage in private nursing, but some are invited to remain in the service of the Hospital as head nurses, and receive twenty dollars (\$20), twenty-five dollars (\$25), thirty dollars (\$30), thirty-five dollars (\$35), per month, with opportunities of promotion. Graduate head nurses who prefer to remain in Hospital work, or return after a term of private nursing, are given post-graduate instructions in ward management, hospital housekeeping, and minor administration.

The school year has no fixed date, but accepted candidates may enter whenever vacancies occur. They are, as a rule, received in the order of acceptance, but those desiring to enter with less delay can generally anticipate a fixed date by placing themselves on the emergency list. When coming to the Hospital they should bring with them the following

articles: Three gingham or calico dresses, made plainly; eight large white aprons, made of bleached cotton, with bibs, plain at the top and gathered slightly at the bottom, two buttons on the band, with hem at bottom four inches in depth; two bags for soiled clothes; one pair of scissors, a pin ball, and a napkin-ring; a good supply of plain under-clothing — every article to be distinctly marked with indelible ink, with the owner's name. Twenty-one pieces are allowed for the laundry each week.

Nurses must bring suitable outer-garments for stormy weather, and they are required to wear noiseless broad-toed and flat-heeled boots. If the teeth are out of order in any way, they must receive attention before coming for the probationary month. Nurses are required to wear the Training School uniform after they join the school. Material for dresses will be sold at cost price; caps are furnished free of charge.

Hours of duty for day nurses are from 7 A.M. to 8 P.M.; for night nurses from 8 P.M. to 7 A.M. No nurse is required to do both day and night duty on the same day, except in rare emergencies. Each nurse on day duty is allowed one hour after 2 o'clock P.M., for rest and recreation, one-half day after 2 P.M. each week, and four hours on Sunday. Two weeks' vacation is allowed each year. If nurses are sick they are cared for in the Hospital, but wages are stopped. Nurses on night duty are required to be in bed until 4 P.M. Nurses may be called upon for four months' regular night duty during the two years' training; besides "special cases" to a limited number.

COURSE OF INSTRUCTION.

JUNIOR YEAR.

Manual of Hospital Nurses (1)	<i>Domville.</i>
Manual of Nursing: Medical and Surgical (2)	<i>Humphrey.</i>
Lectures on Fever Nursing (3)	<i>Wilson.</i>
The Care of the Sick	<i>Billroth.</i>
Notes on Surgery for Nurses	<i>Bell.</i>
Handbook of Obstetrical Nursing	<i>Fullerton.</i>
Glossaries, tables, technicals, etc.	<i>Various.</i>
A lecture once a week (for thirty-four weeks) by a member of the Medical and Surgical Staff.	
Critical Reviews on the lectures given by the Medical and Surgical Staff.	
Instructions in the Wards by Head Nurses and Senior Nurses.	

SENIOR YEAR.

Handbook for Hospitals (1)	<i>Woolsey.</i>
Physiology, Anatomy and Hygiene [complete] (2)	<i>Hutchinson.</i>
General Anatomy, including instruction from Charts, Models, and the Skeleton.	
Elementary Materia Medica	<i>Various.</i>
A lecture once a week [for thirty-four weeks] by a member of the Medical and Surgical Staff.	
Practical Instruction in <i>Massage</i> . [Twelve lessons.]	
Practical Instruction in Cooking for the Sick. [Six lessons.]	
Instruction in the Wards by Assistant Superintendent of Nurses, Night Superintendent of Nurses, and Head Nurses.	
Instruction and drill in the etherizing, operating, and recovery rooms by the Assistant Superintendent of the Hospital, the Surgeons, and Operating-room Nurse.

DISTRIBUTION OF STUDIES.

Monday,	2 to 4 P.M.	Senior Nurses, Cooking Class.
	8 P.M.	Head Nurses; hospital administration, ward management, minor executive work, training of Assistant Nurses.
Tuesday,	11 A.M.	Senior Nurses [section], Operating-room.
	2 P.M.	Junior Nurses [5th class], Recitation.
	3.30 P.M.	Junior Nurses [3d class], Recitation.
Wednes.,	2 P.M.	Junior Nurses [section], <i>Massage</i> .
	3 P.M.	Senior Nurses [section], <i>Massage</i> .
	3.30 P.M.	Junior Nurses [4th class], Recitation.
Friday,	11 A.M.	Senior Nurses [section], in Operating-room.
	2 P.M.	Senior Nurses [1st class, 1st Div.], Recitation.
	3 P.M.	Senior Nurses [2d class], Recitation.
	4 P.M.	Lecture to School in Operating Amphitheatre by a member of the Medical and Surgical Staff.
Saturday,	2 P.M.	Junior Nurses [section], <i>Massage</i> .
	3 P.M.	Senior Nurses [section], <i>Massage</i> .

LIST OF LECTURES AND SUBJECTS.

A lecture is given to the Training School on Fridays, at 4 P.M., in the Operating Amphitheatre, by a member of the Medical and Surgical Staff, once a week between September 15 and June 15. The following are among the lectures given :

- Five.* — Surgical Dressings: poultices, washes, fomentations, bandaging, splints, leeches and blisters, enemas, surgical hæmorrhage, etc.
- Three.* — Theory of Wounds: modes of healing, granulations, ulcers, cellulitis, suppuration, sloughs, erysipelas, pyæmia, gangrene, sepsis, etc.
- Three.* — Bacteriology, brief history and general theory: micro-organisms; general distribution in air, water, etc. Elementary consideration of pathogenic and non-pathogenic micro-organisms. Exhibition of apparatus and cultures. Practical points for nurses.
- Two.* — Theory of Sepsis: aseptic treatment, different methods; dressings, with demonstrations and "quiz drill."
- Two.* — Emergencies: hæmorrhage, burns, heat-stroke, fits or seizures, drowning, fractures, immediate treatment of wounds and injuries, foreign

bodies in eye, nose, and ear, poisons, domestic emergencies, and practice of expedients.

- Two.* — Surgical anatomy and landmarks, hæmorrhages, etc.
- One.* — Surgical Operations: care of patient before, during, and after operations; anæsthesia and recovery; accidents, hæmorrhage, shock, especially as in private nursing.
- One.* — Abdominal Surgery; including ovariectomy, herniotomy, operations for abdominal injuries, etc.
- One.* — Fractures: varieties, preparation and care of splints and apparatus for treatment, management of cases, etc.
- Three.* — Medicines: avenues of taking; preparation and doses; classes of internal and external poisons; cautions; hospital formulæ.
- One.* — Nursing in Fevers: theory of fever, symptoms and course of, different plans of treatment, nurses' duties as to symptoms, bed, clothing, secretions, baths, food, and management of cases.
- Two.* — Eruptive fevers, especially diphtheria and scarlet fever; symptoms and course of disease; complications; infection and contagion; management of patient, and surroundings; personal hygiene of nurse in attendance, etc.
- Two.* — Symptomatology in Disease; what and how to observe accurately; vital organs and special symptoms. The model sick-room; temperature, light, ventilation, care of bed, bedding, and clothing, furniture, utensils, disinfection, cleansing, dusting, etc.
- One.* — Contagious Fevers and Epidemics: prevention of contagion, disinfection, care of habitation, etc.
- Three.* — Care of Children in Health and Disease: diet and clothing of infants and children; various infantile diseases.
- Two.* — Physiology of Pregnancy and Labor: delivery, confinement nursing.
- One.* — On Gynæcological Nursing: preparation of patient for examination or operation; operations after treatment, douches, use of catheter, etc. (Demonstrations to sections of senior nurses in Ward S operating-room.)
- One.* — Special Nursing in Nervous Diseases, including the Insane.
- Two.* — Special Nursing in Skin Diseases and Syphilis in the Infant and Adult.
- One.* — { Special Nursing in Diseases of the Eye.
Anatomy and Physiology of the Eye, and General Care in Health and Disease.
- One.* — Special Nursing in Diseases of the Ear: its care in health and disease; nurses' duties at operations and continued treatment in disease.
- One.* — Special Nursing in Croup, Laryngitis, Tracheotomy, Intubation, etc.
- One.* — Urine; characteristics, properties, including taking notes on same, and brief analysis. Drill in laboratory by classes in sections.
- One.* — *Massage*, its history, theory, and modes of application.
- Two.* — Visceral Anatomy: demonstrations by post mortems; care of the dead, etc.

LIST OF GRADUATES.

TRAINING SCHOOL FOR NURSES, THE BOSTON CITY HOSPITAL.

[* Married. † Died.]

[The badge of Graduate Nurses.]

1879.

Miss Rosa McCormick,	Miss Elizabeth A. Andrews,	
“ N. Elizabeth Fillebrown,	* “ Myra E. McIlvin,	
† “ Mary L. Kelso,	* “ Martha J. Blackwood.	(6)

1880.

Miss Asenith Clement,	Mrs. Maria Hatch,	
Mrs. Margaret Little,	† Miss Olivia Hews,	
Miss Annie Cochran,	“ Mary Monteith,	
† “ Louisa Morrill,	† “ Victoria O. Fowler,	
Mrs. Lucy Rice,	* “ Minnie Gilman,	
* Miss Eva Hallowell,	“ Anna C. Maxwell,	
“ Mary E. Prescott,	Mrs. Sarah Cooke,	(14)

1881.

† Miss Mary Mack,	Mrs. Mary Griswold,	
* “ Jennie Shotwell,	* † Miss Lily Birkbeck,	
* “ Flora Hadley,	* “ Josie Smith,	
† “ Mary Choate,	* “ Mary A. Ferrin,	
“ Georgeanna Russell,	“ Helen M. Hall,	
Mrs. Endenilla S. Neily,	Mrs. Bertha J. Raemisch.	(12)

1882.

† Miss Carrie L. Barrell,	* Miss Annie Martell,
Mrs. Kittie C. Soule,	“ Mary Quinn,
* Miss Georgia L. Forbes,	“ Julia Macrae,
“ Laura A. C. Hughes,	“ Annie E. Barker.

(8)

1883.

* Miss E. Adelaide Nason,	Miss Ida M. Welsh,
“ Mina P. Hill,	“ Annie Soper,
* “ Christina M. Gregoire,	“ Susan Bradley,
† Mrs. Jane E. Young,	* “ Maria Aanrud,
Miss Myra C. Hight,	* “ Jane Howell,
“ Susie H. Hamblet,	“ Emma L. Stowe,

EXTRAS. — In addition to the above, the following extras may be ordered by the Visiting Physicians and Surgeons: Milk, Beef Tea, Chicken Broth, Mutton Broth, Gruel, Oatmeal Mush, Corn Starch, Boiled Rice, Eggs, Beefsteak, Mutton-chop, and Chicken.

A small allowance of Milk and Beef Tea will be provided for each ward daily. The House Physician or Surgeon may order these articles by a signed special order, in each case, when needed, for patients who enter in the intervals between the regular visits of the Visiting Physician or Surgeon to whom the case is assigned.

All Wines and Liquors, Ale, Beer, etc., will be ordered by the Visiting Physicians and Surgeons only, excepting in emergencies, when special orders for the same may be given by the House Physician or Surgeon, to be afterwards approved by the Visiting Physician or Surgeon, as the case may be, or by the Resident Physician.

JULY 2, 1878.

By Order of the Trustees.
